**Prerequisite:** ARCH 504, ARCH 532, A E 422; Concurrent: ARCH 510, A E 211

ARCH 534: Architectural Design IV

6 Credits

Studio developing advanced designs for comprehensive buildings responding to human needs in terms of cultural meaning, context, and technical requirements.

ARCH 536: Design-Inquiry

1-12 Credits/Maximum of 12

Integration of research with the designing of architectural and urban settings.

**Prerequisite:** ARCH 520 and approval of advisor

ARCH 541: Topics in Theory

3 Credits

A series of presentations on the development of contemporary architectural theory.

**Prerequisite:** ARCH 511

ARCH 542: Topics in Community and Urban Design

3 Credits

Community and urban design as an area of design inquiry and interdisciplinary practice. ARCH 542 ARCH 542. Topics in Community and Urban Design (3)The intention of this course is to introduce students to the fundamental elements of community and urban design practice within the fields of architecture, landscape architecture, and planning. An investigation into the diverse traditions of design practice--technical, esthetic, and theoretical--will highlight the role that design plays in the urban and community context and also serve as a powerful medium for analyzing the confluence of the social, economic, political, and ecological dimensions that give form to cities and communities. An objective of the course will be to develop a critical perspective in architectural design vis-a-vis the restructuring of urban and community space. Topics to be covered in the course include: history of the discipline, contemporary urban and community issues, methodologies and techniques in community action research and participatory design, and introduction to the case study method of analysis. It is expected that students will actively participate in class discussions, present a case study of a project related to the topics covered in the class, and submit a research paper on the selected case study. ARCH 542 will be offered as a 3-credit course on an annual basis during the spring semester. Students with graduate standing in architecture and landscape architecture will be given priority for enrollment. However, a limited number of other students may enroll pending consent of the instructor.

**Prerequisite:** graduate standing or consent of instructor

ARCH 543: Topics in Digital Design

3 Credits

Inquiry into digital design paradigms of architecture and related disciplines; exploration design principles and operations supported in digital/virtual design environments.

**Prerequisite:** graduate standing or consent of instructor

ARCH 550: Ethics in the Built Environment

3 Credits

Ethics In the Built Environment is an applied theory course that uses negotiation strategies to examine issues broadly relating to the creation and use of the built environment, including research practices and professional ethics. The course examines the role of power imbalances as underlying ethical questions, and discusses means of mediating the resulting ethical problems in a sustainable manner. Through readings, discussions, short exercises, and a term paper, students will gain a greater awareness of ethical issues raised through the production and use of the built environment, and will develop tools to assess ethical issues and identify appropriate resolutions. Topics covered in this course include: defining ethical concepts, tools for evaluating ethical issues in the built environment, understanding built power and the role of empowerment, the power of marketing, accuracy in historical research, urban design and planning and the right to the city, gender and the built environment, architectural practices, the ethics of green architecture, the ethics of design computing, as well as research on individual case studies.

ARCH 591: Architectural Research

2-12 Credits/Maximum of 12

Guided research project.
ARCH 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on
an individual basis and which fall outside the scope of formal courses.
ARCH 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may
be offered infrequently.
ARCH 600: Thesis Research
1-15 Credits/Maximum of 999
No description.
ARCH 601: Ph.D. Dissertation
0 Credits/Maximum of 999
Ph.D. Dissertation Full-Time
ARCH 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Supervised experience in teaching and orientation to other selected
aspects of the profession at The Pennsylvania State University
ARCH 603: Foreign Academic Experience
1-12 Credits/Maximum of 12
Foreign study and/or research constituting progress toward the degree at
a foreign university.
ARCH 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

Art (ART)

ART 501: Art Research
2-6 Credits/Maximum of 6
Original study and practice in art relating to material, concept, or
technique.
ART 505: Graduate Seminar
2 Credits/Maximum of 8
Seminar covering special topics at the graduate level, emphasizing
interdisciplinary discourse including criticism and review of graduate
work.
ART 511: Issues in Contemporary Art
1-3 Credits/Maximum of 6
A critical survey of issues in contemporary art.

ART 515: New Media Art I
1-7 Credits/Maximum of 14
Individual problems in new media arts practice leading to development of
a body of work representative of the artist.
ART 516: New Media Art II
1-7 Credits/Maximum of 14
Individual problems in new media arts practice leading to development of
a body of work representative of the artist.

Prerequisite: ART 515

ART 530: Sculpture I
1-7 Credits/Maximum of 14
Individual problems in sculpture leading to the development of a
collection or body of work representative of the artist.
ART 531: Sculpture II
1-7 Credits/Maximum of 14
Individual problems in sculpture leading to the resolution of a collection
or body of work representative of the artist.

Prerequisite: ART 530

ART 545: Printmaking I
1-7 Credits/Maximum of 14
Individual problems in printmaking leading to the development of a
collection or body of work representative of the artist.
ART 546: Printmaking II
1-7 Credits/Maximum of 14
Individual problems in printmaking leading to the resolution of a
collection or body of work representative of the artist.

Prerequisite: ART 545

ART 550: Painting I
1-7 Credits/Maximum of 14
Individual problems in painting leading to the development of a collection
or body of work representative of the artist.
ART 551: Painting II
1-7 Credits/Maximum of 14
Individual problems in painting leading to the resolution of a collection
or body of work representative of the artist.

Prerequisite: ART 550
ART 570: Graphic Design I
1-7 Credits/Maximum of 14
Individual projects in design with special emphasis on specialized topics of graphic design.

ART 571: Graphic Design II
1-7 Credits/Maximum of 14
Individual problems in design, with special emphasis on professional practice in the area of graphic design.

Prerequisite: ART 570

ART 580: Ceramics I
1-7 Credits/Maximum of 14
Individual problems in ceramics leading to the development of a collection or body of work representative of the artist.

ART 581: Ceramics II
1-7 Credits/Maximum of 14
Individual problems in ceramics leading to the resolution of a collection or body of work representative of the artist.

Prerequisite: ART 580

ART 592: Photography I
1-7 Credits/Maximum of 14
Individual problems in photography leading to the development of a body of specialized work representative of the artist.

Prerequisite: 12 credits of PHOTO405

ART 593: Photography II
1-7 Credits/Maximum of 14
Individual problems in photography leading to the resolution of a collection or body of work representative of the artist.

Prerequisite: ART 592

ART 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

ART 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

ART 602: Supervised Experience and College Teaching
1-3 Credits/Maximum of 6
Supervised and graded teaching experience.

Art Education (AED)

AED 502: Research in Art Education
3 Credits
Examination of past and present research in art education, an introduction to general methods of research, and critical evaluation of research in art education.

AED 505: Foundations of Art Education
3 Credits
An examination of classic theories in art education and their relevance to current developments.

AED 513: Summer Institute on Contemporary Art
3 Credits
A blended summer course with on-campus and online components and a focus on intersections among contemporary art, curriculum, and pedagogy. AED 513 Summer Institute on Contemporary Art (3) This course is a summer session offering with a focus on intersections between contemporary art and curriculum. A collaborative effort between the Palmer Museum of Art and the Art Education Program, the course employs an innovative instructional approach that combines an intensive one-week intensive on-campus experience followed by correspondence, discussion, and presentation of final student projects using an online course management system during the ensuing five weeks. The course is designed to appeal to practicing K-12 educators, art educators, art education graduate students, and interested students from other disciplines as a forum in which to strengthen their focus on interdisciplinary curriculum theory and design constructed from collaborative interpretations of contemporary works of art and visual culture. As a critically challenging learning experience, this course will prepare students to thrive in a global environment by providing principles of interpretation as the foundation for encounters with beliefs, issues, and practices informed by and evidenced in contemporary works of art and visual culture. Due to the interdisciplinary interpretations and curriculum projects that will result from meaningful engagement with contemporary works of art, the course will promote interdisciplinary teaching and program development. The innovative format: a one-week intensive experience followed by discussion and presentation of final projects supported by an online course management system; challenges conventional approaches to instruction and presentation of evidence of student learning, thereby responding to and requiring new ways to assess and improve student learning outcomes in and through contemporary visual art.

AED 522: Participatory Visual Inquiry in the Public Sphere
3 Credits
Theory and praxis seminar to consider contemporary practices of participatory inquiry and public action with an emphasis on visual methodologies. A ED 522 Participatory Visual Inquiry in the Public Sphere (3) Students will analyze practices of participatory inquiry in response to social and cultural issues, situations, and challenges taken up by visual artists and interdisciplinary collectives who intend their work to construct new knowledge and positive change through collective action. Students will discuss and identify societal situations and propose possible responses as sites for participatory inquiry. A key focus of the
course is the exploration of theories and practices of collaborative inquiry in the public sphere with emphasis on visual methodologies. The course revolves around related and overlapping concepts such as participatory democracy, participatory culture, ideas to actions, collaborative inquiry, collaborative design, community-based research, public pedagogy, and action research. The course is intended to function as a discursive space to broaden perceptions about contemporary art and inquiry practices; informal and public pedagogies; the interdisciplinary roles of art and artists in society, community-based projects and inquiry; and ways collaborative artmaking and cultural production can function as forms of research. Course content focuses on community artworks, interdisciplinary creative projects, and other forms of cultural production created for and existing within the public sphere in response to specific issues, challenges, and conditions. Examples of such work include public murals, public performance interventions, environmental responses, community health and change interventions, and social media activism, among others.

AED 523: Transdisciplinary Creativity: Eco-social Justice Art
3 Credits

Transdisciplinary creativity develops new knowledge, metaphors, visualizations, and insights through performative renderings from dialogue, collaboration, exploration, and experimentation. Transdisciplinary creativity is the coming together of two or more disciplines in order to create something more than the individual or the community by recognizing, combining, and utilizing knowledges of all participants. Moreover, transdisciplinary creativity is a social process that develops sense-abilities. Sense-ability is the capacity to attend to the sensory and sensation, as a collective affective awareness of the environment. Students in the course will explore how different methodologies enhance understanding of complex issues such as sustainability, climate change, climate diaspora, environmental racism, and resource depletion. The national and international scope of environmental conversations is forging alliances across disciplines around urgent matters such as climate change. Rather than STEAM being used as an acronym for Science, Technology, Engineering, Arts, and Mathematics, STEAM is explored, in this course, in terms of collectives such as EcoArtTech, in which their work is eco-social justice action to create STEAM. Moreover, STEAM is considered as transdisciplinary creativity for eco-social justice. From a transdisciplinary view of STEAM, works of art are not an appendage or a singular discourse. STEAM is a transdisciplinary approach to environmental issues. STEAM as an action emphasizes ecology, transdisciplinary research, and creativity as a social process.

AED 524: Arts Education Policy and Advocacy
3 Credits

Critical examination of current and emerging arts education policies in the United States in relation to federal, state, and local education and cultural policies. AED 524 Arts Education Policy and Advocacy (3) Students who are going to become leaders in arts education should understand social and political forces that shape the landscape where they work. Although art educators were identifying policy needs and submitting resolutions with policy recommendations to national agencies during the interwar years, arts education policy gained importance during the 1960s with the founding of The National Endowments for the Humanities and Arts. Arts education ‘as opposed to art, dance, music, or theatre education’ is a political construct forged in order to successfully advocate for inclusion of visual and performing arts in National Educational Goals during the late twentieth century. In this course, students will explore what counts as policy for arts education and how policy discourse is framed; who constitutes stakeholders and policy makers; contexts where policy is advocated and created; and how advocates develop and communicate proposals for needed policies. Working in small groups, students will examine recent issues related to arts education policy, presenting those issues in class.

AED 525: Including Difference
3 Credits

Disability is normal. Ableness is temporary. However, social stigmas, misunderstandings, and notions of ‘normal’ exclude students and adults with disabilities. How have artists with disabilities offered worldviews that decenter normal? To pursue decentering normal, students in the course explore the creative practice of contemporary artists labeled by society as disabled to understand how their viscerally empowered art can function pedagogically to decenter notions of normal. Decentering notions of normal begins with identifying and challenging social systems that-through visual, lingual, and technological cues-communicate which traits are considered normal and which are not. While the analysis of linguistic and visual representations is instructive for articulating identity construction and its relationship to power and privilege, these lines of inquiry within disability studies overlook the realities of embodied difference that are a part of many people who live with disabilities. Notions of a normalized body frame certain patterns of behavior, cognition, affect, and physicality from which bodies are measured as either within or outside of the frame of normalized learning spaces such as schools. The Feminist Disability Studies and Disability Justice readings in the course go beyond labeling difference and invest in articulating and understanding difference as interconnected relationships in which inclusion may be fostered.

AED 536: Curriculum Development in Art Education
3 Credits

Factors affecting art curriculum decisions, analysis, selection, organization, preparation of curriculum. Evaluation and sources of art curriculum improvement and innovation.

Prerequisite: 6 credits of methods

AED 541: Theories of Child Art
3 Credits

Study of current theories of child art; application of recent psychological and anthropological theories to understanding child art.

Prerequisite: A ED 486

AED 570: Artistic Creation and Theories of Knowing
3 Credits

A thematically organized course that makes connections between art-making and art as a way of knowing and inquiry.

AED 588: History of Art Education
3 Credits

Historical development of philosophies in art education in the United States and abroad.
AED 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

AED 594: Research Topics
1-18 Credits/Maximum of 18
Supervised student activities on research projects identified on an individual or small-group basis.

AED 595: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

AED 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

AED 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

AED 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

AED 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

AED 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Teaching of undergraduate art education classes under the supervision of two members of the graduate faculty.
Prerequisite: doctoral candidate status in Art Education and program head permission

AED 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

AED 611: New Media and Pedagogy
3 Credits
Exploration of relationships between communication technologies and beliefs about the nature of knowledge and the nature of art. AED 611 New Media and Pedagogy (3) Due, in part, to contemporary processes of globalization and the development of digital technologies and the Web; new issues, possibilities, and opportunities regarding media communities and art pedagogy emerge in the field of art education. This is the focus of this course. Course participants have the opportunity to explore the aesthetic communicative and pedagogical implications of intertextual Webs, hypertext and hypermedia, blogs, wikis, simulations, the body interfaced in virtual reality, threaded dialogue, WebQuests, online games, media communities, adaptive and assistive technologies, and media-rich essays. Learning activities will be in the form of explorations and creation with the links and resources provided, and focused discussions about these explorations and how to teach this content at participants’ teaching sites. Following 5 thematic explorations, course participants write a capstone essay to construct a speculative fiction of a teaching scenario based on the content of the course imagined in a future teaching site. The main priorities in Exploration 1 are to imagine possibilities of human-technology interfaces for creating and critiquing art. In Exploration 2, participants select a social networking tool from the course’s resources to conduct a collaborative mini-project concerning self-representation online and power relational networks of social, physical, technological, and discursive inscriptions or conditions. Exploration 3 involves using the Internet as a primary medium for art creation and involves developing criteria to critique interactive Net art. The focus of Exploration 4 is free, downloadable authoring programs outside of a commercial economy, which enables the creation of interactive experiences without the need for specialized programming knowledge or database support. Exploration 5 involves participants creating a socially responsive visual culture WebQuest, which is an inquiry-oriented activity in which learners construct knowledge through interacting with, evaluating, and connecting diverse, and sometimes contradictory, resources on the Internet in order to form new insights that they share in a tangible form intended to make a difference in the world. This is one of the required courses for the M.P.S. in Art Education. There is no prescribed sequence and no prerequisites for art education courses in the M.P.S. program.

AED 612: Diversity, Visual Culture, and Pedagogy
3 Credits
Diversity issues in museum and K-12 art education contexts. AED 612 Diversity, Visual Culture, and Pedagogy (3) This course examines diversity, visual culture, and pedagogy in various settings: the artworld, popular media, and cultural settings such as schools and museums. Diversity pertains to gender, sexual identity, social class, ethnicity, ability, age, and other attributes that shape our identities. This course pays special attention to issues of power and privilege in relation to diversity and visual culture. It examines ways that various forms of visual culture, situated in various social contexts, teach us who we are, what is ‘normal’ in our society, and how we might change oppressive social conditions that currently exist. As defined in the course, visual culture includes paintings, sculptures, prints, and other forms of fine art as well as advertisements, news images, scientific images, television programs, and films. It includes toys, comic books, children’s art and more. Visual culture includes all manifestations of cultural life that are significant for their visual features. Pedagogy refers not only to formal methods of instruction, such as teaching and learning in classrooms. It also includes informal instruction through the arts, the media, popular forms
of entertainment, and other social practices. Pedagogy includes being positioned by, or addressed in certain ways by various forms of visual culture. It includes the ways we actively interpret, use, and recreate forms of visual culture in our lives. Objectives of the course include understanding diversity as defined in relation to various forms of visual culture; understanding the complex interactions of ethnicity, class, gender, sexual identity, and other aspects of diversity in visual culture; understanding issues of power and privilege in relation to visual culture; and understanding pedagogical issues related to visual culture, including forms of address and interpretation, as well as pedagogical practices such as teaching and learning in classrooms. By the end of the course, participants should be able to critically examine social constructions of race, class, gender, sexual identity, and other aspects of diversity in visual culture through both written and visual analyses. Participants should also be able to develop and implement units of instruction related to visual culture, and reflect on their own and others' teaching practices in schools and museums. This is one of the required courses for the M.P.S. in Art Education. It is offered every other year with a maximum enrollment of 15 students.

AED 813: Public Pedagogy

3 Credits

Inquiry into the public pedagogy of contemporary visual culture for relevancy to museum and K-12 art education contexts. AED 813 Public Pedagogy (3) This course prepares art teachers to become producers of a socially just world by becoming critical public art pedagogues who extend their teaching environment. As defined in the course, critical public pedagogy of art, as an educational and artistic practice, is a critical stance concerning socio-pervasive artifacts, processes, and interfaces that acculturate and assimilate values, beliefs, and sensitivities. Public pedagogy is the use of a public medium and/or space such as the Internet, films, television, magazines, shopping malls, and sports arenas to influence behaviors and beliefs. Public pedagogy enacts societal curricula that are easily consumed because of its ubiquitous nature. Awareness of consumption of public pedagogy is important because of its global reach. Educators need to be versed in how to facilitate investigations of public pedagogy and how to guide students to develop critical public pedagogical practices. From spheres of influence radiating from art to a multidirectional layered matrix of sensibility, this course explores contemporary art that addresses and enacts public pedagogy through (inter)actions of cultural interfaces such as humans, technologies, localities, and politics. Such artworks are performed networks of relations. Contemporary artists’ praxis involving intertextuality, palimpsest, remix, code-switching, double-coding, subversion, and hypersignification is explored through video, installation, performance, and other contemporary art forms. Objectives of the course include understanding processes of consumption and production of public pedagogy, and understanding contemporary art practices. By the end of the course, participants should be able to develop and implement units of instruction related to contemporary art and public pedagogy, and reflect on their own and others’ teaching practices in schools and museums. This is one of the required courses for the M.P.S. in Art Education. It is offered every other fall semester with a maximum enrollment of 15 students.

AED 814: Informal Learning

3 Credits

Pedagogy and contexts for learning in museums and other cultural institutions. AED 814 Informal Learning (3) The course introduces participants to theories and practices of informal learning, and to the possible contexts including museums, schools and other cultural institutions in which informal, free choice learning may occur. These provide a framework for participants to use in preparing, implementing, and evaluating a learning project or other intervention in their own institutions or communities. The course includes a strategic and policy analysis of the contexts in which free choice learning projects may occur, a review of the social and economic significance of informal, free choice learning in an information age and global economy, an introduction and critical discussion of constructivist theories of informal learning, a review of specific pedagogical practices that may be effective in implementing informal learning for school-age students, adults, and senior citizens, an introduction to tools for evaluating the effectiveness of these practices, and the development, implementation and assessment of an informal learning project or intervention by each participant using other participants as consultants in the process. This is one of the required courses for the M.P.S. in Art Education. It is offered every other year with a maximum enrollment of 15 students.

AED 815: Action Research in Art Education

3 Credits

Develop a reflective process to improve strategies, practices, and knowledge of the environments within which art education is practiced. AED 815 Action Research in Art Education (3) This course prepares M.P.S. in Art Education candidates to conduct action research in their teaching context as part of a community of practice by recognizing and sharing existing tacit knowledge about teaching and learning conceptualized in specific social and physical environments. Action research is a reflective and iterative inquiry process with the aim of improving strategies, practices, and knowledge of the environments within which one teaches. Course participants will learn how to conduct research that develops, leads to, implements, and assesses a genuinely well-informed social action in the midst of an emerging teaching and learning landscape. The course uses a blend of Web technology, print, and other media to maximize flexibility without sacrificing professor and student interaction. Communication tools, including bulletin boards and e-mail, are used to foster a collaborative environment, providing participants with the opportunity to learn from one another about the unique schools and cultural institutions each comes from and as well as their varied professional experiences. A ED 815 will be offered via World Campus as an online course will be offered every spring semester. Enrollment will be limited to 15 students.

Art History (ARTH)

ARTH 511: Seminar in Ancient Art

3-12 Credits

Selected topics from the history of Greek and Roman Art.

ARTH 512: Seminar in Medieval Art

3-12 Credits

Original research into problems dealing with the art of the Middle Ages.
ARTH 513: Seminar in Renaissance Art
3-12 Credits
Investigations in the area of Renaissance art, centering around major masters and monuments.

ARTH 514: Seminar in Baroque Art
3-12 Credits
Investigations in the area of baroque art, centering around major masters and monuments.

ARTH 515: Seminar in Modern Art
3-12 Credits
Lectures, readings, reports, and discussions in the field of modern art.

ARTH 551: Historiography of Art History
1-6 Credits
The relationship between the definition of, and approach to, art-historical problems from Vasari to the present.

ARTH 560: Methods of Research in Art History
3 Credits
Preparation of graduate students for professional careers in academia and museum work, involving creation of publishable articles and grant writing. In the academic world, and particularly in the humanities, the publication of articles and books is understood to be a marker of success and, along with teaching skills, the basis on which appointments are made and tenure granted. Essential to this body of production is the execution and placement of one's research undertakings, skills that the 'Methods Seminar' is designed to hone. No less valued by those who make appointments and offer promotion are the grants and fellowships that a candidate has won. Indeed, since research in art history involves travel to and residence at museum, library and archive sites- whether these be in North America or abroad-financial support is a necessity for most aspiring professionals and is regarded as evidence of external validation of their investigations. Training in 'grant writing' is also covered in the seminar. Even before field work is undertaken, the investigator must be aware of the 'state of research', work normally undertaken at one's own university library. In this domain there are better and worse ways of taking notes. The seminar discusses these methods and goes beyond them to consider the optimum means by which such records are organized and assembled prior to the delivery of papers and the production of articles. The nature of an oral presentation and a publishable paper are distinct activities and this difference needs to be learned. The more complex skills involved in the writing of articles, the securing of photographs and concomitant permissions, and the choice of the journal to which the 'finished' piece should be submitted are dealt with at even greater length.

ARTH 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

ARTH 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

ARTH 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

ARTH 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

ARTH 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Supervised experience for teaching assistants in art history.

ARTH 603: Foreign Academic Experience
1-12 Credits/Maximum of 12
Foreign study and/or research approved by the graduate program for students enrolled in a foreign university constituting progress toward the degree.

Asian Studies (ASIA)

ASIA 501: Proseminar in Asian Studies I
1-3 Credits
A seminar for graduate students in the Asian Studies dual-degree PhD programs.

ASIA 502: Proseminar in Asian Studies II
1-3 Credits
Introduction to theories, methods, and disciplines of Asian Studies.

ASIA 530: East Asian Philosophy and Culture
3 Credits
This course provides students with a comprehensive overview of key philosophical issues in the East Asian traditions. It aims to familiarize students with the most prominent critical debates and philosophical concerns, as well as the latest state of the field. Students will read philosophical texts alongside the critical literature in order to deepen knowledge of and evaluate philosophical discourse in East Asia from ancient times to the present. The course exposes students to the general philosophical canon as well as a range of current philosophical scholarship on how East Asian philosophy is being pursued today. Critical analyses and philosophical texts are chosen so as to illuminate each other and highlight key areas concerning ethics, metaphysics and cosmology, political philosophy, and culture. At the end of the course, students will have gained a sound grasp of East Asian philosophy and its historical dimensions, and they will have developed a critical understanding of the current challenges and directions in the field.

ASH 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

ARTH 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

ARTH 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

ARTH 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Supervised experience for teaching assistants in art history.

ARTH 603: Foreign Academic Experience
1-12 Credits/Maximum of 12
Foreign study and/or research approved by the graduate program for students enrolled in a foreign university constituting progress toward the degree.

Asian Studies (ASIA)

ASIA 501: Proseminar in Asian Studies I
1-3 Credits
A seminar for graduate students in the Asian Studies dual-degree PhD programs.

ASIA 502: Proseminar in Asian Studies II
1-3 Credits
Introduction to theories, methods, and disciplines of Asian Studies.

ASIA 530: East Asian Philosophy and Culture
3 Credits
This course provides students with a comprehensive overview of key philosophical issues in the East Asian traditions. It aims to familiarize students with the most prominent critical debates and philosophical concerns, as well as the latest state of the field. Students will read philosophical texts alongside the critical literature in order to deepen knowledge of and evaluate philosophical discourse in East Asia from ancient times to the present. The course exposes students to the general philosophical canon as well as a range of current philosophical scholarship on how East Asian philosophy is being pursued today. Critical analyses and philosophical texts are chosen so as to illuminate each other and highlight key areas concerning ethics, metaphysics and cosmology, political philosophy, and culture. At the end of the course, students will have gained a sound grasp of East Asian philosophy and its historical dimensions, and they will have developed a critical understanding of the current challenges and directions in the field.
prior knowledge of Classical Chinese is required, as all texts will be read in translation.

Cross-listed with: PHIL 530

ASIA 577: Critical Perspectives on Modern Chinese Literature

3 Credits

This course provides students with an overview of the core texts and main critical paradigms of modern Chinese literary studies. This course provides students with a comprehensive overview of the main critical approaches to modern Chinese literature, by placing these paradigms into historical perspective and linking them with key texts that illuminate the authors’ arguments and demonstrate exemplary readings that have proven influential in the field, past and present. The particular focus of the course may vary according to the instructor (e.g. themes, genres, regions etc.), but the course will generally cover critical interventions and debates, helping students to understand the emergence of the field in its present form; they will also scrutinize major trends that are providing new directions for the study of modern Chinese literature. In addition to the critical literature, students will read a range of literary texts, from the late Qing to the twenty-first century, that provide insights into the forces (aesthetic and intellectual, as well as social and historical) that have shaped the canon of modern Chinese literature. Critical analyses and literary texts are chosen in a way so as to illuminate each other. At the end of the class, students will have gained a sound grasp of the field and its literary and historical dimensions, and develop a critical understanding of the current challenges and directions of the study of modern Chinese literature. Cross Listings: CMLIT 577 will be added as a cross-listed course.

Cross-listed with: CMLIT 577

ASIA 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

ASIA 597A: Digital Humanities

3 Credits

This seminar will function as a workshop and laboratory for sampling, exploring, and experimenting with a variety of computer-based technologies that are currently being applied to (typically) large corporuses for the purposes of algorithmic criticism. Our focus will be hands-on experimentation with software for network analysis (gephi); stylistics (R); topic modeling (mallet), and mapping, with attention paid to foundational ideas of information theory, visualization, spatial humanities, etc. Exploration of further topics and methods according to student interests, preparation, and usefulness for specific research agendas.

Cross-Listed

Astrobiology (ABIOL)

ABIOL 570: Astrobiology Field Experience

2 Credits

Geological field excursions to sites where the early evolution of life and the environment is revealed and to modern analogues. ABIOL 570 ABIOL 570 Astrobiology Field Experience (2) Astrobiology is a new, multidisciplinary field of science encompassing astronomy, biology, biochemistry, genomics, chemistry, atmospheric chemistry, geochemistry, paleontology, geology, and many other fields of science and technology. Astrobiology includes the study of the origin of life, the connections between the evolution of life and of environments, the potential for life and life’s actual distribution in our solar system and beyond, and future of life on Earth and in space. This course is intended to expose students to a variety of rock units (paleosols, sedimentary rocks, glacier deposits, ore deposits, and igneous rocks) formed under a variety of environments during the period between 3 billion years and 400 million years ago in order to gain some ideas about the environments of the early Earth. Students will also be exposed to a variety of geochemical, paleontological, and geological methods to investigate these ancient rocks in order to obtain information about the biological and chemical environments of the early Earth. The field excursion will be held for about two weeks during the Summer semester. It will be preceded by a short series of seminar-style meetings late in Spring semester to discuss the objectives of the excursion and to outline the major features of the field sites to be examined. Possible sites for the excursion will be selected from the Precambrian rocks in Ontario - Quebec, Canada, Michigan, Minnesota, Wisconsin, New York, Virginia, West Virginia, and Maryland and modern microbial ecosystems in the Bahamas and Green Lake (NY). One to three days will be spent at each of the major sites. This is a required course for all students in Dual Title Degree Program in Astrobiology, but is open to any graduate student. This will also be a suitable course for undergraduate students, seniors preferred, with the permission of the instructor. There is no prerequisite. Grading will be based on a term paper submitted within one month after the excursion. The term paper will be based on literature review and field observations on a topic selected by each student.

ABIOL 574: Planetary Habitability

3 Credits

Aspects of star and planet formation, habitable zones, biospheric evolution, life in extreme environments, planet and life detection. ABIOL 574 ABIOL 574 Planetary Habitability (3) This course introduces graduate students to the foundations of the field of Astrobiology. Astrobiology is a new, multidisciplinary field of science encompassing astronomy, biology, microbiology, biochemistry, genomics, chemistry, atmospheric chemistry, geochemistry, paleontology, geology, and many other fields of science and technology. Astrobiology includes the study of the origin of habitable planets, origin of life, the connections between the evolution of life and of environments, the potential for life and life’s actual distribution in our solar system and beyond, and future of life on Earth and in space. Students will expand their knowledge base beyond their discipline while considering such issues as the origins of stars and planets, environmental conditions of the prebiotic Earth, the origin of life on Earth, the nature of the universal ‘tree of life’, the establishment of evolutionary patterns and rates, the causes of glacial cycles and their use as analogues for life on planets or moons such as Europa, how Earth survives in extreme environments on Earth, what determines planetary habitability, how planets in other solar systems are detected, and how we might detect life on other planets. This is a required course for all students in Dual Title Degree Program in Astrobiology, but is open to any qualified undergraduate or graduate student. There is no specific prerequisite. Grading will be based on participation and performance on a midterm and final examination, problem sets, and laboratory exercises.
Astronomy and Astrophysics (ASTRO)

ASTRO 501: Fundamental Astronomy
3 Credits
Concepts, tools and techniques, and essential background in stellar, Galactic, extragalactic astronomy and cosmology.

ASTRO 502: Fundamental Astrophysics
3 Credits
Fundamental tools and results of modern astrophysical theory. Gravitation; gas dynamics; radiation processes; radiative transfer; atomic structure and transitions.

ASTRO 504: Extragalactic Astronomy
3 Credits
Properties and evolution of galaxies including their stellar, interstellar, black hole and Dark Matter components.

Prerequisite: ASTRO501, ASTRO502

ASTRO 513: Observational Techniques in Astronomy
3 Credits
Theoretical and practical aspects of modern multiwavelength observational astrophysics including detector physics, imaging techniques, spectroscopic techniques, and data analysis principles.

Prerequisite: ASTRO501, ASTRO502

ASTRO 515: Astrostatistics
3 Credits
Modern astronomical research – the study of planets, stars, galaxies and the Universe – and the linking of observational data to astrophysical theory encounter a wide array of challenges falling under the rubric of statistical inference. Cosmology, for example, addresses spatial clustering of galaxies, nonlinear regression of Big Bang astrophysical models, supervised regression of galaxy photometric redshifts, multiple hypothesis tests for faint source detection in images, multivariate classification, and time series analysis of billion-object multi-epoch surveys. Big Data arising from large-scale astronomical surveys and Bayesian modeling of astrophysical models are propelling astrostatistics into greater importance than in the past. Yet the curriculum for young astronomers typically includes no courses in statistical methodology. This course is designed to fill this gap. The course progresses through three stages. First, basic principles in statistical inference are presented and discussed including elements of probability theory, point and interval estimation, and probability distributions. The techniques of least squares, maximum likelihood, and Bayesian inference are outlined here and exercised later in the course. Second, central fields of applied statistics are investigated including nonparametric statistics and density estimation, regression (including nonlinear models from astrophysical theory), and multivariate analysis (including unsupervised clustering and supervised classification). Specific statistical methods are linked to specific astronomical problems at each step. Third, the instructor and students choose topics for study, such as time series analysis, spatial point processes, censoring and truncation, Bayesian computation, and scientific visualization. Common characteristics of astronomical data that are not treated in standard statistical presentations are discussed in detail, including heteroscedastic measurement errors, irregularly-spaced time series, and nonlinear astrophysical models. A crucial element of the course is practical training in the implementation of these statistical methods using sophisticated public-domain software environments. Software tutorials in class and text help educate the student to a level where data and science analysis can proceed at a mature level.

ASTRO 527: Computational Physics and Astrophysics
3 Credits
Introduction to numerical methods for modeling physical phenomena in condensed matter, atomic and high energy physics, gravitation, cosmology and astrophysics. ASTRO (PHYS) 527 Computational Physics and Astrophysics (3) This course provides an introduction to applications of numerical methods and computer programming to physics and astrophysics. Numerical calculations provide a powerful tool for understanding physical phenomena, complementing laboratory experiment and analytical mathematics. The main objectives of the course are: to survey of the computational methods used for modeling concrete physical and astrophysical systems; to assess the reliability of numerical results using convergence tests and error estimates; and
to use scientific visualization as a tool for computer programming development and for physical understanding of numerical results.

Cross-listed with: PHYS 527

ASTRO 528: High-PerformanceScientific Computing for Astrophysics
3 Credits/Maximum of 999

Training in software development for performing astrophysical simulations and analyzing astronomical data, including attention to reproducibility, parallelization, and computing architectures.

CONCURRENT COURSE: ASTRO 501

ASTRO 530: Stellar Atmospheres
3 Credits

The structure, physics and observational manifestations of atmospheres of stars.

Prerequisite: ASTRO501 , ASTRO502

ASTRO 534: Stellar Structure and Evolution
3 Credits

Physics of stellar interiors, stellar structure, and evolutionary changes of stars from pre-main sequence through final states.

Prerequisite: ASTRO501 , ASTRO502

ASTRO 542: Interstellar Medium and Star Formation
3 Credits

Theory and observation of the interstellar medium of our Galaxy and the process of star and planet formation.

ASTRO 545: Cosmology
3 Credits

Modern cosmology of the early universe, including inflation, the cosmic microwave background, nucleosynthesis, dark matter and energy.

ASTRO (PHYS) 545 Cosmology (3)

Cosmology is the scientific study of the universe as a whole: its physical contents, principal physical processes, and evolution through time. Modern cosmology, which began in the early 20th century, is undergoing a renaissance as a precision science as powerful ground- and space-based telescopes allow us to observe the formation of the first stars, galaxies and galaxy clusters; the echoes of the inflationary epoch as they are impressed upon the cosmic microwave background; and evidence for and clues to the nature of the mysterious dark energy, which is driving the accelerating expansion of the universe. This course will introduce students to the key observations and the theoretical framework through which we understand the physical cosmology of the early universe.

Cross-listed with: PHYS 545

ASTRO 550: High Energy Astrophysics
3 Credits

Theory and observations of X-rays, gamma-rays and other high energy radiation from Galactic and extragalactic sources.

ASTRO 570: Particle Astrophysics
3 Credits

Particle astrophysics is a discipline at the interface between physics and astronomy, which has undergone tremendous growth in the 21st century, with the commissioning and exciting results from very large facilities detecting the highest energy cosmic rays, neutrinos, gravitational waves, and gamma-rays. There is a rapid and ongoing expansion of the understanding of these radiations, their physics and their sources, which include supernovae, gamma-ray bursts, and active galactic nuclei, and there are major new facilities aimed at characterizing particle properties of dark matter and its cosmological effects. Students will be given an overview of the basics of particle astrophysics and to the latest data and its interpretation, stressing issues currently discussed by the community, with particular attention on major projects in which Penn State faculty are involved. The course is designed for graduate students in physics and astronomy and astrophysics, being also appropriate for students in nuclear engineering or related disciplines.

Prerequisites: ASTRO 502; PHYS 400; PHYS 406 PHYS 557

ASTRO 576: The Search for Extraterrestrial Intelligence
3 Credits

This course offers a broad exploration of the Search for Extraterrestrial Intelligence (SETI) as a subfield of astrobiology. It includes a survey of background astronomy and radio engineering concepts necessary to read and analyze the professional literature on the topic, including foundational works and the state-of-the-art. It takes a broad view of SETI, including communication SETI (i.e. radio and optical searches), artifact SETI (search for non-communicative evidence of engineering), and a critical analysis of the assumptions and potential biases inherent in past and current SETI efforts. It also includes discussion of SETI's place in the popular, political, and scientific landscapes.

RECOMMENDED PREPARATION: Undergraduate degree in an astrobiology discipline, such as physics, astronomy, biology, or geology (and their subdisciplines), including familiarity with research methods. Because little field-specific knowledge is presumed of s

ASTRO 577: Exoplanets
3 Credits

Recommended Preparations: Some assignments will require programming in the student’s programming language of choice. Since the early 1990s, thousands of exoplanets have been discovered orbiting other stars beyond our solar system. The properties of these planets have challenged our understanding of how planetary systems form and evolve. This course will cover theories of exoplanets’ formation and evolution, the discovery and characterization of exoplanets via exoplanet signals, and the physical properties of exoplanets, including prospects for habitability.

ASTRO 585: Topics in Astronomy and Astrophysics
3 Credits

Advanced study of issues in planetary, stellar, galactic, extragalactic and theoretical astronomy and astrophysics. ASTRO 585 Topics in Astronomy and Astrophysics (3)

This 3-credit topics course will be offered as part of the regular sequence of graduate offerings, and can be used to fulfill the graduate degree course requirements on an equal basis with ASTRO 501-580 3 credit courses. The purpose here is to provide a
flexible environment for full courses on subjects that are not covered in the courses with fixed curricular content and are important to Penn State faculty, research Centers, and students.

**Prerequisite:** ASTRO501, ASTRO502

**ASTRO 588:** Seminar in Astronomical Research Development and Responsible Conduct

1 Credits

The course includes a variety of topics related to ethics and professional development in Astronomy and Astrophysics. The course builds from the mandatory training students receive from Scholarship and Research Integrity. The content is geared toward providing students with ‘survival skills’ that are not encountered in the typical course curriculum. Topics include research paper writing, proposal writing, postdoctoral job applications, career options in research/education and outreach/observatory support/data science/policy, professional networking, effective dissemination of research, funding landscape in the profession, etc.

**ASTRO 589:** Seminar in Current Astronomical Research

1 Credits

Contemporary issues in instrumental, observational and theoretical astronomy and astrophysics. ASTRO 589 Seminar in Current Astronomical Research (1)This seminar will be offered as part of the regular sequence of graduate offerings, and is also used to fulfill the graduate degree course requirements for 1-credit seminars. Their purpose is to treat focused issues of current research interest. Examples are: Physics of Gamma-ray Bursts, Design of Precision Spectrographs, Quasar Surveys, Protoplanetary Disks. This course is taught by Department faculty, researchers and visitors.

**Prerequisite:** ASTRO501, ASTRO502

**ASTRO 590:** Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

**ASTRO 596:** Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

**ASTRO 597:** Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**ASTRO 600:** Thesis Research

1-15 Credits/Maximum of 999

No description.

**ASTRO 601:** Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

**ASTRO 602:** Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

No description.

**ASTRO 610:** Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

**ASTRO 611:** Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

**ASTRO 801:** Planets, Stars, Galaxies, and the Universe

3 Credits

Overview of the structure, formation, and evolution of planets, stars, galaxies, and the universe. Topic: Observations by modern ground-based and space-based observatories have fueled significant changes in our understanding of the Universe. The Solar System contains only 8 planets but has many thousands of Kuiper Belt Objects, including Pluto. Large area sky surveys have taken inventory of the stars in the Milky Way Galaxy and galaxies in the Universe and determined that only 4% of the mass of the universe is found in luminous objects. Besides the mysterious ‘dark matter’, we now know that the energy budget of the universe is dominated by ‘dark energy’, which is causing the expansion of the Universe to accelerate. ASTRO 801: Planets, Stars, Galaxies, and the Universe will provide science educators with a strong foundation in astronomy, allowing them to critically evaluate the evidence for the most recent advances in our understanding of the Solar System, our Galaxy, and the Universe. Astronomers use observations of the light from distant sources to discover the nature of these objects and their environment. ASTRO 801 will lead students to an understanding of light and the instruments for its detection. They will see how careful analysis of these observational data and theoretical models are used to solve the mysteries of the Universe. ASTRO 801 will combine digital video, audio, simulation models, and the wealth of astronomical imagery from NASA’s Hubble, Chandra, and Spitzer Great Observatories. Students will use highly detailed planetarium software and simulated observing experiences to directly explore the night sky to make the same observations that research astronomers perform in their work. ASTRO 801 students will be granted licenses to use the courseware developed for this course in their own secondary classrooms.

**ASTRO 897A:** **SPECIAL TOPICS**

2 Credits

**ASTRO 897B:** **SPECIAL TOPICS**

2 Credits
Biobehavioral Health (BBH)

BBH 501: Biobehavioral Systems in Health and Development: Theory and Processes
3 Credits

Examination of theories and basic processes for understanding individuals as dynamic biobehavioral complex systems functioning through continual interactions. BB H 501BB H 501 Biobehavioral Systems in Health and Development: Theory and Processes (3)Understanding the etiology of illness and the design of intervention strategies for promoting healthy development, preventing illness, and accomplishing remediation and rehabilitation require a multidisciplinary understanding of the theoretical basis of normal healthy human development and the complex biological processes that form the basis of health and development. This course (BB H 501) presents the theoretical framework of humans as complex dynamic systems, followed by modules on processes of cell biology and genetics as complex systems. The second course (BB H 503) continues with modules of the processes of neurobiology, endocrinology, immunology, and pharmacology followed by a section on integrative biology and health. The modules of biological processes are developed from the perspective of how the physiological aspects of the area of biology are relevant to behavioral development and on what aspect of this area of biology is linked to behavior. These processes are considered in the context of their role in the comprehensive theoretical models developed in the first section of the course. Similar integration with a primary emphasis on behavioral processes is offered in other courses that form the core graduate curriculum in Biobehavioral Health. Evaluation of the theories section will be by written exam, oral presentation, and seminar participation. Evaluation of the cell biology, genetics, and neurobiology components will be by written exam for each component. This initial required course in the biobehavioral health sequence is designed to provide a multidisciplinary framework of theory and knowledge of biobehavioral processes and their implications for health and illness on which other biobehavioral health courses can build. It is the first of a two-course sequence (BB H 501 and BB H 503). It will be required by all graduate majors in Biobehavioral Health. It will be available to students in other doctoral programs. It could be a part of a Biobehavioral Health minor for other students. This course will be offered every fall semester beginning with the first fall semester after approval and will enroll a maximum of twenty students. Faculty: George Vogler and Byron Jones

Prerequisite: graduate status

BBH 502: Health: Biobehavioral Perspectives
3 Credits

Introduction to the role of psychology in maintaining health and in treating nonpsychiatric disorders.

Cross-listed with: PSY 502

BBH 503: Biobehavioral Systems in Health and Development: Processes and Integration
3 Credits

Examination and integration of basic processes for understanding individuals as dynamic biobehavioral complex systems functioning through continual interactions. BB H 503BB H 503 Biobehavioral Systems in Health and Development: Processes and Integration (3)Understanding the etiology of illness and the design of intervention strategies for promoting healthy development, preventing illness, and accomplishing remediation and rehabilitation require a multidisciplinary understanding of the theoretical basis of normal healthy human development and the complex biological processes that form the basis of health and development. This course is the second course in a two-course sequence (BB H 501 and BB H 503) that is designed to provide first-year graduate students with a multidisciplinary understanding of the biobehavioral health perspective. This views humans as complex dynamic systems of integrated component processes that interact with the environment to influence development and health. The first course (BB H 501) presents the theoretical framework of humans as complex dynamic systems, followed by modules on processes of cell biology and genetics as complex systems. This course (BB H 503) continues with modules of the processes of neurobiology, endocrinology, immunology, and pharmacology followed by a section on integrative biology and health. The modules of biological processes are developed from the perspective of how the physiological aspects of the area of biology are relevant to behavioral development and what aspect of this area of biology is linked to behavior. Similar integration with a primary emphasis on behavioral processes is offered in other courses that form the core graduate curriculum. These processes are considered in the context of their role in the comprehensive theoretical models developed in the first section of the two-course sequence. Evaluation of each of the five modules will be by written exam. This required course in the biobehavioral health sequence is designed to provide a multidisciplinary framework of theory and knowledge of biobehavioral processes and their implications for health and illness on which other biobehavioral health courses can build. It is the second of a two-course sequence (BB H 501 and BB H 503). This course will be required by all graduate majors in Biobehavioral Health. It will be available to students in other doctoral programs. It could be a part of a Biobehavioral Health minor for other students. This course will be offered every spring semester beginning with the first spring semester after approval and will enroll a maximum of twenty students. Faculty: George Vogler and Byron Jones

Prerequisite: or concurrent: BB H 501

BBH 504: Behavioral Health Intervention Strategies
3 Credits

Evaluation of intervention strategies from a biobehavioral health context. Theories of change processes as they pertain to health are analyzed.

Prerequisite: BB H 502, BB H 503

BBH 505: Behavioral Health Research Strategies
3 Credits

Research strategies in behavioral health investigations are examined. Designs and data analytic models relevant to biobehavioral research are included.

Prerequisite: coursework in research design and/or introductory statistics
BBH 521: Structural Equation Modeling
3 Credits
Structural Equation Modeling with LISREL and Amos. Confirmatory factor analysis; regression and path analysis with manifest/latent variables; special applications.
Prerequisite: HD FS519, HD FS526
BBH 551: World Health Promotion
3 Credits
Analysis of the various health problems that affect humans throughout the world; emphasis will be placed on personal health issues.
BBH 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.
BBH 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.
BBH 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.
BBH 600: Thesis Research
1-15 Credits/Maximum of 999
NO DESCRIPTION.
BBH 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
NO DESCRIPTION.
BBH 610: Thesis Research Off-Campus
1-15 Credits/Maximum of 999
No description.
BBH 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
NO DESCRIPTION.

Bioch, Microb and Molecular Biology (BMMB)

BMMB 501: Core Concepts in Biomolecular Science
5 Credits
Introduction to broaden one's understanding of biochemical and biophysical principles and the basic aspects of eukaryotic and prokaryotic cell biology. BMMB 501 BMMB 501 Core Concepts in Biomolecular Science (5) This is a required course to be taken by all BMMB graduate students during their first fall semester. It will be team taught with a mixed textbook/literature approach. Material will be presented primarily in the form of lectures. The objective is to provide training in core concepts that will be essential for the students to pursue more specialized areas of study in Biomolecular Science. The course will prepare students for taking graduate electives in more specialized areas, it is not intended to be a comprehensive survey of all of the topics relevant to all of the program options in BMMB. Topics will include: acid/base theory, thermodynamics, chemical equilibrium, electron transfer, electrochemistry, and sizes and shapes of molecules, protein and nucleic acid structure, enzyme kinetics and catalysis, chromosome structure, DNA replication, cell cycle, recombination, transcription, RNA processing, and translation, intracellular compartmentalization and trafficking, and cell signaling. Each student's mastery of the material will be evaluated by written examinations.
Prerequisite: Graduate standing
BMMB 502: Critical Analysis of the Biochemical, Microbial, and Molecular Biology Scientific Literature
1 Credits
A course focusing on critical reading, understanding and evaluation of primary literature in Biochemistry, Microbiology and Molecular Biology.
Prerequisite: BMMB 501
BMMB 503: Critical Elements of Genetics and Molecular and Cellular Biology
4 Credits
Foundational topics and critical analysis in evolution, genetics, molecular and cellular biology and cell differentiation. BIOL (BMMB/MCIBS/VBSC) 503 Critical Elements of Genetics and Molecular and Cellular Biology (4) Central elements in genetics, genomics and molecular and cell biology will be covered. The course will focus on foundational principles and concepts that will allow students to understand the behavior of proteins and organelles within cells, and to appreciate how intracellular events influence interactions of cells with one another in multicellular systems and during development. Another major focus will be genome architecture, both in the context of evolution and gene expression. Students will also learn how genetic approaches can be used to understand cell and molecular biology, and will develop critical thinking skills through the analysis of the primary scientific literature. The course will include lecture and discussion sessions.
Cross-listed with: BIOL 503, MCIBS 503, VBSC 503
**BMMB 507: Seminar in Biochemistry, Microbiology, and Molecular Biology**

2 Credits/Maximum of 4

No description.

**BMMB 509: Ethics in Biomedical Science**

1 Credits

Discussion of ethical issues relevant to scientific research in the biomedical sciences.

**BMMB 511: Molecular Immunology**

2 Credits

The study of molecular and biochemical events that influence immune responses and define current questions in immunology. BMMB 511 / MCIBS 511 / VBSC 511 Molecular Immunology (2) The goals of the course are to integrate the current questions of immunology with other disciplines, in particular cell biology and biochemistry, and to provide training in critical thinking and evaluation of data and experiments. The course will be approximately 2/3 lecture by the instructor and 1/3 student presentations of papers related to the material. In addition, written critical reviews of recently published papers and a short research proposal will be assigned. By focusing on the mechanisms involved in immunity and disease, this course complements several existing courses on immunology, virology, and biochemistry. The prerequisites of MICRB 410 and BMB 400 assure that the students enrolling in the course have a general understanding of immunology and biochemistry. This course is projected as an elective for the Molecular Medicine and Immunobiology focus areas in the MCIBS graduate program and for the Pathobiology and BMMB graduate programs. The course will be offered in the fall semester with an enrollment limit of 20 students

**Prerequisite:** B M B 401, MICRB410

Cross-listed with: MCIBS 511, VBSC 511

**BMMB 521: Microbial Biology I**

4 Credits

Survey of cutting-edge aspects of microbial ecology, phylogenetics, physiology, molecular biology, pathogenesis and genomics.

**Prerequisite:** B M B 401 or B M B 442

**BMMB 525: Analytical Separations**

3 Credits

Fundamentals and applications of modern chromatographic separations.

Cross-listed with: CHEM 525

**BMMB 531: Biomolecular Structure**

2 Credits

Crystal structure determination and analysis of protein and nucleic acid three-dimensional structures. This course is taught in two parts. In the first part, students will learn the fundamentals of X-ray crystallography of bio-molecules. Topics covered include: What X-rays are and how to produce and use them safely, how protein crystals are grown, how X-rays interact with crystals to yield 3-dimensional diffraction data, how to solve a crystal structure and how to refine the structure. Basic mathematics and physics involved in this technique will be discussed. The students will also learn how to analyze a published crystal structure and how a crystallography laboratory works. The second part will focus on understanding how protein and DNA structure relate to the function of these macromolecules. The students will visualize macromolecular structures in class using videos and using interactive molecular graphics software on their own to develop an understanding of three-dimensional structures. Particular topics include: fundamentals of protein structure, enzymes, signal transduction molecules, immune molecules, protein-DNA interactions, and other related topics.

**Prerequisite:** BMB 401

**BMMB 533: Protein Evolution**

2 Credits

Consequences of evolution of protein-coding sequences: structures and functions. BMMB 533 Protein Evolution (2) Most biological functions are carried out by proteins, and evolutionary logic can be used to infer functions. This course will focus on evolution of protein-coding sequences, conformations and functions of proteins. Different species show varying characteristics of structure, metabolism, and regulatory control networks. Most of these differences are the product of the evolution of protein-coding sequences. DNA mutations can change amino acid sequences, protein structures and protein functions; and favorable mutations are selected, in ways that are integrated to form an organism adapted at both macroscopic and molecular levels. The availability of large databanks of protein amino acid sequences, and protein three-dimensional structures, and the annotation of protein function in the entries in these databanks, has allowed investigation of evolutionary changes that impact proteins. One of the goals of the course will be to describe these databanks and the computational tools available to apply them in research in molecular biology. Many students will find these tools useful in their own research projects. The evolutionary divergence of proteins has shown several types of effects. In some cases, related proteins in different species retain similar functions, but show differences in amino acid sequence and structure. The nature of observed changes in sequence and structure will be described and the relationship between sequence changes and structural changes examined in several well-documented examples, including globins, and serine proteases. In some cases, proteins diverge within a single species to form large families of related molecules with specialized functions. For example, the human genome encodes hundreds of odorant receptors. The comparison of related proteins that have adopted novel functions reveals how cells can expand their functional repertoire. In most cases it is easier to adapt an existing structure to a new function than to create a new protein ‘from scratch’. For example, the proteolytic enzymes of the chymotrypsin family are related to haptoglobin, an iron scavenger that has lost its enzymatic activity. Beyond the description of individual proteins and individual protein families, there is the more general question of how changes in functions of individual proteins are integrated to create a smoothly-running cellular ‘operating system’. The evolution of sequences encoding regulatory proteins to achieve this will be discussed. Methods of bioinformatics to address these questions will be presented, with emphasis on study and comparison of structures with computer graphics.

**BMMB 536: Medicinal Chemistry and Chemical Biology**

3 Credits

The goal of this course is to provide a foundation in development and application of chemical technologies to the understanding and
manipulation of biological systems. Chemical biology is a relatively new field that spans the traditional fields of chemistry and biology by applying chemical technologies to the understanding and manipulation of biological systems. As such, this course should be accessible and provide benefit to students working in both chemical and biological areas. Lectures include higher-level biological chemistry (assuming prior knowledge of biological chemistry at an undergraduate level, such as CHEM 476 or BMB 401) and synthetic chemistry and biology principles along with current literature in the field of chemical biology.

**Prerequisite:** CHEM 476 or BMB 401

**BMB 538: Spectroscopic Methods in Bioinorganic Chemistry**

*3 Credits*

Foundations in spectroscopic methods employed for the determination of the geometric and electronic structure of transition metal clusters in nature.

Cross-listed with: CHEM 538

**BMB 539: Biochemical Reaction Mechanisms**

*3 Credits*

Mechanisms of the most important biochemical reactions, with emphasis on enzyme catalysis.

**Prerequisite:** CHEM 476 or BMB 401

Cross-listed with: CHEM 539

**BMB 541: Molecular Biology of Animal Development**

*3 Credits*

The course emphasizes comparative molecular genetic analyses of developmental gene networks using vertebrate and Drosophila model systems. BMB 541 BMB 541 Molecular Biology of Animal Development (3) This is a required course for graduate students in the IBIOS Cell and Developmental Biology Program. Approximately half of the class sessions will consist of lectures and class discussions related to lecture material. The other half will consist of primary literature presentations by the students and class discussion pursuant to these. The course will provide students with a broad overview of essential signaling pathways and gene regulatory networks that coordinate cellular activities to establish and maintain the complex communities of cells that comprise animal tissues.

**BMB 542: Eukaryotic Cell Biology**

*3 Credits*

This course covers current areas of cell biology research, focusing on processes affecting the cell as a whole. BMB 542 Eukaryotic Cell Biology (3)This course in eukaryotic cell biology will provide a foundation for those students whose thesis research focuses on cell biology or the cellular aspects of development. The primary focus will be to understand how the cell functions as a unit. Areas to be covered include compartmentalization of the cell and transport between different subcellular compartments; the control of cell shape and how cell shape and polarity changes drive cell movement and tissue shape; the life cycle of cells; and the regulation of these processes by extracellular signals. We will also investigate current research techniques and tools that are used to investigate these processes.

**BMB 543: Current Topics in Gene Regulation**

*3 Credits*

This course explores structural, biochemical and genetic approaches in gene regulation. BMB 543 Current Topics in Gene Regulation (3) This course is intended to bring students up to the leading edge of research in gene regulation. It will explore structural, biochemical and genetic approaches in this field of research, covering processes from nuclear structure to RNA decay. It will also illustrate progress from many different model organisms including: prokaryotes, yeast, Drosophila, and humans. This course will include introductory lectures by faculty and student presentations of recent literature.

**Prerequisite:** BMB 400

**BMB 551: Genomics**

*3 Credits*

Structure and function of genomes including use of some current web-based tools and resources for studies and research in genomics. BMB 551 / MCIBS 551 Genomics (3) This course will deal with the structure and function of genomes including the use of some current web-based tools and resources for further studies and research in genomics. The overall objective is to learn current information about the structure and function of genomes, to develop facility in the many web-based tools and resources for further studies and research in genomics, and to appreciate the power and limitations of current resources and knowledge. This course is designed as a basic course for any student in the life sciences who needs to exploit the developments and tools in genomics in their own research and who wants to broaden their understanding of the current knowledge and research in the life sciences that are increasingly drawing on genomics advances. The course will be taught by a team of faculty (members active in genomics research and will be video-conferenced. Students’ grades will be based on take home exams or assignments that require their understanding of the concepts in genomics and the hands-on use of web-based analysis tools, as well as on class discussion participation. Students will be assigned one or more projects, tutorials, problem sets or essays to complete. Reading assignments will further help students explore the materials, do the assignments and participate in classroom discussions.

Cross-listed with: MCIBS 551

**BMB 554: Foundations in Data Driven Life Sciences**

*3 Credits*

Expanded overview of current developments and technique in computational biology and genomics. BMB 554 Foundations in Data Driven Life Sciences (3) The successful progression of data-driven biomedical research is obscured by a wide-range of logistical problems related to data handling and processing, a widespread disconnect between developers and consumers of biomedical analysis software, and lack of accessible, well-developed curricula and active learning opportunities necessary for the development of key data analysis skills in the next generation of researchers and clinicians. This course aims a filling these gaps. Topics include fundamental concepts that underpin analysis of sequence data, design of complex experiments, research transparency and reproducibility, as well as result disseminations practices relevant to presentations and publications.

Cross-listed with: IBIOS 554, MCIBS 554
BMMB 566: Algorithms and Data Structures in Bioinformatics

3 Credits

This course covers elegant algorithmic and data structure techniques that underpin modern biological data analysis. Bioinformatics is a growing field with immediate implications for our understanding of biology and treatment of disease. This course covers elegant algorithmic and data structure techniques and their use in bioinformatics. The emphasis is on recurrent ideas that underpin modern biological data analysis, presented in conjunction with their biological applications. The course is suitable both for students interested in doing bioinformatics research and those interested in applications of algorithms to the natural sciences. Some of the algorithms/data-structures that may be covered include exact string matching, suffix trees, suffix arrays, de Bruijn graphs, hidden Markov models, breakpoint graphs, succinct data structures, the Burrows-Wheeler transform, the FM-index, network flow, and bidirected graphs. Some of the biological applications will include sequence alignment and assembly, cancer genomics, phylogeny, gene finding, and variation detection. No prior biological or bioinformatics knowledge is required. A basic understanding of data structures and algorithms (equivalent to CMPSC465) is a prerequisite; however, exceptionally motivated students can contact the instructor to discuss their options. This course is complementary to existing bioinformatics courses offered through other programs on campus. These courses may be taken concurrently but are not prerequisites. Prerequisites: CMPSC465

Prerequisite: CMPSC465

Cross-listed with: CSE 566

BMMB 567: Nucleic Acids Chemistry

3 Credits

Biophysical and biochemical approaches for studying structure-function relationships in nucleic acids. BMMB (CHEM) 572 Nucleic Acids Chemistry (3) The goal of this course is to provide a foundation in biophysical approaches for studying the quantitative and structure-function relationships in nucleic acids systems, including DNA, RNA, and their interactions with proteins, salt, and water. Lectures include basic physical chemistry and statistical mechanics principles along with current literature in the biochemical sciences. At the end of the course, you should be able to meaningfully dissect molecular biological papers at the level of the physical chemistry of these processes. Current topics are introduced through reading and presenting papers from the literature.

Prerequisite: CHEM 212, CHEM 450

Cross-listed with: CHEM 572

BMMB 573: NMR Spectroscopy for Synthetic and Biological Chemistry

3 Credits

Nuclear magnetic resonance approaches for characterizing the structure and dynamics of synthetic compounds, natural products, and biological macromolecules.

Prerequisite: CHEM 452

Cross-listed with: CHEM 573

BMMB 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

BMMB 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

BMMB 598: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

BMMB 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

BMMB 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

BMMB 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Teaching of biochemistry undergraduate laboratory and recitation classes under faculty supervision.

BMMB 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

BMMB 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

BMMB 801: Foundations of Teaching in Biochemistry, Microbiology, and Molecular Biology

1 Credits

An overview of the science of learning and teaching in biochemistry, microbiology, and molecular biology. This course is designed to prepare BMMB graduate students to become teachers and communicators, and specifically to prepare students to teach undergraduate students in labs or lecture courses. Students will explore how people learn, develop evidence-based teaching strategies to promote learning, and acquire confidence to create effective and inclusive classrooms.
BIOE 504: Numerical Methods in Bioengineering

3 Credits

Students study numerical methods applied to Bioengineering applications through computations. The course is designed to teach numerical methods and computational techniques for modeling physiological systems and medical devices. Topics include differentiation equations, finite difference methods and finite element methods. Finite element modeling software will be covered. Examples include physiological systems at the organ and cellular levels, physio-chemical analysis of biological systems, and transport phenomena in engineered devices. Computing programming experience is required to be successful in this course.

BIOE 506: Medical Imaging

3 Credits

Medical diagnostic imaging techniques, including generation and detection of ultrasound, x-ray, and nuclear radiation; instrumentation and biological effects.

Prerequisite: PHYS 202

BIOE 507: Technical Foundations in Functional Magnetic Resonance Imaging

3 Credits

Theory and applications of functional magnetic resonance imaging. The advent of new neuroimaging techniques such as functional magnetic resonance imaging (fMRI) has symbolized a new era of neuroscience. A large amount of neuroscience research today involves utilizing fMRI given its high spatial resolution and whole-brain coverage. In order to gain an in-depth understanding of these research findings, it is important to know the principles of fMRI. In this class we will address questions such as: What signal do different fMRI methods measure? How to interpret the results from different fMRI techniques? How to apply these methods to solving real neuroscience problems?

BIOE 508: Biomedical Materials

3 Credits

Properties and methods of producing metallic, ceramic, and polymeric materials used for biomedical applications. BIOE 508 BIOE (MATSC) 508 Biomedical Materials (3) The topical content of this course will be grouped into 4 areas. A general introduction to selected aspects of physiology will be presented. This will provide the background necessary to appreciate the factors which govern the selection of biomedical materials. Specific emphases will be placed on the polymerization of biopolymers (polypeptides and polysaccharides) and the general relationships between conformation and biological function, the biochemistry of blood and blood surface interactions, the formation of teeth and bone and the relationships between microstructure, composition and function, the immune responses to implanted materials, the resorption of bone (osteoporosis), and the development of caries. The perspective placed on these topics will be that of materials science. The selection of ceramics for hard tissue prosthesis will be described. Orthopaedic and dental applications for ceramics will be discussed. Specific ceramic materials to be treated include dental porcelain, alumina- and zirconia-based ceramics, and bioglasses. Various classes of inorganic cements, gypsum, zinc phosphates, zinc carboxylates, silicates, and glass-ionomer cements will also be considered as ceramics. Hydroxyapatite, HAp-based composites and HAp-metal interactions will be discussed in particular. Relationships among physical properties, mechanical properties, and chemical interactions with biological fluids will be described. Dental and orthopaedic applications of metals will be described. The fracture toughness of metals, their electrochemical responses in vivo, and the nature of the interfacial interactions with hard tissues will be treated. Dental amalgams and the noble metals for dental applications will be considered. Metals and alloys, such as Ti, Co-Cr, and stainless steel used in prosthetic applications will be described and their properties and limitations discussed. The phenomenon of stress shielding and the immune responses associated with the accumulation of metallic and polymeric particulate debris in the vicinity of an implant will be discussed in particular. Polymeric materials are important in a broad range of biomedical applications. Among these are soft tissue
prostheses, hemostatic agents, dental restoratives, bone replacement materials, and surgical adhesives. In some applications, it is desirable that a polymeric material biodegrade while in others property retention is desirable. Because of the spectrum of applications for polymers, the topics to be covered will be limited with the intent to concentrate on hemocompatible polymers, acrylcs used as bone cements, polyethylene used as bearing surfaces in prostheses, and dental resins and bonding materials. Other relevant polymers and their applications will be discussed.

Cross-listed with: MATSE 508

BIOE 509: Mechanobiology

3 Credits

This course explores the molecular bases of cell mechanics and the role of mechanics in cell biology

Prerequisite: BIOE 512 and BIOE 505

BIOE 510: Biomedical Applications of Microelectromechanical Systems (BioMEMS) and Bionanotechnology

3 Credits

Introduction to BioMEMS and Bionanotechnology. Topics include: electromechanical and chemical biosensors, microfluidics microscale separations, and surface patterning for cellular engineering. BIOE 510 BIOE 510 Biomedical Applications of Microelectromechanical Systems (BioMEMS) and Bionanotechnology (3) Microelectromechanical systems (MEMS) have been developed for a wide range of applications from automotive to medical devices. Nanoscale devices within MEMS have a particular usefulness in biological applications due to their small volumes, low energy sensing, and minimal force actuators. Increased efficacy of instruments and new areas of application are also emerging from specific and successful biomedical applications of MEMS (bioMEMS). Advanced development of nanotechnology and bioMEMS for biomedical and biotechnological applications requires basic foundations from biophysics, biochemistry, solid state devices, and polymer engineering. The objectives of this course are: to build a basic foundation for understanding of mechanisms on electrical, mechanical, chemical, and optical transducers in the context of biomedical applications; and, to teach critical thinking considering microengineering design and fabrication, material compatibility with biological systems, and cellular interaction at the interface. Finally current MEMS activities will be reviewed with emphasis on the examination of the viability of nanoscale devices and bioMEMS technology in particular biomedical applications.

Prerequisite: E E 441, BME 201

BIOE 512: Cell and Molecular Bioengineering

3 Credits

Graduate level cell and molecular biology course for engineers emphasizing molecular mechanisms. BIOE 512 BIOE 512 Cell and Molecular Bioengineering (3) This course investigates the molecules and mechanisms underlying cellular function from an engineering perspective, utilizing physical, chemical and quantitative approaches. Material covered includes the structure and chemistry of biological molecules, enzyme kinetics, DNA replication and repair, gene expression, recombinant DNA technology, subcellular organization, cell motility, signaling and cell division. Applications in medicine, biotechnology, bionanotechnology and tissue engineering are addressed. This is a lecture course graded by means of exams, homework assignments, and a final paper. A general knowledge of physics, chemistry, and some physiology is required; the analytical approach of the course will also require an ability to work with mathematical equations and simple models. It is geared towards engineering students and is also suitable for physics, chemistry, and materials science graduate students. Previous molecular and cell biology knowledge is not required. Three credits, generally offered each fall semester. No formal prerequisites.

BIOE 513: Bioengineering Laboratory Techniques

3 Credits

Laboratory techniques in cell molecular biology, protein biochemistry and cell culture with an emphasis on engineering analysis and quantification. BIOE 513 Bioengineering Laboratory Techniques (3) BIOE 513 is a three-credit laboratory course for engineering graduate students designed to introduce laboratory techniques used in bioengineering/biomedical research. The course objectives are to build a basic foundation for understanding biological assays in the context of biomedical engineering applications and to introduce the student to the integration of biology with design and fabrication of devices. Consideration is also given to compatibility between biological systems and medical devices, and cellular interactions at the interface between biology and engineering. Emphasis is placed on cell and molecular biology, protein biochemistry, bacterial transformations, and mammalian cell culture with particular attention to engineering analysis and quantification. This course requires a substantial amount of laboratory work outside of designated meeting periods.

Prerequisite: BIOE 512

BIOE 514: Quantitative Microscopy

3 Credits

Application of advanced microscopy to quantification of cellular and molecular function.

BIOE 515: Cell Mechanics and Biophysics

3 Credits

Advanced topics and recent developments in cellular engineering; applications of engineering science to cell biology.

Prerequisite: BIOE 505

BIOE 517: Biomaterials Surface Science

3 Credits

Special properties of surfaces as an important causative and mediating agent in the biological response to materials. BIOE 517 BIOE 517. (MATSC 517) Biomaterials Surface Science (3) This course will factor the classical picture of the biological response to materials into spatial and temporal components, identifying the special properties of surfaces as an important causative and mediating agent. Emphasis will be on biophysical mechanisms and the biological response to materials. Contact activation of blood plasma coagulation cascade, bioadhesion, and protein adsorption will be repeatedly used as example biological response to materials surfaces to illustrate concepts and principles. Leading theories attempting to correlate both kinds of intensity of biological responses to surface and interfacial energetics will be compared and contrasted through a process that will quantify important surface thermodynamic properties of materials. The hydrophobic effect
and related phenomena, especially as this pertains to water solvent effects in biology, will receive special emphasis. A general background in chemistry and/or biology is required, but prerequisites are purposefully limited, reflecting the interdisciplinary aspects of the subject and to draw students from different specializations.

Cross-listed with: MATSE 507

BIOE 518: Bioprinting
3 Credits

This course covers the principles of bioprinting in tissue engineering and regenerative medicine for use in fabrication of biomedical related products such as implants, tissue scaffolds, engineered tissues, organs and biological systems. Topics include Tissue Engineering, 3D Printing, Layered Manufacturing and Rapid Tooling in Medicine, Design for Bioprinting, The Bioink, Extrusion-based Bioprinting, Droplet-based Bioprinting, Laser-based Bioprinting, Bioprinters and their components, Application Areas of Bioprinting and New Frontiers in Tissue Engineering such as Organ Printing.

BIOE 519: Artificial Organs Design
3 Credits

Basic techniques and principles of a multidiscipline approach to artificial organs design.

BIOE 552: Mechanics of the Musculoskeletal System
3 Credits

Structure and biomechanics of bone, cartilage, and skeletal muscle; dynamics and control of musculoskeletal system models. BIOE 552 BIOE (I E) 552Mechanics of the Musculoskeletal System (3)The course focuses on the upper limbs and its musculoskeletal components, including mechanical properties and models; work-related musculoskeletal injuries, techniques, models, and instruments to measure and quantify the risks for developing such injuries. Specific topics covered in the first third of the course include an introduction to basic biomechanical principles, the anatomical structure of the musculoskeletal system including soft tissue, neuromuscular physiology, and motor control including muscle receptors. The second third covers various muscle models starting from basic mass/spring/dashpot viscoelastic models as in Hill's 3-element model and continuing on to Hatze's multi-element model, frequency analysis, control theory approaches. More complex models include static and dynamic aspects of tendon-pulley models and multiple muscle-tendon systems. The final third covers basic epidemiology as applied to musculoskeletal disorders and risk factors including instrumentation to measure them and various analysis tools (e.g., the PSU CTD Risk Index) to assess the not only the overall risk for injury but the reliability and validity of such assessments. Time permitting applications to hand tools and office environment with computer work stations are examined. Two exams and a modeling project are given. The course is typically offered Spring Semester.

Prerequisite: Consent of program. Prerequisite or concurrent: BIOL 472 Cross-listed with: IE 552

BIOE 553: Engineering of Human Work
3 Credits

Physics and physiology of humans at work; models of muscle strength, dynamic movements; neural control; physical work capacity; rest allocation.

Prerequisite: BIOL 141 or BIOL 472

Cross-listed with: IE 553

BIOE 576: Bioengineering of the Cardiovascular System
3 Credits

Experimental and analytical studies of network branching patterns, regional blood flow, rheology and mechanics of blood cells and vessels.

Prerequisite: BIOL 472

BIOE 590: Colloquium
1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

Prerequisite: BME 590

BIOE 591: Bioengineering Ethics and Professional Development
1 Credits/Maximum of 999

Problem solving methods in ethical decision making, best practices in research communication, and strategies for professional development. This course will cover the main philosophical underpinnings of bioengineering ethics. It will then assist in developing methods for ethical decision making in the main areas of bioengineering professional practice. These areas include data collection, management and presentation, animal and human experimentation, peer review and authorship, and social implications of bioengineering research. The course will then assist in the professional development of students by instruction in tools for effective acquisition of discipline-specific conceptual knowledge, research skill development, communication, management, leadership.

BIOE 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

BIOE 597: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

BIOE 600: Thesis Research
1-15 Credits/Maximum of 999

No description.
Bioethics (BIOET)

BIOET 501: Perspectives and Methods in Bioethics
3 Credits
This course explores a variety of theories and methods in bioethics and applies them to a selection of current topics.

BIOET 502: Perspectives in Macro-Bioethics
3 Credits
This course explores systemic and structural issues in bioethics, and the theories and methodologies required to address them.

Cross-listed with: PHIL 572

BIOET 504: Research Integrity in Science and Engineering
2 Credits
This course will examine the complex ways ethical issues are a component of research in science and engineering. BIOET 504 Research Integrity in Science and Engineering provides a foundation for understanding an expanded conception of research ethics that includes traditional responsible conduct of research (RCR) issues, but encompasses two additional domains in which ethical issues are relevant to the conduct of science, namely, the broader impacts of science and ethical issues that are embedded in scientific practice. Students in this course will develop a robust understanding of ethical responsibility and ethics spotting in their professional work as well as pedagogical training to support their becoming research integrity leaders in their home disciplines. In this course, students will: understand and identify instances of embedded ethics, broader impacts, and research integrity as they apply to work within their profession; develop the ability to apply ethical reasoning skills to examples of each domain of research ethics through case-based analyses; and acquire pedagogical skills in research ethics through developing, delivering, and assessing curricular materials on relevant research ethics topics drawn from their home disciplines. Students will also develop a research ethics teaching portfolio and will be encouraged to work with their departments to identify ways to develop peer mentoring on these important topics.

BIOET 533: Ethical Dimensions of Renewable Energy and Sustainability Systems
2 Credits
Examination of ethical issues relevant to research procedure, professional conduct, social and environmental impacts, and embedded values in research and practice.

BIOET 540: Bioethics, Biopower, Biopolitics
3 Credits/Maximum of 999
This course will examine in a bioethical context a variety of ways relations of power and values intersect. Bioethics, Biopower, and Biopolitics will develop an understanding of bioethics by considering the ways people's lives interconnect and the relations of power that infuse and often control these interconnections. The goal is to expand the use of the term 'bioethics' beyond the scope of medical practice and institutions and to bring it to bear on a much wider scope of life. We will consider options for understanding the meaning of 'bioethics' by reference to the interplay of values and relations of power that more or less enhance human lives by the practices and policies that form, control, or liberate them.

BIOET 590: Bioethics Colloquium
1-3 Credits/Maximum of 36
Continuing seminars in bioethics that consist of a series of individual presentations by faculty, students, or outside speakers.

BIOET 594: Research Topics
1-12 Credits/Maximum of 15
Supervised student activities on research projects identified on an individual or small-group basis.

BIOET 595: Internship
1-12 Credits/Maximum of 12
Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships related to bioethics.

BIOET 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

BIOET 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore a topic or topics in bioethics in depth.

BIOET 600: Thesis Research
1-15 Credits/Maximum of 999
Thesis Research in Bioethics.

BIOET 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Students will teach lower-level undergraduate courses in bioethics, including courses on the undergraduate minor in bioethics and medical humanities.
Bioinformatics and Genomics (BGEN)

BGEN 541: Critical Analysis of Bioinformatics and Genomics Research Topics
1 Credits/Maximum of 2

Critical Analysis of Critical Analysis of Bioinformatics and Genomics Research Topics reviews the recent developments made in the understanding of basic genomics and bioinformatics research. This approach provides an insight into the topics that are shaping the current and future directions in a field that is rapidly evolving and literally transforming lives. Tutorials provide a comprehensive overview of the new and fundamental developments in genomics research and highlight the way in which genomic concepts are applied to basic biological processes. This course will provide insights into computational, evolutionary, and functional aspects of genomic sciences. Basic concepts that describe how life was organized and evolved and applications that promise huge advances in biomedical and biotechnological fields will be discussed. In addition to helping students develop critical oral and written presentation skills, this course is intended to kindle excitement about genomic research among graduate students and provide an intellectual framework for identifying potentially challenging and interesting questions that may be pursued.

BGEN 595: Internship
1-18 Credits/Maximum of 18

Supervised, research-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

BGEN 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

BGEN 597: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

BGEN 600: Thesis Research
1-15 Credits/Maximum of 999

Thesis Research

BGEN 601: Thesis Dissertation Full-Time
0 Credits/Maximum of 999

Thesis Dissertation Full-Time

BGEN 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6

Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University.

BGEN 611: PhD Dissertation Part-Time
0 Credits/Maximum of 999

PhD Dissertation Part-Time

Biological Chemistry - MD (BCHEM)

BCHEM 510: Carcinogenesis and Chemoprevention
2 Credits

Mechanisms of cancer induction by environmental carcinogens and chemoprevention by natural and synthetic agents. BCHEM 510 Carcinogenesis and Chemoprevention (2) The etiology of most human cancer remains obscure even though a vast body of literature describes risk factors for certain cancers and proposes various hypotheses for cancer etiology on the basis of epidemiological and experimental studies. Tobacco smoking is an established cause of several cancers, with lung cancer remaining the first target on the list. International studies have repeatedly confirmed that people (Chinese, Japanese) migrate from their country of origin to the U.S., adopt the pattern of certain cancers within a few generations (e.g., breast and prostate) of the latter country, which is indicative of the presence of chemical carcinogens in the environment and/or changes in lifestyles. Consequently, the search for carcinogens that exist in the human environment challenges both scientists and regulatory agencies. Chronic exposure to traces of chemical carcinogens in the diet, in polluted air, or in tobacco smoke can be important in the etiology of several human cancers in the presence of host factors that favor the multistep process of carcinogenesis. Bioassays in laboratory animals can provide important information on the role of environmental agents in the induction of particular types of cancer. Biochemical studies can lead to insights into the nature of interactions of these environmental agents with macromolecules such as DNA that are necessary, but not always sufficient for carcinogenesis. The search for optimal diets and for naturally occurring agents in routinely consumed foods that may inhibit cancer development, although challenging, constitutes a valuable and plausible approach to finding ways to control and prevent cancer. The prevention of cancer is the longstanding goal for most cancer researchers. There has been enormous gain in our understanding of carcinogenesis and cancer progression, such knowledge has provided new and promising opportunities to prevent cancer, e.g., to treat precancer or inhibit carcinogenesis (a process often involving 20-30 years in human epithelial cancers), rather than waiting to treat cancer. In the early 1980's, the U.S. National Cancer Institute recognized the promise of chemoprevention research. In summary, this course will provide a better understanding of the potential contribution of environmental carcinogens in the development of certain human cancers and will provide important information on cancer chemoprevention intervention strategies. The course will cover topics that include exposure, metabolic activation, detoxification, and biomonitoring of chemical carcinogens in the human environment, carcinogen-induced DNA damage, mutagenesis and DNA repair, carcinogen-induced cellular and molecular alternations, tumorigenesis and organ specificity in laboratory animals, and factors modulating individual susceptibility to the deleterious effects on chemical carcinogens. Furthermore, this course will provide knowledge on various classes of cancer chemopreventive agents, their efficacy, safety, and mechanisms of action in preclinical studies. Course Objectives: Upon completion of this course, the students will be able to: 1. Understand the potential risk associated with human exposure to chemical carcinogens detected in the environment. 2. Describe the current assays of biomonitoring of human exposure to
chemical carcinogens. 3. Learn the process of metabolic activation and detoxification of chemical carcinogens. 4. Understand the stages of the multi-step carcinogenesis process. 5. Identify factors that govern individual susceptibility to the deleterious effects of chemical carcinogens. 6. Understand the concept of cancer chemoprevention. 7. Identify molecular and cellular targets for chemoprevention intervention at any time during the process of carcinogenesis. Grading: Grading will be determined as follows: 1. Midterm Exam 30% 2. Research Paper* 30% 3. Class Participation 10% 4. Final Exam 30% Total 100%*Guidelines for Research Paper: The topic will be selected following approval of the faculty member in charge. The paper should include the goals (aims) of the research project, literature background, the significance of the research topic, knowledge to be gained, gaps in existing knowledge, and the potential to propose future studies. Faculty Member Proposing: Karam El-Bayoumy

**BCHEM 521: Biochemistry: Structure/Function/Regulation of Biological Molecules**

3 Credits

The fundamentals of biochemistry in evaluating the forces that govern inter- and intra-molecular interactions are studied. BCHEM 521 Biochemistry: Structure/Function/Regulation of Biological Molecules (3) An overriding theme in biochemistry is that macromolecules, which are polymers of simpler molecules, interact to form structurally large and functionally complex entities that give rise to discrete structures and functions. This course focuses on intermolecular forces between the monomers of macromolecules that govern tertiary structure, as well as interactions between macromolecules that govern higher order structures. The course begins with proteins, covering the structural basis of protein functions and then moves on to simple enzyme kinetics and mechanisms. Next, the students will discover the forces that control the three dimensional structures of nucleic acids. Subsequently, the students will explore simple and complex carbohydrates and topics in glyobiology that include energy storage, framework skeleton, and specific molecular recognition. Lipid biochemistry will be examined next, in topics that include lipid chemistry, complex lipids, membrane biology, and transport systems. Finally, the analysis of higher order structures involving the interactions between protein, nucleic acids, lipids, and carbohydrates will be discussed. The course will describe various analytical, chemical, and biochemical techniques that biochemists use to interrogate biomolecular structure and interactions.

**Prerequisite:** BMS 501, BMS 502, BMS 503

**BCHEM 522: Molecular Genetics: Genes to Genomes**

3 Credits

This course focuses on concepts of molecular genetics and genomics, and DNA-protein interactions and their functions within macromolecular complexes. BCHEM 522 Molecular Genetics: Genes to Genomes (3) This course focuses on the principles and concepts of molecular genetics and genomics and DNA-protein interactions and their functions within macromolecular complexes. Special emphasis is placed on the aspects of eukaryotic genome organization, chromatin and chromosome structural and epigenetic changes, and DNA-protein interactions that regulate expression of genetic information and change the process of inheritance in normal and disease models and affect genome stability. This course contains three major sections. Section I includes principles of recombinant DNA technologies used in the analysis of DNA sequences and genome structure. Section II covers genetic interactions and macromolecular assembly and provides links between the studies of molecular interactions and equilibrium with in vivo and genetic approaches. Section III covers genome stability, epigenetics, and medical applications involving mis-regulation of the molecular mechanisms involved in these processes. This part builds on material presented in the BMS 503 course of the core curriculum and provides students an in-depth understanding of the molecular mechanisms of genome alterations and their biomedical significance.

**Prerequisite:** BMS 501, BMS 502, BMS 503

**BCHEM 581: Enzymology: Structure, Energetics, and Function-A. Structural Biology**

1 Credits

Structural biology; NMR spectroscopy and X-ray crystallography. BCHEM 581 BCHEM 581 Enzymology: Structure, Energetics, and Function-A. Structural Biology (1) The objectives of this course are to provide students with a solid background to critically interpret X-ray crystallographic and NMR experiments. Topics will will be covered in the X-ray crystallography lectures will include crystal growth, diffraction, phasing and refinement to determine the structure. Topics in NMR spectroscopy will include basic principles, multidimensional experiments, and assignments of atoms to resonances, structure determination dynamics of ligand binding to proteins. The students will learn the basic principles of protein structure determination by NMR and X-ray crystallography.

**BCHEM 582: Enzymology: Structure, Energetics, and Function-B. Practical Enzymology**

1 Credits

Practical aspects to study protein-ligand binding and substrate-enzyme reaction. BCHEM 582 BCHEM 582 Enzymology: Structure, Energetics, and Function-B: Practical Enzymology (1) The objectives of this course are to provide students with a solid background in practical enzymology.

**BCHEM 583: Enzymology: Structure, Energetics, and Function-C. Mechanisms of Enzyme Reactions**

1 Credits

Molecular basis for enzyme specificity and catalysis. BCHEM 583 BCHEM 583 Enzymology: Structure, Energetics, and Function-C. Mechanisms of Enzyme Reactions (1) The objectives of this course are to provide students with the wherewithal to interpret and design experiments aimed at elucidating the mechanisms of enzyme catalyzed reactions. Selected mechanisms of enzyme catalyzed reactions will be surveyed using primary literature. The rationale for the chemical, kinetic, molecular biological, spectrophotometric, thermodynamic tools that are used to investigate these reactions will be discussed. Topics that will be discussed include (a) principles of enzyme catalysis, (b) electrostatic catalysis (c) acid/base catalysis, (d) phosphates (e) Schiff base formation. Cofactors that will be discussed include pyridyl pyrophosphate, thiamine, biotin, tetrahydrofolate, NAD, FAD, S-adenosyl methionine, and vitamin K and B12.

**BCHEM 590: Colloquium**

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Formal courses given on a topical or special interest subject which may be offered infrequently.

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Formal courses given on a topical or special interest subject which may be offered infrequently.

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Formal courses given on a topical or special interest subject which may be offered infrequently.
education. An in-depth presentation of membrane biophysics, muscle
dynamics, cardiovascular and circulatory regulation, respiratory and renal
function, as well as acid base balance are addressed.

**Prerequisite:** BIOL 472
Cross-listed with: PHSIO 571

BIOL 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by
faculty, students, or outside speakers.

BIOL 591: Molecular Evolutionary Biology Seminar
1 Credits
Continuing seminars in Molecular Evolutionary Biology consisting of
individual lectures by faculty, students, or outside speakers.

BIOL 592: Critical Evaluation of Literature in Biology
1 Credits
Weekly readings and critiques of recent papers from primary literature
are used to teach independent thinking and effective scientific
communication. BIOL 592/BIOL 592 Critical Evaluation of Literature in
Biology (1) This course teaches beginning graduate students how to
evaluate new findings reported in primary literature in the biological
sciences. Each week, a recently published paper is evaluated according
to 8 basic criteria as follows: 1. Does the author adequately establish a
context for the issues addressed in the paper? Are the issues addressed
in the paper important in the field? Why or why not? 2. What is the
hypothesis? Is it clearly stated? Is it operational (i.e. falsifiable)? 3. Are
the methods adequate to test the hypothesis? Why or why not? What
are the controls? Are they adequate? 4. Are the data clearly presented?
Are the results properly analyzed? Are statistical inferences stated
appropriately? Do the data meet the assumptions of the statistical tests?
5. What conclusions are drawn from the results? Do the conclusions
follow from the data? Have some conclusions been overlooked? Are
there reasonable alternative interpretations of the data? Did the authors
consider alternative hypotheses? 6. What could be done to improve
the paper? Consider written format as well as the overall experimental
design. For example, is the title appropriate? Does the abstract accurately
summarize the results and conclusions? Does the paper use recent and
appropriate references? 7. What is your overall opinion of the size of
contribution that the paper makes to the body of knowledge in its field?
Is this work creative? Does it provide new insights or a framework to
understand previously disparate data? Defend your position. 8. What
would be the next set of tests of the hypothesis or the next hypotheses
to test? How should these hypotheses be examined experimentally?
To what extent do you think this paper will stimulate further studies?
The goal of the course is to provide students with opportunities to
sharpen their thinking in regard to what constitutes meaningful scientific
experimentation, interpretation of results, and effective presentation of
information in text, figures, and tables. Near the end of the course each
student prepares a written critique of a paper, and meets individually with
the faculty to discuss their critique. The course follows a format very
similar to the Ph.D. candidacy exam for Biology, thus providing formal
preparation for that exam. Faculty: James Marden

**Prerequisite:** Departmentally controlled

BIOL 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on
and individual basis and which fall outside the scope of formal courses.

BIOL 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may
be offered infrequently.

BIOL 598: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may
be offered infrequently; several different topics may be taught in one year
or semester.

BIOL 598B: **SPECIAL TOPICS**
1-3 Credits

BIOL 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

BIOL 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

BIOL 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 3
Supervised experience in teaching and orientation to other selected
aspects of the profession at The Pennsylvania State University.

BIOL 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

BIOL 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

BIOL 893: Experiential Teaching in Biology
2 Credits
The course provides a broad exploration of the science of learning as well
as how to effectively develop curricula and pedagogy to support effective
learning in undergraduate biology laboratory courses. Additionally, this
course will prepare graduate students for future roles as educators. In
particular, this course will focus on the cognitive principles of how people
learn most effectively as well as provide students the skills involved
in developing curricula and pedagogy to support active learning and
a learner-centered environment in undergraduate biology laboratory
Biomedical Engineering (BME)

BME 504: Numerical Methods in Bioengineering

3 Credits

Students study numerical methods applied to Bioengineering applications through computations. The course is designed to teach numerical methods and computational techniques for modeling physiological systems and medical devices. Topics include differentiation equations, finite difference methods and finite element methods. Finite element modeling software will be covered. Examples include physiological systems at the organ and cellular levels, physio-chemical analysis of biological systems, and transport phenomena in engineered devices. Computing programming experience is required to be successful in this course.

BME 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

Prerequisite: BME 590

BME 591: Bioengineering Ethics and Professional Development

1 Credits/Maximum of 999

Problem solving methods in ethical decision making, best practices in research communication, and strategies for professional development. This course will cover the main philosophical underpinnings of bioengineering ethics. It will then assist in developing methods for ethical decision making in the main areas of bioengineering professional practice. These areas include data collection, management and presentation, animal and human experimentation, peer review and authorship, and social implications of bioengineering research. The course will then assist in the professional development of students by instruction in tools for effective acquisition of discipline-specific conceptual knowledge, research skill development, communication, management, leadership.

BME 594: Research Topics

1-2 Credits/Maximum of 6

Supervised student activities on research projects identified on an individual or small-group basis.
and the mechanisms by which they are regulated; understanding principals of receptor theory, signal transduction and hormonal control of cellular processes; and gaining an understanding and appreciation of diseases that involve abnormal energy metabolism. The course is taught in approximately four blocks, with review sessions and examinations following each block. Exams are designed to determine mastery of the subject matter and to evaluate the ability to solve problems and logically address research questions. The principles and skills learned through successful completion of the course help prepare students for advanced graduate courses and graduate research careers.

BMS 502: Cell and Systems Biology

3 Credits

Explores the cellular and intracellular organization of biology, assembly of cells into tissues, and further integration into biological systems. This course will cover the cellular basis of physiological processes from a systemic perspective. The major emphasis will focus on the cellular, molecular, and biochemical basis of normal and abnormal (pathological) tissue function. A special emphasis will be placed on common themes applicable to all tissue and the integration of molecular, cellular, tissue and organ systems. Introductory lectures will be followed by discussion of the primary literature that complements the lecture material. The course is designed to give students an appreciation of the cell and molecular mechanisms underlying physiological processes as well as cell and molecular biology research techniques.

BMS 503: Flow of Cellular Information

3 Credits

Teaches concepts underlying the inheritance, transmission and translation of genetic information. This course will cover the cellular basis of physiological processes in each cell, tissue, and organ system. The major emphasis will focus on the cellular, molecular, and biochemical basis of normal and abnormal (pathological) tissue function. A special emphasis will be placed on common themes applicable to all tissue and the integration of molecular, cellular, tissue and organ systems. Introductory lectures will be followed by discussion of the primary literature that complements the lecture material. The course is designed to give students an appreciation of the cell and molecular mechanisms underlying physiological processes as well as cell and molecular biology research techniques.

BMS 504: Art of Scientific Communication I

1 Credits

Introduction to scientific analysis, writing, and oral presentation using primary literature sources. The overall goal of BMS 504, and the sequential course BMS505, is to further the development of students into scientific communicators who, in written and oral formats, can convey scientific concepts and the experimental support for these concepts. This includes the development of the knowledge base and communication skills required for effective scientific exchange and engagement. BMS 504 meets 90 minutes, once a week for 11 weeks from the first week of class until the Thanksgiving Recess, and focuses on reading and analyzing articles from the primary literature with brief presentations by students. The intent of this schedule is to support the students in developing the skills necessary to analyze the primary literature, begin to present components of scientific articles in a group setting, and complete these goals in a time frame that does not compete with end-of-semester examinations. The first meeting is a presentation by a course director on Effective Powerpoint Presentations. The following 10 meetings allow two weeks to cover each of five topics. Each topic focuses on a high quality article selected from a portfolio created by the instructors of the Fall first-year Core Curriculum for the Biomedical Sciences (BMS) Graduate Program (BMS 501, 502, and 503). Topics vary from year to year. The first week of each topic examines the components of the chosen article (purpose and significance) and is led by one of the course directors. The second week includes short presentations by students on experimental design and data analysis from the articles and is facilitated by a content expert from one of the Core BMS Courses.

Concurrent: BMS 501, BMS 502, BMS 503

BMS 505: Art of Scientific Communication II

1 Credits

Advanced topics in scientific analysis, writing, and oral presentation using primary literature sources. BMS 505 Art of Scientific Communication II (1) The overall goal of BMS505 is to further the development of students as scientific communicators that began in BMS 504. This includes enhancement of the knowledge base and communication skills, in written and oral presentations, required for effective scientific exchange and engagement. BMS 505 meets 90 minutes, once a week for 10 weeks from the first week of class until the end of April, and focuses on reading and analyzing articles from the primary literature with extended oral and written presentations by students. Topics vary from year to year and focus on research or curricular interests of students enrolled in the course.

Prerequisite: BMS 504

BMS 506A: Biological Basis of Human Health and Disease A

2 Credits

Cellular, molecular, genetic, and biochemical basis of organ function pathology.

Prerequisite: BMS 501 and BMS 502 and BMS 503
BMS 506B: Biological Basis of Human Health and Disease B

2 Credits

Cellular, molecular, genetic, and biochemical basis of organ function pathology.

Prerequisite: BMS 501 and BMS 502 and BMS 503

BMS 512: Data Analysis For The Biomedical Laboratory Scientist, A Practical Approach

2 Credits

Biology is becoming increasingly computational as new technologies are producing massive amounts of data. The quantitative data need to be organized, graphed, and interpreted. This course will teach students the theoretical and practical aspects of experimental design, hypothesis testing, statistical analysis, and linear and non-linear curve fitting. This course will pair lectures describing theory with applications involving problem solving. Students will learn to program so they can analyze complex data sets. The students will increase their understanding of statistics and have the wherewithal to analyze big data sets. The course will end with a final project involving image analysis in which the students will create scripts and functions to analyze the colocalization of fluorescent proteins in cells.

BMS 520: Human Integrative Physiology

3 Credits

This course explores whole organ physiology emphasizing skeletal muscle and exercise physiology, cardiovascular, renal and urinary, respiratory, gastrointestinal, and endocrine. BMS 520 Human Integrative Physiology (3) Human Integrative Physiology considers the function of the mammalian organism with an emphasis on system physiology. This course builds upon the strong foundation of cellular processes, molecular interactions, and genetic regulation provided in BMS 501, 502, 503 and allows students to develop an appreciation of the integration of biological function. The course is organized into multiple sections that focus on different organ systems. Initially, the course reviews principles of excitable cells and discuss sensory transduction, the autonomic nervous system, and motor system physiology. Next, students learn the structure and function of skeletal muscle physiology including muscle contraction, force generation, and movement. The course then focuses on the structure and regulation of the cardiovascular, renal, and respiratory systems. Subsequent sections cover gastrointestinal and endocrine systems by building upon the cellular and molecular processes covered in BMS 501, 502, and 503. Each section teaches the basic design of the system, explores the physiological principles of function, and examines how each system contributes to homeostasis and pathophysiological disease. Class material is covered through lectures and primary literature.

Prerequisite: BMS 501, BMS 502, BMS 503

BMS 550: Fundamentals of Cancer Biology

1 Credits

Tumorigenesis is a multistep process driven by genetic and molecular changes that occur over time. Although cancer is a heterogeneous disease, many human tumors exhibit similar acquired physiological features. This course employs an integrated approach to teach the fundamentals of cancer biology with focus on the role of growth factors, oncogenes, tumor suppressor genes, and signal transduction mechanisms in tumor formation. Building on this foundational knowledge, subsequent sessions address the multistep nature of tumorigenesis as well as the role played by the tumor microenvironment as tumors progress and spread. Current topics on bioinformatics and therapeutic management are covered in the last week of the course.

Prerequisites: BMS 502, BMS 503

BMS 551: Cancer Genetics

1 Credits

Genomic instability is a major hallmark of carcinogenesis. This course will examine how various forms of genome instability promote cellular transformation. The impact of both inherited and somatic mutations will be evaluated. Mechanisms of genomic instability will be explored, to understand how their dysregulation results in cancer. Epigenetic mechanisms of carcinogenesis will also be covered. Finally, novel therapeutic approaches that exploit tumor-specific mutations will be presented. As the part of this course, students will evaluate seminal research papers and the most recent findings in the literature, and learn the relevant experimental approaches employed in the field.

Prerequisites: BMS 502, BMS 503, BMS 550 Recommended Preparations: BMS 550

BMS 552: Tumor Metabolism

1 Credits

Cancer is a disease of dysregulation of cellular growth machinery leading to loss of growth suppressive mechanisms, increased growth promoting signaling, and other key hallmarks supporting the clonal expansion of malignant cells. As the cancer phenotype progresses the tumor requires increasing amounts of metabolic intermediates to continue to grow. This leads to dramatic changes in the use of glucose, fatty acids, nitrogen containing metabolites and sterols by the tumor. These cellular changes have cascading effects on the cells in the local tumor microenvironment as well as other more distant environments such as the bone and skeletal muscle which can lead to organism wide metabolic dysregulation. The objective of this course is to provide an overview of these processes at the cellular, organ, and organism levels with emphasis on the interactions of the metabolic pathways and the potential to intervene in this metabolic dysregulation for the treatment of cancers.

Prerequisite: BMS 550

BMS 553: Cancer Biology Colloquium

1 Credits/Maximum of 2

Students will be exposed to a range of topics in cancer biology from the primary literature to expand their knowledge of current state-of-the art research in cancer biology, and to enhance their critical thinking skills and ability to critique the primary literature.

BMS 554: Cancer Therapy and Immunology

2 Credits

This course gives students an overview of the fundamental processes leading to cancer development but with a focus on using drugs, immunological approaches, or interventions to combat these processes. Specifically, the course will focus on drugs targeting the various processes that lead to cancer development. The objective is to impart an understanding of the concept of cancer and the use of drugs or
immunological approaches, to combat it in the broadest sense. This will be accomplished by 1. Imparting an understanding of the basics of cancer biology and how drugs or immunology can be used to combat this disease (e.g., be able to interpret data from the cancer literature involving this material). 2. Know the major processes leading to cancer development as well as current and future drugs that will target these processes. 3. Obtain an understanding of the challenges in cancer drug development and discovery of a cure for the disease. 4. Understand the process of drug discovery and development, the challenges and opportunities inherent in it, and its relation to cancer drug development and treatment. 5. Develop a clear overview of the theory and methods that are used in the overall process of drug discovery and development for the treatment of cancer.

BMS 562: Principles of Immunology C: Dysfunction and Manipulation of the Immune System

1 Credits

Investigation of diseases associated with immune system dysfunction and the manipulation of this system to prevent and treat disease. This course will investigate the basis for human diseases that are associated with deficiencies or dysregulation of the immune system. The content builds on foundational knowledge of the immune system to demonstrate the interplay of immune components during disease processes. Students will be able to recognize the types of immune deficiencies and mechanisms of immune dysregulation that contribute to disease. In addition, students will apply this knowledge toward an understanding of how manipulation of the immune system can be used both to prevent and treat disease.

BMS 564: Concepts in Virology

2 Credits

The objective of the Concepts in Virology course is to describe the lifecycle of representative RNA and DNA viruses and the relationship between the virus and the host at the molecular level. Emphasis is placed on developing an understanding of the experimental systems used to elucidate individual steps in virus lifecycles and interactions with the host cells. Host cell-virus interactions leading to the production of progeny virus and interactions involved in establishing and maintaining long term interactions, such as latency and effects on cell growth, are discussed in detail. While some didactic lectures are provided, reading and discussion of the primary scientific literature is an integral component of the course. Students will gain a comprehensive view of the interaction between a virus and its host at the molecular level. In addition, students will gain an understanding of the experimental systems used to elucidate steps in the virus lifecycle.

Prerequisite: MICRO 550

BMS 566: Viral Oncogenesis

1 Credits

This course will provide an understanding of the role of viruses in the development of cancer in humans and the molecular mechanisms involved. The course will build on an understanding of normal growth control of cellular proliferation to determine the molecular mechanism through which oncogenic viruses exert their effects on cellular proliferation and survival. Students will gain an understanding of the contribution of an underlying human immunodeficiency virus infection and will be able to apply this knowledge to an understanding of the cooperative effect of HIV and other viruses.

BMS 567: Viral Pathogenesis

1 Credits/Maximum of 999

This course addresses methodologies used to study viral pathogenesis and recent advances in the field. The Viral Pathogenesis course will cover multiple aspects of the study and implications of viral/host interactions at the extracellular or organismal level. The course will give introductions to each topic, and will then examine recent primary literature. The aim of the course is to provide students with foundational knowledge to be able to frame experimental questions, knowledge of recent experimental techniques, and the ability to analyze experimental data and develop firm conclusions from these data. The course will examine both the host response to the virus and the ability of the virus to evade mechanisms deployed by the host to enhance viral replication and subsequent transmission.

BMS 568: Current Topics in Translational Cancer Research

2 Credits

Current Topics in Translational Cancer Research is designed to prepare students to be the next generation of translational cancer researchers. The students are expected to have a basic knowledge of cancer biology and research techniques. The content will include cancer research that is currently being conducted as well as recently completed and will introduce both new technologies as well as new theories on cancer research. The course will offer students an opportunity to acquire skills in developing and implementing hypothesis-based research studies that can lead to clinical therapeutics. The students will learn how to identify potential targets for therapy of cancer at all stages of development, from tumor initiation through progression and metastasis. The development of drugs from design and testing to investigational new drug status and FDA approval for clinical use will be discussed.

Prerequisite: BMS 550

BMS 571: Graduate Clinical Rotation

3 Credits

This course allows graduate students at Hershey and University Park to gain experience in the clinical arena. BMS 571 Graduate Clinical Rotation is designed to allow graduate students at Hershey and at University Park to gain intensive experience in the clinical arena in the area of their dissertation research. The site of the clinical rotation and specific responsibilities of the student are determined by the clinical mentor that is matched with the student. Clinical mentors will indicate their willingness to sponsor a student and will outline the associated opportunities and responsibilities of the specific clinical rotation. The specific rotation will be selected by the student and the dissertation mentor to complement the student’s graduate studies. Opportunities during the clinical rotation: The rotation typically will last 6 - 8 weeks and the student will be in the clinic and/or engaged in clinical activities for about 4h/week. During this rotation, students will have a range of opportunities including: attending Grand Rounds, attending Resident and Department Seminars and lectures, shadowing physicians, attending clinical research meetings, attending relevant case conferences, and, if appropriate, observing surgery. Students also may engage in a practical hands-on analysis of the subject matter (e.g., via an analysis of data, histology, MRI, etc.) and they will be involved in the discussion of relevant
cases and of potential treatment strategies. Requirements: Course-specific policies and expectations for all students (i.e., for all students from Hershey and from the University Park Campus). (1) all students must complete an Infectious Disease Summary; an Insurance Waiver and a Confidentiality form. The forms will be located at the CANVAS course site. All 3 forms must be received by Graduate Education Office before the start of the Graduate Clinical Rotation. (2) Orientation Meeting: All students are required to attend a 2 hour mandatory Orientation Meeting where issues will be discussed related to the course requirements, what to expect in the clinical setting, HIPAA regulations, what is and is not appropriate, how and when to interact with patients, how physicians collect data from patients, terminology, hierarchy, and differences in thinking styles between clinicians and scientists. Students will not be allowed to begin their rotation if they fail to attend this mandatory meeting.

**Prerequisite:** The student must: (a) be at least a 2nd year graduate student, (b) select a thesis relevant clinical rotation, and (c) have been approved by the course director

BMS 581: Molecular and Translational Approaches to Human Disease

3 Credits

This course teaches students the scientific process used to understand the molecular bases of diseases and the development of novel therapies. BMS 581 Molecular and Translational Approaches to Human Disease (3) The course utilizes clinically relevant diseases as specific examples of applying an integrated approach to elucidate a mechanistic understanding of disease pathophysiology and the development of novel therapies. Over the 15-week period of the course the students study five specific diseases or complications of diseases, each over a 3-week period. The diseases used represent areas of high impact on Western society or ones in which specific principles of mechanistic understanding or therapeutic development are clearly illustrated. The diseases also represent strengths of the research at the Penn State Hershey such as cancer, diabetes, cardiovascular disease, and infection and inflammation. The instructors use primary literature to demonstrate the scientific approach used to test specific hypotheses related to disease mechanism. At the end of the 3-week period, the students use team-based learning to develop experimental approaches to study novel aspects of the disease pathology or therapeutic development.

**Prerequisite:** BMS 501, BMS 502, BMS 503

BMS 590: Colloquium

1 Credits/Maximum of 6

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

BMS 591: Biomedical Research Ethics

1 Credits

Education in research ethics for biomedical scientists. Meets U.S. Public Health standards for education in responsible conduct of research.

BMS 595: Internship

1-12 Credits/Maximum of 12

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

BMS 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

BMS 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

BMS 597B: **SPECIAL TOPICS**

3 Credits

BMS 597I: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

BMS 600: Thesis Research

1-15 Credits/Maximum of 999

Laboratory work on thesis project.

BMS 601: Thesis Preparation

0 Credits/Maximum of 999

BMS 601 is available to full-time Ph.D.-degree candidates who have passed the comprehensive examination and met the two-semester residence requirement.

BMS 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

Off-campus laboratory work on thesis project.

BMS 801: Writing Grant Proposals for Biomedical Research

1 Credits

This course will give students experience with the preparation of and submission process for grant proposals. BMS 801 Writing Grant Proposals for Biomedical Research (1) This course provides students with a hands-on learning approach to the process of submitting competitive grant proposals. It will inform students of the types of grants that exist, including training fellowships for which they may be eligible. Students will learn of the many different types of organizations, both public and private, that offer biomedical research funding. A majority of the course will focus on the proposal sections pertaining to the research plan emphasizing the purpose of each section along with strategies to create an effective, successful proposal. The proposal sections to be covered in detail are: specific aims, significance, innovation and approach. In-class discussions and team-based learning activities will be used to highlight the teaching objectives for each session. Using these in-class experiences as a guide, students will apply the key aspects of proposal writing by completing a proposal as part of a grant-writing team. The proposal review process will be discussed and a demonstration
of the review process will allow students to understand who reviews proposals and how proposals are reviewed as well as to allow them to participate in the review process. In addition to these writing and review experiences, strategies for the oral presentation and defense of a proposal will be covered. By the end of the course, a student will be able to write an effective grant proposal and have the knowledge of how to present and defend that proposal orally, all skills required for a successful career in the biomedical sciences.

Biorenewable Systems (BRS)

BRS 500: Research Methods

3 Credits

Foundation in research philosophies, methodologies, issues and policies; measures of research quality; critical thinking and discourse; research report writing; professional development; research ethics. A B E (BRS) 500 Research Methods (3) A B E/BRS 500 is a course designed to assist students entering and advancing in their research career to: better investigate and practice the art of scientific investigation; openly explore and discuss what it means to be a part of the scientific and research enterprise at a major academic setting; gain skills and experiences in critical evaluation and discourse; learn the process of developing and preparing a research proposal from initial concept to near-final written product; better understand the expectations for responsible and ethical conduct as a scientist/student/individual; and further develop their philosophies and capabilities as future scientists and professionals. During this course students will continually read, think, discuss, write, critique, re-read, re-think, re-write, and communicate with other students, faculty, and professionals. The course will provide a setting to allow them to further develop their personal, professional, academic, and scientific goals and capabilities.

Cross-listed with: ABE 500

BRS 501: Biobased Polymers

3 Credits

The chemistry, structure-property relationships, and industrial applications of biobased polymers from plant and agricultural feedstocks.

BRS 502: Human Behavior and ethics in Management and Technology

3 Credits

Ethical leadership continues to be a key issue in our society and is a topic of growing interest to the public and researchers alike. Our world more than ever needs ethical leadership to address critical sociotechnological problems such as climate change, sustainable energy and materials, quality food and water, population growth, prejudice, and global conflict to name just a few. This course will provide students with an improved mechanistic understanding of basic human behavior foundational to ethical leadership and decision making. Specifically, a series of important psychological studies will be examined which provide insights into human needs, personality, individual and social behavior, and leader-follower dynamics which are needed to identify new approaches for developing and managing leadership. Students will explore the literature themselves and share their findings and insights with the larger group. Students will apply what they learn by proposing new management processes for ensuring ethical leadership and decision making and share those with their peers.

BRS 511: Structural BioComposites

3 Credits

Manufacture and practices related to the production of engineered biocomposites processed from lignocellulosic materials.

BRS 550: Applied Bioproducts Marketing

3 Credits

Bioproduct marketing applications for solid and engineered wood products and biorefinery value chain output including environmental services, energy, fuels, and co-products.

BRS 551: Sustainable Business Strategies

2 Credits

Coverage of business strategies that relate to sustainability and environmental issues.

BRS 590: Colloquium

1-6 Credits/Maximum of 12

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

BRS 595: Internship

1-9 Credits/Maximum of 12

Supervised, research-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

BRS 596: Individual Studies

1-9 Credits

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

BRS 597: Special Topics

1-9 Credits/Maximum of 15

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

BRS 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

BRS 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.
BRS 602: Supervised Experiences in College Teaching
1-3 Credits/Maximum of 6
Provides an opportunity for supervised and graded teaching experience in undergraduate biorenewable systems courses.

BRS 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

**Biostatistics and Epidemiology (BIOST)**

BIOST 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

BIOST 595: Internship
1-18 Credits/Maximum of 18
Supervised, research-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships.

BIOST 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

BIOST 601: Ph.D. Dissertation
0 Credits/Maximum of 999
Ph.D. Dissertation

**Business - CA (BUS)**

BUS 500: Negotiation, Communication, Teamwork
2 Credits
Experience-based learning approach to developing effective teams and work organizations; emphasis on developing reflective thinking and interpersonal skill sets. BUS 500BUS 500 Negotiation, Communication, Teamwork (2) This course provides students with an enhanced understanding of their own behavior, the behavior of others, and the capability to deal more effectively with people and groups in organizations. Primary emphasis is placed upon application of experiential learning theory in developing the ability to perform well as a member of a team, and also in facilitating team effectiveness. As adult learners, students are empowered to become active creators of their own learning, and working with the

**Prerequisite:** admission to the MBA or MSIS program

BUS 502: Business Research Applications
3 Credits
Critical evaluative techniques of business research.

BUS 505: Data Analysis for Business Decisions
3 Credits/Maximum of 999
Selection and application of statistical methods and use of business databases to support managerial decision-making, interpretation and presentation.

BUS 510: Business Analytics and Decision Modeling
3 Credits
Methods for solving problems that include both time evolution and uncertainty. Focus on regression analysis, simulation and advanced data analytics. This course discusses concepts and tools to make informed managerial decisions through interpretation and analysis of data. The aim is to (1) familiarize students with the concepts of data interpretation; (2) provide students with language, insights, and tools used to analyze data and model operations; (3) provide students with the opportunity to use these tools, to understand their various applications, and to interpret analyses done by others. The course will focus on regression analysis, non-linear regression analysis, mathematical and simulation modeling, and advanced data analysis techniques. When students successfully complete this course, they will be able to demonstrate use of analytical tools for modeling and optimizing business decisions and also analyze the results.

**Prerequisite:** BUS 505

BUS 515: Business Ethics and Corporate Governance
3 Credits/Maximum of 999
Legal aspects of managing for-profit corporations including (i) corporate governance, (ii) ethical decision-making, and (iii) public policy and legislation regarding business decisions. BUS 515-Business Ethics, Governance, and Law; covers a wide range of important topics regarding how firms are governed. The first part of the course grounds students in the inner workings of corporate boards of directors (BODs). Topics in this section include: - The need for governance and BODs; - The types of people that sit on publicly traded BODs; - The role of committees within BODs; - The voting process in corporations; - The role of shareholders and activist investors. The course then delves into the setting and execution of ethics policy within firms, often either initiated or approved by the BOD. Students read a number of ‘Codes of Conduct’ from firms that they are familiar with (i.e. Dell, Apple, etc) and then perform research that allows them to see if the firms match their actions with their words. Analysis is done through measuring the negative externalities that flow from certain decisions. Specific topics in the ethics section include: - The larger purpose of corporations in society; - Corporate political activity; - Decision-making and anti-trust violations; and - Bankruptcy filing and a BOD’s ethical and fiduciary duty to shareholders. Finally, the course considers general business law that managers must be cognizant of during the decision-making process. Topics include: - Federalism in the U.S.; - The difference between state and federal law; - Incorporation and Bylaws; - Criminal vs. Civil Law; and - Consumers and the Law.
BUS 580: Business and Sustainability
3 Credits
An inter-disciplinary and global perspective on the business case for social responsibility, environmental stewardship, and transparency in corporate governance. This course provides an overview of principles and practices from the natural and social sciences, arts, humanities, and professional disciplines that contribute to understanding and responding to increasing concerns over the consequences of world population growth (now in excess of eight billion people), climate change, energy, natural resource use, environmental degradation, and calls for a more fair distribution of limited and diminishing resources. Issues of corporate sustainability and social responsibility are examined particularly as they pertain to the development and application of business strategy and practices that build social equity, and restore environmental quality while maintaining long-term profitability and enhanced competitive advantage. While the concept of sustainability has existed for some time, it is relatively recently that managers have started to explore its applications to organizations and managerial behavior beyond the basic ideas of corporate social responsibility and recycling. This course moves beyond these basic ideas to place sustainability in its historical and conceptual context by examining the history and definitions of sustainability in organizational management, the role of current drivers and stakeholders, and the advantages and disadvantages of various frameworks and methods for integrating and managing sustainability within organizations, and in their environments. Selected examples of contemporary research and organizational cases will be analyzed to gain a sense of effective and ineffective approaches to sustainability, as well as addressing issues of standards, measurement, and transparent reporting.

Prerequisite: BUSEC 502 and MNGMT 511

BUS 588: Strategic Management
3 Credits
Analyzing external and internal environments of firms to develop sustainable competitive advantages. Strategic Management is the MBA capstone course designed for students to integrate analytical skills learned in functional courses with core principles of strategy formulation, implementation, and performance review. Students will analyze internal and external factors and make recommendations for how firms can create sustainable competitive advantage in the global market environment.

BUS 589: Strategic Venture Planning and Innovation
2 Credits
Development and presentation of a venture plan including product development; market research; competitive analysis; financing and capitalization; organizational structure. BUS 589BUS 589 Strategic Venture Planning and Innovation (2) The purpose of BUS 589 is to have the business student apply strategic management theories and practices acquired in BUS 588 to a specific, practical project in order to further the understanding of the process of creating and managing a strategy based on innovation (an entrepreneur strategy). This course is a direct extension of BUS 588 and should be taken immediately following it. The process of innovation is analyzed in detail together with the influences on it. The effects of various contexts on entrepreneurial strategy will be considered. Finally, issues related to the implementation and management of a strategy based on innovation will be discussed. Students are required to develop a comprehensive new venture plan for an actual business organization to demonstrate knowledge of organizational design from a strategic perspective. Students will have to apply management, marketing, finance, information systems, and accounting knowledge in the new venture proposal. They must also demonstrate their knowledge of the influence of external (environmental) contexts on strategy formulation and implementation through the use of appropriate analytic frameworks. Finally, they must demonstrate a grasp of what constitutes competitive advantage within the strategic context that they have chosen for their project.

Prerequisite: BUS 588

BUS 595: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practicums, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

BUS 596: Individual Studies
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

BUS 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

Business Administration (BA)

BA 512: Quantitative Analysis for Managerial Decision Making
2 Credits
Construction and use of quantitative methods in business decision-making.

BA 513: Advanced Microeconomic Analysis for Business
3 Credits
This course discusses topics in advanced microeconomic analysis with an emphasis on applications to applied research areas in business and other related disciplines. Topics include (but are not limited to) general equilibrium, choice under uncertainty, game theory, mechanism design,
and behavioral economics. An area of particular focus is how incomplete and asymmetric information impacts competitive and strategic behavior by individuals and firms in a variety of applied settings. The materials emphasize theoretical models prevalent in microeconomic research, and students are expected to develop a familiarity with the use of mathematical modeling in economics. Whenever possible applications to related applied disciplines such as those in finance, supply chain management, accounting, and agricultural economics will be highlighted and discussed. Experimental methods will be used at times to motivate and discuss various economic principles.

BA 523: IT Strategy
2 Credits
An introduction to information technologies critical to business organizations.

BA 528: Business Simulation
1-3 Credits
A team-based course during which students will manage a simulated firm. B A 528 Business Simulation (1-3) Using the business simulation, teams of 4-5 students will compete against other teams in a particular industry. The team members will have to make all the decisions about how to run the firm, including overall strategy, product design, detailed marketing plans, factory operations, and financing.

BA 533: Economics for Managers
2 Credits
An introduction to the tools of economic decision making and a consideration of firm, industry, and global economic influences on economic decision making.

BA 545: Business, Government and International Economics
2 Credits
Understand how macroeconomic events and policies affect the global economy and business decisions. B A 545 Business, Government and International Economics (2) Changes in interest rates, swings in the business cycle, new international trade agreements: All are macroeconomic events, and all can dramatically impact business. Accordingly the class is a synthesis of institutional, theoretical and historical perspectives.

BA 571: Strategic Management
1-3 Credits
Analysis and application of concepts and techniques aimed at successfully developing and implementing competitive strategy in a complex business environment. B A 571 B A 571 Strategic Management for Converging Economies (3) This course introduces students to the field of strategic management and the skills and tools used by general managers to make strategic decisions. Students learn to use frameworks and perspectives for analyzing industries, competitors, and companies with an overall objective of positioning the firm to attain and sustain competitive advantage. Students learn how to identify the industry and firm-level determinants of profitability and then relate those factors to the development of competitive strategy within the context of responsible business practice. Students also learn how to evaluate strategies to understand how and why companies are successful or not. Finally, students will learn how senior managers use integrative approaches for solving strategic problems.

BA 575: Capstone Business Case
4 Credits
A team-based project course that requires students to analyze an actual business problem from a firm or nonprofit organization. B A 575 Capstone Business Case (4) The Capstone Business Case course is designed to allow second-year MBA students the chance to integrate the knowledge they have gained to date in the program. True business problems are not narrow, functional area problems; rather they require teams of people to come together to jointly solve a problem that extends across many areas. For example, to assess the commercial viability for a new product requires contributions from economics, marketing, supply chain, finance, strategy, and corporate innovation. The more opportunities students have to work on real cross-functional problems, the better prepared they will be to solve them once they are actually on the job. In addition, working on a team and having to present the results gives students the ability to practice communication, teamwork, and leadership skills that are vital to success on the job.

BA 591: Applied Communications
1 Credits
Develop oral and written communication strategies to succeed in professional and academic contexts. B A 591 B A 591 Professional Development for Business Academics (1) This course is designed to equip doctoral students in business with skills and knowledge that will assist them in successfully completing their doctoral studies and moving on to a successful career as a business academic. These skills fall into three broad categories: 1) communication skills, 2) research skills, and 3) interpersonal skills (which include ethical behavior). The course is designed to cover many crucial skills and career issues that may be overlooked during a doctoral student’s normal course of study.

Prerequisite: admission to the doctoral program in Business Administration

BA 595: Internship
1-12 Credits/Maximum of 12
Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

BA 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

BA 596A: **SPECIAL TOPICS**
1-6 Credits

BA 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.
include diagnosing group dynamics, giving and receiving feedback to teammates, cross-cultural communication, and conflict management techniques. The course provides a real-time practicum for diagnosing team issues and addressing team problems and conflicts. Students apply team process concepts and techniques as they work to complete team projects in their other core M.B.A. classes. Students leave the course with an understanding of how to successfully lead a team and how to diagnose and correct dysfunctional team behaviors.

BA 803: BUSINESS ETHICS

1 Credits/Maximum of 999

A study of ethical conduct in organizations and how cultural differences and personal conduct impact business decisions. This course focuses on developing the ability to understand ethical conduct in business organizations. Understanding how to think about and manage personal ethical conduct is a key learning objective along with a review of how an organization fosters a culture that supports ethical behavior. Students will also learn how cultural differences impact business decisions in a global environment.

BA 804: Ethical Leadership

2-3 Credits

The objective of the ethical leadership course is to raise awareness of the key role played as a manager and leader in creating and maintaining responsible business conduct in work groups and organizations. The course is also intended to enhance the student’s ability to deal with the complexities of ethical decision making in today’s dynamic business environment by clarifying and applying personal values.

BA 805: Negotiation Theory and Skills

1-3 Credits

The ability to effectively negotiate is an essential skill for managers. Negotiations not only occur with customers or clients, but also between bosses and subordinates, among teammates and across departments. Being able to craft a successful deal, especially in difficult circumstances, requires knowledge of yourself, as well as the substantive material that you are negotiating. Effective negotiators know their own limitations as well as their strengths. They also listen well and have good analytical skills. And, they can craft agreements that garner gains for themselves as well as for other if such gains are possible. Successful negotiating is also closely allied with successful teamwork since both processes require listening, persuasion, influence skills, and creativity. This course will give students an overview of the difference between traditional (distributive) bargaining and interest-based (or integrative) negotiations. Students will learn the rudiments of interest-based negotiating and practice it in several negotiation simulations. They will learn how to identify their own and others’ interests, to create and claim value and to craft constructive agreements for all parties. The course will concentrate on two person and small group negotiations as well as to deal with difficult opponents.

BA 809: Strategic Business Architecture

3 Credits

BA 809 focuses on the development and application of business architecture as a holistic discipline that produces a common understanding of the organization that is used to align strategic objectives and tactical initiatives. Business architecture bridges the gap between a company’s strategy and its successful execution. A
business architecture approach that delivers business value to the enterprise produces several things: - An articulation of the strategic requirements of the enterprise - Models of the future state which illustrate what the enterprise should look like across multiple business viewpoints in support of the business strategy - A road map of the change initiatives required to reach that future state - The requirements, principles, standards, and guidelines that will steer the implementation of change initiatives The primary purpose of describing the business architecture of an enterprise is to improve the effectiveness or efficiency of the business itself. This includes innovations in the structure of an organization, the centralization or federation of business processes, the quality and timeliness of business information, and ensuring that money spent at the project level is in support of the strategic objectives of the larger enterprise. The course also develops additional capabilities for communicating, explaining, and justifying decisions relating to business architecture.

BA 810: Supply Chain and Operations Management
1-3 Credits

This course is designed to provide students with an overview of the role of operations in the organization, the kinds of decisions operations and supply chain managers make, and the impact of these decisions on the strategic and tactical position of the firm. Supply chain management is a particular focus in the course. The interaction of production, distribution and information resources plays a critical role in developing and sustaining a firm's competitive advantage.

BA 811: Financial Accounting
1-3 Credits

Business enterprises convey information to their present and potential investors and creditors through financial reports. This course focuses on these financial reports, the data they contain, how users should read and interpret financial statements, and how users can incorporate this information into their investment decision making. It also examines how managers attempt to window dress these financial statements and how the numbers might affect managerial behavior.

BA 815: Business Statistics for Contemporary Decision Making
2 Credits

This course is designed to meet the entry statistical requirements for any course in the Smeal M.B.A. Program, as well as to provide job applicable skills across the entire business portfolio.

BA 817: Communication Skills for Management
1-4 Credits/Maximum of 4

One of the most important skills M.B.A.s develop in business school is the ability to demonstrate the value of their experiences. This course provides students with targeted opportunities to develop this skill as they clearly, forcefully, and professionally represent ideas, opinions, and solutions. Students will participate in various oral, written, and graphic projects during the course. After completing this class, students will have proficiency in representing their skills, expertise, and views to business partners (clients, colleagues, employers, and shareholders). This course is spread over two semesters (2 semesters, 4 M.B.A. modules). Residential M.B.A. students must complete all 4 credits (1 credit each in mods 1,2,3,4 for a total of 4 credits). The material builds on each prior module and applies communications skills to various applications.

BA 821: Foundation in Managerial Accounting
2 Credits

Foundations in Management Accounting has two broad aims. First, it is designed to help students grasp the technical aspects of accounting for activities and processes within and between firms. Therefore, students will study methods of a) cost classification & estimation; b) cost measurement & allocation; c) profit planning; and d) evaluation and control of behavior. Second, the course emphasizes the context of managerial accounting. The firm suspends market prices that regulate behavior impersonally. Students will study how economic arrangements are organized in such non-market settings. Unlike financial accounting, the field of management accounting integrates notions from diverse fields including economics and sociology. Crucially, management accounting is situational and therefore requires and hones students' facility in both quantitative analyses and qualitative judgments.

BA 831: Foundations in Finance
1-3 Credits

This course provides a foundation in finance from the perspective of the firm. The objective is to show students that basic financial principles can be useful no matter the type of job taken. The two main topics of the course are: (1) how managers can use financial techniques to help them do their jobs and (2) how firms can use financial markets to solve financial problems. Topics discussed include the time value of money, criteria for asset selection, capital budgeting, the operation of security markets, portfolio theory and asset pricing, and the firm's cost of capital.

BA 832: Global Business Environment
1 Credits

Changes in interest rates, swings in the business cycle, new international trade agreements: all are macroeconomic events, and all can dramatically impact business. Institutional constraints, as well as theory, and history guide present day macroeconomic analysis and policy. Accordingly, the class is a synthesis of institutional, theoretical, and historical perspectives. A wealth of macroeconomic information and data is now available on the web for those who know how to access and interpret it.

BA 835: Global Perspectives
1-3 Credits

This course starts with the reality that the United States is less influential in global trade, finance, economics, and business than it was in previous decades. Consequently, M.B.A. students need to be aware of the business environments of other countries, the influence of these countries in the global political economy, and new competitors emanating from other parts of the world. About two-thirds of the course is focused on understanding macroeconomic concepts, and analyzing the challenges and opportunities posed by some of the most important countries and regions and the companies headquartered there. Approximately one-third of the course examines global themes that affect virtually all companies, regardless of nationality. Companies that respond creatively to the challenges posed by technology, sustainability, demographic change, urbanization, civil society, and related issues are likely to be more successful than those that do not. The course uses an interdisciplinary approach to explore the dynamics of international
business, globalization, and country/political risk. After reviewing important features of the international business landscape, we will examine the business environments of the world’s major regions and select countries, particularly those where students will be going for Global Immersion, while surveying macroeconomic terms and concepts along the way. The course concludes by examining how transnational themes may affect international business in the coming years.

BA 836: Global Immersion

1-3 Credits

Global Immersion is designed around a visit to another economic region. In the past, MBA students have visited such countries as Belgium, Brazil, Chile, China, Czech Republic, France, Ireland, Turkey, and Singapore. In each country, students visit both local and multinational businesses to understand how a business gets established and run in another country; students also meet with industry and government officials to get their perspectives on the economic policies of the country. Each Immersion is coordinated by a faculty leader who plans the visit so as to appeal to a wide range of student interests.

BA 840: Business Data Management

3 Credits

Business Data Management will enable students to use various database designs to acquire the information needed to make effective business decisions. Successful students will be able to design, create, and implement a relational database and be able to write SQL statements to obtain information from a database. In addition, students will investigate the next generation approaches for storing, manipulating, and managing web data in unstructured formats. Students will gain an understanding of the advantages and disadvantages among XML, NoSQL, NewSQL, and Relational databases. After successfully completing this course, students will have the knowledge, skills, and abilities to: - structure a database, configure it, perform analysis within it, and report from it - have adequate understanding of SQL to retrieve data from a database using SQL query language - design a database system including an ER Model and a UML class diagram, and implement the design in an enterprise database application - understand NoSQL databases, XML native databases, NewSQL databases, and the advantages and disadvantages of these databases.

RECOMMENDED PREPARATIONS: three credits of data analytics

BA 841: Business Intelligence

3 Credits

Business intelligence encompasses the IT tools for exploring, analyzing, integrating, and reporting business data for fact-based, intelligent decision making. This course primarily investigates methods and tools for exploring and analyzing large amounts of business data, also called ‘Big Data’. Learning methods emphasize active learning in the application of methods and tools to real data and the presentation of the results. Students will be exposed to a variety of methods for analyzing both structured and unstructured data and they will work with business data sets to understand the value that can be extracted from large data sets. They will also learn how to classify and associate data to discover business rules that can be used to support decision making. The course will also cover methods to analyze social media information and tools that can facilitate such analysis and discovery. Students will work with data from real social networks to gain an appreciation of how value can be obtained from such networks. Finally, they will learn about techniques for visualizing, presenting, and communicating information in a useful way, e.g. through dashboards and with other technologies on various platforms. Upon successful completion of this course, students will have: - acquired the tools and techniques of data cleaning and preparation, data mining, and data visualization - developed an understanding of data mining, and data visualization - become competent in analyzing both structured and unstructured data - developed an understanding of, and an appreciation for, the complexities of mining unstructured data such as text data including documents, web pages, emails, etc. - developed an understanding of social networks as well as mobile and location-based analytics

COREQUISITE: BA 840 RECOMMENDED PREPARATIONS: three credits of data analytics

BA 850: Sustainability Driven Innovation

3 Credits

This course explores sustainability as a business opportunity for developing innovative products and services. It will focus on consumer needs related to sustainability, willingness to pay for these needs, and the innovative processes necessary to create sustainable solutions.

BA 865: Strategic Leadership

1-3 Credits

This course presents a senior executive perspective on the key opportunities and challenges faced by business leaders. Course content is based on extensive research on the experiences of senior leaders from major organizations around the world. The lessons from these experiences form the backbone of a series of discussions on the changing context for setting strategy and leading organizations in an evolving business environment. Students who complete the course will demonstrate the ability to think strategically about organizational issues and challenges, develop effective strategies for organizational performance and success, and shape organizational cultures that facilitate strategy implementation and organizational change.

BA 880: Leadership Immersion

2 Credits

This course will provide practical and hands-on exposure to leadership training and exercises that can be applied in a diverse range of professional environments and business settings. Students will assess their own leadership strengths and development areas, develop an individual leadership development plan, apply that plan in a Leadership Immersion experience, and complete a reflection paper upon return. The course provides an opportunity to apply and integrate the knowledge and skills students developed throughout the program with strategic management and leadership concepts. Leadership Immersion off-site components take students to one- to two-day leadership development programs such as: the Fire Department of the City of New York (FDNY) Fire Academy; the U.S. Marine Corps Officer Candidate School in Quantico, Virginia; the U.S. Military Academy at West Point; and Gettysburg National Military Park. All of these off-site immersion experiences focus on leadership in situations that require rapid decision-making, communication, and team cohesion in a stressful or uncertain environment.

Prerequisite: BA 801, BA 802
BA 888: Strategic Leading and Identity

3 Credits

The course takes a unique approach to strategic leadership that emphasizes identity issues that are critical to understanding individual and collective processes in organizational life. Students will learn about their own leadership as it relates to their identity and others’ identities. It will provide practical and experiential exposure to classic and contemporary leadership frameworks that can be applied in a diverse range of professional environments and business settings. Students will assess their own leadership strengths and development areas, create an individual leadership development plan, apply that plan as part of the course, and complete a reflection paper upon executing the plan. The course provides an opportunity to apply and integrate the knowledge and skills they developed throughout their education and their careers. The course will include an individual leadership style multi-rater assessment. Students will self-assess and receive feedback from others on their leadership behaviors, and will develop a plan for individual leadership development. The course will also include opportunities for students to focus on self-awareness as a leader and building leadership skills (e.g., active listening, giving/receiving feedback, mindfulness).

Business Administration (BADM)

BADM 501: Costs, Competition, and Marketing Performance

6 Credits

A project-oriented investigation into the critical principles of accounting, economics, and finance.

BADM 502: Demand, Operations, and Firm Performance

6 Credits

A project-oriented investigation into the critical principles of management, marketing, and operations.

BADM 503: Integrated Business Analysis

3 Credits

Overview of the statistical analyses of a variety of business problems.

Prerequisite: BADM 501 and BADM 502

BADM 510: Cost Management for Decision Making and Control

3 Credits

The study and use of accounting information for cost management, product costing, planning and controlling operations, and managerial decision making.

Prerequisite: BADM 501

BADM 512: Managing Effective Organizations

3 Credits

Understanding the critical and changing role of management in contemporary organizations. BADM 512 Managing Effective Organizations (3) The objective of this course is to provide MBA students with an understanding of the challenges confronting managers of contemporary organizations and a knowledge of the tools and techniques available to help them confront those challenges in dynamic workplace settings. The course will be structured around the POLC framework, a system that emphasizes the four essential functions of management: Planning, Organizing, Leading, and Controlling as an ongoing process of interrelated activities.

Prerequisite: BADM 502

BADM 513: Quantitative Methods for Business

3 Credits

This course is designed to provide a systematic understanding of design, operation, and control of business processes that transform inputs into outputs. BADM 513 Quantitative Methods for Business (3) This course is designed to provide a systematic understanding of design, operation and control of business processes that transform inputs into outputs. The course encompasses both manufacturing and services. The focus is on providing decision-making skills with an emphasis on processes of analysis. Topics include operations planning and strategy, systems design, inventory management, capacity and materials planning, JIT and lean operations, quality control and management, scheduling, and project management. Quantitative methods include linear programming, decision analysis, inventory models, forecasting, simulation and queuing models.

Prerequisite: BADM 501 and BADM 502

BADM 514: Strategic Planning and Business Policy

3 Credits

Formulation of objectives and the implementation of programs to promote long-range success of the organization in a changing environment. BADM 514 Strategic Planning and Business Policy (3) Drawing from concepts in competitive strategy, organizational economics, financial economics, and industrial organization, this course will describe the skills that managers must command to create economic value through firm strategy. These skills include the ability to apply analytical tools to assess industry structure and competitors' strategies, the ability to assess the optimal scope and boundaries of the firm, and the ability to design administrative structures, systems, and processes that facilitate the development and deployment of corporate resources. Even though the course incorporates various theoretical perspectives, it ultimately is designed to focus on the essential issues and problems of competitive strategy as experienced by managers.

Prerequisite: BADM 510, BADM 512, BADM 513, and BADM 554

BADM 523: International Business

3 Credits

Survey of the theory and practice of international business.

Prerequisite: BADM 501 and BADM 502

BADM 525: Innovation and Change Management

3 Credits

Analysis of innovation sources, effects on industry structure and firm resources, and how firms can manage adoption and implementation process.

Prerequisite: BADM 501, BADM 502, BADM 503
BADM 526: Leadership and Ethics
3 Credits

A multiperspective review of leadership theory and research with special emphasis given to the ethical dimensions of leadership. BADM 526 Leadership and Ethics (3) The objectives of this course are to: a) increase moral awareness of ethical issues in organizations, b) consider the interrelationships between organizations and their stakeholders, c) analyze the ethical impacts of managerial decision-making, d) understand how to manage the ethical performance of people and organizations, e) develop an understanding of the ethical dimensions of leadership theory and research, f) explore the relationship between the concepts of leadership effectiveness and ethical leadership. Ethical conduct is an important issue for managers in all functional areas of business organizations. Long-term success in business depends not only on mastery of the immediate technical environment and competitive domain, but also consideration of and attention to the broader social and ethical environments in which all organizations and institutions are embedded. Leaders have an important role to play in managing the financial and ethical performance of individuals and organizations. Even though leadership is one of the most researched topics in management, most reviews of the leadership literature rarely mention the ethical dimensions of leadership. Understanding what ethical leadership is and why it is important can provide a more comprehensive view of what it means to be an effective leader.

Prerequisite: B ADM502

BADM 532: Corporate Finance
3 Credits

Application of modern corporate finance theory to corporate practice.

Prerequisite: B ADM501 and B ADM503

BADM 554: Marketing Strategy
3 Credits

An application of marketing theoretical principles from popular press publications. B ADM 554 B ADM 554 Marketing Strategy (3) This course is an investigation into current popular press publications and their application of marketing theoretical principles to actual business situations. It includes analytical processes and an emphasis on critical thinking skills useful to upper level marketing managers.

Prerequisite: B ADM502

BADM 555: New Product Development and Management
3 Credits/Maximum of 999

This course will cover the concepts of new product/service development and brand management strategies for competition intensive firms. Identifying opportunities, developing strategies, and designing processes for the creation of new products are key responsibilities for both entrepreneurs and managers in established firms. But developing new products is also fraught with risk: an overwhelming majority fail when introduced to the market. This course is about improving the odds of placing winning bets on new products. This course is especially recommended to students who expect to (i) launch their own businesses, (ii) work as brand or product managers, or (iii) have responsibilities requiring knowledge of product strategies and management of new product initiatives. Consultants who advise clients on product strategies may also benefit from taking the course. Strategies and processes for new product development will be the core of the course. Strategy provides the context for product development — without it, each product development project is a separate and disjointed effort that has a much lower chance of success. This is one major reason why so many new products fail. Strategy for new products requires aligning new product development with market opportunities (for example in emerging markets, or by exploiting new inventions and technologies); selecting business models; and choosing effective marketing and manufacturing strategies. Process includes choosing a sequence of activities that is both rational and effective for converting ideas into compelling new products. These activities include concept development, design, prototyping, demand estimation, costing and pricing, branding, packaging, product testing, and market testing. However, not all products use the same development processes, and it is important to understand when to use which processes. It is expected that students enrolling in BADM 555 will be familiar with fundamental marketing concepts and practices. These are generally addressed in an undergraduate marketing course or equivalent professional training.

BADM 597: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topic or special interest subject which may be offered infrequently.

BADM 828: Negotiations
3 Credits

Negotiating is an essential task of management. Successful managers bargain, negotiate, and resolve disputes with bosses, co-workers, subordinates, suppliers, customers, competitors, and other stakeholders. Effective negotiation can improve an individual's own outcomes as well as those of the other parties involved. Ineffective negotiation not only hurts the negotiator's ability to get 'things done' but can also lead to poorly constructed or failed agreements in which everybody loses. The goals of this course are to improve students' negotiating skills. In this course, students will learn the theory and practice of negotiation. Course readings, discussions, and exams are designed to develop the theoretical foundation that is needed to understand the principles of effective (and ineffective) approaches to negotiations. Students will practice what they have learned by taking part in negotiation exercises and simulations.

BADM 834: Portfolio Management
3 Credits

The course is designed to expand the student's knowledge of the broad field of financial and investment analysis. The student will examine the basic tools of asset valuation and inputs for portfolio management. Security Analysis requires a thorough understanding of financial statement analysis, quantitative techniques, and economics. The major objectives of this course are to gain a working knowledge of the fundamentals of portfolio management - including creating an investment policy statement, asset allocation, optimal portfolio selection, and analyzing equity, debt, and alternative assets. The student will also have the opportunity to apply those principles to the management of their own (virtual) $100,000 investment portfolio. This course expects students to be familiar with the fundamental finance concepts and practices, either through successful completion of an undergraduate finance course or equivalent professional training.
BADM 841: Principles of Applied Project Management

3 Credits

This course is a problem-based course in the application of project management processes, methods, techniques, and tools needed to manage projects in a modern business environment. The course covers the fundamental project management principles associated with initiating, planning, executing, controlling, and closing projects. Project charters, schedules, resource assignment matrices, and communication, risk, and quality control plans are all tools that can enhance effective project management and which are covered in the course. This course assumes that project management in the modern organization is a complex team-based activity, where application of effective leadership and team management principles are critical and where various types of technologies (including project management software as well as software to support group collaboration) are an inherent part of the project management process. This course also acknowledges that project management involves both the use of resources from within the firm, as well as contracted from outside the organization.

BADM 871: Business Analytics

3 Credits/Maximum of 999

This course provides a broad understanding of business analytics and managerial best practices for leveraging analytics. Advances in computational technologies, coupled with the massive amounts of data available through business activities as well as the surrounding ecosystems, have created an amazing potential for managers to leverage analytics in order to gain organizational and competitive advantages. This course takes a two-fold approach to address Analytics Methodologies. The first section of the course provides a broad understanding of business analytics and the second section demonstrates the managerial best practices for leveraging analytics. The course covers concepts such as analytics problem framing, data understanding and preparation, as well as descriptive and predictive modeling. The course incorporates applications and real-world datasets from marketing and other business disciplines for a hands-on learning experience. Best practices derived from cases are also incorporated into the course structure in order to learn the strategies required to implement and manage analytics initiatives in businesses. Students are initially introduced to business analytics through a series of examples, use cases, and applications. Next, descriptive analytics through the use of dashboard and business reporting techniques is presented as a means for business performance management. Following this, the overall predictive analytics process is explained with emphasis on framing the analytics problem from an understanding business context. Additionally, fundamental predictive modeling concepts are covered concurrently with the introduction of exemplary modeling techniques. Students then receive an opportunity to apply these techniques through the use of different problem scenarios and real world datasets. Related topics including overfitting and visualizing model performance are covered as well. Students are presented an expected value framework to assist approaching business problems with a decision-analytic perspective. The course also covers managerial aspects of integrating business analytics within the enterprise by linking business strategy to business analytics initiatives. Approaches to initiate, manage, and sustain analytics initiatives to gain a competitive advantage are discussed with cases. At the end of the course, students are expected to have the competencies required to analyze possible opportunities for leveraging analytics across the boundaries of functional business domains, as well as apply key analytic techniques and interpret results for decision-making.

BADM 895: Internship

1-6 Credits/Maximum of 6

Supervised, professionally-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

Business Administration (BUSAD)

BUSAD 519: Developing Creative High Performance Organizations

3 Credits

This course focuses on how to create high performing organizations based on models provided by business, science and the arts. BUSAD 519 BUSAD (LEAD) 519 Developing Creative High Performance Organizations

(3)Overview: This course focuses on how to create high performing organizations based on models provided by business, science and the arts. We will examine the key assets that these disciplines bring and show how to apply them to business activities. For example, it has been shown that improvisational models from music are highly relevant to new product development. Course activities will include a discussion of the readings from relevant academic research in the business field. We will discuss the philosophy of aesthetics, analyze cases, and review original works. We will also listen to short lectures by practicing artists, musicians, actors, scientists, and writers. Together, these activities will help students to develop strategies to help their organizations attain higher levels of performance. This course is a graduate elective for MBA students and could also be taken by other students (such as Leadership students) if it meets their degree requirements. The way the course will run: This course will be run as a graduate seminar designed to maximize the learning of the members of the group including the instructor’s. We will learn about each of the topics noted above through a variety of means. Our interaction will include general discussions, lectures, case discussions, exercises, small group meetings, and on-line chats. We will have invited speakers for the class representing the arts, music, science and business.

Prerequisite: 6 graduate credits in business

Cross-listed with: LEAD 519

BUSAD 523: Prices and Markets

3 Credits

A survey of analytical concepts and techniques essential to an understanding of the business environment.

Prerequisite: MGMT 501

BUSAD 525: Quantitative Methods in Finance

3 Credits

Study of quantitative methods used in financial and investment analysis and modeling. BUSAD 525 BUSAD 525 Quantitative Methods in Finance (3) BUSAD 525 studies statistical and econometric methods to provide a quantitative foundation in financial and investment analysis. Students will be introduced to the statistical and econometric methods necessary in quantitative financial modeling. Students will acquire
practical knowledge, skills and abilities in financial modeling, including sampling, estimation, and hypothesis testing, regression analysis and its application in finance, portfolio analysis methods, and time-series analysis and forecasting. Spreadsheet programs such as the Microsoft Excel program will be used extensively throughout the course.

BUSAD 542: Global Intercultural Management

3 Credits

This course develops students’ global cross-cultural competencies and cultural intelligence to enhance ability to manage global organizations and work interculturally.

Prerequisite: MGMT 501 or equivalent graduate-level preparation on organizational behavior or a closely related social science area of inquiry

BUSAD 545: Negotiation Strategies

3 Credits

This course covers strategies and tactics for understanding conflicts, for negotiating effectively, and for dealing successfully with power in organizations. BUSAD 545BUSAD 545 Negotiation Strategies (3) Although situations involving international incidents, corporate acquisitions, or national collective bargaining contracts demonstrate the dramatic effects of the need for negotiation, it is something that most people do every day. Negotiation is not a process reserved for skilled diplomats, top salespeople, or leaders of labor unions. The structure and processes of negotiation at the interpersonal level are fundamentally the same as at the corporate or international level. For this reason, knowledge about and skill in negotiating is essential to anyone who works with and through other people to accomplish objectives. It is part of the normal 'give and take' of any business situation, such as negotiating salaries, arranging deals with vendors, or allocating resources for a project. Unfortunately the ability to simply recognize conflict and the need for bargaining does not insure successful negotiating situations. Negotiation is a complex human activity, involving a dynamic interpersonal process. The skilled negotiator possesses a number of skills including: the intellectual ability to understand the key facts that shape and characterize different negotiation situations; the skills to diagnose problems and select appropriate strategies and approaches to address them; and the understanding of one's own personality and value system, which affect the perception of a situation and the choice of tactics and strategy. Negotiation is a learnable process. In this course students will learn how to recognize and resolve conflict through bargaining, what the bargaining process involves, and how to plan and carry out a successful negotiation.

Prerequisite: MGMT 501

BUSAD 551: Business, Ethics, and Society

2-3 Credits/Maximum of 3

The course focuses upon the exploration and analysis of the ethical, political, technological, social, legal and regulatory environments of business. BUSAD 551 Business, Ethics, and Society (2-3) Students will explore and analyze the challenging issues that lie at the intersection of business, government, and society through a lens of business ethics. Topics covered include the importance of ethics in the business decision process and the types of ethical issues business practitioners face in the business environment; consequentialist and nonconsequentialist ethics principles and their application to business decision-making; the role of personal and organizational values in business decision-making and the impact that organizational culture has on the ethical dimension of decision making. Students will evaluate and analyze the ethical dimension of decision-making; become familiar with the stakeholder concept and utilize it in the business decision-making process; identify the constraints societal values place upon the firm; examine the role government plays in the marketplace; explore the social and ethical dilemmas that arise from the globalization of business; and understand and explain the process through which corporations attempt to influence societal and government institutions.

Prerequisite: B A 517 , MGMT 501

BUSAD 555: Full Range Leadership Development

3 Credits

Development of behavioral skills associated with outstanding leadership of individuals, teams, and organizations through advanced information technology, experimental exercises, and case analysis. BUSAD 555BUSAD (LEAD) 555 Full Range Leadership Development (3) Leadership is one of the world’s oldest preoccupations. Since the beginning of civilization, prophets, kings, rulers and managers have struggled to find answers to an important question: Why do most leaders or managers elicit merely competent performance from their followers, while a select few inspire extraordinary achievement? Given increased globalization, diversity, restructuring, e-business and innovation in today’s business environment, finding answers to this question is important for maintaining organizational competitiveness. The purpose of this course is to provide answers to this question by identifying traits and behaviors associated with outstanding leaders, explaining how they get results, and why their leadership often exceeds all expectable limits. This course is designed to introduce students to a) behaviors associated with outstanding leadership, b) social learning and cognition in organizations as a context to promote outstanding leadership, and c) leadership development as a strategic intervention to enhance individual, group, and organizational motivation and performance. The course will be run as a graduate seminar. We will interact through Web site technology, general group discussions, team projects, lecturettes, case discussions, exercises and videos. Class sessions will focus on issues raised by the readings, cases, and issues relevant to students’ organizational experiences. A portion of the class time may be set aside for the coordination of team projects.

Prerequisite: MGMT 501 or LEAD 501

Cross-listed with: LEAD 555

BUSAD 556: Diversity Leadership

3 Credits

Analysis and application of models, theories, and strategies for managing an increasingly diverse workforce and customer base. BUSAD 556 (LEAD 556) Diversity Leadership (3) In this course students will explore the theory and practice of diversity leadership through experiential exercises, video and didactic presentations, small group and class discussions, and the analysis and application of models, theories, and strategies for managing an increasingly diverse workforce and customer base.

Prerequisite: LEAD 501 or MGMT 501

Cross-listed with: LEAD 556
BUSAD 559: Career Management
3 Credits
Provides students with a conceptual understanding of careers/career design making through an examination/discussion of the literature in career management.

Prerequisite: MGMT 501

BUSAD 578: Managing Business Processes
3 Credits
Develop and evaluate process models, performance metrics, and information flow to facilitate cross-functional business processes for 21st century organizations. BUSAD 578 Managing Business Processes (3) Twenty-first century executives cross-functional business processes rather than managing their organizations as independent functional silos. Consequently, the ability to design and implement process oriented organizations has considerably evolved over the past decades. More importantly, initiatives related to Service Oriented Architectures (SOA) and Business Process Management (BPM) systems are predicated on the existence of well-designed business processes. However, the task of designing processes has become harder due to the disappearance of boundaries both within and across enterprises. Managing Business Processes provides students with an understanding of the key aspects of business processes such as collaboration, information flow, people, and business rules. The main objective is to provide an overview of various techniques and tools for analyzing, improving, and implementing business processes and information system controls. The course will utilize cases, process modeling methodologies, and simulations to strengthen the students’ understanding of business processes and their contribution to business performance.

Prerequisite: MGMT 501, and ACCT 511 or OPMGT510

BUSAD 585: Research in Security Valuation
3 Credits
Analysis and valuation of equity investments. BUSAD 585 BUSAD 585 Research in Security Valuation (3) BUSAD 585 focuses on the analysis and valuation of a firm’s equity securities in the financial market using a fundamental analysis. Students will learn how to use different valuation techniques for different types of companies (e.g., companies in financial distress/bankruptcy, private companies, start-up companies with no earnings). The course integrates topics discussed in various finance courses to help students to develop their analytical ability to identify strategies that enhance value creation. The philosophical basis for this topical integration is that valuation of a firm’s securities requires one to know not only the accounting issues involved in the preparation of financial statements and how to analyze financial statements, but also to understand the impact of monetary policy, the operation and regulation of financial markets on the value of the firm’s equity securities. Moreover, because firm value depends on how well the company is managed, a good understanding of its operations in the global markets, its internal control and risk management strategy is also essential. Finally, because valuation is also based on quantitative models, knowledge of quantitative methods is paramount.

Prerequisite: completion of all core courses in the Master of Finance program

BUSAD 801: Statistical Analysis for Managerial Decision Making
3 Credits
This course is designed to provide the M.B.A. students with an exposure to the most commonly used statistical concepts, methods, techniques, and their applications to business problems. This course covers the basic concepts of business statistics and data analysis integrated in a contemporary spreadsheet environment. The course emphasizes practical applications and business decision making.

BUSAD 802: Cornerstone of Sustainability
3 Credits
In-depth exploration of the social, environmental, and organizational sustainability challenges facing business leaders in the 21st Century. BUSAD 802 Cornerstones of Sustainability (3) BUSAD 802 provides students with an overview of the social, environmental, and organizational sustainability challenges facing 21st Century business leaders. The course seeks to develop students’ critical capacities for reflection and action based upon a systems thinking framework. Topics to be explored include the history of the sustainability movement, an overview of pressing environmental and social issues, and alternative perspectives on the local and global economy. The course addresses local and global issues surrounding sustainable management and reviews the major frameworks of sustainability that provide the scientific foundations and economic principles of how sustainability can help organizational leaders to achieve natural competitive advantage. Students will apply theoretical and practitioner frameworks to real world cases.

BUSAD 809: Triple Bottom Line Accounting
3 Credits
In-depth exploration of the issues related to implementing measurement, reward and reporting systems for economic, social, and environmental impacts. BUSAD 809 Triple Bottom Line Accounting (3) BUSAD809 expands the traditional financial and managerial accounting topics to encompass economic, social, and environmental impacts. Students will investigate the strategic linkages between sustainability and the value of the organization, define true costs and become familiar with alternative cost measurement systems, and assess the impact of social risk. Other topics include the design and implementation of management performance evaluation and reward systems that align with social and environmental as well as economic goals, and global reporting standards and best practices.

BUSAD 811: New Ventures Ideation and Feasibility Analysis
3 Credits
BUSAD 811 focuses on the ideation process and determining whether an idea has commercial potential in both an entrepreneurial and intrapreneurial setting. In order to see and evaluate opportunities, students learn about entrepreneur characteristics; develop skills such as marshaling resources (HR, legal, financial, operational, and technical) needed to introduce the product or service into the market place; and developing an entrepreneurial team.

RECOMMENDED PREPARATIONS: 6 credits in business or by permission
BUSAD 822: New Venture Start-up

3 Credits

Examines the financial and legal issues that are critical in the formation, development, and management of new ventures. The focus of the course is on the methods of funding and cash flow management for the new enterprise, as well as the underlying legal issues that impact new ventures. This course builds on the foundation of the required finance course to give students an overview of the various legal issues that are critical to new venture development.

RECOMMENDED PREPARATION: 6 credits in business or by permission

BUSAD 824: Finance and Investment for Sustainable Growth

3 Credits

In-depth exploration of the methods of financing available for sustainable growth in developed and emerging markets. BUSAD 824 Finance and Investment for Sustainable Growth (3) BUSAD 824 provides students an in-depth exploration of the theories and the applications that financial professionals can leverage to simultaneously earn a profit and have a positive impact on society. The specific financial sectors students will examine are: Capital Markets (to address environmental issues), Commercial Banking (to create sustainable economic development), Project Finance (to reduce poverty and create infrastructure development), and Investment Management (to understand and employ socially responsible investing).

BUSAD 826: Current Issues in Corporate Finance

3 Credits

This course covers topics in advanced corporate finance and financial modeling, including capital structure, cost of capital, financial forecasting, and valuation. Estimating the firm's current market value and projecting its future performance requires one to build accurate and flexible financial models. The ability to understand and build financial models is one of the most essential skills in the finance field, including commercial banking, corporate financial management, investment management, and investment banking. This course bridges the gap between theory and real-world practice through a step by step hands-on approach in financial modeling.

Prerequisite: FIN 531, BUSAD 525, ACCTG 512

BUSAD 827: Fixed Income Securities

3 Credits

This course focuses on the various fixed income securities including bonds (treasury, corporate, municipal), mortgage-backed securities, asset-backed securities, interest rate derivatives, and credit derivatives. It will build upon that knowledge in order to understand fixed income portfolio management, with focus on portfolio construction, managing versus a benchmark, and measuring and managing risks.

Prerequisite: FIN 808 and FIN 813

BUSAD 828: Mergers and Acquisitions

3 Credits

The mission of this course is to survey the drivers of success in mergers and acquisitions (M&A) and develop students' skills in the design and evaluation of these transactions. The course will combine a survey of mergers and acquisitions, an investment banking product-training class for associates, and a case study. We will focus on the type of merger most class participants will potentially be involved with - the acquisition of a modest-sized private company by a larger private company, or by a mid-size public company. At the same time, due to the availability of date, much of the case material relates to larger public-to-public transactions. We will use these cases to illustrate major points applicable across a range of transactions.

Prerequisite: ACCTG 512

BUSAD 829: Data Analysis in Finance

3 Credits

Financial markets produce huge amounts of data, which poses a big challenge for financial institutions. This course provides students with the necessary knowledge and skills to analyze financial data to extract valuable insights in order to facilitate financial decisions. This course focuses on how statistical methods and data mining techniques can be used to analyze real financial data.

Prerequisite: BUSAD 525

BUSAD 830: Biotechnology and Health Industry Overview

3 Credits

The course explores current issues and trends in the biotechnology, pharmaceutical, medical device, and health care industries. The classic cost, quality, and access paradigm is applied from the perspective of multiple stakeholders. Organization of care, financing, policy, regulatory, and ethical problems and issues are emphasized.

BUSAD 834: Ethical Dimensions of Management in the Biotechnology and Health Industry

3 Credits

This course provides an overview of various ethical decision-making frameworks, which are then applied to critically examine issues within the biotechnology and health industries. Ethical decision-making frameworks include utilitarian principles, rights and justice theories, virtue ethics, feminist ethics, and various medical ethics models. Applications to cases involving genetic testing, stem cell research, euthanasia, organ retrieval and transplantation, and pharmaceutical development are among those to be explored. BUSAD 534 BUSAD 534. Ethical Dimensions of Management in the Biotechnology and Health Industry (3)BUSAD 534 introduces the students to various ethical decision-making frameworks, which are then applied to critically examine issues within the biotechnology and health industries. Ethical decision-making frameworks include utilitarian principles, rights and justice theories, virtue ethics, feminist ethics, and various medical ethics models. Applications to cases involving genetic testing, stem cell research, euthanasia, organ retrieval and transplantation, and pharmaceutical development are among those to be explored. Teaching methods include faculty lectures, case study analysis, small group and class discussions, and industry guest speaker presentations. Students will be evaluated on the quality of individual and team writing assignments as well as a team oral presentation. The course will be offered twice annually by the Penn State Great Valley School of Graduate Professional Studies' MBA program and is a required course in the Penn State Great Valley MBA program option biotechnology and health industry management.
BUSAD 830: Commercialization of Biopharmaceuticals
3 Credits
Review organizational processes, regulatory, and environmental issues in the development and commercialization of biopharmaceuticals in the United States and globally. BUSAD 835 Commercialization of Biopharmaceuticals (3) This course reviews organizational processes, regulatory, and environmental issues in the development and commercialization of biopharmaceutical products in the United States and globally. Business development strategies and tactics that encourage innovation and enable biopharmaceutical organizations to prosper in changing business environments are emphasized. The regulatory environment globally and nationally is reviewed for its impact on biopharmaceutical discovery and commercialization, including the IND (investigational new drug) and NDA (new drug application) process and quality control/assurance. Organizational dynamics including culture, structure, ethical dimensions of management, and special considerations in global marketing are explored. Marketing and brand management, financial forecasting, and structuring sales and marketing are examined for their impact on successful commercialization of biopharmaceutical products.

Prerequisite: BUSAD530

BUSAD 837: Managing Digital Enterprises
3 Credits
This course addresses the ways digital technologies transform industry, business models, strategies, operations, and management, and create new markets and products. The competitive advantage module builds on how technological and organizational resources interact to create sustainable competitive advantage. The technology infrastructure and architecture module focus on understanding the core tenets of a digital enterprise and how technology decisions affect the different functional areas of the organization. The implications of data module focuses on the collection, analysis, and use of massive amounts of data driven by digital technologies. The topics covered include big data, search and ad technologies, health, and current/emerging topics. The Transformational Impact module discusses how technology can create new platforms and marketplaces.

Prerequisite: MGMT 501

BUSAD 876: Ethical Issues in Information Technology
3 Credits
Computers are the technological foundation of the information age. Well over half of workers in the U.S. and around the globe make their living by collecting, storing, and manipulating data. Technology has improved our lives, but has also created some unpleasant situations that raise serious ethical questions. The course explores important ethical issues that are affected by information technology, such as privacy, free speech, computer crime, intellectual property, IT professionalism, and software product liability.

Prerequisite: BUSAD 537

BUSAD 879: Sustainable Supply Chain Management
3 Credits
In-depth exploration of sustainability of manufacturing and supply chain operations. BUSAD 879 Sustainable Supply Chain Management (3) BUSAD 879 provides students a set of tools and skills to identify, evaluate, and improve the sustainability of manufacturing and supply chain operations. This course enables students to understand the core concepts related to both supply chain and sustainability. After taking this course, students will be able to design sustainable manufacturing, transportation and supply chain operations. The emphasis in this course is on the design and operations of supply chains to minimize their environmental footprint. Students will also learn how to evaluate suppliers’ sustainability to assign purchasing contracts to minimize the environmental impact. Other important concepts such as product remanufacturability design and techniques to reduce energy usage and raw materials will also be discussed.

Prerequisite: OPMGT510

BUSAD 882: Social Entrepreneurship and Community Leadership
3 Credits
This course uses entrepreneurial and leadership skills to craft innovative responses to social needs. Entrepreneurs are particularly good at recognizing opportunities, exploring innovative approaches, mobilizing resources, managing risks, and building viable, sustainable enterprises. Entrepreneurial skills are just as valuable in the social sector as they are in for-profit business. Social Entrepreneurship aims at social impact but does not exclude economic wealth creation. Therefore it is not limited to the non-profit sector. Despite a sustained economic boom in this country, numerous social problems remain and some seem to be getting worse. The course will provide an overview of business leadership and entrepreneurship principles for both profit and non-profit organizations whose products and services are designed to create social value.

Recommended Preparation: Completion of 24 credits in the MLD program for MLD students Cross-listed with: LEAD 882

BUSAD 888: Applications of Financial Data Analytics
3 Credits
This course is the capstone course for the financial data analytics option of the MFIN program. After students acquire different techniques and knowledge from other courses, including financial data processing, data cleanup, data mining, and other statistical analysis skills, they will apply these concepts in this course to do case analysis related to real-world applications.

Prerequisite: BUSAD 525, BUSAD 829, IE 575, SWENG 545

Business Analytics (BAN)

BAN 530: Business Strategies for Data Analytics
3 Credits
Data analytics problem-solving strategies applied to a real-world business context. BAN 530 Business Strategies for Data Analytics (3) BAN 530 integrates the descriptive/prescriptive/predictive framework for business analytics courses and sets analytics problem solving in a real-world context.
business context. The objective is to provide students with experience with noisy data sets, potential compliance issues, non-standard measures across business units, and other real-world considerations in using data to drive decisions. The course will examine the entire life cycle of a data analytics project, from data origination through collection, filtering, tool selection, calculation, and communication. Particular emphasis will be placed on problem formulation: identifying what the business issue is at hand, what data might be useful in understanding that issue, and what tools can be most usefully applied in a particular context. In addition, communication skills will be emphasized: how data informs the decision-making process when the audience likely lacks the specialized quantitative literacy of the project team. Other important considerations include many facets of information privacy: students will consider the ethical and legal implications of de-anonymization, of deep insight into individual behavior, and of opt-in versus opt-out models of participation.

BAN 541: Data Mining for Business

3 Credits

Intended for recent graduates with little to no professional experience, BAN 541 develops business students’ understanding of and ability to apply a variety of data mining tools and techniques for use in detecting and exploiting patterns and relationships in large structured and unstructured data sets derived from a variety of business scenarios. Students will explore the use of cluster analysis, classification, association, and cause-and-effect modeling techniques to explore and reduce data, classify new data elements, identify natural associations among variables, create rules for target marketing or buying recommendations, and describe relationships among data that motivate business performance. Specific techniques may include k-nearest neighbor, discriminant analysis, and association rule mining. Students will learn how to bridge descriptive and predictive analytics across a variety of business scenarios. Coursework includes individual assignments intended to develop confidence with basic data mining techniques, followed by case-based problems that challenge students’ creativity and data mining mastery in search of patterns and data relationships leading to useful business insights. While underlying theory will be discussed, the course will prepare business analysts by focusing specifically on data mining applications in marketing, finance, supply chain management, and other business areas, with an emphasis on the unique aspects of decision making in a business environment. Software packages, concepts, and business applications will vary and evolve to keep pace with technology, theory, and instructor interest.

BAN 550: Prescriptive Analytics for Business

3 Credits

Development of methods for prescriptive analytics with a focus on business supply side decisions and risk mitigation. BAN 550 Prescriptive Analytics for Business (3) Analytics, defined as the scientific process of using data and quantitative techniques to make better decisions, has permeated virtually all aspects of business. The widespread availability of large amounts of detailed data combined with analytics methods permits an extensive examination of the tradeoffs that inform business decision making, with the ultimate goal of choosing ‘best’ courses of action. BAN 550 explores the use of prescriptive analytics methods in a variety of business contexts. In the early part of the course, the focus is on the tools and methods of prescriptive analytics. As the course progresses the emphasis shifts to the effective integration and implementation of prescriptive analytics in supply-side decision making processes such as supply chain management, service management, operations, logistics and transportation. The applications areas within business will reflect the interests of the instructors and will evolve as new areas of theory and practice develop.

Prerequisite: BAN 540

BAN 831: Business Data Visualization for Decision Making

3 Credits

Given society’s ever-expanding ability to collect and store vast amounts of transactional, performance, and financial data, business analysts and leaders need the capability to recognize patterns in and transform raw data into actionable business intelligence. Designed for recent graduates with little to no professional experience, BAN 831 expands upon the data visualization concepts covered in BAN 830 by exploring a variety of advanced data visualization techniques focused on ‘big data’ sets derived from marketing, finance, accounting, supply chain management, and other business-related scenarios. Using the latest data visualization software applications, business students will focus on the development of dashboards and scorecards useful for translating structured and unstructured business performance data into decision-ready knowledge. The course will prepare business analysts by exploring techniques for visualizing data from sales transactions, social media, marketing surveys, financial records, and other sources in support of fact-based decision making. An emphasis will be placed on the nuances specific to decision making in various business areas. Software packages, concepts, and business applications will vary and evolve to keep pace with technology, theory, and instructor interest.

BAN 832: Programming Skills for Business Analytics

3 Credits

Designed specifically for recent graduates with 0-5 years of practical experience, BAN 832 gives business students the foundational programming skills they need to leverage the power of leading edge general purpose programming languages to acquire, clean, manipulate, query, visualize, and analyze large data sets typical of a variety of business environments. With a focus on developing solutions to business data problems, students will become conversant with a variety of software applications in the context of financial, marketing, supply chain management, and other data-rich business scenarios. Coursework includes individual assignments intended to develop dexterity with foundational programming skills, followed by case-based problems that challenge students’ creativity and programming mastery in search of solutions to complex business problems. This course aims to put recent graduates on the same level as more experienced analysts with regard to applying programming skills and implementing widely used algorithms to solve business analytics challenges. Previous programming experience is helpful but not required, and students will have the opportunity to augment their learning with additional online tutorials. Software packages, concepts, and business applications will vary and evolve to keep pace with technology, theory, and instructor interest.

BAN 840: Predictive Analytics for Business

3 Credits

BAN 840 explores the use of predictive analytics tools and techniques throughout a wide range of business scenarios and problems. Initially focusing on the application of traditional predictive analytics techniques to answer the question, ‘What will happen in the future?’, the course...
Business firms operate within an economic environment that provides opportunities for students to apply regression and forecasting techniques to data from various business contexts to inform business leaders' decisions. Later, students explore various software applications and techniques for acquiring, preparing, and analyzing "big data," recognizing and taking advantage of the exponential growth in the amount of structured and unstructured data generated by and available to businesses. The course next examines cutting-edge techniques gaining increased attention among analytics experts, including data mining, text analytics, and social media analytics. Finally, students will be given an overview of the future of predictive analytics, developing an awareness of artificial intelligence and machine learning concepts, such as neural networks, to help them advance their organizations’ business analytics capabilities. Software packages, concepts, and business applications will vary and evolve to keep pace with technology, theory, and instructor interests.

Recommended Preparations: BAN 530

BAN 888: Implementing Analytics for Business

3 Credits

Sets business analytics in real-world context. Explores project life cycle from business problem framing to model lifecycle management. BAN 888 Implementing Analytics for Business (3) The capstone course for the Business Analytics option in the Data Analytics MPS degree program, this course sets analytics problem solving in a real-world context, including communication to non-statistically trained executives. Key topical areas are derived from the common activities of the business analyst and include business problem framing, analytics problem framing, data sourcing, cleaning and integration, analysis methodology selection, model building, model deployment and model lifecycle management including benefit assessment. Topics align with the body of knowledge in the Institute for Operations Research and the Management Sciences (INFORMS) Certified Analytics Professional Study Guide. Students explore each topic in a real world context, by developing solutions to cases in a team setting. Each team selects a case and works through all elements of the analytics body of knowledge, with group presentations on problem framing, analytics model selection and development, and model lifecycle management in a business setting.

Prerequisite: BAN 530 and BAN 550

Business Economics (BUSEC)

BUSEC 502: Economics for Managers

3 Credits/Maximum of 999

Demand & supply; price and output determination in different markets; determination of income, employment, interest rates, and inflation; stabilization policy. The course consists of two main segments: Microeconomics and Macroeconomics. The course begins with basic economic principles of price and output determination in markets. Students will get an understanding of cost structures of firms in the short and long run, and how firms choose to operate. With this foundation, students will proceed to examine market structure, which is the nature of competition among firms, ranging from perfect competition (many non-dominant suppliers) to monopoly (one dominant market supplier). While studying firms in different market structures, most of the focus will be on business firms which have some market power: monopolistic competition and oligopolies (a small number of inter-dependent suppliers). Strategic behaviors of firms and different oligopoly models will be studied in detail. Business firms operate within an economic environment that provides opportunities, constraints, and threats. The second part of the course focuses on the economic environment over time, generally described as the business cycle. The course will begin considering business cycles by looking first at main indicators such as growth of real GDP (Gross Domestic Product), unemployment rates, and inflation rates. Students will employ simple models of the business cycle to explain recessions, inflation, and other environmental conditions. Financial markets are important in determining economic conditions. Students will learn about the role of financial markets in determining availability and costs of funds. Economic policy is the effort of government to change the economic environment. An important part of the course is the study of these policies. Fiscal policy consists of the use of taxation and government spending to shape the environment. Monetary policy is the effort to influence credit conditions and interest rates for the purpose of achieving a specific environmental change. Domestic economic conditions are increasingly shaped by global conditions. Therefore, a part of the course will be devoted to analysis of foreign exchange rates, interest rates, and monetary policies of other countries. In addition, students will analyze the impacts of barriers to international trade (primarily quotas, tariffs, and foreign exchange controls) and investment.

BUSEC 503: Economic Environment of Business

2 Credits

Analysis of the regulatory and global economic environment within which the firm operates and its implications for business strategy. BUSEC 503 BUSEC 503 Economic Environment of Business (2) Most courses in the School’s M.B.A. program focus on managing the individual firm. However, business firms operate within an economic environment that provides opportunities, constraints, and threats. This course enables the firm’s decision-makers to assess this environment and to design strategies that are appropriate for conditions in the firm’s global, domestic, or regional spheres of operation. The path of changes in the economic environment over time is generally described as the business cycle. The course begins with consideration of business cycle indicators, such as growth of real GDP, unemployment rates and inflation. Students employ simple models of the business cycle to explain recessions, inflation, and other environmental conditions. Class discussions will include consideration of appropriate managerial decisions under each of a variety of these conditions. Financial markets are important in determining economic conditions. Students learn how the interest rate yield curve and other financial market indicators give insight into expectations about credit conditions and economic change. Financial markets also play important roles in determining availability and costs of funds. Economic policy is the effort of government to change the economic environment. An important part of the course is the study of these policies. Fiscal policies consist of the use of taxation and government spending to shape the environment. Monetary policy is the effort to influence credit conditions and interest rates for the purpose of achieving a specific environmental change. Domestic economic conditions are increasingly shaped by global conditions. Therefore, a significant part of the course is devoted to analysis of foreign exchange rates, interest rates, and monetary policies of other nations. In addition, students will analyze the impacts of barriers to international trade (primarily quotas and tariffs and foreign exchange controls) and investment. The course concludes with examination of government regulation and its effect on business. Many regulations are designed to counter-act negative external effects of decisions made by private profit-pursuing firms, especially with regard to pollution of the natural environment. Anti-trust policies, patent and copyright laws. These regulations provide constraints and opportunities for business
Managers. Students demonstrate achievement through completion of short cases, class discussions, and an examination.

**Prerequisite:** admission to the MBA program or the MSIS program

### Business Law (BLAW)

**BLAW 525: Business Law for Innovation and Competition**

2 Credits

Nature of intellectual property rights, as well as process for obtaining and enforcing them. BLAW 525 Business Law for Innovation & Competition (2) Primary areas of focus include intellectual property (IP) law (patents, trademarks, copyrights and trade secrets) and antitrust law, as well as basic principles of U.S. law and the legal rules for related industry practices such as licensing. Students will also learn the legal rules designed to encourage competition (and punish anticompetitive behavior). Finally, the course will help students to better appreciate when professional legal counsel is necessary, and how to manage those interactions more cost effectively. Although the course will impart advanced legal concepts, prior coursework in business law is not required.

**BLAW 596: Individual Studies**

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

### Cell and Molecular Biology - MD (CMBIO)

**CMBIO 596: Individual Studies**

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

**CMBIO 597: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

**Prerequisite:** ANAT 505

**CMBIO 600: Thesis Research**

1-15 Credits/Maximum of 999

No description.

**CMBIO 601: Ph.D. Dissertation Full-Time**

0 Credits/Maximum of 999

No description.

### Chemical Engineering (CHE)

**CHE 501: Bioengineering Transport Phenomena**

3 Credits

Application of the equations of mass, energy, and momentum conservation to physiological phenomena and to the design of artificial organs.

Cross-listed with: BIOE 501

**CHE 503: Fluid Mechanics of Bioengineering Systems**

3 Credits

Cardiovascular system and blood flow, non-Newtonian fluid description, vessel flows, unsteady flows and wave motion, windkessel theory, transmission line theory.

**Prerequisite:** BME 409 (equivalent to CH E 330, M E 320, or AERSP 308)

Cross-listed with: BIOE 503

**CHE 510: Surface Characterization of Materials**

3 Credits

Physical and chemical principles of characterization techniques widely used in materials science, chemistry and engineering. CH E (MATSE) 510 Surface Characterization of Materials (3) Surface and interface characterization is an important subject in nanotechnology, heterogeneous catalysis, semiconductor processing, advanced functional materials, biomaterials, corrosion, environmental science, and tribology. This course will study the physical and chemical principles of representative characterization techniques widely used in these research areas. Topics covered in this course include surface chemistry and physics fundamentals, x-ray and electron-based spectroscopy, vibration spectroscopy, ellipsometry, microscopy with physical probes, and multivariate data analysis. Physical principles and practical applications will be studied through theoretical calculations, data analysis, and literature reviews.

Cross-listed with: MATSE 510

**CHE 512: Optimization and Biological Networks**

3 Credits

Mathematical optimization, formulation and solution techniques for linear, nonlinear, and mixed-integer problems; optimization-based tools for reconstruction, analysis, and redesign of biological networks. CH E 512 Optimization and Biological Networks (3) This course focuses on the principles and applications of mathematical optimization in biological systems. The first part of the course addresses optimization theory, solution algorithms, and implementation software. Topics include nonlinear optimization, linear programming, mixed-integer linear and nonlinear optimization, and bi-level optimization. Emphasis will be placed on understanding the logic of the methodology, underlying key assumptions, comparative merits and shortcomings, and applications for solving engineering problems. Valuable hands-on experience will be provided on coding optimization models using GAMS (General Algebraic Modeling System) and specialized optimization solvers. The latter part of the course concentrates on applying the tools necessary to address the challenges arising in biological networks. Specifically, the use of optimization in reconstructing and analyzing genome-scale models.
of metabolism, protein library design strategies, regulatory network elucidation, and synthetic circuits design as well as optimal modifications in metabolic networks for various bioengineering tasks will be studied.

CHE 524: Chemical Engineering, Application of Thermodynamics
3 Credits
Elements of thermochemistry and thermodynamics of greatest importance in chemical engineering.

CHE 528: Colloidal Forces and Thermodynamics
3 Credits
Unified treatment of formation, growth and stability of colloids based on principles of intermolecular and colloidal forces and thermodynamics.

Prerequisite: CHEM 450, CH E 320 or an equivalent background in chemical thermodynamics

CHE 535: Chemical Reaction Engineering
3 Credits
Optimal design of batch and continuous chemical reactors and reactor batteries; effect of mixing on reactor operation.

CHE 536: Heterogeneous Catalysis
3 Credits
Thermodynamics and kinetics of adsorption and reactions on solid surfaces, heat and mass transfer effects, theory and correlations in catalysis.

Prerequisite: CHEM 450, CHEM 452

CHE 544: General Transport Phenomena
3 Credits
Formulation and solution of transport problems involving momentum, heat, and mass transfer, with chemical engineering applications.

Prerequisite: CH E 330, CH E 350, CH E 410

CHE 546: Transport Phenomena II
3 Credits
Heat and mass transfer, steady and unsteady state, coupling, molecular diffusion, moving boundaries, transfer coefficients, chemical engineering applications.

CHE 576: Environmental Transport Processes
3 Credits
Fundamentals of chemical transport in engineered environments, such as biofilm reactors, and natural systems including aquifers and rivers. C E 576C E 576 Environmental Transport Processes (3)Environmental Transport Processes covers the fundamental of mass transport of chemicals between air, water, soil, and biota. Material is divided into three subject areas: mass transfer theory, transport processes related to engineered reactors, and transport in the natural environment. The focus of the course is on chemical calculations particular to dilute systems, with emphasis on quantifying chemical transport rates and distributions in natural and engineered environments. Special topics of interest to environmental engineers include biofilm models, bioreactors, chemical partitioning in thin fluid film bioreactors, and fate of anthropogenic chemicals from spills and discharges into the environment (i.e., rivers, lakes, and groundwaters). Faculty: Bruce E. Logan

Prerequisite: C E 475
Cross-listed with: CE 576

CHE 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

CHE 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CHE 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

CHE 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

CHE 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

CHE 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Opportunity for supervised and graded teaching experience for graduate students in chemical engineering.

Prerequisite: At least one year of graduate study in chemical engineering.

CHE 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

CHE 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.
Chemistry (CHEM)

CHEM 500: Seminar in Chemistry

1 Credits/Maximum of 99

No description. CHEM 500/CHEM 500 Seminar in Chemistry (1)CHEM 500 is a course in which 1st and 2nd year Chemistry graduate students write about and present a seminar on current chemical research. During their first year of graduate study students are asked to write 6 or more brief reports summarizing and critiquing designated seminars in one of the department’s five regular seminar series. These reports are graded for both their scientific content and writing quality. During their second year of graduate study students are asked to write a more lengthy report and give an oral presentation on a topic of current interest in chemistry, but one not closely related to research being done at Penn State. The written and oral portions of this exercise are also graded. Faculty: Andrew Ewing and Mark Maroncelli

CHEM 511: Chemical Nanoscience

3 Credits

Chemical aspects of matter at the nanoscale. CHEM 511 Chemical Nanoscience (3) This course covers chemical aspects of nanoscience. Topics to be covered include how nanoscale matter differs from bulk material; strategies for synthesis, characterization, purification, and chemical functionalization of nanostructures; forces involved in nanoparticle stabilization and assembly. Emphasis will be placed on wet chemical methods of nanostructure synthesis rather than traditional top-down nanofabrication. Properties of the resulting nanomaterials of interest for uses including biology and medicine, environmental remediation, electronics, optics, catalysis and solar energy conversion will be discussed. The course will emphasize both the primary scientific literature and review articles, and assumes prior knowledge of organic and physical chemistry.

Prerequisite: CHEM 452 and either CHEM 450 or CHEM 466

CHEM 516: Inorganic Chemistry

3 Credits

Overview of systematic inorganic chemistry including main group, transition metal, lanthanide, and actinide chemistry. CHEM 516 Inorganic Chemistry (3) The purpose of this course is to provide a graduate level foundation in the field of inorganic chemistry and its relationship to other areas of science and technology. The emphasis will be on atomic and molecular structure, synthesis methods, and structure-property relationships in a way that will prepare students for studies in more specialized areas such as environmental chemistry, catalysis, materials science, and the biological fields. Opportunities will be provided to integrate the learning experience with the organization of information through writing assignments and class discussions.

CHEM 517: Organometallic Chemistry

3 Credits

Organometallic compounds and their use in catalysis and organic synthesis. CHEM 517 Organometallic Chemistry (3) CHEM 517 provides a graduate-level foundation to a broad range of topics in organotransition metal chemistry with a particular emphasis on catalytic applications in polymer chemistry and organic synthesis. The course assumes a B.S. level understanding of inorganic and organic chemistry. Topics to be covered include the following: basic principles of bonding and structure, elementary reaction mechanisms, and catalytic applications including olefin insertion reactions, cyclosimerization reactions, carbenoid chemistry including olefin metathesis, carbonylations, reactivity of metal allyl complexes, cross coupling and related C&C bond formations, oxidations, reductions and alkylations. Upon successful completion of this course, students can expect to: 1) understand basic concepts in bonding and molecular structure of organometallic compounds, 2) be able to connect electronic and molecular structure with chemical reactivity, 3) describe organometallic reactivity in a mechanistically rigorous fashion, 4) be familiar with common catalytic paradigms that rely on organometallic catalysts, 5) be equipped to critically evaluate the modern primary literature in this field.

CHEM 518: Symmetry and Spectroscopy in Inorganic Chemistry

3 Credits/Maximum of 99

Group theoretical methods and spectroscopies of importance in modern inorganic chemistry. CHEM 518 Symmetry and Spectroscopy in Inorganic Chemistry (3 per semester) CHEM 518 provides a graduate-level foundation in molecular group theory and its use in understanding the molecular orbital structure of organic and inorganic molecules. EPR, NMR, rotational, vibrational, and electronic spectra of molecules are considered with an eye towards using symmetry to simplify analysis. Other spectroscopies of interest to the modern inorganic chemist, such as XPS, PES, and x-ray crystallography are also discussed.

Prerequisite: CHEM 452

CHEM 519: Materials Chemistry

3 Credits

The goal of this course is to provide students with an understanding of the ways in which fundamental chemical principles are utilized in the field of materials science. The approach is to illustrate the crucial importance of synthesis and structure-property chemical relationships in the development of new materials and their utilization in devices. Topics include glasses, oxides and non-ceramics, polymers, metals, semiconductors, superconductors, hybrid materials, and nanomaterials together with the broad range of energy-related, electronic, biomedical, and optical devices on which modern civilization depends. Most of the different types of materials will be discussed, together with approaches to overcome their limitations.

CHEM 524: Electroanalytical Chemistry

3 Credits

Electrochemical principles, techniques, and analytical applications. CHEM 524 Electroanalytical Chemistry (3) CHEM 524 covers the fundamental background and applications of electroanalytical methods. Potentiometric methods are discussed in the context of the basic principles of electrochemical equilibrium. Amperometric methods - chronoamperometry, chronocoulometry, stripping voltammetry, cyclic voltammetry, pulse and hydrodynamic techniques - are also discussed in the context of mathematical models for mass transport and electrode kinetics. Applications including spectroelectrochemistry, photoelectrochemistry, ultramicroelectrodes, corrosion, and scanning electrochemical microscopy are covered. The course involves solving differential equations relevant to electrochemical problems by analytical methods as well as by means of digital simulations, so prior knowledge of a programming language is recommended.
CHEM 525: Analytical Separations
3 Credits
Fundamentals and applications of modern chromatographic separations.
Cross-listed with: BMMB 525

CHEM 526: Spectroscopic Analysis
3 Credits
An overview of modern instrumental techniques including FTIR, optical spectroscopy, mass spectrometry, and electron spectroscopies.

CHEM 525: Physical Organic Chemistry
3 Credits
Reactive intermediates, reaction kinetics and thermodynamics, solvent effects, conformational analysis, reaction mechanisms, noncovalent interactions in synthesis, and stereochemistry.
Prerequisite: CHEM 212

CHEM 526: Spectroscopic Analysis
3 Credits
Cross-listed with: BMMB 526

CHEM 535: Biochemical Reaction Mechanisms
3 Credits
Mechanisms of the most important biochemical reactions, with emphasis on enzyme catalysis.
Prerequisite: CHEM 476 or BM B401

CHEM 536: Medicinal Chemistry and Chemical Biology
3 Credits
The goal of this course is to provide a foundation in development and application of chemical technologies to the understanding and manipulation of biological systems. Chemical biology is a relatively new field that spans the traditional fields of chemistry and biology by applying chemical technologies to the understanding and manipulation of biological systems. As such, this course should be accessible and provide benefit to students working in both chemical and biological areas. Lectures include higher-level biological chemistry (assuming prior knowledge of biological chemistry at an undergraduate level, such as CHEM 476 or BM B 401) and synthetic chemistry and biology principles along with current literature in the field of chemical biology.
Prerequisite: CHEM 476 or BM B401

CHEM 537: Medicinal Chemistry and Chemical Biology
3 Credits
The goal of this course is to provide a foundation in development and application of chemical technologies to the understanding and manipulation of biological systems. Chemical biology is a relatively new field that spans the traditional fields of chemistry and biology by applying chemical technologies to the understanding and manipulation of biological systems. As such, this course should be accessible and provide benefit to students working in both chemical and biological areas. Lectures include higher-level biological chemistry (assuming prior knowledge of biological chemistry at an undergraduate level, such as CHEM 476 or BM B 401) and synthetic chemistry and biology principles along with current literature in the field of chemical biology.
Prerequisite: CHEM 476 or BM B401

CHEM 538: Spectroscopic Methods in Bioinorganic Chemistry
3 Credits
Foundations in spectroscopic methods employed for the determination of the geometric and electronic structure of transition metal clusters in nature.
Cross-listed with: BMMB 538

CHEM 539: Biochemical Reaction Mechanisms
3 Credits
Mechanisms of the most important biochemical reactions, with emphasis on enzyme catalysis.
Prerequisite: CHEM 476 or BM B401

CHEM 540: Biophysical Chemistry
3 Credits
Structure of biomacromolecules, physical techniques for the study of structure and function, thermodynamic and kinetic studies of biomacromolecules in solution.
Prerequisite: CHEM 450

CHEM 543: Polymer Chemistry
3 Credits
This graduate course discusses the new advances in polymer chemistry that leads to new polymeric materials with interesting structures and properties. CHEM (MATSE) 543CHEM (MATSE) 543 Polymer Chemistry (3) This course provides advance level of polymer chemistry and materials taught in MATSE 441 - Polymeric Materials. Students are able to know the versatility that is inherent in polymer chemistry and the new research results and activities, especially controlling polymerization, polymer structures, designing polymers with desirable properties, etc. Students shall also understand the major economic and environmental concerns and solutions in producing commercial-scale polymers. This polymer chemistry course provides important links between chemistry and polymeric materials. The course will focus on recent advances in polymer chemistry that affords new polymeric materials with controlled polymer structures, compositions, and properties, as well as economic and 'green' processes. This course is designed for graduate students having basic knowledge in organic, inorganic, and organometallic principles. For Chemistry major, this course offers students with the knowledge to apply chemical principles and methods to design and prepare the desirable polymers (no prerequisite for Chemistry graduate students). For Material Science and other majors, this course provides advance level of polymer chemistry and materials taught in MATSE 441 (a prerequisite course). In addition, each student will be required to review (presentation and term-paper) a contemporary subject relative to polymer chemistry, which will help student self-education, and presentation and writing skills. Students will be evaluated by quizzes and examinations, a term-paper and presentation, and class participation.
Prerequisite: MATSE441 or approval of program

CHEM 545: Spectroscopic Methods in Bioinorganic Chemistry
3 Credits
Foundations in spectroscopic methods employed for the determination of the geometric and electronic structure of transition metal clusters in nature.
Cross-listed with: BMMB 538

CHEM 546: Medicinal Chemistry and Chemical Biology
3 Credits

Students will be evaluated by quizzes and examinations, a term-paper and presentation, and class participation.
Prerequisite: MATSE441 or approval of program

CHEM 555: Statistical Thermodynamics
3 Credits
Basic principles of statistical mechanics with application to the calculation of thermodynamic properties of gases and condensed phases.
Prerequisite: CHEM 450, CHEM 452
CHEM 565: Quantum Chemistry I
3 Credits
A foundation in the principles of quantum mechanics and their applications to chemistry.
Prerequisite: CHEM 452

CHEM 566: Quantum Chemistry II
3 Credits
Additional techniques in quantum mechanics, with applications to problems in molecular structure and light-matter interactions.
Prerequisite: CHEM 565

CHEM 567: Molecular Spectroscopy
3 Credits
Principles and applications of classical and modern spectroscopic methods.
Prerequisite: CHEM 565

CHEM 572: Nucleic Acids Chemistry
3 Credits
Biophysical and biochemical approaches for studying structure-function relationships in nucleic acids. BMMB (CHEM) 572 Nucleic Acids Chemistry (3) The goal of this course is to provide a foundation in biophysical approaches for studying the quantitative and structure-function relationships in nucleic acids systems, including DNA, RNA, and their interactions with proteins, salt, and water. Lectures include basic physical chemistry and statistical mechanics principles along with current literature in the biochemical sciences. At the end of the course, you should be able to meaningfully dissect molecular biological papers at the level of the physical chemistry of these processes. Current topics are introduced through reading and presenting papers from the literature.
Prerequisite: CHEM 212, CHEM 450
Cross-listed with: BMMB 572

CHEM 573: NMR Spectroscopy for Synthetic and Biological Chemistry
3 Credits
Nuclear magnetic resonance approaches for characterizing the structure and dynamics of synthetic compounds, natural products, and biological macromolecules.
Prerequisite: CHEM 452
Cross-listed with: BMMB 573

CHEM 589: Studies in Chemistry
1-9 Credits/Maximum of 9
Theoretical research, experimental research, or a critical survey of the literature in an area of chemistry.

CHEM 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

CHEM 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

CHEM 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

CHEM 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Teaching of chemistry undergraduate laboratory and recitation classes with senior faculty instruction supervision.

CHEM 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

CHEM 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

CHEM 810: Liquid Chromatography I
1 Credits
The course specifically caters to the needs of the analytical chemical industry and individuals newly hired into entry-level sample management/preparation and quality assurance/quality control positions within companies using liquid chromatographic techniques. The course material is designed to increase student understanding of both the liquid chromatography instrument used in the laboratory and the principles underlying the measurements.

CHEM 811: Liquid Chromatography II
1 Credits
The course specifically caters to the needs of the analytical chemical industry and individuals hired into, or transitioning into, technician level positions within companies using liquid chromatographic techniques. The course material is designed to increase student understanding of both the liquid chromatography instrument used in the laboratory and the principles underlying the measurements.
Prerequisite: CHEM 810

CHEM 812: Liquid Chromatography III
1 Credits
The course specifically caters to the needs of the analytical chemical industry and individuals hired into, or transitioning into, development-
level, or senior-level, chemist positions within companies using liquid chromatographic techniques. The course material is designed to increase student understanding of both the liquid chromatography instrument used in the laboratory and the principles underlying the measurements.

**Prerequisite:** CHEM 811

### Chinese (CHNS)

CHNS 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nontesearch research, that are supervised on an individual basis and which fall outside the scope of formal courses.

### Civil Engineering (CE)

CE 511: Engineering Soil Characteristics

3 Credits

Applications of physico-chemical principles in soil engineering; soil composition; factors influencing engineering soil properties.

**Prerequisite:** C E 335

CE 512: Soil Mechanics II

2-5 Credits/Maximum of 5

Evaluation of strength parameters and compressibility of soils; elastic analysis of stress and strain; techniques of forecasting foundation settlement; slope stability analysis.

CE 513: Advanced Foundation Engineering

3 Credits

Practical applications of soil mechanics principles to geotechnical engineering problems; dewatering techniques; design of deep foundations and retaining structures.

**Prerequisite:** C E 335

CE 521: Transportation Networks and Systems Analysis

3 Credits

Techniques of transportation network, user, stochastic user, and variable demand equilibrium; transportation activity system; computer simulation techniques and forecasting methods.

**Prerequisite:** 3 credits of computer science

CE 522: Traffic Flow Theory and Simulation

3 Credits

This course will cover advanced topics related to traffic operations and traffic flow theory. Students will be exposed to a variety of theories, methodologies, and principles that are used to assess traffic operations on surface transportation systems, as well as their applications. The course will be divided into two major subject areas: 1) operations on uninterrupted facilities, such as freeways; and, 2) operations on interrupted facilities, such as urban streets and large urban networks. Topics in the former area include kinematic wave theory, cell and link transmission models, variational theory, moving-bottlenecks, bottleneck identification and incident management. Topics in the latter include signal coordination, macroscopic fundamental diagrams, multimodal conflicts and their impacts. The course also includes an overview of traffic microsimulation software and its applications to both areas.

**Concurrents:** CE 423

CE 523: Analysis of Transportation Demand

3 Credits

Theories of travel behavior, least squares and maximum likelihood, estimation methods, continuous dependent variable models, utility maximization, discrete econometric techniques.

**Prerequisite:** 3 credits of probability and statistics

CE 525: Transportation Operations

3 Credits

Tools for analyzing transportation operations, including: properties of traffic streams, queuing, traffic dynamics, networks, probability and estimation of traffic properties. C E 525 Transportation Operations (3) This course presents the concepts of traffic and transportation operations necessary for students pursuing an advanced degree in transportation engineering. While the course focuses on surface traffic and related systems, the tools and methods discussed can be used in other sub-disciplines (e.g., public transportation, aviation, and bicycle/pedestrian movement) to analyze operations. Logic and methods are emphasized as opposed to recipes that are specific to certain modes.

**Prerequisite:** C E 423

CE 526: Highway and Street Design

3 Credits

Technical analysis of the design elements of roadways, alinement, cross-section features, and intersection and interchange design considerations.

**Prerequisite:** C E 421

CE 527: Roadside Design and Management

3 Credits

Roadside safety and design, safety management, pavement management, lighting, signs, signals, and markings, clear zone, guiderail, impact attenuators.

**Prerequisite:** C E 421W

CE 528: Transportation Safety Analysis

3 Credits

Issues and methods in transportation safety analysis; factors contributing to crashes; crash causation; modeling accident occurrence; identifying sites for treatment. C E 528C E 528 Transportation Safety Analysis (3) This course introduces students to issues and methods in transportation safety analysis; factors contributing to crashes; methods of analysis for determining crash causation; modeling accident occurrence; identifying crash sites for treatment. Students will be evaluated using periodic homework assignments, a mid-term exam, and a class project. Students are expected to learn fundamental aspects of
highway accident occurrence and modeling. They will be introduced to modeling techniques and methods used to assess causality in crashes. The course is offered annually in the fall semester.

**Prerequisite:** STAT 401

**CE 531:** Legal Aspects of Engineering and Construction

3 Credits

Basic legal doctrines, contractual relationships between parties, analysis of construction contract clauses, contract performance, and professional practice problems.

**Prerequisite:** CE 431W

Cross-listed with: AE 531

**CE 536:** Topics in Biogeochemistry

2 Credits/Maximum of 999

This seminar addresses chemical interactions between the biosphere and the physical environment over Earth's history and as impacted by humans. This course will provide a broad survey of biogeochemical principles, and offer a community-building experience for students with biogeochemical interests from diverse departments. Students will complete the course with a synthetic knowledge of the key topics in the field of biogeochemistry. Each week we will focus on a topic within the broad field of biogeochemistry such as: origins of the elements, reactions in the atmosphere, soil development, the distribution of redox reactions and microbial metabolic pathways, and the global cycles of carbon, water, nitrogen, phosphorus, sulfur, mercury, and perhaps other elements. For each topic, we will focus on the questions: What is known or can be observed? How is this information used to understand biogeochemical phenomena and process? How are these processes scaled over time and space? What are emerging and important questions in the subspecialties of biogeochemistry?

Cross-listed with: GEOSC 536, SOILS 536

**CE 538:** Earthquake Resistant Design of Buildings

3 Credits

Introductory engineering seismology, basic principles of structural dynamics, application of earthquake design provisions of model building codes to design of buildings. A E (C E) 538 Earthquake Resistant Design of Buildings (3) The main objective of this course is to familiarize students with basic principles of design of buildings to resist earthquake effects. Since building design is governed by the Building Code, currently, International Building Code that adopts American Society of Civil Engineers (ASCE) document ASCE-7 for load determination, the seismic provisions of ASCE-7 will be used as the basis for design. The course starts by introducing earthquake phenomenon and engineering seismology concepts. The basic principles of structural dynamics are then covered for single degree of freedom systems starting from free vibration to random loading so that students learn how a ground acceleration time-history subjected to the base of a building can be converted to a time varying effective seismic load on the mass. After introduction of response spectrum, introductory material on multi-degree of freedom systems is introduced so that students can determine natural frequencies and mode shapes for multi-story buildings and perform modal superposition analysis to determine displacement and force responses. Next, the principles of earthquake resisting design related to energy dissipation, ductility, over-strength, and redundancy followed by seismic provision of the building code are discussed. The main design principles related to the two main materials for building construction consisting of reinforced concrete and structural steel are next discussed. The focus will be to illustrate how lateral load resisting systems such as shear walls, moment resisting frames, or braced frames made with such materials as appropriate are designed to resist earthquake effects based on respective material code provisions, that is, American Concrete Institute (ACI) for concrete and American Institute of Steel Construction (AISC) for steel. The last part of the course will introduce seismic retrofit, base isolation systems and the concept of performance based design.

**Prerequisite:** A E 401, A E 402, A E 430

Cross-listed with: AE 538

**CE 539:** Approximate Methods of Structural Analysis

3 Credits

Structural analysis through the application of initial-value methods, Newmark's method, Fourier series, finite difference techniques, and work and energy procedures.

**Prerequisite:** C E 340

**CE 540:** Statically Indeterminate Structures

3 Credits

Analysis of statically indeterminate straight/curved beams, grids, 2D/3D frames, arches, cables, and shells using classical and modern techniques. C E 540C E 540 Statically Indeterminate Structures (3) This course introduces students to various methods for analyzing statically indeterminate structural systems, including: straight and curved beams, grids, 2D and 3D frames, arches, cables, and shells. Both classical hand calculation approaches and more modern computer based approaches that utilize force and displacement based methods are discussed. Additional analysis topics, such as plastic analysis and the examination of beams on elastic foundations are presented. The procedures are introduced to the students so that their ability to analyze statically indeterminate structural systems is enhanced. In addition, practical applications for the methods that are discussed are presented.

**CE 541:** Structural Analysis

3 Credits

Theory of various finite elements as applied to civil engineering structures. Term paper required.

**Prerequisite:** C E 447

**CE 542:** Building Enclosure Science and Design

3 Credits

The building enclosure: nature, importance, loadings; building science: control of heat, moisture, air, hygrothermal analysis; design: walls, windows, roofs, joints. A E 542 A E (C E) 542 Building Enclosure Science and Design (3) The building enclosure, or envelope, is the environmental separator in any building and is, like the superstructure and the service systems, one of the major physical components of the building. The primary objective of this course is to develop an understanding of the nature, importance, functions, and performance of the building envelope in general. The necessary building science—concerning primarily heat, moisture, and air—is covered, and hygrothermal analysis procedures are developed. A generalized categorization system for enclosure elements,
i.e., walls (both above- and below-grade), roofs, and other enclosure sub-assemblies is proposed. General design strategies are developed. The design of specific wall systems (both above- and below-grade), roof systems, base floors, windows, and their joints is then addressed in some detail. The integration of structures (composite action, restraints, etc.), service systems (especially energy consumption), and finish (exterior and interior) is considered in sonic detail. Evaluation is based on an equal combination of assignments (6) and examinations (2). This course complements courses in architecture, civil engineering, architectural engineering, and mechanical engineering.

Cross-listed with: AE 542

CE 543: Prestressed Concrete Behavior and Design
3 Credits

Design and behavior of prestressed concrete structures: materials and systems losses, flexure, shear, bond, deflections, partial prestressing, continuous beams.

Prerequisite: C E 341, A E 402, or approved equivalent

CE 544: Design of Reinforced Concrete Structures
3 Credits

Advanced topics in design of reinforced concrete structures. Torsion and shear; beam moment-curvature; two-way slab systems; slender columns; strut- and-tie methodology. C E 544 C E 544 Design of Reinforced Concrete Structures (3) This course explores advanced topics in the design of reinforced concrete structures in conformance with standardized building codes. Topics covered include load combinations, principles of structural modeling, torsion and shear in reinforced concrete members, two-way slab systems, moment-curvature of beams, slender columns, and strut-and-tie models. Students enrolled in this course should have prior knowledge of the design of reinforced concrete beams, one-way slabs, and short columns. Due to the course content, students must be familiar with the American Concrete Institute (ACI) Building Code Requirements for Reinforced Concrete. This course will generally be offered each fall, with an anticipated enrollment of 10. Grades will be based on two examinations, assignments, and a comprehensive final examination.

CE 545: Metal Structure Behavior and Design
3 Credits

Design philosophies and basis; seismic loading; fatigue; bending, column, plate, and beam-column stability; tapered members; torsion; connections; bracing; frame stability. C E 545 C E 545 Metal Structure Behavior and Design (3) This course presents advanced topics in elastic and inelastic structural metal member behavior and the theoretical basis of modern design codes and procedures. Philosophies of design, fatigue, bending stability and tapered members, torsion, stability of plates, stability of columns, stability of beam-columns and bi-axial bending, connections, and frame stability are covered in depth in addition to other topics relating to advanced behavior and design of metal structures. Students interested in this course must be familiar with the American Institute of Steel Construction (AISC) Manual of Steel Construction. This course will generally be offered each fall, with an anticipated enrollment of 12. Grades will be based on homework assignments, a semester project, two examinations, and a comprehensive final examination.

CE 548: Structural Design for Dynamic Loads
3 Credits

Dynamic behavior of structural systems of one and more degrees of freedom; earthquake, blast-resistant analysis, and design of structures.

Prerequisite: E MCH 212, C E 340

CE 549: Bridge Engineering I
3 Credits

Engineering of modern steel and concrete bridge structures; loading; analysis; design.

Prerequisite: C E 448W

CE 550: Engineering Construction Management
3 Credits

Management fundamentals for construction contracting; organization, project planning, scheduling and control, bonding and insurance, labor legislation and regulation, cost and control.

Prerequisite: C E 431

CE 551: Random Processes in Hydrologic Systems
3 Credits

Hydrologic systems analysis, simulation; design using probability, time series and dynamical systems; formulating models, parameter estimation, environmental impact, resource assessment.

Prerequisite: C E 361; introductory probability and statistics

CE 555: Groundwater Hydrology: Analysis and Modeling
3 Credits

Introduction to groundwater resource analysis, model formulation, simulation, and design of water resource systems using symbolic and numerical methods.

Prerequisite: MATH 251

CE 556: Environmental Electrochemistry
3 Credits

This goal of this course is to prepare students to perform and interpret research in the field of environmental electrochemistry. Students will learn the fundamental mechanisms of electrochemistry and will apply this knowledge to (1) design theoretical experiments to address research questions relevant to environmental engineering and science and (2) analyze and re-interpret results from recently published peer-reviewed studies in this field. Within the field of environmental engineering and science, electrochemical techniques are commonly used to characterize the reactivities and thermodynamic properties of environmental samples, such as soils, minerals, and natural waters. Electrochemical techniques are also frequently used to solve environmental problems, with applications including the treatment and remediation of polluted water and the generation of renewable electricity from waste sources. This course is designed to enable students to critically read environmental electrochemical literature and to design and develop their own electrochemical experimental systems. To achieve
this goal, the course consists of five sections that are roughly equal in length. Section 1 covers the underlying chemistry and thermodynamics relevant to electrode potentials and redox chemistry. Section 2 covers galvanic and electrolytic reactions by covering examples of batteries and fuel cells relevant to environmental engineers. Section 3 addresses the role that kinetics and transport play in electrochemical systems and the mathematical expressions used to cover them. Section 4 covers electrochemical techniques used to study environmental systems and solve environmental engineering problems, such as pollution remediation and renewable energy production. Section 5 covers electrochemical impedance spectroscopy, a complex electrochemical technique used to determine how an electrochemical system can be best approximated as a circuit. As a whole, these sections develop students with the educational foundation necessary to further study specific topics relevant to their research or interests.

CE 561: Surface Hydrology

3 Credits

Quantification of the processes that govern the movement and storage of water near the land-surface including precipitation, evapotranspiration, and runoff. C E 561 C E 561 Surface Hydrology (3)

Water is an important factor in numerous engineering and scientific problems. It can be both a hazard and a resource. Knowledge of the movements and storage of water in the terrestrial, oceanic, and atmospheric environments is fundamental in many such applications. This course provides a graduate level introduction to surface hydrology, which focuses on the quantification of water pathways near the land-surface. It presents basic properties of the terrestrial, oceanic, and atmospheric environments and develops water and energy budget equations for different settings and scales. The course also provides detailed quantitative descriptions of the main processes responsible for the movement of water in the environment including precipitation, evapotranspiration, snowmelt, infiltration, surface runoff, groundwater recharge, subsurface runoff, and streamflow.

CE 563: Systems Optimization Using Evolutionary Algorithms

3 Credits

Comprehensive introduction to genetic and evolutionary computation: genetic algorithms, evolutionary strategies, multi-objective optimization, parallelization approaches, and fitness approximation. C E 563 C E 563 Systems Optimization Using Evolutionary Algorithms (3)

A comprehensive introduction to the field of genetic and evolutionary computation. The course emphasizes state-of-the-art methods for designing and implementing evolutionary algorithms for computationally intensive engineering and science problems. Course concepts are demonstrated using case studies drawn from the disciplines of the students enrolled. The course is offered every spring semester.

CE 564: Sediment Transport in Alluvial Streams

3 Credits

River flow, river channel formation, the physical characteristics of rivers, responses of rivers to natural and human-made changes. C E 564 C E 564 Sediment Transport in Alluvial Streams (3)

A comprehensive presentation of river processes and engineering must be built upon the foundations of fluvial geomorphology, hydraulics of river flow, and sediment transport. The course is organized into the following five principal parts: Part I. Fluvial Geomorphology Part II. Foundations of Fluvial Process Part III.

Regime Rivers and Processes Part IV. Mathematical Modeling of River Channel Changes Part V. River Engineering

Prerequisite: C E 462

CE 566: Uncertainty and Reliability in Civil Engineering

3 Credits

Introduction to probabilistic modeling, simulation, uncertainty analysis, and reliability estimates applied to civil engineering. C E 566 C E 566 Uncertainty and Reliability in Civil Engineering (3)

The objective of this course is to develop understanding of the uncertainty in Civil Engineering analyses, design, and construction and to introduce reliability-based methods of analysis. The course covers review of probability and statistics, uncertainty analysis, probabilistic models of load and resistance, and the application of reliability analysis to problems in Civil Engineering.

CE 567: River Engineering

3 Credits

Introduction to river mechanics and fluvial geomorphology applied to problems of sediment transport and channel morphology. C E 567 C E 567 River Engineering (3)

River Engineering will introduce students to the concepts of flow and sediment transport in canals and alluvial rivers. This course covers: river morphology and hydraulic geometry; hydraulics of flow in river channels; measurement of velocity; rating curves; properties of sediment; scour-related problems; stream stability and classification; sediment movement in rivers; channel design; software for erodible channels; stream bank, bridge pier, and bridge abutment protection; environmental considerations; and stream restoration. During the semester, the students will visit local streams for the purpose of making various observations and measurements. Faculty: Peggy A. Johnson

CE 570: Environmental Aquatic Chemistry

3 Credits

Speciation, reactivity, and distribution of contaminants in water, with emphasis in inorganic chemicals.

Prerequisite: C E 475

CE 571: Physical-Chemical Treatment Processes

3 Credits

The theory of physical-chemical processes used in the treatment of potable water and municipal and industrial wastewaters.

Prerequisite: C E 472 , C E 475

CE 572: Biological Treatment Processes

3 Credits

The theory and application of biological processes to treat organic wastes, including wastewater, solid residuals, and toxic priority pollutants.

Prerequisite: or concurrent: C E 475
CE 573: Environmental Organic Chemistry

3 Credits

Theory, measurement, and estimation of the characteristics and environmental transformations of hazardous materials.

Prerequisite: C E 475

CE 574: Reactive Transport Processes in Porous Media

3 Credits

Recommended Preparations: It is recommended that the students have taken courses on principles of water chemistry, biogeochemistry, or water-rock interactions. This course teaches principles and modeling of flow, transport, and reaction processes in the natural and built environment. The course targets students from a range of disciplines where water-mineral-microbe interactions play a key role. This includes, but not limited to, environmental engineering, water resources, geosciences, petroleum and natural gas engineering, agricultural engineering, civil engineering, chemical engineering, and applied mathematics. The course teaches fundamental concepts, mathematical formulation, and quantitative representation, and applications of multi-component reactive transport processes. The learning outcomes are to 1) understand fundamental concepts of biogeochemical reactions, flow, and solute transport; 2) understand reactive transport equations and concepts of numerical solution; 3) develop computational skills using a reactive transport modeling code. The students will grasp reactive transport concepts, as well as skills to set up reactive transport models, interpret data, and predict subsurface physical flow and geochemical and microbiological process coupling.

CE 575: Industrial Waste Management

3 Credits

Surveys and analysis, pollution prevention, regulatory requirements, treatment and disposal of liquid, gaseous and solid residues.

Prerequisite: C E 472

CE 576: Environmental Transport Processes

3 Credits

Fundamentals of chemical transport in engineered environments, such as biofilm reactors, and natural systems including aquifers and rivers. CE 576C E 576 Environmental Transport Processes (3) Environmental Transport Processes covers the fundamental of mass transport of chemicals between air, water, soil, and biota. Material is divided into three subject areas: mass transfer theory, transport processes related to engineered reactors, and transport in the natural environment. The focus of the course is on chemical calculations particular to dilute systems, with emphasis on quantifying chemical transport rates and distributions in natural and engineered environments. Special topics of interest to environmental engineers include biofilm models, bioreactors, chemical partitioning in thin fluid film bioreactors, and fate of anthropogenic chemicals from spills and discharges into the environment (i.e., rivers, lakes, and groundwaters). Faculty: Bruce E. Logan

Prerequisite: C E 475

CE 577: Treatment Plant Design

1-6 Credits/Maximum of 6

Design of works for the treatment of water and wastewater for municipalities and industries.

Prerequisite: C E 472; 3 credits in hydraulics

CE 578: Groundwater Remediation

3 Credits

Application of fundamental physical/chemical/biological processes in natural and engineered systems for remediation of contaminated soil and groundwater.

Prerequisite: C E 475

CE 579: Environmental Pollution Microbiology

3 Credits

Fundamentals of microorganisms in water and wastewater treatment; indicators of pollution; activities of microorganisms in polluted waters, including biogeochemical cycles.

CE 580: Hydrodynamic Mixing Processes

3 Credits

Physical mixing processes in rivers, estuaries, lakes, and oceans. Analytic methods and computational modeling. CE 580C E 580 Surface Water Quality Models (3) Hydrodynamic Mixing Processes is concerned with the transport and dispersal of tracers in natural water and air environments. It straddles the boundary between traditional civil engineering fluid mechanics (concerned with water quantity) and environmental engineering (concerned with water quality). Emphasis is placed on understanding the physical hydrodynamic processes responsible for tracer dispersal and application to practical problems through use of freely-available numerical models.

CE 581: Pavement Management and Rehabilitation

3 Credits

Techniques of network and project level pavement management, field evaluation methods and equipment, maintenance and rehabilitation strategies, overlay design procedures.

Prerequisite: C E 421

CE 582: Pavement Design and Analysis

3 Credits

Viscoelastic analysis; non-linear analysis; fatigue and permanent deformation; back-calculation of layer moduli; mechanistic-empirical design methods.

CE 583: Bituminious Materials and Mixtures

3 Credits

Composition, physical behavior, production, and performance of bituminous materials and mixtures.
CE 584: Concrete Materials and Properties
3 Credits
Study of concrete properties and associated variables, prediction models, testing, preventative measures, pozzolans, admixtures.

Prerequisite: A E 221 or C E 336

CE 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

CE 591: Environmental Engineering Seminar
1 Credits
Seminar topics selected by faculty and students based on research interests on topics related to environmental engineering and science. C E 591C E 591 Environmental Engineering Seminar (1) This is a seminar course offered primarily for graduate students in Environmental Engineering, although other graduate students with interests in environmental research take this course. Graduate students may receive only 1 credit of this seminar towards a degree in Environmental Engineering, however, they are encouraged to register and attend every semester during their graduate career. This course is offered for 1 credit for both fall and spring semesters. Students making presentations receive letter grades, while others receive a satisfactory/unsatisfactory grade. Seminar topics are selected by faculty and students based on research interests on topics related to environmental engineering and science. Most of the talks will be by environmental engineering graduate students. However, during the semester there will typically be three outside speakers that will be invited to give talks. Students in this class are expected to meet with these outside speakers in the laboratory to discuss their own research projects. Students in this class give short presentations on their research topics. Each presentation should be about 20 minutes in length, allowing for 10 minutes of questions concerning the technical content of the presentation. The rest of the class is used for general discussion. Students are encouraged to give a seminar even though they have not completed all of their research (i.e. prior to their defense). Feedback from faculty and other students in this informal setting can be used to help improve research ideas and stimulate new ideas and research directions during the course of their research work.

CE 592: Environmental Engineering & Science Topics
1 Credits
Current topics in environmental engineering and science. C E 592C E 592 Environmental Engineering & Science Topics (1) This is a literature review course for graduate students interested in topics related to environmental engineering. The subject of this seminar changes each semester. Examples of topics include: membrane bioreactors; biological hydrogen production; metal reduction by soil bacteria; anaerobic respiratory pathways used by bacteria for pollutant degradation. This class is highly participation-oriented. Each week we review a single paper selected by the instructor or by a student in the class. The first two papers are selected by the instructor. Thereafter, students choose the paper. The paper must be selected one week in advance, and sufficient copies will either be brought to class or a pdf file will be provided by email to all participants one week prior to the class. The student choosing the paper will be expected to lead the discussion by prompting others to provide a summary of the paper or of key items; suggesting areas that require closer inspection; stimulating a critical evaluation of the paper. No background is needed on this topic other than general environmental engineering courses typical of an M.S. program in Environmental Engineering.

CE 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CE 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

CE 598: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

CE 599: Foreign Studies
1-2 Credits/Maximum of 4
Courses offered in foreign countries by individual or group instruction.

CE 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

CE 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

CE 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Supervised experience in college teaching.

CE 603: Foreign Academic Experience
1-9 Credits/Maximum of 18
Foreign study and/or research constituting progress towards the degree at a foreign university.

CE 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.
CE 835: Integrated Project Management for Civil Engineers

3 Credits

This course will present the project management process to students pursuing a graduate degree in Civil Engineering. The course will utilize a project/group-based learning process to teach project management's value, methodology, and application to civil and environmental engineering projects in the student's particular emphasis area (Infrastructure, Transportation Systems, or Water and Environment). Students will learn how to initiate, plan, organize, staff, direct, control, and closeout a project. Key topics to be discussed include: the role of the project manager, civil engineering project procurement/proposal development, importance and skills of communications, project team development and leadership, team conflict resolution, design management, scope management, work breakdown structure (WBS), scheduling/time management, budgeting/cost management, risk management, resource management, crisis management, earned value, project evaluation and control, and project closeout and termination.

Classics and Ancient Mediterranean Studies (CAMS)

CAMS 501: Comparative Greek and Latin Grammar

3 Credits

The evolution of the phonological, morphological, syntactic and lexical structures of Greek and Latin from Proto-Indo-European.

Prerequisite: LATIN003

CAMS 503: Seminar on Ancient Mediterranean Languages

3-6 Credits/Maximum of 6

An in-depth examination of the ancient languages of the Mediterranean basin, including Indo-European and non-Indo-European languages.

Prerequisite: LATIN003, LING 502

CAMS 520: Advanced Sumerian

3 Credits

Advanced study of Sumerian grammar and cuneiform writing through the reading of Sumerian literary texts.

CAMS 521: Advanced Akkadian

3 Credits

Advanced study of Akkadian grammar and the cuneiform script through the reading of texts in various dialects.

CAMS 522: Comparative Semitics

3 Credits

Overview of the Semitic language family and introduction to its comparative linguistic study.

CAMS 592: Proseminar

3 Credits

Introduction to the history, research methods, historiography of modern scholarship on ancient Mediterranean studies. CAMS 592 Proseminar (3)The specific aim of this proseminar is to provide a foundation for scholarly work in the disciplines included within Classics and Ancient Mediterranean Studies. This proseminar will therefore introduce the student to the scope and nature of the ancient evidence (literary, documentary, material [archaeological], the history and historiography of modern study of that evidence and the ways in which research methodologies and techniques have evolved. In addition, the proseminar will introduce students to the nature of contemporary academic presentation and publishing, thereby to assist them in preparing research papers for scholarly dissemination.

CAMS 593: Research Seminar

3-6 Credits

Significant research experience in the fields represented by CAMS; guided supervision in the preparation of a scholarly article. CAMS 593 Research Seminar (3-6)The specific aim of this seminar is to provide a research experience in one of the disciplines included within Classics and Ancient Mediterranean Studies. This seminar will therefore introduce the student to the scope and nature of the ancient evidence (literary, documentary, material [archaeological], the history and historiography of modern study of that evidence and the ways in which research methodologies and techniques have evolved in a specific discipline of CAMS. In addition, the seminar will require students to present their own research topic in the form of a seminar presentation and a written paper suitable for submission for publication in a refereed journal.

Prerequisite: CAMS 592

CAMS 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

Clinical and Translational Sciences (CTS)

CTS 590: Colloquium

1 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

CTS 595A: Clinical Science Internship

3-6 Credits/Maximum of 999

Supervised, research-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required. Supervised, research-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required. Students enrolling in this course must 1) be at least a 2nd year graduate student;
2) have completed the online CITI Program course in Human Subjects Research; and 3) have identified an available mentor in a clinical setting.

**Prerequisite:** CTS 590

CTS 595B: Translational Science Internship

3-6 Credits/Maximum of 6

Supervised, research-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required. Supervised, research-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required. Students enrolling in this course must 1) be at least a 2nd year graduate student; 2) have completed the online CITI Program course in Human Subjects Research; and 3) have identified an available mentor in an industry setting.

**Prerequisite:** CTS 590

CTS 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

CTS 596B: IBD Nutr Clin Rota

3 Credits

IBD Nutr Clin Rota

CTS 596C: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

CTS 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

**Communication Arts and Sciences (CAS)**

CAS 500: Historical Public Address

3 Credits/Maximum of 9

Special topics in American public address, 1765-1900; emphasis on rhetoric of revolution, reform, and reaction. CAS 500CAS 500 Historical Public Address (3 per semester/maximum of 9) This is a graduate seminar focusing on special topics in the history of American public address, 1765-1900. It is designed to strenghten students' knowledge of the historical foundations of the American rhetorical tradition. Special attention is paid to key texts, debates, and movements shaping the origins and development of American nationhood. Emphasis is placed on the language of revolution, reform, and reaction. Special topics through which this course is to be taught may include: The Rhetoric of the American Revolution, Rhetoric of Abolitionism and Civil Rights, The Rhetoric of the Women's Suffrage Movement, Great Debates in American History, and Rhetoric and the American Presidency, 1789-1900. Students should consult with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

**Prerequisite:** CAS 411

CAS 504: Contemporary Public Address

3-9 Credits/Maximum of 9

Special topics in recent history of American public address, including speeches, debates, persuasive campaigns, and social movements in America 1900-present. CAS 504 CAS 504 Contemporary Public Address (3 per semester/maximum of 9) This course is a graduate seminar focusing on special topics in the history of American public address since 1900. Through intensive study of great speeches and other rhetorical texts, important national debates and controversies, and significant persuasive campaigns and social movements, it cultivates specialized understanding of the distinctively American tradition of public advocacy and deliberation and illuminates how that tradition has evolved in response to political and social developments and new communication technologies. Special topics reflecting the research interests of current faculty who might be expected to teach the course include: 'The Rhetoric of the Progressive Era,' 'The Rhetoric of the New Deal,' 'The Manifesto in Contemporary Social Movements,' 'The Rhetoric of Contemporary Political Campaigns,' and 'The Rhetorical Presidency.' Students should consult with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

**Prerequisite:** CAS 411

CAS 505: Historical Development of Rhetorical Theory

3 Credits/Maximum of 9

Study of one or more periods of rhetorical theory from Greek antiquity to 1900.

**Prerequisite:** CAS 420

CAS 506: Contemporary Rhetorical Theory

3 Credits/Maximum of 6

A study of rhetorical theory from 1930 to the present, focusing on semantic, political, sociological, symbolic, and philosophical perspectives.

**Prerequisite:** CAS 411 , CAS 505

CAS 507: Issues in Rhetorical Theory

3 Credits/Maximum of 6

Theoretical, analytical, philosophical, and critical problems in human communication, with application of humanistic and social scientific research framework. CAS 507 CAS 507 Issues in Rhetorical Theory
per semester/maximum of 6) The seminar is available to members of the faculty who wish to explore specialized problems of a theoretical, analytical, philosophical, or critical nature in human communication research. Its content varies by instructor. Such subject areas of language and meaning, epistemology, ethics and moral philosophy, metaphysics and ontology, the functions of myth, cognition, child development, and brain function may be considered for the contributions they make to our understanding of rhetorical behavior. Special topics reflecting the research interests of current faculty who might be expected to teach the course include: 'Rhetoric, Myth, and Cosmology,' 'Rhetoric and Ethics,' 'The Rhetorical Construction of Social Identity,' and 'Rhetoric and Public Deliberation.' Students should consult with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

**Prerequisite:** CAS 420

CAS 509: Democratic Deliberation

3 Credits

Modern political systems are as likely to move further away from deliberative ideals as toward them, and such movement can undermine a system's democratic legitimacy. This problem has inspired the development of deliberative democratic theory and research, which provides a powerful critique of contemporary politics. The study of deliberation dates back to ancient Greece, which gave us forms of speech that endure to the present day. Current conceptions stress public deliberation and dialogue's potential to ameliorate social and political problems, including polarization and incivility, and to generate more robust and reflective public policy solutions to complex problems. These ideas fold into grander theories of deliberative democracy, which considers how everything from cultural practices to large-scale institutions feed into the overall system of public discourse in a society. Students will review philosophical and interpretive works, as well as empirical research on deliberation utilizing case studies, surveys, and experiments. This seminar also helps students plan and execute their own contributions to this growing body of scholarship.

CAS 515: Rhetoric and Media

3 Credits/Maximum of 9

Seminar in the application of rhetorical theory and criticism to television, film, and other media. CAS 515 CAS 515 Rhetoric and Media (3 per semester/maximum of 9) Seminar in the application of rhetorical theory and criticism to television, film, and other media. In a recent offering of the seminar, we studied the films of Alfred Hitchcock from the point of view of The Rhetoric of the Thriller. The Films of Alfred Hitchcock as Art, Entertainment, and Social Text. This course offered an intensive examination of the art of Alfred Hitchcock, one of the great film artists of the twentieth century. Each week, the class screened one or more of Hitchcock's classic films. The class then met in small discussion sections for intensive analysis of the films and a series of related readings. Our discussions and readings explored Hitchcock as one of Hollywood's most successful popular entertainers, the 'master of suspense'; as one of the great artists of the medium, as a critic of American culture; and as a persona whose reputation is a construction of his own efforts, and the product of reviewers and academic critics. Students should consult with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

CAS 530: Political Communication and Media

3 Credits

Study of rhetorical and communicative dimensions of contemporary political communication with particular attention to electronic media. CAS 530 CAS 530: Political Communication and Media (3) This seminar explores the rhetoric of electronically mediated political discourse, including broadcast speeches, news coverage of politics and political campaigns, campaign debates, political advertising, talk radio, and political websites. Addressing key problems and issues in democratic theory and practical politics, the seminar explores questions frequently raised by both scholars and political pundits: How has the character of political discourse changed in the age of electronic media? How have new communicative technologies affected political discourse? Is it possible to have an engaged, informed, and responsible electorate in the age of 30-second ads and journalistic sound bites? What might be done to improve the quality of political discourse and to enhance public deliberation? How might new media technologies be used to combat political alienation and promote civic engagement? The specific focus of the seminar varies by semester. Recent seminars have focused on the rhetoric of presidential campaigns, conceptions of the public and public opinion in the age of mass media and polling, and the political significance of such non-traditional media as motion pictures and websites. Whatever the topic, the focus remains on the impact of mass media on the quality and character of political discourse in America. Students in the seminar will join in a larger scholarly conversation about the impact of new media technologies on democratic politics. Students in CAS 530 will read scholarly works on mass media and politics from a variety of disciplines, as well as more popular writings that have developed influential critiques of contemporary political communication or have advocated reforms in the laws and regulations governing mass media. Given the subject matter, the seminar is necessarily interdisciplinary in approach, and students will be encouraged to take interdisciplinary approaches to their own research and writing for the seminar.

CAS 550: Social Influence

3 Credits/Maximum of 6

Theory and devices of persuasion; analysis of persuasive discourse. CAS 550 CAS 550 Social Influence (3 per semester/maximum of 6) This is a graduate-level seminar designed to provide students with social scientific theoretical principles for explanation, prediction, and practice in social influence contexts and situations. CAS 550 emphasizes the positive and negative outcomes likely to be associated with specific messages designed to influence others in social and societal settings. It emphasizes the importance of audience analysis and goal selection in guiding message design, and source and channel selection to communicate in ways that are intended to form, change, or reinforce and maintain others' beliefs, attitudes, values, and behaviors. It affords significant opportunities to address the gaps between theory and measurement in social scientific research pursuits. These attempts may employ a highly active cognitive approach or a more passive strategy. Both approaches are examined in this course. The course content and setting reflects the above aims. The course begins by defining social influence, provides an overview of its history, and introduces the major theories associated with social influence formation, change, and reinforcement objectives. The course devotes significant time to the evaluation of existing social influence attempts, including review of the channel(s) and source(s) used to deliver particular messages. Students will also practice known strategies for designing influence
messages. These activities will take place within the framework of knowledge generated by research findings associated with the influence theories examined in the class. Evaluation will include participation in class, exams that include application in the form of a social influence case study, and a research proposal associated with the application of social influence theories to message design and evaluation. The course complements graduate students’ interests in pursuing academic, business, health, management, public relations, advertising, sales, and other career ambitions where communication is associated with the desire to influence others. The course will increase students’ critical thinking and informed decision-making skills associated with others’ efforts to influence them. It also frames discussion about the ethics of and ethical decision-making associated with persuasion. CAS 550 will be offered every other year with 15 seats per offering.

**Prerequisite:** 6 credits in Communication Arts and Sciences

CAS 551: Persuasive Communication

3 Credits

CAS 551 (Persuasive Communication) is a graduate level survey of classic and contemporary thinking on persuasive communication. The overarching goal of the course is to impart an understanding of the major issues and concerns in one of the oldest and most extensive literatures in social science. Students should leave the course with a broad understanding of the content and contours of the field as well as a set of strong empirical generalizations. Because of the enormous role that persuasion plays in shaping contemporary society as well as the day-to-day lives of individuals, an understanding of it is essential for scholars, consumers, and citizens.

CAS 553: Disaster Communication

3 Credits

This seminar provides students with a comprehensive understanding of the multifaceted nature of disaster communication across phases of a disaster.

CAS 554: Small Group Communication

3 Credits/Maximum of 6

Communication variables in small groups. Experimental research and innovations in communication in vocational, therapeutic, and educational groups. CAS 554 CAS 554 Small Group Communication (3 per semester/maximum of 6) Group communication is a specialized area of study that has ties to the related areas of interpersonal and organizational communication. These ties reflect the fact that groups typically are part of some larger organizational structure and that it is the interaction among the members of groups that drive their performance. The major objectives of the course, which is presently offered once every two academic years, are to provide students with (1) an in-depth examination of what social scientific research has revealed about the functions communication among the members of groups in various interpersonal and organizational contexts and (2) the opportunity to engage in an even deeper examination of a specific issue relating to a specific function of communication in one of the types of groups included, that is, decision-making and problem-solving groups, familial groups, educational groups, work groups, and support groups, by means of an original research project. The first three weeks of the course acquaint students with the general domain of group communication as a specialized area of study, as well as the dominant theoretical and methodological approaches in evidence. In the fourth and fifth weeks, students come to understand how communication in groups functions generally to socialize the members and thereby shape their respective cultures, as well as influence the ways in which they characteristically fulfill the purposes for which they have been created. During the remaining ten weeks of the course, the accent is on particular types of group contexts and the unique ways in which communication is manifested in each. Finally, each student identifies and executes an original research project, the results of which he or she shares with other members of the class in the form of a scholarly paper which, if warranted, he or she subsequently modifies for presentation at a professional conference and possibly publication.

Determination of overall mastery of the course content derives from a student’s performance on a comprehensive final examination held during the regularly scheduled final examination period. The grade for the research project and the final examination combined provide basis for the recorded grade for the course. The course requires no special facilities other than a classroom. Students should consult with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

CAS 555: Interpersonal Communication

3 Credits/Maximum of 6

Investigation of the communicative management of ongoing relationships; examination of how communication both creates and responds to exigencies of friendship. CAS 555 CAS 555 Interpersonal Communication (3 per semester/maximum of 6) This course is intended for graduate students who want an in-depth understanding of interpersonal communication across contexts. It is a graduate-level course, so the reading is heavy, the expectations for the level of discussion are high, and the instructor will assume that students have a serious interest in studying research and theory focused on understanding communication processes. Structurally, the course begins with a review of definitional and philosophical issues underlying research and theory in interpersonal communication, then covers the major frameworks and theories that make up knowledge in the area. In addition, some of the primary issues debated in the literature will be discussed. Evaluation methods will include presentations and research paper(s), but may also include exams and participation. Students should consult with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

**Prerequisite:** CAS 403

CAS 556: Relational Communication

3 Credits

Examines theories and research focused on understanding communication in intimate (or potentially intimate) relationships. CAS 556 CAS 556 Relational Communication (3) This course is intended for students who want an in-depth understanding of interpersonal communication in intimate and potentially intimate relationships. It is a graduate-level course, so the expectations for the level of discussion are high and the instructor will assume that students have a serious interest in studying research and theory focused on understanding communication processes in relational contexts. The focus will be on cognitive and social theories of relational encounters, including friendships, romantic relationships, and family relationships. Structurally, the course begins with a review of different philosophical issues underlying research and theory in the field of relational communication. Then, students will shift their attention to the major social scientific perspectives on human relationships. Next, major theories would be
discussed and the course would be completed with a more focused discussion of central issues related to relational communication. Evaluation methods will include, research paper(s) and presentations, but may also include exams, short papers, journals, quizzes, and creative activities.

**Prerequisite:** CAS 403

CAS 557: Health Communication

3 Credits

Provides experience in making decisions about planning, implementing, and evaluating communication in community-based health campaigns to achieve health promotion/education. CAS 557 CAS 557 Health Communication (3) This is a graduate seminar designed to provide students with a comprehensive overview of health communication in community-based health campaigns. Health messages are a pervasive feature of contemporary American life. The study of health communication for community-based campaigns overviews strategies for informing, motivating, and selling ideas and behaviors based on health and health care. Students will select a target community and topic to use as a focal point for applying course readings. Students will prepare an evaluation plan for assessing policymakers’ involvement in your health topic. This should include projection of the need for policymakers’ involvement, using as many archival materials as possible to conduct a formative evaluation of the need and a plan to obtain the additional information needed to identify the gaps between current and projected levels of involvement. Students will also assess previous efforts to involve lay and expert communities in health promotion efforts associated with their topic, and summarize findings, preparing an organizational membership roster for both Expert Advisory Board and Community Steering Committee, and providing a mission statement to be used in recruitment. Provide a draft of a commitment contract to be signed by board and committee members. Students will also examine previous efforts to involve educational institutions, and lay and expert providers in promotion efforts, summarizing findings and developing a vision of how these audiences should be and could be involved. Previous efforts to involve businesses, retailers, and family in promotion efforts will also be assessed, with development of a vision of how these audiences should be and could be involved included. The health communication seminar complements students’ interests in pursuing academic, political, counseling, pastoral, business, health, management, public relations, advertising, sales, and other career ambitions where community-based campaigns comprise an important focus.

**Prerequisite:** CAS 453

CAS 558: Family Communication

3 Credits

Examines theories and research focused on understanding communication in family contexts. CAS 558CAS 558 Family Communication (3) This course is intended for students who want an in-depth understanding of communication in family relationships. It is a graduate-level course, so the expectations for the level of discussion are high and the instructor will assume that students have a serious interest in studying research and theory focused on understanding communication processes in family contexts. The focus will be on communication theories of family relationships, including parent-child relationships across the life span, sibling relationships, and marital relationships. Students are encouraged to apply this knowledge to their own lives. Students should leave the course with a much more thorough understanding of factors that affect communication within family interaction. Structurally, the course begins with a review of different philosophical issues underlying research and theory in the field of family communication. Then, students will shift their attention to the foundational issues/principles underlying communication in family contexts. Once the course successfully increases student awareness of these foundational principles, the course moves to a focus on interactions within family settings. As part of this move, the course will address communication in parent-child, intergenerational, marital, and sibling relationships, and will include general topics such as affection and intimacy, conflict, power and control, and strengthening and repairing relationships. Throughout, the course will discuss communication processes within the larger cultural, interpersonal, and communication contexts in which family relationships are situated. Evaluation methods will primarily include exams, paper(s), research projects, and critical thinking reaction papers.

**Prerequisite:** CAS 405

CAS 559: Lifespan Communication

3 Credits

How various communication processes such as language skills, interpersonal relationship definition and management, social support change cross the lifespan. CAS 559CAS 559 Lifespan Communication (3) Lifespan Communication is a graduate seminar that emphasizes how communication processes (e.g., language skills, interpersonal conflict management, socialization and support, etc.) are developed, maintained and changed across the lifespan. The seminar concentrates upon numerous communicative processes from infancy through childhood, adolescence into middle age, and beyond middle age into later life. Numerous theoretical perspectives that incorporate lifespan principles will guide this seminar. The most recent research that investigates communication across the lifespan will be read and critiqued. This course is grounded in the assumption that multiple disciplines have investigated and continue to investigate human interaction at all points in the lifespan. Therefore, sociological, psychological and anthropological research will complement the research in the discipline of communication that will be discussed in the seminar.

**Prerequisite:** CAS 403 or equivalent

CAS 560: Communication Theory

3 Credits

This course introduces graduate students to the philosophical underpinnings of communication research and develops skills in theory construction. CAS 560CAS 560 Communication Theory (3) The first Department of Communication was established in the 1950s, and most departments of communication are less than 30 years old. This course is intended for graduate students who want an in-depth understanding of the philosophical issues underlying research and theory in human communication. It is a graduate-level course that emphasizes theory development in the area of human communication behavior. The readings covered are extensive, contributing to an expectation for abstract and integrative thought and discussion. Students should have a serious interest in studying theory construction and related philosophical underpinnings. Structurally, the course begins with a review of definitional issues underlying research and theory in human communication, moves to a focused discussion of various epistemological and ontological positions in the social sciences and humanities, then shifts to issues of theory construction and development. In addition, some of the primary
issues debated in the related literatures will be discussed. Evaluation methods will include presentations and paper(s), but may also include exams and participation. As a result, students will examine where knowledge about communication comes from while defining social science, metatheory, theory, and levels of theorizing; acquire familiarity with the breadth, scope, and range of communication theory as a domain of study; comprehend major issues confronting researchers and theoreticians in communication; and acquire a vocabulary suitable for understanding the discussion that takes place in the field’s journals and at communication conferences. The course is planned as a foundational course for all graduate students entering the graduate program with interests in non-rhetorical methods of inquiry, and it is strongly recommended for all students entering the graduate program with interests in non-rhetorical methods of inquiry. This course will be offered once a year with 15 seats per offering.

**Prerequisite:** CAS 403

CAS 561: Quantitative Research Methods

3 Credits

Introduces graduate students to principles, issues, and design considerations underlying social scientific methodology; material is applied to communication research. CAS 561 CAS 561 Quantitative Research Methods (3) This course is intended for graduate students who want an understanding of the quantitative methodology and research design. It is a graduate-level course, so the reading is heavy, the expectations for the level of discussion are high, and the instructor will assume that students have a serious interest in becoming critical consumers of quantitative research methods. Structurally, the course begins with a review of definitional issues, moves to a thorough discussion of sampling, reliability, and validity in research designs, then shifts to an understanding of quasi-experimental and experimental designs. In addition, some of the primary issues debated in the literature on quantitative methodologies will be discussed. Evaluation methods will include presentations and paper(s), but may also include exams and participation. The course is planned as a foundational course for all graduate students entering the graduate program with interests in non-rhetorical methods of inquiry, and it is strongly recommended for all students entering the graduate program with interests in non-rhetorical methods of inquiry. This course will be offered once a year with 15 seats per offering.

**Prerequisite:** CAS 403

CAS 563: Pairs & Pairings: Quantitative Methods for Interdependent Data

3 Credits

Foundational course exploring methods for addressing interdependent data: dyadic analysis and social network analysis. CAS 563 Pairs & Pairings: Quantitative Methods for Interdependent Data (3) This graduate seminar is a foundational course exposing students to two quantitative perspectives that are increasingly encountered in the communication research: dyadic analysis and social network analysis. Dyadic analysis and social network analysis attempt to analyze non-independent data, and test concepts such as interpersonal influence, position, role, or social distance and segregation. By the end of the semester students should have an understanding of these perspectives, be able to conduct basic dyadic and social network analyses competently, and be ready to anticipate various boundaries, caveats, and necessary conditions. The ultimate objective of this seminar is to produce informed users and consumers of quantitative research using quantitative methods for handling interdependent data.

**Prerequisite:** CAS 561

CAS 564: Measurement in Communication Science

3 Credits

This course is concerned with the theory and technology of measuring variables relevant to the study of communication. In a phrase, the course is about construct validity. It consists of three major sections. The first focuses on how to devise and evaluate a conceptual definition, then create a corresponding operational definition. This section lays the groundwork for the subsequent sessions that present data-analytic procedures for evaluating the correspondence between concept and operation. Part two of the course addresses measures in which the symbols reflective of the phenomenon are ordered. Specific topics include consistency indices of reliability, exploratory factor analysis, and confirmatory factor analysis. Part three emphasizes measurement of phenomena for which the symbols are not ordered, that is, the measurement of categories. It covers the creation and evaluation of coding schemes as they are used in verbal protocols, content analysis, and social interaction analysis as well as agreement indices of reliability. The overarching goal of the course is to impart some of the conceptual and practical skills necessary for conducting social scientific research.

CAS 565: INTERPERSONAL COMMUNICATION & WELL-BEING

3 Credits

This course is a graduate-level examination of research linking interpersonal communication to outcomes associated with personal well-being. This course is grounded in a biopsychosocial understanding of health, which recognizes that physical and mental health is shaped by social experiences, including interpersonal communication. The course begins by reviewing various indices of well-being, mind-body linkages, and evidence that interpersonal communication produces outcomes relevant to well-being. Next, we explore the literature linking well-being to social support in its various forms, spanning the health benefits of social network involvement to the impact of specific comforting messages. We turn then to the deleterious impact of caustic relationship states and communication episodes representing facets of interpersonal conflict. Throughout the semester, attention will be given to the theoretical issues and methodological challenges that confront researchers working on these topics, and a review of those issues serves as the capstone session for the semester.

CAS 567: Health Campaigns: Design and Evaluation

3 Credits

Theory and methods of message design, audience analysis, evaluation, and ethics in health communication research. CAS 567 Health Campaigns: Design and Evaluation (3) This graduate course explores theories of health communication and approaches to designing and evaluating effective communication campaigns that attempt to address real-world health issues. The real-world health issues may vary from pandemic conditions involving global coordination to specific ones appearing within a smaller, cohesive network in a particular neighborhood. Students will consider theory-driven campaigns targeting audiences who represent a variety of languages as well as co-cultural orientations and identities, in domestic and international settings. Students will learn theories and methods related to audience analysis,
campaign design, and program evaluation. This course will cover issues of inference, ethics, and sources of bias in health campaign design and evaluation.

CAS 581: Discourse Analysis

3 Credits

Overview of theories and approaches to the analysis of spoken and/or written discourse. APLNG 581 APLNG (CAS) 581 Discourse Analysis (3) This course is designed to provide an overview of the various theories of and approaches to the analysis of spoken and written discourse, e.g., speech act theory, conversation analysis, pragmatics, contextual analysis, functional/cognitive grammar, grammar and interaction. These and other approaches are intended to serve as analytic tools and frameworks for students to ultimately design and carry out their own research projects within the course of the semester. Research projects may focus on any aspect of language use, such as language and grammar, language and interaction, language and culture, language socialization, language and cognition; projects may center on some phenomenon of English or may involve other languages, as long as the student is capable of conducting an in-depth analysis of the particular phenomenon under investigation in that language.

Cross-listed with: APLNG 581

CAS 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers. CAS 590 CAS 590 Colloquium (1-3) The CAS Colloquium provides a forum for the presentation of graduate student and faculty research, as well as for discussion of professional issues, such as preparing a curriculum vitae or teaching portfolio, publishing scholarly work, applying for grants, and interviewing for academic positions. All first-year graduate students register for the colloquium, and graduate students at all stages of their career are strongly encouraged to attend.

CAS 594: Research Topics

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small group basis.

Prerequisite: prior approval of proposed assignment by instructor

CAS 595: Internship

1-9 Credits/Maximum of 9

Supervised off-campus, nongroup instruction.

Prerequisite: prior approval of proposed assignment by instructor

CAS 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CAS 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

CAS 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

CAS 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

CAS 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Students enrolled will, under supervision, teach SPCOM 100—introduction to speech communication: formal speaking, group discussion, analysis and evaluation of messages.

CAS 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

CAS 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

Communication Sciences and Disorders (CSD)

CSD 500: Research Methods in Communication Sciences and Disorders

3 Credits

Methodology necessary for understanding and conducting research in communication disorders.

Prerequisite: 15 credits in communication sciences and disorders

CSD 520: Physiologic and Acoustic Issues in Speech Science

3 Credits

Seminar in the physiologic and acoustic aspect of normal and disordered speech production. CSD 520 CSD 520 Physiologic and Acoustic Issues in Speech Science (3) CSD 520, Physiologic and Acoustic Issues in Speech Science (PHSIO-ACS SPCH SCI), is a 3-credit course offered every Fall semester. The course is required of all CSD graduate students working towards a masters degree in Communication Sciences and Disorders. The educational objectives of the course are to provide information on acoustical and some physiological aspects of normal speech production, along with some applications to disordered speech production, particularly neurogenic speech disorders, stuttering, and voice disorders. The goal of the course is to provide the graduate student with experience using the most common methods of speech
Modern theories of causes of disorders of rhythm; methods of examination, diagnosis, and treatment. CSD 542 CSD 542 Stuttering
(3) Fluency disorders are difficult to understand without adequate demonstrations. Therefore, this class makes use of numerous videotapes to foster understanding and assist with explanation of difficult concepts. Topics covered include facts about stuttering and its core behaviors, the etiology of stuttering, the development of stuttering. Furthermore, students learn to evaluate stuttering behaviors and to work as part of an interdisciplinary team. Students will learn to evaluate and treat preschool children, school-age children and adults who stutter. In addition, other types of fluency disorders are introduced. Course activities include exams, a stuttering assessment project, team observation of videotapes of individuals with fluency disorders, and modeling stuttering behaviors in order to fully understand the disorder.

Prerequisite: CSD 442, CSD 495A

CSD 543: Craniofacial Anomalies: Cleft Lip and Cleft Palate
1 Credits

This course enhances graduate students’ understanding of the following topics: 1) velopharyngeal mechanism and function for speech production in individuals with and without cleft palate and craniofacial anomalies; 2) basic embryological development related to the lip and palate fusion process; 3) common genetic syndromes that involve cleft palate; 4) in-depth understanding of resonance disorders; and 5) assessment and treatment of resonance disorders.

Prerequisite: CSD 442, CSD 495A

CSD 545: Neuromotor Disorders of Speech
3 Credits

Etiology and symptomatology of dysarthric and apraxic speech: diagnosis, treatment, and the team rehabilitative program approach to these disorders. CSD 545 CSD 545 Neuromotor Disorders of Speech
(3) In this course, students gain basic knowledge of neurological bases for speech-motor control. Students learn to identify and describe diseases/conditions that result in acquired and developmental motor speech disorders. Students learn to identify and describe the dysarthrias in clinical populations across the age span. Emphasis is placed on the development and implementation of appropriate intervention plans to remediate and/or compensate for motor speech disorders. Students complete three examinations during class and write a paper that synthesizes current research on a topic in motor speech disorders.

Prerequisite: CSD 444

CSD 546: Language Disorders in Adults
3 Credits

Nature, etiology, diagnosis, and management of language disorders in adults. CSD 546 CSD 546 Language Disorders in Adults
(3) This course provides information about the disorders of language that result from impairments to the central nervous system. Basic neurology, the aging process, and the nature and cause of aphasia-producing conditions are
covered along with issues related to the assessment and management of adults with aphasia. Stroke-related aphasia in adults is the emphasis of this course, but it also briefly covers other common language and cognitive neuropathologies of traumatic brain injury, Alzheimer’s Disease, and right-hemisphere brain damage.

**Prerequisite:** 9 credits in communication sciences and disorders or related fields such as psychology, linguistics, or human development.

CSD 547: Language Disorders in Children

3 Credits

Nature, etiologies, diagnosis, and management of language disorders in children. CSD 547CSD 547 Language Disorders in Children (3) This course provides students with a strong foundation in the nature of language disorders, the current issues in and theories of language disorders, assessment and intervention and key language assessment and intervention approaches. Major topics include assessment and intervention of infants, toddlers, preschoolers, school-age children, adolescents, children from diverse cultures, and children with special needs such as autism, cerebral palsy, and mental retardation. As a result of the foundation laid in this course, students will be able to critically evaluate and apply the current literature and forthcoming research to their clinical practice. The class includes a combination of lecture, class discussions, and small group activities. In addition, students complete various assignments in and out of the classroom that are designed to assist them in relating theory and research to clinical practice.

**Prerequisite:** CSD 300

CSD 548: Dysphagia

3 Credits

Understanding the process of the swallowing mechanism and the management and treatment of swallowing disorders. CSD 548 Dysphagia (3) This course is designed to provide graduate students with basic knowledge of the swallowing process/mechanism. A brief overview of normal swallowing from birth to the aging adult will be presented. The course will focus on assessment, management, and treatment of individuals who present with a swallowing disorder. Students will become familiar with both non-instrumental assessments of swallowing, and will interpret videofluoroscopic swallowing studies (VFSS). Students will also develop treatment plans for case study patients with dysphagia, Multicultural issues related to swallowing will be discussed.

**Prerequisite:** CSD 444 or equivalent

CSD 549: Speech-Language Pathologists in the Schools

3 Credits

Topics concerning service delivery in the school setting; legislation related to service delivery; special education enrollment, collaboration, caseload management, special populations. CSD 549 CSD 549 Speech-Language Pathologists in the Schools (3) This course covers multiple aspects related to becoming a competent speech-language pathologist in the public school system. Topics include: legislation related to school-based service delivery; the hierarchy of special education enrollment; considerations for special populations; caseload management and logistical aspects of work in the public school system. Case examples, class discussion, and group activities will be used to illustrate various aspects of this work setting.

CSD 550: Seminar in Communication Sciences and Disorders

1-6 Credits/Maximum of 6

Advanced study of special problems and new developments in communication sciences and disorders. CSD 550CSD 550 Seminar in Communication Disorders (1-6) This seminar is designed to address special topics of interest to doctoral students in the Communication Sciences and Disorders. Topics covered vary from semester to semester and include the art and science of grant writing; various research approaches such as qualitative research methods or single-subject experimental research methods, etc.; issues related to teaching at the university level, speech perception, neuroscience, cognitive science, and cochlear implants.

CSD 551: Assessment and Intervention in Augmentative and Alternative Communication

3 Credits

Research results in augmentative and alternative communication (AAC); implications for assessment, prescription of AAC systems, and intervention planning in AAC. CSD 551CSD 551 Assessment and Intervention in Augmentative and Alternative Communication (3) In this course students examine current applications of augmentative and alternative communication (AAC) including unaided and aided AAC systems. Students critically evaluate the strengths and limitations of these systems, identify the skills required to use these systems, and describe individuals who may benefit from AAC. Many topics of importance to AAC are studied including key legislation related to people with disabilities, consumer-responsive services and strategies to effectively implement services that are consumer-responsive. Clinical management is emphasized and students determine appropriate AAC assessment goals, procedures, and tools to identify the communication needs of individuals who require AAC, assess their skills and determine opportunity barriers. Students customize AAC systems to meet the needs of individuals who require AAC, determine partner strategies to enhance communicative interaction with individuals who use AAC and use empirically-validated instructional procedures to teach these strategies to partners. Students evaluate the efficacy of AAC interventions and determine consumer satisfaction. To accomplish these goals, students complete laboratory assignments and written case assignments in AAC assessment, vocabulary selection, and intervention planning and implementation.

CSD 595E: Audiology Practicum

1-5 Credits/Maximum of 5

CSD 595ECDSD 595E Audiology Practicum (1-5) This course provides speech-language pathology graduate students with a detailed and pragmatic understanding of hearing testing, normal and abnormal auditory systems, and common practices used to evaluate hearing ability. Students will gain experience in pure-tone audiometry, tympanometry, speech audiometry, central auditory processing disorders, and otoacoustic emissions. Students participate in hearing aid fittings, programming and repairs. Students learn to interpret the results of audiological evaluations and make appropriate recommendations based on results of audiological evaluations.
CSD 595G: Speech Diagnostics Practicum
1-3 Credits/Maximum of 3
CSD 595GCSD 595G Speech Diagnostics Practicum (1-3) In this practicum course, advanced speech-language pathology graduate students gain experience in interviewing clients, parents and spouses. They learn to counsel clients and their families regarding communication disorders. With supervision, students complete diagnostic evaluations for a broad range of communication disorders and synthesize data. Report writing is also emphasized.

CSD 595J: Audiology Third Site
1-2 Credits/Maximum of 2
Internship course.

CSD 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CSD 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

CSD 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

CSD 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

CSD 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
No description.

Prerequisite: 40 graduate credits in CMDIS

CSD 603: Foreign Academic Experience
1-12 Credits/Maximum of 12
For students who are enrolled in a foreign university, or foreign study and/or research and constituting progress towards the degree.

CSD 852: Lab in Augmentative and Alternative Communication Technology
3 Credits
This course provides in-depth, applied consideration of Augmentative and Alternative Communication and Assistive Technology. It builds knowledge and skills in the areas of system design and the interplay between person and technology; maximizing participation through understanding of barriers and supports at multiple levels; and training and supporting all stakeholders. Students will engage in (a) hands on learning of assistive and AAC technologies that support communication and participation across all environments; (b) discussions of research related to use of assistive and AAC technology to enhance communication and curriculum outcomes for individuals with disabilities; and (c) problem-based learning through case studies in order to apply their knowledge and skills

CSD 895A: Speech Therapy Practicum
1-3 Credits/Maximum of 8
This course introduces graduate students to clinical practice across the lifespan, with individuals with a variety of communication disabilities. It includes a weekly class lecture, providing instruction in and application of therapy procedures. Topics covered include clinical teaching, and activities to enhance teaching and learning. Students also learn appropriate methods of data collection and writing clinical objectives and intervention plans. This course is the in-house means of developing clinical knowledge and skills and accruing practicum hours. The number of clinical hours assigned each semester depends on the number of credits being taken as well as the number and types of hours that need to be accrued to meet certification requirements. The graduate student will attend one weekly meeting with each supervisor with whom a client is assigned. This course is designed to develop clinical knowledge and skills in these areas of intervention: a. Developing appropriate intervention plans with measurable and achievable goals that meet client¿s needs b. Implementing intervention plans, involving clients and relevant others c. Selecting / developing and using appropriate materials and instrumentation d. Measuring and assessing clients¿ performance and progress e. Modifying intervention plans, strategies, materials or instrumentation as appropriate to meet the needs of clients f. Completing administrative and reporting functions (e.g., release form, health / medical emergency form) g. Identifying and referring clients for services as appropriate h. Communicating effectively, recognizing the needs, values, preferred mode of communication and cultural / linguistic background of the client and relevant others i. Collaborating with others in case management j. Providing counseling re: communication and swallowing disorders to client and relevant others k. Adhering to the ASHA Code of Ethics and behaving professionally

CSD 895C: Speech/Language Therapy Externship
7-15 Credits/Maximum of 15
This course is a full-time externship experience in the assessment and treatment of communication disorders and is completed at an off-campus site. Graduate students in Communication Sciences and Disorders participate in an active learning clinical practicum with working professionals to enhance their academic and clinical competencies and skills. Students will accrue required clinical practice hours in an off-campus clinical and/or educational setting including hospitals, rehabilitation centers, nursing homes, early intervention programs, and public schools including pre-school programs.

Prerequisite: 45 credits in communication sciences and disorders and accrual of >200 clinical hours

CSD 895G: Speech Diagnostics Practicum
1-3 Credits/Maximum of 3
CSD 595GCSD 595G Speech Diagnostics Practicum (1-3) In this practicum course, advanced speech-language pathology graduate
students gain experience in interviewing clients, parents and spouses. They learn to counsel clients and their families regarding communication disorders. With supervision, students complete diagnostic evaluations for a broad range of communication disorders and synthesize data. Report writing is also emphasized.

CSD 895I: Speech Pathology Mini-Placement
1-9 Credits/Maximum of 9

Graduate students in Communication Sciences and Disorders participate in an active learning clinical practicum with working professionals to enhance their academic and clinical competencies and skills. Students will accrue these required clinical practice hours by completing this mini-placement in an off-campus clinical and/or educational setting including hospitals, rehabilitation centers, nursing homes, early intervention programs, and public schools including pre-school programs.

**Communications (COMM)**

**COMM 501: Proseminar in Mass Communications**
3 Credits/Maximum of 3

Overview of paradigms in mass communications research

**Prerequisite:** admission to doctoral program

**COMM 502: Pedagogy in Communications**
3 Credits

The purpose of this seminar is to train doctoral students to teach in the communications discipline at the college/university level. COMM 502 Pedagogy in Communications (3)This seminar is proposed as a dimension of the emphases on TA training and teacher preparation for doctoral students in Mass Communications in the College of Communications. The course is one aspect of the College's Graduate Teaching Academy. The seminar provides a foundation in pedagogical research, theory and classroom practice for mass communications doctoral students. The Graduate Teaching Academy demonstrates our faculty's commitment to the integration of training in research and teaching. The work of the seminar focuses on the unique characteristics of undergraduate and graduate education in the communications discipline. The principles and practices covered in the seminar have applications for teaching communications in a number of venues including the academic, business and government professional settings. The course involves students in collaborative learning, assessment skills, powerful pedagogies, practical workshops and substantive reviews and applications of curricular and pedagogical research in the communications discipline. The Graduate Teaching Academy in the College of Communications involves students in a number of activities that will prepare them for teaching. This seminar is one of those activities. Graduate Teaching Academy participants: 1. Take coursework in communications curriculum and pedagogical development that stresses a teaching scholarship of learning theory and a pedagogy of active and engaged learning practices. 2. Study the scholarship of learning within a disciplinary context in order to understand the system of organized knowledge in the communications discipline within which our teaching takes place. This orientation encourages a critical review of the comparative costs/benefits of a disciplinary - versus interdisciplinary-based communications pedagogy. 3. Eligible doctoral students become Teaching Associates, under faculty supervision, for selected College of Communications courses 4. Teach an undergraduate course in the College as an instructor. 5. Develop a teaching portfolio. 6. Attend College colloquia. 7. Have access to College resources like the Academic Services Center, the Office of Multicultural Affairs, and University resources such as the Center for Excellence in Learning and Teaching at Penn State's Schreyer Institute. 8. Complete the Teaching with Technology certification.

**COMM 504: Seminar in the History of Mass Communication**
3 Credits

No description.

**COMM 505: International Communication Problems**
3 Credits

Legal and communications problems of the international flow of news and opinion; international press codes.

**COMM 506: Research Methods in Communications**
3 Credits

The scientific method; survey of basic concepts of theoretical and empirical research; variety of methodology; criteria for adequate research. COMM 506 Introduction to Mass Communications Research (3) COMM 506 provides an overview of and foundation in research. Students are exposed to the nature of scientific inquiry, the process of concept explication, operationalization, measurement, and sampling. They also learn how to ask a research question. Research ethics, the logic and mechanics of experimental methods, fundamentals of survey design, and content analysis are also discussed. Students demonstrate the concepts learned in class by completing their own research project. Students also are exposed to statistical logic and practice in the context of their own project.

**COMM 507: News Media and Public Opinion**
3 Credits

Problems in the function, techniques, and responsibilities of press, radio, and television in forming and interpreting opinion.

**COMM 511: Mass Communications Research Methods II**
3 Credits

Problems of bibliographical research; evaluation of sources and materials in mass communications history, biography, structure, ethics, and other areas.

**Prerequisite:** COMM 506

**COMM 512: Government and Mass Communications**
3 Credits

Problems of freedom of information; governmental efforts to control mass communication agencies; government news coverage; public information agencies.
COMM 513: Constitutional Problems of the News Media
3 Credits
Problems involving conflict between guarantees of press freedom in the
First and Fourteenth Amendments and rights and privileges of others.

COMM 514: Political Economy of Communications
3 Credits
Structure and functions of United States and global media systems and
their relationship to political and economic systems.

COMM 515: MA Proseminar in Mass Communications
3 Credits
An introduction to graduate studies for MA students in Media Studies
and Telecommunications Studies.
Prerequisite: First semester enrollment in MEDIA or TELEC M.A.
programs

COMM 516: Introduction to Data Analysis in Communications
3 Credits
To understand and be able to use data analysis techniques common to
research in communications. COMM 516 Introduction to Data Analysis in
Communications (3) This class serves as an introduction to data analysis
techniques commonly employed in the field of communications and in
related disciplines. The course will employ a commonly-used statistical
package to illustrate concepts (e.g., Statistical Package for the Social
Sciences, SPSS), and instruction will be provided on how to employ
statistical software to conduct a variety of specific analysis techniques.
These techniques will include descriptive statistics, analysis of variance,
correlation and regression, and exploratory factor analysis. Examples of
research from the communications discipline and related fields will be
used throughout the semester to illustrate concepts. Emphasis will be
placed on decisions involved in the data analyses process, interpretation
of data, and effective presentation of results in journal-article format.
Evaluation will be based on short take-home assignments, exams, and a
final paper.
Prerequisite: COMM 506 or consent of program

COMM 517: Psychological Aspects of Communication Technology
3 Credits
Investigation of psychological aspects of human-computer interaction
(HCI) and computer-mediated communication (CMC). COMM 517
Psychological Aspects of Communication (3) This graduate seminar is
devoted to the investigation of psychological aspects of human-
computer interaction (HCI) and computer-mediated communication
(CMC). Theories and empirical research from communication, psychology,
and human-computer studies will be used to explore social responses to
communication technologies; uses and effects of unique technological
features such as interactivity and navigability upon individual users’
thoughts, emotions, and behaviors; nature and dynamics of interpersonal
and group interaction when mediated by technology; how issues of 'source' and 'self' are altered by computer-based media; and
psychological consequences of internet use, such as addiction and
depression. A primary goal of the seminar is to draw out, through
readings, discussion and empirical exploration, fundamental theoretical
and practical implications of these lines of research for interface design,
psychological processing of mediated form and content, human-web
site interaction, and internet-based mass, group and interpersonal
communication.
Prerequisite: COMM 304 or COMM 506

COMM 518: Media Effects
3 Credits
Advanced study of the effects of media messages and technologies via
theories and empirical evidence pertaining to processes of effects.
Prerequisite: COMM 506 or permission of instructor

COMM 520: Seminar in Advertising Problems
3 Credits
No description.

COMM 521: Advertising Perspectives
3 Credits
An overview of advertising in industrial societies including institutional
issues; socio-demographic issues; public policy issues; and ethical
issues.

COMM 522: Social and Cultural Aspects of Advertising
3 Credits
Analysis of advertising from a cultural/literary perspective; emphasis on
semiotic and hermeneutic analysis; advertising as social communication.

COMM 530: Research Methods in Strategic Communications
3 Credits
The purpose of this course is to provide students with an understanding
of the methods and practices used to conduct effective research
in examining practical and theoretical questions in strategic
communications. Successful strategic communications campaigns are
informed by research conducted before (planning), during (monitoring),
and after (evaluation) the implementation of the campaign. Further,
research based on theoretical models can help understand and explain
the effects of strategic communications on consumers, individuals,
and society. This course will be organized so that students will (1)
gain exposure to a breadth of methods used by industry and academic
researchers; (2) understand the role of theory in informing strategic
communications research and its applications; (3) gain depth and
experience in several research methods and techniques; and (4) conduct
research and obtain research-writing experience, in either academic
or professional venues. Students also will learn how to use databases
employed by strategic communications researchers to conduct
audience/consumer analysis and media research. A range of specific
research methods will be discussed, with emphasis placed on trends
or contemporary developments in research. In addition to examining
the principles, methods, and techniques of strategic communications
research, the course will address issues such as when research should
or should not be conducted, analyzing data sets, forming meaningful
research questions, determining the proper means to answer the
questions, and presenting the results and solutions in a clear and
compelling manner.
COMM 531: Strategic Communications: Theory and Implementation

3 Credits

This course provides students with a comprehensive understanding of professional strategic communications via examining key theoretical and conceptual fundamentals of persuasive communication, attitude formation and change, and mass communication, while examining applied implications that affect the strategic communications industry. Students in this course will be: 1) exposed to academic research that analyzes and explains how and why the implementation of strategic communication works, and 2) shown how this information can be tested, extended, and applied to goal-oriented communication campaigns. Through comprehending both the theoretical underpinnings of strategic communications practices and their proper application, students will gain valuable knowledge that applies to both scholarly pursuits—which help to develop theory and knowledge—and professional pursuits, in which theoretical advancements can provide real-world solutions. Strategic communications professionals need to comprehend a wide range of theoretical frameworks to understand how theory and research can inform the implementation of communications plans and decision-making. Students in this course will gain knowledge in traditional and contemporary academic research that examines the mechanisms of persuasive and mass communication in affecting consumers’ beliefs, attitudes, and behaviors. Students will examine the interplay of these theories and identify key gaps in the literature and/or untested potential relationships that could help better explain how strategic communications plans work or should work. Based on this insight, students will apply their theoretical knowledge to realistic industry situations and will be able to offer specific suggestions and communication strategies to solve actual problems. Students will learn how the implementation, testing, and extension of relevant theory can guide precise strategic-communications decisions and strategies that lead to specific outcomes among varied target audiences and consumers. The material covered in this course forms the foundation of understanding how the field of strategic communications functions and how this knowledge can be advanced and applied to achieve desired, communication-based results for any entity.

COMM 550: Film Theory and Criticism

3 Credits

Studies in traditional and contemporary film theory and criticism. COMM 550 Film Theory and Criticism (3) COMM 550 seeks to introduce students to a variety of theoretical approaches to the critical analysis of film. The course devotes attention to aesthetic as well as social, cultural, political and economic issues, assuming that they are, in fact, inseparable. It involves viewing films closely, and researching the contexts of their production and reception. It stresses critical thinking, reading, viewing and writing skills. COMM 550 assumes that films can reveal, both directly and indirectly, something about the experiences, identity, and culture of the people who produce and consume them. That is, movies can be analyzed—even psychoanalyzed—to reveal something about the cultural conditions that produced them and attracted audiences to them. The course seeks both to familiarize students with works they probably haven’t seen, and to ‘defamiliarize,’ through critical and historical analysis, works they very well may have seen. Films are examined as formal constructs, market commodities, and cultural artifacts. Individual instructors may emphasize film authorship, styles, genres, systems or cycles. They may focus on the context, text or reception of a film, filmmaker, or group of films. The emphasis of

COMM 550 is always on the self-conscious, theoretically informed analysis of cinematic texts.

COMM 553: Special Problems in Film and TV

1-3 Credits/Maximum of 99

No description.

COMM 555: Media and Culture

3 Credits

An overview and history of critical theories that aim to explain the relationship between media and culture. COMM 555 Media and Culture (3) This course will provide an overview of the major theorists of mass media whose work offers critical appraisals of the impact of mass media on cultures and the people within those cultures. It will give students an understanding of the major theorists and their conceptions of the relationship between media, communication and culture. Each section is designed to interrogate a particular epistemological or methodological challenge to the social and cultural understanding of mass media, from the seminal thinking of the Frankfurt School - the first thinkers to engage this important field of research - through the theorists of the so-called post-modern turn. Special attention will be paid to examining the ways in which mass media constructs ideological foundations for society’s understanding of democracy, identity and everyday life.

COMM 556: Reading Film

3 Credits/Maximum of 12

A practical and historical approach to film theory and analysis. This seminar develops critical visual literacy by examining a range of practices in cinema study, with emphases on the relation of film to literature and the analysis of film meaning. The course asks how to read a film, and considers the multiple ways that films combine framing, movement, editing, narrative, character, and genre toward the production of culture, ideology, identity, desire, poetic imagery, and community. Students will explore a wide range of critical methods, and will view one to two films per week. Readings will range from novels to classic film theory, cultural studies, belles-lettres, film criticism, radical poetics, apparatus theory, media theory, and contemporary philosophy.

Cross-listed with: ENGL 556, VSTUD 556

COMM 580: Seminar in Telecommunications

3 Credits

Study of the historical and contemporary issues and problems in telecommunications.

COMM 582: Ethics and Emerging Communications Technology

3 Credits

Identification and analysis of ethical issues raised by electronic communications technologies.

COMM 584: International Telecommunications and Trade Policy

3 Credits

An interdisciplinary perspective that investigates contemporary debates and ongoing or anticipated conflicts in international telecommunications and trade policy. COMM 584 International Telecommunications and Trade
Policy (3) The study of international telecommunications policy requires an interdisciplinary perspective. Students should understand the past and present technological, business, philosophical, geopolitical and legal environment. Success in either the public or private sectors may depend on one’s ability to anticipate and react to future trends and upheavals. The course presents, investigates and debates ongoing or anticipated conflicts in international telecommunications and trade policy. The resulting confrontations may stem from technological innovation, real or perceived changes in the marketplace, or the imperatives of prevailing regulatory, political or economic philosophies. Conflict resolution often results from persuasive advocacy, coalition building, and accommodation of outsiders with new perspectives or entrepreneurial visions, rather than applying legal precedent or treaty interpretations. The course also will examine how various nations have organized and reorganized the telecommunications sector. We will consider such developments as privatization, liberalization, deregulation and globalization. Faculty: Rob Frieden

COMM 585: Media & Telecommunications Industries

3 Credits

Study the structure and performance of media, telecommunications and information industries applying principles and ideas from microeconomics, finance and communications. COMM 585 COMM 585 Media & Telecommunications Industries (3) The objective of this graduate seminar is twofold. First, the course provides exposure to the applications of selected concepts, principles and topics in microeconomics to the analysis of the media, telecommunication and information markets. This course is not intended as a general introduction to microeconomic theory and practice - however, students will have the opportunity to begin their study of selected applications of microeconomic principles at a fundamental level and advance their understanding to a high level of complexity worthy of graduate coursework. The second objective of the course is to connect ideas and principles from microeconomics to a body of communications theories, demonstrating possible complements and conflicts across the two disciplines. Discussion of both theoretical and empirical scholarship is emphasized. This in turn gives students a framework for further research on the structure of information industries and the conduct and performance of communications firms. Course covers international markets but focus is on North America. Topics may include selected industries such as wired and wireless telephony, satellite communications, broadband/cable, broadcasting, film, advertising, publishing, computing and Internet; industrial organization; competition and competitive advantage, growth and the economic consequences of innovation; economics of intellectual property protection; electronic markets, hierarchies and transactions cost economics; the economic justification and effects of regulation; natural monopoly economics; cost modeling, demand forecasting and pricing in regulated monopoly and competitive industries; telecommunications deregulation and privatization.

COMM 587: Internet Law and Policy

3 Credits

Examination of legal, policy and business developments in Internet-mediated communications emphasizing the impact on existing regulatory and economic models. COMM 587 COMM 587 Internet Law and Policy (3) This course will provide a forum for students to investigate and debate ongoing or anticipated conflicts in Internet-mediated telecommunications, information processing and commerce. The resulting confrontations may stem from technological innovation, real or perceived changes in the marketplace, or the imperatives of prevailing regulatory, political or economic philosophies. Conflict resolution often results from persuasive advocacy, coalition building, and accommodation of outsiders with new perspectives or entrepreneurial visions, rather than applying legal precedent or treaty interpretations. Internet mediation has the potential to change how we communicate, educate, inform, entertain, and transact business. Technological and marketplace convergence means that Internet mediation will have a profound impact on many legal, regulatory and economic constructs, i.e., the pre-existing templates we use to describe and understand the communications process and impact on individuals and society. The course also will examine the growing body of cases that have addressed aspects of Internet-mediation in each of the following general categories: ◆ Speech - commercial and political speech, obscenity, forums analysis; ◆ Legal and Regulatory Consequences of Convergence - the juxtaposition of telecommunications and information processing technologies, markets and regulatory regimes; ◆ Governance and regulation of the Internet - whether the need exists for government intervention on such matters as numbering and domain name registration; ◆ Intellectual Property Rights - the impact of Internet-mediation on copyright, trademark and patent laws; ◆ Electronic Commerce - the law and policy of Internet-mediated transactions; privacy and encryption concerns; and ◆ Equity, Competition Policy and Consumer Protection Concerns what, if anything, should governments do to remedy market failures.
COMM 830: Strategic Communications Industry
3 Credits

Technology is transforming the strategic communications industry. COMM 830 provides students with an overview of the merging of the advertising, public relations, and corporate communications industries. Students will learn how digital technology has transformed paid, earned, and owned media. Students will explore the transformation of audiences from passive users to active and interactive media-savvy consumers. Special emphasis will include the global and ethical impacts of evolving strategic communication. Students will explore the industry structure as it has evolved from traditional media to the development of the digital media landscape from the internet, Web 2.0, and the post-PC era. The course also provides an overview of strategic communications as it applies to agency, firm, government, corporate, and nonprofit organizations. Students will gain an understanding of the analog and new media landscape and will develop an understanding of the economic and financial indicators that drive the present industry. The course will explore how traditional media practices are impacted by technology as well as the impact of technology on entrepreneurial opportunities for industry practices from broadcast and digital to print, advertising, journalism, and public relations. The course will examine the roles and characteristics of content providers, carriers, and the ever-changing traits and needs of digital media consumers with a focus on emerging technologies on the evolution of interactivity. The course will provide insight into content creation, management, networking, online communities, and content consumption, and the role of evaluation and metrics in understanding the digital landscape. In addition, the course will provide an overview of the social issues facing the digital industry and insights into best practices.

Prerequisite: COMM 530, COMM 830

COMM 831: Digital Media Analytics I
3 Credits

This course provides an overview of the methods for collecting, analyzing, and utilizing audience data for digital media. The class will cover the fundamentals of traditional media audience measurement and web metrics, with an emphasis on ‘first-party’ data. Students will learn the methods of data collection, analysis, and use for traditional broadcast media, and the transformation of these practices in the newly digitized and converged multiplatform, multiscreen environment. The course will also cover the basics of data capture for new media and the use of this data for the design of metrics appropriate for various purposes such as monitoring traffic, conversions, and revenue generation. The use of metrics in pricing models for advertising, sales generation, and content distribution will also be covered.

Prerequisite: COMM 530, COMM 830

COMM 832: Multimedia Content Development and Delivery
3 Credits

This course is designed to provide students with a background in the intellectual and practical skills involved with the development, execution, and delivery of strategic messages and content. Students will learn conceptual strategies that lead to the creative process and the resulting message executions that are delivered to targeted audiences on behalf of companies, brands, and organizations through numerous media formats. This course will explore how the role of branded content is evolving in the modern strategic communications landscape and how to apply different types of content generation to new and traditional communication channels. Students will evaluate the pros and cons of numerous modes of content delivery, and will learn the processes and tactics needed to create and implement numerous communication strategies across the major traditional and contemporary media platforms currently used in the industry. Students will also apply the necessary processes and steps to develop an effective multimedia content plan for any client.

Prerequisite: COMM 531 COMM 830

COMM 833: Ethics and Decision Making in Strategic Communications
3 Credits

This course provides a broad exploration of ethical topics in the practices of strategic communications, public relations and advertising. In particular, it investigates transparency, digital ethics, diversity, and mass-communication ethics as they apply to the development and application of communications strategy and content. Students will learn how ethical tenets are examined and incorporated into current theory and research within the fields of general ethical philosophy, public relations, corporate social responsibility, crisis communications, persuasion, and cultural-communication studies. By subsequently applying these principles to industry examples and professional codes of conduct, students will better understand the importance of ethical decision making in the field of strategic communications. Building on insights from the class, students will engage in online discussions and will apply topics learned in the class to identify and analyze contemporary ethical issues and problems affecting the strategic communications industry.

Prerequisite: COMM 830
COMM 834: Strategic Communications Campaigns

3 Credits

This capstone course requires students to apply the knowledge they have acquired in all the other foundation courses to develop a strategic communications campaign on behalf of a professional client. Students will conduct both primary and secondary research first, and then analyze the competitive environment surrounding the client's service/brand. Based on the research, they will then design the messages, media, and other communication tools as part of a comprehensive communications campaign for the client.

Prerequisite: COMM 530, COMM 531, COMM 830, COMM 831, COMM 832, COMM 833

COMM 835: Social Media Communications

3 Credits

Social media is profoundly transforming human society in almost every aspect, in particular, communication and business. As social media has become an integral part of human life, it is crucial to understand the underlying mechanisms of social media before making best use of it. A profound knowledge of social media and how to use it productively is not only something 'nice to know', but a capability people must have to survive and excel in this new media age. This course focuses on two areas: 1) an in-depth understanding of the social media impact on strategic communications; and 2) how to make best use of social media tools. The impact of social media on cognition, knowledge collaboration, media industry, and strategic communications strategies will be covered. A solid knowledge of social media mechanisms serves as a foundation for making the best use of social media, no matter how current media evolves or what new media platforms emerge in the future.

Prerequisite: COMM 830

COMM 836: Strategic Communications Leadership

3 Credits

The rise of digital media and the public's demand for transparency in business have elevated the importance of strategic communication. Long gone are the days where communicators were viewed as tacticians in organizations. Instead, today strategic communicators often hold top positions in companies. This course will provide students with the essential business knowledge they need to navigate as successful communicators. This will include a focus on the business essentials needed such as: terminology, reputation drivers, and leadership roles. It also builds awareness of key stakeholders such as investors, analysts, and communities. Building on these insights, students will be able to conduct communications audits for a company and understand how and why strong communicators are critical to successful companies.

Prerequisite: COMM 830

COMM 837: Reaching Multicultural Populations in Strategic Communications

3 Credits

There is an increased demand for professional communicators who understand how to reach culturally and ethnically specific market segments using strategic communications strategies. The focus of this course will be on how to effectively and strategically communicate with multicultural populations using mass communication to develop an inclusive environment where diversity is embraced, respected, and valued. The course will explore the economic, political, and social impact of culture and race in our society, socio-economic differences, trends within various multicultural communities and groups, and how traditional and new media communities are reaching these communities. The content of this course will be useful to understand the multicultural market segment. The goal of the course is to understand culture-based communication strategies and market research, multicultural communication research and theories, and apply this understanding to strategic communication decisions.

Prerequisite: COMM 830

COMM 838: Strategic Communications Law

3 Credits

This course provides a broad exploration of strategic communications law. In particular, it examines how the First Amendment applies to strategic communications, the basic tenets of advertising regulation, privacy issues including the collection and use of personal and geolocation information, intellectual property issues including the use of trademarks and copyrights, and the role of self-regulation in a global communications environment. Students will learn to recognize and anticipate key legal issues that they will face as strategic communications practitioners and how to find answers to relevant legal questions.

Prerequisite: COMM 830

COMM 839: Digital Media Analytics II

3 Credits

This course will prepare students to demonstrate their competency and ability to navigate the digital media ecosystem and to develop, implement, administer, and evaluate digital marketing campaigns. Toward this end, students will learn to match digital solutions to clients' marketing objectives through critical analysis and understanding of the tools and processes of the industry. Students will differentiate between digital and traditional media by identifying the strengths and weaknesses of each and understanding how digital complements and extends traditional campaigns. Specifically, students will become familiar with the targeting advantages of digital as related to programmatic buying and re-marketing, as well as behavioral and contextual targeting. Digital advertising formats and platforms will be explored, and students will learn to differentiate between them and to evaluate which formats are best based on client needs and objectives. Digital ad format standards and creative guidelines will be reviewed. Technologies and tools specific to the industry will be summarized, including buy-side and sell-side ad servers, verification systems, and audience segmentation tools. Concepts of statistical analysis will be applied to digital analysis, specifically in the context of A/B testing. Students will apply statistical tests to establish confidence intervals when evaluating alternative marketing approaches and opportunities.

Prerequisite: COMM 530, COMM 830, COMM 831
COMMS 500: Communications and Cultural Theory
3 Credits

This course is designed to provide students a broad background in communications and cultural theory. COMMS 500 Communications and Cultural Theory (3) This course is an advanced study of various interpretive approaches and methodological tools that are central to the analysis of media artifacts, including newspaper articles, magazines, films, advertising, and television programs. It begins with an overview of various interpretive traditions, including culturalism, psychoanalytic theory, structuralism, ethnic and racial critiques, poststructuralism, postmodernism, feminism, postcolonial studies, and queer theory. It prepares students to critically examine philosophical assumptions regarding the relationship between the nature of knowledge, expression, writing and creative production on one hand, and conceptions of personhood, community, social structures and authority, on the other. Students are required to do significant reading and writing in this course, and to propose and conduct analyses of communication artifacts.

COMMS 503: Research Methods in Communications
3 Credits

This course prepares students to conduct research in communications using both qualitative and quantitative research methods. COMMS 503 Research Methods in Communications (3) This course prepares students to conduct research in communications. It begins with an overview of the different strategies and philosophies of research methodology including scientific method, inference, skepticism, hypothetico-deductive reasoning, critical, humanistic, and naturalistic inquiry. The course focuses on four major types of communications research methodology: experimental, survey, textual analysis and naturalistic inquiry. Students are required to do significant reading and writing in this course, as well as propose and conduct a research project of their own design. This course is a fundamental element of the masters program curriculum in that it prepares students to conduct their thesis projects.

COMMS 519: Communication Technology and Culture in History
3 Credits

An advanced study of various interpretive approaches and methodological tools that are central to the analysis of cultural artifacts. COMMS 519 Communication Technology and Culture in History (3) This course is an advanced study of various theoretical approaches that are central to the analysis of communication technology and culture in historical context. It begins with an overview of various communication historiographies, including the works of Harold Innis, Walter Ong, Umberto Eco, Elizabeth Eisenstein, James M. Carey, Marshall McLuhan, Lewis Mumford, and others. It engages students in the critical examination of such critical issues as communication and public memory, discourse in historical context and the historical basis of identity. Students are required to do significant reading and writing in this course, and to propose and conduct historical research employing one of the theories discussed in this course.

COMMS 555: Media Discourse Analysis
3 Credits

This course provides students with advanced theoretical approaches and methodological tools to analyze a variety of media discourses. COMMS 555 Media Discourse Analysis (3) This course provides students with both theoretical approaches and methodological tools to analyze a variety of media discourses. It begins with an overview of linguistic theories, including structuralism, poststructuralism, semiotics, and critical discourse analysis. The course highlights the philosophical relationship between language, culture, identities, politics, and intercultural communications. It also prepares students to examine discourses from multiple angles, such as textually oriented analysis, critical analysis, linguistic analysis, ethnographic analysis, etc. The course then leads into a discussion of several common discursive models in media: ritual, myth, and social drama. It ends with case studies of discourse in films, television, news, advertisement, the Internet, and politics. Students are required to do significant reading and writing in this course, and to propose and conduct a project of discourse analysis of their own design.

COMMS 560: Seminar on Global Culture and Communication
3 Credits

This course explores the globalization of communication and communication technologies within a broad political, economic and cultural context. COMMS 560 Seminar on Global Culture and Communication (3) Developments in technology have led to new levels of interaction and interdependency of human groups and processes across the boundaries that historically separated them - geography, national identity, state borders, and local community. In such a context, we must re-examine many of our assumptions about space, place, identity, and belonging, and about human social organization and human agency - the potential to purposefully transform ourselves and our surroundings. Globalization calls into question our assumptions about politics, economics, culture, and communication. In this course, students will consider the challenges and opportunities that globalization creates for human community and agency - that is, for the multiple ways in which human activity becomes socially organized and purposeful. They will
survey the dominant theories of globalization and regionalization and examine the current trends in regionalization and globalization of politics, culture, communication, economic processes, and regulatory structures. They will focus on the challenges communication globalization poses to past forms of identity, the transformation of traditional understandings of space and place, and the opportunities for new forms of identity, community, and action.

COMMS 568: Media Production Workshop

3-9 Credits/Maximum of 9

This course prepares students for the creation of advanced media projects in traditional and digital media. COMMS 568 Media Production Workshop (3-9 per semester/maximum of 9) This course is a workshop for the creation of advanced media projects in traditional and digital media. Workshop topics will alternate coverage of different media, and will include photography, graphic design, interactive media, video, audio, and other media to reflect the needs of the graduate program. Students will submit proposals that address their project objectives, production plans, and intended audiences. After submitting proposals for peer review and faculty evaluation, students will begin a three-stage process of pre-production, production, and post-production in the creation of their work. This process will require the organization of production elements, the acquisition of media, and the creation of the finished project. This seminar is intended for graduate students who wish to gain experience with new media technologies, pursue creative outlets for their research interests, or develop their professional portfolios. It is an intensive workshop with demanding writing and technology requirements.

COMMS 580: Communications Master's Project

3-6 Credits/Maximum of 6

An original master's paper or creative production with critical paper. COMMS 580 Communications Master’s Project (3-6 per semester/maximum of 6) This course may be a scholarly master’s paper or it might instead be by a creative production supplemented by a descriptive and analytical paper. The production should display integration in skills and faculty evaluation. Workshop topics will alternate coverage of different media, and will include photography, graphic design, interactive media, video, audio, and other media to reflect the needs of the graduate program. Students will submit proposals that address their project objectives, production plans, and intended audiences. After submitting proposals for peer review and faculty evaluation, students will begin a three-stage process of pre-production, production, and post-production in the creation of their work. This process will require the organization of production elements, the acquisition of media, and the creation of the finished project. This seminar is intended for graduate students who wish to gain experience with new media technologies, pursue creative outlets for their research interests, or develop their professional portfolios. It is an intensive workshop with demanding writing and technology requirements.

Prerequisite: COMMS500 ; COMMS503 ; 27 credits towards Master’s in Communications

COMMS 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

COMMS 610: Thesis Research

1-15 Credits/Maximum of 999

No description.

Community and Economic Development (CEDEV)

CEDEV 500: Community and Economic Development: Theory and Practice

3 Credits

Understanding theories, concepts, and frameworks of community and economic development and community decision-making models in application to community development practice and issues. CEDEV 500 Principles of Community and Economic Development and Leadership (3) What factors affect the quality of life of American communities? How can citizens and leaders affect change in their community? This course provides an overview of principles of community and economic development and an introduction to approaches to organizing, planning and managing change in communities. Students gain an understanding of principles and strategies of community and economic development in relation to general systems theory, community decision making, and leadership strategies in group and community settings. Students who complete the course should be able to discuss theories and models of development, to apply general systems theory to development issues, and to understand approaches and techniques for community leadership. They will gain an appreciation of conflict and consensus approaches to decision making and change, and understand action strategies for community development and change. This is a required introductory course for all incoming students in the new Community and Economic Development graduate program. The course will also be of interest to graduate students in other programs who have an interest in community and economic development.

CEDEV 505: Leadership Development

3 Credits

Exploration, understanding, and application of leadership roles, strategies, and principles in group and community settings.

Cross-listed with: AEE 505

CEDEV 509: Population, Land Use, and Municipal Finance

3 Credits

Understanding the interaction of population characteristics, land use, municipal funds, and taxation in a locality and how they impact the operation and management of government jurisdictions. CEDEV 509 Population, Land Use and Municipal Finance (3) How do people approach the task of providing and funding the infrastructure and services in American communities? What effect does different population characteristics and demographic mix have on local governance? Should land use be tied to the changing character of community populations? Where does funding originate for providing municipal goods and services and how do communities manage municipal budgets? This course provides a multidimensional overview of three key aspects of community and economic development. Population - the people. Land Use - the place. Municipal finance - the things they do there. Students will gain an understanding of how to analyze population and demographic issues in communities. They will learn about planning and land use laws, regulations and issues. They will come to understand the elements and dynamics of municipal finance. The course is designed to integrate the above aspects of community into an overall understanding of key interactions in American communities.
Prerequisite: graduate standing

CEDEV 516: Change in Rural Society
3 Credits

Social change in rural society, emphasizing prediction and control of the change process. Even years. R SOC (CEDEV) 516 Change in Rural Society (3) Rural America has experienced change throughout its history, but the most rapid have occurred in the past three decades. Forces of urbanization, industrialization, technological change and globalization of the economy drive change in rural America, and the effects of these forces differ across the United States. Some rural areas benefit from the changes that occur while others are devastated. Some rural people and places are able to adapt and view change as an opportunity, while others are unable to respond to the forces that threaten them. Individuals, families and communities have changed in response to these broad forces. This becomes manifest in new patterns of inequality, family life, educational attainment, migration, age and racial patterns, health and well-being, and local service availability. Questions examined in this course include: What are the theories that explain or describe the social change that has been affecting rural people and places? What industrial restructuring and economic change has occurred in rural areas, how has it affected rural areas, and what drives this restructuring? What other social change has taken place, and can we determine potential sources of that change? What are the options available to rural people and communities as they adapt to forces of change, and how much can they influence their own futures? Underlying each of these questions is the issue of whether the well-being of rural people, families, and communities has improved or is threatened by these changes, and which rural areas are more likely to benefit and which are threatened. Students will leave the class with a broad understanding of the forces affecting rural America, and how and why those forces influence some people and places differently. Grades are assigned in this class based on a term paper on a topic related to rural social change, reaction papers written about each set of reading assignments, serving as discussion leader, and class participation.

Cross-listed with: RSOC 516

CEDEV 517: International Rural Social Change
3 Credits

Implications of planned change for international rural societies, considering basic structural constraints, known institutional linkages, and potential synergetic consequences. R SOC (CEDEV) 517 International Rural Social Change (3) Three-quarters of the world's population live in developing countries where problems of hunger, malnutrition, underemployment, high morbidity and mortality, overurbanization, and inadequate housing, (to name just a few) are severe. This seminar covers the sociology of economic change in developing countries. Through an extensive list of readings, a series of topical videos, and in-depth class discussions, seminar participants should come away with a firm grounding in the ways development has been defined, the social and economic problems facing developing countries today, the basic ways in which economic development has been approached theoretically and empirically, the implications for developing countries of being embedded in a larger world economy, the influence of multinational corporations, the policies that developing countries have followed in fostering economic growth, the nature of foreign aid, the causes and consequences of Third World debt, the nature of the informal economy, rural development and land reform, world hunger and the Green Revolution, and other topics.

Cross-listed with: RSOC 517

CEDEV 533: Rural Development Research Methods and Topics
3 Credits

Advanced theories and methods for rural economic development research.

Prerequisite: ECON 521

Cross-listed with: AEREC 533

CEDEV 550: Principles and Practices of Planning
3 Credits

This course is an overview of the field of planning. It examines the history of planning and the theories behind it, and the corresponding roles that planners can play in their communities. It establishes the legal framework for planning as a profession, and examines landmark legal cases involving planning and its tools. It provides answers for such questions as: Why do communities plan? How has planning developed as a profession? What is the political context of Planning? What is the role of a planner within their community and government structure? How does planning relate to other disciplines? It also examines the different types and levels of planning, the process of planning, what data needs to be collected, how a comprehensive plan is made and implemented, and who planners must interact with in the course of doing their job. Finally, the course attempts to emphasize both the positive and negative impacts of planning.

CEDEV 560: Regional Development: Principles, Policy, and Practice
3 Credits

Regional growth and development, focusing on challenges to theory, policy, and practice, emphasizing change in metropolitan, micropolitan, and rural areas. CEDEV 560 Regional Development: Principles, Policy, and Practice (3) Effective regional development requires that history, theory, and policy are reflected in practice. Globalization impacts the development of regions and places in the United States and around the world. In this context, the development of regions impacts and is impacted by the pace and level of development elsewhere. Regional development addresses issues of how growth and disparity are spatially distributed and differentiated, and what causes these patterns to occur. The challenge is twofold. The first challenge is defining exactly what a region is and identifying who ultimately decides the policies and practices that determine its fate. The second is determining who benefits and who bares the costs of particular local and regional development approaches. The purpose of this course is to introduce students to concepts and frameworks of regional development. The first part of the course focuses on definitions and theories of regional growth and development, and begins to uncover ambiguities in pre-existing definitions and theories of regional development associated with topics such as growth and development theory, the new geography, cluster economics, and sustainability. It then delves into various policy approaches and issues including regional, environmental, and rural issues. The course culminates with a discussion of putting regional theory and policy into practice through case studies. Issues and topics addressed in this course include identifying a region and defining ‘place’, understanding the relationship between economic efficiency and sustainability; sustainable development and place-based development; the use of policy and its framing to allow regions and places to build on
their assets. Additionally, the course will address how regions become interdependent and how relationships can be optimized in this context, and determining the best way and available sources to garner capital to fund development projects. Students will learn how to identify the assets of a region and the impact of interregional collaboration. The course will provide students with the opportunity to analyze the politics of regional development and the important considerations in regional development planning and practice.

**Prerequisite:** CEDEV430 and CEDEV500

CEDEV 567: Resilient Communities and Environments

3 Credits

Understanding connections between communities and surrounding ecosystems; exploration of management techniques for building adaptive, resilient, and sustainable communities and environments. CEDEV 567 Resilient Communities and Environments (3) This course provides students with a foundation in concepts which can be used to explore the interconnections of communities and environments, particularly as they apply to community and economic development. The focus of this course is applying concepts from resilience thinking to sustainable community and economic development. In this course, students will explore how communities, whether rural or urban, are linked to their environment, and how this, in turn, can affect the success of community development projects. The class explores the social, political, economic, and ecological barriers guiding these relationships. Topics covered in this context include environmental law and regulation; environmental and land use planning; risk and risk management; the rhetoric of sustainability; natural resource dependency; and interconnections between social and environmental justice. The last portion of the course discusses possible management techniques for building adaptive, resilient, and sustainable communities.

**Prerequisite:** CEDEV509 and CEDEV452

CEDEV 575: Methods and Techniques for Community and Economic Development

3 Credits

Understanding and applying methods and hands-on experience with techniques used in community and economic development. Lab. CEDEV 575 Methods and Techniques for Community and Economic Development (3) How do I find out what is happening in my community? The economy? The environment? What methods and techniques should I use? I need a toolbox for change! This is a hands-on course designed to provide students with an understanding of community and economic development methods and techniques, and experience in applying them to a variety of problems that they might expect to encounter in the field. The course is based on modules developed and offered by faculty in the Community and Economic Development graduate program. The specific content varies from year to year depending on the needs of each cohort of students. Typical topics include several methods and techniques from each of the following three areas: General Community Assessment Techniques, including identifying power structures, industry structure and employment, natural resources and amenities, human and social capital, local government and services, and land use patterns. Specialized Techniques for Community and Economic Development, including retail trade area analysis, use of GIS, program evaluation, IMPLAN, Input/Output modeling, location quotient, shift-share analysis, survey design and implementation, and the use of social and economic indicators. Leadership and Process Skills, including visioning, goal setting, and strategic planning; grant writing; small group dynamics; conflict management, negotiation, principled bargaining, and deliberation; public speaking and working with the mass media; coalition building, project management; and use of the Internet, design and implementation of Web pages. This is a required course for all students in the MS in Community and Economic Development.

**Prerequisite:** graduate standing and approval of the instructor

CEDEV 576: Applications and Practices for Community and Economic Development

1-6 Credits/Maximum of 6

Consideration of community and economic development applications in communities and practices of public and private organizations and agencies.

**Prerequisite:** graduate standing and approval of the instructor

CEDEV 580: Community and Economic Development Research Application and Practice

3 Credits

Course outlines the steps for students to apply CEDEV theories and methods to a topic in writing their Master's paper.

CEDEV 595: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

CEDEV 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

CEDEV 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

**Community Psychology (CMPSY)**

CMPSY 500: Theories and Issues in Community Psychology

3 Credits

Contemporary issues in community psychology will be discussed within the framework of its development from clinical and social psychology.

CMPSY 510: Change Processes

3 Credits

Social change as it takes place within institutions and communities.
CMPSY 511: Social Impacts on Psychological Functioning
3 Credits
Psychological functioning, as it is affected by social contexts.
Prerequisite: CMPSY500, permission of program

CMPSY 519: Research Methods I
3 Credits
In-depth examination of research methods utilized by community psychologists and social change activists; course followed by CMPSY 520. CMPSY 519 CMPSY 519 Research Methods I (3)This course, along with CMPSY 520 Research Methods II, will examine the key research methods available to community psychologists and social change activists. The course will emphasize a hands-on experience for students so that they can understand all the components of conducting program assessments. All students will develop pilot projects under the guidance of the instructor that will give the students experience in developing action research/program evaluation questions, completing research literature reviews, developing specific methodologies appropriate to their action research/program evaluation questions, data base design, data analysis, and report writing. There will be a balance between action research, program evaluation, quantitative and qualitative approaches. A final report and presentation of the findings of the pilot project are required. This course is the research methods course required of all community psychology and social change graduate students. This course assumes a basic understanding of introductory statistics and the use of statistical software will be undertaken in the course. The course is the introductory research methods course and will be offered in a sequence with CMPSY 520 Research Methods II. Both CMPSY 519 and CMPSY 520 must be taken in order to complete the Community Psychology and Social Change research methods requirement for graduation. This course is for 3 credits. Faculty: Richard Fiene and Robert Colman
Prerequisite: a C or better in an introductory statistics course within the past two years or a passing grade on the Community Psychology competency examination in introductory statistics; status as graduate student in CMPSY program

CMPSY 520: Research Methods II
3 Credits
In-depth examination of research methods utilized by community psychologists and social change activists. (Continuation of CMPSY 519). CMPSY 520 CMPSY 520 Techniques in Action Research (3)This course is the second of two research methods courses required of all Community Psychology and Social Change graduate students, emphasizing action research, program evaluation, and both qualitative and quantitative measurement. Faculty: Richard Fiene and Robert Colman
Prerequisite: CMPSY519

CMPSY 521: Roles and Methods in Community Psychology
3 Credits
Advanced course entailing the development of Master’s Projects with both fieldwork and research; each student writes a formal proposal.
Prerequisite: permission of program, for degree candidates only.

CMPSY 522: Practicum
3-6 Credits/Maximum of 6
Fieldwork implementing planned change.
Prerequisite: CMPSY500, CMPSY510, CMPSY511, CMPSY520, CMPSY521, for degree candidates only.

CMPSY 594: Research
3-6 Credits/Maximum of 6
Supervised research on a master’s paper.
Prerequisite: for degree candidates only

CMPSY 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

Comparative and International Education (CIED)

CIED 500: Comparative Education Proseminar I
3 Credits
Methods of comparative education and case studies of governance and administration; first of two part sequence.

CIED 503: Ethnicity, National Identity, and Education
3 Credits
Surveys group-oriented education policies internationally, especially comparing those of Britain, Taiwan, India.
Cross-listed with: EDTHP 507, HIED 503

CIED 504: Perspectives in African Education
3 Credits
Educational systems in selected African countries are examined with respect to colonial history, social, political, and cultural factors.

CIED 508: Globalization and Lifelong Learning
3 Credits
Examination of globalization discourses and their relationships, implications and impacts on lifelong learning processes and contexts. ADTED 508 ADTED (CIED) 508 Globalization and Lifelong Learning (3) The course is designed to help students to critically examine the nature and impacts of globalization on lifelong learning. The main goal is to enhance the students’ ability to learn and work in a globalizing world and to challenge traditional perspectives about globalization and lifelong learning. As such, the course will adopt a critical perspective on globalization while helping the students to develop a reflective stance on the theory and practice of lifelong learning. A central focus of the course will be to develop a critical analysis that contributes to the building of a more active and socially responsible adult learner. Students will be evaluated using a number of assignments/projects. The major research
paper, class presentation, two critiques of theories of lifelong learning, country profile of lifelong and a short reaction paper will count for 90% of the course grade. Class participation will be awarded 10%.

Cross-listed with: ADTED 508

CIED 509: Language, Literacy, Identity, and Culture in a Global Context
3 Credits

Examines the relationship between issues of language, identity and culture for adult learners in an increasingly global context. ADTED 509 ADTED (CI ED) 509 Language, Literacy, Identity, and Culture in a Global Context (3)This core required course provides graduate students in the ADTED Ph.D. program a critical overview of the literature, theories, and scholarship examining the complexities inherent in an increasingly diverse global and post-colonial sphere. Explorations of historical, theoretical, postcolonial perspectives will be the focus, as will the daily portrayals of diverse peoples by the media. Participants in the course will be expected to familiarize themselves with the readings portraying the complexities of ethnicity, indigeneity, race, gender, and social class. Evaluation will focus primarily on writing a scholarly paper, preparing video materials that illustrate the issues, writing their personal educational histories, and participating in class.

Prerequisite: ADTED508
Cross-listed with: ADTED 509

CIED 511: Educational Ethnography: History, Theory, and Methods
3 Credits

This seminar shows students how to use ethnographic methods for education research to inform classroom practice and education policy. The course is centered around the idea that school communities serve as key sites for students of all ages to learn to become members of their culture(s). Course readings include historical to contemporary works of researchers who have shaped educational ethnography. We will also read about education in various settings and discuss anthropological explanations of inequities experienced by minority culture communities or marginalized groups. Students will carry out a mini-ethnographic study based on their area of research interest. The course is especially designed for students to be able to conduct ethnographic studies or make use of ethnographic techniques in future research projects.

Prerequisite: (CI 502; ADTED 550; EDTHP 586; )
Cross-listed with: CI 511

CIED 513: Video Ethnography in Education
3 Credits

Recommended Preparations: A graduate course in educational ethnography This seminar will show students how to use video ethnography in education research. The course is rooted in what is popularly known as the Preschool in Three Cultures method (also known as video-cued multivocal ethnography). We will learn about and watch films using video-based ethnographic research methods. Students will also carry out mini-video ethnographies in a local classroom.

Prerequisite: CI 502; ADTED 550; EDTHP 586; LDT 574
Cross-listed with: CI 513

CIED 516: Education and Demographic Change
3 Credits

Education is one of the most important factors affecting major demographic shifts and processes worldwide, including the first and second demographic transitions. If, as the old sociological adage goes ‘demography is destiny’ then our destiny is educationally transformed demography. Interdisciplinary research across demography, sociology, neuropsychology, and epidemiology is developing a strong research literature about how the thinking style, behavior, and attitudes of the educated human radically change fundamental dynamics underlying the world’s population. The whole way in which we come to our jobs, spouses, and lifestyles; how many children we have and how we raise them; how long we are likely to live, and what will be our eventual demise are all heavily influenced by how much education we have had. The collective force of widespread education and its influence on rising cognitive abilities, scripts for living, and economic well-being are creating a distinctly new type of human population with major benefits and future challenges for a sustainable human population. At the same time, individuals’ schooling is also influenced by demographic change. This seminar covers key concepts, theories, and methodological issues related to the intersection of demographical and cultural changes from the education revolution and their impact on subsequent demographic processes.

Cross-listed with: EDTHP 516, SOC 516

CIED 524: Comparative Education Research Using Large-Scale Data
3 Credits

This course is designed to give students an overview of large-scale international assessment databases and to demonstrate how these databases can be utilized to investigate critical issues in education from a comparative perspective. A number of empirical studies using large-scale international assessment databases will be reviewed, and these analyses will be replicated via computer labs. Students will develop a good understanding of large-scale international assessment databases and will learn to apply an appropriate method to address a particular topic of interest. Students will also develop a wide range of research skills necessary to independently conduct comparative research, including but not limited to formulating a research question, conducting a literature review, analyzing empirical data, and interpreting results. Although the focus is mainly on datasets relevant to education and education policy research, the skills taught in the course are broadly transferable to other social sciences including sociology.

Prerequisite: EDPSY 505; or SOC 574 RECOMMENDED PREPARATIONS: EDTHP 516; or EDTHP 538; or EDTHP 553
Cross-listed with: EDTHP 524

CIED 525: Bakhtin and Education
3 Credits

This seminar gives students an overview of the writings of key members of the ‘Bakhtin Circle,’ which included Mikhail Bakhtin, Valentin Voloshinov, Pavel Medvedev, and others. The core objective of this course is for students to learn about Bakhtinian theory and how to use Bakhtin as a philosophical method in carrying out research studies and analyzing data. In order to do this, we will read the original works of Bakhtin, Voloshinov, Medvedev, and others alongside contemporary educational
researchers, theorists, and methodologists who apply Bakhtinian philosophical methods and analyses to the study of education.

CIED 534: Childhood and Education in Sociological and International Comparative Perspective

3 Credits
The course objective is to use an international comparative lens and sociological perspective to examine the social, cultural, political and economic forces that shape childhood and the role education plays in this process.

Cross-listed with: EDTHP 534, SOC 534

CIED 538: East Asian Education, Leadership, and Reform

3 Credits
The social and organizational characteristics of East Asian schooling, including understandings of authority, power, and leadership, and systemic school reform.

Cross-listed with: EDLDR 538

CIED 541: Contemporary Philosophies of Education

3 Credits
Educational theory and practice in relation to contemporary movements in philosophy. CI ED 541 CI ED (EDTHP) 541 Contemporary Philosophies of Education (3) This graduate seminar explores a range of contemporary philosophies of education viewed from the perspective of different varieties of postmodernism. The study of modern and postmodern western thought is combined with explorations of eastern thought including viewpoints that are emerging today in both the northern and southern hemispheres. While focusing on contemporary educational ideas, it traces their roots in classical and non-modern philosophical sources. This look at the present in terms of the past reveals the paradigm shift presented by contemporary postmodern educational thought. In doing so, considerations for the issues of race, class, gender, ecology, multiculturalism and the regeneration of diverse incommensurable cosmovisions, severed or overlooked by some educational philosophers, are explored in their reintegration by contemporary postmodern philosophers of education.

Cross-listed with: EDTHP 541

CIED 542: Issues in Literacy Education

3 Credits/Maximum of 6
Discussion of philosophical, sociological, historical, and curricular issues in literacy education.

Cross-listed with: LLED 542

CIED 543: Comparative and International Trends in Adult Literacy Education

3 Credits
This course critically examines the broad contemporary issues and interdisciplinary trends of literacy education with an international and comparative framework. CI ED (ADTED/AFR) 543 Comparative and International Trends in Adult Literacy Education (3) This course provides a comparative synthesis of what is known about literacy education and adult learning and what it will mean for the 21st century: the context in which literacy takes place; who participates; what they learn and why; the nature of the learning processes; new approaches to adult learning; social media and mobile devices; development theory in adult learning; and other issues relevant to understanding literacy education and adult learning in sociocultural, political, and international contexts. It also examines the newer approaches to adult learning: embodied, spiritual and narrative learning; learning and knowing in non-western perspectives; and cultural theory, poststructural and feminist perspectives. This course investigates questions such as: What does it mean to be literate in the 21st century? Why are teachers experiencing difficulty teaching students skills needed to understand and produce written work? Can schools in the 21st century inundated with digital technologies help students navigate the new literacies? How should adult literacy participants deal with the reality of new media and new literacies? What is the role of non-governmental organizations in this crisis? Overall, this course challenges graduate students to engage other international and non-western frameworks of learning and knowing to think about the purpose of education and learning as well as question the nature of knowledge production itself.

Cross-listed with: ADTED 543, AFR 543

CIED 550: Comparative Education Policy Seminar

3 Credits
Examines the educational policy process world-wide and the influence on schooling of children, youth, and adults in national education systems. CI ED (EDTHP) 550 Comparative Education Policy Seminar (3) In this course students will learn how educational policy is made around the world and what influence this policy has on the schooling of children, youth, and adults in national systems of education. Students will examine recent trends in educational policy that have originated at the international level. Methods of policy research and evaluation will also be examined. The main goal of the course is to give students an understanding of international processes in policy formation and detailed knowledge of current education policy trends worldwide.

Cross-listed with: EDTHP 550

CIED 553: Educational Mobility in Comparative Perspective

3 Credits
Role of education in social mobility, using quantitative, qualitative, and historical methods; focuses comparatively on Britain, East Asia, and South America. CI ED 553/SOC 553/EDTHP 553/HI ED 553 CI ED 553. (SOC 553, EDTHP 553, HI ED 553) Educational Mobility in Comparative Perspective (3) Sociologists interested in higher education have attended to the relationships between postsecondary institutions and other institutions, as well as the impact on higher education of general social and demographic processes. Many of the classical ideas in sociological theory, including those of Max Weber and Emile Durkheim, have surfaced in recent debates over the nature of higher education. Sociologists in the U.S. have explored such questions as: the gatekeeping function of higher education; the impact of universities on stratification; and the socializing environment for women and minorities. This seminar introduces some of the classical theorists and contemporary researchers of the sociology of higher education. All seminar participants will be required to write a sample research proposal, based on the readings from the seminar.

Cross-listed with: EDTHP 553, HIED 553, SOC 553
CIED 555: Validity of Assessment Results
3 Credits

Concepts, issues, and methods of validation of educational and psychological assessment including models and approaches to validation, bias, and utility. EDPSY (CI ED) 555 Validity of Assessment Results (3) The goal of this course is to enable the student to acquire a broad perspective on issues and considerations in the process of validating interpretation and uses of tests, scales, assessment procedures, or protocols. Issues of validity are examined from many perspectives including a review of current dominant and alternative validity theories, of known threats to validity, of some advanced specialized statistical techniques; and of test bias, legal issues, psychological/behavioral issues, social/consequential considerations, and philosophical considerations. Additionally, applications are provided through in-depth cross-cultural and historical studies, technical reviews of published commercial tests, and in-depth examinations of controversies.

Prerequisite: EDPSY 406, EDPSY 450
Cross-listed with: EDPSY 555

CIED 562: Politics, Language and Pedagogy: Applying Paulo Freire today
3 Credits

Examines the work of Paulo Freire as it applies to community action projects. ADTED 562 / CIED 562 Politics, Languages and Pedagogy: Applying Paulo Freire Today (3) The life and work of Paulo Freire will be the focus of this advanced graduate seminar. Freire was one of the foremost adult educators of our time. Graduate students participating in the course will read and reflect on his vision and how it evolved over time, critiques of Freire, the ways in which his ideas have been applied in diverse geographic and practice settings (e.g., education, community development), and implications for research, policy, and practice. Students will explore how elements related to Freire's work, such as conscientization, transformative action, and pedagogy for liberation, influence pedagogy and community action projects. Readings will include Freire's books, scholarship on Freire, and case studies of Freirean projects, among others.

Cross-listed with: ADTED 562

CIED 570: Comparative and International Adult Education
3 Credits

Critical and comparative analysis of adult education theory and practice outside North America, including international agency involvement.

Prerequisite: ADTED 460
Cross-listed with: ADTED 570

CIED 571: Comparative Higher Education
3 Credits

Comparative methods of studying structural variations in systems of higher education in principal industrialized nations and other selected countries.

Cross-listed with: HIED 571

CIED 587: Curriculum, Culture, and Child Development
3 Credits

Examines human development and cultural factors in planning, designing, and implementing curriculum and instruction in early childhood and childhood education.

Prerequisite: HD FS 429
Cross-listed with: ECE 587

CIED 594: Research Topics
1-18 Credits/Maximum of 18

Supervised student activities on research projects identified on an individual or small-group basis.

CIED 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

CIED 597: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

CIED 845: Intergenerational Programs and Practices
3 Credits

Background, intervention strategies, and issues related to developing intergenerational programs and practices aimed at addressing vital social and community issues.

Cross-listed with: AYFCE 845

Comparative Literature (CMLIT)

CMLIT 501: Comparative Method in Literary Studies
1-6 Credits/Maximum of 6

Bibliography, research methods, and studies in comparative literature.

CMLIT 502: Comparative Criticism I: Classical to Neoclassical
1-3 Credits/Maximum of 3

Issues in literary criticism from Plato and Aristotle to the mid-eighteenth century.

CMLIT 503: Comparative Criticism II: Romantic to Contemporary
1-3 Credits/Maximum of 3

Principles and theories of literary criticism from eighteenth- and nineteenth-century beginnings to twentieth-century expansion and application.
CMLIT 504: Studies in Literary Genres
3-6 Credits/Maximum of 6
The concept of genre and the evolution of genre theory; application to a specific genre, e.g., the lyric or the novel.

CMLIT 505: Studies in Literary Periods and Movements
3-6 Credits/Maximum of 6
Comparative approaches to cohesive units within literary history, e.g., the Renaissance, the Enlightenment, Romanticism, Surrealism.

CMLIT 506: Studies in Literary Themes and Motifs
3-6 Credits/Maximum of 6
Comparative approaches to recurrent literary themes and motifs; application to a specific example, e.g., literary Utopias or the Faust theme.

CMLIT 507: Comparative Poetics
3 Credits
Theoretical and practical concepts in the comparative, global history of poetry and/or poetics. CMLIT 507 Comparative Poetics (3 per semester/maximum of 6) This course explores theoretical and practical concepts in the history of poetry and/or poetics. Like all comparative literature courses, it pursues its task through discussions of texts from a wide variety of national or linguistic origins and ranges widely across historical period, medium, and social form, where appropriate. Students will develop a broad array of interpretive skills appropriate to poetry and poetics; they will acquire a knowledge of a wide variety of poetic forms; they will undertake comparative analyses of poems and poetic structures; they will learn how to think about poetics outside poetry.

CMLIT 508: Global Visual Culture
3-6 Credits/Maximum of 6
Comparative study of transnational forms of visual cultural production; e.g. new media, cinema, television, public culture.

CMLIT 509: Comparative Modernisms
3-6 Credits/Maximum of 6
Aesthetic and historical development of Modernism in diverse cultures.

CMLIT 510: Theory and Practice of Translation
3 Credits
Theories of translation and interpretation; importance of translation in literary transmission; application of theoretical concepts to individual translation projects.

Prerequisite: 24 credits in a foreign language

CMLIT 511: Theory and Praxis of Teaching Global Literatures
3 Credits
This course is a professional development seminar that prepares graduate students to contribute professionally to the advancement of teaching global and world literature courses at the college and university level. We will investigate the range of global literatures and consider the term 'world literature' in two senses: (a) discerning the theories and meanings inherent in the concept and (b) charting the scope of a world of literature that can fit into one semester within specific institutional expectations. We will discuss the challenges and opportunities inherent in teaching works that are written in a variety of languages, come from a wide range of temporal periods and diverse cultural settings, reflect or provide alternatives to international canons, rely upon varying assumptions and ideologies, and demonstrate different relations to translation, literacy, visuality, orality, and performance. Students will become acquainted with aspects of learning theory and research questions as well as with professional resources such as conferences and journals in this field. We will theorize and explore concrete matters such as teaching within different institutional settings and delivery modes (including online), determining learning objectives and assessment instruments, crafting a syllabus, designing lesson plans, and selecting instructional materials including OER (Open Educational Resources) and other alternatives to expensive textbooks in relation to issues of equity and access. Throughout, we will focus on student learning, on creating an inclusive instructional environment, and on professional ethics as involved in the ways we teach literature. The course is intended to strengthen graduate students' abilities and confidence as teachers now, and their readiness for professional scholarship and for the academic job market later (most faculty jobs in literature are at teaching-focused institutions). We will also consider career diversity since professional careers other than faculty appointments can often include forms of teaching, aspects of this course may be useful for other career options too.

CMLIT 521: Comparative Seminar in Inter-American Literatures
1-12 Credits/Maximum of 12
Comparative topics presenting literary works of the Americas--North America, South America, and the Caribbean--from early to present times. CMLIT 521 CMLIT 521 Comparative Seminar in Inter-American Literatures (1-12) This course forms one series of three new-course proposals for seminars in comparative literature with a focus on various parts of the world. While existing seminars focus on comparative studies organized according to concepts such as literary theory, period, theme, or genre, through the proposed new seminars the Department of Comparative Literature seeks to provide visibility for the full complement of courses that reflect the department's global perspective. These proposals also respond to the College's policy to avoid repeated use of the 597 number for similar subject-matter. Thus we are proposing three separate comparative courses on Asian, African, and Inter-American literatures. All represent subject-matter previously taught as CMLIT 597 or other less clearly defined CMLIT numbers. Comparative study of Inter-American literatures is an important part of the curriculum of our Comparative Literature Department. It is a field of study identified as one of our specialties in our recent strategic plans. Joining existing graduate seminars in European literatures, and supplementing proposed seminars in African and Asian literatures, this course and the other two new graduate courses now being proposed will make visible the ways in which the departmental curriculum to covers the diverse geographic areas relevant to comparative literary study. Our department has long taught 100-level and 400-level courses on Inter-American Literature. We believe that we were the first U.S. university to have created such courses some twenty-five years ago. Many of our graduate students possess appropriate languages (such as Spanish, Portuguese, and French) necessary for study in this field. The Americas as two joined continents have produced thousands of writers and a highly diverse literature written in English, Spanish, French, Portuguese, and other languages, including
Native American languages. A comparative approach to the study of these literatures provides an appropriately internationalized context for understanding the relations among various literatures of the Americas and for seeing them in the purview of world literature as a whole. In sum, we have long had separate numbers for our undergraduate Inter-American Literature courses and we have previously offered graduate Inter-American courses under general numbers. In addition to complying with College policy and not continuing to use 597 repeatedly, we wish to make this field more visible within our curriculum by giving it a course number of its own.

CMLIT 522: Comparative Seminar in Asian Literatures

1-12 Credits/Maximum of 12

Comparative topics presenting literary works of Asia, from the origins of literature in Asia to the present time. CMLIT 522 CMLIT 522 Comparative Seminar in Asian Literatures (1-12) This course forms one of a series of three new-course proposals for seminars in comparative literature with a focus on various parts of the world. While existing seminars focus on comparative studies organized according to concepts such as literary theory, period, theme, or genre, through the proposed new seminars the Department of Comparative Literature seeks to provide visibility for the full complement of courses that reflect the department’s global perspective. These proposals also respond to the College’s policy to avoid repeated use of the 597 number for similar subject-matter. Thus we are proposing three separate comparative courses on Asian, African, and Inter-American literatures. All represent subject-matter previously taught as CMLIT 597 or other less clearly defined CMLIT numbers. Comparative study of Asian literatures is an increasingly important part of the curriculum of our Comparative Literature Department. It is a field of study identified as one of our specialties in our recent strategic plans. Joining existing graduate seminars in Europe and world literature as a whole. In sum, we have long had separate numbers for our undergraduate African languages and literature courses and we have previously offered graduate courses on African literatures under general numbers. In addition to complying with College policy and not continuing to use 597 repeatedly, we wish to make this field more visible within our curriculum by giving it a course number of its own.

CMLIT 524: Comparative Arab/ic Literature and Criticism

3 Credits

This course provides students with a comprehensive overview of modern Arab/ic literature, in dialogue with critical approaches that illuminate these texts within a comparative framework. By examining the critical interventions and debates that have shaped Arabic literature up until our present moment, this course invites students to attend to the manifold ways that this literature engages the major theoretical paradigms of global literary studies. It subsequently de-provincializes these debates beyond the limited purview of ethno-linguistic, philological, or geopolitical divisions of the field. It instead situates this literature as an active agent within world literary debates and criticism, both past and present. In this regard, the course will invite students to critically reframe the (neo)colonial or (neo)orientalist categories of the ‘Middle East’ and ‘Near East’ and to consider other supra- and transnational exchanges staged across Asia, Africa, and the Mediterranean, as well as in the diaspora. In so doing, the course aims to look beyond the exclusive lens of the (post)colonial, or binary models of center/periphery, that dominate discussions of ‘third-world’ literature. In moving away from the siloing of these traditions within Area Studies, the course considers the repercussions of these debates for narrative, aesthetic, geopolitical, theoretical, and pedagogical concerns across the study of Comparative Literature. Students will read a wide variety of literary texts in English translation, spanning a range of genres (prose, poetry, drama, film). Alongside these works, they will engage with critical and philosophical writings from the Arab/ic context, on topics such as aesthetics and the sublime, affects and embodiment, futurity and dystopia, ecocriticism and the Anthropocene, language, modernity/postmodemism, globalization, trauma, and more. After having taken this class, students will have
gained a sound grasp of the field, as well as its literary and historical dimensions. They will also have developed a critical understanding of the current challenges and directions of the study of modern Arab/ic literature.

CMLIT 526: Global Japanese Literature

3 Credits

This course provides students with a comprehensive overview of global Japanese literature, in dialogue with critical approaches that illuminate these texts. The narrative of ethnic, geographic, and linguistic isomorphism, the notion that a Japanese people speaking a Japanese language live in the Japanese islands, is a carefully crafted and relatively modern fiction in Japan. This course examines the gradual, and still contentious, formation of a 'Japanese' literary canon from multiple vantage points. The class combines a survey of key texts composed in the Japanese islands and in Japanese diaspora communities, alongside an examination of the critical paradigms that surround the production, reception, and interpretation of these texts.

CMLIT 543: Literary Relations

3-6 Credits/Maximum of 6

Mutual influences among specific literatures and cultures; for example, German-American, French-American, Inter-American, or East-West literary relations.

CMLIT 570: Forces in Contemporary Literature

3-6 Credits/Maximum of 6

Intellectual currents and experimental forms in contemporary world literature.

CMLIT 577: Critical Perspectives on Modern Chinese Literature

3 Credits

This course provides students with an overview of the core texts and main critical paradigms of modern Chinese literary studies. This course provides students with a comprehensive overview of the main critical approaches to modern Chinese literature, by placing these paradigms into historical perspective and linking them with key texts that illuminate the authors' arguments and demonstrate exemplary readings that have proven influential in the field, past and present. The particular focus of the course may vary according to the instructor (e.g. themes, genres, regions etc.), but the course will generally cover critical interventions and debates, helping students to understand the emergence of the field in its present form; they will also scrutinize major trends that are providing new directions for the study of modern Chinese literature. In addition to the critical literature, students will read a range of key literary texts, from the late Qing to the twenty-first century, that provide insights into the forces (aesthetic and intellectual, as well as social and historical) that have shaped the canon of modern Chinese literature. Critical analyses and literary texts are chosen in a way so as to illuminate each other. At the end of the class, students will have gained a sound grasp of the field and its literary and historical dimensions, and develop a critical understanding of the current challenges and directions of the study of modern Chinese literature. Cross Listings: CMLIT 577 will be added as a cross-listed course.

Cross-listed with: ASIA 577

CMLIT 580: Contemporary Literary Theory

3 Credits

Major issues in contemporary literary theory and their significance for criticism, with emphasis on continental European theorists and their influence.

CMLIT 589: Technology in Foreign Language Education: An Overview

3 Credits

Approaches to the uses and research applications of multimedia and other educational technologies applied to the teaching of foreign languages. (also crosslisted with SPAN 589)

Cross-listed with: APPLNG 589, FR 589, GER 589, SPAN 589

CMLIT 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CMLIT 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

CMLIT 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

CMLIT 601: Ph.D. Dissertation Full Time

0 Credits/Maximum of 999

No description.

CMLIT 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 3

Supervision of teaching; consideration of instructional aims and objectives, methods of lecturing and leading discussions, evaluation of student work.

CMLIT 603: Foreign Academic Experience

1-12 Credits/Maximum of 12

Foreign study and/or research constituting progress toward the degree at a foreign university.

CMLIT 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.
Comparative Medicine - MD (CMED)

CMED 501: Biology and Care of Laboratory Animals
3 Credits
Presentation of the anatomic and physiologic characteristics of the commonly used laboratory animal species and their relation to biomedical research.

CMED 503: Laboratory Animal Genetics
3 Credits
Genetic principles applied to laboratory animals used for investigations of diseases that may be controlled or influenced by genetic factors.

CMED 507: Techniques of Laboratory Animal Experimentation
3 Credits
Techniques of drug administration, infusion, and collection of body fluids and materials; gnotobiology; use of radioisotopes and bioinstrumentation.

CMED 515: Experimental Surgery of Laboratory Animals
3 Credits
Surgical techniques, including nephrectomy and Goldblatt clamp, bladder and gastric pouches, bile duct cannulation, intraventricular operation, cardiac and cerebrovascular catheterization.

CMED 530: Diseases of Laboratory Animals I
3 Credits
Physiological and pathological expressions of both infectious and metabolic degenerative diseases of rodents, with emphasis on diagnostic and control methods.

CMED 531: Diseases of Laboratory Animals II
3 Credits
Physiological and pathological expressions of both infectious and metabolic degenerative diseases of nonhuman primates and other species of animals.

CMED 535: Comparative Pathology
3 Credits
Comparative pathologic characteristics of infectious and metabolic diseases of animals and man.

CMED 590B: Contemporary Topics in Laboratory Animal Science Colloquium
1-3 Credits/Maximum of 3
Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers. This colloquium is specifically focused on recent literature in the field of Laboratory Animal Medicine.

CMED 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CMED 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

CMED 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

Computer Science (CMPSC)

CMPSC 505: Theory of Computation
3 Credits
Topics in discrete mathematics, discrete probability, first order logic and models of computation.

Prerequisite: CMPSC463

CMPSC 511: Design and Analysis of Algorithms
3 Credits
Amortized analysis, graph algorithms, NP-complete problems, approximation algorithms, parallel algorithms.

Prerequisite: CMPSC463

CMPSC 512: Advanced Operating Systems
3 Credits
A study of the principles and practice of distributed system design, including communication, synchronization, processes, file systems, and memory management.
Prerequisite: CMPSC472
COMP 513: Formal Methods for Software Engineering
3 Credits
Object-oriented software development, formal specification techniques and related CASE tools, software re-use, verification and validation, transformational development.

Prerequisite: CMPSC487W, COMP 511, or permission of the program
COMP 516: Advanced Programming Languages
3 Credits
Programming paradigms and styles, object-oriented programming, formal semantics, programming language design.

Prerequisite: CMPSC460
COMP 517: Computer Security
3 Credits
Introduction to the area of computer security and current issues associated with computer security.

Prerequisite: MATH 315
COMP 519: Advanced Topics in Database Management Systems
3 Credits
Concurrency control, crash recovery, query processing, semantic data models, advanced file access, distributed database systems, performance, case studies, advanced applications.

Prerequisite: CMPSC430, MATH 315
COMP 520: Artificial Intelligence
3 Credits
Problem solving, knowledge representation, language understanding, perception, learning, artificial neural networks.

Prerequisite: CMPSC463
COMP 524: Evolutionary Computation
3 Credits
Topics in evolutionary algorithms and genetic algorithms.

Prerequisite: COMP 511 or permission of the program
COMP 545: Computer Architecture
3 Credits
Cache, pipelining, memory design, interconnection networks, multiprocessor systems.

Prerequisite: CMPSC312
COMP 594: Master's Studies
3 Credits/Maximum of 3
Presentation of various research techniques, in-depth study of a specific computer science problem, development of a written paper or project, and an oral defense.

Prerequisite: A minimum of 2 of the 500-level computer science required courses or permission of the program.
COMP 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nontechnical research, that are supervised on an individual basis and which fall outside the scope of formal courses.

COMP 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

COMP 600: Thesis Research
1-15 Credits/Maximum of 999
Research into a specific computer science problem, development of a scholarly written paper, and an oral defense.

Prerequisite: A minimum of 2 of the 500-level computer science required courses or permission of the program.

Computer Science and Engineering (CSE)

CSE 511: Operating Systems Design
3 Credits
Concurrent programming; design of I/O subsystem, memory management, and user interface; kernel design, deadlocks, protection and security; case studies.

Prerequisite: CMPSC473
CSE 513: Distributed Systems
3 Credits
Protocol hierarchies; routing and flow control algorithms; distributed operating systems; communication and synchronization mechanisms; resource allocation problems.

Prerequisite: CSE 411
CSE 514: Computer Networks
3 Credits
Network subsystems, ARPA/NET, SNA, DECNET, network protocols (physical databank, network, transport, sessions, presentation, application), routing and congestion control, network optimization.

CSE 514 CSE 514 Computer Networks (3) This course discusses the
characteristics and low-level protocols of computer networks. It provides basic background, design, and evaluation skills in telecommunication and communication networks. The course will cover International Standards Organization Open System Interconnection (ISO-OSI) reference model, design issues and protocols in the data link layer, network layer and transport layer; architectures and control algorithms of local-area networks, and point-to-point networks; standards in network access protocols; models of network interconnection; and overview of networking and communication software. The course will emphasize on Internet standards such as TCP/IP and many advanced topics in networking. Students should already have some network background before taking this course. Students should also have necessary analytical and programming skills to do networking projects.

**Prerequisite:** CMPEN362; E E 353 or E E 350

CSE 515: Reliable Data Communications

3 Credits

Discussion of problems and solutions for ensuring reliable and efficient communication over wired and wireless links and data networks.

**Prerequisite:** Communication Networks; STAT 418

Cross-listed with: EE 565

CSE 516: Mobile Networking

3 Credits

Algorithms, systems and design of mobile telecommunication voice and data networks. CSE 516 Mobile Networking (3) This course presents the fundamentals of mobile networking and provides simple analytical tools for designing and evaluating these networks. The course is divided into three parts. First, the architecture and algorithms for mobility management and service control in classic circuit-switched cellular networks is presented. Using simple queuing models, students analyze the performance of these networks and examine design trade-offs. GSM is used as a case study. Second, the architecture and algorithms for mobility management is packet-based mobile telecommunications networks are presented. Finally, protocols, algorithms, and performance consideration for the mobile Internet are presented. This course focuses on the practical applications of these concepts, using real systems to illustrate architecture and protocol trade-offs. The course provides students with a venue in which to pursue research in mobile networking that complements several core areas of the graduate CSE curriculum (e.g., networks, architectures, algorithms, and formal analysis). Following the course in networking, this course enables students to learn the skills and obtain the background knowledge necessary to generate publishable research in the area of mobile networks. This course will serve as an elective for students interested in mobile networking and telecommunications.

CSE 517: Performance Evaluation

3 Credits

Tools and techniques for PE, Analytical and Simulation models, evaluation of multiprocessors, multicomputer and LANs, scheduling policies, case studies.

CSE 520: Science of Computer Programming

4 Credits

Weakest preconditions, nondeterminism, terminating constructs, formal derivation of some often used algorithms, correctness of programs, formal specification of large systems.

**Prerequisite:** CMPSC461

CSE 521: Compiler Construction

3 Credits

Design and implementation of compilers.

CSE 530: Fundamentals of Computer Architecture

3 Credits

Advances in computer architecture, Pipelining, parallelism, and multiprocessing.

**Prerequisite:** CMPEN431

CSE 531: Parallel Processors and Processing

3 Credits

Parallel processor organization; basic algorithms suitable for such systems; parallel sorting and interconnection networks; applications and discussion of specific processors.

**Prerequisite:** CSE 530

CSE 532: Multiprocessor Architecture

3 Credits

Fundamental structures of multiprocessors; interprocess communications, system deadlocks and protection, scheduling strategies, and parallel algorithms; example multiprocessor systems.

**Prerequisite:** CSE 530

CSE 536: Fault Tolerant Systems

3 Credits

Attributes of fault-tolerant systems and their definitions; realability and availability techniques; maintainability and testing techniques; practice of reliable system design.

**Prerequisite:** CSE 530

CSE 537: Interconnection Networks in Highly Parallel Computers

3 Credits

Study and comparative analysis of various classes of interconnection networks; routing problem; fault tolerance issue; performance evaluation; VLSI implementation.

**Prerequisite:** CSE 530
We will conclude with a discussion of the major challenges and state of system security, and make predictions about the future of system security.

Prerequisite: CSE 458, CSE 411, CSE 543

CSE 545: Network Security
3 Credits

Advanced methods and technologies for network security. CSE 545 Network Security (3) CSE 545 covers the major topics and emerging trends in network security. We begin with a discussion of the basic problems, architectures and devices in current and next generation networks. This will include a discussion of how these topics relate to popular articles and the press. This part of the class relies heavily on case studies to illustrate how security impacts the social and technical aspects of the Internet and computing systems. The second major topic focuses on the use of applied cryptography supporting network protocols. This will provide a deeper view of the basics of cryptographic constructions and consider formal methods for proving their correctness. The realities and limitations of the current use of cryptography will be considered. Students will spend a considerable amount of time developing and analyzing their own security protocols. The third section of this course will focus on the management and vulnerabilities of current network environments. This will begin with a discussion of emerging authentication systems (federated authentication, graphical passwords, biometrics), and then turn to the security problems of large-scale network management. The class will then review major thrusts in network security: the management and vulnerabilities of wireless systems. The course concludes with a discussion of topical areas in network security. This is the most flexible part of the class, and will reflect the needs and desires of the instructors and students on a semester-to-semester basis.

Prerequisite: CSE 543

CSE 546: Cryptography
3 Credits

Introduction to the theory and techniques of modern cryptography, with emphasis on rigorous analysis and mathematical foundations. CSE 546 Cryptography (3) This course provides an introduction to the theory and techniques of modern cryptography. The course begins by reviewing relevant mathematical tools and moves on to develop definitions and examples of secure protocols for important cryptographic tasks such as symmetric- and private-key encryption, authentication, and digital signatures. Students will be evaluated primarily on weekly problem sets designed to verify and improve their understanding of the materials. Grades will be based on problem sets, a mid-semester examination, a final examination, and class participation/lecture notes. With regard to ‘lecture notes,’ students (in teams) must prepare a written summary of one lecture during the course. The goal of this exercise is to practice technical writing and exposition. This course will serve as an elective for graduate students in Computer Science & Engineering and the Post-Baccalaureate Credit Certificate Program in Computer & Network Security (under development).

Prerequisite: CSE 465
CSE 550: Numerical Linear Algebra
3 Credits
Solution of linear systems, sparse matrix techniques, linear least squares, singular value decomposition, numerical computation of eigenvalues and eigenvectors.
Prerequisite: MATH 441 or MATH 456
Cross-listed with: MATH 550

CSE 551: Numerical Solution of Ordinary Differential Equations
3 Credits
Methods for initial value and boundary value problems; convergence and stability analysis, automatic error control, stiff systems, boundary value problems.
Prerequisite: MATH 451 or MATH 456
Cross-listed with: MATH 551

CSE 552: Numerical Solution Of Partial Differential Equations
3 Credits
Finite difference methods for elliptic, parabolic, and hyperbolic differential equations; solutions techniques for discretized systems; finite element methods for elliptic problems.
Prerequisite: MATH 402 or MATH 404; MATH 451 or MATH 456
Cross-listed with: MATH 552

CSE 554: Error Correcting Codes for Computers and Communication
3 Credits
Block, cyclic, and convolutional codes. Circuits and algorithms for decoding. Application to reliable communication and fault-tolerant computing.
Prerequisite: Communication Networks
Cross-listed with: EE 564

CSE 555: Numerical Optimization Techniques
3 Credits
Unconstrained and constrained optimization methods, linear and quadratic programming, software issues, ellipsoid and Karmarkar’s algorithm, global optimization, parallelism in optimization.
Prerequisite: CMPSC456
Cross-listed with: MATH 555

CSE 556: Finite Element Methods
3 Credits
Sobolev spaces, variational formulations of boundary value problems; piecewise polynomial approximation theory, convergence and stability, special methods and applications.
Prerequisite: MATH 502, MATH 552
Cross-listed with: MATH 556

CSE 557: Concurrent Matrix Computation
3 Credits
This course discusses matrix computations on architectures that exploit concurrency. It will draw upon recent research in the field.
Prerequisite: CMPSC451, CMPSC455, CMPSC450, MATH 451, or MATH 455

CSE 561: Data Mining Driven Design
3 Credits
The study and application of data mining/machine learning (DM/ML) techniques in multidisciplinary design. CSE 561 / EDSGN 561 / IE 561 / IST 561 Data Mining Driven Design (3) This course examines how theoretical data mining/machine learning (DM/ML) algorithms can be employed to solve large-scale, complex design problems. Knowledge Discovery in Databases (KDD) is the umbrella term used to describe the sequential steps involved in capturing and discovering hidden, previously unknown knowledge in large databases. The course begins with foundational information regarding engineering design and provides an overview of KDD and the emergence of the digital age. Students will investigate data acquisition and storage techniques where they will learn the difference between stated and revealed data as related to design. Students will construct their own databases and learn essential techniques in data base queries (SQL) and management. Data transformation techniques, such as binning and dimensionality reduction, will be examined in the data transformation section of the course. This course has a design-driven focus, which will enable students to solve real-life design challenges spanning diverse domains. Students will work on project-based exercises aimed at proposing novel data mining algorithms, or employing existing algorithms to solve design problems in fields relating to engineering, healthcare, financial markets, military systems, to name a few. Data visualization techniques will also be studied to help communicate complex data mining models in a timely and efficient manner.
Cross-listed with: EDSGN 561, IE 561, IST 561

CSE 562: Probabilistic Algorithms
3 Credits
Design and analysis of probabilistic algorithms, reliability problems, probabilistic complexity classes, lower bounds.
Prerequisite: CSE 565

CSE 564: Complexity of Combinatorial Problems
3 Credits
NP-completeness theory; approximation and heuristic techniques; discrete scheduling; additional complexity classes.
Prerequisite: CSE 565

CSE 565: Algorithm Design and Analysis
3 Credits
An introduction to algorithmic design and analysis.
Prerequisite: CMPSC465; Concurrent: CMPSC464
CSE 566: Algorithms and Data Structures in Bioinformatics

3 Credits

This course covers elegant algorithmic and data structure techniques that underpin modern biological data analysis. Bioinformatics is a growing field with immediate implications for our understanding of biology and treatment of disease. This course covers elegant algorithmic and data structure techniques and their use in bioinformatics. The emphasis is on recurrent ideas that underpin modern biological data analysis, presented in conjunction with their biological applications. The course is suitable both for students interested in doing bioinformatics research and those interested in applications of algorithms to the natural sciences. Some of the algorithms/data-structures that may be covered include exact string matching, suffix trees, suffix arrays, de Bruijn graphs, hidden Markov models, breakpoint graphs, succinct data structures, the Burrows-Wheeler transform, the FM-index, network flow, and bidirected graphs. Some of the biological applications will include sequence alignment and assembly, cancer genomics, phylogeny, gene finding, and variation detection. No prior biological or bioinformatics knowledge is required. A basic understanding of data structures and algorithms (equivalent to CMPSC465) is a prerequisite; however, exceptionally motivated students can contact the instructor to discuss their options. This course is complementary to existing bioinformatics courses offered through other programs on campus. These courses may be taken concurrently but are not prerequisites. Prerequisites: CMPSC465 Cross Listings: BMBB 566 will be added as a cross-listed course.

Prerequisite: CMPSC465
Cross-listed with: BMBB 566

CSE 575: Architecture of Arithmetic Processors

3 Credits

Algorithms and techniques for designing arithmetic processors; conventional algorithms and processor design; high-speed algorithms and resulting architectural structures.

Prerequisite: CMPEN411

CSE 577: VLSI Systems Design

3 Credits

Engineering design of large-scale integrated circuits, systems, and applications; study of advanced design techniques, architectures, and CAD methodologies.

Prerequisite: CMPEN411

CSE 578: VLSI Computer-Aided Design Tools

3 Credits

VLSI circuit design tools: placement, routing, extraction, design rule checking, graphic editors, simulation, verification, minimization, silicon compilation, test pattern generation.

Prerequisite: CMPEN411

CSE 583: Pattern Recognition and Machine Learning

3 Credits

This course is a comprehensive overview of the fields of pattern recognition and machine learning. The content covers both classification and recursion, model selection, decision theory, information theory, linear and non-linear models, graphical models, kernel methods, mixture models and EM as well as neural networks. It assumes no previous knowledge of pattern recognition or machine learning concepts. Knowledge of multivariate calculus and basic linear algebra is required, and some familiarity with probability would be helpful.

Recommended Preparations: Multivariate calculus, linear algebra, probability
Cross-listed with: EE 552

CSE 584: Machine Learning: Tools and Algorithms

3 Credits

Computational methods for modern machine learning models, including applications to big data and non-differentiable objective functions.

Cross-listed with: STAT 584

CSE 585: Digital Image Processing II

3 Credits

Advanced treatment of image processing techniques; image restoration, image segmentation, texture, and mathematical morphology.

Prerequisite: CMPEN455 or E E 455
Cross-listed with: EE 555

CSE 586: Topics in Computer Vision

3 Credits

Discussion of recent advances and current research trends in computer vision theory, algorithms, and their applications.

Prerequisite: CMPEN454 or E E 454
Cross-listed with: EE 554

CSE 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

CSE 591: Research Experience in Computer Science and Engineering

1 Credits

Research experience for new doctoral students in computer science and engineering. Research is performed in conjunction with another 500-level CSE course.

Concurrent: enrollment in another 500-level CSE course

CSE 594: Research Topics

1-15 Credits/Maximum of 15

Supervised student activities on research projects identified on an individual or small-group basis.
CSE 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CSE 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

CSE 598: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

CSE 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

CSE 601: Ph.d. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

CSE 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 3
Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University.

CSE 610: Thesis Research Off-Campus
1-15 Credits/Maximum of 999
No description.

CSE 820: Software & Hardware Project Management
3 Credits

Students study the theory and practice of hardware and software project management. CSE 820 Software & Hardware Project Management (3) This course provides a broad exploration of the field of software, hardware, and integrated software/hardware project management. In particular, it investigates the fundamentals of risk, scope, time and cost management, quality assurance, scheduling, and human resource functions. It considers the nuances of software, hardware, and integrated hardware/software project management, as distinct from the management of projects in, say, building construction or manufacturing. Building on these insights, the student will learn how to apply these techniques to a real-world project of his or her choosing. Students will learn to recognize, identify, and apply the functions of project management to the types of projects which they will encounter in industry. This course supports the professional nature of the MEng degree.

Counseling Psychology (CNPSY)

CNPSY 502: Advanced Counseling Theory and Method
3 Credits

Assessment, intervention, and evaluation procedures for counseling problems frequently encountered in school, college, and rehabilitation settings. CN ED 502CN ED (CNPSY) 502 Advanced Counseling Theory and Method (3)This course is concerned with the exploration of ideas that are of theoretical and applied importance to thinking about counseling and psychotherapy. The course is not a skills course, per se, although many of the readings have clear implications for enhancing your therapeutic skills. Nor is the course meant to be a review of theories of personality or counseling typically covered in earlier courses. This course is open to CN ED and CNPSY students. The prerequisite is CN ED 501.

Prerequisite: CN ED501 course open only to CN ED and CNPSY doctoral students.
Cross-listed with: CNED 502

CNPSY 554: Cross-Cultural Counseling
3 Credits

Examines theory, research, and models of counseling relationships between counselors and clients of different racial and sociocultural backgrounds. CNPSY 554CNPSY (CN ED) 554 Multicultural Counseling (3) This course is an advanced multicultural counseling course designed to help doctoral students: (a) develop mastery of the multicultural counseling literature, (b) promote self-awareness and self-knowledge, (c) facilitate the construction of cultural knowledge to increase awareness and sensitivity to issues affecting multicultural populations, (d) identify intervention strategies applicable to multicultural clients, and (e) promote development of a personal philosophy of multicultural counseling toward becoming a multiculturally competent counselor. The course is open to CN ED and CNPSY doctoral students who have successfully completed CN ED 507, CN ED 595A or CNPSY 595A, or equivalent courses.

Prerequisite: CN ED507, CN ED595A, or CNPSY595A
Cross-listed with: CNED 554

CNPSY 555: Career Counseling
3 Credits

The examination of historical, legislative, and current models of career counseling and the development of pertinent individual and group techniques. CN ED 555CN ED (CNPSY) 555 Career Counseling (3) This course is an advanced extension of CN ED 505, Foundations of Counseling Information or its equivalent. In CN ED 505, students acquire a theoretical understanding of models of career development, decision-making, career education, information systems and information resources. In CN ED/CNPSY 555, students will have an opportunity to related such learning to the place of work in human behavior, models of career counseling, the role-play of such models, the practice of career appraisal and the broad economic, social, and legislative contexts, including the global economy, stimulating current emphases on career counseling. This course is open to CN ED and CNTSY students. The prerequisite is CN ED 501.

Prerequisite: CN ED505
Cross-listed with: CNED 555
CNPSY 582: Advanced Group Psychotherapy
3 Credits
Study of group psychotherapy and interventions, with an experiential component. Available only to majors in CN ED and CNPSY.

Cross-listed with: CNED 582

CNPSY 594: Research in Counseling
2-6 Credits/Maximum of 6
The design, implementation, and evaluation of counseling research projects.

CNPSY 595: **SPECIAL TOPICS**
1-6 Credits/Maximum of 6

CNPSY 595D: Supervision of Counselors
1-9 Credits/Maximum of 9
Practical experience in supervising and evaluating work of counselors. **Prerequisite:** CN ED595A or CN ED595B; available only to majors in CN ED and CNPSY

CNPSY 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CNPSY 600: Thesis Research
1-15 Credits/Maximum of 999
NO DESCRIPTION.

CNED 500: Introduction to Counseling and Development
3 Credits
Introduces students to the profession of counseling and to the major models of human growth and development. As such, a primary goal of this course is for students to begin the process of professionalization. Thus the course will address the history and current trends, professional standards, associations, areas of specialization, and major approaches to the field of counseling. It will also address major theories of human growth and development, as well as major developmental periods that might have pertinence for counselors. In addition, students will be expected to begin the process of their own development as professional counselors.

CNED 501: Counseling Theory and Method
3 Credits
Survey of psychodynamic, humanistic, behavioral and cognitive-behavioral approaches to counseling individuals.

CNED 502: Advanced Counseling Theory and Method
3 Credits
Assessment, intervention, and evaluation procedures for counseling problems frequently encountered in school, college, and rehabilitation settings. CN ED 502CN ED (CNPSY) 502 Advanced Counseling Theory and Method (3)This course is concerned with the exploration of ideas that are of theoretical and applied importance to thinking about counseling and psychotherapy. The course is not a skills course, per se, although many of the readings have clear implications for enhancing your therapeutic skills. Nor is the course meant to be a review of theories of personality or counseling typically covered in earlier courses. This course is open to CN ED and CNPSY students. The prerequisite is CN ED 501.

Prerequisite:** CN ED501 course open only to CN ED and CNPSY doctoral students.

CNED 504: Foundations and Practices of School Counseling
3 Credits
This course in school counseling is a broad survey of the foundations, contextual dimensions, and practices of contemporary school counseling in Pre K-12 schools. Students develop knowledge of the roles of school counselors in addressing the developmental, personal-social, academic, and college-career needs of students in Pre K-12 schools. Students gain an understanding of the practices and interventions necessary for establishing and managing a comprehensive school counseling program. Students learn how current education reform and school contexts shape school counselors’ roles. This course will provide the foundational knowledge necessary for additional school counseling courses.

CNED 505: Foundations of Career Development and Counseling Information
3 Credits
Accelerating change in economic, psychological, social, educational influences upon counselees. Utilization of information systems in effecting counselee change.
CNED 506: Individual Counseling Procedures

3 Credits

Training in listening, responding, challenging skills, and action-oriented techniques for individual counseling.

Prerequisite: or concurrent: CN ED501; available only to majors in CN ED and CNPSY

CNED 507: Multicultural Counseling: Foundations

3 Credits

Provide foundational information that controverts, complements and extends traditional psychology and counseling theory and practice.

CNED 508: Organization and Administration of Pupil Services

3 Credits

Principles, organization, personnel, functions, integration with school programs, evaluation.

Prerequisite: A G.P.A. of 3.00 or better in 27 credits of previous coursework covering any three of the following five areas: economics, sociology, psychology, education, and anatomy and physiology.

CNED 509: Introduction to Rehabilitation Counseling

3 Credits

Provides information about rehabilitation history, legislation, philosophy, and agencies, as well as an overview of a variety of disabling conditions.

CNED 510: Foundations of Clinical Mental Health Counseling in Schools and Communities

3 Credits

Foundational content for the profession of clinical mental health counseling. CN ED 510 Foundations of Clinical Mental Health Counseling in Schools and Communities (3) This course provides a foundation for students in the clinical mental health counseling in schools and communities emphasis in the Counselor Education program. Course topics address professional identity, clinical mental health settings and services, public mental health policy, and related client advocacy strategies, as well as current trends and issues affecting clinical mental health counseling practice. Outside readings grounded in current research, in-class discussions, interactive activities, lectures, and films will be critical to integrating, synthesizing, and understanding clinical mental health counseling content. Specific emphasis will be placed on case-based approaches to instruction and learning.

CNED 523: Counseling Children

3 Credits

Provides school and clinic approaches for school counselors and other mental health professionals to help children with developmental problems. CN ED 523 Counseling Children (3) Counseling children includes a range of school and clinic approaches used by school counselors and others to help children. The course combines theory and research findings with practical application of techniques so that students can develop a wide range of knowledge and skills for integration into their individual counseling model and professional situation. Classroom work will include lecture, discussion, videos, and presentations of techniques that include role-play and case studies. The combination of these activities is designed to create a sound basis of understanding and supervised opportunities to apply techniques in school and agency settings.

CNED 524: Counseling Adolescents

3 Credits

Provides approaches for school counselors and others working with a variety of adolescent obstacles and developmental needs.

CNED 525: Applied Testing in Counseling

3 Credits

Using counseling assessments effectively and ethically in applied settings, with an emphasis on test analysis and evaluation of psychometric properties.

Prerequisite: 3 credits of upper-level statistics

CNED 526: Research in Counselor Education

3 Credits

Evaluating counselor education research from scientist-practitioner perspective; emphasis on how to develop and use research with an applied focus.

CNED 530: Family Counseling: Theory and Practice

3 Credits

Conceptualization and application of family counseling frameworks to EC-12 school settings are learned in this course. CN ED 530CN ED 530 Family Counseling: Theory and Practice (3) Family functioning is paramount in the educational, personal/social, and career development of children and adolescents. This course prepares school counselors and other counselors for helping children and adolescents in the context of family. Several theories and models of family counseling are presented, focusing on application of these frameworks to work in EC-12 schools. Through experiential activities connected to the course, counselor-trainees are encouraged to relate experiences in their own families to their functioning as counselors. The course is required for a master’s degree in elementary or secondary school counseling. Evaluation includes multiple-choice tests and a self-reflection project. The course objectives follow: Students will: 1. know the terminology and basic concepts associated with systems thinking and family counseling. 2. adopt a family systems frame of reference and understand the family counseling perspective. 3. know the history and development of family counseling. 4. conceptualize the social constructionist perspective of family counseling and human functioning, including perspectives on substance use and abuse, gender, lifestyle, socioeconomic conditions, sociopolitical conditions, relations among diverse groups, and culture and identity. 5. understand and apply various frameworks of family counseling to the school counseling and school context, including Bowenian theory, attachment theory, experiential/humanistic approaches, structural and strategic approaches, cognitive-behavioral approaches, solution-focused therapy, narrative therapy, and integrative models. 6. grow in their own self-awareness with regard to their families of origin. 7. understand the use of self in counseling and learn and apply this knowledge in experiential activities and personal and professional functioning. 8. understand the wounded healer concept and attachment theory implications for counselor functioning. 9. comprehend and
delineate the relationships among family systems, schools, and community systems. 10. understand racial-ethnic, gender, cultural, socioeconomic, and lifestyle issues in the context of family, school, and community and institutional systems. 11. know how families, schools, and communities interact to influence students’ development. 12. understand strategies used to promote effective teamwork among counselors, educational professionals, students, parents, schools, and communities. 13. understand communication, collaboration, and consultation with parents, educational and mental health professionals, guardians, and community members for promoting students educational, career, and personal development. 14. know and understand the structure of parenting styles and outcomes associated with each parenting style. 15. understand research on parenting styles and contrast the traditional view of adolescent development with the contemporary view. 16. apply parenting styles for various prevention and intervention strategies. 17. know research support for various prevention and intervention strategies, understand measurement associated with various theories and models, and understand research traditions and methods associated with various theories and models.

**Prerequisite:** CN ED501

**CNED 531: Grief and Loss Counseling**

3 Credits

Course focus is on counseling people with a variety of grief and loss issues.

**CNED 532: Diagnosis Counseling**

3 Credits

Course examines elements of counseling diagnosis, including identification and assessment of symptoms and behaviors in determining appropriate diagnoses.

**CNED 554: Cross-Cultural Counseling**

3 Credits

Examines theory, research, and models of counseling relationships between counselors and clients of different racial and sociocultural backgrounds. CNPSY 554CNPSY (CN ED) 554 Multicultural Counseling (3) This course is an advanced multicultural counseling course designed to help doctoral students: (a) develop mastery of the multicultural counseling literature, (b) promote self-awareness and self-knowledge, (c) facilitate the construction of cultural knowledge to increase awareness and sensitivity to issues affecting multicultural populations, (d) identify intervention strategies applicable to multicultural clients, and (e) promote development of a personal philosophy of multicultural counseling toward becoming a multicultural competent counselor. The course is open to CN ED and CNPSY doctoral students who have successfully completed CN ED 507, CN ED 595A or CNPSY 595A, or equivalent courses.

**Prerequisite:** CN ED507 , CN ED595A , or CNPSY595A

Cross-listed with: CNPSY 554

**CNED 555: Career Counseling**

3 Credits

The examination of historical, legislative, and current models of career counseling and the development of pertinent individual and group techniques. CN ED 555CN ED (CNPSY) 555 Career Counseling (3) This course is an advanced extension of CN ED 505, Foundations of Counseling Infon-nation or its equivalent. In CN ED 501, students acquire a theoretical understanding of models of career development, decision-making, career education, information systems and information resources. In CN ED/CNPSY 555, students will have an opportunity to related such learning to the place of work in human behavior, models of career counseling, the role-play of such models, the practice of career appraisal and the broad economic, social, and legislative contexts, including the global economy, stimulating current emphases on career counseling. This course is open to CN ED and CNPSY students. The prerequisite is CN ED 501.

**Prerequisite:** CN ED505

Cross-listed with: CNPSY 555

**CNED 560: Psychosocial Aspects of Disability**

3 Credits

Psychological models of reaction to disability and social consequences in adulthood; generalizations to other life crises; implications for counselor interventions.

**Prerequisite:** 9 credits in counselor education or related area

**CNED 580: Foundations: History and Trends in Counselor Education**

3 Credits

Overview of the foundations and issues relevant to the counseling profession and counselor education. Course available only to majors in CN ED.

**CNED 581: Professional Issues in Counselor Education**

3 Credits

Forum for doctoral students to examine and analyze issues relevant for counselor educators. Available only to majors in CN ED.

**Prerequisite:** CN ED580

**CNED 582: Advanced Group Psychotherapy**

3 Credits

Study of group psychotherapy and interventions, with an experiential component. Available only to majors in CN ED and CNPSY.

Cross-listed with: CNPSY 582

**CNED 589: Seminar on Counseling Supervision**

3 Credits

Study research and theoretical models of clinical supervision of counselors. Includes experiential supervision component as preparation for counseling supervision practicum.

**CNED 593: Management of College and University Career Centers**

3 Credits

The course focuses on the design, management, implementation, and promotion of Career Services in higher education.

**Prerequisite:** 9 credits in counselor education
CNED 594: **SPECIAL TOPICS**
3 Credits

CNED 594A: Research Topics
3 Credits

The design, implementation, and evaluation of counseling research projects.

CNED 595: **SPECIAL TOPICS**
1-6 Credits/Maximum of 6

CNED 595A: Counseling Practicum
1-6 Credits/Maximum of 6

Practice in the application of guidance principles and methods to cases counseled under supervision; case conferences; seminar in guidance techniques

Prerequisite: CN ED505, CN ED506, CN ED525; available only to majors in CN ED and CNPSY

CNED 595D: Supervision of Counselors
1-9 Credits/Maximum of 9

Practical experience in supervising and evaluating work of counselors.

Prerequisite: CN ED595A or CN ED595B; available only to majors in CN ED and CNPSY
Cross-listed with: CNPSY 595D

CNED 595E: School Counseling Internship and Seminar
3-6 Credits/Maximum of 9

The School Counseling Internship provides a closely supervised field experience in involving the full range of duties involved with professional school counseling in Pre-K-12 schools. Students are expected to utilize every opportunity to become familiar with and participate in the services provided by the schools and related organizations with which they are associated. The expectation is that the Internship student should be providing the same range of services for the school district that the other school counselors provide. In this course, you are expected to engage in various counselor roles at your site, including (a) program development and evaluation: program assessment, planning, design, implementation, and evaluation; (b) counseling: individual, group, group guidance; (c) program administration and leadership; (c) collaboration, coordination, and consultation: work with parents, teachers, administrators, community members, and other appropriate stakeholders; and (d) assessment, career development, program coordination, and other important and appropriate roles.

Concurrent: CNED 504

CNED 595G: Counseling Internship and Integrative Seminar
1-6 Credits/Maximum of 12

CN ED 595G Counseling Internship and Integrative Seminar (3-6 per semester/maximum of 12) This course will provide students with opportunities to apply principles and techniques that facilitate the counseling process by completing a supervised 600-hour counseling internship experience. Students must have successfully passed CN ED 595A (Practicum) and gain permission from the Emphasis Coordinator before they can begin their counseling internship. Students are also required to have professional liability insurance as a prerequisite for the counseling internship.

Prerequisite: CN ED595A

CNED 595I: Counselor Education Doctoral Internship
3-6 Credits/Maximum of 9

Practical experience in professional counseling & higher education teaching under supervision available only to CN ED doctoral students. This course provides Counselor Education doctoral students with opportunities to apply principles and techniques that expand their counseling and higher education teaching experiences by completing an individual and group supervised internship. A minimum number of total hours required by accreditation must be acquired to meet the program required total 6 credit hours. This is a culmination course that provides for professional demonstration of information and skills developed in preceding courses in the doctoral program. Students in the course will meet the following objectives: a. Demonstrate a personal theoretical counseling orientation that is based on a critical review of existing counseling and teaching theories. b. Demonstrate effective application of theory and professional best practices. c. Demonstrate an understanding of counseling case conceptualization and effective interventions across diverse populations and settings. d. Develop and demonstrate a personal philosophy of teaching and learning. e. Demonstrate course design, delivery, and evaluation methods appropriate to course objectives. f. Demonstrate the ability to assess the needs of counselors in training and develop techniques to help students develop into competent counselors.

CNED 595P: Counselor Education Doctoral Counseling Practicum
3 Credits

Practice in the application of counselor education principles and methods to cases counseled under supervision; case conferences. Available only to CN ED doctoral students.

CNED 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CNED 600: Thesis Research
1-15 Credits/Maximum of 999

No description.

CNED 601: Thesis Preparation
0 Credits/Maximum of 999

No description.

CNED 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6

Teaching of counselor education laboratory, clinical practice, and recitation classes under senior faculty supervision.
Criminal Justice (CRIMJ)

CRIMJ 500: Advanced Criminological Theory
3 Credits

This course reviews and critiques the major theories of crime causation. CRIMJ 500 CRIMJ 500 Advanced Criminological Theory (3) This course provides students with an understanding of the major theories of crime causation. Students completing this course will (1) articulate the historical development of criminological theories over the last three centuries; (2) critically assess the usefulness of theory to the development of sound crime-related policy; and (3) delineate the strengths and weaknesses of each theory. Since the course serves as a foundation class for the other core requirements, it should be taken by students in their first semester. Students taking this course will be required to lead class discussions, write a significant research paper, and take essay format examinations.

Prerequisite: admission to CRIMJ graduate program or permission of program

CRIMJ 501: Advanced Research Methods for Criminal Justice
3 Credits/Maximum of 999

Advanced research methodology for criminal justice and criminology. The purpose of this course is to assist students in becoming both critical consumers and producers of scientific research. Through an understanding of research methodology, the student should be better prepared to determine the adequacy of findings from studies reported in both technical research reports and in academic journals. Further, students should be able to plan, implement, and assess the outcomes of studies that they might initiate.

CRIMJ 502: Public Policy and the Criminal Justice System
3 Credits

This course studies the concepts and methods of political and legal activity within the criminal justice system and their impact on society. CRIMJ 502 CRIMJ 502 Public Policy and The Criminal Justice System (3) The purpose of this course is to focus on crime policies in terms of effectiveness, efficiency, resource allocation, and societal impact. This course forms a nexus between the legal reasoning of criminal law with the theoretical and research foundations of the discipline. Crime control appears to be centered within the political community often without adequate, fair, or pertinent analysis of policy design or implementation. This course will use legal precedent to discuss the past and apply such a precedent to current issues. Students will examine how political assessments of crime is no guarantee that the resulting policy will deter the behavior. The nexus between research, criminal law, and the expectation of justice often come from disparate views about the goal of the criminal justice system. This course will also examine the goal of justice amid diverse populations. How has racial disparity in sentencing, legal representation, the death penalty, judicial representation, and political careers persisted? Students will also study comparative issues of national and international law. Finally, students will address a policy issue by submitting a policy analysis research proposal followed by a policy analysis paper.

Prerequisite: a baccalaureate in Criminal Justice or Behavioral related Sciences and admission to graduate study

CRIMJ 503: Advanced Statistics in Criminal Justice
3 Credits

Advanced statistics in criminal justice and criminology. The purpose of this course is to teach the student the theory behind a particular statistical technique and its appropriate use. As such, it focuses on: (1) the theory of statistical procedures; and (2) the analysis of computer-generated output. Through classroom discussions, reading assignments, and out-of-class exercises, the student will learn which statistical technique is appropriate with regard to the research hypothesis and the level of measurement of the variables included in the analysis. Further, through data analysis using SPSS, the student will learn how to interpret the output from that analysis.

Concurrent: CRIMJ501

CRIMJ 504: Criminal Justice Organization and Management
3 Credits

The course will be a broad overview of the structure and management of criminal justice organizations. CRIMJ 504 CRIMJ 504 Criminal Justice Organization and Management (3) The purpose of this course is to provide students with the ability to assess substantive policy issues regarding the organization and management of criminal justice agencies, to explain the rudiments of the day-to-day functioning of criminal justice organizations, and, most important, to get students actively engaged in discussing and thinking critically about what they consider to be good organization and management principles and policies. In addition to the text, students will be instructed to consult criminal justice and public administration journals for the most up-to-date ideas and concepts in organizational management. In particular, students should (1) understand the nature of criminal justice organizations; (2) understand the importance of effective communication and motivation of rank-and-file employees; (3) comprehend the necessity of the use of power and decision making; and (4) the necessity of change and research in criminal justice organizations. This course will be offered once every other semester, and it should be a first-semester requirement.

Prerequisite: admission to graduate study and permission of program

CRIMJ 563: Concepts and Practices in Police Administration
3 Credits

Discusses application of police research and management principles to the contemporary policing context. CRIMJ 563 CRIMJ 563 Concepts and Practices in Police Administration (3) This course examines the multitude of factors involved in the delivery of protective services to a diverse community. The evolution of policing from its English, quasi-militaristic
heritage will be analyzed in order to gain foundational knowledge for understanding its current problem-solving, community orientation. Method for attaining a community partnership will be explored. Means for attaining accountability within the new organizational philosophy will be identified. Important issues such as use of force, cultural awareness, integrity, and ethics will be extensively reviewed.

**Prerequisite:** permission of program

CRIMJ 564: Administrative and Legal Aspects of Corrections

3 Credits

This course addresses historical and contemporary correctional policy, accountability, and possible remedial alternatives. CRIMJ 564 CRIMJ 564 Administrative and Legal Aspects of Corrections (3) CRIMJ 564 is the historical, administrative, and legal inquiry into the development of institutional and community criminal punishment. Currently, corrections has nearly a 70% recidivism rate. Corrections is the measure of the cost of doing crime and cultural changes which redefine that cost. CRIMJ 564 will provide a macro-perspective into the mechanics of designing and reforming the process of capital punishment.

**Prerequisite:** permission of program

CRIMJ 565: Courts in the Criminal Justice System

3 Credits

An analysis of the function and role of the courts and the personnel involved in the American criminal justice system. CRIMJ 565 CRIMJ 565 Courts in the Criminal Justice System (3) The course will deal with the nature and function of the courts and their personnel within the American criminal justice system. In relation to the structure and organization of the courts, the differences in court systems and functions will be examined, as well as proposals for reform of these structures and organization in light of concerns over increasing caseloads, other docket pressures, and a variety of other issues. The course additionally examines the personnel involved in the court processes of the criminal justice system in their function, education and training, selection, role orientations and examines the implications of these factors in how they exercise decision-making power. Proposals for reform of decision-making functions of prosecutors, defense attorneys, and judges will be examined in light of the interrelated functioning of personnel within the courts.

**Prerequisite:** permission of program

CRIMJ 567: Juvenile Justice: Issues and Practice

3 Credits

The systematic application of the juvenile justice system and issues related to juvenile delinquency and constitutional law. CRIMJ 567 CRIMJ 567 Juvenile Justice: Issues and Practice (3) This course introduces the juvenile justice system and issues associated with processing youth through that system for graduate study. The course first addresses how there came to be a separate system for juveniles in this country and explores the major philosophical foundation for that separate system. Further, the course encourages the student to think about how delinquency is defined and the challenges those definitions have faced. In addition to exploring how youth are processed through the juvenile justice system (from arrest to disposition of the case), the course also provides the student with an exploration into issues associated with minorities and females. Critical issues of importance to juvenile justice administrators will be covered in this course as well since many CRIMJ graduates will go on to serve as administrators in the criminal justice field. Students will be asked to think critically about the future of the juvenile justice system as the system moves beyond the original intent of its framers. This course should provide the student with a better understanding not only of how the juvenile justice works, but also of how the system has dealt with challenges that it has faced since its first inception in 1899. This course will be offered once a year.

**Prerequisite:** permission of program

CRIMJ 568: Qualitative Methods for Criminal Justice

3 Credits

This course examines the many facets of qualitative research methodology. CRIMJ 568 CRIMJ 568 Qualitative Methods for Criminal Justice (3) The purpose of this course is to train the student how to conduct a good qualitative study. This will be achieved by introducing the students to various methods of data collection used in qualitative research. Specifically, the student will study qualitative methods such as, case study analysis, observer as participant, covert participation, as well as effective interviewing. The student will examine examples of notable qualitative studies to increase their understanding of the various concepts associated with qualitative research.

**Prerequisite:** Admission to a graduate program or permission of program.

CRIMJ 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers. CRIMJ 590 CRIMJ 590. Colloquium (1-3) This common course will focus on specific issues within each colloquia. Issues to be covered will be research, resources allocation, legal issues, and impact on crime control. This course will direct students to study the design and implementation of policies to address specific issues. The course will add to the diversity offerings within the Master of Arts in Criminal Justice. This course will be offered in the summer and the spring with an enrollment of 20. Repeatable credit is possible. It will be offered more if enrollment patterns warrant such an increase.

CRIMJ 594: Research Topics

1-15 Credits/Maximum of 15

Supervised student activities on research projects identified on an individual or small-group basis. CRIMJ 594 CRIMJ 594. Research Topics (1-12) This common course will focus on specific research issues. Issues to be covered will be resources allocation, legal issues, and impact on crime control. Students will study the design and implementation of topical issues as they address specific issues. The course will add to the diversity offerings within the Master of Arts in Criminal Justice. This course will be offered every third semester.

CRIMJ 595: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required. CRIMJ 595 CRIMJ 595. Internship (1-18) The purpose of this course is to introduce students to the ethics, operations, and standards of working within a criminal justice environment. This course is individualized for each placement and student. It is offered in cooperation with the program, the internship site, and the goals of the student. An overall
objective is to familiarize students with the legal and professional standards associated with working with people as colleagues, program participants, or clients. Students will be expected to comprehend the guidelines associated with legal and social service agencies. The internship will enable students to apply these guidelines under novel and unique situations. This course will be offered each semester with an enrollment of ten students. It will be offered more if enrollment patterns warrant such an increase.

**Prerequisite:** The applicant must have complete CRIMJ500, CRIMJ502, CRIMJ504 plus three other Masters credits. The applicant also must have a GPA of at least 3.25

**CRIMJ 596: Individual Studies**

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

**CRIMJ 600: Thesis Research**

1-15 Credits/Maximum of 999

No description.

**Criminal Justice Policy and Administration (CJPA)**

**CJPA 501: Criminal Justice Institutions**

3 Credits

This course provides a broad understanding of the social science study of criminal justice institutions and their decision-making processes. Criminal Justice Institutions focuses on the social scientific study of criminal justice institutions and their decision-making processes. The course presents an overview of key issues in theory and research on each major sector of the criminal justice system: policing, prosecution, criminal defense, courts, and corrections. The course also discusses the societal impact of these criminal justice sectors, and the relationship between research and criminal justice policy.

**CJPA 502: Theories of Crime**

3 Credits

This course provides a survey of social science theories of criminal behavior at the individual and group levels. Theories of Crime provides an advanced survey of social science theories of criminal behavior at the individual and group levels. The course begins with an examination of the empirical study of crime, with an emphasis on crime data and its sources. The course progresses through biosocial, psychological, and sociological theories. The overarching emphasis of the course is to understand explanations of criminal behavior at the individual level and variations in crime rates at the group level.

**CJPA 803: Applied Research Methods**

3 Credits

This course provides a survey of social research methods tailored to the field of criminal justice. This course provides a survey of social science research methods, applied to the study of criminal justice topics and the evaluation of criminal justice policies. The course discusses different sources of crime and justice data, survey research methods, experimental and quasi-experimental approaches, qualitative research approaches, and legal research. The course emphasizes the illustration of types of research methods with examples from criminal justice research and policy evaluation.

**CJPA 808: Capstone Project in Criminal Justice and Policy Administration**

3 Credits

This is a capstone course and a requirement for all students in the M.P.S. in Criminal Justice and Policy Administration. During their final semester the student will work closely with a faculty adviser (selected to match the student on substantive and/or methodological expertise) on a self-selected criminal justice and policy administration-related project. The student is expected to draw on data and methods encountered during their prior course work. At the end of the semester the student will be required to make a formal peer presentation to other enrolled students and all their faculty advisors. The student also will be required to submit a final report/paper to their faculty adviser by the end of the semester.

**Prerequisite:** CJPA 501, CJPA 502, CJPA 803, CJPA 820, CJPA 865, CRIMJ 503

**CJPA 820: Criminal Procedure**

3 Credits

This course provides a survey of criminal procedure and related constitutional law. Section 1 of the course explores the origins and evolution of criminal procedure, from its ancient roots through colonial times, the due process revolution, and modern law. Section 2 examines sources of modern criminal procedure, including statutory law, Supreme Court opinions, other case law, rules, regulations, and organizations’ rules and regulations. Section 3 examines the Fourth Amendment and the evolution of search and seizure laws, including arrests, proper use of force, search warrants, and searches of places and things. This section presents older and more recent psychological conceptions of crime. Section 4 examines the Fifth Amendment, the federal due process clause, and the right to be free from forced self-incrimination; the Confrontation Clause; and the rights and responsibilities of all related criminal justice stakeholders in relation to these issues, including victims and defendants. Section 5 examines the Sixth Amendment, the right to counsel, evidence procurement and development, and criminal trial procedures. Section 6 examines the Eighth Amendment, the relationship between the Eighth and Fourteenth Amendments, pretrial versus post-conviction procedures, sentencing and correctional procedures, and the cruel and unusual punishment clause. Section 7 examines the Fourteenth Amendment, substantive due process clause, the equal protection clause, civil rights litigation, and the role of the writ of habeas corpus in criminal procedure. Section 8 allows students to demonstrate that they have mastered the above through a case study of a criminal case that has occurred within the past twelve months, or is ongoing.

**CJPA 830: Global Policing**

3 Credits

This course is designed to cover topics related to global policing and police cooperation against global crime activities. Students will study how police organizations from different countries communicate, cooperate, and collaborate with each other in order to respond global crime threats. This course will start with comparing and contrasting police systems in different countries to give an idea about similarities
and differences among police organizations around the world. Then, the emergence of global policing will be discussed to understand the historical development of police cooperation in the world. Theoretical frameworks for global policing will be covered to understand the change in the area of policing from local, state, and national levels to an international level. In this course, students will also analyze current global crime trends and understand the necessity of global policing. Moreover, international treaties and laws as well as international organizations against global crime will be discussed to examine the legal foundation and the structure of global policing. Bilateral and multilateral police cooperation initiatives will be studied to see how police agencies from different countries collaborate with each other. The role of U.S. law enforcement agencies in global policing and their assistance to other countries' police forces will be reviewed to evaluate the effectiveness of U.S. agencies in global police collaboration. This course will also analyze peace operations to understand the role of international organizations as well as the U.S. in providing police assistance in order to restore order and create a sustainable society after a war or a civil unrest in a country. Best practices in police cooperation will also be discussed to give an idea about the effective working of police cooperation in practice and challenges and opportunities in police cooperation will be studied to understand the success and failure factors in police cooperation. This course will conclude with a discussion of the future of global policing to identify forthcoming issues and possibilities in global policing.

CJPA 831: Transnational Crime

3 Credits

This course is about transnational crime activities happening around the world. Crime and criminal activities have become transnational due to globalization and advances in technology. The course will start with analyzing the universe of transnational crime to understand the current trends in transnational crime activities and the role of organized crime groups in these criminal activities. Students will study different types of transnational crimes every week to explore current issues related to crimes occurring beyond national borders. Transnational crimes such as drug trafficking, migrant smuggling, human trafficking, arms trafficking, counterfeiting, cybercrime, environmental crime, and money laundering will be analyzed to understand how transnational criminals commit these crimes, what types of strategies and tactics they use, and how law enforcement agencies try to fight against these crimes at the local, national, and international levels. Global responses and the U.S. response against transnational crimes will also be studied to evaluate the role of international organizations as well as the U.S. in the fight against transnational crime.

CJPA 832: Policing Terrorism

3 Credits

This course aims to understand the role of law enforcement in counterterrorism by analyzing the challenges, issues, and difficulties in policing terrorism. Root causes, strategies, and tactics of modern terrorist organizations are studied to understand the underlying motivations and the modus operandi of terrorist organizations. Law enforcement responses and contemporary policing strategies to fight terrorism are studied to evaluate their effectiveness in counterterrorism. Policing efforts to fight against domestic and international terrorist activities are also discussed to understand the new issues and challenges in policing global terrorism.

CJPA 833: Courts and Sentencing

3 Credits

This course is an examination of theory, research, and policy involving courts and their sentencing decisions. The course aims to translate social science research and theory on courts and sentencing into useful perspectives and knowledge for criminal justice practitioners and policy analysts. The course discusses sentencing decisions and how they are shaped by law and policy, the social organization of local courts, and the decision-making discretion of judges, prosecutors, and defense attorneys. In addition, the course considers the pros and cons of various research strategies for evaluating sentencing policies in an evidence-based way.

CJPA 865: Criminal Justice Ethics in a Diverse Society

3 Credits

This course provides a survey of ethical systems and theories. Section 1 provides an overview of the study of ethics, with definitions and a discussion of the parameters of ethical analysis. Section 2 presents the major ethical systems (utilitarianism, ethical formalism, religion, ethics of care, virtue ethics). Section 3 examines the origins of the concept of justice, distributive justice, corrective justice, substantive justice, procedural justice, immoral laws and the moral person, and restorative justice. Section 4 explains the theories of moral development, biological factors, learning theory, Kohlberg's moral stage theory, teaching ethics, and avoiding cynicism and burnout. Section 5 discusses the role of police in society as a crime fighter or public servant, police power and discretion, and the police subculture. Section 6 examines police discretion and discrimination, discretion in criminal investigations, and discretion and the use of force. Section 7 examines police misconduct and corruption as a worldwide problem, including international measures of corruption, on-duty use of drugs and alcohol, sexual misconduct, and criminal behavior by police. Section 8 examines the role of law, the law and legal behavior, justifications for law, and the various paradigms of law. Section 9 presents issues of discretion and dilemmas for the defense and the prosecution. Section 10 discusses ethical misconduct in the courts and the explanations and methods of response to the misconduct. Section 11 describes the issues involving discretion of correctional officers, treatment staff, and probation and parole officers.

Criminology (CRIM)

CRIM 500: Overview of Graduate Studies in Criminology

1 Credits

An overview of professional activities of scholars of criminology and Penn State's program in this field. CRIM 500 Overview of Graduate Studies in Criminology (1) This course is intended for new students in the Criminology graduate program. Its purpose is to speed their transition to graduate study and to provide a good start for their professional socialization. The course offers an overview of many of the professional activities of scholars of criminology and of Penn State's program in this field. This includes writing, publishing, teaching, and seeking funding. A major goal of the course is to help students see beyond the immediate priority of success at course work to the longer term priorities of success in these other arenas. The course is organized around a series of guest speakers from the program faculty who will discuss a range of activities that are a part of the professional life of research scholars. It also provides a forum for graduate students to get to know the faculty. The tone of the discussion is conversational. Speakers welcome questions...
both about the particular topic of the week and about the speaker's professional/research activities.

CRIM 501: Criminal Justice Organizations and Institutions
3 Credits
Organizations and institutions involved in the formulation and implementation of criminal justice policy in complex social and organizational environments. CRIM 501 Criminal Justice Organizations and Institutions (3) Organizations and institutions involved in the formulation and implementation of criminal justice policy in complex social and organizational environments.

CRIM 512: Criminological Theories
3 Credits
Survey of theoretical and substantive issues in deviance and criminology, with emphasis on critical review of theories. SOC (CRIM) 512 Criminological Theories (3) This graduate course in Criminological Theories is designed to provide students with a broad understanding of the major theories that have animated the field of criminology since its inception. The course traces the development of criminological theories from the early 20th century to the present and provides students with a targeted exposure to empirical studies that have tested these theories.

Cross-listed with: SOC 512

CRIM 520: Moral Criminology
3 Credits
Moral Criminology provides a comprehensive understanding of the role of moral ideas, beliefs, and intuitions in the occurrence of crime and analogous behavior and in the application of punishment. How do we decide if a behavior is morally right or wrong, or if someone deserves praise or punishment? Under what conditions do our moral principles, intuitions, and emotions influence whether we follow or break rules or laws? Under what conditions do they influence our attitudes towards such behavior in others? This course integrates perspectives from criminology, sociology, psychology, and philosophy and prepares students to interpret and conduct research on the relationship between morality and crime. Part One of the course examines a variety of approaches for conceptualizing morality. Part Two reviews existing research on morality and crime. Part Three reviews existing research on morality and punishment.

CRIM 559: Communities and Crime
3 Credits
Crime has been shown to differ significantly across neighborhoods of different racial composition and of different socioeconomic characteristics. Specifically, neighborhoods characterized by high poverty and high segregation are more likely to exhibit higher violence, higher homicide rates, and higher disorder. Moreover, growing up in a highly disadvantaged neighborhood predicts whether youth will be involved in delinquency, risky behavior, and violent crime. In this course, students will learn about the major debates and arguments in the field on how such differences can come about and what may be their consequences. Students will learn to recognize, identify, and apply criminological and sociological theories and thinking on the effects of neighborhoods’ social structures on crime. In particular, we will focus on classic and contemporary cutting edge thinking on poverty, social isolation, disorder, collective efficacy, institutional (dis)trust, demographic v. cultural heterogeneity, segregation, immigration, and the physical environment. We will address the theories, methods, and policies related to understanding key features of places such as social (dis)organization, social capital, spatial embeddedness, opportunity infrastructure, and cultural capital.

Cross-listed with: SOC 559

CRIM 591: Teaching Sociology/Criminology
1 Credits
Preparation for teaching sociology and/or criminology at the college level. CRIM (SOC) 591 Teaching Sociology/Criminology (1) Preparation for teaching sociology and/or criminology at the college level.

Cross-listed with: SOC 591

CRIM 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CRIM 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

CRIM 597E: Networks & Crime
3 Credits
A seminar on the study of social networks and crime, including research on interpersonal influence, co-offending, and illicit commerce.

CRIM 597F: CRIME & HEALTH
3 Credits
Topics include overlapping theories in criminology and epidemiology, bio-social explanations of crime/deviance, and collateral health consequences of crime and punishment.

CRIM 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

CRIM 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

CRIM 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.
Curriculum and Instruction (CI)

CI 500: Multiple and Mixed Methods in Curriculum Inquiry
3 Credits

Multiple and mixed methods of inquiry to investigate problems in the practice of curriculum and instruction. CI 500 Multiple and Mixed Methods in Curriculum Inquiry (3) This course focuses on practice-embedded curriculum inquiry and surveys an array of approaches and methods that are quantitative, qualitative or both. The course is intended as a gateway seminar to other C&I disciplined inquiry courses (i.e., C&I 501, 502, 503) in which curriculum and instruction students can discuss and participate in learning activities related to the readings and in which guest speakers can inform C&I graduate students about current issues and topics related to systematic inquiry with application to curriculum and instruction.

Prerequisite: admission to a doctoral program

CI 501: Teaching as Inquiry
3 Credits

Course guides teachers to develop systematic inquires into effective teaching and learning.

CI 502: Qualitative Research in Curriculum and Instruction I
3 Credits

Presentation of theoretical and practical issues related to designing and proposing qualitative research concerning curriculum, teaching and/or learning.

Prerequisite: admission to a doctoral program

CI 503: Qualitative Research in Curriculum and Instruction II
3 Credits

Considers forms of qualitative data, data analyses, procedures to generate data relationships, interpretation, and presentation of data.

Prerequisite: CI 502

CI 511: Educational Ethnography: History, Theory, and Methods
3 Credits

This seminar shows students how to use ethnographic methods for education research to inform classroom practice and education policy. The course is centered around the idea that school communities serve as key sites for students of all ages to learn to become members of their culture(s). Course readings include historical to contemporary works of researchers who have shaped educational ethnography. We will also read about education in various settings and discuss anthropological explanations of inequities experienced by minority culture communities or marginalized groups. Students will carry out a mini-ethnographic study based on their area of research interest. The course is especially designed for students to be able to conduct ethnographic studies or make use of ethnographic techniques in future research projects.

Prerequisite: (CI 502; ADTED 550; EDTHP 586; )

Cross-listed with: CIED 511

CI 512: Contemporary Educational Ethnography
3 Credits

Recommended Preparations: Qualitative Research course or permission of instructor. This seminar shows students how to use contemporary ethnographic theories and methods for education research to inform educational practice and policy. The contemporary movement might arguably be situated in the controversies of the 1980s and 90s, exemplified in Clifford and Marcus’s book, Writing Culture, in which they identified the epistemological and political predicaments and controversies pertaining to ‘the crisis of representation’ in the field of anthropology. CI 512 addresses methodological and theoretical approaches informed through literary, reflexive, postmodern, poststructural, feminist, multisensory, multimodal, multivocal, and postcolonial turns and the ways in which they inform educational ethnography. The course focuses on a comprehensive view of education-schools, cultural and community centers, home life-as sites for all ages to learn to become members of their culture(s). A significant and regularly occurring aspect of the class involves students engaging in contemporary ethnographic practices such as cartographic, photographic videographic, arts-based, alternative writing, walking/movement, sensory, performative, and multimodal. The course will intersperse readings of ethnography with readings about ethnography, largely within the contemporary sphere. The focus will be on contemporary movements that are likely to affect students as they consider ethnographic approaches for their dissertation topics (e.g. science education, musical training, literacy practice, critical race pedagogy).

CI 513: Video Ethnography in Education
3 Credits

Recommended Preparations: A graduate course in educational ethnography This seminar will show students how to use video ethnography in education research. The course is rooted in what is popularly known as the Preschool in Three Cultures method (also known as video-cued multivocal ethnography). We will learn about and watch films using video-based ethnographic research methods. Students will also carry out mini-video ethnographies in a local classroom.

Prerequisite: CI 502; ADTED 550; EDTHP 586; LDT 574

Cross-listed with: CIED 513

CI 515: Foundations of Educational Research
3 Credits/Maximum of 999

Students read the philosophical foundations of education research, study how philosophies influence methodologies, and analyze current educational problems. This course is designed for students entering doctoral programs in the College of Education. Our students are studying to become education researchers within a highly politicized environment. For example, particular definitions of education research and government policies that favor some types of research practices over others provide opportunities for and set limits upon the work of education researchers. Public controversies likewise contribute to challenges faced by education researchers who find their work affirmed or discounted by particular definitions and policies. In order to explore these controversies and to allow students to begin identifying their own ‘positionality’ with regard to research, this course begins with a reading of the history and philosophies of education research (primarily focusing on the United States). The course goals are: - to identify underlying assumptions of
competing forms of social inquiry, each determined to uncover new knowledge; - to bring those assumptions to bear on education research in chosen fields of study; and - to begin to develop one’s own positions in order to direct further study and research. Specifically, through instructor facilitation and group discussions, students will come to understand major philosophical perspectives that permeate and drive research methodologies in education: positivism, postpositivism, interpretivism, critical theory, poststructuralism, and pragmatism. These understandings allow students to recognize the methodological assumptions that inform published research studies and to discover how methodologies might inform the research they wish to conduct as students and practitioners. Although the course is not required by any particular doctoral program in the College of Education, it is suggested for students who consider research important to their future careers and who see benefits in exploring the methodological options available.

Cross-listed with: ADTED 515, EDPSY 515, HIED 515

CI 517: Core Readings in Vygotsky’s Cultural Historical Psychology

3 Credits

The Sociocultural or Cultural Historical theory of mind originated in the writings of Russian psychologist L.S. Vygotsky during the 1920s and 30s. Over the course of only about ten years, Vygotsky and his circle produced a substantial body of theoretical and empirical work that challenged basic epistemological and ontological premises of psychology and that outlined a new way of understanding human abilities and their development. The framework Vygotsky elaborated has come to be referred to as Cultural Historical psychology, emphasizing the fundamental role of mediation in shaping human psychology, mediation through historically created artifacts available in particular cultures and through forms of social interaction. In the decades since Vygotsky’s death, Cultural Historical psychology has been further developed by researchers around the world who have brought Vygotsky’s theoretical proposals to bear on questions and problems as diverse as special education, psychological and educational measurement, early childhood education, psycho-therapy, teacher education, linguistics and communication, adult and workforce education, and political and social change. The course is organized around carefully selected, seminal readings, emphasizing primary texts authored by Vygotsky but complemented by secondary sources generally regarded as leading interpretations. Beginning with an examination of Vygotsky’s enterprise to establish a unified, scientific psychology grounded in Marxian dialectics (historical materialism), the course engages with concepts and principles definitive of Cultural Historical psychology that in some cases have become highly influential in a number of disciplines and that in others are only beginning to be understood. These include mediation, Zone of Proximal Development/ZPD (zona blizhaishego razvitia/ZBR), spontaneous and scientific concepts, teaching/learning-and-development (obuchenie), inner and private speech, units of analysis and meaning (znachenie/smysl), and perezhivanie, among others. In this way, students obtain a deep understanding of the theory, both in the context of Vygotsky’s own writings and the specific problems he sought to address but also in its contemporary applications. This understanding, in turn, enables students to critically evaluate uses of Vygotsky’s ideas in their particular area of study while also providing the background necessary to employ the theory in their own research. The course is intended for students in all areas of education, human development, and applied linguistics. No previous knowledge of Vygotsky’s work is required.

CI 525: Bakhtin and Education

3 Credits

This seminar gives students an overview of the writings of key members of the ‘Bakhtin Circle,’ which included Mikhail Bakhtin, Valentin Voloshinov, Pavel Medvedev, and others. The core objective of this course is for students to learn about Bakhtinian theory and how to use Bakhtin as a philosophical method in carrying out research studies and analyzing data. In order to do this, we will read the original works of Bakhtin, Voloshinov, Medvedev, and others alongside contemporary educational researchers, theorists, and methodologists who apply Bakhtinian philosophical methods and analyses to the study of education.

CI 528: Theories of Identity

3 Credits

Survey of 20th century theories of identity from post-colonial, critical race, psychoanalytic, Marxist, and post-structural feminist and queer perspectives.

CI 529: Foucault in Education

3 Credits

Reading major works in Michel Foucault and applications of his work in the field of Education. CI 529 Foucault in Education (3) The purposes of this course are twofold: 1) to read and discuss in depth the work of Michel Foucault and 2) to consider how Foucault’s ideas may inform and be informed by theories and practices in education. Foucault is arguably one of the pre-eminent Western social theorists of the 20th century. Researchers and theorists working from post-structural, critical and socio-cultural perspectives frequently turn to Foucault’s concepts of power, discipline, and subjectivity as powerful analytic lenses for analyzing the daily lives and practices of students and teachers in classrooms as well as more generally the field of Education, educational politics and policies, and educational institutions. Additionally, given the tremendous impact of Foucault’s work in multiple disciplines throughout the academy, the ability to read and apply the theories of Foucault can facilitate broader reading and discussion across a variety of disciplines. In the class, students will devote approximately 2/3 of the time to reading original works by Foucault and brief commentaries on these works, and 1/3 of the time reading applications of Foucault’s work by education researchers and theorists. The primary work load of the class is reading. Reading Foucault is not an easy task. Students can expect careful scaffolding of their learning through classroom discussions, a required on-line discussion forum, and frequent feedback from the instructor. Preparation for and participation in class discussions and in the building of a vibrant learning environment are required components of the class.

CI 530: Identities in Second Language Learning

3 Credits

This course investigates the ongoing collaborative construction and negotiation of race, ethnicity, gender, sexual, and social class identities in second language learning (SLL). It examines how we learn to speak our multiple selves in a new language, for example, how we learn to language race according to our prior background and the cultural practices and understandings of second language contexts. The impact of these social identities and polemics of racism, sexism, xenophobia, colonialism, homophobia, and elitism that arise when we study them are not restricted to experiences outside the classroom, nor can they be divorced from language curriculum and pedagogy. Examining such issues in SLL can
be challenging due to the belief that raising them courts controversy unnecessarily and goes against mindsets that many value, such as colorblindness, because language learning is an area that naturally welcomes and fosters integration and interaction between different groups in multicultural education. Course participants will interrogate the idea of colorblind language learning classrooms and curricula and examine how the realities of language learners' differentiated, inequitable access, treatment, and experiences in multilingual contexts challenge the field's declared values of multiculturalism in education.

CI 541: Place(s) in Education
3 Credits

In an essay about place, the anthropologist Clifford Geertz notes that 'something that is a dimension of everyone's existence, the intensity of where we are, passes by anonymously and unremarked. It goes without saying.' The purpose of this course is to foreground the concept of place and real places in our daily lives and academic work, particularly with respect to education (including schooling), to make sure that it does not go without saying. What is (a) place? How is it formed, bounded, made meaningful? How is it personal and social? What are its relationships with time and space? What are its relationships with experience, culture, citizenship, margins, diversity, and so many other topics? How does it shape living, especially learning and teaching in schools, and how is it shaped by these things? How do I and we fit in? And, following the feminist educational philosopher Nel Noddings, 'should schools teach for an understanding and love of place or should they offer curricula designed to transcend place?' Through a seminar format focused specifically on educational contexts, we will study place from a range of interdisciplinary perspectives and consider what these landscapes of place mean for teaching, learning, and educational research. Readings will draw from the fields of anthropology, art/s, curriculum, ecology, geography, indigenous thought, literature, philosophy, and sociology, all intersecting with education. Assignments will include citizenship in the community of this course, personal reflection about lived place(s) inside of schools and out, critical analyses of the literature on the intersections of education and place(s), and a final project focused on one aspect of how education and place(s) intersect that is of particular interest to the student. In dialogue, collaboration, the reading of each other's writings, and other activities such as a walking tour of students' most-meaningful places on campus, participants in this course will be and become citizens of the place (and its many physical, digital, and relational places) of the course. Students will exit the course with a broad understanding of the complexity of place(s) in education, including in the work of teachers and researchers.

CI 542: Girls' Cultures and Popular Cultures
3 Credits

This seminar explores educational implications in popular texts created for and by girls across time and culture. CI (WMNST) 542 Girls' Cultures and Popular Cultures (3) The study of girls and their relationship with popular culture lies within the interdisciplinary field of Girldom Studies which draws on established areas of Women's Studies, Children's/Childhood studies, Cultural Studies and Educational Studies. This seminar explores girls cultures in different textual and material forms including books, toys, magazines, and new media. Students will employ feminist cultural theories to compare historical and contemporary girls cultures in relation to educational research and practice. This will provide a framework to locate girls at the center of research and action in order for graduate students to engage in methodologies that are not simply about girls but ‘for’ ‘with’ and ‘by’ girls. Key topics include the misperception of girls (popular) culture as only a contemporary phenomenon, the role of girls as consumers plus producers of culture, and recurrent issues in girls cultures such as sexualization and hyperfemininity.

Cross-listed with: WMNST 542

CI 550: Overview of Contemporary School Curriculum
3 Credits/Maximum of 999

Current school programs and options and their impact on pupils; problems in introducing new content into the curriculum.

Prerequisite: 12 credits in education and psychology or teaching experience

CI 552: The Methods Course in Teacher Education: Challenges and Opportunities
3 Credits

This course will focus on the 'methods course' in teacher education. A common feature of teacher education programs in almost any setting, methods courses are those courses teacher candidates take that address how to teach. Of course, 'how to teach' is nowhere near as simple as that would sound, and even less simple is how to teach how to teach, in a way that will actually influence how candidates will teach. Students in this course will read research on methods courses, analyze many examples at Penn State and elsewhere, and inquire together about methods course design. Students will explore: WHY have methods courses at all? Are there things to learn about how to teach that can't be learned through field experience alone? WHAT shall the content of methods be? Are there such things as 'general methods' or must methods courses always be content-area-specific? What shall students read and come to know in a methods course? WHO shall teach methods courses, and who shall take them? What happens when practitioners teach methods, as opposed to university faculty? Or when we co-teach? WHEN shall methods courses occur in the timespan of a teacher preparation program? Must they be concurrent with field experience, or should they precede it? What prerequisite knowledge or experiences matter for the success of a methods course? WHERE shall methods courses be taught? On site in a school? At the university? Somewhere else? What about online? HOW shall methods be taught? What course activities actually help teacher candidates learn to teach? What are appropriate uses of readings? Peer teaching? Classroom inquiry? By the end of the course, students will have articulated research-based answers to these questions. In addition, students will be able to apply the available research to existing methods courses in their own current and/or future context(s).

RECOMMENDED PREPARATIONS: This course is recommended for doctoral students whose future plans include teaching in teacher-preparation programs

CI 560: Theories of Childhood
3 Credits

The study of childhood from cultural, historical, psychological and philosophical perspectives. CI 560 Theories of Childhood (3) In this course, participants will explore the highly variable ways that childhood has been constructed and enacted across multiple cultures and throughout history. Participants will begin by considering how notions of the nature of childhood, for example, children as innocent, as
primitive, or as blank slates have functioned across history and in their memories and sense of nostalgia about childhood. Participants will expand their understanding of historic and contemporary childhoods through comparative studies of children. Participants will examine and critique normative theories of child development and will finish with an examination of contemporary child culture, including play and how changes in global culture affect children's lives. The course instructor will provide the readings for the course, as well as background information and organizing topics. The instructor creates and assigns activities and provides or oversees discussion questions to organize student thinking for a productive discussion. It is the instructor's responsibility to create an environment conducive to students' development of an open, vibrant learning community; to establish and oversee course standards; and to assist students to achieve both the course objectives and their own. There are no prerequisites for this course. Given that all participants have had a childhood and some may be parents, the memories and experiences each participant brings may be both a help and a hindrance. That is, insofar as their own childhoods or those of their children cause them to believe that they already know what childhood is, class participants need to recognize the limitations of their memories and experiences. The diversity of childhoods that will be represented across the members of the course is a considerable resource for participants to develop an ever-broader understanding of the cultural and historical nature of childhood.

CI 565: Writing Research Articles in Curriculum and Instruction

3 Credits

Graduate course on revising a written product for publication in a peer-reviewed research journal in curriculum and instruction or related fields. CI 565 Writing Research Articles in Curriculum and Instruction (3) In this course, students will prepare a research article for publication. Beginning with a course paper, conference paper, comps paper, thesis, pilot study, dissertation, or another pre-existing draft, writers will learn to frame, revise, and edit a scholarly article for submission to a journal. To do this, students will spend time addressing the genres and conventions of writing about education research for an academic audience, focusing on particular subfields in curriculum and instruction. Students will read and analyze published research in curriculum and instruction, study principles of rhetoric and style, practice collaboration and peer review, and engage in intensive revision and editing. Students will gain skill in dealing with the emotions of writing, work habits, giving and receiving feedback, and motivation. They will also work through concerns like organization, exposition and elaboration, and argument as well as matters of correctness and grammar. Students will consider the variations in epistemology, genre, and conventions of argument and of style for the wide range of subfields in curriculum and instruction as well as across education subfields. This includes attention to historical and contemporary divergences between fields and ways of bridging those as needed for dissemination research. Major assignments include analyses of target journals and representative articles, experiments in scheduling and writing habits, and weekly challenges in revising. In addition, students will work in intensive writing groups across the length of the term. Each student will receive extensive feedback on a draft in progress toward the goal of having a manuscript suitable for submission by course end.
Prerequisite:

Curriculum and Supervision (C-S)

C-S 551: Curriculum Design: Theory and Practice
3 Credits
Course participants explore the fundamentals of curriculum; that is, curriculum cultures, traditions, perspectives, theories, or models that have significantly affected the field of curriculum design. Participants also learn about historical and contemporary issues in the development of national, state, and local academic standards, and how these issues have shaped the design of particular curriculum programs. Participants engage in curricular analysis of a content-specific program through examination of 'what is behind the curriculum' (purpose, goal, perspectives, assumptions), 'what is in the curriculum' (the nature of the content, basis for its selection, content and media structures), and 'what are the experiences with the curriculum' (how curriculum may be taught, what methods may be used, how the program success may be judged, the 'frame-factors') in order to outline the strengths and weaknesses of the program, and how it can be adapted to maximize its benefits and minimize its limitations for a specific institutional or educational context.

Cross-listed with: EDLDR 551

C-S 553: Issues in Curriculum
3 Credits/Maximum of 6
In-depth study of issues and trends in the understanding and practice of curriculum. C & S 553 Issues in Curriculum (3 per semester/maximum of 6)This course provides for in-depth study of issues and trends in the understanding and practices of curriculum. Readings and class activities provide students with the opportunity to examine theoretical implications for the world of practice and life in schools.

Prerequisite: formal acceptance as a doctoral student in the Curriculum and Supervision option area

C-S 555: Development of Teacher Education Programs
3 Credits
Study of the components and design of teacher education programs within the constraints of institutional, professional, and legal contexts. C-S (EDLDR) 555 Development of Teacher Education Programs (3) Enrollees study various models of teacher preparation such as professional development schools and fifth year programs. Participants also discuss various aspects of teacher education such as field experiences teaching and learning ('methods') courses, and content knowledge courses and review research in each of these areas as it relates to the initial continuing education of teachers.

Prerequisite: C I 550 or EDLDR551

C-S 557: Seminar in Curriculum Research
3 Credits
Analysis of particular curriculum studies, methods and paradigms, and the general status of current research in the general curriculum field. C & S 557 Seminar in Curriculum Research (3) This course is a foundational course that supports the diverse inquiries undertaken by doctoral students within the Department of Curriculum & Instruction and throughout the broader university community. Readings and class activities provide students with the opportunity to learn about different research epistemologies and to explore taken-for-granted assumptions about educational research in general and research design and methodology in particular.

Prerequisite: C I 400, C I 550

C-S 560: Principles of Instructional Supervision
3 Credits
Social and institutional settings for instructional supervision; functions, activities, and practices of supervision; supervisory case studies. EDLDR 560 C-S 560 Principles of Instructional Supervision (3) This course explores themes, trends, and key ideas that influence current supervisory practices. Course content gives specific attention to supervisory practice in relation to teaching practices and to life in schools.

Prerequisite: teaching or school administrative experience; 18 credits in education, at least 5 of which are methods of teaching Cross-listed with: EDLDR 560

C-S 562: Methods of Classroom Supervision and Coaching
3 Credits
Strategies and techniques for supervision/coaching of instruction intended to enhance teacher reflection, self-direction, and autonomy. C-S 562 Methods of Classroom Supervision and Coaching (3) This course has been designed to equip students with the knowledge, skills, and dispositions necessary to engage in a variety of supervisory processes aimed at teacher growth and renewal as well as enhanced student learning. The outcome of these supervisory activities should be the development of teachers who are more analytical about their practice and its impact on learners, are more adept at solving the complex problems of teaching practice, and are more reflective about their teaching capabilities.

Prerequisite: EDLDR 560, teaching administrative, or other professional education work experience

C-S 563: Designing Staff Development Programs
3 Credits
Designing, implementing, and evaluating effective staff development programs for personnel in educational settings. EDLDR 563 Designing
Staff Development Programs (3) This course has been designed to provide students with the opportunity to develop a deep understanding of the process of professional development in education at the theoretical and practical levels as well as the ability to apply this understanding to the design, evaluation, and analysis of professional development activities and programs.

Prerequisite: EDLDR560
Cross-listed with: EDLDR 563
C-S 564: Supervision Theory

3 Credits

Critical analysis of alternative theories of instructional supervision and in-depth examination of trends and issues in supervision. C & S (EDLDR) 564 Supervision Theory (3) This course entails critical analysis of alternative theories of instructional supervision and in-depth examination of trends and issues in supervision. Students critique and contrast existing models of instruction, identify and analyze issues in supervision and conceptualize and articulate their own supervisory model.

Prerequisite: EDLDR560
C-S 576: Research Methods in Teacher Education

3 Credits

A basis in theory, findings from research, research design, and methodologies related to teacher education.

Cross-listed with: EDPSY 576
C-S 590: Colloquium
1-3 Credits/Maximum of 4

Recommended Preparation: This course is ONLY for students admitted to the doctoral program in Curriculum and Instruction specializing in Curriculum and Supervision. Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

C-S 597A: **SPECIAL TOPICS**
1-9 Credits

Data Analytics (DAAN)

DAAN 501: Analytics Research and Problem Framing

3 Credits

Students in this course will explore the elements of the research process within quantitative, qualitative, and mixed methods approaches as it applies to research into data analytics and its use. The ethical principles and challenges of research will be covered including human-subject research guidelines and the Institutional Review Board approval process. Students will use these theoretical underpinnings to begin to critically review literature in the analytics domain, determine how research findings are useful in forming their understanding of their work, and place their own research within the context of the extant literature.

Prerequisite: STAT 500

DAAN 572: Reinforcement Learning

3 Credits

Reinforcement learning, along with supervised learning and unsupervised learning, is one of the three basic types of machine learning. Applications of reinforcement learning span across medical intervention, robotics, game playing, autonomous driving, financial trading, and marketing, among many others. This course will cover the main theory and approaches of reinforcement learning, along with deep learning and common software libraries and packages.

DAAN 600: Thesis Research

1-15 Credits/Maximum of 15

Thesis Research

Prerequisite: DAAN 501
DAAN 822: Data Collection and Cleaning

3 Credits

Tools and techniques required for data collection and computational procedures to automatically or semi-automatically identify and eliminate errors in large datasets. DAAN 822 Data Collection and Cleaning (3) This course focuses on the tools and techniques required for collecting data and preparing them for further analysis. The presence of incorrect and inconsistent data can significantly distort the results of the analysis often negating the potential benefits of information-driven approaches. As a result a variety of research over the last decades has focused on data cleansing: computational procedures to automatically or semi-automatically identify and, when possible, correct errors in large data sets. The goal of this course is to explore and discuss different data collection tools and techniques in addition to learning skills for retrieving data from existing databases. To further enforce data quality and reliability this course will introduce techniques for error detection and data cleaning on large databases. Students will learn the available tools and techniques for data collection including automated data collection for databases, retrieving data from available databases, data preparation and cleansing techniques, data quality and reliability and finally learn techniques to identify issues in data collection and how to clean the data.

Prerequisite: STAT 500 and IN SC521
DAAN 825: Large-Scale Database and Warehouse

3 Credits

Examination of large-scale data storage technologies including NoSQL database systems for loosely-structured data, and warehouses for dimensional data. DSCAN 825 Large-Scale Databases and Warehouses (3) This course provides a broad exploration of current and emerging practices for handling large quantities of data using large-scale database systems. Data is being generated at an exponential rate and handling and analyzing such data needs highly customized tools and processes to handle data-intensive tasks. In particular, this course investigates methods to effectively design, develop, and implement the two dominant types of large-scale databases: data warehouses for dimensional data and NoSQL databases for loosely-structured data. Students will learn to design a wide variety of large database solutions, apply extract-transform-load (ETL) strategies, maintain and evolve large-scale databases, explore the fundamentals of NoSQL systems, and understand...
the properties of different database technologies against atomicity, consistency, isolation, and durability (ACID) properties.

**Prerequisite:** IN SC521

**DAAN 826: LARGE SCALE DATABASES FOR REAL-TIME ANALYTICS**

3 Credits

This course provides an exploration of current and emerging big data solutions for handling large quantities of data in real-time. In particular, this course investigates methods to design, develop, and implement several systems used for real-time data analysis and storage such as document databases, column-based databases, queuing systems, and real-time processing systems. Students will learn to design a wide variety of large database solutions, and how to interconnect those systems to create a lambda architecture. Using this platform, students will collect, process, store, and report real-time data.

**Prerequisite:** DAAN 825

**DAAN 846: Network and Predictive Analytics for Socio-Technical Systems**

3 Credits

The objective of this course is to provide a foundation in the principles of network and predictive analytics along with hands-on experience with statistical analysis software for studying the interrelatedness of cyber-social and cyber-technical aspects of our society as a whole that have transformed physical communities into virtual communities. Fundamental principles of network and predictive analytics, the importance of studying network structures, and how network structures can facilitate communication, coordination and cooperation will be discussed. Statistical analysis software will be used for analyzing the structure of an organization or a society as whole to detect and capture the dynamic patterns of group membership and structure, and predict threats, attacks, criminal behavior and evolution of criminal networks.

Cross-listed with: INSC 846

**DAAN 862: Analytics Programming in Python**

3 Credits

This course will explore the development of analytics systems and the application of best practices and established software design principles using the Python programming language and its several toolkits. Students will manipulate, analyze and visualize complex data sets and implement statistical, machine learning, information visualization, text analysis, and social network analysis techniques through popular Python toolkits to gain insight into their data.

**DAAN 871: Data Visualization**

3 Credits

This course provides a foundation in the principles, concepts, techniques and tools for visualizing large data sets. DAAN 871 Data Visualization (3) The course provides a foundation in the principles, concepts, techniques and tools for visualizing information in large complex data sets. Unlike scientific visualization, which focuses on the presentation of data that has a spatial or physical correspondence, data visualization focuses on mapping complex, abstract information to a physical representation. The development of effective visualization strategies is crucial for not only facilitating an understanding of large complex data sets but also for driving knowledge discovery and the decision making processes in a given domain. In this course, students will learn the key principles involved in data visualization and will explore a wide range of visualization approaches that can be applied for understanding complex data across different data types. Specifically, techniques for visualizing one-dimensional data (e.g., temporal data); two-dimensional data (e.g., geospatial data); multidimensional data (e.g., mapping relational data in n-dimensional space); hierarchies and graphs (e.g., tree structures); networks (e.g., social networks) and text (e.g., mining text and hypertext from Web) will be discussed. Emphasis will be placed on the identification of patterns, trends and differences in visualizations of data from variety of domains (e.g., science, business, engineering, social media, etc.). In addition, students will gain hands-on experience with a variety of visualization tools including: Gephi, ManyEyes, Excel, Science of Science (Sci2), Pajek, Lattix, R, Cfinder, MapEquation, NodeXL, and/or Gapminder.

**DAAN 881: Data-Driven Decision Making**

3 Credits

Application & interpretation of analytics for real-life decision making DAAN 881 Data-Driven Decision Making (3) The theory and application of several quantitative decision-making tools will be studied. The usefulness of these tools will be illustrated using projects and case studies throughout the course. Emphasis will be placed on the application of the tools and techniques and the results they generate. Finding patterns in data and appropriately grouping them are essential in the extraction of information in large datasets. This course will use Principal Component Analyses to transform highly correlated sets of data by means of orthogonal transformation. Cluster analysis will be used to properly group data when working with large datasets. When the outcomes involve categorical variables, Logistic regression techniques will be used to estimate the probabilistic values of the output. The decision space will be divided into smaller regions using Regression tree analyses. When factors are too numerous and highly collinear, Partial Least Square Regression methods will be performed. Public access datasets in the healthcare, transportation and finance industries will be used to demonstrate the applications and the limitations of these techniques.

**Prerequisite:** STAT 500 and DAAN 501

**DAAN 888: Design and Implementation of Analytics Systems**

3 Credits

Design and implement data science and analytics systems using contemporary tools and techniques.

**Prerequisite:** IN SC521 and DAAN 825 and DAAN 881

**DAAN 897: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

**Data Sciences (DS)**
Demography (DEMOG)

DEMOG 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

DEMOG 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Early Childhood Education (ECE)

ECE 572: Issues and Trends in Early Childhood Education
3 Credits/Maximum of 9
Research, experimental programs, and emerging trends in early childhood education; relationships between educational experiences and later intellectual and emotional development.
Prerequisite: ECE452, EDPSY400

ECE 587: Curriculum, Culture, and Child Development
3 Credits
Examines human development and cultural factors in planning, designing, and implementing curriculum and instruction in early childhood and childhood education.
Prerequisite: HD FS429
Cross-listed with: CIED 587

ECE 588: Educational Role of the Family
3 Credits
Parent-child-teacher relationships, cognitive socialization, and academic attainments; proximal/distal variables: family structure, history, processes, content, community, culture.
Prerequisite: ECE453, HD FS418, or SOC 315

ECE 589: Play and Early Childhood Education
3 Credits
Developmental significance of play, processes, and development; role of the adult in child's play; educational practices.
Prerequisite: HD FS429 or PSYCH415

ECE 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

ECE 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

ECE 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

Earth Sciences (EARTH)

EARTH 501: Contemporary Controversies in the Earth Sciences
3 Credits
Exploration of current areas of research in the Earth Sciences. EARTH 501 Contemporary Controversies in the Earth Sciences (3) Students will be introduced to a variety of topics from different disciplines within the Earth sciences with the aim of piquing their interest in topics of current research beyond the level found in typical secondary school or introductory college textbooks. The current topics will include subjects in which a consensus has recently been reached as well as scientific questions that are so far unanswered. Students will learn the appropriate state of the art scientific content relevant to each topic by performing basic data in order to complete the activities in each lesson. They will finally construct a plan to teach a selected topic to the audience of their choice. This course provides an entry into the other courses in the Master's Degree Program in Earth Science Education. Students will learn scientific content by completing activities in each of six lessons that will span either the 12-week or 15-week semester. These activities will be in the form of background reading and discussion that outlines a current scientific problem or debate, the collection and manipulation of appropriate data, and the assessment of the results of this work. By doing this, students will simultaneously become familiar with the content as well as the practice of science. Students will also participate in online discussions about how to teach this content to specific secondary school audiences. They will complete a capstone project in which they will construct a teaching plan based on the topic of their choice.

EARTH 520: Plate Tectonics and People: Foundations of Solid Earth Science
3 Credits
Solid Earth geophysics and geological hazards presented within the grand unifying theory of plate tectonics. EARTH 520 Plate Tectonics and People: Foundations of Solid Earth Science (3) This course will cover current areas of research in solid Earth geophysics, especially focusing on the human population's interaction with the solid Earth system. Students will be introduced to a variety of current topics of active research within the field of solid Earth geophysics. They will learn the appropriate state of the art scientific content relevant to each topic by performing basic data analysis (e.g. collection, interpretation and assessment) using publicly available data in order to complete the activities in each lesson. They will finally construct a plan to teach a selected topic to the audience of their choice. Students will learn scientific content by completing activities in each of nine lessons that will span either the 12-week or 15-week semester. These activities will be in the form of background reading that outlines a current scientific problem.
or debate, the collection and manipulation of appropriate data, and
the assessment of the results of this work. By doing this, students will
simultaneously become familiar with the content as well as the practice
of science. Students will also participate in online discussions about how
to teach this content to specific secondary school audiences. They will
complete a capstone project in which they will construct a teaching plan
based on the topic of their choice.

EARTH 530: Earth Surface Processes in the Critical Zone
3 Credits

Introduction to Earth surface processes including weathering and
soils, geomorphology, erosion and sedimentation, hydrogeology, low-
temperature geochemistry and Earth systems. EARTH 530 Earth Surface
Processes in the Critical Zone (3) Rapid changes in Earth’s surface largely
in response to human activity have led to the realization that fundamental
questions remain to be answered regarding natural functioning of the
Critical Zone, the thin veneer at Earth’s surface where the atmosphere,
lithosphere, hydrosphere and biosphere interact. To understand these
processes requires a broad array of scientific expertise spanning:
geology, soil science, biology, ecology, geochemistry, geomorphology and
hydrology. EARTH 530 will introduce students to the basic information
necessary for understanding Earth surface processes in the Critical
Zone through an integration of various scientific disciplines. Those who
successfully complete EARTH 530 will be able to apply their knowledge
of fundamental concepts of Earth surface processes to understanding
outstanding fundamental questions in Critical Zone science and how
their lives are intimately linked to Critical Zone health. EARTH 530
will combine digital video, audio, simulation models, virtual field trips
to on-line data resources, text, and interactive quizzes that provide
instantaneous feedback. The overarching goal of the course is to help
secondary science teachers understand Earth surface processes at a
level they can communicate to their students. These processes will be
presented in a Critical Zone framework - the teachers and subsequent
students will leave with a better knowledge of how their daily lives are
impacted by natural processes, and conversely how their daily activities
impact Earth’s surface and the Critical Zone. Students will be required
to complete weekly assignments. There are 12 lessons divided into 7
units in EARTH 530. Each unit will contain interactive exercises, links,
animations, movies, and novel explanations of the basic scientific
principles of Critical Zone science. Students will also be assigned four
unit projects throughout the semester (Units 2-6). Projects require
students to apply the principles they have learned to various scientific
inquires of Earth surface processes in the Critical Zone. A capstone
Semester Project will require students to use the skills and knowledge
they develop in the course to produce a learning module that they, in
turn, will be able to use to teach course concepts to their own secondary
school students.

EARTH 540: Essentials of Oceanography for Educators
3 Credits

Chemical and physical principles of the oceans and their interaction with
the biosphere, atmosphere and the solid Earth. EARTH 540 Essentials of
Oceanography for Educators (3) EARTH 540 introduces knowledge and
broadens understanding of the oceans and their role in climate, coastal
processes, and life within the fluid Earth. Students will gain insight
into the physical and chemical processes that determine properties
of the ocean and govern interactions between the ocean, atmosphere,
groundwater, and the fluid/solid Earth. Topics will reinforce fundamental
scientific principles such as heat transfer, chemical equilibrium, and
conservation of energy. EARTH 540 will combine digital video, audio,
simulation models, virtual field trips to on-line data resources, text, and
interactive quizzes that provide instantaneous feedback.

EARTH 591: Individual Studies: Research Project
3 Credits

Development of a capstone project, supervised on an individual basis
outside the scope of formal courses. EARTH 591 Individual Studies:
Research Project (3) EARTH 591 broadens the content knowledge
of students in the program, while deepening their understanding of
a specific topic of their choosing. Students will gain insight into the
essence and process of current scientific research by working with an
academic advisor who is a member of the graduate faculty. They will
practice transforming the results of their own investigations into modules
that can then be taught to others. Students will design, develop, and
conduct a project in consultation with an advisor. Appropriate projects
are expected to combine basic scientific research and pedagogical
techniques. Examples of projects could include (but of course are not
limited to): development of a new curriculum appropriate for grades 7-12
based on a specific discipline in the Earth Sciences, such as meteorology;
or an independent research project in a specific scientific subfield, such
as recent climate change, the results of which may then be taught to
students.

Prerequisite: 24 credits in the Master’s Degree program in Earth Science
Education

EARTH 597: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may
be offered infrequently; several different topics may be taught in one year
or semester.

EARTH 801: Computation and Visualization in the Earth Sciences
3 Credits/Maximum of 999

Students practice data visualization and analysis using computational
methods for Earth science data to build content knowledge and
interpretation skills. EARTH 801 helps students to develop procedural
programming skills in a programming language designed for visual artists
and visualization while exploring Earth science topics. In particular,
students learn and practice digital graphics capabilities in order to render
Earth science concepts that are otherwise difficult to visualize due to
complicated space and time scales. Both spatial and object visualization
skills are key to success in the Earth sciences; students in this course
will build an awareness of these skills and practice them with an eye
to being able to teach them to their own secondary school students. In
this course, students will interact with large, open, freely-available Earth
science data sets by collecting, plotting, analyzing them using a variety
of computational methods. Students will therefore be ready to teach
their own secondary school students a range of Next Generation Science
Standards skills involving data collecting, manipulation, analysis, and
plotting. EARTH 801 students will also read and discuss current research
regarding the teaching, learning, and evaluation of visualization skills in
the Earth sciences, as well as exploring the theory of ‘multiple external
representations’ as applied to Earth science concepts and data sets.
Ecology (ECLGY)

ECLGY 510: Classical Ecology
2 Credits
Classical Ecology.

ECLGY 515: Advances in Ecology
3 Credits
Advances in Ecology.

ECLGY 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

ECLGY 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

ECLGY 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

ECLGY 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

ECLGY 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Supervised experience in development of instructional materials, organizing and conducting lectures, laboratories, and evaluating students in Ecology-related undergraduate courses.

ECLGY 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

ECLGY 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

Economics (ECON)

ECON 500: Introduction to Mathematical Economics
3 Credits
Mathematical Economics: Applications of Mathematical Techniques to Economics.

ECON 501: Econometrics
3 Credits
Econometrics: Applications of Statistical Techniques to Economics

ECON 502: Microeconomic Analysis
3 Credits
Economic behavior under pure and imperfect competition; price and output determination in product markets; prices and employment in factor markets.

ECON 503: Macroeconomic Analysis
3 Credits
National income accounts; determination of income, employment, interest rates, and the price level; stabilization policy.

ECON 507: International Trade
3-6 Credits/Maximum of 6
Theory of international trade and investment; effect of commercial policy on trade and income distribution; multinational corporations and international trade.

ECON 510: Econometrics I
3 Credits
General linear model, multicolinearity, specification error, autocorrelation, heteroskedasticity, restricted least squares, functional form, dummy variables, limited dependent variables.

Prerequisite: ECON 501 or STAT 462 or STAT 501

ECON 512A: Empirical Methods in Economics I
1 Credits
The course will provide a foundation for students in the computational methods used to numerically solve and simulate economic models and program econometric estimators.

Prerequisite: ECON 510

ECON 512B: Empirical Methods in Economics II
2 Credits
The course will provide continued exposure to the computational methods used to numerically solve and simulate economic models and program econometric estimators.

Prerequisite: ECON 512A
ECON 517: Open Economy Macroeconomics and International Finance
3-6 Credits/Maximum of 6
The balance of payments, portfolio allocation, monetary and fiscal policy in an open economy, exchange rate regimes, selected policy issues.

ECON 521: Advanced Microeconomic Theory
3-6 Credits
Theory of consumer behavior; theory of the firm; price determination in product and factor markets; introduction to welfare economics.

ECON 522: Advanced Macroeconomic Theory
3-6 Credits
Measurement of income; theories of consumption, investment, and money holdings; static determination of income and employment; introduction to dynamic analysis.

ECON 530: Master's Scholarly Essay I
3 Credits
This course is a workshop designed to guide students through the process of conducting independent research towards successful completion of the M.A. Scholar Essay project. The course will provide students with broad instruction on research objectives such as formulating a research question, constructing an economic analysis, and writing up results for an academic audience. Emphasis will be placed on breaking the task of completing a research essay into discrete, and manageable tasks.

ECON 533: Applied and Quantitative Economics
3 Credits
This course combines the use of econometric software and real economic data sets to study actual empirical questions in economics. Topics covered include instrumental variables, panel data methods, estimation of nonlinear models, discrete choice models, regression discontinuity techniques and nonparametric method for data analysis. Each of the topics will have one or more empirical applications. The economic applications include production function estimation, returns to education, investment models, consumer demand models, and transportation modes.

ECON 543: Industrial Organization and Public Policy
3-6 Credits
The structure of American industry; performance and behavior; public policies toward business.

ECON 555: Research and Knowledge Transfer Methods
3 Credits
The course will provide an overview of existing guidelines published by experienced researchers in various subfields of economics (applied microeconomics, economic development, econometrics, industrial organization, international trade, macroeconomics, and microeconomic theory) on the topics of developing research ideas, writing papers for publication in refereed economic journals and presenting research findings in conferences (shorter presentations) and seminars (longer presentations). Models of successful writing in recent top economic publications will be discussed. Each student will then have an opportunity to apply these guidelines and practice their writing and presentation skills based on their original research. Presentations of research will be discussed with peers and research ideas will be tested within and across subfields of economics, thus preparing students for the demands of academic research exchange and academic publication in economics.

ECON 558: Development of Monetary Theory
3 Credits
Classical and neoclassical quantity theories of money and contemporary criticism; Keynesian monetary theory and its critics.

ECON 559: Current Monetary Theory and Policy
3 Credits
Post-Keynesian reformulation of quantity and Keynesian theories of money; liquidity and general equilibrium approaches; current issues in theory and policy.

ECON 569: Development of Monetary Theory
3-6 Credits/Maximum of 6
Resources and institutions; quantitative measures; theories of economic growth in developing areas; developmental policies.

ECON 589: Seminar in Econometric Theory
3 Credits
Theories and methods relevant to the application of statistical methods to economics.

Prerequisite: ECON 510
EMGT 810: Ecosystem Monitoring
3 Credits

This course provides students with an overview of ecosystem monitoring methods and analyses. Students completing the course will have the ability to apply a quantitative approach to the monitoring of ecosystems. Students will learn about monitoring planning, various sampling designs, and specific measurement methods used to accomplish particular monitoring objectives associated with ecosystem management. Students will be able to apply specific sampling, measurement, and data analysis methods for monitoring vegetation, wildlife, water quantity and quality, and soils, and they will have a statistical foundation for evaluating the various types of data that are collected. Specifically, students will be able to calculate reliability measures, trends, and indicators of ecosystem change, and apply hypothesis testing to these measures to determine their statistical significance. Specific sampling designs will be presented, such as simple random sampling, stratified random sampling, systematic sampling, and cluster sampling.

Prerequisite: STAT 500
Prerequisite: STAT 500, MANGT 510, LEAD 555; OLEAD 409; OLEAD 410; OLEAD 411, OLEAD 464, OLEAD 465; CAS 404, GEOG 482, EMGT 810
CONCURRENT: EMGT 820, EMGT 830

**Education (EDUC)**

EDUC 560: Classroom Management

3 Credits

Analysis of teaching styles, classroom behavior and interaction, organization and correlation of classroom activities and subject areas. (Requires practical application in an actual teaching situation.)

EDUC 561: Theoretical Foundations of Literacy

3 Credits

The primary goals for this course are to (1) examine the theoretical paradigms that inform the field of literacy education, including philosophical, cognitive, sociocultural, critical literacy, and multimodal/digital literacies and (2) to assist participants in becoming more aware of sociocultural, diversity, gender, and identity in relationship to literacy and schooling. Throughout the course, participants will examine the complexity of literacy to become aware of how to situate one's own literacy practice and experience in multiple contexts. Participants become reacquainted with mainstream theories and explore those of critical theorists who challenge traditional perspectives that have often marginalized race, class, and linguistic variety in learning and in literacy development.

Prerequisite: EDUC 477

EDUC 572: Comparative Education: World Perspectives

3 Credits

An evaluative comparison of American education with Western and non-Western educational systems.

EDUC 582: Spirituality and Culture in Health and Education Professions

3 Credits

This course focuses on the cultural aspects of spirituality and its place in the health and education professions. EDUC (HLHED) 582 Spirituality and Culture in Health and Education Professions (3)This course will focus on the examination of the place of the cultural aspects of spirituality and its place in the education and health professions and its implications for culturally responsive education and/or health care in a multicultural society. In particular the goals of the course are as follows: 1) To clarify the difference between spirituality and religion and to understand how spirituality is currently being examined in the fields of adult education, medical education and the health professions. 2) To examine how culture informs spirituality generally, and more specifically, to examine how culture relates to one’s own spiritual development and overall health in the world. 3) To develop a sense of how people construct knowledge through image and symbol, which for many people, maps to their spirituality and culture, as they make new and deeper meaning of their own lives. 4) To begin to consider WHEN and HOW one might appropriately draw on one's own spirituality and that of participants in adult and higher educational practices and health care settings to increase cultural understanding and/or responsiveness to patient needs and when such discussion might seem to impose a spiritual or religious agenda. 5) To examine the connections among spirituality, culture, some complementary and alternative medicine modalities and overall holistic health and education.

Cross-listed with: HLHED 582

EDUC 586: Educational Research Designs

3 Credits

Focuses on methods of research in educational settings to help participants become informed consumers of the educational research literature. EDUC 586 Educational Research Designs (3)This course focuses on methods of research appropriate in educational settings to help participants become informed consumers of the educational research literature. Throughout the course participants will 1) identify an appropriate research problem and justify the importance for investigation; 2) identify and classify the types of variables used in research; 3) utilize electronic search and communication tools; 4) critically examine various research designs and their practical applications; 5) interpret analysis of data using statistical treatments; 6) describe strengths and weaknesses in research designs; 7) critique research studies; 8) describe PSU requirements for conducting research with human subjects; and 9) develop a writing style consistent with scientific/research work with emphasis on objectivity and utilizing appropriate APA style. The key assessment for the course is a critique of a published research article. Instructors will also include assessments such as: midterm or final examinations, quizzes, class presentations, online activities or discussions, research projects, research proposals, dialogue journals, research problem descriptions, article analyses, or class participation.

Prerequisite: EDUC 479; or TRDEV460

EDUC 587: Master's Project

3 Credits

The development of an original master's project (paper, essay, production, practicum) supervised and judged by an appropriate faculty committee.

EDUC 589: Problems in Urban Education

3 Credits

Independent study of selected topics related to urban education.

EDUC 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

EDUC 591: Education Seminar

1-6 Credits/Maximum of 6

The capstone seminar course for the M.Ed. degree requiring an appropriate scholarly term paper. EDUC 591 Education Seminar (6)This performance-based course is intended to serve as a culminating or capstone experience for students enrolled in the Master of Education degree program in Teaching and Curriculum. A constructivist seminar format, augmented by significant readings, will be used to facilitate in-depth discussions of important, timely, and controversial issues in education. Students will be asked to reflect upon all previous course work toward the degree as a foundation for analyzing the past, evaluating
the present, and speculating about the likely future of the numerous issues that collectively constitute the education arena. Students will be expected to demonstrate their ability to analyze and synthesize material through the guiding of, and participation in, class discussions of the readings, through satisfactory completion of in-class assignments, and through the completion of a major scholarly paper and a corresponding class presentation that both focus on the same aspect of an educational theme.

**Prerequisite:** EDUC 506, EDUC 586, and completion of 27 credits in the Teaching and Curriculum program or approval of program

EDUC 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

EDUC 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

EDUC 805: Curriculum Foundations

3 Credits

This course provides a comprehensive overview of the philosophical, historical, psychological, and social foundations that affect the school curriculum. The course calls attention to the global and multicultural perspective in education. It involves the study of the implications and applications of these curricular foundations in the form of issues and theoretical trends that shape the field of curriculum. Participation in the course activities allows candidates to identify and analyze their personal values, beliefs, and perspectives, as well as theories and research which shape their own professional practice as educations within diverse educational settings with children. By the end of the course, participants will be able to 1) develop and demonstrate understanding of how major foundations (disciplines) shape the curriculum of schooling, including philosophy, history, politics/policy, social psychology, and cultural studies; 2) consider and critique selected educational issues, both past and present, examining how they are anchored in and influenced by the foundations of curriculum; 3) investigate how social, economic, cultural, and political/policy debates and representations in the public sphere help to shape the foundations of curriculum; 4) engage in critical inquiry regarding the future roles of teachers, students, and other stakeholders in the learning community and society at large, and exercise the faculty of imagination as a means of thinking ‘outside the box’ for educational purposes; 5) demonstrate professional scholarly attitudes, skills, and dispositions, including critical analysis and constructive use of questioning; scholarly use of research; dedication to continuous learning; positive group interaction and participatory collaboration; and reflective envisioning and enacting of curricular reform; 6) examine issues of race/ethnicity, linguistic variation, social class, gender, and sexual orientation and their relationships to the curriculum and schooling; and 7) demonstrate a professional scholarly writing style with a practical focus sharpened by theoretical awareness, using the APA Writing Manual as a style guide.

**Prerequisites:** EDUC 820

EDUC 806: Curriculum Development and Instructional Design

3 Credits

The course focuses on an examination of theory, issues, problems, organization, and application of instructional design for teachers in planning and developing a curriculum. The course presents examples of effective strategies including concept-based curricula, backward design, interdisciplinary approaches, integrated curricula (curriculum mapping), assessment, and reporting techniques.

**Prerequisites:** EDUC 506, EDUC 586

EDUC 820: Learning Theory for the Classroom

3 Credits

This course is an application of learning theories from psychological, sociological, and physiological disciplines to educational settings for children and adolescents. At the conclusion of the course, participants will be able to 1) analyze the educational implications of cognitive, language, personal, and social/emotional development; 2) describe and distinguish among major learning theories from biological, psychological, and sociological disciplines; 3) employ knowledge of learning theories to analyze learning strategies, strengths, and needs; 4) apply learning theories to optimize learning for all students that complements their cultural background, race, gender, ethnicity, socioeconomic status, or special needs; and 5) analyze through a theoretical lens the impact on student learning of current educational issues and trends.

**Prerequisite:** admission to program

EDUC 839: Educational Assessment

3 Credits

This course will prepare students with the knowledge and skills necessary to monitor, assess, and report student achievement.

**Prerequisites:** EDUC 820

EDUC 862: Literacy Assessment and Evaluation

3 Credits

This is a required course in the M.Ed. in Literacy Education graduate degree and reading specialist certification programs. The course is designed to familiarize participants with (1) factors related to learners who exhibit difficulty with literacy learning; (2) appropriate selection of valid, reliable, fair, and appropriate print and digital assessment tools to evaluate literacy achievement; (3) proper techniques for administering, scoring, and interpreting formal and informal literacy assessments; (4) procedures for analyzing findings, summarizing results, and advocating for appropriate literacy practices and recommendations that meet the diverse needs of K-12 learners.

**Prerequisite:** EDUC 561

EDUC 863: Literacy Methods

3 Credits

This course examines the literacy curriculum and teaching practices in various real world contexts to support the diverse needs of K-12 learners. Graduate students review and apply current literacy research to inform instruction within the context of their individual classrooms. Students also employ a multiliteracies framework in their lessons as they locate
digital resources and tools to model critical viewing, representing, and thinking for their K-12 learners. Students enrolled in EDUC 863: Literacy Methods plan, adapt, and implement innovative instructional approaches that will support their professional practice and future role as K-12 literacy educators and reading/literacy specialists.

**Prerequisite:** EDUC 862

**EDUC 864:** Literacy Clinic

3 Credits

This capstone course for the Master of Education in Literacy Education with the Reading Specialist certification program is designed to address the major theories and empirical research that addresses the cognitive, linguistic, and sociocultural foundations of literacy development, processes, and components, including word recognition, language comprehension, strategic knowledge, critical literacy, and interdisciplinary connections. To demonstrate mastery of these concepts, students engage in an action research case study project in which they design, develop, and implement within their respective curriculum to meet the needs of K-12 learners who are experiencing difficulties with literacy. Through this case study, students demonstrate and apply pedagogical and professional knowledge, skills, and dispositions. Students select a variety of appropriate texts, consider multimodalities, determine learners' backgrounds and interests, and administer appropriate assessments to evaluate and monitor progress. Students also have the opportunity to further enhance their ability to collaborate with professional colleagues, interact with families, and demonstrate leadership in literacy education.

**Prerequisite:** EDUC 863

**EDUC 865:** Literacy Leadership

3 Credits

EDUC 865 Literacy Leadership is a required course in the Master of Education in Literacy Education and Reading Specialist certification program that is designed to prepare students to assume the role of literacy leader within a school or school district. This role includes the implementation, management, and evaluation of the literacy program. The course allows students to connect theory to the development of effective literacy programs and intervention frameworks, and to understand the interrelated nature of literacy policy, curriculum, assessment, and instruction. Throughout the course, students develop dispositions that allow them to work collaboratively alongside classroom teachers, district officials, and other professionals as they develop curriculum, determine appropriate assessments, conduct professional learning workshops, and evaluate program effectiveness.

**Prerequisite:** LLED 445, EDUC 863

**Educational Leadership Program (EDLDR)**

EDLDR 520: Sociology of Rural Schools and Communities

3 Credits/Maximum of 999

This course examines the interrelationships between rural communities and their schools. In the United States schools are the backbone of rural communities. Rural schools help to shape the local boundaries of communities and the identity of community members in a variety of both formal and informal ways. Drawing heavily from published empirical research, this course provides a solid theoretical foundation in community sociology in order to investigate the interrelationships between rural communities and rural schools. Orienting questions include: In what ways might we consider 'rural' as a meaningful category in understanding both community and education? In what ways do schools shape (or reshape) the structure of communities? How do communities shape (or reshape) the structure of education? What are the challenges that confront the vitality of both rural schools and communities? How have these challenges changed over time, and what are the implications for educators, residents, and policy makers? The course is strongly interdisciplinary, with material drawing from education, sociology and rural sociology, economics, anthropology, geography and demography.

**EDLDR 521:** Data Analysis for Education Research

3 Credits

This course bridges theoretical statistics coursework and practical research with real, large-scale data sets. The course emphasizes hands-on data preparation and analysis using statistical software. More specifically, the course will give an overview of national and international data resources that are available for educational researchers, survey the most widely used data analysis techniques in educational research, and use statistical software and large-scale datasets to produce useful results for educational policy research.

Cross-listed with: EDTHP 521, HIED 521

**EDLDR 522:** Economics of Education

3 Credits

The aim of the course is to help students view the educational system and students’ educational decisions through the lens of economics. We will discuss the methods that economists commonly employ to study education and read recent empirical articles that examine the impact of educational policies and practices. At the end of the semester, we will discuss insights from the field of behavioral economics, which builds on the standard economic model to better understand decision making. This course also surveys the empirical literature on the economics of education which is organized into several broad topics, including human capital and economic return to education, school choice and college access, and education production. Finally, the course covers a variety of econometric methods that are widely used in the economic study of education. These methods include regression models (e.g., ordinary least squares, discrete choice models, Multi-level modeling, panel data models, etc.) and commonly used techniques to deal with self-selection and causal inference (e.g., quasi-experimental methods).

Cross-listed with: EDTHP 522, HIED 522

**EDLDR 528:** Educational Politics in the United States

3 Credits

Social and institutional forces which shape the public school system and determine national, state, and local educational policy and politics. EDLDR 528 Educational Politics in the United States (3) 'Educational Politics in the United States' focuses on the social and institutional forces that shape the public school system and determine national, state, and local educational policy and politics. The rationale underlying this course is that citizens and educators, particularly those in administrative roles, need to understand the social forces that influence educational policy and politics. Until the late 1960's there was a pervasive myth that
school affairs could and should be separated from the world of politics. Few people now believe that schooling can be entirely separated from politics, but many people lack an understanding of the broad, recurrent forces and competing values that ensure that schooling in pluralistic societies will be affected by political factors. This course is intended to provide a sophisticated understanding of this subject, with emphasis on the acquisition of conceptual and analytical skills that will be useful for leaders in education. Student performance is assessed through group and individual activities and projects, students’ contributions to class discussions, and exams.

EDLDR 530: Leadership for Inclusive Education
3 Credits

In-depth analysis and discussion of the school leader’s role in creating and sustaining an inclusive learning environment for all.

EDLDR 531: Leadership and Diversity
3 Credits

This course examines what it means to lead educational organizations in an increasingly diverse society. EDLDR 531 Leadership and Diversity (3) This course examines what it means to lead educational organizations in an increasingly diverse society. Specifically, this course will focus on policy, theory and practice as they relate to school leadership and diversity. Students from culturally, linguistically, socially, and economically diverse backgrounds account for an increasing percentage of the school-age population in the United States. Unfortunately, many of these students are not successful in school. This presents a number of challenges for school leaders as they work to facilitate the teaching and learning process. This is a seminar type course aimed at facilitating discussion and exploration around issues related to education and diversity. Discussions and reflective inquiry will be facilitated by assigned readings and case studies as well as the personal experiences of both the instructor and the students in this course. This course will assist students in developing a better understanding of the knowledge and skills needed to effectively lead increasingly diverse educational organizations.

EDLDR 532: Educational Leadership Doctoral Pro-seminar
3 Credits

Preparation for doctoral studies in Educational Leadership. This course is designed as a preparation for Ph.D. studies in Educational Leadership (EDLDR). The primary purposes of this course are: to familiarize first-year Ph.D. students with graduate studies at Penn State; to identify topics, problems, and policies of importance or interest to the field of educational leadership/administration; to introduce students to EDLDR faculty members and their research; and to ensure students are aware of the programmatic requirements for successfully completing the Ph.D. degree in Educational Leadership. This course is also designed to meet the University’s Scholarship and Research Integrity requirements (SARI) for all first-year graduate students.

EDLDR 533: The Politics of Local School Districts
3 Credits

Theory and practice of the politics and governance of local school districts; issues and methods in studying political decision making. EDLDR 533 The Politics of Local School Districts (3) ‘The Politics of Local School Districts’ focuses on the theory and practice of politics in local school districts, with attention to the study of political decision-making and influence. The rationale underlying the course is that citizens and educators need to understand the social and political factors affecting school-community relations and the factors affecting the relationship school-community conflict. Although communities vary greatly, rural, urban, and suburban communities each tend to have some distinctive features that influence the character of school-community relations and politics. At the same time, communities in general vary in the extent to which they possess characteristics that promote or inhibit the incidence and intensity of community conflict. The governance of education in local communities is heavily influenced by such factors. Consequently, educational leaders need to be knowledgeable and perceptive in this area. This course is intended to provide the knowledge and analytical skills needed for effective leadership in local school districts. Student performance is assessed through group and individual activities and projects, students’ contributions to class discussions, and exams.

EDLDR 534: Federal Role in Education
3 Credits

This course examines the Federal role in education, emphasizing relationships between the Federal government and states, tribes and schools.

EDLDR 538: East Asian Education, Leadership, and Reform
3 Credits

The social and organizational characteristics of East Asian schooling, including understandings of authority, power, and leadership, and systemic school reform.

Cross-listed with: CIED 538

EDLDR 540: Technology Applications in Educational Leadership
3 Credits

Development and use of information technology applications to analyze common problems faced by educational administrators. EDLDR 540 Technology Applications in Educational Leadership (3) EDLDR 540 teaches the development and use of electronic spreadsheet models to analyze common problems faced by educational administrators. The format of the course is a computer laboratory in which students work through a series of assignments designed to introduce them to the basics of spreadsheets and then to teach a broadening range of modeling and analytical skills using progressively more complex problems.

Applications are stressed through the creation of models that emphasize the organization, analysis, and presentation of data concerning such topics as salary schedules, budget preparation and analysis, expenditure control, cost projections, and data development. In conjunction with model building, a variety of analytical techniques are used, such as graphing, frequency distributions, regression, what-if tables, pivot tables, and database applications. The work in the course is individual and students move at their own pace through the assignments. New concepts and techniques are introduced and demonstrated periodically by the instructor and are then used by the students in succeeding assignments. The course accommodates widely differing ranges of abilities possessed by students taking the course. No prior computer experience is necessary. Satisfactory completion of all assignments is required for the passing ‘R’ grade. The course emphasizes the development of useful information for administrative decision-making. Students should finish the course with a new or renewed confidence in their ability to deal with a problem in which some quantitative analysis is necessary.
to be able to organize the available data in a logical and helpful fashion, and to use an electronic spreadsheet to develop a serviceable model to aid in the analysis.

EDLDR 542: Civil Rights and Education

3 Credits

Examination of civil rights policies and educational equity in the U.S. from the perspectives of law, social science, accountability policy. Civil Rights and Education will examine civil rights policies and educational equity in the United States from the perspectives of social science, education policy, and law. The aims of the course are to build students’ understanding of the key principles of civil rights policies and the sources of contention in civil rights, and to enhance students’ capacity for participating in issues of civil rights and education through project-based work. We will begin by considering what it means to have an opportunity to learn and how it has been defined. The course will then consider legal and policy developments since the ‘Brown’ decision that have both expanded and constrained the opportunity for certain groups of students. The course is primarily focused on national developments, but does include a focus specifically on educational opportunity in Pennsylvania. The course concludes by considering recent civil rights developments and prospects for the future. Cross Listings: EDLDR 542 will be added as a cross-listed course.

Cross-listed with: EDTHP 542

EDLDR 549: School District Improvement and Systemic Change

3 Credits

This course focuses on understanding and leading systemic district improvement efforts.

Prerequisite: EDLDR559 or EDLDR578

EDLDR 551: Curriculum Design: Theory and Practice

3 Credits

Course participants explore the fundamentals of curriculum; that is, curriculum cultures, traditions, perspectives, theories, or models that have significantly affected the field of curriculum design. Participants also learn about historical and contemporary issues in the development of national, state, and local academic standards, and how these issues have shaped the design of particular curriculum programs. Participants engage in curricular analysis of a content-specific program through examination of ‘what is behind the curriculum’ (purpose, goal, perspectives, assumptions), ‘what is in the curriculum’ (the nature of the content, basis for its selection, content and media structures), and ‘what are the experiences with the curriculum’ (how curriculum may be taught, what methods may be used, how the program success may be judged, the ‘frame-factors’) in order to outline the strengths and weaknesses of the program, and how it can be adapted to maximize its benefits and minimize its limitations for a specific institutional or educational context.

Cross-listed with: C-S 551

EDLDR 559: School Improvement

3 Credits

The course examines how educational leaders at all levels can determine, promote, support, and achieve successful school improvement. EDLDR 559 School Improvement (3) The last 20 years have witnessed unparalleled efforts to improve schools and raise student achievement. These initiatives include but are not limited to: (1) new content standards for mathematics, science, English, and social studies (2) increased requirements for high school graduation, (3) reduced class sizes, especially in the early grades, (4) new high-stakes state testing and assessment programs, and (5) the performance-based accountability requirements set by No Child Left Behind. Yet, despite all this activity and attention, significant changes in student achievement and in basic school practices have been slow at best. While there has been some improvement, success has been largely scant and spotty. The reasons for slow progress are many and complex. However, one that is receiving growing attention is the need for stronger school leaders (including teachers, principals, superintendents, and other educators) who can direct and implement changes in curriculum, instruction, and school organization. There is growing consensus in the research literature that school improvement and school leadership are largely inseparable - that leadership is a critical element in order for schools to improve. While focusing on leadership without attending to the many other conditions that affect school effectiveness is not productive, it is clear that leadership is an important ingredient in the mix of strategies for improving schools. The course addresses three major questions: (1) What is school improvement? (2) What does it involve? (3) How do we do it? To accomplish this, the course first focuses on several general models developed for school improvement purposes. After this the focus shifts to an examination of the component pieces of school improvement, including leadership, professional development/professional learning communities, and a focus on teaching and learning (including standards, instruction, and assessments). All these are connected the larger discussion of what education leaders need to know and be able to do to strengthen instruction and raise student achievement. If leaders are to nurture better teaching and learning, they will need greater familiarity with promising instructional approaches, new curricular materials, and ways to adapt them to a particular school’s circumstances.

EDLDR 560: Principles of Instructional Supervision

3 Credits

Social and institutional settings for instructional supervision; functions, activities, and practices of supervision; supervisory case studies. EDLDR 560 C-S 560 Principles of Instructional Supervision (3) This course explores themes, trends, and key ideas that influence current supervisory practices. Course content gives specific attention to supervisory practice in relation to teaching practices and to life in schools.

Prerequisite: teaching or school administrative experience; 18 credits in education, at least 5 of which are methods of teaching

Cross-listed with: C-S 560

EDLDR 563: Designing Staff Development Programs

3 Credits

Designing, implementing, and evaluating effective staff development programs for personnel in educational settings. EDLDR 563 Designing Staff Development Programs (3) This course has been designed to provide students with the opportunity to develop a deep understanding of the process of professional development in education at the theoretical and practical levels as well as the ability to apply this understanding to the design, evaluation, and analysis of professional development activities and programs.

Prerequisite: EDLDR560
Cross-listed with: C-S 563

EDLDR 565: Personnel Management and Contract Administration

3 Credits/Maximum of 3

Practice and theory of personnel supervision at the central office and building level, including contract administration and grievance handling. EDLDR 565 Personnel Management and Contract Administration (3)

This course will provide an overview of major issues in the practice and theory of personnel management and contract administration. An approach focusing on legal requirements, ethical dimensions, and what constitutes 'good' administrative practice will be used to assist students in better understanding pertinent concerns. Topics to be covered include recruitment, hiring, a professional development of faculty/staff, contract negotiations, teacher/staff rights under the 1st and 4th Amendments to the U.S. Constitution, and issues associated with equal educational opportunities for various groups including racial and linguistic minorities, individuals with disabilities, women, older employees, and gays/lesbians. The class will be a combination of lectures and discussions on particular topics related to personnel management. From time to time, the class will break up into small groups to work on in-class dilemmas.

Prerequisite: 18 credits in education and three years’ teaching experience

EDLDR 567: Organizational Supervision

3 Credits

Principles and practices of supervision in schools related to instructional and support personnel. EDLDR 567 Organizational Supervision (3)

‘Organizational Supervision’ focuses on principles and practices of supervision in schools related to instructional and support personnel. The rationale for this course is that organizational supervision is that aspect of administration that demands that the administrator focus on the instructional and non-instructional program as he/she facilitates the learning process. While the major topic in this course is the role of the administrator in the supervision of the organization, other considerations in this course are how to relate leadership, change, management, and evaluation to organizational supervision. Other topics include the nature of supervision and its place in the schools; the organizational environment for supervision; leadership behavior and supervisory effectiveness; a contingency approach to supervision; power, authority, and conflict in supervision; teacher motivation and supervisory effectiveness; and supervision and group effectiveness.

Prerequisite: EDLDR480

EDLDR 568: The Principalship

3 Credits/Maximum of 3

Principles and practices of administration of elementary and secondary schools. EDLDR 568 The Principalship (3) The course is intended to help students gain theoretical and practical insight into what it means to be an effective principal. EDLDR 568 is not a ‘how to’ course; that is, it makes no effort to explicitly lay out rules, procedures, ‘best practices,’ or techniques associated with being a principal. Rather, the course calls on students to read, think, write about, and discuss: What do we mean by management? By leadership? What’s the difference? What social and political factors help shape the principal’s organizational role and behavior? How can principals acquire and maintain power and authority? And what is the difference between these two concepts? How do different school social contexts influence principal effectiveness? What do we mean by school culture and climate? How do these relate to effectiveness? How do principals become ‘instructional leaders?’ When should they? How should student performance be evaluated? Teacher performance? What legal issues do principals need to be aware of?

EDLDR 569: Decision Making in Educational Organizations

3 Credits/Maximum of 3

Decision making in organizational and environmental contexts; case studies of administrative problems; application of decision making models. EDLDR 569 Decision Making in Educational Organizations (3)

Decision making is one of the central processes in the leadership of educational organizations. The effective decision maker is one who can define a problem, establish criteria for its successful solution, identify and evaluate alternative problem solutions and their consequences, and choose an appropriate plan of action. The course utilizes a case study approach to examine and practice decision making in an educational context. Emphasis is placed on a systematic approach to making decisions, based on theory, research, and best practice knowledge. Various models of decision making are introduced and their usefulness and appropriateness in different types of situations are examined. Working in teams, students analyze increasingly complex cases and prepare both verbal and written presentations, which are tested in general class discussion. Through active learning experiences provided by the case method, students will study significant problems of practice while developing teamwork skills in collaborative work groups.

Prerequisite: EDLDR480, or teaching, supervisory, or administrative experience or permission of program.

EDLDR 573: Public School Finance

3 Credits/Maximum of 3

Financing of public education, including values underlying system, revenue sources and taxation, school funding formulas, equity, and school finance reform. EDLDR 573 Public School Finance (3)

This course analyzes the systems and mechanisms for financing public elementary and secondary schools in the United States. It provides both an overview of basic school finance concepts and issues and an examination of Pennsylvania’s system of financing schools. Throughout the course there is a continuing effort to blend the theoretical foundations of school finance with their practical applications at state and local levels. Microcomputer models are used to explore the applications of concepts to policy and practice.

Prerequisite: EDLDR480 or teaching, administrative or supervisory experience

EDLDR 575: Ethics in Educational Leadership

3 Credits

Course explores the moral and ethical dimensions of the work of educational leaders. EDLDR 575 Ethics in Educational Leadership (3) This course will: 1) examine traditional ethics as well as alternative forms of moral development (critical theory applied to justice and feminist ethics); 2) compare and contrast one’s own code of ethics with that of a professional code of ethics; 3) explore approaches to moral and ethical reasoning and to use these approaches to work through ethical dilemmas related to the practice of educational administration; and 4) have students design and present authentic ethical dilemmas providing theoretical background, appropriate questions, solutions, and reflection.
EDLDR 576: The Law and Education
3 Credits

Legal bases for education; rights and responsibilities of school board members, administrators, teachers, students, and parents; due process. EDLDR 576 The Law and Education (3) This course will provide an overview of major issues in school law. The course will focus primarily on case law including U.S. Supreme Court decisions as well as relevant state and federal lower court opinions. State legislation and administrative laws will also be considered. Topics to be covered include church/state issues, teacher and student rights, and law associated with equal educational opportunities for various groups including racial and linguistic minorities, individuals with disabilities, and women. The class will be a combination of lectures and discussions on particular legal topics based on the text and selected handouts. From time to time, the class will break up into small groups to work on in-class school law dilemmas.

Prerequisite: EDLDR480 or teaching or administrative or supervisory experience

EDLDR 577: Law and Ethics in Education
3 Credits

Course focuses on legal and ethical dimensions issues for educational leaders and their impact on best interests of the students. EDLDR 577 Law and Ethics in Education The instructor will present various paradigms of ethical decision making: justice, care, critique, community, and the ethics of the profession as well as historical and philosophical perspectives on the rights of students. Participants will then apply what they have learned to authentic legal cases involving issues such as students’ free speech rights, corporal punishment, strip searching, assessment, and the right to an education. Analyses will consider questions such as: Even if an action is legal, is it ethical? and What is the ‘best interests of the student’?

EDLDR 578: Schools as Organizations
3 Credits

Intraorganizational relationships; administration and the school in its organizational and environmental contexts. EDLDR 578 Schools as Organizations (3) This course is planned to provide students with an orderly introduction into organizational theory and administrative leadership concepts. A primary objective behind the organization and design of this course is to firmly link theory to practice by addressing the question of what does organizational theory and research have to say that is generally important and useful to the educational practitioner/scholar. This objective is addressed through the belief that practitioners must be self-conscious about what they are doing so organizational action becomes enlightened action; that is, action that has to do with understanding and using multiple perspectives of reality. What are needed are purposeful attempts to construct or reconstitute knowledge so that events, situations and problems are confronted or engaged from multiple points of view. Decision-making and problem-solving activities thus become acts of deliberate, conscious thoughtfulness (reflective thinking, if you will) designed to reconstruct holistic knowledge in order to facilitate enlightened action. Specifically, the objectives of the course are to assist students: (1) to acquire a foundational knowledge or organizational and administrative theory; (2) to use multiple organizational theories in understanding school organizations and leadership roles in these organizations; (3) to develop a framework or schema from which to reflectively think about and develop an understanding of school organizations and problems of practice; (4) to develop a concept of leadership within school organization; (5) to develop an understanding of organizational change processes and attending issues of school change; and (6) to become familiar with organizational perspectives on schools and schooling issues and problems.

Prerequisite: EDLDR480 or teaching or administrative or supervisory experience

EDLDR 579: Financial Management for Schools
3 Credits

Financial management concepts and techniques for educators: district and school level budgeting process, hands-on budget preparation workshop, and budget management. EDLDR 579 Financial Management for Schools (3) Public schools are funded almost exclusively from revenues received from local, state, and federal taxes-public funds-and school administrators are accountable for the proper usage and stewardship of these funds. This course examines the fiscal management concepts and techniques needed by educational leaders in order to plan, control, and evaluate their operations effectively. The primary means for managing the fiscal resources of the district is through the annual budget. Administrators and other educators use the budgeting process to plan educational programs for the upcoming year, to allocate the available funds among competing programs, and to control expenditures in order not to exceed allowable limits. The primary purpose of the course is to acquaint students with the central importance of budgeting in management of schools and districts and to show how mastery of budgeting will make them more effective educational leaders. Procedures for identifying the necessary budgetary activities, as well as constraints, are discussed to provide a management context for the process. Emphasis is placed on the critical, and often neglected, step of formulating expenditure and revenue estimates to teach students how budget numbers are created. Budget modification and analysis techniques are reviewed to provide skills for changing and explaining budget amounts. Monitoring procedures that prevent overexpenditure of budgeted funds are also discussed.

Prerequisite: EDLDR480 or teaching, administrative, or supervisory experience

EDLDR 580: The Use of Theory in Educational Administration
3 Credits

Critical analysis of current theories; problem finding and hypothesis formulation. EDLDR 580 The Use of Theory in Educational Administration (3) This course provides an introduction to problem finding in educational leadership and the development of research problems and hypotheses for conducting systematic inquiries in educational leadership. The focus will first be on the major research paradigms-the structural-functionalist, phenomenological-symbolic interactionist, and critical-constructivist-and on an overview of the kinds of approaches, questions, and problems posed in each. The emphasis will be on developing an understanding and appreciation of the different as well as complementary aspects of each of these research paradigms and the appropriate uses of each for inquiry in support of improved understanding of and practice in education. An integrated agenda of readings, lecture, group discussions and presentations, and completion of a research project will explore and emphasize the relationship and interdependence of all elements of systematic research. Activities are designed to integrate conceptual knowledge and understanding with active and collaborative
participation. This course is designed to provide students with an orderly introduction to and apprenticeship in educational research. Specifically, the objectives of this course, inclusive of both semesters, are: (1) to become familiar with the major research paradigms pertinent to inquiry in educational leadership; (2) to understand the basic tenants, philosophical foundations, and epistemological beliefs of the major research paradigms; (3) to develop an understanding of the different elements involved in the educational research process; (4) to read as widely as possible in relevant literature; and, (5) to explore the research development process by identifying and developing a researchable problem statement and supporting conceptual framework.

**Prerequisite:** EDLDR480, 6 credits in educational leadership

**EDLDR 581: Field Research in Educational Leadership**

3 Credits

Field study and qualitative methods in research on educational organizations. EDLDR 581 Field Research in Educational Leadership (3) This course provides an introduction to the various research methodologies available for conducting inquiry in educational leadership across the three paradigms - structural-functionalist, phenomenological-symbolic interactionist, and critical-constructivist. Specifically, this course will focus on relationships between research questions, the theoretical/conceptual framework, and research methods but focus specifically on the methods for data collection and analysis. Part of the course will focus developing an understanding and appreciation of the different as well as complementary aspects of qualitative and quantitative research methods and the appropriate uses of each for inquiry in support of improved understanding of and practice in education. However, the majority of the course will center on the development of an understanding of the qualitative research skills needed to conduct field research. An integrated agenda of readings, lecture, group discussions and presentations, and completion of a research project will explore and emphasize the relationship and interdependence of all elements of systematic research. Activities are designed to integrate conceptual knowledge and understanding with active and collaborative participation. This course is designed to provide students with an orderly introduction to and apprenticeship in educational research. Specifically, the objectives of this course are: (1) to become familiar with specific research designs and methods used in qualitative research; (2) to read as widely as possible in the relevant qualitative research literature; (3) to become familiar with appropriate field-based research skills for data collection; (4) to conduct field-based research investigating a specific problem related to educational practice; (5) to develop the skills necessary for qualitative data analysis; and, (6) to develop the skills needed for writing qualitative research.

**Prerequisite:** EDLDR480, 6 credits in educational leadership

**EDLDR 582: Reviewing and Editing Education and Policy Journals**

3 Credits

Introduction to education policy journals and the review and editing process; discussion of emerging issues within the academic publishing industry. Cross-listed with: EDTHP 582, HIED 582

**EDLDR 584: Evaluation in Educational Organizations**

3 Credits

Naturalistic and empirical evaluation methods and procedures for educational organizations. EDLDR 584 Evaluation in Educational Organizations (3) This course provides an introduction to the various research paradigms pertinent to evaluation in educational organizations. Part of the course will focus developing an understanding and appreciation of the different as well as complementary aspects of qualitative and quantitative research methods and the appropriate uses of each for inquiry in support of improved understanding of and practice in education. However, the majority of the course will center on the development of an understanding of the qualitative research skills needed to conduct field research. An integrated agenda of readings, lecture, group discussions and presentations, and completion of a research project will explore and emphasize the relationship and interdependence of all elements of systematic research. Activities are designed to integrate conceptual knowledge and understanding with active and collaborative participation. This course is designed to provide students with an orderly introduction to and apprenticeship in educational research. Specifically, this course will focus on relationships between research questions, the theoretical/conceptual framework, and research methods but focus specifically on the methods for data collection and analysis. Part of the course will focus developing an understanding and appreciation of the different as well as complementary aspects of qualitative and quantitative research methods and the appropriate uses of each for inquiry in support of improved understanding of and practice in education. However, the majority of the course will center on the development of an understanding of the qualitative research skills needed to conduct field research. An integrated agenda of readings, lecture, group discussions and presentations, and completion of a research project will explore and emphasize the relationship and interdependence of all elements of systematic research. Activities are designed to integrate conceptual knowledge and understanding with active and collaborative participation. This course is designed to provide students with an orderly introduction to and apprenticeship in educational research. Specifically, the objectives of this course, inclusive of both semesters, are: (1) to become familiar with the major research paradigms pertinent to inquiry in educational leadership; (2) to understand the basic tenants, philosophical foundations, and epistemological beliefs of the major research paradigms; (3) to develop an understanding of the different elements involved in the educational research process; (4) to read as widely as possible in relevant literature; and, (5) to explore the research development process by identifying and developing a researchable problem statement and supporting conceptual framework.

**Prerequisite:** a course in educational administration; a course in basic statistics.

**EDLDR 585: Research Design: Implications for Decisions in Higher Education**

3 Credits

A capstone course on research design and analytical approaches to support decision-making in administration and policy-making. EDLDR 585 / EDTHP 585 / HIED 585 Research Design: Implications for Decisions in Higher Education (3) This course is designed to provide students with basic qualitative and quantitative methods to support decision-making in administration and policy-making. Specifically, the objectives of this course are: (1) to become familiar with the major research paradigms pertinent to inquiry in educational leadership; (2) to understand the basic tenants, philosophical foundations, and epistemological beliefs of the major research paradigms; (3) to develop an understanding of the different elements involved in the educational research process; (4) to read as widely as possible in relevant literature; and, (5) to explore the research development process by identifying and developing a researchable problem statement and supporting conceptual framework.

**EDLDR 586: Qualitative Methods in Educational Research**

3 Credits

Exploration of the theoretical framework undergirding qualitative research and its attendant practices and techniques. EDLDR (EDTHP, HI ED) 586 Qualitative Methods in Educational Research (3) This course is the introductory course in the EPS qualitative research methods sequence. This is the first course in a three-course sequence departmental sequence intended to take students from basic knowledge of qualitative methods through mastery of advanced topics. This course was designed specifically to 1) orient students to the various types of qualitative methods most widely used in educational policy research and their theoretical underpinnings; 2) provide training in basic qualitative research techniques; 3) introduce students to basic research design; 4) provide systematic practice (and feedback) in evaluating qualitative research that would allow students to become sophisticated consumers of qualitative studies; 5) prepare students for the Level 11 course. The course will begin with a brief review of the development of qualitative methods in related fields (anthropology, sociology, linguistics) and quickly move on to an
overview of qualitative methods in education. Students must have read the material prior to class in order to take part in in-class exercises and discussions. We will focus on key issues such as validity, interpretation and representation. Students will be asked to read studies, assess the general quality of the work, and provide a critical evaluation. Students will study specific methods of qualitative field research, and most weeks we will practice and discuss a particular research technique (e.g. participant observation, focus group interviews). These practice sessions will be informed by relevant readings. Students will practice developing coding schemas as well as get a quick overview of qualitative data analysis (QDA) packages. Finally, in small groups, students will design a basic qualitative study to be presented as a final product in the course.

Cross-listed with: EDTHP 586, HIED 586
EDLDR 587: Education Policy and Politics
3 Credits
The political economy and bureaucratic politics of educational organizations, with special attention to the policy making, implementation, and evaluation processes.

Cross-listed with: EDTHP 587, HIED 587
EDLDR 588: Qualitative Methods in Educational Research II
3 Credits
Advanced study of methods involved in executing and analyzing qualitative research in education. EDLDR (EDTHP, HIED) 588 Qualitative Methods in Educational Research II (3) The course will provide practical experience with methods of qualitative data collection, data management, and preliminary data analysis that extends and deepens students' understanding of qualitative research in education. The class, limited to 15 students, will take as the focus with inquiry a common 'site' around which projects of individual and group interest will be designed. Sessions will take place in 'workshop' blocks during which students will present and critique the work of the project. Readings will be interspersed with the practicing of methods. The final project for the course will be the compilation of a synthesized data set that could serve as the basis of further analysis.

Prerequisite: EDLDR 586
Cross-listed with: EDTHP 588, HIED 588
EDLDR 589: Mixed Methods in Educational and Social Scientific Research
3 Credits
This course considers the epistemological and paradigmatic implications of mixed methods research within educational and other social scientific research contexts.

EDLDR 595: Internship
1-15 Credits/Maximum of 15
Guided experience in a school or other educational organization in which the student is not regularly employed, under supervision of a graduate faculty member.

Prerequisite: EDLDR 480, teaching experience and a professional certificate
EDLDR 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

EDLDR 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

EDLDR 597C: **SPECIAL TOPICS**
3 Credits
EDLDR 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

EDLDR 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

EDLDR 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

EDLDR 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

EDLDR 801: Introduction to Teacher Leadership
3 Credits
This course focuses on understanding teacher leadership and its function with the school system. EDLDR 801 Introduction to Teacher Leadership (3) EDLDR 801 Introduction to Teacher Leadership provides an orderly introduction to new conceptions of teacher leadership in schools. The course focuses on three main areas that are foundational to building understandings of teacher leadership. The first of these areas focuses on who teacher leaders are, how they become teacher leaders, and what it is that teacher leaders do. Both formal and informal roles are discussed along with professional and personal qualities that appear to distinguish teacher leaders. Finally, a clear distinction is made between formal administrative leadership, i.e., building principals and their duties, and the role of teacher leaders. The second area uses a systems perspective to focus on the organizational supports and capacities that are necessary for teacher leadership to grow and flourish. At the district level, the focus is on the development of supportive policies and appropriate programs. At the school level, the focus is on developing a culture of continuous learning/continuous improvement in support of teacher leadership. The third area examines not only how one develops teacher leadership but also what is necessary to sustain and nourish it in schools. The focus is on building relationships, distributing power and authority, and aligning with the educational leadership program (EDLDR).
professional learning. These three areas culminate in the development of a practice-based conceptual model of teacher leadership.

EDLDR 802: How Schools Work

3 Credits

Course focuses on understanding schools as learning organizations and how teacher leadership works in such organizations. EDLDR 802 How Schools Work (3) The continuing development of the capacities of schools to become learning organizations is a key aspect of creating capable, competent student learners and effective teachers. A learning organization challenges assumptions, authors and reflects upon essential questions, explores innovative approaches, and through collaborative leadership structures applies these learnings to improve instructional and environmental practices for students and teachers. The objective of this course is to examine four critical areas contributing to the understanding of how schools do work and, most importantly, how they can work, as learning organizations. Effective educational leaders must (1) understand the nature of schools as learning organizations; (2) the significant impact of global social, economic, and demographic changes on schooling; (3) the challenges, opportunities, and constraints of implementing systemic change initiatives; and, (4) the complexities of leadership in such multifaceted organizations as schools.

EDLDR 831: Leadership for Equity and Diversity

3 Credits

Students from culturally, linguistically, socially, and economically diverse backgrounds account for an increasing percentage of the school-age population in the United States. This course serves as an exploration of the school leaders’ role in promoting equity and diversity for all members of the school community. Specifically, this course will focus on policy and theory as they inform the development of leadership practice. This course aims to explore issues related to education, equity, and diversity.

EDLDR 841: Data Informed Leadership

3 Credits

This course focuses on the development of skills related to data use that will help inform administrative and leadership decisions in school settings. The purpose of the course is to build the learner’s knowledge and skills for understanding and using a variety of different forms of data to promote improvements in student outcomes and increased equity. This class will be most relevant to those working in K-12 school settings, particularly those who are engaged in using different forms of data to improve instruction and/or schools.

EDLDR 859: Planned Change for School Improvement

3 Credits

Standards-based reforms of the past have brought about efforts to improve schools and raise student achievement. Initiatives include (but are not limited to): (1) introduction of standards for learning at all levels of K-12 instruction, including the Common Core Standards introduced in 2011; (2) increased requirements for high school graduation; (3) reduced class sizes, especially in the elementary grades; (4) high-stakes state testing and accountability measures. Yet, despite all this activity and attention, significant changes in student achievement and in basic school practices have been slow to transpire. The reasons for slow progress are many and complex. However, one reason is the need for stronger school leaders (including teachers, principals, superintendents, and other educators) who can direct and implement changes in curriculum, instruction, and school organization. There is consensus in the research literature that school improvement and school leadership are largely inseparable—that leadership is a critical element in order for schools to improve. The course addresses three major questions: (1) What is school improvement? (2) What does it involve? (3) How do we do it? To accomplish this, the course focuses on several general models developed for school improvement purposes. It also explores the component pieces of school improvement, including leadership, professional development/professional learning communities, and a focus on teaching and learning including standards, instruction, and assessments. Taken together, this course explores what education leaders need to know and be able to do to strengthen instruction and raise student achievement. If leaders are to nurture better teaching and learning, they will need greater familiarity with promising instructional approaches, new curricular materials, and ways to adapt them to a particular school's circumstances.

EDLDR 861: Principles of Instructional Leadership

3 Credits

The purpose of this course is to provide aspiring leaders with learning opportunities and activities authentic to school leaders and leadership roles in educational organizations. While the course is suited to meet the needs of educators preparing for principal positions in K-12 schools, it also serves to meet the needs of aspiring leaders in specific content areas, including special education leaders and curriculum leaders often employed across K-12 as teacher leaders or administrators. The course focuses on development of leadership skills and dispositions that inform highly effective practices of instructional leaders in education. Throughout the course, students explore and investigate social and institutional settings for instructional leadership, including supervision of instructional staff and the functions, activities, and practices of an instructional leader. Students will continually work to develop and refine leadership dispositions, specifically those that support instructional improvement and high levels of learning for all students. Throughout the course, students are provided with opportunities to apply activities and learning to their specific interests, at all levels of instruction and content within schools and educational organizations. Students are expected to have teaching and/or school administrator experience, 18 credits in education (at least five of which are methods of teaching), and access to a school setting for course activities and projects.

EDLDR 868: The Principalship for Aspiring School Leaders

3 Credits

The Principalship course provides students with knowledge specific to the role of the principal in K-12 schools. The course is intended to help students gain theoretical and practical insight into what it means to be an effective principal. It explores principal leadership responsibilities, decision-making/problem-solving skills, and management practices across levels of K-12 leadership. The course calls on students to read, think, write about, and discuss multiple topics related to the day-to-day challenges of a building leader.

EDLDR 873: Money and Schools: Perspectives, Finance Policies, and Leadership

3 Credits

How we raise money for schools and how we spend that money reflects our values. This course gives students an overview of the values and policies shaping school finance in the United States, with a special
emphasis on the relationship between education funding and equity. Students will also develop their understanding of technical topics in school finance such as how leaders build and maintain a budget. In learning to think critically about funding issues in education, students will consider the relationship between financial management, educational leadership, and organizational change.

EDLDR 876: Law and Education for Educational Leaders

3 Credits

This course will provide an overview of major issues in school law. The course will focus primarily on case law including U.S. Supreme Court decisions as well as relevant state and federal lower court opinions. State legislation and administrative laws will also be considered. Topics to be covered include church/state issues, teacher and student rights, and law associated with equal educational opportunities for various groups including racial and linguistic minorities, individuals with disabilities, and women.

EDLDR 894: **SPECIAL TOPICS**

3 Credits

EDLDR 894 Capstone Inquiry Project (3) EDLDR 894 is the culminating course for the on-line M.Ed. in Educational Leadership with an Option in Teacher Leadership. The course is designed around the presentation of a independent inquiry project that reflects the student's developing understanding of the five leadership strands upon which the program is based. While a good deal of latitude is provided to students in designing their project (usually in conjunction with the First Tier course, CI 501 Teacher Inquiry), course faculty and academic advisors also support and guide the student in project development and continuing work across the program. In addition, several general principles guide and shape the specific project work which continues over the course of the M.Ed. program. In addition to the inquiry project being focused on a problem of practice taken from the student's professional work, the final inquiry project should also give evidence of the following elements: (1) a focus on improvement of schooling practices and/or student learning; (2) the use of current research and instances of exemplary practices; (3) incorporation of authentic learning experiences anchored in practice; (4) the use of an inquiry-based model of learning and reflection; and (5) collaborative work either among on-line program participants or with participants outside the program. A portfolio of evidence pertaining to (1) individuals' reflections on teacher leadership, (2) other forms of documentation of instances of opportunities for teacher leadership, and (3) the development of the individual inquiry project will be maintained across the student's progression through the program and can be incorporated into the presentation of the inquiry project or into the synthesis and reflection paper.

Educational Psychology (EDPSY)

EDPSY 502: Data Analysis Workshop

3 Credits

This course is designed to increase conceptual understanding of basic statistics and proficiency with analytic techniques. EDPSY 502 Data Analysis Workshop (3) This course is designed for students with a desire to increase their conceptual understanding of basic statistics and their proficiency with analytic techniques using educational data sets. Through this course students will increase their knowledge of research methods and analytic strategies. An emphasis is placed on the connections among research design, research questions, analysis strategy, and interpretation of findings to supplement their statistics coursework. The course will be held in a computer lab so students can access a statistical analysis package. This course draws on students' knowledge and skills from research methods and statistics courses. In this elective workshop-style class, students are provided a conceptual review of quantitative statistical analysis. In each session hands-on activities and practice with provided educational data sets allow students to learn techniques and interpretation of conducted analysis. Through this course students become more comfortable with analyzing quantitative data sets. The data sets used in the course include segments of large scale educational data sets as well as smaller data sets that include relevant variables for education or educational psychology. These data sets are either portions of actual sets, or fictitious sets with variables labeled with relevant constructs. There are no general data sets included in the course. Each session starts with a teacher-directed review, followed by a model analysis, and guided practice. Students then practice analyzing and interpreting with provided example data sets. Students exit the course with a set of models to reference in their future work.

Prerequisite: EDPSY406 and EDPSY475

EDPSY 505: Statistical Applications in Educational Research

3 Credits

Statistical techniques for education research including multiple regression, one-way, two-way, and repeated measures ANOVA. Use computer software for statistical analyses.

Prerequisite: EDPSY406

EDPSY 506: Advanced Techniques for Analyzing Educational Experiments

3 Credits

Analytical and experimental control considerations for designs involving nested and/or crossed subjects. Analysis of variance and multiple comparisons via computers. EDPSY 506 Advanced Techniques for Analyzing Educational Experiments (3) The main purpose of this course is to introduce a variety of experimental designs that are used in education and the social and behavioral sciences. Experimental designs involve plans for choosing experimental units, assigning treatments, and collecting measurements. The goal is to design informative studies and carry out powerful analyses to answer research questions within practical constraints. For each design, appropriate statistical analyses including the mathematical model, underlying assumptions, computational routines, and the statistical tests of hypotheses will be covered. Relative advantages and disadvantages of the different designs will be discussed. The course will provide hands-on opportunities to practice data analysis and result interpretation. In light of likely differences in students' academic backgrounds, the course emphasizes conceptual understanding rather than mathematics of the statistical methods.

Prerequisite: EDPSY505 or PSYCH400

EDPSY 507: Multivariate Procedures in Educational Research

3 Credits

Introduction to matrix algebra, computer programming, multiple regression analysis, multiple and canonical correlation, multiple discriminant analysis, classification procedures, factor analysis. EDPSY 507 Multivariate Procedures in Educational Research (3) This course covers analytical techniques in the analysis of variable
relationships. It focuses on regression-based statistical techniques in explaining or predicting outcome variables from other relevant measured variables. Simple and multiple regression analysis of continuous outcome variables and logistic regression analysis of categorical outcome variables will be discussed along with model diagnostics. Other topics considered include applications of discriminant analysis for classification problems, exploratory factor analysis for data reduction and discovering the number of latent dimensions, and if time permits, cluster analysis for identifying patterns of individual responses. The course will provide hands-on opportunities to practice data analysis and result interpretation. The course emphasizes conceptual understanding rather than mathematics of the statistical methods.

**Prerequisite:** EDPSY505 or PSYCH400

EDPSY 512: Group Processes in the Classroom

3 Credits

Basic concepts and perspectives in the study of group processes; instructional group interaction; analysis of classroom behavior.

EDPSY 513: Individual and Group Differences

3 Credits

Description, causes, and interpretation of individual variation over the life-span, with application to school and institutional practices.

**Prerequisite:** EDPSY400 or EDPSY450

EDPSY 515: Foundations of Educational Research

3 Credits/Maximum of 999

Students read the philosophical foundations of education research, study how philosophies influence methodologies, and analyze current educational problems. This course is designed for students entering doctoral programs in the College of Education. Our students are studying to become education researchers within a highly politicized environment. For example, particular definitions of education research and government policies that favor some types of research practices over others provide opportunities for and set limits upon the work of education researchers. Public controversies likewise contribute to challenges faced by education researchers who find their work affirmed or discounted by particular positions. In order to explore these controversies and to allow students to begin identifying their own ‘positionality’ with regard to research, this course begins with a reading of the history and philosophies of education research (primarily focusing on the United States). The course goals are: - to identify underlying assumptions of competing forms of social inquiry, each determined to uncover new knowledge; - to bring those assumptions to bear on education research in chosen fields of study; and - to begin to develop one’s own positions in order to direct further study and research. Specifically, through instructor facilitation and group discussions, students will come to understand major philosophical perspectives that permeate and drive research methodologies in education: positivism, postpositivism, interpretivism, critical theory, poststructuralism, and pragmatism. These understandings allow students to recognize the methodological assumptions that inform published research studies and to discover how methodologies might inform the research they wish to conduct as students and practitioners.

Although the course is not required by any particular doctoral program in the College of Education, it is suggested for students who consider research important to their future careers and who see benefits in exploring the methodological options available.

Cross-listed with: ADTED 515, CI 515, HIED 515

EDPSY 520: Current Issues in Special Education

3 Credits

Explore current issues and research in the field of special education.

**Prerequisite:** SPLED525

Cross-listed with: SPLED 520

EDPSY 521: Learning and Cognition: Educational Applications

3 Credits

This course focuses on understanding human learning and thinking through examining learning theories and research related to educational psychology.

**Prerequisite:** EDPSY421

EDPSY 523: Concept Learning and Problem Solving

3-4 Credits/Maximum of 4

Theoretical-empirical trends in concept learning, problem solving, and creativity related to instructional psychology. EDPSY 523 Concept Learning and Problem Solving (3 to 4 per semester/maximum of 4) This course explores how people acquire knowledge of concepts and the nature of that knowledge. Students will also learn about major models of problem solving and issues related to how people solve problems. The two main topics of the course, concept learning and problem solving, are tied together by exploring how the knowledge that one has influences problem solving and how the experiences of problem solving influence the knowledge that is gained. Students are encouraged to apply the topics of this course to their own areas of study through activities such as selecting relevant research articles, development of a research proposal, and applying research findings to new areas.

**Prerequisite:** EDPSY421 or EDPSY521

EDPSY 524: Theories of Learning and Instruction

3 Credits

Study of major classical theories of learning and recent developments in learning and instructional theory. EDPSY 524 Theories of Learning and Instruction (3) Exploration of major classical and current theories of learning from behaviorism to situated cognition through the reading of original works, extensive overview chapters, and contemporary empirical research. Course content and readings assume that students have prior knowledge or experience with learning theory.

**Prerequisite:** EDPSY421 or EDPSY521

EDPSY 525: Cognitive Processes in Learning from Multiple Representations

3 Credits

Multiple external representations (MERs) refer to instructional materials that contain more than one representation for describing or depicting content. Examples are materials that include two or more representations such as verbal text, formulae, diagrams, graphs, animations, and so
on. This course will also cover materials that include multiple text documents. Regardless of the specific representational combinations used, acquiring knowledge from these representations requires the learner to both comprehend the individual representations and integrate across them, a demand that students often face, but infrequently achieve. This course will cover the major theoretical frameworks used to understand the cognitive processes required for learning from MERs as well as current research addressing these processes.

EDPSY 526: The Psychology of Reading
3 Credits
Psychological principles underlying the process of reading and comprehending, with application to instruction. EDPSY 526 The Psychology of Reading (3)This course explores the psychological processes of reading including topics such as phonological processing, vocabulary development, and comprehension. Students in this course will complete readings that help them to understand the research foundations for these psychological processes of reading and how these processes can be understood in relation to one another. Throughout the course, students will be encouraged to consider how each topic relates to broader considerations in the field of reading. For example, the class may explore how knowledge of psychological processes can be applied to address questions of beginning reading instruction, second language instruction to correlated processes engaged by the learner. The readings and requirements of this course will be shifting continually to keep up with these developments. This course relates various phases of instruction to correlated processes engaged by the learner. The readings will be from the journal literature and/or recent textbooks.

Prerequisite: EDPSY421 or EDPSY521

EDPSY 528: Instructional Psychology
3 Credits
Application to instructional design of current developments in research on human development, information processing, learning strategies, memory structures, instructional processes. EDPSY 528 Instructional Psychology (3) The objective of this course deals with psychological research on mental structures and on the relation of these to learning of basic skills and school subjects exhibiting increasing capability for investigating and implementing emerging principles that meet the complex demands of education and instructional practice. The content and requirements of this course will be shifting continually to keep up with these developments. This course relates various phases of instruction to correlated processes engaged by the learner. The readings will be from the journal literature and/or recent textbooks.

Prerequisite: EDPSY421 or EDPSY521

EDPSY 530: Achievement Motivation
3 Credits
Within a seminar format, this course addresses both theoretical and empirical approaches to motivation and other related affective constructs.

Prerequisite: EDPSY421

EDPSY 550: Design and Construction of Psychological Measures
3 Credits
Lecture-practicum involving planning, construction, administration, and analysis of a psychological test; lectures stress construct validity, item analysis, and predictive validity.

Prerequisite: EDPSY450

EDPSY 554: Theories of Psychological Measurement
3 Credits
Basic true-score and error models; their extensions to test reliability and test validity; problems of item analysis and weighting.

Prerequisite: EDPSY450

EDPSY 555: Validity of Assessment Results
3 Credits
Concepts, issues, and methods of validation of educational and psychological assessment including models and approaches to validation, bias, and utility. EDPSY (CI ED) 555 Validity of Assessment Results (3) The goal of this course is to enable the student to acquire a broad perspective on issues and considerations in the process of validating interpretation and uses of tests, scales, assessment procedures, or protocols. Issues of validity are examined from many perspectives including a review of current dominant and alternative validity theories, of known threats to validity, of some advanced specialized statistical techniques; and of test bias, legal issues, psychological/behavioral issues, social/consequential considerations, and philosophical considerations. Additionally, applications are provided through in-depth cross-cultural and historical studies, technical reviews of published commercial tests, and in-depth examinations of controversies.

Prerequisite: EDPSY406, EDPSY450

Cross-listed with: CIED 555

EDPSY 556: Foundations and Applications of Item Response Theory
3 Credits
Unidimensional models for dichotomously scored and polytomously scored items and their applications in instrument/test development.

Prerequisite: EDPSY450 and EDPSY507

EDPSY 557: Hierarchical Linear Modeling in Educational Research
3 Credits
Statistical techniques for the analysis of multilevel data such as in nested designs or hierarchical data. EDPSY 557 Hierarchical Linear Modeling in Education Research (3) Hierarchical Linear Modeling (HLM) models are particularly important when analyzing data for school settings. This course is designed as an applied statistics course specifically geared to analyzing data from educational settings and using data sets from educational research. Data collected in these ecological contexts with nested designs, such as students enrolled in classrooms, classrooms in schools, and schools within school districts, must be analyzed carefully as relations between and among variables could change given a particular level (e.g., student-level, classroom-level) for analysis. The topics of this course highlight the importance of studying random
versus fixed effects for data collected in multilevel educational research settings. Two-level HLM models, growth-curve models, three-level HLM models, and Hierarchical Generalized Linear Models with binary and ordinal outcomes are the four primary types of models that will be the focus of the class. Students will also learn how to use HLM software to analyze their data given the four types of models. Other topics covered in this class will include: a) centering of independent variables; b) restricted maximum likelihood estimation; c) effect sizes and power analysis; and d) the relevance of educational theory and psychometric analysis in variable selection, and model specification.

**Prerequisite:** EDPSY506 and EDPSY507

**EDPSY 558: Foundations and Applications of Structural Equation Modeling**

3 Credits

Model specification, identification, estimation, evaluation, and modification for measurement models, path models, and full structural models. EDPSY 558 Foundations and Applications of Structural Equation Modeling (3) Structural Equation Modeling (SEM) is considered an advanced multivariate statistical tool. It subsumes general linear models such as ANOVA and regression and can model binary, ordinal, or count data like logistic and Poisson regression. SEM is multi-disciplinary and is most widely used in Social and Behavioral sciences. This course covers foundational issues in Structural Equation Modeling. Path analysis, confirmatory factor analysis, and full structural models will be discussed in terms of model specification, identification, estimation, evaluation, and modification. Students will learn how to specify models of theoretical interest, recognize identification problems, perform model estimation and modification using an SEM software of choice, and defend the final model selected. Examples of model fitting will be illustrated in class with the LISREL program. However, students are encouraged to explore other SEM programs that best suit their skills and research interests. A class project involving the application of the newly acquired techniques is required.

**Prerequisite:** EDPSY406, EDPSY507, and STAT 505

**EDPSY 560: Contemporary Issues in the Evaluation of Educational Programs**

3 Credits

Practical and theoretical issues in the planning, execution, and interpretation of program evaluations.

**Prerequisite:** EDPSY450, EDPSY475

**EDPSY 575: Seminar in Educational Psychology**

1-6 Credits/Maximum of 6

A seminar dealing with specific topics in educational psychology. Open to advanced students in the behavioral sciences.

**EDPSY 576: Research Methods in Teacher Education**

3 Credits

A basis in theory, findings from research, research design, and methodologies related to teacher education.

Cross-listed with: C-S 576

**EDPSY 578: Contemporary Issues in Interdisciplinary Educational Intervention Sciences**

2-3 Credits

Proseminar exploring contemporary issues in the design and evaluation of educational interventions from an interdisciplinary perspective.

Cross-listed with: HDFS 578, PSY 578

**EDPSY 596: Individual Studies**

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

**EDPSY 597: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

**EDPSY 600: Thesis Research**

1-15 Credits/Maximum of 999

No description.

**EDPSY 601: Ph.D. Dissertation Full-Time**

0 Credits/Maximum of 999

No description.

**EDPSY 602: Supervised Experience in College Teaching**

1-3 Credits/Maximum of 6

Teaching of Educational Psychology classes under senior faculty supervision.

**EDPSY 610: Thesis Research Off Campus**

1-15 Credits/Maximum of 999

No description.

**EDPSY 611: Ph.D. Dissertation Part-Time**

0 Credits/Maximum of 999

No description.

**Educational Technology (EDTEC)**

**EDTEC 561: Measuring the Impact of Technology on Learning**

3 Credits

Prepares teachers to evaluate the effects of technology use. EDTEC 561 Measuring the Impact of Technology on Learning (3) This course which will be offered online through Penn State’s ‘World Campus,’ is designed to prepare teachers and other educators to use basic quantitative methods to assess the effects of a variety of technology-related innovations in their own classrooms and schools. It begins with a focus on the various types of learning outcomes, then prepares students to develop the effective tests and scoring tools required to assess them. The course
then introduces the basic statistical concepts and methods, reviews exemplary technology-related quantitative research, and prepares students to design quantitative research studies to be implemented in their own classrooms and schools.

**Prerequisite:** EDPSY421 or equivalent and AEE 521 or equivalent

EDTEC 594: Research Topics

1-9 Credits/Maximum of 9

Supervised student activities on research projects identified on an individual or small-group basis.

**Prerequisite:** EDTEC566 or EDTEC567

EDTEC 595: Internship

1-9 Credits/Maximum of 9

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships.

EDTEC 596: Independent Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, supervised on an individual basis and which fall outside the scope of formal courses.

### Educational Theory and Policy (EDTHP)

**EDTHP 500: Proseminar in Educational Theory and Policy**

3 Credits

An introduction to disciplinary and interdisciplinary studies in educational theory and policy.

**EDTHP 507: Ethnicity, National Identity, and Education**

3 Credits

Surveys group-oriented education policies internationally, especially comparing those of Britain, Taiwan, India.

Cross-listed with: CIED 503, HIED 503

**EDTHP 516: Education and Demographic Change**

3 Credits

Education is one of the most important factors affecting major demographic shifts and processes worldwide, including the first and second demographic transitions. If, as the old sociological adage goes 'demography is destiny' then our destiny is educationally transformed demographic. Interdisciplinary research across demography, sociology, neuropsychology, and epidemiology is developing a strong research literature about how the thinking style, behavior, and attitudes of the educated human radically change fundamental dynamics underlying the world's population. The whole way in which we come to our jobs, spouses, and lifestyles; how many children we have and how we raise them; how long we are likely to live, and what will be our eventual demise are all heavily influenced by how much education we have had. The collective force of widespread education and its influence on rising cognitive abilities, scripts for living, and economic well-being are creating a distinctly new type of human population with major benefits and future challenges for a sustainable human population. At the same time, individuals' schooling is also influenced by demographic change. This seminar covers key concepts, theories, and methodological issues related to the intersection of demographical and cultural changes from the education revolution and their impact on subsequent demographic processes.

Cross-listed with: CIED 516, SOC 516

**EDTHP 518: Analysis of U.S. Educational Policy**

3 Credits

The interaction between educational theory and social structure, focusing on the role of practicing intellectuals in contemporary institutional settings.

**EDTHP 520: Perspectives on Contemporary School Reform**

3 Credits

Examination of contemporary U.S. school reform, with a focus on contrasting theoretical perspectives and the application of policy analysis principles. EDTHP 520 Perspectives on Contemporary School Reform (3) This course examines contemporary U.S. school reform, with several purposes, with a focus on contrasting theoretical perspectives and the application of policy analysis principles. It consists of the following objectives. 1. To gain an appreciation of how school reforms develop, including the rationale behind them and how visions of school change become mediated by social and political contexts as they become policy. 2. To analyze what produces continuity and change in schools and classrooms, including why some reforms persist, why some fade, and why some recur. 3. To gain an understanding that the implementation of school reform is a product of the interaction between the larger context (social, economic, political, ideological, and environmental factors), the character of schools as institutions, and the actions of groups and individuals. 4. To gain and strengthen skills in analyzing a policy argument, its assumptions, and use of evidence in order to construct a coherent and compelling policy analysis of a school reform on your own. The course is an advanced seminar with approximately 15 students enrolled. The course will be offered once in every two-year (4 semester) cycle. Course evaluation includes policy analysis exercises, weekly written responses to readings, responsibility for leading the seminar, and a cumulative research paper examining and analyzing a school reform. Attendance and participation also are part of the course evaluation.

**EDTHP 521: Data Analysis for Education Research**

3 Credits

This course bridges theoretical statistics coursework and practical research with real, large-scale data sets. The course emphasizes hands-on data preparation and analysis using statistical software. More specifically, the course will give an overview of national and international data resources that are available for educational researchers, survey the most widely used data analysis techniques in educational research, and use statistical software and large-scale datasets to produce useful results for educational policy research.

Cross-listed with: EDLDR 521, HIED 521
EDTHP 522: Economics of Education
3 Credits
The aim of the course is to help students view the educational system and students' educational decisions through the lens of economics. We will discuss the methods that economists commonly employ to study education and read recent empirical articles that examine the impact of educational policies and practices. At the end of the semester, we will discuss insights from the field of behavioral economics, which builds on the standard economic model to better understand decision making. This course also surveys the empirical literature on the economics of education which is organized into several broad topics, including human capital and economic return to education, school choice and college access, and education production. Finally, the course covers a variety of econometric methods that are widely used in the economic study of education. These methods include regression models (e.g., ordinary least squares, discrete choice models, Multi-level modeling, panel data models, etc.) and commonly used techniques to deal with self-selection and causal inference (e.g., quasi-experimental methods).

Prerequisite: EDPSY400 and EDPSY406

EDTHP 524: Comparative Education Research Using Large-Scale Data
3 Credits
This course is designed to give students an overview of large-scale international assessment databases and to demonstrate how these databases can be utilized to investigate critical issues in education from a comparative perspective. A number of empirical studies using large-scale international assessment databases will be reviewed, and these analyses will be replicated via computer labs. Students will develop a good understanding of large-scale international assessment databases and will learn to apply an appropriate method to address a particular topic of interest. Students will also develop a wide range of research skills necessary to independently conduct comparative research, including but not limited to formulating a research question, conducting a literature review, analyzing empirical data, and interpreting results. Although the focus is mainly on datasets relevant to education and education policy research, the skills taught in the course are broadly transferable to other social sciences including sociology.

Prerequisite: EDPSY 505; or SOC 574 RECOMMENDED PREPARATIONS: EDTHP 516; or EDTHP 538; or EDTHP 553

EDTHP 527: Testing and Educational Equity
3 Credits
This course considers testing, the reasons that policymakers have widely adopted testing, and implications of testing for educational equity. EDTHP 527 Testing and Educational Equity (3) Results from standardized testing reveal that there are large disparities in test scores that parallel racial and ethnic lines in the U.S. For almost two decades, American policymakers have embraced increased testing in K-12 education as a means of reducing these disparities. The objectives of this course are to help you to understand why testing policies have proliferated, to explore how such policies might or might not affect academic achievement, and to think critically with regard to the policies’ impact on students from diverse racial and ethnic backgrounds. In essence, the course's central question is this: In what ways might testing policies ameliorate or increase disparities across racial and ethnic groups?

EDTHP 533: Social History and Education Policy
3 Credits
Historical study of social dimensions in the formation of education policy.

EDTHP 534: Childhood and Education in Sociological and International Comparative Perspective
3 Credits
The course objective is to use an international comparative lens and sociological perspective to examine the social, cultural, political and economic forces that shape childhood and the role education plays in this process.

EDTHP 536: Studies in Educational Thought
3 Credits
Studies in the historical development of educational theory.

EDTHP 538: Sociology of Education
3 Credits
Provides students with an overview of dominant sociological theoretical perspectives on schools, schooling, and education in modern society. SOC (EDTHP) 538 Sociology of Education (3) This graduate course in the Sociology of Education covers the major sociological theories and empirical research on the role of formal education in society. The object of the course is to have the student become conversant with the main lines of sociological research applied to education and social development at the individual, community, and societal levels. Since sociology of education has had considerable impact on educational policy over the past 50 years, a second goal of the course is to understand this relationship and avenues for future research and policy analysis from a sociological perspective. This course is a central topic in the general study of social stratification and hence in pursuit of the Ph.D. in the Educational Theory and Policy and the Sociology program. The format of the course is a didactic seminar with extensive written assignments as the usual form of evaluation.

EDTHP 541: Contemporary Philosophies of Education
3 Credits
Educational theory and practice in relation to contemporary movements in philosophy. CI ED 541 CI ED (EDTHP) 541 Contemporary Philosophies of Education (3) This graduate seminar explores a range of contemporary philosophies of education viewed from the perspective of different varieties of postmodernism. The study of modern and postmodern western thought is combined with explorations of eastern thought.
including viewpoints that are emerging today in both the northern and southern hemispheres. While focusing on contemporary educational ideas, it traces their roots in classical and non-modern philosophical sources. This look at the present in terms of the past reveals the paradigm shift presented by contemporary postmodern educational thought. In doing so, considerations for the issues of race, class, gender, ecology, multiculturalism and the regeneration of diverse incommensurable cosmovisions, severed or overlooked by some educational philosophers, are explored in their reintegration by contemporary postmodern philosophers of education.

Cross-listed with: CIED 541

EDTHP 542: Civil Rights and Education
3 Credits
Examination of civil rights policies and educational equity in the U.S. from the perspectives of law, social science, accountability policy. Civil Rights and Education will examine civil rights policies and educational equity in the United States from the perspectives of social science, education policy, and law. The aims of the course are to build students’ understanding of the key principles of civil rights policies and the sources of contention in civil rights, and to enhance students’ capacity for participating in issues of civil rights and education through project-based work. We will begin by considering what it means to have an opportunity to learn and how it has been defined. The course will then consider legal and policy developments since the ‘Brown’ decision that have both expanded and constrained the opportunity for certain groups of students. The course is primarily focused on national developments, but does include a focus specifically on educational opportunity in Pennsylvania. The course concludes by considering recent civil rights developments and prospects for the future. Cross Listings: EDLDR 542 will be added as a cross-listed course.

Cross-listed with: EDLDR 542

EDTHP 550: Comparative Education Policy Seminar
3 Credits
Examines the educational policy process world-wide and the influence on schooling of children, youth, and adults in national education systems. CI ED (EDTHP) 550 Comparative Education Policy Seminar (3) In this course students will learn how educational policy is made around the world and how it has been defined. The course will then consider legal and policy developments since the ‘Brown’ decision that have both expanded and constrained the opportunity for certain groups of students. The course is primarily focused on national developments, but does include a focus specifically on educational opportunity in Pennsylvania. The course concludes by considering recent civil rights developments and prospects for the future. Cross Listings: EDLDR 542 will be added as a cross-listed course.

Cross-listed with: EDLDR 542

EDTHP 553: Educational Mobility in Comparative Perspective
3 Credits
Role of education in social mobility, using quantitative, qualitative, and historical methods; focuses comparatively on Britain, East Asia, and South America. CI ED 553/SOC 553/EDTHP 553/HI ED 553 CI ED 553. (SOC 553, EDTHP 553, HI ED 553) Educational Mobility in Comparative Perspective (3)Sociologists interested in higher education have attended to the relationships between postsecondary institutions and other institutions, as well as the impact on higher education of general social and demographic processes. Many of the classical ideas in sociological theory, including those of Max Weber and Emile Durkheim, have surfaced in recent debates over the nature of higher education. Sociologists in the U.S. have explored such questions as: the gatekeeping function of higher education; the impact of universities on stratification; and the socializing environment for women and minorities. This seminar introduces some of the classical theorists and contemporary researchers of the sociology of higher education. All seminar participants will be required to write a sample research proposal, based on the readings from the seminar.

Prerequisite: graduate students only, except with permission of instructor; EDTHP/SOC 416 is recommended
Cross-listed with: HIED 557, SOC 557
EDTHP 565: Causal Inference in Educational Policy Research

3 Credits

This course is designed to help students develop a broad familiarity with the kinds of research designs (e.g., cluster randomized trials) and statistical methods (e.g., propensity score matching, instrumental variables, regression discontinuity) that are helpful in drawing causal inferences in educational policy research.

Prerequisite: EDPSY 505 or SOC 574

EDTHP 580: Improving Educational Writing

3 Credits

Focus on components of high quality academic writing for educational research, with a special emphasis on improving the writing process.

EDTHP 582: Reviewing and Editing Education and Policy Journals

3 Credits

Introduction to education policy journals and the review and editing process; discussion of emerging issues within the academic publishing industry.

Cross-listed with: EDLDR 582, HIED 582

EDTHP 585: Research Design: Implications for Decisions in Higher Education

3 Credits

A capstone course on research design and analytical approaches to support decision-making in administration and policy-making. EDLDR 585 / EDTHP 585 / HIED 585 Research Design: Implications for Decisions in Higher Education (3) By the end of this course you should be able to: (1) Define and explain the following concepts/tools of social science research: The scientific method-Theory and its role, Constructs and variables, Hypotheses and relations, Experimental designs, Quasi-experimental designs and Ex post facto designs. Sampling theory and designs-Survey designs and methods, Approaches to data collection, Measurement reliability and validity, Quantitative analytical designs, and Ethical practices. (2) Apply these concepts/tools in designing a study relating to educational research. (3) Effectively critique both the theoretical bases and methods of a journal article or report of research or policy analysis. (4) Prepare a sound research proposal.

Prerequisite: EDPSY400, EDPSY406, or AG 400, or SOC573

Cross-listed with: EDLDR 585, HIED 585

EDTHP 586: Qualitative Methods in Educational Research

3 Credits

Exploration of the theoretical framework undergirding qualitative research and its attendant practices and techniques. EDLDR (EDTHP, HI ED) 586 Qualitative Methods in Educational Research (3) This course is the introductory course in the EPS qualitative research methods sequence. This is the first course in a three-course sequence departmental sequence intended to take students from basic knowledge of qualitative methods through mastery of advanced topics. This course was designed specifically to 1) orient students to the various types of qualitative methods most widely used in educational policy research and their theoretical underpinnings; 2) provide training in basic qualitative research techniques; 3) introduce students to basic research design; 4) provide systematic practice (and feedback) in evaluating qualitative research that would allow students to become sophisticated consumers of qualitative studies; 5) prepare students for the Level 11 course. The course will begin with a brief review the development of qualitative methods in related fields (anthropology, sociology, linguistics) and quickly move on to an overview of qualitative methods in education. Students must have read the material prior to class in order to take part in in-class exercises and discussions. We will focus on key issues such as validity, interpretation and representation. Students will be asked to read studies, assess the general quality of the work, and provide a critical evaluation. Students will study specific methods of qualitative field research, and most weeks we will practice and discuss a particular research technique (e.g. participant observation, focus group interviews). These practice sessions will be informed by relevant readings. Students will practice developing coding schemas as well as get a quick overview of qualitative data analysis (QDA) packages. Finally, in small groups, students will design a basic qualitative study to be presented as a final product in the course.

Cross-listed with: EDLDR 586, HIED 586

EDTHP 587: Education Policy and Politics

3 Credits

The political economy and bureaucratic politics of educational organizations, with special attention to the policy making, implementation, and evaluation processes.

Cross-listed with: EDLDR 587, HIED 587

EDTHP 588: Qualitative Methods in Educational Research II

3 Credits

Advanced study of methods involved in executing and analyzing qualitative research in education. EDLDR (EDTHP, HI ED) 588 Qualitative Methods in Educational Research II (3) The course will provide practical experience with methods of qualitative data collection, data management, and preliminary data analysis that extends and deepens students' understanding of qualitative research in education. The class, limited to 15 students, will take as the focus with inquiry a common 'site' around which projects of individual and group interest will be designed. Sessions will take place in 'workshop' blocks during which students will present and critique the work of the project. Readings will be interspersed with the practicing of methods. The final project for the course will be the compilation of a synthesized data set that could serve as the basis of further analysis.

Prerequisite: EDLDR586

Cross-listed with: EDLDR 588, HIED 588

EDTHP 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects including non-thesis research, supervised on an individual basis and which fall outside the scope of formal courses.

EDTHP 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.
EDTHP 600: Thesis Research
1-15 Credits/Maximum of 999
No description.
EDTHP 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.
EDTHP 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
This class enables doctoral students to gain experience in college teaching under the supervision of a course instructor.
EDTHP 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.
EDTHP 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

**Electrical Engineering (EE)**

EE 500: Colloquium
1 Credits
Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

EE 510: Linear Integrated Circuits
3 Credits
Design of monolithic, thin-film, and hybrid linear integrated circuits; D.C., video, tuned, r.f., and microwave applications. Emphasis on reliability.

**Prerequisite:** E E 410 ; E E 441

EE 520: Electro Optics–Systems and Computing
3 Credits
Synthetic aperture radar, spatial light modulators, optical interconnection, optical computing, neural networks, and medical optics imaging.

**Prerequisite:** E E 420

EE 521: Fiber Optics and Integrated Optics
3 Credits
Theories and applications of linear and nonlinear optical phenomena in optical fibers and integrated optical devices.

**Prerequisite:** E E 421

EE 522: Electro-Optics Laboratory
3 Credits
Basic concepts and fundamentals of light diffraction, optical signal processing, and holography.

**Prerequisite:** E E 420

EE 524: Lasers and Optical Electronics
3 Credits
Study of several advanced nonlinear optical phenomena, laser propagation, optical and optoelectronic devices, principles, and applications.

**Prerequisite:** E E 424

EE 526: Nonlinear Optical Materials
3 Credits
Mechanisms of polarization nonlinearity, nonlinear optical processes and analyses, optoelectronic materials and their device application. E E (MATSE) 526 Nonlinear Optical Materials (3) Nonlinear Optical Materials is a course that will generally be offered in spring semesters. It is designed for students who are interested in the materials science-related interdisciplinary electronics/electro-optic engineering areas to provide an essential understanding of the mechanisms of the polarization nonlinearity in electronic materials as well as the principles of operation of these materials in various photonic and optoelectronic applications (e.g., frequency conversion, optical control/communication, and information storage). Analytical methods utilizing the electromagnetic wave theories and tensor operations will be covered in this course to treat anisotropic nonlinear optical materials for their wave-matter interaction processes and to enable device designs. Technological issues in research and development of advanced optoelectronic devices using nonlinear optical materials are discussed with students’ participation. Students wishing to take this course should be familiar with optical properties of materials and basic tensor notations.

**Prerequisite:** E E 420 or MATSE435

EE 531: Engineering Electromagnetics
3 Credits
Electromagnetic field theory fundamentals with application to transmission lines, waveguides, cavities, antennas, radar, and radio propagation.

**Prerequisite:** E E 430

EE 534: Conformal Antennas
3 Credits
Introduction to advanced analysis and design techniques as well as applications for conformal antennas mounted on planar and curved surfaces. E E 534 Conformal Antennas (3) E E 534 provides an introduction to the rapidly growing field of conformal antennas. Analysis and design techniques are presented for conformal antennas mounted on planar as well as curved surfaces. Important applications of conformal antennas are also discussed with emphasis on their recent popularity as wireless PCS, GPS, and body-born antennas. Microstrip antenna design projects will be assigned, where students will gain valuable experience.
using one or more commercially available industry-standards modeling codes. E E 534 is the third and most advanced course in a three-course sequence of antenna engineering courses: E E 438 (Antenna Engineering, E E 538 (Antenna Engineering) and E E 534. E E 534 will be taught every other fall semester, with an anticipated enrollment of 20-30 students.

**Prerequisite:** E E 538

EE 535: Boundary Value Methods of Electromagnetics

3 Credits

Theory and application of boundary value problems in engineering electromagnetics; topics include microwave and optical waveguides, radiation, and scattering.

**Prerequisite:** E E 430 or E E 432 or E E 438 or E E 439

EE 537: Numerical and Asymptotic Methods of Electromagnetics

3 Credits

Finite difference time domain, geometric theory of diffraction and method of moments applied to antennas and scattering.

EE 538: Antenna Engineering

3 Credits

In-depth studies of synthesis methods, aperture sources, broadband antennas, and signal-processing arrays.

**Prerequisite:** E E 438

EE 541: Manufacturing Methods in Microelectronics

3 Credits

Methods, tools, and materials used to process advanced silicon integrated circuits.

**Prerequisite:** E E 441

EE 542: Semiconductor Devices

3 Credits

Characteristics and limitations of bipolar transistors, diodes, transit time, and bulk-effect devices.

**Prerequisite:** E E 442

EE 543: Ferroelectric Devices

3 Credits

Theoretical background of ferroelectric devices, practical materials, device designs, drive/control techniques, and typical applications.

EE 544: Micromechatronics

3 Credits

Theoretical background of solid state actuators, practical materials, device designs, drive/control techniques and typical applications.

EE 545: Semiconductor Characterization

3 Credits

Physical principles and experimental methods used to characterize the electrical, optical, structural and chemical properties of semiconductor materials.

Cross-listed with: MATSE 545

EE 546: Field-Effect Devices

3 Credits

The physical background, characteristics, and limitations of surface field-effect and junction field-effect devices and related structures.

**Prerequisite:** E E 442

EE 547: Dielectric Devices

3 Credits

Applications of insulator physics and devices based on insulator properties.

**Prerequisite:** E E 442

EE 549: Acoustic Wave Devices

3 Credits

Examines materials commonly used for acoustic wave devices, fundamentals of acoustic waves and resonance modes, and characteristics of these devices. E E 549 Acoustic Wave Devices (3) E E 549 is an elective in the field of electronic and photonic materials. Solid state acoustic wave devices based on piezoelectric, ferroelectric, and microelectromechanical systems (MEMS) have a broad range of applications including chemical and biological sensors, electromechanical sensing and transduction, resonators and wave guides for material characterization and health monitoring, filters in telecommunication systems, and optic communications. The course will cover commonly used materials and phenomena for acoustic wave devices, characteristics of different waves and vibration modes, device configurations, their main characteristics and applications, as well as design considerations. Students will learn the key features and materials commonly used for acoustic wave devices, main acoustic mode and their characteristics, important device configurations, the equivalent circuits for acoustic wave modes and devices, and examples of the device applications. Students will also acquire basic skills in selecting acoustic wave devices for specific applications, in designing and characterizing acoustic wave devices for different applications, and in finding suitable available materials and/or phenomena for the acoustic wave device. This course will count as an elective for electrical engineering students in the electronics and photonics sub-discipline. Students wishing to take this course should be familiar with electronic circuit design and solid state devices.

**Prerequisite:** E E 310 and E E 442

EE 550: Foundations of Engineering Systems Analysis

3 Credits

Analytical methods are developed using the vector space approach for solving control and estimation problems; examples from different engineering applications. E E (M E) 550 Foundations of Engineering Systems Analysis (3)
Systems Analysis (3) This 3-credit course is offered at the first-year graduate level and provides a systems-theoretic background for more advanced graduate courses in the disciplines of engineering and science. The course uses the vector space approach to develop the analytical foundations for solutions of science and engineering problems in diverse application areas such as optimal control, estimation, and signal processing. First, the theoretical foundation of vector spaces, function spaces, and Hilbert spaces are developed. Linear transformations are then introduced, followed by the Reisz-Frechet theorem and Hahn-Banach theorem, with applications to optimization problems. Spectral analysis is then covered. Finally, diverse applications of these various techniques are presented throughout this course to illustrate the wide range of engineering problems that can be solved using the vector space approach.

**Prerequisite:** MATH 436
Cross-listed with: ME 550

EE 551: Wavelets and Sparse Signal Representations
3 Credits

Recommended Preparations: Linear algebra This course provides the foundation to understand and use wavelets and sparse signal representations. In particular, it develops sparse representations as an evolution of the discrete wavelet transform. Students will recognize, identify, and apply sparse and wavelet representations methodology to specific signal processing projects. Students will be shown multiple real world applications within this area and guided to apply the methodologies combined with their own domain knowledge.

**Prerequisite:** EE 453

EE 552: Pattern Recognition and Machine Learning
3 Credits

This course is a comprehensive overview of the fields of pattern recognition and machine learning. The content covers both classification and recursion, model selection, decision theory, information theory, linear and non-linear models, graphical models, kernel methods, mixture models and EM as well as neural networks. It assumes no previous knowledge of pattern recognition or machine learning concepts. Knowledge of multivariate calculus and basic linear algebra is required, and some familiarity with probability would be helpful.

**Recommended Preparations:** Multivariate calculus, linear algebra, probability
Cross-listed with: CSE 583

EE 553: Topics in Digital Signal Processing
3 Credits

Parametric modeling, spectral estimation, efficient transforms and convolution algorithms, multirate processing, and selected applications involving non-linear and time-variant filters.

**Prerequisite:** E E 453

EE 554: Topics in Computer Vision
3 Credits

Discussion of recent advances and current research trends in computer vision theory, algorithms, and their applications.

**Prerequisite:** CMPEN454 or E E 455
Cross-listed with: CSE 586

EE 555: Digital Image Processing II
3 Credits

Advanced treatment of image processing techniques; image restoration, image segmentation, texture, and mathematical morphology.

**Prerequisite:** CMPEN455 or E E 455
Cross-listed with: CSE 585

EE 556: Graphs, Algorithms, and Neural Networks
3 Credits

Examine neural networks by exploiting graph theory for offering alternate solutions to classical problems in signal processing and control.

EE 557: Multidimensional Signal Processing
3 Credits

Multidimensional sampling, weak causality, recursibility, multidimensional transforms, stability, global and local state-space models, multidimensional filters, and multidimensional spectrum estimation.

**Prerequisite:** E E 453

EE 560: Probability, Random Variables, and Stochastic Processes
3 Credits

Review of probability theory and random variables; mathematical description of random signals; linear system response; Wiener, Kalman, and other filtering.

**Prerequisite:** E E 350 ; STAT 418

EE 561: Information Theory
3 Credits

Mathematical measurement of information; information transfer in discrete systems; redundancy, efficiency, and channel capacity; encoding systems.

**Prerequisite:** E E 460 ; STAT 418

EE 562: Detection and Estimation Theory
3 Credits

Detection decision theory, Bayes and Neyman-Pearson criteria, optimal receivers, classical estimation theory, signal-noise representations, optimum linear signal parameters estimation.

**Prerequisite:** E E 560
techniques are presented and analyzed. Students will be evaluated by initiate hard or soft handoffs, link quality measurement techniques are (GSM) and CDMA cellular systems are covered. Finally, in order to BLAST systems. As examples of mobile cellular architectures, TDMA performance over fading channels are reviewed next, followed by a techniques used in wireless mobile applications and associated are presented. Outage probability evaluation is detailed. Modulation next part of the course covers cells, COST231-Hata, and Walfish-Ikegami models as well as path loss for loss models in macro-cells such as Okumura-Hata and outdoors micro-cells, COST231-Hata, and Walfish-Ikegami models as well as path loss for indoor micro-cells are then detailed. The next part of the course covers fundamental limits introduced by co-channel interference, as multiple path) phenomena. Examples of Rayleigh, Rician, and Nakagami fading are determined. This is followed by methods for developing laboratory fading channel simulators for both single- and multiple-pathschannel models, including the laboratory simulation of shadowing. Conventional path-loss models in macro-cells such as Okumura-Hata and outdoors micro-cells, COST231-Hata, and Walfish-Ikegami models as well as path loss for indoor micro-cells are then detailed. The next part of the course covers fundamental limits introduced by co-channel interference, as multiple lognormal interferers are introduced. Specifically, Fenton-Wilkinson, Schwartz and Yeh, Farley’s methods and a numerical comparison are presented. Outage probability evaluation is detailed. Modulation techniques used in wireless mobile applications and associated performance over fading channels are reviewed next, followed by a detailed investigation of diversity and combining techniques. TDMA and CDMA Cellular systems are presented next. Topics covered here include: Spread spectrum systems including direct sequence, frequency hopping, fading channel applications, RAKE receiver concepts, multi-input-multi-output (MIMO) systems using antenna arrays, space-timecoding and BLAST systems. As examples of mobile cellular architectures, TDMA (GSM) and CDMA cellular systems are covered. Finally, in order to initiate hard or soft handoffs, link quality measurement techniques are discussed. Optimal resource allocation in terms of channel assignment techniques are presented and analyzed. Students will be evaluated by means of assignments (25%), a mid-semester examination (35%), and a final examination (40%). The course will be offered every other spring, with an anticipated enrollment of 15-30 students.

**Prerequisite:** E E 460; E E 560

EE 568: Digital Communications I

3 Credits

Linear and nonlinear digital modulation techniques; performance in additive Gaussian noise channel; continuous phase modulation; carrier acquisition and recovery.

**Prerequisite:** E E 460; Concurrent: E E 560

EE 569: Digital Communications II

3 Credits

Baseband pulse transmission; baseband systems optimization; bandlimited channels performance in ISI; equalization; MLSE and ISI; fading channels; diversity; CDMA.

**Prerequisite:** E E 560; E E 568

EE 573: Constitution of the Ionosphere

3 Credits

Properties of neutral and ionized atmosphere above 60 km; photochemical processes; solar, meteoric perturbations of the ionosphere; large-scale movements in ionization.

EE 574: Propagation Through Random Media

3 Credits

RF/optical wave propagation through turbulent, turbid, and heterogeneous media (atmosphere/ionosphere/sea). Impacts and mitigation discussed for various scenarios.

**Prerequisite:** E E 430 or E E 439 or E E 477 or PHYS 457

EE 576: Inversion Techniques in Remote Sensing

3 Credits

Introduce skills to address a wide variety of inverse problems such as found in atmospheric sensing, geosciences, and acoustics.

**Prerequisite:** E E 430 or E E 439 or E E 477; STAT 418

EE 578: Radar Systems

3 Credits

This course provides a general understanding of radar systems at the graduate level, building upon material covered in undergraduate courses in electromagnetics, signals and systems, and antenna theory. In particular, it investigates the theory of radar systems and subsystems, and continues with the analysis of the radar equation, target detection in noise, and clutter phenomena. It includes radar techniques to enhance high range resolution of targets such as pulse compression. It also considers radar tracking, synthetic aperture radar, radar polarimetry, target recognition, scattering process, radar signal processing, electronic counter-measure techniques, and laser radar. Building on these concepts, students will understand the usage and applications of various types of
radar system designs. Students will understand propagation, multi-path, and clutter phenomena and their effects on radar system performance. Students will recognize, identify, and apply proper radar techniques and apply these techniques to a variety of remote sensing radar applications.

EE 430 and ( EE 432; EE 438; EE 439 ) and ( EE 453; EE 460 )

EE 579: Microwave Radar Remote Sensing

3 Credits

Scientific and engineering principles of microwave radar remote sensing of land, sea, and the atmosphere.

**Prerequisite:** E E 430 or E E 438 or E E 439 or E E 473

EE 580: Linear Control Systems

3 Credits

Continuous and discrete-time linear control systems; state variable models; analytical design for deterministic and random inputs; time-varying systems stability.

**Prerequisite:** E E 380

EE 581: Optimal Control

3 Credits

Variational methods in control system design; classical calculus of variations, dynamic programming, maximum principle; optimal digital control systems; state estimation.

**Prerequisite:** E E 580

EE 582: Adaptive and Learning Systems

3 Credits

Adaptive and learning control systems; system identification; performance indices; gradient, stochastic approximation, controlled random search methods; introduction to pattern recognition.

**Prerequisite:** E E 580

EE 584: Robust Control Theory

3 Credits

Fundamentals of Robust Control Theory with emphasis on stability, performance analysis, and design.

**Prerequisite:** E E 580 or M E 555

Cross-listed with: ME 558

EE 585: Convex Optimization

3 Credits

This course is designed to provide students with necessary skills to recognize or build convex optimization problems coming from diverse application areas and to solve them efficiently. It consists of five parts: 1) convex sets, 2) convex functions, 3) convex optimization, 4) algorithms and 5) real life applications. In the first part, important examples of convex sets will be given and the operations that preserve convexity of sets will be discussed. The second part will focus on convex functions, their basic properties, and the operations that preserve convexity of functions. In the third part, which is built on the first two parts, convex optimization problems will be formally introduced along with important examples ranging from linear and quadratic to semi-definite programming; second, Lagrange duality and optimality conditions will be covered. The fourth part will focus on the algorithms to solve convex problems and on their computational complexity. In the fifth part, various applications will be covered.

**Prerequisite:** IE 505

Cross-listed with: IE 585

EE 587: Nonlinear Control and Stability

3 Credits

Design of nonlinear automatic control systems; phase-plane methods; describing functions; optimum switched systems; Liapunov stability; special topics in stability.

**Prerequisite:** E E 380

Cross-listed with: ME 559

EE 588: Power System Control and Operation

3 Credits

Steady-state and dynamic model of synchronous machines, excitation systems, unit commitment, control of generation, optimal power flow.

**Prerequisite:** E E 488

EE 589: Smart Grid Control and Dynamics

3 Credits

This course covers the application of advanced power electronics in power apparatus. The first step is to understand the design of power electronics systems for smart grids. The course starts with an overview of DC/DC converters and covers the controller design for DC/DC converters. Next, voltage source converters and control designs for voltage source converters are covered. Electrical machines are the main components of the smart grid system. Therefore, operation and modeling of AC machines are very important in modern smart grid systems. The additional topics to be covered in this course are: simplified model of an induction machine connected to the grid, modeling and analysis of doubly fed induction generators used in wind farms, modeling and control of permanent magnet synchronous machines, and modeling and analysis of transformers. Next, an overview of mathematical modeling of solar energy systems is provided and different control methodologies are discussed. Next, the state space modeling is covered and the concepts of eigenvalue analysis, Bode plots, and Nyquist stability criterion are implemented to analyze different generation units. Impedance modeling is another technique used to investigate the interactions between renewable energy sources and grids. The basics of impedance modeling technique are covered and case studies are defined to derive the impedance of voltage source converters in smart grids. Dynamic phasor modeling is another technique used to investigate the stability of a dynamic system, especially in unbalanced systems. The main components of dynamic phasor modeling are discussed and an analysis approach is covered to model renewable energy sources in smart grids.
EE 594: Research Projects
1-9 Credits/Maximum of 9
Supervision of individual research projects leading to M.S. or M.Eng. papers. Written and oral reports are required.

EE 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects including non-thesis research which are supervised on an individual basis and which fall outside the scope of formal courses.

EE 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

EE 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

EE 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University.

**Energy and Mineral Engineering (EME)**

EME 501: Design Under Uncertainty in Energy and Mineral Systems
3 Credits
This class is designed to present a broad range of tools for evaluating energy projects, technologies, and systems. Topics will include project evaluation methods (NPV, discounting), tools for decision/design under uncertainty (Monte Carlo simulation, decision trees, lattices, real options), optimization (linear programming, stochastic programming), and economics/markets/regulation (review of microeconomics, market failures, regulation, and market design). Students will focus both on the intuition and appropriate application of the various methods and theories.

EME 504: Foundations in Sustainability Systems
3 Credits
Theoretical background of sustainability issues and studies of sustainability systems.

EME 511: Interfacial Phenomena in Energy and Mineral Systems
3 Credits
The boundary between two phases, the interface between the phases (referred to as the ‘interface’) has very different properties from that of the bulk phase and such interfaces are important in a variety of energy, chemical, and mineral engineering processes. The interface may control transport between the phases, e.g., liquid-liquid extraction, reaction at the interface, e.g., heterogeneous catalysis, or accumulation of a component from one of the bulk phases, e.g., adsorption. All of these are examples of interfacial phenomena relevant to energy conversion, mineral extraction, and oil recovery processes. Course topics are drawn from physical and interfacial chemistry to address engineering and applied science needs in fuel science, fossil fuel recovery, renewable fuel processing, mineral processing, environmental science, and health. Topics include interfacial forces, phase behavior, adsorption/desorption, reaction kinetics, and solution chemistry. The applications of these subjects in various fields such as reservoir engineering, fuel science, mineral separations, reacting flows, and water systems will also be covered.

EME 521: Mathematical Modeling of Energy and Mineral Systems
3 Credits
This class develops the understanding of methods of modeling used for important physical and chemical phenomena involved in energy and mineral engineering systems. These include both separate and mixed solid (solid mechanics) and fluid (computational fluid mechanics)
systems, including reactive components. The emphasis is on finite element methods but also includes other continuum methods (LBM, SPH), integral methods, and discontinuum methods. Students will develop working programming modules of simple-through-complex models of interactive physical systems and research materials on some form of computational methods.

**Prerequisite:** EGEE 510

EME 522: Computational Methods for Electric Power Systems Analysis

3 Credits

This course covers the formulation of and solution methods for a full range of economic-engineering investment and operations problems for electric power systems. Application problems include economic dispatch, unit commitment, optimal power flow, generation capacity expansion, transmission expansion, and modeling of competitive electricity markets. Solution methods include linear programming, mixed integer programming, decomposition methods for stochastic programming (e.g., Lagrangian Relaxation, Benders Decomposition), and mixed complementarity problems, with an emphasis on numerical implementation.

**RECOMMENDED PREPARATIONS:** It is recommended that students be familiar with or have taken EME 501, IE 505, or an equivalent graduate-level course in math programming.

EME 523: Stochastic Optimization Methods of Energy and Environmental Systems

3 Credits

This course covers the theory and implementation of computational methods for stochastic simulation and stochastic optimization, with an emphasis on algorithms and implementation. The course emphasizes the quantitative analysis or numerical modeling of complex systems in fields such as civil, environmental, energy, mechanical, and industrial engineering or energy, environmental, and natural resource economics. Topics include Monte Carlo simulation, quasi-random and pseudo-random sampling methods, Markov Chains, Dynamic Programming, Approximate Dynamic Programming, and Stochastic Programming decomposition techniques.

**RECOMMENDED PREPARATIONS:** It is recommended that students be familiar with or have taken EME 501, IE 505, or an equivalent graduate-level course in math programming.

EME 524: Machine Learning for Energy and Mineral Engineering Problems

3 Credits

This course provides an overview of the application of machine learning algorithms to problems in energy and mineral engineering. The course addresses the strengths and weaknesses of various machine learning approaches, as well as appropriate testing and validation techniques for these complex models. Topics include machine learning applications in regression, classification, design optimization, and risk analysis. An emphasis of this course is for students to apply these methods to specific research problems of interest. Students with some background in statistics, but no previous formal training in machine learning algorithms will find this course most useful.

**RECOMMENDED PREPARATIONS:** Students are recommended to have had some previous basic training in statistics and experience with at least one programming language.

EME 525: Theory and Practice of Policy Analysis for Engineers

3 Credits

The course provides a broad introduction to analytical methods commonly used in science, technology, and energy policy analysis.

EME 526: Solar Utility and Portfolio Management

3 Credits

EME 526 covers the theoretical frameworks and quantitative methods for evaluating and designing solar resource projects. Methods will include quantitative solar resource measurement, forecasting, uncertainty quantification, dynamical systems modeling, and game theoretic models. Students will compare and assess alternative theoretical and quantitative approaches in terms of their ability to address a range of important objectives, including economic, technical constraints, robustness to uncertainty, varying risk preferences of stakeholders, and other ethical and cultural considerations. The course utilizes data sets and modeling resources drawn from actual case studies to provide students context in which to apply and evaluate the methods.

EME 527: Stochastic Modeling of Spatial Variability in Energy and Environmental Systems

3 Credits

This course covers the theory, methods, and implementation of modeling spatial variability and uncertainty with special consideration of the structure of energy, natural resource, and environmental system models. The course draws heavily upon geostatistical methods, and covers random functions, Semivariograms, Kriging, spatial simulation, and data assimilation into spatial simulation models.

EME 531: Thermodynamics of Energy and Mineral Systems

3 Credits

This course presents linear and non-linear irreversible thermodynamics as a means to explore the coupling between physicochemical, kinetic, and transport processes. Linear irreversible thermodynamics will be illustrated by well-known and practical phenomena such as Seebeck effect (thermocouple), Peltier effect (dehumidifier), Soret effect (thermal diffusion), etc. Non-linear irreversible thermodynamics will be used for demonstrating the phenomena of bifurcation, self-organization, and dissipative structures that take place in nature and human society. The self-organizing economy will also be discussed to show how the far-from-equilibrium thermodynamics can be applied to some economic phenomena.

EME 541: Electrochemical Science and Engineering Fundamentals

3 Credits

Fundamentals of electrochemical science and engineering based on electrochemical thermodynamics and kinetics. EME 541 Electrochemical Science and Engineering Fundamentals (3) The course focuses on the fundamental concepts of electrochemical science and engineering based on thermodynamics and kinetics. The course provides a synopsis of
a variety of electrochemical systems and processes and shows their applicability for a number of industrial applications.

EME 551: Safety, Health and Environmental Risks in Energy and Mineral Production
3 Credits

In the energy and minerals sector, safety, health, and environmental concerns have increased in importance to engineering, operations, and applied research. Contemporary experience has demonstrated that the integration of these priorities into the conceptualization, development, and management of energy and mineral technologies is essential. This course will begin with a few case studies of high-profile disasters to foster a broad understanding of the similar managerial, organizational, behavioral, and technical factors that led to these disasters. The balance of the course will be devoted to study of effective approaches to analyzing, mitigating, and managing risk (qualitative and quantitative), behavioral/psychological dimensions (e.g., cognitive workload and risk biases), and the application and validation of interventions to achieve goals. The intent of this course is to give students an understanding of the challenges and successful approaches that should be part of every project and operation.

EME 570: Catalytic Materials
3 Credits

Preparation and characterization of solid catalytic materials and the relationships between their surface, defect, and electronic properties and catalytic activity. MATSE (EME) 570 Catalytic Materials (3) This course covers the preparation and characterization of solid catalytic materials, and the relationships between the surface and electronic properties and pore structure of the materials and their catalytic activity and selectivity. The course includes the following materials: zeolites and molecular sieves; metals and alloys; metal oxides; metal sulfides; and other catalytic materials. Also included are the major applications of catalytic materials in chemical and petroleum industries and other manufacturing industries for environmental protection. This course can be grouped into three parts: (1) introduction to catalysis and analytical techniques; (2) synthesis and characterization of catalytic materials; and (3) catalysis at surfaces of solid materials. The course is suitable for a broad spectrum of students in energy and mineral engineering, materials science and engineering, fuel science, chemical engineering, chemistry, solid-state science, and environmental engineering.

Prerequisite: CHEM 452 or similar course in chemical, materials or energy sciences and engineering
Cross-listed with: MATSE 570

EME 580: Methodology of Research in EME
3 Credits

Analysis of the methodology of the research process through a discussion of the methodology of reading and writing peer-reviewed publications. The students will learn how to more efficiently understand and explain the results available in the published literature, so that they can apply this methodology to organize, present, and discuss their own results by applying the essential principles of research ethics and integrity.

Prerequisite: EME 500

EME 581: Research and Geostatistics Methods
3 Credits

Presents methods essential for the conduct and analysis of scientific research and spatial characterization in energy and mineral engineering disciplines.

EME 589: Management and Design of Renewable Energy and Sustainability Systems
3 Credits

Most professional opportunities within renewable energy and sustainability systems require working in interdisciplinary teams on complex problems. This course will use a case-study approach to provide realworld management, and leadership, and research experiences and utilize the technical, economic, and ethical concepts learned in other course work in the field of renewable energy and sustainable systems (RESS). Following an intensive session on project management, team dynamics, and leadership, students will identify a team and external company or another stakeholder with a challenge relevant to the program. The teams will then conduct research evaluate alternatives, assess feasibility, and complete a detailed techno-economic analysis for their case. This analysis will serve as a platform from which to define sustainability metrics, evaluate alternatives, and assess feasibility and complete life-cycle and environmental impact analysis as part of the final design. Projects outcomes will be presented to both external stakeholders, and peers, and program faculty for constructive feedback that will be incorporated in the project final report.

Prerequisite: EME 504 , EME 801 , EME 802 , and BIOET533

EME 590: Colloquium
1-3 Credits/Maximum of 3

Continuing seminars that consist of individual lectures by faculty, students or outside speakers on energy and mineral engineering issues.

Cross-listed with: PNG 590

EME 596: Individual Studies
1-9 Credits/Maximum of 12

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

EME 597: Special Topics
1-9 Credits/Maximum of 12

Formal courses given on a topical or special interest subject which may be offered infrequently.

EME 597B: Geomechanics
2 Credits

Discussion of current and foundational research contributions in Geomechanics including ongoing work by current students.
EME 597C: Creating University/Industry Collaboration
2 Credits
This course will provide students hands-on experience designing research programs to address external market needs that will lead to enhanced Penn State / external collaboration. Classroom lectures will cover topics important for design a new technology program.

EME 600: Thesis Research
1-15 Credits/Maximum of 999
Thesis research culminating into the doctoral degree in Energy and Mineral Engineering.

EME 601: Thesis Preparation
0 Credits/Maximum of 999
Thesis research after successful comprehensive exam culminating into the doctoral degree in Energy and Mineral Engineering.

EME 801: Energy Markets, Policy, and Regulation
3 Credits
Structure and function of energy markets; existing and emerging environmental regulations; decision-making by energy companies.

EME 802: Renewable and Sustainable Energy Systems
3 Credits
An overview of renewable energy technologies and sustainable energy system analysis.

EME 803: Applied Energy Policy
3 Credits
Provides in-depth exploration of energy policy development, implementation, and assessment at multiple governmental and corporate scales with emphasis on energy markets.

EME 805: Renewable Energy and Nonmarket Enterprise
3 Credits
Industry perspective on the resources, technologies, engineering approaches and externalities involved in deploying renewable energy businesses profitably and sustainably.

EME 807: Technologies for Sustainability Systems
3 Credits
This course examines strategies and applications of sustainable technologies in manufacturing, energy, water, transportation, food, and building systems.

EME 810: Solar Resource Assessment and Economics
3 Credits
Applications of solar thermal energy (STE) including district heating/cooling (buildings), industrial process heating, fuel synthesis, desalination, and materials processing.
Prerequisite: EME 810

EME 811: Utility Solar Power and Concentration
3 Credits
Technical and theoretical background for utility scale solar energy conversion technologies to generate electric power.
Prerequisite: EME 810

**Energy, Environmental, and Food Economics (EEFE)**

EEFE 510: Econometrics I
3 Credits
Econometrics is concerned with using aspects of economic theory, mathematics, and statistical inference to analyze economic phenomena and relationships. This course approaches econometrics with three broad considerations: 1. The role of econometrics in theoretical and applied economics; 2. The theoretical basis of econometrics; 3. The applied use of econometrics. Topics include general linear model, multicolinearity, specification error, autocorrelation, heteroskedasticity, restricted least squares, functional form, dummy variables, limited dependent variables.
Prerequisite: ECON 490; STAT 462; STAT 501

EEFE 511: Econometrics II
3 Credits
Econometrics II builds on the foundations of EEFE 510 to provide students with a good understanding of econometric methods that are frequently used in the empirical literature. Topics include endogeneity and moment-based estimators, linear systems of equations, maximum likelihood estimation, models for qualitative and limited dependent variables, models for time series data, models for panel data and treatment evaluation. This course is geared towards students who are interested in conducting empirical research on topics in applied economics and related fields.
Prerequisite: EEFE 510

EEFE 512: Applied Microeconomic Theory I
3 Credits
This course covers basic principles of microeconomic theory with the use of calculus. The emphasis is on applied theory and problem solving, rather than formal proofs and derivations. By developing knowledge of microeconomic theory and economic reasoning skills, the goal of the course is to provide a foundation for more advanced courses and for applied research at the graduate level. Students who successfully complete this course should understand and be able to apply the microeconomic theory needed to solve applied economic problems in the following areas: Consumer choice and demand; Producer choice
and supply; Choice under uncertainty; Strategic decision-making (game theory); The functioning of competitive and monopolistic markets; General equilibrium and welfare analysis.

EEFE 519: Resource and Environmental Economics I
3 Credits
This course gives students an overview of essential theories and methods used in the economic analysis of natural resources. Objectives are to provide students with a command of theory and methods needed to teach the field and to conduct contemporary research. Topics include dynamic resource systems; dynamic optimization; nonrenewable resource theory; the Hotelling model; stock pollution externalities; common property; and option values.

Prerequisite: EEFE 512; ECON 502

EEFE 527: Quantitative Methods I
3 Credits
This is a course in quantitative economics and its applications, with heavier emphasis on linear models and how they relate to microeconomic theory in both static and dynamic settings. The first part of the course reviews the foundations of the mathematical analysis with the goal of modeling feasibility; i.e., the set of possible choices. This prepares us to next move to modeling the optimal choice with an extended presentation on optimization theory and application in the static setting. The final part of the course moves on to the methods for engaging in dynamic optimization.

Prerequisite: EEFE 512; ECON 502

EEFE 529: Foundations of Economic Welfare Analysis
3 Credits
How do we know which forms of economic organization are preferred to others? How do we evaluate who wins and loses within the economic sphere? How do we know when the allocation of goods and services by the economic system is societally optimal? How do we define what is societally optimal? When do government policies improve societal welfare and when do they worsen it? How do we measure societal welfare? When should governments intervene in the economic system and to what extent? How large should the economic system be relative to the natural system? How much should present generations consume relative to future ones? Welfare economics is a branch of economics that seeks to answer these questions. In this course we will develop the concepts and tools needed to do so. Our primary focus will be on evaluating the efficiency and equity implications of public policies using modern theory and empirical methods. In the first part of the course we review the ways in which we can and cannot quantify the welfare of economic agents. We begin by reviewing the foundations of microeconomic theory which we use to analyze how the welfare of economic agents is altered due to exogenous changes in prices and/or income. Using these welfare measures, in the second part of the course we examine how public policies affect the welfare of economic agents using tools from public finance. Since our ultimate goal is applying welfare theory to empirical questions we will also review in part the empirical methods and tools required for conducting state of the art research in this area.

Prerequisite: ECON 510, ECON 512

EEFE 530: Applied Microeconometrics II
3 Credits
This course is designed to: (1) expose students to the most common econometric and statistical techniques used in applied microeconomic research and (2) give students an overview of the different types of micro data and the most common methods used to manipulate these data to create additional data sets and variables. The course is divided into three broad parts. The first part of the course focuses on computational, data, and methodological issues. The second and third parts of the course are divided equally between reduced-form/treatment effects methods and structural choice models and methods and other nonlinear structural and quasi-structural models. Each of the topics in the second and third part make use of the methods learned in the first part.

Prerequisite: EEFE 512, EEFE 510

EEFE 531: Applied Microeconometrics I
3 Credits
In this course, we will study microeconometrics, a subfield that encompasses specification as well as a variety of estimation, computational, and simulation methods that allow us to pursue specification and parameterization of econometric models suitable for analyzing micro-level data. We will see that these methods support an enriched basis for examining the validity of microeconomic theory, and also extend the analytics feasibly tackled by microeconomics. At the micro-level of empirical analysis, we will see our theory predicts high frequencies of corner solutions, abrupt switching, and discontinuities. In each case, these predictions are also apparent in micro data. Together, these conditions call for methods that go beyond simple continuous choice functions and equilibria often found adequate for aggregate static and dynamic modeling. Knowledge of these new methods is essential to empirical learning in most areas of contemporary applied microeconomics. These methods evolved to support the active application of microeconomic theories of micro-level behavior (e.g. discrete choice, corner solutions, cusp in dynamic paths) as well as to address peculiar features of micro-level data such as error-in-measurement, availability of only binary or polychotomous indicators of continuous variables, and substantial heterogeneity. Theory is relied upon to specify models prior to estimation, to specify characteristics of data sets, and to interpret results.

Prerequisite: ( EEFE 512; ECON 502 ) and ( EEFE 510; ECON 501 ) and ( EEFE 511; ECON 510 )

EEFE 532: Applied Computational Economics
3 Credits
Economists often find themselves in situations where closed-form solutions do not exist or econometric estimation is inappropriate due to data limitations or the nature of the problem. In these cases, numerical approaches, using computer-based methods, may be an economist's best option. In this course, we will explore four topics in the field of computational economics: computable general equilibrium modeling, growth modeling, uncertainty and formal monte carlo analysis, and agent-based modeling. The overall goal of this course is to provide students with an in-depth understanding of computational economics so that they are prepared to build unique mathematical models to address complex situations that have not yet been encountered. Students should have
successfully completed a graduate-level course in microeconomic theory prior to enrolling in this course.

**Prerequisite:** EEFE 512

EEFE 535: Empirical Analysis in Food Marketing

3 Credits

This is the first course in the Ph.D. field sequence in Industrial Organization, including applications to food marketing. Industrial Organization is the applied study of firms and markets. IO typically focuses on differences across firms and markets, implying the need for a rich set of models. The course presents a series of models of increasing realism and complexity. At each stage, we review the relevant theory as a starting point and then do a detailed study of the empirical application of that theory to real world data with a discussion of the implications for economic policy in areas such as anti-trust, and environmental and food policy analysis.

**Prerequisite:** EEFE 512, EEFE 510

EEFE 536: Economics of Food Behavior and Health

3 Credits

A course in microeconomic consumer theory and estimation, and other economic approaches to consumer behavior, including applications to food and health. The core of the course will cover the microeconomic theory of the consumer and demand estimation. However, other topics relevant to consumer/household behavior may be discussed, such as Duality Theory, Integrability, Function Forms (Linear Expenditure System, Linear Demand, AIDS model, Translog Model, Rotterdam Model, EASI), Price Indices, Flexibility, Incorporating Demographics and Equivalence Scales, Separability, Intertemporal Choice, Household Production, Intrahousehold Allocations, Zeroses Problem, Aggregation, Savings Decisions, Behavioral/Neuroeconomics, Labor Supply, Hedonic Models, Useful Data Sets.

**Prerequisite:** (EEFE 510; EEFE 511; ECON 521) and EEFE 512

EEFE 541: Resource and Environmental Economics II

3 Credits

This course is designed to give students an overview of the field of Environmental Economics. The objectives of this course are to provide students with a basic understanding of the theoretical and methodological foundations used in Environmental Economics, and to explore recent advances in areas of contemporary policy interest.

**Prerequisite:** EEFE 511, EEFE 512

EEFE 550: International Economic Development and Agriculture

3 Credits

This course applies economic analysis to problems of economic development and growth. The course covers the economics of traditional (Malthusian) societies, transitions to modern economic growth, fertility and population growth, investments and intergenerational transmission in human capital, human capital and economic growth, and internal migration and structural transformation. Students who successfully complete this course will be able to demonstrate understanding of, articulate, and use in their own research economic models, theories, and applied research in these topics related to developing countries.

**Prerequisite:** EEFE 510, EEFE 512

EEFE 590: Colloquium

1-3 Credits

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

EEFE 600: Thesis research

1-15 Credits/Maximum of 999

Thesis research

EEFE 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

Ph.D. Dissertation Full-Time

**Energy, Environmental, and Mineral Economics (ENNEC)**

ENNEC 540: Economic Analysis of Energy Markets

3 Credits

This course uses economic analysis to explain the history of world energy and its regulation since 1945.

**Prerequisite:** ECON 502

ENNEC 560: Mineral and Energy Finance I

3 Credits

Introduction to theory of finance and application of financial tools to commodity market analysis. Emphasis on mineral and energy markets.

**Prerequisite:** approval of the department

ENNEC 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research which are supervised on an individual basis and which fall outside the scope of formal courses.

ENNEC 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

**Engineering (ENGR)**

ENGR 501: Engineering Leadership for Corporate Innovation

3 Credits/Maximum of 999

Traditional and contemporary leadership theory is analyzed to determine effective strategies for leading projects and innovation within an engineering context. This course focuses on concepts and theory related
to the study of leadership in an engineering context. Traditional and contemporary leadership theory will be analyzed to determine effective strategies for leading technical projects and innovation. Based on current literature and research into effective engineering leadership, students will focus on understanding concepts related to: technical communication, optimization of engineering teams, and diffusion of innovation. Financial concepts and Lean Sigma practices will be assessed for effective engineering leadership decision-making. Specific topics addressed related to the engineering leadership concepts include leadership in organizations, communications in the workplace, customer focus in organizations, financial knowledge, workforce focus in organizations, and operational excellence. Students who successfully complete this course will be able to: distinguish leadership theory relevant to an engineering context; recognize commonalities of leaders in successful organizations; explain concepts for how innovation is diffused throughout a corporate culture; define communication concepts relevant for leading change in a diverse technical environment; and recognize the ethical and social implications of engineering work in a global environment. The overall objective for this course is to provide theoretical understanding and practice of leadership and innovation in technical contexts within the global business environment.

ENGR 594: Master's Paper Research
1-3 Credits/Maximum of 3

Investigation of a specific engineering problem and development of a scholarly written report in partial fulfillment of requirements for a master's degree in engineering.

ENGR 595A: Engineering Internship
1 Credits/Maximum of 4

ENGR 595A ENGR 595A Engineering Internship (1 per semester/maximum of 4) This course will provide students with an opportunity to apply fundamental skills and academic concepts in a professional laboratory, industry, or government agency setting within the United States. The final grade (Pass/Fail) will be based on the final report submitted by the student, and by mid-point and final evaluations submitted by the employer. This course will be offered fall, spring, and summer, and may be repeated.

Full-Time Equivalent Course

ENGR 595I: International Engineering Internship
0.5-4 Credits/Maximum of 4

ENGR 595 ENGR 595I International Engineering Internship (1 per semester/maximum of 4) This course will provide students with an opportunity to apply fundamental skills and academic concepts in a professional laboratory, industry, or government agency settingoutside of the United States . The final grade (Pass/Fail) will be based on the final report submitted by the student, and by mid-point and final evaluations submitted by the employer. This course will be offered fall, spring, and summer, and may be repeated.

Full-Time Equivalent Course

ENGR 596: Independent Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

ENGR 597: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

ENGR 597C: **SPECIAL TOPICS**
3 Credits

ENGR 600: Thesis Research
1-15 Credits/Maximum of 999

No description.

ENGR 802: Engineering Across Cultures and Nations
3 Credits

Explores cultural differences and impact on business practices and team dynamics working on virtual project teams with global partner universities. Engineering Across Cultures and Nations is a core course in the Engineering Leadership and Innovation Management graduate program and focuses on the primary knowledge areas and essential competencies required for successful engineers to live and work in today's global marketplace. Within the context of engineering, the course will examine individual and cultural differences and how they impact communication and team dynamics. Students who complete the course will be able to understand sources of conflict that can arise from multicultural teams and effectively use the tools and resources discussed in class to manage individual and team motivation and minimize or effectively deal with conflict, while harvesting the benefits of diversity as they work on a real world virtual team project. Within an engineering context, students who complete this course will be able to: demonstrate a proficiency in team-building, leadership, and service; construct creative solutions to engineering issues incorporating cultural differences among team members, suppliers, and customers; critically analyze personal and team-member competencies and biases; formulate and apply strategies to improve team dynamics, compose effective feedback, recognition, motivation, and corrective guidance for international/ intercultural team members; evaluate business opportunities within international and cross-cultural markets; and examine moral, ethical, and legal dilemmas in cross-cultural environments. These topics will be explored in an engineering context through engineering projects, guest lecturers, and discussions. The overall objective of this course is to provide students with a conceptual understanding of the impacts of multi-cultural influence on engineering problems and the leadership theory applicable for effective team performance.

ENGR 804: Engineering Product Innovation
3 Credits

Develop competencies for leading new product/process development or participating in corporate spin-outs using entrepreneurial skills within a corporation. This course focuses on the development of the
Engineering Design (EDSGN)

EDSGN 507: Systems Thinking

3 Credits
The theory and practice of systems thinking. General systems theory, system dynamics, emergent properties, structure, feedback and leverage.

Cross-listed with: SYSEN 507

EDSGN 547: Designing for Human Variability

3 Credits
Statistics, optimization, and robust design methodologies to design products and environments that are robust to variability in users.

Cross-listed with: ME 547

EDSGN 548: Interaction Design

3 Credits
Strategies in user-centered design, ergonomic product analysis, statistical data analysis, low and high fidelity prototyping, and innovative design techniques. EDSGN 548 Interaction Design (3) Interaction Design provides an integrative perspective on the types of human-centered design techniques that can be used to analyze existing consumer products and develop innovative solutions. In this class, students will learn qualitative (e.g., observations and surveys) and quantitative methods (e.g., emg sensing and eye tracking) to measure user interactions. This knowledge will be used develop design recommendations for future products. The material will be presented through a variety of hands-on activities including a semester long interaction design project which requires students to evaluate an existing product using human-centered design techniques, develop solutions based on interaction design principles, prototype solutions, and evaluate their designs in a formal user study. Upon completion of this course, students will be able to identify appropriate research methods (quantitative and qualitative) for guiding interaction design decisions, conduct a user study, and develop design recommendations based on interaction design principles.

Prerequisite: EDSGN 547 or IE 479 or IST 501 or equivalent

Cross-listed with: IE 548

EDSGN 549: Design Decision Making

3 Credits
Complexity of design-making; state-of-the-art methods and tools. EDSGN (IE) 549 Design Decision Making (3) Students in this course will internalize the importance of information and decision-making in design; understand the complexities due to uncertain information, multi-person decision making, technology obsolescence, competitive priorities; become familiar with state-of-the-art methods and tools for design decision-making; and, demonstrate the application of this knowledge in the context of a collaborative design project. Learning in this course will be facilitated in an 'apply what you have learned' fashion with ample opportunities for students to demonstrate their learning through in-class participation, discussion of solved problems, hands-on design projects. Strategies, methods, and means of the design process will be discussed and practiced to include such things as understanding client needs, generating design concepts, and evaluating design ideas.

Cross-listed with: IE 549

EDSGN 558: Systems Design

3 Credits
Systems engineering, principles, practices, and applications of systems engineering in analysis, design, development, integration, verification and validation of complex systems. EDSGN 558 Systems Design (3) The course is intended for engineering students who aspire to careers in systems design and those who wish to broaden their knowledge so as
to address systems problems. The principal objectives of this course are: (1) to bring systems theory, systems thinking, systems engineering, and systems management together into a single framework and to integrate them such that successful system design is possible; and (2) to immerse the student in the principles, practices, and application of systems engineering through selected readings, textbook study, lectures, and homework assignments and as members of a multidisciplinary systems development team on a systems design project. The course is designed to immerse students in the principles, practices and application of systems engineering within the design, development, integration and deployment of complex systems. Students will learn the special functions and responsibilities of systems engineers in comparison to analysts, design specialists, test engineers, project managers and other members of the systems development teams. They will acquire the knowledge, skills and mindset necessary to be successful as part of a major system development project and will acquire the leadership, problem-solving and innovation skills necessary for success. The objective of this course is to immerse traditional engineering students in the principles, practices, and application of systems engineering and design through selected readings, textbook studies, lectures, homework assignments, and a team design project. This course begins with an overview of systems engineering as a discipline, which prepares the student for the course topics/modules that follow. The course addresses the 'hows' and 'whys' of systems analysis, design, and development. Students will: 1) learn how to bridge the gap between capturing user needs and the development of systems by honing skills in the technical activities of systems analysis, systems design, and systems development; 2) learn how to translate abstract visions of the stakeholders and users into a language of specifications, architectures, and designs to direct the system hardware and software development activities resulting in a system that satisfies user needs without latent defects, delivered on schedule, within budget, and profitable for the developing entity; 3) acquire an understanding of systems engineering as a problem-solving solution development discipline that requires a comprehensive understanding of how to analyze systems and how systems are organized, structured, defined, and employed by the user; and, 4) apply the knowledge gained from these lessons toward the analysis, design, and development of a system as members of a multi-disciplinary team.

EDSGN 561: Data Mining Driven Design

3 Credits

The study and application of data mining/machine learning (DM/ML) techniques in multidisciplinary design. CSE 561 / EDSGN 561 / IE 561 / IST 561 Data Mining Driven Design (3) This course examines how theoretical data mining/machine leaning (DM/ML) algorithms can be employed to solve large-scale, complex design problems. Knowledge Discovery in Databases (KDD) is the umbrella term used to describe the sequential steps involved in capturing and discovering hidden, previously unknown knowledge in large databases. The course begins with foundational information regarding engineering design and provides an overview of KDD and the emergence of the digital age. Students will investigate data acquisition and storage techniques where they will learn the difference between stated and revealed data as related to design. Students will construct their own databases and learn essential techniques in data base queries (SQL) and management. Data transformation techniques, such as binning and dimensionality reduction, will be examined in the data transformation section of the course. This course has a design-driven focus, which will enable students to solve real-life design challenges spanning diverse domains. Students will work on project-based exercises aimed at proposing novel data mining algorithms, or employing existing algorithms to solve design problems in fields relating to engineering, healthcare, financial markets, military systems, to name a few. Data visualization techniques will also be studied to help communicate complex data mining models in a timely and efficient manner.

Cross-listed with: CSE 561, IE 561, IST 561

EDSGN 562: Design for Additive Manufacturing

4 Credits

Additive manufacturing (AM, colloquially 3D printing) is rapidly changing the face of modern manufacturing. This layer-by-layer manufacturing approach allows for parts to be created with significant levels of complexity and in cost-effective small batches, with reduced raw material waste when compared with traditional manufacturing processes. This technology has given rise to the need for Design for Additive Manufacturing (DFAM) techniques capable of accounting for both the possibilities and restrictions offered by AM in product design. However, due to the relative youth of the technology, understanding of how to properly establish and evaluate these design considerations is still evolving. In this course, students will be exposed to research in the field of DFAM that aims to establish an understanding of both opportunistic possibilities (e.g., lattice structures, topology optimization, and mass customization) and quantify restrictive limitations (e.g., minimum feature size and support material removal) when designing products for creation with additive manufacturing. The material will be presented through a combination of literature investigations and design exercises viewed through the lens of research in the DFAM field. The objectives of the course include describing the role that DFAM plays in the greater field of additive manufacturing, identifying similarities and differences between existing DFAM approaches and frameworks, synthesizing opportunistic DFAM approaches and how they improve product quality and novelty, identifying and quantifying restrictive DFAM considerations through experimentation, and identifying and discussing key areas of future research to advance the field of DFAM.

CONCURRENT: IE 527

Cross-listed with: AMD 562

EDSGN 581: Engineering Design Studio I

3 Credits

Cross-disciplinary teams learn in a studio environment to consider broad aspects and context of engineering design activities. EDSGN 581 Engineering Design Studio I (3) Students examine engineering design from a broad perspective, including design thinking, systems design, and societal contexts. Students bring together many disparate aspects of their previous engineering and non-engineering experiences and investigate new aspects. The material will be presented through a variety of hands-on activities including design projects. Current and best industry practices will also be examined. This course provides a unique opportunity to explore material from many engineering fields and other disciplines within the context of design. This course is a precursor to Engineering Design Studio II (i.e., EDSGN 582). The course will be taught using a studio model.

EDSGN 582: Engineering Design Studio II

3 Credits

Cross-disciplinary teams in an engineering design studio environment with project emphasis on technical and analytical depth. EDSGN 582 Engineering Design Studio II (3) The course is a continuation of
Engineering Design Studio I (i.e., EDSGN 581) and will be conducted using a studio model. The course requires students to bring together the many disparate aspects of their previous engineering and non-engineering experiences. The course material will be presented through a variety of hands-on activities including design projects. Current and best industry practices will also be studied. Students will integrate the depth and breadth of their engineering and personal experiences and focus on analysis and performance prediction throughout the life cycle of the design.

**Prerequisite:** EDSGN581

EDSGN 585: Engineering Design Portfolio

1 Credits

Preparation of a portfolio summarizing the student’s experience with engineering design research and practice. EDSGN 585 Engineering Design Portfolio

1 Industries seeking to fill positions in engineering design frequently ask for a portfolio representing the applicant’s work. In this course, students will work with a faculty mentor (i.e., course instructor) to create a design portfolio that reflects the depth of their research and design experience. The portfolio consists of two parts: a detailed white paper or report and a short graphical summary. The graphical summary represents the breadth of the student’s experience. Students will reflect on their experiences, identify critical milestones, opportunities for growth, and successes and present these experiences as vignettes in their portfolio. Those examining this element of the portfolio will gain insight into the growth and talent of the engineering designer it represents. The portfolio is mutually beneficial - for the students and the prospective employer.

**Prerequisite:** EDSGN582

EDSGN 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

EDSGN 594: Research Topics

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

EDSGN 595: Internship

1-9 Credits/Maximum of 9

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

EDSGN 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

EDSGN 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

EDSGN 599: Foreign Studies

1-2 Credits/Maximum of 4

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EDSGN 600: Thesis Research

1-15 Credits/Maximum of 999

No description

EDSGN 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

**Engineering Management (ENGMT)**

ENGMT 501: Engineering Management Science

3 Credits

Mathematical models involving optimization, simulation and forecasting to provide quantitative solutions to engineering management problems; scheduling, distribution, inventory control.

ENGMT 510: Economics and Financial Studies for Engineers

3 Credits

Economic feasibility of projects, systems and products. Project budgets, estimation, return on investment, supply and demand, and earned value management.

ENGMT 511: Engineering for Energy and the Environment

3 Credits

Engineering analysis of new technologies with environmental consideration leading to alternative energy sources and sustainable development.

ENGMT 530: Engineering Law

3 Credits

Overview of the legal system and legal issues applied to engineering: contracts, bidding, proposals, torts, professional liability, the intellectual property.

ENGMT 539: Engineering Management Strategy

3 Credits

Project- and discussion-based capstone to the engineering management program.
**Prerequisite:** 27 credits in the engineering management program

ENGMT 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

ENGMT 841: Application of Statistics in Quality and Continuous Improvement in Engineering Activities

3 Credits/Maximum of 999

Application of quality tools to improve products and processes including lean processes and six sigma principles. ENGMT 841 is about learning to apply sophisticated statistical tools for the continuous improvement of products and processes in the manufacturing and service industries. Students will learn how to identify defects (nonconformance to specifications) and provide appropriate solutions that will not only eliminate defects, but also improve the performance. They will be able to take samples from the population, apply appropriate statistical tools and relate the sample characteristics to the population. Students will also apply various control charts to identify the variations in the process and be able to separate the common and special cause variations. Students will be expected to apply the various phases of LEAN and Six Sigma methodologies to a project that will identify various non-value added activities and improve the product or process performance.

ENGMT 897: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

**Engineering Mechanics (EMCH)**

EMCH 500: Solid Mechanics

3 Credits

Introduction to continuum mechanics, variational methods, and finite element formulations; application to bars, beams, cylinders, disks, and plates. E MCH (M E 560) 500 Solid Mechanics (3) This course introduces students to the fundamental principles and basic methods used in solid mechanics. Using indicial notation and integral formulations provides a foundation for more advanced study in continuum mechanics (E MCH 540) and finite element analysis (E MCH 560) specifically and in mechanics in general. The materials behavior is restricted to linear elastic and the emphasis is on stress analysis. Students are expected to have an understanding of elementary mechanics of materials (such as E MCH 013). The course objectives are to: 1) provide students with a firm foundation in solid mechanics. 2) Introduce continuum mechanics concepts, variational methods, and the formulation used in finite element analysis. 3) Enable students to formulate and solve the boundary value problems commonly encountered in the analysis of structures. The study of solid mechanics starts with the definition of stress and strain and how the two are related by material law. Field equations that relate strain to displacement, ensure a single valued displacement field, and the balance momentum are formulated. These are partial differential equations that can only be solved subject to known boundary and initial conditions. The field equations and boundary conditions comprise a boundary value problem that is usually difficult to solve exactly. Variational methods are used to bound or approximate the solution. The finite element method employs variational methods to formulate generic elements and is a computational tool for solving boundary value problems for complex geometries.

Cross-listed with: ME 560

EMCH 501: Mechanics in Emerging Electronics for Biomedicine

3 Credits

Recent advances in electronics enable powerful biomedical devices that have greatly reduced therapeutic risks by monitoring vital signals and providing means of treatment. Conventional electronics today are formed on the planar surfaces of brittle wafer substrates and are not compatible with the complex topology of body tissues. Therefore, stretchable and absorbable electronics are the two missing links in the design process of implantable monitors and in-vivo therapeutics. Mechanics design strategies present unique opportunities to address the challenges in such a potential medical device that (a) integrates with human physiology, and (b) dissolves completely after its effective operation. In this course, we will apply mechanics strategies to address challenging issues in emerging electronics, with examples ranging from sensors for temperature/ strain/ hydration/ electrophysiological monitoring to integrated systems that can serve as human-machine interfaces. This course covers a broad range of topics related to the mechanics strategies for the emerging electronics in biomedicine, including manufacturing techniques for biomedical devices, mechanics of thin films for flexible electronics, perturbation method for stretchable electronics, bending and buckling analysis in the design of flexible and stretchable electronics, energy method for stretchable electronics, and introduction to fracture mechanics for transfer printing.

EMCH 507: Theory of Elasticity and Applications

3 Credits

Equations of equilibrium and compatibility; stresses and strains in beams, curved members, rotating discs, thick cylinders, torsion and structural members.

**Prerequisite:** E MCH213

EMCH 514: Engineering Science and Mechanics Seminar

1 Credits/Maximum of 99

Current literature and special problems in engineering mechanics.

Cross-listed with: ESC 514

EMCH 516: Mathematical Theory of Elasticity

3 Credits

Fundamental equations and problems of elasticity theory; uniqueness theorems and variational principles; methods of stress functions and displacement potential; applications.

**Prerequisite:** E MCH540
EMCH 520: Advanced Dynamics
3 Credits
Dynamics of a particle and of rigid bodies; Newtonian equations in moving coordinate systems; Lagrange’s and Hamilton’s equations of motion; special problems in vibrations and dynamics.  
Prerequisite: EMCH 212 , MATH 250

EMCH 521: Stress Waves in Solids
3 Credits
Recent advances in Ultrasonic Nondestructive Evaluation: waves; reflection and refraction; horizontal shear; multi-layer structures; stress; viscoelastic media; testing principles.  
Prerequisite: EMCH 524A , EMCH 524B  
Cross-listed with: ACS 521

EMCH 523: Ultrasonic Nondestructive Evaluation
3 Credits
Methods, techniques, applications of Ultrasonic Nondestructive Evaluation wave propagation; signal processing and pattern recognition applied to UNDE; practical laboratory demonstrations.

EMCH 524A: Mathematical Methods in Engineering
3 Credits
Special functions, boundary value problems, eigenfunctions and eigenvalue problems; applications to engineering systems in mechanics, vibrations, and other fields.  
Prerequisite: MATH 250 or MATH 251

EMCH 524B: Mathematical Methods in Engineering
3 Credits
Boundary-value problems in curvilinear coordinates, integral transforms; application to diffusion, vibration, Laplace and Helmholtz equations in engineering systems.  
Prerequisite: EMCH 524A , EE SC 404 , or MATH 411

EMCH 524C: Mathematical Methods in Engineering
3 Credits
Green’s functions applied to problems in potentials, vibration, wave propagation and diffusion with special emphasis on asymptotic methods.  
Prerequisite: EMCH 524B , EE SC 406H , or MATH 412

EMCH 527: Structural Dynamics
3 Credits
Dynamic behavior of structural systems; normal modes; input spectra; finite element representation of frameworks, plates, and shells; impedance; elastic-plastic response.  
Prerequisite: EMCH 470 or EMCH 571

EMCH 528: Experimental Methods in Vibrations
3 Credits
Investigation of one or more degrees of freedom, free and forced mechanical vibrations, vibration properties of materials, nondestructive testing.  
Prerequisite: EMCH 470 or EMCH 571

EMCH 530: Mechanical Behavior of Materials
3 Credits
Engineering materials mechanical responses; stress/strain in service context of temperature, time, chemical environment; mechanical testing characterization; design applications.

EMCH 532: Fracture Mechanics
3 Credits
Stress analysis of cracks; stable and unstable crack growth in structures and materials; materials fracture resistance.  
Prerequisite: EMCH 500

EMCH 533: Scanned Image Microscopy
3 Credits
Imaging principles, quantitative data acquisition techniques, and applications for scanned image microscopy are discussed. EMCH 533 Scanned Image Microscopy (3) Scanned Image Microscopy comprises advanced techniques yielding new information in the form of highly resolved micro- and nano-scale images of surfaces and sub-surfaces of materials. The objectives of the course are (1) to endow students with a basic understanding of the principles behind scanned image microscopy, (2) to impart them skills to operate the high-resolution equipment, and (3) to train them to interpret the images obtained. Thus the course includes presentation of imaging principles (i.e. basic physics and design of instruments including the sensors), quantitative data acquisition techniques (including error analysis) and applications of scanned image microscopy. The course not only emphasizes scanning acoustic microscopy and ultrasonic atomic force microscopy, but it also includes environmental scanning electron microscopy and scanning laser confocal microscopy. These four microscopy techniques are too advanced to be routine and are intended for advanced characterization on the nano- and micrometer scales.  
Prerequisite: EMCH 440

EMCH 535: Deformation Mechanisms in Materials
3 Credits
Deformation of crystalline/amorphous solids and relationship to structure; elastic, viscoelastic and plastic response over a range of temperatures and strain rates. EMCH 535 / MATE 564 Deformation Mechanisms in Materials (3) The course will study the relationship between the deformation mechanisms in materials and their structure. The types of deformation behavior considered in the course are linear elasticity (isotropic or anisotropic), viscoelasticity and plastic deformation. For the elastic behavior, the emphasis will be on the way elastic behavior is controlled by atomic structure and microstructure. The constitutive laws that describe this behavior and the assumptions
on which they are based will be introduced. The next phase of the course considers the range of deformation behavior from purely viscous (linear or non-linear) to viscoelastic. Initially, the emphasis will be on the effects of temperature and strain history and the way this behavior is described by mechanical analogs. The effect of structure on creep and stress relaxation will be described. The use of linear viscoelasticity in describing the sintering process will also be included. In ductile crystalline materials, deformation is associated with the movement of dislocations. The types of dislocations, their stress fields and energies will be described. These aspects will then be combined with structural features by including considerations of slip geometry and obstacles to dislocation motion. This approach will allow strengthening methods to be identified and quantified. Finally, creep mechanisms in crystalline materials at high temperature will be discussed and quantified.

**Prerequisite:** E SC 414M or MATSE 436
Cross-listed with: MATSE 564

EMCH 536: Thermal Stress Analysis
3 Credits
Thermoelasticity, thermal shock, and design.

**Prerequisite:** E MCH 400 or E MCH 500

EMCH 540: Introduction to Continuum Mechanics
3 Credits
Algebra and analysis of tensors; balance equations of classical physics; the linear theories of continuum mechanics.

EMCH 541: Structural Health Monitoring
3 Credits
Technology development to address maintenance and safety concerns related to the aging aerospace/mechanical/civil infrastructure. E MCH 541 Structural Health Monitoring (3) Structural Health Monitoring (SHM) is the monitoring of the condition of a structure or system using autonomous sensory systems and any intervention to preserve structural integrity. It is nondestructive evaluation with a sensory system that stays in place and enables condition-based maintenance. SHM is a broad multidisciplinary field both in terms of the diverse science and technology involved as well as in its varied applications. However, at its essence are three fundamental elements: sensing, data analysis, and decision making. The technological developments necessary to enable practical structural health monitoring are originating from scientists and engineers in many fields including physics, chemistry, materials science, biology, and mechanical, aerospace, civil, and electrical engineering. SHM is being implemented on diverse systems and structures such as aircraft, spacecraft, ships, helicopters, automobiles, bridges, buildings, civil infrastructure, power generating plants, pipelines, electronic systems, manufacturing and processing facilities, biological systems, and employed for the protection of the environment and for defense. The objectives of SHM are to: improve public safety, reduce maintenance costs, improve readiness, and foster a paradigm shift in design.

EMCH 542: Physical Principles in Biomedical Ultrasonics
3 Credits
Physical principles of advanced ultrasonic imaging and quantitative data acquisition techniques in fields of biology and medicine. E MCH (ACS) 542 Physical Principles in Biomedical Ultrasonics (3) This course focuses on the phenomenon of ultrasound in the context of medical and biological applications, systematically discussing physical principles and concepts. Concepts of wave acoustics are examined and practical implications are explored - first, the generation and nature of acoustic fields and then their formal descriptions and measurement. Real tissues attenuate and scatter ultrasound in ways that have interesting relationships to their physical chemistry, and the course includes coverage of these topics. This course also includes critical accounts and discussions of the wide variety of diagnostic and investigative applications of ultrasound that are available in medicine and biology. The course encompasses the biophysics of ultrasound and its practical applications to therapeutic and surgical objectives. The course utilizes finite element methods for simulation.

Cross-listed with: ACS 542

EMCH 544: Multiscale Modeling of Materials
3 Credits
This course discusses the key issues of the conventional simulation methods at single length and time scales. The course starts with a revisit of mechanics of materials, statistical mechanics, and thermodynamics and kinetics of materials, which form the fundamental basis for the development of physical-based simulation models. Conventional simulation methods at single length scale will then follow, including the quantum mechanical simulations, molecular dynamics, finite element simulations, and phase field modeling. Emphasis will be placed on the coupling strategies bridging different length and time scales. The multiscale methods will be delivered in combination with interesting materials phenomena spanning nanostructured and biological materials.

**Prerequisite:** EMCH 461

EMCH 550: Variational and Energy Methods in Engineering
3 Credits
Application of variational calculus and Hamilton's principle to various conservative and nonconservative systems; closed form and approximate technique.

EMCH 560: Finite Element Analysis
3 Credits
General theory; application to statics and dynamics of solids, structures, fluids, and heat flow; use of existing computer codes.

**Prerequisite:** E MCH 213

EMCH 571: Foundations of Structural Dynamics and Vibration
3 Credits
Modeling approaches and analysis methods of structural dynamics and vibration.

**Prerequisite:** AERSP 304, E MCH 470, M E 450, or M E 570
Cross-listed with: AERSP 571, ME 571
EMCH 581: Micromechanics of Composites
3 Credits
A rigorous application of mechanics to the understanding of relationships between microstructure and thermomechanical properties of composites.
Prerequisite: CERSC414 or CERSC502 or E MCH471 or E MCH507

EMCH 596: Individual Studies
1-3 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

EMCH 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.
EMCH 597A: **SPECIAL TOPICS**
3 Credits

EMCH 600: Thesis Research
1-15 Credits/Maximum of 999
No description.
EMCH 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999

Engineering Science (ESC)

ESC 501: Solar Cell Devices
3 Credits
Principles of photovoltaic energy conversion and their utilization in engineering devices. Emphasis on current solar cell research and development efforts. ESC 501 Solar Cell Devices (3) Photovoltaic energy conversion using organic and inorganic absorbers and liquid and solid materials is examined in depth. The emphasis is on photovoltaic energy conversion using sun light and covers solar cell device physics, materials, and design as well as all four types of photovoltaic structures; i.e., homojunctions, heterojunctions, surface barrier cells, and dye sensitized cells. Basic topics covered in the course include: solar spectra and industry standards; material properties and physics key to photovoltaic structures; and the role of scale in photovoltaics including the use of nano-structures. Computer modeling topics include an introduction to the AMPS code for transport analysis and an introduction to Maxwell's equations solvers for light trapping analysis. The use of such codes in the design of solar cells for light, carrier collection, and efficiency optimization is explored. Solar cell industry developments and research advancements are discussed throughout the course.
Prerequisite: E E 442 or PHYS 412

ESC 502: Semiconductor Heterojunctions and Applications
3 Credits
Theory, fabrication techniques, and electronic applications of semiconductor heterojunctions, including metal-semiconductor and electrolyte-semiconductor junctions.
Prerequisite: E SC 314 or E SC 414M

ESC 503: Low Dimensional Nanoelectronics
3 Credits
This course will cover advanced concepts which are essential to understand modern state-of-the art electronic devices based on novel nanomaterials. The course is designed for experimentalists, material scientists, and device physicists who are interested to learn how carrier transport takes place in low dimensional semiconductors such as zero dimensional quantum dots, one dimensional nanotubes (CNT), quasi-one dimensional nanowires, and two dimensional nanosheets (graphene, MoS2). The course will begin with a review of semiconductor physics which includes Fermi-Dirac statistics, dispersion relationship (E-k), density of states, electron density, various definition of carrier velocities, and discussion on traditional drift-diffusion (DD) model for carrier transport. We will then adopt a bottom-up approach to understand current flow through a device with only one energy level, which will eventually lead to the formalism of Landauer-Datta (LD) transport model for ballistic conductors. The concept of quantum conductance and transport modes will be taught. We will also learn how to incorporate different scattering mechanisms into the LD model. The second part of the course will focus on the electrostatics and transport in ballistic and quasi-ballistic metal-oxide-semiconductor field effect transistors (MOSFETs). We will learn how to solve Poisson's equation self-consistently with LD model for Si MOSFET and extend it to ultra-thin-body-silicon-on-insulator (UTMSOI) FETs, FinFETs, CNTFETs, graphene and MoS2 FETs. Next, the LD model will be extended to describe heat flow in nanomaterials which forms the basis of various thermoelectric phenomena such as the Seebeck effect, Peltier cooling, etc. The second part of the course will focus on the electrostatics and transport in ballistic and quasi-ballistic metal-oxide-semiconductor field effect transistors (MOSFETs). We will learn how to solve Poisson's equation self-consistently with LD model for Si MOSFET and extend it to ultra-thin-body-silicon-on-insulator (UTMSOI) FETs, FinFETs, CNTFETs, graphene and MoS2 FETs. The advantage of ultra-thin body channel material for MOSFET scaling and how nanomaterials help in overcoming short channel effects will also be taught. Concepts such as quantum capacitance limit will be introduced. Contact resistance and related issues will also be extensively taught. Various beyond Boltzmann novel device concepts tunnel FETs, phase change FETs, negative capacitance FETs, excitonic FETs, strain FETs for low power computing will be introduced. In the third part of the course we will learn multiple quantum
mechanical effects related to transport in nanomaterials such as Quantum Hall effect, energy level broadening, and Coulomb Blockade phenomena in quantum dots. We will also learn multi-electron picture through Folk’s Space in order to understand many body interactions. Finally, we will study the matrix version of Schrodinger equation to derive band-structure of different nanomaterials using nearest neighbor semi-empirical approach in orthogonal basis. Generalized transport equations will be obtained using Non Equilibrium Green’s Function (NEGF) formalism. Students will be asked to do literature reviews on multiple topics taught in the course. They will also use their learning and solid foundation developed through out the course to execute group projects that are either exploratory in nature or relevant to the state-of-the-art technological problems of the semiconductor industry. This will prepare them for independent and innovative research.

ESC 507: Bioarchitecture
3 Credits

Fundamentals of biological architecture observed in nature with emphasis on symmetry and topology with examples from recent literature. Bioarchitecture is the use and implementation of concepts and principles from nature to design functional materials, devices, and systems. Inspired by the structure and utility of biological surfaces, various surfaces have been engineered with micro- and nanoscale features. Bio-derived materials hold great promise to provide a broad range of industrial solutions. These materials can be shaped into various geometries such as fibers, colloids, and thin films. Recombinant expression or direct extraction of bio-derived materials from biological organisms can provide a new generation of recycle-able engineered materials. Understanding the structures and functional characteristics of biological architecture will expedite the design, fabrication, and synthesis of eco-friendly, recyclable, advanced materials, with novel physical properties.

ESC 514: Engineering Science and Mechanics Seminar
1 Credits/Maximum of 99

Current literature and special problems in engineering mechanics.
Cross-listed with: EMCH 514
ESC 518: Bioprinting
3 Credits

This course covers the principles of bioprinting in tissue engineering and regenerative medicine for use in fabrication of biomedical related products such as implants, tissue scaffolds, engineered tissues, organs and biological systems. Topics include Tissue Engineering, 3D Printing, Layered Manufacturing and Rapid Tooling in Medicine, Design for Bioprinting, The Bioink, Extrusion-based Bioprinting, Droplet-based Bioprinting, Laser-based Bioprinting, Bioprinters and their components, Application Areas of Bioprinting and New Frontiers in Tissue Engineering such as Organ Printing.

ESC 520: Engineering at the Nano-scale
3 Credits

Engineering at the nano-scale, its current applications, its future directions, and its impact on society are the subjects of ESC 520. The uniqueness of the nano-scale is addressed by first reviewing the basic aspects of our picture of the physical world (e.g. Newtonian and quantum mechanics, geometrical and physical optics) and then exploring the relative impact of these aspects on physical, chemical, and biological phenomena at the nano-scale. Which phenomena dominate as a function of scale and how this competition affects properties and structures is explored in detail allowing the opportunities of the nano-scale to emerge. Impact of the uniqueness of the nano-scale on engineering and the possibilities offered for engineering applications, ranging from manufacturing processing to better building materials to better drug delivery systems, are discussed throughout the course. These creative possibilities afforded by engineering at the nano-scale are highlighted by a varying array of applications taken from fields including medicine and biotechnology, agriculture and food, environmental mitigation, electronics and spintronics, opto-electronics, photonics, sensing, materials, transportation technology, energy production, energy storage, and informatics.

Prerequisite: ESC 412

ESC 521: Pattern Transfer at the Nano-scale
3 Credits

Engineering at the nano-scale often requires creating and then transferring a pattern when fabricating a desired nano-scale structure. This course explores the basic processes of pattern design and then addresses the techniques used to transfer a nano-scale pattern to a surface or structure. The course looks into pattern transfer techniques that employ particles, photons, and additional chemical and physical means as the transfer mechanisms. Included in the photon approaches are studies of deep UV and Xray pattern transfer. Particle transfer mechanisms discussed include ion and neutral particle approaches. Physical-contact pattern transfer is also explored including discussions of nano-imprinting lithography, nano-molding lithography, and scanning probe lithography. Chemical pattern transfer is another approach to pattern transfer and one that uniquely uses chemical processes to create patterns. Examples to be discussed in this course include molecular self-assembly lithography and block co-polymer lithography. Emerging pattern transfer techniques, such as magneto-lithography, will be included in E SC 521 for completeness. In many of these pattern transfer methodologies, a ‘writing’ of the transferring pattern into some intermediary medium termed a resist is required. In pattern technologies requiring resists, the resist materials and their positioning as well as required physical and chemical properties will be discussed.

Prerequisite: ESC 412, ESC 520

ESC 522: Fabrication and Characterization for Top-down Nano-manufacturing
3 Credits

There are two broad approaches to fabrication and manufacturing at the nano-scale. They are bottom-up and top-down nanofabrication. The two approaches are complementary, with the former having strong ties to biology and the latter having very strong ties to traditional semiconductor processing. E SC 522 focuses on top-down nanofabrication which makes use of two distinct approaches: additive processes and subtractive processes. These are studied in detail in this course by first focusing on the additive processes which deposit or grow materials. The effort then shifts to the subtractive processes which remove materials with a mixture of chemistry and physics, in techniques varying from wet chemical etching to deep ion etching. Achieving nano-scale features with top-down techniques is controllable and verifiable with today's
characterization techniques. This control and verification aspect is an integral part of top-down fabrication at the nano-scale. Characterization tools commonly used in top-down nanofabrication are discussed in this course in the context of process development and manufacturing. These tools include optical microscopies, electron and ion beam microscopies, spectroscopies, and scanning probe techniques.

**Prerequisite:** E SC 412, E SC 520, E SC 521
Cross-listed with: NANO 522

ESC 523: Fabrication and Characterization for Bottom-up Nanomanufacturing

3 Credits

There are two broad approaches to fabrication and manufacturing at the nano-scale: bottom-up and top-down nanofabrication. These are complementary with the former having strong ties to biology and the latter having strong ties to traditional semiconductor processing. E SC 523 focuses on the bottom-up approaches, which provide an increasingly important alternative to top-down techniques. Bottom-up approaches to nano-scale fabrication mimic nature in harnessing fundamental chemical or physical forces operating at the nano-scale to assemble basic units into larger structures. The bottom-up, or self-assembly, techniques explored in this course cover material synthesis, structure fabrication, and material and structure characterization. The production of 0-D, 1-D, 2-D, and 3-D materials will be discussed and then the assembly of these materials into structures will be explored. Fabrication topics to be covered will include block co-polymer manipulation, vapor-liquid-solid growth, the Langmuir-Blodgett technique, surface functionalization, molecular self-assembly, DNA Origami, and bacterial and viral assembly. The characterization techniques to be covered will include those emerging tools capable of ultra-precise resolution such as tip-enhanced Raman scanning microscopy, scanning helium ion microscopy, and magnetic resonance sub-nanometer imaging.

**Prerequisite:** E SC 412, E SC 520, E SC 521
Cross-listed with: NANO 523

ESC 525: Neural Engineering: Fundamentals of Interfacing with Brain

3 Credits

Biophysical basis of neural function, measurable signals, and neural stimulations.

ESC 527: Brain Computer Interfaces (BCI)

3 Credits

Biophysical basis of non-invasive brain signals (electroencephalograms); real-time signal processing.

ESC 529: Neural Control Engineering

3 Credits

The ability to use formal control theory to observe and control neuronal systems is rapidly becoming more feasible as our models of neural systems become more realistic and as our advances in nonlinear Kalman filtering become more sophisticated. This course will explore the cutting edge of nonlinear state estimation of neuronal systems and the construction of control algorithms based on that state estimation. We will give an overview of several canonical neuroscience models, which represent experimental systems that can be controlled: the Hodgkin-Huxley equations, their reduction with the Fitzhugh-Nagumo equations, the Wilson-Cowan model of cortex, and recent models of Parkinson’s disease. We will then apply nonlinear state estimation to measurements from such systems and construct control algorithms that interact with such models.

**RECOMMENDED PREPARATIONS:** Students without a background including calculus, differential equations, and linear algebra should consult with the instructor.

ESC 536: Wave Propagation and Scattering

4 Credits

Survey of analytical and numerical methods for solving acoustic, electromagnetic and elastic wave propagation and scattering problems.

**Prerequisite:** E MCH524A or E MCH524B

ESC 537: Multiple Scattering Theories and Dynamic Properties of Composite Materials

3 Credits

Acoustic, dielectric, elastic dynamics properties; periodic, random composites; wave propagation and scattering; attenuation, dispersion; super-viscous absorption; sonar, optical, ultrasonic applications.

ESC 540: Laser Optics Fundamentals

3 Credits

Selected topics in optics and laser physics, and their application in laser-materials processing. E SC 540 Laser Optics Fundamentals (3) Over the past two decades, new technologies such as laser-materials processing have moved from laboratory research to commercial applications. Engineers must now understand and apply many concepts of physics that in the past lay outside the boundaries of engineering. This course is intended for graduate students and practicing engineers whose exposure to physics has been limited to two or three undergraduate courses. It summarizes theories of geometric optics, physical optics, quantum optics and laser physics relevant to laser-materials processing, and it is designed to bridge the gap between abstract concepts and applications. Upon completion of this course, students will have developed sufficient proficiency in these theories to understand the intricacies of their use and application in laser-materials processing as described in the current technical literature. The student’s accomplishment will be evaluated by mid-semester and final examinations. E SC 540 will be offered each fall semester. Classes will meet twice a per week; each class will be 75 minutes long. The enrollment for this course is anticipated to be 15 to 30 students.

ESC 541: Laser-Materials Interactions

3 Credits

Laser beam interactions with metallic, ceramic, polymeric and biological materials; effects of wavelength, power, spatial and temporal distributions of intensity. E SC 541 Laser-Materials Interactions (3) This course covers laser beam interactions with metals, insulators, semiconductors, polymers and biological materials relevant to laser-materials processing, and is designed to bridge the gap between abstract concepts and applications. Interactions such as heat flow, thermal stresses, melting, material removal, property changes and plasma effects are related to laser characteristics such as wavelength, power and the spatial and temporal distribution of intensity. Upon completion of this course the student will have developed sufficient
knowledge of laser-materials interactions to understand their application in the current technical literature on laser-materials processing. The student's accomplishments will be evaluated by mid-semester and final examinations. This course will be offered each year in the spring semester. The class will meet once a week; each class period will be 150 minutes long. The enrollment for the course is anticipated to be 15-30.

ESC 542: Laser-Integrated Manufacturing
3 Credits
Integration of lasers into manufacturing processes: laser-assisted surface modifications; laser joining; laser-based material shaping processes. E SC 542 Laser-Integrated Manufacturing (3) E SC 542 is intended for graduate students and practicing engineers who have completed E SC 540 and E SC 541. It utilizes classroom lectures to provide a basis for students to develop an understanding of the integration of laser systems into manufacturing processes. Various lasers applicable to macro-processing, optical systems and manipulation components are discussed in terms of integration for industrial processing of materials, which include laser-assisted surface modification, laser joining and laser-based material removal processes. The unique characteristics and attributes of laser processing are discussed and contrasted with other contemporary manufacturing processes. Students will participate in a group project to develop and design an integrated system for selected laser manufacturing processes. Upon completion of this course, the student will understand the system requirements for laser-based manufacturing processes in terms of processing capabilities, equipment capabilities, safety requirements and economic considerations. This course will be offered each year in the fall semester. Classes will meet once per week; each meeting period will be 150 minutes long.

Prerequisite: E SC 540

ESC 543: Laser Microprocessing
3 Credits
Laser microprocessing of engineered and biological materials for electronic, opto-electronic, MEMS and medical/therapeutic applications. E SC 543 Laser Microprocessing (3) This course is intended for graduate students and practicing engineers who have completed E SC 540 and E SC 541. It covers laser processing to produce features and modify properties in metals, organic polymers, inorganic insulators, superconductors, semiconductors and biological materials on the meso, micro and nano scales. The lectures comprise analysis and discussion of selected technical papers on the use of laser microprocessing in electronic, opto-electronic, MEMs and medical-therapeutic applications. Upon completion of this course, the student will have developed sufficient knowledge of laser microprocessing to understand its applications as described in the current technical literature. This course will be offered each year in the spring semester. Classes will meet once per week; each class period will be 150 minutes long.

Prerequisite: E SC 540

ESC 544: Laser Laboratory
3 Credits
Laser systems for materials processing, safety, critical processing parameters, diagnostic measurements, automation, sensing and control. E SC 544 Laser Laboratory (3) This course is intended for graduate students and practicing engineers who have completed E SC 540 and E SC 541. It covers laser systems for materials processing such as carbon dioxide, neodymium-YAG and ultraviolet laser systems; safety; identification of critical process parameters; measurement of spatial and temporal distributions of intensity, power, polarization, absorptivity and reflectivity; beam and work piece manipulators; automation methods of sensing and process control. Students will attend lectures, observe demonstrations and perform hands-on measurements. Upon completion of this course, the student will have developed sufficient proficiency in laser techniques to perform them safely in a laboratory setting and to understand the intricacies of their use as described in the current technical literature on laser-materials processing. The student's accomplishment is evaluated by laboratory reports and a final examination. This course will be offered each summer.

Prerequisite: E SC 540

ESC 545: Engineering and Scientific Principles of Additive Manufacturing
4 Credits
In additive manufacturing (AM), components are fabricated via sequential joining using a bonding agent, curing, sintering, or fusing. AM fabrication of metals, ceramics, polymers, and organics has been demonstrated and is actively being used in industry and academia. ESC 545 / AMD 545 explores these processes with a focus on the fundamentals of sintering and fusion of metals, ceramics, and polymers. The topic is multidisciplinary, requiring examination of individual AM system components, the physics of energy-material interactions, and the materials science at play during heat-reheat cycles. Opportunities for process sensing and real-time control are explored, as well as the role of post-process technologies in realizing serviceable components. These topics will lead to a discussion of methods and strategies to optimize component properties and characteristics. Current and potential impacts of AM on society are also covered.

Recommended preparations: A course in engineering materials and/or engineering analysis is highly desired but not required.

ESC 546: Advanced Metallic Material Feedstocks for Additive Manufacturing
4 Credits
Additive manufacturing (AM) processes use a variety of metallic material forms to produce complex components. These material forms can vary from metallic powders with a rather wide range of size distributions to metal wire to sheet and other more complex composite material types. Knowledge of the processing of these different feedstock forms along with means to characterize them is needed to develop AM processes and procedures capable of being more widely used, particularly in critical applications. In this course, the production, handling, blending, and characterization of common metallic and composite feedstock materials will be covered. Feedstock forms to be addressed include metal and metal-ceramic composite powders, wire, and sheets, along with new product forms becoming available. A multi-disciplinary approach will be taken to elucidate the connections between production, characterization, and handling to develop an understanding of the role of feedstocks on the resulting process-structure-property relationships for AM processes and products.

Prerequisite: ESC 545 CONCURRENTS: MATSE 567, IE 527
ESC 550: Power Semiconductor Devices
3 Credits
Power electronic devices: Physics of operation, materials, architectural design, processing, reliability of operations, reliability with applications and challenges. E SC 550 Power Semiconductor Devices (3) The design and operation of the emerging transformative power semiconductor devices, is founded on basic quantum mechanics and solid state physics principles. Power Semiconductor Devices, PSDs, handle high currents, high voltages and operate at high temperatures. Consequently, PSDs are complex in design, and challenging in long-term reliability. We study the fundamentals of PSDs architecture, processing, reliability, materials and characterization. We study Schottky- and P-i-N- rectifiers, the low power range MOSFETs transistors, the middle power range IGBT transistors, and high power range Thyristors. It is estimated that more than 50% of world electricity passes through power semiconductor devices; hence, optimizing the performance and reliability of these emerging power devices coupled with advancing power materials processing may lead to significant future energy savings. The subject matter is appropriate to students of physical sciences, electrical and materials engineering; in addition to broadening their knowledge base, it exposes them to this frontier research area and a new career-path option.

ESC 551: High Power Energy Storage
3 Credits
High-power energy storage technologies including advanced batteries, ultracapacitors, and flywheels. E SC (M E) 551 High Power Energy Storage (3) The course focuses on high-power, in-vehicle energy storage technologies used in hybrid electric vehicles, including advanced batteries, fuel cells, ultracapacitors, and flywheels. An interdisciplinary approach with mechanical, materials, electrical, and chemistry-based concepts provides the foundation to understand the operation and application of these energy storage devices. The course provides a synopsis of hybrid electric and fuel cell vehicle design, control, and simulation to determine the effect of energy storage components on performance and fuel efficiency.

Cross-listed with: ME 551

ESC 555: Neuroscience Data Analysis
3 Credits
Modern methods for the analysis of neural data. E SC 555 Neuroscience Data Analysis (3) Modern neuroscience experimental methods can generate enormous amounts of complicated data, and a wealth of techniques has sprung up drawing from a wide variety of fields to analyze it. In this course, students will learn how to utilize a toolbox of mathematical and computational techniques to analyze electrophysiological, optical and anatomical data. This course will cover the biophysical origin and measurement of brain signals, as well as the theoretical background of modern analysis methods and their practical implementation. Topics covered include spectral methods, neural encoding and decoding, information theory and image analysis.

Prerequisite: Prerequisite or concurrent: BIOL 469 or equivalent

ESC 577: Engineered Thin Films
3 Credits
Broad overview of the preparation-characterization-property relations for thin films used in a wide range of industrial applications.

Prerequisite: MATH 251, PHYS 237

ESC 581: Microelectromechanical Systems/Smart Structures
3 Credits
Methods of micromachining, smart structure fabrication. Design, modeling for physical, chemical, biomedical microsensors/actuators. Smart structures and microsystems packaging/integration.

Prerequisite: E SC 414M

ESC 582: Micro- and Nano-Structured Light Emitting Devices
3 Credits
Principles and applications of Micro- and Nano-Structured Light Emitting Devices.

ESC 583: Micro- and Nano-Optoelectronic Devices and Applications
3 Credits
Principles and applications of micro- and nano-optoelectronic devices.

ESC 584: Bioarchitecture
3 Credits
Fundamentals of biological architecture observed in nature with emphasis on symmetry and topology with examples from recent literature. Bioarchitecture is the use and implementation of concepts and principles from nature to design functional materials, devices, and systems. Inspired by the structure and utility of biological surfaces, various surfaces have been engineered with micro- and nanoscale features. Bio-derived materials hold great promise to provide a broad range of industrial solutions. These materials can be shaped into various geometries such as fibers, colloids, and thin films. Recombinant expression or direct extraction of bio-derived materials from biological organisms can provide a new generation of recyclable-engineered materials. Understanding the structures and functional characteristics of biological architecture will expedite the design, fabrication, and synthesis of eco-friendly, recyclable, advanced materials, with novel physical properties.

ESC 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

ESC 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.
ESC 600: Thesis Research
1-15 Credits/Maximum of 999
No description.
ESC 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.
ESC 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
No description.
Cross-listed with: EMCH 602
ESC 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.
ESC 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

English (ENGL)

ENGL 501: Materials and Methods of Research
3 Credits
Materials and techniques of research in English and American literary history; form and content of these. Required of all graduate students with an English major.
ENGL 502: Theory and Teaching of Composition
3 Credits
Study of grammar, logic, rhetoric, and style in their applicability to teaching composition.
ENGL 506: The English Language
3 Credits
A problem-centered approach to literary and oral forms of English, utilizing historical and analytic perspectives.
ENGL 507: English Composition Studies
3 Credits
An overview of composition studies, with particular attention to the schools of writing pedagogy.
Prerequisite: EDUC 452, ENGL 409, Bachelor's degree, permission of the program

ENGL 511: Thesis Workshop and Professional Writing
3 Credits
Professional writing for graduate students. ENGL 511 Thesis Workshop and Professional Writing (3) This course helps graduate students in all fields develop a clear, professional, prose style. Every week they give the instructor five or so pages of their writing and get detailed feedback. Several times during the semester, their week's assignment is read and commented on by the whole class in workshop. By learning how to suggest improvements to their classmates, members learn how to see and fix their own writing problems as well. In addition to style, classes discuss organization, mechanics, formats, and any special problems pertaining to the students' projects and to writing in their specialties. Students must have approximately 30 pages of professional-level writing on hand to revise for this course. Evaluation is based on weekly assignments, on a test, and on a case study.

ENGL 512: The Writing of Fiction
3 Credits/Maximum of 15
Supervised workshop in advanced techniques of writing fiction.
ENGL 513: The Writing of Poetry
3 Credits/Maximum of 15
For the student with considerable experience in writing poetry; a workshop devoted to advanced poetic technique.
ENGL 515: The Writing of Nonfiction
3 Credits/Maximum of 15
Supervised workshop in advanced nonfiction techniques.
ENGL 521: Old English Language
3 Credits
An introduction to the main features of the Old English language; readings in simple Old English prose and poetry.
ENGL 522: Beowulf
3 Credits
Reading and critical analysis.
Prerequisite: ENGL 521
ENGL 530: The Literature of Biography and Autobiography
1-3 Credits/Maximum of 6
Study of biographical and autobiographical theory and practice through analysis of major English and American works in each genre.
ENGL 535: Studies in Jewish American Literature
3 Credits
This course offers students a working analytical familiarity with the history of Jewish writing in the United States (in North American context) and with both the history and the current state of professional study of it. Attention will be paid both to dominant and alternative narratives of this literature. Major historical topics include the earliest, pre-19th
Recent Jewish writers in America; 19th century Jewish American writers; writers of the great Ashkenazi immigration wave of 1881-1924; interwar proletarian and modernist writers; postwar writers of assimilation; the mainstreaming of Jewish American literature in the 1950s and 1960s; post-breakthrough Jewish American writers; and 21st-century Jewish American literature and the new immigration. The course analyzes the development of the professional field of Jewish American literary study, including its prehistory and origins in Wissenschaft-based historicism; the professionalization of the field in the Viet Nam era; the growing dominance of so-called New Jewish Cultural Studies of the `80s and `90s; and new theoretical approaches of the first decades of the 21st century. Finally, the course examines the key debates and faultlines in the field today, including the divide between historicist and critical approaches; differences between English Department-based and Jewish Studies-based Jewish American literary study; the situation of Jewish American literary study vis-à-vis Americanist literary study and English Department-based literary study more generally; Cultural Studies-based approaches to the field vs. Literary Studies-based approaches; Comparativist approaches vs. non-Comparativist approaches; the move toward interdisciplinarity; and the ongoing struggle to theorize the field.

ENGL 540: Studies in Elizabethan Prose and Poetry
1-3 Credits/Maximum of 12
Major figures studied will vary from year to year. Writers studied might include figures such as Spenser and Sidney.

ENGL 541: Medieval Studies
1-3 Credits/Maximum of 12
Studies in medieval English literature. Topics studied might include medieval romances, drama, or major figures aside from Chaucer.

ENGL 542: Middle English Literature
3 Credits
A survey of Middle English literature, exclusive of Chaucer. ENGL 542 Middle English Literature (3) This seminar offers a survey of Middle English literature, exclusive of Chaucer, through a close study of some of its characteristic forms and genres. The course begins with the linguistic features of Middle English, with attention to the major dialects of assigned texts (dialect instruction will continue throughout the semester as appropriate). Readings concentrate on several major forms and genres (such as romance, debate poetry, religious writing, lyrics) and authors (such as La7amon, the Pearl Poet, Margery Kempe, Lydgate, Malory). The course combines close reading and translation with ranging investigation into literary contexts and traditions. Considering the multilingual culture of medieval England, students may also read analogue and source literature in languages such as French and Latin (all of which will be taught in translation). Discussion of assigned texts will be situated within the relevant scholarship and criticism (current and historical).

ENGL 543: Studies in Early Seventeenth-Century Literature
1-3 Credits/Maximum of 12
Major figures studied will vary from year to year. Writers studied might include Donne, Herbert, Jonson, Bacon.

ENGL 544: Studies in Later Seventeenth-Century Literature
1-3 Credits/Maximum of 12
Major figures studied will vary from year to year. Writers studied might include Dryden, Swift, Pope, Johnson, Fielding, Gibbon.

ENGL 545: Chaucer
1-3 Credits/Maximum of 12
Major and minor works of Geoffrey Chaucer. The works studied will vary from year to year.

ENGL 546: Milton
3 Credits
The poetry and prose of John Milton.

ENGL 548: Elizabethan and Jacobean Drama
1-3 Credits/Maximum of 12
English drama from 1558 to 1642, exclusive of Shakespeare.

ENGL 549: Shakespeare
1-3 Credits/Maximum of 12
Major figures studied will vary from year to year. Writers studied might include Dryden, Swift, Pope, Johnson, Fielding, Gibbon.

ENGL 550: English Literature 1660-1800
1-3 Credits/Maximum of 12
Major figures studied will vary from year to year. Writers studied might include Dryden, Swift, Pope, Johnson, Fielding, Gibbon.

ENGL 553: Literacy Studies
3 Credits
An overview of current research on literacy, with particular attention to language, thought, and learning and their applications to writing. ENGL 553 Literacy Studies (3) ENGL 553 will present current research on literacy, with an emphasis on language acquisition, learning theory, and their applications for writing pedagogy. 1. Instructional, Educational, and Course Objectives: As a result of having completed the course, students will be able to: Demonstrate a clear understanding of current theories of literacy, including the reciprocity of writing and thinking, speaking and reading. Articulate and discuss various approaches to instruction, including uses of writing in the classroom and writing to learn. Compare and contrast traditional and current approaches to teaching writing. Demonstrate and apply the concepts of the curriculum models for teaching writing. Utilize practical methods for identifying goals and applying theory to instructional plans. 2. Students' evaluation will be based on their knowledge and understanding of instructional objectives, demonstrated in written assignments, class discussions, and other assignments.

Prerequisite: EDUC 452 or ENGL 409; Bachelor's Degree and permission of program

ENGL 554: Studies in Early American Literature
1-3 Credits/Maximum of 12
Major figures studied will vary from year to year. Writers studied might include Bradstreet, Taylor, Mather, Franklin, Edwards, Paine.
ENGL 555: Visualizing Gender

3 Credits

This course analyzes how gender identities relate to the creation, use, and analysis of visual artifacts and bodily practices. Visual texts and conditions are conditioned by intersectional embodiments of gender. In an attempt to understand and critically evaluate the role visual culture plays in our gendered lives as a dominant conduit of knowledge and identity production, this seminar examines visual processes and objects as they are informed and shaped by a nexus of gender, race, sexuality, class, nationality, and other forms of identity. The visualization of gendered forms of identity involves codes that produce bodies as signifiers of chaos, order, beauty, disease, nature, culture, evil, and virtue, including actions bisected according to binaries of masculinity and femininity. The seminar employs analytical approaches to these dynamics, including feminist, queer, and critical race theories of the visual as ways of interrogating a range of visual artifacts and bodily practices. After surveying key foundational texts, the course predominantly engages contemporary works and practices along complex gender matrices, including new directions in visual culture from the 1990s onward.

ENGL 556: Reading Film

3 Credits/Maximum of 12

A practical and historical approach to film theory and analysis. This seminar develops critical visual literacy by examining a range of practices in cinema study, with emphases on the relation of film to literature and the analysis of film meaning. The course asks how to read a film, and considers the multiple ways that films combine framing, movement, editing, narrative, character, and genre toward the production of culture, ideology, identity, desire, poetic imagery, and community. Students will explore a wide range of critical methods, and will view one to two films per week. Readings will range from novels to classic film theory, cultural studies, belles-lettres, film criticism, radical poetics, apparatus theory, media theory, and contemporary philosophy.

Cross-listed with: COMM 556, VSTUD 556

ENGL 557: Authors and Artists

3 Credits

This course explores formal and historical links between literature and art in modernist movements. ‘Ut pictura poesis’ (like painting [is] poetry). This statement, originally articulated by the ancient Roman poet Horace, has been quoted and debated ever since. Links between art and literature have exerted a formative influence on the development of modern fiction and poetry as authors and artists in various avant-garde groupings collaborated and competed to generate modes of artistic expression appropriate to modernity. This course examines those interactions. Course objectives are to bring together for comparative examination: - formal or generic relationships between texts and images at particular historical moments. - issues of creative collaboration and cross-pollination between writers and artists, which have been crucially important in the history of literature and poetry. - conceptions of creativity as these have been expressed by writers using the figure of the artist. This course allows students to explore the ways knowledge of literature and skills in critical reading can be rewardingly brought to bear on the visual arts, and to consider how visual art can illuminate the workings of literature both for individual readers and in the classroom.

Cross-listed with: VSTUD 557

ENGL 558: Nineteenth-Century British Fiction

1-3 Credits/Maximum of 12

Major figures studied will vary from year to year. Writers studied might include Dickens, Thackeray, the Brontes, George Eliot, Hardy.

ENGL 560: American Romanticism

1-3 Credits/Maximum of 12

Major figures studied will vary from year to year. Writers studied might include Hawthorne, Melville, Emerson, Thoreau, Whitman.

ENGL 561: Studies in the Romantic Movement

1-3 Credits/Maximum of 12

Major figures studied will vary from year to year. Writers studied might include Blake, Wordsworth, Coleridge, Byron, Shelley, Keats.

ENGL 562: Studies in the Literature of Victorian England

1-3 Credits/Maximum of 12

Figures will vary from year to year. Writers studied might include Tennyson, Browning, Arnold, Newman, Ruskin, Trollope.

ENGL 564: Studies in Nineteenth-Century American Literature

1-3 Credits/Maximum of 12

Writers will vary from year to year. Writers studied might include Cooper, Poe, Dickinson, Twain, James.

ENGL 565: Period Studies in African-American Literature

3 Credits/Maximum of 9

Studies of periods in African-American literature. Periods might include the Harlem Renaissance or the Black Arts Movement.

ENGL 566: Genre Studies in African-American Literature

3 Credits/Maximum of 9

Genre will vary from year to year, but will include categories such as poetry, fiction, essays, sermons, autobiographies, short stories.

ENGL 567: Thematic Studies in African-American Literature

3 Credits/Maximum of 9

Exploration of key concepts in African-American culture as manifested in various literary discourses.

ENGL 568: Gender Issues in African-American Literature

3 Credits/Maximum of 9

Gender issues in African-American literature and culture. Issues may include the Black woman writer or Gay and Lesbian writers.

ENGL 570: The Writer as Critic: Reviewing Contemporary Poetry, Fiction, and Non-Fiction

3 Credits

Students will write and revise book reviews of poetry, fiction, and non-fiction for a variety of newspapers and literary magazines. ENGL 570
The Writer as Critic: Reviewing Contemporary Poetry, Fiction, and Non-Fiction (3) In this class, students will read books and write reviews of those books, following a detailed schedule of readings and assignments established in the syllabus. Success in this class depends upon the student's ability to set priorities, organize materials, follow up on initial contacts with presses and editors, and revise all reviews to publishable standards. Students begin by reading published book reviews and two texts (one poetry, one fiction) assigned by the instructor. Analyzing the structure of the published reviews, students draft model 200- and 550-word reviews, using the published reviews as guides. As the course progresses, students contact publishing houses and presses to request review copies, while simultaneously writing to editors with project proposals. With longer reviews--700 and 1,000 words--students engage complex issues about the economics and politics of publishing. Readings from the course Sampler (provided by instructor) inspire students to position themselves as literary citizens in the national conversation about contemporary writing. 'The Writer as Critic' supplements the MFA course offerings in non-fiction. Students in all genres may practice advanced expository prose while gaining a practical skill. For students in the MFA program, this course fulfills a literature seminar requirement. Students will be evaluated on the quality of final reviews, the timely completion of all drafts, participation in editing teams, and final portfolio of correspondence. This course, for which MFA students have first priority, will be offered approximately every other year with a maximum of 12 students.

ENGL 571: Writer in the Community
3 Credits
Students study the theory and practice of creative writing pedagogy in non-university settings.

ENGL 573: Studies in Twentieth-Century British Literature
1-3 Credits/Maximum of 12
Major figures studied will vary from year to year. Writers studied might include Yeats, Conrad, Joyce, Shaw, Lawrence, Auden.

ENGL 574: Studies in Twentieth-Century American Literature
1-3 Credits/Maximum of 12
Figures studied will vary from year to year. Writers studied might include Dreiser, Wharton, Eliot, Hemingway, Fitzgerald, Faulkner, O'Neill, Williams.

ENGL 575: Experimentation and Modernism in Twentieth-Century British and American Fiction
1-3 Credits/Maximum of 12
Figures studied will be drawn from the era of Joyce and Virginia Woolf to the present.

ENGL 576: Studies in Twentieth-Century American Fiction
1-3 Credits/Maximum of 12
Concentrated study in such major American writers as Hemingway, Faulkner, and Fitzgerald.

ENGL 577: Contemporary Fiction
1-3 Credits/Maximum of 12
Exploration of contemporary English language fiction.

ENGL 580: Comics and Graphic Novels
3 Credits
A survey of comics and graphic novels, primarily in English. This seminar provides a survey of the comics medium and an introduction to the academic field of Comics Studies. Students acquire facility in the structural and formal analysis of comics and sequential narrative, as well as knowledge of significant critical theories and methodologies within the field of Comics Studies. Assigned primary texts may be targeted to a particular genre, mode, historical period, or creator(s). While the course has a general focus on North America, students may also read texts from European, Japanese, and/or South American traditions (all of which will be taught in translation), not to exceed 25% of the course. Discussion of assigned texts will be situated within relevant scholarship and criticism (current and historical).

ENGL 582: Survey of Contemporary Literary Theory
3 Credits
Exploration of the dimensions of discourse as reflected in recent theories of rhetoric, poetics, and literary criticism.

ENGL 583: Studies in Critical Theory
1-3 Credits/Maximum of 12
Study of specific contemporary critical approaches to literature and application to English and/or American literary works.

ENGL 584: Studies in Rhetoric
1-3 Credits/Maximum of 12
Specific rhetorical problems, issues, or figures; topics will change from year to year.

ENGL 586: Readings in Literature
1-12 Credits
Programs of readings designed to meet specific needs of individual students.

ENGL 589: Studies in American Poetry
1-3 Credits/Maximum of 12
No description.

ENGL 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.
ENGL 596: Individual Studies
1-12 Credits/Maximum of 12
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

ENGL 597: Special Topics
1-9 Credits/Maximum of 18
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

ENGL 597E: **SPECIAL TOPICS**
3 Credits

ENGL 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

ENGL 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

ENGL 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University.

Enterprise Architecture (EA)

EA 594: Research Topics
1-18 Credits/Maximum of 18
Supervised student activities on research projects identified on an individual or small group basis.

EA 871: Enterprise Architecture Foundations I
3 Credits
Theoretical foundations and practice of enterprise architecture.

EA 872: Enterprise Architecture Foundations II
3 Credits
Develops additional capabilities for justifying Enterprise Architecture decision making.

Prerequisite: IST 871

EA 873: Enterprise Modeling
3 Credits
EA 873 is intended to provide an exposure to the foundational concepts and practices of effective enterprise modeling for EA. It explores the general and specific uses and effectiveness of architectural modeling approaches to describe an organization, and examines model-based tools to support, influence, and enable organization planning and decision-making. Emphasis is placed on understanding different modeling approaches, standards, and styles and in the use and interpretation of the models. Students will use enterprise modeling approaches and technology tools to develop descriptive models and understand the use and role of the enterprise architecture repository relative to reusability of models.

Prerequisite: EA 871; BA 809

EA 874: Enterprise Information Technology Architecture
3 Credits
Enterprise Architecture (EA) is the analysis and design of an enterprise in its current and future states from a strategy, business, and technology perspective. It helps to integrate and manage IT resources from a strategic and business-driven viewpoint. This course is intended to provide an exposure to the foundational concepts associated with each of the three primary layers of the enterprise information technology architecture stack: the enterprise applications architecture, the enterprise data architecture, and the enterprise technology infrastructure architecture. The course provides a fundamental understanding of the major components and functions of these layers in order to have a comprehensive understanding of the enterprise. Students will acquire knowledge about the key foundational aspects of these three technical layers of the enterprise architecture, learn what decisions need to be made in each layer, and learn how the layers interrelate. The perspectives covered in the class can be organized roughly by their level of analysis: overview of the enterprise technology stack, the enterprise application architecture, the enterprise data architecture, the enterprise technology infrastructure architecture, the enterprise security architecture, and current issues surrounding the enterprise information technology architecture. Students will compare and contrast the different layers of the enterprise information technology architecture and describe the interrelationships between the different layers of the enterprise information technology architecture.

Prerequisite: EA 871

EA 876: Architecting Enterprise Security and Risk Analysis
3 Credits/Maximum of 999
Analytical skills to produce credible, meaningful answers to critical risk management questions across enterprise architecture layers, including the supply chain. This course develops analytical skills to produce credible and meaningful answers to critical risk management questions across the enterprise architecture layers, including the supply chain. These extended enterprise risks originate from both natural and human-instigated hazards. Topics include critical thinking, enterprise analysis, risk assessment and associated analysis methods, risk communication, and risk control.

Prerequisite: EA 871

Entomology (ENT)

ENT 518: Insect Natural History
2 Credits
Experiential learning in field ecology highlighting insect dynamics, diversity and adaptations in terrestrial and aquatic systems. ENT 518
Insect Natural History (2) This is an experiential learning course in field ecology highlighting insect dynamics, diversity and adaptations in terrestrial and aquatic habitats. On site sessions will introduce ecological processes and natural history from a variety of habitats. Students will gain experience in field sampling and collection techniques, field notebook documentation, GPS use, and specimen databasing. Course is designed for those with limited field experience with insects. The course is intended for new graduate students in Entomology and Ecology. Insect adaptations across multiple habitats are observed in natural, agricultural, and forestry settings and the underlying ecological processes, anthropogenic interactions, and agro/forestry ecosystem management approaches are introduced. A team of faculty and staff from Entomology, and various outside instructors accompany students to various field sites to characterize the attributes, problems, and solutions relative to insect abundance and diversity in each setting. Students learn a wide variety of field sampling and collection methods, sight and key identification to order and major family levels, and standard curation and databasing techniques for arthropods collected for scientific purposes. Methods taught include a variety of light and pheromone trapping, pit traps, sticky traps, malaise traps, sweep netting, and sequential sampling. Curation methods including spreading and pinning, and alcohol and other preservation liquids and drying for immature insects are covered. Community diversity and Shannon Index and advanced statistical characterization of community complexity methods are applied to differing community data that are gathered by teams of students during their chosen mini projects as well as the aquatic community sampling results for Spring Creek vs. Cherry Run. A student collection is required, and at the end of the week each collection is evaluated and graded. Student field notebooks are kept throughout the course and these too are evaluated on the last day and then returned to the students for their continued use. The course is offered over a 5-day period at the end of the insect ‘active season’ with collection and sampling activities requiring natural light or darkness for a variety of the species studied. For example, aquatic insect stream sampling must be done in daylight and collecting for mosquitoes and other insects must be done at dusk or at night with specialized traps. It is essential that this course be completed prior to night temperatures in the 50’s and before the first killing frost.

Prerequisite: one of the following courses: ENT 425, ENT 402W or ENT 410, BIOL 436, BIOL 446, or ECLGY510

ENT 520: Frontiers in Insect Science

4 Credits

This graduate course is designed to provide an overview of the diversity of subjects that fall within the subject of entomology.

ENT 522: Critical Thinking and Professional Development in Entomology

6 Credits

This is a required course for Entomology graduate students focusing on developing the professional skills needed for a successful career in basic or applied research. ENT 522 Critical Thinking and Professional Development in Entomology (6) This required course for Entomology graduate students focuses on developing the professional skills needed for a successful career in basic or applied research. Major topics addressed include (i) effective scientific communication, (ii) the mechanisms of research funding and peer review, (iii) critical evaluation of scientific evidence and arguments, (iv) basic principles of study design, and (v) research ethics and effective collaboration. Students engage in a variety of classroom activities - including lectures, discussions, and peer review of written assignments - and interact with instructors possessing expertise in each of the particular subject areas addressed, as well as with guest instructors working on cutting-edge topics in insect science and related fields. The course emphasizes practical application of the material presented to students’ own research. Over the course of the semester, each student reviews relevant literature and develops and refines a research proposal based on their own scientific interests.

ENT 530: Seminar in Insect Science

1 Credits/Maximum of 4

Seminar in insect science. Topics range from insect phys & immunology to chemical ecology & epidemiology. ENT 530 Seminar in Insect Science (1 per semester/maximum of 4) This class will examine current issues in insect science. Topics for a semester will range from insect physiology, immunology and disease to population ecology, agroecology, and biodiversity. The intent is to generate useful discussions that will help participants advance their own understanding of the broader debate about various research topics in insect science. Specific topics will change each semester allowing students to choose those topics of the greatest interest. Topics will be proposed by faculty with expertise in specific areas. Seminal articles, peer-reviewed literature, government and industry reports, webpages and government regulatory documents will be selected by the faculty member proposing the topic to broaden and deepen student understanding of the topic area. Class participation is expected during discussions and oral presentations of topic areas will be expected.

Prerequisite: Prerequisite or concurrent: ENT 520

ENT 535: Statistical Techniques in Entomology

3 Credits

Research methods course covering experimental design and analysis in entomology, ecology, and the agricultural science. ENT 535 Statistical Techniques in Entomology (3) This natural sciences study design, analysis and interpretation course is for graduate students in ecological and agricultural sciences. The goal of this course is to provide students with the tools needed to conduct quantitative studies. The course focuses on study design and methodology by covering topics such as the relationship between study design and data types and data collection, and interpretation of results.

ENT 539: Chemical Ecology of Insects

3 Credits

Interactions of insects with environmental chemicals, including natural and synthetic compounds; host finding and other behavior modifying cues.

ENT 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

ENT 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses
Entrepreneurship (ENTR)

ENTR 500: Innovation and Entrepreneurship
1-3 Credits

Practical and theoretical insights into analyzing a new business opportunity that you have created. ENTR 500 Innovation and Entrepreneurship (1-3)In this course, you will explore the individual, group, organizational, and inter-organizational levels of analysis. You will gain both practical and theoretical insights from the course as well as creativity, innovation, and entrepreneurship by focusing on the initial identification and quantification of an innovative opportunity and presentation to stakeholders.

ENTR 502: Business Modeling and New Venture Creation
2-3 Credits

ENTR 502 focuses on the process of launching a new venture, in a corporate setting or as a new startup, including identifying a problem or market opportunity, developing business models, forming a team, financing, analyzing markets, assessing the competitive environment, and planning to acquire leadership talent. A business model canvas framework is used as the primary tool for describing, analyzing, and designing business models. In essence, this course identifies and defines the key components necessary to develop a formal business plan. Concepts and techniques explore new venture creation business strategies, including different approaches for business model development. Students will gain insight into how to translate new ideas into viable projects and business ventures. Students will learn the importance of understanding markets, customer segments, and the competitive landscape, as well as how to obtain funding for new ventures. Lastly, the issue of how to acquire leadership and human resource talent to make a new venture viable over time is investigated.

ENTR 503: Garber Venture Capital Practicum
1-2 Credits/Maximum of 2

Structure investment opportunities, conduct due diligence, and potentially invest funds from the Smeal College of Business Garber Venture Capital Fund.

ENTR 504: Essentials of Business Planning
2 Credits

Create a concise and coherent business plan for a start-up or a new corporate initiative.

ENTR 506: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

ENTR 507: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

ENTR 810: Emerging Trends, Technology, and Corporate Innovation
3 Credits

This course explores emerging trends and disruptors in technology and industry that create new markets and influence decision making, product development, business models, and business practices associated with innovation. This course covers the major areas of concern that affect disruptive innovation and examine the role of disruptive innovation in fostering new business ventures. Specific examples of disruptive innovation will be analyzed. Students will gain insight into how breakthroughs in technology, science, and business modeling play out in establishing new products and markets. Students will be exposed to, and investigate, the best practices of key industries (e.g., healthcare, manufacturing, banking, retail, etc.) and organization functions (e.g., marketing, finance, research and development, sales, etc.) as they relate to fostering and supporting innovation and entrepreneurship in a business enterprise. Students will learn the importance of taking an interdisciplinary approach to thinking about and planning innovation projects and programs, in terms of both internal and external forces.

ENTR 820: Corporate Innovation Strategies and Entrepreneurial Methods
3 Credits

This course is designed to survey and explore the methods used to foster innovation and entrepreneurship in a corporate setting. Emphasis will be placed on the methods used in organizations to foster creativity, innovation, and new venture creation. This course covers both tactical and strategic approaches to innovation and entrepreneurship, and examines these in multiple contexts, including technology, business process, product, and strategy. Furthermore, the course will expand on widely accepted frameworks and perspectives for managing innovation,
such as agile product development, and the lean startup approach. Students will also delve into the more abstract notion of how to create and enable an organizational culture of innovation, manage conflict, and negotiate agreements effectively. Lastly, a final objective of the class is to ensure students understand how to protect and manage intellectual property.

**Environmental Engineering (ENVE)**

ENVE 540: Biodegradation and Bioremediation
3 Credits
Microbial degradation and transformation of organic and inorganic contaminants. Principles of current bioremediation technologies for soil and groundwater contaminants.

**Prerequisite:** ENVE 411

ENVE 550: Chemical Fate and Transport
3 Credits
Chemical fate and transport modeling of environmental systems as applied to ecological systems, treatment technologies, and human health exposure assessments. ENVE 550

ENVE 569: Environmental Risk Assessment
3 Credits
Overview of ecological and human risk, including hazard identification, dose response, exposure assessment, and risk characterization.

**Environmental Pollution Control (EPC)**

EPC 590: Colloquium
1 Credits
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

EPC 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

**Environmental Engineering (ENVE)**

ENVE 591: Research Methods in Environmental Engineering
1 Credits
Preparing a research proposal, critical reading of literature, understanding ethics in research, experimental design, data analysis and presentation.

**Prerequisite:** EPC 590

ENVE 594: Research Topics
1-18 Credits/Maximum of 18
Supervised student activities on research projects identified on an individual or small-group basis.

ENVE 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.
Epidemiology (EPID)

EPID 595: Internship
1-18 Credits/Maximum of 18
Supervised, research-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

EPID 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including non-thesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

EPID 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

EPID 599: Foreign Study–Finance
1-12 Credits/Maximum of 12
FULL-TIME GRADUATE-LEVEL FOREIGN STUDY AT AN OVERSEAS INSTITUTION WITH WHOM LINKAGES HAVE BEEN ESTABLISHED.

Prerequisite: acceptance in established exchange program

FIN 506: Portfolio Theory and Policy
3 Credits
Rigorous examination and analysis of asset-holder behavior under conditions of risk and uncertainty.

FIN 531: Financial Management
3 Credits
An intensive examination of techniques available to aid the financial manager in decision making.

Prerequisite: ACCTG511 or ACCTG512 ; B A 533 , SC&IS535

FIN 532: Financial Decision Processes
3 Credits
Financial decision making under uncertainty; positive and normative models and current issues in financial management.

FIN 550: Financial Analysis and Valuation
2 Credits
Builds upon and reinforces the theoretical and institutional finance frameworks learned in introductory business finance.

Prerequisite: B A 531

FIN 570: Financial Modeling
2 Credits
Introduces and applies equity, debt, derivative models and computational techniques using Excel and Visual Basic for Applications. FIN 570 Financial Modeling (2)This course focuses on developing models, making calculations, solving real-world problems, and applying theories. Nearly all the theories applied in this course are from the area of investment management (not corporate finance). However, the concepts, tools, and skills are immediately applicable to corporate finance (such as real option valuation, treasury and cash management, capital budgeting and cost of capital calculation, analysis of M&A and financial restructuring, financial statement and logistical simulations, and programming of routine corporate finance problems.

FIN 577: Financial Engineering and Corporate Strategy
1-3 Credits
This course provides an overview of some of the important issues and problems encountered in recognizing exposures to risk in both financial and non-financial firms, and provides students with a strategic decision-making perspective. Considerable importance will be placed on how exposures to risk affect the firm, and how risk exposures can be re-engineered to enhance firm value. An overview of financial markets and the major sources of risk exposure to the firm will be provided. Measurement of risk exposures will be discussed and various methods of managing and controlling risk will be explored. Tools of the financial engineer ‘futures, options, swaps, and other derivatives’ will be explained and applications will be demonstrated.

RECOMMENDED PREPARATIONS: Smeal M.B.A. Core Courses

FIN 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

FIN 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

FIN 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

FIN 599: Foreign Study–Finance
1-12 Credits/Maximum of 12
FULL-TIME GRADUATE-LEVEL FOREIGN STUDY AT AN OVERSEAS INSTITUTION WITH WHOM LINKAGES HAVE BEEN ESTABLISHED.

Prerequisite: acceptance in established exchange program

FIN 600: Thesis Research
1-15 Credits/Maximum of 999
No description.
Prerequisite:

opportunities and risks in the global business and financial markets.

financing, and risk management strategies in the context of unique
among students to plan, implement, and evaluate value adding investing,
multinational corporations. The course facilitates developing the ability
processes, and valuation consequences of global financial strategies of
setting. It helps students appreciate the strategic motivations, decision
pricing and valuation of derivative instruments.

This course aims to prepare students for a
career in multinational corporate financial management in a global
setting. It helps students appreciate the strategic motivations, decision
processes, and valuation consequences of global financial strategies of
multinational corporations. The course facilitates developing the ability
among students to plan, implement, and evaluate value adding investing,
financing, and risk management strategies in the context of unique
opportunities and risks in the global business and financial markets.

Prerequisite: FIN 531

FIN 808: Analysis of Financial Markets

3 Credits

This course is an overview of financial markets and institutions, with
an emphasis on the valuation of fixed income securities and financial
derivatives. Topics will include: determinants of interest rates; the term
structure of interest rates; various financial markets including money,
bond, stock, and foreign exchange markets; financial derivatives including
options, futures, and swaps; and the financial markets.

Prerequisite: FIN 531

FIN 813: Speculative Markets

3 Credits

This course covers the valuation and uses of derivative securities. The
topics include the pricing and valuation of forward contracts, futures,
swaps, and options. In addition, common hedging strategies will be
discussed using the financial derivatives as basic building blocks to
manage financial risk exposures to equity prices, interest rates, foreign
exchange rates, and commodity prices. The topics in this course are
quantitative and challenging because of the conceptual complexity of
financial derivatives and the precision and degree of details required in
pricing and valuation of derivative instruments.

Prerequisite: B A 531
of the corporate planning strategic management team. The course integrates topics and methodologies analyzed throughout the program, leading students to understand that corporate strategic analysis, and ultimately, the firm's ability to enhance shareholder value, is a holistic and multifaceted analytical process. Generally, the capstone course involves strategic financial decision-making and long-term strategic analysis. The course requires students to demonstrate advanced skill at integration and mastery of specific concepts. Specifically, capital structure and cost of capital analysis, financial forecasting, valuation, corporate control, and the environmental factors influencing capital acquisition and allocation. Analysis of the international operations as a multinational firm adds an additional layer of complexity.

**Prerequisite:** BA 831, FIN 577, FIN 855

**FIN 881: Fundamentals of Financial Markets**

1-3 Credits/Maximum of 3

This course provides a broad understanding of the pricing mechanism of the bond, equity, and foreign exchange markets. The course also gives students an overview of analytical methodologies that help market participants discern asset price from asset value. How can a market participant understand when they are 'buying low and selling high'? In particular, the course investigates the following questions related to understanding financial markets and why this understanding is important to success as a strategic corporate manager. ¿ - What is the language of financial markets? ¿ How do market actors read financial statements with a critical eye to understand assets' future value? ¿ What is the difference between price and value? ¿ What, theoretically, is the 'intrinsic value of an asset'? ¿ What analytical techniques can the financial market participant use to approximate intrinsic value? ¿ How are decisions made given that market results are uncertain? ¿ How are decisions made probabilistically using the basic concepts of expected value and standard deviation? ¿ What is the difference between an 'optimal' decision using market data vs. an 'accurate' decision? ¿ How do we understand and quantify our corporation's risk profile and how does that determine our decisions to employ capital in one asset market vs. another? At the end of the course students should have a sense that decisions to buy or sell an asset in any financial market are imperfect, and that new information alters the value of assets extremely quickly. As a result, students must develop a keen sense of how markets are moving, and why they are moving in one direction or the other. More importantly, students will realize that decisions must be made, assets must be bought or sold, and hopefully, valuation techniques lead to profitable outcomes.

**Prerequisite:** FIN 550 RECOMMENDED PREPARATIONS: Smeal M.B.A.

**Core Courses**

**FIN 883: Modern Portfolio Management: Theory and Practice**

1-3 Credits/Maximum of 3

This course explores tools used by corporate portfolio managers. Topics covered include a review of the structure of the asset markets, basic pricing formulas, fundamental and technical analysis, and the different models relating risk and return, as well as portfolio management and derivative pricing. Statistical concepts such as mean, variance, covariance, and regression analysis will be used extensively throughout the course. In particular, corporate portfolio management has become part of the DNA of the organization. Tactically, how does strategic management of corporate assets (both short- and long-term) i.e., the corporate portfolio, create shareholder value? In this course, students will gain an understanding of the theory underlying optimal portfolio construction, the different ways portfolios are actually built in practice, and how to measure and manage the risk of such portfolios. The course covers investment strategies for bonds, equities, and structured products, including the use of derivatives in managing risk as it relates to overall short- and long-term corporate strategy. Portfolio optimization and asset allocation are covered, as well as how to measure portfolio performance. Ethical investment, the role of taxation, and behavioral investment biases are also explored. At the end of the course students will be able to choose between different bonds, equities, and structured products, as well as make asset allocation decisions that match overall corporate strategic decision making. Students will also be able to decide on and know how to manage a diversified investment portfolio and its currency risk.

**Prerequisite:** FIN 550, FIN 581 RECOMMENDED PREPARATIONS: Smeal M.B.A. Core Courses

**Financial Analysis - CA (FINAN)**

**FINAN 518: Financial Markets and the Economy**

3 Credits

Operation, regulation, use, and evaluation of principal financial markets and institutions; monetary policy, asset pricing, and their effects on business. FINAN 518 Financial Markets and the Economy (3) This course will give students a thorough understanding of the major components and operation of our financial system. This system is used to finance businesses and consumer spending as well as for the management of money (payments and investments). FINAN 518 is a graduate course that adds to both your breadth (variety of topics) and depth (rigor, sophistication) of understanding of financial markets and institutions. The course consists of six inter-related major topics: ◆ Overview of the financial system ◆ Survey and analysis of financial institutions that are used by businesses and by consumers and investors ◆ A rigorous analysis of interest rates and asset prices, including an introduction to asset pricing models ◆ An explanation and evaluation of our most important financial markets ◆ Study of important financial assets (chapters 16-25) that are used by businesses to raise funds and are used by investors to increase their wealth and income ◆ An introduction to the relatively new, and growing, markets for financial derivatives, covering the pricing of derivatives (principally futures and options contracts and their use for hedging price risk and for speculation)

**Prerequisite:** BUSEC502 and BUSEC503

**FINAN 521: Corporate Finance**

3 Credits

An in-depth analysis of concepts and techniques of corporate financial management.

**Prerequisite:** ACCT 501

**FINAN 522: Investment and Portfolio Management**

3 Credits

Investment analysis and portfolio management theory and applications.
Food Science (FDSC)

Prerequisite: FINAN521
FINAN 523: Risk Management of Modern Financial Institutions
3 Credits
Evaluating and managing risks faced by modern financial institutions in a dynamic financial market.

Prerequisite: FINAN521
FINAN 526: International Finance
3 Credits
Basics of corporate finance extended to the international environment through a special consideration of exchange rate behavior and its management.

Prerequisite: FINAN521
FINAN 527: Derivative Securities
3 Credits
Use of financial futures, options, and swaps for risk management and investment; pricing models, trading strategies hedging price risk.

Prerequisite: FINAN521
FINAN 530: Corporate Finance II
3 Credits
In-depth analysis of capital budgeting, mergers and acquisition, raising capital, leasing, working capital management, risk management, and international finance.

Prerequisite: FINAN 521
FINAN 531: Managing Financial Operations
3 Credits
A course for financial managers: working capital management, financial planning, financial controls, reporting, financial strategies; theory and practice.

Prerequisite: FINAN521
FINAN 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

Prerequisite: FINAN521
FINAN 597: Special topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

Food Science (FDSC)

FDSC 500A: Fundamentals of Food Science - Microbiology
1 Credits
Overview of the field of Food Science with the focus on microbiology. FD SC 500A Fundamentals of Food Science - Microbiology (1) An overview of the field of food microbiology required of all entering graduate students majoring in food science. Students will acquire knowledge of the core concepts pertaining to the general topics of food microbiology. Upon completion, the student will be familiar with the primary sources of information related to the field. The course provides background material for more advanced and specialized graduate-level courses in food science and will be offered each fall semester.

FDSC 500B: Fundamentals of Food Science - Engineering
1 Credits
Overview of the field of Food Science with the focus on engineering. FD SC 500B Fundamentals of Food Science - Engineering An overview of the field of food engineering required of all entering graduate students majoring in food science. Students will acquire knowledge of the core concepts pertaining to the general topics of food engineering. Upon completion, the student will be familiar with the primary sources of information related to the field. The course provides background material for more advanced and specialized graduate-level courses in food science and will be offered each fall semester.

FDSC 500C: Fundamentals of Food Science - Chemistry
1 Credits
Overview of the field of Food Science with the focus on chemistry. FD SC 500C Fundamentals of Food Science - Chemistry (1) An overview of the chemistry underlying the properties of food. Students will be introduced to the major chemical components of food along with the reactions occurring during manufacturing and storage that can impact food quality and safety. The material will be taught through a combination of lectures and selected readings pertaining to the field of food chemistry. Upon completion, students will be able to explore how these topics can be practically addressed as research questions through the analysis of papers from recent guided readings. The course provides background material for more advanced and specialized graduate-level courses in food science and will be offered each spring semester.

FDSC 500D: Fundamentals of Food Science - Nutrition
1 Credits
Overview of the applications of nutrition in the field of Food Science. FD SC 500D Fundamentals of Food Science - Nutrition An overview of the role that nutrition research and recommendations play in labeling regulations and product development of manufactured foods. The student will acquire a very basic understanding of human carbohydrate, protein and fat metabolism and how the public health concern about
chronic disease has influenced the Nutrition Facts panel and the use of health claims. Case studies of several functional ingredients (including fat replacers) developed by the food industry in response to nutrition recommendations will be examined.

FDSC 501: Research Methods in Food Science

2 Credits

Planning and conducting research in food science including: problem definition, experimental design, collecting and recording data, and effective communication. FD SC 501 Research Methods in Food Science (2) FD SC 501 is designed to develop and improve research skills and prepare students for professional careers. The course will guide the student from problem selection to a completed research report. Along the way the student will come to appreciate the philosophical underpinnings of the research enterprise and understand how a research project is conducted in a professional and acceptable manner. The course will provide an overview of statistical techniques used for data analyses and protocols necessary to conduct research using human and animal subjects. Emphasis will be given to learning and improving written and oral communication skills. Students will learn by identifying funding sources, writing a research grant proposal and presenting the same to an audience. Subtleties of writing skills for peer-reviewed journals and corporate reports will be highlighted. Performance in the course will be evaluated based on written and oral presentations and class participation. A variety of audio-visual tools will be available to make presentations in the class. The course will be offered every spring semester.

FDSC 506: Flavor Chemistry

3 Credits

Formation, analysis and release of flavors in food systems. 

Prerequisite: FD SC400

FDSC 507: Advanced Food Microbiology

3 Credits

Roles of microorganisms in food preservation, spoilage, health and disease. Recent advances in detection, tracking and control of foodborne pathogens. FD SC 507 Advanced Food Microbiology (3) FD SC507 is an intensive graduate course in food microbiology. Students will acquire knowledge of the core concepts pertaining to the roles of microorganisms in food preservation, spoilage, human health and disease. Special emphasis will be given to recent advances in molecular biology, genomics and bioinformatics that enhance the detection and tracking of foodborne pathogens. Upon completion of the course, students will be able to critically evaluate primary sources of information related to the field and be able to apply their knowledge to the development of effective risk assessment and risk management systems for ensuring food safety. Students will be able to critically analyze current food microbiology research publications and assess the quality of research publications in the field of food microbiology. Performance will be assessed through two exams, two quizzes, presenting and leading critical discussions of journal articles, and participating in class discussions. Resources will include an advanced-level text, other hardcopy and electronic resources and primary literature. The course will be offered every other year during the spring semester.

Prerequisite: FD SC408 or FD SC500A , and a 400-level course either biochemistry or molecular biology

FDSC 510: Carbohydrate Hydrocolloids

3 Credits

Physicochemical behavior of edible carbohydrate hydrocolloids, with emphasis on starch and selected exudates, extracts, flours, and fermentation products.

Prerequisite: BIOCH401

FDSC 514: Food Physical Chemistry

3 Credits

Physical principles underlying food structure and quality. FD SC 514 Food Physical Chemistry (3) Food structure occurs over many scales ranging from the molecular to the macroscopic pieces consumed. We are interested in small scale behaviors as they determine larger scale structures and hence the bulk functionality of foods as materials (e.g., texture, physical stability). The structure of food arises from the molecular interactions of its ingredients as modified by the processing conditions applied. Food is rarely at a thermodynamic equilibrium so time-dependency and kinetics are particularly important. In this class, the students will develop an understanding of the structures occurring (e.g., crystals, gels, colloids), how they form, and how they affect the functional properties of foods. Students will gain knowledge and understanding of the relevant principles through a variety of guided readings and lectures. They will then apply this knowledge in critical discussions of primary research articles. Finally the students will use the knowledge gained in a research project where they will be asked to explain the physics associated with a specific food product or process. Students will be evaluated by a combination of in-class tests, a participation grade, examinations (mid-term and final) and a project. The course will be offered alternating spring semesters.

Prerequisite: FD SC400 or FD SC500C

FDSC 515: Sensometrics - Applied Multivariate Analysis in Sensory & Food Science

3 Credits

The main objective of this course is to allow each student to develop the necessary data analysis skills needed for analyzing and interpreting sensory and consumer data. Additionally, students will develop an understanding for experimental designs and statistical analyses to plan, analyze, and interpret data collected from sensory studies. Hands-on experiences in analyzing sensory data will be provided through homework assignments in each week, and discussions of appropriate literature where indicated. Topics covered in this course will include experimental design and data visualization, data analysis of discrimination tests, analysis methods for descriptive data, approaches for understanding consumer results and identifying drivers of liking, as well as novel statistical methods for alternative descriptive methods (sorting, napping, check-all-that-apply, etc.), ways of analyzing temporal sensory data, and correlating sensory data to other data, such as demographics or instrumental analyses. Discussion of current literature, where appropriate, will showcase how these methods are applied in the 'real world', and further the understanding of how these methods are used, and interpreted. In addition, students will develop and further their critical thinking and communication skills.
**Prerequisite:** STAT 500; or BBH 505 RECOMMENDED PREPARATIONS: STAT 484 STAT 485 FDSC 404

FDSC 516: Consumer Insights

3 Credits

This course aims to allow each student to develop and apply the fundamental dimensions and value of consumer insights to product development objectives; implement key qualitative, quantitative, and hybrid approaches for consumer insights; recognize, identify, and apply key consumer biases, and examine trade-offs in research and consumer behavior. Topics covered in the course start with understanding the consumer and key consumer biases and move to objective-based consumer research design including qualitative, quantitative, and hybrid approaches. In addition, research in the fuzzy front end, utilizing social listening as well as new technology in consumer research will be discussed. Throughout, an objective-based framework will be applied where the consumer is at the center and insights are developed related to how consumer interact with products. In addition, the real-world practical examples and assignments will be utilized extensively for real world application. Taken together, this will allow students to develop and further their critical thinking and communication skills.

**CONCURRENTS:** STAT 500

FDSC 521: Food Defense: Prevention Planning for Food Processors

3 Credits

Course prepares current and aspiring professionals to learn, recognize and apply measures to prevent intentional contamination of the food supply. FD SC (AGBIO) 521 Food Defense: Prevention Planning for Food Processors (3)This course will not only provide participants with knowledge of the domestic and international food industry, but it also provides tools for food industry and homeland security professionals to develop food defense programs to protect the food supply from terroristic activities leading to intentional contamination. The course will introduce and apply: examples where intentional contamination has been used in the food industry; biological, chemical and physical hazards of primary concern in the food industry; methods for detecting hazards in the food supply; systems employed to monitor foodborne illness in the general public; management practices employed in food production to deal with recalls and other crises; vulnerabilities and mitigation procedures unique to food production; as well as agencies, resources, and tools needed to protect, prepare, and respond to intentional contamination incidents. This course is a required course for the certificate program in Agricultural Biosecurity as well as the Master of Professional Studies in Homeland Security/Agricultural Biosecurity Option. These principles also will be incorporated into a food defense plan, recall plan, and emergency preparedness plan for an assigned food establishment.

Cross-listed with: AGBIO 521

FDSC 526: Microbial Physiology of Foodborne Organisms

3 Credits

A current literature-based course investigating the mechanisms by which foodborne bacteria (beneficial and pathogenic) grow, survive, and react to environments encountered in foods and during food processing.

FDSC 534: Readings in Ingestive Behavior

1 Credits/Maximum of 6

Students lead discussions of original research in the field of ingestive behavior; focus on food intake in particular. FDSC 534 / NUTR 534 Readings in Ingestive Behavior (1 per semester/maximum of 6) The class provides a forum for students to learn to lead a discussion focused on original research in the field of ingestive behavior. In addition, it provides the opportunity for students to become familiar with the broad range of topics relevant to this field of research. While the primary focus is on the consumption of food, other relevant topics (obesity, eating disorders, fluid intake) also are included. Research topics include both basic and applied areas.

Cross-listed with: NUTR 534

FDSC 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on individual basis and fall outside the scope of formal courses.

FDSC 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

FDSC 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

FDSC 601: Ph.D. Dissertation Full Time

0 Credits/Maximum of 999

No description.

FDSC 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Supervised experience in the development of instructional materials, the organization and conduct of lectures/laboratories, the evaluation and counseling of students.

FDSC 603: Foreign Academic Experience

1-12 Credits/Maximum of 12

Foreign study and/or research approved by the food science program constituting progress toward the degree.

FDSC 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.
Forensic Science (FRNSC)

FRNSC 532: Drug Chemistry and Toxicology

3 Credits

Chemical and toxicological properties of therapeutic and non-therapeutic drugs and the analytical and instrumental methods of their identification and quantification.

FRNSC 541: Forensic Seminar Series

1 Credits

Advanced concepts in forensic science through presentation of journal articles, case studies, and research findings. FRNSC 541 Forensic Seminar Series (1) Classroom presentations and discussions will focus on different aspects of forensic science as found in current journal articles, casework studies, and current research projects. In this way, the students will be introduced to concepts, technologies, and methodologies that can be applied in forensic crime laboratories today or in the near future. The classroom discussions will include exercises designed to develop critical thinking skills. At the end of the course, students will have gained an understanding or better understanding of a number of different forensic science concepts. The course is a 500-level forensics course required for the Master of Professional Studies in Forensic Science degree program.

FRNSC 561: Ethics in forensic Science

1 Credits

The ethics of forensic science, including issues of evidence handling, data analysis, and courtroom testimony. FRNSC 561 Ethics in Forensic Science (1) Classroom presentations and discussions will focus on integrity, ethical behavior, ethics standards and different examples of ethics violations and misconduct in the forensic science community. In this way, the students will be introduced to the imperative and sensitive issues surrounding professional integrity and ethics. At the end of the course, students will have gained an understanding or better understanding of professional integrity and ethical behavior in relation to forensic science. The course is a 500-level forensics course required for the Master of Professional Studies in Forensic Science degree program.

FRNSC 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

FRNSC 801: Criminalistics III

4 Credits

Advanced CSI investigation, criminalistics, and scene reconstruction with mock courtroom testimony. FRNSC 801 Criminalistics III (4) Classroom discussions will expand on the analysis of commonly encountered evidence to demonstrate its usefulness in real-crime investigation. Students will be given problems to research for which there will be real-life examples in either the literature or in court records. Using a problem solving technique, students will research and examine actual analytical data, interpret it and then testify to it in mock court situations. After researching actual cases, students will demonstrate their ability to critically analyze crime scenes. Scenes will be mocked up at the university crime scene house, Spruce Cottage, selected because of their complexity. Students will analyze evidence obtained after processing a crime scene. The students' laboratory analysis will encompass a variety of physical evidence types that will test a student's ability to select an analytical scheme that makes sense in the context of the current case. Integral in this process is the understanding of the operation of criminalistics laboratories and how it relates to the quality assurance function of the laboratory. The course is an 800-level forensics course required for the Master of Professional Studies in Forensic Science, and is the capstone course for completion of the degree.

Prerequisite: FRNSC410, FRNSC411, FRNSC413, FRNSC415W and FRNSC821 or FRNSC831

FRNSC 821: Forensic Molecular Biology II

4 Credits

Advanced concepts and application of molecular biology techniques to the analysis of biological evidence collected at crime scenes. FRNSC 821 Forensic Molecular Biology II (4) Classroom discussions will expand on the application of forensic DNA analysis using all market types (STR, Y-STR, and mtDNA), including interpretation of complex profiles and mixtures, advanced understanding of instrument operation, and presentation of DNA results in the courtroom. Students will be introduced to technologies that could be applied in forensic laboratories in the near future (e.g., SNP's, micro-capillary arrays, microchips), and will gain an advanced understanding of how forensic DNA laboratories operate and are managed, i.e., quality assurance programs, facility security, proficiency testing programs, basic budgetary and financial issues, and other areas of interest. The laboratory exercises will reflect classroom discussions and students will be expected to prepare courtroom ready materials (data, documents, and demonstrations). The students will be responsible for setting up and running the laboratory in a similar manner to how a real crime laboratory is run. Many of the classroom discussions will be problem solving exercises designed to emphasize specific applications of laboratory analysis. At the end of the course, students will have mastered advanced screening techniques and the three major forensic DNA methods for analyzing biological evidence. Additionally, they will be prepared to work in a forensic DNA crime laboratory, understanding quality assurance, accreditation, and other areas of importance. In the laboratory, students will have analyzed difficult sample types, interpreted complex DNA profiles, and prepared the evidence for advanced levels of courtroom testimony. The proposed course is relevant to any student in the forensic sciences who has an interest in obtaining employment in a local, state or federal law enforcement agency and/or crime laboratory facility. This is an 800-level forensics course that will be required for students in the Master of Professional Studies (MPS) in Forensic Science degree program who are interested in forensic biology.

Prerequisite: FRNSC421W

FRNSC 831: Forensic Chemistry II

4 Credits

Advanced chemical techniques in forensic science, including examination of complex trace evidence and advanced instrumental analysis.
FRNSC 831 Forensic Chemistry II (3) The purpose of this course is to provide students with rigorous and comprehensive exposure to the techniques and methods used in private, state and federal crime labs in the analysis of trace evidence. The course thoroughly integrates lecture and laboratory activities to explore the history, controversies and current issues related to each topic. The laboratory component incorporates skill-building exercises with open-ended guided-inquiry laboratory exercises and a semester-long laboratory- and literature-based research project. The course consists of 2 three-hour laboratories per week.

**Prerequisite:** FRNSC427W and FRNSC415W

FRNSC 894: Research Projects in Forensic Science

1-12 Credits/Maximum of 12

Supervised student research projects identified on an individual or small-group basis.

**Forestry (FOR)**

FOR 508: Forest Ecology

3 Credits

The forest ecosystem, variations in space and time, classification, ordination techniques, dynamic aspects such as energy flow and nutrient cycling.

FOR 521: Advanced Silviculture

3 Credits

Specific silvicultural practices for the establishment and manipulation of forest stands with respect to recent developments and research needs.

**Prerequisite:** FOR 421

FOR 530: Conservation Genetics

3 Credits

Discussion of the use of genetic principles and technologies in the conservation and management of biological diversity. FOR 530 Conservation Genetics (3) This course will familiarize students with the roles of population genetics, phylogenetics, molecular genetics and quantitative genetics in conservation biology, and to examine in depth pertinent examples from the literature dealing with current applications of conservation genetics including genetic diversity, genetics at the landscape level, the effects of fragmentation on the genetic structure of species, and the role of modern genetics within ecosystem management. FOR 530 will provide a new and valuable component to the graduate curriculum of students interested in genetics, forestry, wildlife, fisheries, conservation, and endangered species. The current scientific literature will be critically reviewed and discussed in relation to case studies, on a range of topics. Evaluation will be based on participation, class presentations, and written papers. The course is to be offered biennially in the Spring in even numbered years.

**Prerequisite:** FOR 430

FOR 555: Multispectral Remote Sensing

3 Credits

Computer analysis of data from nonimaging remote sensors as applied to mapping of natural resources and land use.

**Prerequisite:** three credits of remote sensing

FOR 565: GIS Based Socio-Ecological Landscape Analysis

3 Credits

GIS-based socio-ecological analysis of landscape context for natural resources in relations to present and prospective patterns of land use.

FOR 565 GIS Based Socio-Ecological Landscape Analysis (3) This course seeks synthesis to bridge a gap between the contemporary spatially-oriented biophysical analysis of landscape ecology and use of geospatial technologies for analysis of past, present, and prospective human influences operative at landscape scale - both of which use geographic information systems as analytical platforms. Interest is reciprocal - human influences on landscape, and landscape conditioning of human economic development. Instruction takes place in a GIS laboratory facility, and evidence of learning arises from ability to access, manipulate, and display spatial information.

**Prerequisite:** one course each in intro GIS and statistics

FOR 570: Watershed Stewardship Practicum I

3 Credits

Application of integrated community-based watershed planning for water resources management.

**Prerequisite:** enrollment in the Graduate Option in Watershed Stewardship

FOR 571: Watershed Stewardship Practicum II

5 Credits

Application of integrated community-based watershed planning for water resources management.

**Prerequisite:** FOR 570 and enrollment in the Graduate Option in Watershed Stewardship

FOR 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

Cross-listed with: SOILS 590, WFS 590

FOR 591A: Seminar in Watershed Stewardship Issues

1 Credits

Exploration of watershed stewardship issues.

**Prerequisite:** enrollment in the Graduate Option in Watershed Stewardship or by permission of the instructors
FOR 591B: Seminar in Watershed Stewardship Planning
1 Credits
Exploration of watershed stewardship planning processes.
Prerequisite: enrollment in the Graduate Option in Watershed Stewardship or by permission of the instructors

FOR 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

FOR 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

FOR 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

FOR 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

FOR 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Provides an opportunity for supervised and graded teaching experience in forestry courses.

FOR 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

FOR 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

FOR 880: Bioenergy Feedstocks
3 Credits
This course comprehensively addresses the characteristics, production, and improvement of plants as feedstocks for conversion to energy.
Prerequisite: A B E884

French (FR)

FR 501A: Pro-Seminar in French Studies I
1.5 Credits/Maximum of 3
Professional and scholarly development in interdisciplinary French Studies.

FR 501B: Pro-Seminar in French Studies II
1.5 Credits/Maximum of 3
Professional and scholarly development in interdisciplinary French Studies.
Prerequisite: FR 501A

FR 502: Introduction to French Linguistics
3 Credits
An overview of the major subfields of linguistics as they apply to the French language.

FR 529: Seminar in Renaissance Literature
3 Credits/Maximum of 6
Intensive study of various French Renaissance writers in relation to selected artistic issues of the period.

FR 530: La France Contemporaine
3 Credits
A comprehensive cross-sectional view of French society and its institutions since World War II.

FR 531: Francophone Culture
3 Credits/Maximum of 6
Concept of francophone; French minorities in Europe and North America; role of French language in Africa, Middle East, Far East.

FR 533: Baroque Aesthetics in Seventeenth-Century French Literature and Intellectual History
3 Credits
Based on the Foucauldian notion of episteme, the course analyzes major literary texts and intellectual trends.

FR 535: Texts and Performances
3 Credits
Based upon current theories of theater, the course focuses on problematics of French drama from the Seventeenth-Century to the present.

FR 543: Seminar: Studies in the Enlightenment
3 Credits/Maximum of 6
Discourse and thematic analysis of selected works of French Enlightenment genres: essay, drama, fiction, poetry.
FR 545: Analysis of French Civilization  
3 Credits/Maximum of 6  
French cultural aspects, other than language and literature, conducted in French with the collaboration of specialists outside the French department.

FR 546: Discourses on Decadence, 1870-1914  
3 Credits  
This interdisciplinary seminar examines notions of decadence in the visual arts and other fields elaborated primarily in French and Francophone contexts between 1880 and 1914. We will alternate an in-depth reading of Joris-Karl Huysmans' classic text of Decadence, A Rebours (1884), with close study of the visual arts, music, scientific discourse, and historical and philosophical texts in order to identify what were considered by contemporaries the major sources of decadence during that era: among others, 'new women'; Jews and other social and 'racial' inferiors; democratization, urbanization, and the triumph of scientific and rationalistic thought. We will also examine presumed symptoms of decadence: neurasthenia, declining birth rates, perceived social 'pathologies' such as prostitution, crime, and drugs; homosexuality, androgyny, and other supposed sexual 'perversions'; and psychological conditions such as hysteria. Finally, we will examine what contemporaries considered antidotes to decadence: visits to spas, the cult of heroes, sports, a return to faith. We will analyze how artists and authors of the period among others, Aubrey Beardsley, Félicien Rops, Edvard Munch, Fernand Knopff, Jean Lorrain, Oscar Wilde, and others' valorized the notion of decadence, creating it and making it the touchstone of a key aesthetic of the late-nineteenth century, overlapping and echoing other trends and esthetics, such as Symbolism, Art nouveau, the Pre-Raphaelites, Japonism, the Arts and Crafts Movement, Jugendstil, Estheticism, Dandyism, and Snobbism.

FR 547: Modernism and Postmodernism  
3-6 Credits/Maximum of 6  
Interdisciplinary approaches to these concepts, with a focus on artistic and literary objects in the French context.  
Prerequisite: FR 545 or FR 571 or FR 580

FR 559: Issues in Francophone Literatures  
3 Credits  
Diversity issues in Francophone literatures explored through various literary genres: variable focus may combine genre and topic.

FR 560: French Romanticism and Realism  
3 Credits  
Romanticism, realism, and their variations in the context of social and political revolution.

FR 564: Figures of Alterity in Nineteenth-Century French Literature  
3 Credits  
Representations of otherness in nineteenth-century French literature examined through race, gender, religion, and class paradigms.

FR 565: Seminar: Nineteenth-Century Studies  
1-6 Credits  
Various nineteenth-century French writers considered in relation to selected esthetic and cultural problems raised during the period.

FR 566: Women Writers in Nineteenth-Century France  
3 Credits  
Women's literary production in nineteenth-century France, including novels, poetry, travel narratives, children's literature, and essays.

FR 569: Major Texts of Twentieth-Century French Literature  
3-6 Credits/Maximum of 6  
Established contemporary literary texts, figures, and aesthetic movements in various genres from Proust to Sartre and from Genet to Conde.

FR 570: Modern French Poetry  
3 Credits/Maximum of 6  
Exploration of the poetic genre and its diversification through poetic prose, free verse, and metaphorical narrative, from Baudelaire to Cixous.

FR 571: French Literary Theory and Criticism  
3 Credits  
Major trends in contemporary theory and criticism from genre debates to socio-political approaches to literature, post-structuralism, deconstruction, and reception theories.

FR 572: Seminar: Twentieth-Century French Literature  
3 Credits/Maximum of 6  
Specialized consideration of contemporary writers; for advanced students.

FR 574: French Folklore and Popular Culture  
3 Credits  
Historical survey of French folklore and popular culture, with an emphasis on the modern period.

FR 580: Approaches to French Civilization  
3 Credits  
French interdisciplinary methods of cultural analysis and cultural history, with applications to French cultural artifacts.

FR 581: Theory and Techniques of Teaching French  
1-6 Credits/Maximum of 6  
No description.
Fuel Science (FSC)

FSC 503: Analytical Methods in Fuel Science
3 Credits
Analytical and characterization methods used in fuel science and applied to fuel processing, combustion, and conversion are emphasized. FSC 503 Analytical Methods in Fuel Science (3)
The course will focus on the analytical methods that are used in fuel science for the characterization of fuels and their products during combustion, conversion, processing, and utilization. Students will be exposed to the theory and practical applications of such analytical methods as chromatography and spectrometry. Methods for the analysis of the data obtained with these analytical techniques will be discussed. In particular, the potential for interference and confounding results and techniques for establishing reproducibility and error bars in the experimental data and results will be explored.

Prerequisite: EGEE 430, FSC 431 or equivalent

FSC 504: Problems in Fuels Engineering
3 Credits
A problem-based, active learning course on the utilization of fossil fuels and renewable energy.

Prerequisite: EGEE 430 and FSC 431

FSC 506: Carbon Reactions
3 Credits
Current approaches to heterogeneous reactions in combustion and gasification of carbonaceous solids, including those derived from coal and petroleum sources.

Prerequisite: CHEM 452

FSC 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

FSC 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

FSC 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

FSC 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Activities to be included in the teaching assignment will be lecturing, leading discussions, conducting recitations, correcting and grading student papers and examinations.

FSC 603: Foreign Academic Experience
1-12 Credits/Maximum of 12
Foreign study and/or research constituting progress toward the degree at a foreign university.

FSC 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

FSC 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

Genetics (GENET)

GENET 581: Genetics of Model Organisms: Bacterial and Viral Pathogenesis: A
1 Credit
Examines uses of genetic studies in understanding biological processes associated with bacterial and viral pathogenesis. GENET 581
Genetics of Model Organisms: Bacterial and Viral Pathogenesis: A (1) This course presents the use of genetic analysis in bacteria and viruses with its application to the study and dissection of biological pathways and processes. Bacterial and viral pathogenesis will be used to develop concepts and techniques that are critical components of genetic studies. Integration of studies will be used to compare and contrast the specific methods and techniques that underlie the use of genetic approaches in bacteria and viruses.

Prerequisite: BMS 503 or permission of program

GENET 582: Genetics of Model Organisms: Molecular Genetic Analysis of Signaling Pathways: B

1 Credits

Examines uses and interrelationships of genetic studies with model systems from yeast to mice in elucidating signaling pathways. GENET 582 GENET 582 Genetics of Model Organisms: Molecular Genetic Analysis of Signaling Pathways: B (1) This course presents the use of genetic analysis in model organisms and systems with its application to the study and dissection of biological pathways and processes. Elucidation of target of rapamycin (TOR) signal transduction pathway will be used to develop concepts and techniques that are critical components of genetic studies. Integration of studies from multiple model systems will be used to compare and contrast the specific methods and techniques that underlie the use of similar genetic concepts in different organisms and systems.

Prerequisite: BMS 503 or permission of program

GENET 585: Human Genetics B: Non-mendelian Genetics

1 Credits

This course explores genetic disease mechanisms that alter chromosome behavior or show non-mendelian patterns of inheritance. GENET 585 GENET 585 Human Genetics B: Non-mendelian Genetics (1) Many genetic diseases do not show straightforward patterns of inheritance. Was Gregor Mendel wrong? How can a disorder be inherited without causing primary DNA sequence changes? What is the biological basis behind disorders that do not show simple mendelian inheritance? What are the phenotypic consequences of disorders that alter fundamental aspects of chromosome mechanics? These topics and more will be covered in this selective course. This course will be offered as part of 3 one-unit courses in Human Genetics that cover (1) identification and analysis of chromosomes and disease genes, (2) the human genome and complex traits, and (3) chromosome behavior and non-mendelian inheritance. The full three unit series may be taken in its entirety although each one-unit course is completely independent of the other two courses. Students will be evaluated by their class participation and performance on take-home assignments that require the students to solve problems, evaluate experiments, or logically address research questions.

Prerequisite: BMS 501, BMS 502, and BMS 503

GENET 586: Human Genetics C: Complex Traits

1 Credits

This course explores the human genome landscape, how individuals vary, and gene identification for multigenic traits and disorders. GENET 586 Human Genetics C: Complex Traits (1) With the completion of the human genome project, genes underlying almost all 'simple' mendelian traits have now been identified. A new challenge is to identify genes involved in common traits and disorders such as hypertension or obesity. This course will explore the human genome landscape, human genome variation, principals of population genetics and experimental approaches to identify genes involved in these important complex disorders. This course will be offered as part of 3 one-unit courses in Human Genetics that cover (1) identification and analysis of chromosomes and disease genes, (2) the human genome and complex traits, and (3) chromosome behavior and non-mendelian inheritance. The full three unit series may be taken in its entirety although each one-unit course is completely independent of the other two courses. Students will be evaluated by their class participation and performance on take-home assignments that require the students to solve problems, evaluate experiments, or logically address research questions.

Prerequisite: BMS 501, BMS 502, and BMS 503

GENET 587: Genetic Approaches to Biomedical Problems

3 Credits

Advanced training of students with interest in genetic approaches to problem solving.

Prerequisite: BMS 501, BMS 502, BMS 503

GENET 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

GENET 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

GENET 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

GENET 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

GENET 601: Ph.D. Dissertation Full Time

0 Credits/Maximum of 999

No description.

GENET 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.
**Geodesign (GEODZ)**

GEODZ 511: Geodesign History, Theory, Principles

3 Credits

Students study the theory and principles of geospatially-based design by investigating the methods and collaborative nature of the geodesign process. GEODZ 511 Geodesign History, Theory, Principles (3) GEODZ 511 consists of lectures, readings in course literature, small group discussion forums, and individual topic investigation. In this course students will explore the questions, challenges, and the values of the geodesign framework. The course provides a comprehensive overview of the geodesign process, including designing in geographic space, issue identification, process evaluation, fast iteration and alternative scenario generation, multidisciplinary collaboration, and the role of science- and value-based decision making. The course culminates in a final project in which students independently research the physical and social characteristics, data, and teaming-expertise required to deploy a study for their topic, and report on how their proposed geodesign framework enables creative change for that location. Students who successfully complete the course will be able to associate different types of design and planning issues and challenges to the appropriate geodesign workflow and identify possible models to use to promote creative change for a place. They will be able to prepare a description of a scenario and the team needed to perform a geodesign study, and illustrate which tools or techniques may be best suited for a scenario.

**Prerequisite:** GEOG 482

GEODZ 596A: Individual Studies--Geodesign Capstone Project Proposal and Peer Review

3 Credits

Preparation and peer-review presentation of proposal for an individual capstone geodesign project.

**Prerequisite:** GEODZ852

GEODZ 596B: Individual Studies--Geodesign Capstone Project Dissemination

3 Credits

Preparation and dissemination of geodesign capstone project results in a formal professional venue.

**Prerequisite:** GEODZ596A

GEODZ 822: GeoDesign Models I: Evaluation and Decision

3 Credits

The principles, inherent values and practical applications of Evaluation and Decision models as implemented within the Geodesign Framework.

**Prerequisite:** GEODZ511

GEODZ 824: GeoDesign Models II: Process and Impact

3 Credits

The principles, inherent values and practical applications of Process and Impact models as implemented within the Geodesign Framework.

**Prerequisite:** GEODZ822

GEODZ 826: GeoDesign Models III: Representation and Change

3 Credits

The principles, inherent values and practical applications of Representation and Change models as implemented within the Geodesign Framework.

**Prerequisite:** GEODZ822

GEODZ 842: Geodesign Studio I: Rural/Regional Challenges

6 Credits

Problems-based workshop where students apply geodesign process, in a collaborative setting, to regional-scale landscape change and land planning topics.

**Prerequisite:** GEODZ824 or GEODZ826

GEODZ 852: Geodesign Studio II: Urban/District-scale Challenges

6 Credits

Problems-based workshop where students apply geodesign process, in a collaborative setting, to urban-scale landscape change and land planning topics.

**Prerequisite:** GEODZ842

**Geography (GEOG)**

GEOG 500: Introduction to Geographic Research

1-3 Credits/Maximum of 3

No description.

GEOG 502: Research Scholarship in Geography

3 Credits

Learning the craft of scholarly research in geography. GEOG 502 Research Scholarship in Geography (3) Graduate students are expected to make a significant research contribution as part of the requirements for a MS or Doctoral degree in Geography. The Research Scholarship in Geography course provides students with a basic understanding of the craft of scholarly geographic research. It does so by setting research into a tradition of commonalities that shape expectations (e.g., disciplinary and federal IRB ethics standards; ideas of academic freedom and responsibility) and by focusing on the mechanics of key steps in the research process (identifying problems, developing questions and proposals, designing programs of research, executing a systematic program of research, responding to criticism and to opportunities, preparing and delivering oral presentations, and writing and publishing research reports). The course emphasizes important skills in developing research proposals, seeking research funding, writing manuscripts, giving presentations, and publishing research results.

**Prerequisite:** GEOG 500
GEOG 508: Feminist Methodology

3 Credits

The objective of this course is to examine feminist approaches to traditional research methodologies. The objective of this course is to examine feminist critiques of traditional research. The course will examine the animated and contentious debates among feminist scholars about what constitutes a feminist method. Although there is no single feminist method, diverse academic communities are searching for techniques consistent with their convictions as feminists. For this reason, the course will distinguish between methods, as tools for research, and methodology, as theory about the research process. The course reviews methods such as ethnography, interviewing, oral history, discourse analysis, visual analysis, and mixed method approaches. Cross Listings: GEOG 508 will be added as a cross-listed course.

Cross-listed with: WMNST 508

GEOG 510: Seminar in Physical Geography

3 Credits/Maximum of 18

Analysis of current literature in physical geography focusing on theoretical and methodological debates. GEOG 510 Seminar in Physical Geography (3 per semester/maximum of 18) This seminar explores current issues in physical geography. The focus for each offering of this advanced seminar is on a specific theme of current importance. Recent developments and ongoing research issues within that topic are explored in-depth. Topic examples include, but are not limited to: synoptic climatology and climate dynamics, the cryosphere, remote sensing, ecological biogeography and ecosystem dynamics, landscape and restoration ecology, wetlands ecology and management, and coastal and inland hazards.

Prerequisite: GEOG 454, GEOG 455

GEOG 520: Seminar in Human Geography

3 Credits/Maximum of 18

Analysis of current literature in human geography focusing on theoretical and methodological debates.

GEOG 530: Human-Environment Seminar

3 Credits/Maximum of 18

Theory and method in human-environment interaction subfields; may be re-taken when topics vary; readings, discussions, research.

GEOG 550: Wetlands Ecology and Management

3 Credits

Recommended Preparations: One course in ecological or hydrological sciences. This course explores the diversity, complexity, ecological functions, conservation, and cultural values of freshwater and coastal wetlands through interdisciplinary discussions, readings, projects, and field trips. Learning Outcomes: Students successfully completing this course will gain an understanding about the ecology, management, and conservation of freshwater and coastal wetlands. They will be able to classify different wetland types using multiple methods, understand the breadth of wetland functions, and become familiar with laws, regulations, and approaches to conserve wetlands.

GEOG 560: Seminar in Geographic Information Science

3 Credits/Maximum of 18

Geographic information science problems/theory, e.g. GIS, cartography, remote sensing, spatial analysis, modeling.

GEOG 565: Selected Topics in Geographic Information Science

3 Credits

Examination of geographic information science topics: GIS, cartography, remote sensing, spatial analysis, modeling, spatial cognition, geospatial semantics, geovisualization.

GEOG 571: Intelligence Analysis, Cultural Geography, and Homeland Security

3 Credits

The application of cultural geography in the intelligence analysis and synthesis process by identifying prominent threats to civil security. GEOG 571 Intelligence Analysis, Cultural Geography, and Homeland Security (3) This course examines and illuminates the relationships between cultural geography, civil security and the stability of the existing world order. It rests firmly upon the application of the tools of spatial analysis that are at the heart of the discipline of geography, and is designed to help students develop the analytical processes that will lead to enlightened syntheses (intelligence products) about the connections associated with cultural differences and current internal and external threats to the security of the American homeland. It also is designed to encourage students to examine the impacts of cultural differences on the stability of the existing world order. The overarching objective of this course is to help successful students develop the knowledge, comprehension, and skills needed to effectively analyze current geospatial realities and, through the prism of cultural geography, create a rational predictive synthesis (intelligence summary) about potential human threats to the security of the nation.

GEOG 583: Geospatial System Analysis and Design

3 Credits

Systematic approach to requirements acquisition, specification, design and implementation of geospatial information systems. GEOG 583

Prerequisite: GEOG 484

GEOG 585: Open Web Mapping

3 Credits

Design, development, and implementation of web mapping applications using OGC standards and open source software. GEOG 585 Open Web Mapping (3) The geospatial industry has developed a culture of open standards and specifications by which both data and mapping tools can be made interoperable. Web Mapping requires the detailed application of a thorough theoretical understanding of these standards, as well as a working knowledge of how these standards are realized through recent information technology advances in web services and middleware. The course gives students the theoretical base from which they can go on to design, develop, and implement custom web mapping applications using open standards and open source software. On completion of the course, students will be able to build and deploy a complete web mapping solution including selecting the spatial data, the server and client software. Students will be able to determine which type of mapping
server is required for their needs and to explain why choosing an open standard based solution is better than a proprietary solution. The course will cover a variety of open source software packages for web mapping and will provide pointers to commercial solutions where appropriate. Open Web Mapping is designed specifically for adult professionals. The course will be broken down into ten lessons. Each lesson will take one week to complete and requires a minimum of 8-12 hours of student activity each week, totaling approximately 120 hours of activity. Topics to be covered in each lesson include: Lesson 1 Open Web Mapping Framework International Methods Lesson 2 Web Map Servers (WMS) basics Understanding the structure of a WMS request Understanding the structure of a WMS response Lesson 3 Web Feature Server (WFS) basics Understanding the structure of a WFS request Understanding the structure of a WFS response Lesson 4 Introduction to XML XML and web mapping XML schemas Lesson 5 Styling maps with WMS and Styled Layer Description (SLD) Cascading Web Map Servers Lesson 6 Geographic Markup Language (GML) Application Schemas and Profiles Lesson 7 Advanced WFS Gazetteeers Other specialist applications of WFS Lesson 8 Building a web mapping applications Deploying a WMS Deploying a WFS Lesson 9 Building a thin web mapping client Client/Server techniques Web mapping libraries and customizing them Lesson 10 The future of web mapping

**Prerequisite:** GEOG 485

GEOG 586: Geographical Information Analysis
3 Credits

Choosing and applying analytical methods for geospatial data, including point pattern analysis, interpolation, surface analysis, overlay analysis, and spatial autocorrelation. GEOG 586

**Prerequisite:** GEOG 485 or GEOG 486 or GEOG 487

GEOG 587: Conservation GIS
3 Credits

Conservation GIS applies geospatial problem solving to ecological research and resource management issues to enhance conservation planning.

**Prerequisite:** GEOG 487

GEOG 589: Emerging Trends in Remote Sensing
3 Credits

Highlights emerging theoretical and methodological trends in high-performance remote sensing for geospatial analysis through discussion and laboratory experiences.

**Prerequisite:** GEOG 480, GEOG 883

GEOG 590: Colloquium
1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

GEOG 591: GIS for Health Analysis
3 Credits

Applications and theory in geographic information systems for analyzing the geographic dimensions of human health.

**Prerequisite:** GEOG 484

GEOG 594: **SPECIAL TOPICS**
1-3 Credits/Maximum of 3

**Prerequisite:** GEOG 584A: Culminating Experiences in Geospatial Intelligence
1-3 Credits/Maximum of 3

Culminating experiences in current professional and ethical problems facing the geospatial intelligence professional.

**Prerequisite:** GEOG 882, GEOG 883, GEOG 884, GEOG 885, or equivalent courses

GEOG 594B: Geospatial Intelligence Capstone Experience
2 Credits

This course brings together the concepts from the geospatial intelligence program and reinforces the standards of professionalism applicable to geospatial intelligence analysis. The aim is to enhance the student’s understanding of the role of geospatial intelligence, develop individual competencies, reinforce professional concepts, and improve geospatial analytical techniques and methods. Students explore and critically analyze a current topic of interest and apply geospatial technical tools, concepts, and theories learned in previous coursework. Students prepare and deliver a formal presentation of the results of their geospatial intelligence capstone research project.

**Prerequisite:** GEOG 594A

GEOG 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

GEOG 596D: Independent Study/Engaged Scholarship
4 Credits/Maximum of 999

A supervised off-campus, non-group instruction with a geospatial education focus. The instruction may include individual field experience, employment, or internship (paid or unpaid).

GEOG 597: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.
GEOG 597A: **SPECIAL TOPICS**
6.00 Credits

GEOG 597I: **SPECIAL TOPICS**
3 Credits

GEOG 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

GEOG 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

GEOG 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Theoretical and practical aspects of undergraduate instruction in geography.

Prerequisite: concurrent status as graduate teaching assistant

GEOG 603: Foreign Academic Experience
1-12 Credits/Maximum of 12
Foreign study and/or research constituting progress toward the degree at a foreign university.

GEOG 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

GEOG 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

GEOG 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

GEOG 850: Location Intelligence for Business
3 Credits
and experience with contemporary mapping and analysis tools for professional applications of location intelligence.

Recommended Preparations: GEOG 482

GEOG 855: Spatial Data Analytics for Transportation
3 Credits
This course explores the spatial data science and technology associated with the transportation industry. This interdisciplinary field is often referred to as GIS-T. There is a natural synergy between GIS and transportation, which has resulted in a number of specialized techniques and a wide variety of GIS-T applications. To appreciate the value GIS brings to the transportation industry, students need to have some understanding of the business of transportation and the challenges and problems those in the industry face. Consequently, they will learn about a number of subdisciplines within transportation and examine how GIS has been applied to each. Students will also explore some of the key organizations in the transportation industry who use GIS and learn firsthand from transportation professionals, representing a variety of specialized fields, about the role GIS plays for them. Throughout the course, students will study GIS concepts and techniques which are fundamental to transportation, such as transportation networks and linear referencing systems. In addition, they will have the opportunity to explore a number of GIS applications and tools related to transportation. Due to the overall breadth of the transportation industry, the course will focus primarily on the largest application areas: highway and mass transit. We will, however, examine other significant modes, including aviation, maritime, pedestrian, and bike transit. Furthermore, while much of the course content is oriented around the U.S. transportation industry, students will also look at GIS-T applications and trends in other parts of the world.

Recommended Preparations: GEOG 482

GEOG 858: Spatial Data Science for Emergency Management
3 Credits
Geospatial perspectives and technologies have a major role to play in planning for and responding to emergencies. As is true with other analytical paradigms, geospatial systems and technologies - from aerial mapping techniques to data acquisition - are changing rapidly. Emergency management is also changing quickly as the frequency and magnitude of crises and disasters are increasing, and more and more people and places are being impacted. GEOG 858 helps students develop proficiency in the theoretical, analytical, and technical perspectives required to support all stages of emergency (crisis or disaster) management activities with geospatial solutions, ranging from small-scale emergency management efforts to large-scale disasters and humanitarian crises. Topics covered in GEOG 858 will include advancements in geospatial data collection, geospatial data processing and analysis capabilities, unmanned aerial systems (UAS), geospatial artificial intelligence (geoAI), volunteered geographic information (VGI), geospatially-oriented social media, and others.

Recommended Preparations: GEOG 483
GEOG 861: The Earth is Round and Maps are Flat: Working with Spatial Reference Systems in GIS

3 Credits

The course explores three important topics related to georeferenced data: Datums, map projections, and grid systems. Accurate coordinates are the key to successful manipulation in a geographic information system (GIS). The course begins with a detailed look at datums and the role they play in mathematically describing the Earth's shape and size, defining exact Earth coordinates, and establishing the height of a point above mean sea level. Map projections are examined next. These formula-based entities are implemented as algorithms in GIS, remote sensing, and other kinds of mapping and spatial analysis software that systematically take Earth's coordinates and convert them to a planar environment. Grid systems conclude this course with a discussion of their utility when carrying out accurate measurement activities on maps. Collectively, this course provides the theoretical underpinnings and applied knowledge necessary to understand and effectively work with the wide range of available datums, map projections, and coordinate systems that are available today.

RECOMMENDED PREPARATIONS: GEOG 483

GEOG 862: GPS and GNSS for Geospatial Professionals

3 Credits

Cultivates a working knowledge of current and future capabilities of GPS and the emerging Global Navigation Satellite System. GEOG 862 GPS Modernization for Geospatial Professionals (1) Topic: The Global Positioning System (GPS) includes a constellation of earth-orbiting satellites that broadcast their locations in space and time, a network of ground control stations, and military and civilian receivers that calculate ground positions by trilaterating satellite positions. Geospatial professionals need to possess a working knowledge of current and future GPS capabilities because GPS positioning is so prevalent in geographic information systems (GIS) applications in government, industry, and academia. GPS has always been a dual use system, military and civilian. From the beginning, GPS signals have been available with no direct user fees. GPS is used now in all of transportation - aviation, maritime, railroad, highway and mass transit. Satellite positions also play critical roles in telecommunications, land surveying, law enforcement, emergency response, precision agriculture, mining, finance, and scientific research. It controls computer networks, air traffic, power grids, and so on. As the scope of GPS has expanded, the system continues to evolve. Course Objectives: GEOG 862 provides students with an opportunity to develop an in-depth understanding of the Global Positioning System that exceeds the basic awareness that is cultivated in prerequisite courses. For example, while it is useful to know that a minimum of 24 GPS satellites ensure 24-hour worldwide GPS coverage, it is equally important to understand why there are more than the minimum on orbit. Students in GEOG 862 learn that redundancy is necessary in a system upon which much of the U.S. economy now depends. Society's reliance on satellite positioning mandates GPS modernization. Student Activities: The course consists of four weekly lessons. Each lesson will require a minimum of 8-12 hours of activity. Lessons will include weekly lectures (via synchronous Web conference and/or streaming video), threaded discussion, readings, two quizzes and two writing assignments about concepts and tools in GPS Modernization. These assignments are designed to help students progress towards successfully completing the objectives for this course. * Class Participation: Individual participation via online discussion. Students will be encouraged to post and respond to questions and comments in online discussions forums. *Quizzes: There will be a mid-course quiz at the end of Week 2 and a final quiz at the end of Week 4 to test the students' comprehension of class materials and other reading as required. *Papers: There are two writing assignments in this course. The first falls after Week 1 and asks students to prepare a 1200 word paper on one topic covered in 'Basic GPS,' The first lesson. The second falls after Week 3 and asks the students to prepare a 1200 word paper on one topic covered in either Week 2 or Week 3.

GEOG 863: Web Application Development for the Geospatial Professional

3 Credits

The Internet has greatly extended the reach of GIS beyond the desktop. Geospatial technology vendors and the open-source community have devised web service protocols and web mapping application programming interfaces (APIs) so that third-party developers can create their own applications for use on web-enabled devices. These applications serve a wide array of purposes, including place and way finding, data dissemination, and data collection. For example, tabular crime data published on a city's website can be combined with base data layers such as municipal boundaries and roads to produce a map that is valuable for both the city's police department and its citizens. This course focuses on how geospatial professionals can create such applications using industry-relevant geospatial APIs. Students will build applications using current and emerging web technologies. Topics covered will include the implementation of 2D maps and 3D scenes, understanding API documentation, layer discovery and visualization, user interface development, data querying, and geoprocessing.

Prerequisite: GEOG 485

GEOG 864: Professionalism and Ethics in Geographic Information Science and Technology

3 Credits

Professional practice and ethics in the Geographic Information Science and Technology (GIS&T, a.k.a. geospatial) field requires being both competent in one's work and reflective about its legal and ethical implications. Certified GIS&T professionals are required to affirm their commitment to legal and ethical practice. Fulfilling such commitments requires the ability to recognize and analyze legal and ethical problems and to act with integrity. In this course students investigate the nature of professions generally and the characteristics of the professions that occupy the GIS&T field in particular. Students gain awareness of pertinent legal and ethical issues and hone their moral reasoning skills through methodical analyses of case studies in relation to the GIS Code of Ethics and Rules of Conduct. Assignments include readings, case study analyses, interactive discussions, practitioner interviews and preparation of original case studies.

GEOG 865: Cloud and Server GIS

3 Credits

Theory and practical applications of using cloud computing and server resources to solve geospatial problems. GEOG 865 Cloud and Server GIS (3) This course teaches students to use cloud and server GIS resources to solve problems for which geospatial data is an integral element. Students will evaluate and implement systems using three cloud service models; infrastructure services, platform services, and software services. The course involves both lab exercises and critical reading and writing for infrastructure, platform, and software service models. This course
presents common methodologies for setting up cloud services for creating maps, to customize cloud services for managing spatial data, and to invoke cloud services for processing spatial data. This course challenges students to apply critical thinking and technical skills to evaluate and develop successful cloud GIS projects. Written assignments focus on helping students improve their ability to explain and execute cloud GIS projects. A semester-long project involves creating a working cloud GIS project, including public presentation of results.

**Prerequisite:** GEOG 484

GEOG 868: Spatial Database Management for the Geospatial Professional

3 Credits

This course helps students learn how to create, maintain, and retrieve data from a spatially-enabled database. Access to accurate data is the cornerstone on which all successful professional geospatial organizations are built. The data stewards who maintain an organization’s information systems therefore have a crucial role to play. The course begins by introducing relational database theories and structures that are common in both geographic and non-geographic contexts (e.g., Structured Query Language and database design). It then focuses on the special considerations involved in the management of a spatial database by demonstrating two commonly utilized professional approaches.

**Prerequisite:** GEOG 484

GEOG 871: Geospatial Technology Project Management

3 Credits

In this course, students take a critical look at geospatial project management. Project management is a broad discipline that encompasses both technical methods such as system design and analysis, and interpersonal factors that affect professional relationships. Project management is also a discipline that has matured outside of, but can be incorporated into, geospatial technology.

**Prerequisite:** GEOG 583

GEOG 882: Geographic Foundations of Geospatial Intelligence

3 Credits

Orientation to the geographic foundations of geospatial intelligence and its applications in national security, international relief work, and disaster management. GEOG 882 Geographic Foundations of Geospatial Intelligence (3)Topic: Geospatial intelligence (GEOINT) leverages geographic information science and technology (including cartography, geographic information systems, remote sensing, and global positioning systems) with intelligence tradecraft to develop intelligence products that support national security, disaster response, and international relief efforts. Course Objectives: GEOG 882 is designed to challenge current and aspiring GEOINT professionals to be more than technicians. Students who successfully complete GEOG 882 will appreciate that while geospatial technologies are useful in revealing what, who, and where, and to some extent how events are taking place, they are less useful in explaining why events occur, or what response is most appropriate. Students will learn that the political, cultural, historical, and economic perspectives of human geography are needed to put GEOINT analyses in context. The course will also challenge students to approach analyses critically, to consider alternative viewpoints and explanations, and to question their own assumptions. Student Activities: The course consists of 12 lessons that will span either the 15-week semester or the combined 12-week summer sessions. Each lesson will require approximately 10 hours of student activity. Student activity will include viewing and responding to recorded instructor lectures (delivered by digital video and audio), readings from textbooks or selected library resources, five quizzes on readings, four asynchronous online discussion forums, three reflection papers, and a collaborative role-playing simulation that provides a capstone experience.

GEOG 883 Remote Sensing Image Analysis and Applications

3 Credits

GEOG 883 focuses on the use of medium and high resolution remotely-sensed imagery and elevation data in geospatial applications. This course assumes that students have prior knowledge in the basics of remote sensing, mapping, and GIS, and that they have prior experience with commonly used geospatial software. In GEOG 883, students will develop mastery of the tools and techniques used to display, process, and analyze remotely sensed data. Upon completion of GEOG 883 students will be able to develop analytical workflows to derive products and extract information from remotely sensed data for a broad range of applications using both pixel-based and object-based approaches. GEOG 883 Remote Sensing for the Geospatial Intelligence Professional (3)Topic: Geospatial intelligence (GEOINT) leverages geographic information science and technology (including cartography, geographic information systems, remote sensing, and global positioning systems) with intelligence tradecraft to develop intelligence products that support national security, disaster response, and international relief efforts. Course Objectives: GEOG 883 cultivates students’ knowledge of the capabilities and limitations of digital remote sensing instruments, processing systems, and derived data products. It helps students master basic skills needed to leverage these data sources and information products in the context of geospatial intelligence tradecraft. Student Activities: The course consists of eight lessons and one capstone group project that will span either the 15-week semester or the combined 12-week summer sessions. Each lesson will require approximately 10 hours of student activity. Student activities will include reading lesson text, online quizzes, and discussions about the ways in which remote sensing sciences is applied to geospatial intelligence analysis.

**Prerequisite:** GEOG 484

GEOG 884: Geographic Information Systems for the Geospatial Intelligence Professional

3 Credits

How geographic information systems facilitate data analysis and communication to address common geographic problems faced by the geospatial intelligence professional. GEOG 884 Geographic Information Systems for the Geospatial Intelligence Professional (3)Topic: Geospatial intelligence (GEOINT) leverages geographic information science and technology (including cartography), geographic information systems, remote sensing, and global positioning systems) with intelligence tradecraft to develop intelligence products that support national security, disaster response, and international relief efforts. The objectives and concepts are drawn from the University Consortium for Geographic Information Sciences’s GIS&T Body of Knowledge (2006). Course Objectives: GEOG 884 cultivates in students the knowledge of the capabilities and limitations of geographic information systems (GIS) and the skills needed to realize their potential in the context of the geospatial intelligence tradecraft. Student Activities: The course consists of seven project assignments that will span either the 15 week semester or the
combined 12-week summer sessions. Each assignment will require 16-24 hours of student activity. Assignments will include readings, online quizzes about the readings, projects involving the GIS workflow development and implementation in the context of realistic scenarios, discussions about the benefits and limitations of GIS for geospatial intelligence analysis, and reflections about the relevance of course activities to students' professional experiences.

**Prerequisite:** GEOG 882

GEOG 885: Advanced Analytic Methods in Geospatial Intelligence

3 Credits

Prepares current and aspiring geospatial intelligence professionals to apply and interpret results of non-quantitative analysis and modeling techniques.

**Prerequisite:** GEOG 882

GEOG 892: Geospatial Applications of Unmanned Aerial Systems

3 Credits

Introduces theory and methods for operating an unmanned aerial system for geospatial data acquisition and analysis.

**Prerequisite:** GEOG 480

GEOG 897: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject.

### Geosciences (GEOSC)

**GEOSC 500: Issues in Geosciences**

3 Credits

Introduction of first year graduate students to issues in geosciences. GEOSC 500

**Prerequisite:** admission to the Geosciences Graduate Program

**GEOSC 502: Evolution of the Biosphere**

4 Credits

The geologic history of the co-evolution of life and the surface environment is examined from a systems perspective.

**Prerequisite:** undergraduate-level coursework in biology and geology

**GEOSC 508: Mechanics of Earthquakes and Faulting**

3 Credits

An in-depth treatment of fundamental concepts in brittle faulting and earthquake mechanics with emphasis on physical processes. GEOSC 508

**Prerequisite:** GEOSC465, GEOSC489, MATH 251

**GEOSC 511B: Transmission Electron Microscopy**

1 Credits

Principles and practice of transmission electron microscope operation. Students undertake individual projects.

Cross-listed with: MATSE 511B

**GEOSC 514: Data Inversion in the Earth Sciences**

3 Credits

This course focuses on how one finds theoretical parameters to explain observed data using discrete inverse theory.

**Prerequisite:** MATH 220

**GEOSC 518: Stable Isotope Geochemistry**

3 Credits

Theory of isotope fractionation mechanisms; its application to a wide range of problems in the earth and planetary sciences.

**GEOSC 519: Mineral Equilibria**

3 Credits

A thermodynamic treatment of minerals and their reactions under geochemically important conditions of temperature and pressure.

**Prerequisite:** CHEM 450

**GEOSC 521: Thermal State of the Earth**

2-3 Credits/Maximum of 3

Analytical and numerical solutions to earth-related heat conduction and convection problems; geothermal energy, earth's heat flow and temperature.

**GEOSC 522: Geochemistry of Aqueous Systems**

2-3 Credits/Maximum of 3

Ionic and molecular equilibria related to stabilities and solubilities of minerals, with applications to ground water, sea water, and hydrothermal fluids.

**Prerequisite:** CHEM 450, CHEM 452

**GEOSC 523: Sedimentary Geochemistry**

2 Credits

Kinetics and thermodynamics of low-temperature processes in sediments. Applications to weathering processes, natural waters, deposition of sediments, and diagenesis.

**GEOSC 533: Principles of Geochemistry**

3 Credits

A comprehensive treatment of the principles of geochemistry applied to a wide variety of geologic settings and scales.

**Prerequisite:** CHEM 450
This seminar addresses chemical interactions between the biosphere and the physical environment over Earth’s history and as impacted by humans. This course will provide a broad survey of biogeochemical principles, and offer a community-building experience for students with biogeochemical interests from diverse departments. Students will complete the course with a synthetic knowledge of the key topics in the field of biogeochemistry. Each week we will focus on a topic within the broad field of biogeochemistry such as: origins of the elements, reactions in the atmosphere, soil development, the distribution of redox reactions and microbial metabolic pathways, and the global cycles of carbon, water, nitrogen, phosphorus, sulfur, mercury, and perhaps other elements. For each topic, we will focus on the questions: What is known or can be observed? How is this information used to understand biogeochemical phenomena and process? How are these processes scaled over time and space? What are emerging and important questions in the subspecialties of biogeochemistry?

Cross-listed with: CE 536, SOILS 536

GEOSC 542: Quantitative Methods in Hydrogeology
1-4 Credits/Maximum of 4
Investigation of groundwater systems and resources, emphasizing both the practical use and limitations of modeling techniques.
Prerequisite: GEOSC452

GEOSC 548: Surface Processes
3 Credits
Principles, application, and interpretation of Quaternary geochronology, surface process studies, and landscape evolution.
Prerequisite: GEOSC340

GEOSC 555: Advanced Structure and Petrofabrics
1-3 Credits/Maximum of 3
Macroscopic and mesoscopic recognition, measurement, and interpretation of small-scale rock structures and mineral orientation patterns in deformed rocks.

GEOSC 558: Multi-channel Seismic Processing and Interpretation
4 Credits
This course covers the basics of seismic energy propagation, modern 2- and 3-D multi-channel seismic data acquisition methods, and data processing.
Prerequisite: GEOSC454

GEOSC 559: Seismology II
3 Credits
Rigorously covers the methods of computing wave fields for point and distributed seismic sources in vertically inhomogeneous elastic media.
Prerequisite: E MCH524A, E MCH524B, or MATH 405, MATH 406

GEOSC 560: Kinetics of Geological Processes
3 Credits
General development of the kinetic theory of crystal growth, diffusion, irreversible thermodynamics, and heterogeneous reactions needed for geosciences and related fields with applications to current problems.
Prerequisite: CHEM 450, GEOSC519

GEOSC 561: Mathematical Modeling in the Geosciences
4 Credits
The process of transforming a conceptual geoscience model into a numerical model is presented; students create and solve numerical models.
Prerequisite: undergraduate-level calculus and geology coursework is required; experience in computer programming and coursework in differential equations is recommended; or consent of instructor

GEOSC 565: Tectonic Geomorphology
3 Credits
Tectonic geomorphology examines interactions between tectonic and surface processes, paleoseismology, geodesy, structure, active deformation, and landform evolution.
Prerequisite: GEOSC340, GEOSC465

GEOSC 572: Field Stratigraphy
1-2 Credits/Maximum of 2
This course introduces students to field techniques used by stratigraphers, with the capstone experience being a field trip during May.
Prerequisite: GEOSC439, GEOSC472A, GEOSC472B, GEOSC479

GEOSC 585: Sedimentary Geology
3 Credits
An integrated approach to the study of modern and ancient sedimentary environments and their deposits.
Prerequisite: undergraduate coursework in sedimentology or consent of instructor

GEOSC 587: Preparing for an Academic Career in the Geosciences
3 Credits
The course focuses on successful strategies for the academic job market and for launching an academic career. GEOSC 587 Preparing for an Academic Career in the Geosciences (3) This seminar is designed for advanced doctoral students who are ready to launch their own search for an academic position. We will explore important elements of the transition into an academic career, including the application and interview process and strategies to establish teaching and research programs. During the semester students will: (a) learn about roles and responsibilities of faculty members in different educational settings (e.g., community colleges, four-year colleges, universities); (b) Design a teaching and research plan suitable for the next career stage and write teaching and research statements to summarize these plans; (c) Learn strategies for documenting their strengths and accomplishments in
teaching and research; (d) Learn ‘the inside scope’ about job searches including how to navigate the application process, interviews, and negotiation; (e) Learn how to give an effective job talk; (f) Discuss strategies for balancing the many demands and expectations they will face in an academic career. Finally, students will develop a self-inventory of preferred options for the next career stage and a personal action plan.

Prerequisite: Students must have passed their comprehensive exam and be within a year from receiving their Ph.D. degree.

GEOSC 589: Seminar in Aqueous Geochemistry
1 Credits
A seminar aimed at reading current articles in aqueous geochemistry and biogeochemistry.

Prerequisite: GEOSC522

GEOSC 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

GEOSC 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

GEOSC 597: Special Topics
1-9 Credits/Maximum of 999
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

GER 510: Literary Theory: An Introduction
3 Credits
Introduction to the major theoretical approaches to the contemporary study of culture (literature, film, art and politics). GER 510 Literary Theory: An Introduction (3) This seminar will introduce students to contemporary literary and cultural theory in an effort to provide them with the methodological tools they need to undertake cutting-edge literary and cultural analysis themselves. German Studies in the U.S. has at least two defining characteristics. First, though, at least for those of us in German Departments, its emphasis is mainly on culture, it is genuinely interdisciplinary, attempting to explore how cultural products and practices (defined as extending far beyond the traditional canon of German literature) are constituted by and help to constitute history and politics. And, secondly, it advances its interdisciplinary analyses by drawing increasingly on new methodologies elaborated by Anglo-American and foreign cultural theorists. Among the theoretical approaches we may focus on will be formalism and structuralism, psychoanalysis, Marxism, cultural studies, feminism, gender studies, and queer theory, and post-colonial theory. These new theories have profoundly transformed disciplines such as Anglo-American literary studies, comparative literature, women’s studies, history, and anthropology, since the Seventies. In this course we shall find out if/how such theories could transform German Studies, too. The course is reading-intensive and students are expected to invest most of their time in reading and preparing for class discussions. Regular attendance and informed participation in class discussion will be required. This involves reading all assigned articles on a regular basis (20%); oral presentation of one weekly section (30%); second oral presentation that includes a sample analysis of the assigned texts (20%); and one 12-15 page paper due at the end of the semester (30%). German 510 will be the second unit in a three-course package intended to provide beginning graduate students with a set of correlated introductory courses. German 510 is
the only wide-ranging course in theory offered by the Department for incoming students. This course will be offered once a year with 5 to 10 students (15 max) per offering.

GER 511: The Teaching of College German

3 Credits

Theory, methods, techniques, materials, bibliography contributions of linguistics and psychology to language learning; methods of teaching post-secondary German. GER 511 The Teaching of College German (3)German 511 introduces students to the theory and methods of teaching German at the college level. It deals not only with techniques, materials, and bibliography of the field but also evaluates the contributions of linguistics and psychology to college-level language pedagogy. German 511 familiarizes students with current theories of foreign language education as they relate to post-secondary language acquisition. This course further includes the practical aspects of college-level teaching with special reference to problems related specifically to the teaching and learning of German. Evaluation procedures include examinations, research papers, and the preparation of sample teaching materials. German 511 is a required course for all German graduate students both at the M.A. and Ph.D. level. It is offered every year.

GER 513: German Phonetics and Phonology

3 Credits

This course examines German speech sounds and their organization into a linguistic system. GER 513 German Phonetics and Phonology (3)This course provides an overview of the major subfields of phonology as they apply to the German language. No prior knowledge of linguistics or phonology is assumed. Topics discussed include articulatory phonetics, the phoneme, distinctive features, and common phonological processes in German such as final devoicing, prosody, prosodic morphology and dialectal variation. The class will practice phonetic transcription of German and English. We will discuss common phonetic and phonological difficulties presented by German for native speakers of English. In addition to practical applications of phonetics, the class will investigate theoretical concepts such as the phoneme, distinctive features, lexical stress, the syllable and the prosodic foot. Reading assignments include scholarly articles employing different theoretical frameworks and excerpts from seminal works in the field. Frameworks to be discussed include derivational approaches and Optimality Theory. The class will also examine dialectal variation with a particular emphasis on differences between Low, Middle and Upper German dialects. Each student will make a presentation investigating the phonological system of a German dialect. Evaluation is based on problems, class presentations and a final research paper.

GER 514: German Syntax

3 Credits

This course provides an overview of morphosyntactic processes in German. GER 514 German Syntax (3)This course provides an overview of the major components of morphology and syntax as they apply to the German language. No prior knowledge of linguistics or morphosyntax is assumed. Topics discussed include the basic syntactic constituents in German, the verbal bracket and movement rules, German argument structure, the tense/mood/aspect system for German verbs, the connection between pragmatics and word order in German, and dialectal variation as it relates to German syntax. Emphasis will also be placed on how these different areas of German syntax are related to descriptive grammar rules as presented in many German language classes. Reading assignments include scholarly articles employing different theoretical frameworks, including minimalism, and excerpts from seminal works in the field. Evaluation is based on problem sets, two take-home exams and a research paper.

GER 524: Remapping the Holocaust

3 Credits

In most university courses, the Holocaust is taught chronologically, beginning with the rise of the Nazi Party and then following the German armies through Europe and into the Soviet Union. The retreat of those same forces beginning in 1943 parallels the concentration and professionalization of the killing process which then begins to break down as the war comes to an end. This narrative is not incorrect, and certainly makes sense for introductory courses. Yet it also mirrors the perpetrators’ perspective. A graduate course allows us to explore different perspectives on the war and genocide and how these affect both the periodization and the geography of the Holocaust. In this course we will examine a number of divergent historiographic trends regarding the origins, enactment, end, and aftermath of the Holocaust. These will help students to think more broadly about the place of the Holocaust in world history and how new theories, methods and questions can be applied to other historical events.

Cross-listed with: JST 524

GER 530: The Frankfurt School & the Politics of Visual Aesthetics

3 Credits/Maximum of 999

The course examines the Frankfurt School’s critical theories regarding visual strategies for representing and challenging urban consumer culture. The course will examine critical theories by members of the Frankfurt School regarding visual strategies for representing and challenging urban consumer culture. The course will center on German Marxist theories about how the rise of urban mass culture at the beginning of the twentieth century produced Modernist forms of visual representation. The course will examine how the spread of fashion-driven behavior had dramatic implications for aesthetic theory, film, architecture, and literature. The course will provide a survey of the most important works in the German critical tradition and the major thinkers associated with the Frankfurt School. These include Georg Simmel, Georg Lukacs, Siegfried Kracauer, Walter Benjamin, Theodor Adorno, and Jürgen Habermas, among others. Students will learn how these modern theories relate to the German Idealist tradition, particularly Kant, Hegel, and Nietzsche, as well as the history of German Marxism. Topics include the psychology of the metropolitan individual, the commodification of culture, money, and interpersonal relationships, the architecture of shopping, visual advertising through posters and photography, and cinema as a means of understanding social relations, as well as the role of visual media in public debate. The course will consider how modernist architecture, particularly from the Bauhaus school, redefined urban spaces and introduced new functionalist designs. The course will examine how Frankfurt School thinkers responded to the provocative design proposals presented by modernist architects. Students will examine specific modernist designs for consumer products to examine the relationship between the appearance of a commodity and its use, in order to understand how appearance and function are interdependent within modernism. In broad terms, class discussions will focus on such questions as: How does the relationship between the visual image and society change under industrial capitalism? What political functions do visual images have in consumer culture? What visual mechanisms does
the ‘culture industry’ deploy to organize public consciousness? What critical responses are available to visual artists within a mass-market economy? The course will provide students an historical understanding of early twentieth-century German consumer culture and its visual representation, while also offering them critical intellectual tools to understand the social and economic implications of visual images within consumer culture. The course will be taught in English with readings in both languages.

GER 532: Holocaust and Visual Culture
3 Credits

This course studies how art, literature, film, and other media can provide a perspective on one of the most horrific events in human history, the Holocaust: the genocidal murder of more than six million men, women, and children (mostly Jewish) under the Nazi regime during World War II. The course examines the theoretical questions involved in any attempt to capture what appears to be beyond comprehension in terms of moral outrage and the sheer scale, inhumanity, and bureaucratic efficiency of the violence perpetrated by the Nazis. This course examines formal approaches of depicting the Holocaust in literature and film, as well as photography, museum installations, and memorials. Topics to be discussed include include memorialization (Holocaust museums and memorials), mass murder of the disabled, national guilt, survivor’s guilt, stigmatization, and the ethics of historical representation. The course will analyze cinematic strategies for representing the unrepresentable, dark humor about the Holocaust, the persistence of the past, Nazi propaganda, Holocaust photography, trauma theories, graphic novels, the Nuremberg trials, survivor memoirs, representations of the Nuremberg Code and the International Bill of Norms, and possibilities for art after Auschwitz.

GER 534: History of German Film and Photography
3 Credits

This course will examine the history, theory, and practice of German photographic and moving picture technology from its origins to the digital age. The course will be structured around important innovations in visual technology, including: 1) the pre-history and invention of photography, 2) pre-cinematic moving pictures (Anschütz), 3) the invention of cinema (Skladanowsky Bros.), 4) sound and color innovations, 5) video, digital, and installation work. The aim of the course is to provide an historical overview of visual culture in which the radical shifts inaugurated by new technologies are examined in terms of their aesthetic, philosophical, and political impact. In the German context these shifts have been examined by important theoreticians of visual culture (most notably Arnheim, Balácz, Benjamin, Kracauer, and Flusser) whose work has changed the way we think about our relation to images. Practitioners in the German sphere have been no less influential: from Ottomar Anschütz’s pre-cinematic experiments with moving pictures to the very first public demonstration of cinematic technology (the Skladanowskys’ bioscope, one month before the Lumière’s first show) to the avant-garde animation of the Weimar period; from the narrative and design innovations of the Expressionist filmmakers to the rich and varied independent films of the New German Cinema to the radical documentarians of the past decade. By providing students with an understanding of German innovations in and responses to new technologies this course will ground readings of particular works historically. In broad terms, class discussion will consider questions such as: What is the aesthetic status of the photographic image in relation to painting? What is the ontological status of the photograph as a chemical imprint of light? How do these new technologies lend themselves to political action? How is the spectator differently constructed by these technologies? In what way is the still image integral to the moving image-and what implications do these have for our perception of time? What is the new role of the image in mass, consumer culture (subversive or complicit)? How do the formal and technical affordances of the film-based image contribute to the construction of national, race, and gender identities, to spectator desires, and to new aesthetic categories? Readings will be available in German and in English. Class discussion will be in English.

GER 540: Seminar in German Culture and Civilization
3-12 Credits/Maximum of 12

Examination of special problems in German culture and civilization.

GER 561: German Literature of the 19th Century—From Biedermeier to Realism
3 Credits

Survey of major developments in German literature from the mid- to the late-19th century.

GER 571: German Literature from the Turn of the Century to 1945
3 Credits

Advanced survey of German literature from the era of Naturalism to that of Exile literature.

GER 572: Post-War and Contemporary German Literature
3 Credits

Intensive survey of German literature from Gruppe 47 through the literature of the GDR and down to the present.

GER 581: Topics in Literary Genres
3-12 Credits/Maximum of 12

Special studies of modern or older Germanic languages.

GER 582: Topics in Germanic Philology and German Linguistics
3 Credits/Maximum of 12

Special studies of modern or older Germanic languages.

GER 587: Technology in Foreign Language Education: An Overview
3 Credits

Approaches to the uses and research applications of multimedia and other educational technologies applied to the teaching of foreign languages. (also crosslisted with SPAN 589)

Cross-listed with: APLNG 589, CMLIT 589, FR 589, SPAN 589

GER 591: German Literary Theory and Criticism
3-6 Credits/Maximum of 6

Examination of major movements in literary theory and criticism with special reference to German literary thought.
GER 592: Seminar in German Literature
3 Credits/Maximum of 12
Focused investigation of a major figure or theme in German literature.

GER 593: Seminar in German Philology and German Linguistics
3 Credits/Maximum of 12
Focused investigation of a major topic in Germanic philology or linguistics.

GER 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects including nonthesis research, supervised on an individual basis and which fall outside the scope of formal courses.

GER 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

GER 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

GER 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

GER 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Instruction of lower division German courses with observation by the supervisor and attendance at regular meetings to discuss classroom techniques.

GER 603: Foreign Academic Experience
1-12 Credits/Maximum of 12
Foreign study and/or research constituting progress toward the degree at a foreign university.

GER 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

Greek (GREEK)

GREEK 520: Greek Mythography
3 Credits
This graduate seminar focuses on ancient Greek mythographic authors from the beginnings of the genre (6th C.B.C.E.) to the Roman period.

GREEK 520 Greek Mythography (3) This graduate seminar focuses on the ancient Greek mythographic authors from the beginnings of the genre in the sixth century B.C.E. to the Roman period. We shall define 'mythography' simply as the prose exposition of mythic narratives (the most well-known Greek mythographer is Apollodorus, whose first-century C.E. 'Bibliotheca' is consulted regularly by students of myth; some of the earlier practitioners include Hellanicus and Pherecydes). The seminar will consider selected readings in the theory of myth, alongside which we will examine in detail and evaluate the content of sources of the mythographers’ writings. Some of these provide quite outlandish variants on known myths or bizarre stories otherwise unknown. Through a series of case studies of particular mythic stories, we shall place these texts in literary and cultural relief by seeking to understand how they interact with the more well-known mythic genres of Greece such as epic, lyric, and tragedy. We will also probe the borders of what we call 'mythography' by examining other prose texts not normally associated with the genre, such as Herodotus' Histories or even philosophical texts such as Plato or Aristotle. In addition, since much of the material we will treat is in a fragmentary state, we will try our hands at reconstructing both texts and myths that survive in only incomplete form. Some attention will also be given to the Latin mythographic tradition (e.g. Hyginus and others) which is mostly, or perhaps wholly, dependent upon earlier or contemporary Greek mythography.

GREEK 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

Health Administration (HADM)

HADM 503: Research Methods
3 Credits
Examination of research methodologies relevant to administration, planning, and public policy.

Prerequisite: demonstrated working knowledge of IBM SPSS Statistics
Cross-listed with: PADM 503

HADM 506: Management Information Systems for Public and Health Administration
3 Credits
The design, implementation, and purpose of computerized management information systems in health and non-profit organizations.

HADM 510: Organization Behavior
3 Credits
Examines the concepts of human behavior in formal organizations, systems analysis, conceptual models, and decision processes.

Cross-listed with: PADM 510
HADM 539: Health Systems Organization
3 Credits
Health care delivery presented as a socio-technical systems focusing upon resources, policy issues, institutions, technology, and innovations.

Prerequisite: permission of program

HADM 540: Health Administrative Policy Formulation
3 Credits
Analysis of administrative problems from a total organization viewpoint. Case studies of actual organizations are used for analysis.

Prerequisite: permission of program

HADM 541: Health Economics and Policy
3 Credits
Public policy issues, health system components from economic perspective. Economic analysis of health sector, medical markets, health care regulation.

Prerequisite: permission of program

HADM 542: Health Care Politics and Policy
3 Credits
This course reviews political considerations and the policy process as they pertain to health care in the United States.

Prerequisite: permission of program

HADM 543: Long-Term Care Administration and Policy
3 Credits
This course reviews theory and practice related to long-term care administration and policy.

Prerequisite: permission of program

HADM 544: Health Care Quality Assurance
3 Credits
This course reviews theory, methods, outcomes, and management of quality assurance in health care organizations.

Prerequisite: permission of program

HADM 551: Health Care Law
3 Credits
Course on health law for administrators with coverage including hospital governance, taxation, licensure, liability, malpractice, patients’ rights, anti-trust.

Prerequisite: permission of program

HADM 552: Health Delivery Systems
3 Credits
This course discusses design and implementation of health care delivery systems and the pressure and stakeholders which impact those systems.

HADM 553: Health Delivery Systems (3) This course covers the design and implementation of health care delivery systems. Beginning with policy and environmental pressures, the course considers the interests of diverse stakeholders such as regulators, purchasers, providers and consumers. The content of the course is organized in four areas: (1) traditional delivery systems; (2) managed care concepts and practices; (3) healthy communities approaches; and (4) reform and futures issues. The objective of the course is to increase students’ knowledge of the evolving health care delivery systems. This course functions as an elective course in the MHA program. It builds on core courses that have presented the basics of health systems. Students will be required to take a mid-term and final exam and write a term paper (grade 1/3 each). The course will be offered every third semester with an expected enrollment of 20 students.

Prerequisite: permission of program

HADM 594: Research Topics
1-15 Credits
Supervised student activities on research projects identified on an individual or small-group basis.

HADM 595: Internship
1-9 Credits/Maximum of 9
Supervised research-oriented off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

HADM 596: Individual Studies
1-9 Credits
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.
HADM 597: Special Topics
1-9 Credits
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

HADM 897: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

Health and Human Development (HHD)

HHD 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

Health Education (HLED)

HLED 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

Health Education (HLHED)

HLHED 501: World Health Promotion
3 Credits
Analysis of the various health problems that affect humans throughout the world; emphasis will be placed on personal health issues.

HLHED 530: Research Techniques in Health Education
3 Credits
Research techniques, including methods, research design, techniques for data collection, as applied to relevant problems in the health education field.

HLHED 552: Current Health Education Issues
3 Credits
Analysis of scientific and political foundations of current issues within health education tasks, with emphasis on research and action implications.

HLHED 553: Multicultural Health Issues
3 Credits
This course is designed to explore cultural factors influencing the health status among racial/ethnic groups in the United States. HLHED 553 Multicultural Health Issues (3) This course is designed to explore ethnic and cultural factors influencing the health status among racial/ethnic groups in the U.S. Through lecture, discussion, simulations, and case studies, the students will be able to develop an appreciation for the cultural traditions and practices of different groups. The importance and implications of these traditions on health outcomes and health status will be examined. The students will also learn skills of cultural competence that are essential for public health practitioners.

HLHED 582: Spirituality and Culture in Health and Education Professions
3 Credits
This course focuses on the cultural aspects of spirituality and its place in the health and education professions. EDUC (HLHED) 582 Spirituality and Culture in Health and Education Professions (3) This course will focus on the examination of the place of the cultural aspects of spirituality and its place in the education and health professions and its implications for culturally responsive education and/or health care in a multicultural society. In particular the goals of the course are as follows: 1) To clarify the difference between spirituality and religion and to understand how spirituality is currently being examined in the fields of adult education, medical education and the health professions. 2) To examine how culture informs spirituality generally, and more specifically, to examine how culture relates to one's own spiritual development and overall health in the world. 3) To develop a sense of how people construct knowledge through image and symbol, which for many people, maps to their spirituality and culture, as they make new and deeper meaning of their own lives. 4) To begin to consider WHEN and HOW one might appropriately draw on one's own spirituality and that of participants in adult and higher educational practices and health care settings to increase cultural understanding and/or responsiveness to patient needs and when such discussion might seem to impose a spiritual or religious agenda. 5) To examine the connections among spirituality, culture, some complementary and alternative medicine modalities and overall holistic health and education.

Cross-listed with: EDUC 582

HLHED 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

HLHED 591: Capstone Seminar in Health Education
3 Credits
Culminating or capstone experience for students in the M. Ed. program in Health Education.

Prerequisite: completion of 15 credits in the program and permission of advisor

HLHED 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.
Health Policy and Administration (HPA)

HPA 503: Health Services Organizational Behavior
3 Credits

A systematic application of the principles of organizational behavior to understanding professional roles in health services organizations.

HPA 506: Design and Evaluation of Prevention and Health Promotion Programs Across the Life Span
3 Credits

Addresses theory and application of program evaluation, emphasizing process and outcome evaluation strategies for programs involving individuals, organizations and populations. HDFS (HPA) 506 Design and Evaluation of Prevention and Health Promotion Programs Across the Life Span (3) This course is designed for graduate students interested in the design and evaluation of programs in a wide range of human services (e.g., health care, social services, education). The course provides a foundation in the theory and application of program evaluation, with focused attention to the details of how such work can be proposed and conducted. The majority of the semester will focus on issues related to developing scientifically sound and viable studies of interventions in line with students’ interests. The goals for this course are to help students build the knowledge and confidence to evaluate human service programs and/or policies that are implemented in research settings (academic or government) and communities or community settings (e.g., schools, health care facilities, community agencies).

Prerequisite: HD FS503 and HD FS516; or H PA564
Cross-listed with: HDFS 506

HPA 510: Health Services Financing and Policy
3 Credits

Introduction to health policy focusing on health services financing, insurance and other current health policy topics. HPA 510 Health Services Financing and Policy (3) The second in a two-course sequence that introduces graduate students to the organization, financing, and delivery of health services in the US. This course focuses on health services financing and policy. This course will cover policy issues in the federal Medicare program, state Medicaid programs and private health insurance markets, and other important current health care policy issues. The course will also introduce students to the discipline of policy analysis, primarily the economic perspective, but will also include discussions on the political perspective and the policy-making process. The objectives of this course are to help students: 1) Understand the mechanisms by which Americans pay for their health care and become familiar with current health policy issues. The topics covered in this course will serve as a context for key policy issues that will be intensively discussed in a paired research seminar course; 2) Appreciate the policy-making process and the role of political perspectives in the formation and implementation of policy proposals; 3) Understand approaches of policy analysis, which will provide them with an analytic framework for critiquing health policy issues as well as health services research; 4) Develop policy analysis skills.

HPA 511: Research Seminar on Health Services Financing and Policy
3 Credits

An examination of seminal and current research on health services financing, insurance and health policy. HPA 511 Research Seminar on Health Services Financing and Policy is one of two seminars designed to complement introductory courses in the graduate H PA curriculum. This course allows graduate students seeking careers in health services research to engage in deeper study and discussion of the classic and current research on the issues of payment, insurance, regulation and policy related to health care delivery in the U.S. health care system and to begin to explore their research interests for a thesis. The primary objectives of the course are: (a) to help students become familiar with a selection of ‘classic’ and ‘cutting edge’ papers in the field of health services research (b) to develop students’ ability to critically read and analyze the health services research literature with an emphasis on the conceptual and methodological approaches used by researchers (c) to assist students in developing their ability to organize, synthesize and integrate research drawn from a variety of disciplinary approaches into a coherent foundation for further study in health services research (d) to improve students’ oral and written communication skills, emphasizing organization, clarity, and the ability to give and respond to constructive professional criticism. The readings for this class are all drawn from important journals in the field of health services research. Class will generally include 2 or 3 different activities designed to meet the objectives above. During each class, we will spend some time discussing the assigned articles to review the key points, analyze strengths and weaknesses of the research design, and consider how they provide a framework for studying the issues. In some classes, students will be asked to provide a short oral presentation of a topic, complemented by a written summary of the presentation topic. The class will discuss the paper and presentation, giving students constructive critical feedback on the presentation and paper. Finally, in some classes, the entire class will collaborate in developing a research question into a basic research proposal. Students will be responsible for writing papers, giving presentations, preparing written critiques of articles as a seminar class, the full participation of every student is necessary. Students must not only come prepared to class, they must be active participants in all aspects of the class each week. Grades in the class are based on oral presentations, written papers, article critiques and student participation.

Prerequisite: H PA510; Concurrent: H PA510

HPA 520: Introduction to Health Services Organizations and Delivery
3 Credits

Introduction to health systems, health services organization and health care delivery focused on trends, problems and issues.

HPA 521: Research Seminar on Health Services Organization and Delivery
3 Credits

An examination of seminal and current research on health services organization and delivery, emphasizing costs, access and quality. HPA 521 Research Seminar on Health Services Organization and Delivery (3) HPA 521 is one of two seminars designed to complement
introductory courses in the graduate HPA curriculum. This course allows graduate students seeking careers in health services research to engage in deeper study and discussion of the classic and current research on the issues of health services organization and delivery in the U.S. health care system and to begin to explore their research interests for a thesis. The primary objectives of the course are: (a) to help students become familiar with a selection of 'classic' and 'cutting edge' papers in the field of health services research (b) to develop students' ability to critically read and analyze the health services research literature with an emphasis on the conceptual and methodological approaches used by researchers (c) to assist students in developing their ability to organize, synthesize and integrate research drawn from a variety of disciplinary approaches into a coherent foundation for further study in health services research (d) to improve students' oral and written communication skills, emphasizing organization, clarity, and the ability to give and respond to constructive professional criticism. The readings for this class are all drawn from important journals in the field of health services research. Class will generally include 2 or 3 different activities designed to meet the objectives above. During each class, we will spend some time discussing the assigned articles to review the key points, analyze strengths and weaknesses of the research design, and consider how they provide a framework for studying the issues. In some classes, students will be asked to provide a short oral presentation of a topic, complemented by a written summary of the presentation topic. The class will discuss the paper and presentation, giving students constructive critical feedback on the presentation and paper. Finally, in some classes, the entire class will collaborate in developing a research question into a basic research proposal. Students will be responsible for writing papers, giving presentations, preparing written critiques of articles as a seminar class, the full participation of every student is necessary. Students must not only come prepared to class, they must be active participants in all aspects of the class each week. Grades in the class are based on oral presentations, written papers, article critiques and student participation.

**Prerequisite:** H P A520; Concurrent: H P A520

**HPA 523: Managerial Epidemiology**

3 Credits

Introduction to the principles and methods of managerial epidemiology and its application to health care. HPA 523 Managerial Epidemiology (3) This course is intended to familiarize students with the methods and principles of managerial epidemiology. Changes in the structure of the health delivery and financing systems are making managers more responsible for the health of enrolled and constituent populations. The tools of epidemiology are important for purposes of planning, monitoring, and evaluation of population health. Managing the health of populations requires both an understanding of the factors that influence population health and how those factors can be influenced by health care organizations and systems. In addition to the management of population health, the methods of managerial epidemiology can be applied to organizational evaluation and clinical practice improvement. Epidemiology, interaction between health behavior and health management, health interventions, quality improvement, outcomes management, and program implementation and evaluation methods are examined. Particular emphasis is given to health management applications aimed at vulnerable populations, such as racial/ethnic minorities and the elderly.

**Prerequisite:** H P A521

**HPA 524: Management of Health Services Organizations**

3 Credits

A systematic study of the roles of health services managers and the organizational and environmental context within which they work.

**HPA 525: Health and Health Services Across the Life Course**

3 Credits

Explores health and health services across the life course using a population health approach.

**HPA 526: Health Disparities**

3 Credits

This course provides an overview of social factors that lead to demographic disparities in health. HPA(SOC) 526 Health Disparities (3) This course provides a broad exploration of U.S. health disparities. In particular, it examines several types of U.S. health disparities that emerge as a result of individuals' race/ethnicity, socioeconomic status, nativity status and gender. The course focuses on theoretical and methodological strategies for studying health disparities as well as empirical evidence supporting the existence of different health disparities and explanations for understanding and ameliorating them. Students will summarize and discuss weekly readings and apply course materials to understand the state of the field and to carry out an original research project on a particular health disparity that interests them. This course fulfills basic seminar requirements in the Sociology graduate curriculum and serves as a process course for the interdisciplinary Demography dual-title graduate curriculum.

Cross-listed with: SOC 526

**HPA 527: Managing Healthcare Operations**

3 Credits

This course is focused on understanding and overcoming the challenges associated with nurturing and managing effective health care operations. HPA 527 Managing Healthcare Operations (3) This course is focused on understanding and overcoming the challenges associated with nurturing and managing efficient and effective health care operations. It exposes students to the frameworks, theory, and skills commonly employed by managers in an effort to deliver excellence in health care services. The course begins by considering process management and improvement, including the fundamentals of process analysis, queueing theory and staffing applications. The course concludes by taking a step back from specific processes to consider operating systems as a whole. Specifically, the concluding module of the course focuses on how the design of an operating system can impede or enhance the effectiveness of the organization's processes, including the role of complexity and tradeoffs healthcare organizations face between focus and flexibility.

**Prerequisite:** H P A520 and H P A503

**HPA 528: Health Data Analysis for Research**

3 Credits

Introduction to data sources and use of software for data management and analysis in health services research. HPA 528 Health Data Analysis for Research (3) The statistical analysis of quantitative data is a major tool for health services researchers. This course provides students
with an overview of practical, concrete information about identifying, acquiring, processing, and analyzing data in typical health services research settings. The course covers three main content areas: Data issues in health services research, including legal and ethical information on human subjects and private health information; manipulating primary and secondary health services research data to create files amenable to research analysis; and basics of descriptive and exploratory analysis of health services research data. The objectives of the course are: (1) to give students a solid foundation of knowledge about health services data issues for their thesis and related research projects in the future; (2) to give them practical experience manipulating commonly used data sets in health services research; and, (3) to allow them to begin to explore potential research hypotheses for thesis and other research. Its primary role is to guide students in the master’s of science and doctoral programs in Health Policy and Administration as they begin to explore research. It is also appropriate for other graduate students who intend to do research in or related to health services research.

**Prerequisite:** STAT 500 or equivalent preparation in probability and statistics

HPA 540: Epidemiological Applications in Health Services Research

3 Credits

The course emphasizes theoretical as well as practical issues relating to applying advanced methods of epidemiology in health services research. H P A 540 Epidemiological Applications in Health Services Research (3) Advanced methods of epidemiology are presented with examples and exercises. The course emphasizes theoretical as well as practical issues. Students will identify opportunities for implementing the epidemiological principles in health services research. Students will also have the chance to explore the existing secondary data resources and/or to collect primary data and prepare them for epidemiological analysis. The course examines various applications of epidemiological methods in health services research. It focuses on the design and implementation of research projects utilizing epidemiological techniques to study the health of an identified population (Pennsylvanians), using data that is part of a national program, Behavioral Risk Factors Surveillance System (BRFSS) run by the Centers for Disease Control and Prevention in all states.

**Prerequisite:** H P A 440, H P A 528

HPA 541: Poverty, Race, Ethnicity and Child Health

3 Credits

Seminar focusing on disparities in infant, child, and adolescent health, and policies and programs impacting these disparities. HPA 541 Poverty, Race, Ethnicity and Child Health (3) This course is designed to 1) strengthen students’ understanding of the multidimensional nature of health and well-being at each stage of childhood and adolescence, and the magnitude of health disparities that exist among children of differing socioeconomic position and race/ethnicity; 2) encourage critical evaluation of existing governmental policies and programs impacting children’s health and health disparities, and exploration of other potentially effective approaches; and 3) enhance students’ expertise in the synthesis, critical analysis, and presentation of material in class and in written form. The content of this course is relevant not only to students in the Health Policy and Administration program, but also for students in other disciplines including but not limited to Demography, Human Development and Family Studies, Biobehavioral Health, Nutrition, and Nursing who are interested in learning about children’s health and health disparities. Students are expected to participate actively in all class discussions and homework assignments, lead the class in the discussion of a specific government program impacting children’s health, write a short reaction paper on the class text, write a final term paper on socioeconomic and racial/ethnic disparities in an aspect of children’s physical or mental health including evaluation of current and potential policy approaches for addressing these disparities, and present the major points made in the term paper to the class for discussion. This course will be offered once a year, with enrollment limited to 20 students.

HPA 545: Introduction to Health Economics

3 Credits

Survey of the application of economics to the roles of markets and government in health care.

HPA 551: Quality Improvement in Healthcare

3 Credits

Examination of major approaches to performance improvement in contemporary healthcare systems. H P A 551 Quality Improvement in Healthcare (3) The goal of this course is to provide students with requisite knowledge and skills for managing quality improvement and patient safety efforts in health care organizations. The various perspectives on the challenges of providing safe and reliable health services are covered. Operational approaches to quality improvement adapted from industry are examined and practiced in cases and exercises. Students learn to identify key aspects of systems and work flows. They employ currently used analytic tools to analyze quality-related systems problems and identify potential solutions. Finally, the course will assist students in improving management skills in the affective realm. Specifically, excellent performance in this competency realm will be demonstrated through: (a) persuasive written and verbal communication skills; (b) the ability to facilitate group problem solving in a situation that includes conflict; and (c) the ability to effectively navigate difficult conversations. The teaching and learning methods used in the course will include lectures by the instructor (usually brief), briefings by students, discussion, role play and other structured active learning exercises. Weekly class process reflections will be used for improvement purposes. The class serves as part of the culmination of the professional master’s degree program. It is also appropriate as an elective course for students in master’s and doctoral programs who are interested in research and applications in quality improvement in health care.

HPA 556: Strategy Development in Health Services Organization

3 Credits

Integration of prior course work in the program to develop a strategic plan for a health services organization.

**Prerequisite:** H P A 523, H P A 524, H P A 835

HPA 561: Introduction to Research Design in Health Services Research

3 Credits

Review and critical analysis of state-of-the-art health services research methods.
HPA 562: Economics Applications in Health Services Research

3 Credits

Application of theoretical and empirical tools of microeconomics to issues in health services utilization and delivery.

Prerequisite: H P A445 or H P A545

HPA 563: Organizational Studies in Health Services Research

3 Credits

Applications of theoretical and empirical tools of organizational studies in the delivery of health care.

Prerequisite: H P A503

HPA 564: Research Methods in Health Services Research

3 Credits

Introduction to regression models in health services research, including violations and tests of model assumptions and solutions for those violations. HPA 564 Research Methods in Health Services Research (3)This course is the initial course on health services research methods for master's of science and doctoral students in the Department of Health Policy and Administration. In the context of the typical types of data used by health services researchers, students are introduced to the basic linear regression models that are fundamental for understanding more complex modeling of health care data. The course also reviews common data problems in health services research, including heteroskedasticity, serial and auto-correlation, and limited dependent variables. The objectives of the course are to help students understand the theoretical and practical aspects of applying linear regression models to health care data, to help students understand the typical ways in which health care data often lead to violations of the assumptions of linear regression to develop students' knowledge and skills in being able to use statistical models to test for and correct health data for heteroskedasticity, serial and autocorrelation.to introduce students to binary response models that are ubiquitous in health services research.

Prerequisite: STAT 500

HPA 566: Advanced Methods in Health Services Research I

3 Credits

Advanced topics course focusing on extensions of the ordinary least squares regression model and nonlinear methods in health services research. HPA A 566 Advanced Methods in Health Services Research IThe objectives of this course are to help students identify problems that may arise in health services research data, understand methods designed to address such problems, and apply those methods to problems that they encounter in their empirical work. This course is part of the methods core in the HPA doctoral curriculum, and builds from students' introduction to research methods which is a pre-requisite course. Students should have a strong foundation in statistical and research methods prior to taking H PA 566. After completing the course, students should be prepared for the beginning stages of data analysis for a thesis and for further advanced level study in health services research methods. Evaluation is based on homework and examinations.

Prerequisite: H P A564

HPA 567: Advanced Methods in Health Services Research II

3 Credits

Application of advanced methods to health services research topics focused on empirical approaches to causal inference in nonexperimental data. HPA 567 Advanced Methods in Health Services Research II (3) The main theme of the course will be estimating causal effects using non-experimental data in health services research. These general topics, and the associated estimation methods, often go by other names; in economics they are referred to as 'identification strategies,' while in other disciplines they are sometimes labeled 'quasi-experimental research designs.' Causal inference is one of the main issues to confront in conducting health services research. Devising empirical strategies that increase the likelihood that estimates have a causal interpretation is one of the primary objectives of health services researchers. The course will have a distinctively applied bent. The goal will be to survey as many estimation strategies as possible, with particular emphasis placed on those most commonly used by empirical researchers. The objectives will be to understand the strengths and weaknesses of the various approaches, the assumptions they require, and how they have been used in practice.

Prerequisite: H P A564

HPA 590: Colloquium

1-3 Credits/Maximum of 3

Introduction to the field of health services research.

HPA 595: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

HPA 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Cross-listed with: CSPD 596

HPA 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

HPA 600: Thesis Research

1-15 Credits/Maximum of 999

NO DESCRIPTION.

HPA 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

NO DESCRIPTION.
need to use the knowledge gained in class and apply learned analytical skills comprehensively to evaluate and analyze the health care delivered to a specific healthcare consumer. 3. Communication skills. Students will be expected to use accurate and complete information in preparing for and participating in classroom discussions and presentations.

HPA 835: Financial Management in Health Institutions

3 Credits
The financial environment of health institutions; financial aspects of management decision making; emphasis on revenue sources, budgeting, and cost control.

Prerequisite: H PA A447

HPA 836: Health Law

3 Credits
The legal process as it applies to the health administrator, health organization, medical provider, and patient.

Prerequisite: H PA A520

HPA 850: Health Care Marketing

3 Credits
Introduction to the theory, concepts, skills, and principles of marketing applied to health related organizations and networks.

Prerequisite: H PA A520

HPA 853: Leadership Ethics in Health Services Organizations

3 Credits
This course is designed to examine the theories and frameworks that underlie the influence of values and ethics (personal, professional, organization, and social) on leadership practices in health care organizations, and to challenge students to examine their own ethical assumptions. The primary emphasis of this course is on the values held by individuals and their impact on administrative problem-solving processes. Values conflicts will be explored in the context of individual value clashes with the broader organizational and social values held by healthcare organizations. Students will be exposed to a broad range of theoretical literature on values and ethics, but the primary focus of this course is on the development of practical leadership knowledge and skill that will lead to more reflective, intelligent, and principled practices. The primary course goal is to provide students with the tools to be more effective when confronting issues that have ethical implications in their own organizations.

HPA 854: Population Health and Quality Management in Health Services Organizations

3 Credits
This course is designed to examine the theories and frameworks that underlie the influence of values and ethics (personal, professional, organization, and social) on leadership practices in health care organizations, and to challenge students to examine their own ethical assumptions. The primary emphasis of this course is on the values held by individuals and their impact on administrative problem-solving processes. Values conflicts will be explored in the context of individual value clashes with the broader organizational and social values held by healthcare organizations. Students will be exposed to a broad range of theoretical literature on values and ethics, but the primary focus of this course is on the development of practical leadership knowledge and skill that will lead to more reflective, intelligent, and principled practices. The primary course goal is to provide students with the tools to be more effective when confronting issues that have ethical implications in their own organizations.

HPA 855: Health Policy and Administration

3 Credits
The Development of practical leadership knowledge and skill that will lead to more reflective, intelligent, and principled practices. The primary course goal is to provide students with the tools to be more effective when confronting issues that have ethical implications in their own organizations.

HPA 856: Health Services Research

3 Credits
This course is designed to examine the theories and frameworks that underlie the influence of values and ethics (personal, professional, organization, and social) on leadership practices in health care organizations, and to challenge students to examine their own ethical assumptions. The primary emphasis of this course is on the values held by individuals and their impact on administrative problem-solving processes. Values conflicts will be explored in the context of individual value clashes with the broader organizational and social values held by healthcare organizations. Students will be exposed to a broad range of theoretical literature on values and ethics, but the primary focus of this course is on the development of practical leadership knowledge and skill that will lead to more reflective, intelligent, and principled practices. The primary course goal is to provide students with the tools to be more effective when confronting issues that have ethical implications in their own organizations.
within health care and other industries are examined and practiced, using the student's unique organizational situation. Students will employ currently used analytic tools to investigate quality-related systems problems and to identify potential solutions that will improve the health of the population they serve and their communities. The course will provide students with practice in dealing with both cognitive and affective aspects of patient safety, quality improvement, population health, and high reliability concepts. The course is structured to assist the student in selecting and analyzing an internal organizational quality improvement or population health issue.

HPA 855: Information Systems in Health Services Administration

3 Credits

Foundations of information systems for supporting clinical services, quality improvement, and administrative functions in health services management.

Prerequisite: H P A 520

HPA 896: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

HPA 897: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

HPA 897D: **SPECIAL TOPICS**

1 Credits

**Hebrew (HEBR)**

HEBR 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

**Higher Education (HIED)**

HIED 501: Foundations of Higher Education

3 Credits

This course intends to explore what might be called the landscape of U.S. higher education. Acknowledging that a majority of the program's students enter the doctoral program from a wide variety of disciplines and fields, this course is intended to give students an overview of past and current research in four overarching areas of inquiry that a majority of higher education researchers pursue. The four organizing themes are: foundations of higher education; college students; administration and organization in higher education; and, equity and diversity in higher education. Students will recognize that these four themes also intentionally correspond to the four areas in which they eventually must demonstrate competency (i.e., analytical comprehension and significance of the research). In examining the research in each of these four arenas of inquiry, students will consider various perspectives that higher education researchers commonly utilize including economic, historical, sociological, cultural, and legal perspectives.

HIED 502: Diversity & Equity in Higher Education

3 Credits

This course focuses on foundational and current issues related to equity and diversity in higher education. This course is organized into three major areas and levels of analysis: (1) an understanding of inequality and the framing of equity; (2) the diversity frame; and (3) strategies for transformation. The course will explore the concept of equity from different theoretical perspectives and an understanding of inequality from a structural, organizational, and individual level. In the second part, the course will explore what the diversity frame is, what its limitations are, and its relation to legal developments and affirmative action. The third part will focus on action, with specific strategies for transformational change toward greater equity and meaningful diversity and inclusion in higher education. Various types of equity and diversity will be considered, but special attention will be given to the complexity of race.

HIED 503: Ethnicity, National Identity, and Education

3 Credits

Surveys group-oriented education policies internationally, especially comparing those of Britain, Taiwan, India.

Cross-listed with: CIED 503, EDTHP 507

HIED 505: College Student Development

3 Credits

This course covers the knowledge and methods of human development theories and their applications in college settings.

HIED 515: Foundations of Educational Research

3 Credits/Maximum of 999

Students read the philosophical foundations of education research, study how philosophies influence methodologies, and analyze current educational problems. This course is designed for students entering doctoral programs in the College of Education. Our students are studying to become education researchers within a highly politicized environment. For example, particular definitions of education research and government policies that favor some types of research practices over others provide opportunities for and set limits upon the work of education researchers. Public controversies likewise contribute to challenges faced by education researchers who find their work affirmed or discounted by particular definitions and policies. In order to explore these controversies and to allow students to begin identifying their own 'positionality' with regard to research, this course begins with a reading of the history and philosophies of education research (primarily focusing on the United States). The course goals are: - to identify underlying assumptions of competing forms of social inquiry, each determined to uncover new knowledge; - to bring those assumptions to bear on education research in chosen fields of study; and - to begin to develop one's own positions in order to direct further study and research. Specifically, through instructor facilitation and group discussions, students will come to understand major philosophical perspectives that permeate and drive research methodologies in education: positivism, postpositivism, interpretivism, critical theory, poststructuralism, and pragmatism. These understandings
allow students to recognize the methodological assumptions that inform published research studies and to discover how methodologies might inform the research they wish to conduct as students and practitioners. Although the course is not required by any particular doctoral program in the College of Education, it is suggested for students who consider research important to their future careers and who see benefits in exploring the methodological options available.

Cross-listed with: ADTED 515, CI 515, EDPSY 515

HIED 521: Data Analysis for Education Research
3 Credits

This course bridges theoretical statistics coursework and practical research with real, large-scale data sets. The course emphasizes hands-on data preparation and analysis using statistical software. More specifically, the course will give an overview of national and international data resources that are available for educational researchers, survey the most widely used data analysis techniques in educational research, and use statistical software and large-scale datasets to produce useful results for educational policy research.

Cross-listed with: EDLDR 521, EDTHP 521

HIED 522: Economics of Education
3 Credits

The aim of the course is to help students view the educational system and students' educational decisions through the lens of economics. We will discuss the methods that economists commonly employ to study education and read recent empirical articles that examine the impact of educational policies and practices. At the end of the semester, we will discuss insights from the field of behavioral economics, which builds on the standard economic model to better understand decision making. This course also surveys the empirical literature on the economics of education which is organized into several broad topics, including human capital and economic return to education, school choice and college access, and education production. Finally, the course covers a variety of econometric methods that are widely used in the economic study of education. These methods include regression models (e.g., ordinary least squares, discrete choice models, Multi-level modeling, panel data models, etc.) and commonly used techniques to deal with self-selection and causal inference (e.g., quasi-experimental methods).

Cross-listed with: EDLDR 522, EDTHP 522

HIED 545: Foundations in Higher Education and Student Affairs
3 Credits

Foundations in the policy context and student characteristics of postsecondary education; analysis of issues and future trends in the field. Trends. HI ED 545 Foundations in Higher Education and Student Affairs (3) This course provides an overview of the basic structures, functions, participants, constituencies, tensions, and challenges facing higher education and student affairs in the United States. The course goals are to (1) introduce students to the overall structure of higher education and student affairs, (2) examine the societal and individual purposes of higher education, (3) gain exposure to key concepts in higher education and student affairs, (4) examine internal and external actors important to higher education and student affairs, (5) understand the roles of various individuals in colleges and universities, (6) evaluate contemporary challenges facing higher education and student affairs, and (7) provide an opportunity for students to improve their analytical and written and oral communication skills.

HIED 548: Curriculums in Higher Education
2-3 Credits/Maximum of 3

Various types of curriculums and philosophies underlying them; ways in which curriculums are developed; elective versus required courses; evaluation of achievement.

HIED 549: Community Junior College and the Technical Institute
2-3 Credits/Maximum of 3

Distinctive contributions to meeting the need for postsecondary education; development, functions, curriculum and instruction, government, administration, and finance.

Cross-listed with: ADTED 549

HIED 552: Administration and Organization in Higher Education
3 Credits

This course gives students an overview of research on administrative practice and organizational theory relating to higher education. Students will learn about theory, organizational structure, governance, leadership, decision-making, culture, resources, and change. To prepare students for future research, the primary assignments require students to apply organizational theory to aspects of higher education that students select themselves.

Prerequisite: courses or experience in higher education

HIED 553: Educational Mobility in Comparative Perspective
3 Credits

Role of education in social mobility, using quantitative, qualitative, and historical methods; focuses comparatively on Britain, East Asia, and South America. CI ED 553/SOC 553/EDTHP 553/HI ED 553 CI ED 553. (SOC 553, EDTHP 553, HI ED 553) Educational Mobility in Comparative Perspective (3) Sociologists interested in higher education have attended to the relationships between postsecondary institutions and other institutions, as well as the impact on higher education of general social and demographic processes. Many of the classical ideas in sociological theory, including those of Max Weber and Emile Durkheim, have surfaced in recent debates over the nature of higher education. Sociologists in the U.S. have explored such questions as: the gatekeeping function of higher education; the impact of universities on stratification; and the socializing environment for women and minorities. This seminar introduces some of the classical theorists and contemporary researchers of the sociology of higher education. All seminar participants will be required to write a sample research proposal, based on the readings from the seminar.

Cross-listed with: CIED 553, EDTHP 553, SOC 553

HIED 554: The History of American Higher Education
3 Credits

An examination of the development of American higher education against the background of influential social, political, economic, and intellectual issues.
HIED 556: Higher Education Students and Clientele

3 Credits

Characteristics of higher postsecondary education students and other clientele; changes during postsecondary education years and during college; educational challenges and responses.

HIED 557: Sociology of Higher Education

3 Credits

Reviews theory and current sociology research on student access, achievement, and governance in postsecondary education, with applications to policy analysis. EDTHP (HI ED, SOC) 557 Sociology of Higher Education (3) Sociologists interested in higher education have attended to the relationships between postsecondary institutions and other institutions, as well as the impact on higher education of general social and demographic processes. Many of the classical ideas in sociological theory, including those of Max Weber and Emile Durkheim, have surfaced in recent debates over the nature of higher education. Sociologists in the U.S. have explored such questions as: the gatekeeping function of higher education; the impact of universities on stratification; and the socializing environment for women and minorities. This seminar introduces some of the classical theorists and contemporary researchers of the sociology of higher education. All seminar participants will be required to write a sample research proposal, based on the readings from the seminar.

Prerequisite: graduate students only, except with permission of instructor; EDTHP/SOC 416 is recommended
Cross-listed with: EDTHP 557, SOC 557

HIED 560: Legal Issues in Higher Education and Student Affairs

3 Credits

Analyzing case law issues of access, student rights, employment, collective bargaining, church/state, etc., relevant to higher education and student affairs. HI ED 560 Legal Issues in Higher Education and Student Affairs (3) This course is designed to teach a process of legal analysis with a focus on issues related to higher education and student affairs. The course exposes the student to a range of administrative problems at the post-secondary level which entail legal implications. The course will help current and prospective administrators in higher education and student affairs to envision the legal dimensions of collegiate-level decision processes. No attempt will be made to provide definitive legal outlines at any stage; that is a task for the institutional attorney, the state attorney general, and the courts. Explicit recognition is made of the importance of law to higher education and student affairs training, but the overall effort will be illustrative rather than comprehensive.

HIED 562: Organizational Theory and Higher Education

3 Credits

Application of social science theory and research to postsecondary education organizations and administration; use of research in administrative practice.

Prerequisite: HI ED552

HIED 571: Comparative Higher Education

3 Credits

Comparative methods of studying structural variations in systems of higher education in principal industrialized nations and other selected countries.

Cross-listed with: CIED 571

HIED 582: Reviewing and Editing Education and Policy Journals

3 Credits

Introduction to education policy journals and the review and editing process; discussion of emerging issues within the academic publishing industry.

Cross-listed with: EDLDR 582, EDTHP 582

HIED 585: Research Design: Implications for Decisions in Higher Education

3 Credits

A capstone course on research design and analytical approaches to support decision-making in administration and policy-making. EDLDR 585 / EDTHP 585 / HIED 585 Research Design: Implications for Decisions in Higher Education (3) By the end of this course you should be able to: (1) Define and explain the following concepts/tools of social science research: The scientific method-Theory and its role, Constructs and variables, Hypotheses and relations, Experimental designs, Quasi-experimental designs and Ex post facto designs. Sampling theory and designs-Survey designs and methods, Approaches to data collection, Measurement reliability and validity, Quantitative analytical designs, and Ethical practices. (2) Apply these concepts/tools in designing a study relating to educational research. (3) Effectively critique both the theoretical bases and methods of a journal article or report of research or policy analysis. (4) Prepare a sound research proposal.

Prerequisite: EDPSY400, EDPSY406, or AG 400, R SOC573
Cross-listed with: EDLDR 585, EDTHP 585

HIED 586: Qualitative Methods in Educational Research

3 Credits

Exploration of the theoretical framework undergirding qualitative research and its attendant practices and techniques. EDLDR (EDTHP, HI ED) 586 Qualitative Methods in Educational Research (3) This course is the introductory course in the EPS qualitative research methods sequence. This is the first course in a three-course sequence departmental sequence intended to take students from basic knowledge of qualitative methods through mastery of advanced topics. This course was designed specifically to 1) orient students to the various types of qualitative methods most widely used in educational policy research and their theoretical underpinnings; 2) provide training in basic qualitative research techniques; 3) introduce students to basic research design; 4) provide systematic practice (and feedback) in evaluating qualitative research that would allow students to become sophisticated consumers of qualitative studies; 5) prepare students for the Level 11 course. The course will begin with a brief review of the development of qualitative methods in related fields (anthropology, sociology, linguistics) and quickly move on to an overview of qualitative methods in education. Students must have read the material prior to class in order to take part in in-class exercises and discussions. We will focus on key issues such as validity, interpretation
and representation. Students will be asked to read studies, assess the
general quality of the work, and provide a critical evaluation. Students will
study specific methods of qualitative field research, and most weeks we
will practice and discuss a particular research technique (e.g. participant
observation, focus group interviews). These practice sessions will be
informed by relevant readings. Students will practice developing coding
schemas as well as get a quick overview of qualitative data analysis
(QDA) packages. Finally, in small groups, students will design a basic
qualitative study to be presented as a final product in the course.

Cross-listed with: EDLDR 586, EDTHP 586

HIED 587: Education Policy and Politics
3 Credits
The political economy and bureaucratic politics of educational
organizations, with special attention to the policy making,
implementation, and evaluation processes.

Cross-listed with: EDLDR 587, EDTHP 587

HIED 588: Qualitative Methods in Educational Research II
3 Credits
Advanced study of methods involved in executing and analyzing
qualitative research in education. EDLDR (EDTHP HI ED) 588 Qualitative
Methods in Educational Research II (3) The course will provide
practical experience with methods of qualitative data collection, data
management, and preliminary data analysis that extends and deepens
students’ understanding of qualitative research in education. The class,
limited to 15 students, will take as the focus with inquiry a common ‘site’
around which projects of individual and group interest will be designed.
Sessions will take place in ‘workshop’ blocks during which students will
present and critique the work of the project. Readings will be interspersed
with the practicing of methods. The final project for the course will be the
compilation of a synthesized data set that could serve as the basis of
further analysis.

Prerequisite: EDLDR586
Cross-listed with: EDLDR 588, EDTHP 588

HIED 594: Research Topics
1-18 Credits/Maximum of 18
Supervised student activities on research projects identified on an
individual or small-group basis.

HIED 595: Internship in Higher Education
1-9 Credits/Maximum of 9
Supervised experience in administrative offices, in research, on
instructional teams, and in college teaching.

HIED 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an
individual basis and fall outside the scope of formal courses.

HIED 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may
be offered infrequently; several different topics may be taught in one year
or term.

HIED 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

HIED 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

HIED 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 9
Preparation and presentation of materials in undergraduate classes
under the supervision of a full-time faculty member.

HIED 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

HIED 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

HIED 801: Foundations of Institutional Research
3 Credits
Survey course explores fundamental methods and research on campus
decisions, enrollment management, faculty work analysis, institutional
effectiveness, accreditation, student outcomes. HI ED 801 Foundations
of Institutional Research (3)This is a graduate level course that provides
students with an overview of the institutional research profession and the
most common functions that institutional research offices carry out. HI
ED 801 is a core course in the IR Certificate Program and is designed for
higher education professionals who seek to gain a fuller understanding
of campus decision support activities and processes such as strategic
planning, compliance reporting, enrollment management, resource
management, institutional effectiveness, student outcomes assessment,
and program evaluation. The course is designed:1)To give students a
foundation in the concepts, methodologies, research practices, and
information systems that support campus decision making.2)To examine
the diversity of the institutional research profession, including office
organization and staffing, and functions/activities.3) To acquaint
students with the major IR topics including overview of National Data
sets, Planning and Budgeting, Enrollment Management and enrollment
forecasting, Faculty Studies and Instructional Analysis, Institutional
Effectiveness and accreditation, Educational Effectiveness and Student
Outcomes Assessment.4) To give students experience in using SPSS
software, making Power Point presentations, and effective reporting
on selected IR topics. During this course, the classroom and work
experiences are aimed at understanding the readings, obtaining hands-
on experience in analyzing data, and developing reporting skills for the purposes of institutional research. The course serves as a bridge to the other courses that will be offered subsequently in the Institutional Research Certificate program. This course introduces main topics, concepts and processes that are central to the practice of institutional research. It gives an overview of sources used in institutional research and the methods employed. Most importantly, this course aims at introducing students to a variety of reporting strategies and developing report writing skills. Pre-requisite: Working knowledge of basic statistics.

HIED 806: Teaching and Learning in Higher Education

3 Credits

This course gives students an overview of the intricacies of college teaching and learning. There is both an art and a science to teaching and by exploring pedagogical issues and approaches, students will leave this class with a solid instructional foundation. They will have opportunities to learn independently, collaboratively, and reflectively as they question assumptions by reviewing current educational research, and practice instructional strategies. While teaching experience is a plus, it is not required. Being a learner, however, is not optional.

HIED 807: Foundations of Academic Advising

3 Credits

An overview of the academic advising profession and the role of academic advising in the collegiate setting. HI ED 807 Foundations of Academic Advising (3) This course will provide students with an overview of the academic advising profession and the role of academic advising in the collegiate setting. Topics include the history of academic advising; philosophical and theoretical perspectives; models of academic advising; ethical and legal foundations; emerging issues; scholarship; assessment and evaluation; the advising of diverse and unique populations of students; the use of technology in academic advising; the role of academic advising in retention, graduation rates, and student success; the professional development of academic advisors; the future of academic advising nationally and internationally; and the professional preparation necessary to enter the field of academic advising.

HIED 808: Pro-Seminar in U.S. Higher Education

3 Credits

This course is an overview of graduate study, professional careers, and professionalism in higher education. There are no prerequisites for the course and the course content assumes no prior knowledge of higher education as a field of study or as a place of employment. Learners will be actively engaged in developing skills needed for success as a graduate student and as a professional in higher education or a related field. The goal of this course is to prepare students for success as graduate students in the study of higher education and to develop a career plan for self-direction and lifelong learning.

HIED 810: Planning and Resource Management in Higher Education

3 Credits

Strategic planning and resource management in higher education through institutional research. HI ED 810 Planning and Resource Management in Higher Education (3) This course provides students with a working knowledge of strategic planning models and budgeting structures and processes. Planning and budgeting skills are important components in institutional decision support, and this course provides students with tools and skills in environmental scanning, revenue forecasting, expenditure controls, and benchmarking. Curricular goals: Upon completion, students will be able to: 1) discuss, in an informed way, the history, evolution, theory and practice of strategic planning in higher education; 2) appreciate contextual influences (such as organizational politics and culture, leadership, environmental constraints, and the like) on planning; 3) apply data and decision-support tools that can support strategic planning and resource management; 4) apply group process tools to enhance communication, consensus, and action; 5) demonstrate a pragmatic ability to help integrate strategic planning with institutional research and organizational improvement in a college or university setting. HI ED 810 is designed for institutional research professionals, and the on-line learning experiences are aimed at applying the readings, obtaining hands-on experience in analyzing data, and developing reporting skills. Each Unit lists supplementary readings and web links where you can find additional information to explore the topic in greater depth. The methods of teaching and learning include Readings and Supplemental Resources, Professor’s Notes, Discussion Forums, Drop Boxes, Collaborative Learning Opportunities in small groups, Individual Learning Opportunities or a personal project, and Essays or Papers. This course has an established start and end date and includes interaction with other students throughout the course. Pre-requisite: a working knowledge of basic applied statistics.

HIED 830: Designing Institutional Research Studies

3 Credits

Develop skills to design and execute IR studies using quantitative and qualitative research methods. HIED 830 Designing Institutional Research Studies (3) This course acquaints students with best practices and necessary skills in quantitative and qualitative research design including sampling and basic measurement issues, research methods, survey research, interviews, focus groups, and selecting appropriate statistical tools. Upon completion of this course, students will be able to: 1. Define and explain the following concepts/tools of social science research: The scientific method Theory and its role Constructs and variables Experimental designs Hypotheses and relations Ethical Principles and practices Survey designs and methods Sampling theory and designs Approaches to data collection Quasi-experimental designs Measurement reliability and validity Ex post facto designs Quantitative analytical designs Focus Groups & Interviews Qualitative analytical designs 2. Apply these concepts/tools in designing a study relating to education research or policy analysis; 3. Effectively critique and evaluate both the theoretical bases (if any) and methods of a journal article or report of a piece of research or policy analysis. This course has established start and end dates and includes interaction with other students throughout the course. Use of the course Web site is required (the central area for accessing class notes and postings, e-mail communication, ANGEL, downloading files). The course is structured around learning units, each roughly corresponding to one week of a Penn State semester. Learning units are self-contained and built around a single theme or topic. Each contains an introduction, objectives, reading assignments, professor’s content, and learning activities. While it is possible to accelerate or vary the reading and research schedule, the discussion components among peers should adhere roughly to the time frame (the week) within which each Unit is presented. As a pre-requisite for this course, students are expected to: * Know the definition of a ‘variable’ and the distinctions among dependent, independent, and control variables. * Know basic descriptive statistics (e.g., mean, median, variance, standard deviation, percentage distributions), basic inferential statistics (chi-square test of association and goodness-of-fit test, t-tests, one-way analysis of variance,
correlations); the concepts underlying ordinary least-squares (OLS) multiple regression and the basic multiple regression statistics (R2, R2-
change, b-weights, and beta weights).

HIED 840: Assessing Student Outcomes & Evaluating Academic Programs

3 Credits

Academic program assessment/student outcomes in accountability and accreditation processes. HI ED 840 Assessing Student Outcomes & Evaluating Academic Programs (3) This course pulls together the many threads that add up to educational effectiveness: evaluating academic programs and curricula, assessing student learning outcomes, coping with accountability and performance reporting requirements, responding to the demands of both regional and disciplinary/vocational accreditation bodies. The course acquaints students with strategies and instruments for conducting outcomes studies of programs, students, and alumni alike. Assessment topics include studies of students’ basic skills, general education, knowledge in the major, personal growth, and alumni outcomes. Thus, the course is designed for higher education professionals who seek to a fuller understanding of Student Outcomes Assessment, Program Evaluation, and Institutional Effectiveness. The online experiences are aimed at applying the readings, obtaining hands-on experience in analyzing data, and developing reporting skills. Each Unit lists supplementary readings and weblinks where you can find additional information to explore the topic in greater depth. The course has linkages to the other courses in the Institutional Research Certificate program. For example, the opening weeks of HI ED 840 expand upon some of the assessment and evaluation readings and materials covered in selected units of the Foundations course (HI ED 801). Both this assessment course and the course on Studying Students and Student Affairs (HI ED 802) draw upon and discuss relevant literature and theories of student outcomes. Persistence models and theories referred to in these courses are relevant also to Enrollment Management and Forecasting (HI ED 860). The Research Design course (HI ED 830), with its emphasis on measurement issues and survey research, provides an analytical foundation for all these other IR courses. HI ED 840 summarizes the best of what we know about assessing student outcomes. Few topics are more complicated than outcomes assessment. The needs of students and the areas of their learning vary highly among institutions and degree programs. Students are diverse and the dimensions of the learning processes in American Higher Education are extremely complex. Likewise, assessing student performance is complex and hence difficult to summarize. Moreover, before we travel into the real content of assessment, we need to place our journey within a context, and within an environment that is heavily shaping what we do. Thus, before we focus on evaluation academic programs and assessing student outcomes, we will examine accountability, accreditation, and performance reporting. In recent years, evidence of student outcomes has become one of the key indicators of institutional effectiveness, especially as it is viewed by accrediting associations and many state higher education governing boards.

HIED 841: Research and Assessment in Student Affairs

3 Credits

Accreditation bodies, state legislatures, critics, and the public at large continue to challenge colleges and universities to demonstrate what and how students are actually learning. Further, student affairs departments are being scrutinized—both internally and externally—regarding the importance, relationship, and effectiveness of their initiatives for student learning and persistence. This course suggests that research, program evaluation, and assessment are critical skills for student affairs practitioners to develop in responding to such concerns and in order to undertake and accomplish their efforts with excellence. More specifically, this course will help students to contextualize and evaluate student affairs programs with an eye towards effectiveness and improvement.

HIED 842: Administrative Leadership in Higher Education

3 Credits

This course gives students an overview of administrative leadership within higher education institutions. Students learn about organizational structure, governance, leadership, decision-making, internal and external constituencies, culture, resources, and organizational change. Brief discussions of key organizational theories are included but the course primarily focuses on administrative practice.

HIED 843: Foundations of Student Affairs

3 Credits

This course examines the nature and purpose of the student affairs profession, its functions, and how they can be effectively managed, coordinated, and integrated as part of student learning in American institutions. It also explores institutional strategies for organizing, staffing, and funding the large portfolio of programs, services, and facilities designed to facilitate student learning and development at different types of institutions. Complementing material learned in other HIED courses, this course will explore the practical use of student development theory, student learning assessment, and organizational theory in student affairs.

HIED 844: Diversity and Inclusion in Higher Education

3 Credits

Explores diverse student populations, the value university communities place on these differences, and development of skills to assist these populations.

HIED 846: College Students and Their Success

3 Credits

Numerous scholars, over many years, have explored a wide array of topics about college students: their preparation for college, their generalized and particularized characteristics, their behaviors in college, their attitudes about social issues, their relative success in achieving learning outcomes, their engagement (or lack thereof) with various components of the collegiate learning experience, their persistence, and the list goes on and on. This course probes a few of the many relevant avenues of inquiry that comprise ongoing efforts to study college students. More specifically, we will utilize Alexander Astin’s Inputs-Environments-Outcomes (IEO) model (1991) as a useful way to organize an analysis of college students, perhaps with slightly more emphasis placed on the inputs component of Astin’s model.

HIED 849: Legal Issues in Higher Education

3 Credits

This course is an overview of the legal standards arising in higher education, including institutional legal obligations, the rights and responsibilities of faculty, staff, and students, and the legal and regulatory roles of states and the federal government. The course is
intended to serve the needs of students with varied professional and academic interests related to higher education who would benefit from a greater understanding of the legal forces that affect colleges and universities.

HIED 850: Analyzing Faculty Workload, Performance, and Compensation

3 Credits

Develop research skills to analyze faculty workload and performance in teaching, research, outreach, and compensation. HIED 850 Analyzing Faculty Workload, Performance, and Compensation (3) This course provides researchers with an overview of faculty issues with the analytical skills and tools associated with analyzing faculty workload and performance in teaching, scholarship, and outreach. The course is designed for those entering careers in institutional research and planning, particularly those whose work supports the Provost, as well as for those whose work is related to faculty analysis and reporting in other higher education settings. Topics include an overview of needed local and existing national databases, measuring faculty workload, evaluating faculty research productivity, using student ratings of instruction, providing support for academic program reviews, conducting salary studies, addressing issues of equity/diversity, and assessing faculty satisfaction, turnover, and flow. Curricular goals: Upon completion of this course, students will be able to: - Understand concepts, methodologies, research practices, and information systems that support academic decision making in the Provost's Office. - Use NSOPF, NSF, IPEDS, HERI, and other databases that collect faculty information. - Develop appropriate metrics to gauge faculty work in instruction, research, and service. - Understand the diversity of academic work-life and labor market issues at national and institutional levels. - Carry out a basic level major Institutional Research faculty-related analyses, including instructional analysis, research productivity, benchmarking, salary equity, and turnover projections. - Utilize SPSS software, make presentation, and produce effective reports related to faculty issues. This course has established start and end dates and includes interaction with others throughout the course. The course is structured around learning units, each roughly corresponding to one week of a Penn State semester. Learning units are self-contained and built around a single theme or topic. Each contains an introduction, objectives, reading assignments, professor's content, and learning activities. While it is possible to accelerate or vary the reading and research schedule, the discussion components among peers should adhere roughly to the time frame (the week) within which each Unit is presented. Pre-requisite: Working knowledge of intermediate statistics such as OLS regression.

HIED 860: Enrollment Management

3 Credits

This course gives students an overview of key components of strategic enrollment management. The course is divided into three parts. The first part, which contains the initial three lessons, presents core themes that permeate the class while also familiarizing students with the field of enrollment management. The second part addresses the core activities associated within enrollment management: recruitment, admissions, financial aid, and retention. The final part of the course focuses on current trends in enrollment management and on topics of interest to the students.

HIED 897: Special Topics

1-9 Credits/Maximum of 18

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

History (HIST)

HIST 500: Theory, Method and the Practice of History

3 Credits

An examination of the theory and methodologies of the historical discipline and classic works of historiography.

HIST 510: Early Modern Environmental History

3 Credits

The purpose of this course is to explore the place of the natural environment in the late medieval and early modern world. It does so by revisiting classic episodes in world history, from the Mongol conquests in the thirteenth century until the volcanic eruptions of Laki (1783) and Tambora (1815), and reinterpreting them through the lens of environmental history. Topics considered include climate change, plague epidemics, wetland drainage, urbanization, malaria, forestry, colonization, and the commodification of nature. Horses, mosquitoes, and rats will come under the spotlight as active participants in the great transformations of world history. Central to our inquiry throughout the semester is the perennial problem of historical agency; how humanity’s freedom to think and act interacts with the limits that nature imposes. Along the way, students will be given an overview of the concepts, methods, and sources of environmental history.

HIST 511: Topics in Medieval Britain

3 Credits/Maximum of 6

Readings and research in major themes of the history of medieval Britain.

HIST 512: Church and State in Medieval Europe

3 Credits

This course provides students with an overview of the political developments of church and secular government in medieval Europe.

HIST 514: Global History 1300-1800: Empires, Economy, and Civilizations

3 Credits

This course covers the basic historical information, historiographical orientation, and theoretical discussions of the major problems of global history between the end of the Middle Ages and the beginning of the modern world. It covers the history of Europe, Asia, Africa, the Americas, as well as Oceania in a thematic and chronological manner.

HIST 515: Early Modern Europe

3-6 Credits

A graduate seminar examining selected topics in early modern European history through readings, discussions, and research papers.
HIST 516: US Women's and Gender History

3 Credits

A critical analysis of gender and theories of gender in selected American historical contexts.

Cross-listed with: WMNST 516

HIST 523: The History of Colonialism and Mass Death

3 Credits

Over 100 million people were victims of mass killings, including genocide, in the 20th century. And yet, episodes like the Holocaust were not the first instances of state-sponsored mass death; on the contrary, mass killings and mass death have been a distinguishing feature of colonialism and its aftermaths for at least the last five centuries. How and why did these acts and processes occur? What forces caused humans to kill others on a massive scale? How have slower or less sudden processes-like death via slavery or disease-been reinterpreted and debated as foundational to genocide? What do these episodes reveal about the nature of race, religion, colonialism, technology, and modernity?

HIST 523 is a graduate seminar that gives students an overview of the key literatures, methodologies, and debates in the historical literature on colonialism and mass killings, from genocide to epidemiological collapse, from the fifteenth century to the present. Its broad temporal framing and comparative framework reflects debates over the place of violence in European expansion in the Americas, Africa, and Asia, while also allowing for more subsequent, more local mass killings in places where colonization retreated. Before delving into specific historical examples, we will explore definitions of colonialism, mass death, and genocide. The course is then organized chronologically and examines episodes across a broad geographical spectrum, including early modern France, the early Colonial New World, the 19th century American West, 19th century Australia, Congo and Namibia during the 'Scramble for Africa,' East Asia in the early-mid 20th century, 1980s Guatemala, and the Darfur Genocide of the early 2000s. It familiarizes students with the re-reading of colonial and post-colonial histories since the coining of the term 'genocide' in 1944, by Raphael Lemkin, and the debates that the application of the term outside of Europe, outside of the Holocaust, have engendered. Students will be prepared to: teach on the history of mass death, mass killings, and genocide outside of Europe; more efficiently read and review academic texts; and find and interpret primary sources. This course is open to students across departments, and highly recommended for students minoring in Holocaust and Genocide Studies.

HIST 524: Deviance, Crime and Madness in Modern Europe

3 Credits

HIST 524 Deviance, Crime and Madness in Modern Europe (3) Historians and social scientists have shown that societies have persistently established certain standards and ideals for human conduct and being. At the same time, the natural variation in human phenotypes has meant that individual, groups, and institutions within these societies have been faced with those deviating from these norms. The deviations may sometimes present themselves physically (e.g., in the form of a somatic lesion or disability), intrapersonally (e.g., in eccentric thinking or affect), or interpersonally (e.g., in criminal or anti-social conduct). As historians, anthropologists, and other have demonstrated, while there are noteworthy continuities in how these deviations have often been manifested (e.g., seizures accompanying epilepsy), there have been considerable differences across time and place in how deviance has been expressed, perceived, understood, and handled. This seminar examines this constellation of problems as they have emerged in Europe since the 18th century. Posing, as they do, complex human problems, the historical study of deviance, crime, and madness requires paying attention to the scholarly contributions of multiple disciplines beyond the field of history. Thus, the course will attend to both social theory and historiography. Each week, readings from social theory will be paired with a historical work, in order to bring broad theoretical analysis and empirical disciplinary research more deliberately into conversation with one another. Some examples of the course readings include Emile Durkheim’s On Suicide, Eving Goffman’s Stigma: Notes on the Management of a Spoiled Identity, Janet Oppenheim’s ‘Shattered Nerves: Doctors, Patients, and Depression in Victorian England,’ Norbert Elias’ The Civilizing Process, Reviel Netz’s Barbed Wire: An Ecology of Modernity, and Jan Gross’ Neighbors: The Destruction of the Jewish Community in Jedwabne, Poland. Weekly topics will center on key social processes and prominent conceptual frameworks: social control, self-control, marginalization, pathologization, criminalization, and de-criminalization, representation, punishment, extermination, and enhancement. Students will be required to write an interdisciplinary research paper (i.e., a paper accessible to multiple scholarly audiences), calling on both theoretical and empirical scholarship from various disciplines. The course will culminate in a seminar conference in which students will present their research and field questions and comments.

HIST 525: Imperial Borderlands in Modern Europe

3 Credits

This course provides students with an overview of the processes of constructing borders in a variety of forms, ethnic, religious, trade, and linguistic, in a European imperial context. HIST 525 Imperial Borderlands in Modern Europe (3) This course exposes students to the latest developments in colonial studies and new paradigms for considering European imperial history in terms of its borderlands. Using the methodological tools applied in recent years to the history of Western colonial empires, this course expands the scope of European history to encompass the complex interaction between the conquered peoples and their rulers by broadening imperial history to include the study of ethnic and religious differences that emerged from the European encounter with peoples whose cultures differed profoundly from their own. In particular, the material covered in this course will build an awareness among students of the role of states, and especially imperial states, in confronting the polyethnic/multinational character of populations they sought to rule. The theoretical and historiographical works assigned will focus on how imperial European states crafted or erased cultural differences and how borderlands posed particular challenges in these endeavors. Building on these insights, students will gain an awareness of imperial policies and conceptions of colonial rule and of the impact of imperial domination on colonial peoples. Students will learn to recognize and identify the means by which Imperial rule brought irreversible changes to the way of life of the borderlands peoples, who adapted to and resisted imperial rule by a variety of means that they had at hand. Such an approach will yield an awareness of the methods by which historians formulate questions, choose sources, use theory to interpret the material they collect, and the variety of rhetorical and other means available to historians to present findings. Students will conduct their own analyses of scholarship by reflecting on the assigned readings and presenting their thoughts and evaluations in the form of weekly critiques and a final paper. This will be invaluable in helping students to acquire the necessary methodological and theoretical tools to formulate questions for their own research projects. This course fulfills the requirement of...
a topical graduate course in History. It is open to students within and outside of the History Department.

HIST 527: Societies, Citizens, and Violence in Modern Europe
3 Credits
The social and cultural history of warfare in modern Europe, with specific emphasis on the First and Second World Wars.

HIST 530: History of Science in the Early Modern World
3 Credits
This course exposes students to the current state of scholarship from the standpoint of historical, legal, sociological, and literary analyses of science in the early modern period. The inadequacy of long-accepted notions of 'science' and 'modernization' to describe the rapid changes of scientific thought in the early modern era require students to assess the specific value given to such notions by the state, religion, and society in specific cultural and historical contexts. The seminar will also explore the reconceptualization of society and nature in the early modern period and the way in which discoveries in natural philosophy inspired those changes. The exchanges between European and non-European centers of authority during the early modern period helped to shape many of these disputes and scholars' current interpretive frameworks. In particular, we will challenge triumphal narratives of the Scientific Revolution by examining the ways in which geography and local context affected ideas about the natural world, the role of gender in knowledge-making, and how non-elite and artisanal practices also contributed to the creation of early science. A focus throughout the course will be on how the exchanges between European and non-European intellectual communities shaped contemporary understanding of the natural world. The seminar is intended for graduate students in history and related fields who are preparing for the field in Early Modern studies. The seminar is intended for graduate students in history and related fields who are preparing a field in early modern studies.

HIST 531: Religion and State-making in the Early Modern World
3 Credits
This course is a research seminar covering the historiography of early modern Europe, the Ottoman Empire, Mughal India, Warring-State and early Tokugawa Japan, Choson Korea, and the history of Ming and Qing China with a focus on the interaction between religious and political history.

HIST 537: Studies in British History
3-6 Credits/Maximum of 9
Studies in the history of wars and of the political, social, economic, diplomatic, and theoretical foundations of warfare.

HIST 540: Native American History
3 Credits
Surveying Native American history from the pre-colonial era to the present, this course examines key historical events, including: Indigenous civilizations before colonialism; the invasion of North America by Europeans; colonial epidemics; the Indian slave trade; the Pueblo Revolt; the Seven Years’ War; the development and impacts of U.S. Indian policy; Indigenous sovereignty. Methodologically, this course exposes students to a range of historical subfields, such as social history, cultural history, political history, military history, and gender history. Additionally, History 539 gives students an overview of ethnohistory, an interdisciplinary field that draws on techniques and sources from History and Anthropology. By studying ethnohistory, historians will become better acquainted with cultural anthropology and archaeology. This seminar introduces students to major questions, themes, and problems in Native American history. These include: How can we study pre-colonial Indigenous history? What impact did colonization have on the Americas? How did Indians, Europeans, and Africans attempt to navigate cultural differences? How did the enslavement of Indigenous peoples and Africans impact race in North America? How do Native-centered histories transform our understanding of the American past?

HIST 541: War in the Early Modern and Modern World
3 Credits
The study of the causes, conduct, and political, social, diplomatic, cultural, and economic consequences of war from 1500 to the present. HIST 541 War in the Early Modern and Modern World (3) This course offers an introduction to the complexity of war in the early modern (1400-1850) and modern world (1850 to the present). Since war has been experienced across the entire world, the course will draw readings and examples from North and South America, Europe, Asia, and Africa. It brings together the two major approaches to the study of war, both the traditional emphasis on the battlefield and the more recent consideration of both the battlefield and the political, social, economic, and cultural homefronts. Specifically, this course considers the various methodologies that have shaped the ways in which historians have asked and answered such fundamental questions as how and why wars start, have been
averted, and ended. The study of military theory provides the intellectual framework that shaped the study and conduct of war at specific periods of history and in specific cultural context. The evolution of a nation's military theory over time reflects the impact of changes in technology, the changing social composition of its armed forces, the strength of the economic support the national government will supply, and much more. Thus, this course considers issues relevant to armies (technology, soldier experience in battle), to the government (laws of war, revolutions in military affairs, military doctrine, war and national identity), and to the people (issues relating to race, class, and gender; antiwar activism, popular literature) for a fuller understanding of the overarching impact of war in the modern and early modern world.

HIST 542: The United States and Global Migration 1815-1924
3 Credits

Students study the impact of immigration on American society in a global setting.

HIST 543: United States History to 1877
3 Credits/Maximum of 6

Primarily a reading seminar, this course focuses on United States history from the 17th century to 1877, emphasizing the profound ways that the British American colonies and then the United States changed through numerous social, cultural, economic, and political revolutions. In particular, the course investigates transitions from the colonial period through the road to the Revolution, the Early National period, the Jacksonian Era, the sectional conflict, and the Civil War and Reconstruction. Students will examine the growth and impact of the institution of slavery; territorial expansion; cross-cultural encounters; social, cultural, economic, and political revolutions; the consolidation of capitalism; and the impact of reform movements on the colonies and nation.

HIST 544: Topics in the Civil War and Reconstruction
3 Credits/Maximum of 6

Background and impact of the Civil War and the two succeeding decades, with emphasis on historiography and selected topics.

HIST 545: United States History, 1877 to Present
3 Credits

Primarily a reading seminar, this course focuses on United States history from 1877 to the present, emphasizing the profound ways the nation changed socially, culturally, economically, and politically since the late nineteenth century. In particular, the course investigates and builds an awareness of the transition from the Gilded Age through the two world wars, and onward through the social protest and civil rights movements of the 1960s. This seminar will address a variety of topics: industrialization; evolving ideas about individual rights; the role of government in social and economic affairs; the emergence of the nation as an economic and military power; as well as social and labor movements. On a methodological level, the seminar will expose graduate students to a variety of interdisciplinary approaches and subfields of history, ranging from political, economic, social, ethnic, religious, cultural, and environmental history.

HIST 546: The Rise and Fall of Modern America, 1919 to the present
3 Credits/Maximum of 6

Readings and research in major themes of the history of the United States in the twentieth century.

HIST 547: Slavery in the Americas
3 Credits

Slavery in South America, the Caribbean, and North America from 16th century European colonization through the 19th century abolition movement. HIST 547 Slavery in the Americas (3) This course provides a broad exploration of slavery in the Americas from the beginning of European colonization to abolition. From the sixteenth century to the nineteenth century, Spanish, Portuguese, British, and French colonists in the Americas created the largest slave societies the world has ever known. Slaves in the New World produced tropical commodities such as sugar, tobacco, cotton, and coffee that, in turn, contributed to the foundation of capitalist and consumer societies in the Atlantic world. The staple crops produced by slaves were among the first goods to transform elite luxuries into common necessities. The Age of Revolution was a watershed in the history of slavery in the Americas, transforming the terms of struggle between slaves and slaveholders, of debate about slavery, of the ideology of slavery. While the Age of Revolution catalyzed a century-long process of abolition, it also began a new period in the expansion of slavery. Slaveholders developed new policies, practices, and doctrines to reconcile slavery and liberalism. The adoption of modern technology and industrial techniques of production resulted in dramatic increases in the productivity and exploitation of slaves, as well as the wealth and power of slaveholders. The simultaneous growth of slavery and antislavery heightened political divisions over slavery and made its destruction a protracted struggle marked by slave rebellion and civil war as well as landmark acts of state. This course investigates the origins of slavery, race, and abolitionism; transformations in plantation production, the culture of Africans in the Americas, and the ideologies of slavery; and the relationships among slavery, liberalism, capitalism, and modernity. Students will apply a range of concepts from the human sciences, such as creolization, ideology, and human geography, to major problems in the history of slavery.

HIST 548: Topics in United States South
3 Credits/Maximum of 6

Major themes of southern United States history.

HIST 551: The African American Freedom Struggle
3 Credits

This seminar provides students with an overview of important topics and debates related to the African American Freedom Struggle from Reconstruction to the present. The course is organized chronologically and thematically to highlight the changing and distinctive concerns related to African Americans' efforts to secure the rights and benefits of American citizenship. Special attention is given to the ways in which high politics intersect with grassroots actions. The course considers African American mobilization throughout the entire country and does not simply address the more familiar southern post-WWII struggle. Not only will students gain a critical understanding of some central debates in this field, but also, they will begin to think about how they might teach this material to undergraduates.
HIST 552: Late Modern America Society, Culture, and Politics 1975-2008
3 Credits
This course considers the political, cultural and social history of the United States from 1975 to the present.

HIST 553: American Environmental History
3 Credits
This course offers a survey of the history of the place that became the United States through the lens of the environment. Through attention to changing ecologies, conflicting resource-use regimes, differing ideas about what nature is and should be for, students will come to understand the many ways in which natural systems have shaped and been shaped by people in North America over the past five centuries.

HIST 556: American Social and Cultural History
3 Credits
Surveying Social and Cultural History in the 19th and 20th centuries in the United States, this course examines key themes and topics in the history of the field, including: race, class, gender, sexuality, labor, migration, citizenship, incarceration, and environment. This seminar gives students an overview of major questions and problems in American Social and Cultural History such as What is culture? How does society produce culture? What is the relationship between culture and politics? How do we write history from the bottom up? How do our methods constrain what histories we can tell? Methodologically, this course exposes students to a range of theories and subfields including political history, gender history, history of capitalism, labor history, urban history, and legal history. Additionally, this seminar examines journalistic historical writing, biographies, and opinion editorials in order to examine the multiple forms history writing can take.

HIST 557: Latin American Social History, 1500-1900
3 Credits
This course provides students with an overview of the social history of Latin America, 1500-1900. HIST 557 Latin American Social History, 1500-1900 (3) This is a graduate seminar in the field of colonial and nineteenth-century Latin American social and cultural history. It is designed to be accessible and useful not only to Latin Americanists but also to Early Modernists, to students of the early United States, and to Mesoamericanists. The seminar’s scope is all of Latin America, but with an emphasis on Spanish America and especially Mesoamerica, in the centuries from the sixteenth through the nineteenth. The seminar is divided into four parts. Part I introduces the field’s historiography and explores its newest ‘school’ - the New Conquest History. Part II focuses on the ethnography of colonial Mesoamerica and the Andes; ‘ethnography’ is used by colonial Latin Americanists to refer to the study of native peoples in the Americas. Part III turns to ‘Afrohistory,’ the study of people of African descent in colonial Latin America, which evokes the term ‘ethnography’ and thus prompts a comparison of the relative experiences of the two sociocultural groups, the nature of their interaction, and the methodologies required and employed to study them. Such methodologies include the recent revolution in ethnography centered on the use of native-language sources to study and write about native peoples and the creolization debate in African diaspora studies. Part IV is a brief foray into the nineteenth century, designed to provide a bridge between colonial history and the issues of modern Latin America explored in other seminars within the History Department.

HIST 558: Medicine, Science, and Technology in Latin American History
3 Credits
This graduate course explores the history of medicine, science, and technology in early modern Latin America and Iberia, integrating interdisciplinary approaches and local/global contexts. It is designed to give students an overview of some of the key historiographical debates and research in these fields for Latin America and Iberia, and to provide a basic familiarity with the forms that this field of historical/interdisciplinary inquiry has taken in recent years. Some of the themes that we will explore are the role of empire building in shaping medical, scientific, and technological knowledge; how ‘non-Western’ (indigenous, African, Asian, and mixed race) healers, artisans, and scientists innovated, developed, and recreated their practices and societal roles under colonial rule; the historical development of public health in Latin America; and the interactions between global processes of Western knowledge production and local-level multi-ethnic Latin American knowledge production. This course will be of interest to those studying colonial Latin America, those who wish to understand the colonial legacies of issues important to modern Latin America research topics, those interested in the early modern era in a comparative and/or global perspective, and those who wish to prepare for the Latin America or Early Modern World fields of their comprehensive exams.

HIST 559: Colonial Latin American History
3 Credits
HIST 559 gives students an overview of key literatures, methodologies, and debates in the historiography of Latin America (the writing of Latin American history), from the 1490s to the Independence period (mostly, but by no means solely, the 1820s). Its primary focus is Spanish America and Portuguese Brazil, especially Iberian interactions with indigenous American and Africans/African-descended people. But some attention is given to all regions of the Americas and to roles played by British, French, and other colonizers. Chronologically, it is a prequel to HIST 570 (but not an official prerequisite). The course comprises five sections, each based on an historical sub-field and its historiography within the larger field: (1) the indigenous civilizations of the Americas and their responses to European invasion, including the shift from traditional Eurocentric Conquest narratives to the New Conquest History; (2) the political and economic institutions, as well as the culture, of Spanish and Portuguese colonization; (3) the changes and continuities in indigenous civilizations during the colonial centuries (usually termed ‘Ethnography’, and explored more fully in HIST 571); (4) the history of trans-Atlantic slavery and the experience of African-descended peoples in Colonial Latin America; and (5) a sub-field that will vary according to instructor, examples being the history of science and medicine in the region, the history of gender and sexuality, and the history of religious change (or ‘the Spiritual Conquest’).

HIST 570: Latin American History, 1800-Present
3 Credits
This seminar gives students an overview of key literatures, methodologies, and debates in the historiography of Latin America (the writing of Latin American history) and the Americas more broadly, from approximately to 1800 to the present. Its framing reflects the chronology of mainland Spanish American Independence, but it reaches backwards and outwards as needed. It looks to prior Andean and Haitian bids for self-
determination and subsequent exports and imports - of empire, capital, people commodities, science, and instruments of terror - to and from the United States and Africa. It connects those nodes by tracing continuities in political, social, and environmental relationships, and by identifying the ways that peoples in the region (in the Caribbean, Mexico and Central America, Colombia and the Andes, Brazil and the Southern Cone) have thought and acted their way out of colonialisms. Chief among the seminar's goals is the preparation of graduate students to teach post-1800 Latin American History to undergraduates. Students will develop a grasp of the field's key historiographical developments, and think about new ways to teach a subject that many - but not all - North American undergraduates meet with stereotypes. Graduate students of other historical geographies and from other disciplines are welcome too, given that it is also designed to survey approaches to thinking historically after 1800, to question assumptions that those methodologies make, and to address the politics of researching and writing a post-colonial history of a place that has always been 'modern,' where 'Latin America' came into being as a means of anticipating questions crucial to past and present imperialisms, global histories, and politics.

HIST 571: Latin American Ethnohistory

3 Credits

HIST 571 gives students an overview of key literatures, methodologies, and debates in the historiography of Latin American ethnohistory, from the fifteenth to the nineteenth centuries. 'Ethnohistory' is defined here as the historical study of the indigenous peoples of the Americas. The course comprises four sections, each based on an historical sub-field and its historiography: (1) the indigenous civilizations of the Americas in the pre-Contact and Contact periods, primarily fifteenth and sixteenth centuries, including but not necessarily limited to the civilizations of the Aztecs, Mayas, and Incas; (2) indigenous responses to European invasion, with particular attention to regions of Spanish and Portuguese activity - and including the historiographical development of the New Conquest History, with attention also given to regions where colonies were not established; (3) the indigenous experience of Spanish and Portuguese colonization, and indigenous contributions to new colonial-era societies, including changes and continuities in indigenous civilizations during the colonial centuries - and including the historiographical development of the New Philology); and (4) the indigenous experience of the long Independence period, taking the seminar to a point in the nineteenth century, as determined by the instructor.

HIST 572: Race and Nation in Modern Latin America

3 Credits

From initial colonial contact, Latin America represents a site of violent conquest by European colonizers over indigenous populations and exploitation of both African and indigenous labor; white control over black and brown bodies was at the very core of colonial economic success or failure. In turn, racial hierarchy and exploitation define both colonial and modern Latin American history. Our focus is not the overall study of race and slavery throughout Latin American history. Instead we will examine the role of race in Latin American nation-building following independence through the age of twentieth century nationalism. As the ideas of scientific racism swept Europe and the United States in the nineteenth century, the United States established economic, and at times military, dominance over much of Latin America from the neo-colonial period of the late nineteenth and early twentieth century. Increasingly, as cultural and economic ties were broken with the Iberian empires - even in the case of Spain's last American colonies, Cuba and Puerto Rico-Latin American elite sought modernity through trade with and cultural borrowing from the United States and Europe. In response to the scientific racist ideology that in the US led to segregation, Jim Crow, convict lease systems, lynching, and widespread disenfranchisement, Latin American elite consciously engaged these racist ideas as they granted or restricted non-white populations access to their rights as citizens. Nineteenth century luminaries such as Cuban revolutionary José Martí, Argentine journalist and politician Domingo Faustino Sarmiento, and even Venezuelan military and political leader Simón Bolívar had introduced radical ideas on race and citizenship. In the first half of the twentieth century Latin American intellectuals famously built on those ideas by embracing, renegotiating, and/or rejecting North American racist ideologies-often all within the same work-as they optimistically and proudly recognized and rehabilitated the place of the nonwhite, indigenous, mestizo, and mulatto populations into their national narratives. We will focus on three of the best known of these authors (Mexican Jose Vasconcelos, Cuban Fernando Ortiz, and Brazilian Gilberto Freyre) as well as scholarship that will help us contextualize their works, and allow us to better understand the broader theme of race in modern Latin America. The object here is to consider how the subject of race-in large part defined by the role of Afro-Latin Americans, the indigenous, mestizo, and mulatto-is situated in relation to broader considerations of nation, power, violence, and identity. The goal of the course is to lay the groundwork for an interdisciplinary understanding of modern Latin America and the modern black Atlantic: To consider the consequences of colonization, slavery, and the slave trade, both historically and contemporarily, on modern intellectual formations and institutions.

HIST 573: Empire & Society Latin Amer

3 Credits

HIST 573 gives students an overview of key literatures, methodologies, and debates in the historiography of empire and society in Latin American history, fifteenth to nineteenth centuries. The course comprises five sections, each based on an historical sub-field and its historiography: (1) the empires and societies of the Americas in the pre-Contact and Contact periods, primarily that of the Maya, Aztecs, and Incas; (2) the culture and society of Spanish and Portuguese imperialism in Iberia and the Americas (3) the culture and society of the Spanish conquistadors, including roles played by indigenous and black conquistadors; (4) the impact on the Americas of Spanish and Portuguese imperialism in East Asia, and the cultural and social ramifications of trans-Pacific exchanges during the colonial centuries; and (5) the comparative history of imperialism in the Americas by other European powers, most notably the British, Dutch, and French, including the differing experiences of indigenous and African-descended peoples. The seminar will end at a nineteenth-century point determined by the instructor.

HIST 580: Early Modern Asia

3 Credits

This course offers a foundation in early modern Asia from roughly the fifteenth to mid-nineteenth centuries. Students will examine the constitution of centralized and bureaucratic empires, ideological movements, and practices associated with Confucianism, Daoism, Buddhism, Islam, and Hindu thought, and the formation of syncretic socio-cultural spheres in different parts of Asia. Through an exploration of key political, cultural, and intellectual developments in Asia, students will assess Asia's place in the global network of thought, commerce, and exchange. Central to this analysis is how such contact with overland and
maritime cultures deeply affected mainstream Asian societies. By tracing such interactions, students will be encouraged to recognize, identify, and apply the roles of frontier and borderlands in the creation and reification of identity and culture in different parts of Asia. Through this multifaceted approach to Asian history, students will come to recognize the strategic role of Asia within the pan-Eurasian sphere of interactions while also achieve a better understanding of the diverse characteristics of Asian peoples, societies, and institutions in history.

HIST 581: Modern China

3 Credits

Primarily a reading seminar, this course focuses on Chinese history from the mid-nineteenth century to the present, emphasizing the profound ways that the Qing empire, Republican China, and then the People's Republic changed through numerous social, cultural, economic, and political revolutions. In particular, the course investigates transitions from the late imperial period through the Revolution, the Warlord period, the Nanjing Decade, Second World War, the Civil War, and the establishment of the socialist China. Students will examine the changing role of women in Chinese society to the changing relationship of humans to environment, as well as exploring the multiple approaches Chinese historians have taken to reading and presenting historical work, including economic, political, social, and cultural history; social, cultural, economic, and political revolutions; the consolidation of communism; and the impact of successive political movements on China and the Chinese peoples.

HIST 582: Women and Gender in Modern Chinese History

3 Credits

Examines the historical literature on women and gender in late imperial and twentieth century China. HIST 582 Women and Gender in Modern Chinese History (3) The roles of women and men have undergone major shifts in late imperial and modern China, affecting all aspects of daily life. Just the titles used to describe feminine ideals give an indication of these shifts - from the 'talented women' of the late imperial period to the 'new women' and 'modern girls' of the early twentieth century to the 'iron ladies' of the Communist period to the 'factory girls' of the new millennium. Masculine ideals, too, have shifted, from the literary scholar-official of late imperial China to the patriotic worker of the Mao years to the entrepreneurial party member of the late twentieth century. But beyond the ideals, the day-to-day lives of Chinese people have been fundamentally altered as well, changing the way people relate to family and to society. This course examines the historical literature on these shifts from the late imperial period to the present. Misperceptions and stereotypes about Chinese gender roles and, in particular, the status of women are widespread. In the past several decades, historians of China have sought to place our understanding of these topics on firmer historical ground by exploring topics from homosexuality and law in imperial China to widowhood and the imperial cult of female chastity to new marriage practices in post-economic reform village China and, in doing so, to undermine the 'orientalism' that informed, for instance, investigations of footbinding and the 'women's quarters.' Through a wide range of readings, this course will introduce students to the major works and topics in the field of Chinese women's and gender history, including: women and family, women's legal history, gender and nationalism, 'new women' (xin fun&uuml;), gender and revolution, gender and demographics, gender and labor, women's liberation, and love and sexuality. Students will be expected to demonstrate their familiarity with the major themes and topics for Chinese women's and gender history through discussion and written work.

HIST 583: Rebellion, Revolution and Nation in China

3 Credits

A research seminar, this course focuses on rebellion and revolution in Chinese history from the mid-nineteenth century to the present. In particular, the course investigates not only the myriad forms of revolution experienced in China including the 1911 Revolution, the Warlord period, the Nanjing Decade, Second World War, the Civil War, and the Cultural Revolution, it seeks to see these through the lens of the political ideologies such as nationalism, anarchism, communism, and feminism. Students will examine the manner in which the tide of rising expectations predicated the social and economic motivations lingering in the more overt political demands. Understanding the dramatic shifts in Chinese culture as well as its relationship to global politics will shape much of the seminar's focus.

HIST 585: Culture and Society in Late Imperial China

3 Credits

This course examines the cultural developments of late imperial China (14th-18th century) in their broad social contexts.

HIST 586: Modern Japan

3 Credits

This course provides students with an overview of the literature and themes in modern Japanese history. HIST 586 Modern Japan (3) This course explores multiple themes in Japanese history, with a focus on the politics of culture and changing perceptions of Japan's role in the world. There is a close focus on the interplay between domestic politics, foreign relations, and ideas. Through critical reading of major monographs and articles, students will hone their skills in argumentation and the use of evidence. Ideally, this course will stimulate ideas for research projects in other seminars, and it will present students with a variety of approaches to historical problems. Given the close relationship between China and Japan this course is strongly encouraged for those students studying Chinese history at the graduate level. Finally, this course will prepare students to teach a course in modern Japan at the undergraduate level.

HIST 587: Topics in Modern South Asian History

3 Credits/Maximum of 6

Research and readings in the history of South Asia since the late eighteenth century.

HIST 588: Ethnicity and Borderlands in China

3 Credits

A research seminar, this course examines Chinese history from a multi-ethnic perspective. Major topics to be covered include the theoretical development (and evolution) of the terms frontier and borderlands; ethnicity in the imperial period; the centrality of ethnicity in China's conceptualizations of itself; and ethnicity in the People's Republic of China. After successfully completing this course, students will be able to: to demonstrate their familiarity with the major themes and topics for Chinese imperial history and how it relates to the intertwined conceptualizations of ethnicity through discussion and written work. Students will have the option to use this course as a research seminar,
conducting primary document research alongside their historiographic readings.

**HIST 589: World History: Themes and Approaches**

3 Credits

This course provides students with the thematic and theoretical foundation for the study and teaching of world history. **HIST 589 World History: Themes and Approaches (3)** This course will provide students with the thematic and theoretical foundation for the study and teaching of world history. Because world history is a crucial secondary field for historians, with increasing emphasis on it as a necessary 'teaching field;' this course seeks to equip students to teach world history at the undergraduate level. The course will be divided into five primary units, each of which will address a major theme in world history, such as the rise of civilizations, great land empires (particularly the Han Dynasty and the Roman Empire), the Silk Road, the spread of world religions, the Mongol invasions, European exploration, the Industrial Revolution, the rise of the nation-state, and globalization (specific units will be determined by the instructor). Within each of these units, students will be exposed to both substantive historical literature on the topic as well as major theoretical works that have influenced historical scholarship. In this way, students will be encouraged to think about the ways historians use theory to frame and inform their scholarship and teaching. By the conclusion of the course, students will be expected to demonstrate the integration of content, theory, and pedagogy.

**HIST 595: Internship**

1-12 Credits/Maximum of 12

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

**Prerequisite:** prior written approval of proposed assignment by instructor

**HIST 596: Individual Studies**

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

**HIST 597: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

**HIST 600: Thesis Research**

1-15 Credits/Maximum of 999

No description.

**HIST 601: Ph.D. Dissertation Full-Time**

0 Credits/Maximum of 999

No description.

**HIST 602: Supervised Experience in College Teaching**

1-3 Credits/Maximum of 6

Students enrolled will lead discussion sections, grade papers and examinations, given an occasional lecture, and assist instructors in planning survey level courses.

**HIST 603: Foreign Academic Experience**

1-12 Credits/Maximum of 12

Foreign study and/or research constituting progress toward the degree at a foreign university.

**HIST 610: Thesis Research Off Campus**

1-15 Credits/Maximum of 999

No description.

**HIST 611: Ph.D. Dissertation Part-Time**

0 Credits/Maximum of 999

No description.

**Homeland Security (HLS)**

**HLS 540: Comparative Homeland Security and Related Methods**

3 Credits

The course will address international cooperation in Homeland Security and compare select national approaches as well as teach related practical methods of analysis. **HLS 540 Comparative Homeland Security and Related Methods (3)** The need for a coordinated, international response to security threats to citizens and societies since 9/11 has never been greater. Homeland security in the U.S. is a specific subset of national security that focuses on a risk-informed mission space, addressing it by law-enforcement - as opposed to defense - concepts and capabilities, and working across the country and around the world to keep the American nation safe and secure. Homeland security and civil security policies and strategies to make nations secure and resilient against terrorist as well as all-hazards threats were established not only in the U.S. but also in many other countries in the world, based on the need to work with international partners. This course provides students with information and skills to undertake international comparative analysis of civil security threats and ways to address those threats. Crucial aspects of this course will include a comparative examination of select topics, such as: critical infrastructure protection; cybersecurity; use of armies in homeland security; public-private partnerships; security governance; as well as the creation of 'security' as public good and its 'delivery' to the citizens in different countries, along with U.S. collaboration with other nations. The course is rooted in the research focus of civil security. This refers to an all-hazards approach to identifying and closing security gaps based on a mission-centered, comprehensive approach (prevention, preparedness, mitigation, response, recovery - plus transversal aspects such as resilience) that is tuned to end-user requirements, and speaks to technological and societal aspects (including ethical and legal issues). Civil security focuses on both 'all of government' and 'whole of community.' It includes dual-use aspects and civil-military interaction in crisis management, but excludes military-only aspects. The course places an emphasis on U.S.-European Union (EU) comparisons based on a related U.S.-EU implementing
arrangement, and covers other world regions also. It will further scrutinize comparative analysis of emergent threats and challenges by focusing on risk cultures and security cultures in different countries. Moreover, the course will critically assess across different countries - citizens perceptions of homeland security and public acceptance of the use of security technology for surveillance and other purposes, across different countries. The comparative perspective cannot be taught without investigating methods and analytical approaches. Lessons will therefore include comparative examination of research-related methods as well as practical methods - such as risk and vulnerability assessment - used in the policy sector, and how and why those differ across countries.

**Prerequisite:** HLS 801, HLS 803, HLS 805, P ADM401, and P ADM802

HLS 558: Disaster Psychology

3 Credits

Explores psychological impact of disasters and terrorist attacks on victims, families, rescuers, and society and methods of reducing negative effects.

**Prerequisite:** permission of the instructor

Cross-listed with: PSY 558

HLS 594: Research Topics

3 Credits

The course builds on the knowledge components and skills students have gained in prior courses in the program, and students should actively use and integrate those during their work in this capstone course. The purpose of this course is to provide a culminating study and research experience in order to develop additional competencies in problem identification; conducting, using, and interpreting research for problem solving; professional writing and oral presentation; as well as group research and presentation skills. During the course, students will work both individually and within one of several assigned groups. The course therefore requires students to demonstrate evidence of analytical ability and synthesis of material, as gained in the iMPS-HLS program. Students are also expected to actively use knowledge, analytical insight, and experience gained in previous classes and throughout the program as a whole.

**Prerequisites:** HLS 801, HLS 802, HLS 803, HLS 804, HLS 805, HLS 811, HLS 404

HLS 595A: Internship Experience in the Homeland Security Enterprise

3-6 Credits/Maximum of 6

HLS 595A Internship Experience in the Homeland Security Enterprise (3 per semester/maximum of 6) This one-semester internship is offered in falls, spring, and summer. This one-semester internship is designed to provide real world experience in the Homeland Security Enterprise. The course is an elective for students in the Intercollege Master of Professional Studies in Homeland Security (iMPS-HLS) program. Internships can be part-time or full-time and paid or unpaid. Interns may earn 3-6 credits. The number of credits a student can earn will be based on the character of the actual work performed in the internship, in particular the site-specific research project. Interns must complete at least 300 hours on the internship. This is equivalent to working 20 hours per week, although internship schedules are flexible and may be determined on an individual basis. The course includes both an internship and accompanying academic supervision and discussion. It is available to students enrolled in all options related to the program. The course is an additional offering to specialized internship programs that are in place in some iMPS-HLS options. It focuses on a comprehensive real-world experience of the Homeland Security Enterprise: The internship provides real-world experience to enhance the educational experience and application of knowledge and skills acquired in the program. The accompanying academic supervision and discussion contribute to reaching the overall purpose of the course: to integrate academic and real-world learning through an internship opportunity in a workplace setting. Internship activities and assignments are designed to: understand how research and studies are conducted, used, or interpreted in the Homeland Security Enterprise to inform real-world decision-making; to enhance professional development; gain career-related experiences and to provide the opportunity for real-world application of knowledge in a workplace setting; and to prepare for potential job placements. The course places students in numerous workplace and/or research settings that will allow students the opportunity to apply and integrate academic coursework within a professional setting to prepare for further job placement in the Homeland Security Enterprise. Additionally, internship activities and assignments are designed to meet individualized goals and skills, and to evaluate progress toward those competencies. Internship work will be evaluated on an on-going basis with the student intern, site supervisor, and faculty member involved in the process.

**Prerequisite:** HLS 801, HLS 803, and HLS 805

HLS 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

HLS 801: Homeland Security Administration: Policies and Programs

3 Credits

Foundation for understanding homeland security history, the development of homeland security policies and organizations, and current management approaches.

Cross-listed with: PADM 801

HLS 802: Multifaceted Approaches to Homeland Security

3 Credits

Preparedness and responsiveness have long been part of the law enforcement and military lexicon; however 9/11 expanded the terms’ application and the number of people who hold responsibility for their implementation. The result is a growing interest surrounding the nature of the terrorist threat and how intelligence fusion is essential to prevention; the role of the military in civil society; cooperation among federal, state, and local agencies as well as the private sector in response to a catastrophic event; the importance of planning and exercises to improve the mitigation of such events. This course gives an overview of relevant perspectives and concepts related to these topics and develops a framework that demonstrates their interconnectedness. In addition to providing a conceptual understanding of key ideas, it familiarizes students with the roles played by various entities (e.g., law enforcement, intelligence organizations, the military, and federal, state, and local agencies) and the de facto framework in which they exercise their responsibilities. The course gives students an overview of intelligence and the importance of intelligence fusion as a counter-terrorism force as well as the need for collaboration among all relevant actors and the
Prerequisites: related to the materials presented.

Preparation of an analysis of a key homeland security/defense issue sharing between the public and the private sectors. These challenges Security, as well as the basic homeland security missions delineated the nation, particularly in the areas of policy guidance and information the principal goals established in the National Strategy for Homeland these resources reside in the private sector. This presents a challenge to throughout the homeland security enterprise must be ever mindful of nation’s homeland security and defense efforts. Over eighty percent of 9/11. Key policy stakeholders at the federal, state, tribal, and local levels key resources, and border protection provide the framework for the HLS 811: Fundamentals of Homeland Security

3 Credits

This course provides foundational knowledge about homeland security policy, strategy, organization, and legal issues in the U.S. context. HLS 811, Fundamentals of Homeland Security, is a graduate course which focuses on providing a broad overview of homeland security activities as undertaken in the United States since 9/11. Key policy stakeholders at the federal, state, tribal, and local levels throughout the homeland security enterprise must be ever mindful of the principal goals established in the National Strategy for Homeland Security, as well as the basic homeland security missions delineated in the Quadrennial Homeland Security Review. While these will guide a significant portion of the course discussions, they are not the only issues to be examined. Students will also discuss: certain critical legal issues relevant to the implementation and execution of homeland security activities; Executive Branch policies and strategies; homeland security plans and programs; the homeland security organization; and how the United States deals with ‘all hazards. Students will come to understand the history of homeland security as it evolved from the traditional fields of civil defense and emergency management studies, and will further come to appreciate the problems and prospects of establishing proactive homeland security and emergency management capabilities in a modern threat environment that calls for a higher level of preparedness and significantly more awareness. Knowledge will be obtained about how to provide security against various hazards, natural or manmade (e.g., hurricanes, floods, bombings, chemical, biological, or cyber attacks), how to protect critical infrastructure sectors (e.g., transportation, agriculture), and how to plan for effective response and recovery efforts (e.g., first responder, law enforcement, humanitarian relief efforts). The principles and practices of emergency management planning (e.g., risk analysis, emergency preparedness, incident command) are also discussed in this and other courses throughout the iMPS-HLS curriculum. Instruction also focuses on emerging principles of operating in the interagency environment, as well as multi-jurisdictional cooperation involving the private sector, law enforcement, academia, nonprofits, and private citizens. In addition to gaining a broad understanding of the homeland security enterprise, students will also gain some experience in asymmetric thinking, develop an appreciation for the growing body of literature in the homeland security discipline, and have the opportunity to examine key homeland security issues through formal writing assignments.

HLS 820: Emerging Threats to Homeland Security

3 Credits

This course provides new insights of the emerging threats, disruptive technologies, and techniques for analyzing them to plan for the future of Homeland Security. Emerging threats and disruptive technology is a new field of study in the homeland security enterprise, whether in academia, public, or private sector. Thus, there is very little awareness or understanding of the needed policies, analytical methodologies, and strategic planning to guide homeland security practices over the next generation. In some ways, the homeland security enterprise is operating in a knowledge void, with the potential of being surprised as new and potentially devastating threats emerge. To adapt to this new learning environment we are compelled to take a multi-disciplinary approach to researching and understanding threats, societal context, and applications of advanced technologies.

HLS 832: U.S. Military’s Domestic Imperative: Homeland Defense and Defense Support of Civil Authorities

3 Credits

Provides an overview of the homeland defense mission and defense support of civil authorities during disasters, and the distinctions between the two. HLS 832 U.S. Military’s Domestic Imperative: Homeland Defense and Defense Support of Civil Authorities (3) The U.S. Military’s Domestic Imperative: Homeland Defense (HD) and Defense Support of Civil Authorities (DSCA), will explain the military’s HD mission and DSCA during disasters, and the distinctions between the two. Any prospective homeland security practitioner should understand the basics of the Department of Defense’s (DOD) roles, missions, and functions in
protecting the homeland, as well as how DOD provides support to civil authorities. This is especially true if Penn State graduates will be the future leaders of the homeland security enterprise. The course will provide students with the generally accepted body of knowledge in HD and DSCA required of the homeland security professional. The course focuses on: policies and procedures; roles, missions, and functions of DOD in a HD or DSCA environment; key players at the federal, state, and local levels; and critical legal issues. In addition to gaining a broad, general understanding of this wide range of subjects, students will also gain some experience in critical thinking in the disciplines of HD and DSCA.

Prerequisite: HLS 801

HLS 875: U.S. Homeland Security Law

3 Credits

This course assesses the controlling authorities that pertain to homeland security, from the U.S. Constitution to major federal statutes, court decisions, and executive directives. Beyond an analysis of the universal relevance of law to homeland security, specific issues are considered in detail, based on their relationship to U.S. vital national interests. The course also emphasizes the compelling standard that government organizations, as well as the professional practitioner, perform competently in all situations. It provides current and future homeland security practitioners with established knowledge and methodologies in the field of the study of U.S. homeland security law, as applied to practice. It focuses on the essential role that law plays in providing practical solutions for homeland security problems across all preparedness capabilities, from prevention and protection to response and recovery. Beyond application of knowledge from the many dimensions of homeland security law in the context of providing pragmatic solutions for professionals, the course is designed to stimulate critical thinking and improve students’ leadership attributes in order to support them in becoming accomplished practitioners, while reaffirming their commitment to the de facto and de jure requirement to preserve fundamental rights and freedoms.

Horticulture (HORT)

HORT 514: Modern Techniques and Concepts in Plant Ecophysiology

2 Credits

An intensive introduction to concepts of plant ecophysiology and modern techniques used in this field.

Prerequisite: BIOL 220W

Cross-listed with: PLBIO 514

HORT 517: Ecology of Plant Roots

2 Credits

Form and function of roots from an ecological perspective using examples from both wild and crop plants.

HORT 573: Interpreting Data from Experiments with Quantitative Treatments

3 Credits/Maximum of 999

Interpreting Data from Experiments with Quantitative Treatments (HORT 573) is an applied regression course that employs statistical analysis in the context of agricultural/horticultural experimentation. Analytical approaches include: descriptive statistics, data distribution(s), data graphing/representation, correlation, least squares linear regression, general linear models, Mixed linear models, generalized linear mixed models, non-linear regression models, and discrete response regression models. Graphical techniques are demonstrated to identify unusual observations and recognize relationships. Discussions will focus on identifying the best models with linear, polynomial, and multiple linear regression techniques for data obtained from both observational and designed experiments. Fixed and/or mixed model approaches will be used for experiments with designs and treatment structures common to agricultural and horticultural experiments, such as blocked designs, and factorial and augmented factorial treatment structures. Analysis of covariance will be discussed in detail to include situations with homogeneous and nonhomogeneous slopes and factorial experiments involving repeated measures and/or additional indicator variables. Analysis of covariance will also be presented as an alternative to blocking. Practical applications of nonlinear and logistic regression methods will also be discussed.

Prerequisite: AGRO 808 or ENT 535 or STAT 500

HORT 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

HORT 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects including non-thesis research, supervised on an individual basis and which fall outside the scope of formal courses.

HORT 596A: **SPECIAL TOPICS**

1-9 Credits/Maximum of 9

HORT 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

HORT 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

HORT 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

HORT 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Provides an opportunity for horticulture graduate students to gain experience in teaching under the supervision of a faculty member.
HORT 603: Foreign Academic Experience
1-12 Credits/Maximum of 12
Foreign study and/or research constituting progress toward the degree at a foreign university.

HORT 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

HORT 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

Hospitality Management (HM)
HM 503: Research Methods in Hospitality Management
3 Credits
An introduction to the process of research; problem-solving approaches; the research proposal and the development of the research question.
Prerequisite: STAT 451

HM 511: Services Marketing Hospitality Management Seminar
3 Credits/Maximum of 999
Hospitality services marketing.

HM 585: Seminar in Hospitality Management
3 Credits
This course is a doctoral seminar in HM (Hospitality Management) that addresses the conceptual foundations of the HM knowledge base.

HM 586: Data Analysis in Hospitality Management
3 Credits
This course is a doctoral seminar in HM (Hospitality Management) that addresses multivariate data analysis techniques used in hospitality management.

HM 590: Colloquium
1-3 Credits/Maximum of 4
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

HM 594: Research Topics
1-18 Credits/Maximum of 18
Supervised student activities on research projects identified on an individual or small group basis.

HM 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

HM 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

HM 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

HM 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
No description.

HM 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

HM 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

Human Development and Family Studies (HDFS)
HDFS 501: Human Development Across the Lifespan
3 Credits
Multidisciplinary study of theories and research on human development across the lifespan.

HDFS 502: Biological Systems in Developmental Context
3 Credits
Discusses the development of key biological systems, and their influences on behavior across the lifespan.

HDFS 503: Human Development Intervention: Analysis of Theories and Approaches
3 Credits
Theoretical and empirical analyses of multilevel approaches for enhancing development of individuals and families.
Prerequisite: graduate status in HD FS or related fields; 1st in a sequence
HDFS 504: Consultation in Human Development Intervention
3 Credits

Principles of consultative and collaborative practice with human development intervention programs in formal or informal community settings.

Prerequisite: HD FS503

HDFS 506: Design and Evaluation of Prevention and Health Promotion Programs Across the Life Span
3 Credits

Addresses theory and application of program evaluation, emphasizing process and outcome evaluation strategies for programs involving individuals, organizations and populations. HDFS (HPA) 506 Design and Evaluation of Prevention and Health Promotion Programs Across the Life Span (3) This course is designed for graduate students interested in the design and evaluation of programs in a wide range of human services (e.g., health care, social services, education). The course provides a foundation in the theory and application of program evaluation, with focused attention to the details of how such work can be proposed and conducted. The majority of the semester will focus on issues related to developing scientifically sound and viable studies of interventions in line with students’ interests. The goals for this course are to help students build the knowledge and confidence to evaluate human service programs and/or policies that are implemented in research settings (academic or government) and communities or community settings (e.g., schools, health care facilities, community agencies).

Prerequisite: HD FS503 and HD FS516; or HPA 564
Cross-listed with: HPA 506

HDFS 508: Best Practices in Preventive Intervention
1-6 Credits/Maximum of 6

Implementing empirically validated preventative programs; discussion and evaluation of theory and techniques.

Prerequisite: HD FS503

HDFS 510: Developmental Cognitive Neuroscience of Adolescence
3 Credits

In this course students will evaluate a mix of foundational and cutting-edge research and theory investigating various changes during adolescence principally from a developmental cognitive neuroscience perspective. Particular emphasis will be placed on understanding the application of non-invasive neuroimaging techniques (e.g., functional magnetic resonance imaging, EEG) and the critical role these tools have played in our understanding of adolescent development. Topics to be discussed include (but will not be limited to) structural brain development, maturation in cognitive control functions (e.g., working memory, inhibitory control), as well as affective (e.g., emotion and reward processing), and social information processing. We will also examine factors contributing to adolescent decision-making and risk-taking behaviors.

HDFS 515: Professional Issues in Human Development and Family Studies
1-6 Credits/Maximum of 6

Overview of issues in professional development for careers in human development and family studies.

HDFS 516: Methods of Research in Human Development
3 Credits

Review of basic research methods and statistics as applied to human development and family studies.

HDFS 517: Multivariate Study of Change and Human Development
3 Credits

Models of development and change derived from empirical research utilizing multivariate research design and procedures.

Prerequisite: at least three statistics courses, including correlation and regression analysis

HDFS 518: Applied Statistics Laboratory
1 Credit

This course provides graduate students with practical skills in data entry, data management, and applied statistical analyses.

HDFS 519: Methods of Statistical Analysis in Human Development
3 Credits

An overview of basic statistical concepts, models, and methods for the analysis of development and change.

Prerequisite: H DEV516, introductory statistics

HDFS 521: Child Maltreatment: Theory, Research, and Impact
3 Credits

Theory and research pertaining to the causes, bio-psycho-social consequences, and the public health impact of childhood maltreatment. The purpose of this course is for students to learn to think critically about child maltreatment concepts, research, and treatment. Students will be thinking about child maltreatment at multiple levels, including individual, family, and prevention. Therefore, this course will review the breadth of literature on the biological, psychological, and public health impact of child maltreatment including sexual abuse, physical abuse, and neglect. The course will cover the prevalence and history of child maltreatment, long-term outcomes of maltreatment, research methods, and evidence-based treatment and prevention approaches. State-of-the-art research in the areas of prevention, treatment, biological sequelae, developmental consequences, and intergenerational transmission will be covered. Building on existing research, students will learn to apply critical thinking skills in order to recognize, articulate, and apply the concept of scientific impact to the field of child maltreatment.
HDFS 523: Strategies for Data Analysis in Developmental Research  
3 Credits  
This course provides the skills necessary to confront the data analytic issues presented in the Human Development and Family Studies methodology core curriculum.  
**Prerequisite:** HD FS519 or STAT 501  
HDFS 525: Introduction to Family Studies  
3 Credits  
Introduction to current theory and research about micro and macro forces related to family relationships and development.  
HDFS 526: Measurement in Human Development  
3 Credits  
**Prerequisite:** EDPSY450 or PSYCH404 ; HD FS519  
Cross-listed with: PSY 526  
HDFS 527: Social Epidemiology  
3 Credits  
Application of epidemiological methods to issues in the study of human development.  
**Prerequisite:** HD FS503 , HD FS516  
HDFS 528: Observational Methodologies for Development  
3 Credits  
Design and application of observational methods in developmental research.  
**Prerequisite:** graduate student standing in HD FS or psychology  
Cross-listed with: PSY 528  
HDFS 529: Seminar in Child Development  
1-6 Credits/Maximum of 6  
Readings and reports on recent findings in child development.  
**Prerequisite:** 6 graduate credits in child development, child psychology, or educational psychology; 3 in statistics  
Cross-listed with: PSY 529  
HDFS 530: Longitudinal Structural Equation Modeling  
3 Credits  
Exposure to a wide variety of statistical models as special cases of the General Linear Mixed Model with latent variables. HD FS 530 Longitudinal Structural Equation Modeling (3) This course provides a broad overview of structural equations modeling as a method for studying developmental processes in Human Development and Family Studies. In this course, students gain a thorough hands-on understanding of a wide variety of statistical model types as special cases of the General Linear Mixed Model (GLMM) with latent variables. Specific statistical model types covered include: exploratory and confirmatory factor analysis; linear, nonlinear and multivariate latent growth curve modeling; quasi-simplex modeling; longitudinal factor modeling; multi-group factor analysis, including a concise introduction to behavior genetic modeling; mediation analysis; testing for measurement equivalence; MANCOVA with nonstandard within-subject covariance structures; outlines of statistical selection theory and principal component analysis. The presentation of these diverse model types as special instances of the same GLMM is helpful to understanding their relationships and differences and considerably streamlines applied statistical modeling. Each of these statistical model types are commonly used to analyze data from studies in the field of Human Development and Family Studies and illustrative examples are provided. Each model type is explained at 4 levels: 1) in terms of a set of simultaneous model equations; 2) as a set of matrix equations; 3) as a graphical model; and 4) as a Lisrel input code. All model assumptions are made explicit and the interrelationships between the 4 levels of model representation are emphasized. Then the model is applied to simulated and real data. The obtained model fits are assessed in terms of various statistical criteria and conclusions are explicitly drawn based on standard statistical decision theory. Selected models from studies of Human Development and other social sciences are interpreted in terms of content and possible pitfalls in their interpretation are discussed. For each modeling technique appropriate background publications, lecture notes and advanced reading material on nonstandard topics are provided.  
**Prerequisite:** HD FS523  
HDFS 531: Family Disorganization: Stress Points in the Contemporary Family  
3 Credits  
Focuses on divorce, remarriage, incest, family violence as well as problems associated with family formation and parent-child relations.  
Cross-listed with: SOC 531  
HDFS 532: Childhood Obesity  
3 Credits  
This course addresses how genetic predispositions, behavioral and environmental factors affect children's obesity risk and examines strategies for obesity prevention. HDFS (NUTR) 532 Childhood Obesity (3) This course will examine the epidemic of obesity, particularly childhood obesity, and how various behavioral and environmental factors place children at risk of becoming overweight. Sources of influence that will be examined include: children's nutrition and physical activity behaviors, the family environment, the school environment and community characteristics. Media, social policy and economic factors will also be addressed. In addition, the health and psychosocial consequences of obesity, ethnic and socioeconomic disparities in the prevalence and predictors of obesity among children and adolescents will be addressed. At its conclusion, this course will examine policy initiatives and obesity prevention programs.  
Cross-listed with: NUTR 532  
HDFS 533: Adult Obesity  
3 Credits  
Important current and emerging topics in obesity research relevant to government policy and general public education; emphasis on adult obesity. HD FS (NUTR) 533 Adult Obesity (3)
the epidemic of obesity, particularly adult obesity. Obesity: Causes, Consequences and Treatment will provide a forum to introduce and discuss current and emerging topics in adult obesity research, with emphasis on policy, prevention and treatment. Focus will be given to determinants of adult obesity and translation into government policy and efforts to educate the general public on the most effective strategies for body weight regulation, obesity prevention and treatment. Sources of influence that will be examined include: environment, genetics, neural, peripheral and sensory mechanisms, food properties and food supply, and therapies and treatment of adult obesity.

Cross-listed with: NUTR 533

HDFS 534: Person-Specific Data Analysis
3 Credits

This course covers statistical dynamic systems modeling of multivariate psychological time series obtained with single and multiple subjects.

HDFS 535: Integrating Qualitative Methods into Quantitative Research
3 Credits/Maximum of 999

Focuses on effective ways to integrate qualitative methods into quantitative approaches to research in human development and family studies. The purpose of this course is to cover how best to combine quantitative and qualitative methods in human development and family studies research. This course begins with the assumption that students have an existing research question to test through quantitative approaches that involve the formulation of research hypotheses before data collection. The course then explores how qualitative data approaches can further enhance their study. This course emphasizes the integration of qualitative and quantitative approaches through 1) designing qualitative projects to test hypotheses, 2) the importance of sampling, and 3) coverage of R for analyzing both qualitative and quantitative data. The course begins with an overview of mixed methods research. The course then addresses qualitative research and the development of qualitative research projects, before describing how to combine quantitative and qualitative data. The course will address best practices for sampling in mixed methods research. The course then will cover specific issues in qualitative research such as ethnographic data, intensive interviewing, and focus groups. The remainder of the course will cover specific issues in mixed methods designs, such as research designs, divergent findings, life history calendars, and statistical programs for mixed methods data.

Prerequisite: HD FS 516

HDFS 537: Biosocial Perspectives on the Family
3 Credits

The implications of knowledge from behavioral endocrinology, behavior genetics, and evolutionary psychology for understanding family relationships and child development. HD FS 537. (SOC 537) Biosocial Perspectives on the Family (3) Breakthroughs in the way biological variables are measured and modeled have generated new findings that greatly increase our understanding of the reciprocal influences between family relationships, child development, and biological factors. Specifically, advances in the study of hormones, genetics, evolution, pharmacology, and immunology have led to important advances in our knowledge of gender, becoming a parent, early child development, middle child, and adolescent development, parent-child relations, courtship and mate selection, quality of intimate relations, separation and divorce, incest, and dominance and family violence. Students are required to keep a journal of researchable ideas during the first five weeks of class. The purpose is to give students practice in identifying research needs and opportunities. The journal should include 4-6 research problems, each developed in 2-3 typed pages. The majority of each entry should be a clear statement of what knowledge gains would be realized by conducting the study and why they are important. The remainder of the statement should include consideration of the data you would use, measures of major variables, and analytic strategies. Think of it as a brief portfolio of thesis, dissertation, or research publication ideas. Entries on research projects in which you are already involved are not eligible for inclusion in the journal. On the last page of the journal, indicate which problem you would like to develop into a more detailed proposal during the remainder of the semester and why. Turn in the journal during week 5. I will evaluate your entries and comment on your selection idea. The rest of the semester will be spent on developing one of the ideas to a full-blown proposal (about 20 pages). You should turn in as many drafts as needed to receive a good grade for this segment of the course. I expect you to turn in three or more before the end of the semester. We will meet about each draft and go over my comments. Proposal drafts should be spaced out over the semester. The last week of the semester will be devoted to presentations of research proposals after which class members will offer comments and suggestions. Your grade will be based on the proposal draft you turn in the last week of the class. Twenty-one percent of the course grade is based on the research proposal.

Cross-listed with: SOC 537

HDFS 538: Dynamical Systems Methods and Applications
3 Credits

The course will provide an overview of the concepts and theory behind dynamical systems. Practical methods for exploring linear and nonlinear relations in multivariate longitudinal data, as well as methods for fitting dynamical systems models to panel and intensive longitudinal data (e.g., diary / experience sampling / ecological momentary assessments) will be presented. Examples may include difference and differential equation models, structural equation models with regime switching/latent transition, and mixture/random effects extensions of these models. A variety of examples of dynamical systems from developmental research, family studies, and intervention science will be presented to provide some perspectives on when Dynamical Systems techniques might be useful. We will also develop hands-on familiarity with different types of dynamical systems by using software programs to simulate, fit, and assess model-fitting results from different dynamical systems models. Students are encouraged to bring research issues and data pertinent to their own interests to class for discussion and critique. Recommended Preparations: HDFS 523 or other equivalents covering regression and multivariate data analysis techniques. The prerequisite may be waived or replaced with other courses in consultation with the instructor. Prior experience in mixed effects modeling and/or structural equation modeling is helpful, but not required.

Prerequisite: HDFS 523

HDFS 539: Seminar in Adolescent Development
1-6 Credits/Maximum of 6

Cultural, psychological, and biological aspects of the developmental transition to adulthood.
Prerequisite: 6 credits in individual development or psychology; 3 credits in sociology and statistics

HDFS 540: Parenting: Theory, Research and Intervention

3 Credits

Review of current theory, research, and intervention in the study of parenting. HDFS 540 Parenting: Theory, Research and Intervention (3) This course is designed to have students think critically about parenting and parenting competence by reviewing theoretical, ideological, and empirical literature. Competent parenting is a key factor in producing desirable child outcomes. Therefore, in this course, parenting competence reflects the behaviors and practices parents use that contribute to the child’s ability to function in society. In particular, the course will examine how parenting behaviors, such as warmth/responsiveness, and forms of discipline promote desired child outcomes in attachment relationships, conscience development, internalization of values, and other socio-emotional outcomes.

Prerequisite: HD FS501 or HD FS525

HDFS 541: Optimization of Behavioral and Biobehavioral Interventions

3 Credits

Evidence-based behavioral and biobehavioral interventions are used to prevent and treat health problems (e.g. school-based drug abuse prevention; smoking cessation treatment), improve educational attainment (e.g. reading improvement interventions), and promote health and well-being (e.g. parenting skills training). An intervention may be aimed at any age and delivered in any context; may be aimed at individuals, families, organizations, or communities; and may include both behavioral components and medical components such as pharmaceuticals. The purpose of this course is to enable students to understand and apply quantitative, empirical research methods for optimization of evidence-based multicomponent behavioral and biobehavioral interventions. These methods are used for two related purposes. First, they are used to obtain knowledge about what intervention components work and for whom. Second, they are used to build optimized evidence-based interventions that are not only effective, but also efficient, economical, and scalable. The methods can be used to build new interventions, improve existing interventions, or identify good approaches for implementing interventions. The course will cover a comprehensive framework for empirical development, optimization, and evaluation of evidence-based behavioral and biobehavioral interventions. Students will learn how to craft a detailed conceptual model for an intervention under development, based on existing scientific theory and literature, and the student’s own ideas. A substantial amount of time in the course will be spent on experimental design for optimization trials, particularly factorial experimental designs and variations such as the fractional factorial. The emphasis will be on making the best use of available resources so as to gather the highest-quality and most relevant scientific information. Students will learn how to identify the most appropriate and efficient experimental design for an optimization trial. Practical matters, such as guarding against implementation errors when conducting an experiment in a field setting, and dealing with errors if they occur, will be reviewed. Appropriate statistical analysis of data gathered during an optimization trial will be discussed. Students will learn how to use the empirical results obtained in an optimization trial as a basis for selection of the components and component levels that will make up the optimized intervention. Students will also learn how the approaches covered in this course are applicable across a broad range of intervention types and objectives, and also to determine how these approaches are applicable to optimization of interventions in the students’ own individual fields of scientific endeavor.

RECOMMENDED PREPERATION: A minimum of two graduate-level statistics courses, covering at least up through multiple regression.

HDFS 546: Seminar in Family Relationships

1-9 Credits/Maximum of 9

Interpersonal interaction within family systems throughout the life cycle.

Prerequisite: IF S418

HDFS 549: Developmental Theory

3 Credits

Conceptual frameworks and major contributions to the study of individual development across the life-span.

Prerequisite: 6 credits at the 400 level in individual development or psychology

Cross-listed with: PSY 549

HDFS 569: Seminar on Development in Middle Age

1-6 Credits/Maximum of 6

Interdisciplinary approach to study of human development in middle age, including psychological, cultural, and biological aspects.

Prerequisite: HD FS501

HDFS 575: Applied Longitudinal Data Analysis

3 Credits/Maximum of 999

Students learn techniques for analysis of intensive longitudinal data in the social sciences. The purpose of this course is to facilitate formulation of research questions, design of studies, measurement devices, and methods of analysis suitable for the types of empirical data obtained in intensive longitudinal studies (e.g., diary / experience sampling / ecological momentary assessment) being used in the social sciences. Students will gain skills useful in the study of developmental or other change-based processes. In particular, students will gain abilities related to research conceptualization, research design, data analysis, results interpretation, and the presentation and critique of longitudinal research. The course will (1) highlight general issues regarding the link between process-oriented research questions and longitudinal study designs, (2) survey a selection of intrindividuual change and variability concepts, (3) provide step-by-step instruction on data manipulation, graphing, and the analysis of intensive repeated measures data (univariate and multivariate), and (4) develop students’ skill in effectively communicating the features of longitudinal data and results of longitudinal analysis. Specific topics include the use of intraindividual variability metrics, multilevel models, generalized multilevel models, multivariate multilevel models, and P-technique factor analysis for measurement and modeling of dynamic characteristics and dynamic processes; the design and implementation of multiple time-scale studies; and how new technologies are shaping both the collection and analysis of intensive longitudinal data in the social sciences.

Prerequisite: HD FS 519 or STAT 501
HDFS 577: Poverty, Policies, and Child Development
3 Credits
Focuses on interrelationships among families, poverty, and social policies.
Prerequisite: HD FS525

HDFS 578: Contemporary Issues in Interdisciplinary Educational Intervention Sciences
2-3 Credits
Proseminar exploring contemporary issues in the design and evaluation of educational interventions from an interdisciplinary perspective.
Cross-listed with: EDPSY 578, PSY 578

HDFS 579: Seminar in Adult Development and Aging
1-9 Credits/Maximum of 9
A seminar dealing with specific topics concerning adult development and aging.
Prerequisite: IF S445, statistics

HDFS 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

HDFS 595: Field Projects in Individual and Family Studies
1-9 Credits/Maximum of 9
Supervised research or internship in human services program.
Prerequisite: instructor’s approval of proposed project

HDFS 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.
Prerequisite: instructor’s approval of proposed study

HDFS 597A: **SPECIAL TOPICS**
3 Credits

HDFS 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

HDFS 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

HDFS 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University.

HDFS 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

HDFS 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

**Human Dimensions of Natural Resources and the Env* (HDNRE)**

HDNRE 574: Integrated Perspectives in Human Dimensions of Natural Resources and the Environment
3 Credits
Introduction to the integration and application of interdisciplinary concepts to contemporary natural resource and environmental issues.

HDNRE 575: Ethical Issues in Human Dimensions of Natural Resources and the Environment
3 Credits
Introduction to ethical issues in human dimensions of natural resources and the environment.

HDNRE 590: Human Dimensions in Natural Resources and the Environment Colloquium
1 Credits
Professional socialization and training, development, and assessment of meta-theoretical frameworks and cohort building.
Prerequisite: admissions to the HDNRE dual-title intercollege degree program
HDNRE 596: Individual Studies
1-9 Credits/Maximum of 12
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

HDNRE 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

Human Resources and Employment Relations (HRER)

HRER 500: Topics in Comparative Industrial Relations
3-6 Credits/Maximum of 6
Similarities and differences of various aspects in industrial relations assessed within the political, economic, and historical contexts.

HRER 501: Labor and Employment Law
3 Credits
Legal context of employment in the United States.

HRER 502: Human Behavior at Work
3 Credits
This course takes an individual, group, and organizational perspective to deepen students' knowledge of individual and team behavior in organizations.

HRER 503: Seminar in International Human Resources Studies
3 Credits
Seminar course exploring human resource studies from an international perspective.

HRER 504: Seminar in Employment Relations
3 Credits
Theory, process, and issues of employment relations, including collective bargaining and contract administration.

HRER 505: Seminar in Human Resources
3 Credits
Current human resource topics in the context of organizational strategy, planning, and responsibility.

HRER 510: Introduction to Graduate Studies in Human Resources and Employment Relations
1 Credits
An overview of professional development and research activities of scholars of Human Resources and Employment Relations.

HRER 512: Research Methods in Human Resources and Employment Relations I
3 Credits
Research design, sampling design, data collection, and analysis; modeling, means and comparison of means, correlation analysis; and case study.

Prerequisite: STAT 200, STAT 480

HRER 513: Research Methods in Human Resources and Employment Relations II
3 Credits
Continuation of research design, validity and reliability; experimental design and ANOVA; survey design, and multiple regression models.

HRER 516: Labor Market Analysis
3 Credits
Neoclassical, institutional and systemic theories of external and internal labor markets and their dynamics.

3 Credits
The course will provide students with an analytic framework for understanding how social inequalities in race, class, and gender shape experiences in families and the workplace. HRER (WMNST) 523 Seminar in Work-Life Dilemmas, Practices, and Policies (3) This course investigates many of the invisible challenges people face in the 21st century labor market including: what happens when a worker's child is sick; whether mothers are discriminated against in the labor market; what happens to men at work when they have children; whether a person's health is influenced by their work; and if the division of labor at home benefits some people more than others. This course will provide answers to these questions and more through an in-depth investigation of the institutions that structure work-family life in 21st century America. First, the class will consider how work and families have changed in the last 50 years. Second, the students will investigate how inequalities based on gender, race, class, and family structure manifest at work. Third, the course will investigate how work responsibilities impact home life and how this differs according to race, gender, class and family structure. Finally, the course will ask what solutions may fix some of today's most pressing work-life dilemmas.

Cross-Listed

HRER 526: Managing Talent Flow
3 Credits/Maximum of 999
This course covers the strategic management of talent into, through, and out of organizations including recruiting, selection, and employee transitions. This course covers one of the main functional areas of Human Resource Management, staffing, and prepares students to be effective staffing professionals. The course combines lectures, videos, activities, role plays, and a semester-long learning project designed to develop students' skills across a wide variety of staffing topics. The course focuses on the effective management of the flow of talent into, through, and out of organizations. Particular attention is given to the impact of business strategy, internal and external labor markets,
recruiting, selection, and analytics on staffing practices. We will cover human resource planning, layoffs, career transitions, and other workforce movement. Experiences focusing on the transfer of course material to real-world situations will be an integral part of the class.

Prerequisite: HRER 513

HRER 527: Talent Development and Change Management
3 Credits

This course focuses on HR/ER consulting capabilities, change management efforts, and the strategic development of talent and competencies required to execute strategy and attain individual and organizational goals. Change management and talent development efforts are anchored in organizational goals and strategies. The entire change management or talent development initiative must be understood within the broader organizational system of which it is a part. Due to external forces such as technology and globalization, the pace and intensity of change and development efforts have increased dramatically. Effective implementation of such efforts rests on a deeper understanding of the theories and models that guide practice so they may be critically evaluated, adapted, and supported to maximize the likelihood of success. The outcome of these efforts are enhanced employee competencies that are of strategic value to the organization and improved support of organizational change efforts. As organizations evolve, change efforts must be adapted and the talent profiles and competencies required to support strategic execution must evolve. This course provides the depth and analytical understanding that will enable students to evaluate and flexibly adapt change and talent development theories and models to fit specific organizational contexts.

HRER 536: Diversity in the Workplace
3 Credits

Women and minorities in the workplace.

HRER 588: Capstone in Human Resources and Employment Relations
3 Credits

This is the capstone research course designed to support students as they synthesize prior learning with a topic of interest about which they will conduct research. This capstone course incorporates a review and synthesis of material from across the entire human resource management and employment relations curricula. Domestic and international research and issues relevant to workers, other stakeholders in the employment relationship, and the effective acquisition and management of organizations’ human resources will be central to the course, as will the legal, ethical, and diversity related issues that pertain to them. Topics to be reviewed and integrated include: - Strategic human resource management - International human resource management - Functional areas of human resource management - Employment relations and global worker rights - Data analytics - Legal, ethical, and diversity related issues By way of an example, if a student were interested in exploring the rise of the gig economy, they would be encouraged to observe this phenomenon first from the perspective of how this impacts the HRM strategy of an organization. They would then look at the global implications of the gig economy, and then consider how this might affect different HRM functions such as performance management or training of gig economy workers. The topic would then be considered from the perspective of how employment relations theories enhance understanding of gig economy workers. In the following two weeks, students would explore empirical evidence through data analytics specific to the gig economy. Finally, they would review the legal, ethical and diversity issues related to the gig economy. In this way, the student week-by-week constructs an in-depth research paper that adopts a multi-perspective approach based on both theory and empirics.

CONCURRENTS: All degree and option requirements must be met prior to taking this course or be met concurrently in the same semester this course is taken.

HRER 594: Research Topics
1-18 Credits/Maximum of 18

Supervised student activities on research projects identified on an individual or small-group basis.

HRER 595: Internship
1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

HRER 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

HRER 597: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

HRER 599: Foreign Studies
1-12 Credits/Maximum of 24

Full-time graduate-level foreign study at overseas institution with whom linkages have been established.

International Cultures (IL)
HRER 600: Thesis Research
1-15 Credits/Maximum of 999

No description.

HRER 801: Comparative and International Employment and Labor Law
3 Credits

Survey of employment and labor laws around the world that shape the practice of international human resource management (IHRM). HRER 801 Comparative and International Employment and Labor Law (3) This course surveys how the employment and labor laws of countries around the world help to shape the practice of international human resource management (IHRM). It examines such laws and regulations as they affect a representative spectrum of HR concerns, ranging from hiring and contract formation, to anti-discrimination laws and union relations, to personal privacy. The course first examines the role of culture and employment and labor law in the field of international human
resources management (IHRM). Students will be asked to address how different national legal regimes affect important HR policies and practices involving the formation of compensation, firing or layoff of employees, anti-discrimination measures, works councils, and mergers and acquisitions. In addition to comparative (national) law, a growing body of ‘supra-national’ regulation - much of it issued and supervised by the International Labor Organization - sets the stage for the latter weeks of the course. These lessons examine how international labor standards are created and can then be adopted as part of unilaterally issued corporate codes of conduct or incorporated into bargained-for international framework agreements (between multinational companies and global union federations). Upon completion of the course, students should have a solid foundation for navigating through national and international law in their formation and implementation of HR policies and practices.

HRER 802: Human Behavior and Organizational Performance

3 Credits

This course helps students understand individual and team behavior in organizations and its impact on individual, team, and organizational effectiveness. HRER 802 Organizations in the Workplace (3) Through the case method, students will be challenged to think critically about real-world problems faced by employees, managers, and organizational leaders. Incorporating basic theoretical principles, we will brainstorm and explore possible approaches to diagnosing those problems and implementing solutions. The approach to learning is purposefully interactive and open-ended, although each module will include some readings summarizing relevant current academic research that provide a framework for thinking about the case. Team exercises and a term paper also provide opportunities for more in-depth exploration of one or more issues introduced during the course of the semester. Students should leave the course with (a) practice in critical thinking; (b) tools for analyzing and managing their own careers in organizations; (c) exposure to some basic concepts from organizational and management science; (d) knowledge about several real-world managers, companies, and industries. Evaluation will be based on participation in online case discussions (40%) and written case memos (20%), an individual career and network assignment (20%), and an individual or team option final project involving a paper (10%) and presentation (10%). All letter grades will be assigned in accordance with the University’s grading policy.

HRER 803: Human Resources in Multinational Enterprises

3 Credits

This course examines current human resource management (HRM) systems world-wide and the influence of globalization on HRM practice.

HRER 805: Human Resource Management

3 Credits

HRER 805 Human Resource Management provides students who are relatively new to the field with a foundation in human resource management (HRM) as a career and a strategic view of the field of HRM. Understanding the importance of alignment among different HRM functions, having a systems perspective, and creating an awareness of multiple stakeholders and their impact on the practice of HRM are central to the course. How the different HRM functional areas including staffing, training, compensation, benefits, safety and health, and performance management individually and interdependently influence organizational performance and success will be emphasized. In addition, the role of ethics and the various forces that shape the talent philosophy and human resource management strategy of an organization will be covered. The role of the HR function as a strategic business partner in the creation and implementation of business policy and competitive strategy for both domestic and global organizations will be considered. Current trends in HRM and priorities including managing a diverse workforce and the challenges and opportunities of globalization, virtual work, changing performance management trends, and the changing nature of work relationships will also be covered. Various HRM career options and professional competencies required for success will also be explored.

HRER 811: Labor and Employment Law II

3 Credits

Advanced topics in labor and employment law; such areas as immigration, unemployment compensation, and safety/health.

Prerequisite: HRER 501

HRER 816: Labor Market Analysis

3 Credits

Neoclassical economic and institutional theoretical perspectives on labor supply, demand for labor, internal labor markets, wage determination and labor policies. HRER 816 Labor Market Analysis (3) Virtually everyone will eventually develop an intimate acquaintance with the domain of labor markets—the job market, workplace, labor force and household. This course is intended to help students better analyze general issues surrounding work, the market for labor and the employment relationship. It will reveal the interdependence of the economy, workplace structures, labor organizations, household and family structure and public institutions and policies. It will prepare students to more deeply analyze the determination of earnings and employment, and the influence of organizational and individual behavior, government policies and labor relations. The course will examine the structures and processes that comprise the labor market and the range of theoretical perspectives that can be used to understand its operation. It will rely heavily on applying, and critically appraising, the various perspectives from the field of economics, integrated with other approaches. Its scope will include analyzing the level and types of employee compensation, employment opportunities, labor force participation, work and non-work time, earnings inequality, work-life conflict, etc. It also examines how labor markets, employers and workers are affected by interventions such as government regulatory policy, labor unions, discrimination, and technological advancement. Each unit will focus on an issue within labor markets, and how it may be analyzed in a rigorous way. The individual’s decision to participate in the labor force and how much time to devote toward paid work as opposed to leisure, studying and family; the individual and employer decision to invest in their own ‘human capital’ (employees’ skills) via payment of training and higher education; the employer’s demand for labor resources in both the short-run and long-run and its determinants such as output demand; the determination of wages in perfectly competitive or internal labor markets; the effect of working conditions, such as hazardous or insecure jobs, on pay; the influence of employee compensation schemes on productivity and turnover; the effect of labor unions and collective bargaining on levels of pay, productivity, profitability and employment; the effect of government subsidies, taxes, minimum wage, maximum hours and family leave regulations on labor supply and demand, worker earnings and well-being; the effect of various types of discrimination present in the labor market on gender, race and age earnings differentials; the influence of the ‘new economy’ (technology, networking) on unemployment and
quality of employment (e.g., temporary jobs, work schedules) and income inequality.

HRER 822: Employee Compensation

3 Credits

This course covers one of the main functional areas of Human Resource Management, employee compensation, and prepares students to create and implement effective compensation systems. Compensation systems play a critical role in a variety of ways in creating effective and efficient organizational outcomes. The types and levels of pay are important in an organization’s ability to recruit talent. Similarly the ability to retain talent, particularly in the context of competitive global markets, is related to the quality of types and levels of compensation. In this latter context, the course will connect compensation to the manner in which HRER professionals are able to support organizational strategy. The course will also provide illustrations of the primary ways in which compensation contributes to the entire talent management process. For example, the course will provide tools to understand the role equity plays in influencing employee satisfaction with pay policies and practices, and the resulting ways in which employees respond to their assessment of such circumstances. In this context students will learn how compensation policies influence employee motivation, satisfaction, and employee engagement, as well as other ways in which HR professionals respond to compensation-related issues (e.g. employees perception of unfair pay practices).

Prerequisite: HRER 505

HRER 823: Employee Benefits

3 Credits

This course covers one of the main functional areas of Human Resource Management, employee benefits, and prepares students to create and implement effective benefit practices consistent with organization strategy. The course focuses on the systematic assessment required to determine the alignment between employees’ benefit needs and organizational goals, as well as the actual creation of an effective and efficient benefit system. In this regard, students will study various benefit options and special topics in benefits (e.g. benefits for executives, comparative international benefit programs).

Prerequisite: HRER 505

HRER 824: Total Rewards

3 Credits

This course covers one of the main functional areas of Human Resource Management, total rewards, and prepares students to be effective compensation and benefits professionals. In this course, students will develop a detailed understanding of the many choices employers make when deciding how to compensate, support, and reward employees, and the consequences of those choices. Students will also learn to think systematically about how the external environmental conditions and internal organizational considerations influence the design and management of an organization’s compensation and benefits systems. Experiences focusing on the transfer of course material to real-world situations will be an integral part of the class.

Prerequisite: HRER 512 CONCURRENT: HRER 513

HRER 825: Strategic Business Tools for HRER Professionals

3 Credits

This course connects Business Strategy, Financial Tools, and HR to an organization’s strategic business objectives. HRER 825 Strategic Business Tools for HRER Professionals (3) Students will learn critical concepts associated with business strategy initiatives, including the application of the experience curve, the growth-share matrix and blue ocean strategies. Students will particularly focus on an analysis that supports the creation of a sustained competitive advantage. This process will expose students to the basic accounting processes from which the statements are built, personalize the understanding of the purpose and use of each of the statements, and address many of the financial concepts which will help students gain credibility with other organizational decision makers. Also, students will address such issues as calculating Return on Investment (ROI), other cost/benefit tools, as well as the conceptual framework around which risk management issues affect financial calculations. HR students will develop a comprehensive understanding of tools that link HR policies and practices to the support of business strategy. In this context the critical concept is the use of metrics designed to provide continuous feedback concerning the efficiency and effectiveness of HR efforts. Students will learn how to identify appropriate metrics based on specific initiatives (e.g., talent management), create metrics that are valid and reliable measures of success, and create dashboard (i.e., balanced score cards) designed to provide comprehensive data to all corporate stakeholders.

Prerequisite: HRER 505

HRER 826: Talent Management

3 Credits

This course covers one of the main functional areas of Human Resource Management, staffing, and prepares students to be effective staffing professionals. The course focuses on the effective management of the flow of talent into, through, and out of organizations. Particular attention is given to the impact of business strategy, internal and external labor markets, recruiting, selection, and analytics on staffing practices. We will cover human resource planning, layoffs, career transitions, and other workforce movement. Experiences focusing on the transfer of course material to real-world situations will be an integral part of the class.

HRER 827: Talent Development

3 Credits

This course covers one of the main functional areas of Human Resource Management, training and development, and prepares students to be effective training and development professionals. The course focuses on the systematic assessment required to determine actual learning needs, identifying where learning is best achieved in a training and development intervention, as well as the actual creation of effective and efficient training classes. In this regard students will study training methods, program design elements, and training program assessment methods.

Prerequisite: HRER 505

HRER 836: Diversity in the Workplace

3 Credits

This course examines workplace diversity, gender and race challenges facing employers and employees, and the skills for managing diversity.
HRER 836 Diversity in the Workplace (3) This course will examine gender and race issues challenging employers and employees in an age when demographic changes and globalization are significantly increasing the diversity of the U.S. workforce. This course will provide an opportunity for students to explore the various ways in which ethnicity, race and gender, sexual orientation, national origin, and disability impact the workplace. Specific issues to be examined include employment and discrimination laws, work and family policies, human resource practices (such as recruitment and selection), and sexual harassment. The course will also explore various workplace accommodations and strategies for managing diversity in the workplace; sex roles; occupational choices made by women and minorities; and career development. This course is one core requirement for the Masters Degree Program in Human Resources and Employment Relations. It provides graduate course level coverage of topics addressed in L I R 536: Labor Diversity in the Workplace. Mastery of course material will be evaluated through both informal and formal assignments which include case studies, exercises and group activities, participating in on-line discussion, and short essay exams.

HRER 860: Ethical Decision Making for HR Practitioners
3 Credits

Use of normative elements associated with ethical decision making, as well as the emerging interest in descriptive ethics, to address important problems human resource managers confront. HRER 860 Ethical Decision Making for HR Practitioners (3) Increasingly board members, CEOs, Managers (including Human Resource practitioners) and employees are expected not only to understand and apply core organizational values, but also be capable of engaging in ethical decision making at those moments where they are confronted by competing moral demands. HR practitioners find such dilemmas in a wide variety of contexts. Students will study the application of the decision-making model to interpersonal, HR policy making and application, as well as situations involving business strategy. Students will also engage in a detailed examination about how stakeholders actually behave when confronted with moral dilemmas. The need for this insight emerges in related lessons that help prepare students to manage ethical programs. They will learn how to construct a code of ethics and what helps to make codes effective in promoting ethical awareness and eventually ethical action. They will also learn specific techniques that can help create valuable training initiatives that, again, promote ethical awareness and eventually ethical action. One of the themes that will constantly emerge in this course is the unique and important role HR practitioners play in helping groom the ability of all stakeholders to avoid careless ethical action. They will also learn specific techniques that can help create valuable training initiatives that, again, promote ethical awareness and eventually ethical action. One of the themes that will constantly emerge in this course is the unique and important role HR practitioners play in helping groom the ability of all stakeholders to avoid careless ethical action.

Prerequisite: HRER 501, HRER 504 and HRER 505

HRER 894: Research Topics
1-15 Credits/Maximum of 15

Supervised student activities on research projects identified on an individual or small-group basis. HRER 894 Research Topics (1-15) The course presents an opportunity for students to demonstrate that they can apply the principles, theory, and content studied over the course of the degree to an applied issue of importance in the field of human resources and employment relations. In addition to a description, analysis, and interpretation of the project or findings, all papers will require a literature review, explicit theoretical framework, and standard bibliographical format. Each student will have a faculty mentor who will assist the student during the research and writing phases, and who will evaluate the final paper.

HRER 897: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

Humanities - CA (HUM)

HUM 500: Research Methods and Scholarly Inquiry in the Humanities
3 Credits

Study of the methods and materials of scholarship, use of reference tools, evaluation of evidence, and writing of research papers.

HUM 515: Seminar
3 Credits/Maximum of 9

A seminar focusing on typical methods and approaches of a single discipline within the humanities.

HUM 525: Studies in Aesthetics
3 Credits

Philosophical investigation into the nature of art, aesthetic experience, artistic meaning, criticism, grounds for judgment, and history of aesthetic theory.

HUM 530: Seminar in Comparative Arts
3 Credits/Maximum of 9

A seminar focusing on selected periods or artists in two or more disciplines within the humanities.

HUM 535: Topics in Cultural and Intellectual History
3 Credits/Maximum of 9

Study of methods, issues, and selected topics in the history of thought, social values, and creative expression.

HUM 550: Junior College Teaching Internship
3 Credits

Teaching humanities courses in a two-year college under a faculty supervisor, who will direct, criticize, and evaluate the intern.

Prerequisite: HUM 500, HUM 560, 12 additional graduate credits

HUM 560: Interrelations in the Humanities
3 Credits

The study and practice of conducting interdisciplinary research and of investigating and supporting inter-art analogies.

Prerequisite: HUM 500
HUM 580: Master's Production
1-6 Credits/Maximum of 6
An original scholarly master's paper or creative production initiated by
the student, supervised by an appropriate professor, and judged by a
committee.

HUM 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by
faculty, students, or outside speakers.

HUM 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an
individual basis and which fall outside the scope of formal courses.

HUM 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may
be offered infrequently; several different topics may be taught in one year
or semester.

Industrial Engineering (IE)

IE 505: Linear Programming
3 Credits
An accelerated treatment of the main theorems of linear programming
and duality structures plus introduction to numerical and computational
aspects of solving large-scale problems.

Prerequisite: I E 405

IE 507: Operations Research: Scheduling Models
3 Credits
Scheduling models with simultaneous job arrival and probabilistic job
arrival, network scheduling, and scheduling simulation techniques.

Prerequisite: I E 425

IE 509: Operations Research: Waiting Line Models
3 Credits
Waiting line models including models with infinite queues, finite queues,
single and multiple servers under various priorities and disciplines.

Prerequisite: I E 516

IE 510: Integer Programming
3 Credits
Study of advanced topics in mathematical programming; emphasis on
large-scale systems involving integer variables.

Prerequisite: I E 405

IE 511: Experimental Design in Engineering
3 Credits
Statistical design and analysis of experiments in engineering;
experimental models and experimental designs using the analysis of
variance.

Prerequisite: I E 323

IE 512: Graph Theory and Networks in Management
3 Credits
Graph and network theory; application to problems of flows in networks,
transportation and assignment problems, pert/CPM, facilities planning.

Prerequisite: I E 405

IE 516: Applied Stochastic Processes
3 Credits
Study of stochastic processes and their applications to engineering
and supply chain and information systems. I E (SC&IS) 516 Applied
Stochastic Processes (3) This course covers the mathematical
fundamentals and tools for analyzing stochastic systems evolving over
time, including concepts and techniques related to Poisson Processes,
renewal processes, and discrete and continuous time Markov chains.
Students will also learn to build probabilistic intuition and insights when
thinking about random processes. Additionally, students will learn to
apply the essential techniques of stochastic processes to real world
problems in the supply chain and information systems area. This is a
prescribed research foundation course for Ph.D. students in SC&IS.
Student evaluations are based on class participation, individual and
group assignments, and exams. This course will be offered during Spring
semester to approximately 5-10 students.

Prerequisite: I E 322 or STAT 318
Cross-listed with: SCIS 516

IE 519: Dynamic Programming
3 Credits
Theory and application of dynamic programming; Markov decision
processes with emphasis on applications in engineering systems,
supply chain and information systems. I E (SC&IS) 519 Dynamic
Programming (3) This course presents the basic theory and applications
of dynamic programming. The focus of the course will be on the theory
of Markov decision processes (MDP), which provides an analytical tool to
optimally control the behavior of a Markov Chain. The students will learn
fundamental MDP models, computational methods and applications
in supply chain and information systems, including production and
inventory control, quality control, logistics, scheduling, queueing
network, and economic problems. Student evaluations are based on
class participation, individual and group assignments, and projects. This
course will be offered during Spring semester for approximately 5-10
students.

Prerequisite: I E 516 or SC&IS 516 or equivalent
Cross-listed with: SCIS 519
IE 520: Multiple Criteria Optimization

3 Credits

Study of concepts and methods in analysis of systems involving multiple objectives with applications to engineering, economic, and environmental systems.

Prerequisite: IE 405 or INS 427

IE 521: Nonlinear Programming

3 Credits

Fundamental theory of optimization including classical optimization, convex analysis, optimality conditions and duality, algorithmic solution strategies, variational methods in optimization.

Prerequisite: IE 505

IE 522: Discrete Event Systems Simulation

3 Credits

Fundamentals of discrete event simulation, including event scheduling, time advance mechanisms, random variate generation, and output analysis.

Prerequisite: IE 425

IE 527: Additive Manufacturing Processes

4 Credits

The course will cover the fundamentals of Additive Manufacturing (AM) processes. During the course the students will leverage their background in computer-aided manufacturing to learn the Digital Work Flow steps from Design to Manufactured AM parts. They will learn and gain experience in the various data representation, algorithms and software tools, processes, and techniques that enable advanced/ additive manufacturing. Computational algorithms will be researched and evaluated. Detailed research investigations into the fundamental process models of various additive manufacturing (AM) processes using polymers, metals, and other material will provide insight into the operating principles, capabilities, and limitations of AM processes. In addition to theoretical knowledge, the students will gain hands-on experience with AM machines and understand the complete process steps through design, fabrication, and measurement of example parts. The students will study the range of applications of AM across a spectrum of industries (e.g., aerospace/automotive, medical devices, and consumer products) while developing an understanding of the requirements, constraints, and business case for the applications. After completing this course, students will have a fundamental understanding of the research in AM processes and prepare them for additional depth in follow on courses. Additionally the students will be able to appropriately utilize (e.g., evaluate, select, design) this developing technology in the future of manufacturing and digital transformation of manufacturing.

IE 528: Metal Cutting Theory

3 Credits

Study of the theory of metal cutting, contemporary and future problems of metal removal processes; critical analysis of current literature.

IE 530: Financial Engineering

3 Credits

Financial option pricing and portfolio design relevant to investment decision making. IE 530 Financial Engineering (3) The objective of this course is to provide students with the basic terminology, concepts, and issues relevant to financial engineering. It serves as an introduction to the investment, financial instruments, and valuation of projects via portfolio theory and option pricing and is primarily for students who have had exposure to multi-variable calculus and probability theory. Students will learn the core concepts and advanced techniques for decision making of capital investment and for managing and valuing risky projects. This course also aims to enable students to effectively use tools in finance and mathematics in order to conduct rigorous research on topics involving the analysis of managing and valuing flexibility and uncertainty. A requisite course in applied stochastic processes will provide the necessary background on probability models needed for this course.

Prerequisite: IE 516

IE 532: Reliability Engineering

3 Credits

Mathematical definition of concepts in reliability engineering; methods of system reliability calculation; reliability modeling, estimation, and acceptance testing procedures.

Prerequisite: IE 323 or 3 credits in probability and statistics with a prerequisite of calculus

IE 533: Workforce Engineering

3 Credits

Methods and applications for selecting, assigning, scheduling, and planning for workforce operations in the manufacturing and service industries. IE 533 Workforce Engineering (3) This course studies the field of workforce engineering, and bridges the areas of human factors engineering, production planning, and optimization. The objective of the course is to examine state-of-the-art practices, models, solution techniques, and opportunities for graduate research. The course studies quantitative applications related to determining workforce size, skill sets, and multifunctionality in service and manufacturing systems based on measurable quality and productivity performance. Students will develop the skills necessary to model and solve problems considering the tradeoffs between speed and accuracy.

Prerequisite: IE 405 and IE 425

IE 540: Manufacturing Systems Simulation

3 Credits

Use of simulation in design and process improvement of manufacturing systems. Analysis of simulation language structure. Readings in current literature.

Prerequisite: IE 453
IE 546: Designing Product Families

3 Credits

Product families, product platforms, mass customization, product variety, modularity, commonality, robust design, product architectures. IE (ME) 546 Designing Products Families (3) Designing Product Families is a graduate-level course generally offered in the spring. It is designed for students interested in product realization, engineering design, and manufacturing to gain an understanding of mass customization and methods for designing families of products based on modular and scalable product platforms. The transition from craft production to mass production to mass customization will be covered in this course along with methods and tools for designing robust, modular, and scalable product platforms. Platform leveraging strategies and commonality metrics will be investigated through product dissection activities, which will also be integrated with lectures on evaluating manufacturing and assembly. Several industry case studies will also be discussed in the course to examine the implications of producing a variety of products and strategies for effective mass customization and product postponement. Students interested in taking this course should be familiar with product design and manufacturing. Students are evaluated through individual and group homework assignments, in-class participation and activities, and a group project report and presentation.

**Prerequisite:** ME 414 or ME 415 or IE 466
Cross-listed with: ME 546

IE 547: Designing for Human Variability

3 Credits

Statistics, optimization, and robust design methodologies to design products and environments that are robust to variability in users.
Cross-listed

IE 548: Interaction Design

3 Credits

Strategies in user-centered design, ergonomic product analysis, statistical data analysis, low and high fidelity prototyping, and innovative design techniques. EDSGN 548 Interaction Design (3) Interaction Design provides an integrative perspective on the types of human-centered design techniques that can be used to analyze existing consumer products and develop innovative solutions. In this class, students will learn qualitative (e.g., observations and surveys) and quantitative methods (e.g., EMG sensing and eye tracking) to measure user interactions. This knowledge will be used to develop design recommendations for future products. The material will be presented through a variety of hands-on activities including a semester long interaction design project which requires students to evaluate an existing product using human-centered design techniques, develop solutions based on interaction design principles, prototype solutions, and evaluate their designs in a formal user study. Upon completion of this course, students will be able to identify appropriate research methods (quantitative and qualitative) for guiding interaction design decisions, conduct a user study, and develop design recommendations based on interaction design principles.

**Prerequisite:** EDSGN 547 or IE 479 or IST 501 or equivalent
Cross-listed with: EDSGN 548

IE 549: Design Decision Making

3 Credits

Complexity of design-making; state-of-the-art methods and tools. EDSGN (IE) 549 Design Decision Making (3) Students in this course will internalize the importance of information and decision-making in design; understand the complexities due to uncertain information, multi-person decision making, technology obsolescence, competitive priorities; become familiar with state-of-the-art methods and tools for design decision-making; and, demonstrate the application of this knowledge in the context of a collaborative design project. Learning in this course will be facilitated in an ‘apply what you have learned’ fashion with ample opportunities for students to demonstrate their learning through in-class participation, discussion of solved problems, hands-on design projects. Strategies, methods, and means of the design process will be discussed and practiced to include such things as understanding client needs, generating design concepts, and evaluating design ideas.

Cross-listed with: EDSGN 549

IE 550: Manufacturing Systems

3 Credits

Fundamental theory for analyzing manufacturing systems including structural analysis, optimization and economics of manufacturing systems, automated and computer-aided manufacturing.

IE 551: Computer Control of Manufacturing Systems

3 Credits

Analysis of microprocessor-controlled servo loops, adaptive control, stochastic methods in control, analysis of NC machines, robots, and their controllers.

IE 552: Mechanics of the Musculoskeletal System

3 Credits

Structure and biomechanics of bone, cartilage, and skeletal muscle; dynamics and control of musculoskeletal system models. BIOE 552 BIOE IE (IE) 552 Mechanics of the Musculoskeletal System (3) The course focuses on the upper limbs and its musculoskeletal components, including mechanical properties and models; work-related musculoskeletal injuries, techniques, models, and instruments to measure and quantify the risks for developing such injuries. Specific topics covered in the first third of the course include an introduction to basic biomechanical principles, the anatomical structure of the musculoskeletal system including soft tissue, neuromuscular physiology, and motor control including muscle receptors. The second third covers various muscle models starting from basic mass/spring/dashpot viscoelastic models as in Hill's 3-element model and continuing on to Hatze's multi-element model, frequency analysis, control theory approaches. More complex models include static and dynamic aspects of tendon-pulley models and multiple muscle-tendon systems. The final third covers basic epidemiology as applied to musculoskeletal disorders and risk factors including instrumentation to measure them and various analysis tools (e.g., the PSU CTD Risk Index) to assess the not only the overall risk for injury but the reliability and validity of such assessments. Time permitting applications to hand tools and office environment with computer work stations are examined. Two exams and a modeling project are given. The course is typically offered Spring Semester.
**Prerequisite:** Consent of program. Prerequisite or concurrent: BIOL 472
Cross-listed with: BIOE 552

IE 553: Engineering of Human Work

3 Credits

Physics and physiology of humans at work; models of muscle strength, dynamic movements; neural control; physical work capacity; rest allocation.

**Prerequisite:** BIOL 141 or BIOL 472
Cross-listed with: BIOE 553

IE 555: Statistical Process Monitoring and Analysis

3 Credits

Statistical techniques for univariate and multivariate monitoring of dependent and autocorrelated processes; theoretical and numerical approaches for analyzing performance. IE 555 Statistical Process Monitoring and Analysis (3) This is an advanced course in Statistical Process Control (SPC) techniques for process monitoring, one of the main areas of Quality Engineering (QE) methodology. The aim of QE methods is to improve the quality of products used by our society. The widespread and successful use of basic SPC methods have led to the development of many new techniques and procedures over the past 20 years that contribute to that high purpose. Students should have a background in basic statistical concepts including sampling and sampling distributions, hypothesis testing, confidence intervals, and analysis of variance (ANOVA). This course will give an overview of the traditional SPC methods and time series modeling background, then concentrate on some of the more useful recent developments including univariate and multivariate techniques to monitor autocorrelated data, detect special causes or out-of-control conditions, and identify process changepoint models. A number of practical applications in manufacturing and service fields including polymer processing, nanotechnology, health care, and global sustainability will be considered. The course objectives are to: (1) understand the basic economic and financial principles of process monitoring; (2) know how to select, set up, and use monitoring charts effectively depending on the system characteristics; (3) understand the assumptions and theoretical foundations of process monitoring; and (4) understand and execute methods for comparing different monitoring strategies based on run length distributions. More broadly, students will also know how to research and critique the relevant literature and understand the needs for future research in the area. Students will be evaluated based on their performance on homework (25%), a mid-semester examination (25%), presentations (25%), and a final course project (25%).

IE 556: Robotic Concepts

3 Credits

Analysis of robotic systems; end effectors, vision systems, sensors, stability and control, off-line programming, simulation of robotic systems.

**Prerequisite:** I E 456 or M E 456

IE 557: Human-in-the-Loop Simulation

3 Credits

Design and programming of simulations that facilitate human control, real-time discrete-event simulation, supervisory control of dynamic system. I E 557 Human-in-the-Loop Simulation (3) This course is designed to provide graduate students with the capability to develop an interactive, real-life simulation and to create interfaces for an interactive simulation. The course will cover key phases in the life cycle of interactive systems development including design, implementation, and evaluation. Course topics will be explored through application in supervisory control of complex, dynamic systems. Java will be the programming language used for software development in this course. Students will understand the fundamental concepts in interactive simulation; learn how to implement random number generation and event handling in a simulation; understand the uses of human-in-the-loop simulation to investigate human performance within the simulated system; and demonstrate the application of knowledge gained in the course in a project. Human-in-the-Loop Simulation is designed for students interested in human interaction with simulations of dynamic, supervisory control systems. The design and implementation of real-time interactive simulations will be covered. The construction of simulations from basic object-oriented programming concepts will be discussed. The role of the human within a dynamic, supervisory control system and methods of evaluating human performance within the simulated system will be examined. Students will be evaluated by laboratory assignments, two mid-semester examinations, and a semester project.

**Prerequisite:** I E 418 and I E 453

IE 558: Engineering of Cognitive Work

3 Credits

Information processing and decision making models of the human in the modern workplace, emphasizing visual inspection and other industrial applications.

**Prerequisite:** I E 323 and I E 408

IE 560: Manufacturing Processes and Materials

3 Credits

Materials processing and manufacturing methods for engineering materials; manufacturing process modeling and control; manufacturability of engineering materials. I E 560 Manufacturing Processes and Materials (3) The course provides a broad exploration of the manufacturability of engineering materials. In particular it investigates the fundamentals of material performance during processing, manufacturability requirements for primary material processing methods, and the processing limitations of widely used material systems. It considers formability, machinability, castability, weldability and, particulate consolidation of metallic systems with emphasis on widely used ferrous and non-ferrous alloys and widely used polymer, composite and ceramic systems. Building upon these insights, students will develop an integrated understanding of material processing science and control, and microstructure/property/processing relationships. They will be able to select appropriate material and manufacturing processes for engineering components and identify critical material and manufacturability issues that limit manufacturing success. Students will be able to apply these principles to develop an understanding of manufacturability constraints for newly developed engineering materials and processing methods. The course is an elective course for all Industrial Engineering MS, MENG and PhD degrees and is part of the required core of courses for the MS and MENG Manufacturing Option.

**Prerequisite:** E SC 414M , MATSC424 , or I E 470
IE 561: Data Mining Driven Design

3 Credits
The study and application of data mining/machine learning (DM/ML) techniques in multidisciplinary design. CSE 561 / EDSGN 561 / IE 561 / IST 561 Data Mining Driven Design (3) This course examines how theoretical data mining/machine learning (DM/ML) algorithms can be employed to solve large-scale, complex design problems. Knowledge Discovery in Databases (KDD) is the umbrella term used to describe the sequential steps involved in capturing and discovering hidden, previously unknown knowledge in large databases. The course begins with foundational information regarding engineering design and provides an overview of KDD and the emergence of the digital age. Students will investigate data acquisition and storage techniques where they will learn the difference between stated and revealed data as related to design. Students will construct their own databases and learn essential techniques in data base queries (SQL) and management. Data transformation techniques, such as binning and dimensionality reduction, will be examined in the data transformation section of the course. This course has a design-driven focus, which will enable students to solve real-life design challenges spanning diverse domains. Students will work on project-based exercises aimed at proposing novel data mining algorithms, or employing existing algorithms to solve design problems in fields relating to engineering, healthcare, financial markets, military systems, to name a few. Data visualization techniques will also be studied to help communicate complex data mining models in a timely and efficient manner.

Cross-listed with: CSE 561, EDSGN 561, IST 561

IE 562: Computational Foundations of Smart Systems

3 Credits/Maximum of 999
Methodological aspects of expert systems design and review of some existing systems with emphasis on manufacturing and industrial engineering.

IE 563: Computer-Aided Design for Manufacturing

3 Credits
Study of CAD systems and concepts including 3D wireframe and solid modeling systems, emphasizing manufacturing applications.

Prerequisite: IE 463

IE 566: Quality Control

3 Credits
Advanced quality assurance and control topics, including multivariate methods, economic design for control and acceptance, dimensioning, tolerancing, and error analysis.

IE 567: Distributed Systems and Control

3 Credits
Advances in distributed control and decision-making in enterprises and supply chains with emphasis on computing, algorithms, and dynamics. IE 567 Distributed Systems and Control (3) Recently several new open architecture standards have emerged for control and information systems in industrial enterprises. These standards have been largely driven by industry to reduce the cost of integrating and configuring manufacturing systems, allowing a new breed of distributed enterprises to be engineered. This course deals with the multidisciplinary aspects of controls, computing, and communication in this rapidly evolving area. The objective of this course is to study current research and engineering challenges in distributed systems and control in the context of manufacturing and service enterprises, and supply chains. Emphasis will be placed on understanding the dynamics and computational aspects of decision making and control algorithms in integrated enterprises. Assignments and projects in this course will include designing, programming, and integrating distributed control systems. Evaluation will be based on programming and lab assignments, literature review and class presentation, a semester project, and class participation. This course will be offered every third semester with a maximum enrollment of 18.

IE 568: Healthcare Systems Engineering

3 Credits
Quantitative methods to analyze and improve healthcare systems.

Prerequisite: IE 405, IE 425, and IE 433

IE 570: Supply Chain Engineering

3 Credits
Use of operations research models and methods for solving problems in supply chain systems. IE 570 / SCIS 570 Supply Chain Engineering (3) The course provides state-of-the-art mathematical models, concepts and solution methods important in the design, control, operation and management of global supply chains. It provides an understanding of how companies plan, source, make and deliver their products to create/or maintain a global competitive advantage. It emphasizes the application of operations research models and methods to optimize the various components of an integrated supply chain. The course is appropriate for graduate students interested in working in the supply chain area in industry as well as those planning to pursue research in supply chain optimization.

Prerequisite: IE 405, IE 425, or SC&IS 510
Cross-listed with: SCIS 570

IE 571: Product Design, Manufacturing Specifications, and Measurements

3 Credits/Maximum of 999
Elements of Product Design, Manufacturing Specifications, and Measurements with applications in the design, manufacture, and metrology of discrete parts. Elements of design and manufacturing engineering with an emphasis on the tools, standards, and methods used for product and part representation, specifications, and measurements. Students will learn to identify product dimensional design requirements and develop deterministic and probabilistic solution methods to sets of dependent and independent design requirements. They will then be exposed to industrial interchangeability models and their solutions. This will be followed by an in-depth exposure to the standardization of design and manufacturing, information embodied in the ASME Y14.5 and ISO 1101 Standards. The specification and interpretation of the dimensional and geometric tolerances contained in these standards will be enhanced with applications in design, manufacturing, and metrology. The class will conclude with an introduction to the operation of metrology hardware including Zeiss, GGP, and FARO contact and non-contact measuring machines. The preceding body of material will provide the students with a sound foundation of design and manufacturing knowledge that will serve
IE 572: Discrete Part Metrology

3 Credits/Maximum of 999

Theoretical considerations and practical applications in the design, acquisition, and interpretations of measurements in discrete part metrology and quality control. Metrology plays an important role at all stages of industrial product realization. Students in manufacturing programs must be well versed in methods of discrete part data acquisition, analysis, and reliability. The main objective of this course is to provide interested students with theoretical and practical knowledge in discrete part metrology for the validation, monitoring, and control of the output of manufacturing processes. Students will learn the ISO GUM and ANOVA-based methods for analysis of measurement uncertainty and apply these methods to the design, data acquisition, and analysis of measurements. They will explore the hardware and software of a typical Coordinate Measuring Machine (CMM), learn to develop a rigid body error model for such a machine and apply the methodology to the development and analysis of error models for other machine tools or measuring machines configurations. They will use laser interferometry tools and other hardware to acquire estimates of some of the components of the error budget. They will also explore the formulation, application, and solution of least squares and minimum zone algorithms to the CMM measurements of ASME Y14.5 size and geometric tolerances. The course will conclude with a short insight into the process planning of metrology tasks using the development of constraint graphs, their analysis, and subsequent sequencing of measurements tasks.

IE 575: Foundations of Predictive Analytics

3 Credits

Survey course on the key topics in predictive analytics. I E 575 Foundations of Predictive Analytics (3) This will be a survey course on the various aspects of predictive data analytics. Students will learn methods associated with data analytics techniques and apply them to real examples using the R statistical system. The key survey topics will include linear regression models, classification methods, tree-based methods, dimensionality reduction, and clustering. The focus will be on providing a basic understanding of the fundamentals of these techniques with realistic applications in marketing, healthcare, engineering and web-based data. An introduction to predictive models based on text and network data will be provided.

Prerequisite: I E 323, STAT 500 or equivalent

IE 582: Engineering Analytics

3 Credits

Students will learn advanced information technology network science, big data, descriptive and predictive analytics, for manufacturing and service systems.

IE 583: Response Surface Methodology and Process Optimization

3 Credits

Response Surface Methodologies used for sequential experimentation and optimization of production processes. Statistical design and analysis of such experiments. I E 583 Response Surface Methodology & Process Optimization (3) This course considers Response Surface Methodology (RSM), a collection of statistical and optimization techniques aimed at improving the quality characteristics of a manufacturing process through the sequential application of statistically-designed experiments and model-building techniques. Optimization techniques for response surfaces, functions that can exhibit large sample variability, are highlighted. Multiple response optimization problems, which occur frequently in practice, are considered, and their relation to Taguchi's Robust Parameter Design problem is emphasized. The course also includes an introduction to the design, analysis, and optimization of mixture problems, which occur frequently in food manufacturing, metallurgy, and semiconductor manufacturing. The practical aspects of RSM are considered through a final project in which the students optimize a (simulated) manufacturing process. For this purpose, a Web-based process simulator has been designed. The Software packages Design Expert, SAS, and Minitab will be used by the students in the class. MATLAB and MAPLE programs will support some of the topics in the class. Recent papers from the technical literature will be covered. The prerequisites of this course are either I E 511, which is an introductory course in Design of Experiments, or STAT 501, an introductory course to linear regression.

Prerequisite: I E 511 or STAT 501

IE 584: Time Series Control and Process Adjustment

3 Credits

Design of Time Series-based process controllers for Quality Engineering. Study of the effect of autocorrelation on control chart performance. IE 584 Time Series Control & Process Adjustment (3) With modern sensor technology, quality control data frequently exhibits dynamics due to the short time between observations. Quality specifications keep 'shrinking', and process drift is less tolerated than before. Under these circumstances, Statistical Process Control (SPC) techniques cannot be applied, and the emphasis in quality control moves from monitoring a process to actively adjusting it. Time Series techniques are ideal tools for developing such process adjustment strategies. This course covers topics of recent interest both in academia and in industry, including: integration of feedback adjustment techniques with traditional SPC methods; the 'run-to-run' control problem as it occurs in discrete-part manufacturing (e.g., semiconductors); and optimal design of proportional-integral and EWMA controllers. In addition, a detailed treatment of statistical identification and estimation of ARIMA and discrete-time transfer function processes is presented. The effect of data autocorrelation on the performance of SPC control charts is discussed, and process adjustment strategies are presented as an alternative. For this reason, ABIMA modeling is discussed in detail as a means to represent data autocorrelation. Use of the MATLAB and SAS software packages are encouraged. A book on the course subject matter is under preparation and has been accepted by John Wiley & Sons who will publish it in its Probability & Statistics Series. Given the heterogeneity of the students taking the course, the prerequisites are rather modest, and the course is almost self-contained. The prerequisite is IE 423, or a similar introductory course in statistical process control.

IE 585: Convex Optimization

3 Credits

This course is designed to provide students with necessary skills to recognize or build convex optimization problems coming from diverse application areas and to solve them efficiently. It consists of five parts: 1) convex sets, 2) convex functions, 3) convex optimization, 4) algorithms and 5) real life applications. In the first part, important examples of
convex sets will be given and the operations that preserve convexity of sets will be discussed. The second part will focus on convex functions, their basic properties, and the operations that preserve convexity of functions. In the third part, which is built on the first two parts, convex optimization problems will be formally introduced along with important examples ranging from linear and quadratic to semi-definite programming; second, Lagrange duality and optimality conditions will be covered. The fourth part will focus on the algorithms to solve convex problems and on their computational complexity. In the fifth part, various applications will be covered.

**Prerequisite:** IE 505
Cross-listed with: EE 585

IE 586: Machining Process Design and Theory

3 Credits/Maximum of 999

Machining process engineering, including process design, computer programming and control, metal cutting theory, and process analysis. Machining processes are used to either directly or indirectly create the functional surfaces of nearly all mechanical products in use. This ‘hands on’ course provides a comprehensive study of machining process engineering, including machine tool technology, machining processes, process design specification, basic and advanced machine programming, machine tool set up and specification, metal cutting mechanics and heat transfer, cutting tool wear mechanisms, workpiece surface formation mechanisms, and cutting tool materials and coatings. Students will learn through both lecture and laboratory. Students will use computer controlled machining centers and turning centers for training, scientific experiments, and projects. This course is intended for engineers who wish to implement and optimize machining processes in industry. In order to be successful in this course, students should have completed undergraduate courses in manufacturing process, materials engineering, and mechanical design. Students who successfully complete this course will obtain sufficient skills to engineer and utilize CNC machining processes. They will understand the relevant scientific theory and advanced engineering analysis that is currently being used to advance the technology. They will also be prepared for further graduate studies in product design and manufacture.

IE 588: Nonlinear Networks

3 Credits

Foundation in congestion games, including elements of non-cooperative game theory, equilibrium network flows, Braess paradox, and the price of anarchy. IE 588 Nonlinear Networks (3) This course examines the theory of congestion games, developed originally to describe flows on congested transport networks but recently embraced to model data networks. Students will learn how to formulate descriptive models of traffic and data network flows in the presence of congestion as Nash games expressed as variational inequalities (VIs). These models will be used to derive theoretical bounds on the price of anarchy (the social costs of not achieving a truly cooperative or system optimal flow). Students will also learn how to formulate normative design problems and Stackelberg games or so-called mathematical programs with equilibrium constraints (MPECs) to avoid the Braess paradox. Numerical techniques for solving VIs and MPECs will be discussed and illustrated. The course begins with an introduction to so-called system optimal network flow models that explicitly incorporate network congestion. The study of system optimal flows contains an introduction to nonlinear network optimization algorithms, including feasible direction, gradient projection, simplicial decomposition and affine scaling algorithms. Following the consideration of system optimal flows, both atomic and non-atomic network equilibrium models in the form of non-cooperative Nash games are discussed in-depth. The price of anarchy is presented as the ratio of the cost of Nash equilibrium flows to the cost of system optimal flows within the network of interest. Various theoretical bounds on the price of anarchy are derived. Numerical experiments to determine the price of anarchy are also described. The Braess paradox, wherein global congestion can increase when local capacity is added to a nonlinear network, is introduced and its relationship to the price of anarchy demonstrated. Discrete and continuous equilibrium network design models that eliminate any possibility for the Braess paradox to arise are articulated. Each such design model is shown to be equivalent to a Stackelberg game, which is a type of mathematical program with equilibrium constraints (MPEC). Mechanism design in the form of network congestion pricing to alleviate the effects of congestion is also considered and show to have an MPEC structure as well. Algorithms for solving MPECs to ascertain efficient network topology/efficient tolling will be discussed in detail, including simulated annealing and other types of computational intelligence on the one hand; and duality, penalty, decomposition and other types of nonlinear programming algorithms on the other. Students interested in taking this course should have completed a course in linear programming (IE 505); a course in nonlinear programming is also recommended.

**Prerequisite:** IE 505

IE 589: Dynamic Optimization and Differential Games

3 Credits

Dynamic optimization and dynamic non-cooperative games emphasizing industrial applications. IE 589 Dynamic Optimization and Differential Games (3) This course provides an introduction to dynamic optimization and dynamic noncooperative games from the perspective of infinite dimensional mathematical programming and differential variational inequalities in topological vector spaces. The objective of this course is to give a working knowledge of computational methods for and applications of dynamic games. It builds on two prerequisite courses - introduction to operations research and linear programming - and also on co-requisite course in non linear programming. Coverage includes descent, projection and penalty algorithms for infinite dimensional mathematical programming and their extension to differential variational inequalities and dynamic games. Cournot-Nash-Bertrand and Stackelberg dynamic games are then studied from the point of view of differential variational inequalities and optimal control problems constrained by differential variational inequalities. Manufacturing and service engineering applications are employed to illustrate the tools developed in the course. Students will be evaluated on the basis of a set of assigned problems (30%), a semester paper (30%), and a final examination (40%).

**Prerequisite:** IE 425 and IE 505; Concurrent: IE 521

IE 590: IE Colloquium

1-3 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

**Prerequisite:** graduate standing in Industrial Engineering
IE 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

IE 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

IE 598: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

IE 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

IE 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

IE 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

IE 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

IE 894: Capstone Design
3 Credits
Students will apply the analytical and design skills learned in previous courses to solve an industrial problem based on their workplace or industrial partner. Students who do not have an identifiable work-related problem will work collaboratively with the instructor to develop a suitable topic. This is an individual project culminating in a final report.

Recommended preparations: Recommended preparation is for the student to take this course after taking most of the courses in the program because prior knowledge is needed to perform a capstone design project.

Industrial Health and Safety (IHS)

IHS 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses. I H S 596 Individual Studies (1-9) This course is designed to allow students to study independent topics with industrial health and safety faculty. Grades will be assigned by the instructor according to a format agreed upon at the beginning of the period of study.

IHS 600: Thesis Research
1-15 Credits/Maximum of 999
No description. I H S 600 Thesis Research (1-6) This course comprises the I H S M.S. research project. Grades will be assigned by the instructor according to a format agreed upon at the beginning of the period of study.

Information Science (INSC)

INSC 521: Database Design Concepts
3 Credits
The requirements capture, design, and development of relational database applications; analysis of business requirements and development of appropriate database systems.

Prerequisite: completion of all IN SC or SWENG core courses or with instructor or division approval

INSC 525: Applied Data Mining
3 Credits
Functional overviews of algorithms used in data mining will be presented and contemporary data mining software used to conduct a project.

Prerequisite: SC&IS535 or with instructor or division approval

INSC 526: Business Process Management and Integration
3 Credits
Design and development of business processes that align business objectives with Information Technology (IT) systems.

INSC 531: Information Technology Law
3 Credits
Examines the legal concepts/issues applicable to the field of information technology and to information technology, software engineering, and computer professionals.

Prerequisite: completion of all IN SC core courses or with instructor or division approval

INSC 539: IT Systems Seminar
3 Credits
A culminating, integrative capstone experience for IN SC students, including a formal technical paper and in-class presentation.

Prerequisite: taken as the final course in the Master of Science in Information Science degree, or with instructor’s permission
INSC 561: Web Security and Privacy

3 Credits

A web-centric look at the latest techniques and practices in computer security as they apply to the Internet.

Prerequisite: CSE 543 or IST 815

INSC 594: Research Topics

1-15 Credits/Maximum of 15

Supervised student activities on research projects identified on an individual or small-group basis.

INSC 846: Network and Predictive Analytics for Socio-Technical Systems

3 Credits

The objective of this course is to provide a foundation in the principles of network and predictive analytics along with hands-on experience with statistical analysis software for studying the interrelatedness of cyber-social and cyber-technical aspects of our society as a whole that have transformed physical communities into virtual communities. Fundamental principles of network and predictive analytics, the importance of studying network structures, and how network structures can facilitate communication, coordination and cooperation will be discussed. Statistical analysis software will be used for analyzing the structure of an organization or a society as whole to detect and capture the dynamic patterns of group membership and structure, and predict threats, attacks, criminal behavior and evolution of criminal networks.

Cross-listed with: DAAN 846

INSC 897: Special Topics

1-9 Credits/Maximum of 999

Formal courses given on a topical or special interest subject which may be offered infrequently.

Information Sciences and Technology (IST)

IST 501: Interdisciplinary Research Design for Information Sciences and Technology

3 Credits

An interdisciplinary introduction to graduate research design for investigating how data and information technologies are created, analyzed, and evaluated. IST 501 serves as the central foundational course for graduate students who intend to conduct research in IST. Although each student may eventually focus on one or several methods discussed in the course, the College is committed to providing all of its research students an interdisciplinary mindset regarding their own and their peers’ research activities. This mindset is a defining feature of IST research training. The course provides foundational information regarding three contrasting research perspectives of IST: Social Informatics, Human-Centered Design and Computational Informatics. The three perspectives are presented in an interleaved fashion, one week at a time, with gradually increasing complexity and sophistication in the methods used. The methods address requirements for, design of, and impacts of information technologies used to meet people’s information needs at multiple levels of analysis, including individuals, groups, organizations, and national and global cultures. The technologies investigated are of various types, including algorithms, structured data, user interfaces, and distributed systems. Each one-week methods topic is practiced through an individual homework activity and a team project is used to provide an integrated application activity that cumulates throughout the semester. Through reading of contemporary and classic literature, demonstrations and practice with specific research techniques, and sharing and reflection on individual and team research activities, students will explore fundamental assumptions, theories and directions in contemporary research design useful to researchers in IST. The emphasis of this course is on defining and developing conceptual linkages between human behavior, the social, organizational, and cultural context of information and technology use, human experience when learning or using information and computing technologies, and the construction of information and computing technologies. The interdisciplinary research design will operate at individual, group, and other units of human, social, and organizational analysis, and across a range of information technologies.

IST 503: Foundations for IST Research

3 Credits

Study of major methodological, normative, and theoretical issues in philosophy of science related to research in information sciences and technology. IST 503 Foundations for IST Research (3) This course is a study of major methodological, normative, and theoretical issues in the philosophy of science related to research in information science and technology. A significant part of this course will involve coordinating issues and problems customarily associated with the philosophy of science in general with current research in information science and technology (IST) in particular. In order to achieve this coordination, the study of classical texts in the philosophy of science will be interspersed at appropriate places with lectures and topics that exhibit relevant faculty research in various IST related disciplines. The course focuses on the main arguments that have been advanced in Anglo-American philosophy of the science for the period beginning about seventy years ago up to the present. The course contradicts the view of a single unitary ‘philosophy of science.’ It shows a series of positions and arguments that continue to lead on to still deeper questions. Usually the student will have adopted one of the classical positions without having examines it or defended it rigorously. Readings will progress in a historical fashion through arguments that attempt to provide a justification for the truth claims of science. The course will begin with a consideration of logical positivism in its early forms, i.e. the ideas of the Vienna Circle, and the early Wittgenstein’s theory of meaning. The course will go on to the writings of Karl Popper especially as found in his Logic of Scientific Discovery. Continuing the historical development, Kuhn’s ‘The Structure of Scientific Revolutions’ will be considered. The discussion will then progress to the Popper-Kuhn debates involving the sophisticated falsificationists (Lakatos) and eclectic approaches like Feyerabend’s. Finally, Richard Bernstein’s book, Beyond Objectivism and Relativism is reviewed summarizing the debate. This final view strives to uncover the strong points in the opposing positions reviewed early in the course. Then it sets a hermeneutical position which he derives principally from the philosophy of Hans Georg Gadamer. This position amounts to a new and interesting view on how knowledge is attained in science and in life in general. The course relates the debates in the arguments in the philosophy of science to research issues in IST.

Concurrent: IST 501
IST 504: Foundations of Theories and Methods of Information Sciences and Technology Research

3 Credits

Provides the foundation to the research and theories of how technologies are used to meet society's, groups' and individuals' information needs. IST 504 Foundations of Theories and Methods of Information Sciences and Technology Research (3) This course provides an overview of the diverse fields that comprise the information sciences. The course has three broad objectives. First, the course serves as an overview to the theories, models, findings, research methods and research-related issues that frame the multiple fields of the information sciences. Second, the course provides students with skills of critical evaluation of literature. Finally, the course provides students a means to begin formulating researchable topics and questions. The course is designed as a fundamental course for research-oriented graduate students in the information sciences. The specific focus is a critical treatment of the research relative to the questions asked, views of a technology's affordances and potential uses, the implementation of the research, and conclusions drawn. Through reading of contemporary and classic literature, ongoing debate, reflection and synthesis, and active analyses, students will explore fundamental assumptions, theories and directions in the contemporary research in the various fields of the information sciences. The emphasis of this course is on defining and developing conceptual linkages between human and social behavior, information and the use of computing technologies. Assessments will be based on a number of short summary papers and an extensive synthesis of literature organized around a conceptual framework. Because this is an interdisciplinary subject, students should be prepared to read outside their primary research/interest area and be ready to embrace and integrate new knowledge from related fields into their primary field.

IST 505: Foundations of Research Design in Information Sciences and Technology

3 Credits

Provides the foundations on research design and methods used in information sciences and technology. IST 505 Foundations of Research Design in Information Sciences and Technology (3) This course develops students' abilities to conduct academic research, formulate a relevant thesis proposal, present and discuss the progress of their work, and conduct a small-scale research project in an information sciences and technology-related area. It provides an overview of the major research methods used in the area of information sciences and technology, including quantitative, qualitative, computational, and design approaches. The course emphasizes developing and practicing research design, execution, evaluation, and writing skills through application of the concepts that define the course.

Prerequisite: IST 504

IST 510: Foundations in Computational Informatics

3 Credits

Foundational theories and techniques in general computational informatics.

Prerequisite: IST 501

IST 511: Information Management: Information and Technology

3 Credits

Introducon to theoretical, computational, and practical issues involved in managing textual, spatial, temporal, and multimedia information in a computerized system. IST 511 Information Management: Information and Technology (3) The objective of IST 511 is to provide an introduction to the theoretical and computational issues involved in managing textual, spatial, temporal, and multimedia information. The course will survey the nature of information in various application contexts (digital libraries, digital government, healthcare information, environmental information, etc) and seek to understand their generic and specific requirements for information management. Students will be exposed to major principles and technologies for information management that are drawn from database systems, and information retrieval (IR) and spatial/geographical information systems literature. Special emphasis will be given to the problems of managing heterogeneous information sources with different ontology, representation, scales, and error characteristics. This course is required of all Information Sciences and Technology (IST) graduate students under both research Master and Ph.D. degrees. It is a foundation course that should be taken in the first or second year of graduate study. IST 501 is the prerequisite for this course. For hands-on practice and demonstration purposes, this course requires students access and use of a database management system (such as ORACLE or SQL server), a geographical information systems (Arc View or MapInfo), a information retrieval system, and/or a ERP (Enterprise Resource Planning) system.

Prerequisite: IST 501

IST 521: Human-Computer Interaction: The User and Technology

3 Credits

Users, models of users, developing the models, technology for creating interfaces; examples of good research and implications for Human-Computer Interface (HCI) design. IST 521 Human-Computer Interaction: The User and Technology (3) This course introduces students to the broad area of human-computer interaction and the idea of a theory driven interface, an underlying concept in HCI. To do this, the course starts by outlining relevant aspects of human behavior with respect to technology and how interfaces are developed, the two raw components. Students are then exposed to a tool for creating interfaces and a variety of theories of how users interact with technology on a variety of levels. These theories are validated and supplemented by usability studies. The course completes with a group project based on the readings and theories introduced in the first 12 weeks.

Prerequisite: IST 501

IST 525: Computer-Supported Cooperative Work

3 Credits

IST 525 introduces theories, empirical findings, evaluation methods, and design frameworks in computer-supported cooperative work.
IST 525 Computer-Supported Cooperative Work (3) Students in the course will investigate CSCW challenges and opportunities from the dual perspectives of human-computer interaction and socio-technical systems analysis. They will analyze group interactions and concerns in collaborative activities such as written and spoken communication, design, meetings, education, decision-making, and everyday work activities. They will review and critique state-of-the-art CSCW technologies, including text-based and video communication tools, immersive meeting environments, group decision-making, workflow, and knowledge management. These technologies will provide a context for investigating and synthesizing issues related to individual use (e.g., perceptions of cost-benefit), the context of collaboration (e.g., social and cultural norms embodied in systems), and software architecture (e.g., coupling and consistency management). Students will apply their understanding of these issues in evaluation and design projects.

Prerequisite: IST 521

IST 526: Development Tools and Visualizations for Human-Computer Interaction

3 Credits

IST 526 addresses concepts and tools for developing working user interface software and prototypes to provide effective information visualizations. IST 526 Development Tools and Visualizations for Human Computer Interaction (3) This is a technical course focused on the different tools for designing and creating working software for the human-computer interface to complex systems. The course builds on the psychological and social theories, usability engineering methods, and computer programming techniques from its prerequisite courses to provide an advanced experience with user interface design and construction. Because of their importance and depth, special consideration is given to the concepts and tools used to develop sophisticated visualizations of complex information.

Prerequisite: IST 521

IST 530: Foundations in Social Informatics

3 Credits

Foundations in social theories used in the study of the human context within which information and information technology exists.

Prerequisite: IST 501

IST 541: Qualitative Research in Information Sciences and Technology

3 Credits

Assists IST researchers in their efforts to learn about and employ appropriate qualitative methods in their research. IST 541 Qualitative Research in Information Sciences and Technology (3) As information and communication technologies (ICTs) have evolved, so too has our understanding of the role of the human contexts within which information technologies are situated. This has led to the need for appropriate methods of studying information systems and technologies in their context of use. There is a growing consensus that qualitative methods offer important research opportunities for this type of study. Therefore, researchers in such fields as the information sciences and technologies, communication technologies and information systems should have an understanding of the various types of qualitative methods so that they can determine ones that are most appropriate for addressing their particular research problems. The course is complementary to quantitative methods courses, in that it addresses problems that are not amenable to those approaches. For example, studies involving very small groups, individuals, societal level concepts and others often lend themselves to qualitative research techniques. This course begins by considering research topics that lend themselves to the choice of qualitative research methods. It then proceeds to examine the steps involved in conducting qualitative research. These include: developing the research question(s); choosing a particular research method (such as ethnography, case study or action research); making decisions about approaches to data collection (such as interview or focus group) and analysis (such as coding technique); and producing and publishing the results. This course explores concrete issues that researchers have encountered in their use of qualitative methods. It does this by drawing upon the collective expertise of distinguished scholars who employ qualitative methods in their own research. The course will examine published work that focuses on research findings as well as that which discusses methodological issues.

Prerequisite: IST 501

IST 543: Foundations of Software Security

3 Credits

This course teaches the principles and practice of software security. The course gives an overview of the foundations of computation models and languages. It then builds on this foundation by teaching students how to address software security issues using fundamental techniques such as type systems and program analysis. The course also covers the practical side of software security, such as memory safety issues including buffer overflow, code injection, and code reuse attacks, as well as some of the latest security problems. Through this course, the students will gain a concrete understanding of principles and practices of software security and be prepared for research on software security related problems.

IST 554: Network Management and Security

3 Credits

Essential skills and knowledge for effectively utilizing networks and Internet technologies to facilitate, manage and secure data communications and applications. IST 554 Network Management and Security (3) Information technology is an integral part of today's organizations and services. As information systems and networks continue to grow and evolve, we are becoming more and more dependent, individually and socially, on them to provide support for the economy, military, education and business. Because of this dependence, network-based information and communication systems are attractive targets for those who would compromise information or disrupt services for economic, social or political purposes.

IST 555: Intelligent Agents and Distributed Decision Making

3 Credits

Distributed decision making theories and agent-based technologies, models and systems with applications in command and control, emergency and resource management. IST 555 Intelligent Agents and Distributed Decision Making (3) This course introduces the theory and design of intelligent agents for distributed decision making with applications in grid computing, command and control, emergency management and sensor management. Emphasis will be placed on understanding theories of decision making and using them to model and
IST 557: Data Mining: Techniques and Applications

3 Credits

This course will introduce data mining techniques, including frequent pattern and association rule mining, some basic background on classification and clustering, and applications of data mining techniques in specific domains. The emphasis will be on applications in specific domains rather than fundamental methodologies. IST 557 Data Mining: Techniques and Applications (3) The course will begin with an introduction of data mining field, including why data mining, what is data mining, what kinds of data can be mined, what kinds of patterns can be mined, an overview of technologies, the major issues in data mining, and a brief history of data mining community. The three key lecture topics are: (1) mining frequent patterns and association rules; (2) classification: basic concepts and techniques, and (3) cluster analysis: basic concepts. For topic (1), we will introduce frequent item set mining methods including Apriori and FPgrowth. We will also teach advanced frequent pattern mining methods such as pattern mining in multi-dimensional space, constraint-based frequent pattern mining, mining high-dimensional data, sequential pattern mining, and graph pattern mining. For topic (2), we will teach how to formulate a real-world problem into a classification problem, how to apply classification models on real data and how to analyze the results. The classification models covered in our class include decision tree, random forest, boosting, support vector machine and kernels, naive bayes classifier, and KNN. Students will learn how to evaluate classification methods using different measures. We will be brief on the fundamental classification methods and will focus more on the applications of such methods on various kinds of data. For topic (3), we will cover the clustering topics including partitioning methods, hierarchical methods, density-based methods, grid-based methods and evaluation of clustering results. We will be brief on the fundamental clustering methods and will focus more on the applications of such methods on various kinds of data. Four weeks will be used for lectures on special topics such as text mining, time series mining, spatial data mining, graph mining, image mining, and emerging subjects in data mining. The purpose of the special topics is to help students learn about real-world data mining problems and applying state-of-the-art solutions to them. Instructor will select a few topics based on students' project proposals. Instructor and students will work together on the literature survey and prepare for the presentation. Potential key special topics include: Mining text data. We will introduce basic preprocessing methods such as tokenization, stemming, and stopwords filtering and basic textual features such as tf-idf. We will teach text mining topics including sentiment analysis, topic modeling, and entity extraction. Mining temporal data. We will introduce basic techniques in mining temporal data, such as measuring time series similarity, periodicity analysis, and trend prediction. Mining spatial data. We will introduce basic spatial methods, clustering of spatial locations, spatial outliers, co-location patterns, and location prediction. There will be five discussion classes. Instructor will use these classes to talk with individual students and teams, help them with the problems they encounter in assignments and projects, and better personalize the learning experience.

Prerequisite: Programming, Data Structures, Algorithms, Basic Statistics

IST 558: Data Mining II

3 Credits

Advanced data mining techniques: temporal pattern mining, network mining, boosting, discriminative models, generative models, data warehouse, and choosing mining algorithms. IST (STAT) 558 Data Mining II (3) This course is the second course in a two-course sequence on data mining. It emphasizes advanced concepts and techniques for data mining and their application to large-scale data warehouse. Building on the statistical foundations and underpinnings of data mining introduced in Data Mining I, this course covers advanced topics on data mining, mining association rules from large-scale data warehouse, hierarchical clustering, mining patterns from temporal data, semi-supervised learning, active learning and boosting. In addition, to computational aspects of algorithm implementation, the course will also cover architecture and implementation of data warehouse, data preprocessing (including data cleansing), and the choice of mining algorithms for applications. In addition to discriminative models such as CRF and SVM models, the course will also introduce generative models such as Bayesian Net and LDA. A term project will be developed by each student to apply an advanced data mining algorithm to a multi-dimensional data set. Classes will include lectures, paper discussions, and project presentations. Paper discussions will allow students to discuss state-of-the-art literature related to data mining. Project presentations will enable students to share and compare project ideas with each other and to receive feedback from the instructor.

Prerequisite: STAT 557 or STAT 558

Cross-listed with: STAT 558

IST 561: Data Mining Driven Design

3 Credits

The study and application of data mining/machine learning (DM/ML) techniques in multidisciplinary design. CSE 561 / EDSGN 561 / IE 561 / IST 561 Data Mining Driven Design (3) This course examines how theoretical data mining/machine learning (DM/ML) algorithms can be employed to solve large-scale, complex design problems. Knowledge Discovery in Databases (KDD) is the umbrella term used to describe the sequential steps involved in capturing and discovering hidden, previously unknown knowledge in large databases. The course begins with foundational information regarding engineering design and provides an overview of KDD and the emergence of the digital age. Students will investigate data acquisition and storage techniques where they will learn the difference between stated and revealed data as related to design. Students will construct their own databases and learn essential techniques in data base queries (SQL) and management. Data transformation techniques, such as binning and dimensionality reduction, will be examined in the data transformation section of the course. This course has a design-driven focus, which will enable students to solve real-life design challenges spanning diverse domains. Students will work on project-based exercises aimed at proposing novel data mining algorithms, or employing existing algorithms to solve design problems in fields relating to engineering, healthcare, financial markets, military systems, to name a few. Data visualization techniques will also be studied to help communicate complex data mining models in a timely and efficient manner.

Cross-listed with: CSE 561, EDSGN 561, IE 561
IST 562: Theoretical Foundations of Information Science
3 Credits
This course introduces the theoretical foundations of information science, with applications in communication, signal processing, machine learning, and pattern recognition. Emphases will be placed on theories of communications and compression. Theories of probabilities and inference, learning methodologies, and graph theory.

Prerequisite: Familiarity with college-level linear algebra, calculus, and probability theory or consent of the instructor

IST 564: Crisis, Disaster and Risk Management
3 Credits
This course examines the fundamental elements of crisis, disaster, risk and emergency management.

IST 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

IST 594: Research Topics
1-18 Credits/Maximum of 18
Supervised student activities on research projects identified on an individual or small group basis.

IST 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

IST 597: Special Topics
1-9 Credits/Maximum of 999
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

IST 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
No description.

IST 610: Thesis Research Off-Campus
1-15 Credits/Maximum of 999
No description.

IST 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

IST 815: Foundations of Information Security and Assurance
3 Credits
This course provides theoretical and applied foundations of information security and assurance. IST 815 provides theoretical and applied foundations of information security and assurance, with an emphasis on access control, information security governance and risk management, cryptography, security architecture and design, software security, business continuity and disaster recovery planning, network security, physical security, operations security, laws, regulations, investigations, and compliance.

IST 816: Web Fundamentals
3 Credits
The growth and use of the web is increasing at a remarkable rate. The web is a huge evolving system with data full of uncertainties and has become a critical part of everyday life of modern societies. This course will cover fundamental techniques used in building and maintaining the web. The focus will be on the practical aspect of the web's backbone techniques. Topics to be covered include: basic web and internet technologies, modern applications based on the web techniques, and an integrated presentation of theory, examples, exercises, and applications.

IST 820: Cybersecurity Analytics
3 Credits
IST 820 provides theoretical and applied foundations of fundamentals of network security, data sources, data collection techniques and tools, cybersecurity analytics infrastructure, machine learning and data mining, network forensics, anomaly and malware detection, security data visualization, and security dashboard design and implementation.

IST 836: Healthcare Informatics
3 Credits
This course provides a foundation in information systems and technology for improvement of healthcare.

Cross-listed with: NURS 836
IST 841: Search Engines & Information Retrieval

3 Credits

Introductory course on search engines and information retrieval. Search, indexing, ranking, and search evaluation are formally defined, explained, and used. IST 841 Search Engines & Information Retrieval (3) This is an introductory course on the principles of information storage and retrieval systems and databases. Students will learn how effective information search and retrieval is interrelated with the organization and description of information to be retrieved. Students will also learn to use a set of open source tools and procedures for organizing information, will become familiar with the techniques involved in conducting effective searches of print and online information resources and will build a vertical/specialty search engine. Search, indexing, ranking, and search evaluation are formally defined, explained and used.

IST 852: Knowledge Management

3 Credits/Maximum of 999

This course provides a foundation in knowledge management concepts and paradigms, emphasizing computational methodologies and tools for supporting data and knowledge management practices.

IST 868: Topics in Visual Analytics for Security Intelligence

3 Credits

Introduce visual analytic techniques for security informatics and intelligence. Survey technical approaches for data analysis, threats and vulnerability, communicating risk. IST 868 Topics in Visual Analytics for Security Intelligence (3) This course surveys techniques for visualizing and analyzing security and risk information and for communicating threats, risk and vulnerability to decision-makers. Students will be motivated by the needs for better intelligence in a broad range of applications such as homeland security, crisis management, and public safety. Through case studies and problem-based learning, students will develop understanding of important concepts and issues, such as data source and data quality, visual thinking associations and integration of incidence, hazards, and risk factors, and the difficulties of analyzing and communicating knowledge. Various visual analytical methods for homeland security intelligence will be discussed, such as: (1) mapping and visualizing patterns of crime and incidence, (2) identifying targets and agents of terrorist attacks, (3) spatial analysis of social, economic and environmental risk indicators, and (4) prediction of threat and risk. It also pays special attention on the interpretation of analytical results for actions. Geographical information systems and associated spatial analytical tools will be used to exemplify the kinds of information environment available to intelligence community. The course will prepare students to become immediate workforce for security-related industries and government agencies.

Prerequisite: IST 816 or IST 554 or IST 562

IST 885: Introduction to Multisensor Data Fusion

3 Credits

Understanding the concepts, techniques, and issues surrounding the fusion of information from multiple sensors and sources of data. IST 885 Introduction to Multisensor Data Fusion (3) Rapid advances in nano and micro-scale sensors, ubiquitous wide-band wireless communications and improvements in computing provide the opportunity to collect and disseminate huge amounts of data and information from sensors, humans acting as observers, and emerging data available on the web. Applications for this data are widespread and include areas such as geospatial intelligence, emergency management, environmental monitoring, epidemiology, and others. This course introduces methods and process models for fusion of the information from diverse sources to achieve inferences that cannot be obtained by using a single source or sensor. Course Objectives: IST 885 provides an introduction to multisensor information fusion. Multisensor information fusion seeks to combine information from multiple sensors and sources to achieve inferences that are not feasible from a single sensor or source. The proliferation of micro and nano-scale sensors, wireless communication, and ubiquitous computing enables the assembly of information from sensors, models, and human input for a wide variety of applications such as environmental monitoring, crisis management, medical diagnosis, monitoring and control of manufacturing processes. Techniques for fusing multisensor and multi-source information are drawn from a variety of disciplines including statistics, data mining, artificial intelligence, estimation and control theory, pattern recognition, and signal and image processing. While this course is non-mathematical it will help students understand the concepts, techniques and issues associated with developing and using multisensor data fusion systems. At the end of this course students should be able to: * Explain different models of multisensor data fusion and describe the advantages and limitations of data fusion * Explain the five levels of data fusion in the Joint Directors of Laboratories (JDL) data fusion process model * Assess and characterize a sample information fusion application * Identify various techniques used in multisensor data fusion and indicate the applicability and limitations of the techniques for a selected application * Design a data fusion system including specifying the required functions, applicable techniques, selection/assessment of sensors and information sources, and design of a sample user interface * Discuss current technology trends that affect the implementation of a fusion system. Student activities: The course consists of ten lessons and one capstone group project that will span either the 15-week semester or the combined 12-week summer session. Each lesson will require approximately 8 hours of student activity. Student activities will include reading lesson text, online quizzes, and discussions about the way in which multisensor information fusion is applied to selected applications such as geospatial intelligence, environmental monitoring, monitoring of complex systems, crisis management or related areas.

IST 888: Mobile Computing and Applications

3 Credits

design and development of mobile computing-based applications and services utilizing current and emerging mobile computing technologies. The purpose of this course is to provide students with an advanced and hands-on exploration of mobile computing paradigms. Mobile computing addresses the mobility needs of business operations and management in organizations, with the increasing trend of leveraging a variety of deployed enterprise information systems. Hence, well-designed and developed mobile applications can meet the needs of business mobility on both the service provider and the customer sides. This course is designed to explore and discuss approaches to the design and development of mobile applications. It builds an awareness of the business need for operational agility and mobility, and the value of existing IT investments in organizations. Specifically, this course investigates the fundamental design and development of mobile applications and services using platform technologies; area topics include mobile application and services design patterns, user interface, animation, location & mapping, and integration. Through working on exercises, labs, and projects, students will be able to identify and apply
appropriate mobile platform technologies in their assignments and will gain skills and coding experience in the development of adaptable and sustainable mobile application solutions. Consequently, with this course, students will learn mobile development environments, application and service design and development, device emulators, data and mobility management, and enterprise solution-based integration. Cross Listings: IST 888 will be added as a cross-listed course.

Cross-listed with: SWENG 888

Information Systems - CA (INFSY)

INFSY 535: Object-Oriented Design and Programming in Business

3 Credits

Overview of key concepts in object design and the application of these concepts in business software development. INFSY 535 will be among the courses prescribed in the MSIS program and would normally be taken early in the Program. It is a prerequisite to several additional courses in the program. The course is intended to provide students with a foundation in object-oriented design and programming to understand the application of these concepts to business problems. Students will learn basic object concepts and develop skills to implement computer programs utilizing object tools. As managers in the technology environment, students need to have an understanding of how projects are implemented. To be successful, they also need to learn how to work together to design, implement, and manage technology projects. The goals of INFSY 535 are to: 1) Expose students to principles and concepts within the object oriented programming environment, 2) Teach students how to apply an object-oriented language in a business environment, and 3) Develop team skills when programming complex systems.

Prerequisite: admission to MBA or MSIS Program or Program approval

INFSY 540: Information Technology and Knowledge Management

3 Credits

Information systems management, enterprise models of information technology, information technology and knowledge management. INFSY 540 Information Technology and Knowledge Management (3) INFSY 540, Information Technology and Knowledge Management, is a required course for MBA and MSIS students. Students will be provided an understanding of enterprise resource planning and how it relates to information technology architecture and its impact on modern organizations. Students learn Information Technology and Knowledge Management concepts that may be applied to leverage the benefits, avoid the pitfalls, and overcome the limitations of using information technology in an organization. Although individual assignments and examinations will occur, INFSY 540 includes project- and team-based assignments where students will actively examine Information Technology and Knowledge Management and its effects on industries and specific organizations. Student performance will be evaluated using both individual and team assignments, individual examinations, case study analyses, and research papers.

Prerequisite: admission to M.B.A. or MS/IS program or program permission

INFSY 543: Electronic Commerce

3 Credits

Overview of key aspects of E-Commerce within an organizational context including coverage of managerial issues and supporting technology. INFSY 543 Introduction to E-Commerce (3) INFSY 543 provides a survey of E-Commerce topics, and serves as a foundation for further courses on E-Commerce. The course is designed to appeal to both MBA and MSIS students. Upon successful completion of this course, the student will have an understanding of the various types of e-commerce, systems used to support e-commerce, applications of e-commerce, and associated managerial issues. INFSY 543 is an elective in the MBA and MSIS programs. INFSY 540, Information Resources in Management, is a required course for MBA and MSIS students and is a prerequisite for INFSY 543. In INFSY 543, students will continue to explore the interrelationship between technology and organizational performance. Although individual assignments and examinations will occur, INFSY 543 includes project- and team-based assignments where students will actively examine e-commerce and its effects on industries and specific organizations. Student performance will be evaluated using both individual and team assignments, individual examinations, case study analyses, and c-commerce project(s). INFSY 543 will be offered once per academic year or more frequently, based on student enrollment and demand.

Prerequisite: INFSY540 or permission of the Program

INFSY 547: WEB Enabled Technologies

3 Credits

Integrating design principles and applying technologies that support business related, web-based applications. INFSY 547 WEB Enabled Technologies (3) The objectives of this course are to: a) teach students how to manage large WEB projects b) teach students a programming language that is used to create complex business projects c) make students aware of research issues that apply to WEB development d) strengthen collaborative skills related to project development. To accomplish these goals, students will study project management as applied to WEB applications, participate collaboratively in a business project where they apply management and design skills over the course of the semester. Additionally, the latest research will be explored as it relates to the above.

Prerequisite: INFSY535 or permission of the Program

INFSY 554: Master's Project

3 Credits

Development of an original master’s project in the student’s field of interest and preparation of a paper.

Prerequisite: last 6 credits of Master’s in the Information Systems program

INFSY 555: Data Management Systems

3 Credits

Concepts and theory of database management systems explored through data modeling and planning techniques. INFSY 555 Data Management Systems (3) This course emphasizes the analysis, design and development of relational database management systems. Students will develop the analysis and design of a relational database for a
business application through a series of assignments using ORACLE database software. Students also develop a research paper in database management.

Prerequisite: INFSY535

INFSY 556: Data Warehousing

3 Credits

The study of the requirements collection, design, and development of data warehouses. INFSY 556 Data Warehousing (3) This course deals with the collection of requirements, design, and development of data warehouses. Requirements gathering through query graphs, dimensional modeling, online analytical processing (OLAP) tools, metadata, and technical architecture of data warehouses will be the major focus of this course. End user applications pertaining to data warehousing is also included.

Prerequisite: INFSY555

INFSY 565: Intelligent Systems in Business

3 Credits

This course will emphasize the analysis, design, and application of intelligent systems within organizational settings. INFSY 556 Intelligent Systems in Business (3) This course emphasizes the analysis, design and application of intelligent systems within organizational settings. Students will study the underlying concepts of intelligent systems such as expert systems and neural networks and learn how these systems support the business environment. A goal of the course is that students learn when and where intelligent systems will benefit an organization. Students will analyze cases related to intelligent system development, study the issues of knowledge acquisition, and learn about uncertainty in intelligent systems. Actual system applications will be integrated into the course.

Prerequisite: INFSY535

INFSY 566: Data Mining and Knowledge Discovery

3 Credits

The study and application of data mining techniques used to mine patterns in large transactional databases. INFSY 566 Data Mining and Knowledge Discovery (3) This course deals with the advanced study of intelligent data mining tools that are used to mine patterns in very large databases. The focus is on theoretical, mathematical and statistical foundations of data mining as well as the applications of data mining to various business applications. Students taking this course will learn different data mining techniques that can be used to mine patterns in large corporate and transactional databases, will be capable of developing and applying data mining tools, and will be able to do independent research in data mining area. Specific topics include the process of and statistical perspectives on knowledge discovery in databases, graphical models for discovering knowledge, inductive logic programming and data mining, discovering informative patterns and data cleaning, fast mining of association rules, inductive and deductive reasoning for data mining, and mathematical foundations of data mining. Data mining applications in finance, direct marketing and medicine will be emphasized. Several projects and a research paper required.

Prerequisite: INFSY565

INFSY 570: Software Engineering in the Analysis and Design of Information Systems

3 Credits

Software engineering concepts, specifically the analysis and design of structured information systems using computer-aided software engineering (CASE).

Prerequisite: INFSY535

INFSY 572: Strategic Information Systems

3 Credits

The survival and success of organizations in a highly competitive on-demand economy is dependent on strategic information technology alignment. Strategic Information Systems examines the strategic management and use of information resources, theoretical models, and practices. It examines the alignment of an organization's business strategy, organizational strategy and design, and information systems strategy in order to achieve a sustainable competitive advantage.

Prerequisite: INFSY535 or INFSY570

INFSY 575: Seminar in Information Technology Management

3 Credits

Examination of selected topics relevant to current and future managerial and organizational issues of information technology.

Prerequisite: INFSY555 or INFSY570

INFSY 587: Global Information Technology

3 Credits

Comprehensive coverage of components, applications, and issues of global information technology management in organizations worldwide.

Prerequisite: INFSY555 or INFSY570

INFSY 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

INFSY 595: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction, including field experience, practicums, or internships. Written and oral critique of activity required.

INFSY 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.
INFSY 597: Special Topics
1-9 Credits
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

INFSY 860: Data Communications Systems and Networks
3 Credits
The course covers the functional aspects and terminology of computer networks in order for the student to be competent as a manager of a network staff. The course reviews alternative technology solutions and helps implement effective solutions. The course provides an overview of network technology and future developments in the technology. Finally, through this course, students will gain an understanding of network technology and how it integrates with the other IT systems.

**Prerequisite:** INFSY 540

INFSY 863: Network Security
3 Credits
This is a study of network security concepts, technology, and issues. Authentication, privacy, and integrity of messages are analyzed. INFSY 863 is a follow-up course to INFSY 860, Data Communications and Networking. The objective of the course is that students gain a higher-level understanding of network security. Although the course is designed to appeal primarily to M.S.I.S. students, it is expected that the more technically minded M.B.A. will find the course valuable. Upon successful completion of this course, the student will have an in-depth understanding of encryption techniques and the use of keys for encryption. Each student will study the appropriate applications to public keys, secret keys, and session keys. They will gain an understanding of the role of certificate authorities and the public key infrastructure. In addition, students will learn about the various architectures available to transmit information securely across the internet through virtual private networks.

**Prerequisite:** INFSY 535 and INFSY 860

INFSY 890: Colloquium
1-3 Credits/Maximum of 9
Continuing professionally oriented seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

### Instructional Systems (INSYS)

**INSYS 581: Theoretical Foundations of Instructional Systems**
3 Credits
Analysis of theoretical foundations of the instructional systems (systems and cybernetics, communications, cognitive psychology, sociological, constructivist, ecological) for doctoral students.

### Insurance (INS)

**INS 575: Risk Management**
2 Credits
Develop an understanding of the risks facing corporations and the methods available to deal with those risks.

**Prerequisite:** BA 531

**INS 596: Individual Studies**
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

### Integrative Biosciences (IBIOS)

**IBIOS 541: Critical Analysis of Bioinformatics and Genomics Research Topics**
1 Credit/Maximum of 2
A weekly review of current literature related to the area of bioinformatics and genomics research. IBIOS 541 Critical Analysis of Bioinformatics and Genomics Research Topics reviews the recent developments made in the understanding of basic genomics and bioinformatics research. This approach provides an insight into the topics that are shaping the current and future directions in a field that is rapidly evolving and literally transforming lives. Tutorials provide a comprehensive overview of the new and fundamental developments in genomics research and highlight the way in which genomic concepts are applied to basic biological processes. This course will provide insights into computational, evolutionary, and functional aspects of genomic sciences. Basic concepts that describe how life was organized and evolved and applications that promise huge advances in biomedical and biotechnological fields will be discussed. In addition to helping students develop critical oral and written presentation skills, this course is intended to kindle excitement about genomic research among graduate students and provide an intellectual framework for identifying potentially challenging and interesting questions that may be pursued.

**IBIOS 551: Genomics**
3 Credits
Structure and function of genomes including use of some current web-based tools and resources for studies and research in genomics. IBIOS (BMBM) 551 Genomics (3) IBIOS/BMMS 551 will deal with the structure and function of genomes including the use of some current web-based tools and resources for studies and research in genomics. The overall objective is to learn current information about the structure and function of genomes, to develop facility in the many web-based tools and resources for further studies and research in genomics, and to appreciate the power and limitations of current resources and knowledge. This course is designed as a basic course for any student in the life sciences who needs to exploit the developments and tools in genomics in their own research and who wants to broaden their understanding of the current knowledge and research in the life sciences that are increasingly drawing on genomics advances. The course will be taught by a team of faculty (members active in genomics research and will be video-conferenced. Students' grades will be based on take home
exams or assignments that require their understanding of the concepts in genomics and the hands-on use of web-based analysis tools, as well as on class discussion participation. Students will be assigned one or more projects, tutorials, problem sets or essays to complete. Reading assignments will further help students explore the materials, do the assignments and participate in classroom discussions.

Cross-Listed

IBIOS 554: Foundations in Data Driven Life Sciences

3 Credits

Expanded overview of current developments and technique in computational biology and genomics. BMMB (MCIBS) 554 Foundations in Data Driven Life Sciences (3) The successful progression of data-driven biomedical research is obscured by a wide-range of logistical problems related to data handling and processing, a widespread disconnect between developers and consumers of biomedical analysis software, and lack of accessible, well-developed curricula and active learning opportunities necessary for the development of key data analysis skills in the next generation of researchers and clinicians. This course aims a filling these gaps. Topics include fundamental concepts that underpin analysis of sequence data, design of complex experiments, research transparency and reproducibility, as well as result disseminations practices relevant to presentations and publications.

Cross-listed with: BMMB 554, MCIBS 554

IBIOS 572: Benchmark Papers

2 Credits

Discussion of current literature on molecular, cellular and developmental biology. IBIOS 572 Benchmark Papers (2) This is a required course for all CDB graduate students during their second fall semester. It will be team taught using papers selected by the participating faculty members. One to few paper(s) on a specific topic will be assigned each week prior to the meeting between a faculty and the students. The students will read the papers, and then come to the meeting ready for discussion. The faculty member will moderate and guide the discussion, including asking questions, pointing out key aspects that might be missed by students, and giving time to those students who have not had a chance to speak.

IBIOS 593: Molecular biology Laboratory

3 Credits

An intensive laboratory course on the principles and techniques of nucleic acid purification, analysis by restriction enzymes, gel electrophoresis, nucleic acid labeling and hybridization, cloning, sequencing, PCR amplification, and analysis of cloned heterologous gene expression by western blotting.

IBIOS 594: Research Topics

1-15 Credits/Maximum of 15

Supervised student activities on research projects identified on an individual or small-group basis.

IBIOS 595: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

IBIOS 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University.

Intercollege Masters of Business Administration (IMBA)

IMBA 501: Markets, Industry Analysis, and Business Strategy

3 Credits

How markets determine prices and activity in the business firm; the firm's microeconomic and macroeconomic environments; formulation of competitive strategy.

Prerequisite: enrollment in the Intercollege M.B.A. program

IMBA 502: Financial and Accounting Tools

3 Credits

Introduction to financial systems and reports, ability to analyze financial information, apply financial tools, and communicate financial information.

Prerequisite: enrollment in the Intercollege M.B.A. program

IMBA 513: Data Analysis Resource Module

2 Credits

Applications of statistical methods in business management: selection of methods, interpretation of results, and presentation.

Prerequisite: enrollment in the Intercollege M.B.A. program

IMBA 515: Accounting for External Reporting

2 Credits

Ability to read financial reports and analyze their content.

Prerequisite: enrollment in the Intercollege M.B.A. program; IMBA 501 , IMBA 502

IMBA 516: Organizational Behavior and Performance

2 Credits

Analysis of conceptual models, systems, and decision processes consistent with high levels of individual, group, and organizational performance. IMBA 516 Organizational Performance Management (2) The primary objective of this course is to provide an introduction to the research and case study findings relating to the performance of people and groups in organizations. These findings, when taken in the context of contemporary social, ethical, and legal contextual factors, are employed by managers at all levels of high performing organizations to establish, direct, enhance, and deploy desired behavior of individuals, groups, and
the organization itself. Course topics will also focus upon mechanisms for continuous system improvement methods such as employee involvement, training, satisfaction, and well-being. Information regarding work system effectiveness, as well as effectiveness of measurement, control, and support systems is also considered.

Prerequisite: enrollment in the Intercollege M.B.A. program

IMBA 517: Corporate Governance

2 Credits

Study of interrelationships among shareholders, boards of directors, and managers (owner agents) and other stakeholders in a modern public corporation. IMBA 517 Corporate Governance (2) The subject matter of corporate governance deals with the nature of the interrelationships among shareholders (owners), boards of directors (representatives of the owners), and managers (agents of the owners). These interrelationships from the basis for the modern corporation. As their agents, managers are supposed to run a company in the interest of its shareholders; the board of directors is expected to monitor the performance of managers and to ensure that they do not stray from their primary obligation to the owners. The subject of corporate governance also encompasses the study of corporations’ relationships with its employees, creditors, supplies, and customers. Finally, as corporations are expected to be good citizens of their communities, corporate governance also ends to the study of corporations; relationships with their communities. Periodic scandals involving major, publicly held companies have underscored the fundamental importance of these relationships. The larger interests of society and of its citizens required that various stakeholders perform their roles in an ethical manner. This course reviews major theories of ethical and moral development, provides cases and exercises to heighten students’ awareness of these areas, and reviews heuristics and decisions-models for ethical conduct. This course thus also addresses the emerging area of ethical corporate governance, specifically exploring the how ethical conduct and the ethical underpinnings of corporate governance function to safeguard the interests of all stakeholders.

Prerequisite: enrollment in the Intercollege M.B.A. program

IMBA 521: Strategic Analysis

2 Credits

Analysis of a company case; development of the ability to draw sound conclusions on business strategies and proformance.

Prerequisite: IMBA 501, IMBA 502, IMBA 513, IMBA 515, enrollment in the Intercollege M.B.A. program

IMBA 522: Financial Management

2 Credits

Analyze capital investment projects, examine the general principles of asset valuation, and study the valuation of stocks and bonds.

Prerequisite: IMBA 515, enrollment in the Intercollege M.B.A. program

IMBA 523: Organizational Development, Intervention and Change

2 Credits

Analysis and assessment of conceptual models, systems, and decision processes for organizational development, intervention and change; transformation and reengineering processes. IMBA 523 Organizational Development, Intervention and Change (2) This course will analyze organizational models using current theory and case study application to discuss the topics surrounding organizational development, intervention and change. The course focuses on the human and social aspects of the organization as a way to improve the ‘fit’ between individuals and the organization and between the organization and the environment. This analysis and assessment helps to improve the organization’s overall performance and stakeholder satisfaction. The course emphasizes the use of Organization Development (OD) as one of the most effective approaches to introduce changes to organizations and to facilitate intervention. The course elaborates on knowledge and techniques from the behavioral sciences to create a learning environment through increased trust, open confrontation of problems, employee empowerment and participation, knowledge and information sharing, the design of meaningful work, cooperation and collaboration between groups and the full use of human potential.

Prerequisite: enrollment in the Intercollege M.B.A. program and IMBA 516

IMBA 530: Marketing in a Global Environment

3 Credits

Global marketing planning and strategic formulation for profit and non-profit firms in creation, promotion, pricing, and distribution of goods and services.

Prerequisite: IMBA 501, IMBA 513, enrollment in the Intercollege M.B.A. program

IMBA 531: Project Management

2 Credits

A problem-based, interdisciplinary course in project management skills and techniques needed to manage projects in a modern business environment. IMBA 531 Project Management (2) Project management has been labeled by Fortune Magazine as the number one career choice for the coming decade. Increasingly, organizations are adopting project management techniques and structures within their business framework. Project management offers the twin advantages of allowing organizations to create products and processes efficiently, through optimal use of resources, and rapidly, to respond to rapid time-to-market demands. This course would give business majors a competitive advantage in the job market, as companies are in great need of a trained cadre of qualified project managers who can allow the business firm to operate to its highest potential. The role of the instructor in this course is to train students in the wide variety of demands and skills for which they must be qualified: the ability to exert leadership in managing project teams, an understanding of people and behavioral skills, and the ability to effectively use computer-based scheduling and tracking software to keep to timetables and schedules. The course will involve semester-long projects, either developed by the instructor or developed (in collaboration with the instructor) by students involved in business enterprises. As a result, students would have real-time experience in the challenges of creating a unified team, solving problems, tracking their projects, and presenting a final paper and presentation on the process.

Prerequisite: enrollment in the Intercollege M.B.A. program
IMBA 543: Accounting for Internal Decision Making
2 Credits
Covers basic concepts, issues, tools, and techniques in the use of accounting information for internal decision making.

Prerequisite: IMBA 502, enrollment in the Intercollege M.B.A. program

IMBA 544: Managing Human Resources
3 Credits
Processes and issues related to staffing and retaining human resources.

Prerequisite: IMBA 501, IMBA 513, enrollment in the Intercollege M.B.A. program

IMBA 550: Corporate Information Strategy
3 Credits
Information technology supporting decision making, operations, and creation of new products and services; electronic commerce in global markets.

Prerequisite: enrollment in the Intercollege M.B.A. program

IMBA 560: Corporate Innovative Strategies
3 Credits
Formulation and implementation of a corporate innovation or technology strategy.

Prerequisite: enrollment in the Intercollege M.B.A. program

IMBA 561: Global Operations and Supply Chain Management
3 Credits
Effective management of the flow of goods and services.

Prerequisite: IMBA 513, enrollment in the Intercollege M.B.A. program; also previous course sequencing in the IMBA program is required for this course

IMBA 562: Global Business Management
3 Credits
Establishing and expanding businesses in global markets and managing multinational firm strategies and operations. IMBA 562 Global Business Management (3) This course examines the unique opportunities and problems that confront multinational companies and international managers as they navigate the company through the extreme complex and ever-changing global economic, political-legal, socio-cultural, and technological environments. It studies the decision choices of international managers regarding business strategies for production and marketing of goods and services, the modes of entry into foreign markets, the management of such functions as physical and human resources, production of goods and services, financial management, controlling of operations, labor relations, and conducting businesses ethically. It is designed to help students to gain insights into the complexities of managing across borders and cultures.

Prerequisite: enrollment in the Intercollege M.B.A. program

IMBA 573: Strategic Planning
3 Credits
Application of knowledge in creating and sustaining competitive advantage; development of skills necessary for writing a strategic plan.

Prerequisite: enrollment in the Intercollege M.B.A. program; completion of all courses prior to final term

IMBA 574: Strategic Financial Decisions
3 Credits
Advanced capital project analysis; evaluating levered investments; application of option valuation principles to strategic decisions.

Prerequisite: enrollment in the Intercollege M.B.A. program; IMBA 502 and IMBA 522

International Affairs (INTAF)

INTAF 500: Research Design
3 Credits
This course provides a general overview of empirical research methods appropriate for international affairs specialists. The approach is hands-on, with a focus on learning practical skills for evaluating real-world events.

INTAF 501: Water and Sustainable Development
3 Credits
This course addresses the scientific theory and practical considerations necessary to manage water resources in an international sustainable development context.

INTAF 502: Science, Technology, and International Policy
3 Credits
Examines science and policy communities, importance of science and technology to international affairs, scientific issues likely to affect international policy.

INTAF 503: Hazards, Disasters, and International Affairs
3 Credits
Hotspots, tipping points, and international approaches to prepare for, respond to, and recover from hazards, disasters and complex humanitarian emergencies.

INTAF 504: Political Economy of Development and Growth
3 Credits
Theories of economic growth and established empirical evidence are used to explain differential levels of economic development across the world. INTAF 504 Political Economy of Development and Growth (3) This course examines the reasons why different nations realize diverse long-run levels of welfare. Possible determinants of the differential outcomes include different rates of accumulation in physical capital, rates of technological innovation, the impact of human and financial capital, and the impact of demographic changes with increasing levels
of economic development. Further extensions include a consideration of the impact of the openness of economies, geographical location, and exposure to disease vectors. In addition, the course considers the impact of institutions, including domestic institutions, international institutions, as well as multilateral forms of cooperation between economies. Types of institutions to be considered will include micro-level institutions (those that function most obviously at the individual agent level), as well as institutions that govern societies at more aggregate levels.

The course also examines evidence on whether there are interaction effects between the determinants of growth (for instance, whether the impact of openness is different under democratic or autocratic political governance). The course will consider relevant theory, but will place an emphasis on examining available data sources in order to test alternative explanations. Given the International Affairs context, particularly strong emphasis is placed on drawing from literatures that reflect the strong interdisciplinary nature of International Affairs programs. This includes perspectives from economics, law, political science and sociology.

INTAF 505: Strategy, Conflict, Peace
3 Credits

The course teaches the principal solution concepts to the analysis of strategic interaction in static and dynamic contexts, and under incomplete information. INTAF 505 Strategy, Conflict, Peace (3) The purpose of this course is to provide the analytical tools required to deal with international affairs situations that involve strategic actions - that is, actions whose outcome depends on the interaction with other decision makers. While the approach of the course is applied, with recourse to many illustrations by real examples, the primary concern of the course is with the development of the appropriate analytical tool kit to be able to deal with choice in the presence of strategic interaction with other agents. The core tool kit is provided by game theory, and this is the focus of the course. Coverage will be of the representation of games, solution concepts in static as well as dynamic games, and the role of information in games. While primary attention will be on non-cooperative strategic interaction, some results from cooperative game theory are also considered. Presentation of core analytical techniques will be in the form of lectures. Many applications will be presented by course participants. Applications are drawn from concrete examples encountered in the literature. Strong emphasis is placed on applications that are encountered by agents in international contexts. Since such international agents span the range from nations, political parties, firms, multinationals, households and firms, applications are multidisciplinary. Applications are drawn from (but not limited to): voting and agendas; reciprocity; surprise attack and disarmament; nuclear deterrence; randomization of promises and threats; sequential bargaining; time consistency; reputation; location games; partnership games; tariffs; Median Voter Theorem; political participation; contracts; guarantees; reputation and incomplete information; signaling; cheap talk; tournaments; coalition formation and the importance of stable preference-driven cooperation in an anarchic world.

3 Credits

This course addresses the principles, policies, and practices in international trade and finance that are fundamental for understanding international economic relations and the future of the global economy. The course examines the economic principles underlying behaviors and policies in international and domestic public affairs and explains how to evaluate and conduct economic analyses.

INTAF 508: Domestic Influences on Foreign Policy
3 Credits

This course will examine how domestic politics influences the formulation and implementation of foreign policy in the United States and other major powers. INTAF 508 Domestic Influences on Foreign Policy (3) This course will examine how domestic politics influences the formulation and implementation of foreign policy in the United States and other countries. Among the factors considered will be the role of lobbyists, special interests and bureaucratic politics. Among the major topics covered will be national identity, the politics of national security since World War II, foreign policy formulation in China, the domestic sources of American foreign policy, case studies in buying influence, the influence of think tanks, public opinion and ethnic groups, how other countries attempt to influence American foreign policy and how domestic groups in other countries try to influence their own foreign policy. This course will be extremely useful to any student wishing to understand how governments formulate and implement foreign policy and how that has been affected by domestic politics in the past and today. Students will learn about the history of political influences on foreign policy and how that had changed over time, especially since the end of the Cold War. Students will also develop their ability to think critically and to apply that thinking to historical and present-day examples of interest groups influencing foreign policy. The course will also emphasize professional skills including the development of the student’s ability to write and to make in-class presentations.

INTAF 510: Cross Cultural Conflict Resolution
3 Credits

Across the globe there are more laws and provisions in place to protect human beings from discrimination than at any other time in history and yet there are more incidents of conflict, intolerance, bias, and violence than ever. How are we to make sense of these two competing realities? How can we become ethical leaders in the face of such contrasts and complications? This course combines perspectives from communications, psychology, sociology, political science, law and legal studies, human rights, identity-based studies, media studies, and cultural studies to engage questions of how cultural difference and discrimination play a role in conflict and resolution. Topics to be covered are 1) how societies create egalitarian categories of identity, 2) how those divisions create conflict, and 3) how those divisions hinder conflict resolution. The course will look at a variety of ways that societies come to categorize forms of human life according to religion, nationalism, patriarchy, ethnic identity, and other forms of social division and stereotyping. One key area we will address is the development of law and other instruments that both protect and disenfranchise vulnerable populations. We will also look at strategies for cross-cultural community development and peace building. The topics will be studied in a cross-cultural context allowing students to consider these issues from a range of global perspectives.

INTAF 511: Ethical Dimensions in Food and Agricultural Governance
3 Credits

Famines around the world have long made news headlines, and in recent years the news includes a discussion of the so-called ‘diseases of affluence’ that come about, in part, due to an overabundance of food (i.e., Type II diabetes, heart disease). While, the natural environment affects regions of food security and insecurity, the policy environment plays an equally strong role in constructing our global food systems. For
example, how have changing agricultural policies shaped our food safety problems, such as E. coli contaminated meat or spinach? How have government policies related to labeling of organics shaped the growth of consumer demand for organic agriculture and food products? This class analyzes the socio-economic, political, and cultural construction of our food systems and the ways in which institutions and individuals involved with these systems have experienced dramatic changes in the twentieth and twenty-first centuries. We also explore and evaluate the ethical dimensions of agriculture and food policy at the global, regional, and national levels and the ways these policies impact the flow of food around the world (e.g., the World Trade Organization, transnational corporations, NAFTA, the European Union, and national governments). By the end of this course, students will be able to describe the institutions and organizations that are involved in the provision of food at national and international levels, identify problems with the dominant agriculture and food system, and evaluate the strengths and weaknesses of many of the proposed solutions for creating a more sustainable and equitable food system.

INTAF 534: Political Economy of Energy and Extractive Industries in Africa (Oil and Mining)

3 Credits

Given the rising global demand for energy and resources, Africa’s production of oil and solid minerals has already produced very significant positive as well as negative impacts on the continent’s political, economic, and social conditions. This seminar examines the extractive industry-driven changes in Africa’s political economy, as well as in the continent’s foreign relations. Students will examine the institutional basis under which the expansion of the industry is taking place in Africa. This will involve discussions of the institutional characteristics of Africa, including issues of land tenure and property rights laws, how institutional systems are changing in order to facilitate the industry’s expansion, and the repercussions of these changes upon society. The course also interrogates the relevance of international efforts to mitigate some of the adverse impacts of the industry. Among such efforts is the UN Guiding Principles for Business and Human Rights. Overall this seminar examines the industry’s impact on Africa’s socioeconomic development and global relations, and concludes with how African countries might deal with the adverse impact of the Oil and Mining industry.

Cross-listed with: AFR 534, PLSC 534

INTAF 567: Terrorism

3 Credits

This seminar provides a general and cumulative investigation into the phenomenon of terrorism from a Political Science perspective. It is a study of terrorism with an attention to what it is ‘theoretically, conceptually, empirically’ and how and why it is used by nonstate actors; its political, economic, and social root causes; its consequences to political, economic, and social institutions and outcomes; and the implications of current research on terrorism and counterterrorism. Although the study of terrorism has a long pedigree in the social sciences, research by political scientists became more extensive following the September 11, 2001 attacks on the World Trade Center. This course critically evaluates this new literature, noting its contributions, limitations, gaps, and opportunities for future discovery. Much of the contemporary scholarly literature on terrorism makes use of state-of-the-art political science research methods and quantitative analysis.

INTAF 568: Psychology of Terrorism

3 Credits

This course examines the causes and consequences of terrorism, and the responses to terrorism from a psychological perspective, to include Christian extremism, Islamic Fundamentalism, Jihadism, Left wing extremism and Marxist terrorism, Right wing extremism, and single-issue terrorism. It draws on research from a variety of disciplines in order to examine terrorist ideologies; the motives, strategies, and behaviors of terrorists and terrorist leaders; how people come to join terrorist groups; methods of recruitment; terrorist tactics; the psychological consequences of terrorism on individuals, communities, and global societies; psychological counterterrorism; reactions to counterterrorism efforts; terrorism prevention; and possibilities for disengagement and deradicalization.

Cross-listed with: PLSC 568, PSY 568

INTAF 590: Colloquium

3 Credits

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

INTAF 594: Research Topics

1-15 Credits/Maximum of 15

Supervised student activities on research projects identified on an individual or small-group basis.

INTAF 595: Internship

1-12 Credits/Maximum of 12

Supervised off-campus, non-group instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

INTAF 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and that fall outside the scope of formal courses.

INTAF 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

INTAF 597B: **SPECIAL TOPICS**

3 Credits

INTAF 598: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.
the basis of political and strategic calculations, along with commercial
why and how major energy market players shape their interactions on
resource-owning national governments and foreign investors; and about
agreements reflect regarding the shifting balance of power between
and gas development and what the differences among these types
contractual arrangements for cross-border investment in upstream oil

appreciation of the role of energy, and especially hydrocarbon-based
industry, and nonproliferation challenges. Students will develop a deep
focuses especially on international markets for crude oil and natural
of ongoing trends and structural shifts in global energy markets. It
Addresses the principal actors, institutions, and legal frameworks which
operate in international relations.
INTAF 802: Foundations of Diplomacy and International Relations Theory
Addresses the central tenets of diplomacy and international relations and
theories and concepts that underpin the study of international relations.
INTAF 803: Multi-sector and Quantitative Analysis
Introduces students to quantitative methods applicable to various
issue areas, including international relations, economics, business, law,
education, health, and environment.
INTAF 804: Global Cultures and Leadership
Introduces students to cultural theories and to an understanding of how
socio-cultural beliefs may impede or accelerate social change.
This course explores the economic, political, and strategic implications of
ongoing trends in global energy markets, particularly oil and gas markets.
This course explores the economic, political, and strategic implications of
ongoing trends and structural shifts in global energy markets. It
focuses especially on international markets for crude oil and natural
gas; attention is also devoted to nuclear energy, the international nuclear
industry, and nonproliferation challenges. Students will develop a deep
appreciation of the role of energy, and especially hydrocarbon-based
energy, in contemporary international affairs. They will learn about the
historical development and evolution of hydrocarbon-based energy and
the international oil and gas industry; about the various types of
contractual arrangements for cross-border investment in upstream oil
and gas development and what the differences among these types of
agreements reflect regarding the shifting balance of power between
resource-owning national governments and foreign investors; and about
why and how major energy market players shape their interactions on
the basis of political and strategic calculations, along with commercial
and economic considerations. They will also learn about the economic
and political factors affecting the contribution of nuclear energy to the
global energy balance; about the major proliferation risks associated with
civil nuclear technology; and about the international regime that has been
developed to mitigate these risks and the most pressing challenges to
this regime.
INTAF 811: Estimative Analysis in International Strategy
3 Credits
Analytical methods to estimate future conditions as they might influence
international policy, negotiations, or strategic planning.
INTAF 812: The Role of Intelligence in International Relations
3 Credits
This course examines how governments gather intelligence, how it is
analyzed and what impact it has on policy makers.
INTAF 814: U.S. Policy in the Middle East
3 Credits
This course focuses on the strategic challenges facing U.S. policymakers
in one of the world's economically, politically, and strategically most
important regions. INTAF 814 U.S. Policy in the Middle East (3) This
course explores the strategic challenges facing U.S. policymakers
in the Middle East, one of the world's economically, politically, and
strategically most important regions. It draws on readings and class
discussion to help students develop both a sense of the historical
evolution of U.S. policy toward the Middle East and an analytic framework
for understanding current policy debates. Students will develop a deep
appreciation of the impact of U.S. engagement in the Middle East on
modern international history and contemporary international affairs. They
will learn about the Middle East's place in the United States post-World
War II and post-Cold War grand strategy, about America's decades-long
quest for strategic primacy in the region, and about competing visions
among American elites for the exercise of that primacy. They will examine
the key bilateral relationships (with Saudi Arabia, Israel, and - since 1979
- Egypt) that have shaped U.S. foreign policy toward the Middle East.
They will also explore America's long struggle with Saddam Hussein's
Iraq and evaluate the U.S. project to build a post-Saddam Iraq that would
help consolidate America's post-Cold War dominance in the region.
Against this backdrop, students will also learn about major indigenous
challenges to American hegemony in the Middle East - e.g., the Islamic
Republic of Iran, Islamist resistance movements, and rising demand for
participatory Islamist governance among regional publics - and assess
U.S. approaches to dealing with these challenges. Students will consider
alternative perspectives on jihadi extremism and whether America's
self-declared 'war on terror' has been self-defeating. Likewise, they will
examine America's response to the Arab Awakening, with a particular
focus on U.S. military interventions in Libya and (indirectly) in Syria, and
Turkey's evolving role in the region. Finally, they will look at Russia's
resurgence in Middle East affairs and at the impact of China's deepening
engagement in the Middle East and the prospects for Sino-American
competition for influence there.
INTAF 815: Dynamics of International Economic Order: Law, Politics, and Power

3 Credits

This course examines the cross-cutting relationship between political power and global economic governance. INTAF 815 Dynamics of International Economic Order: Law, Politics, and Power (3) This course explores the cross-cutting relationship between political power and global economic governance. It considers how nation-states define international economic order through the creation of legal frameworks and rules-based regimes; how shifts in the international distribution of power impact these frameworks and regimes; and how, in contemporary context, the United States and China approach global economic governance as part of their grand strategies. To ground their engagement, students will appraise philosophical and analytical perspectives on international economic exchange and economic order - mercantilism, liberalism, realism, and institutionalism. They will examine the concept of hegemonic hegemony and debates over whether economic openness requires a hegemon. Against this backdrop, students will investigate the relationship between American primacy and international economic order. They will consider how U.S. primacy and America’s strategic aspirations coming out of World War II shaped the postwar economic order with regard to multilateral trade liberalization (the General Agreement on Trade and Tariffs) and monetary relations (the Bretton Woods gold exchange standard). They will evaluate challenges to America’s vision of postwar economic order posed by Asian developmentalism and ‘mercantile realism.’ Likewise, they will assess the OPEC revolution, the American/Western response thereto, and the impact of these developments on the international economic order. Students will continue examining the relationship between American primacy and international economic order by reviewing interpretations of economic globalization as a recasting of the original, post-World War II pax Americana. They will look at how reconstituting American primacy through globalization affected multilateral trade liberalization (the World Trade Organization), monetary relations (the post-Bretton Woods dollar standard), and financial liberalization. They will also evaluate competing visions of post-9/11 American primacy - liberalism, neoconservatism, and realism. Students will then turn to the impact of China’s rise on international economic order. They will assay the historical backdrop of China’s rise, ongoing processes of economic reform and modernization, Chinese grand strategy, and the challenges China’s rise poses to international frameworks for trade and investment, finance and monetary relations, and energy. They will also consider the implications of China’s rise for Asian regionalism, the BRICS (Brazil, Russia, India, China, South Africa), and the ‘global South.’ Finally, through case studies on nuclear energy and nonproliferation and on Iran sanctions, students will look at how contestation between alternative viewpoints of international order affects global governance in specific arenas. They will also reflect on the ramifications of these cases for the future of international economic order.

INTAF 816: War and Peace

3 Credits

This course examines how wars begin, how they end and the responsibility of the international community in bringing an end to the fighting and dealing with the effects of the conflict. INTAF 816 War and Peace (3) The course will examine the types and causes of war and how they are brought to an end. It will consider the role of the international community and international organizations in mediating the conflict and helping to bring about peace both through formal negotiations by governments (track I diplomacy) and through the efforts of third parties and nongovernmental entities (track II diplomacy.) It will also address the evolving role of the international community, the concept of responsibility to protect, and how and when outside interventions are undertaken. It will look at war and the origins of humanitarian intervention, conflict analysis, methods and techniques of peacemaking in international conflict including mediation, the role of the UN in conflict peacekeeping and peace-building, and democracy and the economics of war.

INTAF 817: Weapons of Mass Destruction and International Security

3 Credits

Although no nuclear weapon has been used in war in 73 years, they are used every day to affect international security decisions. This course will explore how nuclear weapons revolutionized thinking about war and peace among major powers and how they can become a primary focus of international diplomacy. It will examine why WMD programs (perhaps incorrectly) have come to be seen as a potential cause of war in some contexts and as a primary deterrent to war in others. The course will provide students with the technical understanding of the major classes of WMD (nuclear, chemical and biological weapons) and their effects and it will examine the evolution of international security thinking about their role. It will look both at how major powers (the U.S., Russia and China) conceive of the role of WMD and also how other countries and sub-national groups might consider them. The course will look at how nuclear and biological weapons in particular are for the first time in a generation becoming of increasing concern to strategic thinkers. Finally it will look at the means the U.S., other major powers and the broader international community have developed to limit and perhaps someday to eliminate the threat WMD pose to international peace and perhaps to human existence.

INTAF 818: U.S. National Security

3 Credits

This course examines: 1) how states fight wars and use force; 2) how the characteristics of nuclear and conventional weapons affect strategic thinking; 3) the manner in which the states match interests with capability and domestic politics, 4) civil military relations and 5) how wartime assessment influences policy, and 6) how to present and write professional briefings. The course will focus on both the general pattern among all states and the application of these concepts to U.S. national security. Students will be expected to develop the knowledge and skills to think, speak, and write knowledgeably about the dynamics of U.S. national security specifically and international security more generally.

INTAF 890: Colloquium

3 Credits/Maximum of 999

Continuing seminars that consist of series of individual lectures by faculty, students, or outside speakers.

INTAF 897: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject with a professional orientation that may be offered infrequently; several different topics may be taught in one year or semester.
INTAF 899: Foreign Studies
1-12 Credits/Maximum of 24
Courses with a professional orientation offered in foreign countries by individual or group instruction.

**International Agricultural Development (INTAD)**

INTAD 577: Global Agricultural Systems
3 Credits

Global food demand is expected to double over the next few decades and agriculture is arguably the world's major driver of global environmental change. Therefore the challenge is increasing agricultural production and yields without comprising biophysical processes and environmental sustainability. This course tackles this issue through a review and survey of world farming and agricultural production systems from a biophysical, technical and agro-ecological perspective. Students will learn about basic environmental factors, constraints, threats, and solutions to these systems. Emerging topics and key innovations such as sustainable intensification, GMOs, precision farming, global climate change, and biodiversity are discussed in the context of complex socio-technical and agro-ecological systems. The focus is on developing countries but includes different agro-ecological zones, from cold temperate regions to the sub-tropics, and from the arid tropics to the sub-humid and humid tropics.

INTAD 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

INTAD 820: International Agricultural Development Seminar
3-6 Credits/Maximum of 6
Students will examine international agricultural development issues through observation of systems, methods, and policies.

**International Business (IB)**

IB 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

IB 800: International Business Management
3 Credits

This is a foundational course in international business. The basic content of the course includes: 1) an overview of the means of conducting international business, with an emphasis on what makes international different from domestic; 2) the effects of the social systems within countries on the conduct of international business; 3) the major theories explaining international business transactions and the institutions influencing those activities; 4) the financial exchange systems and institutions that measure and facilitate international transactions; 5) the dynamic interface between countries and companies attempting to conduct foreign business activities; 6) corporate strategy alternatives for global operations; 7) international activities that fall largely within functional disciplines

Prerequisite: MGMT 501 ACCTG 511; ACCTG 512

**Italian (IT)**

IT 596: Individual Studies
1-9 Credits/Maximum of 9

CREATIVE PROJECTS, INCLUDING NONTHESIS RESEARCH, WHICH ARE SUPERVISED ON AN INDIVIDUAL BASIS AND WHICH FALL OUTSIDE THE SCOPE OF FORMAL COURSES.

IT 801: Fundamentals of Reading Italian for Research
3 Credits

This course provides the fundamental skills for reading Italian prose to graduate students with special interests in conducting research using Italian materials.

**Japanese (JAPNS)**

JAPNS 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

**Jewish Studies (JST)**

JST 524: Remapping the Holocaust
3 Credits

In most university courses, the Holocaust is taught chronologically, beginning with the rise of the Nazi Party and then following the German armies through Europe and into the Soviet Union. The retreat of those same forces beginning in 1943 parallels the concentration and professionalization of the killing process which then begins to break down as the war comes to an end. This narrative is not incorrect, and certainly makes sense for introductory courses. Yet it also mirrors the perpetrators' perspective. A graduate course allows us to explore different perspectives on the war and genocide and how these affect both the periodization and the geography of the Holocaust. In this course we will examine a number of divergent historiographic trends regarding the origins, enactment, end, and aftermath of the Holocaust. These will help students to think more broadly about the place of the Holocaust in world history and how new theories, methods and questions can be applied to other historical events.

Cross-listed with: GER 524

JST 532: Holocaust and Visual Culture
3 Credits

This course studies how art, literature, film, and other media can provide a perspective on one of the most horrific events in human history, the Holocaust: the genocidal murder of more than six million men, women, and children (mostly Jewish) under the Nazi regime during World War II.
The course examines the theoretical questions involved in any attempt to capture what appears to be beyond comprehension in terms of moral outrage and the sheer scale, inhumanity, and bureaucratic efficiency of the violence perpetrated by the Nazis. This course examines formal approaches of depicting the Holocaust in literature and film, as well as photography, museum installations, and memorials. Topics to be discussed include include memorialization (Holocaust museums and memorials), mass murder of the disabled, national guilt, survivor’s guilt, stigmatization, and the ethics of historical representation. The course will analyze cinematic strategies for representing the unrepresentable, dark humor about the Holocaust, the persistence of the past, Nazi propaganda, Holocaust photography, trauma theories, graphic novels, the Nuremberg trials, survivor memoirs, representations of the Nuremberg Code and the International Bill of Norms, and possibilities for art after Auschwitz.

JST 535: Studies in Jewish American Literature
3 Credits

This course offers students a working analytical familiarity with the history of Jewish writing in the United States (in North American context) and with both the history and the current state of professional study of it. Attention will be paid both to dominant and alternative narratives of this literature. Major historical topics include the earliest, pre-19th century Jewish writers in America; 19th century Jewish American writers; writers of the great Ashkenazi immigration wave of 1881-1924; interwar proletarian and modernist writers; postwar writers of assimilation; the mainstreaming of Jewish American literature in the 1950s and 1960s; post-'breakthrough' Jewish American writers; and 21st-century Jewish American literature and the new immigration. The course analyzes the development of the professional field of Jewish American literary study, including its prehistory and origins in Wissenschaft-based historicism; the professionalization of the field in the Viet Nam era; the growing dominance of so-called New Jewish Cultural Studies of the '80s and '90s; and new theoretical approaches of the first decades of the 21st century. Finally, the course examines the key debates and faultlines in the field today, including the divide between historicist and critical approaches; differences between English Department-based and Jewish Studies-based Jewish American literary study; the situation of Jewish American literary study vis-à-vis Americanist literary study and English Department-based literary study more generally; Cultural Studies-based approaches to the field vs. Literary Studies-based approaches; Comparativist approaches vs. non-Comparativist approaches; the move toward interdisciplinarity; and the ongoing struggle to theorize the field.

JST 536: Global Cultures of Genocide
3 Credits

The history and memory of the Holocaust, the Armenian, Cambodian and other forms of genocide, are often taught separately in different disciplines. This course will examine them together through the various ways different societies dealt with, experienced, and understood these. Using the extensive literature on the history of genocide this course further suggests ways in which these tragic events affected and were entangled by each other’s. Specific content will vary according to individual instructor, but topics may include victim cultures, ethnic cleansing, trauma, human rights, dark tourism, memorials, and architecture, as well as the general impact of these tragedies on global politics, or the way the memories of the tragedies were entangled with the civil rights and other struggles in American and global history.

JST 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

Kinesiology (KINES)

KINES 530: Experimental Design and Methodology in Kinesiology
3 Credits

Research techniques, including methods, research design, techniques for data collection, as applied to relevant problems in Kinesiology.

Prerequisite: 3-credit 400-level statistics course

KINES 531: Issues in Athletic Training
3 Credits

Analysis of professional/academic issues related to athletic training; includes medical considerations, legal and professional developments, and current research.

KINES 540: History of Sport: Cultural and Social Dynamics
3 Credits

This seminar explores the literature, methodologies, theoretical challenges, and research questions confronting the field. KINES 540 History of Sport: Cultural and Social Dynamics (3) The History of Sport: Social and Cultural Dynamics explores the significant literature, key methodologies, and major questions currently confronting scholars of sport and leisure. The class will survey a variety of national sporting cultures and a wide range of topics. Students will read works in major research areas in the field. They will debate arguments and issues raised in those readings. They will write critiques of their readings. Students will undertake several research expeditions. The expeditions familiarize the students with the resources available at Penn State and other libraries and archives. The research expeditions also introduce them to the scholarly tools necessary for undertaking research in the social and cultural dynamics of sport. They will also produce a primary-source based research paper on a topic that they select in consultation with the professor. This course seeks to prepare graduate students to explore the history of sport. The course also seeks to develop the basic academic skills necessary for success in scholarly endeavors. Students will read, debate, and write. Writing assignments include journal article summaries, book critiques, and a research paper. The completed research paper should serve as a platform for producing a conference presentation and/or journal publication.

KINES 551: Seminar in Motor Control
3 Credits

The course will address contemporary theories and methods in motor control as reflected in recently published scientific papers.

KINES 565: Neuropsychological Basis of Movement
3 Credits

The basic understanding of neuropsychological structures and mechanisms involved in the generation of human voluntary movement.
KINES 567: Advanced Exercise Physiology
3 Credits

Physiological changes during exercise with emphasis on the effects of physical conditioning and training.

Prerequisite: BIOL 472, EXSCI480
Cross-listed with: PHSIO 567

KINES 575: Experimental Methods in Biomechanics and Motor Control
3 Credits

Introduces the theory and practice behind the primary experimental methods used in biomechanics and motor control. KINES 575 Experimental Methods in Biomechanics and Motor Control (3)

Biomechanics and motor control share a common methodology for recording and analyzing human movement. This course is designed to introduce students to the theory and practice behind the primary experimental methods used in biomechanics and motor control. At the end of the course students should have an increased understanding of the experimental methods used in biomechanics and motor control, and experience at implementing these methods. Topics to be covered include: signal processing, electromyography, motion analysis, force measurement, anthropometry, joint kinematics in two- and three-dimensions, joint kinetics, modeling, error propagation, and scaling and dimensional analysis. Lectures will be used to introduce students to the theory behind a measurement technique. Readings will be used to provide supplementary examples of how these techniques are applied in the analysis of human movement. The techniques will be illustrated with MATLAB routines, with data sets provided so the students can experience how the data must be manipulated to provide meaningful results. Assessments will focus on students' understandings of the techniques, their implementation, and interpretation of their output. The course will provide a solid foundation for students wanting to understand how the data they are reading about has been produced, and the limitations in such data. Students will also have the background required to become independent in their data collection and processing in the analysis of human movement in both biomechanics and motor control. Evaluation will include exams, class presentations and a portfolio. It is anticipated that this course will be offered every spring semester with a maximum enrollment of 15.

Prerequisite: 3-credit 400-level biomechanics or motor control class

KINES 577: Cardiovascular Physiology
3 Credits

In-depth study of the heart and circulatory system with emphasis on the effects of exercise on cardiovascular function.

Prerequisite: KINES484
Cross-listed with: PHSIO 577

KINES 579: Advanced Biomechanics of Human Motion
3 Credits

Biomechanical foundation of human movement and injury prevention.

Prerequisite: KINES484, MATH 141 or MATH 220

KINES 588: Scientific Writing in Kinesiology
3 Credits

Instruct students in writing grant proposals, abstracts, manuscripts, and effective presentations in their respective scientific fields of study in Kinesiology. KINES 588 Scientific Writing in Kinesiology (3)

This course is intended to assist graduate students in writing grant proposals, abstracts, and manuscripts, as well as preparing effective presentations in their respective scientific fields of study within the discipline of Kinesiology. Course objectives are to: 1. Increase technical proficiency in scientific writing vice a vers a grammar, sentence structure, formatting, etc. 2. Promote the ability to write effective specific aims, hypotheses, and background statement portions of a grant proposals. 3. Understand the formulaic approach to writing effective scientific abstracts and manuscripts. 4. Expand the ability to prepare and present effective oral communications using a Power Point format. Develop an understanding and appreciation for the peer review process associated with grant proposals and manuscripts. Evaluation will be based on grading of the following brief writing assignments: a manuscript abstract, the Introduction section of a manuscript, the Specific Aims page of an NIH-style grant proposal, and a set of Power Point slides for an abbreviated oral presentation. The course is to be offered every fall semester. Enrollment is limited to Kinesiology Department graduate students.

KINES 590: Colloquium
1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students or outside speakers.

KINES 590B: Exercise Physiology Colloquium
1 Credits/Maximum of 4

Continuing colloquia in exercise physiology which consists of individual lectures by outside speakers, students and faculty.

KINES 594: Research Topics
1-18 Credits/Maximum of 18

Supervised student activities on research projects identified on an individual or small-group basis.

KINES 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

KINES 597: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.
KINES 597A: **SPECIAL TOPICS**
1-3 Credits

KINES 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

KINES 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

KINES 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Preparation and presentation of materials in lecture and laboratory classes under the supervision of a full time faculty member.

Prerequisite: appointment as a Graduate Teaching Assistant in Health and Physical Education

KINES 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

KINES 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

Labor and Global Workers' Rights (LGWR)

LGWR 510: International Labor Law
3 Credits
Seminar exploring international labor law, including its standards, reviewing bodies, procedures, information sources, remedies, and overall strengths and weaknesses. LGWR 510 International Labor Law (3) Because globalized production systems call for globalized rules for workplace rights, a body of international labor law is rapidly developing. Designed principally for global labor activists, this course equips students to evaluate the role that international labor law – its sources, participants, mechanisms, and remedies – plays in the promotion of labor rights in the global economy. A centerpiece of the course looks at the International Labor Organization, whose complex processes introduce students to the generally ‘soft’ rules of international workplace regulation. Beyond the ILO, the course looks at other bodies – some global, others regional or bilateral – that require or encourage compliance with decent working standards. It also addresses how private parties can create either voluntary ‘codes of conduct’ or negotiated framework agreements spelling out labor rights. Across all of these topics, students take up cases covering the broad range of labor struggles (affecting unions, children, women, immigrants, forced laborers, etc.). Critical to the course is the student’s gaining familiarity with the surprising variety of information available on working conditions around the globe. As the course progresses, students are asked to formulate opinions on which international labor law forum holds the greatest potential to help with selected worker rights issues in selected countries. Students will review evidence suggesting that labor activists make their best use of international labor law when they link legal action to outreach, education, research, and ‘on the ground’ organizing to enhance chances for success.

LGWR 520: Global Workers’ Rights
3 Credits
Seminar course exploring the issues of work and workers’ rights in the global economy. LGWR 520 Global Workers’ Rights (3) This course examines the multiple debates around the topic of workers’ rights: taking political and social perspectives and linking them to contemporary debates and proposals to enhance and/or strengthen workers’ rights in Multinational Corporations (MNCs) and Global Value Chains (GVCs). The course combines an initial discussion of both the nature and the breadth of workers’ rights, both in terms of philosophical debates and institutional policy parameters. The course then examines how workers’ rights have been defended through strategic corporate research and campaigns. The course will analyze the extent to which the legal grounding of workers’ rights comes into harmony, or perhaps discord, with the actual state-based institutions that are said to implement labor laws and monitor their compliance. The course will also look at how workers’ rights and labor standards are continuously challenged by MNCs and their supplier firms, especially in light of the hegemony of competition and economic liberalization of the present age. Taking cues from such developments, the course looks at how certain theories and perspectives may assist students in understanding more acutely how the gradually changing economic and industrial structures and production-distribution regimes impact on workers’ rights. Answering this question will be done by examining recent theories derived from economic sociology and contemporary industrial relations, especially those that look at how GVCs impact lead firms, supply firms, states, workers and worker organizations. Specifically, the course will look at how workers’ rights are impacted by types of foreign investment and types of economic upgrading processes taking place in developing countries and often being propelled by capital fractions that are headquartered in the industrialized world. The last segment of the course will explore labor solidarity in GVCs. It will pay particular attention to how strategic corporate research can inform international solidarity campaigns.

LGWR 530: Chinese Labor Rel
3 Credits
Since it opened its economy to private investment in 1978, China’s planned economy has been turned into a market-driven economy. Relying heavily on export-oriented industries, China serves as a ‘spatial fix’ for Western capital, which eagerly searches for new sites of investment and business opportunities. As a result, China has become a gigantic manufacturing hub and the second largest economy in the world. The massive inflow of foreign investment, the pro-business developmental strategies of the Chinese state, and weak legal enforcement of workers’ rights have rendered workers victims of economic reform. This course will examine labor relations in post-socialist China. It will cover topics such as the development of China’s economic reform, the employment and working conditions of workers, trade unions and the collective bargaining system, the state’s role in employment relations, the labor law system, and the role of civil society and non-governmental organizations in the country’s labor relations. In addition to China, this course will focus on Vietnam (another post-communist country in Asia), and Hong Kong, Taiwan, and South Korea (three of the four Asian Tigers). It will...
investigate how these countries are similar to or different from China in terms of socio-economic development and labor relations. Moreover, the course examines labor relations in China and other countries by drawing upon analytical and theoretical concepts on subjects such as the state, the legal system, the economic system, class relations, and civil society.

LGWR 540: Research Methods in labor and Global Workers' Rights
3 Credits

This course introduces students to social science research methods and writing skills as they relate to workers and labor policy.

LGWR 550: Protest in the Fields: Agricultural Workers and Rural Organizing in a Global Context
3 Credits

The agricultural industry accounts for an enormous share of the global political economy, employing 1 billion people and representing 1 in 3 of all workers. Nonetheless, the organization of agricultural workers is often dismissed as too difficult, given the precarity, isolation, citizenship status, and technological displacement of these workers. This course provides a broad exploration of these global and national shifts in food production, tracing the transformations in the agricultural sector and the labor conditions of agricultural workers in the United States and across Latin America, Africa, Asia, and Europe. It considers how agricultural workers have developed new and innovative organizing strategies to demand economic and political rights. Drawing on diverse examples from the United Farm Workers to the global farmers’ organization La Via Campesina (the Peasant Way), we will discuss the struggles for rural unions, environmental rights, land access, and food sovereignty. The goal of the course is to provide students with an overview of how the agricultural sector reproduces racial, economic, gender, and national inequities, while also highlighting the potential power that agricultural workers hold to reshape and reconfigure the global economic system. The first half of the course offers an overview of the political and economic history of the agricultural sector, beginning in the eighteenth century and extending to the current day. This part of the course analyzes the shift from small-family farming to industrial agricultural production, as well as particular issues such as women’s access to land, the role of international agencies that regulate the agricultural sector, and the rise of organic farming. Building on these insights, students will develop an original thesis and write a paper that explores how these changes in agricultural production unfolded in one particular country. The second half of the course analyzes how rural populations have organized for workers’ rights within this shifting industry. This section of the course examines a diverse range of rural organizing efforts, from slave revolts to farmer and farmworker movements to transnational attempts to promote food sovereignty.

LGWR 596: Individual Studies
3 Credits

- 1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

LGWR 597: Special Topics
1-9 Credits/Maximum of 18

Formal courses given on a topical or special interest subject which may be offered infrequently.
LARCH 502: Intellectual History and Theory of Landscape Architecture

3 Credits
Introductory theory seminar covering the intellectual history of landscape architecture and theoretical contributions from related disciplines.
LARCH 502: Intellectual History and Theory of Landscape Architecture (3)
LARCH 502 is an introduction to the key intellectual themes in contemporary landscape architecture. The seminar provides a vehicle for rigorous and structured exploration of the theoretical and philosophical issues that face landscape architectural designers and planners. Specifically designed as a gateway graduate course, this course serves as an introduction to the disciplines at a graduate level and as means for new graduate students to develop independent research.

LARCH 510: Graduate Seminar in Landscape Architecture

3 Credits/Maximum of 3
Landscape architectural theory exploration through readings and discussions.
Prerequisite: graduate standing in the department of landscape architecture

LARCH 515: Design and Theory I: Introduction

5 Credits
Introductory landscape architectural design and applied theory for MLA students. LARCH 515 Design and Theory I: Introduction (5) LARCH 515 is the first of a four-class sequence of design studios at the core of the professional MLA design program. The design studio is an active learning setting where principles discovered in lecture or seminar classes are subject to experiments in the form of design projects. It is a class setting where solutions to complex problems are synthesized and tested based on information gathered in earlier and concurrent classes.

LARCH 550: Master of Landscape Architecture Project Studio

6 Credits
The final capstone studio for students completing the Master of Landscape Architecture.
Prerequisite: LARCH 540

LARCH 551: Final Culminating Experience Proposal

1 Credits
The Final Culminating Experience Proposal course provides the opportunity for a student to develop an area of inquiry within the discipline of landscape architecture to be explored toward the production of a capstone project as the final culminating experience of the Master of Landscape Architecture degree. The student is expected to generate and refine research questions, develop aspects of extant questions, develop and test design ideas, or otherwise enhance his or her research interests. LARCH 551 is the third of three courses that will lead to the student's final culminating experience (FCE) for the Master of Landscape Architecture degree. A successful FCE, typically a capstone project, will research in the frontiers of knowledge in the field of landscape architecture. The form and specific criteria for a capstone project will be determined by the student and adviser, in consultation with the landscape architecture graduate professor-in-charge. This documentation and presentation course is an advanced landscape research or research and design course which will culminate in the presentation of scholarly products required for the conferral of a Master of Landscape Architecture degree.

LARCH 552: Final Culminating Experience Production

4 Credits
Following approval of the FCE proposal (LARCH 551), students shall proceed to implement their research project based on their prepared schedule. In this course students shall complete the steps as outlined in their proposal with the assistance of faculty advisors. It is expected that this work shall last the duration of one semester minimum. Additional time to complete the research may be required based on topic and resources. Students are expected to document progress in the manner appropriate to their investigation topic, and to present their findings in progress on a regular basis.

LARCH 553: Final Culminating Experience Documentation & Presentation

2 Credits
In this course students shall prepare final documentation of their research-based design project, and make a public presentation/defense of their project's relevance, research/inquiry methods, design approach, and findings. LARCH 553 is the third of three courses that will lead to the student's final culminating experience (FCE) for the Master of Landscape Architecture degree. A successful FCE, typically a capstone project, will research in the frontiers of knowledge in the field of landscape architecture. The form and specific criteria for a capstone project will be determined by the student and adviser, in consultation with the landscape architecture graduate professor-in-charge. This documentation and presentation course is an advanced landscape research or research and design course which will culminate in the presentation of scholarly products required for the conferral of a Master of Landscape Architecture degree.

LARCH 590: Colloquium

1-3 Credits/Maximum of 6
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

LARCH 596: Independent Studies

1-9 Credits/Maximum of 9
Independent study opportunities open for graduate students covering topics which fall outside the scope of formal courses (non thesis).

LARCH 597: Special Topics

1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

LARCH 600: Thesis Research (On Campus)

1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

LARCH 815: Grad Studio I

6 Credits
LARCH 815 is the first of a three-course sequence of design studios at the core of the professional M.L.A. design program. Students will develop the fundamental concepts and basic skills of landscape architectural design and explore site design through expanded complexity of site and program. Students are presented with design projects that include extensive and complex programs and a broad range of site scales, existing conditions, and contexts. Projects also explore the extent and complexity of pedestrian and vehicular circulation. These expanded site and program considerations require students to consider a broad range of design responses while building skill in site design. Throughout the semester, students will develop skills in graphic representation and
visualization to explore design ideas and develop presentation graphics. The subsequent challenge for students will be the development of design processes necessary to integrate site and program understandings into unified, successful design.

**Prerequisite:** LARCH 515

**LARCH 816: Grad Studio II**

**6 Credits**

LARCH 816 considers the broader landscape and systems within the landscape. Students learn to work at the broader landscape scale, making informed planning, design and management recommendations at that level, and enlightening site-scale design with a regional perspective. Students begin exploring ways to understand and address issues of regional context. Projects include an emphasis on regional analysis, site and program analysis, and site design in the regional context. Studio work involves research and report writing and medium- to large-scale projects where site design and program are directly influenced by regional factors. Topography, geomorphology, land use, transportation, regional ecology, demographics, landscape history, visual analysis, etc., are covered, all bound into current technological formats using such tools as Geographic Information Systems. Students explore ideas about landscape-scale conservation, linkages, and recreational programming - important types of regional-scale work with which landscape architects are involved. They apply knowledge of the landscape in considering public planning, design, and management interventions, including exploration of alternatives for landscape conservation and recreation. Students become involved, through community outreach projects, with interactive and real (e.g. sometimes messy) public dialogue that may help build community-wide enthusiasm for a landscape project of regional significance. Throughout the semester, students will continue to develop skills in graphic representation and visualization to explore design ideas and develop presentation graphics.

**Prerequisite:** LARCH 520

**LARCH 817: Grad Studio III**

**6 Credits**

LARCH 817 provides an overview of community and spatial design that accommodates civic and public functions while addressing social and environmental imperatives. It also expands on site design and programs that creatively reconcile community-based (i.e. residential and/or public space) agendas. In support of focused explorations of community-oriented design, students are expected to draw on their knowledge of regional and landscape systems from LARCH 816, as well as site design in LARCH 815. In designing public spaces that lie at the heart of thriving communities, students are also expected to draw on technical skills in grading, materials, and planting acquired in their implementation courses. Throughout the semester, students will continue to develop skills in graphic representation and visualization to explore design ideas and develop presentation graphics.

**Prerequisite:** LARCH 530

**LARCH 835: Grad Implementation I: Grading**

**3 Credits**

Computer Applications for Site Analysis and Design. Geometrics: In order to perform landform manipulation, students must be able to efficiently acquire and process physical information about a site and are required to understand a suite of measurements. This course will first provide an overview of the digital and paper data sources available to landscape architects. Students will develop skills in manipulating or processing these data in order to comply with the requirements of site design. The course will also provide the measurements and formulae required for students to efficiently and accurately manipulate landforms. Landform Manipulation: One of the most critical skills landscape architects must acquire as designers is the ability to design landforms to accommodate changes in use and to translate their design ideas into dimensionally precise topographic representations of their designs. This course provides the knowledge for students to complete this process. Beginning with a single site element, students are expected to explore the suite of opportunities to place and modify a site to fit a single site element. Increased complexity is added to the suite throughout the remaining portions of the semester, thus enabling students to balance the opportunities and constraints presented by each individual design element and the overall site design. Site Systems: Building on ecological components of the curriculum, this course provides the first site specific and physical understanding of site systems critical to every landscape architect's design. Students will primarily focus on the major site features as related to site drainage, such as soil, topography, and surface geology, but will also be expected to recognize regional context in their designs. Computer Applications for Site Analysis and Design: A central component underlying the instruction of the course is providing students with a suite of computer tools. Course objectives: a) To assist in initial efforts in acquiring and processing site data; b) To perform calculations such as cut and fill, spot elevations, and slope calculations; c) To visualize and complete manipulation of landforms; d) To understand the interaction of physical site features on individual sites (e.g., soil and topography); and e) To communicate their final site designs according to professional standards

**LARCH 836: Grad Implementation II: Materials**

**3 Credits**

The landscape architect calls upon a rich array of materials to construct the built elements of landscape walls, ground surfaces, overhead structures, and furniture systems. The functional success and durability of many historical and traditional construction methods is based on a learned appreciation of the qualities and behaviors of materials in use in the landscape. Students develop understanding of the fundamental structural qualities of materials and use that knowledge to devise and illustrate their own design details. The same understanding of material behaviors will be used to investigate the qualities of novel construction materials, and will guide the development of construction details that respond to new constraints and opportunities. The main focus of LARCH 836 will be on materials and construction detailing, with emphasis on techniques appropriate for an array of design situations. Representation of design ideas using computer-aided-drafting is expected in this class.

**LARCH 837: Grad Implementation III: Plants**

**3 Credits**

This course addresses the applied principles, tools, and techniques of planting design implementation, with a focus on landscape planting methods and technically proficient documentation. It relies on students having achieved foundational planting design knowledge and abilities in prior design studios. Proceeding briskly through site and contextual analysis and conceptual design, we will concentrate on methodical design development, investigation of planting implementation
and management methods, and preparation of planting contract documentation. Upon successful completion of the course, students will have achieved proficiency in planting design implementation as integral to the overall design process and vital to realizing goals for landscape performance, aesthetics, site functionality, and broader social and environmental values.

LARCH 838: Grad Implementation IV: Stormwater

3 Credits

This course is one of four graduate-level design implementation offerings that focus upon the more technical aspects of landscape architectural practice. By means of lectures, studio problems, assigned readings, and computer courseware, LARCH 838 will present the principles and techniques of: - Advanced Landform Design and Site Grading- integration of landform and structure through iterative grading design process; water flow and surface drainage. - Site Systems and Stewardship - soil, water, and vegetation interactions and ecology; site protection; site systems management; environmental responsibilities and stewardship. - Hydrology and Stormwater Management basic site hydrology; overview of hydrology and stormwater management concepts, infiltration; surface runoff calculations, surface and subsurface drainage systems design. - Production of technical drawings using computer-aided-drafting is expected in this class

RECOMMENDED PREPARATION: LARCH 835

Language and Literacy Education (LLED)

LLED 500: The Reading and Writing Classroom

3 Credits

Analysis of reading and writing processes and the development of integrated language arts programs for elementary schools.

Prerequisite: LL ED400

LLED 501: Teaching Writing in Elementary and Secondary Schools

3 Credits

In depth examination of writing development and the development of writing components of language arts programs K-12.

Prerequisite: LL ED500 or LL ED512

LLED 502: Studies in Literature for Children

3 Credits

Study of various genres of children's literature from various critical perspectives; emphasis on role of literature in children's lives.

Prerequisite: LL ED402

LLED 512: Teaching Language, Literacy, and Literature in Secondary Schools

3 Credits

Collaborative inquiry into the curricular design and experience of language, literacy, media, and literature in adolescents' personal and social lives.

Prerequisite: LL ED412W

LLED 520: Literature for Adolescents

3 Credits

Critical study of adolescent literature, its diversity of cultural voices, and designs for its use in secondary school classrooms.

Prerequisite: LL ED420

LLED 540: Adolescent and Children's Literature Related to Ethnic and Social Issues

3 Credits

Literature, K-12; study of literary symbolism, ethnic literature, issues, e.g., sex, death, adoption, divorce in trade books.

Prerequisite: LL ED402

LLED 542: Issues in Literacy Education

3 Credits/Maximum of 6

Discussion of philosophical, sociological, historical, and curricular issues in literacy education.

Cross-listed with: CIED 542

LLED 545: Literacy And Language Assessment For Instructional Decisions

3 Credits

Diagnosis of reading difficulties; genesis of reading problems; achievement, diagnostic, and capacity tests; application in simulation activities.

Prerequisite: EDPSY450, LL ED500

LLED 550: Theory and Practicum in Assessment and Remediation of Reading Difficulties

3 Credits

Links theory and practice in supervised practicum involving design and analysis of appropriate assessment and instructional procedures for elementary and secondary students.

Prerequisite: LL ED500, LL ED545

LLED 561: Cultural Pluralism in Children's and Adolescent Literature

3 Credits

Reading/discussing literature from multicultural/critical multicultural lenses and how this impacts literacy. LLED 561 Cultural Pluralism in Children's and Adolescent Literature (3) LLED 561 is a critical exploration of literature that addresses multicultural issues and their functions in
the classroom. Emphasis is on cultural diversity in children's lives. The course focuses on four main areas. The first of these areas revolves around the concepts of multiculturalism and critical multiculturalism and how they serve as lenses through which students can ask questions about society as represented in literature. It addresses what multicultural literature is, who writes multicultural literature, and how this genre of literature serves as a window into and a mirror of culturally diverse societies. Race/ethnicity, gender, class, disability and cultural authenticity in multicultural literature are discussed. The primary objectives of the course are to enable students to expand their strategies for reading culturally diverse literature, become familiar with resources related to multicultural literature, explore cultural, literacy and socio-political issues related to Children's/adolescent literature and to consider the role that multicultural literature plays in a literacy curriculum.

LLED 563: Myths and Folktales in Children's Literature
3 Credits
An in-depth study of myths and folktales shared with children and how these stories are remade and disseminated today.
Prerequisite: LL ED402

LLED 564: Writing for Children
3 Credits
Supervised workshop in the craft and techniques of writing picture books, short stories, longer fiction, and nonfiction literature for children. LLED 564 Writing for Children (3) This is a course in creative writing for those who wish to write for children. The course is intended to be creative practice in the art, craft, and techniques in a wide range of genres in children's literature: poetry, picture books, picture story books, short stories, and longer works. Students will learn about the field of literature for children, namely, how to develop their ideas into appropriate literary forms for the various age groups. Students will read and discuss contemporary writers and examine their work, and get responses to their own writing.
Prerequisite: LL ED502

LLED 567: Politics of Bilingual Education
3 Credits
To critically analyze the contemporary and historical political context of an education that is bilingual and bicultural.

LLED 568: Doing Research in Children's Literature
3 Credits
An examination of research traditions used to frame research in children's literature studies and preparation to write the master's paper.
Prerequisite: LL ED402

LLED 580: Media Literacy, Language, and Literacy in Schools
3 Credits
Theories of media literacy, issues of non-print technology in language and literacy.
Prerequisite: LL ED480

Cross-listed with: CI 580
LLED 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

LLED 594: Research in Language and Literacy Education
3 Credits
Cooperative design and study of research in language and literacy education.
Prerequisite: CI 400 or EDPSY400

LLED 595: **SPECIAL TOPICS**
1-6 Credits/Maximum of 6
LLED 595A: Practicum: Remedial Procedures and Diagnosis
3-6 Credits/Maximum of 6
Advanced practicum; diagnostic testing and remedial instruction of more severe types of reading disability; supervisory experiences, if appropriate.
Prerequisite: LL ED545

LLED 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

LLED 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

LLED 870: Teaching Reading & Writing to K-12 English Learners
3 Credits
This course prepares students to develop reading and writing instruction that supports the academic development of school-aged English learners (ELs) with a primary focus on reading. An overarching goal of the course is to promote an understanding of learning language as a process of expanding linguistic resources to engage in various contexts, with different participants/audiences and for a variety of purposes. Class participants will critically analyze reading/writing theories and research in reference to bilingual/ESL reading/writing practices. As part of this overview, students will analyze and evaluate current second language (L2) reading/writing approaches and strategies in home language (L1) and L2 literacy development. Thus, the course content emphasizes the theoretical underpinnings of and practical applications for integrating language and literacy instruction for diverse ELs.
Latin (LATIN)
LATIN 510: Latin Seminar
3-6 Credits/Maximum of 6
No description.
LATIN 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

Latina/o Studies (LTNST)
LTNST 571: Latina/o Studies: Foundations in the Field and Its Teaching
3 Credits
A foundation in the field and strategies for teaching Latina/o Studies to undergraduates. This course provides a foundation in U.S. Latina/o Studies Literature and its contexts, with two separate but related goals. The first is to get a grasp on the U.S. Latina/o Studies canon that integrates humanities and social science approaches in order to analyze critical historical contexts that have shaped the emergence and evolution of the field of Latina/o Studies in U.S. higher education and academia, such as early colonial enterprises in the South and the Southwest, Spanish and U.S. imperialism, the Chicano and Young Lords movements during the 1960s, immigration patterns from the Caribbean and Latin America, government policies towards Latinos, contemporary rural and urban movements, etc. The second goal is to explore systematically pedagogical theories and practices in Latina/o Studies and critical race scholarship more broadly, in order for students to become conversant in the theoretical debates that underlie the design of curriculum and classroom practice in Latina/o Studies at the undergraduate level. The course will incorporate some of the major lines of research in Latina/o Studies from different disciplines (such as History, Anthropology, Ethnic Studies, Gender and Sexuality Studies, and Linguistics) in order to address some of their most relevant discussions, internal critical debates, and major schools of thought. Students will also engage with other forms of cultural production, including visual culture, theater and performance, and music, among others. The seminar will provide graduate students a solid foundation in the development of a very timely and marketable research and teaching minor.

Cross-listed with: SPAN 571

Leadership Development (LEAD)
LEAD 501: Leadership Across the Lifespan
3 Credits
Analysis and application of models, theories and strategies for developing an individual's full leadership potential at different life stages.
LEAD 501 Leadership across the Lifespan (3) LEAD 501 explores and analyzes the requirements for positive leadership of the self and others, recognizing the way people change along the way from early adulthood to old age. Students will be introduced to the various components of the self-leadership, including personal meaning, optimal experiences (flow), emotional intelligence, moral development, how a leader's (and his/her followers') life stream of biographic and demographic elements influence leadership processes, and followers' perceptions the leader's behavior. Students will learn how to display psychologically empowering positive leadership based upon information obtained through discussions, 360-degree and moral development leadership assessments, participation in field projects observing leadership 'in vivo,' analysis of relevant popular movies by applying theories of leadership and adult development, and readings. Emphasis in this course is placed on learning from the life streams of 'real world' leaders to bring to life the material covered in the course. As the course progresses, new knowledge and skills are integrated into a more sophisticated framework for understanding positive leadership across the lifespan.

LEAD 519: Developing Creative High Performance Organizations
3 Credits
This course focuses on how to create high performing organizations based on models provided by business, science and the arts. BUSAD 519 BUSAD (LEAD) 519 Developing Creative High Performance Organizations (3) Overview: This course focuses on how to create high performing organizations based on models provided by business, science and the arts. We will examine the key assets that these disciplines bring and show how to apply them to business activities. For example, it has been shown that improvisational models from music are highly relevant to new product development. Course activities will include a discussion of the readings from relevant academic research in the business field. We will discuss the philosophy of aesthetics, analyze cases, and review original works. We will also listen to short lectures by practicing artists, musicians, actors, scientists, and writers. Together, these activities will help students to develop strategies to help their organizations attain higher levels of performance. This course is a graduate elective for MBA students and could also be taken by other students (such as Leadership students) if it meets their degree requirements. The way the course will run: This course will be run as a graduate seminar designed to maximize the learning of the members of the group including the instructor's. We will learn about each of the topics noted above through a variety of means. Our interaction will include general discussions, lectures, case discussions, exercises, small group meetings, and on-line chats. We will have invited speakers for the class representing the arts, music, science and business.

Prerequisite: 6 graduate credits in business
Cross-listed with: BUSAD 519

LEAD 555: Full Range Leadership Development
3 Credits
Development of behavioral skills associated with outstanding leadership of individuals, teams, and organizations through advanced information technology, experimental exercises, and case analysis.
BUSAD 555 BUSAD (LEAD) 555 Full Range Leadership Development (3) Leadership is one of the world's oldest concerns. Since the beginning of civilization, prophets, kings, rulers and managers have struggled to find answers to an important question: Why do most leaders or managers elicit merely competent performance from their followers, while a select few inspire extraordinary achievement? Given increased globalization, diversity, restructuring, e-business and innovation in today's business environment, finding answers to this question is important for maintaining organizational competitiveness. The purpose of this course is to provide answers to this question by identifying traits and behaviors associated with outstanding leaders, explaining how they get results, and why their leadership often exceeds all expectable limits. This course is designed to introduce students to a) behaviors associated with
outstanding leadership, b) social learning and cognition in organizations as a context to promote outstanding leadership, and c) leadership development as a strategic intervention to enhance individual, group, and organizational motivation and performance. The course will be run as a graduate seminar. We will interact through Web site technology, general group discussions, team projects, lecture topics, case discussions, exercises, and videos. Class sessions will focus on issues raised by the readings, cases, and issues relevant to students' organizational experiences. A portion of the class time may be set aside for the coordination of team projects.

**Prerequisite:** MGMT 501 or LEAD 501

Cross-listed with: BUSAD 555

**LEAD 556: Diversity Leadership**

3 Credits

Analysis and application of models, theories, and strategies for managing an increasingly diverse workforce and customer base. BUSAD 556 (LEAD 556) Diversity Leadership (3) In this course students will explore the theory and practice of diversity leadership through experiential exercises, video and didactic presentations, small group and class discussions, and the analysis and application of models, theories, and strategies for managing an increasingly diverse workforce and customer base.

**Prerequisite:** LEAD 501 or MGMT 501

Cross-listed with: BUSAD 556

**LEAD 557: Leadership Models and Methods**

3 Credits

Design, analysis and application of leadership models and research methods for solving organizational problems. LEAD 557 Leadership Models and Methods (3) LEAD 557 provides masters' level graduate students with an initial understanding of the process of research methods, particularly within leadership and management-related disciplines and in organizational contexts. Students will study a variety of leadership models and their application to leadership research and practice. They will learn how to evaluate and design research studies and apply them in organizational contexts in their consulting work, debate ethical and philosophical science issues, and solve focused organizational problems by applying the scientific method. Emphasis in this course is placed on "learning by doing" in order to gain knowledge of how leadership theories are formulated, how data are analyzed to test theories, and how conclusions about data and theory are drawn. Students learn by critiquing a variety of key leadership models, identifying real organizational programs and applying the skills of theory and hypothesis formulation, measurement, sampling, and study design. Students learn techniques of data collection and analysis using SPSS (Statistical Package for the Social Sciences), and how to write clear and concise research papers. As the course progresses, new knowledge and skills are integrated into a more sophisticated framework for understanding how leadership models and methods can solve organizational problems.

**Prerequisite:** LEAD 501, LEAD 555, and LEAD 556

**LEAD 561: Dynamic Communication in Leadership Contexts**

3 Credits

Articulating and promoting a vision; facilitating interaction and communicating with groups; theory and techniques of persuasion.

LEAD 561 Dynamic Communication in Leadership Contexts (3) LEAD 561 is an advanced communication course that emphasizes leadership development and communication competency. Theories and models of interpersonal communication, transformational and charismatic leadership, group dynamics, persuasion, and creativity and innovation are addressed in relation to communication practice. Student evaluation methods will include individual and team projects, presentations, and essays. The course will be offered annually and is a required course in the Master of Leadership Development program.

**Prerequisite:** LEAD 555 BUSAD555

**LEAD 562: Strategic Leadership**

3 Credits

LEAD 562 explores and analyzes the requirements for effective strategic leadership in organizations. Strategic leadership examines the role of executive leaders and their effects on organizations. The primary role of executives is to foster financial success and create wealth in organizations. This course is designed to provide students with an understanding of the requirements for effective strategic leadership in organizations as assessed by the balanced scorecard. The challenges of strategic leadership involve strategic planning, marketing products and services, selecting and training employees, facilitating organizational learning and development, and developing systems to support operations, innovation and human resources. These outcomes are lead indicators of financial success and wealth creation in organizations. Students will be given an overview of the various elements of the strategic leadership system, including organizational context/environment, leader's life stream of biographic and demographic elements influencing leadership, and followers' perceptions the leader's behavior. Emphasis in this course is placed on learning from 'real world' senior managers/administrators to enhance the practicality and usefulness of the material covered in the course. As the course progresses, new knowledge and skills are integrated into a more sophisticated framework for understanding strategic leadership.

**Prerequisites:** (LEAD 501; MGMT 501; PSY 532), LEAD 555.

Recommended preparation: Completion of 24 credits including for MLD students, LEAD 501, LEAD 555, LEAD 557; for PSYLD students, PSY 532 and LEAD 555; or with permission of instructor.

**LEAD 563: Ethical Dimensions of Leadership**

3 Credits

This course in leadership ethics is designed to examine ethical challenges faced by leaders. The course provides a historical overview of the study of ethics, including the major ethical theories advanced in both Western and non-Western traditions with a particular emphasis on the major alternatives available for the ethical leader in the twenty-first century.

**LEAD 582: Social Entrepreneurship and Community Leadership**

3 Credits

This course uses entrepreneurial and leadership skills to craft innovative responses to social needs. Entrepreneurs are particularly good at recognizing opportunities, exploring innovative approaches, mobilizing resources, managing risks, and building viable, sustainable enterprises. Entrepreneurial skills are just as valuable in the social sector as they are in for-profit business. Social Entrepreneurship aims at social impact but does not exclude economic wealth creation. Therefore it is not limited
to the non-profit sector. Despite a sustained economic boom in this country, numerous social problems remain and some seem to be getting worse. The course will provide an overview of business leadership and entrepreneurship principles for both profit and non-profit organizations whose products and services are designed to create social value.

**RECOMMENDED PREPARATION:** Completion of 24 credits in the MLD program for MLD students
Cross-listed with: BUSAD 882

**Learning Design and Technology (LDT)**

**LDT 505: Integrating Mobile Technologies into Learning Environments**

3 Credits

Research on learning with mobile computers and models for mobile computer integration for K-12 schools, community organizations, and universities. LDT 505 Integrating Mobile Technologies into Learning Environments (3) Integrating Mobile Technologies into Learning Environments examines how people use and learn with mobile computers in their everyday lives around the world. The focus is on the uses and educational possibilities of mobile computers to serve as tools that can support people in various learning environments (such as schools, colleges and universities, training and professional development, museums, libraries, homes, and workplaces). Topical areas are covered that build from empirical studies about how people learn with mobile forms of computing: (1) how people use mobile computers in their everyday lives, (2) key theoretical perspectives on how people learn with mobile computers, and (3) research findings on integrating mobile computers into the design of learning environments. In addition to activities for the whole class, students select one course strand to support their own interests and final project. The course strands are tailored to students’ interest and can include (1) integrating mobile computers to support families and young people, in and out of school, (2) integrating mobile computers to support adult learners in higher education (includes distance education), (3) integrating mobile computers to support workforce development, vocational education, professional development, certification achievement, and on-the-job training, and (4) integrating mobile computers within community-based organizations, personal hobbies, and cultural institutions.

**LDT 525: Instructional Design Models, Strategies, and Tactics**

3 Credits

Application of instructional design models and design of appropriate instructional strategies and tactics.

**Prerequisite:** LDT 415

**LDT 527: Designing Constructivist Learning Environments**

3 Credits

Designing learning environments based on constructivist principles of learning that provide modeling, coaching, and scaffolding.

**LDT 544: Video for Instruction, Training, and Research**

3 Credits

Theory, design models, and methodologies supporting the use of video in a variety of learning environments.

**Prerequisite:** INSYS 447

**LDT 549: Current Topics in Emerging Technologies**

3 Credits

An in-depth seminar on the instructional and training design implications of specific new technologies as they emerge.

**LDT 550: Learning Design Studio**

3 Credits/Maximum of 12

Examines a range of skills, processes, and theories for designing and developing interactive educational materials.

**LDT 553: Managing and Consulting for Instructional Development**

3 Credits

Knowledge and skills in managing and coordinating an instructional development project and consulting with subject matter experts and clients.

**Prerequisite:** INSYS 525

**LDT 566: Computers as Learning Tools**

3 Credits

Amplifying thinking or organizing mental functions with computers.

**LDT 574: Applied Qualitative Research for Work Practice, Innovation, and Systems Design**

3 Credits

Investigates qualitative research paradigms and methodologies; develops skills in use of ethnographic methods in work practice, innovation and systems design.

**Prerequisite:** ADTED 550

**LDT 575: Designing Experimental Research in Learning, Design, and Technology**

3 Credits

Designing research studies in Learning, Design, and Technology of a quantitative and experimental nature, which results in a research proposal.

**LDT 576: Design-based Research Methods, Applications for Educational Research**

3 Credits

The course focuses on design-based research methods in education.
CSCL is an interdisciplinary branch within the Learning Sciences that focuses on the study of social learning processes with and without technology, and the development and evaluation of tools to improve the practice of collective cognition in learning contexts. CSCL also promotes a shift in mainstream education from a practice that prioritizes individual knowledge acquisition of inert forms of knowledge about things, to one that prioritizes higher forms of psychological function, such as control over learning processes, artifact creation, and collaborative knowledge building. The CSCL community is made up of a diverse collection of researchers and includes design and lab-based studies. As such, this class will provide an overview of a variety of literature in CSCL and take a collaborative approach towards exploring this exciting field. We will use collaborative technologies to discuss and build understanding of key CSCL theories, learn about CSCL methodologies, and create new tools, artifacts, and designs to articulate our developing understanding.

LDT 581: Theoretical Foundations of Learning, Design, and Technology
3 Credits
Analysis of theoretical foundations of the instructional systems (systems and cybernetics, communications, cognitive psychology, sociological, construc-tivist, ecological) for doctoral students.

Prerequisite: PH.D. or D.ED. candidacy

LDT 583: Survey of Research in Learning Sciences and Technology
3 Credits
Analysis and evaluation of research in domains of learning sciences and technology. This course reviews the empirical research literature from the Learning Sciences and Technology fields. Students will gain experiences reading and understanding research papers to understand modern perspectives on the theories, models, methods, and tools used in the learning sciences.

Cross-listed with: SCIED 583

LDT 586: Diffusion and Adoption of Innovations and Change
3 Credits
Understanding change process in educational contexts, comparing various models, tailoring them to individual needs, and creating personalized model of change.

LDT 594: Research Topics
1-18 Credits/Maximum of 18
Supervised student activities on research projects identified on an individual or small group basis.

LDT 595: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

LDT 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

LDT 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

LDT 597B: **SPECIAL TOPICS**
3 Credits

LDT 600: Thesis Research
1-15 Credits/Maximum of 999
NO DESCRIPTION.

LDT 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
NO DESCRIPTION.

LDT 602: Supervised Experience In College Teaching
1-3 Credits/Maximum of 6
NO DESCRIPTION.

LDT 610: Thesis Research Off-Campus
1-15 Credits/Maximum of 999
NO DESCRIPTION.

LDT 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
NO DESCRIPTION.

LDT 832: Designing e-learning Within Course Management Systems
3 Credits
Practical design of instructor-facilitated online lessons taking advantage of the affordances and within the constraints of course management systems. LDT 832 Designing e-learning Within Course Management Systems (3) This course is intended for professionals in corporate and non-profit settings including those in online cyber schools, but will be informative for anyone designing online learning. Participants in this course learn to use the internal features of a CMS and to find and incorporate external tools (i.e., go outside the CMS, create something, bring it back inside). By controlling access and records, course management systems (CMS) provide a safe haven for online learning that protects the learners, the teachers, and the institution. But as closed systems, the CMS limits learning approaches to what is available within the CMS. This course requires directed hands-on experience with a CMS to develop understanding with the capability and limitations of management systems. Students who successfully complete this course will have an expanded repertoire for designing, developing, and implementing learning online and a skill set for integrating new
tools and approaches into their instruction. This course provides professionals in corporate and non-profit and other settings with hands-on experiences with online management systems to gain command of, and extend its use. Topical areas that you will read, discuss, and write about include the affordances and constraints of Course Management Systems, the tension between safety online versus access to open resources, mandates (i.e., FERPA and accessibility issues), the current and future forms of virtual classrooms, instructional design models for e-learning, the role of lesson plans as learning objects, evidenced-based didactic and constructivist delivery strategies including project-oriented approaches, problem-based learning, and case-based learning, and e-learning assessment. Subsidiary topics covered include games, simulations, mobile learning, and other breaking current topics related to online course design and delivery. The role and significance of social learning approaches in online courses are emphasized as an essential dynamic in current online courses (e.g., asynchronous discussions, learning communities, and community of inquiry). You will be asked to prepare and then moderate a class discussion and also to participate in an external professional learning community. A central outcome of this course is to actually design effective learning in a CMS. The final course project consists of a learning module that you develop within a course management system of your choice on a topic of your choice for an audience of your choice, and includes serving as instructor or facilitator of that module. You will also review lessons developed by others to provide formative feedback on those modules.

LDT 835: Supervised Field Experience in Online Instruction

3 Credits

The Supervised Field Experience in Online Teaching is a practical application of contemporary skills and practice related to online or hybrid (residential + online) education. This field experience allows students to apply and demonstrate their skills in designing, developing, and delivering online instruction to an authentic audience. The supervised field experience synthesizes and applies online program instruction in a real-world context. The experience can be tailored and differentiated to match the students’ professional goals related to their desired role(s) within an educational system. The student's online teaching field experience will contain adequate rigor that both demonstrates practical application of skills learned during Learning, Design, and Technology certificate or degree coursework as well as provide new opportunities for professional development and growth.

LDT 894: CAPSTONE EXPERIENCE

1-9 Credits/Maximum of 999

Supervised, professionally oriented student activities that constitute the culminating experience for the program.

LDT 895: Internship

1-18 Credits/Maximum of 18

Supervised, professionally oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

LDT 896: Individual Studies

1-9 Credits/Maximum of 999

Creative projects with a professional orientation, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses. Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

LING 500: Syntax II

3 Credits

Advanced topics in syntactic analysis and theory. LING 500 Syntax II (3) The aim of this course is to provide students with the skills necessary to contribute to our understanding of modern generative syntactic theory (although other theories may be introduced by professors from different theoretical backgrounds). An overview of the theory of early generative grammar and its attendant problems will be presented in this course. Attempts to resolve these issues in contemporary syntax via the minimalist program will be covered in as much depth as possible. Using the skills and arguments developed in this course, students will be required to do original research on a particular problem of syntax.

LING 502: Historical Linguistics

3 Credits

Principles of comparative linguistics; language families; reconstruction of lost languages. LING 502 Historical Linguistics (3) The goal of this course is to engage graduate students in an analysis of the competing theories of the methods for classifying the world’s languages. The course will provide an historical overview of the field with a major emphasis on contemporary debates. At issue will be whether all languages can be reconstructed to a common source. Is there possible evidence for such a reconstruction? Can the methodology faithfully extend to the very remote past?

LING 504: Phonology II

3 Credits

Advanced topics in phonological analysis and theory. LING 504 Phonology II (3) Students in this course will examine the shift from rule-
based to constraint-based theories of phonology with an emphasis on analyzing the shortcomings and paradoxes inherent in earlier approaches. At issue will be the search for a better understanding of how the phonological component continually interacts with phonetics and morphology in order to create optimal outputs. Students will analyze particular problems through reading various journal articles treating the same topic from different approaches. They will then evaluate the various approaches systematically. The goal of this course is to prepare students to do close readings of advanced research.

LING 519: Current Statistical Practice in Language Science

3 Credits

Our primary goal in this course is to explore how to analyze and interpret quantitative data in language science. Part of this goal will be to gain familiarity and proficiency with a range of quantitative techniques common in language science. Reflecting trends in the field, linear and logistic mixed effects regression will be a major focus in addition to more well-known (e.g., ANOVA, multiple regression, chi-square) techniques. We will also spend some time exploring other methods such as multidimensional scaling, generalized additive modeling, and conditional inference trees, as well as more specialized techniques (e.g., drift-diffusion modeling). A more important goal is to learn to think critically about quantitative data and how we can learn from it. This includes a critical view of quantitative research in general, questions of measurement, the many decisions involved in analytic strategy, model structure and interpretation, and the ability to extend students' knowledge to new techniques independently.

RECOMMENDED PREPARATION: Completion of an introductory graduate level course in statistics, or advanced undergraduate courses. Experience with regression and familiarity with common software for statistical analysis in language science.

LING 520: Seminar in Psycholinguistics

3-9 Credits/Maximum of 9

Consideration of theoretical and research issues relevant to psychological aspects of language sounds, syntax and semantics, and other cognitive support. LING (PSY) 520 Seminar in Psycholinguistics (3 per semester/maximum of 9) In this seminar, psycholinguistic approaches to bilingualism will be examined. Bilingualism is of interest for a number of reasons. First, despite the prevalence of monolinguals in the United States, most people of the world are bilingual. To have a genuinely universal account of human cognition will therefore require a detailed understanding of the relations between language and thought in individuals who speak and understand more than one language. It will be essential that research on basic cognitive functions in bilinguals examines both the course and the consequence of second language acquisition. Second, bilingualism provides a unique vantage point from which the relations between thought and language may be viewed. Historically, this issue was the focus of the debate over the Whorfian hypothesis (i.e., does language determine thought?). In contemporary psychology, it has emerged as a central issue in the debate over modularity. Understanding the form of language and memory representation in the bilingual may provide an important set of constraints in modeling the fundamental categories of the mind. Finally, bilingualism can provide a research tool for examining cognitive functions that are sometimes impenetrable within an individuals first language. The examination of the mapping of form to meaning in Constructing syntactically well-formed sentences in two languages with contrasting syntax, or in understanding the meaning of words that have similar form but differ in meaning in two languages, provides a tool for developing converging sources of evidence to test theories of language comprehension and memory. Topics to be covered include second language acquisition in children and adults, language comprehension and memory in second language, code switching and language mixing, the consequences of bilingualism, and the neuropsychology of bilingualism.

Cross-listed with: PSY 520

LING 521: Proseminar in the Language Science of Bilingualism

3 Credits

This course provides a cross-disciplinary overview of language science approaches to bilingualism and second language learning.

LING 522: Proseminar in Professional Issues in Language Science

3 Credits

This course addresses issues of professional development in the language sciences with special attention to cross-disciplinary research.

LING 525: Experimental Research Methods in Psycholinguistics

3 Credits

This course provides an overview of experimental research techniques used in language science.

LING 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

LING 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

Management (MGMT)

MGMT 501: Behavioral Science in Business

3 Credits

Application of behavioral science concepts and analytical methods to problems in business organizations. Analysis of administrative behavior and decision making.

MGMT 507: Positive Organizational Behavior and Wellbeing

3 Credits

Exploration of positive organizational behavior and wellbeing concepts for developing the 'human sustainability' factor in organizations.

MGMT 520: Team Facilitation

2 Credits

To gain an in-depth understanding of team dynamics and develop skills for facilitating teams to achieve effective performance.
MGMT 528: Seminar in Organizational Behavior

3 Credits

Current theoretical and research issues applicable to the study of individual and group behavior within organizational settings.

MGMT 534: Leadership and Change in Organizations

2 Credits

Understanding yourself as a leader, particularly as a leader in organizations and especially a leader of organizations undergoing change. MGMT 534 Leadership and Change in Organizations (2) This course mixes concept with practical, workable knowledge. We will focus on how you think about leadership, how things get done, and how things might be improved in organizations. This is the course that will allow you to discover, consider, and alter your leadership tendencies and values. Self-management is the major emphasis. Another is learning to lead organizations and the people in them humanely. It is also a course that will allow you to see the differing viewpoints and perspectives of your peers concerning many leadership and organizational issues.

MGMT 535: The Upper Echelons Perspective: Theory and Research

3 Credits

To learn to evaluate and conduct research on top executives and their influence on organizational strategy, structure and performance.

Prerequisite: admission to a doctoral program at PSU

MGMT 538: Seminar in Organization Theory

3 Credits

Current theoretical and research issues applicable to the study of design and management of complex organizations.

MGMT 539: Seminar in Organizational Social Networks

3 Credits

Learn theory, concepts and methods for research on organizational social networks. MGMT 539 Seminar in Organizational Social Networks (3) This course familiarizes doctoral students with the theory, research and methodological issues connected with social network analysis in organizational contexts. The course encompasses topics from the micro level (e.g., cognition and networks) to the macro level (e.g., interorganizational networks) and introduces a range of network ideas concerned with centrality, structural holes, embeddedness, and social capital. Class periods will consist mainly of focused discussion of academic papers, but will also include discussion of data analysis exercises, and student presentations. Upon completion of the course, students should have a good grasp of social network concepts and methods and be able to use them to conduct research. The course requirements include participation in discussion, the completion of data analysis exercises, and the writing of a research paper. The course is designed for 15 students and is likely to be offered once every two years.

Prerequisite: admission to a doctoral program at PSU

MGMT 551: Growth and Innovation Strategy

2 Credits

Identify opportunities for growth and profitability through technological and organizational innovations and market independently or with strategic partners.

Prerequisite: B A 571

MGMT 565: Power and Influence

2-3 Credits

Power and influence are ever-present and necessary features of organizational life; they are required to get things get done within organizations. Effective leadership therefore depends upon both understanding and possessing power and being influential. This course provides a pragmatic and ethical framework, based upon social science theory and evidence, for systematically analyzing the organizational and individual sources of power and influence, and the circumstances that lead to their attainment and effective use. The concepts and principles covered in the course provide the foundation for the skills needed to diagnose power situations, to manage conflict, and to use political strategies in responsible and pragmatic ways to get things done in organizational settings.

MGMT 578: Seminar in Corporate Strategy

3 Credits

Current theoretical and research issues applicable to the study of corporate strategy formulation and implementation.

MGMT 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

MGMT 591: Organizational Research Design

3 Credits

Experience in designing research for organizational science, to maximize the validity of eventual conclusions; methodological choices, constraints, and compromises (tradesoffs).

Prerequisite: admission to a doctoral program at Penn State; graduate-level statistics (linear model) course (e.g., STAT 501: Applied Regression Analysis).

MGMT 592: Qualitative Research Methods

3 Credits

This course provides students with an introduction to and experience with qualitative research methods employed in organizational contexts.

Prerequisite: admission to a doctoral program at Penn State
MGMT 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

MGMT 597: Special Topics
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

MGMT 597A: **SPECIAL TOPICS**
9.00 Credits

MGMT 599: Foreign Study–Management
1-12 Credits/Maximum of 12
Full-yime graduate-level foreign study at an overseas institution with whom linkages have been established.

Prerequisite: acceptance in established exchange program
International Cultures (IL)

MGMT 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

MGMT 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
NO DESCRIPTION.

MGMT 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

MGMT 811: Sustainability Strategy Development
3 Credits

MGMT 811 Sustainability Strategy Development covers intermediate to advanced content for integrating sustainability into core business by identifying and managing the environmental and social impacts of a business in order to drive profitability, reduce risk, and for long-term value creation. This course provides students with knowledge, concepts, and practical tools for developing a strategic sustainability strategy and measuring financial, environmental, and social returns. Course content focuses on: (1) an exploration of ‘sustainability’ and what it means to business regarding changes to the regulatory, consumer, competitive landscape; (2) analysis of international differences across Europe, Asia, Africa, the Americas and beyond; (3) strategy development including external and internal analysis, employee engagement, governance, and ensuring sustainability is ‘built in, not bolted on’; and (4) the latest business models and sustainable design solutions to drive business value and environmental/social performance.

MGMT 821: Complex Negotiations
1-3 Credits/Maximum of 3
The purpose of this course is to understand the theory and practice of negotiation in a variety of settings, with specific emphasis on multiparty contexts. A basic premise of the course is that while a manager needs analytical skills to discover optimal solutions to problems, a broad array of negotiation skills and an understanding of multiparty dynamics are needed in order for these solutions to be accepted and implemented. The course will allow students to develop these skills experientially and to understand negotiation in useful analytical frameworks. This course will give students an overview of the unique challenges and intricacies associated with multiparty negotiation, providing an opportunity to understand and develop applied skills regarding (a) the formulation of strategy and tactics before, during, and after a negotiation, and (b) third-party intervention in multiparty negotiation. Students will learn the structural and social characteristics of multiparty negotiation and develop techniques for managing its complexity.

Prerequisite: BA 805

MGMT 823: Organizational Change: Theory and Practice
3 Credits
The primary purpose of MGMT 823 is to provide students with an overview of current theory and practice in organizational change and development. The primary aim of organizational development is to enhance organizational performance by improving the fit between individuals and the organization, as well as between the organization and its environment, all amidst ever-changing surroundings. This course will discuss current theories, models, research, techniques, and approaches to organizational change as well as the implications of change for organizational transformation and reconceptualization of management philosophies, principles, practices, and behavior that leads to high performance. The application of management and leadership skills required to manage change are of primary interest in contemporary organizations and is the main focus of this course.

MGMT 831: Strategy Implementation and Organizational Change
2-3 Credits
This course addresses the managerial challenge of strategy implementation, particularly by examining the organizational elements that must be drawn into line to support a strategy, as well as the immense difficulties of changing an organization. As such, the course relies on two overarching frameworks. The first is a model of organizational alignment; the second is a model for managing the change process. The course will emphasize application and practice, primarily by the use of cases. Students will be asked, class after class, to take the position of a senior manager or an adviser to a manager, and develop answers to questions like these: What’s the real problem here? How are the elements of the problem interconnected? What should be done? How, specifically, should we go about it? Strategy Implementation and Organizational Change will be relevant for a broad array of students, including those hoping to be managers, consultants, investors, and entrepreneurs. Because the course focuses on changing entire organizations (rather than small parts of organizations), we will be primarily taking the point of view of senior managers. However, our frameworks and tools, and the skills students will develop, will be useful early in their careers, as they face the need to manage change in their
MGMT 841: Human Resource Management

3 Credits

Human Resources Management (HRM) includes evaluating the internal and external environments of an organization, assessing work and work outcomes, and acquiring, training, developing, and compensating employees. In addition, HRM includes labor-management relations, human resource information systems, and international HRM. All managers are responsible for HR practices and managing the employment relationship in organizations, and for the impact of their HRM activities. The primary objective of this course is to investigate how managers might identify, engage in, and evaluate effective Human Resources practices. In addition, the roles and practices of the HR professional are examined.

MGMT 861: Global Strategy and Organization

2 Credits

This course focuses on the 'strategic' challenges facing the multinational firm. The types of questions that we address are: Why do firms go abroad? What differentiates a ‘global’ from a ‘multi-domestic’ industry? What are the sources of competitive advantage in a global context? Why and when do/should companies engage in cross-border strategic alliances? What are the associated risks and how to guard against them? What potential roles can foreign subsidiaries play in an MNC’s global strategy? How do companies choose an optimal global structure? How do companies ensure coordination between the center and the subsidiaries and among subsidiaries? How do companies manage strategic change from one type of global strategy to another?

Prerequisite: second year of MBA Program or graduate status in another program

MGMT 871: Strategic Management

3 Credits

This capstone course for the M.B.A. is meant to broaden the students’ orientation, giving them the perspective of top management. This is accomplished by integrating information from many functional areas such as marketing, accounting, finance, and management, and providing a ‘big picture’ strategic approach to the business environment. The course is meant to be a ‘value added’ experience, and not just a review of what has been learned in the program to date.

Prerequisite: MGMT 501, ACCTG 811, BUSAD 523, MBADM 820, BA 800, BA 810 Recommended Preparations: Student must complete a minimum of 27 credits, including Foundation courses.

MGMT 873: Corporate Innovation Strategies

3 Credits

The goal of this course is to enable students to improve their understanding of managing and leading in changing environments. Students will study approaches to change, including resistance, learning, innovation, resilience, sustainability, and adaptation.

Prerequisite: MGMT 501

MGMT 880: Business Transformation Consulting

1-3 Credits

This course provides an understanding of key issues, concepts, and methodologies associated with business transformation and management consulting. It introduces students to the professional services industry, industry best practices, and a variety of client contexts where advisory services are needed. Additionally, students will learn common consulting methods and how to apply them in client organizations. A consulting-oriented solution development lifecycle is used as the organizing framework of the course. The primary phases of this framework include: client qualification/validation, problem identification, data gathering, requirements definition, project planning, solution design, solution development, solution implementation, and client relationship management. Students will learn to how to identify and define organization problems, highlight pain points, map work flows, explore business models, investigate strategic alignment, develop recommendations, present business cases, and prototype solutions. The course will also enable students to learn how to advise clients and present key points and recommendations in a direct, clear, and compelling manner. The course objective is to provide students with consultative methods, skills, and tools essential to facilitating organizational change. It is designed around real-world problems and projects involving organizational assessment, solution development, and implementation planning. Students will be assigned to a consulting team. Each consulting team will be assigned to work with a corporate client to address a real-world business problem. Students will learn how to work proactively with key stakeholders to identify and understand the choices, risks, and benefits of particular solution alternatives, prepare project proposals, develop a plan to support the needed changes, and assess the effectiveness of business transformation efforts. Depending on the project, the recommended solution may be prototyped or fully developed during the course.

MGMT 883: Project Management & Delivery

1-3 Credits

MGMT 883 addresses concepts and methodologies associated with project management and the delivery of non-repetitive business activities. In this course, students will learn how to organize and manage work activities related to delivery of a collaborative venture that has unique objectives along with a beginning and an end. Along with the acquisition of fundamental project management knowledge and learning how to apply common project management tools/techniques, students will explore how to apply project management practices in multiple industries and contexts (i.e., consulting, internal corporate, multi-party, venture start-up). More specifically, students will learn and apply common project management tools and techniques used in various aspects of project management including but not limited to requirements gathering, stakeholder analysis, project definition/charter, project scheduling, project communication planning, risk mitigation planning, project budgeting & control, project metrics/assessment, project documentation planning, and project closeout assessment. Traditional and agile approaches to project management will be explored along with the benefits and drawbacks of each approach. Strategic considerations will include identification of success criteria, effective use of KPIs and performance metrics, timely identification and mitigation of project risk, team formation, resource constraints, project sponsorship, leadership within a project management context, and management of scope creep.
MGMT 885: Management Consulting Methods and Practice

MGMT 885 explores the methods and tools commonly used in the practice of management consulting. This course is intended for students interested in working in this field or working in organizations that hire management consultants. It is organized into the following topical areas:
- Management Consulting as a Discipline
- Project Management Techniques
- Change Management
- Project Environment
- Roles and Responsibilities
- Tools and Techniques
- Client Communication
- Research and Analysis
- Project Selection
- Resource Management
- Project Control
- Risk Management
- Career Development

Prerequisite: graduate standing

MANGT 510: Project Management

A problem-based, interdisciplinary course in project management skills and techniques needed to manage projects in a modern business environment. MANGT 510 Project Management (3) Project Management has been labeled by Fortune magazine as the number one career choice for the coming decade. Increasingly, organizations are adopting project management techniques and structures within their business framework. Project management offers the twin advantages of allowing organizations to create products and processes efficiently, through optimal use of resources, and rapidly, in order to respond to rapid time-to-market demands. At the same time, however, substantial interest has been generated in the methods for effective cost control in the project environment. How can an organization implement projects while maintaining control of its costs and value? The role of the instructor in this course is to promote student learning of a wide variety of knowledge and skills required for successful project management. These include the ability to understand 'cost' and 'value' as these terms apply to project management, to understand the nature of budgeting and financial analysis for project selection and control, and the ability to interpret control information as it allows for change (configuration) management of mid-stream projects.

Prerequisite: or concurrent: MANGT510

MANGT 520: Planning and Resource Management

A problem-based course that addresses techniques for planning the project development process, including securing resources and resource management. MANGT 520 Planning and Resource Management (3) Project management has been labeled by Fortune magazine the number one career choice for the coming decade. Increasingly, organizations are adopting project management techniques and structures within their business framework. Project management offers the twin advantages of allowing organizations to create products and processes efficiently, through optimal use of resources, and rapidly, in order to respond to rapid time-to-market demands. The key 'front-end' processes associated with successful project management consist of planning and resource management—in effect, the need to first plan the work, ensure necessary resources are available, and thoroughly understand the components of the project plan, including activities and their interrelationships. The role of the instructor in this course is to promote student learning of a wide variety of knowledge and skills required for successful project management. These include the ability to understand planning and resources as these terms apply to project management, to understand the nature of developing comprehensive plans and schedules, manage resources for their maximum effect, and learn how to respond to crises or unanticipated events in terms of adjustments to plans and resource requirements.

Prerequisite: or concurrent: MANGT510
MANGT 525: Commercial Law and Project Procurement

3 Credits

A problem-based course that addresses elements of commercial law and procurement practices and their implications for project management. MANGT 525 Commercial and Procurement (3) Project management has been labeled by Fortune magazine as the number one career choice for the coming decade. Increasingly, organizations are adopting project management techniques and structures within their business framework. Project management offers the twin advantages of allowing organizations to create products and processes efficiently, through optimal use of resources, and rapidly, in order to respond to rapid time-to-market demands. This course looks at the key issues in contracts, contract law, negotiation, and procurement. In developing projects for external clients, it is vital that organizations and project team members understand some of the basics by which contracts are negotiated and enforced. The role of the instructor in this course is to promote student learning of a wide variety of knowledge and skills required for successful project management. These include the nature of contracts and contract law, the use of contracts as a procurement strategy, how to understand the nature of contracts, their use as a negotiation tool, and the use of bidding and negotiation in relationships between project organizations and their customer base.

Prerequisite: prerequisite or concurrent: MANGT510

MANGT 531: Organizations

3 Credits

An examination of organizational theories and processes of organizational behavior.

MANGT 535: Interpersonal and Group Behavior

3 Credits

A human relations-based course that identifies the significant challenges that managing individuals on project teams represents. MANGT 535 Interpersonal and Group Behavior (3) Project management has been labeled by Fortune magazine as the number one career choice for the coming decade. Increasingly, organizations are adopting project management techniques and structures within their business framework. Project management offers the twin advantages of allowing organizations to create products and processes efficiently, through optimal use of resources, and rapidly, in order to respond to rapid time-to-market demands. This course serves as an important linkage between the technical demands of project management and the behavioral challenges that await project teams in the form of interpersonal behavior and group interactions. The role of the instructor in this course is to promote student learning of a wide variety of behavioral knowledge and skills required for successful project management. These include understanding the impact of interpersonal behavior and team-based performance on project success as well as recognizing the impact of issues such as motivation and negotiation skills for managing projects.

Prerequisite: prerequisite or concurrent: MANGT510

MANGT 540: Strategy: Corporate, Business and Project

3 Credits

A problem-based course that focuses on linking projects to overall corporate strategy. MANGT 540 Strategy: Corporate, Business and Project (3) Project management has been labeled by Fortune magazine as the number one career choice for the coming decade. Increasingly, organizations are adopting project management techniques and structures within their business framework. Project management offers the twin advantages of allowing organizations to create products and processes efficiently, through optimal use of resources, and rapidly, in order to respond to rapid time-to-market demands. This course provides a conceptual grounding in the role that projects play in furthering an organization's strategic goals. Projects are, in effect, the building blocks of strategy because they represent the operationalization of strategic plans. The role of the instructor in this course is to promote student learning of a wide variety of knowledge and skills required for successful project management. These include understanding the complex, widely diverse nature of the skills and knowledge required of modern project managers.

Prerequisite: prerequisite or concurrent: MANGT510

MANGT 545: Project Team Leadership

3 Credits

This course focuses on development of team leadership skills and the ability to solve team problems related to human interaction. MANGT 545 Project Team Leadership (3) The first half of this course consists of self-paced assigned readings which over basic concepts of team leadership. Students will complete quizzes over each chapter which they read and begin writing a personal case analysis. The second half of the course utilizes case studies of project teams and includes extensive class and small group discussions. In addition, each student will present a case analysis to the class. Students will have the opportunity to develop basic team leadership skills and the ability to solve team problems as they arise.

Prerequisite: MANGT510 and MANGT535

MANGT 575: Management of Projects

3 Credits

A problem-based capstone course that integrates the themes necessary to appreciate the overall challenge of project management. MANGT 575 Management of Projects (3) Project management has been labeled by Fortune magazine as the number one career choice for the coming decade. Increasingly, organizations are adopting project management techniques and structures within their business framework. Project management offers the twin advantages of allowing organizations to create products and processes efficiently, through optimal use of resources, and rapidly, in order to respond to rapid time-to-market demands. This course serves as a capstone experience intended to require students to be able to integrate the various elements from the previous set of project management courses they have covered. The course requires all other courses as prerequisites or co-requisites so that students may be sufficiently knowledgeable to synthesize all prior material. The role of the instructor in this course is to promote student learning of a wide variety of knowledge and skills required for successful project management. These include understanding the complex, widely diverse nature of the skills and knowledge required of modern project managers. In order to cover sufficiently the capstone material, students must have a thorough background in the various issues that comprise this capstone experience.
**Prerequisite:** MANGT510 prerequisite or concurrent: completion of at least 15 credits from MANGT 515, 520, 525, 531, 535, or 540.

**MANGT 596: Individual Studies**

1-9 Credits/Maximum of 9

**CREATIVE PROJECTS, INCLUDING NONTHESIS RESEARCH, WHICH ARE SUPERVISED ON AN INDIVIDUAL BASIS AND WHICH FALL OUTSIDE THE SCOPE OF FORMAL COURSES.**

**MANGT 597: Special Topics**

1-9 Credits/Maximum of 9

**FORMAL COURSES GIVEN ON A TOPICAL OR SPECIAL INTEREST SUBJECT WHICH MAY BE OFFERED INFREQUENTLY; SEVERAL DIFFERENT TOPICS MAY BE TAUGHT IN ONE YEAR OR SEMESTER.**

3 Credits

This is a graduate-level project management elective designed to expose project managers to strategic issues in marketing, opportunity recognition, and new product/service development. Marketing is presented as more than a business function; rather, as a philosophy of doing business. Students will be exposed to marketing management concepts and techniques in both domestic and international markets. This elective is intended to offer a specific context within which a large number of projects are initiated - i.e., new product and service development (NPSD) while broadening the perspective of students to understand how NPSD and project management directly link to marketing. An overview of the field of marketing is presented - from defining marketing and understanding its role in running a successful business to a thorough examination of the marketing mix, holistic marketing, marketing strategies, market opportunities analysis, branding, brand equity, and so on. It presents the marketer’s view of product and service development as well as an understanding of stakeholder management and how project managers must work with marketing as a key stakeholder in the NPSD process. Further, the course explores linkages between marketing and project management - e.g., identifying opportunities, developing strategies, building a business case, identifying key performance indicators, and so forth. Identifying opportunities, developing strategies, and designing processes for the creation of new products, are key responsibilities for both entrepreneurs and managers in established firms. Developing new products and services is also fraught with risk, however: an overwhelming majority fail when introduced to the market. New product development is thus a joint challenge of marketing and effective project management. This course is about improving the odds of placing winning bets on new products and services. Strategies and processes for new product/service development will be the core of the course.

**Management - CA (MNGMT)**

**MNGMT 505: Managing Human Resources**

3 Credits

Issues in human resource management including recruitment and selection, employee development, performance management, employee and labor relations, and employee safety. MNGMT 505 Managing Human Resources (3) This course examines the primary functions and responsibilities of those who manage human resources in formal organizations. The emphasis of this course is on the practical application of the methods human resource specialists, generalists, and managers use to perform their duties. The course is designed to appeal not only to future (or current) human resource practitioners, but also to anyone who aspires to manage people in organizations. Topics covered include management practices, the legal and regulatory environment of human resources, employee recruiting, selection and placement, training and development, performance management, compensation and benefits, employee and labor relations, and employee health, safety, and security. This course surveys the major functions and responsibilities of human resource managers. In doing so, a primary objective is to gain greater factual knowledge of human resource issues by studying organizational practices, analyzing cases, conducting research using the World Wide Web, and utilizing other sources of information. It is also hoped that each student will develop a philosophy concerning the relationships among the employer, employee, union, and government agencies involved in employment issues. Students’ knowledge is evaluated, in part, using written examinations. Each student is also typically the member of a small team that will research a specific challenge, trend, or issue that currently confronts human resource managers. Each team prepares a concise and focused presentation and written summary on its chosen topic. Other means of evaluating student knowledge may include case analyses, investigations of human resource practices within specific organizations, or other related projects.

**Prerequisite:** admission to graduate degree status

**MNGMT 511: Organizational Behavior**

3 Credits

Individual and group behavior in organizations' motivation, performance, rewards, satisfaction, decision processes, conflict; job and organizational design; structure and culture. The field of organizational behavior is intended to further our understanding of human behavior in work and organizational contexts. The field draws upon research emanating from any social science discipline (e.g., psychology, social psychology, sociology, anthropology, etc.) that might offer insight as to how individuals and groups function effectively within work contexts. The overall goal is 1) to explore how individuals’ work experience can be made more satisfying and personally fulfilling to them, and 2) to explore how organizations can manage and shape human behavior in ways that optimize organizational effectiveness and organizational goal accomplishment. Particular emphasis is placed upon the study of individual and group-level dynamics within organizations, including topics such as motivation, individual differences, ethics, emotional intelligence, group dynamics, decision-making, stress, power and politics, leadership, and organizational culture and structure.

**MNGMT 514: Organizational Innovation and New Venture Development**

3 Credits

Advanced study of the process of innovation from an organizational perspective. Includes analyses of individual, organizational, and environmental variables. The subject of MNGMT 514 is the process of innovation in organizations and the factors associated with its successful implementation. Among the topics covered are the creative process as the wellspring of innovation and elements of organizational architecture (structure and culture) that influence the process of innovation. Entrepreneurial strategy is discussed as a means for creating competitive advantage through innovation. During the last third of the course, students will develop a new venture model for an innovation...
by applying the concepts developed in the first part of the course. New venture models will be developed using collaborative learning groups established at the beginning of the course.

**Prerequisite:** MNGMT511

MNGMT 515: Labor Management Relations

3 Credits

Labor relations issues; collective bargaining agreement, negotiations, and administration; legal framework of collective bargaining; labor relations in larger social context.

**Prerequisite:** admission to MBA/MSIS Program

Cross-listed with: PADM 515

MNGMT 520: Organizational Transformation

3 Credits

Treats methods, practices, and theory of organizational empowerment, quality management, process redesign, re-engineering, restructuring, and planned change. MNGMT 520 Organizational Transformation (3) The objective of this course is to review the current theory and practice of organizational development (OD), and applied field of social science. ODs primary aim is helping to improve the alignment between individuals and the organization, and between the organization and its environment in order to achieve greater effectiveness, performance, and stakeholder satisfaction. The course provides an overview of theories, research findings, approaches, and concepts of OD. Particular attention is paid to discussing practitioner-centered cases in OD. Large-scale, system-wide organizational development - usually one that involves a paradigm shift is often referred to as Organizational Transformation or Re-engineering. The paradigm shift often involves a re-conceptualization of management philosophies, principles, practices, and behavior leading to a high performing, empowering organization.

**Prerequisite:** MNGMT511

MNGMT 522: Operations and Supply Chain Management

3 Credits

Design, development, management of manufacturing systems in a supply chain context; tools, techniques, and applications at tactical and strategic levels. MNGMT 522 Operations and Supply Chain Management (3) The purpose of Operations and Supply Chain Management is to provide students with tools and knowledge that can help them increase productivity and profitability in a manufacturing environment. Both strategic and tactical aspects of operations management will be emphasized. The course is taught in supply chain context meaning that decisions made in manufacturing must consider the overall impact of the suppliers and customers in the supply chain. Students will be asked to read and participate in the discussion of articles dealing with progressive operations and supply chain methods. The course also incorporates the case study method, in order to provide students an opportunity to apply their knowledge in class.

**Prerequisite:** BUS 505

MNGMT 523: Service Operations Management

3 Credits

Design, development, and management of service systems. Tools and techniques for non-manufacturing operations at tactical and strategic levels. MNGMT 523 Service Operations Management (3) This course is designed to introduce students to the operational aspect of a service organization, the kinds of decisions that operations managers make, and the impact these decisions have on the tactical and strategic position of the firm. Students will be introduced to tools and concepts that have the ultimate objective of increasing the productivity of the firm and the customer satisfaction of its clientele.

**Prerequisite:** BUS 505

MNGMT 570: Leadership Development

3 Credits

Experientially based skill-building for development of managerial and leadership competencies.

MNGMT 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

MNGMT 596: Individual studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

MNGMT 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

MNGMT 841: Entrepreneurial Funding Strategies

3 Credits

Entrepreneurial Funding Strategies is an in-depth analysis of concepts, strategies, and techniques to obtain funding for start-ups and entrepreneurs. This course covers an overview of entrepreneurship, techniques for analyzing cash needs, strategies for financing the new venture, building venture relationships, and exit strategies.

MNGMT 897: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

MNGMT 897A: **SPECIAL TOPICS**

3 Credits
Manufacturing Systems Engineering (MFGSE)

MFGSE 550: Design for Manufacturability I
3 Credits
Introduction to DFM, a review of enabling technologies and the systematic use of quality tools during the DFM process. MFGSE 550 Design for Manufacturability I (3) This course will provide the student with an introduction to the product design process and techniques used in the design process to optimize product design for both overall quality and minimum cost. PRODUCT DESIGN PROCESS Product fit, competitive analysis, bench marking (2 periods) Concurrent engineering (2 periods) Process standards (2 periods) Value engineering, cost containment methods (2 periods) Project management (3 periods) Product liability, patents, trade secrets (1 period) Design standards (e.g., UL, ASME) (1 period) Process standards (e.g., ISO 9000, Q.S. 9000) (1 period) The topics include: Design for Manufacturability, Design for Assembly Enabling Technologies for DFM and DFA, Quality Tools. Student performance will be evaluated by written reports, quizzes and exams.

Prerequisite: graduate standing

Marketing (MKTG)

MKTG 500: Marketing Management
3 Credits
Development of a marketing management focus, including market analysis, competition analysis, and decisions in pricing, product, promotion, and distribution channels.

Prerequisite: ACCTG511 or ACCTG512 ; B A 533

MKTG 515: Marketing Data Integration to Create Consumer Insights
3 Credits
This capstone course provides students the opportunity to integrate the foundational skills learned throughout the Master's program needed to deal with disparate marketing data sources which are common in data-driven marketing analytics. The course will be a culminating experience and will build on what students have learned about the marketing analytics process by studying current research and theoretical frameworks in the field of data visualization and integration in Marketing. Next, the course will show students how to apply the marketing analytics processes for marketing data collection, data integration, data visualization, and the creation and dissemination of marketing-related managerial insights.

MKTG 518: Global Marketing
3 Credits
Role of international marketing in the global business environment; development of marketing plans and implementation strategies under differing socio-economic conditions.

Prerequisite: MKTG 500

MKTG 521: Scientific Marketing Analysis and Implementation
2 Credits
An introduction to the tools used, rationale for, and the practice and implementation of a variety of current marketing techniques. MKTG (MS&IS) 521 Marketing Engineering (3) This course deals with concepts, methods, and applications of decision modeling to address such marketing issues as segmentation, targeting and positioning, new product design and development, advertising, sales force and promotion planning, and sales forecasting. The course is designed for MBAs as well as for students in engineering and related disciplines who have some background in or understanding of marketing principles, and exposure to spreadsheet programs such as EXCEL. Unlike conventional capstone marketing courses that focus on conceptual material, this course will attempt to provide skills to translate conceptual understanding into specific operational plans—a skill in increasing demand in organizations today. Using market simulations and related exercises tied to PC-based computer software, students will develop marketing plans in various decision contexts. Specifically, the course objectives are to: Provide students with an understanding of the role that analytical techniques and computer models can play in enhancing marketing decision making in modern enterprises. Improve students' skill in viewing marketing processes and relationships systematically and analytically. Expose students to numerous examples demonstrating the value of the analytic approach to marketing decision making. Provide students with the software tools that will enable them to apply the models and methods taught in the course to real marketing problems. The course will be of particularly valuable to students planning careers in marketing and management consulting. The course is designed for students with some background in quantitative methods as well as some exposure to basic marketing concepts. Class sessions will be devoted to probing, extending and applying the material in the readings and the cases. We will use the "Tell-Show-Do" sequence to give you hands-on experience in using the course materials for making marketing decisions. It is your responsibility to be prepared for each session as detailed in the course outline. Each one of you will benefit from belonging to a "study group" that meets and prepares for each session before coming to class.

Prerequisite: B A 500

MKTG 532: Brand Management
2 Credits
To examine and understand the processes of building, designing, measuring, and maintaining brand equity.

Prerequisite: B A 500

MKTG 533: Business Marketing
2 Credits
Study of marketing of goods and services to business, institutions, and government.

Prerequisite: B A 500
MKTG 534: Integrated Market Communications

2 Credits

Provides the frameworks for thinking, tools, language, and skills for strategic management of integrated market communications.

**Prerequisite:** B A 500

MKTG 540: Marketing Analytics

3 Credits

The course objectives are to demonstrate to students the benefits of using systematic and analytical approaches to marketing decision-making, and to build their skills and confidence in undertaking such analyses and decision-making in a modern enterprise. The analytical approaches covered in the course will enable students to identify alternative marketing options and actions that enhance business performance, predict the expected market and consumer reactions associated with potential marketing actions undertaken by a business, calibrate the opportunity costs associated with each action, and choose one or more actions that have the highest likelihood of achieving established business goals. The course will help students to develop skills that will enable them to propose and justify marketing expenditures using a Return on Investment (ROI) logic that businesses are increasingly asking of their executives. This course builds on the basic business analytics concepts and methods that business students are expected to have. The topics covered include a range of analytical concepts and tools associated with various aspects of marketing, including segmentation, targeting, positioning, product design, short-term and long-term forecasting, marketing resource allocation, search engine advertising planning, social influence measurement, A/B testing, and attribution analysis.

**Prerequisite:** MKTG 811

MKTG 541: Consumer Behavior

2 Credits

Introduce theories and concepts from psychology, sociology, economics, and other disciplines that are useful in understanding and marketing to consumers.

**Prerequisite:** B A 500

MKTG 542: New Product Development and Management

2 Credits

Identify business opportunity, understand potential customer needs, and develop a new product from concept to virtual prototype.

**Prerequisite:** B A 500

MKTG 543: e-Marketing

2 Credits

Using the Internet and related technologies to enhance and transform marketing functions and processes.

MKTG 544: Marketing Analytics

2 Credits

Prepare, analyze, and present research data to marketing decision-makers.

**Prerequisite:** MKTG 540

MKTG 545: Marketing Analytics

2 Credits

Analyze marketing data using advanced statistical models to make informed decisions.

**Prerequisite:** MKTG 540

MKTG 546: Marketing Analytics

2 Credits

Develop and apply advanced analytics techniques to marketing problems.

**Prerequisite:** MKTG 540

MKTG 547: Marketing Analytics

2 Credits

Apply advanced marketing analytics to real-world business problems.

**Prerequisite:** MKTG 540

MKTG 548: Marketing Analytics

2 Credits

Analyze complex marketing data using advanced statistical techniques.

**Prerequisite:** MKTG 540

MKTG 549: Marketing Analytics

2 Credits

Develop advanced marketing analytics models for real-world applications.

**Prerequisite:** MKTG 540

MKTG 550: Marketing Analytics

2 Credits

Analyze marketing data using advanced statistical models.

**Prerequisite:** MKTG 540

MKTG 551: Theoretical Perspectives on Buyer Behavior

3 Credits

Review of marketing and social sciences research related to understanding consumer and market behavior.

**Prerequisite:** MKTG 555

MKTG 552: Research Methods in Marketing

2 Credits

Philosophical, methodological, and measurement issues involved in designing, conducting, analyzing, and interpreting research in marketing.

**Prerequisite:** MKTG 555

MKTG 553: Marketing Models

2 Credits

Topics in the model building approach to marketing decision making, focusing on current research issues.

**Prerequisite:** MKTG 555

MKTG 554: Research Methods in Marketing

3 Credits

To explore the conceptual and applied dimensions of marketing management. MKTG 556 Marketing Management (3) This course is a seminar course, so class involvement will be a major component. In addition, students will be expected to prepare two papers. The first will be a journal submission review; the second will be the written version of each student’s research proposal. Academics need to understand journal reviewing, and they need to develop research ideas and write about them. Students will also be expected to prepare and perform two oral presentations. The first will be the presentation discussed in the session description below and will be a part of their class participation. The second will be an oral form of the student’s research presentation. Students need to be able to communicate their ideas, and it is hoped that having an oral presentation of their proposals before the written presentation will also help them improve their proposal. Finally, there will be an examination at the end of the course. Each class session, with the exception of the first and last class periods, will be devoted to an important topic in the marketing management domain. For each class period, other than the two exceptions, students will read around 7 papers. The papers will be a mix of classical, seminal works and recent, cutting-edge works in the assigned area. The bulk of the class period will be devoted to discussion of the articles assigned. Discussion will be devoted to a) why the article is important, b) good points of the article, c) bad points of the article, and d) research ideas that the article might suggest or engender. In addition, one student per week will be responsible to find, prepare, and present another published paper that deals with the weeks’ issues; this presentation will be part of the student’s participation grade. The last few minutes of each class will be devoted to a discussion by the instructors of where research in the assigned area is going and some interesting open research questions in the area. The two exceptions among the class periods will be the first and last class. In the first class, we will have an introduction to research in marketing management and this particular Ph.D. seminar, while the last class will be devoted to allowing the remaining students to present their research proposals.

**Prerequisite:** MKTG 551; Concurrent: MKTG 555
MKTG 571: Marketing Strategy  
2 Credits  
Examines business-level marketing issues and solutions to problems in competitive business environments.  
**Prerequisite:** B A 500  
MKTG 590: Colloquium  
1-3 Credits/Maximum of 3  
Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.  
MKTG 596: Individual Studies  
1-9 Credits/Maximum of 9  
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.  
MKTG 597: Special Topics  
1-9 Credits/Maximum of 9  
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.  
MKTG 599: Foreign Study–Marketing  
1-12 Credits/Maximum of 12  
Full-time graduate-level foreign study at an overseas institution with whom linkages have been established.  
**Prerequisite:** acceptance in established exchange program  
International Cultures (IL)  
MKTG 600: Thesis Research  
1-15 Credits/Maximum of 999  
No description.  
MKTG 601: Ph.D. Dissertation Full-Time  
0 Credits/Maximum of 999  
No description.  
MKTG 602: Supervised Experience in College Teaching  
1-3 Credits/Maximum of 6  
No description available.  
MKTG 610: Thesis Research Off Campus  
1-15 Credits/Maximum of 999  
No description.  

MKTG 811: Driving Business Success with Marketing Analytics  
3 Credits  
Data-driven marketing is essential for today’s business success. MKTG 811 prepares students with the fundamental skills to successfully leverage marketing data in business decision making and strategy. Students will learn how to map data to marketing challenges, apply basic statistics to marketing analyses, report results in meaningful ways, and support organizations in effectively leveraging marketing data. Special emphasis is given to translating data into meaningful and actionable business insights. This course does not assume any prior knowledge in statistics.  
MKTG 812: Evaluating Marketing Communications in the Digital World  
3 Credits  
This course provides students with the basic principles, procedures, and objectives of using analytics to assess digital marketing communications. Course content focuses on key areas of marketing communication evaluation, including audience engagement, messaging and content effectiveness, campaign reach and influence, marketing mix allocation, social sentiment and impact, and mobile and website user experience. Students will gain practical experience with a variety of analytic tools and software.  
MKTG 813: Data-Driven Customer Acquisition & Retention  
3 Credits  
MKTG 813 focuses on leveraging marketing data to support acquiring, developing relationships with, and retaining customers. Through the lens of the Customer Lifecycle, students will learn key data analytic techniques for targeting the right customers, engaging them and moving them through the path to purchase, identifying customer profitability and customer lifetime value, managing challenges such as customer churn, and building and managing customer loyalty programs.  
**Prerequisite:** MKTG 811  
MKTG 814: Analytics for Brand Management and Customer Experience  
3 Credits  
MKTG 814 prepares students to apply marketing data analytics in support of brand and product success. The course familiarizes students with analytics for brand and product positioning, brand equity and loyalty, price optimization, and enhancing the customer experience. Special emphasis is placed on data visualization and communicating data insights in ways meaningful for strategic business application.  
**Prerequisite:** MKTG 811  

Marketing - CA (MRKT)  

MRKT 513: Marketing Management  
3 Credits  
Analysis of market opportunities, development of marketing strategies, implementation of marketing plans, and control of marketing processes. This course examines concepts, techniques, and developments of marketing plans and programs within domestic and international market environments. The major focus of the course will be on the analysis of market opportunities, development of marketing strategies, plans,
and programs; organization of the marketing activities; implementation of the marketing plans, strategies, and programs; and control of the marketing processes. Furthermore, important contemporary issues of social responsibility, green marketing, and marketing ethics will be explored conceptually and analytically.

**MRKT 514: Strategic Mrkt**

3 Credits

Analysis and implementation of strategic marketing concepts and techniques in complex domestic and global business environments. The objective of this course is to provide students with a deeper understanding of marketing management in a strategy-planning context. The course is concerned with the development, evaluation, and implementation of marketing management in complex domestic and global business environments. The course deals primarily with an in-depth analysis of theories, facts, analytical procedures, techniques, and models related to marketing institutions and processes.

**Prerequisite:** MRKT 513

**MRKT 571: Consumer Behavior**

3 Credits

Factors influencing buyer behavior; contributions of the behavioral sciences to the study of selected phenomena. MRKT 571 Consumer Behavior (3) This course is intended to introduce graduate students to the basic theoretical ideas and techniques of investigations into consumer behavior phenomenon. Such a study will, it is hoped, provide an appreciation of the problems of consumer behavior and the techniques available for their solution. Specific objectives are: (a) The prepared graduate students who will enter a wide range of careers with a substantial knowledge of consumer behavior theory, research, and state-of-the art conclusions, that will permit them to use more sophisticated analytical techniques in anticipating and meeting consumer needs and demand. (b) To offer strategic how-to, and 'insider' information for using theoretical concepts and techniques and give graduate students specific opportunities, within the course.

**Prerequisite:** MRKT 513

**MRKT 572: Marketing Research**

3 Credits

Management information needs, evaluation of research proposals and findings, methods of data collection and analysis, integration of research and decisions. MRKT 572 Marketing Research (3) This is a graduate level Marketing Research course and deals with collection, processing, analysis and interpretation of information, which are main steps in completing a successful market research project. The course provides students with an understanding of marketing research and its is designed in the belief that one must understand market research jobs and use it effectively in managerial decision-making. It is practical oriented and aligned with scientific, scholarly and logical truth. The course will cover the research process including problem identification, secondary and primary data collection questionnaire design, sampling, coding process, research methodology, data analysis and interpretations, and communication with management through research reports and presentations.

**Prerequisite:** MRKT 513

**MRKT 585: Business-to-Business Marketing**

3 Credits

Marketing of products and services to other businesses and organizations including strategy, planning, research, communications, pricing, distribution, and global issues. MRKT 585 Business-to-Business Marketing (3) This course builds upon marketing management concepts and focuses on the special elements and requirements of business-to-business marketing. Emphasis is given to managerial decision-making in the areas of business marketing environment, business buying functions, business marketing strategy, business marketing systems, business marketing planning, business marketing research, business marketing segmentation and demand analysis, product strategy in business marketing, business marketing communications, promotion, pricing, and distribution and globalization strategy in business marketing. The course employs real marketing situations treated analytically and emphasizing business marketing situations. In order to present the materials in a real life environment, case problems from business-to-business marketing will be used. Heavy student preparations and participation are expected. The course will also cover business marketing strategies on the Internet.

**Prerequisite:** MRKT 513

**MRKT 587: Global Marketing**

3 Credits

Exploration of strategic marketing planning concepts and techniques from a global perspective within diverse overseas market environments. MRKT 587 Global Marketing (3) This course is a systematic treatment and application of marketing management knowledge on a global scale. The objective of the course is to develop knowledge and understanding of the global marketing environment and of concepts, tools, and theory that will prepare students to take responsibility for successful global market penetration. The perspective of the course is managerial: i.e., the ability to identify market opportunities, develop plans/programs, resolve problems, and implement strategies. This course will provide graduate students with an understanding of marketing planning and strategy from a global perspective. The world should be viewed as a marketplace with a resulting need for familiarity with various environmental similarities and/or differences. These may necessitate adaptation and/or standardization of marketing programs, strategies and plans from region/nation to region/nation. A major focus of this course will be a strategic marketing management techniques, issues, strategies and problems within a global marketing framework. As well, an understanding and appreciation of world cultures, socioeconomic, and legal/political conditions which have a profound effect on a US firm’s target market selection and marketing strategy development, will be established.

**Prerequisite:** MRKT 513

**MRKT 596: Individual Studies**

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.
and strategies will be emphasized, as well as extensions based on recent innovations in financial engineering and the financial literature.

MFE 594: Research Topics
1-18 Credits/Maximum of 18
Supervised student activities on research projects identified on an individual or small-group basis.

MFE 801: Econometric Analysis
3 Credits
The aim of this course is to develop basic econometric estimation and hypothesis testing tools necessary to analyze and interpret the empirical relevance of financial and other economic data. The focus will be on the theoretical foundations of econometric analysis and strategies for applying these basic econometric methods in empirical finance research. The course includes the following topics: multivariate regression; maximum likelihood estimation; hypothesis testing; omitted variables and misspecification; asymptotic theory; measurement error and instrumental variables; time-series modelling; predictability of asset returns; econometric tests of the Capital Asset Pricing Model and multifactor models, and volatility modelling.

MFE 821: Numerical Optimization for Finance
3 Credits
This course gives students an overview of the numerical optimization concepts and methods frequently used in financial engineering. Building upon students’ knowledge of programming and calculus, this course explores computational finance applications. Many classes of optimization problems will be explored, including linear, non-linear, integer, and dynamic programming. This course will combine theory (optimality conditions, for example) and how to apply the methods to asset allocation, risk management, option pricing, and cash flow matching. Students will also be exposed to using current software tools to solve optimization problems.

Prerequisite: (MFE 513, MFE 527, MFE 811) Recommended
PREPARATIONS: Students must have basic understanding of programming, calculus, and finance. Three semesters of calculus and one semester of programming are recommended.

MFE 822: Stochastic Calculus in Finance
3 Credits
This course is designed to give students an overview of the techniques of stochastic calculus. Building upon a student’s calculus and statistical background, the course explores how to model systems that behave randomly. Applying the concepts to financial models, students will explore both discrete and continuous time processes. Major objectives in this course include covering the concepts of arbitrage and risk-neutral pricing, discrete-time models, continuous time models, Markov processes, Brownian motion, and the Black-Scholes model. Throughout the course, students will apply the techniques learned to real world problems in areas such as stock prices, bond interest rates, and portfolio management.

Prerequisite: MFE 513, MFE 811
MFE 830: Financial Engineering Capstone Project

3 Credits

This course will be an intensive/exploration/hands on course that will consist of two phases, Phase I will be a preparation phase in which the student will acquire on his/her own all the financial terminology to be used throughout the semester. Examples of the topics to be covered in this phase include asset pricing, statistical analysis of high-frequency data, merger and acquisitions, portfolio formation, assessment and traditional portfolio theory, and market anomalies. In Phase II students are required to select a topic from these areas and conduct a research project.

Prerequisites: MFE 513, MFE 527, MFE 801, STAT 805

MFE 895: Internship

1-18 Credits/Maximum of 18

Supervised, professionally oriented, off-campus, non-group instruction including field experiences, practicums, or internships. Written and oral critique of activity is required.

MFE 896: Individual Studies

1-9 Credits/Maximum of 9

Creative projects with a professional orientation, including non-thesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

MFE 897: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject with a professional orientation that may be offered infrequently; several different topics may be taught in one year or semester.

MFE 899: Foreign Studies

1-12 Credits/Maximum of 24

Courses with a professional orientation offered in foreign countries by individual or group instruction.

**Masters in Business Administration (MBADM)**

**MBADM 531: Corporate Innovation and Entrepreneurship**

3 Credits

Understanding, exploring, and applying innovation-related concepts, principles, and practices to corporate environments involved with new venture creation and other contexts.

**MBADM 571: Global Strategic Management**

3 Credits

Integrating multiple functional business areas to resolve global business problems and improve organizational performance. As the capstone course in the online MBA program, this course covers the study of strategic management, and is designed to integrate many of the components and key concepts that students have studied throughout the core curriculum. This course will enable students to develop skills to deal with complex situations, identify and evaluate alternative courses of actions for their organizations, and communicate their assessments and recommendations succinctly yet comprehensively. This course centers on factors that influence the competitive behavior and performance of the firm and the major focus throughout is firm success. Upon completion of this course, students will be able to describe, analyze, explain, and apply strategy concepts and techniques to virtually any type of organization, business or otherwise, in its pursuit of competitive advantage. More importantly, students will be prepared to think logically and critically about actual strategic situations that managers confront. By the conclusion of this course, students will be able to take a strategic manager's perspective to resolve business problems and issues with the goal of improving their organizations' performance.

**MBADM 810: Team Performance**

3 Credits

Overview of concepts, applications, and research on group and team processes and performance in an organizational context. This course provides students with an understanding of team processes and performance as well as other current issues that affect interpersonal dynamics in the workplace. This course provides an overview of the concepts of groups and teams as related to process and performance in organization. The course will blend theory, research, and practice to enable students to create, manage, and participate in teams more effectively. Broad topic areas include team design, context, and process. Specific areas of focus include learning orientation; group process skills; managing emotions, diversity, and conflict in groups; various workplace teams (e.g., virtual, cross-functional); and designing effective teams.

**MBADM 811: Financial Accounting**

3 Credits

Accounting rules, practices, and applications that characterize the accounting presentations that for-profit organizations provide to the public. This course provides students with a foundation in the basic principles, procedures, and objectives of financial accounting that govern the reporting of information about a business to individuals, institutions, and other external groups. Course content focuses on: (1) conveying the conventions and institutional framework that define accounting rules and practice, including basic exposure to Generally Accepted Accounting Principles; (2) developing familiarity with financial statements; (3) teaching fundamental accounting transactions; and (4) training students in rudimentary analysis of the financial statements. Participation in synchronized discussions at specified times will be required.

**MBADM 812: Economics for Business Strategy**

3 Credits

Introduction to microeconomic and macroeconomic environments of business, pricing determination, market structures, and formulation of competitive strategy. This course is concerned with the economics way of thinking, the economics of effective management, the economic foundation of business strategy, and the economic environment of business. It draws on, and integrates, microeconomic and macroeconomic principles to bring new insights to business strategy and effective management. It provides a study of how markets are structured, how competitors and market participants behave, how prices and levels of activity in the business firm are determined, and how pricing is used
by firms as a competitive strategy. The elements of the demand-and-supply framework are used to explain and resolve issues concerning production and sales levels, resource acquisition and allocation, and new value propositions. Also introduced are the basics of macroeconomics in the analysis of business cycles and in an understanding of government policies intended to influence the economic environment and affect where and how firms choose to compete. The effects of the global context (e.g., exchange rate policies, etc.) on economic conditions and business landscapes are analyzed. Throughout this course, students will be engaged in discussion of economic concepts and theories relevant to the concepts of competitive forces, competitive advantage, and competitive strategy, as well as the industry environment (market and competitors and their behaviors) and the industry's general economic environment. They will gain an understanding of how markets affect the elements of the firm's internal operations and how markets shape the firm's external environments which are often challenging and complex. They will also learn how to use the concepts and theories covered in this course to formulate a business strategy for the firm.

MBADM 813: Data Analysis for Decision Making
3 Credits

Applying statistical concepts to quantify uncertainty and gain insights from data in business settings. This course is designed to provide students with an exposure to the most commonly used statistical concepts, methods, and techniques, and their applications to business problems. The course covers the basic concepts of business statistics and data analysis using appropriate statistical software. The course emphasizes practical applications and business decision-making under uncertainty.

MBADM 814: Leadership Communications and Change Management
3 Credits

This course provides students with an overview of current theories and practices of organizational communication through the application and understanding of organizational change models. The primary aim is to enhance written, oral, and graphic communication by applying, assessing, and presenting organizational change assessments in team and individual forums. The course focuses on developing an understanding of the paradigm shift necessary to achieve organizational transformation and re-conceptualization of management principles through effective and efficient communication.

MBADM 815: Ethical and Responsible Business Leadership
3 Credits

Managing ethical conduct in organizations, including corporate social responsibility, sustainability, and stakeholder analysis. This course develops students’ ability to understand and manage ethical conduct and social responsibility in business organizations. Topics and readings teach students to identify and understand their values with respect to others’ and common ethical dilemmas. Philosophical and prescriptive approaches to decision making are applied to real and hypothetical ethical dilemmas. Individual differences and cognitive barriers are studied to understand their role in ethical judgement. Students learn to voice their values and to analyze whistle-blowing situations. Techniques for leading individuals and teams toward ethical conduct are discussed. Organizational culture is audited to understand its role in corporate actors’ decision making. Corporate social responsibility, stakeholder analysis, and sustainability are discussed from an historical and applied perspective. Global issues including bribery, human rights, corruption, and global standards as guiding principles are discussed.

MBADM 816: Managing and Leading People in Organizations
3 Credits

Overview of human behavior in organizations, and implications for managing and leading individuals, teams, and organizations. This course provides an overview of the theories, concepts, applications, and research findings of human behavior in formal organizations and their implications for individual, team, and organizational performance. This study of organizational behavior and performance will take place at three levels of analysis: (1) The Individual in the Organization, including topics such as personality, attitudes, perception, and motivation; (2) Groups in Organizations, including group and team dynamics, influence and political behavior, negotiation, and managing conflict, and; (3) Organizational Processes, such as work design, behavior modification, communication, and decision making.

MBADM 820: Financial Management
3 Credits

Application of techniques available to aid managers in sound financial decision making. This course is an intensive examination of techniques available to aid the financial manager in decision making. It is designed to provide the principles and tools of sound financial decision making involving cash flows over time under uncertainty. The course is also a basis and prerequisite for other graduate courses in finance and business. The topics covered include time value of money, valuation of bonds and stocks, capital budgeting, risk and return, valuation of a firm, capital markets and financing, international finance, and options.

Prerequisite: MBADM 811

MBADM 821: Marketing in a Global Environment
3 Credits

Examining strategic issues in global marketing, including opportunity analysis, planning, and implementation. This is a comprehensive marketing management course examining strategic issues in marketing. The areas of analysis, planning, implementation, and control of marketing activities and processes are examined. Marketing is presented as more than a business function; but rather, a philosophy of doing business. The main emphases of the course are on market assessment and measurement; analysis of consumer and business markets and buyer behavior; competitive marketing strategies; market segmentation, target marketing, and positioning strategy; product development and commercialization; pricing; channels of distribution; and communication and promotion strategies. The course uses a combination of readings, online discussions, presentations, group projects and a comprehensive simulation to help students not only gain a broad understanding of marketing strategies but also acquire hands-on experience in taking control of an enterprise operation involving marketing, production, and financial decision making at both strategic and tactic levels.

MBADM 822: Managing Supply Chains in Global Markets
3 Credits

Analyzing and applying key concepts, tools, and strategies in managing supply chains in global markets. This course addresses the concepts, tools, and strategies required to manage supply chains in a global market
environment. The primary focus of the course is to enable students to develop a good understanding of strategic, tactical, and operational issues of Supply Chain Management (SCM) and to apply the various SCM concepts, tools, and strategies to make decisions for effective and efficient management of supply chains. The concepts of supply chain management are linked to provide an integrated decision making framework for managers. Specific skills acquired in this course include those needed for Inventory management, Network modeling, Contracting in Supply Chains, understanding the Value of Information, building strategic Alliances, Distribution strategies, Procurement strategies, Risk management, Supply chain design, and Global logistics.

**Prerequisite:** MBADM 813

MBADM 830: Managing in the Digital Economy

3 Credits

How digital innovation, technology, and market disruption transforms industries, business practices, and market strategies. This course addresses the ways digital technological innovations transform industry, business models, strategies, operations, and management, and create new markets and products. The Economics and Markets module builds a foundation for understanding the role of disruptive technologies and their transformational impact on business strategies and models. The module has three focus areas - behavioral and informational economics, power laws, and platform competition. The Disruptive Information Technologies module is based on Clayton Christensen's concept of disruptive innovations with discussions centered on Clouds and Mobility, Internet of Things, 3D printing, robotics, transportation. The Implications of Data module focuses on the collection, analysis, and use of massive amounts of data driven by digital technologies. The topics covered include big data, privacy and security, search and ad technologies, health, and current/emerging topics. The Transformational Impact module discusses strategic implications of digital innovations on work, business, industry, and society.

**Materials Science and Engineering (MATSE)**

MATSE 501: Thermodynamics of Materials

3 Credits

MATSE 501 Thermodynamics of Materials (3) The goal of this course is to teach the fundamental principles of thermodynamics of materials from a practical viewpoint - thermodynamics as a 'toolbox' to help understand chemical behavior of materials. It attempts to integrate chemistry, phase equilibria, and thermodynamics of a materials system as different means of describing the same chemical behavior. It develops quantitative relationships among them. Thermodynamic terms/values are defined in terms of measurable quantities such as temperature, pressure (partial pressures), and concentrations to diminish the abstract nature of thermodynamics. The course emphasizes problem solving, and more specifically, developing explanations and understanding of chemical and thermal behavior observed in the laboratory/industry. A integral part of the course is to teach the use of state-of-the-art equilibrium thermodynamics computer software as an aid in performing calculations, particularly those involving chemically complex systems with many species.

**Prerequisite:** MATSE401 or equivalent

MATSE 503: Kinetics of Materials Processes

3 Credits

Introduction to application of transition state theory and mass transfer to the kinetics of materials and mineral processes. MATSE 503 Kinetics of Materials Processes (3) MATSE 503 is fundamentals of atomistic theories and phenomenological descriptions of kinetic processes in solids. It provides the foundation for the advanced understanding of materials processing, phase transformations, and microstructural evolution. Topics include atomistic mechanisms of diffusion, solutions to the phenomenological diffusion equation, diffusion along extended defects, gas-solid reactions, phase transformations, computer simulation of diffusional processes, and microstructure evolution.

**Prerequisite:** MATH 250, CHEM 450; GEOSC521 or MATSC501

MATSE 504: Solid State Materials

3 Credits

The main course objective is to present fundamental concepts and models to develop students' quantitative understanding of mechanical, electrical, optical, and thermal phenomena in solid-state materials. Emphasis is placed not only on the discussion of material properties, but also on building a comprehensive understanding of how structure affects properties in solid state materials and vice versa. An overview of quantum mechanics is given and applied to understanding confinement effects and their implication for electronic and optical properties in nanostructured materials. It is further used to provide a solid foundation for understanding LCAO, MO theory, and tight binding approximations as powerful tools towards a modern understanding of structure property relationships in materials science, bridging all the way from the atomic scale of structure to macroscopic scale of properties. The course content is reinforced by utilizing interactive simulation programs. The structure and physical properties of most solids can be understood from fundamental building blocks developed in the last century, namely, crystal structure and symmetry of the organization of atomic nuclei in a solid, and the organization of electrons throughout this periodic Coulombic potential generated by the nuclei in a crystal. These are the essential concepts that will be emphasized in this course. It will begin with a description of crystal structure and diffraction theory to understand the crystal structure in real and momentum spaces in the form of a review. This will be followed by classical and semi-classical description of solids beginning from the free electron theory in metals, to tight binding theory in insulators, and band structure in semiconductors. Examples are given for how these different materials are employed in modern electronics and optoelectronics. One of the unique aspects of this course is that computer simulations will be used to aid in 'visualizing' the concepts learnt in the class to develop an intuitive understanding of the structure in solid-state materials and their properties. The goal of the course is to equip the student with the knowledge necessary to master the modern framework in solid state materials that describes phenomena, such as electronic band structure, electronic transport, and the vibrational and thermal properties of solid state materials at an atomic level, and to prepare them for higher level graduate courses. The course is suitable for anyone interested in the science and engineering aspects of materials.

MATSE 506: Interfacial Electrochemical Processes

3 Credits

Electrochemical processes play a pivotal role in the development of new energy storage devices, energy-efficient material separation
processes, and corrosion-resistant materials. This course covers the thermodynamic and transport properties of electrochemical systems, electrochemical characterization techniques, and their application in materials research. The course gives students an overview of the fundamental principles of electrochemical cells and electrode reactions based on the thermodynamic and transport properties at the electrode-electrolyte interface. The course will begin with thermodynamics of electrode reactions both in aqueous and non-aqueous electrolytes (e.g., molten salts), including the measurement techniques and Pourbaix diagrams. Then, the course will progress to kinetic aspects of electrode reactions, followed by the electrochemical characterization methods to determine critical kinetic parameters (e.g., exchange current density, diffusivity, and Tafel constants) based on dc (e.g., controlled potential, controlled current, and cyclic voltammetry) and ac techniques (e.g., a.c. voltammetry and impedance spectroscopy). Throughout the course, the application of electrochemical principles in modern materials research and processes will be covered, including electrochemical separation processes (e.g., electroplating, electrorefining, and electrowinning cells) of energy materials, evaluation of corrosion-resistant alloys, and electrochemical power sources (e.g., batteries and fuel cells).

PREREQUISITE MATSE 401 MATSE 402

MATSE 507: Biomaterials Surface Science

3 Credits

Special properties of surfaces as an important causative and mediating agent in the biological response to materials. BIOE 517 BIOE 517. (MATSC 517) Biomaterials Surface Science (3) This course will factor the classical picture of the biological response to materials into spatial and temporal components, identifying the special properties of surfaces as an important causative and mediating agent. Emphasis will be on biophysical mechanisms and the biological response to materials. Contact activation of blood plasma coagulation cascade, bioadhesion, and protein adsorption will be repeatedly used as example biological response to materials surfaces to illustrate concepts and principles. Leading theories attempting to correlate both kinds of intensity of biological responses to surfaces and interfacial energetics will be compared and contrasted through a process that will quantitatively express the thermodynamic properties of materials. The hydrophobic effect and related phenomena, especially as this pertains to water solvent effects in biology, will receive special emphasis. A general background in chemistry and/or biology is required, but prerequisites are purposefully limited, reflecting the interdisciplinary aspects of the subject to and draw students from different specializations.

Cross-listed with: BIOE 508

MATSE 510: Surface Characterization of Materials

3 Credits

Physical and chemical principles of characterization techniques widely used in materials science, chemistry, and engineering. CHE 510 (MATSE) 510 Surface Characterization of Materials (3) Surface and interface characterization is an important subject in nanotechnology, heterogeneous catalysis, semiconductor processing, advanced functional materials, biomaterials, corrosion, environmental science, and tribology. This course will study the physical and chemical principles of representative characterization techniques widely used in these research areas. Topics covered in this course include surface chemistry and physics fundamentals, x-ray and electron-based spectroscopy, vibration spectroscopy, ellipsometry, microscopy with physical probes, and multivariate data analysis. Physical principles and practical applications will be studied through theoretical calculations, data analysis, and literature reviews.

Cross-listed with: CHE 510

MATSE 511B: Transmission Electron Microscopy

1 Credits

Principles and practice of transmission electron microscope operation. Students undertake individual projects.
Cross-listed with: GEOSC 511B

MATSE 512: Principles of Crystal Chemistry

3 Credits

Relation of structure to ionic size and nature; influence of pressure and temperature on structure; chemical-structural defects, crystalline solutions, phase-transitions. MATSE (GEOSC) 512 Principles of Crystal Chemistry (3) Crystal chemistry is concerned with the systematics of crystal structures as determined by ionic sizes and characteristics of chemical bonds and with changes in crystal structure with variations in temperature and pressure. The course begins with a short review of crystallography. It then proceeds to elements and ions as the building blocks of crystals. Models for the chemical bonds which bind elements and ions into crystals include classical electrostatic theory, crystal field theory, molecular orbital theory, and band theory. The principles underlying each model are explained. The next step in the buildup of crystals is to explain the principles of ionic packing, crystal defects, and the concepts of polymorphism and phase transitions. With the underlying principles and theory in place, the second half of the course deals with a systematic presentation of the various families of crystal structures, their properties, and some indication of the practical utilization of the various structural families. The discussion proceeds from binary packing structures to packing structures of ternary and quaternary composition, to metal structures, to silicate structures, to organic crystals, to defect structures and non-crystalline solids. The course is divided into seven parts, and grading is achieved by a 30-minute quiz following completion of each part. There is no suitable textbook, but a comprehensive set of printed notes is provided as are recommended readings of selected review articles and current literature. Students are also required to prepare a semester paper on a topic of their choice.

MATSE 514: Characterization of Materials

3 Credits

Classical and new (microprobe, scanning microscope, magnetic resonance, and Mossbauer) techniques for the characterization of composition, structure, defects, and surfaces. MATSE 514 Characterization of Materials (3) This course is designed for graduate and selected undergraduate students. The broad spectrum of the various materials characterization techniques will be briefly surveyed. Students will not be taught how to run specific instruments or be expected to be an expert on the analytical techniques. However, students will be given assignments that require a search of the literature and having discussions with the relevant experts to develop a detailed understanding of specific characterization techniques. Students will also be required to apply statistical methods in their assigned projects. The objectives of the course include the presentation of a survey of material characterization techniques, lectures on experimental design and use of statistical techniques, as well as problem-solving techniques. The goal is to provide students with a foundation in the use of characterization techniques to solve and diagnose material problems that can be identified and potentially resolved with materials characterization. The first part of the lectures provides a survey on many of the material characterization techniques. The second part of the course covers statistical analysis of experimental data including small population statistics, error analysis, curve fitting routines, and a brief survey of statistical experimental design. The third part of the course covers problem-solving techniques using materials characterization. Several characterization problems are given to the class that require the formation of project teams composed of 4 to 5 class members to resolve. Each project team prepares oral and written reports for the problem selected.

MATSE 523: Environmental Degradation of Materials in Nuclear Power Plants

3 Credits

Degradation of materials performance when exposed to the combination of high temperature, neutron irradiation, and aggressive electrochemistry found in nuclear reactors.

Prerequisite: MATSE409

Cross-listed with: NUCE 523

MATSE 525: Communicating Topics in Materials Science

3 Credits

This course is designed to expand students’ knowledge of materials science, engineering, and research. The course will cover the properties and applications of a broad range of materials based on each student’s proposed research topic. Students will develop an understanding of the primary characterization methods that are used to study and measure the physical and chemical properties of the chosen material and how to appropriately communicate research ideas to their peers. Additionally, students will learn about the broader impacts of their work and the importance of broadening participation - each of which are required elements in NSF proposal.

MATSE 530: X-Ray Crystallography and Diffraction

3 Credits

Reciprocal lattices and the Ewald sphere construction; crystal structure determination by powder and single crystal techniques; space groups. MATSE 530 X-Ray Crystallography and Diffraction (3) MATSE 530 is a general introduction to the crystallography and x-ray diffraction for a variety of different studies of the structure of solids. Students will gain an understanding of basic crystallography, the geometry of diffraction measurements and instrumentation, and the interpretation of diffraction data. Diffraction studies using synchrotron radiation and neutrons are also discussed.

Prerequisite: MATSE430

MATSE 531: Transmission Electron Microscopy

3 Credits

Diffraction pattern analysis and simple contrast theory applied to the structures of materials; analytical techniques in the microscope. MATSE 531 Transmission Electron Microscopy (3) This course will present the fundamentals of elastic and inelastic electron beam interactions with solid-state materials. Students will learn theoretical and practical aspects of electron diffraction and imaging, energy-dispersive x-ray spectroscopy, and electron energy loss spectroscopy. They will learn how to apply this knowledge to conduct experiments in and interpret data from the transmission electron microscope.

MATSE 535: Geometrical Crystallography

3 Credits

Derivation of lattices, types, point groups, and space groups; and group theory applied to crystallography and spectroscopy. MATSE 535
Prerequisite: MATSE43 and MATSE445 or equivalent

MATSE 543: Polymer Chemistry

3 Credits

This graduate course discusses the new advances in polymer chemistry that leads to new polymeric materials with interesting structures and properties. CHEM (MATSE) 543CHEM (MATSE) 543 Polymer Chemistry (3) This course provides advance level of polymer chemistry and materials taught in MATSE 441 - Polymeric Materials. Students are able to know the versatility that is inherent in polymer chemistry and the new research results and activities, especially controlling polymerization, polymer structures, designing polymers with desirable properties, etc. Students shall also understand the major economic and environmental concerns and solutions in producing commercial-scale polymers. This polymer chemistry course provides important links between chemistry and polymeric materials. The course will focus on recent advances in polymer chemistry that affords new polymer materials with controlled polymer structures, compositions, and properties, as well as economic and 'green' processes. This course is designed for graduate students having basic knowledge in organic, inorganic, and organometallic principles. For Chemistry major, this course offers students with the knowledge to apply chemical principles and methods to design and prepare the desirable polymers (no prerequisite for Chemistry graduate students). For Material Science and other majors, this course provides advance level of polymer chemistry and materials taught in MATSE 441 (a prerequisite course). In addition, each student will be required to review (presentation and term-paper) a contemporary subject relative to polymer chemistry, which will help student self-education, and presentation and writing skills. Students will be evaluated by quizzes and examinations, a term-paper and presentation, and class participation.

Prerequisite: MATSE441 or approval of program

Cross-listed with: CHEM 543

MATSE 544: Computational Materials Science of Soft Materials

3 Credits

Pursue applications of computational modeling methods to soft materials; explore use of these methods to different research areas.

MATSE 545: Semiconductor Characterization

3 Credits

Physical principles and experimental methods used to characterize the electrical, optical, structural and chemical properties of semiconductor materials.

Cross-listed with: EE 545
Additive manufacturing (AM) processes use a variety of metallic material forms to produce complex components. These material forms can vary from metallic powders with a rather wide range of size distributions to metal wire to sheet and other more complex composite material types. Knowledge of the processing of these different feedstock forms along with means to characterize them is needed to develop AM processes and procedures capable of being more widely used, particularly in critical applications. In this course, the production, handling, blending, and characterization of common metallic and composite feedstock materials will be covered. Feedstock forms to be addressed include metal and metal-ceramic composite powders, wire, and sheets, along with new product forms becoming available. A multi-disciplinary approach will be taken to elucidate the connections between production, characterization, and handling to develop an understanding of the role of feedstocks on the resulting process-structure-property relationships for AM processes and products.

**Prerequisite:** ESC 545 CONCURRENTS: MATSE 567, IE 527

MATSE 546: Advanced Metallic Material Feedstocks for Additive Manufacturing

4 Credits

This course reviews the fundamental underpinnings of electroceramic materials as used in passive, active, and sensor components, and systems. The recent literature and industrial trends are critically discussed within the course to aid students in identifying key material science problems to be solved in this area.

MATSE 552: Sintering of Ceramics

3 Credits

Introduction to the fundamental concepts needed to understand the physics applicable to polymer melts, solutions and gels. MATSE (PHYS) 555 Polymer Physics I (3) This course develops fundamental understanding of the conformations of polymers in solution and melt states. We start with ideal chains that have random walk statistics. Next excluded volume is introduced to understand the self-avoiding walk conformation and collapsed conformation of real chains. The behavior ideal and real chains are studied in extension, compression and adsorption. While positive excluded volume leads to swelling, negative excluded volume leads to collapse and phase separation. The phase behavior of polymer mixtures and solutions is described in detail. Semidilute solutions are understood in terms of two length scales where each chain changes its conformational statistics. Scattering is used to determine the conformation of chains, their molar mass and their interactions with surroundings. Percolation theory is introduced to model the statistics of random branching and gelation. The rubber elasticity of fully developed networks is understood in terms of the stretching laws for network chains. Entanglement effects, swelling and viscoelasticity are discussed in detail. Once the conformations of polymers are understood, dynamics of polymer liquids are considered. In dilute solutions hydrodynamic interactions dominate and the viscoelasticity predicted by the Zimm model is derived. In unentangled melts of short chains, hydrodynamic interactions are screened and the Rouse model is used to understand viscoelasticity. Unentangled polymers in semidilute solutions have Zimm dynamics on small length scales and Rouse dynamics on longer length scales. Dynamic scattering techniques are discussed for measuring polymer dynamics. Entanglement effects are described using the tube model, where surrounding chains confine the motion of a given polymer to a tube-like region. The effects of concentration, chain length and polydispersity of linear chain polymer liquids are discussed in detail. The effects of branching on polymer dynamics are introduced at the level of simple structures such as star polymers and comb polymers. The course assumes some prior knowledge of polymers, usually obtained through an introductory undergraduate course. The students should attain a working understanding of the basic concepts of polymer physics in this course, allowing them to tackle more difficult problems in their research. Such skills are reinforced through homework and take-home examinations.

Cross-listed with: PHYS 555

MATSE 556: Polymer and Composite Materials for Additive Manufacturing

3 Credits

This course will focus on how polymers are used in 3D printing including topics of thermal processing, photopolymerization, composites, and modern topics at the intersection of polymer science and additive manufacturing. Of particular importance will be the description of how additive manufacturing processes influence the final properties of polymeric and composite materials. The details of polymer chemistry and material structure will be covered to give students foundational knowledge in materials and additive processes. Basic ASTM processes in additive manufacturing will be described along with hybrid processes and topics in modern research. This course will give students a competitive advantage in understanding both materials and new manufacturing processes. The unique aspects of additive manufacturing will be discussed in the context of manufacturing economics and its impact on polymer processing as the industry and the technology develops.

MATSE 560: Hydrometallurgical Processing

3 Credits

Fundamental physico-chemical factors underlying the aqueous extraction and recovery of metals and nonmetals from ores, minerals, and scrap metal. MN PR 507 (MATSE 560) Hydrometallurgical Processing (3)
3-credit course is concerned with the fundamental physico-chemical processes associated with the processing, utilization, and recycling of materials in aqueous systems. The topics covered cut across a wide range of practical applications. The course is therefore suitable for a broad spectrum of scientists and engineers concerned with processes and processing in aqueous systems, e.g., in materials science and engineering, mineral processing, geoscience, soil science, environmental engineering, chemistry, chemical engineering, petroleum and natural gas engineering, mining engineering, nuclear engineering, and electronic and electrical engineering. A required term paper provides a formal mechanism for ensuring that students have the opportunity to apply ideas discussed in the course to their specific areas of interest.

**Prerequisite:** MATSE426
Cross-listed with: MNPR 507

MATSE 564: Deformation Mechanisms in Materials

3 Credits

Deformation of crystalline/amorphous solids and relationship to structure; elastic, viscoelastic and plastic response over a range of temperatures and strain rates. EMCH 535 / MATSE 564 Deformation Mechanisms in Materials (3) The course will study the relationship between the deformation mechanisms in materials and their structure. The types of deformation behavior considered in the course are linear elasticity (isotropic or anisotropic), viscoelasticity and plastic deformation. For the elastic behavior, the emphasis will be on the way elastic behavior is controlled by atomic structure and microstructure.

The constitutive laws that describe this behavior and the assumptions on which they are based will be introduced. The next phase of the course considers the range of deformation behavior from purely viscous (linear or non-linear) to viscoelastic. Initially, the emphasis will be on the effects of temperature and strain history and the way this behavior is described by mechanical analogs. The effect of structure on creep and stress relaxation will be described. The use of linear viscoelasticity in describing the sintering process will also be included. In ductile crystalline materials, deformation is associated with the movement of dislocations. The types of dislocations, their stress fields and energies will be described. These aspects will then be combined with structural features by including considerations of slip geometry and obstacles to dislocation motion. This approach will allow strengthening methods to be identified and quantified. Finally, creep mechanisms in crystalline materials at high temperature will be discussed and quantified.

**Prerequisite:** E SC 414M or MATSE436
Cross-listed with: EMCH 535

MATSE 565: Metals in Electronics

3 Credits

Processing and performance of metals in electronics, covering electrical resistivity, metal film deposition, metal/semiconductor contacts, interconnects, and electronic packaging. MATSE 565 Metals in Electronics (3) This course addresses the processing, use, and performance of metals in electronics. The course is intended to provide students with a background in semiconducting or other electronic materials with specific knowledge about the application of metals in electronics as well as to allow students with a metallurgical background to learn about how their expertise fits into the electronics industry. Topics covered include electrical resistivity in thin metal and alloy films, deposition of thin metal films, metal/semiconductor contacts, interconnects in microelectronics, electromigration, diffusion barriers, electronic packaging, and metal/metal contacts. Grades are based on homework problems, a term paper, and class presentations. The course is offered in alternate fall semesters.

MATSE 567: Additive Manufacturing of Metallic Materials

3-4 Credits

This course will expose students to the state of the art in understanding processing, structure, and property relationships in materials fabricated using additive manufacturing (AM). There will be a strong focus on metallic alloys, but polymers, ceramics, and advanced materials will also be briefly discussed. The emphasis of the course will be on understanding the links between processing and the resulting structure, as well as the microstructure and the mechanics of the fabricated materials. Initially, we will discuss the types of AM and the feedstock materials required for these processes. We will then focus on metals, and discuss the energy sources used in AM (lasers, electron beams), and their interactions with the material. We will discuss the molten pool characteristics and the solidification microstructures. We will relate the microstructures seen in AM to the resulting mechanical properties (elastic deformation, plastic deformation, fracture, fatigue performance, and residual stress/distortion). Finally, we will discuss specific case studies for metals, polymers, ceramics, and advanced materials.

Cross-listed with: AMD 576

MATSE 570: Catalytic Materials

3 Credits

Preparation and characterization of solid catalytic materials and the relationships between their surface, defect, and electronic properties and catalytic activity. MATSE (EME) 570 Catalytic Materials (3) This course covers the preparation and characterization of solid catalytic materials, and the relationships between the surface and electronic properties and pore structure of the materials and their catalytic activity and selectivity. The course includes the following materials: zeolites and molecular sieves; metals and alloys; metal oxides; metal sulfides; and other catalytic materials. Also included are the major applications of catalytic materials in chemical and petroleum industries and in other manufacturing industries for environmental protection. This course can be grouped into three parts: (1) introduction to catalysis and analytical techniques; (2) synthesis and characterization of catalytic materials; and (3) catalysis at surfaces of solid materials. The course is suitable for a broad spectrum of students in energy and mineral engineering, materials science and engineering, fuel science, chemical engineering, chemistry, solid-state science, and environmental engineering.

**Prerequisite:** CHEM 452 or similar course in chemical, materials or energy sciences and engineering
Cross-listed with: EME 570

MATSE 575: Functional Polymeric Materials

3 Credits

In-depth discussions of structure/property relationships in functional polymers and modern concepts of structural design of polymers.
MATSE 580: Computational Thermodynamics
3 Credits

The integration of fundamental principles and advanced computational approaches in the thermodynamics of materials, including hands-on computation, theory and application.

Prerequisite: MATSE501 or equivalent

MATSE 581: Computational Materials Science II: Continuum, Mesoscale Simulations
3 Credits

This course will focus on computational techniques and fundamentals of phase transformation simulations on the continuum, mesoscale level. The objective of the course is to introduce the evolution of simulation techniques and integrate fundamental principles in thermodynamics and kinetics with advanced computational approaches. The teaching will be problem-oriented using literature publications. There will be many hands-on computer exercises to gain experience in presenting problems to computer and interpreting the computer results. This course is particularly useful for students who would like to explore the power of computational approaches and would like to understand the thermodynamic and kinetic principles behind computational phase transformations.

Prerequisite: MATSE501 and MATSE503

MATSE 582: Materials Science and Engineering Professional Development
1 Credits

This course covers ethical conduct of research, pathways of professional development and strategies and tools for research.

MATSE 590: Colloquium
1 Credits/Maximum of 1

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

MATSE 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

MATSE 597: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

MATSE 597B: **SPECIAL TOPICS**
1-3 Credits

Cross-Listed

MATSE 600: Thesis Research
1-15 Credits/Maximum of 999

No description.

MATSE 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999

No description.

MATSE 602: Supervised experience in college teaching
1-3 Credits/Maximum of 6

Supervised assistance with the teaching program in metallurgy.

MATSE 602 Supervised Experience/College Teaching (1-3) This course provides the opportunity for graduate students to learn college teaching by assisting a faculty member with an undergraduate or graduate course.

Mathematics (MATH)

MATH 501: Real Analysis
3 Credits

MATH 501 Real Analysis I (3) This course develops Lebesgue measure and integration theory. This is a centerpiece of modern analysis, providing a key tool in many areas of pure and applied mathematics. The course covers the following topics: Lebesgue measure theory, measurable sets and measurable functions, Lebesgue integration, convergence theorems, Lp spaces, decomposition and differentiation of measures, convolutions, the Fourier transform.

Prerequisite: MATH 404

MATH 502: Complex Analysis
3 Credits

MATH 502 Complex Analysis (3) This course is devoted to the analysis of differentiable functions of a complex variable. This is a central topic in pure mathematics, as well as a vital computational tool. The course covers the following topics: complex numbers, holomorphic functions, Cauchy's theorem, meromorphic functions, Laurent expansions, residue calculus, conformal maps, topology of the plane.

Prerequisite: MATH 501

MATH 503: Functional Analysis
3 Credits

Banach spaces and Hilbert spaces. Dual spaces. Linear operators. Distributors, weak derivatives. Sobolev spaces. Applications to linear differential equations. MATH 503 Functional Analysis (3) This course develops the theory needed to treat linear integral and differential equations, within the framework of infinite-dimensional linear algebra. Applications to some classical equations are presented. The course covers the following topics: Banach and Hilbert spaces, dual spaces,
linear operators, distributions, weak derivatives, Sobolev spaces, applications to linear differential equations.

Prerequisite: MATH 501

MATH 504: Analysis in Euclidean Space
3 Credits
The Fourier transform in L1 and L2 and applications, interpolation of operators, Riesz and Marcinkiewics theorems, singular integral operators.

Prerequisite: MATH 502

MATH 505: Mathematical Fluid Mechanics
3 Credits
Kinematics, balance laws, constitutive equations; ideal fluids, viscous flows, boundary layers, lubrication; gas dynamics.

Prerequisite: MATH 402 or MATH 404

MATH 506: Ergodic Theory
3 Credits
Measure-preserving transformations and flows, ergodic theorems, ergodicity, mixing, weak mixing, spectral invariants, measurable partitions, entropy, Ornstein isomorphism theory.

Prerequisite: MATH 502

MATH 507: Dynamical Systems I
3 Credits
Fundamental concepts; extensive survey of examples; equivalence and classification of dynamical systems, principal classes of asymptotic invariants, circle maps.

Prerequisite: MATH 502

MATH 508: Dynamical Systems II
3 Credits
Hyperbolic theory; stable manifolds, hyperbolic sets, attractors, Anosov systems, shadowing, structural stability, entropy, pressure, Lyapunov characteristic exponents and non-uniform hyperbolicity.

Prerequisite: MATH 507

MATH 511: Ordinary Differential Equations I
3 Credits
Existence and uniqueness, linear systems, series methods, Poincare-Bendixson theory, stability.

Prerequisite: MATH 411 or MATH 412

MATH 513: Partial Differential Equations I
3 Credits
First order equations, the Cauchy problem, Cauchy-Kowalevski theorem, Laplace equation, wave equation, heat equation.

Prerequisite: MATH 411 or MATH 412

MATH 514: Partial Differential Equations II
3 Credits
Sobolev spaces and Elliptic boundary value problems, Schauder estimates. Quasilinear symmetric hyperbolic systems, conservation laws.

Prerequisite: MATH 502, MATH 513

MATH 515: Classical Mechanics and Variational Methods
3 Credits
Introduction to the calculus of variations, variational formulation of Lagrangian mechanics, symmetry in mechanical systems, Legendre transformation, Hamiltonian mechanics, completely integrable systems.

Prerequisite: MATH 401, MATH 411, or MATH 412

MATH 516: Stochastic Processes
3 Credits
Markov chains; generating functions; limit theorems; continuous time and renewal processes; martingales, submartingales, and supermartingales; diffusion processes; applications.

Prerequisite: MATH 416

MATH 517: Probability Theory
3 Credits
Measure theoretic foundation of probability, distribution functions and laws, types of convergence, central limit problem, conditional probability, special topics.

Prerequisite: MATH 403
Cross-listed with: STAT 517

MATH 518: Probability Theory
3 Credits
Measure theoretic foundation of probability, distribution functions and laws, types of convergence, central limit problem, conditional probability, special topics.

Prerequisite: STAT 517
Cross-listed with: STAT 518

MATH 519: Topics in Stochastic Processes
3 Credits
Selected topics in stochastic processes, including Markov and Wiener processes; stochastic integrals, optimization, and control; optimal filtering.

Prerequisite: STAT 516, STAT 517
Cross-listed with: STAT 519
MATH 523: Numerical Analysis I
3 Credits
Approximation and interpolation, numerical quadrature, direct methods of numerical linear algebra, numerical solutions of nonlinear systems and optimization. MATH 523 Numerical Analysis I (3)
1. Approximation and interpolation. Weierstrass theorem, Bernstein polynomials, Jackson theorems, Lagrange interpolation, least squares approximation, orthogonal polynomials, piecewise Lagrange and Hermite interpolation, spline interpolation, the Fast Fourier Transform.
3. Direct methods of numerical linear algebra. Gaussian elimination with pivoting, backward error analysis, conditioning of linear systems.
Prerequisite: MATH 456

MATH 524: Numerical Linear Algebra
3 Credits
This course provides a graduate level foundation in numerical linear algebra. It covers the mathematical theory behind numerical algorithms for the solution of linear systems of equations and eigenvalue problems. Specific topics include: matrix decompositions, direct methods of numerical linear algebra, eigenvalue computations, iterative methods.
Prerequisite: MATH 535

MATH 527: Topology
3 Credits
This course provides an overview of the fundamental concepts of Geometric and Algebraic Topology and presents examples of calculations of principal topological invariants. It starts with review of general topology and covers the following topics: fundamental group, homology theories, index theory, CW complexes, and examples of calculations.
Prerequisite: MATH 429

MATH 528: Differentiable Manifolds
3 Credits
Smooth manifolds, smooth maps, Sard’s theorem. The tangent bundle, vector fields, differential forms, integration on manifolds. Foliations. De Rham cohomology; simple applications. Lie groups, smooth actions, quotient spaces, examples. MATH 528 Differentiable Manifolds (3)
This course covers the foundations of differential geometry, developing the theory of differentiation and integration on manifolds. It provides tools for the study of nonlinear problems, combining techniques in analysis and geometry. Concepts and tools from differential geometry have found wide use in different areas of mathematics, including nonlinear differential equations, control and optimization problems, and numerical analysis. The goal is to cover the most important techniques of differential geometry in a concise way. The course will appeal not only to students who plan to do research in geometry, but also to those interested in analysis, or applied and computational mathematics, as well. It covers the following topics: smooth manifolds, smooth maps, Sard’s theorem, the tangent bundle, vector fields, differential forms, integration on manifolds, foliations, de Rham cohomology, Lie groups, smooth actions, quotient spaces, examples.
Prerequisite: MATH 527

MATH 529: Algebraic Topology
3 Credits
Manifolds, Poincare duality, vector bundles, Thom isomorphism, characteristic classes, classifying spaces for vector bundles, discussion of bordism, as time allows.
Prerequisite: MATH 528

MATH 530: Differential Geometry
3 Credits
Distributions and Frobenius theorem, curvature of curves and surfaces, Riemannian geometry, connections, curvature, Gauss-Bonnet theorem, geodesic and completeness.
Prerequisite: MATH 528

MATH 533: Lie Theory I
3 Credits
Lie groups, lie algebras, exponential mappings, subgroups, subalgebras, simply connected groups, adjoint representation, semisimple groups, infinitesimal theory, Cartan’s criterion.
Prerequisite: MATH 528

MATH 534: Lie Theory II
3 Credits
Representations of compact lie groups and semisimple lie algebras, characters, orthogonality, Peter-Weyl theorem, Cartan-Weyl highest weight theory.
Prerequisite: MATH 533

MATH 535: Linear Algebra and Its Applications
3 Credits
Prerequisite: MATH 436

MATH 536: Abstract Algebra
3 Credits
This course covers fundamental concepts, needed toward the study of advanced areas in abstract algebra. The course covers the following topics: groups, Sylow’s theorems, rings, ideals, unique factorization domains, finitely generated modules, fields, algebraic and transcendental field extensions, Galois theory.
**Prerequisite:** MATH 535

MATH 537: Field Theory

3 Credits

Finite and infinite algebraic extensions; cyclotomic fields; transcendental extensions; bases of transcendence, Luroth's theorem, ordered fields, valuations; formally real fields.

**Prerequisite:** MATH 536

MATH 538: Commutative Algebra

3 Credits

Topics selected from Noetherian rings and modules, primary decompositions, Dedekind domains and ideal theory, other special types of commutative rings or fields.

**Prerequisite:** MATH 536

MATH 547: Algebraic Geometry I

3 Credits

Affine and projective algebraic varieties; Zariski topology; Hilbert Nullstellensatz; regular functions and maps; birationality; smooth varieties normalization; dimension.

**Prerequisite:** MATH 536

MATH 548: Algebraic Geometry II

3 Credits

Topics may include algebraic curves, Riemann-Roch theorem, linear systems and divisors, intersectino theory, schemes, sheaf cohomology, algebraic groups.

**Prerequisite:** MATH 547

MATH 550: Numerical Linear Algebra

3 Credits

Solution of linear systems, sparse matrix techniques, linear least squares, singular value decomposition, numerical computation of eigenvalues and eigenvectors.

**Prerequisite:** MATH 441 or MATH 456

Cross-listed with: CSE 550

MATH 551: Numerical Solution of Ordinary Differential Equations

3 Credits

Methods for initial value and boundary value problems; convergence and stability analysis, automatic error control, stiff systems, boundary value problems.

**Prerequisite:** MATH 451 or MATH 456

Cross-listed with: CSE 551

MATH 552: Numerical Solution Of Partial Differential Equations

3 Credits

Finite difference methods for elliptic, parabolic, and hyperbolic differential equations; solutions techniques for discretized systems; finite element methods for elliptic problems.

**Prerequisite:** MATH 402 or MATH 404 ; MATH 451 or MATH 456

Cross-listed with: CSE 552

MATH 553: Introduction to Approximation Theory

3 Credits

Interpolation; remainder theory; approximation of functions; error analysis; orthogonal polynomials; approximation of linear functionals; functional analysis applied to numerical analysis.

**Prerequisite:** MATH 401, 3 credits in Computer Science and Engineering

MATH 555: Numerical Optimization Techniques

3 Credits

Unconstrained and constrained optimization methods, linear and quadratic programming, software issues, ellipsoid and Karmarkar's algorithm, global optimization, parallelism in optimization.

**Prerequisite:** CMPSC456

Cross-listed with: CSE 555

MATH 556: Finite Element Methods

3 Credits

Sobolev spaces, variational formulations of boundary value problems; piecewise polynomial approximation theory, convergence and stability, special methods and applications.

**Prerequisite:** MATH 502, MATH 552

Cross-listed with: CSE 556

MATH 557: Mathematical Logic

3 Credits

The predicate calculus; completeness and compactness; Godel's first and second incompleteness theorems; introduction to model theory; introduction to proof theory.

**Prerequisite:** MATH 435 or MATH 457

MATH 558: Foundations of Mathematics I

3 Credits

Decidability of the real numbers; computability; undecidability of the natural numbers; models of set theory; axiom of choice; continuum hypothesis.

**Prerequisite:** any 400 level math course
MATH 559: Recursion Theory I
3 Credits
Recursive functions; degrees of unsolvability; hyperarithmetic theory; applications to Borel combinatorics. Computational complexity. Combinatory logic and the Lambda calculus.
Prerequisite: MATH 557, or MATH 558

MATH 561: Set Theory I
3 Credits
Models of set theory. Inner models, forcing, large cardinals, determinacy. Descriptive set theory. Applications to analysis.
Prerequisite: MATH 557 or MATH 558

MATH 565: Foundations of Mathematics II
3 Credits
Subsystems of second order arithmetic; set existence axioms; reverse mathematics; foundations of analysis and algebra.
Prerequisite: MATH 557, MATH 558

MATH 567: Number Theory I
3 Credits
Congruences, quadratic residues, arithmetic functions, partitions, classical multiplicative ideal theory, valuations and p-adic numbers; primes in arithmetic progression, distribution of primes.
Prerequisite: MATH 421

MATH 568: Number Theory II
3 Credits
Congruences, quadratic residues, arithmetic functions, partitions, classical multiplicative ideal theory, valuations and p-adic numbers; primes in arithmetic progression, distribution of primes.
Prerequisite: MATH 421

MATH 569: Algebraic Number Theory I
3 Credits
Dedekind rings; cyclotomic and Kummer extensions; valuations; ramification, decomposition, inertial groups; Galois extensions; locally compact groups of number theory.
Prerequisite: MATH 536, MATH 568

MATH 570: Algebraic Number Theory II
3 Credits
Topics chosen from class field theory; integral quadratic forms; algebraic and arithmetic groups; algebraic function of one variable.
Prerequisite: MATH 569

MATH 571: Analytic Number Theory I
3 Credits
Improvements of the prime number theorem, L-functions and class numbers, asymptotic and arithmetic properties of coefficients of modular forms.
Prerequisite: MATH 421

MATH 572: Analytic Number Theory II
3 Credits
Distribution of primes, analytic number theory in algebraic number fields, transcendental numbers, advanced theory of partitions.
Prerequisite: MATH 571

MATH 574: Topics in Logic and Foundations
3-6 Credits/Maximum of 6
Topics in mathematical logic and the foundations of mathematics.
Prerequisite: MATH 558

MATH 577: Stochastic Systems for Science and Engineering
3 Credits
The course develops the theory of stochastic processes and linear and nonlinear stochastic differential equations for applications to science and engineering.
Prerequisite: MATH 414 or MATH 418; M E 550 or MATH 501
Cross-listed with: ME 577

MATH 578: Theory and Applications of Wavelets
3 Credits
Theory and physical interpretation of continuous and discrete wavelet transforms for applications in different engineering disciplines.
Prerequisite: M E 550 or MATH 501
Cross-listed with: ME 578

MATH 580: Introduction to Applied Mathematics I
3 Credits
A graduate course of fundamental techniques including tensor, ordinary and partial differential equations, and linear transforms.
**Prerequisite:** Basic knowledge of linear algebra, vector calculus and ODE, MATH 405

MATH 581: Introduction to Applied Mathematics II

3 Credits

A graduate course of fundamental techniques including Ordinary, Partial, and Stochastic Differential Equations, Wavelet Analysis, and Perturbation Theory.

MATH 582: Introduction to C* Algebra Theory

3 Credits

Basic properties of C* algebras, representation theory, group C* algebras and crossed products, tensor products, nuclearity and exactness.

**Prerequisite:** MATH 503

MATH 583: Introduction to K-Theory

3 Credits

**Prerequisite:** MATH 503

MATH 584: Introduction to von Neumann Algebras

3 Credits

Comparison of projections, traces, tensor products, ITPFI factors and crossed products, the Jones index, modular theory, free probability. MATH 584 Introduction to von Neumann Algebras (3) A concise introduction to von Neumann algebra theory, beginning with the basic definitions and proceeding through modular theory. The currently important subjects of index theory and free probability theory will be introduced.

**Prerequisite:** MATH 503

MATH 585: Topics in Mathematical Modeling

3 Credits

Introduction to mathematical modeling, covering the basic modeling and common mathematical techniques for problems from physical, biological and social sciences.

**Prerequisite:** MATH 403, MATH 411, and MATH 412

MATH 588: Complexity in Computer Algebra

3 Credits

Complexity of integer multiplication, polynomial multiplication, fast Fourier transform, division, calculating the greatest common divisor of polynomials.

Cross-Listed

MATH 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

MATH 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

MATH 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

MATH 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

MATH 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

**Mathematics Education (MTHED)**

MTHED 501: Foundations of Mathematics Education I: Learning

3 Credits

This course focuses on understanding and application of theories of mathematical thinking and learning in research and practice. MTHED 501 Foundations of Mathematics Education I: Learning (3) An understanding of what it means to learn mathematics, knowledge of extant theories of learning mathematics, and knowledge of the nature of students' mathematical thinking at various grade levels are central to the work of mathematics educators. Research, curriculum development, classroom interactions with mathematics students, development of assessments, and many other activities in which mathematics educators engage all draw heavily on understanding and knowledge of mathematical thinking and learning. Students in this course will develop a deeper understanding of classical and contemporary theories of mathematical learning and thinking and comparisons among these theories. Assignments in the course support students' growth in applying these theories to frame research, to enhance instruction, to consider curriculum, to support teacher development, and to effect policy. A major project in the course builds students' skills in investigating mathematical thinking and learning. This course would be one of four required Mathematics Education courses for all doctoral students in the Mathematics Emphasis Area/Curriculum and Instruction Ph.D. program. [The other required courses are MTHED 502 Foundations of Mathematics Education II: Teaching; MTHED 503 Foundations of Mathematics Education III: Curriculum; and MTHED 504 Foundations of Mathematics Education IV: Teacher Development and Policy.] Students in this course would be expected to participate in class discussion, complete weekly assignments, conduct two major projects, and respond
to a final examination. Course grades depend on students' performance on all of these measures.

**Prerequisite:** acceptance in Mathematics Education Emphasis Area/ Curriculum and Instruction Ph.D. program

**MTHED 502: Foundations of Mathematics Education II: Teaching**

3 Credits

Teaching is the object of study encountered through connections among classical and contemporary theories of teaching and research on teaching. MTHED 502 Foundations of Mathematics Education II: Teaching (3) Teaching mathematics and developing knowledge, skills, and dispositions of mathematics teachers are central tasks in the work of mathematics educators. Thus acquiring deeper theoretical knowledge and practical skills in teaching are fundamental objectives for doctoral students in mathematics education. The focus of this course is on teaching - and not the teacher - as an object of study. In this course, students explore and connect classic and contemporary research and theories of teaching, come to know the nature of mathematics teaching in tradition and vision, relate theories of teaching to theories of learning, develop ability and disposition to study and improve mathematics teaching and hone ability to evaluate and conduct research on teaching. This course would be one of four required Mathematics Education courses for all doctoral students in the Mathematics Emphasis Area/Curriculum and Instruction Ph.D. program. [The other required courses are MTHED 501 Foundations of Mathematics Education I: Learning; MTHED 503 Foundations of Mathematics Education III: Curriculum; and MTHED 504 Mathematics Education IV: Teacher Development and Policy. This course would typically follow MTHED 501.] Students in this course would be expected to participate in weekly discussions, articulate their emerging philosophies of teaching, and analyze teaching episodes. Course grades depend on students' performance on all of these measures.

**Prerequisite:** acceptance in Mathematics Education Emphasis Area/ Curriculum and Instruction Ph.D.

**MTHED 503: Foundations of Mathematics Education III: Curriculum**

3 Credits

Study of mathematics curriculum blends historical trends and current issues with research literature and techniques to study effects of innovations. MTHED 503 Foundations of Mathematics Education III: Curriculum (3) Mathematics educators who are active in leadership of school systems, teacher education, research and development projects, and formulation of education policy are frequently called on for analytic or creative work related to the school and collegiate curriculum. They are asked for advice on the content, organization, presentation, and evaluation of mathematics curricula and to conduct research directly related to curricula and the effects of their implementation. Students in this course will develop a connected current and historical view of the nature of K-16 mathematics curriculum materials, movements, and guidelines. They will develop skills and dispositions to critique, conceptualize, design, conduct and report research on curriculum development and implementation efforts. This course would be one of four required Mathematics Education courses for all doctoral students in the Mathematics Emphasis Area/Curriculum and Instruction Ph.D. program. [The other required courses are MTHED 501 Foundations of Mathematics Education I: Learning; MTHED 502 Foundations of Mathematics Education II: Teaching; and MTHED 504 Foundations of Mathematics Education IV: Teacher Development and Policy.] In addition to participation in class discussions, students in this course would be expected to conduct a historical analysis of the treatment of a mathematical theme or topic in K-16 curricula, analyze and synthesize research related to an important issue, analyze instruments used in curriculum research, and propose a research study in some aspect of the mathematics curriculum. Course grades depend on students' performance on all of these measures.

**Prerequisite:** acceptance in Mathematics Education Emphasis Area/ Curriculum and Instruction Ph.D.

**MTHED 504: Foundations of Mathematics IV: Teacher Development and Policy**

3 Credits

Nature and study of teacher education and professional development programs and projects coupled with policy and impact in mathematics education. MTHED 504 Foundations of Mathematics IV: Teacher Development and Policy (3) One of the principal day-to-day responsibilities of mathematics educators is teaching content and pedagogy courses for prospective teachers. This work often leads to opportunities for leadership through professional development courses and projects with in-service teachers and to consulting work with local, state, and national school, governmental, and professional organizations concerned about educational policy. Effective work in these arenas requires knowledge and practical skills about professional development and institutional change as well as awareness of policies and the role of policy in influencing practice. Students study research and practice in teacher education and professional development of mathematics teachers. They come to know the research and the issues that confront those who prepare teachers and support teachers' continued professional development. Students become familiar with governmental and professional organizations and the critical issues that impact the direction of mathematics education. They also learn how to study local, state, and national policies and publications. This course would be one of four required Mathematics Education courses for all doctoral students in the Mathematics Emphasis Area/Curriculum and Instruction Ph.D. program. [The other required courses are MTHED 501 Foundations of Mathematics Education I: Learning; MTHED 502 Foundations of Mathematics Education II: Teaching; and MTHED 503 Foundations of Mathematics Education III: Curriculum.] In addition to participation in class discussions, students in this course would be expected to articulate a policy regarding a critical issue in mathematics education, evaluate a teacher education or professional development program, propose a professional development or teacher education project, and complete a final examination. Course grades depend on students' performance on all of these measures.

**Prerequisite:** acceptance in Mathematics Education Emphasis Area/ Curriculum and Instruction Ph.D.

**MTHED 511: Connections Between Mathematics and Mathematics Education**

3 Credits

Course connects college-level mathematics with secondary school mathematics in terms of curriculum content and research on teaching and learning. MTHED 511 Connections Between Mathematics and Mathematics Education (3) The course is organized around key areas of college-level mathematics. In each area, the college-level mathematics focus is on critical ideas, such as fundamental concepts, powerful techniques, and important theorems. These ideas are then explored...
as abstractions of secondary school mathematics content and as justifications for procedures taught in secondary schools. Resulting new mathematics understandings will be used to understand research on learning and teaching mathematics and to apply research to secondary school mathematics instruction. Mathematics curriculum expectations will include both mathematics content topics and mathematical practices and processes.

**Prerequisite:** MATH 435, MATH 471, MTHED411, and MTHED427

MTHED 520: Analysis of Research in Mathematics Education

3 Credits

Survey of the status of knowledge about mathematics learning and instruction, K-12; analysis of research procedures; instruments for evaluating research.

**Prerequisite:** MTHED412W or MTHED420; 3 credits in statistics; teaching experience

MTHED 523: Projects in Mathematics Education Research, Curriculum Development, and Evaluation

1-3 Credits/Maximum of 24

Conceptualizing, designing, conducting, and reporting mathematics education research, curriculum development and/or evaluation projects.

**Prerequisite:** enrollment in Curriculum and Instruction graduate program and by permission of the Mathematics Education emphasis area; course in psychological foundations and course in qualitative or quantitative research foundation

MTHED 527: Research on the Use of Technology in Mathematics Education

3 Credits

Reviewing, critiquing, designing, and conducting research on mathematics learning and teaching in technology intensive environments.

**Prerequisite:** MTHED427

MTHED 530: Mathematical Thinking at the Secondary and Early College Levels

3 Credits

Exploring and applying theories of advanced mathematical thinking; reviewing, conducting research on mathematical thinking at secondary and early college levels.

**Prerequisite:** enrollment in Curriculum and Instruction doctoral program with Mathematics Education emphasis; mathematics background equivalent to a Bachelors' degree in mathematics

MTHED 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

MTHED 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

MTHED 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

**Mechanical Engineering (ME)**

ME 504: Advanced Engineering Thermodynamics

3 Credits

Pure and applied thermodynamics including its application to advanced engineering problems; collateral reading and discussion of the classical works on the subject.

ME 512: Heat Transfer--Conduction

3 Credits

One- and two-dimensional conduction heat transfer for steady state and transient systems with varying boundary conditions.

ME 513: Heat Transfer--Convection

3 Credits

Laminar and turbulent flow heat transfer in natural and forced convection systems.

ME 514: Heat Transfer--Radiation

3 Credits

Thermal radiation fundamentals; specular and diffuse systems; differential and integral methods; numerical techniques; industrial applications.

ME 515: Two-Phase Heat Transfer

3 Credits

Heat transfer processes involving evaporation, boiling, and condensation.

ME 520: Compressible Flow II

3 Credits

Two-dimensional subsonic flow; similarity rules; theory of characteristics; supersonic and hypersonic flows; nonsteady flow; oblique shock waves.

**Prerequisite:** M E 420

ME 521: Foundations of Fluid Mechanics I

3 Credits

First semester of core sequence in fluid mechanics; Navier-Stokes equations, potential flow, low Re flow, laminar boundary layers.
Prerequisite: M E 300, M E 320

ME 522: Foundations of Fluid Mechanics II

3 Credits

Second semester of core sequence in fluid mechanics; continuation of boundary layers, stability, transition, turbulence, turbulent boundary layers, turbulence models.

Prerequisite: M E 421 or M E 521

ME 523: Numerical Solutions Applied to Heat Transfer and Fluid Mechanics Problems

3 Credits

Application of finite difference methods to the study of potential and viscous flows and conduction and convection heat transfer.

ME 524: Turbulence and Applications to CFD: DNS and LES

3 Credits

First of two courses: Scalings, decompositions, turbulence equations; scale representations, Direct and Large-Eddy Simulation modeling; pseudo-spectral methods; 3 computer projects.

Prerequisite: AERSP 508 or M E 521

Cross-listed with: AERSP 524

ME 525: Turbulence and Applications to CFD: RANS

3 Credits

Second in two courses: Scalings, decompositions, turbulence equations; Reynolds Averaged Navier Stokes (RANS) modeling; phenomenological models; 3 computer projects.

Prerequisite: AERSP 508 or M E 521

Cross-listed with: AERSP 525

ME 530: Fundamentals of Combustion

3 Credits

Theoretical formulations and methods of solution of engineering problems and physical/chemical processes in various propulsion systems. ME 530 Fundamentals of Combustion (3) This course is devoted to the fundamentals of chemically reactive flow systems with application to modern jet, rocket, air-breathing engines, and other power generation systems. Experimental and theoretical foundations of steady-state reactions of homogeneous gas mixtures; application of mass and heat diffusion concepts to premixed and non-premixed gaseous flames, liquid-fuel droplet combustion; detonation waves, deflagration-to-detonation transition processes; ignition of gaseous mixtures. Methods for evaluation of thermal and transport properties of gases and liquids will also be discussed. While there are no prerequisites for ME 531, this course serves as a prerequisite for ME 532 (Turbulent and Two-Phase Combustion). The course will: 1) help students acquire a better understanding of the fluid flow, heat transfer, and chemical reaction processes in combustion systems by presenting a systematic description of various analyses developed for describing the fundamental processes involved in chemically reacting flow systems; 2) demonstrate the usefulness of basic principles by performing analyses and obtaining solutions for various combustion problems encountered in engineering so that individuals can utilize them to solve ‘real-world’ problems.

Prerequisite: F SC 421 or M E 430 or M E 531

ME 535: Physics of Gases

3 Credits

An introduction to kinetic theory, statistical mechanics, quantum mechanics, atomic and molecular structure, chemical thermodynamics, and chemical kinetics of gases.

Cross-listed with: AERSP 535

ME 537: Laser Diagnostics for Combustion

3 Credits

A study of laser-based techniques for measuring gas temperature and concentration in chemically reacting flows.

Prerequisite: M E 535
ME 545: Mechatronics

3 Credits

This class will facilitate the hands-on investigation of mechatronic systems using a problem-based approach, with specific focus on system-level implementations. M E 545 Mechatronics (3) This class will facilitate hands-on investigation and learning of mechatronic systems using a problem-based approach. The course consists of lectures, lab activities, and major projects that train students to develop system-level implementations of mechatronics. This course complements and builds on the existing undergraduate-level microcomputer interfacing course, which presents model-free design of single-processor, single-sensor, single-task, and/or single actuator mechatronic systems. This course focuses on model-based design of multi-processor, multi-sensor, multi-actuator, and multi-tasking mechatronic systems. Students are expected to be familiar with systems and signals analysis including Laplace transforms, Eigenvalues, Bode plots, stability margins, basic feedback loop performance and stability analysis, etc. Students should have a firm understanding of electrical circuits and structured programming. Nearly all assignments will require the use of MATLAB and/or some C-style programming.

Prerequisite: M E 445

ME 546: Designing Product Families

3 Credits

Product families, product platforms, mass customization, product variety, modularity, commonality, robust design, product architectures. I E (M E) 546 Designing Products Families (3) Designing Product Families is a graduate-level course generally offered in the spring. It is designed for students interested in product realization, engineering design, and manufacturing to gain an understanding of mass customization and methods for designing families of products based on modular and scalable product platforms. The transition from craft production to mass production to mass customization will be covered in this course along with methods and tools for designing robust, modular, and scalable product platforms. Platform leveraging strategies and commonality metrics will be investigated through product dissection activities, which will also be integrated with lectures on evaluating manufacturing and assembly. Several industry case studies will also be discussed in the course to examine the implications of producing a variety of products and strategies for effective mass customization and product postponement. Students interested in taking this course should be familiar with product design and manufacturing. Students are evaluated through individual and group homework assignments, in-class participation and activities, and a group project report and presentation.

Prerequisite: M E 414 or M E 415 or I E 466
Cross-listed with: IE 546

ME 547: Designing for Human Variability

3 Credits

Statistics, optimization, and robust design methodologies to design products and environments that are robust to variability in users.

Cross-listed with: EDSGN 547

ME 550: Foundations of Engineering Systems Analysis

3 Credits

Analytical methods are developed using the vector space approach for solving control and estimation problems; examples from different engineering applications. E E (M E) 550 Foundations of Engineering Systems Analysis (3) This 3-credit course is offered at the first-year graduate level and provides a systems-theoretic background for more advanced graduate courses in the disciplines of engineering and science. The course uses the vector space approach to develop the analytical foundations for solutions of science and engineering problems in diverse application areas such as optimal control, estimation, and signal processing. First, the theoretical foundation of vector spaces, function spaces, and Hilbert spaces are developed. Linear transformations are then introduced, followed by the Reisz-Frechet theorem and Hahn-Banach theorem, with applications to optimization problems. Spectral analysis is then covered. Finally, diverse applications of these various techniques are presented throughout this course to illustrate the wide range of engineering problems that can be solved using the vector space approach.

Prerequisite: MATH 436
Cross-listed with: EE 550

ME 551: High Power Energy Storage

3 Credits

High-power energy storage technologies including advanced batteries, ultracapacitors, and flywheels. E SC (M E) 551 High Power Energy Storage (3) The course focuses on high-power, in-vehicle energy storage technologies used in hybrid electric vehicles, including advanced batteries, fuel cells, ultracapacitors, and flywheels. An interdisciplinary approach with mechanical, materials, electrical, and chemistry-based concepts provides the foundation to understand the operation and application of these energy storage devices. The course provides a synopsis of hybrid electric and fuel cell vehicle design, control, and simulation to determine the effect of energy storage components on performance and fuel efficiency.

Cross-listed with: ESC 551

ME 552: Optimal Control of Energy Systems

3 Credits

This course provides an overview of the fundamental principles and methods of optimal control, dynamic programming, and extremum-seeking control, with a focus on the application of these tools to a variety of problems in the energy generation, storage, and management domain. Fundamental topics covered include bond graph modeling of energetic systems, constrained and unconstrained static optimization, the Karush-Kuhn-Tucker conditions, extremum-seeking control, the Bellman principle of optimality, deterministic dynamic programming, Markov chains, stochastic dynamic programming, the Bolza optimal control problem, the Pontryagin maximum principle, the Hamilton-Jacobi-Bellman equation, linear quadratic regulation, bang-bang control, and pseudo-spectral optimal control. Applications examined include impedance matching in photovoltaics and wind power plants, fuel-minimizing optimal vehicle path planning, optimal Lithium-ion battery charging/discharging, optimal power management in hybrid electric and hybrid hydraulic vehicles, and optimal building energy management. The course serves as a broad overview of fundamental topics covered in more depth in other classes.
on dynamic programming, adaptive control, and optimal control. Equal emphasis is placed on the tools and methods of optimal control theory and their practical application to optimal energy management problems. The course is intended for graduate students in engineering interested in energy management research, and already possessing a basic familiarity with energy systems and dynamic system modeling.

**Prerequisite:** ME 450

ME 554: Digital Process Control

3 Credits

Analysis and design of control systems with digital controllers, including PID, finite settling time, state feedback, and minimum variance algorithms.

**Prerequisite:** M E 450 , M E 455

ME 555: Linear System Theory and Control

3 Credits

Advanced problems and techniques in the design of automatic control systems with emphasis on stability, controller design, and optimum performance. M E 555 Linear System Theory and Control (3) This course examines problems and techniques in the analysis and design of linear systems. The course assumes a fundamental background in dynamic system modeling and frequency-domain SISO control input analysis and design. Topics include: vectors and vector spaces; Eigenvalues and Eigenvectors; the Cayley-Hamilton theorem; Jordan canonical forms; internal and BIBO stability; Lyapunov stability analysis; observability and controllability; similarity transformations, state-space realization, and observer/controller canonical forms; pole placement; elementary observer and state-feedback controller design; the separation principle; Kalman filtering; and linear quadratic regulation.

**Prerequisite:** M E 455

ME 556: Robotic Concepts

3 Credits

Analysis of robotic systems; end effectors, vision systems, sensors, stability and control, off-line programming, simulation of robotic systems.

**Prerequisite:** I E 456 or M E 456

ME 558: Robust Control Theory

3 Credits

Fundamentals of Robust Control Theory with emphasis on stability, performance analysis, and design.

**Prerequisite:** E E 580 or M E 555

Cross-listed with: EE 584

ME 559: Nonlinear Control and Stability

3 Credits

Design of nonlinear automatic control systems; phase-plane methods; describing functions; optimum switched systems; Liapunov stability; special topics in stability.

**Prerequisite:** E E 380

Cross-listed with: EE 587

ME 560: Solid Mechanics

3 Credits

Introduction to continuum mechanics, variational methods, and finite element formulations; application to bars, beams, cylinders, disks, and plates. E M CH (M E 560) 500 Solid Mechanics (3) This course introduces students to the fundamental principles and basic methods used in solid mechanics. Using indicial notation and integral formulations provides a foundation for more advanced study in continuum mechanics (E M CH 540) and finite element analysis (E M CH 560) specifically and in mechanics in general. The materials behavior is restricted to linear elastic and the emphasis is on stress analysis. Students are expected to have an understanding of elementary mechanics of materials (such as E M CH 013). The course objectives are to: 1) provide students with a firm foundation in solid mechanics. 2) introduce continuum mechanics concepts, variational methods, and the formulation used in finite element analysis. 3) enable students to formulate and solve the boundary value problems commonly encountered in the analysis of structures. The study of solid mechanics starts with the definition of stress and strain and how the two are related by material law. Field equations that relate strain to displacement, ensure a single valued displacement field, and the balance momentum are formulated. These are partial differential equations that can only be solved subject to known boundary and initial conditions. The field equations and boundary conditions comprise a boundary value problem that is usually difficult to solve exactly. Variational methods are used to bound or approximate the solution. The finite element method employs variational methods to formulate generic elements and is a computational tool for solving boundary value problems for complex geometries.

Cross-listed with: EMCH 500

ME 561: Structural Optimization Using Variational and Numerical Methods

3 Credits

Shape and size optimization of elastic structures, continuous and discrete solution methods and numerical algorithms, design of compliant mechanisms. ME 561 Structural Optimization Using Variational and Numerical Methods (3) Optimal Structural Design is a graduate-level course generally offered in spring semester. The course is designed for graduate students in mechanical engineering or related fields who have already taken a course in finite element analysis. The course covers techniques in structural optimization from classical variational-based methods to modern numerical and finite element-based methods. Topics include shape and size optimization of elastic structures, continuous and discrete methods for least weight maximum stiffness design, solution using optimality criteria methods, structural topology optimization, gradient-based solution methods and numerical algorithms, and design project(s) using these methods. Methods are applied to examples such as beam and truss structures, compliant mechanisms, and piezoelectric actuators. Computer programming skills using software such as Matlab are required. Students are evaluated based on homework assignments, review and presentation of articles from the literature, class participation, and a group design project.

**Prerequisite:** M E 461
ME 563: Nonlinear Finite Elements
3 Credits
Advanced theory of semidiscrete formulations for continua and
structures; emphasizes dynamic and nonlinear problems.
Prerequisite: A B E 513, E MCH 461, or E MCH 560
Cross-listed with: EMCH 563

ME 564: Elastic and Dynamic Stability of Structures
3 Credits
An introduction to the concept and analysis methods of structural
stability; structures under static/dynamic loading and high speed
conditions.
Prerequisite: E MCH 213, M E 450; students need to have basic
understanding of mechanical behavior of materials to follow the
equations in this course, and basic concepts of system stability to
expand them to elastic structures

ME 565: Optimal Design of Mechanical and Structural Systems
3 Credits
Application of numerical optimization techniques to design mechanical
and structural systems; design sensitivity analysis.

ME 566: Metal Additive Manufacturing Laboratory
3 Credits
This course will provide in-depth and hands-on laboratory experience
in metal-based additive manufacturing. The laboratory activities will
expose students to all aspects of the additive manufacturing workflow
for metal components, starting with conceptual design, proceeding
through fabrication, post-processing, and part inspection. Laboratory
activities will include part design and analysis, process simulation
and modeling, build preparation and machine set up, fabrication and
post-processing, and non-destructive inspection and measurement.
Laboratories will include computational design tools and simulation
models as well as fabrication and post-processing (e.g., heat treatment,
machining). Finally, the laboratory activities will also stress safe powder
handling, equipment, and laser safety, which is particularly important
when working with metallic powders and feedstocks. The laboratory is
intended for students that have a basic understanding of the different
additive manufacturing processes and are gaining familiarity with the
engineering and science of additive manufacturing. The laboratory
activities will provide students with the scientific foundation and research
skills necessary to rigorously ascertain the performance of additively
manufacturing materials, processes, and parts. Upon completion of the
laboratory, students should be able to describe the workflow for additive
manufacturing, identify main cost drivers, and describe the differences
when using metals versus polymers. They should also understand the key
tradeoffs between design, manufacturing, and materials as it relates to
the additive manufacturing processes utilized in the laboratory activities.
Prerequisite: IE 587 CONCURRENT: ESC 545

ME 567: Foundations of Structural Dynamics and Vibration
3 Credits
Modeling approaches and analysis methods of structural dynamics and
vibration.
Prerequisite: AERSP 304, E MCH 470, M E 450, or M E 570
Cross-listed with: AERSP 571, EMCH 571

ME 568: Experimental Modal Analysis
3 Credits
The development of structural dynamic models from experimental data,
analytical and experimental vibration, analysis methods, laboratory
techniques.
Prerequisite: M E 450

ME 569: Colloquium
1 Credits
Continuing seminars that consist of a series of individual lectures by
faculty, students, or outside speakers.
understanding of the full spectrum of weather phenomena including the

using both theoretical and observational methods students will gain an

that result. Quantitative results from this theoretical analysis are then

explores these linkages and the dynamics of the weather phenomena

spectrum of weather phenomena is linked energetically. This course

scales, each phenomenon draws energy from conditions created by

structure and dynamics vary with latitude and topography as well as a

microscale meteorology, mesoscale meteorology, and synoptic

Prerequisite: METEO0411, METEO501

METEO 515: PRACTICAL STATISTICS FOR ATMOSPHERIC SCIENCES

3 Credits

The aim of this course is to build practical statistical tools for data

analysis in the atmospheric sciences. The course will first provide the

students with a solid foundation in fundamental statistical concepts,

including hypothesis testing, maximum likelihood estimation, random

variables, and probability density functions. Once the students are

familiar with the basic terminology and concepts in statistics, the course

will move on to a suite of more advanced statistical techniques that

are commonly used in atmospheric science research. The advanced

topics include regression analysis, nonparametric tests and resampling

techniques, data reduction such as eigendecompositions and principal

component analysis, time series analysis, spatial statistics, and Bayesian

modeling. The emphasis will be on the sound application of these

techniques and their interpretations, rather than technical foundations

and derivations. The goal is to build intuition behind commonly used

statistical tools and learn how to avoid potential pitfalls in their

applications.

RECOMMENDED PREPARATIONS: The course assumes familiarity with
calculus and linear algebra, including basic matrix manipulations and
eigendecomposition.

METEO 520: Geophysical Fluid Dynamics

3 Credits

Fundamentals of fluid dynamics with an emphasis on basic concepts

that are important for atmospheric and oceanic flows. METEO 520

Geophysical Fluid Dynamics (3) This is a course in the fundamentals of

fluid dynamics with an emphasis on basic concepts that are important

for geophysical flows, such as those in the atmosphere and ocean.

Topics include kinematics, conservation laws, vorticity dynamics,
dynamic similarity, laminar flows, and an introduction to waves and

instability. Students should leave this course with a solid foundation in

fluid dynamics, possessing a conceptual and mathematically rigorous

understanding of the fundamental conservation laws for fluids and

some basic applications of them. Together, METEO 520 and METEO 521
(Dynamic Meteorology) make up the core dynamics curriculum for graduate students of meteorology.

**Prerequisite:** Vector calculus, differential equations

**METEO 521: Dynamic Meteorology**
3 Credits

An overview of the major large-scale atmospheric motions of weather and climate.

**Prerequisite:** METEO520

**METEO 523: Modeling the Climate System**
3 Credits

An introduction to the mathematical description and modeling of atmospheric and oceanic motions.

**METEO 526: Numerical Weather Prediction**
3 Credits

Finite difference and spectral methods, barotropic and baroclinic models, filtered and primitive equation models, synoptic-scale and mesoscale models.

**Prerequisite:** METEO422 or METEO522

**METEO 527: Data Assimilation**
3 Credits

Data assimilation (DA) is the process of finding the best estimate of the state and associated uncertainty by combining all available information including model forecasts and observations and their respective uncertainties. DA is best known for producing accurate initial conditions for numerical weather prediction (NWP) models, but has been recently adopted for state and parameter estimation for a wide range of dynamical systems across many disciplines such as ocean, land, water, air quality, climate, ecosystem, and astrophysics. Taking advantages of improved observing networks, better forecast models, and high performing computing, there are two leading types of advanced approaches, namely variational data assimilation through minimization of a cost function, or ensemble-based data assimilation through a Kalman filter. Hybrid techniques, parameter estimation, predictability, and ensemble sensitivity methods will also be covered. Emphasis will be on applications to atmospheric science and numerical weather prediction, and the unique aspects of its observing systems, computer models, and predictability characteristics. The material in this course may be relevant to those in engineering, statistics, mathematics, hydrology, earth systems science, atmospheric science, and many other fields that seek to integrate information from observations and models.

**RECOMMENDED PREPARATIONS:** A basic knowledge of probability theory, statistics, calculus, linear algebra/matrices, and computer programming is expected.

**METEO 528: Parameterization Schemes**
3 Credits

Parameterization is the process by which important physical processes that cannot be resolved explicitly in a numerical model are represented. Examples include the transfer of shortwave radiation through the atmosphere, and the formation of cloud droplets, both of which occur on the molecular scale. As numerical models have grid spacing of hundreds of meters, molecular processes are not resolved explicitly in current models and so must be parameterized. A parameterization scheme is a representation of our understanding of the physical process as related to the available model variables, such that one can estimate how the behaviors of these important sub-grid physical processes influence the available model variables. In this way, sub-grid scale physical processes are included in models even when they cannot be explicitly represented. The most common parameterization schemes used in numerical models of the atmosphere will be discussed, including land and ocean surface, planetary boundary layer, convection, microphysics, radiation, cloud cover, and orographic drag. Emphasis is placed upon understanding the basic approaches to parameterization and how the differences in approaches influence the resulting behaviors.

**Recommended Preparations:** A general, broad knowledge of meteorology and atmospheric science, as well as experience in computer programming.

**METEO 529: Mesoscale Dynamics**
3 Credits

A survey of concepts of mesoscale systems including frontogenesis, symmetric instability, mountain waves, wave CISK, and frontal waves.

**Prerequisite:** METEO521

**METEO 531: Atmospheric Thermal Physics**
3 Credits

Advanced treatment of thermodynamic principles as they relate to atmospheric cloud physics, radiation and dynamics. METEO 531 Atmospheric Thermal Physics (3) Thermal physics concepts are important to understanding many facets of atmospheric cloud physics, radiation and dynamics. This course presents a rigorous treatment of these concepts as they appear in the atmospheric sciences.

**METEO 532: Chemistry of the Atmosphere**
3 Credits

Review of chemical principles in gaseous and multiphase environments; characteristics of key atmospheric components and chemical systems in the lower and middle atmosphere.

**Prerequisite:** CHEM 110

**METEO 533: Cloud Physics**
3 Credits

Overview of cloud systems; theories of phase changes in clouds and micro-physical mechanisms of precipitation formation; cloud electrification.

**Prerequisite:** METEO431
The atmospheric boundary layer is the layer of the atmosphere that is in frequent contact with the surface of the earth. It is the layer where life exists, and which mediates exchanges of energy, momentum, and chemicals between the earth’s surface and the atmosphere. The scales of motion in the atmospheric boundary layer, because of the presence of the earth’s surface, are small compared to the rest of the atmosphere. The dynamics, therefore, differ from those found in the ‘free’ atmosphere. This course describes the physical properties of the layer of the earth’s atmosphere that is in frequent contact with the earth’s surface, the atmospheric boundary layer. The course includes a descriptive overview of this layer using observations, then presents the governing equations and common simplifications used to describe the boundary layer. Conservation of mass, energy, and momentum, are covered. A core principle is the decomposition of the governing equations into a mean state and turbulent components, and the challenges introduced by this decomposition. The concepts of eddy diffusivity and closure methods are motivated by this challenge. These principles and governing equations are used to understand the typical evolution of the atmospheric boundary layer as a function of time of day. Convective and stable boundary layer conditions are contrasted. The contrasting conditions are linked to changes in the exchange of energy, momentum and water vapor at the earth’s surface. The fundamentals of plume dispersion are described and tested. A simple numerical model of the atmospheric boundary layer is discussed and applied to atmospheric data. Stability conditions in the atmosphere are further explored using the equation for turbulent kinetic energy. Parameters describing the turbulence state of the surface layer and boundary layer, including the Obukhov length, friction velocity, convective velocity scale, and Richardson number, are discussed and applied to typical boundary layer conditions and observations. Similarity theory is discussed as a means of describing turbulent properties of the atmospheric boundary layer as a function of stability conditions. Monin-Obukhov similarity theory for the surface layer is applied to atmospheric observations. Additional common atmospheric boundary layer states are described, including cloud topped boundary layers, marine boundary layers, and boundary layers in heterogeneous terrain. Observational, measurement and numerical methods are presented and used in class assignments.

**Prerequisite:** METEO520

**METEO 556: The Atmospheric Boundary Layer**

3 Credits

The atmospheric boundary layer is the layer of the atmosphere that is in frequent contact with the surface of the earth. It is the layer where life exists, and which mediates exchanges of energy, momentum, and chemicals between the earth’s surface and the atmosphere. The scales of motion in the atmospheric boundary layer, because of the presence of the earth’s surface, are small compared to the rest of the atmosphere. METEO 575: Climate Dynamics Seminar
1-3 Credits/Maximum of 15
Review of evolving climate dynamics and earth system science, including ongoing departmental research.

METEO 582: Ice and Snow Physics
1-3 Credits/Maximum of 15
Structure of ice and its electrical, optical, mechanical, and surface properties; snow formation in the atmosphere.

METEO 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

METEO 591: Development and Ethics in the Atmospheric Sciences
1 Credits
Provide a forum for discussion of scholarship and research integrity as well as critical components of professional development. METEO 591 Development and Ethics in the Atmospheric Sciences (1) This course provides a forum with graduate faculty for discussions on responsible conduct of research topics relevant to the atmospheric sciences, including, but not limited to: acquisition, management, sharing, and ownership of data; publication practices and responsible authorship; conflict of interest and commitment; research misconduct; peer review; mentor/trainee responsibilities; collaborative science. Important components to successful professional development of students are also considered.

METEO 592: Research Proposal Preparation in the Atmospheric Sciences
1 Credits
This course familiarizes graduate students with research rigor, proposals, and processes. METEO 592 Research Proposal Preparation in the Atmospheric Sciences (1) This course familiarizes graduate students with research rigor, proposals, and processes. The focus of these topics is upon research proposal preparation, research literature surveys, preparing a research proposal, and verbally defending the written research proposal in an oral presentation type setting.

METEO 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

METEO 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

METEO 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

METEO 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

METEO 602: Supervised Experiences in College Teaching
1-3 Credits/Maximum of 6
No description.

METEO 801: Understanding Weather Forecasting for Educators
3 Credits
Fundamental principles of synoptic and physical meteorology, remote sensing and data analysis in the setting of mid-latitude weather forecasting. METEO 801 Understanding Weather Forecasting for Educators (3) Never before has the quantity of available weather information so far exceeded the quality of the public’s understanding of atmospheric science. METEO 801 aims to help correct this imbalance by helping secondary teachers to develop the knowledge and skills they need to become critical consumers of weather information and to, in turn, help their own students to do the same. Students who successfully complete METEO 801 will be able to apply knowledge of fundamental concepts of atmospheric science to discriminate between reliable and unreliable weather forecasts, to explain what makes one forecast better than another, and to teach these same concepts and applications to secondary school students. To ensure that students develop the knowledge and skills required to critically assess public weather forecasts, METEO 801 will provide an apprentice-training environment that will encourage students to learn forecast mid-latitude weather themselves. They will discover that weather forecasting involves sophisticated data analysis techniques, a thorough understanding of atmospheric science, and strong verbal and graphic communication skills. METEO 801 will combine digital video, audio, simulation models, virtual field trips to on-line weather data resources, text, and interactive quizzes that provide instantaneous feedback. The course will provide unprecedented access to one of the world’s most distinguished meteorology programs. METEO 801 students will be granted licenses to use the courseware developed for this course in their own secondary classrooms. The overarching goal of the course is to help secondary science teachers become informed, critical consumers of the weather information they rely upon every day and to be able to effectively convey their knowledge to their students as part of an Earth science curriculum. Students will be required to complete weekly assignments. There are 12 lessons in METEO 801. Each lesson contains interactive exercises,
links, animations, movies, and novel explanations of the basic scientific principles of how the atmosphere works. At the end of each Lesson, students will take an open-book 'Promotion Quiz' that allows them to improve their status as an apprentice forecaster. In addition to Promotion Quizzes and weekly assignments on the course discussion board, students will be assigned four projects throughout the semester. Projects are also open book but require you to apply the principles students have learned to past case studies of storms and specific weather patterns.

METEO 802: Fundamentals of Tropical Forecasting for Educators

3 Credits

Applying atmospheric principles to the tropics, with an emphasis on the development, structure, prediction, and destructive impact of hurricanes. METEO 802 Fundamentals of Tropical Forecasting for Educators (3) Worldwide, approximately 80 tropical cyclones develop each year. This global annual average of tropical cyclones is small in comparison to the thousands of low-pressure systems that routinely parade across the middle latitudes each year. Yet tropical storms and hurricanes garner far greater attention from meteorologists and the media. The obvious reason for this lopsided focus is that tropical cyclones can inflict great devastation to life and property. To ensure that students develop the knowledge and skills required to critically assess weather forecasts issues by the National Hurricane Center, METEO 802 provides, like METEO 801, an apprentice-training environment. Under the tutelage of professional weather forecasters, students, in their role as apprentices, work toward the goal of creating their own tropical-weather forecasts. In the process, students in METEO 802 learn about the pitfalls of forecasting the tracks and intensities of tropical storms and hurricanes as they actively work with output from sophisticated numerical models available on the Internet. Moreover, successful students apply their knowledge of the fundamental concepts of atmospheric science in order to competently evaluate forecasts issues by the National Hurricane Center in Miami and the Joint Typhoon Warning Center in Honolulu. Students also gain a broad perspective of the general weather and oceanic patterns in the tropics. For example, students learn about El Nino and La Nina. In the process, they discover the El Nino and La Nina are not to blame for every unusual weather even that occurs anywhere in the world. To facilitate the learning objectives, METEO 802 includes the use of digital video, audio, simulation models, virtual field trips to on-line resources for weather data, text, and interactive quizzes that provide timely feedback. The course will provide unprecedented access to one of the world's most distinguished meteorology programs. METEO 802 students will be granted licenses to use the courseware developed for this course in their own secondary classrooms. One of the primary objectives of METEO 802 is to give secondary science teachers a working knowledge of hurricanes and tropical storms so that they can become critical weather consumers and to be able to effectively convey their knowledge to their students as part of an Earth science curriculum. Students will be required to complete weekly assignments. There are 12 lessons in METEO 802. Each lesson contains interactive exercises, links, animations, movies, and novel explanations of the basic scientific principles of how the atmosphere works. To demonstrate their mastery of the learning objectives, students complete automated online quizzes actively engage in online discussion groups focusing on real-time weather, and publish, to a person 'e-portfolio,' three comprehensive projects that explore timely case studies related to weather forecasting. The e-portfolio takes the form of a Web site. In addition to posting their work to their e-portfolio, students also use the space to reflect on their learning. By using their Penn State personal Web space to host their e-portfolios, students are able to share their work not only with program faculty and students, but also with external audiences, including potential employers.

Prerequisite: METEO801

METEO 803: Fundamentals of Mesoscale Weather Forecasting for Educators

3 Credits

Applying atmospheric principles to small-scale weather systems, with an emphasis on the conceptual modeling and short-range prediction of severe thunderstorms. METEO 803 Fundamentals of Mesoscale Weather Forecasting for Educators (3) When outbreaks of severe weather occur, dire warnings for tornadoes, large hail or damaging straight-line winds urgently scroll across the bottoms of television screens. Simultaneously, television weathercaster's warn viewers to 'take cover immediately.' Yet, because of the limited spatial and time scales of severe thunderstorms, the areas affected by tornadoes, large hail and damaging straight-line winds often turns out to be relatively small (sometimes as small as a tenth of one percent of the original 'watch area'). There is no doubt that people should be prepared to take definitive action to protect their lives and the lives of their families when outbreaks of severe weather occur. But the overall impression that entire counties or cities will be destroyed by severe weather can be, and frequently is, misleading. To ensure that students develop the knowledge and skills required to critically assess public weather forecasts, METEO 803 provides an apprentice training environment that guides students, under the tutelage of professional weather forecasters, to actively learn how to create their own mesoscale-weather forecasts. In the process, METEO 803 reinforces the notion that weather forecasting involves sophisticated techniques of data analysis and a thorough understanding of atmospheric science. METEO 803 also stresses that the clear communication of the forecast requires strong verbal and graphic communication skills. Using conceptual models and real-time radar and satellite imagery in concert with output from numerical models designed specifically for mesoscale forecasting, students predict severe weather on timescales of a few hours to one day. For example, students are required to choose a tornado 'watch-box' issued by the Storm Prediction Center (SPC) in Norman, Oklahoma, and then to evaluate the forecast (and forecast verification) in the setting of a litany of scientifically sophisticated tools on SPC's Web site. In effect, students will mirror the process that professional forecasters follow to create such high-profile forecasts. For more general outlooks that identify regions where there is a potential for severe weather (time scales of one to two days), students will use output from the numerical models that were introduced in METEO 801 to identify the areas likely to be at risk for severe weather. To facilitate the learning objectives, METEO 803 includes the use of digital video, audio, simulation models, virtual field trips to on-line resources for weather data, text, and interactive quizzes that provide timely feedback. The course will provide unprecedented access to one of the world's most distinguished meteorology programs. METEO 803 students will be granted licenses to use the courseware developed for this course in their own secondary classrooms. One of the primary goals of METEO 803 is to give secondary science teachers a scientifically grounded perspective of the spatial and time scales of typical outbreaks of severe weather and other events associated with mesoscale weather systems. In the process, students become better weather consumers and to be able to effectively convey their knowledge to their students as part of an Earth science curriculum. To gain such insights, students learn conceptual models of the life cycles of severe thunderstorms and then apply them in real-time outbreaks of severe weather. In the final analysis, students are able to more accurately weigh the information being disseminated by the media and the Storm Prediction Center in Norman,
Oklahoma. Students will be required to complete weekly assignments. There are 8 lessons in METEO 803. Each lesson contains interactive exercises, links, animations, movies, and novel explanations of the basic scientific principles of how the atmosphere works. To demonstrate their mastery of the learning objectives, students complete automated online quizzes, actively engage in online discussion groups focusing on real-time weather, and publish, to a personal ‘e-portfolio,’ three comprehensive projects that explore timely case studies related to mesoscale weather forecasting. The e-portfolio takes the form of a Web site. In addition to posting their work to their e-portfolio, students also use the space to reflect on their learning. By using their Penn State personal Web space to host their e-portfolios, students are able to share their work not only with program faculty and students, but also with external audiences, including potential employers.

**Prerequisite:** METEO801

METEO 810: Weather and Climate Datasets

3 Credits

Anticipating weather events first requires an understanding of typical (or expected) conditions at a particular site. Such climatologies are constructed primarily from historical observations but may also include numerically derived forecasts and analyses. In this course, students will learn a variety of methods for accessing appropriate weather and climate datasets available from government and research institutions. Working with very large datasets in a computationally efficient manner will be stressed, as will consideration of factors that affect data reliability. Students will be encouraged to consider numerous possibilities for presenting weather and climate data with a minimum of quantitative analysis. In addition, numerous examples and case studies will augment discussions on such topics as numerical reanalysis datasets, self-describing archives, and typical problems encountered with environmental observations. Finally, students will learn to construct a site-specific or regional climatology and to communicate a qualitative analysis of those data to others.

**RECOMMENDED PREPARATIONS:** Coursework and/or experience with basic computer programming

METEO 815: Applied Atmospheric Data Analysis

3 Credits

This course provides practical guidance in the quantitative analysis of large weather and climate datasets for incorporation into a data analytics system. Students will learn a variety of methods for describing environmental data focusing on bulk characteristics, hypotheses testing, linear modeling, and variability modeling. Furthermore, current data mining strategies used in creating analysis workflows will be presented. Specific emphasis will be placed on data organization and pre-processing for computational analysis, validating assumptions for a particular analysis technique, identification and resolution of non-compliant data sets, and use of analysis/display software to improve communication of results. Numerous examples and case studies will augment discussion on the various analysis methods with the goal being to broaden the student’s perspective on the use of weather and climate data in decision-making.

**Prerequisite:** METEO 810

METEO 820: Time Series Analytics for Meteorological Data

3 Credits

This course provides practical guidance in the quantitative analysis of large weather and climate time series datasets for incorporation into an analytical modeling system. Students will learn a variety of methods for identifying key temporal patterns in atmospheric datasets, modeling methods based on patterns, trend analyses in climate datasets, advanced modeling methods, frequency domain analyses, and spatial-temporal visualization techniques specific to meteorology. Furthermore, data reduction techniques will be discussed for working with big weather and climate datasets. Specific emphasis will be placed on preparing environmental data for analysis, data visualization techniques, correctly selecting appropriate analyses, validating results, and realistic interpretations of results. Case studies will augment the discussion on the various time series methods with the goal being to broaden the student’s perspective on the use of weather and climate data for forecasting and modeling as it pertains to decision making.

**Prerequisite:** METEO 810, METEO 815

METEO 825: Predictive Analytic Techniques for Meteorological Data

3 Credits

This course provides practical guidance in forecast systems of weather and climate variables for incorporation into decision-making systems. Students will learn a variety of methods for prognostic modeling of categorical and continuous variables, measuring forecast accuracy, and assessing results through Monte Carlo simulations. Ensemble environmental forecasting techniques will also be presented. Specific emphasis will be placed on the strengths and limitations of each technique, validating assumptions for particular forecast methods, and assessing the results of the weather or climate model using a variety of statistical techniques. Numerous examples and case studies will augment discussion of the techniques with the goal being to grow the student’s knowledge on weather and climate forecasting and its usage in decision-making.

**Prerequisite:** METEO 820

METEO 830: Weather and Climate Analytics Applications

1 Credits

The goal of weather and climate analytics is to better inform decision-makers on the probability of adverse and advantageous weather events. This course will adopt a case study approach whereby students learn to create a weather and climate analytics analysis and presentation. Emphasis will be placed on framing a problem with appropriate research, collecting and analyzing historical data, developing appropriate analytical modeling, and presenting results and recommendations. As preparation for synthesizing their own project, students will scrutinize multiple examples of weather and climate analytic studies from a variety of industries and sectors. Furthermore, the course will provide multiple opportunities for students to receive guidance and feedback from their instructor, fellow classmates, and industry professionals.

**Prerequisite:** METEO 825
METEO 880: Communication of Research in Atmospheric Science

2 Credits

In this course, students will learn how to present the results of their research in the three main forms that atmospheric scientists currently use: peer-reviewed journal articles, poster presentations, and oral presentations. Students will learn how scientific writing differs from other forms of writing and will learn the building blocks for constructing effective paragraphs and sentences for journal articles. The structure of a journal article will be described and students will learn about each of the key elements of a journal article, including the abstract, introduction, methods, results, discussion, conclusions, references, figures, and tables. Authorship and the peer-review process will be discussed. Finally, students will learn techniques for communicating their research to the general public.

METEO 891: Professional Development for Graduate Students

1 Credits

The one-credit pass/fail course will offer practical and helpful advice to graduate students who are ready to begin exploring career opportunities. The course will cover professionalism and ethics, writing and reviewing scientific papers, how to succeed at grant writing, post-doctoral opportunities and examples, careers in industry, careers in government and academic, the job application process, how to interview, career planning after college, financial literacy, the value of professional societies for your career, dealing with new media, and leadership development. There will be guest speakers, including successful alumni, university staff, and others whose participation will enhance the value of the class. Finally, students will be paired with an alum in a similar or related discipline and will interview this alum about their career and any advice they would offer a recent graduate. The students will share what they learned during their alumni interviews with the class. Class discussion is strongly encouraged.

METEO 897: Special Topics

1-9 Credits

Formal courses given on a topical or special interest subject which may be offered infrequently.

Microbiology - MD (MICRO)

MICRO 550: Medical Microbiology

2 Credits

Principles of medical microbiology; host-parasite relationships; structure and function of viruses, bacteria, and fungi as agents causing human disease.

MICRO 551: Medical Microbiology

3 Credits

Principles of medical microbiology; host-parasite relationships; structure and function of viruses, bacteria, and fungi as agents causing human disease.

Prerequisite: MICRO550

MICRO 556: Concepts in Immunology

2 Credits

Concepts in Immunology is designed to instruct students in immunological topics that are typically not covered in depth in lower-level classes in microbiology and/or immunology. These topics usually represent emerging areas in immunology and the specific interests of the teaching faculty and students registered for the course. This course is team-taught and is offered primarily to graduate students. Most students enrolled in this course are either graduate students in the Virology and Immunology Option (VIORM) of the Biomedical Sciences (BMS) Program or students in other options of the BMS Program but who are conducting thesis research in laboratories of faculty who are in the Department of Microbiology and Immunology. One major objective of this course is to reinforce the students' knowledge in the fundamentals of immunology and to provide a substantially deeper base of knowledge in selected fundamental areas. Another major objective is to broaden the students' scope of immunological concepts through the teaching of interdisciplinary topics in immunology. In the past, such topics have included neuroimmunology, immunological aspects of aging, immunology of atherosclerosis, regulation of the maternal immune response during pregnancy, and pathogenesis of rheumatoid arthritis. Achieving these objectives is accomplished through a combination of didactic lectures and readings/discussion of both primary and review literature. This course is typically offered in the Spring semester of each year and class enrollment usually ranges between three and six students.

MICRO 557: Literature Reports

1 Credits/Maximum of 99

Weekly analysis of current literature in microbiology.

MICRO 581: Immunology A: Basic Concepts in Innate and Adaptive Immunity

1 Credits

Discuss innate immune mechanisms and the basic concepts and molecular/cellular components of adaptive immune system. MICRO 581 Immunology A: Basic Concepts in Innate and Adaptive Immunity (1) This course will cover basic concepts, molecular/cellular components, and recognition mechanisms of innate immune system. It will also include an introduction of the molecular/cellular components of the adaptive immune system. Lectures are based on research literature, although an Immunology textbook will be recommended to the students.

MICRO 582: Immunology B: Adaptive Immunity

1 Credits

Discuss adaptive immune mechanisms. MICRO 582 Immunology B: Adaptive Immunity (1) This course focuses on the mechanisms in the development, activation, and effector functions of the adaptive immune system. It covers the development and activation of lymphocytes, humoral and cellular immunity, cytokines, as well as immunological techniques.

Prerequisite: MICRO581

MICRO 583: Viral Vectors

1 Credits

Use and design of viral vectors in research land use in gene therapy; exploration of viral vector strengths and limitations. MICRO 583 Viral
Vectors (1) This course is designed to provide the student with the 'big picture' regarding the properties, design, and use of viral vectors within the research laboratory. A basic understanding on the construction of viral vectors, the various methods used for transfection, choice of promoters, as well as considerations regarding Kozak's rules, distance requirements between the 5'-end and the ATG, internal initiation sites, splicing signals, nuclear export signals, polyadenylation etc. In addition, emphasis will also be placed on the future role viral vectors will play in gene therapy and vaccination. One of the strengths of this course is that it will address a subject in translational medicine that is rapidly evolving and the students will be exposed to the dynamic aspects regarding the development of viral vectors for their eventual use in treatment of disease.

**Prerequisite:** BMS 501 , BMS 502 , BMS 503

MICRO 590: Colloquium
1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

MICRO 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

MICRO 600: Thesis Research
1-15 Credits/Maximum of 999

No description.

MICRO 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999

No description.

MICRO 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6

Teaching students laboratory techniques and tests that are used to identify microorganisms and to aid in the diagnosis of disease.

**Mineral Processing (MNPR)**

MNPR 505: Particle Separation
3 Credits

This course will provide the students with the fundamentals and state-of-the-art techniques in particle separations and their applications in recovery of minerals and elements from primary and secondary sources. The topics covered in this course include: Data Evaluation and Mass Balancing, Gravity Concentration, Forth Flotation, Advanced Dry Separations, Advanced Dewatering Techniques, Classifications, Magnetics, Clarification, Processing of Primary Mineral Resources, and Recycling.

**RECOMMENDED PREPARATIONS:** Students should be familiar with the fundamentals of mineral process engineering and the content of MNPR 413, or equivalent.

MNPR 507: Hydrometallurgical Processing
3 Credits

Fundamental physico-chemical factors underlying the aqueous extraction and recovery of metals and nonmetals from ores, minerals, and scrap metal. MN PR 507 (MATSE 560) Hydrometallurgical Processing (3) This 3-credit course is concerned with the fundamental physico-chemical processes associated with the processing, utilization, and recycling of materials in aqueous systems. The topics covered cut across a wide range of practical applications. The course is therefore suitable for a broad spectrum of scientists and engineers concerned with processes and processing in aqueous systems, e.g., in materials science and engineering, mineral processing, geoscience, soil science, environmental engineering, chemistry, chemical engineering, petroleum and natural gas engineering, mining engineering, nuclear engineering, and electronic and electrical engineering. A required term paper provides a formal mechanism for ensuring that students have the opportunity to apply ideas discussed in the course to their specific areas of interest.

**Prerequisite:** MATSE426

Cross-listed with: MATSE 560

MNPR 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

MNPR 600: Thesis Research
1-15 Credits/Maximum of 999

No description.

MNPR 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999

No description.

**Mining (MNG)**

MNG 512: Valuation of Mineral Properties and Mining Projects
3 Credits

This course will prepare the students with tools to evaluate mineral resources and mining projects from industrial perspectives. Students are expected to possess basic understanding of geostatistics, economic and accounting principles, and the mining industry in general. This course will provide additional insight in geostatistical methods and the economic and financial decision-making process. Case studies will examine recent major global exploration undertakings to reinforce key concepts.

**RECOMMENDED PREPARATIONS:** Students are expected to possess basic understanding of geostatistics, economic and accounting principles, and the mining industry in general, as covered in MNG 412, EME 460, or equivalent.
MNG 541: Surface Mine Equipment Selection Analysis  
3 Credits  
Design analysis and selection criteria for principal surface mine equipment, their interaction in operation, and auxiliary equipment requirements.  
Prerequisite: C E 360, MNG 441

MNG 554: Rock Mechanics Design  
3 Credits  
Engineering design process; design of mines, tunnels, slopes, and underground chambers; guided design concept; creativity and innovation; group design project.  
Prerequisite: MNG 543

MNG 596: Individual Studies  
1-9 Credits/Maximum of 9  
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

MNG 597: Special Topics  
1-9 Credits/Maximum of 9  
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

MNG 597A: **SPECIAL TOPICS**  
6.00 Credits

MNG 598: Special Topics  
1-9 Credits/Maximum of 9  
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

MNG 600: Thesis Research  
1-15 Credits/Maximum of 999  
No description.

MNG 601: Ph.D. Dissertation Full-Time  
0 Credits/Maximum of 999  
No description.

---

Molecular, Cellular, and Integrative Biosciences (MCIBS)

MCIBS 503: Critical Elements of Genetics and Molecular and Cellular Biology  
4 Credits  
Foundational topics and critical analysis in evolution, genetics, molecular and cellular biology and cell differentiation. BIOL (BMMB/MCIBS/VB SC) 503 Critical Elements of Genetics and Molecular and Cellular Biology (4) Central elements in genetics, genomics and molecular and cell biology will be covered. The course will focus on foundational principles and concepts that will allow students to understand the behavior of proteins and organelles within cells, and to appreciate how intracellular events influence interactions of cells with one another in multicellular systems and during development. Another major focus will be genome architecture, both in the context of evolution and gene expression. Students will also learn how genetic approaches can be used to understand cell and molecular biology, and will develop critical thinking skills through the analysis of the primary scientific literature. The course will include lecture and discussion sessions.  
Cross-listed with: BIOL 503, BMMB 503, VBSC 503

MCIBS 511: Molecular Immunology  
2 Credits  
The study of molecular and biochemical events that influence immune responses and define current questions in immunology. BMMB 511 / MCIBS 511 / VBSC 511 Molecular Immunology (2) The goals of the course are to integrate the current questions of immunology with other disciplines, in particular cell biology and biochemistry, and to provide training in critical thinking and evaluation of data and experiments. The course will be approximately 2/3 lecture by the instructor and 1/3 student presentations of papers related to the material. In addition, written critical reviews of recently published papers and a short research proposal will be assigned. By focusing on the mechanisms involved in immunity and disease, this course complements several existing courses on immunology, virology, and biochemistry. The prerequisites of MICRB 410 and BMB 400 assure that the students enrolling in the course have a general understanding of immunology and biochemistry. This course is projected as an elective for the Molecular Medicine and Immunobiology focus areas in the MCIBS graduate program and for the Pathobiology and BMMB graduate programs. The course will be offered in the fall semester with an enrollment limit of 20 students  
Prerequisite: B M B 400, MICRB 410  
Cross-listed with: BMMB 511, VBSC 511

MCIBS 530: Regulation of gene expression by xenobiotics  
3 Credits  
The course examines mechanisms by which foreign chemicals alter gene expression and techniques used to analyze these effects. MCIBS (VB SC) 530 Regulation of Gene Expression By Xenobiotics (3) The goals of the present course are to enhance the students' ability to read, design, implement and discuss studies focusing on how chemicals regulate gene expression. Through the use of current research articles, the students will understand the principles of experimental design. They will learn critical reading skills as well as enhance their own research
and problem solving abilities. In addition, an emphasis will be placed on presentation clarity and ability to defend scientific inquiry from peers. Thus students will develop critical communication skills. Each student will give several presentations during the semester (depending on the number of students enrolled), each based on a current journal article. All students are expected to read the article and participate in in-class discussions. This course requires a good understanding of biochemistry and molecular biology.

MCIBS 535: Oncology: Bench to Bedside

3 Credits

This course is required for graduate students in the MCIBS program who are in the Cancer Biology Emphasis Area. It is designed to give students who are studying cancer at a molecular, reductive level experience with the clinical aspects of the disease. The course will be held at Mt. Nittany Medical Center once a week for 3 hrs, in both patient-oriented, hands-on and didactic settings to understand how cancer is diagnosed, imaged, and treated, how patient care and side effects of therapy are managed, and the importance of clinical trials in developing new treatments for cancer. For each subject area students will spend 2 hours engaged in a clinical experience related to cancer under the supervision of course directors or additional clinicians at Mt. Nittany, followed by a 1 hour lecture/didactic session on a related topic. In addition to broad learning objectives, this course will make students aware of critical issues in cancer biology and treatment that may serve as a springboard for future research.

Prerequisite: MCIBS 503, MCIBS 590, BIOL 416; VBSC 534

MCIBS 551: Genomics

3 Credits

Structure and function of genomes including use of some current web-based tools and resources for studies and research in genomics. BMMB 551 / MCIBS 551 Genomics (3) This course will deal with the structure and function of genomes including the use of some current web-based tools and resources for studies and research in genomics. The overall objective is to learn current information about the structure and function of genomes, to develop facility in the many web-based tools and resources for further studies and research in genomics, and to appreciate the power and limitations of current resources and knowledge. This course is designed as a basic course for any student in the life sciences who needs to exploit the developments and tools in genomics in their own research and who wants to broaden their understanding of the current knowledge and research in the life sciences that are increasingly drawing on genomics advances. The course will be taught by a team of faculty (members active in genomics research and will be video-conferenced. Students’ grades will be based on take home exams or assignments that require their understanding of the concepts in genomics and the hands-on use of web-based analysis tools, as well as on class discussion participation. Students will be assigned one or more projects, tutorials, problem sets or essays to complete. Reading assignments will further help students explore the materials, do the assignments and participate in classroom discussions.

Cross-listed with: BMMB 551

MCIBS 554: Foundations in Data Driven Life Sciences

3 Credits

Expanded overview of current developments and technique in computational biology and genomics. BMMB (MCIBS) 554 Foundations in Data Driven Life Sciences (3) The successful progression of data-driven biomedical research is obscured by a wide-range of logistical problems related to data handling and processing, a widespread disconnect between developers and consumers of biomedical analysis software, and lack of accessible, well-developed curricula and active learning opportunities necessary for the development of key data analysis skills in the next generation of researchers and clinicians. This course aims a filling these gaps. Topics include fundamental concepts that underpin analysis of sequence data, design of complex experiments, research transparency and reproducibility, as well as result disseminations practices relevant to presentations and publications.

Cross-listed with: BMBB 554, IBIOS 554

MCIBS 555: Statistical Analysis of Genomics Data

3 Credits

Statistical Analysis of High Throughput Biology Experiments.

Cross-listed with: BIOL 555, STAT 555

MCIBS 556: Computation, Bioinformatics, and Statistics Practicum

3 Credits/Maximum of 999

Training in developing and implementing team research projects using high dimensional genomic data. CBIOS Practicum builds on fundamental knowledge of the literature and scientific process learned in MCIBS 541 Critical Analysis of Bioinformatics and Genomics Research Topic. Students will identify, plan, and implement actual research projects involving high dimensional, complex ‘omics’ data that are relevant to the biomedical sciences and of direct interest to the students enrolled and their mentors. Students will form teams and work on these projects throughout the semester, fostering interdisciplinary exchanges, the ability to work collaboratively in teams, and excellence in oral and written communication through presentations and reports. Various types of computational tools and statistical techniques will be discussed, utilized, and compared, based on students’ background and choice of research projects. Students will be assessed based on the creativity of their team research project and the quality of its implementation. Assessment will involve progress presentations during the semester, as well as a final presentation and written report on the research project. Students will be evaluated on their ability to identify, plan, and implement the research projects and their understanding of biomedical, computational, and statistical concepts related to the projects, as well as their oral and written scientific communication skills.

Prerequisite: MCIBS 541

MCIBS 571: Current Issues in Biotechnology

2 Credits

Lecture-discussion series by academic and industry experts on the cutting-edge of science, business, intellectual property, legal, social, and ethical issues in biotechnology. The course also requires a group project, involving case studies or market research on various areas of biotechnology. MCIBS 571 Current Issues in Biotechnology (2) Lecture-discussion series by academic and industry experts on the cutting-edge
of science, business, intellectual property, legal, social, and ethical issues in biotechnology. The course also requires a group project, involving case studies or market research on various areas of biotechnology.

MCIBS 589: Colloquium in Bioinformatics and Genomics
1-2 Credits/Maximum of 3
Colloquium in Bioinformatics and Genomics will be based on seminars by faculty, students, and outside speakers in the area of bioinformatics and genomics. Students will attend weekly seminars and listen to various faculty talks on broad research topics. Students will additionally meet either on a weekly (fall semester) or a bimonthly (spring semester) basis and review and discuss the talks attended.

MCIBS 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

MCIBS 591: Ethics, Rigor, Reproducibility and Conduct of Research in the Life Sciences
2 Credits
An examination of ethics, scientific rigor, data reproducibility, and scientific transparency in the conduct of research in life sciences

MCIBS 592: Current Research Seminar
2 Credits
This course uses a weekly biological seminar as a springboard for discussion of a research topic of high current interest.

MCIBS 593: Molecular Biology Laboratory
3 Credits
An intensive laboratory course on the principles and techniques of nucleic acid purification, analysis by restriction enzymes, gel electrophoresis, nucleic acid labeling and hybridization, cloning, sequencing, PCR amplification, and analysis of cloned heterologous gene expression by western blotting. MCIBS 593 Molecular Biology Laboratory (3) An intensive laboratory course on the principles and techniques of nucleic acid purification, analysis by restriction enzymes, gel electrophoresis, nucleic acid labeling and hybridization, cloning, sequencing, PCR amplification, and analysis of cloned heterologous gene expression by western blotting.

MCIBS 594: Research Topics
1-15 Credits/Maximum of 15
Supervised student activities on research projects identified on an individual or small-group basis.

MCIBS 595: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

MCIBS 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

MCIBS 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

MCIBS 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

MCIBS 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

MCIBS 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University.

MCIBS 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

MCIBS 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

Music (MUSIC)

MUSIC 500: Introduction to Music Reference and Research Materials
2 Credits
A study of musicological reference and research materials in English and western European languages, with exercises in their use.

MUSIC 505: symphonic Wind Ensemble
1 Credits/Maximum of 4
Rehearsal and performance of wind repertoire and concert band literature.

Prerequisite: admission by audition

MUSIC 507: Philharmonic Orchestra
1 Credits/Maximum of 4
Orchestra rehearsal and performance.
MUSIC 508: Chamber Orchestra
1 Credit/Maximum of 4
Chamber orchestra rehearsal and performance.

MUSIC 519: Graduate Seminar in Intermediate Piano Pedagogy
2 Credits
Graduate seminar in intermediate teaching repertoire and strategies for piano from the Baroque to the 21st century. This course is intended for pianists in the degrees Master of Music and Doctor of Musical Arts who will have already passed the introductory undergraduate course in Intermediate Piano Pedagogy, MUSIC 424, or the current Graduate Seminar in Piano Pedagogy, MUSIC 589 (which will continue to be offered; it is required for piano pedagogy major students in the Master of Music degree), or an equivalent of one of these courses at another institution. The material will be covered in class discussions, reading and listening assignments, and in-class student presentations. Writing, performing, and speaking will be required. The course is designed to give developing professional pianists and piano teachers greater depth of knowledge of the pedagogical repertoire than is possible either in the introductory course or through their own concurrent teaching experiences. The seminar format encourages group discussion as well as independent work.

MUSIC 519: Graduate Seminar in Intermediate Piano Pedagogy
2 Credits
Graduate seminar in advanced repertoire, history of piano pedagogy, and strategies for piano from the Baroque to the 21st century. MUSIC 524 is intended for pianists in the degrees Master of Music and Doctor of Musical Arts who will have already passed the introductory undergraduate course in Intermediate Piano Pedagogy, MUSIC 424, or the current Graduate Seminar in Piano Pedagogy, MUSIC 589 (which will continue to be offered; it is required for piano pedagogy major students in the Master of Music degree), or an equivalent of one of these courses at another institution. The material will be covered in class discussions, reading and listening assignments, and in-class student presentations. Writing, performing, and speaking will be required. The course is designed to give developing professional pianists and piano teachers greater depth of knowledge of the pedagogical repertoire than is possible either in the introductory course or through their own concurrent teaching experiences. The seminar format encourages group discussion as well as independent work.

Prerequisite: MUSIC 424, MUSIC 589

MUSIC 520: Chamber Music for Strings
1 Credit/Maximum of 4
Preparation for performance of (advanced) chamber music literature involving primarily stringed instruments–quartets and quintets.

Prerequisite: admission by audition

MUSIC 521: Chamber Music for Woodwinds
1 Credit/Maximum of 4
Preparation for performance of (advanced) chamber music literature involving primarily woodwind instruments–quartets and quintets.

Prerequisite: admission by audition

MUSIC 522: Chamber Music for Brass
1 Credit/Maximum of 4
Preparation for performance of (advanced) chamber music literature involving primarily brass instruments–quartets and quintets.

Prerequisite: admission by audition

MUSIC 523: Sonata Duos
1 Credit/Maximum of 4
Preparation for performance of (advanced) sonata literature for various individual instruments with keyboard.

Prerequisite: admission by audition

MUSIC 524: Graduate Seminar in Advanced Piano Pedagogy
2 Credits
Graduate seminar in advanced repertoire, history of piano pedagogy, and strategies for piano from the Baroque to the 21st century. MUSIC 524 is intended for pianists in the degrees Master of Music and Doctor of Musical Arts who will have already passed the introductory undergraduate course in Intermediate Piano Pedagogy, MUSIC 424, or the current Graduate Seminar in Piano Pedagogy, MUSIC 589 (which will continue to be offered; it is required for piano pedagogy major students in the Master of Music degree), or an equivalent of one of these courses at another institution. The material will be covered in class discussions, reading and listening assignments, and in-class student presentations. Writing, performing, and speaking will be required. The course is designed to give developing professional pianists and piano teachers greater depth of knowledge of the pedagogical repertoire than is possible either in the introductory course or through their own concurrent teaching experiences. The seminar format encourages group discussion as well as independent work.

Prerequisite: MUSIC 424, MUSIC 589

MUSIC 531: Analytical Techniques
3 Credits
Twentieth-century theories of tonal music other than Schenker; emphasis on motivic, thematic, metric, and rhythmic analysis.

Prerequisite: MUSIC 331

MUSIC 532: Schenkerian Analysis
3 Credits
An intensive introduction to the analytical method developed by the Twentieth-century Austrian theorist and musicologist, Heinrich Schenker.

Prerequisite: satisfactory performance on the graduate theory placement examination

MUSIC 533: The Pedagogy of Undergraduate Theory and History
2 Credits
A study of approaches to the teaching and learning of music theory (written and aural skills) and history.

Prerequisite: MUSIC 262, MUSIC 331

MUSIC 535: Composition
1-4 Credits/Maximum of 4
Composition of vocal, instrumental, and electronic media and preparation of compositions for performance.

MUSIC 560: Choral Conducting
2 Credits/Maximum of 16
Study of choral conducting techniques, comprehensive score analysis, and supervised rehearsal and performance practicum.
MUSIC 561: Orchestral Conducting
2 Credits/Maximum of 16
Study of orchestral conducting technique, comprehensive score analysis, and supervised rehearsal and performance practicum.

MUSIC 562: Band/Wind Ensemble Conducting
2 Credits/Maximum of 16
Study of band and wind ensemble conducting, comprehensive score analysis, and supervised rehearsal and performance practicum.

MUSIC 565: Studio and Recital Accompaniment
1 Credits/Maximum of 4
Keyboard accompaniment of student soloists in the studio and in public performance, under faculty supervision.

Prerequisite: admission by audition

MUSIC 572: Seminar in Musicology
3 Credits/Maximum of 9
Research in selected areas of music history.

MUSIC 573: Integrative Seminar in Music Theory and History
3 Credits
Special topics (composer, style, genre) taught from both theoretical and historical perspectives.

Prerequisite: MUSIC262, MUSIC331

MUSIC 574: Seminar in Music Theory
3 Credits
Study of analytical techniques, aesthetics, writings, in music theory, music cognition, musical sketches, and mathematical models taught from a theory perspective.

Prerequisite: MUSIC432

MUSIC 575: Integrative Conducting Seminar
1 Credits/Maximum of 2
A seminar for choral, orchestral, and band/wind ensemble graduate conducting majors, taught by conducting faculty in all three areas.

MUSIC 580: Studies in Orchestral Literature
2 Credits/Maximum of 8
Selected studies in orchestral literature from the seventeenth century to the present.

MUSIC 582: Studies in Band/Wind Ensemble Literature
2 Credits/Maximum of 8
Selected studies in band and wind ensemble literature from the Renaissance to the present.

MUSIC 583: Studies in Choral Literature
2 Credits/Maximum of 8
Selected studies in choral literature of all types from the Renaissance to the present.

MUSIC 585: Graduate Seminar in Keyboard Music 1710 to 1820
2 Credits
Seminar in music for keyboards (organ, harpsichord, pianoforte) from the early works of J.S. Bach (c. 1710) to late Beethoven. MUSIC 585 Graduate Seminar in Keyboard Music 1710 to 1820 (2)This first of three seminar courses is intended for pianists in the degrees Master of Music and Doctor of Musical Arts who will have already passed the introductory survey in Keyboard Literature, MUSIC 481 or its equivalent at other institutions. The material, dealing with the periods beginning with late Baroque (J.S. Bach, Handel, Domenico Scarlatti) and ending with Beethoven, will be covered in class discussions, listening assignments, and student presentations in class. Both writing and speaking will be required. The course is designed to give developing professional pianists greater depth and breadth of knowledge of their repertoire than is possible either in the introductory survey or in their own practice. The seminar format encourages group discussion as well as independent work.

Prerequisite: MUSIC481

MUSIC 586: Graduate Seminar in Piano Music 1820-1920
2 Credits
Seminar in music for pianoforte from the early works of Schubert, circa 1820, to Rachmaninoff (Romantic and post-Romantic). MUSIC 586 Graduate Seminar in Piano Music 1820-1920 (2)This course is intended for pianists in the degrees Master of Music and Doctor of Musical Arts who will already have passed the introductory survey in Keyboard Literature, MUSIC 481, or its equivalent at other institutions. The material, in this case the Romantic music that is the core of pianists’ repertoire, will be covered in class discussions, listening assignments, and student presentations in class. Both writing and speaking will be required. The course is designed to give developing professional pianists greater depth and breadth of knowledge of their repertoire than is possible either in the introductory survey or in their own practice. The seminar format encourages group discussion as well as independent work.

Prerequisite: MUSIC481

MUSIC 587: Graduate Seminar in Piano Music 1890-Present
2 Credits
Seminar in modern music for pianoforte from the early works of Debussy (circa 1890) to the present day. MUSIC 587 Graduate Seminar in Piano Music 1890-Present (2)This course is intended for pianists in the degrees Master of Music and Doctor of Musical Arts who have already passed the introductory survey in Keyboard Literature, MUSIC 481, or its equivalent at other institutions. The most extensive treatment will be given to Debussy and Ravel in the first weeks, and later to Schonberg and his followers, as well as Bartok, Stravinsky, Hindemith, Ives, Messiaen and other outstanding figures. Less-well known composers of superior accomplishment will also be addressed. The material will be covered in class discussions, listening assignments, and student presentations in class. Both writing and speaking will be required. The course is designed
to give developing professional pianists greater depth and breadth of knowledge of their repertoire than is possible either in the introductory survey or in their own practice. The seminar format encourages group discussion as well as independent work.

**Prerequisite:** MUSIC 481

MUSIC 588: Seminar in Music Literature of the Major Performance Area
1-3 Credits/Maximum of 3

Selected studies in music literature specific to the student’s major performance area. Will include research, analysis, and performance.

MUSIC 589: Seminar in Piano Pedagogy
2 Credits

Selected variable topics in piano pedagogy; includes research, performance and discussion of appropriate literature, and class participation.

**Prerequisite:** MUSIC 419, MUSIC 424

MUSIC 590: Colloquium
1-3 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

MUSIC 594: Master’s Paper Research
1-6 Credits/Maximum of 6

Investigation of a specific problem in music or music education.

MUSIC 595: Internship
1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

**Prerequisite:** MUSIC 419, MUSIC 424, MUSIC 589

MUSIC 595A: **SPECIAL TOPICS**
1 Credits

MUSIC 595B: **SPECIAL TOPICS**
1-2 Credits

MUSIC 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

MUSIC 597: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.
MUSIC 810: Choral Ensemble
1 Credits/Maximum of 4

Rehearsal and performance of choral music. MUSIC 810 Choral Ensemble (1 per semester/maximum of 4) The goals of Music 810 are to develop the vocal performing skills, music reading abilities, and interpretive capabilities of the class members within a variety of choral ensemble types, including mixed-voice choirs of varying sizes, men's and women's choirs, and choral ensembles focusing on specific musical traditions. Repertoire is selected from Western music as well as world music traditions. The course is for students who have established vocal performance skills. An audition is required.

MUSIC 811: Instrumental Ensemble
1 Credits/Maximum of 6

Rehearsal and performance of instrumental music. MUSIC 811 Instrumental Ensemble (1 per semester/maximum of 6) The goals of Music 811 are to develop the instrumental performing skills, music reading abilities, and interpretive capabilities of the class members within a variety of instrumental ensemble types. Repertoire is selected from Western music as well as world music traditions. The course is for students who have established instrumental performance skills. An audition is required.

MUSIC 891: Graduate Degree Performance
1 Credits

A juried recital performance for students majoring in performance, composition, or conducting.

MUSIC 896: Individual Studies
1-9 Credits/Maximum of 18

Creative projects with a professional orientation, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

Music Education (MUED)

MUED 540: Reflective Practice and Inquiry I
2 Credits

This course will develop students' reflection in and on teaching through gaining understanding of systematic inquiry and reflection paradigms.

MUED 541: Developing Music Curricula
2 Credits

Introduction to the process for developing music curricula for grades K-12 that reflects current theories/research data as well as state/national guidelines.

MUED 545: Psychological Foundations of Musical Behavior
3 Credits

Study of psychoacoustical effects of musical stimuli; emphasis on responses affecting learning musical ability, musical taste, and aesthetic reactions.

MUED 546: Assessment of Music Learning
2 Credits

Exploration of the unique processes, techniques, and challenges involved in the assessment of music learning.

MUED 547: Mentoring Novice Teachers
1 Credits/Maximum of 2

Strategies for mentoring novice music teachers in peer teaching experiences and in K-12 school field experiences.

MUED 550: Reflective Practice and Inquiry II
2 Credits

This course will use systematic inquiry and reflection to assist students' in understanding the relevance of research methods in music education.

Prerequisite: MU ED540

MUED 555: Doctoral Seminar in Music Education
1-6 Credits/Maximum of 6

Forum for the discussion of problems in theory and design encountered in individual and group research projects.

Prerequisite: admission to doctoral candidacy

MUED 556: Music Learning Theories and Approaches
3 Credits/Maximum of 999

An in-depth analysis of music learning theories and an overview of various approaches to music teaching and learning. In this course, students will be given opportunities to compare and contrast learning theories in education and music. The work of previous major pedagogues in the fields of music education and education will also be analyzed. Application of those theories to music teaching situations as well as analysis of music teaching applications will be explored. Research in these areas will be highlighted and will serve as a basis for discussion. An advanced course primarily for doctoral students in Music Education, other graduate students may enroll if given permission by the instructor. It is assumed that students enrolled in the course have much experience as a music teacher and previous background in general learning theories.

MUED 557: Readings in the History of American Music Education
2 Credits

Intensive reading course on the history of American music education and the social, theological, and educational influences on the profession.

MUED 559: Contemporary Issues in Music Education
1-2 Credits/Maximum of 2

Consideration of the current political and pedagogical issues that influence curriculum development, teaching, and administration of K-12 music programs.
MUED 597: Special Topics
1-3 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MUED 600: Thesis Research
1-15 Credits/Maximum of 999
MUED 601: Ph D Dissertation Full-Time
0 Credits/Maximum of 999
MUED 602: Supervised Experience in College Teaching
1-2 Credits
Teaching of music education laboratory, and recitation classes under senior faculty supervision.

MUED 610: Thes Res Off Cmpus
1-15 Credits/Maximum of 999
MUED 611: Ph D Dissertation Part-Time
0 Credits/Maximum of 999
Research course.

MUED 895: Practicum in Music Teaching
1 Credits/Maximum of 4
Field experiences in music teaching for graduate students in music education.

**Music-Brass (BRASS)**

BRASS 500: Trumpet: Secondary
1 Credits/Maximum of 1
Individual instruction in trumpet one-half hour per week.

BRASS 501: French Horn: Secondary
1 Credits/Maximum of 1
Individual instruction in French horn one-half hour per week.

BRASS 502: Trombone: Secondary
1 Credits/Maximum of 1
Individual instruction in trombone one-half hour per week.

BRASS 503: Euphonium: Secondary
1 Credits/Maximum of 1
Individual instruction in euphonium/baritone one-half hour per week.

BRASS 504: Tuba: Secondary
1 Credits/Maximum of 1
Individual instruction in tuba one-half hour per week.

BRASS 510: Trumpet: Secondary
2 Credits/Maximum of 2
Individual instruction in trumpet one hour per week.

BRASS 511: French Horn: Secondary
2 Credits/Maximum of 2
Individual instruction in French horn one hour per week.

BRASS 512: Trombone: Secondary
2 Credits/Maximum of 2
Individual instruction in trombone one hour per week.

BRASS 513: Euphonium: Secondary
2 Credits/Maximum of 2
Individual instruction in euphonium/baritone one hour per week.

BRASS 514: Tuba: Secondary
2 Credits/Maximum of 2
Individual instruction in tuba one hour per week.

BRASS 530: Trumpet: Performance
4 Credits/Maximum of 4
Individual instruction in trumpet one hour per week. For graduate trumpet performance majors.

BRASS 531: French Horn: Performance
4 Credits/Maximum of 4
Individual instruction in French Horn one hour per week. For graduate French horn performance majors.

BRASS 532: Trombone: Performance
4 Credits/Maximum of 4
Individual instruction in trombone one hour per week. For graduate trombone majors.

BRASS 533: Euphonium: Performance
4 Credits/Maximum of 16
Individual instruction in euphonium one hour per week. For graduate euphonium majors.

BRASS 534: Tuba: Performance
4 Credits/Maximum of 4
Individual instruction in tuba two sessions per week. For graduate tuba performance majors.
**Music-Keyboard (KEYBD)**

KEYBD 500: Piano: Secondary

1 Credits

Individual instruction in piano one-half hour per week. For students who qualify.

KEYBD 501: Organ: Secondary

1 Credits

Individual instruction in pipe organ one-half hour per week. For students who qualify.

KEYBD 510: Piano: Secondary

2 Credits

Individual instruction in piano one hour per week. For students who qualify.

KEYBD 530: Piano: Performance

4 Credits

Individual instruction in piano one hour per week. For graduate piano performance majors.

KEYBD 580: Piano Performance Doctoral/Artist Level

4 Credits/Maximum of 4

One-hour weekly piano lessons with jury examination at end of each semester; repeatable course; four semesters required. KEYBD 580J Piano Performance Doctoral/Artist Level (4)KEYBD 580J consists of one-hour weekly lessons, like other private applied music lessons in the School of Music. The repertoire to be performed and the standards of preparation will be at the highest level, for pianist-students in the degree Doctor of Musical Arts, who will have already completed a Master of Music in Performance. This standard, which will be enforced via a jury examination at the end of the semester, will require large amounts of independent practice, and therefore will be valued at four credits per semester. Four semesters minimum (16 credits) will be required.

**Music-Strings (STRNG)**

STRNG 500: Violin: Secondary

1 Credits

Individual instruction in violin one-half hour per week. For students who qualify.

STRNG 501: Viola: Secondary

1 Credits

Individual instruction in viola one-half hour per week. For students who qualify.

STRNG 510: Violin: Secondary

2 Credits

Individual instruction in violin one hour per week. For students who qualify.

STRNG 511: Viola: Secondary

2 Credits

Individual instruction in viola one hour per week. For students who qualify.

STRNG 512: Violoncello: Secondary

2 Credits

Individual instruction in violoncello one hour per week. For students who qualify.

STRNG 513: Double Bass: Secondary

2 Credits

Individual instruction in double bass one hour per week. For students who qualify.

STRNG 530: Violin Performance

4 Credits/Maximum of 4

Individual instruction in violin one hour per week. For graduate violin performance majors.

**Music-Percussion (PERCN)**

PERCN 500: Percussion: Secondary

1 Credits

Individual instruction in percussion one-half hour per week.

PERCN 510: Percussion: Secondary

2 Credits

Individual instruction in percussion one hour per week.

PERCN 530: Percussion: Performance

4 Credits

Individual instruction in percussion one hour per week. For graduate percussion performance majors.
Music-Voice (VOICE)

STRNG 531: Viola: Performance
4 Credits
Individual instruction in viola one hour per week. For graduate viola performance majors.

STRNG 532: Violoncello: Performance
4 Credits
Individual instruction in violoncello one hour per week. For graduate violoncello performance majors.

STRNG 533: Double Bass: Performance
4 Credits
Individual instruction in double bass one hour per week. For graduate double bass performance majors.

Music-Voice (VOICE)

VOICE 500: Voice: Secondary
1 Credits
Individual instruction in voice one-half hour per week.

VOICE 510: Voice: Secondary
2 Credits
Individual instruction in voice one hour per week.

VOICE 530: Voice: Performance
4 Credits
Individual instruction in voice one and one-half hours per week. For graduate voice performance majors.

Music-Woodwinds (WWNDS)

WWNDS 500: Flute: Secondary
1 Credits
Individual instruction in flute one-half hour per week.

WWNDS 501: Oboe: Secondary
1 Credits
Individual instruction in oboe one-half hour per week.

WWNDS 502: Clarinet: Secondary
1 Credits
Individual instruction in clarinet one-half hour per week.

WWNDS 503: Bassoon: Secondary
1 Credits
Individual instruction in bassoon one-half hour per week.

WWNDS 504: Saxophone: Secondary
1 Credits
Individual instruction in saxophone one-half hour per week.

WWNDS 510: Flute: Secondary
2 Credits
Individual instruction in flute one hour per week.

WWNDS 511: Oboe: Secondary
2 Credits
Individual instruction in oboe one hour per week.

WWNDS 512: Clarinet: Secondary
2 Credits
Individual instruction in clarinet one hour per week.

WWNDS 513: Bassoon: Secondary
2 Credits
Individual instruction in bassoon one hour per week.

WWNDS 514: Saxophone: Secondary
2 Credits
Individual instruction in saxophone one hour per week.

WWNDS 530: Flute: Performance
4 Credits
Individual instruction in flute one and one-half hour per week. For graduate flute performance majors.

WWNDS 531: Oboe: Performance
4 Credits
Individual instruction in oboe one hour per week. For graduate oboe performance majors.

WWNDS 532: Clarinet: Performance
4 Credits
Individual instruction in clarinet one hour per week. For graduate clarinet performance majors.

WWNDS 533: Bassoon: Performance
4 Credits
Individual instruction in bassoon one hour per week. For graduate bassoon performance majors.

WWNDS 534: Saxophone: Performance
4 Credits
Individual instruction in saxophone one hour per week. For graduate saxophone performance majors.
Nanotechnology (NANO)

NANO 521: Pattern Transfer at the Nano-scale

3 Credits

Engineering at the nano-scale often requires creating and then transferring a pattern when fabricating a desired nano-scale structure. This course explores the basic processes of pattern design and then addresses the techniques used to transfer a nano-scale pattern to a surface or structure. The course looks into pattern transfer techniques that employ particles, photons, and additional chemical and physical means as the transfer mechanisms. Included in the photon approaches are studies of deep UV and X-ray pattern transfer. Particle transfer mechanisms discussed include ion and neutral particle approaches. Physical-contact pattern transfer is also explored including discussions of nano-imprinting lithography, nano-molding lithography, and scanning probe lithography. Chemical pattern transfer is another approach to pattern transfer and one that uniquely uses chemical processes to create patterns. Examples to be discussed in this course include molecular self-assembly lithography and block co-polymer lithography. Emerging pattern transfer techniques, such as magneto-lithography, will be included in E SC 521 for completeness. In many of these pattern transfer methodologies, a ‘writing’ of the transferring pattern into some intermediary medium termed a resist is required. In pattern technologies requiring resists, the resist materials and their positioning as well as required physical and chemical properties will be discussed.

Prerequisite: ESC 412, ESC 520
Cross-listed with: ESC 521

NANO 522: Fabrication and Characterization for Top-down Nano-manufacturing

3 Credits

There are two broad approaches to fabrication and manufacturing at the nano-scale: bottom-up and top-down nanofabrication. These are complementary with the former having strong ties to biology and the latter having strong ties to traditional semiconductor processing. E SC 522 focuses on top-down nanofabrication which makes use of two distinct approaches: additive processes and subtractive processes. These are studied in detail in this course by first focusing on the additive processes which deposit or grow materials. The effort then shifts to the subtractive processes which remove materials with a mixture of chemistry and physics, in techniques varying from wet chemical etching to deep ion etching. Achieving nano-scale features means as the transfer mechanisms. Included in the photon approaches are studies of deep UV and X-ray pattern transfer. Particle transfer mechanisms discussed include ion and neutral particle approaches. Physical-contact pattern transfer is also explored including discussions of nano-imprinting lithography, nano-molding lithography, and scanning probe lithography. Chemical pattern transfer is another approach to pattern transfer and one that uniquely uses chemical processes to create patterns. Examples to be discussed in this course include molecular self-assembly lithography and block co-polymer lithography. Emerging pattern transfer techniques, such as magneto-lithography, will be included in E SC 521 for completeness. In many of these pattern transfer methodologies, a ‘writing’ of the transferring pattern into some intermediary medium termed a resist is required. In pattern technologies requiring resists, the resist materials and their positioning as well as required physical and chemical properties will be discussed.

Prerequisite: ESC 412, ESC 520, E SC 521
Cross-listed with: ESC 523

Neuroscience - MD (NEURO)

NEURO 501: Neuroscience Seminar

2 Credits/Maximum of 8

This is a weekly seminar involving discussion of research approaches and methodologies used by guest speakers for the neuroscience seminar series. NEURO 501 Neuroscience Seminar (2 per semester/maximum of 8) This course examines issues related to the research presented by invited speakers in the Neuroscience Seminar series. This is a required course for first and second-year graduate students in the Neuroscience program. The intent is to generate discussion that aids in the understanding of the general research questions, techniques and conclusions reflected in the work of the various speakers. Speakers will address topics ranging from the molecular to human behavior. The Neuroscience Seminar course has two components: (1) the students present on the background research (approaches, methods, and concepts) related to the invited speaker’s work. The students will read 2-3 papers from a list of the speaker’s publications prior to the seminar. The host of the invited speaker (and sometimes the speaker himself or herself, depending on availability) will join the students in the discussion. Each time there will be one student who leads the discussion. Students will participate in discussions with the invited speaker, the instructor, and with other students who may have different research experiences and backgrounds. (2) the students will attend the seminar delivered by the invited speaker and participate in the discussion and question and answer periods.
NEURO 511: Neurobiology II
3 Credits
Structure and physiology of central and peripheral nervous system, including specific sense organs.

Prerequisite: graduate student status

NEURO 512: Comparative Neuroanatomy
4 Credits
This course elucidates the structural organization of the nervous system and describes the evolutionary principles that guide brain development. NEURO 512 Comparative Neuroanatomy (4) This course provides instruction on the functional and structural organization of the vertebrate central nervous system. In addition to lectures, students attend laboratory sessions devoted to human brain dissections, histologic sections of various vertebrate brains, and non-invasive magnetic resonance images. Following instruction on the structural and physiological properties of neurons, students learn how structural and neurochemical variations endow neurons with specific computational properties so that connections between different neuronal subtypes enable local circuits to extract information and create specific input-output transformations that define the functional character of each neural system. The structural organization of the brain is then described both grossly and at the level of functional circuits. Material at the gross level describes the 3-D spatial relationships among the nuclei and fiber tracts within each subdivision of the central nervous system so that students can describe the internal organization of the forebrain, midbrain, hindbrain, and spinal cord. As part of this, students learn to recognize specific structures in different planes of sections along the major axes of the brain. Material at the functional level describes the sensory, motor, and limbic systems according to their circuit connections. Emphasis is placed on the specific connections that enable circuits to transform specific types of information. Students are expected to describe the successive series of nuclei and interconnected pathways that comprise each major neural system. Students are also taught to view neuroanatomy as a scientific field of inquiry. Landmark discoveries and the methods by which prominent neuroanatomists made those discoveries provide a context for describing brain organization. Breakthrough scientific experiments are discussed to illustrate how the structural-functional relationships of the brain have been elucidated. Attention is also devoted to instructing students in modern experimental methods that are used to determine how brain circuits are altered by experimental manipulations. While the course emphasizes the mammalian nervous system, many aspects of brain organization in non-mammalian vertebrates are presented. In the last third of the course, students read a monograph focused on the principles that guided vertebrate brain evolution across different phylogenetic lineages. A series of lectures are devoted to neurocladistics and the evidence that has prompted competing theories of brain evolution so that students can critically evaluate differences in brain organization across different groups of vertebrates.

NEURO 515: Developmental Neurobiology
2 Credits
Development of the nervous system in all its aspects.

Cross-listed with: ANAT 515

NEURO 520: Cellular and Molecular Neuroscience
3 Credits
An introduction to neurons, glia, and the molecular basis of brain function.

NEURO 521: Systems Neuroscience
3 Credits
An introduction to the major neural systems and their integrative functions.

NEURO 522: Seminars in Neuroscience I
2 Credits
Study at the cellular, molecular, and metabolic level of selected subjects in neuroscience.

NEURO 523: Seminars in Neuroscience II
2 Credits
Study at the cellular, molecular, and metabolic level of selected subjects in neuroscience.

NEURO 524: Neuroscience Bootcamp
2 Credits
This is a laboratory course that meets twice weekly. The goal of this course is to engage incoming graduate students in the Neuroscience Program to a didactic/hands-on methods-based primer and overview of modern neuroscience laboratory methodology. After successful completion of this course, students will be able to: - Demonstrate an understanding of basic laboratory safety and standard laboratory practices. - Demonstrate an understanding of how to keep data and records in a proper laboratory notebook. - Demonstrate an understanding of basic laboratory approaches used in a modern neuroscience research lab to address questions in neuroscience. - Demonstrate an understanding of how to perform and interpret laboratory experiments and analyze data acquired from those experiments.

NEURO 530: Professional Development and Responsible Conduct in Science
1 Credits
An introduction to the professional skills necessary for careers in biomedical sciences.

NEURO 580: Translational Medicine in Substance Use Disorder
3 Credits
This course provides students with insight into the dynamic and ongoing relationship between laboratory research and clinical practice as it relates to substance use disorder. Students will shadow a clinician in order to observe the current clinical treatment strategies for substance use disorder as well as learn about how this chronic disease affects the afflicted patients. In parallel, weekly lectures and classroom discussions will provide students with the most up-to-date understanding of the physiological mechanisms mediating substance use disorder based on preclinical and clinical data. To provide students with a government and health insurance perspective on substance use disorder, this course
will discuss policies put in place to control illicit drug use as well as discuss the approach insurance companies take when covering patients getting treatment. The goal of this course is to provide students with a comprehensive understanding of drug addiction at the clinical, preclinical, and government levels with the purpose of training students to observe clinical needs and address them through experimental design.

**COREQUISITES:** BMS 571

**RECOMMENDED PREPERATION:** The student must: (a) be at least a 2nd year graduate student (b) select a thesis relevant clinical rotation and (c) have been approved by the course director

**NEURO 590:** Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students or outside speakers.

**NEURO 596:** Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

**NEURO 597:** Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

**NEURO 600:** Thesis Research

1-15 Credits/Maximum of 999

Thesis Research

**NEURO 601:** Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

**NEURO 602:** Supervised Experience in College Teaching

1 Credits/Maximum of 2

Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University

**Prerequisite:** NEURO 511, NEURO 520, NEURO 521

**Nuclear Engineering (NUCE)**

**NUCE 501:** Reactor Engineering

3 Credits

Thermal hydraulic fundamentals applied to power reactors, thermal analysis of fuel elements and two-phase heat transfer in heated channels.

**Prerequisite:** NUC E430

**NUCE 502:** Reactor Core Thermal-Hydraulics

3 Credits

In-depth analysis of the reactor core thermal hydraulics; computational methods and practical applications. NUC E 502 Reactors Core Thermal-Hydraulics (3) This course provides students with a background in reactor core thermal hydraulics and enhances their understanding of the important phenomena in a nuclear reactor core, which can determine reactor safety performance. Students will obtain an overall view of reactor safety from the reactor thermal hydraulics perspective. This course examines the outcomes of research projects and international scientific activities in this area. Objectives are met by introducing course modules that utilize state-of-the-art computer codes to solve well established international thermal-hydraulics benchmark problems to demonstrate reactor performance during operational transients. One of the principal goals of the course is to provide students with a computationally intensive curriculum that is consistent with their capabilities and their expectations for a modern reactor thermal hydraulics course. This course discusses detailed thermal-hydraulic analysis of reactor systems with an emphasis on the application of conservation equations for single- and two-phase flow in detailed modeling of reactor cores using three-dimensional subchannel analysis methods and examines the reactor's core thermal-hydraulic design for core limit analysis. The governing sets of equations that form the basis for the three-dimensional thermal-hydraulic methods commonly used in the nuclear industry will be derived and discussed in addition to specific models that are used for closure. Hot assembly analysis will be performed, as well as core wide analysis, to determine the hot assembly and resulting hot subchannels in the core. Students will use state-of-the-art three-dimensional computer codes to model fuel assemblies and the reactor core to determine the most limiting fuel pin and hottest subchannel. Background on heat and mass transfer and fluid dynamics is the prerequisite to this course, which provides a basis for understanding reactor core thermal-hydraulic analysis.

**Prerequisite:** NUC E430

**NUCE 505:** Reactor Instrumentation and Control

3 Credits

Reactor control principles; classical control methods; operational control problems; control simulation using modern mainframe and microcomputer software packages; reactor instrumentation.

**Prerequisite:** NUC E302 or NUC E401

**NUCE 506:** Nuclear Chemistry

3 Credits

Energetics, kinematics, and models of nuclear reactions; nuclear processes as chemical probes, mssbauer effect and perturbed angular correlation spectroscopy.

**NUCE 511:** Nuclear Reactor Kinetics and Dynamics

3 Credits

Analytical kinetics and dynamics modeling for reactivity-induced transients; reactor accident kinetics methods for simple and complex geometries; experimental methods. NUC E 511 Nuclear Reactor Kinetics and Dynamics (3) This course provides students with a background in the area of nuclear reactor kinetics and dynamics and enhances their
Prerequisite: regenerating cases. Prerequisite: found in nuclear reactors. Approximate and exact solution for the monoenergetic and spectrum design. Derivation of Boltzmann equation for neutron transport; techniques of high temperature, neutron irradiation, and aggressive electrochemistry.

Degradation of materials performance when exposed to the combination cycle. Emphasis on calculational techniques in reactor, optimization, and nuclear fuel inventory determination and economic value through the fuel cycle. Cross-listed with: MATSE 523

3 Credits

NUCE 521: Nuclear Fuel Management

3 Credits

Nuclear fuel inventory determination and economic value through the fuel cycle. Emphasis on calculational techniques in reactor, optimization, and design.

Prerequisite: NUC E302

NUCE 521: Neutron Transport Theory

3 Credits

Derivation of Boltzmann equation for neutron transport; techniques of approximate and exact solution for the monoenergetic and spectrum regenerating cases.

Prerequisite: NUC E403 or PHYS 406

NUCE 523: Environmental Degradation of Materials in Nuclear Power Plants

3 Credits

Degradation of materials performance when exposed to the combination of high temperature, neutron irradiation, and aggressive electrochemistry found in nuclear reactors.

Prerequisite: MATSE409 Cross-listed with: MATSE 523

NUCE 525: Monte Carlo Methods

3 Credits

Fundamentals of the probability theory and statistics, analog and non-analog Monte Carlo methods and their applications, random processes, and numbers.

Prerequisite: MATH 141, PHYS 237, STAT 401

NUCE 530: Parallel/Vector Algorithms for Scientific Applications

3 Credits

Development/analysis of parallel/vector algorithms (finite-differencing of PDEs and Monte Carlo methods) for engineering/scientific applications for shared and distributed memory architectures.

Prerequisite: AERSP424 or CMPSC450

NUCE 540: Theory of Plasma Waves

3 Credits

Solutions of the Boltzmann equation; waves in bounded and unbounded plasmas; radiation and scattering from plasmas.

Prerequisite: E E 471 Cross-listed with: AERESP 540

NUCE 542: Source and Detector Technologies for Nuclear Security

3 Credits

Theory and Technology behind detectors, sensors, and source technologies including portal monitors and field deployable detection systems.

Prerequisite: NUC E 450

NUCE 543: Nuclear Security Education Laboratory

3 Credits

Hands-on Experience with the radiation detection systems, sensors, devices, and source technologies for nuclear security applications.

Prerequisite: NUC E 450, NUC E 542

NUCE 544: Global Nuclear Security Policies

3 Credits

This course reviews the historical development and examines the current state of American and international policies and laws related to global nuclear security. U.S. policy has evolved over a period of more than sixty years since the Manhattan Project and has embraced the importance of both safeguards (applicable to weapons states and non-weapons states that commit to peaceful use of nuclear materials) and proliferation prevention (policies intended to deter and detect attempts to illicitly acquire nuclear weapons). Over this time improvements in technology have increased the potential for proliferation but have also increased the ability to detect proliferation. Recently, heightened danger of unauthorized proliferation by states and, more worrisome, transnational non-states, has led to increased emphasis on control and detection. Within this context students in this course will study U.S. national security strategy in the areas of counterterrorism and nonproliferation. We will discuss those policies aimed at enhancing nuclear security and...
examine the roles of various agencies, including the Department of Homeland Security, the Department of Energy (including the National Nuclear Security Administration), the Nuclear Regulatory Commission, the Department of Defense, and the Environmental Protection Agency. International treaties and conventions on nuclear safeguards, arms control, and terrorism will be covered. Regulations promulgated by the U.S. Nuclear Regulatory Commission and the International Atomic Energy Agency will also be studied. The course will consider how these policies are intended to control the actions of both state and non-state adversaries and applications to both government and private sector nuclear activities. The role of transnational and domestic groups will be discussed, especially with regard to motivation and potential capabilities.

NUCE 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

NUCE 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

NUCE 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

NUCE 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

NUCE 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

NUCE 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Graduate assistants receive credit for teaching lower level courses while under the direct supervision of a graduate faculty member.
Prerequisite: graduate student standing in nuclear engineering

NUCE 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

NUCE 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

Nursing (NURS)

NURS 501: Issues in Nursing and Health Care
3 Credits
Analysis and evaluation of the health care system with emphasis on health policy and economic issues affecting nursing practice. NURS 501 Issues in Nursing and Health Care (3) This course will focus on the state of the U.S. health care system within global, health policy, and economic perspectives. The course will cover current and complex issues and trends specific to nursing, and in the broader context of interdisciplinary health care. Master's level nurses will develop beginning mastery over the concepts and principles of health care policy, and the leadership skills necessary to influence policy changes in health care within organizations and on a national, state or local level.

NURS 510: Theoretical and Scientific Foundations of Advanced Nursing Practice
3-6 Credits
Examines the relationship of nursing theories to the development of nursing science, as well as current scientific advances that guide nursing practice and research.

NURS 513: Evidence-Based Practice in Professional Nursing
3 Credits
NURS 513 Evidence-Based Practice in Professional Nursing (3) focuses on the analysis and synthesis of research to develop the project. Students will identify a significant issue or problem that is common in their area of nursing practice. These practice areas may include advanced practice nursing specialties, nursing education, or nursing administration. Students will systematically search, analyze, and synthesize relevant research literature to make recommendations for evidence-based nursing practice, education, or administration.
Prerequisite: NURS 512

NURS 522: Comprehensive Assessment of the Older Adult
3 Credits
In-depth assessment of biological, physical, clinical, functional, cognitive, psychological, and social changes associated with aging. NURS 522 Comprehensive Assessment of the Older Adult (3) This course provides an in-depth interdisciplinary assessment of the biological, physical, clinical, functional, cognitive, psychological, and social changes associated with aging. Students will be provided with foundational information about the process of aging along with a global perspective on aging. The primary focus of the course is an assessment of the unique issues encountered by the older adult. Legal, financial, and other economic concerns will also be explored.

NURS 523: Interventions for Common Health Issues in Older Adults
3 Credits
Discussion of common acute and chronic health issues experienced by older adults and development of evidence-based interventions/personal approaches for management. NURS 523 Interventions for Common Health Issues in Older Adults (3) This course presents both common acute and chronic health issues experienced by older adults. Using a systems approach, interventions will be discussed specifically addressing
1046 Nursing (NURS)

an aging person. The development of evidence-based interventions/
personal approaches for management will be stressed. Other age-specific
concerns and issues faced by older adults, such as end-of-life care, and
care transition, and finances will be discussed.

NURS 580: Epistemology of Nursing Science
3 Credits
Examines the development and organization of nursing knowledge;
nursing theories are critically analyzed in relationship to the substantive
structure of nursing science.

Prerequisite: NURS 510 or an equivalent nursing theory course; Master's
degree in Nursing

NURS 582: Review and Analysis of the Literature for Nursing Science
4 Credits
In this course, the conceptual and scientific basis of nursing will be
critically and systematically appraised. Students will focus their inquiry
on a self-selected area of research with the goal of developing the
foundation of the literature review for their dissertation.

Prerequisite: NURS 580

NURS 583: Advanced Seminar in Nursing Science
3 Credits/Maximum of 6
Intense interactive seminar for synthesizing prior content into the
dissertation proposal.

Prerequisite: NURS 582, NURS 585, NURS 586

NURS 585: Qualitative Methods in Health Research
3 Credits
Provides an overview of advanced qualitative research methodologies
useful in the conduct of social and behavioral health research.

NURS 586: Quantitative Methods in Health Research
3 Credits
An overview of methodological considerations specific to quantitative
health research.

Prerequisite: STAT 500 or PHS 520

NURS 587: Ethics in Nursing Research
1 Credits
Provides the theoretical and practical knowledge needed to design and
conduct ethically responsible social and behavioral health research.

Prerequisite: Master of Science degree

NURS 588: Healthcare Policy for Nurse and Healthcare Scholars
3 Credits
This course prepares scholars to influence healthcare and related
policies. Theories of social justice and other scholarly perspectives are
used to explore the interrelationships among health policy and the social,
political, and economic determinants of health. Strategies for developing,
initiating, analyzing, and evaluating health policies are proposed using
students' areas of foci as a basis. The course provides the foundation for
leadership in interdisciplinary collaborative endeavors to address health
policy at the regional, national, and global levels.

NURS 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by
faculty, students, or outside speakers.

NURS 594: Research Topics
1-18 Credits/Maximum of 18
Supervised student activities on research projects identified on an
individual or small-group basis.

NURS 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on
an individual basis and which fall outside the scope of formal courses.

NURS 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may
be offered infrequently; several different topics may be taught in one year
or term.

NURS 598: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may
be offered infrequently; several different topics may be taught in one year
or semester.

NURS 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

NURS 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

NURS 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Provides an opportunity for supervised and graded teaching experience in
undergraduate nursing courses.

NURS 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.
NURS 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

NURS 802: Advanced Health Assessment of Adult Populations
3 Credits
Advanced nursing assessment and diagnosis of physical, psychosocial and developmental health for adults and families across the adult age spectrum.

NURS 802A: Advanced Health Assessment of Pediatric Populations
1 Credit
Advanced nursing assessment and diagnosis of physical, psychosocial and development health for individuals and families across the pediatric age spectrum.

NURS 802B: Physical Assessment Through The Lifespan
3 Credits
Nursing assessment and diagnosis of physical, psychosocial, and developmental health across the lifespan. NURS 802 Physical Assessment Through The Lifespan (3) This course focuses on the comprehensive assessment of patients across the lifespan; including newborns, infants, children, pre-adolescents, adolescents, childbearing women, adults, and older adults. Comprehensive assessment includes normal changes and common health problems across the lifespan, and atypical presentations of diseases commonly seen in patient populations. Assessment instruments specific to each population group will be reviewed.

NURS 803: Pathophysiology
3 Credits
Integration of advanced physiology, genetics, and pathophysiology as related to specific disease entities and alterations in functioning.

NURS 804: Pharmacologic Therapy
3 Credits
Pharmacologic therapies in advanced nursing practice.

NURS 808: Population Health Perspectives
3 Credits
This course explores population health concepts, measurement, and application in practice, research, and policy. This course explores population health as a framework for improving health in society. Multiple determinants will be examined in relation to health status measurement, health and disease trends, and health disparities at a community, national, and global perspective. Students will explore models for health improvement and how evidence is utilized in determining population-based intervention and policies directed at health promotion and disease prevention.

NURS 823: Interventions for Common Health Problems in the Adult/ Older Adult
4 Credits
Discussion of common health problems experienced by adults/older adults and development of evidence-based interventions for management.

Prerequisite: NURS 502, NURS 503, NURS 804

NURS 824: Primary Palliative Care: An Interdisciplinary Approach
3 Credits/Maximum of 999
This course examines the delivery of primary palliative care from an interdisciplinary perspective. This course examines the delivery of primary palliative care in diverse populations across health care settings. Students will explore the roles of interdisciplinary healthcare professionals in the delivery of care for individuals with advanced serious illness and their family members. A holistic, person-centered approach addressing the physical, psychosocial, cultural, and spiritual delivery of primary palliative care will be examined across the life span.

NURS 825: Primary Palliative Care: Interdisciplinary Management of Advanced Serious Illness
3 Credits/Maximum of 999
This course examines the interdisciplinary management of persons with advanced serious illness and their family members. This course examines the interdisciplinary management of persons with advanced serious illness and their family members. Evidence-based approaches for managing the physical, psychosocial, cultural, and spiritual aspects of person-centered primary palliative care will be discussed. The course will focus on the delivery of high-quality, culturally sensitive, primary palliative care across the life-span with diverse populations in various health care settings. Holistic approaches to management from an interdisciplinary team perspective will be examined.

NURS 826: Interdisciplinary Practicum of the Primary Palliative Care Role
3 Credits/Maximum of 999
Interdisciplinary practicum in the synthesis and application of the primary palliative care role. This course involves the practical application of knowledge acquired in previously completed courses related to primary palliative care. Students will have precepted experiences, observations, and simulated experiences to demonstrate multiple aspects of the delivery of primary palliative care. The practicum will be interdisciplinary and include various types of health care settings. The practicum will build upon and extend students’ previous experiences with palliative care and fulfill mutually agreed-upon objectives based on the students’ previous experiences and identified learning needs.

Prerequisite: NURS 824, NURS 825

NURS 828: Person-Centered Care: Emerging Interdisciplinary Approaches for Older Adults
3 Credits
This course examines the delivery of person-centered care for older adults and their families across the health care continuum. Application of relevant theories will provide a framework of understanding and delivering care which addresses the individual’s goals and behavioral
episodes in the context of personal interactions and environmental factors. The importance of assessment and care planning in relation to individuals’ context, personal history, and preferences for everyday living will be emphasized, while integrating care related to complex medical problems in older adults. Students will explore interdisciplinary roles, examine case studies, and identify specific interventions. The course will use a holistic approach which addresses the biological, mental/ emotional, social/cultural, and spiritual delivery of person centered care to older adults and their families.

NURS 830: Evidence-Based Practice I: Inquiry and Research Methods
3 Credits
Foundations in evidence-based research and inquiry for nursing practice. This course will provide students with the skills to incorporate evidence-based research and inquiry into nursing practice.

NURS 831: Evidence-Based Practice II: Translating Inquiry into Practice
3 Credits
Evaluation and translation of evidence-based research and inquiry into nursing practice. This course will provide students with the skills to evaluate evidence-based research in order to translate the research into practice. Students will identify a clinical or practice phenomenon in need of evaluation and change and conduct a systematic search of the research literature.

NURS 832: Doctor of Nursing Practice: Leadership I
3 Credits
Foundations of Doctor of Nursing Practice transformational leadership in complex health care settings.

NURS 833: Doctor of Nursing Practice: Leadership II
3 Credits
Doctor of Nursing Practice transformational leadership to improve healthcare delivery and quality outcomes.

Prerequisite: NURS 832

NURS 834: Doctor of Nursing Practice Clinical Practicum
1-4 Credits/Maximum of 8
The focus of the clinical practicum is planning, implementing, and evaluating evidence-based interventions to address a healthcare problem.

NURS 835: Doctor of Nursing Practice Project
2-3 Credits/Maximum of 10
The Doctor of Nursing Practice capstone project demonstrates clinical scholarship in an area of practice.

NURS 836: Healthcare Informatics
3 Credits
This course provides a foundation in information systems and technology for improvement of healthcare.

Cross-listed with: IST 836

NURS 837: Evidence-Based Practice III: Project Development
3 Credits
The Doctor of Nursing Practice (D.N.P.) project plan will be developed focusing on design, sample, data collection, projected outcomes, resourcing, plan for analysis, and sustainability. Students will collaborate with key stakeholders to build project support. Students will complete steps for Institutional Review Board (IRB) submission. The course includes 75 hours of required clinical practicum hours.

Prerequisite: NURS 830, NURS 831

NURS 840: Nursing Education Theories and Strategies
3 Credits
Theoretical foundation and evidence-based strategies for nursing education. NURS 840 Nursing Education Theories and Strategies (3) This course provides a foundation in the role of the nurse educator and evidence-based strategies for nursing education. Students will explore various theoretical perspectives of teaching and learning, as well as practical application of strategies to meet the diverse needs of learners. The course is intended to prepare students to employ effective teaching strategies in classroom, clinical, and on-line educational settings. Discussion of managing various challenges related to nursing education will be included throughout the course.

NURS 841: Assessment and Evaluation in Nursing Education
3 Credits
Methods for assessment, measurement, and evaluation of student learning in academic and clinical settings. NURS 841 Assessment and Evaluation in Nursing Education (3) This course provides a foundation in assessment, measurement, and evaluation strategies for nursing education. Students will explore the theoretical basis for evaluation, as well as practical application of the strategies. The course is intended to prepare students to utilize strategies of measurement and evaluation in developing tests, interpreting test results, assessing clinical performance, and evaluating written assignments. Discussion of legal and ethical issues related to evaluation in nursing education will be included throughout the course.

NURS 842: Curriculum and Program Development in Nursing Education
3 Credits
Curriculum design and evaluation, educational program development, and accreditation. NURS 842 Curriculum and Program Development in Nursing Education (3) This course provides a foundation in curricular design, program development, and curriculum evaluation in nursing education. Students will explore internal and external contextual factors influencing curriculum design and implementation. This course is intended to prepare students to utilize foundational principles and concepts for the development and evaluation of nursing curricula in academic settings. This course will also prepare students for program development and evaluation in nursing education.

NURS 843: Synthesis and Application of the Nurse Educator Role
3-6 Credits/Maximum of 6
This capstone practicum course involves the practical application of knowledge from previously completed courses related to the nurse educator role in academic and healthcare settings. Students will work
with a preceptor in an educational/healthcare settings to demonstrate multiple aspects of the nurse educator role. In addition, students will demonstrate a direct care role through clinical experiences designed to strengthen patient care delivery skills. The practicum experience will be developed to fulfill mutually agreed-upon objectives based on students’ previous experiences and identified learning needs.

**Prerequisite:** NURS 840, NURS 841, NURS 842

3 Credits

Concepts of healthcare economics and policy for nurse administrators

NURS 846: Leadership Concepts and Theories for Nurse Administrators

3 Credits

Concepts and theories of leadership for nurse administrators. NURS 846 Leadership Concepts and Theories for Nurse Administrators (3) This course provides a foundation in nurse leadership roles, concepts, and theories. Students will explore the theoretical basis of leadership and change, as well as analyze organizational structure, power, and politics. This course is intended to provide students with a theoretical and evidence-based foundation for leadership roles within health care organizations. Discussion of communication, decision-making, and problem-solving strategies for nurse administrators is included throughout the course.

3 Credits

Human resource management and work force issues for nurse administrators. NURS 847 Human Resource and Work Force Issues for Nurse Administrators (3) This course provides a foundation in human resources within health care organizations. Students will examine ethical and legal issues related to collective bargaining, unions, and staffing. This course is intended to prepare students to utilize leadership strategies for recruiting, retaining, developing, and evaluating a diverse, multidisciplinary work force in complex healthcare environments. Discussion of evidence-based strategies for conflict resolution will be included throughout the course.

NURS 848: Synthesis and Application of the Nurse Administrator Role

3-6 Credits/Maximum of 6

This course involves the practical application of knowledge acquired in previously completed courses related to nurse administration. Students will work with a preceptor in a health care setting to demonstrate multiple aspects of the nurse administrator role. The practicum experience will be developed to fulfill mutually agreed-upon objectives based on students’ previous experiences and identified learning needs.

**Prerequisite:** NURS 845; NURS 846; NURS 847

NURS 848A: Synthesis and Application of the Nurse Administrator Role

4 Credits

This course involves the practical application of knowledge acquired in previously completed courses related to the nurse administrator. Students will work with a preceptor in a health care setting to demonstrate multiple aspects of the nurse administrator role. The practicum experience will be developed to fulfill mutually agreed-upon objectives based on students’ previous experiences and identified learning needs. This course is specifically designed as a practicum course for students in the B.S.N. to D.N.P. program and evaluated based on the nationally acknowledged foundational competencies that are core to all advanced nursing practice roles and known as the D.N.P. Essentials (AACN, 2006).

**Prerequisite:** NURS 845, NURS 846, NURS 847

NURS 851: General Linear Modeling in Health Research

4 Credits

In this course students will learn the application of general and generalized linear models in health research. Students will learn the process of developing and testing hypotheses including hypotheses testing mediation and moderation. Students will also identify the quantitative and clinical assumptions of models, apply model building techniques, and calculate the appropriate effect sizes. Using common statistical analysis software packages, students will develop the skills needed for interdisciplinary collaborations on research projects using these models.

**Prerequisite:** STAT 500 or PHS 520 or HDFS 519 or EDPSY 406

NURS 860: Adult Gerontology Acute Care Nurse Practitioner Role I

3 Credits/Maximum of 999

Acute Care Nurse Practitioner role across the continuum of care with adults and older adults with complex acute, critical, and chronic health conditions to restore or maximize health. This course focuses on utilization of a collaborative approach to enhance Acute Care Nurse Practitioner effectiveness with restorative care and synthesis of theoretical, scientific, and clinical knowledge required for the assessment, diagnosis, management, and treatment options of patients with complex acute, critical, and chronic illness across the continuum of care. Content will focus on patients with acute and chronic cardiovascular, pulmonary, infectious disease, and nutrition problems, as well as related ethical, legal, and professional practice issues. This course is designed to be taken concurrently with the Adult Gerontology Acute Care Nurse Practitioner Practicum I (NURS 862) and is required for the Adult Gerontology Acute Care Nurse Practitioner Option within the Master of Science degree with a major in Nursing.

**Prerequisite:** NURS 802 and NURS 803 and NURS 804 and NURS 865 and NURS 866

NURS 861: Adult Gerontology Acute Care Nurse Practitioner Role II

3 Credits

Continuation of Acute Care Nurse Practitioner role across the continuum of care with adults and older adults with complex acute, critical, and chronic health conditions to restore or maximize health. NURS 861 Adult Gerontology Acute Care Nurse Practitioner Role II (3) This course continues the focus on utilization of a collaborative approach to enhance Acute Care Nurse Practitioner effectiveness with restorative care and synthesis of theoretical, scientific, and clinical knowledge required for the assessment, diagnosis, management, and treatment options of patients with complex acute, critical, and chronic illness across the continuum of care. Content will focus on patients with acute and chronic neurologic, gastrointestinal, renal, hematologic, and endocrine problems, as well as
special topics. This course is designed to be taken concurrently with the Adult Gerontology Acute Care Nurse Practitioner Practicum II (NURS 863) and is required for the Adult Gerontology Acute Care Nurse Practitioner Option within the Master of Science degree with a major in Nursing.

Prerequisite: NURS 860, NURS 862; Concurrent: NURS 863

NURS 862: Adult Gerontology Acute Care Nurse Practitioner Practicum I

4 Credits

Adult Gerontology Acute Care Nurse Practitioner practicum with patients across the continuum of care with adults and older adults with complex acute, critical, and chronic health conditions. This is a comprehensive practicum in which students implement the Adult Gerontology Acute Care Nurse Practitioner role through application of theoretical knowledge and psychomotor skills taught in NURS 860 and all prior courses. Emphasis is given to development of clinical competency and clinical decision making abilities. This practicum course for the Adult Gerontology Acute Care Nurse Practitioner option involves student rotations through clinical sites providing care for adults and older adults with acute and critical illness. Clinical conferences will enable students to discuss their unique clinical experiences and topics that emerge from their clinical practice. Minimum clinical conference time is 15 hours per semester.

Prerequisite: NURS 802 and NURS 803 and NURS 804 and NURS 865 and NURS 866

NURS 863: Adult Gerontology Acute Care Nurse Practitioner Practicum II

4 Credits

Adult Gerontology Acute Care Nurse Practitioner practicum across the continuum of care with adults and older adults with complex acute, critical, and chronic health conditions. NURS 863 Adult Gerontology Acute Care Nurse Practitioner Practicum II (4) This is a comprehensive practicum in which students implement the Adult Gerontology Acute Care Nurse Practitioner role through application of theoretical knowledge and psychomotor skills taught in NURS 861 and all prior courses. Emphasis is given to development of clinical competency and clinical decision making abilities. This practicum course for the Adult Gerontology Acute Care Nurse Practitioner option involves student rotations through clinical sites providing care for adults and older adults with acute and critical illness. Student rotations will include both medical and surgical clinical sites by completion of Practicum I and Practicum I. Clinical conferences will enable students to discuss their unique clinical experiences and topics that emerge from their clinical practice. Minimum clinical conference time is 15 hours per semester.

Prerequisite: NURS 860, NURS 862; Concurrent: NURS 861

NURS 864: Adult Gerontology Acute Care Nurse Practitioner Integrative Practicum

2-6 Credits

Adult Gerontology Acute Care Nurse Practitioner integrative practicum across the continuum of care with adults and older adults with complex acute, critical, and chronic health conditions. NURS 864 Adult Gerontology Acute Care Nurse Practitioner Integrative Practicum (6) This is a comprehensive practicum in which students implement the Adult Gerontology Acute Care Nurse Practitioner role and demonstrate synthesis of theoretical, scientific and contemporary clinical knowledge learned in all courses of the Adult Gerontology Acute Care Nurse Practitioner Option. This practicum allows the student to integrate the roles of the Adult Gerontology Acute Care Nurse Practitioner and demonstrate clinical competency and clinical decision making abilities. The setting for clinical rotation may include any acute or critical care area and may be chosen based on the student’s preferred specialty area. Clinical conferences will be utilized to discuss clinical issues identified by students from their specific sites, synthesize all previously learned knowledge, and discuss role development. Minimum clinical conference time is 15 hours per semester.

Prerequisite: NURS 862, NURS 863

NURS 865: Pharmacology for Acute Care Nurse Practitioners

1 Credits

Principles of clinical pharmacology as applied to management of complex acute, critical, and chronically ill adult and older adult patients. NURS 865 Pharmacology for Acute Care Nurse Practitioners (1) This course focuses on pharmacologic therapies specific to critically ill adult and older adult patients. Emphasis is placed on proper prescribing regimens and monitoring in critical illness. This course is designed to be taken concurrently with Pharmacologic Therapy (NURS 504) and is required for the Adult Gerontology Acute Care Nurse Practitioner Option within the Master of Science degree with a major in Nursing.

NURS 866: Health Assessment of the Adult Gerontology Population in Acute Care

1 Credits

Physical assessment and diagnostics for physical and psychosocial health of adult and older adult individuals and families with acute and critical illness. NURS 866 Health Assessment of the Adult Gerontology Population in Acute Care (1) This foundational course is designed to assist the advanced practice nurse in learning comprehensive assessment of adult and older adult individuals and families with acute and critical illness. Performance and interpretation of related diagnostic tests and procedures is integrated in the course. Emphasis is placed on development of competence to perform a comprehensive health assessment, develop differential diagnosis, and demonstrate diagnostic reasoning in evaluation of acutely and critically ill patients. This course is designed to be taken concurrently with Physical Assessment Across the Lifespan (NURS 502) and is required for the Adult Gerontology Acute Care Nurse Practitioner Option within the Master of Science degree with a major in Nursing. The didactic and laboratory components of the course are offered concurrently to allow for the application of knowledge.

NURS 870: Nurse Practitioner Role with Healthy Individuals and Families

3 Credits/Maximum of 999

Nurse Practitioner role to promote health, prevent illness, and manage common acute/episodic health problems across the adult-older adult age spectrum. NURS 870 provides instruction in the Nurse Practitioner role to promote health, prevent illness, and manage common acute/episodic health problems across the adult-older adult population. Common acute/episodic conditions seen in primary care are discussed. Evidence-based management including, but not limited to, assessment, differential diagnoses, current guidelines’ treatments, with both pharmacological and nonpharmacological strategies, are included; as are individual, age-related, family, and special population considerations. Epidemiological, cultural, ethical, and economical factors, plus interprofessional collaborations, related to health promotion, disease prevention, and treatment are explored.
NURS 871: Nurse Practitioner Role with Individuals and Families with Complex and/or Chronic Health Problems
3 Credits
Nurse Practitioner role with individuals and families to maximize health and manage complex and/or chronic health problems.

Prerequisite: NURS 870, NURS 872 or NURS 872A; Concurrent: NURS 873 or NURS 873A
NURS 872: Family Nurse Practitioner Practicum I
3 Credits
Family Nurse Practitioner practicum with individuals and families across the life span experiencing common acute/episodic health problems. This is a comprehensive practicum in which students implement the Family Nurse Practitioner (FNP) role through application of theoretical knowledge and psychomotor skills taught in all prior courses. Emphasis is given to development of clinical competency and clinical decision-making abilities with guidance from a clinical preceptor and clinical faculty oversight. This practicum course involves student rotations through clinical sites providing care for individuals and families across the lifespan experiencing common acute/episodic health problems. Epidemiological, cultural, ethical, and economic factors, plus interprofessional collaborations related to health promotion, disease prevention, and treatment are explored. Clinical conferences will enable students to discuss their unique clinical experiences and topics that emerge from their clinical practice.

Prerequisite: NURS 802 and NURS 802A and NURS 803 and NURS 804 CONCURRENT: NURS 870 and NURS 875
NURS 872A: Adult Gerontology Primary Care Nurse Practitioner Practicum I
4 Credits
AGPC NP practicum with individuals and families across the adult/older adult age spectrum experiencing common acute/episodic health problems. This is a comprehensive practicum in which students implement the Adult Gerontology Primary Care Nurse Practitioner role through application of theoretical knowledge and psychomotor skills taught in all prior courses. Emphasis is given to development of clinical competency and clinical decision-making abilities with guidance from a clinical preceptor and clinical faculty oversight. This practicum course involves student rotations through clinical sites providing care for individuals and families across the adult/older adult age spectrum experiencing common acute/episodic health problems. Epidemiological, cultural, ethical, and economic factors, plus interprofessional collaborations, related to health promotion, disease prevention, and treatment are explored. Clinical conferences will enable students to discuss their unique clinical experiences and topics that emerge from their clinical practice.

Prerequisite: NURS 802 and NURS 803 and NURS 804
NURS 873: Family Nurse Practitioner Practicum II
4 Credits
Family Nurse Practitioner practicum with individuals and families across the life span experiencing complex and/or chronic health problems.

Prerequisite: NURS 870, NURS 872 NURS 875, NURS 876; Concurrent: NURS 871
NURS 873A: Adult Gerontology Primary Care Nurse Practitioner Practicum II
4 Credits
Adult Gerontology Primary Care Nurse Practitioner practicum with individual/families across the adult/older adult age spectrum experiencing complex and/or chronic health problems.

Prerequisite: NURS 870, NURS 872A; Concurrent: NURS 871
NURS 874: Family Nurse Practitioner Integrative Practicum
2-6 Credits
Family Nurse Practitioner integrative practicum with communities and individual/families across the life span experiencing health and illness.

Prerequisite: NURS 871, NURS 873
NURS 874A: Adult Gerontology Primary Care Nurse Practitioner Integrative Practicum
2-6 Credits
Adult Gerontology Primary Care Nurse Practitioner integrative practicum with communities and individual/families experiencing health and illness.

Prerequisite: NURS 871, NURS 873A
NURS 875: Nurse Practitioner Role with Children and Families
2 Credits
Nurse Practitioner role with children and their families to promote health, prevent illness, and manage acute or chronic health problems. NURS 875 provides instruction in the Nurse Practitioner role with children and their families to promote health, plan anticipatory guidance, conduct health screenings, prevent illness, and manage primary care health problems. Evidence-based management including, but not limited to, assessment, differential diagnoses, current guidelines' treatments, with both pharmacological and nonpharmacological strategies, are included; as are individual, age-related, family, and special population considerations. Epidemiological, cultural, ethical, and economic factors, plus interprofessional collaborations related to health promotion, disease prevention, and treatment are explored.

Prerequisite: NURS 802 and NURS 802A and NURS 803 and NURS 804 CONCURRENT: NURS 876
NURS 876: Family Nurse Practitioner Practicum with Pediatric Populations
2 Credits
Family Nurse Practitioner practicum with pediatric populations/families during health or experiencing acute and chronic health problems.
NURS 875 provides instruction in the Nurse Practitioner role with children and their families to promote health, plan anticipatory guidance, conduct health screenings, prevent illness, and manage primary care health problems. Evidence-based management including, but not limited to, assessment, differential diagnoses, current guidelines' treatments, with both pharmacological and nonpharmacological strategies, are included; as are individual, age-related, family, and special population considerations. Epidemiological, cultural, ethical, and economical factors, plus interprofessional collaborations related to health promotion, disease prevention, and treatment are explored.

Prerequisite: NURS 802 and NURS 802A and NURS 803 and NURS 804

CONCURRENT: NURS 870 and NURS 872 and NURS 875

NUTR 501: Regulation of Nutrient Metabolism I

4 Credits

Integration of nutritional, biomedical, biochemical, physiological, and hormonal processes involved in carbohydrate, lipid, and protein metabolism.

Prerequisite: NUTR 445

NUTR 502: Regulation of Nutrient Metabolism II

3 Credits

Complementary to NUTR 501 with an emphasis on metabolic roles of vitamin and mineral elements.

Prerequisite: NUTR 446

NUTR 503: Nutritional Epidemiology

3 Credits

This course will examine how epidemiological designs can be applied to study the role of diet and other related lifestyle factors in chronic disease. The interrelationship between diet and other lifestyle factors will be discussed (physical activity, smoking). Learning about these issues is addressed within the context of the diet & cancer, but can be applied to other disease outcomes.

NUTR 506: Ruminology

3 Credits

Physiological, biochemical, and microbiological activities occurring within the rumen and the relation of rumen function to animal response.

Prerequisite: at least one course in each of the following areas: animal nutrition, physiology, microbiology, and biochemistry

Cross-listed with: ANSC 506

NUTR 508: Critical Readings in Molecular Nutrition

1.5 Credits/Maximum of 6

Understanding of approaches, methods and current concepts in molecular biology and nutrition through critical readings of current primary literature.

Concurrent: NUTR 445 or NUTR 446

Cross-Listed

NUTR 511: Maternal and Child Nutrition

3 Credits

Role of nutrition in female fertility, during pregnancy and lactation, as well as during infancy and early childhood. NUTR 511 Maternal and Child Nutrition (3) This course is designed to provide an understanding of the nutritional recommendations during preconception, pregnancy, lactation, early infancy, and childhood. In this course, students will acquire a broad understanding of the role and regulation of nutrient metabolism and effects of genetic variation on nutritional needs during these unique physiological periods. These concepts will be discussed from molecular, clinical and applied perspectives that will guide further graduate-level inquiry. Lectures and readings will explicate 1) how nutrient metabolism affects pregnancy outcomes, lactation sufficiency and infant development; 2) how nutrition affects common early childhood conditions, such as obesity, allergy and autism; 3) how fetal/postnatal nutrition affects long-term health; and 4) the role of genetics in nutritional requirements during these times in the lifecycle. Students will gain an appreciation for the contribution of nutrition during the fetal/postnatal periods on long-term health and the incidence of disease through understanding the role of nutrients in a translational framework.

NUTR 513: Atherosclerosis and Nutrition

2 Credits

The etiology and pathophysiology of atherosclerotic cardiovascular disease, with emphasis on nutritionally-related aspects.

Prerequisite: NUTR 452

NUTR 515: Mathematical Modeling in Nutrition

2 Credits

Study of the theory and application of mathematical modeling of the tracer and tracee kinetics of nutrients and their metabolites in animals and man.

Prerequisite: MATH 140 or MATH 141

NUTR 520: Readings in Nutrition

1 Credits/Maximum of 2

Readings and reports of selected topics in nutrition.

NUTR 532: Childhood Obesity

3 Credits

This course addresses how genetic predispositions, behavioral and environmental factors affect children's obesity risk and examines strategies for obesity prevention. HDFS (NUTR) 532 Childhood Obesity (3)

This course will examine the epidemic of obesity, particularly childhood
obesity, and how various behavioral and environmental factors place children at risk of becoming overweight. Sources of influence that will be examined include: children’s nutrition and physical activity behaviors, the family environment, the school environment and community characteristics. Media, social policy and economic factors will also be addressed. In addition, the health and psychosocial consequences of obesity, ethnic and socioeconomic disparities in the prevalence and predictors of obesity among children and adolescents will be addressed. At its conclusion, this course will examine policy initiatives and obesity prevention programs.

Cross-listed with: HDFS 532

NUTR 533: Adult Obesity
3 Credits

Important current and emerging topics in obesity research relevant to government policy and general public education; emphasis on adult obesity. HD FS (NUTR) 533 Adult Obesity (3) This course will examine the epidemic of obesity, particularly adult obesity. Obesity: Causes, Consequences and Treatment will provide a forum to introduce and discuss current and emerging topics in adult obesity research, with emphasis on policy, prevention and treatment. Focus will be given to determinants of adult obesity and translation into government policy and efforts to educate the general public on the most effective strategies for body weight regulation, obesity prevention and treatment. Sources of influence that will be examined include: environment, genetics, neural, peripheral and sensory mechanisms, food properties and food supply, and therapies and treatment of adult obesity.

Cross-listed with: HDFS 533

NUTR 534: Readings in Ingestive Behavior
1 Credits/Maximum of 6

Students lead discussions of original research in the field of ingestive behavior; focus on food intake in particular. FDSC 534 / NUTR 534 Readings in Ingestive Behavior (1 per semester/maximum of 6) The class provides a forum for students to learn to lead a discussion focused on original research in the field of ingestive behavior. In addition, it provides the opportunity for students to become familiar with the broad range of topics relevant to this field of research. While the primary focus is on the consumption of food, other relevant topics (obesity, eating disorders, fluid intake) also are included. Research topics include both basic and applied areas.

Cross-listed with: FDSC 534

NUTR 540: Research Methods
3 Credits/Maximum of 999

Review of different studies that utilize various nutrition research designs and data analyses. This course will provide information on how to evaluate the scientific literature and will promote the development of skills to enable students to identify the strengths and limitations of different types of experimental approaches (epidemiologic, etc.), individual studies, and a body of literature on a specific nutrition-related topic. The importance of generating hypotheses and testing them will be emphasized. The Bradford Hill criteria for evaluating a body of literature and making causal inferences will be utilized. In addition, development and use of the Evidence Analysis Library for making nutrition policy decisions will be discussed. The course will focus on major contemporary nutrition topics undergoing scientific inquiry. The review of a body of literature, as well as a single study in a practice setting will take place throughout the course. The knowledge gained in reviewing and critiquing the scientific literature will be applied to the preparation of a proposal for students’ Capstone Project.

Prerequisite: NUTR 850, STAT 500

NUTR 551: Seminar in Nutrition
1-6 Credits/Maximum of 6

Selected topics and recent advances in nutrition.

NUTR 583: Nutritional Epidemiology
3 Credits

Epidemiological principles and methodology to study nutritional determinants of disease.

Prerequisite: NUTR 445, NUTR 446 and 6 credits of statistics or concurrent

NUTR 590: Colloquium
1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

NUTR 595: **SPECIAL TOPICS**
1-6 Credits

NUTR 595A: Application of Community Nutrition – Internship
3 Credits

Application and integration of community nutrition theories in a practicum environment under the supervision of preceptors in community agencies.

Prerequisite: selection into the Dietetic Internship Program

NUTR 595B: Application of Food Service Management – Internship
3 Credits

Application and integration of food service management principles and motivation theories in a practicum environment under the supervision of preceptor.

NUTR 595C: Dietetic Enrichment Experience - Dietetic Internship
1 Credits

The enrichment experience is designed for interns to plan and implement a rotation of interest in the nutrition field.

Prerequisite: NUTR 595A, NUTR 595B, NUTR 595D, or NUTR 595E
NUTR 595D: Application Clinical Nutrition – Internship

6 Credits

Application and integration of clinical nutrition theories in a practicum environment under the supervision of preceptor who is a registered dietitian.

NUTR 595E: Introduction to Nutrition Research – Internship

1 Credits

Introduction of nutrition research to assist in the understanding of planning and conducting research studies in a variety of nutrition research laboratories.

NUTR 595F: Professional Portfolio Internship

1 Credits

Designing and completing a professional portfolio to assist in the employment process in the field of dietetics.

NUTR 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

NUTR 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

NUTR 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

NUTR 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

NUTR 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Provides an opportunity for a supervised and graded experience for graduate students in teaching undergraduate courses in nutrition.

NUTR 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

NUTR 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

NUTR 800: Food Systems and Organization Management

3 Credits

This course provides an opportunity to acquire an in-depth knowledge of food systems management and develop the skills necessary to guide practice in the management and leadership of food and nutrition service operations. Students will develop the skills to apply principles of organization management to achieve operational goals and manage financial, human, material, and physical resources in the area of food service and clinical management care. Skills that are emphasized include: collaboration, critical thinking, effective communication, professional conduct, decision-making, planning, time management, and training. Management and leadership are key components of quality food and nutrition services and effective practice in the field of nutrition and dietetics.

RECOMMENDED PREPARATIONS: Admission to the online Integrated Studies track of the Master of Professional Studies in Nutritional Sciences or departmental approval.

NUTR 801: Leadership in the Nutrition Profession

2 Credits

This course provides an opportunity for students to become proficient in the skills essential for effective leadership within the nutrition field. We will utilize evidence-based tools designed for self-assessment of leadership traits and strengths. Students will practice and develop competency in the skills of negotiation, collaboration and persuasion, intercultural communication and motivation, visioning, and ethical decision-making. The importance of work-life balance and personal boundaries will be examined in the context of today's work environment.

NUTR 805: Advanced Nutrient Metabolism

4 Credits

Integration of biochemical, physiological, and hormonal processes involved in nutrient metabolism and function in humans. NUTR 805 provides the student with both a review of the fundamentals of nutrient metabolism but also more advanced topics in the biochemistry, physiology, metabolism, and regulation of nutrients important in health and disease. At this advanced level, students develop an understanding of the integration and interdependency of many of these metabolic processes. There will be an initial review of cellular structure and function and the basics of organ systems, followed by the physiology and microbiology of the gastrointestinal (GI) tract related to nutrient processing, including the impact of dietary fibers on GI function. For each nutrient, the following topics will be covered: food sources and/or dietary considerations; chemical structure and characteristics; and regulation of digestion, absorption, and excretion. Water, macronutrient (carbohydrate, protein, and lipids), and micronutrient (vitamins and minerals) metabolism, function, and regulation will be presented. For some select nutrients of public health concern, the metabolic mechanisms of deficiency and/or toxicity will be discussed. Metabolic integration relevant to nutritional needs and biomedical applications will be highlighted in this course. Students will apply their knowledge to current biomedical situations relevant to nutrition and health professionals. This course prepares students for the advanced courses in assessment and clinical nutrition.
NUTR 810: Nutritional Assessment and Diagnosis

3 Credits

Evaluation of assessment methods and interpretation of results to assess and diagnose nutritional status of individuals and groups. This course will offer a critical analysis of assessment methods used in clinical, community, and home-based settings to diagnose malnutrition and other nutrition-related problems. Students will become proficient at identifying appropriate current techniques and technologies for collecting assessment data, interpreting the results of the collected data, and diagnosing nutrition problems for specific populations. Specific skills such as nutrition-focused physical examination, identifying and applying appropriate assessment data collection methods, interpreting laboratory values and genetic tests, etc., will be integrated by the student through hands-on experience and case study development. The course focus will be on advanced skill development, critical analysis of assessment methods and interpretation of the data, and communicating the findings to health care professionals and patients/clients in a variety of workplace settings.

NUTR 820: Advanced Clinical Nutrition

3 Credits

Advanced study of acute and chronic illnesses and conditions and how these events influence the nutritional needs of patients. This class provides an opportunity for students to become proficient in the skills essential to advanced clinical nutrition practice. We will examine the metabolic demands of acute and chronic illness and conditions and how these influence the nutritional needs of patients in various disease states. Interrelationships of nutrition with biochemical, physiological, and anatomical changes associated with acute illness or injury, chronic disease, terminal illness, surgery, and trauma will be covered. Students will utilize an evidence-based approach to assessing nutrient requirements and determine best methods of nutrient delivery in various disease states. The ultimate goal of the course is to develop the skills necessary for advanced clinical nutrition practice.

NUTR 830: Advanced Nutrition and Health Program Planning

3 Credits

This course provides an opportunity for students to become proficient in the skills essential for successful nutrition education programming, dissemination, and evaluation through development and implementation of a nutrition education intervention with a target audience in their respective communities. We will examine current theories, models, and state-of-the-art strategies, and discuss how to apply them to a variety of settings including clinical, community, and other workplaces, as well as the home. Various behavioral and environmental factors, which may contribute to the maintenance of poor nutritional outcomes, will be critically assessed. Focus will be on how to plan interventions that address multiple components within the target populations environment. Students will gain proficiency by working in groups and using best practices to design, implement, and evaluate an educational program within their chosen community.

NUTR 840: Advanced Nutrition Counseling

3 Credits

Application of theories and counseling techniques to the nutrition care process in different practice settings with diverse patients/clients. This class provides an opportunity for students to become proficient in the skills essential to successful nutrition counseling. We will examine current theories and state-of-the-art techniques of counseling, and apply them to a variety of settings including clinical, community, workplace, and home-based. Various behavioral and environmental factors, which may contribute to the maintenance of poor nutritional outcomes, will be critically assessed focusing on advanced skill development and the ability to handle challenging communication issues that arise within the nutrition care process. Students will gain proficiency through practicing techniques including client-centered counseling methods, motivational interviewing, and behavior change strategies, as well as principles of group counseling, facilitation, and effective team dynamics. Best practices for those with chronic diseases, obesity, eating disorders, lifespan counseling, and end of life issues will be discussed.

NUTR 850: Leadership Concepts and Application for the Nutrition Professional

3 Credits/Maximum of 999

Exploration and application of concepts essential to effective leadership within the nutrition profession. This course will revisit and expand on the skills necessary for effective leadership within the field of nutrition introduced in NUTR 801. Theories and concepts of leadership as they apply to the nutrition field will be examined. Students will have opportunities to interview leaders in their area of interest, and they will identify the topic of their Capstone Project, which is designed to promote individual leadership development. Promotion of leadership development specific to the field of nutrition will be emphasized in the selection of a project as well as in course content. Student projects will need to be of sufficient breadth and scope to promote the utilization of skills and concepts presented throughout the M.P.S. program and this particular course. Course topics will focus on the process of identifying and creating change within an organization. The ultimate goal of the course is to foster the development of a leadership mindset for innovation, empowerment, and risk-taking.

Prerequisite: NUTR 801

NUTR 860: Capstone Project in Nutritional Sciences

2-5 Credits/Maximum of 5

Completion of a Capstone Project involving research and application of leadership principles in nutrition practice. This course is the culminating course for the M.P.S. in Nutritional Sciences program. This course requires students to synthesize the research gathered from the leadership opportunity project, their literature review, and their Capstone Project results to prepare a paper and give a presentation of their findings to their fellow students and to a professional audience. Students will use the findings from their Capstone Project to formulate evidenced-based solutions that can be used in nutrition practice.

Prerequisite: NUTR 540 NUTR 850

NUTR 895A: Internship-Clinical

1-18 Credits/Maximum of 18

Supervised, professional oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.
NUTR 895B: Internship-Food Systems and Organization Management
1-18 Credits/Maximum of 18
Supervised, professionally oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique or activity required.

NUTR 895C: Internship-Community
1-18 Credits/Maximum of 18
Supervised, professionally oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Operations Research (OR)

OR 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

Pathology - MD (PATH)

PATH 590: Colloquium
1 Credits/Maximum of 1
Continuing seminars which consist of a series of individual lectures by faculty, students or outside speakers.

PATH 801: Veterinary Infectious Disease Diagnostic and Surveillance Systems
3 Credits
This course provides knowledge of diagnostic and surveillance systems used to detect infectious diseases and protect against animal agricultural biological attack.

Prerequisite: AGBIO 520
Cross-listed with: AGBIO 801

Petroleum and Natural Gas Engineering (PNG)

PNG 501: Flow in Porous Media
3 Credits
This course provides students with fundamental skills to formulate problems of fluid flow in porous media in the context of reservoir engineering applications. Emphasis is placed on description of petrophysical properties, characterization methods, formulation of the equations that govern flow in porous media, and analytical solutions to steady-state flow problems.

PNG 502: Coupled Flow and Deformation in Porous Media
3 Credits
This course is a foundational course in the study of unsteady problems of flow, deformation, and transport in porous media. General topics of interest include continuum mechanics formulation of porous media, along with related mathematical solution development techniques including Green's functions, integral transforms, convolution integrals, and asymptotic expansion methods. The course further provides an overview of advanced modeling tools such as dual-continuum method and porochemoelasticity.

Prerequisite: PNG 501

PNG 511: Numerical Solution of the Partial Differential Equations of Flow in Porous Media
3 Credits
Differencing schemes for the partial differential equations of single-phase flow; application to flow of gas and mixing in porous media.

PNG 512: Numerical Reservoir Simulation
3 Credits
Mathematical analysis of complex reservoir behavior and combination drives; numerical methods for the solution of behavior equations; recent developments.

PNG 518: Design of Miscible Recovery Projects
3 Credits
Theory and design of miscible methods of oil recovery, current field applications, including hydrocarbon, CO2, micellar/polymer, alkaline, and inert gas.

PNG 520: Thermodynamics of Hydrocarbon Fluids
3 Credits
Thermodynamic science applied to hydrocarbon mixtures and problems in petroleum and natural gas engineering. General topics include study of phase diagrams of hydrocarbon fluids and application of thermodynamic rigor to phase equilibrium problems in the petroleum and natural gas industry.

PNG 526: Well Stimulation
3 Credits
Causes and identification of oil and gas wells with low productivity and or recovery; design and evaluation of well stimulation methods.

PNG 530: Natural Gas Engineering
1-3 Credits/Maximum of 3
Flow in producing or storage reservoirs; gas well testing; transmission systems; storage cycle; current developments.

Prerequisite: P N G481

PNG 555: Unconventional Resources Analysis
3 Credits
This course provides an in-depth analysis of the technical aspects of unconventional oil and gas reservoirs, such as geochemistry, geomechanics, storage mechanisms, and transport processes. The course is designed to contribute to the student's ability to advance the frontiers of knowledge about the characteristics and development of
unconventional reservoirs. The course presents conceptual knowledge and mathematical models necessary for exploration, characterization, reserve estimation, and performance analysis of unconventional oil and gas reservoirs. This content is critical for the student given that conventional hydrocarbon resources are known not to be able to meet growing demand for energy to fuel worldwide economic growth, which has triggered the developments of unconventional resources such as Marcellus Shale.

PNG 566: Reservoir Characterization
3 Credits

This course focuses on the quantitative characterization of oil and gas reservoirs, principally through analysis of seismic survey data, well logs, and by employing geostatistics. Emphasis is placed on the use of seismic surveys in the oil and natural gas industries, including interpretation, inversion, rock physics, and ties to well logs. One major goal of this course is to expose the student to a variety of advanced analytical tools used to quantitatively interpret seismic data. The tools we will talk about are specifically geared towards characterizing petroleum and natural gas reservoirs, but may be adapted for other purposes.

PNG 577: Production and Completions Engineering
3 Credits

In petroleum and natural gas engineering, production and completion operations are critical components of field development operations. This course presents a high-level treatment of modern petroleum production engineering, including well deliverability from vertical and horizontal wells and diagnosis of well performance including production logging. In this course, the function of the production engineer is envisioned in the context of well design, stimulation, and artificial lift.

PNG 590: Colloquium
1-3 Credits/Maximum of 3

Continuing seminars that consist of individual lectures by faculty, students or outside speakers on energy and mineral engineering issues.

Cross-listed with: EME 590

PNG 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

PNG 597: Special Topics
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

PNG 598: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

PNG 600: Thesis Research
1-15 Credits/Maximum of 999

No description.

PNG 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999

No description.

PNG 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999

No description.

Pharmacology - MD (PHARM)

PHARM 520: Principles of Drug Action
2 Credits

Detailed analysis of basic parameters governing drug actions.

PHARM 551: Anti-infective Therapeutics
1 Credits

This course covers general principles related to pharmacology of major classes of antimicrobial agents. PHARM 551 Anti-infective Therapeutics (1) This course focuses on the pharmacology of anti-microbial drugs. The overall goal of the course is to examine the mechanisms of action of these drugs as well as factors determining susceptibility, resistance, selection, host factors, pharmacokinetics, and adverse reactions.

Prerequisite: BMS 501, BMS 502, BMS 503

PHARM 552: Integrated System Pharmacology
1 Credits

This course covers principles related to pharmacology of major classes of drugs affecting the autonomic nervous, cardiovascular, pulmonary, and renal systems. PHARM 552 Integrated System Pharmacology (1) This course focuses on the pharmacology related to autonomic nervous, cardiovascular, pulmonary, and renal systems. The overall goal of the course is to present the mechanisms underlying the effects of drugs acting on these systems at various levels of biological organization (e.g., cell, tissue, and the whole body).

Prerequisite: BMS 501, BMS 502, BMS 503, PSIO 504

PHARM 553: Gastrointestinal and Immunomodulatory Therapeutics
1 Credits

This course covers principles related to pharmacology of major classes of drugs affecting gastrointestinal disorders, drugs used in therapy of inflammatory diseases, and immunomodulatory drugs for organ transplantation therapy. PHARM 553 Gastrointestinal and Immunomodulatory Therapeutics (1) This course covers the use of pharmacotherapies to treat gastrointestinal disorders, inflammation, and immune response. The emphasis is to examine the mechanisms underlying the effects of these drugs at various levels of biological organization (e.g., cell, tissue, and the whole body).
**Prerequisite:** BMS 501, BMS 502, BMS 503

PHARM 554: Anticancer Therapeutics

1 Credits

This course provides an understanding of general principles of the induction, prevention and treatment of cancer. PHARM 554 Anticancer Therapeutics (1) This course introduces students to the concept of the multi-step process involved in carcinogenesis. Discussion of both synthetic drugs and naturally occurring compounds used in cancer prevention and cancer treatment is included. Potential future targets for cancer therapy are presented.

**Prerequisite:** BMS 501, BMS 502, BMS 503

PHARM 561: Neuropharmacology

2 Credits

This course introduces basic principles of human neuropharmacology, with primary emphasis on drugs active in the central nervous system. PHARM 561 Neuropharmacology (2) This course covers the use of pharmacotherapies to treat a variety of neuropsychiatric disorders and other disorders of central nervous system function. Discussion includes: 1) normal neurophysiology; 2) the neuropathology of common disorders; 3) mechanisms of action of drugs affecting the central nervous system and of drugs used to treat disorders of this system; 4) the experimental bases for our knowledge of the actions of these drugs; 5) animal models useful for drug discovery; and 6) the mechanisms underlying drugs of abuse.

**Prerequisite:** BMS 501, BMS 502, BMS 503

PHARM 562: Endocrine Pharmacology

2 Credits

This course presents basic principles of human endocrine pharmacology, emphasizing drugs active in the endocrine and reproductive systems. PHARM 562 Endocrine Pharmacology (2) This course covers pharmacotherapies used to treat disorders of the endocrine and neuroendocrine systems and to modulate reproduction. Discussion includes: 1) the physiological basis for normal endocrine homeostasis; 2) the pathology of common disorders; 3) the mechanisms of action of drugs affecting these systems and of drugs used to treat disorders of these systems; 4) the experimental bases of these drugs and therapies; and 5) animal models useful for endocrine drug discovery.

**Prerequisite:** BMS 501, BMS 502, BMS 503

PHARM 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

PHARM 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

PHARM 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

PHARM 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

PHARM 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

**Philosophy (PHIL)**

PHIL 501: American Philosophy Seminar

3 Credits/Maximum of 6

Critically examines central figures in American philosophy including Emerson, Thoreau, Pierce, James, Royce, Dewey, Santayana, Mead, Quine, Davidson, and Rorty.

PHIL 502: European Philosophy Seminar

3 Credits/Maximum of 6

Critically examines central European philosophers including Husserl, Heidegger, Sartre, Merleau-Ponty, Gadamer, Levinas, Foucault, and Derrida; course content varies with instructor.

PHIL 503: Ethics Seminar

3 Credits/Maximum of 6

Critical investigation of philosophical problems in ethics, and viability of historical and contemporary ethical positions; course content varies with instructor.

PHIL 508: Social and Political Philosophy Seminar

3 Credits/Maximum of 6

Critical examination of social and political philosophies, their historical context and relation to philosophic method; course content varies with instructor.

PHIL 512: Seminar in Logic

3 Credits

This course covers topics in first-order symbolic logic with identity and advanced special topics in metatheory.

PHIL 516: Aesthetic Seminar

3 Credits/Maximum of 6

Critical examination of problems in philosophy of art including beauty, taste, value, politics, culture, interpretation; course content varies with instructor.
PHIL 538: Feminist Philosophy Seminar

3 Credits

Critically examines feminist approaches to ethics, epistemology, philosophy of science, metaphysics, social/political philosophy, and the history of philosophy. PHIL (WMNST) 538 Feminist Philosophy Seminar (3) This course aims to give students an understanding of the philosophical concepts and problems of feminist philosophy. The course will focus on major topics, such as the history of philosophy, ethics, social/political philosophy, epistemology and philosophy of science, and metaphysics, and figures within 20th century feminist philosophy with the concurrent goal of bringing them to bear on contemporary issues involving gender’s relationship to race, sexuality, class, disability, nationality and age. This course builds upon PHIL 438 Feminist Philosophy and counts towards the requirements of the dual title degree in Philosophy and Women’s Studies. Evaluation methods include preparation for and participation in class meetings, two short discussion papers, and a final term paper. The course will be offered at least once every four semesters with an enrollment goal of 20. Specific course content will vary with instructor.

Cross-listed with: WMNST 538

PHIL 539: Critical Philosophy of Race

3 Credits/Maximum of 6

The study of philosophical issues raised by racism and by the concept of race and other related concepts. PHIL 539 Critical Philosophy of Race (3 per semester/maximum of 6) This course provides an intensive examination of a major area of philosophical research: the philosophical examination of racism and of our thinking about race. It will investigate philosophical debates about such topics as mixed-race identity, going beyond the Black-White binary, the distinction between racism and xenophobia, the distinction between race and ethnicity, the debate about the reality of race, as well as questions about the nature and genealogy of racism. The course will have a historical component that will show how thinking in terms of the concept of race first developed and was transformed across time as well as addressing contemporary issues that includes an examination both of the dominant theories and definitions or racial identity and of ethical and political questions raised by the persistence of the notion of race. The course will also examine debates about the complicity of certain canonical figures in the history of philosophy, such as Immanuel Kant and Georg Wilhelm Friedrich Hegel in the conceptualization of race and the spread of philosophical racism. In addition to these two philosophers the following authors will be among those studied: Johann Friedrich Blumenbach, Frederick Douglass, Antenor Firmin, W. E. B. Du Bois, Anna Julia Cooper, Alain Locke, Paulette Nardal, Jean-Paul Sartre, Frantz Fanon, Anthony Kwame Appiah, Gloria Anzaldua, Bernard Boxill, and Angela Davis. Race will be examined in its relation to other ways of thinking about human difference, including class, gender, nationality, religion, and sexuality. Attention will be given to diverse experiences in the US context, such as those of African Americans, Latina/os, Asian Americans, Native Americans, Irish Americans, and so on. In addition to examining the role race has played and continues to play in the United States of America, the ways in which race is approached in other parts of the world, for example in China, will also be the subject of investigation. The course content will vary, dependent upon the instructor.

PHIL 553: Ancient Philosophy Seminar

3 Credits/Maximum of 6

Analyzes specific concerns and texts of ancient philosophy including those of Plato and Aristotle; course content varies with instructor.

PHIL 554: Medieval Philosophy Seminar

3 Credits/Maximum of 6

Critical examination of medieval texts and philosophers, including Augustine, Anselm, Aquinas, Duns Scotus, and Ockham; course content varies with instructor.

PHIL 555: Modern Philosophy Seminar

3 Credits/Maximum of 6

Examines rationalism, empiricism, and other philosophical movements from Bacon and Descartes to Kant and Mill; course content varies with instructor.

PHIL 556: 19th-Century Philosophy Seminar

3 Credits/Maximum of 6

Examination of philosophy from Hegel to Nietzsche on history, dialectic, ideology, existence, science, and art; course content varies with instructor.

PHIL 557: 20th Century Philosophy Seminar

3 Credits/Maximum of 6

Central problems in works of twentieth-century philosophers including Russell, Dewey, Wittgenstein, Heidegger, Foucault, Levinas; course content varies with instructor.

PHIL 558: Contemporary Philosophy Seminar

3 Credits/Maximum of 6

Critically investigates diverse recent figures and problems of continental, pragmatic, and analytic philosophy; course content varies with instructor.

PHIL 560: Africana Philosophy

3 Credits

This course explores and analyzes existing and emerging dominant themes in Africana philosophical discourse. It examines the construction of the Africana Philosophy canon and dominant themes that emerge within that canon while also identifying new directions for this important area of philosophy. With this in mind students will explore central foundational articles and books that signaled the rise of Africana Philosophy, edited collections and anthologies in Africana Philosophy, existing course syllabi, and more recent trajectories in Africana Philosophy in the 21st Century. Furthermore, the course will make central not only the contributions of early and contemporary male philosophers and activist-intellectuals to this tradition, but also critical women philosophical figures (who have often been marginalized by their male counterparts).
PHIL 562: Major Figures in Modern Philosophy
3 Credits/Maximum of 12
Close study of a major figure in modern philosophy through one central or several important texts.

PHIL 563: Major Figures in Nineteenth-Century Philosophy
3 Credits/Maximum of 12
Close study of a major figure in nineteenth-century philosophy through one central text or several important texts. PHIL 563 Major Figures in Nineteenth-Century Philosophy (3 per semester/maximum of 12)

This course provides an intensive examination of one major figure in nineteenth-century philosophy, such as Friedrich Wilhelm Schelling, Georg Friedrich Hegel, Arthur Schopenhauer, Auguste Comte, William James, Karl Marx, Charles Sanders Peirce, and Friedrich Nietzsche. Regardless of the figure selected, the course focuses on one major text written by that figure (such as in the case of Hegel the Phenomenology of Spirit or in the case of Schopenhauer The World as Will and Representation) or on two complementary texts by a major figure (for example, Schelling’s First Outline of a System of the Philosophy of Nature and his The Ideas for a Philosophy of Nature or Nietzsche’s Beyond Good and Evil and The Genealogy of Morals). Possible topics covered in relation to the figure selected would include as appropriate to the figure: knowledge; reason; language; subjectivity; logic; nature and spirit; dialectics; ideology; philosophy of history; religion; truth; ethics; aesthetics; and genealogy. The students will also be introduced to the major secondary works written about this author and the controversies they have generated. The course content will vary, dependent upon the instructor.

PHIL 564: Major Figures in Twentieth-Century Philosophy
3 Credits/Maximum of 12
Close study of a major figure in twentieth-century philosophy by means of one central text or several important texts. PHIL 564 Major Figures in Twentieth-Century Philosophy (3 per semester/maximum of 12)
The course aims to provide students with a ‘building block’ in their knowledge of the history of philosophy. That is, the students will achieve an expert’s understanding of the central ideas of one figure in twentieth-century philosophy. On this basis, students will be able to develop a comprehensive understanding of the figure’s entire corpus and complete range of ideas. Moreover, students will be able to develop a comprehensive understanding of the historical period. There are many possible figures for this course: Edmund Husserl, Martin Heidegger, Emmanuel Levinas, Hans-Georg Gadamer, Jean-Paul Sartre, Maurice Merleau-Ponty, Simone de Beauvoir, Jacques Derrida, Gilles Deleuze, Michel Foucault, Julia Kristeva, Alain Badiou, John Dewey, Jurgen Habermas, Rudolf Carnap, Wilfred Sellars, W. V. O. Quine, Hilary Putnam, and Richard Rorty. In relation to Husserl, for example, students will master the problems (relativism and skepticism) to which phenomenology is responding; the phenomenological method (the epoché, the reductions, eidetic variation); and how the transcendental position of phenomenology at once responds to the question of knowledge and to the question of being. This knowledge will allow students to develop an understanding not only of Merleau-Ponty’s view of language but also his view of politics. From this developed understanding of Merleau-Ponty, students will be able to understand how Merleau-Ponty differs from Bergson, Merleau-Ponty’s predecessor, from Sartre, Merleau-Ponty’s contemporary, and from Foucault, Merleau-Ponty’s inheritor. The course content will vary, dependent upon the instructor.

PHIL 571: Perspectives and Methods in Bioethics
3 Credits
This course explores a variety of theories and methods in bioethics and applies them to a selection of current topics.

PHIL 572: Perspectives in Macro-Bioethics
3 Credits
Provides an understanding of ethical issues arising in the responsible conduct of biomedical research and applies them to a selection of current topics.

PHIL 573: Ethics and the Responsible Conduct of Biomedical Research
3 Credits
Provides an understanding of ethical issues arising in the responsible conduct of biomedical research and frameworks for critically analyzing them.

Cross-listed with: BIOET 502

PHIL 574: Ethics and the Responsible Conduct of Biomedical Research
3 Credits
Provides an understanding of ethical issues arising in the responsible conduct of biomedical research and frameworks for critically analyzing them.

PHIL 580: Phenomenology
3 Credits/Maximum of 6
A critical study of one or more thinkers, ideas, or movements in modern phenomenology.

PHIL 589: Philosophical Translation Seminar
2 Credits
Studies philosophical works in their original (non-English) languages; course content varies with instructor.

Prerequisite: appropriate language proficiency demonstrated by satisfactory completion of departmental translation exam in given language

PHIL 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

PHIL 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.
PHIL 597: Special Topics  
1-9 Credits/Maximum of 9  
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

PHIL 600: Thesis Research  
1-15 Credits/Maximum of 999  
No description.

PHIL 601: Ph.D. Dissertation Full-Time  
0 Credits/Maximum of 999  
No description.

PHIL 602: Supervised Experience in College Teaching  
1-3 Credits/Maximum of 6  
Students will teach introductory logic course—i.e., Phil 1—and other introductory level courses as required by staffing.

PHIL 603: Foreign Academic Experience  
1-12 Credits/Maximum of 12  
Foreign study and/or research constituting progress toward the degree at a foreign university.

PHIL 610: Thesis Research Off Campus  
1-15 Credits/Maximum of 999  
No description.

PHIL 611: Ph.D. Dissertation Part-Time  
0 Credits/Maximum of 999  
No description.

PHIL 803: Homeland Security: Social and Ethical Issues  
3 Credits  
This course will examine the social, political, legal, and ethical issues that arise in the context of homeland security.  
Cross-listed with: HLS 803

**Physics (PHYS)**

PHYS 510: General Relativity I  
3 Credits  
Foundations of general relativity, elements of differential geometry, Einstein's equation, Newtonian limit, gravity waves, Friedmann cosmologies and Schwarzschild solution.  
**Prerequisite:** PHYS 557

PHYS 511: Topics in General Relativity  
3 Credits  
Selected topics from: Cauchy problem, Hamiltonian formulation, positive energy theorems, asymptotics, gravitational radiation, singularity theorems, black-holes, cosmology, observational tests.  
**Prerequisite:** PHYS 510

PHYS 512: Quantum Theory of Solids I  
3 Credits  
Electrons in periodic potentials; single electron approximations; lattice dynamics; electrical, optical, and magnetic properties of solids; transport theory.  
**Prerequisite:** PHYS 412; Concurrent: PHYS 517

PHYS 513: Quantum Theory of Solids II  
3 Credits  
Electron-phonon interaction, BCS theory; Landau Fermi-liquid theory; disorder and localized states; spin-wave theory; many-body theory.  
**Prerequisite:** PHYS 512

PHYS 514: Physics of Surfaces, Interfaces, and Thin Films  
3 Credits  
This course focuses on interfacial and surface phenomena; structural, electronic, vibrational and thermodynamic properties; physisorption and chemisorption; phase transitions and ultrathin film nucleation; and growth phenomena.  
**Prerequisite:** PHYS 412

PHYS 517: Statistical Mechanics  
3 Credits  
Thermodynamics, classical and quantum statistics; Bose and Fermi gases; Boltzmann transport equation; phase transitions, critical phenomena; Ising model.  
**Prerequisite:** PHYS 561

PHYS 518: Critical Phenomena and Field Theory  
3 Credits  
Critical phenomena using field theoretical and renormalization group techniques; solvable statistical models and conformal field study; fluctuations and random processes. PHYS 518 Critical Phenomena and Field Theory (3) The application of field theoretical methods, in particular, the renormalization group approach, has profoundly influenced our understanding of the physics of continuous phase transitions. In particular, they reveal the origin of universality between seemingly unrelated phase transitions, and the reason for the failure of the Landau Ginzburg theory close to the critical point. This course will begin with the concepts of the order parameter and spontaneous symmetry breaking, and the shortcomings of the Landau Ginzburg theory that neglects fluctuations of the order parameter. Subsequently, we will introduce field theoretical techniques and Feynman diagrams, and the basic foundations of the renormalization group method for integrating out
rapidly fluctuating modes of the order parameter. These concepts will be applied to various classes of phase transitions, including the Heisenberg ferromagnet, nonlinear sigma model, and the Kosterlitz-Thouless model. Epsilon expansion will be performed in detail starting from both four and two dimensions, and a connection will be made to experiments, such as superfluid transition in thin helium films. No prior knowledge of field theory is required. The course grade will be based upon homework assignments and a term paper.

**Prerequisite:** PHYS 517

PHYS 524: Physics of Semiconductors and Devices

3 Credits

Electronic structure, optical and transport properties of crystalline and amorphous semiconductors, quantum wells, superlattices; quantum devices; quantum Hall effect.

**Prerequisite:** PHYS 412

PHYS 525: Methods of Theoretical Physics I

3 Credits

Complex variables, Hilbert spaces, linear operators, calculus of variations, Fourier analysis, Green's functions, distributions, differential equations, and special functions.

PHYS 526: Methods of Theoretical Physics II

3 Credits

Finite and Lie groups, representations and application to condensed matter and particle physics; selected topics from differential geometry.

**Prerequisite:** PHYS 525

PHYS 527: Computational Physics and Astrophysics

3 Credits

Introduction to numerical methods for modeling physical phenomena in condensed matter, atomic and high energy physics, gravitation, cosmology and astrophysics. ASTRO (PHYS) 527 Computational Physics and Astrophysics (3) This course provides an introduction to applications of numerical methods and computer programming to physics and astrophysics. Numerical calculations provide a powerful tool for understanding physical phenomena, complementing laboratory experiment and analytical mathematics. The main objectives of the course are: to survey of the computational methods used for modeling concrete physical and astrophysical systems; to assess the reliability of numerical results using convergence tests and error estimates; and to use scientific visualization as a tool for computer programming development and for physical understanding of numerical results.

Cross-listed with: ASTRO 527

PHYS 529: Neural Control Engineering

3 Credits

The ability to use formal control theory to observe and control neuronal systems is rapidly becoming more feasible as our models of neural systems become more realistic and as our advances in nonlinear Kalman filtering become more sophisticated. This course will explore the cutting edge of nonlinear state estimation of neuronal systems and the construction of control algorithms based on that state estimation. We will give an overview of several canonical neuroscience models, which represent experimental systems that can be controlled: the Hodgkin-Huxley equations, their reduction with the Fitzhugh-Nagumo equations, the Wilson-Cowan model of cortex, and recent models of Parkinson’s disease. We will then apply nonlinear state estimation to measurements from such systems and construct control algorithms that interact with such models.

**RECOMMENDED PREPARATIONS:** Students without a background including calculus, differential equations, and linear algebra should consult with the instructor.

PHYS 530: Theoretical Mechanics

3 Credits

Newtonian mechanics, noninertial coordinate system, Lagrangian mechanics, small oscillations, Hamiltonian formulation, canonical transformations, Hamilton-Jacobi theory, dynamical systems.

**Prerequisite:** PHYS 419

PHYS 541: Elementary Particle Phenomenology

3 Credits

Baryons and mesons; leptons and quarks; electromagnetic and weak interactions and their unification; quantum chromodynamics; experimental techniques.

**Prerequisite:** PHYS 562

PHYS 542: Standard Model of Elementary Particles Physics

3 Credits

Weinberg-Salam model of electroweak interactions, spontaneous symmetry breaking, quantum chromodynamics; selected topics from grand unified theories and superstring theory.

**Prerequisite:** PHYS 564

PHYS 545: Cosmology

3 Credits

Modern cosmology of the early universe, including inflation, the cosmic microwave background, nucleosynthesis, dark matter and energy. ASTRO (PHYS) 545 Cosmology (3) Cosmology is the scientific study of the universe as a whole: its physical contents, principal physical processes, and evolution through time. Modern cosmology, which began in the early 20th century, is undergoing a renaissance as a precision science as powerful ground- and space-based telescopes allow us to observe the formation of the first stars, galaxies and galaxy clusters; the echoes of the inflationary epoch as they are impressed upon the cosmic microwave background; and evidence for and clues to the nature of the mysterious dark energy, which is driving the accelerating expansion of the universe. This course will introduce students to the key observations and the theoretical framework through which we understand the physical cosmology of the early universe.

Cross-listed with: ASTRO 545
PHYS 555: Polymer Physics I

3 Credits

Introduction to the fundamental concepts needed to understand the physics applicable to polymer melts, solutions and gels. MATSE (PHYS) 555 Polymer Physics I (3) This course develops fundamental understanding of the conformations of polymers in solution and melt states. We start with ideal chains that have random walk statistics. Next excluded volume is introduced to understand the self-avoiding walk conformation and collapsed conformation of real chains. The behavior ideal and real chains are studied in extension, compression and adsorption. While positive excluded volume leads to swelling, negative excluded volume leads to collapse and phase separation. The phase behavior of polymer mixtures and solutions is described in detail. Semidilute solutions are understood in terms of two length scales where each chain changes its conformational statistics. Scattering is used to determine the conformation of chains, their molar mass and their interactions with surroundings. Percollation theory is introduced to model the statistics of random branching and gelation. The rubber elasticity of fully developed networks is understood in terms of the stretching laws for network chains. Entanglement effects, swelling and viscoelasticity are discussed in detail. Once the conformations of polymers are understood, dynamics of polymer liquids are considered. In dilute solutions hydrodynamic interactions dominate and the viscoelasticity predicted by the Zimm model is derived. In unentangled melts of short chains, hydrodynamic interactions are screened and the Rouse model is used to understand viscoelasticity. Unentangled polymers in semidilute solutions have Zimm dynamics on small length scales and Rouse dynamics on longer length scales. Dynamic scattering techniques are discussed for measuring polymer dynamics. Entanglement effects are described using the tube model, where surrounding chains confine the motion of a given polymer to a tube-like region. The effects of concentration, chain length and polydispersity of linear chain polymer liquids are discussed in detail. The effects of branching on polymer dynamics are introduced at the level of simple structures such as star polymers and comb polymers. The course assumes some prior knowledge of polymers, usually obtained through an introductory undergraduate course. The students should attain a working understanding of the basic concepts of polymer physics in this course, allowing them to tackle more difficult problems in their research. Such skills are reinforced through homework and take-home examinations.

Cross-listed with: MATSE 555

PHYS 557: Electrodynamics

3 Credits

Special relativity, electromagnetic fields, Maxwell’s equations, conservation laws, electrostatics and magnetostatics. PHYS 557 Electrodynamics (3) The first half of the course starts from special relativity and uses Hamilton’s principle to derive relativistic dynamics and Maxwell’s equations. This approach, developed by Landau and Lifshitz, sets classical electrodynamics in a broad base of theoretical physics, and provides insights to solving many interesting problems that might be hard to solve starting from the traditional approach of deriving Maxwell’s equations empirically through Coulomb’s law, the law of Biot and Savart, Faraday’s law, and Maxwell’s inclusion of displacement current. The second half is based on the classic textbook by Jackson, and is devoted to application of electrodynamics in various settings. This includes dynamics of charged particles in given electromagnetic fields, with special emphasis on problems with symmetry and the guiding center dynamics. Examples of such topics include electromechanical problems with the use of Lagrangian; fields generated by given distributions of charges and currents, especially for case of small sources, and the use of multiple expansions; polarization and magnetization, and Maxwell’s equations in continuous media; boundary value problems; electromagnetic waves with single frequency in vacuum and medium; wave guides and resonant cavities; the generation of electromagnetic radiation.

Prerequisite: PHYS 400

PHYS 559: Graduate Laboratory

2 Credits

Study and applications of techniques and instrumentation used in modern physics laboratories.

PHYS 561: Quantum Mechanics I

3 Credits

Postulates of quantum mechanics, Hilbert space methods, one dimensional potentials, spin systems, Harmonic oscillator, angular momentum, Hydrogen atom.

Prerequisite: PHYS 410

PHYS 562: Quantum Mechanics II

3 Credits

Addition of angular momenta, perturbation theory, variational principle, scattering theory, density matrices, identical particles, interpretations of quantum mechanics, Dirac theory.

Prerequisite: PHYS 561

PHYS 563: Quantum Field Theory I

3 Credits

Canonical and functional integral quantization of relativistic and non-relativistic field theories; Feynman diagrams; spontaneous symmetry breaking; renormalization group.

Prerequisite: PHYS 562

PHYS 564: Quantum Field Theory II

3 Credits

Abelian and non-Abelian gauge theories; renormalization group and operator product expansions; BRST quantization; scattering theory, other related topics.

Prerequisite: PHYS 563

PHYS 565: Interface of General Relativity and Quantum Physics

3 Credits

Limitations of perturbative methods, conceptual problems; selected topics from black hole thermodynamics, canonical quantum gravity, loop space methods and string-theory.

Prerequisite: PHYS 510, PHYS 563
PHYS 570: Particle Astrophysics

3 Credits

Particle astrophysics is a discipline at the interface between physics and astronomy, which has undergone tremendous growth in the 21st century, with the commissioning and exciting results from very large facilities detecting the highest energy cosmic rays, neutrinos, gravitational waves, and gamma-rays. There is a rapid and ongoing expansion of the understanding of these radiations, their physics and their sources, which include supernovae, gamma-ray bursts, and active galactic nuclei, and there are major new facilities aimed at characterizing particle properties of dark matter and its cosmological effects. Students will be given an overview of the basics of particle astrophysics and to the latest data and its interpretation, stressing issues currently discussed by the community, with particular attention on major projects in which Penn State faculty and students are involved. The course is designed for graduate students in physics and astronomy and astrophysics, being also appropriate for students in nuclear engineering or related disciplines.

Prerequisites: ASTRO 502; PHYS 400; PHYS 406 PHYS 557

PHYS 571: Modern Atomic Physics

3 Credits

Light-atom interactions, atomic structure, laser cooling and trapping, interferometry, and Bose-Einstein condensation. PHYS 571 Modern Atomic Physics (3) Students will learn the physics behind most of the major recent developments in the field of atomic physics, at the level required for research at the graduate level. Material to be covered will include selected topics from the following list: Light-atom interactions, atomic structure, laser cooling, atom trapping and atomic optics, atom interferometry, precision measurements with atoms, quantum computing with atoms, atomic Bose-Einstein condensates, degenerate Fermi gases, reduced dimensionality systems, simulating condensed matter physics with atoms. Students will enhance their technical writing and presentation skills. Students will use the background they have acquired to develop an oral presentation related on a research advance related to modern atomic physics.

Prerequisite: PHYS 411 , PHYS 561 , or CHEM 565

PHYS 572: Laser Physics and Quantum Optics

3 Credits

Theory of modern lasers, non-linear and quantum optics, photon statistics, laser spectroscopies, pulsed lasers. PHYS 572 Laser Physics and Quantum Optics (3) Students will learn the basic physics of lasers, how they work and how they are used, primarily for physics research at the graduate level. They will become familiar with a broad array of the most important topics of laser physics including mode competition, pulsed lasers, pulse propagation, non-linear laser spectroscopy, laser stabilization, and the quantum nature of laser light. Students will enhance their technical writing and presentation skills. Students will use the background they have acquired to develop an oral presentation related on a research advance related to lasers.

Prerequisite: PHYS 410 , PHYS 561 , or CHEM 565

PHYS 580: Elements of Network Science and Its Applications

3 Credits

Introduction to elements of network theory used to describe and model complex networks; applications in social, biological, and technological networks. PHYS 580 Elements of Network Science and Its Applications (3) Network Science is the study of network representations of physical, biological, and social phenomena leading to predictive models of these phenomena. This class will focus on four main questions asked by network science: (i) How do we use data analysis methods to determine or infer the interaction graphs underlying complex systems? (ii) How can we characterize the organizational features of large-scale networks? (iii) What are the mechanisms that determine the common topological features of a wide variety of networks? (iv) To what extent does the organization of the interaction network underlying a complex system determine the dynamical behavior (e.g. steady state or oscillations) of the system? Applications in social, biological and technological networks will be examined. As Network Science is an interdisciplinary field of research, the course is open and should be of interest to a wide range of graduate students in degree programs in physics, social sciences, life sciences, mathematics, engineering, and computer science.

Prerequisite: knowledge of basis calculus

PHYS 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

PHYS 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

PHYS 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

PHYS 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

PHYS 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

Physiology (PHSIO)

PHSIO 510: Physiological Adaptations to Stress
3 Credits

Students will learn how to address problems in physiological adaptations to stress through parallel molecular, cellular, and systemic approaches.

Prerequisite: PHSIO571, PHSIO572

PHSIO 567: Advanced Exercise Physiology
3 Credits

Physiological changes during exercise with emphasis on the effects of physical conditioning and training.

Prerequisite: BIOL 472, EXSCI480

Cross-listed with: KINES 567

PHSIO 571: Integrative and Cellular Mammalian Physiology I
3 Credits

Mammalian cardiovascular, respiratory, renal, and gastrointestinal systems. This course in Cellular and Integrative Mammalian Physiology covers all major aspects of physiology. A special emphasis will be placed on how cellular aspects of physiology are integrated with organ and systems physiology. It is designed for students that either major in Physiology or are interested in integrating physiology concepts into their education. An in depth presentation of membrane biophysics, muscle dynamics, cardiovascular and circulatory regulation, respiratory and renal function, as well as acid base balance are addressed.

Prerequisite: BIOL 472

Cross-listed with: BIOL 571

PHSIO 572: Integrative and Cellular Mammalian Physiology II Endocrine Physiology
3 Credits

The course in Cellular and Integrative Mammalian Physiology II covers all major aspects of endocrine physiology. A special emphasis will be placed on how cellular aspects of physiology are integrated with organ and systems physiology. This course is designed for graduate students in the Physiology or Animal Science graduate programs, or students who are interested in integrating physiology concepts into their work in another program. Although there are no prerequisites for the course, prior courses in physiology, endocrinology, and/or biochemistry are beneficial. The course will include the following topics: gastrointestinal physiology, pancreatic hormones and integrated metabolism, hypothalamic pituitary function, thyroid, parathyroid and bone, as well as physiology of growth and lactation. Additional topics will encompass adrenal function, sexual differentiation, male and female reproduction, embryo and adult derived stem cells, aging, obesity, and metabolic syndrome.

Prerequisite: KINES484

Cross-listed with: KINES 577

PHSIO 590: Colloquium
1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students or outside speakers.

PHSIO 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Physiology - MD (PSIO)

PSIO 501: Scientific Analysis and Presentation
1 Credits

Journal club format used to develop critical analytical and presentation skills for understanding and clearly presenting current scientific data.

PSIO 504: Cellular and Integrative Physiology
3 Credits

PSIO 504 is a physiology course that integrates cellular and organ-based physiology concepts. PSIO 504 Cellular and Integrative Physiology (3)
The course in Cellular and Integrative Physiology is a one semester, three credit course that will cover all major aspects of physiology. A special emphasis will be placed on how cellular aspects of physiology are integrated with organ physiology. The course will meet for 1 hour sessions, three times per week. The course will be offered in the fall semester. It is designed for graduate students that either major in Physiology or are interested in integrating physiology concepts into their graduate education. Although there are no prerequisites for the course, prior introductory courses in physiology and/or biochemistry are beneficial. The course will expand upon material in an assigned physiology textbook. Text chapters will be assigned as reading material prior to each meeting. The instructor will review the assigned material during the beginning of each meeting, after which more detailed aspects of the material will be discussed. The course will have three examinations. The exams will be composed of a mixture of short essays, multiple choice and problem-solving questions. The lectures in PSIO 503 form the
first block of the lectures in the more comprehensive PSIO 504 course. Students should enroll in either PSIO 503 or PSIO 504.

PSIO 505: Cellular and Integrative Physiology II

3 Credits

This is a physiology course that integrates cellular and organ-based physiology concepts. PSIO 505 Cellular Integrative Physiology II (3) The course, is a one-semester, 3-credit-course that will cover major aspects of physiology not covered in Cellular and Integrative Physiology I. A special emphasis will be placed on how cell function and differentiation are integrated with organ physiology. The course will meet for one-hour sessions, three times per week. The course will be offered in the spring semester. It is designed for graduate students that either major in Physiology or are interested in integrating physiology concepts into their graduate education. PSIO 504 (Cellular and Integrative Physiology I) is a prerequisite for the course. Prior introductory courses in physiology and/or biochemistry are beneficial. The course will expand upon material in an assigned physiology textbook. Text chapters will be assigned as reading material prior to each meeting. The instructor will review the assigned material during the beginning of each meeting, after which more detailed aspects of the material will be discussed. The course will have two examinations. The exams will be composed of a mixture of short essays, and multiple-choice and problem-solving questions.

Prerequisite: PSIO 504

PSIO 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students or outside speakers.

PSIO 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects including nonthesis research, supervised on an individual basis and which fall outside the scope of formal courses.

PSIO 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

PSIO 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

PSIO 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

Plant Biology (PLBIO)

PLBIO 512: Plant Resource Acquisition and Utilization

4 Credits

Advanced study of plant resource acquisition and utilization considering molecular, physiological, and whole plant perspectives through lectures and problem solving.

PLBIO 513: Integrative Plant Communication and Growth

4 Credits

Advanced study of plant communication, growth, and development considering molecular, physiological, and whole plant perspectives through lectures and problem solving.

PLBIO 514: Modern Techniques and Concepts in Plant Ecophysiology

2 Credits

An intensive introduction to concepts of plant ecophysiology and modern techniques used in this field.

Prerequisite: BIOL 220W

Cross-listed with: HORT 514

PLBIO 515: Modern Techniques and Concepts in Plant Cell Biology

2 Credits

An intensive introduction to concepts of plant cell biology and modern techniques used in this field.

Prerequisite: introductory course in plant physiology

PLBIO 516: Modern Techniques and Concepts in Plant Molecular Biology

2 Credits

An intensive introduction to contemporary molecular biology methods as applied to the study of plants.

Prerequisite: general biology and plant physiology at the undergraduate level

PLBIO 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

PLBIO 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.
PLBIO 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

PLBIO 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

PLBIO 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

PLBIO 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

Plant Pathology (PPATH)

PPATH 502: Plant Disease Diagnosis
3 Credits
Field and laboratory techniques used in diagnosing plant diseases caused by various types of pathogens with emphasis on fungi.

Prerequisite: PPATH401

PPATH 505: Fundamentals of Phytopathology
4 Credits
An in-depth tutorial of the fundamental theories and concepts of plant pathology. PPATH 505 Fundamentals of Phytopathology (2) Using the primary literature of the discipline, students will explore, in-depth, the knowledge base of plant pathology. Students will write a 3-5 page paper each week summarizing the major points of the topic covered in the primary literature assigned as related to 4 pathogens/diseases chosen by each student from an approved list. Students will also answer, in writing, 1-2 specific questions posed by the instructor each week. These writings constitute 90% of the grade. 5% of the grade is based upon a written final exam and 5% on oral participation in class.

Prerequisite: PPEM 405

PPATH 522: Professional Development & Ethics in Plant Pathology
1 Credits
Graduate students will develop key professional skills and ethics through a combination of lectures, discussions, and assignments. PPATH 522 Professional Development & Ethics in Plant Pathology (1) This course is designed to help graduate students acquire key professional skill and ethics through a combination of lectures, case study discussions on various ethics and professionalism issues, dialogs with invited guests about their professional experience, and mock exercises of paper and proposal reviews. Topics to be covered include: (a) the process and ethics of publishing, (b) how peer review of papers and grant proposals works, (c) plagiarism, (d) scientific misconduct, (e) oral and poster presentation skill, and (f) successful strategies in grant proposal writing and proposal review.

PPATH 533: Molecular Genetics of Plant-Pathogen Interactions
3 Credits
In depth discussion/review of the primary literature on the mechanisms of plant-pathogen interactions at the molecular and cellular levels. PPATH 533 Molecular Genetics of Plant-Pathogen Interactions (3) The main objective of this 3-credit course is to help students gain (a) firsthand knowledge of various techniques used in studying the molecular basis of plant-pathogen interactions and (b) knowledge of the current concepts and theories on the nature and mechanisms of the plant-pathogen interactions. In addition, this course will help students develop an ability to integrate and synthesize various areas of knowledge in solving plant health related problems. This course will serve the needs of students in Plant Pathology and other departments/programs who require an in-depth understanding of the molecular basis of plant-pathogen interactions for their program of study. This course will be offered in fall of even numbered years, and its expected enrollment is 8-10. Grading will be based on class participation, paper presentations, assignments, and a mid-term exam.

Prerequisite: B M B400 or equivalent

PPATH 542: Epidemiology of Plant Diseases
3 Credits
Disease development in populations of plants, with emphasis on the impact of environment and control practices on rate of development.

Prerequisite: PPATH401 ; MATH 111 or MATH 141 or 3 credits in statistics

PPATH 544: Fungal Genetics
4 Credits
Fungal breeding systems, mating types, asexual restrictions and recombination, tetrad analysis, gene conversion and extra genetic elements. PPATH 544 Fungal Genetics (4) Fungal genetics will focus on the classical genetics of fungi starting with the expected inheritance ratios and patterns for single gene and multiple genes on various fungal traits. The methods of establishing crosses and obtaining progeny will be covered in the examples provided. Mating type and breeding systems are an important trait for obtaining the sexual phase, therefore an emphasis will be placed on the genetic determination of breeding methods and mating type, and what is known of mating type switching. There are several unique phenotypes associated only with fungi (pokey, senescent fungi, killer character and others) inherited by mitochondrial DNA and induced by plasmids or transposons. The determination of inheritance and the importance will be examined. Fungi provide the unique opportunity to conduct tetrad analysis in determination of inheritance and mapping of traits. In the laboratory, crosses will be set up by students to obtain data to conduct tetrad analysis and to visualize unusual tetrads brought about by gene conversion. Exchange of genetic material occurs without the sexual cycle though heterokaryosis and the parasexual cycle but may be limited by vegetative incompatibility. These difficult concepts will be discussed as well as visualized by conducting experiments in the laboratory. In discussions, an emphasis will be placed on plant pathogenic fungi and inheritance of virulence which is an important plant pathogen trait. Finally topics on population genetics of fungi including determination of genetic diversity, allele
frequencies, genotype frequencies will be studied. Evaluation of student performance will be based on problems sets provided throughout the semester, laboratory reports, student projects and presentations, and a final examination. The problem sets are designed to help students solve genetic problems based on the concepts learned in lecture. The laboratory experiments are designed to complement the lectures and allow students to visualize difficult concepts from lecture. Students will be assigned a plant pathogenic fungus and will explore the literature especially any relevant genetic information on that fungus. The final examination will focus on short answer questions requiring the student to synthesize information. The course will be offered every other spring semester even years. Expected enrollment is 10 students.

**Prerequisite:** 3 credits of mycology and introductory genetics

**PPATH 555: Effective Scientific Communications**

3 Credits

Students will learn to effectively present their research to scientific and non-scientific audiences. The overall goal of the course is to develop student skills in spoken and written communication of scientific concepts, methods, and data, and to provide effective evidence-based recommendations for practical application of such knowledge. In addition, students will develop skills in writing testable hypotheses, evaluating experimental approaches, considering alternative approaches, and envisioning expected outcomes of a research plan.

**PPATH 590: Colloquium**

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

**PPATH 596: Individual Studies**

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

**PPATH 597: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

**PPATH 600: Thesis Research**

1-15 Credits/Maximum of 999

No description.

**PPATH 601: Ph.D. Dissertation Full-Time**

0 Credits/Maximum of 999

No description.

**PPATH 602: Supervised Experience in College Teaching**

1-3 Credits/Maximum of 6

Supervised preparation and presentation of materials in lectures and laboratories, preparation and supervision of exams and student consultation and evaluation.

**PPATH 610: Thesis Research Off Campus**

1-15 Credits/Maximum of 999

No description.

**PPATH 611: Ph.D. Dissertation Part-Time**

0 Credits/Maximum of 999

No description.

**PPATH 802: Plant Protection: Responding to Introductions of Threatening Pests and Pathogens**

3 Credits

This course provides knowledge of plant biosecurity, plant disease, regulations, and technologies using case study examples.

Cross-listed with: AGBIO 802

**PPATH 840: Major Writing Projects: Start to Finish**

3 Credits

In this course, students will work through a major STEM writing project (e.g. thesis proposal, review article), with the goal of having a completed project at the end of the course. Individual student goals will be agreed upon at the outset of the course by the student, the major adviser to the student, and the course instructor. Students in the course will follow a rigorous writing schedule that requires writing submissions and peer reviews most weeks. In addition to submitting and reviewing writing, students will learn a variety of relevant writing skills through both lectures and practical activities.

**PPATH 853: Interpreting Turfgrass Science Literature**

3 Credits

Introduction to turfgrass research publications, interpretation of the data, and discussion of the significance of the results. PPATH (TURF) 853 Interpreting Turfgrass Science Literature (3) This course will provide an introduction to literature search in turfgrass management, identification of most pertinent peer-reviewed journals for each area of interest/specialty in turfgrass management, and utilization of other resources such as technical journals, trade journals, online and resident educational material resources, extension bulletins/circulars from various institutions/organizations that addresses various topics on turfgrass management. This course will prepare the students for analyzing research questions or rationale formulated by an investigator, for understanding how the study was devised to address the objectives adequately and the results were obtained and presented in the publication, and for identifying the take-home message in the publication. Emphasis will be made on the criteria used for data collection, the significance of methods employed in statistical analyses of the data, and presentation of results in the publications to effectively convey the information to readers.
Cross-listed with: TURF 853

Political Science (PLSC)

PLSC 501: Methods of Political Analysis
3 Credits
Survey of important methods and approaches to the study of politics; introduction to research design.

PLSC 502: Statistical Methods for Political Research
3 Credits
Basic concepts of statistics and their use in political research; data analysis, causal inference, regression analysis, computer applications.

PLSC 503: Multivariate Analysis for Political Research
3 Credits
Analysis of selected issues in quantitative political analysis; introduction to advanced multivariate analysis techniques. PL SC 503 Multivariate Analysis for Political Research (3) This course is part of the methods sequence required of doctoral students in political science. The prerequisites are PL SC 501 and PL SC 502. The course has three objectives. First, students will acquire a theoretical/mathematical understanding of multivariate regression analysis. Such understanding is fundamental to applying appropriate applications of quantitative methodology to substantive problems. Students must acquire clear and correct conceptual understanding of the statistical ideas behind the mathematics in order to succeed in this course. Second, students will learn to program in SAS to relate statistical ideas to practice and develop a set of programming skills that will benefit their research over the long run. They are expected to acquire proficiency in SAS in terms of data management and statistical analysis, which will be useful when they find the need to pick up some other statistical software package in the future. Third, students will gain experience in quantitative research by applying their statistical and computing skills to substantive problems in political science. Students should aim at producing publishable quality work. They would also develop the ability to evaluate other scholars' use of quantitative methods.

Prerequisite: PL SC501, PL SC502

PLSC 504: Topics in Political Methodology
3 Credits
This course examines a range of statistical models widely used in political science that generalize from linear normal regression. PL SC 504 Topics in Political Methodology (3) This is an elective course in statistical methods designed to meet the particular needs of students in the political science Ph. D. curriculum. PL SC 504 is tailored to focus on the specific issues that arise in the types of data found in political science applications. Students are expected to have completed the three required foundational courses in political methodology or their equivalents. This course examines a range of regression-like models widely used in empirical political science. Its core focus is on maximum likelihood estimation of models for various kinds of limited-dependent and qualitative response variables. Specific models covered are widely used in political science today, including binary logit and probit, multinomial logit and probit, ordered logit and probit, and Poisson regression models. Additional topics include models for time-to-event (survival) data, panel data and time-series cross-sectional analysis, item response theory, multi-level models, and methods for causal inference using observational data. Students will apply these models in a series of homework assignments, a replication project, and a final exam. Empirical political scientists must have familiarity with these models; these techniques represent a minimal level of statistical competence necessary for those seeking to do advanced quantitative analysis in the political science. The material in this course is technical, but students will be given an intuitive rationale for each model. Weekly homework assignments will be based on data from published research in political science.

Prerequisite: PL SC503 or STAT 462 or STAT 501 or STAT 504 or STAT 511

PLSC 505: Time Series Analysis in Political Science
3 Credits
This course provides students with a foundation in time series methods and to the applications of these methods in political science. PL SC 505 Time Series Analysis in Political Science (3) This course provides students with a foundation in time series methods and to the applications of these methods in political science. The initial focus of the course is descriptive analysis of time series, with attention given to developing an understanding of social processes that are inherently dynamic in nature and to how time series are measured. The focus then shifts to more rigorous univariate time series analysis with the introduction of linear difference equations as the foundation for understanding political dynamics, and the development of models for both stationary and nonstationary time series. The remainder of the course is devoted to an examination of traditional econometric analyses of time series using regression techniques, and an array of important topics in time series analysis including Granger causality, vector autoregression, and cointegration techniques. Students will learn the statistical theory underlying the methods of time series analysis, as well as how to apply and interpret those methods in practice.

Prerequisite: PL SC503

PLSC 506: Game Theory for Political Science I
3 Credits
This course offers foundational information regarding the use of non-cooperative game theory in political science. PL SC 506 Game Theory for Political Science I (3) This course offers foundational information regarding the use of non-cooperative game theory in political science. Game theory is a mathematical tool used to study strategic interaction in a variety of academic disciplines. Within political science, researchers who study American politics, comparative politics, and international relations use game theory to examine a broad range of political phenomena, including the outcomes of elections, the formation of governments, and the onset and duration of interstate conflict. The course introduces students to the basic concepts and principles of non-cooperative game theory, and demonstrates through examples how it can be used in the study of politics. Attention is given to both strategic (simultaneous move) and extensive form games. Topics to be covered include the concept of Nash equilibrium; mixed strategies; backward induction; subgame perfect equilibrium; incomplete information; and signaling games. The course provides students with the concepts, language, and notation needed to begin using game theory in their own research and to evaluate its application by others.
Prerequisite: PL SC500 and PL SC502

PLSC 507: Game Theory for Political Science II
3 Credits
This course offers information regarding the advanced application of non-cooperative game theory in political science.

Prerequisite: PL SC506

PLSC 508: Political Networks
3 Credits
A network is a set of relationships among units. The study of networks in political science, the social sciences, and beyond has grown rapidly in recent years. This course is a comprehensive overview of methods for analyzing network data. We will cover network data collection and management, the formulation and expression of network theory, network visualization and description, and methods for the statistical analysis of networks. The course will make extensive use of real-world applications and students will gain a thorough background in the use of network analytic software. Most of the applications discussed will be drawn from political science and sociology, but this course will be relevant to anyone interested in the study of network data.

Recommended Preparations: Students taking this course should have knowledge of hypothesis testing and regression, and experience with at least one statistical or scientific programming language (e.g., R, Stata, SAS, Python, Matlab).

PLSC 511: Professional Norms in Political Science
1.5 Credits
An introduction to professional norms, the fundamentals of good research, and the basic skills necessary for good teaching. PL SC 511 Professional Norms in Political Science (1.5) This course is the first of two courses in a required series on professional development in the graduate program in political science. The first course focuses specifically on fundamental knowledge and skills that will help graduate students throughout graduate school but also in their later careers as a scholar. The topics over the course of the semester fall into three main themes: 1) understanding the norms and requirements of the profession; 2) the fundamentals of good research; and 3) an introduction to teaching. Professionalization topics include planning your graduate school years, putting together a curriculum vita, communicating with senior scholars, and writing the MA; teaching topics including planning a course and recitation sections, preparing lectures or discussion classes, as well as documenting your teaching; and the research fundamentals that we will discuss include defining problems, crafting arguments, outlining and revising manuscripts.

PLSC 513: Writing and Professional Development in Political Science
1.5 Credits
Professional development focusing on publishing research, writing dissertations, and professional issues of advanced graduate students. PL SC 513 Writing and Professional Development in Political Science (1.5) This course is designed to help advanced graduate students surmount the challenges they face as they turn to writing a dissertation and prepare to become junior faculty. The course is designed to give practical advice on many of the issues faced by these students. Primary among these is learning to turn initial papers into research publishable in high quality peer reviewed journals. The course also focuses on practical advice on finishing comprehensive exams, starting a dissertation and early preparation for the job market.

Prerequisite: 3rd year standing in Political Science Ph.D. program

PLSC 518: Survey Methods I: Survey Design
3 Credits
Research design of social, behavioral and health surveys. PL SC (SOC) 518 Survey Methods I: Survey Design (3) This course is intended to provide graduate students the background to both evaluate published research using survey methods, and -- when combined with additional training -- to design their own surveys to collect data for their own research. Students will learn the essentials of sampling, questionnaire design, and how surveys may be implemented in different modes: telephone, face to face interviews, mail or other self-administered modes, and the internet. The course will emphasize how decisions of research design have important implications for the validity, reliability, and quantity of data that will be analyzed to answer key questions in the social, behavioral and health sciences. Sample design: 2 weeks; Questionnaire design and item analysis: 2 weeks; Telephone Surveys: 2 weeks; Face to face surveys: 2 weeks; Self administered and mail surveys: 2 weeks; Internet Surveys: 2 weeks; Ethics and human subjects protection: 1 week.

Cross-listed with: SOC 518

PLSC 519: Survey Methods II: Analysis of Survey Data
3 Credits
Intermediate course on the statistical analysis of survey data: topics include weighting, complex surveys, missing data, and contextual analysis. PL SC (SOC) 519 Survey Methods II: Analysis of Survey Data (3) This is an intermediate level course in quantitative analysis. It is intended for graduate students who have completed 1-2 semesters of graduate-level statistics (not general research methods) and who are interested in the application of social statistics to the unique aspects of data collected by way of surveys. Surveys have a combination of qualities that represent challenges to valid inference. These include cluster and stratified sampling, under-representation of some groups due to differential response rates, missing data due to item non-response, cross-sectional design, and coarse measurement. Quite often we use surveys to test theories that the original survey designer did not intend to address, raising issues of validity and reliability of measurement. At the same time, surveys offer a number of opportunities and, when combined with other surveys (pooled cross sections) or merged with contextual data, can address a wide range of methodological puzzles in the social sciences. This course provides an introduction to techniques in applied statistics that have developed specifically to address the special features of survey data. Examples of such techniques are: use of design weights, post-stratification weights, merging surveys with other surveys or auxiliary data, missing data imputation, challenges of causal inference. The class will blend an understanding of the core statistical issues with an emphasis on acquiring an intuition for the theory underlying the statistical models rather than focusing on proofs and estimation. This will provide a foundation for frequent hands-on applications in this seminar and for enrollment in more advanced or more in-depth courses offered by the Statistics department and the various social science departments.

Prerequisite: PL SC503 or SOC 575
PLSC 534: Political Economy of Energy and Extractive Industries in Africa (Oil and Mining)

3 Credits

Given the rising global demand for energy and resources, Africa's production of oil and solid minerals has already produced very significant positive as well as negative impacts on the continent's political, economic, and social conditions. This seminar examines the extractive industry-driven changes in Africa's political economy, as well as in the continent's foreign relations. Students will examine the institutional basis under which the expansion of the industry is taking place in Africa. This will involve discussions of the institutional characteristics of Africa, including issues of land tenure and property rights laws, how institutional systems are changing in order to facilitate the industry's expansion, and the repercussions of these changes upon society. The course also interrogates the relevance of international efforts to mitigate some of the adverse impacts of the industry. Among such efforts is the UN Guiding Principles for Business and Human Rights. Overall this seminar examines the industry's impact on Africa's socioeconomic development and global relations, and concludes with how African countries might deal with the adverse impact of the Oil and Mining industry.

Cross-listed with: AFR 534, INTAF 534

PLSC 540: American Government and Politics

3 Credits

Survey of basic literature in major fields of U.S. government: public opinion, parties, voting, interest groups, presidency, congress, judiciary.

PLSC 541: American Political Institutions

3-9 Credits/Maximum of 9

Research on a selected topic in United States political institutions such as the presidency, the courts, congress, bureaucracy, state governments.

PLSC 542: American Political Behavior

3-9 Credits/Maximum of 9

Research on a selected topic in United States political behavior such as public opinion, voting, parties, socialization, judicial behavior.

PLSC 543: Political Representation

3 Credits/Maximum of 9

An examination of significant concepts, ideas, and research questions addressed in recent and classic studies of political representation. PL SC 543 Political Representation (3) This seminar will investigate significant concepts, ideas, and research questions addressed in recent and classic studies of political representation. It will take up questions and issues central both to an understanding of American politics and to an assessment of the nature and quality of democratic governance: how are citizen interests represented and how responsive is government to citizen preferences? The seminar begins with an investigation of different types of political representation, some of which are policy-related and others of which are not rooted in public policy. It next takes up assessments of the relationship between citizen preferences and public policy (policy responsiveness); biases and inequality in representation; and the role of political intermediaries, namely organized interests and political parties, in facilitating the representation of citizen interests. The implications of a more or less representative political system are then examined. Throughout the seminar, attention is paid to how political scientists formulate and execute research on political representation, as well as to how the design of such research affects what is known about representation. Seminar participants will be required to engage in extensive careful reading, contribute to weekly discussion, prepare short written critical responses to the readings, and complete an original research project that takes up questions relevant to our understanding of representation.

PLSC 550: Comparative Politics: Theory and Methodology

3 Credits

Survey of basic literature and major research efforts in comparative political analysis.

PLSC 551: Comparative Political Institutions

3 Credits/Maximum of 9

Comparative study of the institutional structures of different political systems: the state, party systems, administrative structures.

PLSC 552: Comparative Political Behavior

3 Credits/Maximum of 9

Research on aspects of comparative political behavior, such as political culture, political change and development, interest groups, public opinion. PL SC 552 Comparative Political Behavior (3 per semester/maximum of 9) This course will explore the nature of social movements and revolutions. We will look at the major theories that sociologists and political scientists have created to explain the development and outcomes of social movements and revolutions. How do we explain why people participate in revolutions or social movements? Why is it that some people never revolt although observers would say they are as bad off as others that do? What sorts of factors determine the tactics people will use once they decide something must be done? Can governments repress revolutions or social movements? What determines whether a social movement or revolution is successful? In examining these questions we will read theoretical works, quantitative studies comparing many different social movements or revolutions, and case studies of particular social movements and revolutions. By the end of this course, you should have a good grasp of the theoretical debates about social movements and the methods which have been used to study revolutions and social movements, and you will have cursory knowledge of several different revolutions and social movements ranging from the French Revolution to the American Civil Rights Movement. Precise content will vary in subsequent offerings of the course, as determined by instructor. Students will consult with instructor prior to taking the course additional times.

PLSC 555: Comparative Regimes

3 Credits

This course provides an overview of comparative analyses of regimes as they relate to the field of political science. PL SC 555 Comparative Regimes (3 per semester/maximum of 9) This course focuses on the comparative study of particular types of regimes, including democracies and authoritarian regimes. It is designed for Ph.D. or M.A. students who have completed the foundational graduate statistical methods courses. The course examines current research on both the institutional
structures of different political systems (e.g. the state, party systems, administrative structures) and on aspects of political behavior (such as political participation, interest groups and social movements, public opinion). Topics include theories of regimes, measures and typologies of regimes; formal theories of regimes; political institutions (legislatures, parties, and elections); political behavior; consequences of regimes for economics; and regimes place in current international relations research. Building on this literature, students will be expected to conduct replications or original research focused on these regimes.

PLSC 556: Civil Conflict
3 Credits
This class addresses civil conflict, in terms of general theory regarding cooperation and conflict and also cross-regional cases of civil conflict.

PLSC 560: International Relations: Theory and Methodology
3 Credits
Survey of major traditional and contemporary theory-building efforts and contemporary research techniques and orientations in international relations.

PLSC 561: American Foreign Policy
3 Credits/Maximum of 9
Research on the institutions, dynamics, and major themes of United States foreign policy. PL SC 561 American Foreign Policy (3 per semester/maximum of 9) This course is an advanced option for graduate students in political science studying international relations. The course surveys important themes in U.S. foreign policy, including how that policy is made, the implementation of policy, and critiques of U.S. foreign policy. Precise content will vary in subsequent offerings of the course, as determined by instructor. Students will consult with instructor prior to taking the course additional times.

PLSC 563: International Political Economy
3 Credits/Maximum of 9
Research on international political economy with a focus on theory building; analysis of political causes and consequences of economic behavior. PL SC 563 International Political Economy (3 per semester/maximum of 9) This course is a graduate seminar on international political economy. Topics covered include the major theoretical perspectives in international political economy and the political economy of international trade, finance, investment, and monetary policy. The aim is to familiarize students with theoretical and empirical literature in the field of international political economy. Students are expected to engage in constructive dialogues across the disciplinary boundaries of economics and political science, across different research methods, and among themselves, with the goal of producing publishable work. Precise content will vary in subsequent offerings of the course, as determined by instructor. Students will consult with instructor prior to taking the course additional times.

PLSC 565: International Conflict
3 Credits
Research into the causes and consequences of international crises and wars, using various methodologies for theory assessment.

Prerequisite: PL SC560
PLSC 566: Conflict Management, Termination, and Bargaining
3 Credits
Research on termination and resolution of international conflicts, focusing on theory building and empirical assessment of theories of conflict resolution. PL SC 566 Conflict Management, Termination, and Bargaining (3) This graduate seminar introduces and examines the dominant theories, hypotheses, and research concerning the termination and resolution of international and civil wars. Topics include international mediation, rational bargaining theory, conflict resolution vs. termination, third party intervention, peacekeeping, and peace duration. The focus is theoretical and research oriented; arguments about the causes of conflict resolution are assessed both logically and empirically, using both case study and statistical methods. The course examines whether and how theories of conflict management have been tested, and allows/encourages students to develop their own testable hypotheses about conflict management and termination. Existing research (primarily from political science, but also drawing on economics) is evaluated on its merits, and students then seek appropriate ways to extend that research.

Prerequisite: PL SC560
PLSC 567: Terrorism
3 Credits
This seminar provides a general and cumulative investigation into the phenomenon of terrorism from a Political Science perspective. It is a study of terrorism with an attention to what it is 'theoretically, conceptually, empirically' and how and why it is used by nonstate actors; its political, economic, and social root causes; its consequences to political, economic, and social institutions and outcomes; and the implications of current research on terrorism and counterterrorism. Although the study of terrorism has a long pedigree in the social sciences, research by political scientists became more extensive following the September 11, 2001 attacks on the World Trade Center. This course critically evaluates this new literature, noting its contributions, limitations, gaps, and opportunities for future discovery. Much of the contemporary scholarly literature on terrorism makes use of state-of-the-art political science research methods and quantitative analysis.

PLSC 568: Psychology of Terrorism
3 Credits
This course examines the causes and consequences of terrorism, and the responses to terrorism from a psychological perspective, to include Christian extremism, Islamic Fundamentalism, Jihadism, Left wing extremism and Marxist terrorism, Right wing extremism, and single-issue terrorism. It draws on research from a variety of disciplines in order to examine terrorist ideologies; the motives, strategies, and behaviors of terrorists and terrorist leaders; how people come to join terrorist groups; methods of recruitment; terrorist tactics; the psychological consequences of terrorism on individuals, communities, and global societies; psychological counterterrorism; reactions to counterterrorism efforts; terrorism prevention; and possibilities for disengagement and deradicalization.

Cross-listed with: INTAF 568, PSY 568
PLSC 569: Counterterrorism

3 Credits

This course investigates the topic of counterterrorism. It surveys the history and evolution of counterterrorism campaigns, strategies, and tools using relevant scholarly and professional literature on the subject as well as contemporary and practical case studies that explore the application of counterterrorism. It begins with an examination of the current status of U.S. counterterrorism and the institutions and agencies that conduct counterterrorism. The course then moves into a discussion of specific counterterrorism strategies and tactics, ranging from military interventions to the use of community outreach, development, culture, and soft power. The course examines the challenges posed by network and clandestine structures of terrorist threats to counterterrorism officials, as well as the ethical implications of counterterrorism efforts. The comparative focus of the course is used to inform contemporary U.S. counterterrorism with the lessons learned from historical and contemporary counterterrorism campaigns waged by other states such as the United Kingdom, Israel, Turkey, France and Colombia.

PLSC 581: History of Political Theory

3 Credits/Maximum of 9

Research on selected political theorists or historical traditions of political thought. PLSC 581 History of Political Theory (3 per semester/maximum of 9) This seminar is a survey of American political thought. The course is designed (1) to introduce students to sources and techniques in researching and writing the history of political thought and (2) to prepare its participants for teaching American political thought courses to undergraduates. We will discuss a variety of persuasive works (sermons, speeches, essays, autobiographies, poetry, plays, films, etc.) to examine how Americans have conceptualized key political ideas (e.g., equality, liberty, autonomy, community, progress, the American dream) and how their views on the proper organization of political society have changed from the seventeenth century to today. We will pay particular attention to the tradition of dissent in American political thought, and the corresponding political and social movements that have been built on demands for ‘liberty and justice for all.’ Precise content will vary in subsequent offerings of the course, as determined by instructor. Students will consult with instructor prior to taking the course additional times. This course will be offered once a year with 16 seats per offering.

PLSC 583: Modern Political and Social Theory

3 Credits/Maximum of 9

Research on major developments and issues in modern political and social theory, such as critical theory, modernism, and postmodernism. PL SC 583 Modern Political and Social Theory (3 per semester/maximum of 9) This course will survey recent versions of liberal theory as well as critical appraisals of that tradition. Particular attention will be paid to the developments of liberalism in the most recent work of Rawls and Habermas. We will then consider critical appraisals of liberalism arising from various corners: communitarianism, identity politics, and postmodernism. Throughout, we will explore themes concerning the grounds of political theorizing and normative justification, models of the self and the person presupposed in political theories, questions of individualism and collective identity, and the very possibility of stable meanings and generalized theory construction. Precise content will vary in subsequent offerings of the course, as determined by instructor. Students will consult with instructor prior to taking the course additional times. This course will be offered once a year with 12 seats per offering.

PLSC 586: Theory of Bureaucratic and Administrative Politics

3-6 Credits/Maximum of 6

The role of the executive in government and politics; theories of administrative organization, organization behavior, and decision-making processes.

PLSC 594: Research in Political Science

1-6 Credits/Maximum of 6

Supervised student activities on research projects identified on an individual or small group basis.

PLSC 595: Internship in Political Science

1-9 Credits/Maximum of 9

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Prerequisite: Prior consent of supervisor, advisor, or department head; applicable departmental internship requirements such as satisfactory completion of required upper level courses appropriate for the internship program selected.

PLSC 595A: Survey Research Practicum

1-6 Credits/Maximum of 6

Practicum in Survey Research data collection or management.

Prerequisite: PL SC518 or SOC 518 and PL SC519 or SOC 519 Cross-Listed

PLSC 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses. A specific title may used in each instance and will be entered on the student’s transcript.

PLSC 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

PLSC 598: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.
PLSC 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

PLSC 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

PLSC 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
No description.

PLSC 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

PLSC 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

PLSC 805: Violence, Threats, Terror, and Insurgency
3 Credits
This course examines political violence committed by non-state groups as it applies to homeland security from both a domestic and global perspective.

Cross-listed with: CRIM 805, HLS 805

PLSC 836: Root Causes of Terrorism
3 Credits
Investigates the role economic, political and social factors play in determining patterns of international and domestic terrorism and terrorist activity.

PLSC 837: Radicalization, Counter-Radicalization, and De-Radicalization
3 Credits
This course examines the communicative, social, and psychological factors related to individual and mass trajectories into and out of engagement in terrorism and other forms of political violence. It investigates the factors that promote the radicalization process, as well as the theoretical and practical foundations of efforts at counter-radicalization and de-radicalization both in the United States and abroad. With an emphasis on the persuasive strategies employed by terrorist groups and counter-terrorist forces (including government officials, analysts, and community outreach organizations), the course explores the social and psychological processes that move an individual towards engagement in political violence; the conceptual distinctions between radicalization, violent radicalization, counter-radicalization, and de-radicalization; the specific efforts designed and implemented by counter-terrorist forces meant to prevent violent radicalization; existing programs and initiatives designed to divorce an individual from his/her violent ideology; and the question of whether radicalization is fundamental to terrorism.

PLSC 838: Tools and Analysis of Counterterrorism
3 Credits
This course explores the various resources and analytical techniques available to terrorism and counterterrorism experts today. It gives students an overview of the major sources of data on terrorist networks, terrorist incidents reports, risk climates, and legal and criminal justice data surrounding terrorism and counterterrorism. It provides students with critical data gathering and analysis skills useful to practitioners, and engages them in reporting and threat briefing exercises. The course begins with an overview of the resources available to counterterrorism professionals, including information and data on terrorist networks, terrorist incidents, legal and criminal justice data related to terrorism, data on individuals engaged in terrorism, and relevant government documents. The course focuses on how the data can be accessed, norms and practices for analyzing the data and compiling it into reports, and the advantages and limitations of the various bodies of information available.

Prerequisites: PLSC 569 or PLSC 836 or PLSC 837

Portuguese (PORT)

PORT 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

PORT 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

Psychology (PSY)

PSY 501: Seminar in General Psychology
1 Credits
Orientation course for first-year graduate students in Psychology.

Prerequisite: graduate standing in the Psychology Department

PSY 502: Health: Biobehavioral Perspectives
3 Credits
Introduction to the role of psychology in maintaining health and in treating nonpsychiatric disorders.

Cross-listed with: BBH 502

PSY 507: Analysis of Psychological Data I
3 Credits
Overview of analysis techniques for psychological data. PSY 507 Analysis of Psychological Data I (3) Research in psychology employs a variety of methods, many of which are unique to the study of the mind and behavior. This course assumes some familiarity with psychological
research and concerns the analysis of psychological data, including the results from self-report and observational studies, factorial and repeated-measures experiments, and designs that mix two or more types of factor or measure. An introduction to the current methods of describing and reporting psychological data will be provided, as well as a primer on the special issues surrounding data reduction and measurement error that arise when working with human subjects.

**Prerequisite:** graduate standing in psychology

PSY 508: Analysis of Psychological Data II

3 Credits

Overview of advanced analytic techniques for psychological data. PSY 508 Analysis of Psychological Data II (3) This course deals with the analysis and interpretation of multivariate data of the sort often obtained in psychological research. It discusses data analysis when there are multiple independent variables (e.g., various applications of multiple regression), when there are multiple dependent variables (e.g., multivariate analysis of variance), and when the aim of the data analysis is to understand the latent structure of a set of variables (e.g., factor analysis, structural equation modeling). The course uses a number of data-analytic platforms, focusing on: (1) using SPSS syntax to structure complex analyses, and (2) using AMOS to carry out analyses involving both latent and observed variables.

**Prerequisite:** graduate standing in Psychology; PSY 507

PSY 511: Seminar in Contemporary Psychology

1-3 Credits/Maximum of 12

Critical review of readings on a topic of current interest, either in content or methodology, within psychology. PSY 511 Seminar in Contemporary Psychology (1-3 per semester/maximum of 12) The Seminar in Contemporary Psychology is designed to provide a seminar experience for graduate students in Psychology and related programs. Topics will vary by semester and instructor. Each section will provide an in-depth look at a current area of scientific research in psychology. Assigned readings will include material from the original scientific literature (journal articles, chapters, or books). Evaluation methods vary by section, but are writing-based and typically include a combination of short writing assignments (30%), class participation (10%), and longer papers requiring library research in the original literature (60%).

**Prerequisite:** 9 credits in psychology

PSY 512: Developmental Cognitive Neuroscience of Adolescence

3 Credits

In this course students will evaluate a mix of foundational and cutting-edge research and theory investigating various changes during adolescence principally from a developmental cognitive neuroscience perspective. Particular emphasis will be placed on understanding the application of non-invasive neuroimaging techniques (e.g., functional magnetic resonance imaging, EEG) and the critical role these tools have played in our understanding of adolescent development. Topics to be discussed include (but will not be limited to) structural brain development, maturation in cognitive control functions (e.g., working memory, inhibitory control), as well as affective (e.g., emotion and reward processing), and social information processing. We will also examine factors contributing to adolescent decision-making and risk-taking behaviors.

PSY 517: Advanced Social Psychology

3 Credits

Problems of theory and of research methods with emphasis on persisting issues relevant to contemporary developments in social psychology.

**Prerequisite:** PSYCH420; PSYCH200 or STAT 200

PSY 520: Seminar in Psycholinguistics

3-9 Credits/Maximum of 9

Consideration of theoretical and research issues relevant to psychological aspects of language sounds, syntax and semantics, and other cognitive support. LING (PSY) 520 Seminar in Psycholinguistics (3 per semester/maximum of 9) In this seminar, psycholinguistic approaches to bilingualism will be examined. Bilingualism is of interest for a number of reasons. First, despite the prevalence of monolinguals in the United States, most people of the world are bilingual. To have a genuinely universal account of human cognition will therefore require a detailed understanding of the relations between language and thought in individuals who speak and understand more than one language. It will be essential that research on basic cognitive functions in bilinguals examines both the course and the consequence of second language acquisition. Second, bilingualism provides a unique vantage point from which the relations between thought and language may be viewed. Historically, this issue was the focus of the debate over the Whorfian hypothesis (i.e., does language determine thought?). In contemporary psychology, it has emerged as a central issue in the debate over modularity. Understanding the form of language and memory representation in the bilingual may provide an important set of constraints in modeling the fundamental categories of the mind. Finally, bilingualism can provide a research tool for examining cognitive functions that are sometimes impenetrable within an individuals first language. The examination of the mapping of form to meaning in Constructing syntactically well-formed sentences in two languages with contrasting syntax, or in understanding the meaning of words that have similar form but differ in meaning in two languages, provides a tool for developing converging sources of evidence to test theories of language comprehension and memory. Topics to be covered include second language acquisition in children and adults, language comprehension and memory in second language, code switching and language mixing, the consequences of bilingualism, and the neuropsychology of bilingualism.

Cross-listed with: LING 520

PSY 521: Cognitive Studies

3 Credits

Survey of theories, methods, and issues in cognitive science.

**Prerequisite:** PSYCH456

PSY 522: Personnel Selection and Appraisal

3 Credits

Evaluation of models for personnel selection, placement, and performance appraisal in business and industry.
Prerequisite: PSYCH404, PSYCH482

PSY 523: Social-Organization Psychology in Industry
3 Credits
Analysis of the role of social and organizational variables as they affect employee performance and employee attitudes.

Prerequisite: PSYCH484

PSY 524: Proseminar in Cognitive Psychology
3 Credits
An historical introduction to theories and critical findings in the field of cognitive psychology.

Prerequisite: graduate standing in the Psychology Department

PSY 525: Cog Psy Sem
3 Credits/Maximum of 12
An advanced seminar in a topical or research area in the field of cognitive psychology.

Prerequisite: graduate standing in the psychology department

PSY 526: Measurement in Human Development
3 Credits

Prerequisite: EDPSY450 or PSYCH404; HD FS519
Cross-listed with: HDFS 526
PSY 528: Observational Methodologies for Development
3 Credits
Design and application of observational methods in developmental research.

Prerequisite: graduate student standing in HD FS or psychology
Cross-listed with: HDFS 528
PSY 529: Seminar in Child Development
1-6 Credits/Maximum of 6
Readings and reports on recent findings in child development.

Prerequisite: 6 graduate credits in child development, child psychology, or educational psychology; 3 in statistics
Cross-listed with: HDFS 529
PSY 531: Multilevel Theory, Measurement, and Analysis
3 Credits
This course is designed to provide students with an overview of multilevel theory building and testing. Issues to be discussed include: multilevel theory & multilevel constructs, multilevel measurement models including composition and compilation models, data aggregation, aggregation bias, the role of within-group agreement in multilevel measurement, cross-level inference & cross-level bias, cross-level interactions, and multilevel regression models/hierarchical linear models/random coefficient regression models. This course has three goals: 1) To provide students with a broad theoretical understanding of multilevel modeling, 2) To provide students with the technical skills necessary to incorporate multilevel data analytic techniques into their research projects 3) To provide students with a cursory treatment of the mathematical foundations of these topics so that the interested student has the requisite background to pursue advanced training in these areas.

Prerequisite: PSY 507

PSY 532: Psychological Foundations of Leadership
3 Credits
Students will examine the social and psychological processes underlying leadership in organizations. PSY 532 Psychological Foundations of Leadership (3) Emerging organizational challenges underscore the criticality of leadership in successful organizational functioning - a trend that is as true for the corporate world as it is for non-profit and governmental institutions. Underlying the need for well-trained, effective leaders is the requirement that future leaders have a fundamental understanding of the psychological processes driving successful leadership. This course provides a broad exploration of the theoretical bases for understanding leadership. Specifically, in this course, students will have the opportunity to learn about the psychological, cognitive, and social foundations underpinning leadership thinking and theory. In particular, course readings and activities will explore traits associated with leadership, psychodynamic perspectives on leaders, skills and styles used by effective leaders, contingency approaches to leadership, the role of power and influence, leader-member exchanges, team-based leadership, transformational leadership, and servant and authentic leadership. By exploring these topics, students will improve their critical thinking about their roles as leaders and expand their skillset to operate more effectively as future leaders. Students will consolidate and demonstrate their understanding of and ability to apply conceptual bases of understanding leadership to analysis of leadership situations and to improving their own capacity for leadership by participating in a number of course activities. For example, students will learn to apply their learning about course topics such as psychological perspectives on leadership to real-world examples of leadership. Moreover, students will gain a deep understanding of the complexities surrounding effective leadership by reviewing representations of leadership in popular culture and carrying out activities that require reflection on those representations. Such deep understanding will be reinforced through exposure to relevant examples, discussion, and cases that emphasize the application of leadership models and theory to practice. Final writing assignments will serve as a vehicle for students to recognize and identify concepts such as leadership styles and types of leadership and to apply them to developing reflective awareness of the psychological processes that drive successful leadership. The conceptual framework for the course will be the psychological principles guiding the development and instantiation of successful leadership.

PSY 534: Practicum in Industrial/Organizational Psychology
1-3 Credits/Maximum of 3
Supervised application of psychological principles in industrial and governmental settings.

Prerequisite: PSYCH484, PSYCH482
PSY 535: Research Methods in I/O Psychology

3 Credits

This seminar is designed to help students develop a broad understanding of applied research by exposing them to the various research methods commonly used in Industrial/Organizational Psychology. The objectives for the course include: 1) developing a solid core understanding of the concepts underlying the research endeavor; 2) building an appreciation of the strengths and limitations of various designs and methods of research; 3) developing the skills to apply these methods to research problems; 4) creating an understanding of the connections between theory, method, and the advancement of knowledge; 5) becoming aware of ethical issues in research; and 6) making significant progress toward the completion of the master's thesis proposal.

PSY 537: Topics in Organizational Psychology

3 Credits

PSY 537 builds on the basic learning blocks of organizational psychology in order to be on the frontiers of knowledge about multilevel and interpersonal dynamics in organizations from the employee, to the team, to the broader organization. The course objective is to gain in-depth knowledge of the theories and research evidence in an area of organizational psychology, and then to develop a novel research idea that contributes to and expands beyond existing research. Specific topic in this course include: employee emotions and motivation, employee well-being, leadership and social influence, workplace diversity, and team-level processes and climate.

Prerequisite: PSY 523

PSY 538: Psychology of Personnel Development

3 Credits

Industrial training in relation to psychological learning theory and experimental findings.

Prerequisite: PSYCH482 or EDPSY421

PSY 539: Foundations of Behavior, Motivation, and Attitudes at Work

3 Credits

Students will examine the psychological and social processes underlying behavior, motivation, and attitudes at work settings. PSY 539 Foundations of Behavior, Motivation, and Attitudes at Work (3) Ongoing changes in the nature of work (e.g., increasingly jobs are knowledge-based), the workforce (e.g., more diverse), and employee-organizational linkages (e.g., greater mobility of employees from organization to organization; increased employee responsibility for maintaining work-relevant skills and knowledge) result in increasing complexity and variability in individual motivation and attitudes at work that, in turn, lead to challenges for leaders in their attempts to influence and develop their employees. Knowledge of the many psychological factors affecting motivation and attitudes, and related skills in understanding the specific ones that may be relevant in a given organizational setting, are critical for effective leadership. This course will provide a broad exploration of research and theory concerning the psychological factors that underlie motivational and attitudinal processes related to human behavior in work and organizational settings. In particular, the course investigates both positive and dysfunctional work behaviors, and their causes and consequences; work attitudes, including job satisfaction and organizational commitment; work motivation theories, including need and trait approaches, behavioral approaches, and cognitive approaches; the role of work content and context and social factors on motivation and attitudes; the importance of aligning such factors to create a work environment supporting effective employees and work groups; and how the changing nature of work and organizations may impact the importance of these factors. The course will focus on the development of the students’ ability to think critically about the complexity of factors that influence behavior and the wide range of individual differences in behavior, emotions, and thinking that occur even when individuals experience a common work environment. Building on these insights, students will learn to recognize and identify in specific work settings the situational conditions that may enhance and/or inhibit effective employee motivation, attitudes, and behavior. Students will also develop skill in aligning various organizational programs and policies to maximize the overall positive impact on effective employee behavior. Synthesis of the various theories and sets of research findings will be developed by the use of relevant examples, cases, and discussions that allow students to demonstrate their knowledge in relation to the development of leadership behaviors likely to be effective in various organizational situations.

PSY 540: Seminar in Clinical Problems

1-9 Credits

Contemporary psychological theory, research, and methodology in relation to clinical psychology.

Prerequisite: PSY 542, PSY 560

PSY 542: Lifespan Development and Psychopathology - Adulthood

3 Credits

This course covers knowledge about typical development in adulthood and about atypicality and the development of adult psychological disorders.

Prerequisite: PSYCH470

PSY 543: Research Design in Clinical Psychology

3 Credits

Experimental and quasi-experimental designs, methodological problems, and techniques of experimental control in clinical psychology research.

Prerequisite: 3 credits of statistics

PSY 547: Fundamentals of Social Development

3 Credits

An introduction to theories, current issues, and critical psychological research findings relating to social and emotional development. PSY 547 Fundamentals of Social Development (3) This course will focus on children's social and emotional development with an emphasis on the various agents that play a part in children's socialization. An important assumption underlying this course and guiding its content is that growth in social and emotional competence emerges from children's experiences in their relationships with other people, especially parents, siblings, and friends. In addition, we will assume that socialization is bi-directional, that is, that children influence their relationships even as their relationships influence them. The goals for the course are as follows: To enhance understanding and familiarity with the methods and findings of the
scientific literature on social development; to provide an understanding of the how of theory and cultural assumptions influence empirical research and how to recognize the implications of theory for research; to enhance understanding of the variability that exists among individuals in terms of social experiences and the growth and development of social competence; to develop or extend students' skills for scholarly communication by providing opportunities to make presentations and produce written work in formats that mimic those used by professionals in the field.

PSY 548: Fundamentals of Cognitive Development
3 Credits

Fundamentals of Cognitive Development will provide students with a broad background in theories, methods, and empirical findings in cognitive development. Discussions will address cognitive development across the lifespan, although empirical work will emphasize cognitive development during infancy, childhood, and adolescence. Students will study varied theoretical frameworks and methods, and will obtain experience in evaluating research from different theoretical perspectives, considering the role of diverse contexts and individuals, and addressing implications of research for applied issues such as education.

PSY 549: Developmental Theory
3 Credits

Conceptual frameworks and major contributions to the study of individual development across the life-span.

Prerequisite: 6 credits at the 400 level in individual development or psychology
Cross-listed with: HDFS 549

PSY 554: Clinical Assessment
3 Credits

Development of psychological measures; evaluation of reliability and validity. Predictive utility of tests in clinical settings emphasized.

Prerequisite: PSY 541 or PSY 542 ; a course in measurement

PSY 555: Theory and Practicum in Clinical Assessment
3-9 Credits

Theoretical issues and research in clinical assessment with special reference to administration and interpretation of testing procedures and clinical interviewing.

Prerequisite: PSY 541 or PSY 542 , and a course in measurement

PSY 556: Neuropsychological Assessment
4 Credits

Survey of human neuroanatomy, neuropathology, behavioral correlates of cerebral dysfunction, and the assessment of neurological disorders.

Prerequisite: PSYCH478 , PSY 554

PSY 558: Disaster Psychology
3 Credits

Explores psychological impact of disasters and terrorist attacks on victims, families, rescuers, and society and methods of reducing negative effects.

Prerequisite: permission of the instructor
Cross-listed with: HLS 558

PSY 560: Practicum in Clinical Methods
1-6 Credits/Maximum of 6

SUPERVISED PRACTICE IN THE PSYCHOLOGY CLINIC, INCLUDING ASSESSMENT, THERAPY, REPORT WRITING, AND STAFF PARTICIPATION.

Prerequisite: PSY 555

PSY 561: Clinical Practicum with Children
1-6 Credits/Maximum of 6

Diagnosis and counseling of child-parent problems of learning and adjustment.

Prerequisite: PSYCH415 , PSYCH412 , PSY 555

PSY 563: Behavior Modification I
3 Credits

Conceptual foundations of principles, assessment methods, and research strategies.

PSY 566: Multicultural Perspectives in Clinical Psychology
3 Credits

Experimental and descriptive research on culture and behavior in both Western and non-Western settings.

Prerequisite: PSYCH420 , PSYCH438 , and 6 credits of statistics

PSY 568: Psychology of Terrorism
3 Credits

This course examines the causes and consequences of terrorism, and the responses to terrorism from a psychological perspective, to include Christian extremism, Islamic Fundamentalism, Jihadism, Left wing extremism and Marxist terrorism, Right wing extremism, and single-issue terrorism. It draws on research from a variety of disciplines in order to examine terrorist ideologies; the motives, strategies, and behaviors of terrorists and terrorist leaders; how people come to join terrorist groups; methods of recruitment; terrorist tactics; the psychological consequences of terrorism on individuals, communities, and global societies; psychological counterterrorism; reactions to counterterrorism efforts; terrorism prevention; and possibilities for disengagement and deradicalization.

Cross-listed with: INTAF 568, PLSC 568
PSY 569: Advanced Theory and Practicum in Counseling and Psychotherapy
3-9 Credits
Theoretical issues, research, and practicum experience in psychotherapy.

PSY 571: Seminar in Social Psychology
3-12 Credits/Maximum of 12
Historical development of theory and methods; determinants and principles of complex social or interactional behavior; contemporary problems and research.

PSY 572: Psychology of Gender
3 Credits
Theory and research on the psychology of gender, emphasizing gender in social interaction, and in individual identity. PSY (WMNST) 572 Psychology of Gender (3) This seminar is a graduate-level introduction to the psychology of gender. Our goal is to understand what ‘gender’ is, and how and when gender matters in our evaluations of ourselves and in our interactions with others. Gender is considered as a system of power relations, as an aspect of personality, and as a cue. The course provides a background and fundamental skills for more advanced courses on the topic or independent study. The course will serve as one of the regular seminars that students can take to meet graduate program requirements in Psychology. Students will be evaluated on preparation and participation (20%), weekly reaction papers (30%), individual research paper (30%), and class presentation on research paper or other topic (20%). This course will be offered once a year with 15 seats per offering.
Prerequisite: graduate standing in psychology, women's studies, or allied field

PSY 575: Lifespan Development and Psychopathology - Childhood and Adolescence
3 Credits
This course covers knowledge about typical development in childhood and about atypicality and the development of child psychological disorders.

PSY 576: Clinical Child Interventions
3 Credits
Clinical-child therapeutic techniques from a developmental-clinical perspective with emphasis on theoretical basis and empirical evaluation of various techniques.
Prerequisite: PSY 575

PSY 577: Clinical Child Assessment
3 Credits
Overview of major methods used in clinical assessment of infants, preschool children, and grade-school children with emphasis on social-emotional functioning.
Prerequisite: PSY 575, or background in psychological assessment

PSY 578: Contemporary Issues in Interdisciplinary Educational Intervention Sciences
2-3 Credits
Proseminar exploring contemporary issues in the design and evaluation of educational interventions from an interdisciplinary perspective.
Cross-listed with: EDPSY 578, HDFS 578

PSY 583: Designing Research in Social Psychology
3 Credits
Designs and procedures useful in social psychology and cognate disciplines; quasiexperimental designs and analysis, field experimentation, validity of inferences.
Prerequisite: 3 credits of 500-level statistics

PSY 584: Attitude Formation and Change
3 Credits
Theory and method in research on attitude formation and change with emphasis on critical analysis.
Prerequisite: PSYCH420 or SOC 403; 3 credits in statistics
Cross-listed with: SOC 584

PSY 589: Social Cognition and Social Perception
3 Credits
Overview of how social behavior and social perception (e.g., impression formation, attitudes, the self, stereotyping) are influenced by cognitive processes.

PSY 591: Seminar on Teaching Psychology
1-3 Credits
Objectives and content of psychology; organization and presentation of material; teaching aids and techniques.

PSY 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

PSY 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

PSY 600: Thesis Research
1-15 Credits/Maximum of 999
No description.
expatriate leaders who are given international assignments outside of their native cultures. Over the semester students will explore relevant examples, cases, and discussions that emphasize the application of psychological theory and research findings from varied cultural settings to the practice of leadership functions in global organizations and work situations. Some examples of the course material that will be addressed include: dimensions of national culture relevant for work organizations; research on the differences and similarities of preferred and effective leadership across dimensions of cultural differences; developing a global mindset and global leaders; leading multinational and culturally diverse teams; challenges of expatriate leadership assignments.

Prerequisite: PSY 532 and PSY 539

PSY 812: Group Leadership and Effective Decision Making

3 Credits

Students will examine the influence of leadership on the psychological and social processes related to effective decision making in work groups. PSY 812 Group Leadership and Effective Decision Making (3) Contemporary organizations can easily suffer from an ‘information explosion’ with the ready availability of large quantities of data of possible relevance to decisions and problem-solving. Psychological research has identified numerous factors that can result in work groups’ failing to make effective decisions. These factors include cognitive biases and heuristics that can be employed with little or no awareness by individuals and groups, usually to simplify information processing to make a decision quickly. They also include psychosocial factors related to how decisions are influenced by conformity, social power, and overconfidence about decision outcomes. In addition, psychological research has shown that groups do not always include effectively new information into revisions of the perceived consequences of decision alternatives. Leaders can help work groups be less influenced by such factors by use of approaches that require more in-depth processing of information and that increase group member awareness of potential biases and constraints that affect decision making. This course provides a comprehensive exploration of the psychological and social factors that underlie decision making in work groups in organizational settings, and in addition emphasizes the role that group leadership plays in making these decision processes more effective. The course focuses on the development of the students’ ability to think critically about the complexity of the direct, indirect, and interactive impact of these factors on leading within multinational organizations that operate worldwide. Considerable attention will be placed on the extensive findings of the major research effort related to global leadership, Project GLOBE, that assessed the expectations, preferences, and judged effectiveness of leadership practices and styles in organizations and work groups in the major cultural regions of the world. The course will focus on the development of the students’ ability to think critically about the complexity of the direct, indirect, and interactive impact of these factors on leading within multinational organizations that operate worldwide. Considerable attention will be placed on the extensive findings of the major research effort related to global leadership, Project GLOBE, that assessed the expectations, preferences, and perceived effectiveness of a comprehensive set of leadership styles and behaviors in 3 industrial sectors in a total of 60 cultures located in all geographic regions of the world. Students will be able to use the Globe Project’s framework of cultural differences and similarities related to organizational leadership to analyze specific cultural settings in terms of desired leadership approaches. Students will understand the paradoxical needs for both flexibility and consistency when attempting to lead with a global perspective. They will also be able to develop leadership approaches in their organizations that can achieve sufficient levels of both consistency across various global and cultural settings (needed for perceptions of fairness and predictability) and flexibility (necessary for adaptation to cultural and social differences). Students will also be exposed to research on the challenges faced by expatriate leaders who are given international assignments outside of
PSY 813: Leadership for Creativity and Innovation  
3 Credits  
Students will examine the influence of leadership on the psychological and social processes related to developing creative ideas and implementing them within work groups and organizations. PSY 813 Leadership for Creativity and Innovation (3) Organizations face continuous and strong pressures to be innovative with regard to all types of organizational functions. Creativity and innovation are not just important with regard to developing new products and services that organizations can offer to their customers, but with regard to developing more effective administrative, production, and delivery systems. At the same time individuals and groups within the organization are likely to resist change because of its inherent uncertainty and risk. Furthermore, while innovation and creativity may be strategic goals for the organization, at the same time the organization is also likely pursuing goals of efficiency, standardization, and quality that conflict with introducing change into the organization. Leaders in the organization thus face difficult paradoxes related to the achievement of multiple, conflicting goals. Organizational and work group creativity and innovation face a number of obstacles that leaders must minimize if the organization is to be successful or even survive. Leading for innovation is a critical skill in today’s organizations. Students will have the opportunity to learn about the psychological and social factors that underlie creativity and innovation in work groups in organizational settings with an emphasis on the role that group leadership plays in the development and implementation of novel idea and processes. The course will focus on the development of the students’ ability to think critically about the complexity of factors that influence creativity and innovation and the range of approaches to dealing with the normative resistance to change that often exists in organizations. Particular attention will be paid to how individuals and groups develop alternative potential ideas, evaluate those alternatives, and implement a novel approach to the issue at hand. Over the semester students will be exposed to relevant examples, cases, and discussions that emphasize the application of psychological theory and research findings to the practice of leadership functions in work settings that help develop and implement novel ideas. Some examples of the course material that will be addressed include: models of the creativity-innovation process within organizations; resistance to change; individual, group, and organizational factors affecting creativity; individual, group, and organizational factors affecting innovation; role of leadership in creativity and innovation; paradoxes related to concurrent need to lead for innovation and lead for efficiency; special challenges related to leading for innovation in multinational and virtual teams.  
Prerequisite: PSY 532 and PSY 539  
PSY 814: Psychology of Leading Work Groups and Teams  
3 Credits  
Students will examine the psychological and social processes related to leading work groups and teams. PSY 814 Psychology of Leading Work Groups and Teams (3) The nature of work in contemporary organizations has been changing from being performed largely by individuals to being increasingly performed by work groups and teams. Furthermore, employees are often members of multiple work groups over relatively short intervals of time or even members of several work teams at one time. Add to this trend the increasing diversity of the workforce and the increasing use of work groups that are geographically and temporally distributed around the world, and the role of being an effective work unit leader is much more difficult than it was in the past. The multiple challenges that leaders face in their attempts to influence, motivate, and develop their employees require knowledge of the psychological and social factors affecting group performance and processes, and related skills in understanding the specific factors that may be relevant in a given organizational setting. This course provides a comprehensive examination of the psychological and social factors that underlie group and team processes in work and organizational settings. The course will focus on the development of the students’ ability to think critically about the complexity of factors that influence group processes and the wide range of individual differences in behavior and emotions that can occur within a work group. Over the semester students will be exposed to relevant examples, cases, and discussions that emphasize the application of psychological theory and research findings to the practice of leadership functions in work settings that help develop effective work groups and positive intra- and inter-group relations. Particular attention will be paid to those factors that work unit leaders can directly create and maintain (such as developing and coaching individual employees and the intact team; recognizing effective work behaviors and motivation; task assignments and delegation of responsibility). Utilizing this method of deployment, students will be exposed to personal experiences of the instructor as well as those of other students, thereby encouraging the use of multiple approaches to analyzing situations and designing action plans. Emphasis will be placed on applying knowledge and theories to real world situations through both the use of case studies and discussion. Topics will range from basic definitional and theoretical framing, to critical evaluation of the utility of theories, as related to the students’ goals as future organizational leaders.  
Prerequisite: PSY 532 and PSY 539  
PSY 815: Psychology of Servant and Authentic Leadership  
3 Credits  
Students will examine the importance of developing followers and leader-follower relationships, by investigating servant and authentic leadership. PSY 815 Psychology of Servant and Authentic Leadership (3) Growing evidence suggests the importance of leading with genuine, positive, honest intent and action. Namely, there exist a growing number of examples illustrating failed, corrupt, and poor leadership. As such, this course will rely on psychological theory and framing to provide students with an overview of servant and authentic leadership, respectively. In the first half of the semester, students will be exposed to the emerging conceptualization of servant leadership, which emphasizes importance of empowering and developing followers. Building on this foundation, the course will then introduce the framework of authentic leadership which emphasizes genuine, engaging, and honest exchanges between leaders and followers. The primary purpose of the course is to provide students with a deeper understanding of the importance of follower relationships and their role as leaders in guiding and developing subordinates. Emphasis will be placed on applying knowledge and theories to real world situations either through the use of case studies or discussion. Students will be exposed to course relevant personal experiences of the instructor as well as other students. Particular emphasis will be placed on the psychological principles guiding authentic and servant leadership, specifically drawing from social psychology, cognitive psychology, and industrial and organizational psychology. Topics will range from basic definitional and theoretical framing, to critical evaluation of the utility of a theory to the students’ goals as future leaders. The overarching aim is to provide students with the tools not only to become effective leaders, but also to be the type of leader who will ensure that those around him/her are continually improving and growing. According to the literature on
servant and authentic leadership, such growth will come about through the leader's dedication to followers' needs and professional requirements.

**Prerequisite:** PSY 532 and PSY 539

**PSY 816: Dysfunctional Leadership**

3 Credits

Students will explore the impact of negative and destructive leader behaviors including toxic leadership, abusive supervision and leader error. PSY 816 Dysfunctional Leadership (3) Leaders face a variety of psychological, cognitive, social, and decision-making challenges in organizational life. Even the noblest leaders may be tempted by the opportunities and trappings afforded by influential leadership positions. It is necessary, then, to teach less experienced leaders about the potentially negative components of supervisory roles. As such, this course approaches the psychological processes surrounding the darker side of leadership, with specific foci on destructive leadership, toxic supervision, leader error and error recovery. The course will provide students with foundational information regarding psychological concepts of dark leadership with the aim of reducing the scope, frequency, and impact of negative leadership. Over the semester, students will be exposed to the causes and antecedents of negative leadership with a particular focus on multilevel influences. Students will also learn means and methods of appropriately and ethically recovering from errors. Learning objectives include providing a basic understanding of what factors cause destructive leadership and how to avoid potentially pitfalling situations. Emphasis will be placed on teaching students how to assess and identify contextual factors that may drive harmful leadership influence. By applying such understanding, students will learn to limit the effect of destructive leadership on themselves and their followers.

**Prerequisite:** PSY 532 and PSY 539

**PSY 817: Psychology of Shared and Collective Leadership**

3 Credits

Students will examine the topic of shared and collective leadership, which includes the psychological processes surrounding collective, team-based, and dyadic leadership in organizations. PSY 817 Psychology of Shared and Collective Leadership (3) Given the complexity faced by leaders in organizations, it will not always be possible to operate alone as a leader. At times, it will be beneficial to share that process with one or more other individuals, hence the growing emphasis on 'we-based' leadership. With psychology serving as the disciplinary framework for the course, students will have the opportunity to learn about the process and framework of shared leadership with the express goal of allowing them to utilize this, and similar, leadership processes in their own professional careers. The course will focus on providing a broad exploration of collective leadership. In particular, it will provide an understanding of the varying approaches to understanding and thinking about shared and collective leadership. In the investigation of course material, students will be exposed to real life examples and experiences - drawing heavily on instructor and student experiences as well as chosen case studies. Learning objectives for the course will center first on providing a foundation in the relatively new concept of 'we-based' leadership to students. With this foundation, students will begin to apply this knowledge to understanding the conditions under which we-based approaches are most and least effective. Finally, students will be provided with a greater understanding of the contextual factors that shape the need for we-based leadership, with a focus on sustaining long-term leadership effectiveness.

**Prerequisite:** PSY 532 and PSY 539

**PSY 818: Leadership Assessment and Development**

3 Credits

Organizations use personality and other types of assessments for a variety of purposes, including employee selection, team building, and employee development. Many assessments are well-developed with extensive research to support their use for specific purposes. These assessments can add tremendous value to organizations and individuals by providing insights related to interests, traits, and other characteristics. There are also many popular personality inventories that are used for purposes that the publisher does not intend and/or that research does not support. This course will serve two primary goals. First, by educating class participants concerning the advantages and limitations of a variety of popular personality inventories and other types of assessments, students will become educated consumers, better able to make choices for themselves and their organizations concerning appropriate assessment methodologies. Second, by completing different assessments during the course, students will gain personal insights concerning their individual strengths, talents, interests, and developmental needs. Examples of the course topics that will be addressed include: an overview of leadership competency models, including models such as Bartram's Great Eight which is used in Penn State's Leadership Assessment Center; measurement issues, including topics such as reliability and validity; strengths and limitations of different assessment techniques; multi-rater feedback, including creating and administering a short feedback survey; theories underlying different approaches to measuring personality traits and styles; how to integrate different assessment sources; setting goals; and creating a professional development plan.

**Prerequisites:** PSY 532, PSY 539

**PSY 833: Ethics and Leadership: Psychological and Social Processes**

3 Credits

Ethical decisions must be made by leaders at all levels of an organization. Thus, students in this course will have the opportunity to learn about important issues in ethical leadership that will provide a foundation of the basic principles of operating as an ethical leader in organizations. The term 'organizations' is intentionally broadly defined and will include reference to business, non-government organizations, government entities, and non-profit entities. Specifically, students will be exposed to topics such as the role of psychological development in ethical decision making, theoretical foundations of choosing ethical pathways from the field of psychology, the role of personality and cognition in ethicality, developing and sustaining an ethical climate, ethics during crises, ethics in a global environment, and the psychological underpinnings of leading groups toward ethical ends. The course will be grounded in psychological theory, with particular emphasis on social, cognitive, and affective frameworks. Through the presentation and investigation of the course material, students will be exposed to the core principles of ethical leadership as well as a series of real-world case examples and experiences. In addition, students will share their personal experiences and work through the often challenging and difficult decisions that surround ethical leadership. These practical discussions will be couched and framed in the discipline of psychology. Such practical applications are intentional and aimed at providing a bridge between psychological
theory and application. Building on these insights, the learning outcomes of the course will be to teach students to effectively and accurately assess complex leadership situations, possessing the capacity to make ethical decisions and take ethical action. Moreover, students will develop an awareness of key psychological principles guiding ethical choices and be able to apply such awareness to identify key barriers to leading ethically, with the intent of encouraging students to remove such barriers in organizations. Finally, students will possess the ability to teach others how to operate in ethically-bound ways, further enhancing the performance and sustainability of the organization.

**Prerequisite:** PSY 532

PSY 894: Capstone Experience

3 Credits

Supervised, professionally oriented student activities that constitute the culminating experience for the program.

**Psychology - CA (PSYC)**

PSYC 500: Ethics and Professional Practice in Psychology and Counseling

3 Credits

This course will familiarize students with the standards of ethical conduct related to research and practice in psychology and counseling. PSYC 500 Ethics and Professional Practice in Psychology (3) The purpose of PSYC 500 Ethics and Professional Practice in Psychology is to introduce students to the standards of the American Psychological Association regarding acceptable practices in research, assessments, and interventions. Relevant laws and regulations in the Commonwealth of Pennsylvania will be presented and discussed in class. This course is a required course for students admitted to the Master of Arts programs in Applied Clinical Psychology and Applied Psychological Research. Admission to one of those programs is a prerequisite for taking this course. This course is a prerequisite for enrollment in a clinical internship. The overall objectives are to familiarize students with the legal and professional standards associated with working with people as research participants, colleagues, or clients in mental health settings. Students will be expected to understand the Guidelines and Principles of Ethical Conduct in Psychology, the laws of the Commonwealth of Pennsylvania, and to be able to apply them in novel situations. Throughout the semester, students will be presented with examples of possible breaches of ethical standards, and be asked to critically evaluate the scenarios to identify the issues involved and procedures to follow to ensure compliance with accepted standards of conduct. Prior to each class, students are to write a brief paper reflecting on their understanding of the issues underlying the weekly reading assignments and critically evaluate at least one of the moral issues involved in the readings. In addition students will be expected to write an analysis of a professional situation in which two or more ethical standards appear to be in conflict, and demonstrate their critical thinking skills in coming to a resolution of the conflict. Grades will be based on two examinations, weekly commentaries on the readings, written vignette analysis, and the quality of participation in class discussion. The class will be offered once a year with an enrollment of 25 students per offering. The frequency will be adjusted if enrollments trends suggest an adjustment is necessary.

**Prerequisite:** admission to the Applied Clinical Psychology or Applied Psychological Research programs

PSYC 501: Cultural Competency in Psychology

3 Credits

This course will familiarize students with the need for sensitivity to individual and group differences associated with culture and ethnicity. PSYC 501 Cultural Competency in Psychology (3) PSYC 501 Cultural Competency in Psychology is intended to provide a broad perspective on some of the major ways in which people are different from one another. This course will demonstrate some of the ways in which one's heritage interacts with individual differences and impacts on the person's beliefs, attitudes, and behaviors. The overall objectives of this course are to increase sensitivity to diversity issues, assist students in recognition of their own cultural biases, and lay the groundwork for learning to work with people who are different from one's self. Appreciation for both individual and population differences, and learning to work effectively with those differences, are the goals of this course. PSYC 501 is a required Psychology Core course in both the Applied Clinical Psychology and Applied Psychological Research programs. It is intended to raise awareness of the fundamental issues with which researchers and mental health professionals need to be attentive to as the population increases in diversity. This course will provide a perspective on population issues which impact on the entire field of psychology, and thus should be taken early in the program of study. Admission to either the Applied Clinical Psychology or Applied Psychological Research program is a prerequisite for this course. Students in related areas may request permission of the instructor to register for this class on a space available basis. Students will be evaluated on the quality of their class participation, examination performance, and a major research paper covering issues relevant to working with people who are from a different background than the student. The course will be offered annually with an enrollment limit of 25 students.

**Prerequisite:** admission to the Applied Clinical Psychology or Applied Psychological Research programs

PSYC 502: Applied Social Psychology

3 Credits

An examination of social psychological applications to areas such as health, law, interpersonal relations, environment, politics, and other social issues.

PSYC 510: Human Development and Growth

3 Credits

The course covers human development across the life span. PSYC 510 Human Development and Growth (3) The course is designed to meet the requirements for Pennsylvania Mental Health Counselor licensure. The course will review methods of developmental and lifespan research, and encourage critical analysis of developmental research. In addition, a research paper either reviewing a significant development process, or proposing significant development research will also be required. The course will be offered annually with an anticipated enrollment of 25 students. It will be offered more often if enrollment patterns warrant such an increase.

**Prerequisite:** Admission to the Applied Clinical Psychology program or permission of the program.
PSYC 514: Preventive Psychology
3 Credits

This course focuses on the theoretical, conceptual, programmatic, and empirical issues currently in preventive psychology.

**Prerequisite:** admission to program

PSYC 515: Clinical Health Psychology
3 Credits

This course examines wellness maintenance, early detection, and the impact of health care on individuals and the community.

**Prerequisite:** admission to program

PSYC 516: Child Health Psychology
3 Credits

This course will familiarize students with health issues in the context of child development and family systems. PSYC 516 Child Health Psychology (3) PSYC 516 Child Health Psychology provides an overview of the major threats to the health and well-being of children and youth, in the context of child development and family systems theories. Health psychology adheres to the biopsychosocial model, which means that the course will stress how biological, psychological, and social factors interact to maintain wellness or foster illness. The focus will be on primary prevention of illness and injury wherever possible, including accident prevention and fostering healthy lifestyle behaviors such as good nutrition and exercise. When illness or injuries occur, they will be discussed in the context of the child’s development. Comprehension of the illness is influenced by the child’s cognitive abilities, social development, prior experience with illness, and family response. Examination of how developmental processes impact on the illness and the illness impacts on the developmental processes will be a theme underlying all the health threats studied. This is a required course for students in the M.A. in Applied Clinical Psychology program who elect the Health Psychology concentration. The overall objectives are to provide a background for development of programs to maintain health and wellness in children and youth, to facilitate the understanding of the impact of illness and disability on children and their families, and to prepare students to work with children and families in a medical environment. Grades will be based upon two examinations, a prevention proposal, an analysis of the literature relevant to an illness or injury from both the biopsychosocial and developmental perspectives, and class participation. The class will be offered biennially, with an enrollment limit of 25 students. The frequency will be adjusted if enrollment trends suggest an adjustment is warranted.

**Prerequisite:** admission to the Applied Clinical Psychology program

PSYC 517: Psychopathology
3 Credits

A broad spectrum view of psychopathology including biological, social, cognitive, psychological, and neuropsychological approaches, is emphasized, with an applied focus. PSYC 517 Psychopathology (3) This course will cover a broad spectrum of all aspects of psychopathology including the earned, social, biological, emotional, cognitive, affective, and cultural factors, which may be relevant to the understanding and diagnosis of mental disorders. The varied theoretical views of abnormal behavior and psychopathology will be critically reviewed, with emphasis on the current dominant theories. Approaches reviewed will include biological, behavioral, social, cognitive, psychological, existential, medical, and neuropsychological theories. Students will learn to make differential diagnoses based on the current Diagnostic and Statistical Manual and to code the disorders appropriately. Successful completion of the course requires the demonstration of competence in understanding the nature of psychopathology. Psychopathology is a required course for students in the M.A. in Applied Clinical Psychology program, and is restricted to students in the M.A. in Applied Clinical Psychology program. This course will be a prerequisite for PSYC 518, 519, and 540. The objectives of this course are to prepare students for working with a variety of clients in therapeutic settings. Methods of evaluating student performance will be explained on the syllabus, and may include components such as examinations, written papers, oral presentations, videotaped and live demonstrations of diagnostic role plays, and other in-class exercises. This course is offered once a year with an enrollment limit of 15 students.

**Prerequisite:** admission to program

PSYC 518: Interviewing and Counseling
3 Credits

This course covers basic clinical interviewing and counseling techniques from both the didactic and experiential perspectives. PSYC 518 Interviewing and Counseling (3) In this course students will begin to practice eliciting information from classmates, or volunteer undergraduate students, simulating individuals presenting with a variety of issues, use that information to make an appropriate diagnosis, and work with their mock client to set goals and develop a concrete plan to achieve those goals. Guidelines for report writing will be presented. Students will submit an initial draft of a report based on the first interview session, and a full report of the client contact from initial interview through implementation of treatment plan and discharge.

**Prerequisite:** admission to the Applied Clinical Psychology program

PSYC 519: Theories and Models of Psychotherapy
3 Credits

An advanced level of psychotherapies and applications in diverse settings. PSYC 519 Theories and Models of Psychotherapy (3) It is a required course for students in the M.A. in Applied Clinical Psychology program. The objectives of this course are to prepare students for working with a variety of clients in therapeutic settings. Students will be evaluated on written papers and in-class exercises.

**Prerequisite:** PSYC 518

PSYC 520: Research Methods
3 Credits

This course is intended to provide students in the Applied Psychology Clinical program with a basis for understanding psychological research methodologies. The course will serve as a starting point for developing their master’s project (PSYC 530), which is the culminating research experience for the Applied Clinical Psychology program. The course will begin with development of research questions and explore how to appropriately search research databases for previous literature on topics of interest. The course will also focus on developing ethical foundations for research through review of case studies and discussion of ethical principles and codes for psychologists. Students will also
focus on understanding how different methodologies function in relation to psychological research including, but not limited to: experimental designs, quasi-experimental designs, program evaluation, within or between subject designs, and systematic literature reviews. In addition to developing an understanding of research methodologies, students will also explore how to interpret and write-up statistical results for academic manuscripts.

**Prerequisite:** admission to program

**PSYC 521: Statistics**

3 Credits

The nature, computation, computer analysis, interpretation, and APA-style write-up will be discussed for a number of statistical tests. **PSYC 521 Statistics (4)** This course is intended to provide students in the Applied Psychology program with the statistical skills they will need to be applied masters-level psychologists. The course will follow PSYC 520, the graduate research methods course, and will be a prerequisite for PSYC 530, the masters paper. The course will begin with a review of basic statistical methods. Since the more advanced statistical techniques are extensions of these basic tests, it is crucial that students have a firm grasp of the latter before being exposed to the former. For each test, the conditions of use, the nature of the null and alternative hypotheses, computation of relevant test statistics, interpretation of results, test assumptions, strength of the relationship, SPSS analysis, reading SPSS output, and APA Results section writeup will be discussed. Much of this advanced material that students will not have encountered in their previous statistics courses. The course will then continue with a discussion of the following advanced techniques: nonparametric statistics, analysis of covariance, one-way repeated measures analysis of variance, factorial analysis of variance, and multiple regression. In addition, students will be introduced to such multivariate techniques as factor analysis and MANOVA. The information noted above will again guide the class presentations. Consistent with the applied nature of the program, the goals of this course are for students to become good consumers of the types of statistical information they are likely to encounter in their work, to be able to select and apply the appropriate test when called on to analyze data, and to be able to generalize their basic statistical skills to new techniques, as necessitated by their career demands. Evaluation will consist of some combination of assignments and examinations, as determined by the instructor. This course will be required of all Applied Psychology students, and will be made available to other qualified students on a space-available basis, with permission of the program. This course will be taught once every academic year. Expected enrollment is approximately 15 students.

**Prerequisite:** PSYC 520

**PSYC 524: Biological Basis of Behavior**

3 Credits

This course focuses on biological determinants of behavior, including evolution, hormones, sensory systems, internal states, reproduction, emotions, learning, and memory. **PSYC 524 Biological Basis of Behavior (3)** PSYC 524 Biological Basis of Behavior is intended for graduate students majoring in psychology. This course focuses on the biological determinants of behavior. Students will learn the major theories underlying research in biological psychology, including such topics as neuroanatomy and brain anatomy, evolution, behavior genetics, hormones and reproductive behavior, sensory systems, internal states, emotions, learning, and memory. Students will be taught to use critical thinking skills when interpreting and evaluating research in biological psychology. Students will use these skills and knowledge gained during the semester to develop a research proposal or integrative review paper on a psychological topic. Students will learn basic neuroanatomy and brain anatomy as a basis for understanding more complex biological behavior. The remainder of the semester will cover theories underlying more advanced topics in biological psychology. Students will learn how genes, hormones, and neurotransmitters determine some behaviors. They will also learn how biology interacts with the environment to produce behaviors such as reproduction, emotion, learning, and memory. Examinations will include questions designed to ascertain students’ knowledge of the theories covered in class as well as critical thinking skills used to interpret and evaluate research in biological psychology. During the course of the semester, students will use the knowledge they have gained to a) formulate a research question based on a topic covered in class; b) perform a literature search on the topic; and c) design a research proposal or integrative review paper based on the topic. Writing the paper will give students experience in formulating research questions, evaluating research critically, and writing in APA (American Psychological Association) style.

**Prerequisite:** admission to the Applied Clinical Psychology or Applied Psychological Research programs

**PSYC 525: Forensic Psychology**

3 Credits

This course will explore social, cognitive, civil and criminal issues related to forensic psychology. **PSYC 525 Forensic Psychology (3)** The purpose of PSYC 525 Forensic Psychology will be to explore the general principles of forensic psychology. Social Psychological, clinical and cognitive processing theories will be examined as they pertain to the legal system. This course will include a brief overview of the judicial system. Competency issues will be defined, and the clinical assessment of competency will be examined in the course. Specific competency issues will include competency to stand trial, to plead, to confer and to testify. There will be an overview of the insanity defense, describing the history and contemporary status of the defense. Issues such as automatism, unconsciousness and diminished capacity will be explored. The contribution of the mens rea and intoxication will be described. M’Naughton rules and the ALI rules for insanity will be described. Evaluation techniques for forensic assessments will be described and role-played by the course participants. Interview techniques, developmental and historical information gathering, and psychological testing will be reviewed in terms of utility for the forensic evaluation. Special issues such as amnesia, recovered memories, and malingering will also be covered in the course. Other issues including assessment of dangerousness, and civil commitment will be reviewed. The rule of the expert and the status of scientific information in the forensic context will be described.

**Prerequisite:** admission to the Applied Clinical Psychology program

**PSYC 530: Research Paper**

3 Credits

Supervised research in psychology for degree candidates.

**Prerequisite:** PSYC 520, PSYC 521, and permission of the program
PSYC 535: Behavioral Management
3 Credits
Analysis of determinants of behavior and behavioral ecology. Emphasis on data collection and data evaluation techniques.

PSYC 540: Group Interventions
3 Credits
This course covers applications of psychotherapeutic techniques to a group setting. PSYC 540 Group Interventions (3) This course introduces the application of therapeutic techniques to a group setting. Selection and formation of groups, leadership skills, and group process will be examined. Adaptations required for specialized groups, such as children and adolescents, will be presented.
Prerequisite: PSYC 518

PSYC 571: Tests and Measurements
3 Credits
Administration, analysis, and interpretation of psychological evaluation methods will be reviewed. PSYC 571 Tests and Measurements (3) This course builds on the critical appraisal of the nature of psychological evaluation and allows the student to develop sound abilities in the administration and interpretation of psychological instruments.
Prerequisite: permission of the Applied Clinical Psychology program

PSYC 572: Neuropsychological Assessment
3 Credits
This course will review the biological bases of behavior, emphasizing brain-behavioral relationships and assessment of these relationships. PSYC 572 Neuropsychological Assessment (3) Neuropsychological Assessment builds on the assessment skills introduced in PSYC 571 Tests and Measurement. Test batteries designed to measure neuropsychological functioning such as the Halsted-Reitan Neuropsychological Battery, the Wechsler Memory Scales, and the Woodcock-Johnson Test of Cognitive Ability will be taught. Evaluation will be based upon demonstrations of skills in test administration and scoring, written examinations, and written assignments such as assessment reports. This course is offered in the fall of odd numbered years, more often if enrollment patterns warrant, with an enrollment limit of 15 students.
Prerequisite: PSYC 524, PSYC 571

PSYC 573: Career Counseling: Research, Assessment, and Intervention
3 Credits
This course is designed to acquaint students with the knowledge of career counseling theories, assessments, and methods based in psychological research, acquaint students with the use of empirically-supported career assessment instruments, increase knowledge to work with clients of different ages, races, ethnicities, socioeconomic classes, and genders, and discuss current issues, trends, and ethics in the field of career assessment and counseling. Students will learn about commonly used psychological theories that are applied to career assessment, including trait-oriented theories, social learning and cognitive theories, developmental theories, person-in-environment theories, career counseling-specific models, and integrative theories. Students will learn the process of assessing clients' vocational and professional interests through the use of both formal assessment instruments and interviews. Assessment techniques will include structured interviews, standardized assessment, psychological inventories, self-assessment, computerized assessment, case conceptualization, and report writing. Developmental considerations, as well as issues of cultural sensitivity and gender will be discussed. Approaches to integrating this information into career advising and/or psychotherapy will be explored. By the end of the course, students will demonstrate an understanding of the major theories of career development; be able to explain the structure of occupations, and individual and societal issues in career development, including multicultural and gender issues; summarize the relationships among personality, occupational choices, and occupational success; identify the major sources of career and educational information available through the Internet, computer-based guidance systems, and printed materials; administer and interpret printed and computer-based assessments of career interests, beliefs, and values; integrate career development theory and assessment results with empirically-supported career counseling interventions; and describe the professional process of career assessment and advising, as integrated into psychological services.

PSYC 594: Research Topics
1-18 Credits/Maximum of 18
Supervised student activities on research projects identified on an individual or small group basis.

PSYC 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

PSYC 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

PSYC 843: Trauma-Focused Approaches to Psychological Intervention I
3 Credits
This course covers the etiology, symptoms, diagnosis, and treatment of trauma-related dysfunction, particularly post-traumatic stress disorder (PTSD), acute stress disorder (ASD), and common comorbid conditions. Students will learn about the range of events associated with trauma, the prevalence, incidence, and developmental impact of trauma-related disorders across the lifespan, the major risk factors for trauma-related dysfunction, cultural factors that impact dysfunction, trauma-focused assessments for identifying trauma-related symptoms, and the major research-supported approaches to treatment and prevention of trauma-related disorders in the aftermath of trauma. Major treatment approaches to be covered include prolonged exposure (PE), trauma-focused cognitive-behavioral therapy (TF-CBT), cognitive processing therapy (CPT), eye-movement desensitization and reprocessing (EMDR), emotion-focused treatment (EFT), stress management techniques, and psychopharmacological interventions. The recognition, prevention, and
treatment of compassion fatigue and vicarious traumatization in the clinician will be emphasized.

PSYC 844: Trauma-Focused Approaches to Psychological Intervention II
3 Credits

This course covers issues concerning the diagnosis and treatment of complex trauma-related dysfunction, particularly post-traumatic stress disorder (PTSD), Dissociative Disorders, and treating special populations issues. Building upon the theoretical knowledge gained in PSYC 843, the emphasis of the course will be on development and application of skills in conducting empirically-supported therapy and assessment for Type I ('single-event') and Type II ('complex') trauma, Dissociative Disorders, and trauma-associated somatic symptoms. Major treatment approaches to be covered will include phase-oriented integrated treatment and relational models; Skills Training in Affective and Interpersonal Regulation (STAIR); Stress-Inoculation Therapy (SIT), Acceptance and Commitment Therapy (ACT); Dialectical-Behavioral Therapy (DBT), Imagery Rehearsal Therapy (IRT), Narrative Exposure Therapy (NET), and couples and family approaches. The course will also address specific treatment considerations based on trauma type as well as ethical issues relevant to clinical work with trauma survivors. The course will also address the assessment, diagnosis, and treatment of comorbid conditions (depression, anxiety, substance use, relationship problems) and special populations.

Prerequisite: PSYC 843

PSYC 845: Crisis and Disaster-Related Interventions in Psychology
3 Credits

This course will provide students foundational knowledge about crisis intervention and disaster interventions. Students will learn about empirically supported models and best practices of psychological interventions during disasters, taking into context cultural and trauma-specific contextual information. Students will be trained in basic crisis intervention skills and psychological first aid and practice crisis case handling. Students will learn about how to handle specific crisis situations and how to handle issues of burnout, vicarious traumatization, and compassion fatigue in disaster and crisis situations. By the end of the course, students will be able to describe clinicians’ roles and responsibilities as members of an interdisciplinary emergency response team during a local, regional, or national crisis, disaster, or other trauma-causing event and know the skills needed to provide crisis intervention services. Students will also learn how to differentiate between diagnosis and developmentally appropriate reactions during crisis, trauma, and disaster using appropriate assessment and diagnosis. Students will be given the opportunity to practice crisis assessment and intervention, as well as learn how assessment, diagnosis, and treatment may be influenced by crisis, trauma, and disasters.

PSYC 895A: Clinical Practicum
3 Credits

This course will give students their first experience of working with clients in a psychological setting. The course will focus on assisting students with their transition to an applied clinical role while attending to their growth as psychological professionals. There will be a focus on integration of psychological theories of counseling and clinical practice. Further, this course will center on ethical issues in counseling, exploring empirically-validated clinical interventions, understanding crisis intervention models, exploring forms of supervision, understanding self-care, and demonstrating case conceptualization skills. The course is designed to meet standards for Pennsylvania Licensed Practicing Counselor (LPC) licensure. The standards for licensure include completing one hundred (100) hours of practicum time prior to placement in an internship. PSYC 895A represents that initial supervised clinical psychology experience. Students will typically complete this experience as part of the training component at the site for their first clinical internship placement, but prior to beginning the internship. Supervising faculty will be licensed or license eligible in the Commonwealth of Pennsylvania. The on-site supervisors must meet the criteria for clinical supervision mandated by the Commonwealth of Pennsylvania.

Prerequisite: PSYC 500, PSYC 517, PSYC 518, PSYC 519

PSYC 895B: Clinical Internship
1-6 Credits/Maximum of 18

This course is designed to aid meeting standards for Pennsylvania mental health counselor licensure, specifically the LPC (Licensed Professional Counselor). The standards include completing six hundred (600) hours of internship time after completion of 100 clock hours of practica experiences. PSYC 895B represents the 600 hours of supervised experience following the practica. The internship experience builds on the initial practica experience, and is typically completed over two or three semesters, and thus may represent experience gained at more than one placement to increase the breadth of the student’s training. Supervising faculty will be licensed or license eligible in the Commonwealth of Pennsylvania. The on-site supervisors must meet the criteria for clinical supervision mandated by the Commonwealth of Pennsylvania. Professional liability insurance is required.

PREREQUISITE PSYC 500, PSYC 517, PSYC 518, PSYC 519, PSYC 895A

Public Administration - CA (PADM)

PADM 500: Foundations of Public Administration
3 Credits

PADM 500 is an overview of the study and practice of public administration. It gives students an overview of the basic concepts and issues in the field, including theories of organization, public policy, public management, decision making, public law, program implementation and evaluation, and ethics, and notes how the field has developed over time. Students develop skills in decision making, and in appreciating the multiple perspectives, values, and ethical challenges of public service. The course shows the interrelationships of organizations, public policies, and management activities within the public sector, including the role of nonprofit organizations in delivering services to the public. Theories from social psychology, economics, political science, jurisprudence, ethics, and organizational studies are covered to illustrate the range of ideas used in governance and management. Contemporary efforts to reform organizations and management activities are assessed, and future directions in which the field is likely to head are considered.

PADM 502: Governmental Fiscal Decision Making
3 Credits

Nature, function, and technique of governmental budgeting viewed as mechanism for allocating resources among alternative public uses.
PADM 503: Research Methods

3 Credits

Examination of research methodologies relevant to administration, planning, and public policy.

Prerequisite: Demonstrated working knowledge of IBM SPSS Statistics
Cross-listed with: HADM 503

PADM 504: Data Analysis for Policy and Administration

3 Credits

This course is intended to prepare students to conduct independent research in policy analysis, program evaluation, and public management. Students will not only learn statistical methods, but how to use them to evaluate public problems and suggest solutions. The course begins with a review of basic research design practices, and how statistical analysis fits into the research process. This will be followed with an overview of probability theory as a foundation for inferential statistics. We will then move through the core components of hypothesis testing - the normal distribution, confidence intervals, p-values, and the central limit theorem. All of this lays the foundation for addressing specific types of statistical techniques that administrators and analysts are likely to either conduct or interpret. These include basic descriptive statistics, contingency tables, comparing means, correlation, linear regression, and logistic regression. We will also cover how to effectively visualize data in tables, graphs, and basic spatial displays of data (i.e., mapping using online software). These skills are particularly important for writing professional and academic research reports in public policy and administration and presenting complex information in a straightforward way that the public can understand. The emphasis in the course is on how these tools can be used for public sector and academic research, as well as how to solve policy and management problems. It prepares students for more advanced courses in policy analysis and program evaluation.

PADM 505: Human Resources in the Public and Nonprofit Sectors

3 Credits

Concepts and approaches contributing to effective use of human resources in public and non-profit organizations; legal issues and requirements.

PADM 506: Public Information Management and Technology

3 Credits

This course provides a broad exploration of government information management and technology issues and organizational and social impacts of these initiatives in government. Understanding policy and management issues in information technology is critical to improve service qualities and performance since public organizations have heavily utilized information technology applications. This course is designed to demonstrate key concepts, issues, trends, and practices of government use of information management and technology, such as government information technology initiatives, implementation of information technology initiatives, e-democracy, e-business, open government, security and privacy, digital divide, e-performance, and information management systems. This course examines managerial, political, and legal challenges and opportunities while managing information technology in the public sector. This course provides students with an opportunity to enhance knowledge and skills for analyzing, evaluating, and managing major policy and managerial practices in information technology. Students will gain better perspectives of managing information technology issues in public and nonprofit organizations.

PADM 507: Introduction to Public Policy Analysis

3 Credits

Introduction to the analysis of public policy within its organizational and political contexts, including an emphasis on an economic perspective.

PADM 507 Introduction to Public Policy Analysis (3) The course is an introduction to the field of policy analysis that focuses on the process of public policy formulation, implementation, and modification. Basic principles of microeconomics are used to examine public policymaking. Students will review basic economic and microeconomic principles, theories, and models, with an emphasis on justification for government intervention. Students will understand the process of policy analysis, including problem formulation, selection of criteria, comparison of alternatives, political and organizational constraints, and implementation and evaluation. The course will be offered once per year and is projected to enroll about 20 students per section. Course Objectives: a) to understand the economic rationale for government action b) to understand the economic component of policy analysis c) to understand government failure, such as inefficient pork-barrel decision-making and excessive bureaucratic red tape d) to understand better the practice of policy analysis e) to understand the stages of the policy process f) to understand the economic and political context in which policy analysis takes place.

PADM 510: Organization Behavior

3 Credits

Examines the concepts of human behavior in formal organizations, systems analysis, conceptual models, and decision processes.

Cross-listed with: HADM 510

PADM 511: Organizational Change and Development

3 Credits

Theory of organizational change and development; case analysis of applications in actual situations. PADM 511 Organization Change and Development (3) This course is designed to lead to the understanding of the process of introducing planned change into complex organizations. Specific course goals include gaining an understanding of organization development (OD) as a specific type of change strategy acquiring knowledge of various OD approaches, learning how to assess organizations to enable effective organization change to be introduced, obtaining an understanding of the phases of the OD process and how to manage planned change efforts in organizations, and developing skills in applying the concepts learned to real-life organizational situations. Students will receive ‘hands-on’ experience in designing and implementing organizational change by completing individual reports on OD and the change project as well as a team project report. Grading will be based on development of consulting skills and knowledge through involvement in class activities (10%), being an effective member of the project team (10%), demonstrating understanding of key OD concepts and processes via individual reports and contributions to project team work (40%), and by producing a high quality project based on evaluation of OD process, the final report, and class presentations (40%). PADM 511 is an elective course for the MPA degree and is offered every third semester.
Prerequisite: H ADM510 or P ADM510

PADM 512: Issues in Human Resources

3 Credits

A survey of major human resource issues such as job stress, burnout, and the many forms of discrimination in organizations. P ADM 512 Issues in Human Resources (3) The course has three specific objectives: (1) to become familiar with the subtleties and complexities (interpersonal, legal/regulatory, and effectiveness) of the major human resource issues which confront the human resource manager in public and nonprofit organizations; (2) to develop a practical strategy for handling and coping with the major human resource issues; and (3) to improve research, analytical, and presentation skills. This course will address the following major human resources issues: appraisal and reward systems; various types and forms of discrimination; sexual harassment; disabilities; alcohol and drug abuse; workplace violence; stress and burnout; workplace ethics; and reforming a human resource system. Student grades are based on a final exam (40%); an issue paper (40%); and class participation (20%). P ADM 512 is an elective course for the MPA degree and is offered in a six-week session during the summer semester.

Prerequisite: P ADM505 or P ADM510 or H ADM510

PADM 515: Labor Management Relations

3 Credits

Labor relations issues; collective bargaining agreement, negotiations, and administration; legal framework of collective bargaining; labor relations in larger social context.

Prerequisite: admission to MBA/MSIS Program

Cross-listed with: MNGMT 515

PADM 516: Strategic Planning

3 Credits

A survey of strategic planning purposes, approaches and methods, and expected outcomes in small and large organizations.

PADM 517: Nonprofit Organizations: History and Evolution

3 Credits

A study of the history, development and current role of nonprofit organizations as a distinguishing feature of American society. PADM 517 Nonprofit Organizations: History and Evolution (3) This course is designed to trace the evolution of nonprofit organizations in the United States from colonial times to the present, focusing on the definition, legal foundations, missions, and accomplishments of these entities. The course will offer a review of various nonprofit sectors including healthcare, education, religion, human services, advocacy and the arts. Course objectives are to: - increase student knowledge and understanding of the history and nature of the broad spectrum of nonprofit organizations; - stimulate critical thinking about the role of nonprofit organizations in addressing public problems; and - examine and understand trends and challenges for nonprofit organizations in a market economy. The course will include a combination of lectures, group discussions, review of readings, and student research. Course requirements involve a primary text, Lester M. Salaiiloi, An Era of Nonprofit Sector, A Prntier's Guide, 2nd ed. New York: The Foundation Center, 1999, and secondary readings from such areas as history, law, economics, and public administration, e.g., Gronbjerg, Kirsten A., "The
of nonprofit organizations and to stimulate critical thinking about the strategies for financial operations of nonprofit organizations in a changing environment. This course extends the collection of courses in the nonprofit concentration area of public administration and further develops the concentration. The course will include a combination of lectures, group discussions, review of readings, and student research. Course requirements involve a primary text and secondary readings from such areas as business, law, grantsmanship, and public administration. The course will be offered every third semester.

**PADM 521: Performance Measurement and Management**

3 Credits

This course is designed to enhance students’ ability to develop and use performance measurement systems in the public sector. P ADM 521 Performance Measurement and Management (3) This course provides a foundation in performance measurement and management in the public sector. It is designed to enhance the ability of students to develop and use performance measurement systems for purposes of improving the management and performance of government programs; and to enhance their ability to think critically about result-oriented governance and managing for results. In this course students will become familiar with the general context that surrounds public sector performance management, key elements associated with the development of performance measurement systems, and opportunities and challenges associated with the implementation and use of performance measurement systems. Despite its emphasis on the public sector, many concepts covered in the course are also applicable to nonprofit organizations.

**Prerequisite:** P ADM500

**PADM 522: Government Financial Management**

3 Credits

Theories and techniques of financial planning and control, with emphasis on their application in government and nonprofit agencies. P ADM 522 Government Financial Management (3) The focus of this course is on a laboratory in local government budget and financial analysis, concentrating on the theories and applications which also relate to hospitals, businesses, and nonprofit agencies. Applied methods of budgetary decision-making are employed to formulate and to implement a budget based on actual city data. The course places the student in the role of a member of a budget department staff asked to prepare a budget for presentation, debate, and ultimate acceptance by a deliberative body. The work requires one to acquire knowledge of and apply financial management techniques without losing sight of the basic theories from which the techniques grew. The final course grade consists of materials completed by students throughout the course (75%) and the final examination (25%). P ADM 522 is offered every spring semester as an elective in the government concentration of the MPA program.

**Prerequisite:** P ADM502

**PADM 523: Governmental and Nonprofit Accounting**

3 Credits

Accounting, reporting, and auditing principles and procedures for public sector agencies and nonprofit organizations.

**Prerequisite:** P ADM502

**PADM 532: Urban Government**

3 Credits

Administrative processes and policy problems associated with managing urban communities; political, intergovernmental, fiscal, structural, and analytical concepts in urban government.

**PADM 533: Local Planning Law and Administration**

3 Credits

Structure and function of local and regional government from perspective of local planning law and its administration. P ADM 533 Planning Law and Administration (3) The course covers structure and function of local and regional government from the perspective of local planning law and its administration. Objectives: To develop students’ abilities in (a) understanding state and local policies and laws related to planning and administration, local development, regionalism, and regionalization of services; (b) analytic ability, involving the process of careful, rigorous, and systematic thinking at both abstract (theoretical) and concrete (practical) levels; (c) perception of the studies processes from a theoretically informed point of view, through development and application of concepts, models and other course materials; and (d) application of models and techniques in course assignments. Evaluation: class participation (10%), portfolio, including literature review essay (60%), project/poster (30%). Frequency of offerings: every two years.

**PADM 535: Policy Analysis and Planning**

3 Credits

The course will cover the theoretical issues in and basic methods of policy analysis and planning (prospective policy analysis). P ADM 535 Policy Analysis and Planning (3) Policy analysis is a systematic inquiry into the nature of policy problems and public policies. It offers a set of principles and methods that can be used in constructing public policies and evaluating their outcomes. This course covers the theoretical approaches and methods in prospective policy analysis and planning. Emphasis will be on the quantitative/analytical methods, but qualitative approaches and methods in prospective policy analysis and planning will also be covered. These methods and techniques will be discussed in their theoretical contexts. The course will be divided into three sections. The first section will provide students with an overview of the nature of public policy problems, history of policy analysis, and the current competing theories. The second section will focus on the problems in and methods of gathering and disseminating policy-analytical information. In the policy-analytical process, information is gathered and disseminated in political and cultural contexts; the characteristics of this process and its contexts will be covered in this section. In the third section of the class, the stages and some of the basic methods of policy analysis will be discussed. The focus will be on problem structuring and forecasting methods, cost-benefit analysis, decision trees, and implementation design.

**Prerequisite:** P ADM503

**PADM 550: Policy and Program Evaluation**

3 Credits

The course will cover the theoretical issues in and basic methods of policy and program evaluation (retrospective policy analysis). P ADM 550 Policy and Program Evaluation (3) This course is designed to cover the theoretical issues and perspectives in policy and program evaluation, ethical issues in evaluation, and basic methods of evaluation research.
The methods of needs assessment, monitoring social programs, impact assessment, and measuring efficiency will be discussed. Students will learn how to conduct randomized experiments, quasi-experiments, evaluation of full coverage programs, and efficiency measurement in evaluation research. The primary goal of this course is to help students become informed consumers of the products of evaluation research. They will also learn the basic skills of designing and conducting evaluation projects. Class time will be devoted mainly to discussions of theoretical concepts and examples. During the semester, students will be given written assignments. They will also conduct policy or program evaluation studies in the areas of their choice.

**Prerequisite:** P ADM503

**PADM 556: State Government Administration**

3 Credits

Study of structures, systems, processes, problems, and issues affecting state government administration; case studies, field observations, and research. P ADM 556 State Government Administration (3) State Government Administration aims to provide students with an introduction to management tools and techniques for administering state government agencies and programs in the context of intersector and intergovernmental relations within a system of representative democracy. The course deals both with management tools as well as policy and management leadership, focusing especially on the nexus between policy and management. Specific course objectives: to foster understanding of the tools and techniques associated with the administration of state government within the context of the broader governance environment; to develop an understanding of the interaction among politics, policy, and management processes at the state level and the role of state officials within institutions and processes; to develop a working knowledge of appropriate tools, models, and concepts associated with state administration via the completion of applied assignments; and to improve communication, writing, and technical skills. Students will be graded on overall discussion (15%), five written news analyses (15%), management papers (40%), and final exam (30%). P ADM 556 is an elective for the MPA degree and is offered every two years.

**PADM 557: Federalism and Intergovernmental Relations**

3 Credits

Study of the impact of a federal system of government on the administration of public functions. National-state-local dimensions. P ADM 557 Federalism and Intergovernmental Relations (3) The course aims to develop students' abilities in four broad categories: (1) understanding of intergovernmental relations and management as it relates to past, present, and future trends in American governance and the historical, normative, and institutional context of American public administration; (2) analytic ability, involving the process of careful, rigorous, and systematic thinking at both abstract and concrete levels; (3) perception of public administration from a theoretical informed point of view, through development and application of concepts, models, and other course materials related to intergovernmental topics; and (4) application of specific information and skills, with emphasis on issue identification and problem solving. The course offers the students an opportunity to develop the self-awareness and personal capacities that are vital to becoming a dynamic public administrator. The course will be graded on written and oral seminar participation (20%); research and presentations (40%); and two examinations (40%). P ADM 557 is an elective for the MPA degree and is offered every two years.

**PADM 558: Legislative Processes**

3 Credits

Legislatures in American government, emphasizing comparative state legislatures: constitutional patterns; organization, administration; interaction with bureaucracy, constituencies, and organized interests. PADM 558 Legislative Processes (3) The course examines development of the modern congress and the general assembly, campaigns and elections; party organization and the leadership; committees and the rules of procedure; the "Republicans take over congress;" congress, the President and the bureaucracy: the congressional campaign; congress, interest groups, and the congressional enterprise; congress, the budget, and domestic policy making; the decline of representative democracy. The Pennsylvania state legislature will receive particular attention. The course is designed to equip students to manage programs within the political environment of public and nonprofit administration. The course is evaluated on two short, written reports (25% each); final exam (40%); class participation and presentations (10%). PADM 558 is offered every third semester as an elective for the MPA degree.

**PADM 570: Scope and Methods of Public Administration**

3 Credits

Examination of theoretical approaches to public administration and the role of theory in the field. PADM 570 Scope and Methods of Public Administration (3) Course objectives: At the conclusion of the semester, each participant should have gained a solid grasp of the literature of public administration; understand the major issues that have created the boundaries and horizons of the field; understand the importance of systematic research and methods of inquiry to the field of public administration; and have a sense of the likely directions research and practice will take in the future. Evaluation for the course will be: Class participation, 10%; individual reports (briefing papers on required assignments), 30%; final paper in the 25-35-page range, 30%; final examination, 30%. This course is the basic core course in the Ph.D. program and is a prerequisite course for the remaining core Ph.D. courses. It is offered each fall to incoming Ph.D. students, with an enrollment of 5-12 students.

**Prerequisite:** P ADM500

**PADM 571: Seminar in Organizational Theory**

3 Credits

Selected theories of organizations and their applications to the study of public organizations.

**Prerequisite:** P ADM510 or P ADM570

**PADM 572: Research and Theory in Public Budgeting and Finance**

3 Credits

The course is designed to provide students with an understanding of the seminal theories and literature in the various topical areas that define the study of public budgeting and public finance. Students will be able to understand and apply the theories in their own research as well as to understand the strengths and limitations of the theory in the context of the topical area. These areas include principles of public budgeting and public finance; the budget process; budget practices; taxation; non-tax revenues; and debt administration. While emphasis is placed on public
budgeting and finance as it relates to the U.S. government at the federal, state, and local levels, international experiences are also studied.

**PADM 573: Research and Theory in Public Policy and Governance**

3 Credits

An introduction to policy analysis, the stages of the policy process, and key theoretical issues. Applications to real world problems. P ADM 573 Research and Theory in Public Policy and Governance (3) This seminar provides an introduction to policy analysis, basic stages of the policy process, and key theoretical issues associated with the subject. Among issues addressed in this course: ethics in policy analysis; policy analysis as a profession. The stages of the policy process will be considered in detail, from problem definition to termination. Key theories associated with each will be discussed. Additional concepts to be considered include: policy instruments, policy design, issue networks, policy typologies and the politics associated with each. The institutional context of these stages will be considered. Students will explore the impact of positivism and postpositivism on our understanding of policy. Finally, public policy will be examined in light of a variety of approaches to democratic theory and practice.

**Prerequisite:** P ADM570 or permission of program

**PADM 574: Research and Theory in Public and Nonprofit Management**

3 Credits

This course provides a broad exploration of public and nonprofit management issues to improve students' abilities to analyze the given institutional matrix of modern public management. The informed and skillful practices of public and nonprofit management will improve public values and service delivery in effective and efficient ways. This course is designed to understand the theories, perspectives, and functions of management in the public managers and nonprofit sectors; and to assess management practices, possibilities, and challenges encountered with emerging issues. The topics include traditional approaches of management, new public management, history of management, general management theory, structural issues, institutionalized values of management, managerial functions, strategic management, performance management, accountability and leadership, organizational design and institutional governance, global perspectives of management, challenges for public governance, and frontier of management. Students will gain better perspectives of managing the public and nonprofit sectors and build skills to analyze and evaluate management issues and practices.

**Prerequisite:** P ADM570

**PADM 575: Advanced Research Design**

3 Credits

Experimental, quasi-experimental, survey, aggregate, and other research designs applied to organizational, managerial, and policy analysis research problems.

**Prerequisite:** P ADM503

**PADM 576: Multivariate Statistical Methods**

3 Credits

Multivariate statistical methods, with special emphasis on their use in organizational, managerial, and policy analysis research settings.

**Prerequisite:** P ADM575

**PADM 591: Readings in Public Administration**

3 Credits

Directed readings in selected areas of public administration.

**Prerequisite:** P ADM570 and permission of program

**PADM 594: Research Topics**

1-18 Credits/Maximum of 18

Supervised student activities on research projects identified on an individual basis.

**Prerequisite:** P ADM503

**PADM 595: Internship**

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

**Prerequisite:** P ADM503

**PADM 596: Individual Studies**

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

**PADM 597: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

**PADM 600: Thesis Research**

1-15 Credits/Maximum of 999

No description.

**PADM 601: Ph.D. Dissertation Full-Time**

0 Credits/Maximum of 999

No description.

**PADM 801: Homeland Security Administration: Policies and Programs**

3 Credits

Foundation for understanding homeland security history, the development of homeland security policies and organizations, and current management approaches.

Cross-listed with: HLS 801
PADM 802: Multifaceted Approaches to Homeland Security

3 Credits

Preparedness and responsiveness have long been part of the law enforcement and military lexicon; however 9/11 expanded the terms' application and the number of people who hold responsibility for their implementation. The result is a growing interest surrounding the nature of the terrorist threat and how intelligence fusion is essential to prevention; the role of the military in civil society; cooperation among federal, state, and local agencies as well as the private sector in response to a catastrophic event; the importance of planning and exercises to improve the mitigation of such events. This course gives an overview of relevant perspectives and concepts related to these topics and develops a framework that demonstrates their interconnectivity. In addition to providing a conceptual understanding of key ideas, it familiarizes students with the roles played by various entities (e.g., law enforcement, intelligence organizations, the military, and federal, state, and local agencies) and the de facto framework in which they exercise their responsibilities. The course gives students an overview of intelligence and the importance of intelligence fusion as a counter-terrorism force as well as the need for collaboration among all relevant actors and the integration of actions and planning. Finally, it provides an opportunity for students to demonstrate their ability to apply knowledge and methodologies to real-world cases, practically assessing key components in mitigating the impact of future events.

Prerequisites: HLS 811 or PADM 401
Cross-listed with: HLS 802

PADM 804: Strategic Planning and Organizational Imperatives in Homeland Defense and Security

3 Credits

The course covers the essential concepts of planning for the response to all hazards incidents. The National Incident Management System (NIMS) and its companion policy guidance document, the National Response Framework (NRF), provide broad policy guidance for a comprehensive approach to domestic incident management to prevent, prepare for, respond to, and recover from all hazards incidents. Familiarity with the NIMS and the NRF are essential for individuals to integrate into and be a valuable member of destructive event mitigation and response, whether disasters are natural or human-caused. Critical infrastructure, key resources, and border protection provide the framework for the nation's homeland security and defense efforts. Over eighty percent of these resources reside in the private sector. This presents a challenge to the nation, particularly in the areas of policy guidance and information sharing between the public and the private sectors. These challenges will be presented and analyzed during this course. Participant's understanding of the principles presented will be measured through the preparation of an analysis of a key homeland security/defense issue related to the materials presented.

Prerequisites: HLS 811

PADM 813: Leadership in Public and Nonprofit Organizations

3 Credits

The course presents historical and contemporary leadership theories and concepts to provide a strategic foundation for public leaders in government and nonprofit organizations. The purpose of the course is to increase our student's capacity to lead and to help develop the skills to analyze and address leadership challenges and opportunities.

PADM 897: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

Public Health Preparedness (PHP)

PHP 510: Public Health Preparedness for Disaster and Terrorist Emergencies II

3 Credits

A public health perspective on the preparation necessary to develop a coordinated response to a disaster or terrorist emergency.

Prerequisite: permission of the instructor

PHP 527: Public Health Evaluation of Disasters and Bioterrorism

3 Credits

Introduces students to the design of exposure assessment and health effect studies applicable to disasters and terrorism.

Prerequisite: permission of the instructor

PHP 530: Critical Infrastructure Protection of Health Care Delivery Systems

3 Credits

Investigates the impact that terrorist incidents may have on healthcare facilities or their ability to deliver healthcare services.

Prerequisite: permission of the instructor

Cross-Listed

PHP 594: Research Topics

1-15 Credits/Maximum of 15

Supervised student activities on research projects identified on an individual or small-group basis.

Prerequisite: Completion of at least 15 credits in the program or permission of the instructor.

PHP 596: Individual Studies

1-15 Credits/Maximum of 15

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

PHP 597: Special Topics

1-3 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently, several topics may be taught in one year or term.
PHP 831: Public Health Preparedness and the Emergency Operations Plan  
3 Credits  
Teaches fundamentals of emergency preparedness exercises (i.e. orientation, tabletop, drill, functional and full scale exercises.  
Prerequisite: PHP 530  
PHP 832: Fundamentals of Biorisk Management  
3 Credits  
This course covers the principles, methods, and competencies for developing, improving, and evaluating a biorisk management system.

PHP 897: Special Topics  
1-9 Credits/Maximum of 9  
Formal courses given on a topical or special interest subject with a professional orientation that may be offered infrequently; several different topics may be taught in one year or semester.

Public Health Sciences (PHS)

PHS 500: Research Ethics for Clinical Investigators  
1 Credits  
This course is designed for graduate students preparing for a career that will include clinical investigations.

PHS 503: Nutritional Epidemiology  
3 Credits  
This course will examine how epidemiological designs can be applied to study the role of diet and other related lifestyle factors in chronic disease. The interrelationship between diet and other lifestyle factors will be discussed (physical activity, smoking). Learning about these issues is addressed within the context of the diet & cancer, but can be applied to other disease outcomes.

PHS 504: Behavioral Health Intervention Strategies  
3 Credits  
Evaluation of intervention strategies from a biobehavioral health context; theories of change processes in health.

PHS 505: Public Health Program Planning and Evaluation  
3 Credits  
Foundations in public health program planning and evaluation.  
Prerequisite: PHS 504 or BB H 504

PHS 506: Behavioral Health Intervention Strategies II  
3 Credits  
This course provides instruction on how to design theory-driven public health interventions.  
Prerequisite: PHS 504 or BB H 504 ; and PHS 505

PHS 507: Public Health Surveillance  
3 Credits  
Public health surveillance, through collecting and monitoring public health related data as they appear in the real world, plays an important role to ensure public health. This course provides an overview of the principles and practice of public health surveillance and will include design, data collection, and data analysis of the public health surveillance system in general. The skills that students learn from this course will help them better understand and analyze public health issues. Using existing public health surveillance data such as NHANES, NHIS, BRFSS, and SEER, this course provides hands-on experience with analyzing public health surveillance data.  
Prerequisite: PHS 520, PHS 550

PHS 510: Grant Writing for Clinical Research  
3 Credits  
To become independent researchers, students will need to write many grants for external funding. The primary purpose of this course will be for students to experience the full range of grant writing, from review of funding opportunities with a focus on patient- or population-based samples, to forming the research question, preparing, and submitting the grant. Most students are expected to write an F31 application to various NIH-institutions, but other training grant opportunities may be chosen according to the topic of interest. In addition, strategies to get involved in high dimensional or big data will be emphasized, such as human genome data, EMR data, and MARKETSCAN data.

PHS 511: Methods Used in Translational Research  
1 Credits  
This course is designed to familiarize clinicians with state-of-the-art laboratory techniques as they apply to translational research studies.

PHS 516: Statistical Genetics  
3 Credits  
Basic theory and methods for statistical analysis, introduction to bioinformatics, principles and methods of statistical genetics, case-control association studies.

PHS 518: Scientific Communication  
2 Credits  
A survey of the formats in which medical science is presented, with exercises in the preparation of abstracts, manuscripts, and grant applications, including illustrations.

PHS 519: Patient Centered Research  
3 Credits  
A survey course designed to provide foundational information regarding 15 core clinical research topics presented in theory and with application.  
PHS 519 Patient Centered Research (3) Patient Centered Research, PHS 519, is a three credit course specifically designed for physicians who have completed their medical training and are interested in learning about clinical research. Clinical research training is rarely offered in a typical medical school curriculum but is imperative for training academic physicians to perform high quality investigational research. This course
covers the opportunities and the expected skills needed to become an independent clinical investigator. This is a survey course which is designed to provide an overview of clinical research along with an introduction to the methods used to conduct clinical research.

PHS 520: Principles of Biostatistics

3 Credits

Introduction to the application of techniques and interpretation of results that are commonly used to plan, analyze, and report clinical and health services research.

PHS 521: Applied Biostatistics

3 Credits

This course is a continuation of Principles of Biostatistics. It covers multivariable regression methods for continuous, categorical, and time-to-event outcomes. Topics are multiple linear regression including ANOVA, ANCOVA, interaction and model selection, logistic and conditional logistic regression, logistic regression for ordinal data, and survival analysis including the log-rank test and Cox proportional hazards regression.

**PREREQUISITES:** PHS 520 or STAT 500

PHS 522: Multivariate Biostatistics

3 Credits

This course focuses on advanced topics in biostatistics involving multivariate responses in biomedical research.

**Prerequisite:** PHS 520; STAT 500, PHS 521

PHS 523: Multivariate Analysis

3 Credits

This course focuses on the theoretical and applied aspects of multivariate analyses that are relevant to biomedical research.

**Prerequisite:** STAT 511, STAT 512, STAT 513, and STAT 514

PHS 524: Longitudinal Data Analysis

3 Credits

This course focuses on the theoretical and applied aspects of longitudinal data analyses that are relevant to biomedical research.

**Prerequisite:** PHS 523

PHS 525: Biostatistics for Lab Scientists

3 Credits

Basic theory and methods for statistical analysis, data presentation and experimental design, with a focus on biomedical applications.

**Prerequisite:** one semester of college calculus (e.g. MATH 110), experience with spreadsheet software such as Microsoft Excel.

PHS 526: Categorical Data Analysis

3 Credits

This course focuses on statistical theory and methods for analyzing categorical data.

**Prerequisite:** STAT 511, STAT 512, STAT 513, and STAT 514

PHS 527: Survival Analysis

3 Credits

This course focuses on the analysis of time-to-event data with a focus on biomedical research.

**Prerequisite:** STAT 511, STAT 512, STAT 513, and STAT 514

PHS 528: Bayesian Methods

3 Credits

Approaches to Bayesian modeling and computation with application to medicine and biomedical research.

**Prerequisite:** STAT 511, STAT 512, STAT 513, and STAT 514

PHS 529: Biostatistical Computing for Public Health

1 Credits

Provides experience in intermediate and advanced usage of a biostatistical software package for public health data analyses. PHS 529 Biostatistical Computing for Public Health (1) The goal of this course is to provide students with the SAS skills to perform intermediate and advanced biostatistical analyses of public health data and associated data management tasks using the SAS system, so that in other public health and biostatistics courses they may focus on theoretical aspects rather than computing and programming issues. Upon completion, students will be able to use standard statistical software and to apply the fundamental concepts of information technology.

**Concurrent:** PHS 520

PHS 530: Principles of Health Services Research

2 Credits

A foundation course on the principles of health services research and the methods used to conduct health services research. This course gives students a foundation in the principles and methods of health services research, a multidisciplinary field that addresses health policy, health care delivery, health care financing and costs, and quality and outcomes of care. The student will learn about how health services research projects are designed, conducted, reported in the literature, and used by policymakers, providers, and public health practitioners. The general overview provided in this course is intended to increase students’ awareness of health services research and to encourage students to continue to learn more about the field and to consider health services research for their capstone projects.

PHS 531: Perspectives on Women’s Health

3 Credits

The Perspectives in Women’s Health Seminar uses a seminar format and class discussion to address the public health issues facing women
today. The course will start with an overview of women's health as a construct, and will then challenge students to consider how public health programs, health care delivery organizations, and public policy can respond to emerging needs in women's health. The course will examine women's health across the life course, focusing on key issues that affect women domestically and internationally, including health problems that exhibit a gender disparity. The aims of this course include the education of public health leaders in women's health, including the sociocultural and historical factors contributing to conceptions of women's health in the U.S. and worldwide. Students will understand how public health perspectives on women's health are changing, and key issues that are debated in the context of that change. Students will be able to identify key health problems facing women across the lifespan, and be able to identify key biological, psychosocial, and cultural factors that influence women's health.

PHS 532: Population Health Informatics and Analytics
3 Credits

This course explores the principles of population health informatics and analytics, where learners will have practical experiences using data such as clinical, genomic, financial, publicly available secondary data, and other health-related data for analysis aimed at improving patient care across populations by reducing outcome variations, increasing quality and patient satisfaction, and reducing cost of care.

PHS 534: Public Health Law Research and Practice
3 Credits

Public health law research is the scientific study of the relation of law and legal practices to population health (Wagenaar & Burris, 2013, p.4). This course is concerned not with what is legal to include within the jurisdiction of public health law (the objective of health law), but with whether law can empirically be shown to affect the health of a population. This course is for M.P.H., Dr.P.H., Ph.D., and J.D. students who want to develop knowledge and skills in a distinct and trans-disciplinary field that combines both law and scientific methods. This course will be highly interactive and will give students an overview of the general concepts of the field of public health law research, the processes or mechanisms through which a law manages to have measurable effects on people's health, and the various study designs for evaluating public health laws.

PHS 535: Quality of Care Measurement
3 Credits

Emphasizes the concept and measurement issues involved in assessing and improving the quality of health care. Students will become acquainted with definitions of quality of care and with a broad range of measures and methods used in public reporting and outcomes research. The policy dimensions of quality of care measurement and improvement will be discussed. Course content will be useful to those interested in outcomes research or research on quality of care, and to those who will assume responsibility for quality of care measurement and improvement programs in public health and/or health care organizations.

Prerequisite: PHS 520, or STAT 500, and PHS 550 or STAT 507
analysis, including probabilistic sensitivity analysis, cost-effectiveness acceptability, and Markov models for chronic diseases.

PHS 541: Decision Analysis II

1 Credits

This course provides an introduction to the methods and applications of decision analysis in clinical decision making.

Prerequisite: enrollment in the Master of Science in Public Health Sciences program and satisfactory completion of PHS 540

PHS 542: Environmental Health Sciences

3 Credits

Overview of the impact that chemical, physical, and biologic agents in the environment have on human health.

PHS 550: Principles of Epidemiology

3 Credits

Students will learn to utilize basic epidemiological methods, i.e., design, calculate, analyze, interpret, report, in the examination of public health problems or programs. Topics include measurements, surveillance, outbreak investigation, bias, and study design.

Concurrent: PHS 520; STAT 500

PHS 551: Advanced Epidemiological Methods

3 Credits

Advanced methodological course providing in-depth discussions on applications of advanced methods to design, execution, data analysis, and epidemiological studies reporting.

Prerequisite: PHS 520 and PHS 550 or PHS 510

PHS 552: Molecular Epidemiology of Chronic Disease

3 Credits

This course provides instruction on molecular epidemiologic study design and methods in the study of chronic disease.

PHS 553: Infectious Disease Epidemiology

3 Credits

Principles of infectious disease epidemiology and the use of epidemiologic methods to address infectious diseases of national and international importance.

Prerequisite: PHS 550

PHS 554: Statistical Methods in Public Health I

3 Credits

Biostatistical methods in the design and analysis of epidemiological (observational) studies. This is a course on biostatistical methods in the design and analysis of epidemiological studies. The course addresses design issues with respect to (1) basic epidemiological (observational) studies, such as case-control, cohort, and cross-sectional studies, and (2) more complex studies, such as nested case-control, case-cohort, and case-crossover designs. Next, the course develops basic statistical inference for risk measures according to the nature of the outcome variables (binary and ordinal, continuous, rate, time-to-event). Confounding and interaction issues are discussed, along with statistical methods for handling them, such as standardization, stratification, and matching. More advanced methods are described based on multiple regression models that are specific to the outcome variables, as well as mediation modeling and propensity scores. Finally, computer-intensive analyses are considered, such as bootstrapping, permutation tests, and multiple imputation for missing data.

PHS 555: Statistical Methods for Public Health II

3 Credits

The course provides in-depth information regarding the principles behind randomized and controlled clinical trials and then delves into topics that are specific to clinical trials. Study designs determine how the data are analyzed and how to avoid/minimize clinical biases, so study designs are investigated: (a) Phase I-IV trials, (b) non-inferiority designs, (c) factorial designs, and (d) crossover designs. Next, sample size calculations are investigated to optimize precision, and the biostatistical and logistical aspects of randomization methods are described. Adaptive designs provide more efficient approaches, especially two-stage approaches. Adaptive designs are investigated for Phase II-III clinical trials. Many clinical trials invoke time-to-event outcomes, so survival analysis methods are covered in detail. Systematic reviews and meta-analyses consist of summarizing and analyzing the data across a set of independent clinical trials. In particular, fixed-effects and random-effects models for meta-analyses are explored. The final topic is medical diagnostic testing, in which clinical researchers try to identify new testing procedures for distinguishing between healthy and diseased individuals.

Prerequisite: PHS 554

PHS 556: Cancer Epidemiology

3 Credits

Cancer is the second leading cause of death in the U.S. Therefore, public health professionals need to know the basic principles and methods of cancer epidemiology. This course will provide a foundation in basic cancer biology, the frequency of disease for the most common cancers, study design, data analysis, and the interpretation of data for cancer epidemiologic studies. The goal is to provide students with the knowledge and skills to apply epidemiologic methods to design and conduct cancer studies, to know study limitations due to biases, and to critically evaluate epidemiologic studies.

Prerequisite: PHS 520, PHS 550

PHS 557: Global Impact of Infectious Diseases

3 Credits

This course is designed to provide an understanding of the global and local perspectives of infectious disease. This course will provide a fundamental knowledge of several different infections including virus, bacterial, and parasitic types. The course will then expand on this knowledge and discuss the impact of these infectious diseases on the global community, then discuss, analyze, and design methods for prevention and control. Diseases of global importance will include: malaria, HIV, hepatitis, dengue, emerging viral hemorrhagic fevers, causes of diarrheal illness, tuberculosis, polio, smallpox, cholera, syphilis, select
parasitic diseases, and other diseases as necessitated by current global disease trends.

PHS 558: Cardiovascular Disease Epidemiology

3 Credits

Cardiovascular disease (CVD) is the leading cause of death in the U.S. Therefore, understanding the public health burden of CVD and the basic concepts and principles of CVD epidemiology is important for public health professionals and CVD researchers. This course will provide a foundation in CVD epidemiology, with a particular focus on the distribution, time trend, and major risk factors of CVD. This course will use examples from cornerstone population-based CVD epidemiological studies to help students understand the study design, analysis, and interpretation of CVD epidemiological studies. Students will use the Atherosclerosis Risk in Communities (ARIC) study data to perform epidemiological investigations of acute myocardial infarction and stroke and their behavioral/lifestyle and demographic determinants (in the first half of the semester) and the biological determinants (in the second half of the semester). The overall goal is to provide students with the knowledge and skills to apply epidemiological methods to design and conduct their own CVD epidemiological studies.

RECOMMENDED PREPARATION: 6-9 credits in epidemiology at the graduate level

PHS 562: Environmental Epidemiology

3 Credits

This course provides students with an understanding of the major topics in environmental epidemiology and involves the application of epidemiologic methods to environmental exposures. Environmental exposures discussed include environmental tobacco smoke, radon, ambient air pollution, and others. The course material covers 1) the statistical methods and software coding needed to analyze these data, as well as the interpretation of the results of these methods; and 2) geographic information system (GIS) software and coding needed to display epidemiologic data. Spatial statistical methods in environmental epidemiology will be discussed, including geostatistical exposure modeling and areal and point-process data analysis. Also, linear mixed effect (LME) models, generalized additive models (GAMs) and generalized additive mixed models (GAMMs) and their use in environmental epidemiology will be discussed.

PHS 563: Infectious Disease Epidemiology II

3 Credits

The course is designed to help students gain expertise in modern infectious disease research and apply epidemiological methods to address infectious diseases of national and international importance. Emphasis is given to methods of infectious disease dynamics, designs and evaluation of infectious disease surveillance systems, mathematical models in infectious disease epidemiology, and epidemiological methods for infectious disease research. Specific infectious diseases to be covered include HIV/STD, vaccine-preventable diseases and vaccine safety, healthcare-associated infections, global antimicrobial resistance, infection-associated cancers, and emerging infectious disease.

Prerequisite: PHS 550, PHS 553

PHS 565: Statistical Models for Tobacco Research

1 Credits

Provide statistical analytical methods in estimating potential or empirical effects of regulation of tobacco. This course will provide statistical analytical methods in estimating potential or empirical effects of regulation of tobacco (i.e., cigarette consumption, nicotine addiction, pathology, health states). This course will cover skills and tools to construct models for comparing effects under various model assumptions, and project health benefits or harms. This course will also discuss statistical methods of modeling smoking and nicotine dependence and developing cost effectiveness models varying tobacco use and nicotine dependence outcomes. Moreover this course will present models of carcinogenesis based on exposures to tobacco. The primary goal of this course is to enable students to gain an understanding of the potential or anticipated processes and effects by which tobacco regulation may be most effective and least effective in producing public health benefit.

PHS 570: Health Economics and Economic Evaluation

3 Credits

An introductory course on applied economic evaluation, with emphasis on micro-economic theory, cost-effectiveness and economic modeling.

Prerequisite: enrollment in PHS graduate program or discretion of the instructor

PHS 571: Health Services Organization and Delivery

3 Credits

Examination of health systems, organization, financing, and evaluation; trends, problems, and issues.

PHS 574: Methods in Clinical and Public Health Intervention Design

3 Credits

This course provides students with evidence-based guidelines for designing, adapting, implementing, and evaluating public health programs, clinical research studies, and public health policy. The course will expose students to best practices for developing programs and interventions, challenges faced in research and evaluation, and novel methodological approaches for engaging communities and populations. Classes will be divided into three sections, didactic instruction, case study critique, and interactive discussions with researchers. Didactic instruction will cover pertinent topics such as challenges faced when developing public health programs and interventions, conducting a needs assessment, research evaluation, working with under-served and vulnerable communities, and public health policy. During the case study critique the instructor or the students (individually or in dyads) will lead the class in a critical review and discussion of case studies related to the topics discussed in class. The research talk and discussion section of the course will consist of presentations and discussions led by academic researchers and individuals working in the private and public sector. Each speaker will describe a research program, project, or evaluation they led or are currently leading. The speaker will describe for the students the population or health topic of interest explored through the program or study, the analytical methods used, the duration of the study, and study challenges and successes. Students will be asked to consider the
methods used by each speaker and determine if their approach would be applicable to and effective for their population of interest.

PHS 575: Integrative Seminar in Public Health Leadership
3 Credits
Provides the knowledge and skills necessary to understand the dynamic nature of leadership within the public health sector.

PHS 576: Integrative Seminar in Public Health Policy
3 Credits
Provides in-depth exploration of the development, implementation, and analysis of public health and health-related policy.

PHS 577: Integrative Seminar in Social & Behavioral Determinants of Health
3 Credits
Students examine the multiple determinants of population health and initiatives that could improve population health and reduce health disparities.

PHS 578: Advanced Integrative Public Health Leadership
3 Credits
Provides the advanced knowledge and skills necessary to extend the understanding of leadership within public health venues. Advanced Integrative Public Health Leadership will extend the discipline and practice of leadership to prepare students for leading public health initiatives for diverse populations. The advanced concepts covered in this course bridge the foundational concepts learned in previous Dr.P.H. courses to these specialized areas of Leadership constructs. Students will learn advanced leadership theories such as transactional, transformational, servant, and authentic leadership, and how to apply these academic theories to the field of public health leadership, while being aware and culturally understanding of advanced ethical and moral issues, and be able to work effectively with people who have different cognitive styles for problem solving. This course will expose students to the importance of both having and being a mentor and sponsor for professional and personal growth within the public health discipline. Current and relevant social justice themes will be represented through case studies and media reports giving students the opportunities to face and make challenging decisions. This course will have a research and public speaking component to offer students experiential learning within the context of real world problems impacting the health of various populations.

Prerequisite: PHS 575

PHS 580: Clinical Trials: Design and Analysis
3 Credits
This course stresses the concepts of statistical design and analysis in biomedical research, with special emphasis on the clinical trial.

Prerequisite: PHS 520

PHS 582: Biostatistical Methods in Clinical Trials
3 Credits
Recommended Preparations: Ph.D. Biostatistics candidates must have completed a Master’s degree that includes at least four graduate level Statistics courses. Dr.P.H. candidates must have completed a graduate (e.g., master’s) or advanced professional (e.g., MD) degree. Dr.P.H. candidates may also be required to successfully complete PHS 520, a core Biostatistics course, in their first semester. The background knowledge of these candidates provides sufficient preparation for PHS 582. An in-depth course on biostatistical methods in the design and analysis of randomized and controlled clinical trials. PHS 582 Biostatistical Methods in Clinical Trials (3) This is an in-depth course on biostatistical methods in the design and analysis of randomized and controlled clinical trials. The course provides foundational information regarding the principles behind randomized and controlled clinical trials and then delves into topics that are specific to clinical trials. Study designs determine how the data are analyzed and how to avoid/minimize clinical biases, so study designs are investigated: (a) Phase I-IV trials, (b) non-inferiority designs, (c) factorial designs, and (d) crossover designs. Next, sample size calculations are investigated to optimize precision, and the biostatistical and logistical aspects of randomization methods are described. Adaptive designs can provide more efficient approaches, especially two-stage approaches. Adaptive designs are investigated for Phase II-III clinical trials. Many clinical trials invoke time-to-event outcomes, so survival analysis methods are covered in detail. Systematic reviews and meta-analyses consist of summarizing and analyzing the data across a set of independent clinical trials. In particular, fixed-effects and random-effects models for meta-analyses are explored. The final topic is medical diagnostic testing, in which clinical researchers try to identify new testing procedures for distinguishing between healthy and diseased individuals.

Prerequisite: PHS 575

PHS 583: Asymptotic Tools
3 Credits
An advanced theoretical course on statistical large sample theory and its application in biomedical and public health research. This is an advanced theoretical course on statistical large sample theory and its application in biomedical and public health research. Students are expected to understand the theorems and proofs on large sample theory, and conduct statistical derivation and asymptotic inference by applying the knowledge from the course. Important asymptotic statistics ideas on basic probability theory, statistical large sample theory, and efficient estimation and testing are covered in this course. Specific topics include the modes of convergence, the law of large numbers, Taylor’s theorem and delta method, order statistics, central limit theorem, U-statistics, likelihood inference, M-estimates, L-estimates, efficiency of test, goodness of fit, Bootstrap and Jackknife estimates, and permutation and rank tests. In addition, statistical computing is vital for understanding asymptotic theory so program techniques based on R/SAS software are learned and utilized during the course. Students are expected to have taken at least two graduate level courses in mathematical statistics.
PHS 590: Colloquium
1 Credits/Maximum of 3
Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

PHS 594: Research Topics
1-9 Credits/Maximum of 9
A closely monitored, clinical or population based research project that is conducted during the second year of the PHS MS curriculum.

PHS 595: Public Health Practice Internship
1-6 Credits/Maximum of 6
This course provides Master of Public Health degree students with hands-on, 'real-world' experience in the practice of public health.

PHS 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects including non-thesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

PHS 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be of topical or of special interest.

PHS 600: Thesis Research
1-9 Credits/Maximum of 9
Research training provided to enable the student to advance his or her knowledge about a selected topic in public health sciences.

PHS 590: Colloquium
1 Credits/Maximum of 3
Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

PHS 594: Research Topics
1-9 Credits/Maximum of 9
A closely monitored, clinical or population based research project that is conducted during the second year of the PHS MS curriculum.

PHS 595: Public Health Practice Internship
1-6 Credits/Maximum of 6
This course provides Master of Public Health degree students with hands-on, 'real-world' experience in the practice of public health.

PHS 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects including non-thesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

PHS 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be of topical or of special interest.

PHS 600: Thesis Research
1-9 Credits/Maximum of 9
Research training provided to enable the student to advance his or her knowledge about a selected topic in public health sciences.

PHS 802: Practice of Public Health
2 Credits
Provides knowledge and skills in methods and procedures used for the practice of public health. PHS 802 Practice of Public Health (2) Practice of Public Health will have two major components. The first is the presentation of core public health knowledge and skills (i.e., evidence-based practice, public health infrastructure, sources of public health data, the public health agenda, the profession of public health, funding public health, professional development for the public health professional, and professional communication) related to the practice of public health. This information will be presented to provide a thorough understanding of the public health system and how it functions in order to ensure good public health practice. This first component will be presented via lectures, discussions and course assignments. The second component of the course will include the examination and analysis of public health methodology and procedures of public health practice. This component of the course will be accomplished via students' analyses and presentations of public health case studies.

Prerequisite: PHS 501

PHS 803: Principles of Global Health
3 Credits
This course provides an overview of the major issues and initiatives in contemporary global health. This course provides an overview of the major issues and initiatives in contemporary global health. Throughout the course we will explore the political, social, economic, cultural, and environmental determinants of health. We will review the role of global health players such as the World Health Organization, UN agencies, and governmental and nongovernmental organizations, as well as how they interact with health systems to improve health. This course will also discuss the major health issues worldwide and key factors associated with health inequalities. The course will take a public health approach, but will also touch upon global health frameworks from other disciplines such as anthropology and sociology.

PHS 804: Integrating Systems Thinking in Global Health
3 Credits
In this course, students will engage in case studies of global health programs and initiatives. A systems thinking framework will be applied to the cases and students will use the framework to anticipate unintended consequences related to international field work and to propose possible solutions. Cases will illustrate the complexity of global health work and the importance and implications related to the interconnectedness and complementary roles of critical public health systems. The cases used in this course will include a spectrum of small to large scale programs and short-term to long-term response efforts. The framework can be applied domestically and the course will consider domestic health issues. Cases will cover the major topics of the public health system, biosocial context, chronic disease, infectious disease, and systems failures.

PHS 805: Public Health Policy Analysis
3 Credits
This course takes a pragmatic approach to public health policy analysis that aims to provide an understanding of how to do policy analysis. The course uses a case study format to investigate both historical cases and contemporary issues, in parallel, to understand the real-life complexity and challenges in health policy analysis. Attention will be given to what theoretical, ethical, and analytic frameworks best inform policy analysis, what research designs and methods to use, and the historical, political, and contextual influences. Health policy issues are often high profile and demand a public response. By examining health policy cases, both retrospectively and prospectively, students will develop a thoughtful conceptualization of the policy process and a systematic approach to construct clear and testable propositions about the health policy topic they are studying. The case study approach will provide lessons on the evolution of policy implementation, successes, and failures, and provide tools to assist students, as future policy-makers, in evaluating and planning current and future health policy
PHS 806: Public Health Ethics

3 Credits

Public Health Ethics will familiarize students with the tenets that apply to health care delivery, experimentation, research, and human behavior as guided by principles developed over time to apply to government oversight of public health. Many of these principles are the results of specific cases or phenomena that have arisen over time and led to social interventions as a result. The course will look at several seminal events and the ethical principles derived from them. In many cases, principles are still being debated and the lines between ethical and unethical behavior still being negotiated. We will examine the differences between morals, ethics, and laws. We will explore the consequences of violating them. As scientific research grows in size and complexity, new principles will be needed. Students will also demonstrate a sound sense of scholarship and research integrity (SARI) by participating in ongoing discussions about Responsible Conduct of Research (RCR). How should these be formulated by concerned and caring individuals? The course will give some answers. Major topics will include moral reasoning, ethical decision-making frameworks, research integrity, and numerous case studies that highlight the interplay between ethics, law, and public health issues past, present, and future. The aims of this course include the education of public health leaders in applying ethical principles to public health issues, and enhancing decision making skills and capabilities that are necessary for creating an ethical approach to public health practice and research.

PHS 807: Public Health Education Methods

3 Credits

Provides the knowledge and skills associated with the methods used to deliver successful public health education programs.

Prerequisite: PHS 505 and either PHS 504 or BB H 504

PHS 808: Population Health Management

3 Credits

This course is designed to provide students with a contextual understanding of the reasons for a renewed focus on population health as a clinical care-delivery model. An overview of the current state of the health of the U.S. population will set the stage for a brief examination of the Affordable Care Act. New care delivery models, such as Accountable Care Organizations, that are promoted in the ACA are discussed. The course provides an overview of the role Centers for Medicare and Medicaid Services (CMS), state governments, and payers play in creating new healthcare financing models that incentivize a shift from episodic to value-based care. Exploration of changes in reimbursements, the importance of quality measures, and implementation of evidence-based guidelines will be presented. With this foundation, the course focus turns to examine the many elements of population health management as a concept of broader public health goals. These elements include patient attribution models and risk identification and stratification into sub-populations, as well as care coordination - a key strategy in meeting the health needs of a population across the continuum of care. The specific intervention strategies of chronic condition management and transitions of care are described. The primary care setting, which is the focal point of population health management, is explored. The transformation of this care provider to a patient-centered medical home is described along with the evolution of interdisciplinary care teams, the use of extenders such as medical assistants, and the shifted emphasis to prevention and health promotion. The emphasis on the role of the patient in population health, the need for improvements in health literacy, consideration of the social determinants of health, and the need for health education are discussed. An overview of various technology and data analytical tools and processes used to support population health management care delivery models is provided. Discussion of the importance of using data to track, trend, and measure population health interventions will continue in the technology section of the course. The course will conclude with examinations of the multiple challenges and barriers that health care organizations, payers, and patients experience with value-based care and population health care delivery models. Lastly, a look forward at trends in policy and regulations, application of comparative effectiveness research, and the pervasiveness of ‘big data’ will allow students to explore the future of health care delivery transformation.

PHS 809: Principles of Public Health

3 Credits

This course provides students with a foundation in public health principles and practice. Students will examine public health models and frameworks, determinants of health, indicators of health, and the etiology of disease. Students will learn about public health milestones and innovations, measures of health and well-being, issues surrounding health disparities, ethical issues in public health practice and research, and the role of state and county health departments in disease control and prevention. Students will examine today’s priority health concerns using a public health framework.

PHS 863: Applied Tobacco Research

3 Credits

Provides knowledge and skills in methods for tobacco research, and the use of research to inform tobacco regulation and policy. Applied Tobacco Research will have two major components. The first is a seminar series, presenting topics within four substantive content areas in applied tobacco research: 1) Smoking epidemiology research models, 2) Smoking prevention and biobehavioral interventions, 3) Tobacco regulatory policy, ethics, and consumer influence, and 4) Comparative effectiveness research on tobacco and nicotine regulatory strategies. The second component of the course will include the examination and analysis of a topic area of interest to the student, within the domains of tobacco regulatory science and applied tobacco research.

PHS 864: TCORS Tobacco-Related Biomarkers

2 Credits

Provides knowledge and skills associated with using biomarkers in tobacco research and regulation. This course will provide students with the knowledge and skills associated with using biomarkers in tobacco research and regulation. Topics covered include types of tobacco biomarkers, the effect of smoking behaviors on exposure, biomarkers of smoking-related diseases and disorders, the use of biomarkers in clinical research, analysis and interpretation of biomarker data, and the use of biomarkers in regulatory science.

PHS 890: Colloquium

1-3 Credits/Maximum of 3

Continuing, professionally oriented seminars that consist of a series of individual lectures by faculty, students, or outside speakers.
PHS 892: Directed Studies in Public Health
3 Credits
The Directed Studies course is intended to help prepare students for dissertation research and/or culminating manuscript preparation.

PHS 894: Capstone Experience
3 Credits
A culminating experience in which students create and present a scholarly project based on the competencies gained in previous courses.

Prerequisite: PHS 501; PHS 520; PHS 550; and PHS 571 or HPA520

PHS 895A: Master of Public Health Internship
1-6 Credits/Maximum of 9
Provides Master of Public Health (MPH) degree students with hands-on, real-world experience in the practice of public health. Students are required to complete 20 hours of practice-based activities prior to enrollment in this course. These activities can include community-based volunteer opportunities, PSU COM career development training events, PHASE events, or other activities as approved by the Public Health Program.

Recommended Preparations: Students are required to complete 20 hours of practice-based activities prior to enrollment in this course.

PHS 895B: Advanced Field Experience
1-6 Credits/Maximum of 9
This course provides DrPH degree students with advanced hands-on, practical experience in the practice of public health. Students are required to complete 20 hours of practice-based activities prior to enrollment in this course. These activities can include community-based volunteer opportunities, PSU COM career development training events, PHASE events, or other activities as approved by the Public Health Program.

Recommended Preparations: Students are required to complete 20 hours of practice-based activities prior to enrollment in this course.

PHS 895C: MPH Global Health Internship
1-6 Credits/Maximum of 6
Provides Master of Public Health (M.P.H.) global health internship opportunities on their own. Internships that are not pre-approved must be reviewed and approved by the M.P.H. program leadership before students can begin. At each internship site, students report to an on-site Preceptor. Preceptors are identified by the M.P.H. program leadership and are key decision-makers at their respective agencies, organizations, or institutions. Prior to beginning the internship, students will work with the course Director to develop individualized learning objectives. These learning objectives will shape a student's experience at the internship site and the types of projects the student will complete. The learning objectives also will provide students with a measure against which they can evaluate their efforts and the internship sites. Students are required to complete 20 hours of practice-based activities prior to enrollment in this course. These activities can include community-based volunteer opportunities, PSU COM career development training events, PHASE events, or other activities as approved by the Public Health Program.

Recommended Preparations: Students are required to complete 20 hours of practice-based activities prior to enrollment in this course.

PHS 895D: Dr.P.H. Global Advanced Field Experience
1-6 Credits/Maximum of 6
Provides Doctor of Public Health Students (Dr.P.H.) students with real-world experience in the practice of public health in international or local settings. The Doctor of Public Health Students (Dr.P.H.) Global Advanced Field Experience aims to provide Dr.P.H. students with hands-on experience in the practice of public health. The Global Advanced Field Experience builds and reinforces public health practice skills by enabling students to apply what they have learned in the classroom to real-world public health problems and settings. As the Dr.P.H. is a professional degree, gaining experience in a real-world public health setting through the Global Advanced Field Experience is critical to students' academic and professional development, and their ability to become competent in the practice of public health. Students may complete their Global Advanced Field Experience at public health agencies, organizations, and/or institutions, and work on substantive projects that contribute to the mission, goals, and objectives of the sites in which they are placed. Students are matched with sites based on their respective academic and professional interests and goals. Students may be matched with pre-approved sites, which have been identified by the Dr.P.H. program leadership. Students also may seek out Global Advanced Field Experience opportunities on their own. Global Advanced Field Experience sites that are not pre-approved must be reviewed and approved by the Dr.P.H. program leadership before students can begin. At each site, students report to an on-site Preceptor. Preceptors are identified by the Dr.P.H. student and approved by Dr.P.H. program leadership; they generally are key decision-makers at their respective agencies, organizations, or institutions. Prior to beginning the Global Advanced Field Experience, students will work with the course Director to develop individualized learning objectives linked with at least five Dr.P.H. competencies. These learning objectives will shape a student's experience at the internship site and the types of projects the student will complete. The learning objectives also will provide students with a measure against which they can evaluate their efforts and their ability to meet their competencies.

RECOMMENDED PREPARATION: 20 hours of practice-based activities, can include community-based volunteer opportunities, PSU COM career development training events, PHASE events, or other activities as approved by the DrPH Program
Creative projects with a professional orientation, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

**PHS 896: Individual Studies**
1-9 Credits/Maximum of 9

This course provides Dr.P.H. degree students with opportunities to demonstrate knowledge and skills gained through doctoral research via manuscript development. Integrative Doctoral Research I is the first of two courses required for the integrative culminating experience for Doctor of Public Health students delivered on an individualized basis. Dr.P.H. students will be required to develop two major components for their Dr.P.H. integrative experience that are linked conceptually: two publishable-quality manuscripts. With individualized guidance from their doctoral adviser and doctoral committee, students will develop two manuscripts that comprehensively address, generate, and/or interpret and evaluate knowledge applicable to public health practice. Manuscripts are encouraged to be of an applied nature and must demonstrate students' abilities to conduct independent research on a contemporary public health issue. Students will demonstrate the application of advanced public health practice skills and knowledge in the design and execution of a scholarly project, the analysis and interpretation of the findings, and the application of the new knowledge to advance public health practice. This work should contribute to the evidence base of public health practice, be of publishable quality, be linked to the doctoral portfolio contents and demonstrate critical thinking and rigorous analytic strategies.

**Prerequisite:** PHS 892

**PHS 896A: Integrative Doctoral Research I**
1-9 Credits/Maximum of 9

This course provides a foundation for both evaluating and conducting quantitative analysis of public policy. The first third of the course examines foundational issues of conducting quantitative analysis of public policy. It does so by reviewing the basic elements of the foundations of such analysis, including the logic of scientific analysis, issues of philosophy of science, measurement theory (validity and reliability), and the elements of research design associated with internal and external validity as they apply to designs common in policy analysis. The remaining two-thirds of the course sequentially examines the use of basic statistical techniques in public policy analysis, including descriptive statistics (frequency distributions, measures of central tendency, and measures of dispersion), probability (the normal, binomial, Poisson and other probability distributions), inferential statistics (hypothesis testing, estimating population proportions, and testing differences between two groups), and the analysis of nominal and ordinal data (constructing and analyzing simple and control contingency tables). The course provides a foundation for studying more advanced quantitative analysis techniques, such as regression analysis and related techniques. Throughout the course, the several statistical analysis techniques will be examined through their application to typical public policy problems. The goal of the course is to enable students to become familiar with the basic elements of quantitative analysis of public policy, to enable them to evaluate statistical evidence bearing on public policy decisions, and to conduct basic statistical analysis on public policy questions, all of which are essential for professional careers in public policy.

**PPOL 503: Statistics for Public Policy I**
3 Credits

This course prepares students for both evaluating and conducting quantitative analysis of public policy using regression and regression-like techniques of statistical analysis. It does so by reviewing the logic of simple and multiple regression and the inferences that can be drawn from such analysis about public policy questions. The course then reviews the detection of violations of the assumptions of the regression model (specification error, heteroskedasticity, serial correlation, collinearity, nonlinearity, nonadditivity, and measurement error), their implications for valid inference, and their correction using extensions of basic regression analysis. The course will also examine regression-like techniques for nominal and ordinal dependent variables and their statistical evaluation. Throughout the course, the several regression analysis techniques will be examined through their application to typical public policy problems. The goal of the course is to enable students to become familiar with the elements of quantitative analysis of public policy using regression analysis, to enable them to evaluate such evidence bearing on public health knowledge, specialized knowledge, translation of this knowledge into evidence-based public health practice, and leadership style.

**Prerequisite:** PHS 892 and PHS 896A

**PHS 896: Individual Studies**
1-9 Credits/Maximum of 9

This course provides Dr.P.H. degree students with opportunities to demonstrate knowledge and skills gained through doctoral research via manuscript development. Integrative Doctoral Research I is the first of two courses required for the integrative culminating experience for Doctor of Public Health students delivered on an individualized basis. Dr.P.H. students will be required to develop two major components for their Dr.P.H. integrative experience that are linked conceptually: two publishable-quality manuscripts. With individualized guidance from their doctoral adviser and doctoral committee, students will develop two manuscripts that comprehensively address, generate, and/or interpret and evaluate knowledge applicable to public health practice. The goal of the course is to enable students to become familiar with the basic elements of quantitative analysis of public policy, to enable them to evaluate statistical evidence bearing on public policy decisions, and to conduct basic statistical analysis on public policy questions, all of which are essential for professional careers in public policy.

**PPOL 506: Statistics for Public Policy II**
3 Credits

This course prepares students for both evaluating and conducting quantitative analysis of public policy using regression and regression-like techniques of statistical analysis. It does so by reviewing the logic of simple and multiple regression and the inferences that can be drawn from such analysis about public policy questions. The course then reviews the detection of violations of the assumptions of the regression model (specification error, heteroskedasticity, serial correlation, collinearity, nonlinearity, nonadditivity, and measurement error), their implications for valid inference, and their correction using extensions of basic regression analysis. The course will also examine regression-like techniques for nominal and ordinal dependent variables and their statistical evaluation. Throughout the course, the several regression analysis techniques will be examined through their application to typical public policy problems. The goal of the course is to enable students to become familiar with the elements of quantitative analysis of public policy using regression analysis, to enable them to evaluate such evidence bearing on public health
policy decisions, and to conduct regression analysis on public policy questions, all of which are essential for professional careers in public policy.

**Prerequisite:** PPOL 503

**PPOL 596: Individual Studies**

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

**PPOL 801: The Public Policy Process**

3 Credits

The policy process refers to the development of public policy over time and the actors, events, and contexts surrounding this development. Trying to understand and explain the policy process requires an understanding of the relationships among an uncountable number of factors in a dynamic system with nested levels of interactions and uncertain inputs and outputs. This course decomposes this complexity by first considering the political conceptualization of public policy problems, the tools by which public policies – laws, regulations, and markets – are expressed, and the formal and informal actors (voters, legislators, executives, courts, bureaucracies, the media, and interest organizations) engaged in the policy process. The course then examines a number of broad models of the policy process as a whole, including the policy streams, institutional, incremental, advocacy coalition, and punctuated equilibrium models. The course also examines these actors and models at several stages of the policy process running from agenda setting, through policy formulation and adoption, to policy evaluation. The goal of the course is to enable students to identify the wide variety of actors in the policy process, understand the institutional contexts they operate in and the tools of policy influence they seek to employ at several distinct stages of the policy process, and critically assess the implications and empirical veracity of a variety of conceptual models of the policy process.

**PPOL 802: Economic Analysis for Public Policy**

3 Credits

Should the government directly regulate pollution or allow the market to determine levels of effluents? Should government pay farmers to reduce production of oversupplied crops, or is this an unfair government handout? Economists approach such questions using the basic microeconomic tools of their discipline. Understanding and being able to apply those tools is an essential part of the work of public policy analysts. This course, designed for students with little or no prior training in economics, gives students an overview of the tools and logic economists use in analyzing questions like those above, as well as many others. The focus will be on gaining a sound understanding and familiarity with the basic concepts and modes of analysis used in microeconomics so they can be applied to public policy questions. This includes first a basic overview of the behavior of consumers, firms, and labor markets, and based on this, the concepts of supply and demand, competition, and consumer and producer surplus. Students will learn how these influence the functioning of markets given that they may be imperfect, including problems of imperfect information, irrational behavior, and market failures associated with externalities and public goods. And third, this course will cover how these problems both play out in the demand for government goods and services and government’s production decisions, as well as how these problems might be addressed using the tools of microeconomic analysis. Students will leave this course with a better understanding of how an economist approaches many contemporary policy debates and an ability to use microeconomic analysis to assess policy problems.

**PPOL 804: Public Sector Organization Theory**

3 Credits

Public policies are more often than not designed by public sector organizations and implemented by them. To understand public policy, then, students must understand public sector organizations. Why are they designed as they are? And why do they behave as they do? Several disciplines offer often competing theories to answer these questions. This course will survey these theories to provide students with a foundation for understanding public sector organizations and how they influence public policy. After first discussing the inherent link between public sector organizations and public policy and discussing how public and private sector organizations differ, this course will examine several theories that address the internal structure of organizations: bureaucratic, structural, human relations, contingency, and new institutional theories. Behavioral decision theory and incremental theory are then examined as the most prominent views of how organizations make decisions. External influences on organizational structure and behavior are then considered in a review of organization ecology, resource dependency, and organization economics theories. The course will then move beyond isolated organizations by addressing social capital and network theory and social movement theory. In reviewing these several theoretical perspectives, special attention will be placed on public sector organizations and the application of insights from the theories to the design and implementation of public policy. The goals of the course include developing an understanding how the different theories offer critical insights for the design and implementation of public policies.

**PPOL 805: Bureaucracy and the Policy Process**

3 Credits

This course examines the role of bureaucracy in the public policy process. Bureaucracies are critical actors in the conceptualization of policy problems, formulating policy solutions, and implementing public policies, whether directly through government or via the market. Public agencies are also the locus of many public policy careers. We will analyze how public agencies and their employees at all levels of government survive and sometimes prosper within an intensely political environment. The course briefly examines the relationship between politics and policy as first developed in public administration as the politics/administration dichotomy, then via the concept of overhead democracy within political science, and finally in contemporary economics and political science via public choice theory and principal agent models. Second, to better understand this transition in approaches to understanding of bureaucracy, the course develops a working model of bureaucratic politics by examining the motivations of relevant actors and their complex political environment(s). And third, this model is employed to examine the enduring problem of political control of the bureaucracy, with emphasis on evaluating a number of alternative and competing institutional strategies designed to enhance control. This first of these strategies is via hierarchy as expressed via principal-agent analysis. After outlining the logic of agency theory, the course looks closely at the relationship between bureaucracy and political executives, legislators, courts, and non-governmental actors. This strategy of controlling bureaucracy in the policy process is then contrasted with three others:
limited government, non-bureaucratic provision of services by quasimarkets, and competitive bureaucracy in which agencies are designed to compete with each other. The goals of the course are to become first broadly familiar with the issue of bureaucratic politics and then how this influences each stage of the policy process. Beyond that, the goals include an appreciation of the nature of the bureaucratic control problem and the various strategies designed to address it.

**Prerequisite:** PPOL 801

PPOL 807: Managing Public Organizations

3 Credits

Public policies are more often than not designed by public sector organizations and implemented by them. To understand public policy, then, students must understand public sector organizations and the people who work in them, interact with them, or are served by them. All of these influence the substantive manner in which public policy is actually implemented and the quality of that implementation. Further, many public policy analysts move into line management positions as their careers develop. How well public sector organizations are managed, then, has a significant impact on public policy outcomes and policy analyst careers. This course considers a range of management issues operative in the daily work of public sector organizations. After first discussing the inherent link between public sector organizations and public policy and discussing how public and private sector organizations differ in regard to management, this discussion considers several broad characteristics that distinguish organizations. This includes organizational structures and cultures. It then addresses the roles of leadership and strategic planning in defining the management function. And last, the course surveys a broad range of persistent management issues with a bearing on public policy: managing the civil service system, motivating employees, organizational performance, contracts and networks, and citizen involvement. More dynamically, it examines the management of conflict, change and innovation, and the political environment. The goals of the course include developing both an understanding of the internal and external influences on public sector organizations as they implement public policies and an appreciation of the range of distinct management issues that influence policy outcomes.

**Prerequisite:** PPOL 804

PPOL 808: Public Finance and Budgeting

3 Credits

This course provides an overview of taxation and expenditure choices made by government as essential inputs into the policy process. How big should government be? What is a good source of revenue? What is a good expenditure? The course examines and compares how different theoretical and disciplinary approaches to fiscal analysis — economics, political science, and public administration — answer these questions. In addition to examining the question of the overall size and growth of the public sector and the governmental institutions responsible for fiscal choices, public expenditures will be evaluated from the perspectives of public goods theory (market failure and non market failure), rational budgeting theory and the development of budget proposals, incremental theory, and democratic theory. Revenue choices will be examined through the lens of both normative tax theory on the criteria of adequacy, stability, efficiency, and equity, and positive theories of taxation that address how taxes are actually adopted and altered by governments. An understanding of tax incidence is central to several of these criteria. The course will also examine the balance of government revenues and expenditures by examining the sources, financing, and consequences of government debt and the use of capital budgets. The course will be especially attentive to how policy professionals apply these varied theoretical approaches to answering these questions. The goal of the course is to enable students to become conversant both with the many conceptual languages in which government taxation and budgeting issues are debated and to prepare them for professional positions in which revenue and expenditures are essential instruments in the formulation and implementation of public policy.

**Prerequisite:** PPOL 802, PPOL 801

PPOL 809: Public Policy Analysis

3 Credits

This course provides students an overview of prospective public policy analysis as a means of informing public policy choice. That is, it examines how analysis techniques can be used to assess whether proposed policy solution are likely to solve policy problems. The scientific logic underlying formal prospective public policy analysis is discussed before turning to identifying policy problems, conceptualizing public policies from economic, organizational, and political perspectives, and identifying public policy alternatives as well as the criteria for assessing their likely policy consequences and political and organizational feasibility. Several formal methods of prospective public policy analysis are discussed, including a family of back-of-the-envelope techniques, forecasting methods, simulation methods, discounting for probability, risk, and time, cost-benefit analysis, and political and organizational analysis addressing feasibility. Such formal analyses are not, of course, the only type of information used in the policy formulation and adoption process. Thus, the limits on the role of formal analysis in the policy process are discussed along with the effective reporting of formal prospective public policy analyses.

**Prerequisite:** PPOL 503, PPOL 506

PPOL 810: Policy and Program Evaluation

3 Credits

This course provides students an overview of public policy and program evaluation as a scientifically-based means of assessing whether such programs and policies are effective after they have been adopted and implemented. The scientific logic underlying evaluation research is discussed before turning to conceptualizing public policies and programs as testable hypotheses. After then reviewing measurement theory and its application to public policies and programs, the course discusses the inferential validity criteria used to assess a variety of research designs. A major portion of the course will entail an in-depth discussion of several different research designs, including their logic, implementation, strengths, and weaknesses. These will include discussions of pre-experimental, experimental, correlational, interrupted time series, regression discontinuity, comparison group, case study, and nested research designs. Ethical and other practical problems of constructing evaluation research in the field are examined. Finally, the reporting of evaluation research results along with utilization problems associated with evaluation reports are discussed. The goals of the course include enabling students to both critically interpret evaluation research reports and to design, conduct, and report evaluation studies of public policies and programs.

**Prerequisite:** PPOL 803, PPOL 806
PPOL 811: Project Design and Methods
3 Credits

The capstone project is the culminating course in the Master of Public Policy (M.P.P.) program, in which students demonstrate their ability to design and execute a significant public policy analysis project in their area of public policy specialization. Successful completion of the project is a final demonstration that students can perform the professional work of public policy analysts. Capstone projects will likely be a prospective analysis of a policy proposal or a retrospective program or policy evaluation. Indeed, students may build on the policy analysis research proposals they developed in earlier courses. Students are strongly encouraged to do one or the other of these two types of projects, although other types of analysis projects may be submitted for approval to the M.P.P. program. This course will take students through the conceptualization, measurement, analysis, and reporting stages of their projects.

Prerequisite: PPOL 809, PPOL 810 CONCURRENTS: PPOL 894

PPOL 894: Capstone Experience
1-18 Credits/Maximum of 18

Supervised, professionally oriented student activities that constitute the culminating experience in the program.

CONCURRENT: PPOL 811

PPOL 895: Public Policy Internship
1-18 Credits/Maximum of 18

Supervised, professionally oriented, off-campus, non group instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

PPOL 897: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject with a professional orientation that may be offered infrequently; several different topics may be taught in one year or semester.

Quality and Manufacturing Management (QMM)

QMM 552: Applied Statistical Process Control and Experimental Design
3 Credits

Concepts and techniques of statistical process control and the design of experiments.

Prerequisite: QMM 851

QMM 561: Manufacturing Systems Planning and Control I
3 Credits

Systems, components and configurations, flow of material and information in a manufacturing system.

Prerequisite: admission to the QMM program

QMM 562: Manufacturing Systems Planning and Control II
3 Credits

Flow of material and information in a manufacturing system; emphasis on systems integration.

Prerequisite: QMM 561

QMM 581: Manufacturing Processes of Materials
3 Credits

Characteristics of materials with respect to their properties and associated choices of processing to create a range of products.

Prerequisite: admission to the QMM program

QMM 582: Manufacturing and Supply Chain Strategy
3 Credits

Strategic decision context of manufacturing and its supply chains with linkage to corporate and business strategy.

Prerequisite: enrollment in the QMM program

QMM 593: Field Experience in Manufacturing
1-2 Credits/Maximum of 2

Experiential learning through the firsthand study of manufacturing plants and by interacting with manufacturing leaders.

Prerequisite: admission to the Quality and Manufacturing Management (QMM) Program

QMM 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

QMM 597: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

QMM 851: Quality Management
3 Credits

Concepts of design, assessment, and improvement of quality systems; customer needs analysis, identification of opportunities for application of measurement techniques.

Prerequisite: admission to the QMM program

QMM 871: Design Practice for Manufacturing I
3 Credits

Contemporary concepts in design and design practice with emphasis on engineering, business, and human strategic issues.
Penn State University 1107

**Prerequisite:** or concurrent: QMM 491 or QMM 492

QMM 872: Design Practice for Manufacturing II

3 Credits

Contemporary concepts in design and design practice with emphasis on logistics, risk, design and manufacturing readiness, and production.

**Prerequisite:** QMM 871

QMM 891: Communication and Leadership Skills for Manufacturing Managers

1-3 Credits/Maximum of 3

Applied principles of managerial, visual, and written communication that support the needs of manufacturing leaders.

**Prerequisite:** admission to the QMM Program

**Real Estate (REST)**

REST 550: Contemporary Issues in Real Estate Markets

3 Credits

This course surveys important issues in real estate markets, including special characteristics of real estate markets, valuation of real properties, mortgage mechanics and calculations, valuing investment opportunities, financing corporate real estate, financing project development, and the secondary mortgage market. After taking this course, students will be able to: 1. Demonstrate understanding of basic features of real estate markets; 2. Value real estate using the sales comparison approach and the income approach; 3. Conduct mortgage-related calculations and make mortgage-financing decisions; 4. Calculate before and after tax cash flows from income properties; 5. Make investment decisions for income properties, and conduct sensitivity analysis; 6. Conduct sensitivity analysis, partition Internal Rate of Return (IRR), and apply the real option approach in making investment decisions; 7. Make real-estate-related decisions for non-real estate firms; 8. Demonstrate understanding of the financing of project development; 9. Know cash-flow mechanics and risk-sharing attributes of some mortgage-backed securities, 10. Demonstrate understanding of Real Estate Investment Trusts (REITs) and their role in real estate investment.

REST 560: Real Estate Financial Analysis

2 Credits

This course provides a modern framework for the valuation and analysis of real property using both theoretical and empirical approaches.

**Prerequisite:** B A 531

REST 570: Institutional Real Estate Investment

2 Credits

This course covers the convergence of real estate and the capital markets. It is designed to expose students to the structure, analysis, and valuation of a variety of real estate securities including: residential mortgage backed securities (MBS), collateralized mortgage obligations (CMOs), commercial mortgage backed securities (CMBS), and real estate investment trusts (REITs). The course also focuses on the role of real estate as a specific asset class in modern portfolio theory. After successfully completing this course, students will have a practical foundation for applying rigorous empirical methods in research to topics related to project level valuation and investment, the role of debt (capital structure), analysis of mortgages, private and public equity investment in real estate, and the role of real estate in portfolio allocation models.

**Prerequisite:** REST 830; BA 831

REST 575: Quantitative Analysis for Real Estate

3 Credits

The course provides students with working knowledge of some of the widely used quantitative methods and their applications in business, as well as using statistical analysis software to apply such methods for business analyses and decision-making. By the end of the course, students will understand the purposes of these methods and how to use them to solve real estate, financial, marketing, and risk management problems. - Students will be able to interpret results in ways that are correct, insightful, and useful. - Students will be aware of potential problems of each method and know how to make corrections if these problems are present. - Students will also have developed working knowledge of statistical analysis software widely used by quantitative analysts.

**Prerequisite:** STAT 500

REST 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

REST 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

REST 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

REST 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

REST 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

REST 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 3

No description.
REST 830: Real Estate Institutions and Markets Analysis  
1 Credits  
This course has three objectives: a) provide an overview of modern real estate analysis, b) overview of risk management, and c) develop a series of analytical techniques associated with real estate risk analysis. The course begins with an overview of issues in real estate and risk management. Focus then shifts to a series of legal issues, including property rights and regulations. The remainder of the course deals with the economic and financial evaluation of real estate.

REST 840: Real Estate Analysis Software and Tools  
1 Credits  
This course will provide a comprehensive overview of the leading real estate industry software used for financial and investment analysis. These software programs provide a platform for investment and valuation analysis of individual properties as well as portfolios. Students successfully completing this course will be prepared to sit for various industry certification exams. After successfully completing this course, students will be able to: - Accurately implement a discounted cash flow model - Perform real estate portfolio analysis - Perform real estate valuation analysis and conduct sensitivity analysis - Demonstrate understanding of the basic inputs to cash flow models. - Create standard industry investment and valuation reports - Conduct market analysis.

REST 880: Real Estate Development and Analysis  
2 Credits  
This course exposes students to the real estate development process, emphasizing property analysis and deal execution, as well as marketing, management, zoning, and financing. Course lectures will include a variety of speakers that will cover various aspects of the development process. Material covered in their presentations will be critical to successful completion of the semester research project. The course will include discussions and presentations of development types including, but not limited to Office, Retail, Hotel, Residential, and Warehouse/industrial. Students will work in groups on a semester project to select a site, conduct research, and prepare an appropriate development plan. The project development plan will include a market analysis, project design (including construction costs and preliminary design), and a cash flow pro forma (including financing) to demonstrate the projects feasibility.

Prerequisite: REST 560

Recreation, Park, and Tourism Management (RPTM)

RPTM 501: Leisure Studies Foundations  
3 Credits  
This course provides general background knowledge about the literature and research methods central to the field of leisure studies.

RPTM 510: Tourism Behavior: An interdisciplinary Approach  
3 Credits  
An exploration of the various approaches that have been taken in the social sciences to understand tourism behavior.

Prerequisite: 3 credits in statistics; 3 credits in behavioral science

RPTM 525: Behavioral Patterns of the Outdoor Recreationist  
3 Credits  
Patterns of time and space use; user characteristics; meaning of participation; facilitation of environment-use enhancement.

RPTM 527: Social Psychology of Leisure  
3 Credits  
Application of the methods, constructs, and theory of social psychology to the study of leisure, outdoor recreation, and therapeutic recreation.

Prerequisite: PSYCH420 , SOC 403

RPTM 530: Research Methods in Leisure Studies  
3 Credits  
Research techniques, including methods, research design, techniques for data collection, as applied to relevant problems in the leisure studies field.

RPTM 533: Leisure Studies, Surveys, and Appraisals  
3 Credits  
Advanced procedures related to leisure, recreation, and park research.

Prerequisite: RPTM 530 ; 3 credits in statistics

RPTM 535: Collection and Analysis of Qualitative Data  
3 Credits  
In this course, students will be given an overview of and have the opportunity to apply many techniques employed by qualitative social science researchers. A particular emphasis will be on inductive, fieldwork-based research methods including participant observation and in-depth interviewing. During class meetings students will participate in seminar discussion of assigned reading material and the shared experiences associated with the preparation of course assignments. These assignments will develop methodological experience through activities conducted locally. Across the semester students will also develop a more elaborate funding proposal for research based on qualitative methodologies. The course will be of particular value to students preparing for thesis or dissertation research utilizing qualitative methods. Though qualitative research is often associated with an interpretivist or humanistic research paradigm, participants espousing a scientific/positivist paradigm are also encouraged to enroll, as are students from outside of Recreation, Park, and Tourism Management.

RPTM 537: Scholarly Development in Recreation, Park, and Tourism Management  
3 Credits  
Students from outside of Recreation, Park, and Tourism Management are also encouraged to enroll. This course, taught from a recreation, park and tourism management perspective, provides an overview of the varied expectations and responsibilities for doctoral graduates at universities/colleges, non-profit organizations, and governmental agencies. Topics include grant/contract proposals, scholarly and professional publications, and the development of professional vitae, narrative, and teaching portfolios.
RPTM 540: Public and Private Recreation Lands and Waters
3 Credits
Public and private roles and interactions, allocation of resources, use policies, open space concepts, private enterprise developments, legal controls.

RPTM 545: Philosophical and Social Bases of Leisure
3 Credits
Philosophical and social bases of leisure; analysis of critical issues of leisure for philosophical and social implications.

RPTM 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

RPTM 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

RPTM 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

RPTM 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

RPTM 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University.

RPTM 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

RPTM 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

Religious Studies (RLST)

RLST 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Research Integrity and Scholarly Ethics (RISE)

RISE 500L: Responsible Conduct of Research in Life and Health Sciences
1 Credits/Maximum of 2
Responsible conduct of research (RCR) is the foundation upon which science depends for rapid progress and appropriate allocation of credit for research accomplishments. In the life and health sciences there have been dramatic changes in the research environment over time that have led to high-stakes professional outcomes for research scientists: multi-million dollar research grants, high-visibility international awards, institutional prestige. Personal accomplishments are intricately tied up with these professional outcomes: career consequences (tenure, expanded research group, etc.), significant personal financial rewards (royalties, start-up companies, etc.), and personal prestige and recognition, among others. These increasing professional and personal pressures on research scientists can have very real impacts on the day-to-day decisions of scientists: appropriate data acquisition and management, proper allocation of credit, responsible use of animals, responsible work with human subjects, appropriate advising and mentoring of students, respect of intellectual property, and the avoidance of conflicts of interest and commitment. This course explores the ethical basis for the responsible conduct of research, and highlights the challenges faced by today’s scientists. Students will learn about past failures in the responsible conduct of research that inform the current regulatory environment, understand the current expectations of biomedical scientists beyond the regulations, and, through the use of case studies, explore real ethical dilemmas for which there are not always easy answers. At the conclusion of this course, students will have both intellectual and practical resources to deal with ethical challenges they might face in their careers by making appropriate, ethical decisions.

RISE 597: Special Topics
1 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

Rural Sociology (RSOC)

RSOC 502: Use of Theory in Rural Sociology
3 Credits
Examine and evaluate metasociology of alternative theoretical systems applicable to rural society, with emphasis on American society.

Prerequisite: 24 credits in sociology, including 6 in rural sociology and 3 in sociological theory.

RSOC 508: Sociology of Agriculture
3 Credits
Sociological analysis of changes in the organization of agriculture and food systems in the United States and developing countries.
RSOC 513: Research Methods in Rural Social Sciences

3 Credits

Scientific method in planning and conducting research.

RSOC 514: Qualitative Research Methods

3 Credits

Learn core approaches for collecting, interpreting and analyzing qualitative data within rural sociology. RSOC 514 Qualitative Research Methods (3) This course provides tools often described as qualitative methods of social inquiry. The course covers basic techniques for collecting, interpreting and analyzing qualitative data, paying particular attention to their application within rural sociology. Special focus is given to two methods - ethnographic observation and in-depth interviewing. The course operates on two interrelated dimensions, one focused on the theoretical traditions underlying different approaches to qualitative research, the other focused on the practical techniques. These dimensions are linked through reading and critiquing diverse examples of qualitative research, some clearly exemplary, some problematic. The goal is to understand the promise and possible pitfalls of qualitative social research.

RSOC 516: Change in Rural Society

3 Credits

Social change in rural society, emphasizing prediction and control of the change process. Even years. RSOC (CEDEV) 516 Change in Rural Society (3) Rural America has experienced change throughout its history, but the most rapid have occurred in the past three decades. Forces of urbanization, industrialization, technological change and globalization of the economy drive change in rural America, and the effects of these forces differ across the United States. Some rural areas benefit from the changes that occur while others are devastated. Some rural people and places are able to adapt and view change as an opportunity, while others are unable to respond to the forces that threaten them. Individuals, families and communities have changed in response to these broad forces. This becomes manifest in new patterns of inequality, family life, educational attainment, migration, age and racial patterns, health and well-being, and local service availability. Questions examined in this course include: What are the theories that explain or describe the social change that has been affecting rural people and places? What industrial restructuring and economic change has occurred in rural areas, how has it affected rural areas, and what drives this restructuring? What other social change has taken place, and can we determine potential sources of that change? What are the options available to rural people and communities as they adapt to forces of change, and how much can they influence their own futures? Underlying each of these questions is the issue of whether the well-being of rural people, families, and communities has improved or is threatened by these changes, and which rural areas are most likely to benefit and which are threatened. Students will leave the class with a broad understanding of the forces affecting rural America, and how and why those forces influence some people and places differently. Grades are assigned in this class based on a term paper on a topic related to rural social change, reaction papers written about each set of reading assignments, serving as discussion leader, and class participation.

Cross-listed with: CEDEV 516

RSOC 517: International Rural Social Change

3 Credits

Implications of planned change for international rural societies, considering basic structural constraints, known institutional linkages, and potential synergetic consequences. RSOC (CEDEV) 517 International Rural Social Change (3) Three-quarters of the world's population live in developing countries where problems of hunger, malnutrition, underemployment, high morbidity and mortality, overurbanization, and inadequate housing, (to name just a few) often are severe. This seminar covers the sociology of economic change in developing countries. Through an extensive list of readings, a series of topical videos, and in-depth class discussions, seminar participants should come away with a firm grounding in the ways development has been defined, the social and economic problems facing developing countries today, the basic ways in which economic development has been approached theoretically and empirically, the implications for developing countries of being embedded in a larger world economy, the influence of multinational corporations, the policies that developing countries have followed in fostering economic growth, the nature of foreign aid, the causes and consequences of Third World debt, the nature of the informal economy, rural development and land reform, world hunger and the Green Revolution, and other topics.

Cross-listed with: CEDEV 517

RSOC 522: Data Analysis in Rural Sociology

1 Credit

Analysis of research data in rural sociology using computer library programs.

Prerequisite: or concurrent: AG 400

RSOC 525: Fertility, Population Change, and Development

3 Credits

Fertility and population growth in less-developed countries; theories of fertility change, agricultural development, and population policies.

Prerequisite: SOC 423 or prior work in population

RSOC 530: Sociology and Demography of Poverty in the United States

3 Credits

An in-depth treatment of sociological and demographic dimensions of poverty in rural and urban areas of the United States.

RSOC 552: Theoretical Frameworks for Rural Community Research

3 Credits

Application of community theories to the study of communities in rural areas. RSOC 552 Theoretical Frameworks for Rural Community Research (3) Communities form the fabric of social life in rural areas. It is in these communities that individuals live and work, and experience the broader society and culture. It also is in these communities that individuals deal with the past and make decisions about their own futures. Knowing the theoretical underpinnings of communities in rural areas is crucial for understanding issues of social and economic well-being. This course examines sociological theories of community and how they relate to understanding the organization, structure, interactions and development of rural communities. Rural community theory also plays a
role in understanding how community context influences individual and family well-being. In this course, students will gain an appreciation for the role of rural sociology in the study of community. They will read and evaluate theoretical essays and how the theories have been applied in empirical studies of rural communities. The goal is to increase student knowledge and understanding of the research process that links theory and hypothesis development as it relates to the study of community in rural areas. Students will enhance their skills and obtain experience in organizing and leading class discussions; reading, interpreting and integrating theoretical and empirical studies; writing a book review; and writing essays that integrate ideas from assigned materials with student evaluations of the materials. Students will be evaluated on class participation, written essays evaluating key topics, organizing and leading class discussion, and a written book review. Rural Sociology 452, or its equivalent, is a prerequisite for this class.

Prerequisite: CED 452
RSOC 555: Human Dimensions of Natural Resources
3 Credits
Identification of the interrelationships and influence of human behavior and natural resources.
RSOC 573: Methods of Survey Data Analysis
3 Credits
Use of multivariate procedures in the analysis of survey data in the rural social sciences.
Prerequisite: AG 400
RSOC 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers
RSOC 594: Research Topics
1-18 Credits/Maximum of 18
Supervised student activities on research projects identified on an individual or small-group basis.
RSOC 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.
RSOC 597: **SPECIAL TOPICS**
1-9 Credits/Maximum of 9
RSOC 597G: **SPECIAL TOPICS**
3 Credits
RSOC 600: Thesis Research
1-15 Credits/Maximum of 999
No description.
RSOC 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.
RSOC 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Provides advanced standing graduate students from a research oriented curriculum the opportunity to receive experience/supervision in resident instruction in higher education.
RSOC 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

Russian (RUS)
RUS 501: Readings in Russian Literature
3-6 Credits
No description.
Prerequisite: RUS 204
RUS 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

School Psychology (SPSY)
SPSY 500: Professional Issues in School Psychology
1-3 Credits/Maximum of 3
Orientation to the field through study of unique problems, current issues, ethical and legal matters, unique cases, and research projects.
SPSY 503: Development Across the Life Span
3 Credits
This is a graduate level survey course on the scientific discipline of human development across the life span. S PSY 503 Development Across the Life Span (3) The purpose of this course is to give graduate students, especially in the professional practice areas of psychology, such as counseling psychology, school psychology, and clinical psychology and other developed practice areas (e. g., counselor education), an overview of the study of human development across the life span. This survey of the scientific discipline of human development will cover three major areas, with a cultural emphasis: theory, methodology, and research findings. A variety of influential development theories (non exhaustive), in conjunction with classic and contemporary research, will be examined with the goal of providing a framework for comparing and contrasting various theories, concepts, and supporting research as well as understanding their use in the professional practice and research endeavors.
Prerequisite: graduate student status, with priority given to those in the professional practice areas of psychology, such as clinical, counseling, and school psychology, and other developed practice areas (e.g., counselor education)

SPSY 510: Supervision of Pupil Service Personnel

1-10 Credits/Maximum of 10

Program supervision and professional leadership in university clinics and school systems.

Prerequisite: S PSY595A

SPSY 517: Social Aspects of Behavior in Education

3 Credits

A critical and detailed examination of social behavior in canons of classic and contemporary theoretical and empirical work. S PSY 517 Social Aspects of Behavior in Education (3) Social aspects of behavior are fundamental to the practice of professional psychology. This course is designed to provide graduate students in the professional areas of psychology and other developed practice areas a critical and detailed examination of social behavior. Specifically, the course is also designed to illustrate how the individual and social interaction shape and are shaped by the cultures and social situations in which they exist. Students will have the opportunity to acquire and demonstrate substantial understanding of and competence in the current body of knowledge in mainstream social aspects of behavior. Topics that will be addressed are the social cognition, attribution, affiliation, attraction, and social comparison, aggression, equity, and social exchange attitudes and attitude change, conformity, prejudice and discrimination, and group dynamics. Presented within each of these topics will be: (a) the canons of classic research and theory, (b) contemporary theoretical and empirical work, and (c) recent events that show the presence of the social aspects of psychology in daily life. As a result, a focus of each topic will be on the application of social aspects to the practice of psychology and student's own research.

SPSY 530: Psychoeducational Interventions

3 Credits

Development of empirically validated psychoeducational interventions for academic and behavioral problems experienced in school by children and adolescents.

SPSY 535: School-Based Psychological Interventions for Children and Youth

3 Credits

Development of empirically supported psychological and psychoeducational interventions for behavioral and emotional concerns among school-aged children. S PSY 535 School-Based Psychological Interventions for Children and Youth (3) This course is an advanced graduate course that will be offered in the spring semester. Topics will include (a) psychological theories underpinning psychological interventions, (b) introduction to basic individual and group helping and communication skills, (c) criteria for empirically supported psychoeducational interventions, (d) issues related to individual characteristics and medical needs that potentially can impact educational progress, and (e) school-based individual and group crisis intervention skills.

Prerequisite: EDPSY450, EDPSY475, PSYCH461

SPSY 540: Academic Instruction and Intervention

3 Credits/Maximum of 999

This course complements the school-based intervention sequence for students enrolled in the School Psychology doctoral program. Academic Instruction and Intervention complements the school-based intervention sequence for students enrolled in the School Psychology doctoral program. This course covers the theoretical and empirical foundation for effective instruction, academic skills assessment, and academic intervention for K-12 students. This course will provide an overview of specific teaching behaviors associated with positive student outcomes and provide a framework for assessing those behaviors. In addition, this course will explore effective academic interventions for students who need support beyond what is typically provided in the classroom environment. Coursework will emphasize theoretical and empirical issues; however, students will also work to apply intervention skills in practice.

Prerequisite: S PSY 500

SPSY 551: Professional Development of School Psychologists in Working with English Language Learners (ELL)

3 Credits

This course is designed to educate school psychology graduate students on accommodations and adaptations for diverse learners, per Pennsylvania’s guidelines. S PSY 551 Professional Development of School Psychologists in Working with English Language Learners (ELL) (3) This course is designed to situate information about language and English learners in the context of working school psychologists. The first half of the course will provide foundational information on the history and sociopolitical influence of language, native language development, and second language acquisition through use of the lens and application of a school psychologist. The second half of the course will carry over the information learned and focus on directly applying it to the best practice of a school psychologist as a scientist-practitioner by understanding and using sound research outcomes in providing educational services (assessment, intervention, and consultation) to ELL students (K-12) with disabilities or at-risk.

SPSY 554: Psychological and Educational Evaluation of Exceptional Children

3 Credits

Administration and interpretation of individual tests other than the Stanford-Binet, WISC, WAIS.

Prerequisite: S PSY559

SPSY 555: Special Education, School Governance, and School Law

3 Credits/Maximum of 999

Special Education, law, and school governance will provide a framework for how schools operate to help school psychologists effect change. This course will provide a basic framework of how school systems operate in order to help school psychologists and other potential school leaders affect change. Individuals involved in the operation of public schools must be familiar with the laws that govern these educational institutions because legal developments impact schools, educators, and parents. Schools are political systems that affect the working world of educators.
through the use of power and influence, bargaining, and negotiation. Thus, related topics will include educational leadership, policy and governance, negotiations and personnel management, legal aspects of public schools, business and finance, and school and community relations.

SPSY 556: Psychological Assessment of Preschool and School-Aged Children

3 Credits

Study of cognitive/affective tests; use of systems (analytic, multivariate statistical, actuarial methods of data combination) in decision-making processes. Studies indicate that a major job function of school psychologists is the evaluation and classification of children who are thought to be exceptional. Diagnosis of learning and personal/social problems of children is complex and highly dependent upon assessment strategies. Although individual-level diagnostic tools are still a hallmark of school psychological practice, up-and-coming professionals also need to be prepared to think through universal screening, progress monitoring, program implementation, and systems-change to support children with social-emotional problems as part of three-tiered service delivery models such as School-Wide Positive Behavior Intervention and Supports, school-based mental health, and Response to Intervention frameworks. Within this overall ‘blueprint’ the course will focus on six critical areas: 1. The evaluation of specific assessment techniques in relation to acceptable psychometric standards to include a review of universal screening, progress monitoring, and individual-level/targeted techniques (to include lethality risk assessment including risk for harm to self or others). 2. The statistical selection, use, and adaptation of diagnostic batteries. 3. The use and interpretation of computer output in the evaluation of predictive validity, clinical utility, bias, and clustering of both psychological variables and children. 4. Comprehensive case planning for social-emotional assessment in school settings and carrying out mock evaluations that emphasize social-emotional concerns for students. 5. The use of diagnostic reports as vehicles for facilitating instructional and social-emotional goal planning for children. 6. The reporting of results of screening and diagnostic results to parents and teachers to facilitate shared understanding.

Prerequisite: EDPSY400, EDPSY450, EDPSY554 or S PSY559

SPSY 559: The Individual Psychological Examination

3 Credits

Demonstrations and practice in widely used ability and aptitude tests; psychological report writing.

Prerequisite: 15 credits in psychology and a course in measurement

SPSY 561: Consultation in Educational Settings

3 Credits

Prepares students to consult with teachers, administrators, parents, and other professionals about academic, behavioral, social-emotional, and programmatic issues. S PSY 561 Consultation in Educational Settings (3) This course will be an advanced graduate seminar which will be offered in the fall semester by the School Psychology program. Topics will include: (a) the history of consultation; (b) a review of the major consultation models (mental health, behavioral, instructional, organizational development); (c) research literature on consultation; (d) application of the consultation models in practice; (e) cross-cultural consultation; and (f) ethical and legal issues in consultation. Students completing this course will have a solid grounding in consultation theory and research as well as supervised experiences consulting with educators. Final grades will be based on a number of criteria including classroom participation, analyses of daily readings, a mid-semester examination, a final paper, written logs of consultation activities, regular attendance, and active participation in classroom discussions and activities. Although a mandatory course for advanced graduate students in School Psychology, the course will also be a useful addition to the training of other graduate students who will be consulting with parents or teachers around psycho-educational issues. To benefit from the course, students should have some prior training in assessment and intervention. Prior to working with educational professionals, students will participate in role-plays and simulations to hone their skills. Actual consultation sessions will be videotaped and students will also be expected to critically analyze the videotapes as part of the process of self-improvement and to demonstrate their ability to learn from their own mistakes.

Prerequisite: EDPSY450, SPLED401

SPSY 575: Child and Adolescent Psychopathology

3 Credits

This course will familiarize students with specific psychiatric disorders of childhood and adolescence encountered by mental health professionals in schools. S PSY 575 Child and Adolescent Psychopathology (3) This course will familiarize students with many of the child and adolescent disorders that mental health professionals encounter in working with preschool and school-age children. The primary focus of the course is to provide students with an historic understanding of the epidemiology, etiology, diagnostic criteria, and long-term implications of specific childhood disorders, with an emphasis on those likely to be encountered by practicing school psychologists. In addition to these topics, class discussion will focus on current controversies and research directions regarding the study of childhood psychopathology as well as ongoing changes to diagnostic systems. Individual class sessions will consist of discussion, group activities, student presentations, and the observation of actual casework. Students are expected not only to participate in but also to facilitate group discussions. Students will be encouraged to share their experiences working with children and adolescents with psychological disorders. Because childhood psychopathology is a broad domain, discussion topics for the course primarily reflect the disorders most frequently observed in typical school populations. Through individual projects, however, students will have the opportunity to explore areas of child or adolescent psychopathology that may not have been addressed in this course.

Prerequisite: EDPSY475 and EDPSY406 and either EDPSY450 or EDPSY554

SPSY 594: Research Topics

1-3 Credits/Maximum of 6

Graduate seminar examining current research in the field of School Psychology.

Prerequisite: EDPSY475 and EDPSY406 and either EDPSY450 or EDPSY554
SPSY 595: **SPECIAL TOPICS**
1-6 Credits/Maximum of 10

SPSY 595A: Practicum
1-6 Credits/Maximum of 6

Clinical experience with children under supervision in a variety of settings requiring service, including practice in synthesizing data and observations.

Prerequisite: PA Act 34 clearance required. In addition, non-Pennsylvania residents must provide evidence of an FBI background information check. (Forms: 228 Chambers)

SPSY 595B: Internship
1-10 Credits/Maximum of 10

Long-term placement in settings providing work for school psychologists with children, parents, teachers, administrators, and service agencies, under supervision.

Prerequisite: PA Act 34 clearance required. In addition, non-Pennsylvania residents must provide evidence of an FBI background information check. (Forms: 228 Chambers)

SPSY 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

SPSY 597: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject that may be offered infrequently; several different topics may be taught in one year or semester. A specific title may be used in each instance and will be entered on the student's transcript. Multiple offerings may be accommodated by the use of suffixes, A, B, etc.

SPSY 597A: **SPECIAL TOPICS**
1 Credits

SPSY 600: Thesis Research
1-15 Credits/Maximum of 999

No description.

SPSY 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999

No description.

SPSY 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6

Supervised Experience in College Teaching.

SPSY 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999

No description.

SPSY 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999

No description.

SPSY 843: Prevention Strategies and Programming
3 Credits

Addresses prevention program development, implementation, and evaluation, along with theoretical and empirical underpinnings, ethical and multicultural issues related to prevention.

Cross-listed with: CNED 843

Science (SC)

SC 595: Internship
1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Full-Time Equivalent Course

Science Education (SCIED)

SCIED 550: Science Education Curriculum
3 Credits

History, analysis, and evaluation of precollege science curricula. SCIED 550 Science Education Curriculum (3) The course examines the precollege science curriculum: its history in the United States, the sociocultural influences that shaped it, the impact of recent state and national science standards documents, the evolution of changing theoretical and practical aspects of curriculum design, and the influence of science education research on curriculum. Participants investigate and apply methods for analyzing and evaluating curricula, and review research on the impacts of curriculum and instruction on student learning and other outcomes. Broader questions concerning economics, ethnicity, language, gender, and class will inform this work.

SCIED 551: History, Philosophy, & Sociology of Science and Science Teaching
3 Credits

Examination of the implications of history, philosophy, and sociology of science for science teaching. SCIED 551 History, Philosophy, & Sociology of Science and Science Teaching (3) This course explores science and school science studies from a sociocultural perspective. Topics draw from scholarship in the sociology, philosophy, and discourse of science. Among the central topics for discussion will be the social context of disciplinary knowledge, problems of experimentation, ideological bias in research, feminist critiques of science, the discourse of school science, multicultural issues in science, and knowledge access issues. The focus will remain on curriculum, instruction, and learning throughout the
course. The course goals include learning about the history, philosophy, and sociology (HPS) of science as related to science education, learning about educational research and scholarship, applying ideas from HPS to the field of science education research. Students are expected to examine and interpret contemporary research in science education and related fields.

Prerequisite: graduate standing

SCIED 552: Science Teaching and Learning

3 Credits

Exploration of the theoretical and empirical foundations of the teaching and learning of science. SCIED 552 Science Teaching and Learning (3) This course is an exploration of the foundational empirical and theoretical research in the teaching and learning of science. The first part of the course includes a core of learning theory based in the literature of education and science education. In addition to this theoretical work students will read empirical studies based on different theoretical foundations allowing for the critical examination of the relationship between theory and empirical based on theory. The readings and discussions in this course will be centered on the questions of ‘Is there a science of education that allows us to make instructional decisions in science teaching based on research?’ and ‘What is the theoretical basis of standards-based science education reforms such as inquiry-based science?’ The goal of this course is to help students develop a core foundational knowledge in the science education literature as well as an articulated theoretical framework for teaching and learning they can use to develop their own research projects.

SCIED 558: Research Problems in Science Teaching

3 Credits

Problems and research dealing with curriculum, materials, evaluation, and supervision of science teaching and learning.

Prerequisite: SCIED412 or SCIED458 ; teaching experience

SCIED 583: Survey of Research in Learning Sciences and Technology

3 Credits

Analysis and evaluation of research in domains of learning sciences and technology. This course reviews the empirical research literature from the Learning Sciences and Technology fields. Students will gain experiences reading and understanding research papers to understand modern perspectives on the theories, models, methods, and tools used in the learning sciences.

Cross-listed with: LDT 583

SCIED 590: Colloquium

1-3 Credits/Maximum of 3

continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

SCIED 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

SCIEN 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

SCIEN 855: Precollege Engineering Education

3 Credits

This course is intended to help experienced educators to critically understand the ‘E’ in ‘STEM education.’ Engineering has only recently roared into state and national curriculum standards, venturing out of its traditional lair in higher education. We explore the reasons for this development, as well as the opportunities and challenges that the change presents for students and teachers. As we proceed, we draw upon the varied experiences of participants, including teachers from elementary, middle, and secondary schools, as well as informal settings such as science museums. Because few precollege STEM teachers have studied engineering formally, we review the history and nature of engineering, and work through a number of activities that model aspects of engineering work. Throughout the course, an emphasis is placed on the epistemic practices of engineering, which make the subject unique among school subjects. Contemporary relevant school curricula and informal educational programs are reviewed, and students carry out an actual design project. This course is intended for teachers, and prior formal training in design, modeling, and physics is not required.

Science, Technology, and Society (STS)

STS 589: Ethics and Values in Science and Technology

3 Credits

Study interrelationships of 20th century technological change and human values with emphasis on social and ethical aspects of technological progress.

Social and Behavioral Neuroscience (SBN)

SBN 505: Seminar in Social and Behavioral Neuroscience

3 Credits/Maximum of 12

Each section of this course explores an important topical area within contemporary social and behavioral neuroscience, exploring pertinent concepts, theories, and empirical findings. Topics explored may include the neuroscience underpinnings of social, personality, and emotional development; the neuroscience of aging and memory; and social and affective neuroscience. The intention of this course is to lay a foundation so that students may critically read and conduct research in the topical area, with an emphasis on how the topic can be examined at different levels of analysis, and how integrating information across levels of analysis furthers advancement in the field. Levels of analysis include neurochemical and cellular processes, neural networks and systems, behavioral manifestation, and dynamic feedback from the environmental context. The course will emphasize class participation and provide multiple opportunities to examine related topics in written and spoken form.
Prerequisite: NEURO 520 or NEURO 521

SBN 508: Methods in Social and Behavioral Neuroscience

3 Credits/Maximum of 12

Different sections of SBN 508 will explore important topical areas in the broader domain of research design, experimental and measurement techniques, and data analytic methods that are common to Social and Behavioral Neuroscience or are newly developed, cutting edge methods in the field. Courses will include an examination of (a) the biological process being measured (e.g. what type of neural activity is and is not captured in fMRI), (b) the foundational principles of the experimental and/or measurement technique, (c) the analytical approaches pertinent to the type of data being generated, and (d) methodological issues of particular relevance to the experimental technique and/or design being used. The intent of SBN 508 is to provide students with a strong foundation in research design, procedures, measurement, and data analytic approaches that students can carry forward and use in research projects in Social and Behavioral Neuroscience. SBN 508 will emphasize class participation and provide multiple opportunities to examine related topics in written and spoken form. Courses will also provide students with the opportunity to work with the relevant data types to provide an immersive experience in design and analysis. We anticipate that SBN 508 course sections will be continually revised and updated to reflect new and innovative experimental, measurement, and data analytical techniques that continually appear in the scientific literature.

Prerequisite: NEURO 520; or NEURO 521

SBN 511: Translational Applications of Social and Behavioral Neuroscience

3 Credits/Maximum of 12

This course explores translational applications of Social and Behavioral Neuroscience to a particular population or populations at risk, how neuroscience contributes to a broader multi-level understanding of the phenomenon and more comprehensive theory and evidence-based intervention approaches, and how understandings derived from neuroscience can inform policy and best practice. Content may also address how neuroscience can contribute to the evaluation of behavioral interventions to inform factors such as (a) etiological heterogeneity that may moderate treatment efficacy, (b) neurological processes that mediate the behavioral effects of intervention, and (c) the implications of neuroscience evidence for assessing individual-level responsivity to intervention. These topics naturally integrate advances in the idea of ‘personalized medicine’ to include behaviorally targeted prevention and intervention programs. Topics explored may include the neuroscientific substrates of: substance use, misuse, and addiction, learning disabilities, developmental disability, and behavioral problems. SBN 511 will incorporate interdisciplinary, transactional developmental models that take into account individual characteristics across multiple levels of analysis (i.e. genetic, neurobiological, psychological, behavioral) throughout childhood, adolescence, and adulthood, in interaction with contextual and experiential conditions (family, peers, adversity) that bear directly on individual risk and resilience and, more broadly, policy and best practice. This course aims to lay a foundation so that students may critically read and conduct research in the topical area and understand how the topic can be examined at different levels of analysis. The course will emphasize class participation and provide multiple opportunities to examine related topics in written and spoken form.

Prerequisite: NEURO 520 or NEURO 521

SBN 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

SBN 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

Social Data Analytics (SODA)

SODA 501: Big Social Data: Approaches and Issues

3 Credits

Interdisciplinary integration of computational, informational, statistical, visual analytic, and social scientific approaches to the creation of big social data. This course addresses computational, informational, statistical, visual analytic, and social scientific approaches to the creation of data that are both ‘social’ (about, or arising from, human interactions) and big (of sufficient scale, variety, or complexity to strain the informational, computational, or cognitive limits of conventional social scientific approaches to data collection or analysis). Examples include text, image, audio, video, intensive spatial and/or longitudinal data, data with complex network, hierarchical and/or other relational information, data from distributed sensors and mobile devices, digitized archival data, and data exhaust from sources like social media. Possible topics include sources of social data, data structures and formats for social data, data collection and manipulation technologies, data linkage and alignment, ethics and scientific responsibility in human subjects research, experimental and observational data collection design for causal inference, measurement of latent social concepts, reliability and validity, search and information retrieval, nonrelational and distributed databases, and standards for data preservation and sharing.

SODA 502: Social Data Analytics: Approaches and Issues

3 Credits

Interdisciplinary integration of computational, informational, statistical, visual analytic, and social scientific approaches to learning from big social data. This course addresses the interdisciplinary integration of computational, informational, statistical, visual analytic, and social scientific approaches to learning from data that are both ‘social’ (about, or arising from, human interactions) and ‘big’ (of sufficient scale, variety, or complexity to strain the informational, computational, or cognitive limits of conventional social scientific approaches to data collection or analysis). Topics include alternative scientific models for learning from data (Bayesian inference, causal inference, statistical / machine learning, visual analytics, measurement modeling), analytics issues with big data (variable selection, parallel computing, algorithmic scaling, ensemble modeling, validation), analytics issues with particular structures and channels of social data (network data, geospatial data, intensive longitudinal data, text data), and issues of scientific responsibility and ethics in analysis of big social data.
Social Studies Education (SSED)

SSED 533: Research on Social Studies Education
3 Credits

This course examines current and influential theory and research on social studies education in the context of K-12 schools and curriculum. The field of social studies education is broad and inclusive of different disciplines and academic content that relate to the social education of learners: histories of countries, peoples, social groups, movements, and the world; historical narratives and counternarratives of identities and heritage; notions of citizenship/civic belonging, civic engagement, and social justice; politics and ideologies; media and technology; sociology and sociocultural analyses; economic development, equity, and socioeconomic analyses; geography and world cultures; globalization and globalism; place and environments; and the interplay of individuals, groups, and institutions. How is social content positioned (or neglected) in school curriculum and educational policy? How is social content taught by teachers and learned by young people? How is that learning assessed and used? What are the implications for how young people learn about the world, cultures, social phenomena, and the past? These are kinds of questions that the social studies education research field explores. This course offers an overview of the research base and significant current scholarship on social studies education. It provides students with a grounding in reading and analyzing that literature, synthesizing ideas from across bodies of research, and applying research findings and interpretations to curricular and educational work. Course activities and assignments give students exposure to critically evaluating this research and scholarship and applying research findings to educational practice, curriculum design, professional development, or future academic inquiry.

RECOMMENDED PREPARATION: Teacher certification and/or teaching experience in K-12 Social Studies or a related subject

SSED 535: Teaching and Learning Historical Literacy with Media
3 Credits

Study of how historically oriented media influence learning about past and connect to present with challenges and potential for education.

SSED 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

SSED 897: Special Topics
1-9 Credits/Maximum of 18

Formal courses given on a topical or special interest subject which maybe offered infrequently; several different topics may be taught in one year or semester.

Social Thought (SOCTH)

SOCTH 501: Seminar in Social Thought
3 Credits

Selected topics in the historical development of the tradition in social thought, and a discussion of contemporary issues and debates.

Sociology (SOC)

SOC 500: Introduction to Graduate Study in Sociology
1 Credits

Required of all incoming graduate students in sociology.

SOC 501: Proseminar in Sociology
3 Credits/Maximum of 6

An in-depth introduction to the major specialty areas of Sociology.

Prerequisite: admission to the graduate program

SOC 502: Theories of Society I
3 Credits

Review and analysis of trends and controversies in sociological theory from late eighteenth-century beginnings through the nineteenth century.

SOC 503: Theories of Society II
3 Credits

Review and analysis of trends and controversies in sociological theory in the twentieth century.

SOC 512: Criminological Theories
3 Credits

Survey of theoretical and substantive issues in deviance and criminology, with emphasis on critical review of theories. SOC (CRIM) 512 Criminological Theories (3) This graduate course in Criminological Theories is designed to provide students with a broad understanding of the major theories that have animated the field of criminology since its inception. The course traces the development of criminological theories from the early 20th century to the present and provides students with a targeted exposure to empirical studies that have tested these theories.

Cross-listed with: CRIM 512

SOC 513: Sociological Research Methods
3 Credits

Critical review of methodological issues; research designs; analysis and interpretation of findings.

SOC 516: Education and Demographic Change
3 Credits

Education is one of the most important factors affecting major demographic shifts and processes worldwide, including the first and second demographic transitions. If, as the old sociological adage goes
‘demography is destiny,’ then our destiny is educationally transformed demography. Interdisciplinary research across demography, sociology, neuropsychology, and epidemiology is developing a strong research literature about how the thinking style, behavior, and attitudes of the educated human radically change fundamental dynamics underlying the world’s population. The whole way in which we come to our jobs, spouses, and lifestyles; how many children we have and how we raise them; how long we are likely to live, and what will be our eventual demise are all heavily influenced by how much education we have had. The collective force of widespread education and its influence on rising cognitive abilities, scripts for living, and economic well-being are creating a distinctly new type of human population with major benefits and future challenges for a sustainable human population. At the same time, individuals’ schooling is also influenced by demographic change. This seminar covers key concepts, theories, and methodological issues related to the intersection of demographical and cultural changes from the education revolution and their impact on subsequent demographic processes.

Cross-listed with: CIED 516, EDTHP 516

SOC 518: Survey Methods I: Survey Design

3 Credits

Research design of social, behavioral, and health surveys. PL SC (SOC) 518 Survey Methods I: Survey Design (3) This course is intended to provide graduate students the background to both evaluate published research using survey methods, and – when combined with additional training – to design their own surveys to collect data for their own research. Students will learn the essentials of sampling, questionnaire design, and how surveys may be implemented in different modes: telephone, face to face interviews, mail, or other self-administered modes, and the internet. The course will emphasize how decisions of research design have important implications for the validity, reliability, and quantity of data that will be analyzed to answer key questions in the social, behavioral, and health sciences. Sample design: 2 weeks; Questionnaire design and item analysis: 2 weeks; Telephone Surveys: 2 weeks; Face to face surveys: 2 weeks; Self administered and mail surveys: 2 weeks; Internet Surveys: 2 weeks; Ethics and human subjects protection: 1 week.

Cross-listed with: PLSC 518

SOC 519: Survey Methods II: Analysis of Survey Data

3 Credits

Intermediate course on the statistical analysis of survey data: topics include weighting, complex surveys, missing data, and contextual analysis. PL SC (SOC) 519 Survey Methods II: Analysis of Survey Data (3) This is an intermediate level course in quantitative analysis. It is intended for graduate students who have completed 1-2 semesters of graduate-level statistics (not general research methods) and who are interested in the application of social statistics to the unique aspects of data collected by way of surveys. Surveys have a combination of qualities that represent challenges to valid inference. These include cluster and stratified sampling, under-representation of some groups due to differential response rates, missing data due to item non-response, cross-sectional design, and coarse measurement. Quite often we use surveys to test theories that the original survey designer did not intend to address, raising issues of validity and reliability of measurement. At the same time, surveys offer a number of opportunities and, when combined with other surveys (pooled cross sections) or merged with contextual data, can address a wide range of theoretical puzzles in the social sciences. This course provides an introduction to techniques in applied statistics that have developed specifically to address the special features of survey data. Examples of such techniques are: use of design weights, post-stratification weights, merging surveys with other surveys or auxiliary data, missing data imputation, challenges of causal inference. The class will blend an understanding of the core statistical issues with an emphasis on acquiring an intuition for the theory underlying the statistical models rather than focusing on proofs and estimation. This will provide a foundation for frequent hands-on applications in this seminar and for enrollment in more advanced or more in-depth courses offered by the Statistics department and the various social science departments.

Prerequisite: PL SC503 or SOC 575
Cross-listed with: PLSC 519

SOC 521: Family Demography

3 Credits

Current family demographic research on nuptiality, divorce, household composition, female employment, migration, and fertility.

SOC 522: Demography of the Life Course

3 Credits

The theoretical bases, critical concepts, and methods of life course analysis in the study of demographic transitions.

Prerequisite: SOC 423, SOC 473

SOC 523: Internal and International Migration

3 Credits

Examination of theories, frameworks, and policies related to internal and international migration causes and consequences in developed and developing nations.

Prerequisite: SOC 423 or prior work in population or human ecology

SOC 524: The Demography of Human Fertility

3 Credits

Overview of major issues and methodological approaches in the demographic study of human fertility in developing and developed countries. SOC 524 The Demography of Human Fertility (3) This course provides a graduate-level overview of the study of human fertility, one of the three basic demographic processes (i.e., fertility, mortality, migration) emphasized in the field of demography. The first part of the course will focus on the timing and nature of historical and contemporary fertility declines. The major theories that have been set forth to explain why fertility declines occur will be studied, as will empirical evidence that bears on the applicability of the theories to fertility patterns in specific areas of the world. The second component of the course will focus on fertility patterns in the contemporary United States. Theoretical perspectives on the determinants of fertility in advanced industrial countries will be examined. Variation in fertility by race, ethnicity, and various social characteristics will be addressed. In addition, students will learn how to measure fertility with various types of data (e.g., surveys, vital statistics, censuses) and they will be exposed to a variety of research methodologies employed to assess the nature and determinants of fertility patterns. The class will be organized as a seminar. Major requirements are class participation, leadership of one or more class
sessions, and completion of a class project. The class project can be an empirical research paper, a research proposal, or a literature review. This course covers core content that is essential for demographic training. The course has been approved by the Dual-Title Graduate Degree Program in Demography as a core seminar on demographic structure and change; it can therefore be used by students in that program (in addition to students in Sociology) to fulfill the requirements for the degree.

SOC 525: Immigration, Assimilation, and Inequality
3 Credits

Examine theories, research, and policies on the incorporation of immigrants and their descendants. SOC 525 Immigration, Assimilation, and Inequality (3) Over the last several decades, the diversity of American society has increased substantially as a result of immigration from Latin America, Asia, and other world regions. This has raised numerous questions about the consequences of immigration and the long-term prospects of immigrants and their descendants. The major objective of this course is to provide the foundation for a sociological understanding of the process of assimilation (or incorporation), especially in relation to the structure of opportunities and the reproduction of inequality. This will be accomplished through a survey of contemporary theoretical perspectives, and both quantitative and qualitative studies that evaluate their merits. Although sociology has embraced the study of assimilation since its inception, we will also draw on other disciplines to explore various topics associated with educational attainment, economic mobility, social incorporation, political incorporation, family formation, and ethno-racial identification. Students will be evaluated on the basis of their engagement with weekly readings, as revealed by the quality of their participation in discussions and their written response to weekly essay questions. Students will also be required to write a paper on a topic of their choosing. This paper may be a research proposal, a literature review or a research study. The course will be offered every other year. It may serve as an elective in Sociology and the Dual-Title Graduate Degree Program in Demography as a core seminar on demographic processes.

SOC 526: Health Disparities
3 Credits

This course provides an overview of social factors that lead to demographic disparities in health. H P A(SOC) 526 Health Disparities (3) This course provides a broad exploration of U.S. health disparities. In particular, it examines several types of U.S. health disparities that emerge as a result of individuals' race/ethnicity, socioeconomic status, nativity status and gender. The course focuses on theoretical and methodological strategies for studying health disparities as well as empirical evidence supporting the existence of different health disparities and explanations for understanding and ameliorating them. Students will summarize and discuss weekly readings and apply course materials to understand the state of the field and to carry out an original research project on a particular health disparity that interests them. This course fulfills basic seminar requirements in the Sociology graduate curriculum and serves as a process course for the interdisciplinary Demography dual-title graduate curriculum.

Cross-listed with: HPA 526

SOC 527: Migration, Urbanization, and Policy in the Developing World
3 Credits

This course examines the dynamics of migration and urbanization processes, as well as their policy implications, in non-industrialized regions of the world.

Cross-listed with: AFR 527

SOC 529: Seminar in Race and Ethnicity
3 Credits

Reviews the status of U.S. racial and ethnic minority groups; analyzes factors influencing inequality and inter-group relations. SOC 529 Seminar in Race and Ethnicity (3) The seminar opens with a review of the status of central racial and ethnic minority groups in the United States: African Americans, Latinos, Asian Americans, American Indians. Educational and economic status are considered, along with such factors as family structure, geographical location, residential segregation, language, and involvement with the criminal justice system. Institutional patterns that potentially contribute to observed statuses are reviewed. Two groups of African Americans receive special attention: the urban 'underclass' that sits at the bottom of the socioeconomic ladder and middle class blacks. Consideration of economic stratification by race and ethnicity includes analysis of wealth disparities and the differences in life chances they create. Structural and cultural explanations of economic outcomes are contrasted. Patterns of economic assimilation shown for recent immigrants are outlined, and the notion of 'segmented assimilation' is introduced. Economic interdependence among minority groups receives attention. Extensive recent evidence about employment discrimination is reviewed. The relevance of white Americans' racial attitudes to political opinions and policy outcomes receives attention in readings that focus on policy issues affecting both African Americans and American Indians. Classic and recent frameworks for understanding prejudice and discrimination are introduced. Patterns observed for African American targets are contrasted with those for Latinos and Asian Americans. Research on the outcomes of intergroup contact is reviewed, along with recent 'contextual' studies that assess the influence of community characteristics on racial attitudes. Racial/ethnic identity is put in the spotlight, with attention to African Americans but also American Indians, West Indian immigrants, Latinos, Asian Americans, multiracial groups, and white Americans. ‘Pan-ethnicity’ is considered. The seminar is designed to familiarize graduate students in sociology and related fields with central information about the evolving status of racial and ethnic minority groups in the U.S., and with theoretical perspectives developed in sociology and other social science disciplines to understand racial/ethnic prejudice, discrimination, and inequality.

SOC 530: Sociology of Family
3 Credits

An in-depth introduction to the sociological study of the family. SOC 530 Sociology of Family (3) This seminar will cover critical issues or current debates and issues regarding family policy in the United States. Examples of current family policy debates include welfare, class, gender, etc.
SOC 531: Family Disorganization: Stress Points in the Contemporary Family

3 Credits
Focuses on divorce, remarriage, incest, family violence as well as problems associated with family formation and parent-child relations.

Cross-listed with: HDFS 531

SOC 532: Global Health and Mortality

3 Credits
Major issues in international health from a demographic perspective; special attention to the Global South and to data quality.

Prerequisite: SOC 573

SOC 533: Sociology of Religion Seminar

3 Credits
A survey of the sociology of religion designed to help students conduct and critique social science research.

SOC 534: Childhood and Education in Sociological and International Comparative Perspective

3 Credits
The course objective is to use an international comparative lens and sociological perspective to examine the social, cultural, political and economic forces that shape childhood and the role education plays in this process.

Cross-listed with: CIED 534, EDTHP 534

SOC 537: Biosocial Perspectives on the Family

3 Credits
The implications of knowledge from behavioral endocrinology, behavior genetics, and evolutionary psychology for understanding family relationships and child development. HD FS 537. (SOC 537) Biosocial Perspectives on the Family (3) Breakthroughs in the way biological variables are measured and modeled have generated new findings that greatly increase our understanding of the reciprocal influences between family relationships, child development, and biological factors. Specifically, advances in the study of hormones, genetics, evolution, pharmacology, and immunology have led to important advances in our knowledge of gender, becoming a parent, early child development, middle child, and adolescent development, parent-child relations, courtship and mate selection, quality of intimate relations, separation and divorce, incest, and dominance and family violence. Students are required to keep a journal of researchable ideas during the first five weeks of class. The purpose is to give students practice in identifying research needs and opportunities. The journal should include 4-6 research problems, each developed in 2-3 typed pages. The majority of each entry should be a clear statement of what knowledge gains would be realized by conducting the study and why they are important. The remainder of the statement should include consideration of the data you would use, measures of major variables, and analytic strategies. Think of it as a brief portfolio of thesis, dissertation, or research publication ideas. Entries on research projects in which you are already involved are not eligible for inclusion in the journal. On the last page of the journal, indicate which problem you would like to develop into a more detailed proposal during the remainder of the semester and why. Turn in the journal during week 5. I will evaluate your entries and comment on your selection idea. The rest of the semester will be spent on developing one of the ideas to a full-blown proposal (about 20 pages). You should turn in as many drafts as needed to receive a good grade for this segment of the course. I expect you to turn in three or more before the end of the semester. We will meet about each draft and go over my comments. Proposal drafts should be spaced out over the semester. The last week of the semester will be devoted to presentations of research proposals after which class members will offer comments and suggestions. Your grade will be based on the proposal draft you turn in the last week of the class. Twenty-one percent of the course grade is based on the research proposal.

Cross-listed with: HDFS 537

SOC 538: Sociology of Education

3 Credits
Provides students with an overview of dominant sociological theoretical perspectives on schools, schooling, and education in modern society. SOC (EDTHP) 538 Sociology of Education (3) This graduate course in the Sociology of Education covers the major sociological theories and empirical research on the role of formal education in society. The object of the course is to have the student become conversant with the main lines of sociological research applied to education and social development at the individual, community, and societal levels. Since sociology of education has had considerable impact on educational policy over the past 50 years, a second goal of the course is to understand this relationship and avenues for future research and policy analysis from a sociological perspective. This course is a central topic in the general study of social stratification and hence in pursuit of the Ph.D. in the Educational Theory and Policy and the Sociology program. The format of the course is a didactic seminar with extensive written assignments as the usual form of evaluation.

Cross-listed with: EDTHP 538

SOC 544: Current Issues in Complex Organizations

3 Credits
Critical survey of recent developments in sociological study of organizations and the theory of bureaucracy, including reciprocal effects on environments.

SOC 551: Social Stratification and Social Change

3 Credits
Origin and development of stratification systems and inequality among and within societies; social mobility; change in stratification systems.

SOC 553: Educational Mobility in Comparative Perspective

3 Credits
Role of education in social mobility, using quantitative, qualitative, and historical methods; focuses comparatively on Britain, East Asia, and South America. CI ED 553/SOC 553/EDTHP 553/HI ED 553 CI ED 553. (SOC 553, EDTHP 553, HI ED 553) Educational Mobility in Comparative Perspective (3) Sociologists interested in higher education have attended to the relationships between postsecondary institutions and other institutions, as well as the impact on higher education of general social and demographic processes. Many of the classical ideas in sociological
theory, including those of Max Weber and Emile Durkheim, have surfaced in recent debates over the nature of higher education. Sociologists in the U.S. have explored such questions as: the gatekeeping function of higher education; the impact of universities on stratification; and the socializing environment for women and minorities. This seminar introduces some of the classical theorists and contemporary researchers of the sociology of higher education. All seminar participants will be required to write a sample research proposal, based on the readings from the seminar.

Cross-listed with: CIED 553, EDTHP 553, HIED 553

SOC 557: Sociology of Higher Education
3 Credits

Reviews theory and current sociology research on student access, achievement, and governance in postsecondary education, with applications to policy analysis. EDTHP (HI ED, SOC) 557 Sociology of Higher Education (3) Sociologists interested in higher education have attended to the relationships between postsecondary institutions and other institutions, as well as the impact on higher education of general social and demographic processes. Many of the classical ideas in sociological theory, including those of Max Weber and Emile Durkheim, have surfaced in recent debates over the nature of higher education. Sociologists in the U.S. have explored such questions as: the gatekeeping function of higher education; the impact of universities on stratification; and the socializing environment for women and minorities. This seminar introduces some of the classical theorists and contemporary researchers of the sociology of higher education. All seminar participants will be required to write a sample research proposal, based on the readings from the seminar.

Prerequisite: graduate students only, except with permission of instructor; EDTHP/SOC 416 is recommended
Cross-listed with: EDTHP 557, HIED 557

SOC 559: Communities and Crime
3 Credits

Crime has been shown to differ significantly across neighborhoods of different racial composition and of different socioeconomic characteristics. Specifically, neighborhoods characterized by high poverty and high segregation are more likely to exhibit higher violence, higher homicide rates, and higher disorder. Moreover, growing up in a highly disadvantaged neighborhood predicts whether youth will be involved in delinquency, risky behavior, and violent crime. In this course, students will learn about the major debates and arguments in the field on how such differences can come about and what may be their consequences. Students will learn to recognize, identify, and apply criminological and sociological theories and thinking on the effects of neighborhoods' social structures on crime. In particular, we will focus on classic and contemporary cutting edge thinking on poverty, social isolation, disorder, collective efficacy, institutional (dis)trust, demographic v. cultural heterogeneity, segregation, immigration, and the physical environment. We will address the theories, methods, and policies related to understanding key features of places such as social (dis)organization, social capital, spatial embeddedness, opportunity infrastructure, and cultural capital.

Cross-listed with: CRIM 559

SOC 560: Urban Sociology
3 Credits

Examination of the structure and dynamics of North American cities and of residents’ experiences in such settings. SOC 560 Urban Sociology (3) The major objective of Sociology 560 (formerly 597F) is to survey the field of urban sociology, providing graduate students with a solid grounding in the literature on North American cities. The course heavily emphasizes recent writings by sociologists. However, the historical development and continuity of the major questions that have guided urban research receive more than passing attention, as do the contributions of geographers, psychologists, and others outside the discipline. A broad range of theoretical perspectives, substantive topics, and methodological strategies are through reading, lecture, and discussion. Students are expected to be active, critical consumers of urban knowledge but also producers of it: they must independently formulate and address a research problem then share their results with their classmates. Once students complete Sociology 560, they should be ready to enroll in more specialized urban seminars and to teach urban sociology at the undergraduate level.

SOC 572: Foundations in Causal Analysis in the Social Sciences
3 Credits

Methods for estimating causal effects in observational data, including matching, counterfactual, and related approaches. SOC 572 Foundations in Causal Analysis in the Social Sciences (3) This course investigates methods for estimating causal effects in observational (non-experimental) data. There are three common strategies for estimating causal effects in observational data. One strategy is to condition on variables to block all the back-door paths from the causal variable to the outcome variable. Examples: matching (including propensity scores) and regression with control variables. A second strategy is to use exogenous variation to isolate the ‘unconfounded’ covariation in the causal and outcome variables. Examples: instrumental variables (IVs), natural experiments, fixed effects. A third strategy is to isolate the mechanisms through which the causal variable operates to affect the outcome variable. These methods are becoming more standard in sociology and related fields. The course will cover the following methods: standard regression and its limitations; natural experiments and instrumental variables; counterfactual or potential outcomes methods; matching methods, including propensity scores; fixed-effects and random-effects; structural equation methods; mixed methods. The course is distinguished from other courses in the university by its focus on the use of statistical methods for causal inference. Whereas other courses describe regression or structural equation models as general methods for one’s statistical toolkit, this course concentrates on when, and how, regression or structural equation approaches can be used to draw causal inferences from non-experimental data. Examples will be drawn from a variety of social science disciplines, including economics, political science, and criminology, as well as from sociology.

SOC 573: Demographic Techniques
3 Credits

Models and measures of vital processes (fertility, mortality, migration) and their effects on growth and age structure of human populations.

Prerequisite: STAT 200
SOC 574: Statistical Methods for Social Research

3 Credits

Basic concepts of statistics; linear regression; computer software; analysis of social surveys; causal inferences from nonexperimental data.

Prerequisite: 3 credits in statistics and 3 credits in research methods.

SOC 575: Statistical Models for Nonexperimental Research

3 Credits

Causal models for quantitative and qualitative data; path analysis and structural equations; logistic regression; duration models.

Prerequisite: SOC 574

SOC 576: Applied Mathematical Demography

3 Credits

Survey of mathematical models used in the study of population: models of growth, survivorship, fertility, migration, stability, kinship, projection.

Prerequisite: ANTH 408 or SOC 473; calculus

SOC 577: Techniques of Event History Modeling

3 Credits

Survival analysis theory and methods for discrete dependent variables.

Prerequisite: SOC 575

SOC 578: Multilevel Regression Models

3 Credits

Covers multilevel regression models for the analysis of nested or hierarchical data, including both contextual and longitudinal applications. SOC 578 Multilevel Regression Models (3) This course is devoted to statistical models for regression analysis of multilevel data. Multilevel data arise when cases are sampled at two or more levels, with each lower level subsumed within the next higher, such as residents within neighborhoods within cities or individuals within families. Such data almost always violate the independence assumption of ordinary least squares regression, and in recent years a wealth of more appropriate techniques have become available. These methods bring the full flexibility of multiple regression analysis to the analysis of multilevel data, enabling scholars to address a broad range of research questions. This course thoroughly covers the basic multilevel regression model and also devotes considerable time to more advanced topics such as analysis of data with three or more levels, multilevel analysis of discrete dependent variables, and latent variables. Students will study examples in a broad range of substantive domains, with special attention to the unique research questions to which these methods give access. This is a course in the application of statistics to social science research, not a theoretical statistics course. Therefore the course will not include derivations and proofs, but rather the mathematics covered will be in the service of defining statistical models that correspond to useful research questions. The emphasis will be on understanding how to use these methods to do good research and on learning to interpret the results they provide. Several class sessions will be held in computer laboratories in order to train students in the use of statistical software that implements these methods.

Prerequisite: SOC 575

SOC 579: Spatial Demography

3 Credits

This graduate course will expose students to spatial analysis tools and analytical methods applied to demographic research. ANTH (SOC) 579 Spatial Demography (3) The improved application of spatial data and methods to demographic research is a critical methodological challenge facing demographers today. This graduate seminar is designed to focus on substantive demographic research topics while exposing sociologists and demographers to challenges in, and opportunities for, using geographic information systems (GIS), spatial analysis, and spatial statistics in their own research. Substantive foci will include readings and discussions of spatial perspectives on topics such as racial/ethnic segregation, spatial mismatch/entrapment, poverty, crime/delinquency, migration, health inequalities, wellbeing, maternal and child health, environmental justice, and population and environment relations. Similarly, the seminar will highlight connections between spatial concepts and data availability (e.g., Modifiable Areal Unit Problem - MAUP; data privacy), other emerging methodological approaches to studying society (e.g., contextual modeling, multi-level modeling and the area of neighborhood effects) as well as the integration of different types of data (e.g. qualitative data and quantitative data). Throughout the course lectures and discussions will be complemented with lab sessions introducing spatial analysis methods and GIS and spatial analysis software. The lab sessions will include the use of among other software GeoDa, CrimeStat, R, and ArcGIS (including Geostatistical Analyst and Spatial Analyst extensions). These lab sessions will introduce many methodological and technical issues relevant to spatial analysis (e.g., error, data validation, data integration, cartography, exploratory spatial data analysis, spatial regression modeling, geographically weighted regression, point pattern analysis and geostatistics). Assignments for the courses include up to two writing assignments, up to four lab assignments, and a final project which will be presented as a short 15-minute presentation as well as submitted as a term paper. The writing assignments will include an annotated bibliography/brief literature review within a selected demographic theme area and a profile of a well-known demographer and their adoption of spatial thinking/perspectives/methods. The lab assignments will focus on building geospatial databases, basic spatial analysis, exploratory spatial data analysis, and spatial regression modeling. The courses will include other labs and assignments that will be completed for no grade; these are intended as mechanisms/opportunities for developing and enhancing familiarity with selected software, data resources, and analytic methods.

Prerequisite: Graduate course in statistics, i.e., SOC 574 or ANTH 509 Cross-listed with: ANTH 579

SOC 580: Social Network Analysis

3 Credits

Methods of social network analysis used to examine patterns of ties among actors in a social system. This course provides an overview of the analytic methods and conceptual perspective of a social network approach to social science research, with a focus on quantitative methods. Social network analysis is used to examine patterns of ties between multiple actors in a social system, where the actors could be individuals, dyads, groups, organizations, or nation-states. There has been a dramatic rise in the application of such an approach to research from a broad range of researchers over the past decade. A social network approach is applicable to several subfields within sociology, such as
social psychology, demography, criminology, organizations, and the family. The course objectives are to: 1) become familiar with the basic elements of social network analysis and recognize situations where this approach may be useful; 2) develop an appreciation for the conceptual perspectives behind this modeling approach; 3) learn about the strengths and limitations of network models and analyses; 4) apply social network analysis to empirical data and interpret findings, and finally: 5) complete a research paper that applies this approach to data regarding a social science problem. Network topics covered include centrality, clustering and cliques, triads and transitivity, weak ties, structural equivalence, and network visualization. In addition, students will be introduced to advanced topics, such as exponential random graph models, and dynamic SIENA models. Students should have completed two semesters of social statistics at the graduate level or equivalent before enrolling in this course.

SOC 584: Attitude Formation and Change
3 Credits

Theory and method in research on attitude formation and change with emphasis on critical analysis.

Prerequisite: PSYCH420 or SOC 403 ; 3 credits in statistics
Cross-listed with: PSY 584

SOC 591: Teaching Sociology/Criminology
1 Credits

Preparation for teaching sociology and/or criminology at the college level. CRIM (SOC) 591 Teaching Sociology/Criminology (1) Preparation for teaching sociology and/or criminology at the college level.

Cross-listed with: CRIM 591

SOC 592: Writing for Publication in the Social Sciences
3 Credits

Systematic, collective review of unpublished student manuscripts with an eye toward revision for publication. SOC 592 Writing for Publication in the Social Sciences (3) The overarching goal of the course is to prepare relatively advanced Ph.D. students to write effective journal articles, books, and grant proposals. The course emphasizes learning by doing. We begin by writing reviews of anonymous manuscripts that have been submitted to journals for possible publication. We ask four key questions about each article: What do we like about the manuscript (strengths)? What do we dislike (weaknesses)? What suggestions do we have - substantive and stylistic - for revising the manuscript? Is it published? Class discussion is organized around those questions. Then we use the same format and tools to critique unpublished student manuscripts. We discuss each manuscript with a view to answering the question of how the manuscript needs to be revised to make it publishable. Finally we read key articles on the differences between journal writing, book writing, and the writing of grant proposals. Again students are given hands-on experience by reviewing book prospectuses and grant proposals. The course is designed to be a core course in the Sociology Department’s Professional Development Module for Ph.D. students. The specific goals of the course are: A publishable paper - or at least concrete suggestions for how to make a student manuscript publishable, or book precis competitive, grant proposal fundable. A better understanding of how the review process works - what happens after you submit your paper, precis, or research proposal; what to expect from the editor’s decision letter. A better understanding of what editors and reviewers are looking for in a journal manuscript, book precis, or grant proposal, and a better understanding of how to respond to reviewers’ criticisms when you are invited to resubmit a manuscript or grant proposal. Good reviewing skills - what a good review looks like, and how to go about writing one. An expansion of students’ intellectual horizons through exposure to different substantive areas, methodologies, and styles of work. Students will be evaluated on the basis of their written reviews due each week. The course will be offered at least twice every three years. Course enrollment should be limited to 12, to enable full in-class discussion of each student's manuscript.

Prerequisite: Master's thesis or permission of program

SOC 595: Internship in Political Science
1-9 Credits/Maximum of 9

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Prerequisite: Prior consent of supervisor, advisor, or department head; applicable departmental internship requirements such as satisfactory completion of required upper level courses appropriate for the internship program selected.

SOC 595A: Survey Research Practicum
1-6 Credits/Maximum of 6

Practicum in Survey Research data collection or management.

Prerequisite: PL SC518 or SOC 518 and PL SC519 or SOC 519
Cross-Listed

SOC 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

SOC 597: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

SOC 600: Thesis Research
1-15 Credits/Maximum of 999

No description.

SOC 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999

No description.

SOC 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6

Students will teach introductory level courses as required by staffing and students' needs.
SOC 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

**Software Engineering (SWENG)**

SWENG 505: Software Project Management
3 Credits
Analysis and construction of project plans for the development of complex software products; how to manage change and cost control.

SWENG 510: Secure Software Engineering
3 Credits
This course provides a foundation in software engineering techniques for developing secure software systems.

SWENG 541: Advanced Database Design Concepts
3 Credits
Practical benefits of a Database Management System; three-stage process to create and implement a relational database to meet defined requirements.
**Prerequisite:** IN SC521 or approval of instructor or department

SWENG 545: Data Mining
3 Credits
Practical benefits of data mining will be presented; data warehousing, data cubes, and underlying algorithms used by data mining software.
**Prerequisite:** IN SC521 or approval of instructor or department

SWENG 568: Enterprise Integration
3 Credits
Advances in design, development, and deployment of control and management software for enterprise and production information systems.

SWENG 569: Service Oriented Architecture
3 Credits
The principles of service oriented architecture; modeling, design and implementation of services; mapping business processes to services. SWENG 569 Service Oriented Architecture (3) Service-Oriented Architecture (SOA) is a design principle for guiding the design, development, deployment, and sustaining of flexible and agile IT solutions. SOA has become increasingly viable because of the widespread adoption of Web services technology that makes creating SOA practical and cost effective. SOA essentially makes IT agile, interoperable, and more responsive. This course is structured to be appropriate for graduate students in software or systems engineering, or information science. Many of the topics covered in this course may be applied to a wide variety of research areas. Usually this course would cover the following topics: 1) Model, design, and implement SOA; 2) Create agile and reusable SOA; 3) Automate business processes by mapping to the architectural model; 4) Orchestrate services and execute processes with the Business Process Execution Language (BPEL); 5) Achieve interoperability within SOA using proven design patterns and/or best practices; and 6) Implement loosely coupled services using WSDL-first techniques. Students will be evaluated on their understanding of the course material by completing one examination (20%), weekly assignments (40%), and an individual project with presentation (40%).

SWENG 580: Advanced Software Engineering
3 Credits
Description of tools and techniques in the software development lifecycle; Mitigation and managing time-to-market and quality of large software systems.
**Prerequisite:** SWENG537 or equivalent knowledge with instructor’s permission

SWENG 581: Software Testing
3 Credits
This course provides a rigorous formal framework and practical information on this the testing of software throughout its life cycle.

SWENG 582: Real-Time Software Design and Analysis
3 Credits
A holistic, systems-based approach to design and analysis of real-time systems; design and implementation of a small real-time system.
**Prerequisite:** completion of all IN SC or SWENG core courses or with instructor or division approval

SWENG 584: Genetic Algorithms
3 Credits
Application of genetic algorithms to problems in engineering and science including combinatorial optimization, multi-criteria optimization, biology, chemistry, and neural networks.
**Prerequisite:** completion of a course in data structures and algorithms, or on approval of department

SWENG 585: Pattern Oriented Design
3 Credits
This class examines well-known heuristics, principles and patterns in the design and construction of reusable frameworks, packages and components. SWENG 585 Pattern Oriented Design (3) This course studies the heuristics, principles and patterns of object-oriented design in the construction of extendable frameworks, reusable packages and pluggable components. Topics covered include Riel’s object-oriented design heuristics, Martin’s principles of class and package design,
the ‘Gang of Four’ design pattern catalog, refactoring and framework evolution.

Prerequisite: SWENG537

SWENG 586: Requirements Engineering

3 Credits

Theory and applications of requirements elicitation, analysis, modeling, validation, testing, and writing for hardware and software systems. SWENG 586 Requirements Engineering (3) This course is a thorough treatment of the theoretical and practical aspects of discovering, analyzing, modeling, validating, testing and writing requirements for systems of all kinds, with an intentional focus on software-intensive systems. The course will bring to bear a variety of formal methods, social models, and modern requirements writing tools (e.g., the UML) to be useful to the theorist and practicing engineer. Students will be led through a series of weekly activities that culminate in the delivery of a complete software requirements specification project for a hardware/software system (first in draft, then in final form). The project is broken down into four subprojects, Requirements Elicitation, Requirements Analysis and Representation, Requirements Validation and Testing, and Final Requirements Documentation, each of which counts 25% toward the final grade. The course can be used as an elective in the Master of Software Engineering (M SE) program and, it is a required course in the online Systems Engineering (M.Eng.) program.

SWENG 587: Software Systems Architecture

3 Credits

Software systems architecture; architectural design principles/patterns; documentation/evaluation of software architectures; reuse of architectural assets through frameworks/software product lines. SWENG 587 Software Systems Architecture (3) Architecture is an abstract view of a software system distinct from the details of how such a system is implemented. A robust architecture is key to developing software systems that meet quality expectations (such as performance, scalability, availability, maintainability, etc.) of their stakeholders. This course introduces basic concepts of software architecture, architectural design principles, and patterns. Students also learn how to document and evaluate software architectures, and reuse architectural assets through software product lines. This course is structured to be appropriate for graduate students in software or systems engineering. Many of the topics covered in this course may be applied to a wide variety of research areas. Students will be evaluated on their understanding of the course material by completing one examination (25%), weekly assignments (35%), and an individual project with presentation (40%).

SWENG 588: Program Understanding

3 Credits

Techniques for the analysis and visualization of large software systems to assess the quality of the design and architecture. SWENG 588 Program Understanding (3) It is a general observation that software engineers learn about software design, programming languages, paradigms, patterns and tools, and are expected to produce high quality designs and code, often without ever having seen good examples. This approach is akin to teaching students the syntax of the English language and writing techniques and then expecting them to become expert writers without ever having read great literary works. The course in Program Understanding seeks to educate graduate software engineering students beyond their understanding of code syntax and best construction practices with analytical evaluation of ‘great works’ of software code. This approach includes manual code reading, the use of visualization techniques, and automated approaches to assessment of design and code quality.

SWENG 594: Research Topics

1-15 Credits/Maximum of 15

Supervised student activities on research projects identified on an individual or small-group basis.

SWENG 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

SWENG 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

SWENG 826: Applied Human-Computer Interaction

3 Credits

Evaluate and design interactive products that support how people work and communicate from both a theoretical and practical perspective.

SWENG 826 Applied Human-Computer Interaction (3) This course introduces the student to the broad area of human-computer interaction. Emphasis is placed on applying theories and techniques to the evaluation and design of software-based products that are both useful and usable. Students will gain an understanding of these concepts primarily by analyzing existing interfaces and developing prototypes. Students will be exposed to the challenges of usability testing through review of published studies and by developing a usability study design. Objectives: The course objectives are for Information Science professionals and software engineers to: 1. Identify examples of positive and negative user experiences in both everyday life and the work environment. 2. Gain an overview of HCI theories, principles, and guidelines. 3. Learn how to design for usability. 4. Learn how to incorporate usability design into the software development process. 5. Use usability principles to evaluate and compare software-based products. 6. Learn how to effectively test for usability. Performance will be evaluated through projects where students will apply what they have learned to design and evaluation problems. It is anticipated that this course will be offered once every year with expected enrollment of 20 students per offering.

SWENG 837: Software System Design

3 Credits

The application of engineering best practices to the requirements, analysis and design of large software-centric systems will be presented. This will include the state of the art in software modeling techniques, the Unified Modeling Language and the Unified Process, along with tried and tested structured approaches. Students will learn how to analyze customer requirements and then systematically develop complete
software specifications to meet those requirements using appropriate techniques for the application domain.

**Prerequisite:** CMPSC483W or equivalent knowledge with instructor’s permission

SWENG 861: Software Construction

3 Credits

Students will learn and practice the elements of constructing a large-scale distributed software system using current technologies. SWENG 861 Software Construction (3) This course will expose the student to the elements and activities of software construction with a particular emphasis in the development of large-scale distributed software systems. Through investigation of large-scale distributed applications, the student will have the knowledge to be much more productive at modern software development. This course will begin by covering the foundation that surrounds large scale software construction such as performance, scalability, fault-tolerance, and security. Following the foundation, a particular emphasis in this course is on technologies that are used to build applications for modern devices and systems as well as an emphasis on overcoming the issues that large-scale distributed systems encounter such as security and availability. The student will also investigate web services that help with the interoperability across heterogeneous platforms as well as learn how to handle concurrency, persistence and unit testing across all tiers of the application. Finally, the students will learn how to deal with deployment and security in large-scale distributed systems. Students will learn and practice software construction by developing a project that evolves gracefully as the technology discussion evolves but will have the freedom to work on either Java EE or MS. NET platforms.

SWENG 888: Mobile Computing and Applications

3 Credits

The purpose of this course is to provide students with an advanced and hands-on exploration of mobile computing paradigms. Mobile computing addresses the mobility needs of business operations and management in organizations, with the increasing trend of leveraging a variety of deployed enterprise information systems. Hence, well-designed and developed mobile applications can meet the needs of business mobility on both the service provider and the customer sides. This course is designed to explore and discuss approaches to the design and development of mobile applications. It builds an awareness of the business need for operational agility and mobility, and the value of existing IT investments in organizations. Specifically, this course investigates the fundamental design and development of mobile applications and services utilizing current and emerging mobile computing technologies. The material covered will be quite comprehensive. The breadth of material is comparable to that covered in an undergraduate introduction to soil science, but with greater depth. The class will incorporate a substantial level of experiential components, including chemical analysis lab practice overview, some labs for gaining insight into physical properties, and field trips to help students gain an appreciation of how soils are influenced by, and also influence, the landscape in which they exist. Landscape visits with guided discussions, research proposal development and analysis, and selected soil management problem analysis provide students opportunities to synthesize classroom and textbook based material. Students will be evaluated based on quizzes, exams and written assignments.

SOILS 504: Unsaturated Zone Hydrology and Chemical Transport

3 Credits

Recommended Preparations: At least one undergraduate course in Mathematics and in Chemistry. GEOSC 452 This course provides the theoretical basis for and mathematical description of the transport of water and chemicals through the unsaturated zone between the soil surface and the regional water table. This zone is frequently referred to as the vadose zone. In particular, the course investigates the solutions to problems involving the transport of water and chemicals through the vadose zone, such as might be the case when attempting to predict direction and rate of a contaminant spill, or to determine the length of time required for contaminant remediation, or to protect buried waste from infiltrating water. Students will recognize parameters required in order to develop solutions to identified problems, will identify means to obtain values of the needed parameters, and will develop model solutions in order to gain insight into expected outcomes of proposed solutions.

SOILS 507: Soil Physics

3-4 Credits/Maximum of 4

Soil physical properties emphasizing water, heat, gas, and ion movement in unsaturated soils. Laboratory included with 4 credits.

**Prerequisite:** 6 credits each of calculus, physics, and soils
SOILS 510: Geographic Information System Applications

3 Credits

Soil data bases, image processing, and geographic information systems will be used to model and understand land and water resources.

Prerequisite: GEOG 457

SOILS 512: Environmental Soil Microbiology

3 Credits

Biology and ecology of microorganisms in terrestrial environments; microbiological and molecular analysis methods; microbial processes in carbon and nitrogen cycling. SOILS 512 Environmental Soil Microbiology (SOILS 512) examines the major groups of microorganisms and their processes and interactions in terrestrial systems, with an emphasis on carbon and nitrogen cycling. Students will obtain an overview of the biology, ecology, and functions of bacteria, archaea, and fungi in soils, rhizospheres, sediments, and organic wastes. This course is intended for students interested in spatial and temporal distribution and activities of microorganisms in the environment, as well as in appropriate methods for analyzing microbes in environmental samples. Course format will consist of two weekly lectures, each followed by a 25-min discussion period. Class discussions will include exercises and reviews of recent literature on classical and molecular soil/environmental microbiology. Grading will be based on participation in class discussions (20%), two midterm exams (20% each), one final take-home exam (20%), and a 10-page research proposal to be presented to the class in late April (20%). SOILS 512 will support interdisciplinary training of graduate students in Soil Science as well as in other disciplines of the College of Agricultural Sciences, especially Plant Pathology, Horticulture, Entomology, and Agricultural and Biological Engineering. Graduate students in the Intercollege Graduate Degree Program in Ecology (IGDPE), College of Earth and Mineral Sciences, Eberly College of Science, and College of Engineering also will find this course useful when undertaking research on systems involving microorganisms (e.g., biogeochemistry, plant or animal systems, or environmental engineering). Course will be offered every other spring semester with an anticipated enrollment of 20 students per class.

Prerequisite: two years of chemistry and B M B401, A B E308, or equivalent

SOILS 513: Soil Environmental Chemistry

3 Credits

Chemical constituents and processes occurring in soils. Discussion of soil components, reactions at the solid-solution interface, and soil chemical processes.

Prerequisite: CHEM 450

SOILS 516: Soil Genesis

1-4 Credits/Maximum of 4

Field trip to study the genesis, classification, and geomorphology of the major soils of the northeastern United States.

Prerequisite: SOILS 416 or 6 credits in geology or physical geography

SOILS 519: Nature of Soil Minerals

3 Credits

Constituent minerals of soils: modern methods for identification; relations to soil formation and agricultural practices.

SOILS 536: Topics in Biogeochemistry

2 Credits/Maximum of 999

This seminar addresses chemical interactions between the biosphere and the physical environment over Earth's history and as impacted by humans. This course will provide a broad survey of biogeochemical principles, and offer a community-building experience for students with biogeochemical interests from diverse departments. Students will complete the course with a synthetic knowledge of the key topics in the field of biogeochemistry. Each week we will focus on a topic within the broad field of biogeochemistry such as: origins of the elements, reactions in the atmosphere, soil development, the distribution of redox reactions and microbial metabolic pathways, and the global cycles of carbon, water, nitrogen, phosphorus, sulfur, mercury, and perhaps other elements. For each topic, we will focus on the questions: What is known or can be observed? How is this information used to understand biogeochemical phenomena and process? How are these processes scaled over time and space? What are emerging and important questions in the subspecialties of biogeochemistry?

Cross-listed with: CE 536, GEOSC 536

SOILS 571: Ecosystem Nutrient Cycles

3 Credits

Ecological theory and applications related to water, carbon, nitrogen, phosphorus, and cation cycling in managed and unmanaged terrestrial ecosystems. SOILS 571 Ecosystem Nutrient Cycles (3) This course is designed to benefit basic and applied environmental scientists that want to understand how nutrients cycle in terrestrial ecosystems. Students will develop knowledge of the biologically important nutrient cycles in terrestrial ecosystems, including linkages between nutrient cycling and energy (carbon) and water flow. The material covers the major theoretical advances in ecosystem ecology and applications of ecosystem theory to environmental management and problem solving. The water, carbon, nitrogen, phosphorus, and nutrient cation cycles will be covered. For each nutrient, inputs, outputs and internal cycling in plants and soils are discussed. Class time will include a mixture of lectures, discussions of primary literature and case studies, and group projects. Each student will write a paper on a topic related to their research that will be reviewed by student peers. Field and laboratory experiences will expose students to methods used by ecosystem ecologists. Students will complete the class with an understanding of: (1) classic and contemporary theories of nutrient cycling at the ecosystem scale, 2) variability in nutrient cycling among the major unmanaged and managed ecosystem types, 3) ecosystem responses to natural disturbance and human management, and 4) common and cutting-edge methods of ecosystem analysis.

SOILS 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

Cross-listed with: FOR 590, WFS 590
SOILS 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

SOILS 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

SOILS 600: Thesis Research
1-15 Credits/Maximum of 999
NO DESCRIPTION.

SOILS 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
NO DESCRIPTION.

SOILS 602: Supervised Experience In College Teaching
1-3 Credits/Maximum of 6

NO DESCRIPTION.

SOILS 610: Thesis Research Off-Campus
1-15 Credits/Maximum of 999
NO DESCRIPTION.

SOILS 804: Soil Ecosystem Analytical Techniques
3 Credits
SOILS 804 is a three-credit quantitative laboratory instrumentation course that is designed to give students a deeper understanding and application of modern laboratory instrumental techniques for the isolation, identification, detection, and quantitation of soil ecosystem chemical substances. Upon completion of the course, students should be well versed in appropriate techniques used to collect and process a sample and measure the chemical constituents and assess the condition of soil ecosystems: soil gases; soil inorganic and organic solids, and soil solutions/digests/extracts. Instrumental techniques covered in the course include spectroscopic, chromatographic, spectrometric, electrochemical, and thermal methods for soil ecosystem measurements. As such, the course has laboratory and lecture components. In the lectures, students learn good laboratory practices, sampling and sample processing and preparation methods, selection of analytical instruments and the chemical and/or physical principles exploited during the measurement, how the instrument performs the measurement and some of the techniques used to increase accuracy, precision, sensitivity, selectivity, and measurability. In the laboratory, students will put the theory and principles into practice by performing various analytical experiments designed to provide examples of the usefulness of selected instruments or techniques in a way that will enable the student to understand and operate a wide range of other related instruments for soil ecosystem analyses. Thus, while the laboratory experiments and demonstrations will illustrate some of the applications of the instruments, students will be expected to develop a deep understanding of the advantages and disadvantages of different instrument analytical techniques in terms of their usability, sensitivity, cost, and other parameters with emphasis on the applicability and complementarity of different techniques to soil ecosystem chemical measurements.

SOILS 896: Individual Studies
1-9 Credits/Maximum of 9
Creative projects with a professional orientation, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

SOILS 897: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject with a professional orientation that may be offered infrequently; several different topics may be taught in one year or semester.

Spanish (SPAN)

SPAN 502: Theory and Techniques of Teaching Spanish
1-3 Credits
Audio-lingual orientation.

SPAN 507: Hispano-Romance Linguistics
3 Credits/Maximum of 9
History, development, and linguistic description of Old Spanish and related Romance languages of the Iberian Peninsula.

SPAN 508: Generative Syntax
3 Credits
This course offers foundations of generative syntax. It addresses the advantage of a scientific model to explain human knowledge of language that also makes predictions about its representation in the mind.

SPAN 509: Functional Syntax
3 Credits
This course covers foundations of functional syntax. It addresses the advantages of a scientific approach to explain human knowledge of language that makes predictions about its representation in the mind.

SPAN 510: Spanish Descriptive Linguistics: Phonology
3 Credits
No description.
SPAN 513: Acquisition of Spanish as a Second Language
3 Credits

Analysis of research on the acquisition of syntax, phonology, lexicon, discourse. SPAN 513 Acquisition of Spanish as a Second Language (3) An in-depth analysis of current research carried out on the acquisition of Spanish as a second language. Focus will be on syntax, phonology, lexicon, discourse, and pragmatics. Specific topics covered include the following: null-subjects, clitics; movement and word order; tense and aspect, mood, agreement features, grammaticalization, modality, negation, functional categories, tutored vs. untutored learners, UG vs. non-UG effects, the Noun Phrase Accessibility Hierarchy, markedness, cohesive devices, speech acts, metaphors, idioms, the lexicon and culture, the phonological systems, including suprasegmentals. In addition to developing an understanding of the current research on the acquisition of Spanish as a second language, students will learn how to read the research literature from a critical perspective and how to read empirical data presented in published research that might result in alternative interpretations from those espoused by authors of published work. This goal will be achieved in two ways: requiring students to submit via e-mail to the professor and other students in the seminar two- to three-page critiques of assigned readings; and oral presentations in class of readings selected by the student(s). Some of the critical reports and presentations will be carried out jointly, and others will be done individually. Students will also learn how to design and implement empirical research on the acquisition of Spanish as well as how to write up the results of this research in a potentially publishable research report. Finally, they will have the opportunity to present their research findings to the Penn State applied linguistics community, in a mini in-house workshop at the end of the course. In preparation for this, time will be set aside near the end of the seminar for students to present and discuss their research with their colleagues in the course. Most of the readings for the course will be preselected by the professor; however, students will also be expected to carry out independent reading of publications not included in the course syllabus and present and critique what they read in the seminar.

Prerequisite: introduction to Hispanic linguistics

SPAN 514: Hispanic Dialectology
3 Credits/Maximum of 6

Early fragmentation among the peninsular dialects; their status today; Judeo-Spanish; descriptive analysis of modern Spanish American dialects.

SPAN 519: Current Statistical Practice in Language Science
3 Credits

Our primary goal in this course is to explore how to analyze and interpret quantitative data in language science. Part of this goal will be to gain familiarity and proficiency with a range of quantitative techniques common in language science. Reflecting trends in the field, linear and logistic mixed effects regression will be a major focus in addition to more well-known (e.g., ANOVA, multiple regression, chi-square) techniques. We will also spend some time exploring other methods such as multidimensional scaling, generalized additive modeling, and conditional inference trees, as well as more specialized techniques (e.g. drift-diffusion modeling). A more important goal is to learn to think critically about quantitative data and how we can learn from it. This includes a critical view of quantitative research in general, questions of measurement, the many decisions involved in analytic strategy, model structure and interpretation, and the ability to extend students’ knowledge to new techniques independently.

RECOMMENDED PREPARATION: Completion of an introductory graduate level course in statistics, or advanced undergraduate courses. Experience with regression and familiarity with common software for statistical analysis in language science.

SPAN 528: Seventeenth-Century Spanish Literature
3 Credits/Maximum of 9

Prose and poetry of major authors: works and trends of the late Golden Age and Baroque period.

SPAN 537: Golden Age Theatre
3 Credits/Maximum of 6

Major works of Lope de Vega, Tirso de Molina, Calderon, and others.

SPAN 561: The Cinematic Pluriverse of Pedro Almodóvar
3 Credits

This seminar will examine the cinematic imagination of Spain's most internationally celebrated filmmaker, Pedro Almodóvar. Topics to be considered will include Almodóvar's sensing of gender politics, sexuality, multiculturalism, and national identity in post-dictatorial Spain; his nimble negotiation of the local and the global; his taste for cinephilic self-referentiality and hybridity of genre; and a distinctive tendency toward thematic idiosyncrasy all of which are signature features of his postmodern 'brand.' Significant attention will be devoted to approaches and trends within the vast corpus of scholarly criticism dealing with the filmmaker's oeuvre, and our engagement with film theory will arise organically out of the references from these texts. Some basic tools, techniques, and language of film analysis will be considered, as will a general understanding of field-specific norms of film studies as practiced in North American and U.K. Hispanism.

SPAN 566: Contemporary Spanish Poetry
3 Credits

Various currents in Spanish poetry from the generation of 1927: Lorca, Aleixandre, Salinas, Guillen, Alonso, Alberti, Hernandez, Otero, and others.

SPAN 568: Early Spanish American Literature
3 Credits/Maximum of 9

Content varies; selected topics from colonial period, romanticism, and the nineteenth century before modernism.

SPAN 571: Latina/o Studies: Foundations in the Field and Its Teaching
3 Credits

A foundation in the field and strategies for teaching Latina/o Studies to undergraduates. This course provides a foundation in U.S. Latina/o Studies Literature and its contexts, with two separate but related goals. The first is to get a grasp on the U.S. Latina/o Studies canon that integrates humanities and social science approaches in order to analyze critical historical contexts that have shaped the emergence and evolution of the field of Latina/o Studies in U.S. higher education and academia, such as early colonial enterprises in the South and the Southwest,
Spanish and U.S. imperialism, the Chicano and Young Lords movements during the 1960s, immigration patterns from the Caribbean and Latin America, government policies towards Latinos, contemporary rural and urban movements, etc. The second goal is to explore systematically pedagogical theories and practices in Latina/o Studies and critical race scholarship more broadly, in order for students to become conversant in the theoretical debates that underlie the design of curriculum and classroom practice in Latina/o Studies at the undergraduate level. The course will incorporate some of the major lines of research in Latina/o Studies from different disciplines (such as History, Anthropology, Ethnic Studies, Gender and Sexuality Studies, and Linguistics) in order to address some of their most relevant discussions, internal critical debates, and major schools of thought. Students will also engage with other forms of cultural production, including visual culture, theater and performance, and music, among others. The seminar will provide graduate students a solid foundation in the development of a very timely and marketable research and teaching minor.

Cross-listed with: LTNST 571

SPAN 572: Translation in the Americas
3 Credits

This course provides a broad exploration of translation in the Americas. In particular, it investigates the politics, practices, and theories of translation in Latin America and the United States from the late nineteenth century to the early twenty-first century, which allows for a comparative mode of reading across and between borders of language, nation, and region. The following questions will guide our readings and discussions over the course of the semester: How does translation unfold as a metaphor, a linguistic act, and a cultural experience in the Americas? To what extent do processes of translation inform the exchanges of languages, peoples, and cultures within and between nations in this region? The class examines the role of canonical Latin American writers as translators and scholars in order to underscore the centrality of translation to the production, circulation, and reception of Latin American literature. The course analyzes the contributions of Latin American writers, including José Martí, Brazilian modernists, Jorge Luis Borges, concrete poets Augusto and Haroldo de Campos, Octavio Paz, and Julio Cortázar, to discussions of translation by reading their works on translation as theory and practice alongside key essays in translation studies by, among others, Walter Benjamin, Jacques Derrida, Gayatri Spivak, Lawrence Venuti, and Emily Apter. It also considers the importance of translators like Gregory Rabassa, Suzanne Jill Levine, and Elizabeth Bishop in disseminating Latin American literature within the United States. Building on these insights, students will consider the recent phenomenon of Latin American literature in translation and re-translation to recognize translation as a linguistic and aesthetic challenge governed by, in part, the political and economic demands of the global, literary market.

SPAN 587: Stylistic and Literary Criticism
3 Credits

Major theories of literary criticism applied to Hispanic literature.

SPAN 589: Technology in Foreign Language Education: An Overview
3 Credits

Approaches to the uses and research applications of multimedia and other educational technologies applied to the teaching of foreign languages. (also crosslisted with SPAN 589)

Cross-listed with: APLNG 589, CMLIT 589, FR 589, GER 589

SPAN 596: Individual Studies
1-9 Credits/Maximum of 9

CREATIVE PROJECTS, INCLUDING NONTHESIS RESEARCH, WHICH ARE SUPERVISED ON AN INDIVIDUAL BASIS AND WHICH FALL OUTSIDE THE SCOPE OF FORMAL COURSES.

SPAN 597: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

SPAN 600: Thesis Research
1-15 Credits/Maximum of 999

No description.

SPAN 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999

No description.

SPAN 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6

Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University.

SPAN 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999

No description.

**Special Education (SPLED)**

SPLED 500: Seminar in Special Education
1-9 Credits/Maximum of 9

Continuing series of professional seminars designed to provide a forum for discussion of current and classical research concerning exceptional children.

**Prerequisite:** EDPSY400; 6 credits in special education
SPLED 501: Administration and Supervision of Educational Programs for Exceptional Children

3 Credits

Problems connected with the instituting and organizing of classes for atypical children; the legal phases, finances, teaching personnel, pupil personnel, housing, equipment, courses of study, curriculum, etc.

Prerequisite: SPLED401 and EDLDR480, or teaching or administrative or supervisory experience

SPLED 502: Educating Individuals with Autism Spectrum Disorders

3 Credits

This seminar addresses evidence-based strategies related to individuals with ASD including characteristics, assessment, treatment approaches, and life-span programming. SPLED 502 Educating Individuals with Autism Spectrum Disorders (3) This advanced seminar will address evidence-based strategies related to working with individuals diagnosed as having Autism Spectrum Disorders (ASD). Course objectives will include familiarity/competency in the following topical areas: a) cognitive, social, and behavior characteristics that affect learning; b) assessment strategies and instrumentation; c) treatment/intervention approaches; d) strategies to assess the validity of interventions according to evidence-based/empirical standards; and e) how to program across the lifespan of the individual with ASD. Course content will be delivered through lectures, discussions, peer presentations, and guest speakers. There are no prerequisites for the course.

SPLED 503A: Applied Behavior Analysis for Special Education: Basic Principles I

4 Credits

Topics include a history of applied behavior analysis; underlying assumptions; dimensions and characteristics of ABA; ethics; basic terminology and principles.

SPLED 503B: Applied Behavior Analysis for Special Education: Basic Principles II

4 Credits

Topics include functional assessment of behavior, ethics, methods to increase and decrease behavior, and generalization.

Prerequisite: SPLED503A

SPLED 503C: Applied Behavior Analysis for Special Education: Extended Applications I

4 Credits

Topics include assessment and intervention for challenging behavior, systems support, classroom applications of ABA, and review of ABA Certification Exam.

Prerequisite: SPLED503A, SPLED503B

SPLED 503D: Applied Behavior Analysis for Special Education: Extended Applications II

3 Credits

In this course students learn additional techniques to promote meaningful behavior change using principles of behavior.

Prerequisite: SPLED503A, SPLED503B, and SPLED503C

SPLED 504: Classroom and School-Wide Management Practices in Special Education

3 Credits

Developing function-based individual interventions as well as class-wide behavior supports for students with disabilities. SPLED 504 Classroom and School-Wide Management Practices in Special Education (3) This course is designed to build upon existing content knowledge and experience in evidence-based classroom management practices including applied behavior analysis and explicit instruction. The overall course objective is to engage students in a review of relevant theories and research on supporting positive behavior change for K-12 students with special needs, and to prepare graduate students to implement effective, evidence-based practices (e.g., classroom structure methods, reinforcement based interventions, behavior reduction strategies) when working with learners with special needs exhibiting a broad range of challenging behaviors (e.g., off task, failure to follow directions, verbal and physical aggression). This course goes beyond introductory-level classroom management courses by presenting the research base for advanced classroom and school-wide behavior change methods that require students to synthesize prior learning with new knowledge into contemporary classroom situations. The course will entail current readings from the professional literature and both individual and group projects intended to enable the learner to apply content to realistic case studies.

Prerequisite: SPLED400 or SPLED401; C I 495F

SPLED 505: Single-Case Research

3 Credits

Overview of research methods associated with collecting and evaluating repeated measures on single cases. SPLED 505 Single-Case Research (3) This is an advanced graduate course that introduces students to single-case research design and methodology. This course is designed to provide the student with all the necessary tools needed to formulate questions that require repeated measures observation and analysis, including the use of visual and statistical analytic methods. Intro-subject experimental designs are discussed with particular attention paid to repeated measures analysis of trends and level effect size changes, as well as supportive topics (e.g., observing and recording behavior, observer training and agreement, social validation).

SPLED 509A: Seminar in Literacy Skills Instruction for Students with Disabilities

3 Credits

Review of research in reading instruction for students with disabilities and analysis of implications for classroom practice. SPLED 509A Seminar in Literacy Skills Instruction for Students with Disabilities (3) This seminar builds on prerequisite special education courses in curriculum and instructional methods. Enrolled students will extend their knowledge...
of the research that examines the use of explicit instructional strategies in the context of reading. Students will review and discuss current research on classroom-based assessment, curriculum development, and instructional strategies for teaching reading to K-12 students with learning disabilities. Students will learn how to select the reading skills necessary to scaffold and enhance learners' present reading skills. Methods for using research-based assessment strategies and developing foundational reading skills within a classroom context will be described.

**Prerequisite:** SPLED400 ; SPLED403A or SPLED403B

**SPLED 509B: Seminar in Writing and Content Literacy Instruction for Students with Disabilities**

3 Credits

Evidence-based methods for designing and implementing writing and content literacy instruction for learners with special needs across content areas. SPLED 509B Seminar in Literacy Skills Instruction for Students with Disabilities (3) This seminar builds on prerequisite special education courses in curriculum and instructional methods. Enrolled students will extend their knowledge of the research that examines the use of explicit instructional strategies in the context of reading. Students will review and discuss current research on classroom-based assessment, curriculum development, and instructional strategies for teaching reading to K-12 students with learning disabilities. Students will learn how to select the reading skills necessary to scaffold and enhance learners' present reading skills. Methods for using research-based assessment strategies and developing foundational reading skills within a classroom context will be described.

**Prerequisite:** SPLED400 ; SPLED403A or SPLED403B

**SPLED 509C: Seminar in Mathematics and Science Instruction for Students with Disabilities**

3 Credits

Explore advanced methods of effective mathematics and science instruction for students with disabilities. SPLED 509C Seminar in Mathematics and Science Instruction for Students with Disability (3) This seminar builds on prerequisite special education courses in curriculum and instructional methods and is designed for students who desire to develop advanced knowledge of intervention research in mathematics and science and practical application of the most effective instructional practices for students with disabilities. The focus of the course is on developing an in-depth knowledge of the scientifically supported instructional and assessment practices for students with disabilities in mathematics and science. This course will cover five key topical areas. In the first area, the high quality indicators of intervention research are explored through a series of readings and classroom discussions. In the second topic area, specific instructional practices supported in the research for teaching mathematics to students with disabilities are presented, discussed, and synthesized. Similarly, in the third topic area specific instructional practices supported in the research for teaching science to students with disabilities are presented, discussed, and synthesized. In the fourth area, the advanced application of curriculum-based measurement procedures is developed. Finally, in the fifth area, current and emerging technology applications for students with disabilities in mathematics and science are reviewed and presented.

**Prerequisite:** SPLED400 ; SPLED403A or SPLED403B

**SPLED 510: Problems in the Education of the Mentally Retarded**

2-4 Credits/Maximum of 4

Study of existing curriculums, instructional practices, educational programs; experimentation in curriculum building and materials construction.

**Prerequisite:** SPLED305 ; SPLED401 or SPLED411

**SPLED 512: Advanced Instructional Design and Delivery for Students with High-Incidence Disabilities**

3 Credits

Explore research underlying effective instruction for students with high-incidence disabilities and use information to design and deliver class lessons. SPLED 512 Advanced Instructional Design and Delivery for Students with High-Incidence Disabilities (3) The purpose of SPLED 512 is to provide advanced discussion and application of appropriate methodology for teaching academic skills to students with significant learning difficulties. The majority of the course deals with a review of the research on (and practical application of) effective practices for designing and delivering academic instruction and independent work to students who do not learn optimally under current conditions within their general education classes. Students will review and discuss both foundational and current research in instructional design for students with learning difficulties. Readings will be drawn from research in general education, special education, cognitive psychology, and educational psychology. Students will read and discuss the research literature on underlying cognitive processes which impact learning for students with learning disabilities (e.g. attention, executive functioning, working memory, prior knowledge) and on intervention research with this population. In addition, students will demonstrate the ability to make practical application of these research-based methods in designing and delivering instruction.

**Prerequisite:** SPLED403A or SPLED403B

**SPLED 515: Infants and Toddlers with Special Needs**

3 Credits

Comparison of typical and atypical development of infants and toddlers; applicable instructional strategies in education.

**Prerequisite:** at least one year teaching experience with elementary-age children

**SPLED 516: Assessment in Early Educational Intervention**

2-3 Credits/Maximum of 3

Describes and illustrates models, methods, and materials for assessing infants and preschoolers with developmental delays and disabilities.

**Prerequisite:** SPLED415

**SPLED 520: Current Issues in Special Education**

3 Credits

Explore current issues and research in the field of special education.

**Prerequisite:** SPLED525

Cross-listed with: EDPSY 520
SPLED 521: Capstone Seminar in Special Education

3 Credits

Seminar dealing with advanced research analysis, interpretation, synthesis, and presentation in special education. SPLED 521 Capstone Seminar in Special Education (3) SPLED 521 is the capstone course of the M.Ed. in Special Education. In this course students develop and present their capstone projects. Projects generally relate to topics explored in both the student's area of emphasis, as well as in an initial research course. Projects may involve quantitative or qualitative data collection or syntheses of literature. Early in the course, students develop and refine research questions of their own interest. After questions are clearly delineated, students learn methods of data collection that will assist in answering their questions. Students will then learn skills needed to write for both practitioner and research outlets. Finally, students will develop and present their key findings to the class using appropriate technology.

Prerequisite: SPLED573

SPLED 525: Teaching Learners with Disabilities in Inclusive Settings

3 Credits

Strategies for educating learners with disabilities in inclusive settings with an emphasis on instruction, accommodations, collaboration, and consultation.

Prerequisite: SPLED400 or SPLED425

SPLED 530: Problems in the Education of the Learning Disabled

2-4 Credits/Maximum of 4

Review of the research and theoretical implications in the educational and behavioral management of learning disabled children.

Prerequisite: SPLED305

SPLED 540: Orientation to PhD Study in Special Education

3 Credits

Information and skills needed for successful completion of Ph.D. study in Special Education for those targeting academic careers. SPLED 540 Orientation to PhD Study in Special Education (3) Offered every fall semester, this course is for students new to Ph.D. study in Special Education to prepare them for Candidacy and initiation of a line of research. Students take the course during their first semester in the Program. Based upon special offerings and typical numbers of new Ph.D. students in Special Education the anticipated enrollment will be 5-7 students. The course is intended to provide students frequent feedback on development of basic search skills and skills related to conducting a systematic review of professional literature, a skill that is prerequisite to development of a research agenda. At this point in their development, students are not expected to be able to formulate experimental research questions or use the IRB. They are still at a point at which they need to develop their skills reading and synthesizing current literature as a foundation for future experimental efforts (development of hypotheses, experimental designs, and IRB approvals are all covered in later courses). Students will receive feedback from the instructor and from peers as well as provide it to peers thereby developing their own feedback and editing skills (students actually receive feedback on their feedback). Towards the end, they need to be able to recognize varying forms of literature reviews (differing purposes and methods) and developing a means for conducting their own reviews in a systematic, replicable manner. They need to work on technical writing skills and on organization and using APA style. To accomplish this requires a lot of discussion and analysis of work in separate stages of development of a review. Generally the content includes basic information and skills needed for successful completion of Ph.D. study including: Campus resources, pitfalls, technical writing skills, setting a research agenda (research to practice issues) and conducting systematic reviews of professional literature. While this may not sound like much, it is important to note that this is a highly individualized course with an emphasis on skill development. Therefore, as a result of participation students will: (1) become acclimated to PSU information resources, (2) identify ways to keep on track during PhD study, (3) identify local support networks, (4) locate 3 systematic reviews of the professional literature and identify key features, (5) identify 3 key issues in research to practice in Special Education, (6) complete electronic searches for references on a topic assigned by the course instructor, (7) write an 18-22 page, systematic review (which will include introduction, methods, results, and discussion/implications sections), of the literature on a topic assigned by the instructor and based upon search results, (8) practice formulating ‘good’ (i.e., answerable) research questions, (9) distinguish between plagiarism and appropriate citation of other works, (10) refine technical writing skills (including using APA style), (11) develop feedback/editing skills in the area of technical writing, and (12) present an oral presentation of their results complete with visuals. Methods of evaluation are primarily subjective and will include both peer and instructor assessments. Peer feedback during the development of the systematic review will not carry weight toward a final grade although the instructor will provide feedback to peers on their feedback to each student. The instructor’s feedback will largely be individual and in writing and orally in private meetings with each student as the review is conducted in steps (e.g. introduction, results, etc.). Instructor’s feedback will include areas related to technical writing in Special Education such as correct APA format, organization, substantiating claims, analysis and synthesis skills, and providing solid rational for the effort.

Prerequisite: admission to Ph.D. study in Special Education

SPLED 550: Professional Seminar in Special Education

2 Credits

Professional competencies and ethical issues related to obtaining and retaining positions in higher education. SPLED 550 Professional Seminar in Special Education (2) SPLED 550, Professional Seminar in Special Education is a required course for all doctoral candidates in the Special Education Program. The purpose of the seminar is to discuss and further develop professional competencies needed to obtain and retain positions in higher education as well as discuss issues related to professional ethics. Topics will include university teaching, applying and interviewing for a job, conference presenting, developing inservice programs and other expectations of higher education not covered in other coursework. In addition, ethical issues related to conducting research and working with students, staff and colleagues will be covered.

Prerequisite: admission to Special Education doctoral program and successful completion of candidacy in special education
SPLED 554: Developing and Interpreting Assessments in Special Education
3 Credits
Advanced assessment of special needs learners including research and legal basis for norm-referenced and informal assessments.
Prerequisite: SPLED573 or equivalent

SPLED 570: Problems in the Education of the Emotionally Disturbed
2-4 Credits/Maximum of 4
Current issues, methods, and problems associated with the education of the emotionally/behaviorally disturbed.

SPLED 573: Introduction to Research in Special Education
3 Credits
A seminar to review and design research in special education. SPLED 573 provides professionals in the field with an array of valuable information. Unfortunately, this literature is, for various reasons, under-utilized by classroom teachers. The ultimate purpose of this class is to help teachers find solutions in the literature to everyday classroom problems. In line with this purpose, teachers will learn how to (a) find information in the literature, (b) evaluate the technical adequacy of the information, and (c) apply the information in their setting.
Prerequisite: SPLED454

SPLED 575: Grant-Proposal Development in Special Education
3 Credits
Designed to facilitate development of grants and proposal writing techniques for submission and funding by student researchers.
Prerequisite: EDPSY400, SPLED573

SPLED 594: Research Topics
1-15 Credits/Maximum of 15
Supervised student activities on research projects identified on an individual or small-group basis.

SPLED 595: Internship
1-12 Credits/Maximum of 12
Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required. A specific title may be used in each instance and will be entered on the student's transcript. Multiple offerings may be accommodated by the use of suffixes A, B, etc.

SPLED 595A: Practicum
1-6 Credits/Maximum of 6
Supervised clinical experience on campus in University-managed diagnostic and remedial settings.
Prerequisite: SPLED412. PA Act 34 clearance required. In addition, non-Pennsylvania residents must provide evidence of an FBI background information check. (Forms: 228 Chambers)

SPLED 595B: Field Experiences in Off-Campus Laboratories
1-10 Credits/Maximum of 10
Supervised off-campus field experiences in selected laboratory settings with exceptional children.
Prerequisite: SPLED412, SPLED595A. PA Act 34 clearance required. In addition, non-Pennsylvania residents must provide evidence of an FBI background information check. (Forms: 228 Chambers)

SPLED 595C: Intern Sp Ed Sup
1-6 Credits/Maximum of 6
Prerequisite: SPLED595B

SPLED 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

SPLED 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

SPLED 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

SPLED 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

SPLED 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Experience in structuring and teaching a college course supervised by a graduate faculty member.

SPLED 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

SPLED 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.
SPLED 801: Evidence-Based Student, Classroom, and School-Wide Behavior Supports

3 Credits

Overview of motivation, encouraging positive behaviors, effective classroom management, performance feedback, functional behavior assessment, collaboration, generalization, and maintenance of behavior.

SPLED 802: Design and Delivery of Evidence-Based Instruction for Learners with Special Needs

3 Credits

Evidence-based methods for designing, delivering, and adapting instruction for students with special needs in general education settings.

SPLED 803: Evidence-Based Assessment for Teaching Learners with Special Needs

3 Credits

Overview of special education assessment law, the assessment process, monitoring academic progress, classroom behavior, and assessing learners with severe disabilities. SPLED 803 Evidence-Based Assessment for Teaching Learners with Special Needs (3) This course provides an overview of special education law and methods to assess learners with special education needs in the general education setting. Roughly 15% of the course provides knowledge related to historical and legal foundations of special education that relates to general education teachers and settings. The remaining content focuses on assessing learners with both mild and more severe disabilities in general education settings. Specifically, students will learn how children are identified with special needs and found eligible for special education services. Students will learn about the value and importance of collecting and using data to make informed instructional decisions. Different assessment procedures will also be covered including norm-referenced tests and progress monitoring through the use of curriculum-based measures. Students will learn to create and implement assessments across a variety of content areas such as reading, writing, mathematics, and vocabulary (in social studies or science classes). An important part of data collection procedures is the ability to graph data and subsequently make decisions based on this data; thus, a portion of the course will focus on these skills. Students will also learn how to monitor classroom behavior. Finally, there will be a focus on assessing learners with more severe disabilities. Functional behavior assessments as well as accommodating learners with severe needs will be discussed.

SPLED 806: Foundations of Applied Behavior Analysis

3 Credits

This course covers the foundational underpinnings of the field of applied behavior analysis, which uses principles of behavior to positively impact client outcomes. The field emphasizes an empirical base through the use of experimental analysis of key variables in order to develop evidence-based interventions. This course is divided into two main areas. In the first half of the course, content is centered around behavior as a science and the historical foundations of applied behavior analysis. The second half of the course is comprised of an examination of respondent and operant conditioning as well as basic principles of behavior.

SPLED 807: Concepts and Principles of Applied Behavior Analysis

3 Credits

This course is a prerequisite to subsequent courses in the applied behavior analysis course sequence. This course teaches the basic principles of applied behavior analysis, the building blocks necessary for developing evidence-based behavioral interventions. Defining and operationalizing behavior will be reviewed and then students will take an in-depth look at the principles of reinforcement and punishment. Students will review respondent and operant conditioning and then will learn about contingencies and stimulus control, schedules of reinforcement and the various types of differential reinforcement, and motivating operations. Finally, verbal behavior will be covered including exploration of each of the verbal operants and an overview of the application of verbal behavior training toward communication goals. Throughout the course, an emphasis will be placed on understanding these principles in applied contexts.

Prerequisites SPLED 806

SPLED 808: Assessment of Behavior in Contexts

3 Credits

This course teaches students how to conduct and interpret various behavioral assessments. The course will begin with a discussion of the purpose of assessment, determining the need for behavior analytic services, and record review and intake considerations. Students will then explore various behavioral assessments including skills assessments, preference assessments, direct and indirect functional behavior assessments, and experimental functional analysis. Finally, students will learn how to interpret the results of the assessments to accurately determine the function of problem behavior.

Prerequisites SPLED 505 and SPLED 806

SPLED 809: Behavioral Change Procedures and Management I

3 Credits

This course is a prerequisite to subsequent courses in the applied behavior analysis course sequence. This course utilizes the concepts and foundations taught in the prerequisite courses in order to guide students towards developing the skills necessary in implementing evidence-based practices and selecting the appropriate procedures when targeting behaviors for change. The course will begin with an overview of intervention and will continue with an exploration of reinforcement-based interventions and establishing stimulus control. Students will then take an in-depth look at various instructional procedures including environmental arrangements, imitation, modeling, shaping, chaining, and equivalence-based instruction. Content will then focus on interventions to decrease target behaviors and will finally conclude with strategies to promote generalization and maintenance of behavior change.

SPLED 811: Ethical Considerations for Special Education Populations

3 Credits

Recommended Preparations: SPLED 503A Ethical behavior is a key component of any human service enterprise. Before a special education teacher or behavior analyst can effectively work with a client or student, they must first establish an environment of trust. This trust is built through ethical behavior on the part of the practitioner. In this class students will learn about the governmental and professional.
disciplinary standards that regulate the field of behavior analysis in special education. Beyond the letter of the law, students will work through case studies where ethical dilemmas are presented in an effort to tease out the underpinnings of ethical behavior. In this class students will work through five major content areas that are related to ethics in behavior analysis. As a foundation, Federal, State, and Local statutes that pertain to the practice of behavior analysis will be presented. Additionally, other key legal issues such as informed consent and privacy will be discussed. Next, students will learn about definitions of ethics along with the most common ethical dilemmas in the field. Relatedly, students will learn about the reporting of unethical behavior. After the more general treatment of ethics, the class will move on to more formal codes of ethical conduct, which include those promulgated by the Council for Exceptional Children and the Behavior Analyst Certification Board. The final third of the class is focused on ethics within practice and includes topics such as working and communicating with families in a responsible manner and strategies to support ethical behavior. After successfully completing this course students should be able to (a) describe ethical behavior, (b) discuss relevant governmental regulations regarding behavior analysis in schools, (c) discuss the disciplinary standards of the Behavior Analyst Certification Board, (d) discuss the ethical standards of the Council for Exceptional Children, and (e) identify effective communication skills with clients and students.

SPLED 867: Practicum in Applied Behavior Analysis
2-4 Credits/Maximum of 10
Supervised experience in applied settings implementing behavior management techniques.

SPLED 897: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject with a professional orientation that may be offered infrequently.

Statistics (STAT)

STAT 500: Applied Statistics
3 Credits
Descriptive statistics, hypothesis testing, power, estimation, confidence intervals, regression, one- and 2-way ANOVA, Chi-square tests, diagnostics.

Prerequisite: one undergraduate course in statistics

STAT 501: Regression Methods
3 Credits
Analysis of research data through simple and multiple regression and correlation; polynomial models; indicator variables; step-wise, piece-wise, and logistic regression.

Prerequisite: STAT 500 or equivalent; matrix algebra

STAT 502: Analysis of Variance and Design of Experiments
3 Credits
Analysis of variance and design concepts; factorial, nested, and unbalanced data; ANCOVA; blocked, Latin square, split-plot, repeated measures designs.

Prerequisite: STAT 462 or STAT 501

STAT 503: Design of Experiments
3 Credits
Design principles; optimality; confounding in split-plot, repeated measures, fractional factorial, response surface, and balanced/partially balanced incomplete block designs.

Prerequisite: STAT 462 or STAT 501 ; STAT 502

STAT 504: Analysis of Discrete Data
3 Credits
Models for frequency arrays; goodness-of-fit tests; two-, three-, and higher-way tables; latent and logistic models.

Prerequisite: STAT 460 or STAT 502 or STAT 516 ; matrix algebra

STAT 505: Applied Multivariate Statistical Analysis
3 Credits
Analysis of multivariate data; T²-tests; particle correlation; discrimination; MANOVA; cluster analysis; regression; growth curves; factor analysis; principal components; canonical correlations.

Prerequisite: MATH 441 , STAT 501 , STAT 502

STAT 506: Sampling Theory and Methods
3 Credits
Theory and application of sampling from finite populations.

Prerequisite: calculus; 3 credits in statistics

STAT 507: Epidemiologic Research Methods
3 Credits
Research and quantitative methods for analysis of epidemiologic observational studies. Non-randomized, intervention studies for human health, and disease treatment. STAT 507 Epidemiologic Research Methods (3) This 3-credit course develops research and quantitative methods related to the design and analysis of epidemiological (mostly observational) studies. Such studies assess the health and disease status of one or more human populations or identify factors associated with health and disease status. To a lesser degree, the course also covers non-randomized, intervention (experimental) studies that may be designed and analyzed with epidemiological methods. This course is a second-level course and complements Biostat Methods, STAT 509, which is focused on clinical (experimental) trials. Together, these two courses provide students with a complete review of research methods for the design and analysis for common studies related to human health, disease, and treatment. Prerequisite are Intro Biostats (STAT 250 or equivalent).
Prerequisite: STAT 250 or equivalent

STAT 508: Applied Data Mining & Statistical Learning

3 Credits

With rapid advances in information technology, the field of Applied Statistics and Data Science has witnessed an explosive growth in the capabilities to generate and collect data. In the business world, very large databases on commercial transactions are generated by retailers. Huge amounts of scientific data are generated in various fields as well using a wide assortment of high throughput technologies. The internet provides another example of billions of web pages consisting of textual and multimedia information that is used by millions of people. Analyzing large complex bodies of data systematically and efficiently remains a challenging problem. This course addresses this problem by covering techniques and new software that automate the analysis and exploration of large complex data sets. Data Mining methods are introduced by using examples to demonstrate the power of the statistical methods for exploring structure in data sets, discovering patterns in data, making predictions, and reducing the dimensionality by Principal Component Analysis (PCA) and other tools for visualization of high dimensional data. Exploratory data analysis, classification methods, clustering methods, and other statistical and algorithmic tools are presented and applied to actual data. In particular, the course investigates classification methods (supervised learning), and clustering methods (unsupervised learning), and other statistical and algorithmic tools as they are applied to actual data. In addition, data mining and learning techniques developed in fields other than statistics, e.g., machine learning and signal processing, will also be reviewed. The Statistics graduate program also offers more in-depth courses on data mining, STAT 557 and STAT 558. This course focuses on how to use software to investigate and analyze large data sets, whereas STAT 557 and STAT 558 focus more on writing data mining algorithms and the computational aspects of algorithm implementation.

Prerequisite: (STAT 501; STAT 462)

STAT 509: Design and Analysis of Clinical Trials

3 Credits

An introduction to the design and statistical analysis of randomized and observational studies in biomedical research. STAT 509 Design and Analysis of Clinical Trials (3) The objective of the course is to introduce students to the various design and statistical analysis issues in biomedical research. This is intended as a survey course covering a wide variety of topics in clinical trials, bioequivalence trials, toxicological experiments, and epidemiological studies. Many of these topics do not appear in other statistics courses, although a few topics are covered in greater depth in more advanced statistics courses. Computations are performed via the SAS statistical software package. Evaluation methods include four to five homework assignments, an in-class mid-semester examination and an in-class final examination.

Prerequisite: STAT 500

STAT 510: Applied Time Series Analysis

3 Credits

Identification of models for empirical data collected over time. Use of models in forecasting.

Prerequisite: STAT 462 or STAT 501 or STAT 511

STAT 511: Regression Analysis and Modeling

3 Credits

Multiple regression methodology using matrix notation; linear, polynomial, and nonlinear models; indicator variables; AOV models; piece-wise regression, autocorrelation; residual analyses.

Prerequisite: STAT 500 or equivalent; matrix algebra; calculus

STAT 512: Design and Analysis of Experiments

3 Credits

AOV, unbalanced, nested factors; CRD, RCBD, Latin squares, split-plot, and repeatd measures; incomplete block, fractional factorial, response surface designs; confounding.

Prerequisite: STAT 511

STAT 513: Theory of Statistics I

3 Credits

Probability models, random variables, expectation, generating functions, distribution theory, limit theorems, parametric families, exponential families, sampling distributions.

Prerequisite: MATH 230

STAT 514: Theory of Statistics II

3 Credits

Sufficiency, completeness, likelihood, estimation, testing, decision theory, Bayesian inference, sequential procedures, multivariate distributions and inference, nonparametric inference.

Prerequisite: STAT 513

STAT 515: Stochastic Processes and Monte Carlo Methods

3 Credits

Conditional probability and expectation, Markov chains, Poisson processes, Continuous-time Markov chains, Monte Carlo methods, Markov chain Monte Carlo. STAT 515 Stochastic Processes and Monte Carlo Methods (3) This course provides an introduction to stochastic processes and Monte Carlo methods. The course covers topics usually covered in a standard introductory course on stochastic processes, including Markov chains of various kinds. It also covers modern Monte Carlo and Markov chain Monte Carlo methods. Simulation and computing are emphasized throughout the course. The course is divided into two parts: the first part (roughly 8 weeks) provides an introduction to stochastic processes, while the latter (roughly 7 weeks) focuses on Monte Carlo methods, including Markov chain Monte Carlo. The first part of the course begins with a review of elementary conditional probability and expectation before covering basic discrete-time Markov chain theory and Poisson processes. The course then provides students with an overview of continuous-time Markov chains and birth-death processes. The second part of the course covers Monte Carlo methods. Starting with basic random variate generation, the course covers classical Monte Carlo methods such as accept-reject and importance sampling before discussing Markov chain Monte Carlo (MCMC) methods, which includes the Metropolis-Hastings and Gibbs sampling algorithms, and Markov chain theory for discrete-time continuous-space Markov chains.
Prerequisite: MATH 414, STAT 414, or STAT 513

STAT 517: Probability Theory
3 Credits
Measure theoretic foundation of probability, distribution functions and laws, types of convergence, central limit problem, conditional probability, special topics.

Prerequisite: MATH 403
Cross-listed with: MATH 517

STAT 518: Probability Theory
3 Credits
Measure theoretic foundation of probability, distribution functions and laws, types of convergence, central limit problem, conditional probability, special topics.

Prerequisite: STAT 517
Cross-listed with: MATH 518

STAT 519: Topics in Stochastic Processes
3 Credits
Selected topics in stochastic processes, including Markov and Wiener processes; stochastic integrals, optimization, and control; optimal filtering.

Prerequisite: STAT 516, STAT 517
Cross-listed with: MATH 519

STAT 525: Survival Analysis I
3 Credits
Location estimation, 2- and K-sample problems, matched pairs, tests for association and covariance analysis when the data are censored.

Prerequisite: STAT 512, STAT 514

STAT 540: Statistical Computing
3 Credits
Computational foundations of statistics; algorithms for linear and nonlinear models, discrete algorithms in statistics, graphics, missing data, Monte Carlo techniques.

Prerequisite: STAT 501 or STAT 511; STAT 415; matrix algebra

STAT 544: Categorical Data Analysis I
3 Credits
Two-way tables; generalized linear models; logistic and conditional logistic models; loglinear models; fitting strategies; model selection; residual analysis.

Prerequisite: STAT 512, STAT 514

STAT 551: Linear Models I
3 Credits
A coordinate-free treatment of the theory of univariate linear models, including multiple regression and analysis of variance models.

Prerequisite: MATH 415 or STAT 415 or STAT 514; STAT 512; MATH 436 or MATH 441

STAT 552: Linear Models II
3 Credits
Treatment of other normal models, including generalized linear, repeated measures, random effects, mixed, correlation, and some multivariate models.

Prerequisite: STAT 551

STAT 553: Asymptotic Tools
3 Credits
A rigorous but non-measure-theoretic introduction to statistical large-sample theory for Ph.D. students. STAT 553 covers most standard statistical asymptotics theory but does not require any knowledge of measure theory (it does not define convergence with probability one, for example). It covers convergence of random variables in both the univariate and multivariate settings, Slutsky’s theorem(s) and the delta method, the Lindeberg-Feller central limit theorem, power and sample size, likelihood-based estimation and testing, and U-statistics. Although there is no measure theory in the course, it is a mathematically rigorous course and major results are proved. Many common applications of the theory in mathematical statistics are discussed, and most assignments require the use of a computer.

Prerequisite: STAT 513 and STAT 514

STAT 555: Statistical Analysis of Genomics Data
3 Credits
Statistical Analysis of High Throughput Biology Experiments.
Cross-listed with: BIOL 555, MCIBS 555

STAT 557: Data Mining I
3 Credits
This course introduces data mining and statistical/machine learning, and their applications in information retrieval, database management, and image analysis. STAT 557 Data Mining I With rapid advances in information technology, we have witnessed an explosive growth in our capabilities to generate and collect data in the last decade. In the business world, very large databases on commercial transactions have been generated by retailers. Huge amount of scientific data have been generated in various fields as well. For instance, the human genome database project has collected gigabytes of data on the human genetic code. The World Wide Web provides another example with billions of web pages consisting of textual and multimedia information that are used by millions of people. How to analyze huge bodies of data so that they can be understood and used efficiently remains a challenging problem. Data mining addresses this problem by providing techniques and software to automate the analysis and exploration of large complex
data sets. Research on data mining have been pursued by researchers in a wide variety of fields, including statistics, machine learning, database management and data visualization. This course on data mining will cover methodology, major software tools and applications in this field. By introducing principal ideas in statistical learning, the course will help students to understand conceptual underpinnings of methods in data mining. Considerable amount of effort will also be put on computational aspects of algorithm implementation. To make an algorithm efficient for handling very large scale data sets, issues such as algorithm scalability need to be carefully analyzed. Data mining and learning techniques developed in fields other than statistics, e.g., machine learning and signal processing, will also be introduced. Example topics include linear classification/regression, logistic regression, model regularization, dimension reduction, prototype methods, decision trees, mixture models, and hidden Markov models. Students will be required to work on projects to practice applying existing software and to a certain extent, developing their own algorithms. Classes will be provided in three forms: lecture, project discussion, and special topic survey/research applications. Project discussion will enable students to share and compare ideas with each other and to receive specific guidance from the instructors. Efforts will be made to help students formulate real-world problems into mathematical models so that suitable algorithms can be applied with consideration of computational constraints. By surveying special topics, students will be exposed to massive literature and become more aware of recent research. Students are strongly encouraged to survey or present their own applications of data mining and statistical learning in graduate research and carry out discussions on data collection and problem formulation.

Prerequisite: STAT 318 or STAT 416 and basic programming skills

STAT 558: Data Mining II

3 Credits

Advanced data mining techniques: temporal pattern mining, network mining, boosting, discriminative models, generative models, data warehouse, and choosing mining algorithms. IST (STAT) 558 Data Mining II (3)This course is the second course in a two-course sequence on data mining. It emphasizes advanced concepts and techniques for data mining and their application to large-scale data warehouse. Building on the statistical foundations and underpinnings of data mining introduced in Data Mining I, this course covers advanced topics on data mining; mining association rules from large-scale data warehouse, hierarchical clustering, mining patterns from temporal data, semi-supervised learning, active learning and boosting. In addition, to computational aspects of algorithm implementation, the course will also cover architecture and implementation of data warehouse, data preprocessing (including data cleansing), and the choice of mining algorithms for applications. In addition to discriminative models such as CRF and SVM models, the course will also introduce generative models such as Bayesian Net and LDA. A term project will be developed by each student to apply an advanced data mining algorithm to a multi-dimensional data set. Classes will include lectures, paper discussions, and project presentations. Paper discussions will allow students to discuss state-of-the-art literature related to data mining. Project presentations will enable students to share and compare project ideas with each other and to receive feedback from the instructor.

Prerequisite: STAT 557 or IST 557
Cross-listed with: IST 558

STAT 561: Statistical Inference I

3 Credits

Classical optimal hypothesis test and confidence regions, Bayesian inference, Bayesian computation, large sample relationship between Bayesian and classical procedures.

Prerequisite: STAT 514; Concurrent: STAT 517

STAT 562: Statistical Inference II

3 Credits

Basic limit theorems; asymptotically efficient estimators and tests; local asymptotic analysis; estimating equations and generalized linear models.

Prerequisite: STAT 561

STAT 565: Multivariate Analysis

3 Credits

Theoretical treatment of methods for analyzing multivariate data, including Hotelling’s T2, MANOVA, discrimination, principal components, and canonical analysis.

Prerequisite: STAT 505 , STAT 551

STAT 580: Statistical Consulting Practicum I

2 Credits

General principles of statistical consulting and statistical consulting experience. Preparation of reports, presentations, and communication aspects of consulting are discussed.

Prerequisite: STAT 502 ; STAT 503 , STAT 504 , STAT 506

STAT 581: Statistical Consulting Practicum II

1 Credits

Statistical consulting experience including client meetings, development of recommendation reports, and discussion of consulting solutions. STAT 581 Statistical Consulting Practicum II (1 per semester/maximum of 2) This course serves as a continuation of STAT 580, which provides actual practical experience as a statistical consultant. In STAT 581, each student will hold a consulting session biweekly (by appointment) with a researcher to discuss the statistical design, analysis and computation aspects required for the client’s project. Written reports are required for each project and reviewed for appropriateness and accuracy by a supervising faculty member. In addition, a weekly seminar is utilized to discuss selected projects and non-standard applications of statistical methodology. This course will be offered in the spring and summer, with an anticipated enrollment of 15-20 students per semester.

Prerequisite: STAT 580

STAT 584: Machine Learning: Tools and Algorithms

3 Credits

Computational methods for modern machine learning models, including applications to big data and non-differentiable objective functions.

Cross-listed with: CSE 584
STAT 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

STAT 592: Teaching Statistics
1 Credits
This course is designed to help students become better teachers and communicators of statistics. INTAF 592 Teaching Statistics (1) This course is designed to help students become better teachers and communicators of statistics, and specifically to prepare students to supervise undergraduate statistics students in labs or small group settings, or even to lead their own undergraduate courses. Students learn about and discuss pedagogy in statistics, gain experience with practice teaching, and improve via individual feedback.

STAT 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

STAT 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

STAT 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

STAT 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

STAT 605: Multivariate Statistics and Applications
3 Credits
This course is designed to build upon a student's undergraduate quantitative backgrounds by giving an overview of multivariate statistical techniques. Many applied fields often require the use of large, multivariate data sets and students need to be aware of the wide range of statistical tools available to them. Major objectives of this course are to gain a working knowledge of probability theory, univariate and multivariate statistics, the use of copulas, Monte Carlo techniques, and multiple linear regression. Throughout the course, students will have the opportunity to apply these concepts to real world data sets using modern statistical software packages.

STAT 610: Time Series Analysis and Applications
3 Credits
This course is designed to build upon a student's background by giving an overview of the techniques of time series analysis often used in applied settings. Many areas of research and application often utilize long time series of data in an effort to model changes and volatility in data measured consistently over time. Major objectives in this course include an overview of linear time series; AR, MA, and ARIMA models; ARCH and GARCH models; nonlinear time series models; multivariate time series models; and models of high-frequency data. Throughout the course, students will have the opportunity to apply these concepts to real world data sets using modern statistical software packages.

Prerequisite: ( MFE 801, STAT 805; STAT 505 )

STAT 805: Multivariate Statistics and Applications
3 Credits
This course is designed to build upon a student's undergraduate quantitative backgrounds by giving an overview of the techniques of time series analysis often used in applied settings. Many areas of research and application often utilize long time series of data in an effort to model changes and volatility in data measured consistently over time. Major objectives in this course include an overview of linear time series; AR, MA, and ARIMA models; ARCH and GARCH models; nonlinear time series models; multivariate time series models; and models of high-frequency data. Throughout the course, students will have the opportunity to apply these concepts to real world data sets using modern statistical software packages.

Supply Chain and Information Systems (SCIS)

SCIS 505: Management Information Systems Research
1-3 Credits/Maximum of 3
Research problems and issues in supply chain and information systems. SC&IS 505 Management Information Systems Research (3) This is a Ph.D. level course designed to familiarize students with information systems theories and research methodologies. Special emphasis is given to the design science paradigm and, specifically, to process and
data modeling of information systems problems using techniques like UML, XML, and Petri-nets. In addition, workflow systems as an application of process modeling will be studied. After completing this course, students will have the knowledge, skills, and abilities to discuss and critically reflect on: a) information system research paradigms b) Information system modeling techniques c) Coordination theory d) Workflow models, management and architectures e) Information systems in supply chains. This is a prescribed research foundation course. Student evaluations are based on class participation, individual and group assignments, and exams. This course will be offered during Fall semester for 5-10 students.

SCIS 510: Introduction to Supply Chain and Information Systems

3 Credits

Introduction to the strategic framework, issues, and methods for integrating supply and demand management within and across companies. SC&IS 510 Introduction to Supply Chains and Information Systems (3) This course introduces the strategic framework, the managerial issues, and the methodologies for integrating supply and demand management within and across companies. Both theoretical and quantitative perspectives will be offered on these topics. Additionally, each topic will be addressed from strategic, financial, and research perspectives. After completing this course, students will have the knowledge, skills, and abilities to discuss and critically reflect on: a) supply chain theories, methodologies, trends, best practices, and research issues b) core supply chain processes c) strategic and financial impacts of supply chain management d) role of information systems. This is the first of four prescribed foundation courses. Student evaluations are based on class participation, individual and group assignments, and exams. This course will be offered during Fall semester with resident enrollment limits set at 20 students.

SCIS 516: Applied Stochastic Processes

3 Credits

Study of stochastic processes and their applications to engineering and supply chain and information systems. I E (SC&IS) 516 Applied Stochastic Processes (3) This course covers the mathematical fundamentals and tools for analyzing stochastic systems evolving over time, including concepts and techniques related to Poisson Processes, renewal processes, and discrete and continuous time Markov chains. Students will also learn to build probabilistic intuition and insights when thinking about random processes. Additionally, students will learn to apply the essential techniques of stochastic processes to real-world problems in the supply chain and information systems area. This is a prescribed research foundation course for Ph.D. students in SC&IS. Student evaluations are based on class participation, individual and group assignments, and exams. This course will be offered during Spring semester for approximately 5-10 students.

Prerequisite: I E 322 or STAT 318
Cross-listed with: IE 516

SCIS 519: Dynamic Programming

3 Credits

Theory and application of dynamic programming; Markov decision processes with emphasis on applications in engineering systems, supply chain and information systems. I E (SC&IS) 519 Dynamic Programming (3) This course presents the basic theory and applications of dynamic programming. The focus of the course will be on the theory of Markov decision processes (MDP), which provides an analytical tool to optimally control the behavior of a Markov Chain. The students will learn fundamental MDP models, computational methods and applications in supply chain and information systems, including production and inventory control, quality control, logistics, scheduling, queueing network, and economic problems. Student evaluations are based on class participation, individual and group assignments, and projects. This course will be offered during Spring semester for approximately 5-10 students.

Prerequisite: I E 516 or SC&IS 516 or equivalent
Cross-listed with: IE 519

SCIS 520: Principles of SC&IS I

3 Credits

Initial course on principles of supply chain and information systems with special emphasis on potential research topics. SC&IS 520 Principles of SC&IS I (3) This is the first of two courses covering principles, research problems and issues in supply chain and information systems. The course familiarizes students with a wide range of appropriate research topics and prepares them to initiate doctoral level research in these areas. Topics include: logistics network design, transportation and distribution, management production and inventory management, supply chain integration and coordination, workflow systems, and process and data modeling of information systems. Evaluation methods include homework assignments, research paper(s), presentations, and class participation and discussion. Offered in the fall semester only. SC&IS 510 is a prerequisite.

Prerequisite: SC&IS 510

SCIS 525: Supply Chain Optimization

3 Credits

Introduction to theory and practice of optimization methods and models for analyzing and improving the performance of supply chain environments. SC&IS 525 Supply Chain Optimization (3) This course introduces students to the optimization methods and models that are applicable to managing supply chains and provides a quantitative foundation for research in supply chain management. The primary objective is to investigate the theory and practice of optimization methods, especially as they apply to managing large, interconnected supply chains. The investigation includes mathematical programming techniques, modeling approaches, and optimization languages. This is a required course for Ph.D. students in SC&IS and an element of a set of methodological courses designed to provide a framework for analytical study of supply chain management. The course may also serve graduate students in related fields of study. Student evaluations are based on individual and group assignments or projects and examinations. This course will be offered during Spring semester for approximately 5-10 students.

Prerequisite: prior coursework in linear algebra and calculus

SCIS 530: Principles of SC&IS II

3 Credits

Sequel on principles of supply chain and information systems with special emphasis on potential research topics. SC&IS 530 Principles of SC&IS II (3) This sequel to SC&IS 520 is directed at first and second
year Ph.D. students in the SC&IS program. Other graduate students are welcome to attend with instructor’s permission. The objectives are to (1) study supply chain and information system principles, (2) expose students to a wide range of appropriate research topics, and (3) prepare students to conduct doctoral level research in these areas. Topics include planning, integration, and coordination; value and impact of information; game theory models, auctions, and behavioral issues. Evaluation methods include homework assignments, research paper(s), presentations, and class participation and discussion. This is the second part of a two-course sequence covering research problems and issues in supply chain and information systems. Offered in the spring term only. SC&IS 510 is a prerequisite.

Prerequisite: SC&IS 510

SCIS 535: Statistical Research Methods for Supply Chain and Information Systems

3 Credits

Current statistical research methods for modeling and analysis of supply chain and information systems. SC&IS 535 Statistical Research Methods for Supply Chain and Information Systems (3) This is a Ph.D. level course that requires in-depth study of statistical research methods for observational analysis and modeling of supply chain and information systems. Special emphasis is given to five methods of statistical inference: a) Estimation b) Comparison of K-groups c) Forecasting d) Data mining e) Decision-making under uncertainty. Student evaluations are based on class participation, individual and group assignments, and exams. This course will be offered during Fall semester for approximately 5-10 students.

Prerequisite: 3 credits each in undergraduate accounting, economics, and statistics

SCIS 540: Transportation and Distribution Management

3 Credits

Transportation and distribution systems in supply chains. Emphasis on role of system cost, price, service elements in total order management. SC&IS 540 Transportation and Distribution Management (3) This course focuses on the role of transport and distribution systems in new supply chain business models, with special emphasis given to total order management. Transportation system topics cover economic conditions, managerial strategies, governmental policies, and other phenomena, which affect the demand for and supply of transport and distribution services. Course design is directed toward graduate students with relatively little or no previous academic work in transport management and economics. Student evaluations are based on class participation, individual and group assignments, and exams. This course will be offered during the Fall semester with resident enrollment limits set at approximately 20 students.

SCIS 545: Supply Chain Systems Simulation

3 Credits

Application of computer simulation to analysis and design of supply chain and information systems design; simulation experiments in SC&IS research. SC&IS 545 Supply Chain Systems Simulation (3) This course will provide an introduction to Monte Carlo and discrete-event simulation. Material will be aimed at the students who need to use simulation as a research tool at a sophisticated level. Although the focus of the course is the application of simulation to the analysis and design of supply chain and information decision systems, the material in this course will be appropriate for a much broader range of applications. Some time will be spend constructing simulation models of real-world systems, but the bulk of the course will be devoted to the statistical analysis required for correctly specifying input processes and interpreting the output of simulation models. This is an elective course for graduate students in SC&IS, which may also serve graduate students in related fields of study. Student evaluations are based on a series of classroom assignments. This course will be offered during Spring semester to approximately 5-10 students.

Prerequisite: 3 credits of computer programming

SCIS 546: Procurement and Supply Management

3 Credits

Analysis, planning, and management of domestic and international procurement and supply activities. SCIS 546 Procurement and Supply Management (3) SCIS 546 provides an overview of procurement and supply management in the context of domestic and global supply-chain networks. Special emphasis is given to strategic sourcing relationships, supply management ‘best practices,’ and E-perspectives on supply management. The course uses problem-based learning and emphasizes the case method. The goal is to learn through the application of course materials to relevant supply management case problems and scenarios. Collaboration in case preparation is required. Student evaluations are based on class participation, individual and group assignments, and exams. This course will be offered during the Fall semester with resident enrollment limits set at 20 students.

SCIS 560: Seminar in Transport Economics and Policy

3 Credits/Maximum of 6

Comparative analysis of theoretical and empirical studies in transport cost, demand, pricing, and policy problems. SC&IS 560 Seminar in Transport Economics and Policy (3-6) This course is designed for Ph.D. students interested in intensive study of transportation economics and policy research and current issues. Student evaluations are based on class participation, individual and group assignments, and written exams. This course will be offered during the Spring semester with resident enrollment limits set at approximately 20 students.

SCIS 565: Supply Chain Strategy

3 Credits

Strategies, issues and best practices in technology adoption, change management, financial/capability assessments, critical aspects of relationship management in supply-chain networks. SC&IS 565 Supply Chain Strategy (3) The course focuses on the strategic design and the effective operation of supply chains. It specifically seeks to integrate topics foundation course and to engage students in the critical analysis and in probing discussions of specific supply chain leadership issues. Special emphasis is given to supply chain technology adoption, change management, shareholder value assessment, capability assessment, relationship management, and performance metrics.

Prerequisite: SC&IS 510
SCIS 570: Supply Chain Engineering

3 Credits

Use of operations research models and methods for solving problems in supply chain systems. IE 570 / SCIS 570 Supply Chain Engineering (3) The course provides state-of-the-art mathematical models, concepts and solution methods important in the design, control, operation and management of global supply chains. It provides an understanding of how companies plan, source, make and deliver their products to create/or maintain a global competitive advantage. It emphasizes the application of operations research models and methods to optimize the various components of an integrated supply chain. The course is appropriate for graduate students interested in working in the supply chain area in industry as well as those planning to pursue research in supply chain optimization.

Prerequisite: IE 405 , IE 425 , or SC&IS510

Cross-listed with: IE 570

SCIS 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses. A specific title may be used in each instance and will be entered on the student's transcript.

SCIS 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

SCIS 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

SCIS 601: Thesis Preparation

0 Credits/Maximum of 999

No description.

SCIS 610: Thesis Research

1-15 Credits/Maximum of 999

No description.

SCIS 611: Thesis Preparation

0 Credits/Maximum of 999

No description.

Supply Chain Management (SCM)

SCM 530: Supply Chain Analysis

3 Credits

Methods and tools to support supply chain decision making with emphasis on forecasting, inventory analysis, and demand planning.

Prerequisite: SCM 800 , SCM 810 , and SCM 820

SCM 540: Transportation in Supply Chains

2 Credits

Strategies and processes for design and implementation of transportation service links in supply chain networks.

Prerequisite: B A 510 or permission of program

SCM 546: Strategic Procurement

2 Credits

Development of procurement and supply management strategies to support synchronized supply chains.

Prerequisite: B A 510 or permission of program

SCM 556: Manufacturing Strategy

2 Credits

Development of service-sensitive manufacturing strategies to support synchronized supply chains.

Prerequisite: B A 510 or permission of program

SCM 566: Demand Fulfillment

2 Credits

Demand fulfillment strategies, operations, and methods in supply chain networks.

Prerequisite: B A 510 or permission of program

SCM 570: Supply Chain Modeling

2 Credits

Explore current modeling methods and software for design, analysis, execution and integration of supply chains.

Prerequisite: SCM 556

SCM 594: Research Topics

1-15 Credits/Maximum of 15

Supervised student activities on research projects identified on an individual or small-group basis.

SCM 595: Internship

1-9 Credits/Maximum of 9

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships.
SCM 800: Supply Chain Management

3 Credits

This course provides an enhanced understanding of key principles, concepts, and methodologies for effective supply chain management. Supply chain management is the integration of core business processes from the end user through original suppliers that provides products, services, and information that add value for customers. The systems viewpoint and a process orientation are explored at the firm level and from the perspective of inter-firm collaboration among participants in supply chains. The course provides opportunities to investigate important topics such as the bullwhip effect, the key approaches to planning and managing inventory across supply chains, the creation of value through alignment and realignment of supply chain capabilities, and the key supply chain performance metrics. Students successfully completing the course will be able to: - Articulate the essential principles and concepts of the supply chain approach - Demonstrate understanding of the potential role of supply chains in creating value and in sustaining competitive positions of firms - Explain the impact of the bullwhip effect on supply chain performance - Demonstrate understanding of the underlying causes of the bullwhip effect and articulate the principal approaches to ameliorating its impacts on supply chain performance - Articulate differences in the principal approaches to managing inventories across supply chains - Articulate the principal benefits and challenges associated with collaborative approaches to supply chain management - Demonstrate understanding of the principal metrics used to manage supply chain performance

SCM 801: Supply Chain Performance Metrics and Financial Analysis

3 Credits

Performance metrics are essential for effective planning and management of supply chain operations. Clear understanding of the relationship between supply chain decisions/initiatives and the firm's primary financial measures is increasingly important competency for all supply chain managers. SCM 801 provides professional-level coverage of essential supply chain performance and financial metrics applied both within the firm and across the extended enterprise. The course helps students develop the ability to choose and utilize the correct set of performance and financial metrics for varying supply chain decision-making situations. Students learn how to leverage key supply chain decision variables to impact performance and financial metrics. Students also learn to apply appropriate accounting tools and techniques and conduct financial analyses to evaluate and optimize supply chain decisions. Topics addressed include inventory and financial metrics, measures of supply chain velocity, working capital, ratio analysis, the Strategic Profit Model, total cost of ownership, the Balanced Scorecard, and the SCOR Model. Additionally, the course will utilize various financial tools and techniques (such as Discounted Cash Flow Analysis, Ratio Analysis, Breakeven Point Analysis, and Cost Volume Profit Analysis) to demonstrate the impact of supply chain principles and concepts on the performance of a firm. Students successfully completing the course will be able to: - Identify, describe, and measure the essential metrics that are the key indicators of supply chain performance, particularly as they relate to financial performance of the firm and the extended enterprise - Identify and assess the perspectives of alternative stakeholders that analyze and use financial metrics and statements - Utilize various tools/models (working capital evaluation, ratio analysis, etc.) to calculate, analyze, and gain better insights on the interplay between supply chain decision making and financial performance - Utilize discounted cash flow models to evaluate supply chain investment proposals - Describe the role of supply chain costs on the income statement and balance sheet of a firm while understanding different types of costs, cost drivers, and breakeven point evaluation (BEP) - Demonstrate understanding of how the sales and operations plan is developed and its role in supply chain processes - Compare various viewpoints regarding performance metrics and the constraints that inhibit effective implementation and utilization of those metrics

CONCURRENT: SCM 800

SCM 810: Transportation and Distribution

4 Credits

Role of transportation and distribution operations in matching supply with demand; principles of transport industry analysis and competitive positioning. SCM 810 Transportation and Distribution (4) The course is set against a background of microeconomic theory and in a framework of supply chain management. Course design is directed toward graduate students with relatively little or no previous academic work in transport management and economics. Subject coverage includes both conceptual and applied material, such as the principles of industry analysis and competitive positioning; theory and practice of transport demand, costing, pricing, and revenue and demand management in distribution settings. After completing this course, students should have the knowledge, skills, and abilities to a. Perform an industry analysis and assess a firm's competitive positioning in its industry b. Explain the principal categories of cost in a transport/distribution operation and how those cost categories behave with changes in the level of activity c. Perform a basic activity-based costing analysis for a transport/distribution operation d. Articulate the principal characteristics of transport demand e. Understand the measure of price elasticity of demand and to use this measure to quantify the revenue impact of price changes f. Articulate principal distribution strategies g. Calculate a cost-based price and a differential price h. Explain the principles and primary applications of revenue and demand management The evaluation of students is based on small team case study submissions, individual short paper and problem assignments, on-line discussion postings, and peer reviews. This course is a prescribed course for the on-line Master of Professional Studies in Supply Chain Management (MPS/SCM). The course is the second course in the first year of study, building on foundation knowledge developed in the first course but with a focus on the deliver portion of the supply chain.

Prerequisite: SCM 800
SCM 812: Demand Fulfillment

2 Credits

This course covers the forecasting and inventory management activities involved in the fulfillment of demand for finished goods. This course covers the supply chain activities related to demand planning and inventory management involved in the fulfillment of demand for finished goods. This will include an introduction to the Sales and Operations Planning (S&OP) framework and the role of demand planning in this framework. The students will develop a basic understanding of forecasting and inventory models, including how to evaluate the performance of these models and manage demand and lead time variability. The course will also help students understand the implications of setting service level targets on inventory, as well as manage cost and service tradeoffs in the demand fulfillment process.

Prerequisite: SCM 801

SCM 813: Sustainable Supply Chain Management

3 Credits

Traditional supply chain fundamentals are necessary but not sufficient in understanding and strategically managing emergent environmental and social costs, risks, and opportunities. Driving this change is a combination of pressures from customers, suppliers, competitors, employees, regulations, and resource constraints. This course is designed to equip supply chain students with the latest tools, concepts, and business practices for managing an environmentally and economically sustainable supply chain.

SCM 814: Logistics and Transportation Management

4 Credits

The role of logistics and transportation in matching supply with demand.

Prerequisite: SCM 812

SCM 815: Product Realization: Development, Manufacturing, and the Supply Chain

4 Credits

Integration of product development, production, and supply chain processes required to launch products from design concept to steady state manufacturing.

SCM 820: Strategic Procurement

4 Credits

Strategic planning for the source/buy process, including developing and managing supplier relationships, global issues, and e-procurement. SCM 820 Strategic Procurement (4) The course provides a special emphasis on the development and management of strategic sourcing relationships and promotes an understanding of the strategic role of supply management in effective supply/demand/value chain operations. Students learn through the application of course materials to relevant supply management case problems and scenarios. Collaboration in case preparation is required. Online discussions, 'what if scenarios,' and contemporary problems enhance the learning experience. After completing this course, students should have the knowledge, skills, and abilities to: a. Understand the strategic role of supply management in effective supply/demand/value chain management. b. Understand the potential impact of supply management on the competitive success and profitability of business organizations. c. Articulate supply management best practices and understand the circumstances under which they work or do not work as well. d. Understand key issues and approaches in relation to strategic supply management, including: supply relationship management, supply segmentation, and the outsourcing decision. e. Plan and execute negotiation strategies. f. Explain developments and technologies in e-Business and e-Procurement and their implications for supply chain management. View and examine future trends in both e-Business and e-Procurement. g. Understand basic issues related to global sourcing. h. Articulate the challenges and opportunities for supply management in the future. The evaluation of students is based on small group case study submissions, individual case study submissions, a small group negotiation exercise, on-line discussion postings, and peer reviews.

Prerequisite: SCM 800

SCM 822: Supply Management

3 Credits

This course provides a broad exploration of selecting, evaluating, and determining the nature of relationships with suppliers from the buyer’s perspective within the context of industry and market knowledge. Additionally, the course seeks to develop the ability to understand ethical conduct in business organizations. In particular, the course investigates Supply Market Analysis, Spend Analysis, Supplier Segmentation, Supplier Cost Management, Supplier Selection and Evaluation, Business Ethics, and Negotiation.

Prerequisite: SCM 801

SCM 824: Strategic Procurement

4 Credits/Maximum of 999

Alignment of suppliers with the strategic needs and direction of the organization. This course examines the alignment of an organization with its suppliers. Topics covered include an intensive analysis of outsourcing and offshoring decisions, evaluation and selection of appropriate transportation alternatives, determination of resiliency in the design of the supplier network, measurement of supplier performance and methods, and future issues and developments.

Prerequisite: SCM 822

SCM 830: Supply Chain Project Management

4 Credits

The fundamentals and tools of managing supply chain projects, with special emphasis given to related information technology projects. SCM 840 Supply Chain Project Management (3) This course explores the principles, concepts, and tools of managing supply chain projects, including project activity that requires a commitment of resources and people to an often strategically important undertaking that is not repetitive and short term. Special emphasis is given to IT related projects in supply chains. After completing this course, students should have the knowledge, skills, and abilities to: a. Articulate the critical project management elements and the sequence of these elements in bringing a project to fruition and success. b. Charter and organize a cross-supply-chain project teams capable of achieving project success. c. Use and apply the essential project management tools such as CPM, PERT, and Project to complete supply chain projects. d. Determine project
SCM 800: Topics in Supply Chain Management
4 Credits

Emerging issues in supply chain management, from procurement through manufacturing, logistics, and sales. SCM 846 Topics in Supply Chain Management (4) SCM 846 provides an enhanced understanding of emerging concepts in supply chain management. For this course, supply chain management is defined as 'the integration of key business processes from the end user through original suppliers that provide products, services, and information that add value for customers.' Beginning with this lifecycle understanding, the course will identify emerging developments that have the potential to alter competitive balance, planning assumptions, cost structures, and conventional timelines. Given trends in globalization, information technology, demographics, and supply chain practice, new innovations have the potential to facilitate both improvement in the performance of existing systems and the disruption of current sources of competitive advantage. Thus, the course focuses on 'weak signals' that have yet to enter the mainstream of supply chain management theory or practice. As a result, the selection of topics will evolve with the state of practice.

Prerequisite: SCM 820

SCM 850: Supply Chain Design and Strategy
3 Credits

The focus of this course is the strategic design of supply chain networks. Supply chain design decisions have extraordinary impact on the cost and service value attributes of a product or service over its lifetime. The influence of supply chain design on a firm's profitability and competitive positioning is one reason why competition today extends beyond firm versus firm to supply chain versus supply chain. Supply chain design decisions are among the most financially influential and long-lasting business decisions and yet, supply chain designs should not be static. Ever increasing customer requirements, expanding product lines and customer segments, decreasing product life cycles, and competitive pressures enabled by a growing range of flexible supply chain designs constantly force supply chain executives to evaluate and modify their current supply chain networks and the role of the supply chain in their firm's overall strategy. This course provides an examination of (1) the role of supply chain network design within the context of the firm's competitive strategy, (2) alternative supply chain designs and the factors that influence network design decisions, (3) a framework for the network design process, and (4) the principal models and techniques used for the design of supply chain networks. Students successfully completing the course will be able to: - Explain the importance of achieving strategic fit between a firm's competitive strategy and the design of the firm's supply chain network. - Describe the basic decision-making framework for achieving strategic fit. - Identify the key questions in network design for supply chains. - Identify the principal supply chain network design alternatives. - Enumerate the principal factors influencing choices among alternative supply chain designs. - Present a framework for the supply chain network design process. - Examine the principal models and techniques used for making network design decisions. - Explain the influence of demand and supply uncertainties on network design choices.

Prerequisite: SCM 800, SCM 810, SCM 820
SCM 860: Supply Chain Transformation and Innovation

3 Credits

Strategy, supply chain innovation, transformation, and leadership are the key themes throughout this course. This course is designed to address strategic management issues and offers many framework models for consideration. The course also includes leadership frameworks and insights for more impactful business management through transformational changes, risk mitigation, and crisis management. The course is designed around four major subjects: Fundamental Dimensions of Strategy - Compare/contrast different perspectives on business strategy - Connecting supply chain strategy to business strategy - Best in class supply chain strategies: which one fits the mark? - Supply chains within the context of volatility, market uncertainty, and disruptions - Optimizing the Supply Chain Diamond: interdependence of customer satisfaction, asset utilization, revenue growth, and supply chain costs. Supply Chain Innovation - Disruptive innovation vs. frugal innovation - How many SC innovations are truly revolutionary? - What does it take to remain a SC leader? Supply Chain Transformation - Defining supply chain transformation: key strategies and capabilities - Supply chain transformation process model - Learning to live with complexity - Distribution strategies for omni-channel - Deep Dive: innovation, consumer-led transformation, and lead time reduction for long term revenue growth Organizational and Personal Leadership - Leading change: why transformation efforts fail? - Change management during logistics outsourcing - SC risk assessment, mitigation, and crisis management - Leadership challenge: keeping pace with skills needed - Professional career map for path forward after graduation

Upon successful completion of this course, students will be able to discuss, analyze, and demonstrate understanding of: - Fundamental dimensions of strategy - Connecting supply chain strategy to business strategy - Guiding supply chains through recessionary, uncertain, and volatile business environments - Different ways for businesses to innovate - Strategies and capabilities for supply chain transformation - Organizational leadership traits and models to drive success in the workplace - Personal leadership including working constructively in virtual teams and peer feedback - Creating a professional development framework for their careers

Prerequisite: SCM 800, SCM 810, SCM 820, SCM 830, SCM 840 and SCM 850

SCM 896: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Systems Engineering (SYSEN)

SYSEN 505: Technical Project Management

3 Credits

Analysis and construction of project plans for the development of complex engineering products taken from a variety of problem domains.

SYSEN 507: Systems Thinking

3 Credits

The theory and practice of systems thinking. General systems theory; system dynamics, emergent properties, structure, feedback and leverage.

Cross-listed with: EDSGN 507

SYSEN 510: Engineering Analysis I

3 Credits

The course includes applications of advanced engineering mathematics; the study of systems are described by ordinary/partial differential equations and methods of solutions.

Prerequisite: students should have completed calculus at the undergraduate level or have instructor’s permission

SYSEN 520: Systems Engineering

3 Credits

Fundamentals of Systems Engineering with focus on System methodology, design, and management, includes life cycle analysis, human factors, maintainability, serviceability/reliability.

Prerequisite: SYSEN510 or instructor’s permission

SYSEN 522: Systems Verification Validation & Testing

3 Credits

The theory and practice of verification, validation and testing of engineering systems.

SYSEN 530: Systems Optimization

3 Credits

Theory/practice of linear programming will be developed including determination of optimum mix of products, levels of staffing, blending, network analysis, multi-period planning.

Prerequisite: SYSEN520 or instructor’s permission

SYSEN 531: Probability Models and Simulation

3 Credits

Provides background in modeling problems containing random components that must be accounted for in a reasonable solution.

SYSEN 532: Simulation in Systems Engineering: Discrete-Time Systems

3 Credits

The scale and cost of typical systems engineering projects mandate that proposed solutions are explored through integrated models and simulations such that stakeholders are confident that the system will work as intended upon deployment. In this course we examine the use of discrete-time approaches to these integrated models and their application to systems engineering. The course covers fundamental concepts, methods, and applications of modeling and simulation with a particular emphasis on problem framing, conceptual model development, and modeling systems of interconnected heterogeneous systems using hybrid simulation. The course begins with an overview of different types
of systems and models, model verification and validation processes, sources of randomness and uncertainty, and reviews basic concepts related to computer simulation. Students are given an overview of two types of simulation, namely Monte Carlo and discrete event simulation. Basic concepts related to input modeling, experimentation, and output analysis are covered. Students will then learn how to combine the two simulation methods and develop hybrid simulations to model a system of interconnected subsystems and the importance of modeling these interrelationships. The students also gain hands-on experience on additional topics such as simulation-based optimization by using a commercial simulation software package.

SYSEN 533: Deterministic Models and Simulation

3 Credits

Provides a background in simulation and the modeling of problems that contain differential equations as part of the system.

SYSEN 534: Simulation in Systems Engineering: Continuous-Time Systems

3 Credits

This course addresses system dynamics modeling and simulation for the analysis of complex systems. It provides the theoretical and technical knowledge necessary to conceptualize dynamics of complex systems, formulate appropriate simulation models, and use models to understand the system behavior and develop effective policy interventions. Students are exposed to the techniques used to form models of supply-demand, mechanical, electrical, biological, and hybrid systems. The course starts with an overview of system dynamics (SD) as a set of conceptual tools that enable us to understand the structure and dynamics of complex systems. Then, students learn about tools and techniques that enable us to use SD as a rigorous modeling method to build formal computer simulations of complex systems. Also, the use of computer-based simulation software packages will be addressed. After understanding how to test the validity of the simulation model, and analyze the sensitivity of the model to uncertainty in parameters and/or structural changes, students will learn how to use SD to model and analyze basic electromechanical and hybrid systems. Advanced topics, including simulation-based optimization and application of SD in modeling interdependent infrastructure, socio-economic, and hybrid renewable energy systems, are covered to provide students with an insight to the applications of SD in studying contemporary issues.

SYSEN 536: Decision and Risk Analysis in Engineering

3 Credits

Analysis of engineering decisions under uncertainty; problem identification, formulation, judgment, resolution; mitigation, risk analysis, quantification and management. SYSEN 536 Decision and Risk Analysis in Engineering (3)This course examines the analysis of decisions under uncertainty within the context of engineering and technology. It focuses on understanding and improving the decision-making process of individuals and groups in technical organizations. Emphasis is placed on evaluation methods; identification, modeling, and problem resolution; consequences/outcomes of the action taken; risk analysis and quantification. Objectives 1. To appreciate the theoretical foundations of decision sciences within the context of engineering data and problems. 2. To be able to explain and evaluate alternative perspectives of the decision making process. 3. To be able to identify sources of decision failure in individuals and organizations. 4. To gain an understanding of decision technologies in the context of engineering decision making. Performance will be evaluated through a mid-semester written examination, homework (case studies) assignments, class participation, and a semester group project with an in-class presentation.

SYSEN 550: Creativity and Problem Solving I

3 Credits

Foundations of individual problem solving, including creativity, cognitive style and level, problem solving processes and techniques, the paradox of structure. SYSEN 550 Creativity and Problem Solving I (3) Problem solving is a fundamental human activity that is critically important to all disciplines. The primary objective of this course is to help students become better and more effective problem solvers through a basic, yet rigorous, understanding of the cognitive processes involved in problem solving and individual creative behavior. To meet this objective, selected elements of cognitive psychology are examined, along with general and domain-specific models of the problem solving process, a variety of problem solving techniques, and illustrative examples and case studies related to these topics in a variety of contexts (including science, engineering, and management). In addition, students will explore their personal preferences for problem solving strategies and the ways these preferences can impact both personal and professional life. Here, the objective is to provide students with an assessment of their strengths and weaknesses in the domain of problem solving, as well as a basis of understanding and appreciating the diverse problem solving abilities and styles of others. With its focus on effective problem solving at the individual level, this course is appropriate for students in all disciplines and areas of study. It also serves as the foundation for additional courses in problem solving, which may build upon the theoretical elements presented here (e.g., group problem solving) or serve as in-depth application studies in specific topical areas (e.g., invention). Students’ performance in this course will be evaluated through written examinations and homework assignments, as well as class participation. This course will be offered at least once during each academic year.

SYSEN 552: Creativity and Problem Solving II

3 Credits

Theory and practical applications of group problem solving, including cognitive gap, coping behavior, agents of change, and managing cognitive diversity. SYSEN 552 Creativity and Problem Solving II (3) This course builds on an understanding of the individual problem solver to address the dynamics of group problem solving, with a particular focus on the domains of science, engineering, and technical management. At the core of the course material is cognitive gap, i.e., differences in cognitive characteristics that may exist between problem solvers (both individuals and groups) and/or between problem solvers and the problems they solve. Students will explore the impact different cognitive profiles on problem solving from multiple perspectives, including group efficiency, personal communication, and the quality of group outcomes. Strategies and tactics for improving the problem solving performance of groups of all sizes will be learned and applied using real-world examples and case studies. Upon completing this course, students will have a fundamental, rigorous understanding of cognitive diversity within groups and how it can be leveraged to make problem solving more effective. Skills learned will include: analyzing the cognitive resources of a problem solving group; breaking down complex problems based on cognitive variables; and matching cognitive resources appropriately with required skills. With its focus on effective problem solving at the group level, this course is appropriate for students in all disciplines and areas of study. It also
serves as the foundation for additional courses in problem solving, which may build upon the theoretical elements presented here (e.g., problem solving leadership) or serve as in-depth application studies in specific topical areas (e.g., invention). Students' performance in this course will be evaluated through written examinations and homework assignments, as well as class participation. This course will be offered at least once each academic year.

**Prerequisite:** SYSEN550

SYSEN 554: Problem Solving Leadership

3 Credits

Models, processes, and techniques for solving complex problems, managing problem solving diversity, and facilitating change through problem solving in socio-technical systems. SYSEN 554 Problem Solving Leadership (3) As the problems faced by professionals become more complex, expertise in the domain of the problem must be supplemented with knowledge about the problem solver and the problem solving process. This course builds on an understanding of the individual problem solver and problem solving groups (and the individual's role within them) to focus on the facilitation of complex problem solving within socio-technical systems, including the role of the problem solving leader within problem solving groups. Students will learn and implement strategies for characterizing and coordinating the problem solving preferences and abilities of individuals and groups based on problem constraints and the solutions desired. Other topics and skill sets covered will include: systems models of leadership; practical leadership as problem solving; processes and techniques for characterizing complex needs, generating and assessing potential solutions, and evaluating problem solving outcomes; frameworks for modeling and coordinating problem solving diversity among people, problems, and products; and the modeling and facilitation of socio-technical change through problem solving. This course is appropriate for students in all disciplines and areas of study, although it is particularly relevant for students in engineering, science, and/or management. Students' performance in this course will be evaluated through written examinations, homework assignments, and a class project that extends over the semester.

**Prerequisite:** SYSEN550, SYSEN552

SYSEN 555: Invention and Creative Design

3 Credits

This course focuses on the creative design process which leads to the development of new products, processes, and systems (i.e. invention).

SYSEN 594: Research Topics

1-15 Credits/Maximum of 15

Supervised student activities on research projects identified on an individual or small-group basis.

SYSEN 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

SYSEN 880: Systems Architecture and Models

3 Credits

System architecture is an abstract view of a complex system distinct from the details of how such a system is implemented. It plays a significant role in developing complex systems that meet expectations of their stakeholders and achieve the mission and life cycle concepts of the system. This course covers the fundamental concepts, techniques, and methods for creating and analyzing system architecture of complex systems. System engineers, system architects, product design engineers, product managers, and project managers working in system development of commercial or military engineering systems will benefit from this course. Major topics to be covered include analysis of form and function, the process of mapping form to function, and methods of decomposition and re-integration, application of model based systems engineering for development and analysis of system architecture, and view-based architectural frameworks for documentation of system architecture. Students will: - Learn the significance of system architecture, - Learn fundamental concepts underlying a system architecture, - Learn models, methods, and tools for architecture development and analysis, - Demonstrate understanding of influences on system architecture decisions - Explore architectural frameworks for documentation of system architecture

SYSEN 895: Internship

1-9 Credits/Maximum of 9

Supervised, professionally oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships.

SYSEN 897: Special Topics

1-9 Credits/Maximum of 999

Formal courses given on a topical or special interest subject which may be offered infrequently.

**Theatre (THEA)**

THEA 500: Theatre Research: Sources and Procedure

3 Credits

Source materials and techniques as applied to theatre research; the form and content of theses and monographs.

THEA 502: Creative Collaboration

3 Credits

Theory and process of creative collaboration between the theatre artistic and production staffs.

**Prerequisite:** MFA theatre candidate

THEA 505: Masterpieces in Production I

3 Credits

Dramatic structure, theatrical validity, production viability of great plays from Greek to eighteenth-century. Drama as blueprint for production.
THEA 506: Masterpieces in Production II
3 Credits
Dramatic structure, theatrical validity, production viability of masterworks of theatre. Drama as the blueprint for production. Offered in London, England. THEA 506 Masterpieces in Production II (3) This course functions as a component of the core sequence on text analysis and dramatic literature required of all graduate students in the School of Theatre. As the course is offered only in London, England, it also functions as a core component of the international field studies program. While in residence at University Park, the focus of the course will be on literature and theory. Graduate students will then take up residence in London, England, where they will experience and analyze plays in production, focusing on production techniques and application of theory in the real world of the theatre.

Prerequisite: THEA 500, THEA 505

THEA 507: Masterpieces in Production III
3 Credits
Dramatic structure, theatrical validity, production viability of major American plays from Tyler to the present. Drama as blueprint for production.

THEA 508: Experiential Analysis of Italian Design Styles
3 Credits
Applications of Historical and Cultural Perspectives in Dramatic Production. Offered in Italy.

THEA 509: Experiential Analysis of Eastern European Styles
3 Credits
Applications of Historical and Cultural Perspectives in Dramatic Production. Offered in Prague and Budapest.

THEA 510: Experiential Analysis of Period Style
3 Credits
Applications of Visual/Spatial History in Dramatic Production. Offered in London, England. THEA 510 Experiential Analysis of Period Style (3) This course is taught in tandem with the second course of the core sequence on text analysis and dramatic literature required of all graduate students in the School of Theatre. As the course is offered only in London, England, it also functions as a core component of the international field studies program. Prior to taking up residence in England, students will explore films and dramatic texts set in periods ranging from the middle ages to the present day. Discussion will focus on the historic context for each dramatic work. Topics covered will include background information on historical events, an introduction to the visual world of each period, and the social/cultural ideology reflected in the period design. While in England, students will participate in tours of museums and historical sites. Class discussion will focus on establishing connections between the social/cultural content previously presented and the tactile, spatial experiences gained through seeing actual sites and artifacts from each period. The primary objective of the course will be to enhance the practical and intuitive understanding of period dramatic action in theatre students of all disciplines by guiding them through actual experience of period artifacts and spaces.
Prerequisite: THEA 552, MFA theatre design candidacy
THEA 559: Portfolio Presentation
1 Credits/Maximum of 2
Current practice in portfolio development and presentation to client and employer.
Prerequisite: prior approval of faculty
THEA 569: Costume Construction: Crafts
3 Credits
Exploration and development of various crafts techniques with application to costume construction (i.e. masks, jewelry, armor, millinery, footwear, wigs).
THEA 571: Stage Lighting Design IV
3 Credits
Course addresses individual problems in the stage lighting design process concentrating on the development of skills necessary for processional examination.
Prerequisite: THEA 570
THEA 585: Theatre Planning
3 Credits
Processes and problems in planning and designing theatres: performance, audience, and technical requirements.
THEA 589: Design/Production Monograph
1-4 Credits/Maximum of 4
The development and presentation of M.F.A. monographs in design/production.
THEA 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.
THEA 595: Internship
1-3 Credits/Maximum of 3
Professional field experience in theatre performance, production, and management assignments.
Prerequisite: approval of internship by instructor prior to registration
THEA 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.
THEA 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.
THEA 597A: SPECIAL TOPICS
1 Credits
THEA 597B: SPECIAL TOPICS
6 Credits
THEA 597C: SPECIAL TOPICS
3 Credits
THEA 597D: SPECIAL TOPICS
3 Credits
THEA 597F: SPECIAL TOPICS
2 Credits
THEA 597G: SPECIAL TOPICS
2 Credits
THEA 597I: SPECIAL TOPICS
1-3 Credits
THEA 597K: SPECIAL TOPICS
3 Credits
THEA 600: Thesis Research
1-15 Credits/Maximum of 999
No description.
THEA 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Teaching of theatre and film classes under senior faculty supervision.
THEA 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.
THEA 811: International Studio Intensive
1-9 Credits
The course enhances the ability of the actor to meet the voice and speech demands for the performance of Shakespeare. THEA 811 International Studio Intensive (1-9 per semester) The objective of the course is two-fold. The first part of the class deals with the vocal skills necessary for successful acting of the Shakespearean play. The actors work on a series of rigorous voice and speech exercises, and master an intense and complete warm-up that prepares them to deal with the text. The second portion of the course deals with the play-script itself and examines the relationship between the voice and the text. Working with
sonnets and monologues, the student is introduced to scansion, imagery, alliteration, and other text related skills.

THEA 811A: International Production Studio Intensive

1-9 Credits/Maximum of 9

Intensive studio application of processes and procedures within specific theatre disciplines as influenced by the work of international professionals.

**Prerequisite:** THEA 500, THEA 505

THEA 820A: Acting I

4 Credits

Exercises, monologue, and scene study. Principal focus on realism. THEA 820A Acting I (3 per semester) THEA 820A is a laboratory or practicum course requiring active student presentation of assigned acting projects. Outside preparation and homework are required for all sessions. Working in pairs, each student will participate in improvisational scenes on a daily basis. In addition, each actor will be required to independently prepare and present various acting exercises, scenarios, and finally, a comprehensive play and character analysis for a scripted scene from contemporary realism (that will be performed with an acting partner the following semester). Critiques of each actor's work will be given on a daily basis and the student will be expected to rehearse outside of class to address any issues raised and to have them remedied for the next viewing.

**Prerequisite:** admission to the MFA performance acting program

THEA 820B: Movement for Actors I

2 Credits

Techniques and skills in physical expression, awareness, control, and stage movement. THEA 820B Movement for Actors I (2 per semester) A fundamental movement class designed to strengthen, prepare, and align the body for maximum freedom of expression. Emphasis is on concentration, flexibility, balance, coordination, relaxation and sensitivity to the impulses stimulated from outer and inner resources. Techniques may include but are not limited to time tested modalities such as Yoga, Alexander, Tai Chi, Pilates, Feldenkrais, and Modern Dance. Included in the course are units on nutrition, time management, and the proper care and maintenance of the physical instrument. Students will be evaluated according to their acquisition of skills and professional attitude.

**Prerequisite:** admission to MFA performance acting program

THEA 820C: Voice and Speech I

2 Credits

Vocal techniques for the actor: articulation, voice control, support, and projection. THEA 820C Voice and Speech I (2) THEA 820C is the first in a sequence of voice and speech courses for the actor. This first semester installment will focus on awareness and conditioning activities related to breath, posture, resonance and articulation. Prose and poetry readings will be used for application activities. Students will experience activities that will heighten their physical awareness of vocalizing. Most activities will involve a re-learning of how they speak, bringing to their conscious awareness the processes of voice/speech which were initially learned through early childhood nurturing. Class events will include awareness of breath patterns and the means to release inhibitive behaviors related to spinal posture, head and neck alignment, and musculature along the breath/vocal tract. Students will also gain awareness of how breath relates to their expressive/emotional system.

**Prerequisite:** admission to the MFA performance acting program

THEA 821A: Acting II

3 Credits

A continuation of THEA 520A. THEA 821A Acting II (3) The foundational work of the first semester continues with its application to scripted material, primarily drawn from contemporary drama. The actor's skills in contact, communication, and inventiveness are further developed, along with personalizing the given circumstances of the dramatic text. The concept of character is introduced and students will begin the exploration of bringing truthful behavior to viewpoints different than their own. Each student will be paired with an acting partner and perform three scenes during the semester. A written, comprehensive script and character analysis will be required for each scene. Critiques of each actor's work will be given on a daily basis and the student will be expected to rehearse outside of class to address any issues raised and to have them remedied for the next viewing.

**Prerequisite:** THEA 820A

THEA 821B: Movement for Actors II

2 Credits

A continuation of THEA 520B. THEA 821B Movement for Actors II (2) Through the study and discipline of learning precise corporeal skills, the actors gain confidence and clarity of expression. This clarity is applied toward the creation of mimetic illusions, mask-work, tableaux, and various animal and effort shaping studies aimed at developing characters for the stage. Characters may range from the fantastic to the most real. Improvisation and specific exercises are developed to encourage bold physical choices and the liberation of the creative imagination. Actors work in individual, team, and ensemble situations to apply techniques toward meaningful rendition of ideas.

**Prerequisite:** THEA 820B

THEA 821C: Voice and Speech II

2 Credits

A continuation of THEA 520C. THEA 821C Voice and Speech II (2) THEA 821C is the second in a sequence of voice and speech courses for the actor. This second semester installment will continue the focus of voice/speech training addressed in THEA 820: focus on awareness and conditioning activities related to breath, posture, resonance and articulation. Prose and poetry readings will be used for application activities. Students will experience activities that will heighten their physical awareness of vocalizing. Most activities will involve a re-learning of how they speak, bringing to their conscious awareness the processes of voice/speech which were initially learned through early childhood nurturing. Class events will include awareness of breath patterns and the means to release inhibitive behaviors related to spinal posture, head and neck alignment, and musculature along the breath/vocal tract. Students will also gain awareness of how breath relates to their expressive/emotional system. Class activities will also include physical awareness of the consonant and vowels sounds and their phonetic transcriptions. Each event will strive to improve actors' intelligibility and increase musicality of speech. Through application assignments with
word lists, sentences, poetry and prose, students will increase language sensitivity. This semester will also address voice quality issues directly and how they relate to the above. Specific events will focus on vibratory awareness in primary resonators and how to apply this awareness in all vocal life. Issues of vocal health, projection and emotional demands will be addressed. Students will be evaluated upon preparedness, work ethic, focus, openness to change, growth, degree of self-reliant recall and creative application of new skills. This studio performance class offers opportunity for assessment from the instructor in each class session. Periodic assignments will be made to assess self-reliant application of the work.

Prerequisite: THEA 820C

THEA 822A: Acting III

3 Credits

This course will focus on the research and development of skills necessary to perform the plays of Shakespeare and his contemporaries. THEA 822A Acting III (3) THEA 822A is designed to take the skills acquired in the movement, voice and acting studios in the first year of the graduate actor training program and apply them to the lush words, passionate images, and intense emotion required by the elevated texts of playwrights such as Shakespeare. The process requires the reduction of modern vocal and physical parasites and their replacement by a higher standard of speech and a classically open, expressive body. Truthful behavior in action is still the goal - the challenge is to embrace Shakespeare's truths. In the weeks devoted to scene study, the actors must learn to be comfortable with classical works, to confront any predisposition about style, and see that their vocal and physical instruments need to be strengthened in order to fully play classical characters. Because THEA 822A is a laboratory performance course, one in which students must be sharing what they are learning or performing on a daily basis, on-going assessment takes place through faculty feedback in working sessions, through faculty and peer critique of work presented, through an oral evaluation at mid-semester in conference with the graduate acting faculty, and through an extensive written evaluation and formal conference with the head of the School and the head of the acting program at semester's end. Other faculty will observe midterm and end of semester presentations to offer insights. Students thus receive assessment on many occasions in the course of the semester.

Prerequisite: THEA 821A

THEA 822B: Movement for Actors III

2 Credits

Advanced techniques and skills in physical expression. THEA 822B Movement for Actors III (2) Building upon the character work of the previous semester, actors delve into the specific demands of farcical comedy and the development of European clown characters. Comic devices, timing, exaggeration, and invention are studied and applied to specific texts dealing with farcical movement demands. Clown characters are devised and guided toward specific invention work aimed at developing skills needed for a wide variety of comic situations. Building upon the previous work, an ensemble improvisation piece is developed to enable actors to apply techniques to an invented world with many different and demanding situations. Linking to the classical work in the acting studio, the actors will finish with a unit dealing with comic and dramatic physical demands and pitfalls inherent in working within the world of Shakespeare's plays.

Prerequisite: THEA 821B

THEA 822C: Voice and Speech III

2 Credits

Advanced voice and speech training for the actor: articulation, resonance, and vocal technique related to verse and heightened language drama. THEA 822C Voice and Speech III (2) THEA 822C is the third in a sequence of voice and speech courses for the actor. This third semester installment will focus on review of speech and voice techniques and application of those techniques in the performance of Shakespearean drama text and other heightened language plays. Scansion of poetic meter, syntax, lexicon resources, and sound patterns will be the primary informative elements of vocal performance. Students will be assigned sonnets, monologues and scenes as vehicles for application in the studio. Students will be evaluated upon preparedness, work ethic, focus, openness to change, growth, degree of self-reliant recall and creative application of new skills. This studio performance class offers opportunity for assessment from the instructor in each class session. Periodic assignments will be made to assess self-reliant application of the work.

Prerequisite: THEA 821C

THEA 823A: Acting IV

3 Credits

Students prepare audition material for their New York Showcase for theatrical agents. THEA 823A Acting IV (3) The objective of the course is the selection, rehearsal, and performance of audition material for the New York Showcase for theatrical agents. Students begin the semester by bringing large amounts of potential audition material into a peer review format where their fellow students and the instructor, evaluate the monologues and scenes and give specific feedback on its suitability. During the course of the semester, the students decide on a core of eight monologues and four scenes from which the final Showcase will be crated. The monologues are performed for the class and the School of Theatre faculty.

Prerequisite: THEA 822A

THEA 823B: Movement for Actors IV

2 Credits

Fundamentals of unarmed and armed stage combat with emphasis on enactment of safe and effective stage fights. THEA 823B Movement for Actors IV (2) Actors learn the basics of unarmed and armed stage combat techniques. Applying the standardized and time-tested safety measures derived from the Society of American Fight Directors, each actor must master kicks, slaps, punches, grabs, holds, rolls, and all other unarmed techniques. They must also learn how to wield a quarterstaff, rapier and dagger, and broadsword with confidence: safely and effectively enacting various styles of stage combat choreography. Designed to train specific techniques while raising kinetic awareness, the course also introduces the historical background for each weapon style.

Prerequisite: THEA 822B
THEA 823C: Voice and Speech IV

2 Credits

A study of stage dialects. THEA 823C Voice and Speech IV (2) THEA 823C is the fourth in a sequence of voice and speech courses for the actor. This fourth semester installment will apply the articulation, phonetics and resonance skills addressed in prerequisite classes toward the acquisition of stage dialects and accents. For each dialect the student becomes aware of the resonance, phonetic transcription, inflection, and rhythmic changes necessary to perform dramatic text with an accent or dialect. Vocal agility, phonetic recall and the ability to integrate the altered vocal behavior to the demands of acting are the primary goals. Each dialect unit will have an introductory instruction, a review session, and a presentation of a reading of a dialect monologue. The final project will be the performance of two dialect monologues. Students will be evaluated upon preparedness, work ethic, focus, openness to change, growth, degree of self-reliant recall and creative application of new skills. This studio performance class offers opportunity for assessment from the instructor in each class session. Periodic assignments will be made to assess self-reliant application of the work.

Prerequisite: THEA 822C

THEA 824: Acting for the Camera

6 Credits

This course introduces the actor to the skills necessary for successful performance in television, film, video and commercial venues.

Prerequisite: THEA 823A, THEA 823B, THEA 823C

THEA 825A: Acting Professionally/NYC Showcase

3 Credits

Development of audition repertoire; study of business topics; development, rehearsal and performance of NYC showcase. THEA 825A Acting Professionally/NYC Showcase (3) THEA 825A is a capstone course that brings closure to the actors’ studio training and prepares them for entrance into the competitive world of the entertainment industry. The first half of the semester the students will locate, edit and present audition material for weekly critique. The students will also become aware of business practices related to the acting profession such as union membership, contracts, working with agents/casting directors, etc. During the second eight weeks the students will rehearse and eventually perform an audition showcase in NYC for talent agents and casting directors. Students will receive daily criticism of their work by faculty and peers and will be graded upon the applied aspects of the course, in audition tour of professional regional theatres and the NYC showcase performance.

Prerequisite: THEA 823A, THEA 823B, THEA 823C

THEA 825C: Professional Repertory Performance

3 Credits

Rehearsal and performance of theatre productions at Penn State featuring third year MFA actors and professional guest artists. THEA 825C Professional Repertory Performance (3) The professional performance experience is the equivalent of a masters degree thesis. It is the culminating event for three years of full-time study, rehearsal, and performance. The season is chosen to demonstrate the acting skills of each student in the third year of the M.F.A. program. These plays are chosen to be the first professional experience for the acting students as they work alongside professional guest artists.

Prerequisite: THEA 823A, THEA 823B, THEA 823C

THEA 830: Interdisciplinary Theatrical Design Studio

3-6 Credits/Maximum of 36

Advanced analysis, graphic, and presentation techniques for evolving and communicating design for the stage.

THEA 831: Theatrical Costume Technology Studio

3-6 Credits/Maximum of 6

Advanced mastery of both traditional and modern techniques in costume creation for live performance. This course will combine the instruction of all aspects of theatrical costume execution for the stage into a single studio. Upon completion of diagnostic exercises, costume faculty will work with students, providing project based instruction specific to the student’s developmental level and necessary industry skill sets. Innovative methodologies and new technologies are also explored. This course will encourage a professional standard in skills and techniques, and promote a greater understanding of the creative and collaborative relationship between the technologist, costume designer, and performer.

THEA 857: Scenic Design for Production

1 Credits/Maximum of 6

Design and execution of production design projects.

THEA 861: Costume Design and Construction

1-6 Credits/Maximum of 18

Advanced special projects for the graduate designer and costumer.

Prerequisite: THEA 461 or THEA 560

THEA 863: Costume Construction: Draping

3 Credits

Exploration and development of various draping techniques with application to costume construction.

THEA 865: Costume Construction: Period Reconstruction

3 Credits

Exploration and development of reproduction techniques relating to period clothing, and their application to costume construction.

THEA 866: Costume Construction for Production

1 Credits/Maximum of 6

Execution of production in construction and shop management.

THEA 867: Costume Design for Production

1 Credits/Maximum of 6

Design and execution of production design projects.
Prerequisite:
- a realistic project budget
- e) Creating and managing a TRDEV project team
- d) Creating and monitoring timeline for management and completion of the project
- c) Identifying and conceptualizing the project's scope
- b) Creating and monitoring a realistic project budget
- is designed to enhance students' skills in managing a TRDEV project: a) organizations.

professionals must effectively manage complex projects. This course involves the study of performance consulting strategies and techniques when working with organizations to systematically analyze and improve performance at the organization, process, and job levels. This type of consulting involves working with clients to document how work is accomplished at the organization, process, and job-performer levels; selecting appropriate measures of performance for these three levels of performance; and identifying causes of performance problems. As a result of these processes, appropriate solutions can be identified and implemented within a specific organization.

Prerequisite: TRDEV460

TRDEV 505: Project Management in Training and Development

3 Credits

Introduces skills for managing complex training and development projects, such as developing timelines, creating budgets, and allocating resources. TRDEV 505 Project Management in Training and Development (3) In today’s fast-paced workplace, training and development professionals must effectively manage complex projects. This course is designed to enhance students’ skills in managing a TRDEV project: a) Conceptualizing the project's scope b) Creating and monitoring a realistic timeline for management and completion of the project c) Identifying and allocating necessary resources and personnel d) Creating and monitoring a realistic project budget e) Creating and managing a TRDEV project team

Prerequisite: TRDEV460, or permission of the program

TRDEV 507: Program Evaluation

3 Credits

Evaluation of educational and other human services programs; preparation and presentation of the evaluation proposal.

Prerequisite: TRDEV460, or permission of program

TRDEV 518: Systematic Instructional Design in Training

3 Credits

Study of theory and practice of systematic instructional design. Application of instructional design principles to training problems in local organizations.

Prerequisite: TRDEV460, or permission of program

TRDEV 520: Learning Styles and Learning Theory in Training

3 Credits

Adult learning theory and its application to training and development.

Prerequisite: TRDEV460

TRDEV 528: Instructional Systems Design Applications

3 Credits

Advanced instructional systems design theory, models, strategies, and consulting approaches. TRDEV 528 Instructional Systems Design Applications (3) The ways in which employees work and learn in organizations are continuously changing. Such changes require that instructional designers modify and, when necessary, use new theories and models to be more responsive and effective in meeting organizational needs for learning and performance improvement systems. Introductory graduate courses in instructional systems design typically use traditional models of instructional design to teach graduate students the fundamentals of the design process. This is necessary so that students have a solid foundation of concepts and principles to guide their practice in instructional design. This course, TRDEV 528, immerses students in the instructional systems design literature for the purpose of advancing their knowledge of more contemporary theories, models, and research of instructional systems design as students also engage in a real-world instructional design project. The process of individual and group reflection on recent research and theoretical developments in instructional systems design as students grapple with the demands and challenges of a real-world design project will broaden and deepen their expertise in the instructional systems design, thereby producing instructional designers who are more prepared to responsively and effectively address complex learning and performance improvement needs in organizations.

Prerequisite: TRDEV460 and TRDEV518

TRDEV 530: Multiplatform Delivery Skills

3 Credits

Platform skills for training delivery, including voice, audio-visual aids, and personal presence, in face-to-face and virtual environments. TRDEV 530 Multiplatform Delivery Skills (3) This highly participatory course is designed to provide students with the theoretical underpinnings of communication through presentation that will increase their capacity to flexibly convey content in ways that engage their audience in any modality - face to face, virtual, synchronous, and asynchronous. Within the context of solid communications theory, students will have opportunities to develop or strengthen a personal delivery style, applying theoretical constructs to accentuating their strengths. Through readings, discussion, critique of exemplars, practice presentations, and feedback, students will become facile with identifying theory in use, and develop the skills required to effectively deliver content. In the increasingly complex world, there is a persistent need for and value in face-to-face presentations and the skills required to produce and deliver them are paramount in a range of organizational circumstances including but not limited to what is considered formal training. Increasingly, these skills are being called into service to support content delivery in virtual settings, and although the basic approaches are consistent philosophically, these settings require special consideration. It is on this basis that the course is organized into three sections focused on 1) underpinning communications and cognitive theory, 2) application of theory to face-
to-face presentations, 3) theoretical distinctions to support virtual environments, both synchronous and asynchronous.

**Prerequisite:** TRDEV460

TRDEV 531: Technology in Training
3 Credits

Applications of various new instructional technologies to training problems.

**Prerequisite:** permission of the program

TRDEV 532: Web-Based Training
3 Credits

Introduction to the design and development of websites for computer-based instruction in the workplace. TRDEV 532 Web-Based Training (3) Computer-Based Training (CBT), Computer-Assisted Instruction (CAI), Computer-Based Education (CBE), Interactive Multimedia (IMM), and Web-Based Training (WBT) are all terms used to describe the delivery of learning materials via computer. The recent rapid increase in these types of programs can be partially attributed to the development of software authoring tools. These allow developers to create computer-based programs through easy-to-learn Graphical User Interfaces (GUIs) without requiring extensive knowledge of programming and programming languages. Most recently, the World Wide Web (WWW) has offered a new way of distributing training materials through a broader electronic network. Thus, Web-Based Training, or WBT, is becoming increasingly important as a tool for Trainers. Its 'language' is primarily HTML. The primary goal of this course is for you, the student, to demonstrate competency in applying design theory while using Web tools to develop a WWW-based module.

**Prerequisite:** permission of the program

TRDEV 537: Technologies in Learning and Development
3 Credits

Design and application of various technologies utilized for instructional and human resource development in corporate and similar settings. TRDEV 537 Technologies in Learning and Development (3) Over the past several decades, technology has become increasingly important for instruction and organizational development activities in a wide range of corporate and similar settings. While historically focused on relatively straightforward hardware-based implementation (e.g., film and slide projectors, overhead projectors, etc.), technology is now composed of an increasingly complex combination of hardware and software as well as personally created and/or globally available information. This course will be composed of three distinct, but related areas — distance education, Web-based instruction, and organizational development. The distance education component will include topics related to the various technologies and strategies related to the delivery of instructional materials to students who choose to learn at a distance from their educational institution. Further discussion will include material related to the growing body of research in this field as well as methods for evaluation and assessment. The second major component — Web-based instruction — will focus on the history and research of this rapidly changing area as well as the growing number of technologies available for teaching students who are utilizing this medium for instruction. Topics related to the design and development of instructional materials, including their related technology options, will also be included. The use of various technologies for organizational development is the final major component of this course. These include technologies for knowledge management, organizational diagnosis, career management and succession planning, and collaboration.

**Prerequisite:** TRDEV460 and TRDEV531

TRDEV 560: Implementing Training and Development Programs
3 Credits

The critical analysis of theories, strategies, and techniques for planning and implementing TRDEV programs to enhance employee learning and performance. TRDEV 560 Implementing Training and Development Programs (3) A fundamental goal of training and development is to promote employee learning performance. This course involves the critical analysis of theories, strategies, and techniques for planning and implementing TRDEV programs to support the accomplishment of that goal.

**Prerequisite:** TRDEV460 or permission of the program

TRDEV 567: Instructional Leadership Theories and Development
3 Credits

Examines instructional leadership theory, development strategies and practice, and style, including students' leadership styles and development action planning. TRDEV 567 Instructional Leadership Theories and Development (3) In this course students will work with three dimensions of instructional leadership. At the core of the course are the key theories of leadership drawn from historic and contemporary scholarship. This will lead into the second dimension, that of leadership development. Perhaps more than any other area of the training and development field, leadership development weaves together the best of what we know about how adults learn and how organizations work, and is arguably one of the most
visible strategic contributions influencing groups, organizations, and society writ large. The course will explore the knowledge base and skills necessary to develop leadership in a variety of organizational settings.

**Prerequisite:** TRDEV460

TRDEV 583: Issues in Training

3 Credits

An issue seminar addressing topics such as an unprepared work force, diversity, recession, and issues generated by the class.

**Prerequisite:** TRDEV460, or permission of the program

TRDEV 587: Master’s Paper

1-6 Credits/Maximum of 6

The development of an original master’s project (paper, production, or practicum) supervised and judged by an appropriate faculty committee.

TRDEV 588: Research Designs Applied in Training

3 Credits

Planning experimental, observation, survey and qualitative research designs for training setting needs such as needs assessments and evaluations.

**Prerequisite:** EDUC 586, TRDEV460

TRDEV 590: Colloquium

3 Credits

The purpose of this colloquium is to critically explore current theory, research, and best practices in training and development.

**Prerequisite:** TRDEV460

TRDEV 595: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor

TRDEV 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

TRDEV 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

---

**Traveling Scholars Program (CIC)**

**CIC 597: Special Topics**

1-15 Credits/Maximum of 15

Formal courses taken on a special interest subject which will be offered on a CIC institution by CIC traveling scholars; several different topics may be taken each semester.

**Prerequisite:** acceptance as a CIC traveling scholar

CIC 598: Special Topics

1-15 Credits/Maximum of 15

Formal courses taken on a special interest subject which will be offered on a CIC institution by CIC traveling scholars; several different topics may be taken each semester.

**Prerequisite:** acceptance as a CIC traveling scholar

**Turfgrass (TURF)**

**TURF 850: Turfgrass Physiology**

3 Credits

Lectures, reading assignments, and problems designed to develop student competency in plant physiology as it relates to turfgrass management strategies. TURF 850 Turfgrass Physiology (3) The emphasis of this course will be on the applied aspects of turfgrass physiology; however, in order for these to be useful in an applied manner, the science behind them must be fully understood so they may be properly implemented. This course is designed to provide turfgrass managers the background knowledge of physiological principles and concepts in order for them to make informed decisions as they implement new technologies in their cultural systems. Basic topics include the physiology of the germination process, seedling development, photosynthesis, respiration, transpiration, seedhead development, and the physiological implications of the use of bio-stimulants, growth regulators, phytohormones, and antioxidants on turfgrass quality. Other topics that will be discussed include; carbohydrate metabolism and utilization, dormancy, and hardening.

**TURF 852: Turfgrass Health Management**

3 Credits

Lectures and exercises designed to develop student competency in solving turfgrass pest problems, as well as disease resistance in turfgrass.

**TURF 853: Interpreting Turfgrass Science Literature**

3 Credits

Introduction to turfgrass research publications, interpretation of the data, and discussion of the significance of the results. PPATH (TURF) 853 Interpreting Turfgrass Science Literature (3) This course will provide an introduction to literature search in turfgrass management, identification of most pertinent peer-reviewed journals for each area of interest/specialty in turfgrass management, and utilization of other resources such as technical journals, trade journals, online and resident educational material resources, extension bulletins/circulars from various institutions/organizations that addresses
various topics on turfgrass management. This course will prepare the students for analyzing research questions or rationale formulated by an investigator, for understanding how the study was devised to address the objectives adequately and the results were obtained and presented in the publication, and for identifying the take-home message in the publication. Emphasis will be made on the criteria used for data collection, the significance of methods employed in statistical analyses of the data, and presentation of results in the publications to effectively convey the information to readers.

Cross-listed with: PPATH 853

**Veterinary and Biomedical Sciences (VBSC)**

**VBSC 503: Critical Elements of Genetics and Molecular and Cellular Biology**

4 Credits

Foundational topics and critical analysis in evolution, genetics, molecular and cellular biology and cell differentiation. BMB (BMB/MMCIBS/ VB SC) 503 Critical Elements of Genetics and Molecular and Cellular Biology (4) Central elements in genetics, genomics and molecular and cell biology will be covered. The course will focus on foundational principles and concepts that will allow students to understand the behavior of proteins and organelles within cells, and to appreciate how intracellular events influence interactions of cells with one another in multicellular systems and during development. Another major focus will be genome architecture, both in the context of evolution and gene expression. Students will also learn how genetic approaches can be used to understand cell and molecular biology, and will develop critical thinking skills through the analysis of the primary scientific literature. The course will include lecture and discussion sessions.

Cross-listed with: BIOL 503, BMB 503, MCIBS 503

**VBSC 511: Molecular Immunology**

2 Credits

The study of molecular and biochemical events that influence immune responses and define current questions in immunology. BMB 511 / MCIBS 511 / VBSC 511 Molecular Immunology (2) The goals of the course are to integrate the current questions of immunology with other disciplines, in particular cell biology and biochemistry, and to provide training in critical thinking and evaluation of data and experiments. The course will be approximately 2/3 lecture by the instructor and 1/3 student presentations of papers related to the material. In addition, written critical reviews of recently published papers and a short research proposal will be assigned. By focusing on the mechanisms involved in immunity and disease, this course complements several existing courses on immunology, virology, and biochemistry. The prerequisites of MICRB 410 and BMB 400 assure that the students enrolling in the course have a general understanding of immunology and biochemistry. This course is projected as an elective for the Molecular Medicine and Immunobiology focus areas in the MCIBS graduate program and for the Pathobiology and BMBB graduate programs. The course will be offered in the fall semester with an enrollment limit of 20 students

**Prerequisite:** BMB 400, MICRB 410

Cross-listed with: BMB 511, MCIBS 511

**VBSC 514: Prostaglandins and Leukotrienes**

3 Credits

Biochemical, physiological, and nutritional aspects of arachidonic acid and related essential fatty acid metabolism. Structure-activity relationships of prostaglandins, prostacyclins, thromboxanes, and leukotrienes.

**Prerequisite:** BIOCH 402 or BIOCH 437

Cross-listed with: NUTR 514

**VBSC 520: Pathobiology**

3 Credits

The course deals with the mechanism of disease. Topics are: homeostasis, vascular injury, inflammation, neoplasia, genetic disorders, and biochemical toxicology. VB SC 520 Pathobiology (3) Upon completion of VB SC 520, Pathobiology, students will have an understanding of disease processes with emphasis on changes at both the tissue and systemic levels. During the first portion of the course, the student will have the opportunity to examine the role of infectious agents, inflammation, genetics, metabolism and neoplasia in the disease process. Students will integrate their knowledge of general microbiology, cell biology, histology and biochemistry in understanding these processes. The student will understand how differing disease phenotypes can be caused by different underlying etiologies in an organism. During the second portion of the course the student will gain knowledge concerning disease processes of different organ systems building on the general principles learned in the first portion. Topics are organized and presented in a format that covers the basics of normal anatomy and histology progressing to an analysis of the abnormalities associated with various disease states arising from multiple etiologies. While the human model will be discussed most extensively, there are numerous applications to other mammalian species. The student will learn considerable medical terminology and clinical concepts. The course has been modeled after introductory pathobiology courses currently taught at major medical schools. It should be of interest to graduate and undergraduate students in life sciences who wish to become familiar with the various underlying mechanisms, including molecular mechanisms, which give rise to the disease phenotype. The course is an excellent preparation for students wishing to pursue advanced study in medicine or veterinary science.

**Prerequisite:** VBSC 420, BIOCH 401 or BIOCH 437

**VBSC 534: Current Topics in Cancer Research**

3 Credits

A discussion of current cancer research literature with the focus on primary research literature. VB SC 534 Current Topics in Cancer Research (3) Students enrolled in Current Topics in Cancer Research will acquire knowledge of focused areas in cancer research including basic biology of cancer cells, genes and signaling pathways that control cancer cell growth and metastasis, molecular methods for analysis of human and animal cancers, specific animal models of cancer and molecular approaches to cancer therapy. Emphasis will be placed on critical reading of primary literature, identification of strengths and weaknesses of methods, approach and conclusions of specific studies and implications of the research for future studies and understanding of cancer and therapy. This course will provide a solid foundation and companion for other specialized courses in a diverse group of graduate degree programs.
as well as the critical thinking and analysis required for completion of a doctoral program.

**Prerequisite:** BIOL 413 or BIOL 416 or B M B400 or B M B433 or B M B460

**VBSC 535: Oncology: Bench to Bedside**

3 Credits

This course is required for graduate students in the MCIBS program who are in the Cancer Biology Emphasis Area. It is designed to give students who are studying cancer at a molecular, reductive level with the clinical aspects of the disease. The course will be held at Mt. Nittany Medical Center once a week for 3 hrs, in both patient-oriented, hands-on and didactic settings to understand how cancer is diagnosed, imaged, and treated, how patient care and side effects of therapy are managed, and the importance of clinical trials in developing new treatments for cancer. For each subject area students will spend 2 hours engaged in a clinical experience related to cancer under the supervision of course directors or additional clinicians at Mt. Nittany, followed by a 1 hour lecture/didactic session on a related topic. In addition to broad learning objectives, this course will make students aware of critical issues in cancer biology and treatment that may serve as a springboard for future research.

**Prerequisite:** MCIBS 503, MCIBS 590, BIOL 416; VBSC 534

**VBSC 590: Colloquium**

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

**VBSC 596: Individual Studies**

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

**VBSC 597: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

**VBSC 597A:** SPECIAL TOPICS

1-3 Credits

**VBSC 597B:** SPECIAL TOPICS

1-2 Credits

**VBSC 597F:** SPECIAL TOPICS

1 Credits

**VBSC 597G:** SPECIAL TOPICS

1 Credits

**VBSC 600: Thesis Research**

1-15 Credits/Maximum of 999

No description.

**VBSC 601:** Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

**VBSC 602: Supervised Experience in College Teaching**

1-3 Credits/Maximum of 6

Experience in preparing and conducting lectures/laboratories and assembling materials for laboratories.

**Virology (VIRIM)**

**VIRIM 580: Critical Reading in Immunobiology**

1 Credits

Literature review of cellular, molecular, genetic and biochemical analysis of in vitro and in vivo immunology. VIRIM 580 Critical Readings in Immunology is a critical discussion of primary literature in molecular and cellular immunology to be presented and discussed by students to students participating in this course and faculty of the virology and immunology option of the biomedical and medical sciences (BMS) program. The goals of this seminar format course are twofold. First, students will develop skills in presenting scientific literature to a critical audience of their peers. Second, students will review in depth and critically evaluate current literature in immunobiology, as presented in high impact peer reviewed scientific publications.

**Visual Studies (VSTUD)**

**VSTUD 501: Visual Culture Theory and History**

3 Credits

Visual Culture Theory and History examines foundational theoretical texts that have come to define Visual Studies as a historically delineated academic discipline. ‘Visual Culture Theory and History’ provides a broad exploration of theories describing the aesthetic, psychological, and social significance of visual images, as well as the media processes inherent in creating visual experiences. The course will define Visual Studies as an academic field within the humanities. Topics will generally include the image in classical rhetoric, media theories about images,
visuality and post-colonial theory, semiotic analysis of images, the cinematic image, gender and visuality, consumer culture's use of images, spectatorship and social identity, television history, images and the construction of space, the relationship between word and image in books, experimental manipulation of visual images in art, images in performance both theatrical and social, the history of photography, and technologies of image production. The class discussions will elucidate the interdisciplinary effects of image production, reception, and circulation in modern media environments. The course will provide students with a broad range of theoretical methods for analyzing visual images so that they may understand their importance and incorporate a theoretically sophisticated analysis of this visual component in their graduate research. The course is one of two required courses for the Visual Studies dual degree.

VSTUD 502: Visual Digitality

3 Credits

Study of historical, theoretical, and operational aspects of the consumption and production of digital technologies and associated cultures.

VSTUD 532: Holocaust and Visual Culture

3 Credits

This course studies how art, literature, film, and other media can provide a perspective on one of the most horrific events in human history, the Holocaust: the genocidal murder of more than six million men, women, and children (mostly Jewish) under the Nazi regime during World War II. The course examines the theoretical questions involved in any attempt to capture what appears to be beyond comprehensibility in terms of moral outrage and the sheer scale, inhumanity, and bureaucratic efficiency of the violence perpetrated by the Nazis. This course examines formal approaches of depicting the Holocaust in literature and film, as well as photography, museum installations, and memorials. Topics to be discussed include include memorialization (Holocaust museums and memorials), mass murder of the disabled, national guilt, survivor's guilt, stigmatization, and the ethics of historical representation. The course will analyze cinematic strategies for representing the unrepresentable, dark humor about the Holocaust, the persistence of the past, Nazi propaganda, Holocaust photography, trauma theories, graphic novels, the Nuremberg trials, survivor memoirs, representations of the Nuremberg Code and the International Bill of Norms, and possibilities for art after Auschwitz.

VSTUD 555: Visualizing Gender

3 Credits

This course analyzes how gender identities relate to the creation, use, and analysis of visual artifacts and bodily practices. Visual texts condition and are conditioned by intersectional embodiments of gender. In an attempt to understand and critically embody the role visual culture plays in our gendered lives as a dominant conduit of knowledge and identity production, this seminar examines visual processes and objects as they are informed and shaped by a nexus of gender, race, sexuality, class, nationality, and other forms of identity. The visualization of gendered forms of identity involves codes that produce bodies as signifiers of chaos, order, beauty, disease, nature, culture, evil, and virtue, including actions bisected according to binaries of masculinity and femininity. The seminar employs analytical approaches to these dynamics, including feminist, queer, and critical race theories of the visual as ways of interrogating a range of visual artifacts and bodily practices.

After surveying key foundational texts, the course predominantly engages contemporary works and practices along complex gender matrices, including new directions in visual culture from the 1990s onward.

VSTUD 556: Reading Film

3 Credits/Maximum of 12

A practical and historical approach to film theory and analysis. This seminar develops critical visual literacy by examining a range of practices in cinema study, with emphases on the relation of film to literature and the analysis of film meaning. The course asks how to read a film, and considers the multiple ways that films combine framing, movement, editing, narrative, character, and genre toward the production of culture, ideology, identity, desire, poetic imagery, and community. Students will explore a wide range of critical methods, and will view one to two films per week. Readings will range from novels to classic film theory, cultural studies, belles-lettres, film criticism, radical poetics, apparatus theory, media theory, and contemporary philosophy.

Cross-listed with: COMM 556, ENGL 556

VSTUD 557: Authors and Artists

3 Credits

This course explores formal and historical links between literature and art in modernist movements. "Utopia poesis" (like painting [is] poetry). This statement, originally articulated by the ancient Roman poet Horace, has been quoted and debated ever since. Links between art and literature have exerted a formative influence on the development of modern fiction and poetry as authors and artists in various avant-garde groupings collaborated and competed to generate modes of artistic expression appropriate to modernity. This course examines those interactions. Course objectives are to bring together for comparative examination: - formal or generic relationships between texts and images at particular historical moments. - issues of creative collaboration and cross-pollination between writers and artists, which have been crucially important in the history of literature and poetry. - conceptions of creativity as these have been expressed by writers using the figure of the artist. This course allows students to explore the ways knowledge of literature and skills in critical reading can be rewardingly brought to bear on the visual arts, and to consider how visual art can illuminate the workings of literature both for individual readers and in the classroom.

Cross-listed with: ENGL 557

VSTUD 580: Comics and Graphic Novels

3 Credits

A survey of comics and graphic novels, primarily in English. This seminar provides a survey of the comics medium and an introduction to the academic field of Comics Studies. Students acquire facility in the structural and formal analysis of comics and sequential narrative, as well as knowledge of significant critical theories and methodologies within the field of Comics Studies. Assigned primary texts may be targeted to a particular genre, mode, historical period, or creator(s). While the course has a general focus on North America, students may also read texts from European, Japanese, and/or South American traditions (all of which will be taught in translation), not to exceed 25% of the course. Discussion of assigned texts will be situated within relevant scholarship and criticism (current and historical).
VSTUD 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject.

VSTUD 897: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject.

Wildlife and Fisheries Science (WFS)

WFS 500: Professionalism in Natural Resources
3 Credits
Scholarly discussion and critique of skills important to professionalism of students in natural resources, wood products, and related science-based disciplines. W F S 500 Professionalism in Natural Resources (3)
The course will give an in-depth coverage of issues and skills pertinent to the professionalism of graduate students in natural resources, wood products, or related science-based disciplines. Particular focus will be given to a discussion, critique, and development of communication skills (oral and written). In addition, a spectrum of pertinent topics and issues relevant to graduate students will be discussed in depth, ranging from the philosophy and land-grant institutions and to those important to the academic success of graduate students and their success in future careers. This course will be offered in fall semester each year.

Prerequisite: graduate student standing or permission of program

WFS 510: Design of Ecological Field Studies
2 Credits
Application of the scientific method and general principles of designing ecological field studies through discussion and critique of the primary literature.

WFS 542: Systematics
3 Credits
Principles and methods of classification, phylogeny, and speciation; taxonomic techniques; analysis of species; causal interpretation of animal diversity.

WFS 552: Systematics and Evolution of Fishes
3 Credits
Detailed study of the systematics, evolution, identification, and natural history of fishes.

Prerequisite: BIOL 421, W F S452

WFS 560: Population Estimation and Modeling
4 Credits
Application of statistical models to estimating population parameters to test ecological theories. W F S 560 Population Estimation and Modeling (4)
The purpose of this course is to impart a working knowledge of statistical methods for estimating fish and wildlife populations. Primary emphasis will be on methods of estimating population size, survival rates, and birth rates as they relate to testing hypotheses about population dynamics. Most of the course will focus on mark-recapture models for both open and closed populations, but other methods such as distance sampling and removal models that do not require marked animals will be studied.

Prerequisite: STAT 500, STAT 501 or STAT 502

WFS 585: Applied Spatial Ecology
3 Credits/Maximum of 999
Students will develop skills in understanding and processing complex datasets while learning traditional and innovative methods for spatial data analysis. The purpose of this course is to assist researchers on methods for data management and analysis using a state-of-the-art statistical program after data has been collected in the field or for designing field experiments. The course focuses on wildlife/fisheries research, both basic and applied, that rely on large ecological datasets that provide unique opportunities to explicitly incorporate sources of spatial and temporal variability into understanding motivations for an organism’s movements, resource selection, subpopulation structuring, or presence in a landscape. The impetus behind this course and resulting manual was to import data from spreadsheet software, import Geographical Information Systems (GIS) layers, and conduct statistical analysis of datasets all in a single software platform. In the past several decades, advancements in data acquisition have resulted in datasets often with thousands of records. Concurrent with these advancements in acquisition, methods of handling and manipulating large datasets, GIS capabilities, and methods of estimators for home range, movements, resource selection, and spatial epidemiology have increased dramatically.

WFS 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

Cross-listed with: FOR 590, SOILS 590

WFS 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

WFS 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

WFS 600: Thesis Research
1-15 Credits/Maximum of 999
No description.
Women's Studies (WMNST)

WMNST 501: Feminist Perspectives on Research and Teaching Across the Disciplines
3 Credits
Feminist approaches to methodological issues in research and teaching in the social sciences, humanities, and natural sciences. WMNST 501 Feminist Perspectives on Research and Teaching Across the Disciplines (3) In this seminar, we will explore feminist approaches to research and teaching in different fields in the humanities, the social sciences, and the natural sciences. Students will take an active part in identifying and evaluating feminist approaches to theory and in analyzing how a feminist approach to research reshapes and redirects the ways that research has traditionally preceded and the results obtained in different disciplines. Our aim is not to identify a feminist orthodoxy with which to replace a masculinist or patriarchal orthodoxy, but rather to identify and understand the varieties of feminism existing today; to delineate differences between feminist and traditional paradigms, in terms of the ways research is designed and carried out within those disciplines; and to arrive at an appreciation of the transformative effect upon teaching and research of the new paradigms forged by feminist scholars in a variety of disciplines.

WMNST 502: Global Perspectives on Feminism
3 Credits
Exploration of feminist issues in a global perspective, including debates in history, ethics, and political feminism.

WMNST 507: Feminist Theory
3 Credits
Development of feminist theory and its relationship to history in terms of critique of family, sexuality, and gender stratification.

WMNST 508: Feminist Methodology
3 Credits
The objective of this course is to examine feminist approaches to traditional research methodologies. The objective of this course is to examine feminist critiques of traditional research. The course will examine the animated and contentious debates among feminist scholars about what constitutes a feminist method. Although there is no single feminist method, this diverse academic community is searching for techniques consistent with their convictions as feminists. For this reason, the course will distinguish between methods, as tools for research, and methodology, as theory about the research process. The course reviews methods such as ethnography, interviewing, oral history, discourse analysis, visual analysis, and mixed method approaches. Cross Listings: GEOG 508 will be added as a cross-listed course.

Cross-listed with: GEOG 508

WMNST 509: Feminist Pedagogies
3 Credits
This interdisciplinary graduate seminar gives students an overview of the theoretical, epistemological, and methodological foundations of feminist pedagogy. We will examine theoretical frameworks of teaching and learning that promote justice and social change (i.e. praxis), as well as feminist pedagogical strategies that can be utilized within and beyond the classroom (i.e. practice). Students can expect to engage with various critical and liberatory pedagogies, pedagogies of identity and difference, and signature pedagogies. They will learn how feminist epistemologies shape (and are shaped by) ethical classroom practice, focusing on specific ways in which to cultivate and nurture feminist teaching and learning. In addition, students will also learn how to develop a syllabus and teaching philosophy.

WMNST 516: US Women's and Gender History
3 Credits
A critical analysis of gender and theories of gender in selected American historical contexts.

Cross-listed with: HIST 516

WMNST 518: Global Black Feminist Thought
3 Credits
This course will explore the historical background and various expressions of contemporary Black feminist thought around the globe.

WMNST 520: Gender and Nationalism
3 Credits
Impact of Western nationalism and colonialism on the organization of gender roles from the 18th century to the present.

WMNST 522: Gender and Sexuality
3 Credits
This course offers students an interdisciplinary overview of the complex topics of gender and sexuality. Employing various theoretical and disciplinary perspectives including feminist and queer theory, historical and sociological perspectives, visual culture, and post-colonial discourse,
this course gives students a broad understanding of key historical and contemporary issues in the arena of gender and sexuality. This course engages the following themes: gender and sexual identities; the intersectionality of gender, sexuality, race, and class; discourses of heteronormativity & homonormativity; the body, body politics, and bodily violence; contemporary movements for gender and sexual justice; racial, gender and sexual politics; performances and representations of gender and sexuality; health and medicalization; global LGBTQ human rights issues; the (re)production of gender and sexual difference; labors of gender and sexuality; and the relationship between gender, sexuality and the State. Students in this course will develop a keen understanding of how these themes operate in the discourse of gender and sexuality. Throughout this course students will examine a variety of diverse texts ‘theoretical, historical ethnographic, literary, visual, and sonic’ to gain a comprehensive introduction to the topic of gender and sexuality. This graduate seminar emphasizes discussion, writing, and research.

3 Credits

The course will provide students with an analytic framework for understanding how social inequalities in race, class, and gender shape experiences in families and the workplace. WMNST (HRER) 523 Seminar in Work-Life Dilemmas, Practices, and Policies (3) This course investigates many of the invisible challenges people face in the 21st century labor market including: what happens when a worker's child is sick; whether mothers are discriminated against in the labor market; what happens to men at work when they have children; whether a person's health is influenced by their work; and if the division of labor at home benefits some people more than others. This course will provide answers to these questions and more through an in-depth investigation of the institutions that structure work-family life in 21st century America. First, the class will consider how work and families have changed in the last 50 years. Second, the students will investigate how inequalities based on gender, race, class, and family structure manifest at work. Third, the course will investigate how work responsibilities impact home life and how this differs according to race, gender, class and family structure. Finally, the course will ask what solutions may fix some of today's most pressing work-life dilemmas.

Cross-listed with: PHIL 538

WMNST 536: Gender and Science

3 Credits

Studies the foundations of feminist science studies as applied to biocultural practices of gender, biology, and reproductive technologies. WMNST 536 Gender and Science (3) This course explores the productive intersection between gender and science. Students will learn to examine scientific culture, technological developments, and popular narratives of science through the concepts and methodologies of feminist science studies. A portion of the course will be devoted to the foundations of science studies, including critical examinations of the production of scientific knowledge and methodologies for examining science as culture. Students will use concepts from feminist science studies to reexamine the possibilities of objectivity, materiality, and practice for science. Students will also consider the implications of scientific institutions, practices, and technologies for sex and gender. The course will take up both historical and contemporary technoscientific practices as case studies, including biotechnologies, reproductive technologies, bioart, animal husbandry and reproduction, eugenics, and risk assessment, management and mitigation.

WMNST 537: Gender, Sexuality and Islam in Africa: Exploring Contemporary Feminist Scholarship

3 Credits

A course about discourses of sexuality and gender in studies of Islam in Africa, with South Africa as a case study.

Cross-listed with: AFR 537

WMNST 538: Feminist Philosophy Seminar

3 Credits

Critically examines feminist approaches to ethics, epistemology, philosophy of science, metaphysics, social/political philosophy, and the history of philosophy. PHIL (WMNST) 538 Feminist Philosophy Seminar (3) This course aims to give students an understanding of the philosophical concepts and problems of feminist philosophy. The course will focus on major topics, such as the history of philosophy, ethics, social/political philosophy, epistemology and philosophy of science, and metaphysics, and figures within 20th century feminist philosophy with the concurrent goal of bringing them to bear on contemporary issues involving gender's relationship to race, sexuality, class, disability, nationality and age. This course builds upon PHIL 438 Feminist Philosophy and counts towards the requirements of the dual title degree in Philosophy and Women's Studies. Evaluation methods include preparation for and participation in class meetings, two short discussion papers, and a final term paper. The course will be offered at least once every four semesters with an enrollment goal of 20. Specific course content will vary with instructor.

Cross-listed with: PHIL 538

WMNST 542: Girls' Cultures and Popular Cultures

3 Credits

This seminar explores educational implications in popular texts created for and by girls across time and cultures. CI (WMNST) 542 Girls’ Cultures and Popular Cultures (3) The study of girls and their relationship with popular culture lies within the interdisciplinary field of Girlhood Studies which draws on established areas of Women’s Studies, Children’s/Childhood studies, Cultural Studies and Educational Studies. This seminar explores girls cultures in different textual and material forms including books, toys, magazines, and new media. Students will employ feminist cultural theories to compare historical and contemporary girls cultures in relation to educational research and practice. This will provide a framework to locate girls at the center of research and action in order for graduate students to engage in methodologies that are not simply about girls but ‘for’ ‘with’ and ‘by’ girls. Key topics include the misperception of girls (popular) culture as only a contemporary phenomenon, the role of girls as consumers plus producers of culture, and recurrent issues in girls cultures such as sexualization and hyperfemininity.

Cross-listed with: CI 542
WMNST 550: African Feminisms
3 Credits
African feminisms are deeply rooted in the continent’s rich historical traditions and diverse cultural contexts. In this interdisciplinary graduate seminar, students will become familiar with the theoretical frameworks that guide African feminist scholarship, as well as the activist histories from which they emerged. This course will consider the epistemological foundations of African feminist thought and how they differ from feminisms in other parts of the world. This course will also examine key areas of conjuncture - how African feminisms map on to larger transnational movements. Particular emphasis will be placed on the fluidity of African gender systems, the ways in which African women have negotiated politics, religion, militarism, sexuality, and violence, and the role of creativity, art, and beauty in nurturing and sustaining activist momentum. Students in the course can expect to engage with a number of different types of texts: documentaries, feature films, memoirs, novels, newspapers, scholarly books, and articles.

Cross-listed with: AFR 550

WMNST 594: Research Topics
1-15 Credits/Maximum of 15
Supervised student activities on research projects identified on an individual or small-group basis.

WMNST 595: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

WMNST 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

WMNST 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

WMNST 597G: **SPECIAL TOPICS**
3 Credits

WP 537: International Wood Products Marketing and Trade
3 Credits
Strategic analysis, environmental scanning, international trade policy implications, determinants of competitive strategy for firms, industries, and nations.

Prerequisite: WP 437W

WP 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

WP 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

WP 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

WP 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Provides an opportunity for supervised and graded teaching experience in forest products courses.

WP 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

Workforce Education and Development (WFED)

WFED 501: Scholarly Writing for Workforce Education and Development
3 Credits
This course is grounded in the current research literature, theoretical frameworks, analysis, and methodologies within the discipline of Workforce Education and Development. Within this course students will engage in synthesis of knowledge and analytical work. The objective of this course is to contribute to the student's ability to expand the frontiers of knowledge, and produce creative scholarly writing products with a particular focus on scholarship within the field of Workforce Education and Development. The course content includes: (1) Research literature and theoretical frameworks in Workforce Education and Development; (2) The annotated bibliography foundation; (3) Analysis and methodologies within Workforce Education and Development; (4) The literature review process; (5) Developing positive writing habits; (6) Writing for publication in Workforce Education and Development; (7) Research presentation formats; and (8) Enhancement of Scholarship for the future.
WFED 508: Workforce Education Management  
3 Credits  
Introduction to theories and concepts of managing workforce education programs in the public and private sector.  

WFED 518: Curriculum and Instructional Leadership for Workforce Education  
3 Credits  
Study of topics related to curriculum and instructional leadership in workforce education in the public and private sectors.  
Prerequisite: 3 years of professional experience in vocational education  

WFED 528: Fiscal and Facilities Management for Vocational Administrators  
3 Credits  
Sources of revenue, budget preparation, purchasing, and the management of physical facilities in vocational education.  
Prerequisite: 3 years of professional experience in vocational education  

WFED 529: Ethical Issues in Workforce Education and Development  
3 Credits  
A study of ethical issues in workforce education environments in industry and education.  

WFED 538: Administering Personnel Services in Vocational Education  
3 Credits  
Planning and implementing staff development activities, student guidance services, admissions, student organizations, and placement.  
Prerequisite: 3 years of professional experience in vocational education  

WFED 540: Data Analysis in Workforce Education and Development  
3 Credits  
Provides opportunities to acquire and practice skills in descriptive and inferential statistics.  

WFED 543: Evaluation of Investments in Workforce Education and Development  
3 Credits  
Use of labor supply models to evaluate investments in workforce education and development.  

WFED 544: Analysis of Policies for Workforce Education and Development  
3 Credits  
Explores models and methods for analyzing policies for workforce education.  
Prerequisite: I ED 540, WF ED550  

WFED 546: Work Based Education  
3 Credits  
Discussion of legislation and educational requirements for education based at the worksite including cooperative education, youth apprenticeship, and apprenticeship programs.  
Prerequisite: WF ED441  

WFED 548: Analysis of Policies for Workforce Education and Development  
3 Credits  
Explores models and methods for analyzing policies for workforce education.  
Prerequisite: WF ED550  

WFED 550: Research in Workforce Education  
3 Credits  
Research techniques in workforce education.  

WFED 551: Historical and Philosophical Foundations of Workforce Education  
3 Credits  
An investigation of historical, philosophical, and professional foundations of workforce education.  

WFED 552: Needs Assessment for Workforce Development Professionals  
3 Credits  
Acquire skills to identify training and development needs, distinguish problems with management versus training solutions, develop and evaluate training solutions. WF ED 573 Needs Assessment for Workforce Development Professionals (3) WF ED 573 is designed for workforce development professionals to familiarize them with the models, concepts, and techniques for designing, implementing, and analyzing the results of training needs assessments in organizations. After successfully completing this course, they will have the necessary skills and competencies to identify human performance problems, distinguish between training and non-training plans of action, and design and develop appropriate plans of action in response to human performance problems.  

WFED 557: Process Consultation in Organization Development  
3 Credits  
This course provides a foundation in process consultation. Process refers to how groups interact and how people get along.  

WFED 557: Process Consultation in Organization Development  
3 Credits  
This course familiarizes students with approaches to assessing and feeding back data in organization development (OD) and consulting services. WF ED 582 Assessing Data: Organizational Diagnosis (3) This course familiarizes students with approaches to assessing and feeding back data in organization development (OD) and consulting services. It helps students to develop the specialized competencies essential to diagnosing organizations for change efforts/interventions. Students in
the course will learn various ways by which to define and conceptualize assessment, feedback, and diagnosis for OD and consulting efforts. Students will learn how to distinguish between the unique approaches to organizational diagnosis used by OD consultants and by management consultants to detect the underlying root causes of problems rather than the mere symptoms of such problems. OD consultants who work inside organizations (internal consultants) may face unique challenges in organizational diagnosis that differ from those challenges faced by consultants who are brought in from outside (external consultants), and this course will explore those challenges faced by each type of consultant and how those consultants may overcome those special challenges. The course will encourage students to identify the consulting competencies that OD consultants need to diagnose organizational problems, and the students will be invited to compare themselves to those competencies so that they will know what special skills they need to develop to be effective organizational diagnosticians and how to develop those skills. The course reviews the important elements necessary in establishing a strategic diagnostic plan for OD, implementing it, and evaluating the assessment and feedback strategy. Students will learn how to demonstrate the skills essential to separating symptoms (presenting problems) from underlying root causes during initial meetings and contacts with prospective OD sponsors and clients. Additionally, the course will examine how to prepare assessment and feedback protocols and reports for OD and change management interventions. Finally, the course will summarize current thinking and research on organizational diagnosis, assessment and feedback methods as well as ethical issues affecting organizational diagnosis and OD assessment and feedback.

WFED 585: Appraising Organization Change and Development and Consulting
3 Credits
This course familiarizes students with approaches to evaluating organization development (OD) and consulting services.

WFED 588: Platform Skills for Human Resource Development Professionals
3 Credits
Platform skills focuses on theory and practice related to delivering well-crafted and effective training presentations.

WFED 590: Industrial Training Professional Seminars
1 Credits
Study of special topics relating to problems, practices, methodologies and special competency needs in industrial training.

WFED 595: **SPECIAL TOPICS**
1-15 Credits/Maximum of 15

WFED 595A: Field Based Project for Workforce Development Professionals
2-5 Credits/Maximum of 5
WF ED 595A Field Based Project for Workforce Development Professionals (2-5 per semester/maximum of 5) WF ED 595A is a field based experiential learning course for students to identify a training and/or organization development project in business, industry, or government and carry out contract problem analysis and resolutions.

WFED 595B: Workforce Education Administrative Internship
2-15 Credits/Maximum of 15
Supervised study with an administrator or researcher at a cooperating school, state governmental agency, or research institution.

WFED 595C: Internship in Cooperative Vocational Education
1-10 Credits/Maximum of 10
Validation of teaching and co-op coordinator competencies learned in prerequisite courses during interaction with professional staff while functioning under the supervision of a certified cooperative coordinator.

Prerequisite: WF ED441, WF ED442

WFED 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

WFED 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topic or special interest subject which may be offered infrequently.

WFED 597A: **SPECIAL TOPICS**
3 Credits

WFED 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

WFED 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

WFED 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
An opportunity for graduate students to teach a college level course under the supervision of an experienced professor.

WFED 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

WFED 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.
WFED 806: Program and Facilities Management for Work Force Development Professionals

3 Credits

This course examines advanced learning laboratory organization and management processes to facilitate learning and skill development in a safe environment. WF ED 806 Program and Facilities Management for Work Force Development Professionals (3) Program and Facilities Management for Workforce Development Professionals thoroughly examines the two categories of managing an educational laboratory, which include the physical operations and program management responsibilities. The physical operations deal with the actual physical facility including the building, tools, equipment, and maintenance. The program management aspect deals with the safety organization and the functionality of the environment. This course will present advanced principles of managing facilities and focus on the safety and functionality aspects that are imperative in the development of successful learning environments. Additionally, students will explore advanced concepts of occupational safety and health as defined by the U.S. Department of Labor (i.e., OSHA & NIOSH), which are vital to every technical program and workplace. Emphasis will be placed on the individual laboratory and instructional strategies regarding safety within the educational environment and greater world-of-work. Throughout the course students will read and reflect upon practical, theoretical and research oriented literature about occupational education programs and facilities management, laboratory supervision and instruction as well as on occupational safety and health. At the end of the semester, students will design and showcase a comprehensive safety implementation plan, which promotes successful management, supervision and instruction.

WFED 807: Career and Technical Student Organizations (CTSOs)

3 Credits

This course examines principles and practices of Career and Technical Student Organizations to promote enhanced learning and skills development. WF ED 807 Career and Technical Student Organizations (CTSOs) (3) This course examines principles and practices of organizing, managing and advising Career and Technical Student Organizations (CTSOs) to promote enhanced learning and skill development within Career and Technical Education (CTE). Emphasis is placed on the integral relationship between CTSOs and CTE, as well as advisor responsibilities. Students will learn specific procedures for establishing programs of work; incorporating local, state and national events and activities into career and technical curriculum and instruction; advisor roles and ethical imperatives; financial operations; integration of academics; public relations; and student recruitment and retention.

WFED 808: Assessment Techniques in Workforce Education

3 Credits

This course examines advanced assessment techniques associated with learning in an integrated competency-based Career and Technical Education (CTE) program. This course examines advanced assessment techniques as well as recording and reporting procedures to promote enhanced learning and skill development within Career and Technical Education (CTE). Emphasis is placed on the integral relationship between competency-based learning and CTE, as well as instructor responsibilities. This course is designed to provide students with an opportunity to develop the competencies needed to facilitate their implementation and management of a classroom- and laboratory-based assessment program.

WFED 852: Global Talent Development

3 Credits

Global Talent Development (GTD) is the systematic process of developing employees to be in the right place at the right time to do the right things to achieve the right results in ways that align with business strategy, organizational values, and organizational ethics. The Global Talent Development Leader is the person in the organization who facilitates this process. Part of a larger talent management effort, GTD emphasizes growing the organization’s internal talent to meet present and future needs.

WFED 865: Implementing Training as an Organization Development Intervention

3 Credits

In this course, students will be asked to do more than accept the conventional wisdom of organization development and change. Students will look at the standard approaches and then beyond them to examine critically the processes associated with planning, developing, and implementing training and development programs in the context of the whole organization. Students will focus on how to create changes that take into account the individuals who comprise the organization at the same time that the changes improve the organization's overall effectiveness. A key point of emphasis will be the connection between the models, theories, and strategies and the students' workplaces and their professional practices. Students will be encouraged to share stories about their experiences - both past and current - that illustrate or raise questions about concepts discussed in the course.

WFED 870: Whole System Change for Workforce Professionals

3 Credits

The Whole System Change Approach is a change model for transforming any business into a thriving organization by aligning internal systems with external forces and engaging every person in an organization. This course provides the background and theory for building a Whole System Change Approach that is sustainable and strategic. The approach is intended to alter the relationship between an organization and its environment, and to affect outcomes at the organization level, including revenue, profitability, and culture. WFED 870 (Whole System Change) is designed to familiarize students with the Whole System Change Approach, including models, concepts, techniques for designing large-scale changes, implementing, and evaluating results of the whole system change intervention in organizations.

WFED 875: Current Policy and Practices in Organization Development

3 Credits

The purpose of this course is to explore current policy and practices in contemporary organizations. This course is designed to familiarize students with recent trends, practices, theories, research, and cases. This knowledge will prepare students to become competitive OD/HRD professionals.
WFED 876: Facilitating Organization Development and Change Through Technology
3 Credits
This course aims to equip OD/HRD professionals with the technological acumen necessary for their consulting practice and work efficiency. Emerging topics such as security and big data have become integral to technology usage in the workplace. In this course, students will learn about such trends and develop an understanding of how to intervene in organization processes to improve performance by utilizing technological tactics and software programs to gather, visualize, and present data to client organizations. Other tools and technologies that enhance knowledge management, team-building, and project management will also be explored.

WFED 877: Training-Group Seminar
1 Credits
This course familiarizes students with self as an instrument of change and sensitizes individuals to their role in group dynamics.

WFED 880: Facilitating Groups and Teams
3 Credits
This course provides students with necessary skills to facilitate small groups and teams. WF ED 880 Facilitating Groups and Teams (3) This course acquaints students with the role of facilitator and provides a comprehensive introduction to facilitation. Small group facilitators focus on group process and help groups work collectively to accomplish common goals. The course will build student skills in facilitation, acquaint students with the competencies of facilitation, review the role of facilitation in small group situations, and explore current research and practice in small group/team facilitation. The course examines theoretical and practical perspectives of facilitation and provides opportunities to practice facilitation techniques and build facilitation skills.

WFED 881: Marketing Organization Development
3 Credits
This course familiarizes students with the unique issues in marketing organization development (OD) and OD consulting services.

WFED 883: Organization Change and Development Interventions
3 Credits
This course focuses on organization change and development interventions, where an intervention means a change effort.

WFED 884: Appreciative Inquiry
3 Credits
This course provides a foundation in the theories, principles and techniques of Appreciative Inquiry (AI). WFED 884 Appreciative Inquiry (3) This course provides a foundation in the theories, principles and techniques of Appreciative Inquiry (AI), sometimes called ‘positive change theory’ or ‘positive organizational scholarship.’ Students will build practical competencies necessary to carry out various AI interventions based on the theories and techniques of organization development and change management. The course will teach students how to define Appreciative Inquiry (AI) and distinguish it from alternative approaches to organization development (OD) and change management (CM). The course describes how AI relates to training and development and other performance improvement interventions, summarizes the history of AI, explains important theories of organizations and describes how small group and large group change interventions using AI differ from training interventions, describes each step in a common AI model and explain how it is applied. The course also reviews ethical issues affecting AI, identifies and summarizes future organizational trends affecting AI, and describes what they might mean for practitioners who use AI.

WFED 885: Appreciative Inquiry Coaching
3 Credits
Appreciative inquiry has been called the next generation of organization development. Appreciative inquiry is a strength-based approach to change methodology, as well as a paradigm of thought, a worldview, and a way of being in the world. For these reasons, appreciative inquiry coaching is a timely and important topic. The knowledge and skills related to appreciative inquiry coaching gained during this course will prepare students to become well-rounded OD/HRD professionals.

WFED 886: Laboratory in Organization Change and Development
3 Credits
Students will work in teams to carry out an OD intervention in a field setting.

WFED 888: Developing Appreciative Leaders
3 Credits
This course provides an in-depth look of appreciative leadership. Students will learn the story of appreciative leadership through assigned readings, discussions, and videos, as well as assignments that allow them to analyze and practice appreciative learning. They will also have the opportunity to practice applying class concepts to actual workplace situations and to develop their own leadership styles.

WFED 895: Internship
1-18 Credits/Maximum of 18
Supervised, professionally oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.
