This one-credit laboratory course is structured to reinforce the various principles taught in the corresponding 3-credit lecture course - M E 410, Heat Transfer. The laboratory includes several different experiments whose objective is to reintroduce and reinforce the various principles associated with conduction, convection, radiation and heat exchangers. Each laboratory session begins with a thorough review of the relevant material covered in the lecture course, including the use of energy conservation on control volumes related to the experiment and related simplifications. Prior to conducting any experiment, the students are informed about the particular safety issues that vary from one experiment to another. The students are then briefed about the setup of the data acquisition systems, what type of data the need to be collected, and how the data then is coupled to the review of the specific laboratory topic. At the end of the semester, the students should be able to interface a typical data acquisition system with those used in industry and elsewhere. The students generally work in groups to collect data, with reports prepared individually after an experiment is completed.

Prerequisite: M E 320. Prerequisite or concurrent: M E 345, M E 410

ME 320: Fluid Flow

3 Credits

This course is an introduction to fluid mechanics, and emphasizes fundamental concepts and problem-solving techniques. Topics to be covered include fluid properties (density, viscosity, vapor pressure, surface tension); fluid statics (hydrostatic pressure, pressure forces on planar and curved surfaces); fluid kinematics (flow visualization, vorticity, Reynolds transport theorem); control volume analysis (conservation laws of mass, momentum, and energy, Bernoulli equation); dimensional analysis (dimensional homogeneity, method of repeating variables, experimental testing, similarity); internal flows (pipe flows, major and minor losses, piping networks, matching pumps to systems); differential analysis (Navier-Stokes equation, creeping flow, potential flow, boundary layers); external flows (lift and drag, pressure vs. friction drag); and compressible flow (isentropic flow through nozzles, shock waves). Brief introductions to computational fluid dynamics (CFD), and turbomachinery (pumps and turbines) will also be provided.

Prerequisite: E MCH212, MATH 251; M E 201 or M E 300; MATH 230 or MATH 231

ME 325: Fluids Laboratory

1 Credits

The course is designed for students to understand basic concepts of fluid mechanics through analysis of experimental data from various sources. The course emphasizes hands-on experience to take measurements, analyze and interpret experimental data. An important component of this course fosters an ability to write laboratory reports and to creatively generate independent ideas that involve the study of fluid mechanics through development and execution of final project. The course aims to developed teamwork (no hyphen needed, this is one word) skills and advanced proficiency in professional communications and interactions.

Prerequisite: M E 320, M E 345

ME 330: Computational Tools

3 Credits

This course gives students physical insights as well as introductory skills on the use of modern computational tools in solving mechanical engineering problems. The course has two main thrusts: 1) finite element
Prerequisite: statistics is used to analyze and interpret acquired data.

The fundamental principles of their operation. Statistical analysis is integrated into the course, especially in the hands-on laboratories, where students apply the design process; problem definition, conceptual design, system design, detail design, evaluation and test, implementation, documentation and communication. M E 340 Mechanical Engineering Design Methodology (3) This course is intended to provide mechanical engineering students with the fundamental tools to produce an effective design solution in a realistic professional environment with conflicting customer needs and technical capabilities. The students will identify the system design targets through interaction with the 'customer', develop multiple conceptual designs, select the best design solution and produce a functional prototype. The course is project driven with significant input from the students in defining the work objectives and goals. Initially several mini-projects will be assigned with specific objectives such as identifying customer needs, quantifying technical design specifications and decision making. The course culminates with a student team based design competition. The competition provides an opportunity to apply the design process to an open-ended mechanical engineering problem.

Prerequisite: EDSGN100 ; Prerequisite or concurrent: M E 320 or BME 409 ; M E 360

ME 340: Mechanical Engineering Design Methodology

3 Credits

Fundamentals of statistics, sensors, instrumentation, and measurement of mechanical phenomena such as temperature, flow, pressure, force, stress, displacement, and acceleration. M E 345 Instrumentation, Measurements, and Statistics (4) This course is required for all mechanical engineering students, and is taken in the junior year. It serves as an introduction to the fundamental principles of circuit analysis, instrumentation and measurement, as well as statistics. The course includes a 3-hour-per-week, hands-on laboratory where students explore the concepts taught in the lecture. For many students this is the first time they have actual hands-on experience with electronics and measurement equipment, such as oscilloscopes, breadboards, function generators, digital data acquisition systems, integrated circuits strain gages, displacement meters, thermocouples, tachometers, dynamos, filters, volume flow meters, velocity meters, pressure transducers, etc. Students learn not only how to use these devices in the lab, but also the fundamental principles of their operation. Statistical analysis is integrated into the course, especially in the hands-on laboratories, where statistics is used to analyze and interpret acquired data.

Prerequisite: Prerequisite or concurrent: E E 212 or E E 211 or equivalent

ME 345W: Instrumentation, Measurements, and Statistics

4 Credits

ME 348 Circuit Analysis, Instrumentation, and Statistics (4) This course is required for all mechanical engineering students, and is taken in the junior year. It serves as an introduction to the fundamental principles of circuit analysis, instrumentation and measurement, as well as statistics. The course includes a 3-hour-per-week, hands-on laboratory where students explore the concepts taught in the lecture. For many students this is the first time they have actual hands-on experience with electronics and measurement equipment, such as oscilloscopes, breadboards, function generators, digital data acquisition systems, integrated circuits strain gages, displacement meters, thermocouples, tachometers, dynamos, filters, volume flow meters, velocity meters, pressure transducers, etc. Students learn not only how to use these devices in the lab, but also the fundamental principles of their operation. Statistical analysis is integrated into the course, especially in the hands-on laboratories, where statistics is used to analyze and interpret acquired data.

Prerequisite: Prerequisite or concurrent: E E 212 or E E 211 or equivalent

ME 348: Circuit Analysis, Instrumentation, and Statistics

4 Credits

Intermediate topics in mechanics of materials with computer applications. M E 349 Intermediate Mechanics of Materials (3) This course introduces students to intermediate and applied topics in mechanical behavior of materials with an emphasis on design and computation. This course will give students the tools to do practical analysis and the foundation needed to prepare them for other mechanical engineering courses in design and other elective courses. Subjects covered include stress analysis, deformation & deflection, material failure and finite element analysis. Stress analysis includes the study of stress concentrations, stress transformations and principal stresses. Stress-based static failure theories for brittle and ductile materials are investigated. Two-way bending of beams is covered as well as torsional deformation of non-circular cross sections. Buckling and pressure vessels are introduced as separate topics while the finite element analysis is introduced as a computational tool to study stress and deformation. Throughout the course students will use a commercial finite element program to verify and visualize results from analysis of the various topics. During the course, students are introduced to the basic theory of the finite element method.

Prerequisite: E MCH213 , EDSGN100S Prerequisite or concurrent: CMPSC200 , MATH 220
ME 355: Dynamic Systems Laboratory

1 Credits

Experimental investigation of simple position, velocity, and temperature control systems with analog and digital controllers. M E 355 Dynamic Systems Laboratory (1) The objective of the Dynamic Systems Laboratory is to enable students to experimentally investigate the calibration, response characteristics, modeling, and control of mechanical and fluid systems. This course is intended to allow students to develop some hands-on experience and working knowledge of basic dynamic and control systems. Specifically, to 1. Identify the actuators, sensors, plants, and controllers of physical control systems. 2. Calibrate encoders, temperature, laser displacement, and flow sensors. 3. Measure steady state, step, and frequency response of thermal, fluid, and mechanical systems. 4. Compare simulation and experimental results to validate theoretical model. 5. Design controllers for thermal, fluid, and mechanical systems. 6. Implement and test PID controllers for thermal, fluid, and mechanical systems.

Prerequisite: M E 345; Prerequisite or concurrent: M E 450

ME 357: System Dynamics

3 Credits

Mathematical modeling and analysis of linear dynamic systems; performance and design of simple controllers. M E 357 System Dynamics (3) This course is to explore the modeling of linear systems via transfer functions and state-space models; analysis of systems in the time and frequency domain using transfer functions and state-space models; development of control techniques based on PID. The use of software Matlab and Simulink is another emphasis. Students are evaluated through the use of written exams during the semester, a comprehensive written final, weekly homework assignments, and a design project. This course is required in the ME BD program at Behrend, integrates material from a number of previous courses, and provides the student with tools that will be used in a number of subsequent courses.

Prerequisite: CMPSC200, E E 211 or E E 212, MATH 251

ME 360: Mechanical Design

3 Credits

Specification of components such as shafts, bearings, and power transformers; optimal designs for operational, environmental, and manufacturing requirements. M E 360 Mechanical Design (3) This course is required for all mechanical engineering students, and is taken in the junior year. It is an introduction to analysis and design of mechanical components. It helps provide practical insight into theory provided by prerequisites in engineering mechanics and materials science. Students initially perform yielding and fatigue failure predictions for general structural elements and then focus on specific mechanical components such as gears, fluid film bearing, rolling element bearings, screws, shafts and springs. Use and interpretation of finite element analyses (FEA) are also introduced. The overall goals are for students to learn to make basic design decisions regarding the suitability of different materials in mechanical components (e.g. steel versus aluminum); and to make basic design decisions regarding the suitability of different components in a mechanical system (e.g. ball bearings versus fluid film bearings).

Prerequisites: CMPSC 200, EMCH 213

ME 360H: Mechanical Design

3 Credits

Specification of components such as shafts, bearings, and power transformers; optimal designs for operational, environmental, and manufacturing requirements.

Honors

ME 365: Materials Testing Laboratory

1 Credits

Laboratory for materials testing, property identification and modification, failure analysis, and metallurgical testing. M E 365 Materials Testing Laboratory (1) This laboratory course provides an integrated approach to materials science and engineering. The laboratory examines the important relationships between processing, microstructure, and the properties of materials. The course provides an introduction to basic characterization techniques for materials, such as microscopy, hardness testing, fracture testing and analysis, fatigue testing, and impact testing. In addition, material selection and heat treatment topics are covered. The course requires hands-on involvement by the students in the planning of experiments as well as data manipulation and analysis of results. The laboratory exercises are intended to provide students with a broad appreciation of the breadth of material science and engineering and the principles behind material characterization and property modification. Students work in groups, and written reports are the primary basis for grading.

Prerequisite: Prerequisite or concurrent: MATSE259

ME 367: Machine Design

3 Credits

Design and selection of machine components and connections. Stress analysis and modes of failure of materials used in machine components. M E 367 Machine Design (3) This course introduces students to the process for selection, design and failure analysis of various common machine elements. This course will give students the foundation to design mechanical systems and the tools to design, select, or analyze machine components for practical applications necessary for their senior design projects and other mechanical engineering electives. Subjects include the reliability, safety factors, and the design of machine elements including shafts, roller bearings, brakes, clutches, gears, belt and chain drives, and additional topics such as screws, springs, journal bearings, and connections. Both static and cyclic loading are considered as part of the design and analysis process. Extensive use is made of material properties, design tables, figures and graphs to assist in the design and analysis process. The course includes a comprehensive project that incorporates several of the topics covered in the course in the design of a mechanical system. The goal of the project is for students to learn how various machine components and procedures are used in the Machine Design process as well as giving them further experience in teamwork and presentation skills.

Prerequisite: M E 349 Prerequisite or concurrent: MATSE259

ME 370: Vibration of Mechanical Systems

3 Credits

Modeling and analysis of vibration characteristics of mechanical systems with single degree and multiple degrees of freedom. Vibration
control by isolation, absorption and balancing. M E 370 Vibration of Mechanical Systems (3) The course studies vibration characteristics of mechanical systems and vibration control. It is divided into four main topics. Fundamental aspects of mechanical vibrations are studied first. Types and causes of various vibratory motions are described. The concepts of mathematical modeling of the vibratory systems are presented. Model elements including mass/inertia, spring and damper elements and their corresponding describing equations are studied. Single degree-of-freedom vibrations are modeled and analyzed. Equations describing free vibrations of undamped and damped systems are derived. Natural frequency and damping ratio are defined and their physical significance discussed. Harmonically excited vibrations are studied with many practical application problems; resonance and its physical significance are emphasized. The theoretical aspects of general periodic vibrations and non-periodic vibrations are formulated by means of Fourier analysis and convolution integral. Vibrations of multiple degrees-of-freedom systems are studied. Mathematical models governing free vibrations are formulated. Equations determining the natural frequencies and mode shapes of the system are derived with relation to eigenvalue problems. Harmonically excited vibrations are analyzed with practical applications. Vibration control in relation to engineering design is the last topic studied. Various vibration control concepts and techniques are presented including vibration isolation, vibration absorption and balancing to reduce the intensity of the source of excitation.

**Prerequisite:** E MCH212, CMPSC200, MATH 220, MATH 251

ME 375: Vibrations Laboratory

1 Credits

Experimental measurement and analysis of mechanical system dynamics. This laboratory course provides an opportunity to apply the fundamental vibrations theory taught in ME 370 to actual mechanical hardware. The experiments illustrate fundamental concepts from an experimental vibration perspective. Experimental vibration measurement methods are applied to estimate simplified dynamic models for vibrating mechanical systems. The students compare analytical to experimental results to gain a sense of the limitations of both modeling and experimentation. Experiments include: free vibration of linear and nonlinear systems, response, measurement of translational and rotational, forced harmonic vibration, spectral analysis of vibration signals, experimental data uncertainty and comparison of finite element model dynamic results to experimental data. Throughout the course the students will: 1. Plan, implement and debug instrumentation to measure vibrations of mechanical systems. 2. Implement experimental test systems using vibration transducers and data acquisition to maximize measurement quality. 3. Recognize the dominant behavior seen in many larger, more complicated engineering systems. 4. Estimate the system vibration parameters. 5. Use software to compare measured and predicted dynamic behavior. 6. Recognize dominant nonlinear behavior and implement a nonlinear simulation using software. 7. Verify the results of computer analyses of dynamic systems by various methods including experimental measurement and analytical modeling.

**Prerequisite:** or concurrent: M E 370, M E 345

ME 380: Machine Dynamics

3 Credits

Kinematic analysis of mechanisms such as linkages, flywheels, cams and gears. Dynamic forces and vibrations of mechanisms. M E 380 Machine Dynamics (3) In this course students learn how to apply the techniques of dynamics to analyze both the motion and forces associated with planar mechanisms. Students learn how to model and solve for the position, velocity, acceleration and forces on linkages using vectors. They also study the kinematics of gears, flywheels and cams. Machine vibrations is introduced as an integral part of Machine Dynamics. Students learn how to model simple mechanical systems as vibrating systems and then analyze the vibratory response of these systems. Once these analytical skills have been developed, the students can apply these skills to the design of linkages, internal combustion engines, gears, shafts and cams. Several in-class exams are used to evaluate students' performance. Computer problems are assigned so students can experience the solution methods to some of the more complex problems. This required course integrates material from calculus and dynamics to provide the student with tools that can be used to analyze the motion of machinery and can be used in the design of machinery and machine components. It is offered annually in the Fall semester and occasionally in the Spring semester.

**Prerequisite:** E MCH212, MATH 251

ME 390: Academic and Career Development for Mechanical Engineers

0.5 Credits

ME 390 Academic and Career Development for Mechanical Engineers (0.5) guides students through the process of tailoring their academic studies to suit their individual career goals. Students will look at career opportunities within mechanical engineering as well as the many other professions that are available to BSME degree holders. Students will be prepared to participate successfully in recruiting events such as the Penn State career fairs.

**Prerequisite:** 5th Semester standing in Mechanical Engineering

ME 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor

Full-Time Equivalent Course

ME 397: Special Topics

0.5 Credits

ME 397: Special Topics (0.5) guides students through the process of tailoring their academic studies to suit their individual career goals. Students will look at career opportunities within mechanical engineering as well as the many other professions that are available to BSME degree holders. Students will be prepared to participate successfully in recruiting events such as the Penn State career fairs.

**Prerequisite:** or concurrent: M E 370, M E 345

ME 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ME 400: Thermodynamics of Propulsion and Power Systems

3 Credits

Analysis and modeling of propulsion and power systems, including combustion, compressible flow through nozzles, chemical equilibrium, and moist air systems. M E 400 Thermodynamics of Propulsion and Power Systems (3) This course is specifically designed to take advantage
of the senior level standing of the student by providing an integrative modeling and analysis approach to thermal-fluids systems. The course emphasizes the integration and application of fundamental principles of mass, momentum, and energy conservation to relatively complex systems. These systems include spark-ignition and diesel engines, gas-turbine engines for power production, and turbojet engines. The integration of the topics of combustion, compressible flow, and psychrometrics allow these systems to be analyzed in their totality. Emphasis is on creating engineering models of these systems. The course aims to integrate previous knowledge and develop skill in ‘thinking like an engineer.’

**Prerequisite:** M E 300 and M E 320 ; Prerequisite or concurrent: M E 410

**ME 401: Refrigeration and Air Conditioning**

3 Credits

Theoretical principles, design, performance, and selection of various refrigeration and air-conditioning systems; building heat and cooling loads; solar heating.

**Prerequisite:** M E 410

**ME 402: Power Plants**

3 Credits

A study of fossil-fuel steam generation and utility plants, including cogeneration, gas turbine, and combined cycles. M E 402 Power Plants (3) This course serves as an introduction to fossil-fuel plants for both steam generation and electricity production. Following an overview of an entire plant and an introduction to combustion processes, each subsystem of a fossil-fuel plant will be considered. The subsystems include fuel preparation and handling, boiler types and the fundamentals of steam generation, water systems (condensate-feedwater, makeup, cooling, and waste), and turbomachinery. Consideration will be given to environmental aspects of steam and power generation as well as operations, maintenance, and controls issues. Students will spend time at the West Campus Steam Plant (WCSP) to observe the various systems discussed in class. Data taken from the WCSP will be used in problem solving and in an assessment of the plant.Course Objectives: To acquaint students with both steam generation and electricity production and to present some of the engineering calculations encountered in practice.Objectives that students will meet at the end of the course: 1. list the subsystems of a plant, indicating the function of each subsystem 2. sketch typical subsystems of a power plant (example: sketch the coal and ash handling system) 3. perform basic analyses associated with each subsystem 4. sketch the flow of water-steam, fuel, and air through a plant 5. analyze a heat balance, perform an availability analysis, and interpret the results of those analyses 6. select the type of plant appropriate for a given application 7. perform an energy audit on the auxiliary systems 8. perform a water audit on the plant 9. use DoE Best Practices (or equivalent program) to assess a steam plantStudents will be required to draw on material from core undergraduate courses in thermodynamics (M E 030 and M E 031), fluid mechanics (M E 033), and heat transfer (M E 412). Students must be able to: 1. sketch the configuration and draw a T-s diagram for a Rankine cycle and a Brayton cycle 2. indicate the general trends for the ideal cycles (example: for a Brayton cycle, how does the efficiency depend on the pressure ratio, inlet temperature, etc.) 3. define the basic modifications to the simple Rankine cycle and simple Brayton cycle 4. discuss the significance of the modifications 5. state the definition of the adiabatic efficiency for turbines and pumps 6. perform an energy balance given a particular cycle 7. use the Darcy-Weisbach equation to determine the friction losses in pipes and ducts 8. perform simple analysis of a heat exchanger

**Prerequisite:** M E 410

**ME 403: Polymer Electrolyte Fuel Cell Engines**

3 Credits

Introduction to Fundamentals of Polymer Electrolyte Fuel Cells (PEFCs). Includes fundamentals of electrochemistry, thermodynamics, fluid mechanics, heat transfer materials, and manufacturing issues of PEFCs. A brief survey of other fuel cell types is also included. M E 403 Polymer Electrolyte Fuel Cell Engines (3) This course is intended for the engineering student interested in obtaining a fundamental background required for polymer electrolyte fuel cell (PEFC) modeling and diagnosis. Those students with interest in the basic design, operation, and characteristics of PEFC systems should also benefit. This course serves as an introduction to the fundamental principles of electrochemistry, thermodynamics, heat and mass transfer, materials and manufacturing issues related to PEFC engines. The various types of PEFC components and technologies are dissected in detail, including direct inject alternative fuel systems. A survey of cutting-edge issues in fuel cell technology including the future direction of PEFC technology will be presented as time permits. The student will also participate in an experimental lab study to aide in the understanding of these systems, a computer-based simulation project, and a group-based fuel cell system design project. Issues of specific interest to mechanical engineers, including water management and heat and mass transfer in thin film porous media, will be dealt with in depth. A brief survey of other fuel cell types is also presented.

**Prerequisite:** M E 300 Prerequisite or concurrent: M E 320; Concurrent: M E 410, or equivalent

**ME 404: Gas Turbines**

3 Credits

This course enables students with the proper background to gain specialized knowledge as a step towards becoming practitioners in the field of gas turbines. The information imparted covers from basic cycles to properties of materials required to put together these impressive machines. Competent course performance requires knowledge of basic thermodynamics, fluids and heat transfer. The homework is carefully graduated in order to highlight key aspects already covered in the lectures, with new thinking an unavoidable part. As an optional part of the course, students can run and acquire data in an actual gas turbine. Additionally, those with a strong background in fluids can design blades and study the flow around them with CDF. Course Objectives: Upon completion of this course, students should be able to: 1. Analyze cogeneration plants. 2. Analyze turbofans, jets and turbojets. 3. Specify a typical gas turbine installation, including auxiliaries. 4. Carry out conceptual design of gas turbine engines for different applications. 5. Specify construction materials to withstand typical operating conditions. 6. Demonstrate professionalism in interactions with colleagues, faculty, and staff. Program Objectives: This course covers the following program objectives: 1. demonstrate ability to solve differential equations 2. demonstrate familiarity with linear algebra 3. perform analysis of thermal/fluids components 4. perform analysis of thermal/fluids systems 5. work effectively on multidisciplinary teams 6. demonstrate ability to communicate effectively with the written word 7. demonstrate ability
ME 405: Indoor Air Quality Engineering

3 Credits

Prediction of the motion of contaminants (both gaseous particulate) in gas streams; analysis of ventilation systems and air pollution control systems; comparison of experimental sampling techniques. ME 405 Indoor Air Quality Engineering (3) This course serves as an introduction to environmental health engineering, which presents the quantitative relationships describing generation, movement, and control of pollutants inside the workplace. Although some aspects of the course can be applied to outdoor air pollution, the course concentrates on applications related to indoor air quality. In particular, students are taught how to measure and predict concentrations of air pollutants, both gaseous and particulate, in rooms. In addition, they are taught how to design both local and general ventilation systems to maintain acceptable indoor air quality. In addition, the design of air pollution control systems that remove both gaseous and particulate contaminants from the air is discussed. The relationships are described by mass and energy balances that relate pollutant generation and movement to process parameters. The course is designed for seniors and graduate students in Mechanical, Chemical, Environmental and Civil Engineering, and Meteorology. To work effectively in environmental health engineering, students must be proficient in applying the thermal sciences. The course uses principles of mathematics and thermal sciences included in accredited programs of engineering. Most students will have mastered some of these principles, but few will have mastered them all. The course reviews all the necessary thermal science principles before using them, but some students will need to review this material in more detail than others. This course is offered once per year.

Course Objectives:

a. Demonstrate the ability to analyze and compare risks associated with various activities and with exposure to hazardous chemicals.
b. Demonstrate a working knowledge of the physiology and function of the respiratory system, including diseases of the lung.
c. Demonstrate the ability to estimate pollutant emission rates using emission factors and fundamental mass balance techniques.
d. Analyze practical problems of general and local ventilation requirements.
e. Design local ventilation systems using standard guidelines from ACGIH and ASHRAE.
f. Predict the motion of particles in air, and analyze pollution control devices which remove particles from the air.
g. Demonstrate professionalism in interactions with colleagues, faculty, and staff.

Program Objectives:

a. Demonstrate knowledge of chemistry.
b. Demonstrate ability to solve differential equations.
c. Demonstrate familiarity with statistics.
d. Perform analysis of thermal/fluid components and thermal/fluid systems.
e. Demonstrate an appreciation of the economic, global, social, and ethical context of their work.
f. Demonstrate professionalism in interactions with colleagues, faculty, and staff.
g. Make effective use of spreadsheets as an analysis and design tool.
h. Use software such as Matlab and MathCAD to solve engineering problems including ODE'S, systems of linear equations, and numerical integration.

Prerequisite: M E 320 or equivalent

ME 406: Introduction to Statistical Thermodynamics

3 Credits

Statistical description of systems composed of large numbers of particles in the context of classical and quantum mechanics; basic concepts of probability theory and thermodynamics as they relate to statistical mechanics. ME (NUC E) 406 Introduction to Statistical Thermodynamics (3) This course is an introduction to probabilistic and statistical concepts in the physical sciences, which we refer to as 'statistical thermodynamics.' In areas such as design and processing of electronic devices, materials engineering, chemical engineering, and combustion engineering, the science of statistical mechanics is a particularly necessary, powerful, and important tool for the engineer. The underlying foundation of statistical mechanics is developed by (1) reviewing the basic ideas from probability theory, (2) deriving the binomial, Poisson, and Gaussian probability distributions, and (3) using these models to analyze several examples taken from science and engineering. To make a connection between macroscopic quantities and the corresponding probabilistic representation, classical thermodynamics is reviewed using the internal energy, entropy, and free energy functions in the context of the first and second laws. Statistical mechanics for classical and quantum-mechanical systems is presented via the micro-canonical, canonical, and grand canonical ensembles using the associated partition functions. During the syntheses of ideas, applications from various branches of science are presented. Some examples of applications are the Einstein crystal, the Debye crystal, the ideal gas, and black body radiation. This course covers the following program objectives:

1. Demonstrate knowledge of basic chemistry and physics.
2. Demonstrate a knowledge of atomic and nuclear physics.
3. Demonstrate a knowledge of thermodynamics, heat transfer, and fluid flow.
4. Understand and apply the basic concepts of particle transport.
5. Understand and apply thermodynamics and heat transfer principles to the analysis of nuclear power components and systems.

Prerequisite: M E 300 or M E 201 or M E 302 or CH E 303; MATH 230 or MATH 231

Cross-listed with: NUCE 406

ME 408: Energy Systems

3 Credits

Theory, analysis, design, selection, and application of energy conversion systems. This course is intended for mechanical engineering students to reinforce the topics taught in thermodynamics, fluid mechanics, and heat and mass transfer; gives students familiarity with energy conversion systems using traditional and renewable energy sources which are typically encountered by mechanical engineers, and improves students' analytical and design skills. Coverage of materials include heat exchanger analysis, selection, and design with respect to heat transfer, pressure drop, and fluid pumping requirements; analysis and design of power cycles based on thermodynamic principles; fundamentals of combustion processes; introduction to wind energy and wind turbine aerodynamic analysis; fuel cell fundamentals and analysis of fuel cell problems and systems based on thermodynamics and heat transfer principles. Students will be evaluated by homework assignments; individual and small team projects; and exams.

Prerequisite: M E 320, M E 410

ME 410: Heat Transfer

3 Credits

Thermal energy transfer mechanisms: conduction (steady, transient), convection (internal, external), radiation; lumped parameter method; heat exchangers; introduction to numerical methods. ME 410 Heat Transfer (3) ME 410, Heat Transfer, is a required course for mechanical and nuclear engineering students. The course presents the three modes of heat transfer: conduction, convection, and radiation. One-dimensional steady and transient conduction is studied for planar, cylindrical, and
spherical geometries. The lumped capacitance analysis is used for transient conduction when appropriate. Analytical and numerical methods are presented for two-dimensional conduction problems, including the analysis of extended surfaces. Convection heat transfer is studied in both internal and external geometries and under laminar and turbulent flow regimes. External flows include cooling on flat plates due to laminar and turbulent boundary layer flows, and cooling of cylinders due to cross flow. The convection heat transfer analysis in internal flows considers laminar and turbulent pipe flows. Free convection is also considered where heat transfer is due to flow induced by fluid buoyancy. Boiling and condensation considers the effect of two-phase flows on surface heat transfer. Radiation heat transfer is studied by considering both the general characteristics of radiation as well as the properties of radiating surfaces and radiation heat transfer between surfaces. Methods for solving multi-mode heat transfer are presented throughout the course.

Heat exchangers and heat transfer from extended surfaces are two applications studied in the course.

**Prerequisite:** M E 320 or BME 409; CMPSC200 or CMPSC201; MATH 220 or NUC E309

**ME 410H: Heat Transfer**

3 Credits

Transient heat conduction; convection in laminar and turbulent flow; heat exchanger devices; boiling and condensation; radiation.

**Honors**

**ME 411: Heat-Exchanger Design**

3 Credits

Thermal design and application of different heat-exchanger types, including surface selection and design optimization.

**Prerequisite:** M E 410

**ME 420: Compressible Flow I**

3 Credits

Introductory compressible flow (gas dynamics), mathematical background, and physical concepts of isentropic flow, shock waves, expansion waves, and applications.

**Prerequisite:** M E 320

**ME 421: Viscous Flow Analysis and Computation**

3 Credits

Apply analytical and computational methods to solve the differential equations describing fluid flow. Incompressible external flows past objects and internal flows in pipes and ducts are some problems considered. M E 421 Viscous Flow Analysis and Computation (3) M E 421 is an intermediate course in fluids mechanics that bridges between the required undergraduate fluid mechanics course and the graduate fluid mechanics courses. Steady and unsteady flows are considered past objects and in pipes, ducts, and annuli. Analytical and numerical methods are used to solve the boundary layer and Navier-Stokes equations that describe fluid motion. Analytical methods include solutions for steady and unsteady internal flows with heat transfer. Similarity equations for boundary layer flows are derived and then solved numerically using the Runge-Kutta method. Finite difference methods for viscous flows are introduced and applied. Turbulence modeling is presented and applied in a boundary layer code. The stages of transition from laminar to turbulent flow and methods for the prediction of transition are introduced. Topics in M E 421 include: 1. Analytical solutions for one-dimensional viscous flows in Cartesian and cylindrical coordinates with heat transfer. 2. Unsteady viscous flow solutions using Separation of Variables. 3. Boundary layer similarity solutions using the Runge-Kutta method. 4. Panel method for incompressible inviscid flows. 5. Finite-differenced equations for viscous flows and the accuracy and stability of the schemes. 6. Using a commercial CFD code for a simple geometry. 7. Algebraic turbulence models and the approximations of each. 8. Higher-order turbulence models and the approximations used. 9. Stages of transition from laminar to turbulent flow. 10. Methods to predict boundary layer stability and transition.

**Prerequisite:** M E 201, M E 320, AERSP308, AERSP311, or C E 361; CMPSC200 or CMPSC201 or CMPSC202; MATH 220; MATH 250 or MATH 251

**ME 422: Principles of Turbomachinery**

3 Credits

Conservation laws pertinent to energy conversion and fluid mechanics are applied to pumps, centrifugal compressors, axial compressors and turbines, hydro turbines and wind turbines. Ideal performance is established, and conventional loss correlations are applied to define potential performance of turbomachinery. The applications of similarity and dimensionless parameters toward characterizing turbomachines are outlined. The course objectives are: 1. Review/acquire thermofluids concepts applicable to turbomachinery such as Reynolds transport theorem, First and Second laws, isentropic efficiencies, potential flow, dissipative flows. 2. Develop an understanding of working principles applicable to centrifugal, axial and mixed flow machinery. Extend concepts applicable to hydro and wind turbines. Develop approximations for both compressible and incompressible flows. 3. Gain an understanding of loss calculations.

**Prerequisite:** ME 320

**ME 423: Introduction to Numerical Methods in Fluid Dynamics**

3 Credits

This course provides an introduction to the important and growing field of Computational Fluid Dynamics (CFD). The student will become familiar with a short history and relevance of CFD, the basic differential models of fluid dynamics, discretization and linearization practices, and solution strategies of CFD. Fundamentals of algorithm classification, error and stability analysis will be covered. Also, several advanced topics of relevance to modern CFD analysis will be covered. A term project will involve coding a CFD model of one of several choices including: 2D shallow wave equations for application to a tsunami, unsteady conjugate flow+heat transfer analysis of a pin array, and others per the instructor's discretion.

**Prerequisites:** AERSP 312, ME 320, MATH 250; MATH 251, CMPSC 200; CMPSC 201

**ME 424: Additive Manufacturing Lab**

1 Credits

Explore various aspects of 3D printing. Topics will vary by semester, depending on the current technology and advancements in the field.
This laboratory course provides an integrated approach to additive manufacturing and reverse engineering. The course introduces basic operating procedures for Fused Deposition Modeling (FDM) printers and gives instruction on repair, troubleshooting, and print optimization techniques. The laboratory exercises provide students with a broad appreciation of the current technological capabilities of FDM 3D printing and an understanding of when to implement the technology over a traditional manufacturing technique. Written technical and research reports and proposals, Inventor models, and 3D printed models are the primary basis for grading.

**Prerequisites:** ME 349

**ME 427: Aerodynamics for Mechanical Engineers**

3 Credits

The primary objective of this course is to teach students how to apply concepts relating to incompressible flows to solve aerodynamic design problems. In incompressible aerodynamics, fundamental concepts such as lift, drag, aerodynamic moment, induced drag, viscous drag, pressure drag, separation, stall, circulation, downwash, camber, thickness ratio, and lift distribution are discussed. Students use these concepts primarily to determine aerodynamic lift and drag using a variety of techniques, including potential flow theory and wind tunnel testing.

Based on instructor preference and expertise, additional topics relating to incompressible and/or compressible aerodynamics may be also discussed. Students will be evaluated through the use of written exams during the semester, a comprehensive written final, and weekly homework assignments. This course is a technical elective in the ME programs at the Behrend, Berks and Harrisburg campuses and allows students who have completed ME 320, Elementary Fluid Mechanics, to improve their understanding of fluids and thermodynamics by covering the subject in more detail and applying it specifically to aerodynamic problems. It will usually be offered annually.

**Prerequisite:** M E 320

**ME 428: Applied Computational Fluid Dynamics**

3 Credits

Introduction to theory and application of computational techniques for solving fluid flow and heat transfer. M E 428 Applied Computational Fluid Dynamics (3) The purpose of this course is to teach students how to use a commercial CFD code to solve real-world engineering fluid flow problems. The definition of appropriate problem domain, set of governing equations, boundary conditions, and fluid properties is discussed. Sufficient theory of CFD is covered so that students are able to select appropriate elements or interpolation techniques and options, mesh size, pressure-correction technique and solution technique. Students are also taught how to interpret the results of a CFD simulation, including determination that the solution is physically realistic, conforms to the governing equations, is converged and grid independent, and determination of important engineering quantities such as net force, pressure drop and flow rate. Students are evaluated through the use of written exams during the semester, a comprehensive written final, weekly homework assignments, and a semester project. This course is a technical elective in the Mechanical Engineering program and allows students who are interested in fluid mechanics and heat transfer to further their study. It is offered periodically.

**Prerequisite:** M E 320, M E 410

**ME 430: Introduction to Combustion**

3 Credits

Concepts related to laminar and turbulent premixed and nonpremixed combustion with applications to propulsion and stationary systems. EGEE (M E) 430 Introduction to Combustion (3) This course provides an introductory treatment of combustion science. The objectives of the course are to develop in the students an understanding of combustion kinetics, combustion thermochemistry, flame dynamics, flame stability, and pollutant formation. Coverage includes laminar and turbulent flames, premixed and diffusion flames, and detonations. Emphasis is placed on the role that kinetics, heat transfer, mass transfer, and fluid dynamics have on flame structure and flame stability. The course includes some laboratory demonstrations of flat flame and diffusion flame burners, and incorporates numerical calculations of thermodynamic and kinetic combustion phenomena. The course begins with a review of transport phenomena, physical gas dynamics, and thermochemistry. Then, the concept of the laminar flame speed is introduced in the context of a one-dimensional flame and a propagating chemical wave. Issues of premixed flame structure and stability are presented along with a discussion of flammability limits. Next, laminar diffusion flames are presented via the Burke-Schumann analysis. From laminar flames, the emphasis shifts to turbulent premixed and diffusion flames, and the concepts of flame stretch and strain. Detonations are considered, with emphasis on thermodynamic analysis of the detonation and the structure of the detonation wave. Details of chemical kinetics for the hydrogen-oxygen and hydrocarbon-air reaction systems are presented, with linkage back to earlier topics such as flame stabilization and flammability limits. After kinetic phenomena, the course then considers pollutant formation focusing on soot and NOx. The fundamental aspects of combustion are applied to analysis of the combustion process and pollutant formation in international combustion engines and catalytic combustors. The course wraps up with discussion of atmospheric chemistry, the fate of pollutants, and the formation of secondary pollutants.

**Prerequisite:** M E 201 or M E 300 or EME 301

Cross-listed with: EGEE 430

**ME 431: Internal Combustion Engines**

3 Credits

This course is specifically designed to take advantage of the senior level standing of the student by providing an integrative modeling and analysis approach to thermal-fluids systems. The course emphasizes the integration and application of fundamental principles of mass, momentum, and energy conservation to relatively complex systems. These systems include spark-ignition and diesel engines, gas-turbine engines for power production, and turbojet engines. The integration of the topics of combustion, compressible flow, and psychrometrics allow these systems to be analyzed in their totality. Emphasis is on creating engineering models of these systems. The course aims to integrate previous knowledge and develop skill in ‘thinking like an engineer.'
ME 432: Rocket Propulsion

3 Credits

Design and performance of rocket propulsion components and systems; thermodynamics, solid and liquid fuels, heat transfer, materials, controls, and instrumentation.

Prerequisite: M E 320, M E 410

ME 433: Fundamentals of Air Pollution

3 Credits

Natural and man-made sources of pollution; atmospheric dispersion; biological and health effects; control systems; legislation and regulations. This course is an introduction to air pollution, with an emphasis on outdoor rather than indoor air pollution. Topics to be covered include sources (emissions) of air pollution, both gaseous and particulate, interaction of air pollution with our bodies and the environment, and methods of measuring, quantifying, analyzing, and controlling air pollution. A brief introduction to government regulations related to air pollution will also be provided. Students are expected to be proficient in applying mathematics (e.g., integration, differentiation, and application of differential equations), and some basic chemistry, statistics, thermodynamics, and fluid mechanics.

Prerequisite: M E 201 or M E 300

ME 440W: Mechanical Systems Design Project

3 Credits

Design and analysis of mechanical components and systems. Application of fundamental design and analysis methods to open-ended engineering problems. Students develop and practice skills and techniques for managing and executing engineering design projects. These skills are applied to an industry-sponsored project. Project teams perform all facets of product and process design. This includes problem identification, planning of the project, formulation of design specifications, the development and evaluation of alternative conceptual designs, the development of detailed designs, the specification of manufacturing processes, prototyping of manufacturing processes and parts, design computations, drawings and performance via use of CFD and analysis and documentation of results. Students will visit industrial sites when possible to gain an understanding of existing processes and problems and to assess the customer’s needs. Students will present their design process and final design in several formats: oral presentations, poster presentations, web pages and reports.

Prerequisite: M E 340; M E 410 Prerequisite or concurrent: ENGL 202C

Writing Across the Curriculum

ME 442W: Advanced Vehicle Design I

2 Credits

Part one of a two course sequence; applications of design and analysis methods to open-ended advanced transportation vehicles. Two semester course; satisfies Senior Design or ME Technical Elective requirements (when combined with ME 443W). Students develop and practice skills and techniques for managing and executing engineering design projects. This is done in the context of an international University-level engineering design competition that is sponsored by government agencies and/or by industry. The competitions are structured to span a full calendar year, with the competition itself taking place in late Spring. For that reason, the course is spread over two semesters. In the Fall semester, there is approximately equal emphasis on classroom lectures and hands-on laboratory activities; in the Spring semester, the emphasis is on hands-on laboratory activities. The focus is advanced powertrain technology for personal transportation vehicles. Broader aspects of energy efficiency, security, and sustainability also will be discussed. The specific technologies that are targeted will evolve with time to remain ahead of what is available in current production vehicles. Project teams perform all facets of product and process design. This includes problem identification, planning of the project, formulation of design specifications, the development and evaluation of alternative conceptual designs, the development of detailed designs, the specification of manufacturing processes, prototyping of manufacturing processes and parts, and analysis and documentation of results. Students also will participate in broader aspects of the design competition. This may include securing sponsorship and funding, participating in outreach and public relations events, developing a business plan, developing a web site, and traveling to competition workshops and to the annual competition. Students will present their design process and final design in several formats: oral presentations, poster presentations, web pages, and reports.

Prerequisite: ME 340; CONCURRENT: IE 312, ENGL 202C

Writing Across the Curriculum

ME 441W: Thermal Systems Design Project

3 Credits

Design of thermal systems through component design and/or selection, system simulation and optimization. Assessment of system economics and energy efficiency. ME 441 Thermal Systems Design Project (3) Students develop and practice skills and techniques for managing and executing engineering design projects related more to thermal design but not excluding mechanical design. These skills are applied to projects mostly sponsored by the industry. Project teams perform all facets of product and process design either on paper via use of computer models and/or as a physical product. This includes problem identification, planning of the project, formulation of design specifications, the development and evaluation of alternative conceptual designs, the development of detailed designs, the specification of manufacturing processes, prototyping of manufacturing processes and parts, design computations, drawings and performance via use of CFD and analysis and documentation of results. Students will visit industrial sites when possible to gain an understanding of existing processes and problems and to assess the customer’s needs. Students will present their design process and final design in several formats: oral presentations, poster presentations, web pages and reports.

Prerequisite: ME 340; CONCURRENT: IE 312, ENGL 202C

Writing Across the Curriculum

ME 443W: Advanced Vehicle Design II

1 Credits

Part two of a two course sequence; applications of design and analysis methods to open-ended advanced transportation vehicles. Two semester course; satisfies Senior Design or ME Technical Elective requirements (when combined with ME 442). ME 443 Advanced Vehicle Design II (1) Students develop and practice skills and techniques for managing and executing engineering design projects. This is done in the context of an international University-level engineering design competition that is sponsored by government agencies and/or by industry. The competitions are structured to span a full calendar year, with the competition itself
taking place in late Spring. For that reason, the course is spread over two semesters. In the Fall semester, there is approximately equal emphasis on classroom lectures and hands-on laboratory activities; in the Spring semester, the emphasis is on hands-on laboratory activities. The focus is advanced powertrain technology for personal transportation vehicles. Broader aspects of energy efficiency, security, and sustainability also will be discussed. The specific technologies that are targeted will evolve with time to remain ahead of what is available in current production vehicles. Project teams perform all facets of product and process design. This includes problem identification, planning of the project, formulation of design specifications, the development and evaluation of alternative conceptual designs, the development of detailed designs, the specification of manufacturing processes, prototyping of manufacturing processes and parts, and analysis and documentation of results. Students also will participate in broader aspects of the design competition. This may include securing sponsorship and funding, participating in outreach and public relations events, developing a business plan, developing a web site, and traveling to competition workshops and to the annual competition. Students will present their design process and final design in several formats: oral presentations, poster presentations, web pages, and reports.

**Prerequisites:** ME 340 Concurrent Courses: ENGL 202C, IE 312 Writing Across the Curriculum

ME 444: Engineering Optimization

3 Credits

Problem formulation, algorithms and computer solution of various engineering optimization problems. M E 444 Engineering Optimization (3)Students will learn to formulate and solve a variety of engineering optimization problems. Basic concepts, problem formulation, scaling, use of different optimizers, effect of tuning parameters and starting points and solution interpretation will be taught. Example problems will be taken from mechanical, aerospace, nuclear, civil, chemical, electrical and other engineering disciplines. This course will complement other engineering design courses, such as capstone design. Students will learn how optimization can reduce product turnaround time, and to make decisions involving weight, stiffness, strength, performance, energy utilization, and other attributes. Pedagogy will focus on hands-on experience through computational problem-solving and graphical understanding. Technology classrooms and computer labs for instruction will be used. A by-product of this course is increased math and computer skills.

**Prerequisite:** MATH 220, MATH 230 or MATH 231, CMPSC201 or CMPSC202 or CMPSC200

ME 445: Microcomputer Interfacing for Mechanical Engineers

4 Credits

Interfacing of electro-mechanical systems to microcomputers for data acquisition, data analysis and digital control.

**Prerequisite:** M E 345 and seventh-semester standing

ME 446: Reliability and Risk Concepts in Design

3 Credits

Introduction to reliability mathematics. Failure data collection and analysis. Components and systems reliability prediction. Effects of maintenance on reliability. Risk Analysis. Case studies in engineering applications. ME 446 / NUCE 446 Reliability and Risk Concepts in Design (3) The course covers materials reliability in design including mechanical, electrical and system aspects. Five main topics will be studied. The course starts by introducing engineering risk and reliability, highlighting its interdisciplinary nature and its significance in system design. The concept of reliability as a probability is introduced and the basic laws of probability are reviewed. The discussion centers on the mathematics needed to understand and analyze complex systems including components in series and parallel. The topics include the independence, mutual exclusivity, truth tables and Venn diagrams. These concepts are then applied to simple systems consisting of one, two and three components in various configurations. The equivalency of the various methods is discussed. The effect of maintenance on a system’s reliability is presented along with discussions of various maintenance strategies. Then, the failure modes and effects analysis is introduced and examples discussed. The concept of fault trees and event trees and their application to reliability analysis are presented. Risk analysis is then introduced as a case study in the application of reliability analysis. A nuclear power plant system is analyzed to quantify the risk to the public from its operation.

**Prerequisite:** MATH 250 or MATH 251; M E 345 or NUCE 309 Cross-listed with: NUCE 446

ME 448: Engineering Design Concepts

3 Credits

Engineering design and modelling, engineering economic analysis techniques, technical communication skills, project planning and design. M E 448 Engineering Design Concepts (3)This course is the first of a two-part sequence of courses that make up the capstone design experience in the ME BD major (the second course is M E 449, Mechanical Design Projects). In this course students study the engineering design process, begin working on their senior design project, and learn about professional topics related to industry. Topics in the engineering design process include customer needs identification, development of engineering specifications, concept generation, concept selection, costing, and project planning. Professional topics include communication, team work, ethics, safety, sustainability, globalization, and engineering economics. Students are evaluated on the design process and professional topics through assignments and quizzes. A major component of the course is to begin work on a capstone design project. Students work in teams of 3 to 4 on an industrially-sponsored project or other project approved by the faculty. The student teams work with the sponsor to develop specifications and a project plan, perform background research necessary to fully understand the project, begin to solve the problem, and make two presentations during the semester. The first presentation is a formal project proposal; the second presentation at the end of the semester is a progress report. Students are evaluated on both their technical and presentation skills, as well as their ability to function as a team. This course is required in the Behrend Mechanical Engineering (ME BD) program, and integrates material from a number of previous courses.

**Prerequisite:** M E 380, seventh-semester standing. Prerequisite or concurrent: M E 367, M E 410

ME 449: Mechanical Design Projects

3 Credits

Group or individual design projects in the areas of mechanical engineering.
Prerequisite: M E 448, eighth-semester standing

ME 450: Modeling of Dynamic Systems

3 Credits
Modeling and analysis of dynamic interactions in engineering systems. Classical and state variable methods; digital simulation; stability and dynamic response. M E 450 Modeling of Dynamics Systems (3) This course covers modeling, analysis, and control of single and multiple degree-of-freedom dynamical systems, including mechanical, electrical, thermal, fluid systems and their combinations (mixed systems). The processes of energy storage and dissipation, which are common for different kinds of dynamic systems, will be emphasized in investigating general principles for modeling various dynamic systems. Basic concepts in system theory such as state variables and stability notions will be introduced. Most of the content will be restricted to linear-time-invariant systems (LTIs); however, local linearization around nominal operating points will be taught to analyze nonlinear systems. Introduction to classical control analysis and design methods will also be given.

Prerequisite: M E 370; Prerequisite or concurrent: M E 345

ME 452: Vehicle Road Dynamics

3 Credits
This course conducts investigations of one-dimensional, two-dimensional, and three-dimensional dynamics, kinematics and design integrated into the study of vehicle dynamics. Topics include body kinematics, steady state body dynamics, transient stability, tire forces, suspension, automatic control, and driver interaction. The emphasis is on the analysis of a vehicle as a complex system, recognizing how to abstract observed behaviors into appropriate mathematical models, how to decompose behaviors into subsystems, how to construct and perform numerical simulations, and how to design and analyze experiments to test models and simulations to gain insights into design goals and tradeoffs.

Prerequisite: prerequisite or concurrent: M E 450

ME 453: Powertrain System Modeling, Simulation, and Control

3 Credits
This course introduces students to the control-oriented state-space and transfer function modeling of powertrain components and systems. Relevant application domains include conventional automotive powertrains, hybrid powertrains, locomotive propulsion systems, marine and submarine propulsion systems, and stationary power generation systems. The course introduces students to the use of fundamental principles from thermodynamics, fluid mechanics, and rigid body mechanics for powertrain modeling. Simple, control-oriented models are emphasized. Model integration and simulation topics, including numerical stiffness, solver selection, and integration step size selection are emphasized. Applications of powertrain modeling and control covered in the course include servo-control problems (e.g., air-fuel ratio control) and supervisory power management in hybrid powertrains.

Prerequisite: ME 370 CONCURRENT: ME 357; ME 450

ME 454: Mechatronics

3 Credits
Interfacing of electro-mechanical hardware to microcomputers and microcontrollers for data acquisition, data analysis, and digital control. The course addresses the need for today's mechanical engineer to understand the architecture of engineering systems and not just the mechanical hardware. The course has a significant lab component in the form of weekly, two-hour labs. Examples of lab topics include the design and building of a complete autonomous vehicle including the drive system, steering, sensors, obstacle avoidance, and computer control.

Prerequisites: ME 345; ME 345W; ME 348

ME 455: Automatic Control Systems

3 Credits
This course covers the characterization and feedback control of linear time invariant (LTI) dynamic systems, classical feedback control theories will be emphasized. Basic concepts of analyzing, predicting and specifying the performance of dynamic systems, including transfer functions, dynamic response, block diagram, stability notions and sensitivity will be introduced. A thorough treatment of feedback controller design via Root-Locus method will be provided, which includes the design of lead/lag compensation and PID controller. Frequency domain controller design will also be introduced thoroughly, from the characterization of open-loop frequency response using Bode plot to the analysis of closed-loop frequency response. In this process, the notions of gain-phase relationship, Nyquist stability criterion, and stability margin will be discussed. Finally, the method of adding dynamic compensation to adjust the frequency response and improve the stability and performance of the system will be introduced.

Prerequisite: M E 320, M E 450 or M E 357

ME 456: Introduction to Robotics

3 Credits
This course is a technical elective where students learn about the present and future status of robot applications, and are required to apply fundamental knowledge of physics, mechanics, and mathematics to develop software to analyze and control robots. The course deals with mechanics and control of mobile robots, flying robots and robot manipulators. First, students are taught to describe position and orientation of a rigid body, including rotation matrix, roll-pitch-yaw angles and Euler angles. In addition, a brief introduction to feedback control system is provided. After these background materials, students learn about the following topics: a. kinematics and control of wheeled mobile robots, car-like mobile robots and quadrotor and b. 3-D kinematics, statics, dynamics and control of robot manipulators. Sensors, actuators and software used in industrial robots are discussed.

Prerequisites: EMCH 212, ME 360; ME 367

ME 460: Advanced Machine Design Problems

3 Credits
This course is designed to approach and analyze fundamental problems in the design of advanced level machine components and systems. It integrates advanced concepts in fatigue, vibrations, mechanics of materials and tribology for component and system level reliability. The course emphasizes elements of power transmission through
detailed discussion on kinematics and reliability-based design of cams, flywheels, transmission couplings and gear chains. Example cases involve single and multiple cylinder automotive engine system with analysis of dynamics and balancing, power transmission through both flexible and rigid elements as well as different kinds of differentials built of spur, helical, bevel and worm gears. Another thrust is the application of tribology on machine design with special focus on hydrostatic and hydrodynamic bearings. Through case studies drawn from design and failure from real life systems, the course develops knowledge and skills for translating design concepts from components to system level.

Prerequisite: M E 360, M E 370

ME 461: Finite Elements in Engineering
3 Credits

Computer modeling and fundamental analysis of solid, fluid, and heat flow problems using existing computer codes. E MCH (M E) 461 Finite Elements in Engineering (3) This is an introductory course in the Finite Element Method. Through this course, students gain knowledge in finite element theory and problem modeling. The mathematical formulation of the method is presented and then applied to problems in elasticity and heat transfer. Projects are assigned to demonstrate the finite element method in simplified problems using hand-calculations and computer programs such as Matlab. The use of commercial FEA programs is introduced and problems of increased complexity are assigned to demonstrate their use in a computer lab. Finally, problems of realistic complexity are assigned such that students can practice solving, documenting and presenting their use of commercial FEA programs.

Prerequisite: E MCH213, E MCH210H, or E MCH210; CMPSC200, CMPSC201 or CMPSC202
Cross-listed with: EMCH 461

ME 462: Lubrication in Machine Design
3 Credits

Lubricants and lubrication with applications to design aspects of machines and mechanisms including bearings, gears, cams, and automotive engines. M E 462 Lubrication in Machine Design (3) The course covers interdisciplinary materials on lubrication in machine design including mechanical, mechanics and chemistry aspects. Six main topics will be studied. The course starts by introducing engineering tribology, highlighting its interdisciplinary nature and its significance in machine design. Surfaces of machine components in contact are studied, including surface physiochemistry, surface topography, topographical measurements and characterization and classification of regimes of lubrication. Lubricants used in machine design are discussed in length, including types of industrial lubricants, properties of lubricating oils: compositions, viscosity and additives, synthetic lubricants and engine oils. The course will develop the theory of fluid-film lubrication, including the mechanisms of pressure generation, configuration of tribo-contacts and the Reynolds equation. Hydrodynamic lubrication is studied. The topics include the machine components with hydrodynamic lubrication, thrust bearings, journal bearings and design considerations of these devices. The last topic to be covered is the theory and application of Elastohydrodynamic lubrication (EHL). First, the machine components with concentrated contacts are introduced. Then, the Hertz theory of contact in studied and the governing equations for EHL are derived. Thermal EHL and traction are studied, and design calculations for rolling bearings, cams and gears are developed in relation to the geometrical and kinematic features of these components.

Prerequisite: MATH 251, M E 360

ME 465: Introduction to Manufacturing Laboratory
1 Credit

A laboratory-based introduction to manufacturing processes including material removal, forming, casting and joining for metals and non-metals. M E 465 Introduction to Manufacturing Laboratory (1) This laboratory course provides an integrated approach to Manufacturing Science and Engineering. The laboratory examines common techniques for fabricating parts; providing an introduction to several basic processes for creating both metallic and polymeric parts. As a part of this course, students will be exposed to compressive, tensile, sheet, bending, casting and powder metal processes. Using basic material science principles, students will examine concepts such as material flow, springback, and cold working. The course requires hands-on involvement by the students in the planning of experiments as well as data manipulation and analysis of results. The laboratory exercises are intended to provide students with a broad appreciation of the breadth of Manufacturing Science and Engineering. Students work in groups. Written reports and in-class exercises are the primary basis for grading. This course is a technical elective.

Prerequisite: Prerequisite or concurrent: M E 468

ME 467: Applied Finite Element Analysis
3 Credits

Review of matrix algebra; discretization; finite element formulation; application of finite element computer codes.

PREREQUISITE: ME 349 CONCURRENT: ME 410

ME 468: Engineering for Manufacturing
3 Credits

Manufacturability, the selection of the most effective materials and processes, and quality assurance. M E 468 Engineering for Manufacturing (3) This course will present an overview of the various manufacturing techniques that are currently used within industry. The advantages and disadvantages of each manufacturing technique will be discussed along with common defects that occur with each process. The start-up, operating, maintenance, and labor costs of each process will be presented along with general manufacturing economical concerns. Statistics and Quality assurance topics will also be covered, along with manufacturability and design for manufacturing concepts.

Prerequisite: MATSE259

ME 468H: Engineering for Manufacturing
3 Credits

Manufacturability, the selection of the most effective materials and processes, and quality assurance. M E 468 Engineering for Manufacturing (3) This course will present an overview of the various manufacturing techniques that are currently used within industry. The advantages and disadvantages of each manufacturing technique will be discussed along with common defects that occur with each process. The start-up, operating, maintenance, and labor costs of each process will be presented along with general manufacturability and design for manufacturing concepts.
presented along with general manufacturing economical concerns. Statistics and Quality assurance topics will also be covered, along with manufacturability and design for manufacturing concepts.

**ME 469: Metallic Manufacturing Processes**

3 Credits

Principles of metal working and introduction to current theories; analysis of deformation, joining, and metal removal processes. M E 469 Metallic Manufacturing Processes (3) In this integrated lecture/laboratory course students will learn a) metal deformations techniques such as: forging, rolling, extrusion and drawing, b) metal removal techniques for single, multi and infinite point cutting, and c) metal fastening techniques, including bolts, rivets and welds. As a part of the learning process, students will directly compare existing standards and theories to actual laboratory results. Students will learn how to assess the accuracy of both theoretical derivations and experimental procedures by first deriving theoretical equations in the classroom and then directly examining the ability of the equations to predict the given behavior by actually performing the manufacturing operation in the laboratory. Based on in-depth discussions regarding assumptions, approximations, and experimental error, students will assess the accuracy of the current state-of-the-art techniques to accurately predict the forces generated/required during various manufacturing metal working operations. In addition, students will derive their own theories by removing/improving some assumptions within the existing theories. For processes where multiple theories exist, students will compare and contrast the predictive abilities of the various techniques to those found through controlled laboratory experiments. Similar comparisons will also be made for processes where both engineering standards and theoretical techniques exist.

**Prerequisite:** M E 349

**Prerequisite or concurrent:** M E 468

**ME 470: Analysis and Design in Vibration Engineering**

3 Credits

Application of Lagrange's equations to mechanical system modeling, multiple-degree-of-freedom systems, experimental and computer methods; some emphasis on design applications. In this course, students will learn basic techniques for modeling and analyzing linear multidegree-of-freedom (MDOF) mechanical systems, and will learn how to use these techniques for mechanical design. Students will learn to obtain equations of motion using energy methods (Lagrange's equations), with emphasis on the efficient formulation and reduction to the linear case. The basic theory of MDOF systems will be presented, including: eigenvalue problems; natural frequencies and normal modes; superposition and modal analysis; and frequency response. Numerical methods for solving static, dynamic and eigenvalue problems will be presented. Introductions to the theory of linear continuous systems and experimental methods of vibrations will be presented. A substantial portion of the course will be spent discussing design applications of the basic theory, such as: finite element numerical analysis and experimental modal analysis of beams and plates; vehicle suspension design; and vibration isolation and absorption.

**Prerequisite:** E MCH212 or E MCH212H; M E 370 or E SC 407H

Cross-listed with: EMCH 470

**ME 471: Noise Control in Machinery**

3 Credits

Nature of noise sources in machine elements and systems. Propagation and reduction of noise. Effects of noise on man. M E 471 Noise Control in Machinery (3) Course Objectives: This course prepares students to perform effectively as noise control engineers in industries with noise and vibration applications, e.g., during the early stages in product design or environmental noise control in industrial settings. Much of the material presented builds on second and third year courses covering such topics as dynamics, vibration, fluid mechanics and electrical components. Hands-on laboratory experiments (both programmed and open-ended) coordinated with focused lectures provide students with a working knowledge of the disciplines associated with noise and vibration and their practical applications for identifying, analyzing, and solving real world problems. The first part of the course centers on learning modules that cover the fundamentals of acoustics and noise control. Each module consists of two lectures followed with a laboratory experiment that demonstrates the relevant principles. These take place in small group settings (8 students maximum). Students are required to write individual reports based on the results of each of the laboratory experiments. The modules are followed with a laboratory project competition wherein each small group is given a noisy, small machine with the challenge to reduce its noise and vibration signatures. The course concludes with formal Power Point presentations of the results from each small group to an assessment team consisting of the industrial sponsors and selected professors and graduate students. This course is offered annually during the fall semester with an enrollment limited to 32 students (8/laboratory group).

**Prerequisite:** M E 320, M E 370

**ME 480: Mechanism Design and Analysis**

3 Credits

Design and analysis of mechanical linkages including kinematic synthesis and dynamic analysis. Linkages for a variety of applications are considered. M E 480 Mechanism Design and Analysis (3) The student who takes this course will develop a basic understanding of the analysis and synthesis of planar linkage mechanisms. Students will develop the ability to model real linkage mechanisms using kinematic diagrams, including identification of links and joints. They will also learn to use Gruebler's equation to calculate the mobility or number of degrees of freedom of linkages based on the kinematic diagram. Students will also become familiar with real mechanism applications in the context of mechanism synthesis, where they will learn to determine the required dimensions of a mechanism for a specific application. Students will apply these dimensional synthesis methods in a design project which includes building a simple linkage prototype. They will learn kinematic analysis methods, i.e., analysis of position, velocity, and acceleration of planar linkages. These methods consist of graphical, algebraic, and complex number approaches. Students will also learn to use commercial software packages, e.g. Working Model, to predict position, velocity, and acceleration of planar linkages, and will compare their predictions to those using analytical approaches. Finally, students will learn to do dynamic force analysis of planar linkages to predict joint forces and motor torques. They will use commercial software packages to predict joint forces and motor torques of planar linkages, and will compare their predictions to those using analytical approaches.

**Prerequisite:** E MCH212

**Prerequisite or Concurrent:** CMPSC200
ME 481: Introduction to Computer-Aided Analysis of Machine Dynamics

3 Credits

Techniques and formulations for computer based kinematic and dynamic analyses of machines. M E 481 Introduction to Computer-Aided Analysis of Machine Dynamics (3) This course addresses computer methods for kinematic and dynamic analyses of two-dimensional (2D) multi-body machines at the advanced undergraduate and introductory graduate level. The course introduces the formalism of kinematic mobility and topology to help students recognize constrained kinematic chains embedded in larger engineering systems. Classic kinematic and Newtonian dynamic methods are reformulated using modern matrix methods. The latter half of the course focuses on underlying algorithms and theory behind commercially available mechanism analysis software packages that employ differential-algebraic equation (DAE) solvers. Students program their own numerical integration methods for time domain simulation of forward dynamics of a simple system to reinforce the theory. The overall goals are for students to be able to identify forward versus inverse dynamic problems; and to be able to plan, implement and debug an appropriate computer-based design tool to analyze kinematics and dynamics of 2D constrained mechanisms.

Prerequisite: E MCH212 ; Prerequisite or concurrent: CMPSC200

ME 490: Professional Development for Mechanical Engineers

0.5 Credits

ME 490 Professional Development for Mechanical Engineers (0.5) provides a look at foundational business issues of importance to new engineers: creating value, organizational models, financial statements, and intellectual property. Students will get a preview of their role in today's global workplace and how they can position themselves for success. Strategies for recognizing opportunities and continually growing skills and knowledge is emphasized. The course meets once weekly for 8 weeks.

Prerequisites: 7th Semester standing in Mechanical Engineering

ME 491: Bioengineering Applications of Mechanical Engineering

3 Credits

Application of mechanical engineering knowledge in the context of life sciences. M E 491 Bioengineering Applications of Mechanical Engineering (3) The primary objective of this course is to teach students how to apply mechanical engineering knowledge in the context of life sciences. Fundamental mechanical engineering knowledge such as solid mechanics, fluid mechanics and system dynamics will be reviewed first. Then, different topics in bioengineering, such as motion biomechanics, physiological fluid mechanics, modeling of physiological systems, and rehabilitation engineering will be discussed. Throughout the semester, students also work in groups to solve several simplified real-life bioengineering projects. Students will be evaluated through these projects plus a final project presentation, an application presentation and several homework assignments. This course is a technical elective in the ME BD program and allows students who have completed their junior year to learn the application of mechanical engineering knowledge in the life science context.

Prerequisite: E E 211 , M E 320 , M E 357 , E MCH213 , M E 349 or permission of program

ME 492: Dynamics and Vibration Lab

1 Credits

This lab is about Dynamic systems and Vibration. It studies the step response of first order system and second-order system: how to quantify transient response using parameters such as amplitude, frequency, overshoot, rising time, etc; and relate them to the modeling parameters such as time constant, damping ratio and natural frequency. It also studies free vibration and harmonically excited vibration of SDOF, MDOF, and continuous mechanical systems: how to identify the resonance of vibration and measure/derive the transmissibility, and relate them to the modeling parameters such as damping ratio, natural frequency, and mode shapes. The proper implementation of those relation in the vibration isolation and absorption are also studied.

Prerequisite: ME 357 CONCURRENT: ME 370

ME 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

ME 494H: Senior Thesis

1-9 Credits/Maximum of 9

Students must have approval of a thesis adviser before scheduling this course. M E 494H Senior Thesis (1-9) All Schreyer Scholars are required to complete an undergraduate honors thesis. This work represents the culmination of a student's honors experience. Through the thesis, the student demonstrates a command of relevant scholastic work and a personal contribution to that scholarship. The thesis project can take many forms - from laboratory experiments all the way to artistic creations. The thesis document captures the relevant background, methods and techniques, as well as describing the details of the completion of the individual project. Two Penn State faculty members judge the merits of this Scholar's honors thesis, the student's self-selected thesis supervisor and the department-selected honors adviser in the student's area of honors.

Honors

ME 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

ME 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.
ME 496A: **SPECIAL TOPICS**
1-6 Credits

ME 496H: Honors Research
1-6 Credits

Honors research that fulfills Shreyer’s Honor College requirements. This research will serve as a basis for my honors thesis. Research regarding the development and manufacturing of micro fuel cells. Course will be graded on a scale similar to a traditional class.

Honors
ME 497: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ME 499: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

**Mechanical Engineering Technology (MET)**

MET 105: Mechanical Systems
3 Credits

Mechanical Systems with Laboratory is an introductory course for Engineering Technology major students to broadly introduce Mechanical Engineering Technology. MET 105 Mechanical Systems (3) MET 105 includes mechanical engineering technology profession, United States Customary System and Metric System, communication skills; structures and mechanics including the resultant of a system of forces, moment of a force, and the requirements for equilibrium; Materials and Stress including a stress-strain curve, the material properties for metals and their alloys, ceramics, polymers, and composite materials, a factor of safety; Fluids Engineering including the application of fluids engineering, a fluid’s density and viscosity properties, laminar and turbulent fluid flows, buoyancy, drag, and lift, the volumetric flow rate and pressure drop of fluids through pipes. Thermal and Energy system including various energy, heat, work, and power quantities in the SI and USCS, the principle of energy conversion, the basic operating principles of various engines; Motion and Power Transmission including the design and operation of power-transmission equipment, rotational velocity, work, power, belts, and gears.

MET 107: Computer Applications for Technologists
3 Credits

Programming spreadsheets, data bases and presentation software for solutions of technical problems; introduction to languages allowing creation of program macros.

**Prerequisite:** MATH 081 or MATH 022 or MATH 026; Concurrent: MATH 081 or MATH 022 or MATH 026

MET 197: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MET 206: Dynamics
3 Credits

Kinematics (particles and rigid bodies), kinetics, work-energy, impulse-momentum, and mechanisms. MET 206 Dynamics (3) Instructional, Educational, and Course Objectives - To introduce students to the basic principles of dynamics as applied to practical problems which include such topics as friction, kinetics of particles and rigid bodies, laws of force and motion, using methods of work-energy and impulse-momentum. Further, students will consider mechanisms which are typical in manufacturing industries and mechanical design. These goals serve to satisfy the following course objectives: - Students should be able to demonstrate proficiency in applied design, manufacturing processes, and mechanics. - Students should be able to apply concepts of applied mathematics and science in solving technical problems.

**Prerequisite:** MCH T111; MATH 082 or MATH 022

MET 210W: Machine Design
3 Credits

Design machine elements including bearings, springs, levers, shafts, gears, belts, and small mechanical devices; writing skills and computer applications. MET 210W Machine Design (3) ME T 210W is designed to provide students with the necessary concepts and procedures to properly design machine elements in mechanical systems. The course starts with the study of the properties of various engineering materials, including various types of steel, aluminum, and plastics. Heat treating of steels is also covered. Machine design criteria are presented along with discussions of various types of stresses, concepts of principle stress, combined stresses, and methods of stress analysis. Failure theories and their application to brittle and ductile materials are covered along with the relationship of these concepts to design factors. The influence of dynamic loads on design and design margins is also covered. Welded and bolted connections and their design requirements are also studied, along with the application of buckling and beam deflection analysis to the design of support columns and beams. The course also examines the design of various types of springs and gears, the calculation of shaft stresses, and the design of clutches, brakes, belts, and chains. The writing component of the ME T 210W course is satisfied by having students choose a design project which is completed over the course of the semester. Instructors introduce the design project early in the semester and discuss how writing exercises will be used to complete the project. Students write an initial proposal that is graded and returned. Subsequently, students prepare and present progress reports at various times through the semester. These are also graded. The project ends with students preparing a draft final project report, which is critiqued and returned. Based on the critique, a final design report is prepared and is a significant component of the final course grade. Both the progress reports and the final design report activities involve both written and oral exercises.
Prerequisite: MET 206 or E MCH212 or PHYS 150 or PHYS 250 or PHYS 211; MCH T213 or E MCH213 or ET 322 or EMET 322

Writing Across the Curriculum

MET 296: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

MET 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MET 306: Computer-Aided Design
3 Credits

Computer-aided drafting and design; computer software solutions to mechanical engineering technology design problems. MET 306 Computer-Aided Design (3) This course is designed to be the third CAD course in a Mechanical Engineering Technology program. Students will be exposed to modeling industry specific geometry using solid and surface modeling techniques. Sheet metal modeling, tool path generation and material removal simulation for CNC operations as well as mechanism analysis are taught. Automation and optimization techniques using CAD packages are also covered in lab assignments. Students are expected to document their designs by producing industrial quality working drawings. Lecture material is directly related to the laboratory assignments and topics in understanding hardware and CAD software benchmarking as well as associated costs and their relationship to the engineering design process are also covered. Experience in basic CAD modeling is required as well as a working knowledge of Statics, Dynamics and Strength of Materials. Evaluation is based on laboratory assignments, homework assignments, quizzes and a final project.

Prerequisite: MET 107; EG T 121 or EG T 201 and EG T 205

MET 308: Computer Aided Solid Modeling and Analysis
3 Credits

Basic techniques necessary to perform Computer Aided Design and Analysis in three dimensions for machine components. MET 308 Computer Aided Solid Modeling and Analysis (3) To introduce students to the theory and practice of creating computer aided design files for mechanical components, drawings, layout of multiview drawings, detailing design projects, assemble parts, and create assembly drawings and sections. Although it is highly recommended that the students have basic knowledge of finite element analysis FEA theory, the very user friendly interfaces and CAD interactive modes available in the market together with appropriate introductory training will enable students to perform reasonable and reliable structural, thermal, and motion analysis. This analysis is at the core of every day assignments for design engineers working in modern industrial firms with concurrent engineering culture. With the advent of very powerful desktop workstations, FEA is now available at a practical cost to virtually all engineers and designers.

Prerequisite: MET 306

MET 320: Strength of Materials II
3 Credits

Principles of stress and strain in 3D, indeterminate structures, failure theory, and energy methods in solid mechanics. MET 320 Strength of Materials II (3) This course consists of three main subject areas; a study of statically indeterminate structures, a study of stresses and strains in three dimensions, and a study of energy methods in solid mechanics. Statically indeterminate structures are studied for stresses and deformations. The types of indeterminate structures studied are axially loaded members, including temperature changes; torsionally loaded members, including geared connections; and bending members. Stresses and strains are studied in three dimensions with Mohr’s Circle to identify principal stresses and absolute maximum shear stress, to understand Hooke’s Law and other material property relationships, and to apply various failure or yield theories. Energy methods are studied so that stresses and deformations from impact loading of structures can be analyzed and included in the design of axial, torsion, and bending structures. Energy methods are also used to determine the static deformation of complicated structures. Other miscellaneous topics may include unsymmetric bending, bending of multi-material beams including reinforced concrete, bending of curved beams, shear center, combined loadings, torsion of non-circular members, columns, and true stress and true strain.

Prerequisite: E MCH213 or MCH T213

MET 321: Analytical Techniques
2 Credits

A study of engineering methods of problem formulation and solution; includes differential methods, dimensional analysis, and graphical analysis.

Prerequisite: MATH 140 and ET 321 or EMCH 212 or MET 206

MET 330: Thermodynamics
3 Credits

Introduction for technologists to the basic concepts and applications of thermodynamics. MET 330 Thermodynamics (3) This course is designed as the first thermal sciences course in a series of three. Students are introduced to the basic thermodynamic units and concepts, the properties of pure substances, first law of thermodynamics for open and closed systems, second law of thermodynamics, ideal cycles, performance and efficiency, entropy, power and refrigeration cycles. Evaluation is based on homework assignments, quizzes and examinations. Students need a background that includes inorganic chemistry and calculus to succeed in this course.

Prerequisite: PHYS 250 or PHYS 211 or PHYS 150. Prerequisite or concurrent: CHEM 110; MATH 083 or MATH 140

MET 331W: Heat Transfer
4 Credits

Introduction for technologists to the basic concepts and applications of heat transfer. Includes a thermodynamics and heat transfer laboratory.

Prerequisite: M E 300 or MET 330. Prerequisite or concurrent: MET 341

Writing Across the Curriculum
MET 332: Thermal Engineering A

3 Credits

Basic thermodynamic units, concepts, properties of ideal gases and vapors, first and second laws, gaseous mixtures, one-dimensional compressible flow.

Prerequisite: MATH 140 and CHEM 110

MET 336: Engineering Fluid Mechanics

3 Credits

This course introduces mechanical engineering technology students to the development of basic fluid mechanics relationships. Course topics include such as fluid properties, pressure measurement, hydrostatic forces on plane and curved surfaces, buoyancy and stability, conservation of mass, conservation of momentum, and conservation of energy. Specific, Bernoulli’s equation, internal and external flow, friction in pipes and fittings, Reynold’s number, laminar and turbulent flow, boundary layer theory, Minor losses, Major losses, and Drag forces are discussed. Students use differential and integral calculus and draw free body diagrams to solve applied fluid flow problems.

Prerequisite: ET 321

MET 338: Thermal/Fluids Laboratory

1 Credits

The objective of the Thermal/Fluids Lab course is to provide Mechanical Engineering Technology students with practical experience in thermal-fluid applications. Students will develop experience in making fluid velocity, flow rate, temperature, and power measurements. Exercises will cover a range of applications and may include: power generation, refrigeration cycles, duct flows, and other thermal-fluid phenomena. Laboratory experiments will be performed in groups. Typically, students will prepare individual written lab reports to present their findings and demonstrate their understanding of each laboratory experiment.

Corequisite: MET 322 and MET 336

MET 341: Mechanical Measurements and Instrumentation

3 Credits

Measurement concepts, transducers, electronic-aided measurement, mechanical and electrical measurements. Intended for mechanical engineering technologists. MET 341 Mechanical Measurements and Instrumentation (3) This course serves as an introduction to the fundamental principles of instrumentation and measurements. Subjects covered in this course may include the responses of first and second order systems, the concept of time constant and rise time, calibration, standards, design of experiment, and lectures on the design and function of different types of sensors and instruments. Topics may be added or removed, as needed to meet Program Outcomes. The course includes lectures alternating with hands-on laboratory where students apply the material learned in the lectures. For many students this is the first time they have actual hands-on experience with electronic and measurement equipment, such as oscilloscopes, breadboards, function generators, digital data acquisition systems, integrated circuits, strain gauges, displacement sensors, thermocouples, tachometers, force sensors, accelerometers, velocity meters, pressure transducers, flow measurements, etc. Students learn not only how to use these devices in the lab, but also the fundamental principles of their operation.

Prerequisite: EET 105 or EET 100 or E 211 or EET 320 and PHYS 151, PHYS 211 or PHYS 250; Concurrent: PHYS 151, PHYS 212, or PHYS 251

MET 358: Process Design Engineering

3 Credits

Introduction to process design for production applications from job shop to world-class manufacturing environments. MET 358 Process Design Engineering (3) Process design engineering includes the theory and application of principles and practices for economical tool design. Students will learn and demonstrate the use of basic engineering metrology tools. Students will learn and apply the principles of geometric dimensioning and tolerancing to datum systems. Students will learn the elements of process design for a variety of manufacturing processes currently used in industry with a focus on material removal methods including computer numerical control machining. Students will learn the fundamentals of process specification, planning, and fixture design for high-volume material removal operations. Students will participate in a team project to design and build a production machining fixture. The project teams will document and present their designs. This course is the second of a three-course sequence with a focus on manufacturing. The first two courses, Introduction to Manufacturing Processes and Process Design Engineering, are required in the Mechanical Engineering Technology program at Penn State Capital College. The third course, Manufacturing Engineering, is a senior-level technical elective. The course in this proposal will be offered every spring semester with a projected enrollment of 30. All lab work will be done in the Engineering Lab Building. Students are evaluated based on their individual performance as well as their participation as a team member. Evaluation opportunities are both lecture and lab-related. There are two exams and a couple of short projects that each student will complete. Student teams will conduct a machining experiment, which each student will analyze in a formal lab report. Project teams will document their fixture designs with drawings and supporting descriptions. Also, each team will prepare a formal presentation showcasing their fixtures and present it to the class.

Prerequisite: IET 321 or IET 215 and IET 216

MET 365: Design of Machine Elements

3 Credits

Design of structural and mechanical elements with emphasis on theories of fatigue failure. MET 365 Design of Machine Elements (3) Design of Machine Elements covers a wide array of mechanical engineering principles. The course draws heavily on the knowledge gained in the strength of materials lecture and laboratory courses. Failure Theory is covered for both static and dynamic loading conditions. The study of failure under ‘low stress’ cyclic loading, also called fatigue, is a feature of failure theory study. Finally, the theories are applied to the design of machine and structural elements that include beams, columns, pressure vessels, shafts, keys, couplings, belt and chain drives, fasteners, springs, gears, brakes, and clutches. The effects of wear and lubrication on machine design are also examined.

Prerequisite: ET 322 or EMCH 213 or MCHT 213
Materials Science and Engineering is an organized investigation of engineering materials, including their classification, properties, and means of testing to determine their properties. In materials courses different topics such as atomic bonding, crystalline structure of materials, structural imperfections, solid state diffusion, plastic deformation, mechanical properties of engineering materials, systematic analysis of materials failure, phase diagrams and kinetics are discussed. The application of materials in manufactured products and construction, and the effects of both manufacturing processes and in-service stress on materials are considered. The laboratory subjects combine hands-on experiments with the materials which will be discussed in the lecture. Sample preparation, tension tests, hardness test, impact resistance, heat treatment, fatigue testing, torsion, shear, bending, etc. are some of the experiments which may be performed in the lab sessions. The report for the lab session is a necessary component which is a practice for written technical communication.

**COREQUISITE:** IET 311 or IET 101

MET 397: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

MET 403: Advanced Mechanical Design
3 Credits

Continuation of strength of materials and machine design, with emphasis on advanced methods of design and analysis of machine elements.

**Prerequisite:** MET 365

MET 415: Finite Element Analysis Applications I
3 Credits

Solutions of advanced engineering design problems using finite elements. Intended for engineering technologists. MET 415 Finite Element Analysis Applications I (3) Finite Element Analysis Applications I is a required course for junior or senior-level students in the Mechanical Engineering Technology (METBD) baccalaureate degree program. Finite element analysis (FEA) is a computer-simulation tool which is frequently used in engineering practice. Students study fundamental topics in static, structural FEA with the goal of mastering the usage of this software tool to become efficient and effective users of FEA technology in their engineering careers. Emphasis is placed on appropriate modeling (symmetry, simplifying assumptions, etc.), clear communication of analysis findings, and verification of results.

**Prerequisite:** MET 320 ; EG T 121 or EG T 205

MET 417: Finite Element Analysis
3 Credits

Formulation and computer implementation of finite element models for solving problems in heat transfer, fluid flow, and solid mechanics.

**Prerequisite:** MET 365

MET 418: Finite Element Analysis for Plastics Design
3 Credits

Solutions of advanced engineering problems using finite element and finite difference techniques; advanced topics in computer-aided manufacturing; problems in optimization and design.

**Prerequisites:** EGT 120, PLET 232, MCHT 213

MET 425: Finite Element Analysis Applications II
3 Credits

Solutions of advanced engineering design problems using finite element methods. MET 425 Finite Element Analysis Applications II (3) Students study advanced topics in finite element analysis (FEA), including CAD interfaces, non-linear behavior, heat transfer analysis, dynamic analysis, optimization and/or design of experiments (DOE), and design and analysis to code. Emphasis is placed on efficient models (symmetry, simplifying assumptions, etc.) and verification of results.

**Prerequisite:** MET 415

MET 431: Heat Transfer
3 Credits

Basic principles of conduction, convection, and radiation with applications.

**Prerequisite:** MET 332

MET 432: Fluid Power
3 Credits

Principles of fluid flow, hydraulic components, and hydraulic circuits having application to industry. MET 432 Fluid Power (3) This course studies fluid motion, flow, and energy losses, as well as, fluid storage and distribution. Specific devices are examined, including hydraulic pumps and air compressors; hydraulic and pneumatic actuators such as motors and cylinders; and fluid power circuit valves and other ancillary devices. Heat transfer in fluid power circuits is evaluated. Fluid power circuit design is presented using electrical and electronic controls with ladder logic programming.

**Prerequisite:** M E 300 or MET 330 or MET 332 ; prerequisite or concurrent: MET 331W or MET 431

MET 435: Building Energy Systems
3 Credits

Analysis and design of components and systems for building heating and cooling; emphasis on applying the thermal sciences.

**Prerequisite:** MET 332 , MET 336

MET 436: Energy Conservation Systems
3 Credits

Analysis of processes and systems for energy conversion, including power, refrigeration and air conditioning cycles, thermoelectric etc.

**Prerequisite:** M E 300 or MET 330 or MET 332
MET 438: Thermal Engineering B

3 Credits

Applied thermodynamics of power cycles; refrigeration and air conditioning cycles; combustion; psychometrics; and gas mixtures.

Prerequisite: MET 332

MET 440: Vibrations for Technologists

3 Credits

Principles of basic vibration theory, vibration measurement, data acquisition and analysis, and the effective presentation of vibration data.

MET 440 Vibrations for Technologists (3) This course will introduce students to basic vibration theory. The theoretical topics will include lumped parameter, single degree-of-freedom and multi degree-of-freedom systems with descriptions of damping models, transmissibility, and transient behavior. Simple continuous systems will also be described. The focus of the course will be on data acquisition and data analysis and on practical vibration solutions. Students learn how to install various measurement devices and how to discriminate process vibration signals. They also learn effective ways of presenting data to engineering and management. The practical vibration solutions presented will allow the student to understand and solve general problems typically encountered by a technologist in industry. Student performance will be evaluated by exams, graded homework, assignments, and laboratory reports.

Prerequisite: MET 206 or E MCH212 ; MATH 211 or MATH 250 ; MET 341 . Prerequisite or concurrent: MET 415

MET 441: Vibration Analysis

4 Credits

Analysis of motion arising from lateral and torsional vibrations of systems; free and forced vibrations; damping; isolation; balancing.

Prerequisite: E MCH212 , MET 321

MET 452: Rapid Prototyping

3 Credits

Introduction to the production of prototypes directly from computer models.

Prerequisite: IET 216 , MET 306

MET 454: Automatic Controls

3 Credits

An introduction to basic automatic control theory, practical applications of automatic controls to typical industrial machinery, HVAC equipment, etc. MET 454 Automatic Controls (3) This course is intended for mechanical engineering technology students. It provides the student with a spectrum of knowledge about process controls and control systems. The course will cover some of the theoretical and practical concepts that underlie the analysis and response of linear control systems. A brief coverage of industrial and electronic components used in modern control engineering is also necessary. Examples include microprocessors, Operational amplifiers, Solid state switches, relays, filters, PLC’s, motors, etc. Principles of closed-loop control systems and stability analysis using the Laplace transform are also discussed. Laboratory demonstration on PLC’s and the use of computer simulation for modeling control systems are available.

Prerequisite: E MCH212 or ET 321 or MET 206 and MET 321

MET 455: Mechatronics

3 Credits

Integration of mechanical and electronic systems implemented using data acquisition systems, sensors, actuators, signal conditioning, feedback controls, and programmable logic controllers. MET 455 Mechatronics (3) Mechatronics is essential to the design and manufacture of modern products and processes. Mechatronics design is an approach where mechanical, electronic, computer, and control subsystems are designed simultaneously to function as an integrated system forcing the designer to be familiar with several disciplines. The course offers an integrated approach to engineering, incorporating product design, microprocessor-based control, manufacturing systems, modeling, and simulation. Mechatronic systems depend for their unique functionality on computer software; whether PC or PLC. This course studies mechatronics at both the theoretical and practical level using in-class lectures with formal concepts and laboratory simulations to prove out design concepts. Emphasis in the course is placed on physical understanding of the system rather than on mathematical formalities. Lecture topics include the fundamental aspects such as automation safety, logic functions, Boolean algebra, system input and output sources, flow charting, PLC programming and system design. Each of the lecture topics are reinforced using lab assignments based on software simulations or physical hardware configurations designed to stimulate the student’s involvement and interest.

Prerequisite: EET 100 or EET 105 or EET 101 or E E 211 ; MET 210W or M E 367 ; MET 341 or M E 345W ; MET 432 or M E 320

MET 457: Lean Manufacturing

3 Credits

Principles and methods of Lean Manufacturing currently used in modern industries. MET 457 Lean Manufacturing (3) This course introduces the students to the methods of Lean Manufacturing used currently in the manufacturing industry. The basic Lean Manufacturing topics covered in the lecture include its history, the commitment required by a company to start and sustain Lean Mfg, team building, and the training required by both management and the employees. To aid in the organization of the many Lean topics lectured on and to give the students a structured guideline for analyzing a process, the method of Value Stream Management is used. This method, when used on either a manufacturing or office environment, maps the manufacturing process and analyzes it for opportunities to reduce waste. Once the process mapping has been accomplished, the more advanced Lean topics are then covered which introduces the student to methods of reducing or eliminating waste in the manufacturing process. These topics include fast setup (SMED), plant floor organization (SS), improving equipment uptime (TPM), improving product quality, error proofing a process (Poka-Yoke), work balancing and cellular layout. Additionally, the most advanced topics of automation, just-in-time (JIT), flexible or agile manufacturing, and Kanban are covered. In order for the student to fully comprehend the material presented, the students are placed into teams that are sponsored by local industries to work on a manufacturing process. The students are given the opportunity to explore a manufacturing process
and develop ways to eliminate problems, issues, and waste in an actual situation rather than a simulation.

**Prerequisite:** 7th semester standing; and IE T 215 or M E 468 or permission of program

**MET 458: Controls Laboratory**

1 Credits

Introduction to open loop, closed loop, error analysis, and main components of a control loop. Analysis concepts cover first and second-order systems, stability criterion, and transfer functions. Application of electronics, analog/digital convertors, and electrical circuits. Properties of systems, time constant, process gain, natural and damped frequency, transient and steady state responses. Design of proportional, derivative and integral controllers based on closed-loop specifications. Microprocessor selection, programing and interfacing for system automation and control. Software design and implementation for process monitoring and logic control. Examples of mechanical systems utilizing sensors and actuator technologies, including amplifiers. Laboratory experiments give hands-on experience with components and equipment used in the design of mechatronics product. Emphasis on interpretation of experimental data, group dynamics, experimental design, and report writing.

**CO-REQUISITE:** MET 454

**MET 461: Advanced Machine Design**

3 Credits

Stress analysis, material selection, design of machine elements, design of connections, and computer-aided design.

**Prerequisite:** MET 210W , MET 415

**MET 462: Internal Combustion Engine Design**

3 Credits

The effect of operation requirements on design and construction of internal combustion engines; study of support systems and emissions control.

**Prerequisite:** MET 332

**MET 470: Materials Engineering**

3 Credits

Study of material selection, material properties, material test methods, and special topics.

**Prerequisite:** CHEM 110 , CHEM 111 . Prerequisite or concurrent: MET 415

**MET 480: Senior Capstone**

1 Credits

Career and professional topics; development of year-long senior project with industry. MET 480 Senior Capstone is a required course for senior-level students in the Mechanical Engineering Technology (METBD) baccalaureate degree program. The purpose of the course is to introduce students to the practices associated with managing an industrial-based project. Student teams begin working on a capstone project. Project definition, specification development, scheduling, engineering constraints, and budgeting of both time and money are discussed. Other issues of career development are presented, such as interviewing, resume preparation, and career opportunities. Ethical issues related to the discipline are discussed. Engineering economy, OSHA, and safety are introduced.

**Prerequisite:** IE T 216 , MET 210W , MET 306 , M E 300 or MET 330 . Prerequisite or concurrent: MET 415 , MET 470

**MET 481: Project Design**

3 Credits

This course is the first of a two-part course sequence that comprises the capstone design experience in the MET major (the second course is MET 486, Project Design). In this course students study the engineering design process, begin working on their senior design project, and learn about professional topics related to industry. Topics in the engineering design process include needs identification, concept generation, concept selection, costing, and project planning. Professional topics include communication, team work, ethics, safety, and sustainability. Engineering economics and its application to the capstone design project is a featured topic. Students are evaluated through assignments and quizzes. One major component of the course is to begin work on a capstone design project. Students typically work in teams of 3 to 4 on an industrially-sponsored project or other project approved by the faculty. The student teams work with the sponsor to develop a project scope and plan, perform background research, begin to solve the problem, and present their project proposal orally and in written form. Students are evaluated on both their technical and presentation skills, as well as their ability to function as a team. This capstone course is required in the Mechanical Engineering Technology (MET) program.

**Prerequisite:** MET 365 or MET 210W

**MET 485: Senior Industrial Project**

3 Credits

Individual or group design projects in mechanical design or materials.

**Prerequisite:** MET 331W , MET 470 , MET 480 . Prerequisite or concurrent: MET 425

**MET 486: Project Design**

3 Credits

Design of system or machine, including decision making, engineering analysis, layout, detail drawings, specifications, construction.

**Prerequisite:** MET 481

**MET 495: Internship**

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor

Full-Time Equivalent Course
Mechanical Technology (MCHT)

MCHT 111: Mechanics for Technology: Statics

3 Credits

Forces; moments; resultants; two- and three-dimensional equilibrium of force systems; friction; centroids and moments of inertia of areas. MCH T 111 Mechanics for Technology: Statics (3) MCH T 111 will provide practical and compressive coverage of elementary statics. In addition to the theoretical approach, the course will demonstrate the practical applications of statics concepts. Students entering this course should have basic knowledge of algebra as well as geometry and trigonometry. Course will introduce the definition of scalar and vector quantities. This will be followed by vector addition, vector subtraction, resolution of vectors, addition of systems of coplanar forces, rectangular components of a vector, etc. Course will also introduce the concept of moments and couples. This will be followed by introducing free-body diagrams as a tool for solving statics problems. Emphasis will be placed on equations of equilibrium for particles and rigid bodies. Students will be exposed to 2D and 3D equilibrium. Course will put emphasis on truss and frame analysis as well as pulleys. Distributed loads will also be discussed. Course will also introduce the concept of friction, angle of friction, wedges, etc. Belt friction and rolling resistance as well as friction in bearings will also be discussed. Course will also introduce the concept of centroids, center of gravity, and moment of inertia of an area. Emphasis will be put on calculating centroidal moment of inertia of composite areas. Polar moment of inertia and mass of moment of inertia will also be introduced. Student will learn not only problem solving strategy but also develop ability to present results in clear manner.

Prerequisite: MATH 026 or MATH 081

MCHT 112: Statics Laboratory

1 Credits

Laboratory experimentation associated with basic engineering mechanics principles and concepts including forces, moments, equilibrium, trusses, frames, friction, and centroids. MCH T 112 Statics Laboratory (1) MCH T 112 facilitates the basic understanding of certain principles and concepts of elementary engineering mechanics. The course provides the hands-on experience essential to learn the fundamental engineering mechanics topics including forces, moments, equilibrium, frames, trusses, friction, and centroids. Laboratory experiments will be supported by lectures presented in MCH T 111 (taken concurrently), demonstrations, and associated computer software utilization.

Prerequisite: MATH 026 or MATH 081; Concurrent: MCH T 111

MCHT 213: Strength and Properties of Materials

3 Credits

Axial stress and strain; shear; torsion; beam stresses and deflections; combined axial and bending stresses; columns, ductility, resilience, and toughness. MCH T 213 Strength and Properties of Materials (3) MCH T 213 includes analysis and computations of axial stress and strain, shear and bearing stress; stress-strain diagrams, mechanical properties of materials including yield strength, ultimate strength, modulus of elasticity, percent elongation, poisson's ratio; stress concentration, axial deformations, statically-indeterminate axially loaded members, thermal stress and strain; torsion analysis including shear stress, angle of twist, power, rotational speed; beam bending analysis including shear force and bending moment diagrams, flexure stress, beam shear stress, beam deflections; combined axial and bending stresses; columns.

Prerequisite: MCH T111, MATH 026 or MATH 081

MCHT 214: Strength and Properties of Materials Laboratory

1 Credits

Measurement of mechanical properties of materials; structural testing, data acquisition and analysis; technical laboratory report writing.

Prerequisite: Prerequisite or concurrent: MCH T213 or EMET 222

Medieval Studies (MEDVL)

MEDVL 107: Medieval Europe

3 Credits

HIST 107 / MEDVL 107 examines the history of Europe from c. 300-c. 1400 CE. The many themes of this course include: the development of political, judicial and diplomatic institutions; the role of religion, especially that of Christianity in all its forms - orthodox, heretical, and popular - as a significant element of medieval society; the development of royal houses; and changes in economic and social life of medieval Europe. Within these primary themes, the course addresses many subjects, including the development of both secular and ecclesiastical authority, various efforts to control or wield violence, and the importance of a number of agricultural and economic changes that transformed Europe.

MEDVL 108: Medieval Civilization

3 Credits

MEDVL 108 offers an interdisciplinary introduction to the culture and society of medieval Europe from c. 400-1500 CE. The course examines the literature, history, art, and thought of medieval society, focusing on a geographical area that includes Europe, the Mediterranean, the Levant, and North America. Many modern concepts--such as those involving love, honor, town planning, literature, warfare, religion, and science--have their have origins in medieval Europe. This course begins with a
brief look at the chronological progression of events in the Middle Ages, particularly the connection of political events with cultural ideals and scientific progress, and then proceeds to broader elements of medieval society; these themes are focused on everyday life, art and literature, religious thought, and the organization of society.

Meteorology (METEO)

METEO 2: Our Changing Atmosphere: Personal and Societal Consequences
3 Credits

A survey of meteorology emphasizing how the nature of our lives, individually/societally, depends upon atmospheric structure, quality, and processes. METEO 002 Our Changing Atmosphere: Personal and Societal Consequences (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. The primary objective is to provide the student with an understanding of the mechanisms that determine local and regional weather and climate patterns, with emphasis on how these factors impact individuals and society. We focus on the energy balance of the atmosphere and the forces that drive motion and that are ultimately responsible for surface properties such as precipitation and air quality. Cloud microphysical processes are discussed with emphasis on natural and man-made influences. The potential for inadvertent as well as planned modification of precipitation is discussed. Data sets are provided that enable the students to investigate climate change patterns and to assess the causes of these changes. Student teams are required to prepare reports of findings that are presented in class as well as in written form. Finally, we shall explore the governmental policy implications and responses to a variety of climate threats (including global warming, ozone depletion and urban pollution and heat islands). Students are asked to explore a variety of governmental policy initiatives and to assess the soundness of their individual and team efforts in a variety of projects. Because of the hands-on nature of this course, we envision an enrollment of no more than 30. The course will be offered every semester.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

METEO 3: Introductory Meteorology

3 Credits

Nontechincal treatment of fundamentals of modern meteorology and the effects of weather and climate. METEO 3 Introductory Meteorology (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. The objectives of the course are for students to gain a better understanding of atmospheric structure and processes so they can better apply the weather information they encounter - in essence, to help students become better weather consumers. Students will learn to read the sky so they can make their own short-term forecasts and adjust their behavior accordingly. When presented with a weather forecast containing caveats, students will have a better feeling for what controls the evolution of a developing system so they can understand why a certain degree of hedging is necessary. Students will acquire the foundation to evaluate, in a scientifically rigorous way, the veracity of many claims about weather and climate that they might see on television or the internet.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

METEO 4: Weather and Risk

3 Credits

Non-technical introduction to the science and historical development of meteorology, and the role of weather forecasting as a tool for risk management by individuals, businesses, and societies. METEO 4 traces the development of weather forecasting as both a scientific discipline and as a tool for risk management. Beginning from the pre-modern history of weather forecasting as a diverse set of folkloric and ritualistic practices, the emergence of meteorology as a genuine science has enabled the development of powerful tools for managing risks faced by individuals, businesses and societies. Students will learn about the fundamental principles that govern the global atmospheric circulation, and how this circulation shapes weather and climate. They will learn how this scientific understanding has served as the foundation of a global system of weather observation and forecasting, encompassing a worldwide network of atmospheric observing instruments, powerful computer modeling systems, and a highly elaborate system for disseminating information to diverse users. Demand for weather forecasts is driven by the need to manage weather risks confronting agriculture, transportation, the military, insurance, humanitarian relief, and virtually every other sector of society. Examples will be given of how forecasts are incorporated into the decision-making of businesses. This topic leads to a discussion of the economic value of weather information, and the role of public and private providers of information. The treatment is organized around three themes. First, the possibility of generating a forecast of future conditions requires the adoption of the perspective that the natural world has an underlying regularity, and that this regularity can be discovered and organized through research. The second theme is the critical role of instrumentation in providing the quantitative basis for formal scientific forecasting models. Third, developments in weather forecasting have not proceeded solely from improvements in scientific knowledge: rather, society's demand for risk management tools has acted as a constant spur on efforts to improve forecasting techniques, as part of a feedback loop between the producers and consumers of forecasts.

General Education: Natural Sciences (GN)
METEO 5: Severe and Unusual Weather
3 Credits
Non-technical introduction to the physical processes important in the formation of various severe and unusual weather phenomena. METEO 5 provides a current, relevant, and scientifically accurate discussion of a wide range of severe and unusual weather. Severe weather has made a major imprint on the world’s cultures and economies throughout history (e.g., the drought of the 1930s led to westward migration and changes in agriculture practices in the U.S., utilities in East Coast cities were placed underground after the Blizzard of 1888, and the severe winter of 1941-1942 helped change the momentum of World War II), and has also been prominent in our literature and entertainment (e.g., The Wizard of Oz, The Grapes of Wrath, Twister, The Perfect Storm). Students will learn about the fundamental principles that govern severe and unusual weather. Concepts are taught in a descriptive manner without relying heavily on mathematics; thus, the material is highly accessible to students with a wide variety of backgrounds. It is believed that learning about weather is enhanced by experiencing weather. For this reason, the class frequently draws upon examples of significant historical and recent severe weather events. Students will be able to apply what they have learned immediately to weather events occurring near their homes or around the world. The course has four major themes. The unit on hazardous cold-season phenomena treats the formation of freezing and frozen precipitation, lake-effect snowstorms, and blizzards. The unit on hazardous warm-season weather treats thunderstorms and larger-scale conglomerations of thunderstorms known as convective systems, including hurricanes. Students also will learn about flash floods, lightning, tornadoes, downbursts, and hailstorms. The unit on hazardous weather triggered by mountainous terrain deals with topographically-forced gravity waves, downslope windstorms, and rotors. The final unit treats a wide variety of unusual atmospheric optical phenomena resulting from the interaction of light with raindrops or ice crystals, such as rainbows, glories, and haloes.

General Education: Natural Sciences (GN)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

METEO 6N: History and Weather: How Weather Played an Instrumental Role in Great World Events
3 Credits
In HIST 6N / METEO 6N, we will survey how weather and history are integrated throughout time. Moving from past to present, the course will use case studies to navigate historical moments where weather shaped the outcome. Each case study will have a historical, cultural, and meteorological analysis of the event so students gain a deeper understanding of the national or international event and the integration of science and history. Weather has shaped the outcome of major world events. For example, a weather forecast led to the delay of the Allied invasion of Normandy (D-Day), record cold weather in Florida led to the Challenger Space Shuttle explosion, General George Washington used fog to conceal the withdrawal of his troops at the Battle of Long Island, and the list goes on. The case studies range from the Revolutionary War through present day, and this period of history has been selected because there are firsthand accounts of the weather and/or recorded weather data for each event. The meteorological study examines the event’s atmospheric conditions. How or why did they occur? How did they affect the event? Therefore, students will learn basic meteorology and climatology. They will also analyze weather maps and scientific data. The historical study provides context for the event. What lead to the event? What happened during the event? What are the event’s lasting impacts? To better understand the decisions that leaders faced, students will be asked to assess risk and make decisions based on the same weather data or information leaders at the time had. Students will also explain the context, cause, and effects of major historical moments in everyday language to an audience of their peers through discussions and/or projects. The cultural study examines each event from a psychological and sociological point of view. What were the mindsets of the people and cultures involved in the event? How does the event connect to or parallel things in today’s society? How would a present day culture react? This study will give students a better understanding of cultural differences in the world and how those cultural differences can alter the course of history. Time in the course is equally split between United States and international topics, and there will be frequent discussion of current events.

METEO 51N: Meteorology and Visual Arts: To Know is to See
3 Credits
This course examines the inter-relationship between what we know and what we see, through an introductory exploration of art and science. Engaging students in the study of weather formation, mainly clouds, artistic depictions within the genre of landscape, and the expressed artistic depictions within the genre of landscape, and the expressed}

Penn State University 3849
about cloud processes, and will learn and practice artistic techniques to convey atmospheric conditions. Ideas from both perspectives will be integrated in analysis and discussion. Data from instruments and the individual artist will be collected, shared, and analyzed. Learning how clouds form will help with painting, and questions and perspectives that arise from painting will increase the understanding of cloud processes. The common threads in this approach are a curious mind, a strong detail-oriented focus, effective communication, and respect for the creative tension between ambiguity and assurance in the search for a better sense of causes, connections, and incessant changes.

METEO 101: Understanding Weather Forecasting

3 Credits

Fundamental principles of synoptic and physical meteorology, satellite and radar imagery, and data analysis in the setting of mid-latitude weather forecasting. METEO 101 Introduction to Weather Forecasting (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Never before has the quantity of available weather information so far exceeded the quality of the public's understanding of atmospheric science. Meteorology 101: Understanding Weather Forecasting aims to help correct this imbalance by helping students develop the knowledge and skills they need to become critical consumers of weather information. Students who successfully complete Meteorology 101 will be able to apply knowledge of fundamental concepts of atmospheric science to discriminate between reliable and unreliable weather forecasts, and to explain what makes one forecast better than another. To ensure that students develop the knowledge and skills required to critically assess public weather forecasts, Meteorology 101 will provide an apprentice-training environment that will encourage students to learn forecast mid-latitude weather themselves. They will discover that weather forecasting involves sophisticated data analysis techniques, a thorough understanding of atmospheric science, and strong verbal and graphic communication skills. As it develops these competencies, METEO 101 will fulfill the goals established for Penn State General Education courses in the Natural Science knowledge domain. The intended audience includes undergraduate students at University Park and other Penn State campuses, as well as adult learners in the weather information industry and weather hobbyists worldwide. To reach this diverse audience, METEO 101 will be offered through the University's World Campus in a Web-based, instructor-led format. Currently in development in collaboration between the Department of Meteorology, the EMS e-Education Institute, and the World Campus, METEO 101 will combine digital video, audio, simulation models, virtual field trips to on-line weather data resources, text, and interactive quizzes that provide instantaneous feedback. The course will provide unprecedented access to one of the world’s most distinguished meteorology programs. METEO 101 will be offered three times each year during the spring, summer, and fall semesters to an expected audience of about 300 annually.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

METEO 122: Atmospheric Environment: Growing in the Wind

3 Credits

Atmospheric Environment: Growing in the Wind is for students who are interested in learning about the dynamic effects of weather on plants and animals. It is about how processes at the ground surface and in the air govern weather conditions on Earth. Growing in the Wind focuses on five major weather elements: energy, temperature, moisture, pressure and wind and how these factors influence ecosystems and habitation of our planet. Emphasis is also given to human impacts on weather and climate, and current environmental issues involving the atmosphere. The lectures are organized around the central theme that the unequal distribution of incoming solar energy (both spatially and temporally) produce temperature and pressure contrasts at the Earth's surface and in the atmosphere that in turn cause storms and control the weather and climate.

General Education: Natural Sciences (GN)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Soc Resp and Ethic Reason

METEO 133N: Ethics of Climate Change

3 Credits

Climate change is not only a political, economic, and social crisis, it presents one of the great moral problems of our time. This course will cover the science, policy, and ethics of climate change. It fulfills general science requirements by giving an overview of the role played by such diverse scientific disciplines as chemistry, earth systems, ecology, and geology in understanding our changing climate while also exploring mitigation and adaptation strategies being developed in the fields of engineering, forestry, agriculture, and others. It fulfills humanities requirements by delving into the ethical dimensions of climate change, including religious and humanistic theories of human flourishing, deontological and teleological theories of ethics, and analysis of specific choices addressed by international negotiators. A hallmark of this course is using Penn State as a 'living laboratory' by taking advantage of both faculty expertise and the realworld activities of the Office of Physical Plant. Every week, students will interact with experts from various quarters of the University in order to see how climate change is being approached in a multi-disciplinary fashion. The first third of the course will feature guest lectures by EMS faculty working on paleoclimate, modeling, carbon sinks, ocean acidification and other aspects of climate science. The second portion will engage humanists, economists, historians, and artists at Penn State. The third will include tours of Penn State facilities, such as the East Campus Power Plant, and interviews with researchers developing new energy and sequestration technologies. In addition to exams and papers, students will prepare for a mock negotiation by learning about the energy profile and history of assigned countries. They will then have to set specific CO2 and temperature goals and come up with solutions to achieve these. The goal is to understand the role placed by ethical ideals in the pragmatic process of producing an equitable solution. In short, this course will give students the tools to understand the basic science of climate change and its ethical implications. Students will come away with a better sense of the moral dimensions of this phenomenon and the implications for human civilization and for the biosphere.
METEO 241: Fundamentals of Tropical Forecasting

3 Credits

Concurrent: METEO 215 may be repeated up to 8 times.

The objective of Tropical Forecasting is to give students a working knowledge of hurricanes and tropical storms so that they can become critical weather consumers. For example, when a hurricane bears down on the coast of the United States, the media often portray the storm as a monster capable of laying waste to anything in its path. In METEO 241, students will understand that the initial fury of a land-falling hurricane is focused within a swath of coastal area approximately 30 miles long or less. To ensure that students develop the knowledge and skills required to critically assess weather forecasts issued by the National Hurricane Center, METEO 241 will provide, like METEO 101, an apprentice-training environment. Under the tutelage of professional weather forecasters, students, in their role as apprentices, will also work toward the goal of creating their own tropical-weather forecasts. In the process, students in METEO 241 will learn about the pitfalls of forecasting the tracks and intensities of tropical storms and hurricanes as they actively work with output from sophisticated numerical models available on the Internet. Moreover, successful students will apply their knowledge of the fundamental concepts of atmospheric science in order to competently evaluate forecasts issued by the National Hurricane Center in Miami and the Joint Typhoon Warning Center in Honolulu. Students will also gain a broad perspective of the general weather and oceanic patterns in the tropics. For example, students will learn about El Nino and La Nina. In the process, they will discover that El Nino and La Nina are not to blame for every unusual weather event that occurs anywhere in the world. It should be noted here that METEO 241 will be one of four courses required for students to earn a Certificate of achievement in Weather Forecasting, a unique online program offered through Penn State’s World Campus. The three other courses that will comprise this online program are METEO 101: Understanding Weather Forecasting, METEO 361: Fundamentals of Mesoscale Weather Forecasting and METEO 410: Advanced Topics in Weather Forecasting. To facilitate the learning objectives, METEO 241 will include the use of digital video, audio, simulation models, virtual field trips to on-line resources for weather data, text, and interactive quizzes that provide timely feedback. To demonstrate their mastery of the learning objectives, students will complete automated online quizzes, actively engage in online discussion groups focusing on real-time weather, and publish, to a personal e-portfolio, four comprehensive projects that will explore timely case studies related to weather forecasting. The e-portfolio will take the form of a Web site that students initially create during the second course of the program (METEO 241 or METEO 361). Students will augment their e-portfolio as part of the requirements for METEO 241, METEO 361 and METEO 410. They will also use the space to reflect on their learning. At the end of the program, students will make a final e-portfolio entry that highlights their program accomplishments. In this way, the e-portfolio will serve both as a showcase of a student’s work for the purpose of course assessment and as a chronicle of a student’s achievements during the program. By using their Penn State personal Web space to host their e-portfolios, students will be able to share their work not only with program faculty and students, but also with external audiences, including potential employers. Upon successful completion of the program, graduates will receive a copy of their final e-portfolio on CD-ROM.

Prerequisite: METEO101

METEO 201: Introduction to Weather Analysis

3 Credits

Introduction to the collection, display, and application of weather observations and numerical forecasts used by the operational meteorologists. Students who have passed both METEO 200A and 200B may not schedule this course for credit.

METEO 215: Weather Forecast Preparation Laboratory

0.5 Credits/Maximum of 4

Forecast methods/data discussed prior to nightly weather forecast entry. Satisfactory performance will be determined by attendance and forecast accuracy. METEO 215 Weather Forecast Preparation Laboratory (0.5 per semester/maximum of 4) Students will learn basic weather forecasting techniques and identify appropriate sources of weather information that will assist them in weather forecast preparation. Forecast accuracy will be judged against peer groups at Penn State and several other institutions of higher learning across the U.S. and Canada through WxChallenge (or a similarly run program), a national weather forecasting contest. The bulk of the class time will be spent preparing weather forecasts for five different U.S. cities, each for two consecutive weeks. Cities from different climate regimes will help familiarize students with forecasting challenges from across the country. In addition, the previous day’s weather forecast difficulties and ways to improve forecast accuracy will be discussed. The remaining weeks of the semester will be devoted to in-depth analysis of forecast errors and ways to keep improving forecast quality. Satisfactory performance is determined through attendance records and weather forecast contest results. The course should be taken in BOTH the fall and spring semesters each year for maximum learning potential. METEO 215 may be repeated up to 8 times.

Concurrent: METEO101, METEO200A and METEO200B , or METEO201

METEO 241: Fundamentals of Tropical Forecasting

3 Credits

Applying atmospheric principles to the tropics, with an emphasis on the development, structure, prediction and destructive impact of hurricanes. METEO 241 Fundamentals of Tropical Forecasting (3) Worldwide, approximately 80 tropical cyclones develop each year. This global annual average of tropical cyclones is small in comparison to the thousands of low-pressure systems that routinely parade across the middle latitudes each year. Yet tropical storms and hurricanes garner far greater attention from meteorologists and the media. The obvious reason for this lopsided focus is that tropical cyclones can inflict great devastation to life and property. One of the primary goals of Meteorology 241: Fundamentals of Tropical Forecasting is to give students a working knowledge of hurricanes and tropical storms so that they can become critical weather consumers. For example, when a hurricane bears down on the coast of the United States, the media often portray the storm as a monster capable of laying waste to anything in its path. In METEO 241, students will understand that the initial fury of a land-falling hurricane is focused within a swath of coastal area approximately 30 miles long or less. To ensure that students develop the knowledge and skills required to critically assess weather forecasts issued by the National Hurricane Center, METEO 241 will provide, like METEO 101, an apprentice-training environment. Under the tutelage of professional weather forecasters, students, in their role as apprentices, will also work toward the goal of creating their own tropical-weather forecasts. In the process, students in METEO 241 will learn about the pitfalls of forecasting the tracks and intensities of tropical storms and hurricanes as they actively work with output from sophisticated numerical models available on the Internet. Moreover, successful students will apply their knowledge of the fundamental concepts of atmospheric science in order to competently evaluate forecasts issued by the National Hurricane Center in Miami and the Joint Typhoon Warning Center in Honolulu. Students will also gain a broad perspective of the general weather and oceanic patterns in the tropics. For example, students will learn about El Nino and La Nina. In the process, they will discover that El Nino and La Nina are not to blame for every unusual weather event that occurs anywhere in the world. It should be noted here that METEO 241 will be one of four courses required for students to earn a Certificate of achievement in Weather Forecasting, a unique online program offered through Penn State’s World Campus. The three other courses that will comprise this online program are METEO 101: Understanding Weather Forecasting, METEO 361: Fundamentals of Mesoscale Weather Forecasting and METEO 410: Advanced Topics in Weather Forecasting. To facilitate the learning objectives, METEO 241 will include the use of digital video, audio, simulation models, virtual field trips to on-line resources for weather data, text, and interactive quizzes that provide timely feedback. To demonstrate their mastery of the learning objectives, students will complete automated online quizzes, actively engage in online discussion groups focusing on real-time weather, and publish, to a personal e-portfolio, four comprehensive projects that will explore timely case studies related to weather forecasting. The e-portfolio will take the form of a Web site that students initially create during the second course of the program (METEO 241 or METEO 361). Students will augment their e-portfolio as part of the requirements for METEO 241, METEO 361 and METEO 410. They will also use the space to reflect on their learning. At the end of the program, students will make a final e-portfolio entry that highlights their program accomplishments. In this way, the e-portfolio will serve both as a showcase of a student’s work for the purpose of course assessment and as a chronicle of a student’s achievements during the program. By using their Penn State personal Web space to host their e-portfolios, students will be able to share their work not only with program faculty and students, but also with external audiences, including potential employers. Upon successful completion of the program, graduates will receive a copy of their final e-portfolio on CD-ROM.

Prerequisite: METEO101
METEO 273: Introduction to Programming Techniques for Meteorology

3 Credits/Maximum of 3

Algorithm design and implementation for meteorological analysis and forecasting. Algorithm design and implementation for meteorological analysis and forecasting, including access to datasets in meteorological common data formats. The objectives of this course are to introduce the student to fundamental programming concepts, such as variables, flow control, and syntax, to apply those concepts to solve meteorological problems couched in the analysis of datasets in meteorologically-relevant common data formats, and to familiarize students with appropriate programming languages and their application to meteorological analysis or forecasting problems on regional and/or global scales.

Prerequisite: METEO 101 or 201

METEO 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

METEO 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

METEO 300: Fundamentals of Atmospheric Science

4 Credits

An introduction to the fundamentals of atmospheric dynamics, physics, and chemistry. METEO 300 Fundamentals of Atmospheric Science (4)This course prepares students for their 400-level meteorology courses by laying a solid foundation in the application of physical, chemical, and mathematical principles to a broad range of atmospheric phenomena. Students are introduced to fundamental concepts and applications of atmospheric thermodynamics, radiative transfer, atmospheric chemistry, cloud microphysics, atmospheric dynamics, and the atmospheric boundary layer. These topics are covered broadly but in enough depth to introduce students to the methods atmospheric scientists use to describe and predict atmospheric phenomena. The course is designed to be taken by sophomore meteorology students as well as by students in related disciplines who have an adequate mathematical and physical background.

Prerequisite: CHEM 110, MATH 141, PHYS 211; Concurrent: MATH 230 or MATH 231

METEO 332N: Science and policy of global greenhouse gas emissions and management

3 Credits

This interdomain course introduces students to the science and policy of greenhouse gas emissions. The course focuses on emissions from natural sources, energy production and food production. Policy components will introduce students to the fundamentals of environmental policy and examine key policy options for mitigating and managing emissions. Global in scope, the course will also address how emissions and policy options differ in developed and developing countries. Topics will include overviews of the global carbon cycle, agriculture and land use change emissions, history of global energy use and production, overview of global climate change policy, frontiers in climate, energy and agriculture policy, amongst others.

Prerequisite: ENGL 015.

Cross-listed with: ANSC 332N, GEOG 332N
General Education: Natural Sciences (GN)
General Education: Social and Behavioral Scien (GS)
General Education - Integrative: Interdomain
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Soc Resp and Ethic Reason

METEO 361: Fundamentals of Mesoscale Weather Forecasting

3 Credits

Applying atmospheric principles to small-scale weather systems, with an emphasis on the conceptual modeling and short-range prediction of severe thunderstorms. METEO 361 Fundamentals of Mesoscale Weather Forecasting (3) When outbreaks of severe weather occur, dire warnings for tornadoes, large hail or damaging straight-line winds urgently scroll across the bottoms of television screens. Simultaneously, television weathercasters warn viewers to ‘take cover immediately’. Yet, because of the limited spatial and time scales of severe thunderstorms, the areas affected by tornadoes, large hail and damaging straight-line winds often turns out to be relatively small (sometimes as small a tenth of one percent of the original ‘watch area’). There is no doubt that people should be prepared to take definitive action to protect their lives and the lives of their families when outbreaks of severe weather occur. But the overall impression that entire counties or cities will be destroyed by severe weather can be, and frequently is, misleading. One of the primary goals of METEO 361: Fundamentals of Mesoscale Weather Forecasting is to give students a scientifically grounded perspective of the spatial and time scales of typical outbreaks of severe weather. In the process, students will become better weather consumers. To gain such insights, students will learn conceptual models of the life cycles of severe thunderstorms and will then apply them in real-time outbreaks of severe weather. In the final analysis, students will be able to more accurately weigh the information being disseminated by the media and the Storm Prediction Center in Norman, Oklahoma. To ensure that students develop the knowledge and skills required to critically assess public weather forecasts, METEO 361 will provide, like METEO 101, an apprentice-training environment that will guide students, under the tutelage of professional weather forecasters, to actively learn how to create their own mesoscale-weather forecasts. In the process, METEO 361 will reinforce the notion that weather forecasting involves sophisticated techniques of data analysis and a thorough understanding of atmospheric science. METEO 361 will also stress that the clear communication of the forecast requires strong verbal and graphic communication skills. Using conceptual models and real-time radar and satellite imagery in concert with output from numerical models designed specifically for mesoscale forecasting, students will predict severe weather on time scales of a few hours to one day. For example, students will be given a litany of web-based tools and asked to place their own ‘watch box’ for severe weather. Students will then be asked to verify and discuss the outcomes of their forecasts. For more general outlooks of severe weather (time scales of one to two days), students will use output from the numerical models that were introduced in METEO 101 to identify the areas likely to be at risk for severe weather. It should be noted here that METEO 361 will be one of four courses required for students to earn a Certificate of Achievement in Weather Forecasting, a unique
Prerequisite: METEO101

METEO 395: **SPECIAL TOPICS**

3 Credits/Maximum of 6

METEO 395A: Internship in Meteorological Communication

3 Credits/Maximum of 6

METEO 395A Internship in Meteorological Communication (3 per semester/maximum of 6) A student participates for at least 100 hours in an internship with an agency or company that focuses on communication of weather forecasts or other atmospheric information. This internship is normally completed after the sophomore year. Given the focus of this internship and the paper requirement to relate the internship experience to meteorology coursework, students must have completed the first two required courses covering weather analysis or forecasting and fundamentals of atmospheric science. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student’s Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student’s internship supervisor.

Prerequisite: METEO101, or METEO200A and METEO200B, or METEO201, and METEO300

METEO 395B: Private Sector Meteorology Internship

3 Credits/Maximum of 6

METEO 395B Private Sector Meteorology Internship (3) A student participates for at least 100 hours in an internship with a private sector company that focuses on problems or applications that use meteorological information. This internship is normally completed after the sophomore year. Given the focus of this internship and the paper requirement to relate the internship experience to meteorology coursework, students must have completed the first two required courses covering weather analysis or forecasting and fundamentals of atmospheric science. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student’s Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student’s internship supervisor.

Prerequisite: METEO101, or METEO200A and METEO200B, or METEO201, and METEO300

METEO 395C: Internship in Meteorological Operations

METEO 395C Internship in Meteorological Operations (3 per semester/maximum of 6) A student participates for at least 100 hours in an internship with an agency or company that focuses on communication of weather forecasts or other atmospheric information. This internship is normally completed after the sophomore year. Given the focus of this internship and the paper requirement to relate the internship experience to meteorology coursework, students must have completed the first two required courses covering weather analysis or forecasting and fundamentals of atmospheric science. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student’s Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student’s internship supervisor.

Prerequisite: METEO101, or METEO200A and METEO200B, or METEO201, and METEO300

METEO 395D: International Meteorological Internship

METEO 395D International Meteorological Internship (3) A student participates for at least 100 hours in an internship with an agency or company that focuses on communication of weather forecasts or other atmospheric information. This internship is normally completed after the sophomore year. Given the focus of this internship and the paper requirement to relate the internship experience to meteorology coursework, students must have completed the first two required courses covering weather analysis or forecasting and fundamentals of atmospheric science. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student’s Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student’s internship supervisor.

Prerequisite: METEO101, or METEO200A and METEO200B, or METEO201, and METEO300

METEO 395E: Off-Campus Meteorological Research Internship

METEO 395E Off-Campus Meteorological Research Internship (3) A student participates for at least 100 hours in an internship with an agency or company that focuses on communication of weather forecasts or other atmospheric information. This internship is normally completed after the sophomore year. Given the focus of this internship and the paper requirement to relate the internship experience to meteorology coursework, students must have completed the first two required courses covering weather analysis or forecasting and fundamentals of atmospheric science. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student’s Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student’s internship supervisor.

Prerequisite: METEO101, or METEO200A and METEO200B, or METEO201, and METEO300
coursework, students must have completed the first two required courses covering weather analysis or forecasting and fundamentals of atmospheric science. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student's Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student's internship supervisor.

Prerequisite: METEO101, METEO200A and METEO200B, or METEO201, and METEO300

METEO 397F: Special Topics - InterDomain

3 Credits

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GN/GS GenEd course.

General Education: Natural Sciences (GN)
General Education: Social and Behavioral Scien (GS)
General Education - Integrative: Interdomain

METEO 410: Advanced Topics in Weather Forecasting

3 Credits

Exploring highly specialized topics and techniques in weather forecasting that span from mesoscale to planetary spatial scales and short-term to long-range time scales. METEO 410 Advanced Topics in Weather Forecasting (3) T.H. Huxley’s passage from Biogenesis and Abiogenesis – ‘The great tragedy of Science - the slaying of a beautiful hypothesis by an ugly fact’ (1870) – will serve as the springboard for learning in METEO 410. In the spirit of a ‘beautiful hypothesis,’ forecasters’ diagnoses of the present state of the atmosphere and their prognoses for how the atmosphere will evolve with time may be scientifically sound. Yet, local weather can turn out dramatically different than the intent of the forecast (the ugly fact). To compound this ‘great tragedy of Science,’ weather forecasters routinely spend most of their preparation time on local details, particularly when the weather tends to get more interesting. Nonetheless, there are ‘master forecasters’ who regularly avoid great tragedies in weather forecasting. Master forecasters will prudently weigh the length of the forecast time as well as interactions between weather features on the hemispheric, synoptic, meso and local scales while, at the same time, they will adroitly use an array of forecasting tools to arrive at a high-quality local forecast. With the prudent and seasoned approach of the master forecaster in mind, METEO 410 will provide students with a master apprenticeship in weather forecasting. As master apprentices, students will learn highly specialized tools and techniques that will help them to hone and expand their overall forecasting skills. For example, students will learn a new technique for forecasting rare and extreme weather that is based on assessing departures of specific meteorological fields from climatological norms. In the process, students will study rare historic events, such as the great ice storm across northern New England and eastern Canada in 1998. Along the way, students will learn some basic statistics, including climatological means and standard deviations. As master apprentices, students will also learn about medium-range forecasting (three to seven days into the future) and medium-range computer models. Students will learn how to implement modern prediction techniques, such as ensemble forecasts from computer models. Master forecasters increasingly take advantage of this avant-garde technique in short to medium-range forecasting. Unique learning modules, which run the gamut from forecasting wildfires to learning about the influence of the North Atlantic Oscillation on long-range forecasts (seven days or more), will provide students with the tools to understand the bases for all the forecasts they see on television, hear on the radio, read in publications such as Weatherwise, or access on the World Wide Web. For example, students will learn about the forecasting products issued by the Climate Prediction Center, which include seasonal outlooks that focus on the seasonal impacts of La Nina and El Nino. To facilitate the learning objectives, METEO 410 will include the use of digital video, audio, simulation models, virtual field trips to on-line resources for weather data, text, and interactive quizzes that provide timely feedback. It should be noted here that METEO 410 will be one of four courses required for students to earn a Certificate of Achievement in Weather Forecasting, a unique online program offered through Penn State's World Campus. The three other courses that will comprise this online program are METEO 101: Understanding Weather Forecasting, METEO 241: Fundamentals of Tropical Forecasting and METEO 361: Fundamentals of Mesoscale Weather Forecasting. To demonstrate their mastery of the learning objectives, students will complete automated online quizzes, actively engage in online discussion groups focusing on real-time weather, and publish, to a personal ‘e-portfolio,’ four comprehensive projects that will explore timely case studies related to weather forecasting. The e-portfolio will take the form of a Web site that students initially create during the second course of the program (METEO 241 or METEO 361). Students will augment their e-portfolio as part of the requirements for METEO 241, METEO 361 and METEO 410. They will also use the space to reflect on their learning. At the end of the program, students will make a final e-portfolio entry that highlights their program accomplishments. In this way, the e-portfolio will serve both as a showcase of a student’s work for the purpose of course assessment and as a chronicle of a student’s achievements during the program. By using their Penn State personal Web space to host their e-portfolios, students will be able to share their work not only with program faculty and students, but also with external audiences, including potential employers. Upon successful completion of the program, graduates will receive a copy of their final e-portfolio on CD-ROM.

Prerequisite: METEO101, METEO201, METEO300

METEO 411: Synoptic Meteorology Laboratory

4 Credits

Techniques of analyzing synoptic scale weather situations; introduction to weather forecasting.

Prerequisite: METEO101 or METEO200A and METEO200B or METEO201; MATH 230 or MATH 231 Prerequisite or concurrent: METEO421 and METEO431

METEO 413: Map Analysis

3 Credits

Analysis of actual surface weather observations, with emphasis on the Norwegian cyclone model, missing or bad data, and mesoscale phenomena. METEO 413 Map Analysis (3) METEO 413, Map Analysis, is designed as a professional elective for Meteorology majors and as such it is primarily taken by fourth-year students. Third-year students who have completed METEO 411 may also register for Map Analysis. The course encourages students to tie together concepts learned in prior meteorology courses through analysis of numerous weather maps from across the northern hemisphere both at the surface and above. This is accomplished by improving the student’s understanding of the
cyclone model and applying that knowledge to ‘real-life’ analyses where data quality may be compromised and topographic and other mesoscale factors may be important. Grades are based upon the best 13 of 14 lab assignments, 2 or more quizzes, and in-class assignments. Class participation is rewarded on an extra-credit basis. METEO 413 is offered each spring; enrollment is limited to 15 students.

**Prerequisite:** METEO411

METEO 414: Mesoscale Meteorology

4 Credits

A survey of conceptual models and analysis techniques for mesoscale atmospheric features.

**Prerequisite:** METEO411

METEO 415: Forecasting Practicum

3 Credits

Modern techniques in weather analysis and forecasting.

**Prerequisite:** METEO411

METEO 416: Advanced Forecasting

3 Credits

Competitive, simulated, operational, real-time forecasting is covered.

**Prerequisite:** METEO 415; Concurrent METEO 414

METEO 419: Air Quality Forecasting

3 Credits

Issues relating to the prediction and dispersion of air pollutants are discussed. METEO 419 Air Quality Forecasting (3) Prediction of air quality is discussed from the perspective of operational weather forecasting. The chemical properties of pollutants for which public forecasts are currently made, fine-scale particulate matter and ozone, are summarized to provide the physical background for making forecasts. The impacts of weather on pollutant concentrations are discussed. Current techniques for forecasting air quality are presented and used by the students to create their own air quality forecasts. Students present air quality weather briefings and post-analysis of significant historical air quality events. To take this course, students must have the background provided in a basic course in chemistry and a basic course in meteorology that covers weather systems governing the transport of air pollution.

**Prerequisite:** CHEM 110 and METEO 003, or METEO101, or METEO 200A and METEO 200B, or METEO 201

METEO 421: Atmospheric Dynamics

4 Credits

Balanced and unbalanced flows, vorticity, circulation and potential vorticity, an introduction to wave dynamics and stability analysis, and a quantitative discussion of the general circulation. Meteo 421 Atmospheric Dynamics (4) This course builds on the foundation laid in METEO 300, Fundamentals of Atmospheric Science, by presenting applications of the equations of motion to the description of a variety of atmospheric motions. The intrinsically rotational aspects of large-scale atmospheric motions are presented through a discussion of vorticity dynamics (including both relative and planetary vorticity) and the related circulation theorems of Kelvin and Bjerknes that culminate in potential vorticity thinking. The contrast between oscillating and unstable atmospheric systems is highlighted using the examples of gravitational, inertial, and shear instability, and the parcel and perturbation methods are introduced for studying these systems. An introduction to wave dynamics presents the concepts of phase and group velocity with applications to gravity, inertial, and Rossby waves, and to geostrophic adjustment. Finally, the general circulation, including the major zonal wind systems (e.g., the mid-latitude westerlies) and the major overturning cells (Hadley and Ferrel cells) is discussed quantitatively to provide a description of planetary-scale motions.

**Prerequisite:** METEO 300, PHYS 212, MATH 230 or MATH 231 and MATH 232; Concurrent: METEO 431, MATH 251

METEO 422: Advanced Atmospheric Dynamics

3 Credits

Survey of advanced dynamical topics including instabilities, numerical modeling, and others of current interest. METEO 422 Advanced Atmospheric Dynamics (3) This course in atmospheric dynamics covers advanced topics, including instabilities that lead to the development of various atmospheric phenomena at the synoptic and smaller scales, numerical modeling principles and applications, topographic gravity and Rossby waves, understanding of the general circulation that can be used for extended-range forecasting, and frontal structure and frontogenesis. Some additional topics will vary at the discretion of the instructor.

**Prerequisite:** METEO421

METEO 422H: Dynamic Meteorology II

4 Credits

Generalized vertical coordinate systems, vorticity and theory applications, conservation principles and energetics, quasi-geostrophic processes, boundary layer dynamics.

Honors

METEO 426: Inside Numerical Weather Prediction Models

3 Credits

This course will teach the student a practical understanding of the structure of numerical weather prediction (NWP) models in the context of their application to real world precipitation forecasting. The course combines lecture material on the inner workings of NWP models with a forecasting module that applies the lecture material to daily precipitation forecasts. Topics covered during the semester include the mathematical structure of weather models, including their historical development, techniques for initializing models (data assimilation), basic numerical methods used to advance the model in time, techniques to account for phenomena not directly resolved by the model (parameterizations), as well as the theory behind, and creation of, ensemble model forecasts. Current, and next generation, operational NWP models will be used as examples for each topic. Students will use the lecture material and other forecasting techniques to issue precipitation forecasts three days per week in the form of a class-wide forecast contest.

**Prerequisite:** METEO 411; METEO 421
METEO 431: Atmospheric Thermodynamics
3 Credits
Classical thermodynamics applied to both the dry and the moist atmosphere.

Prerequisite: METEO 101 or METEO 201, PHYS 212; Concurrent: METEO 300

METEO 434: Radar Meteorology
3 Credits
Fundamental operating principles of radars, with application to observation of meteorological phenomena. METEO 434 Radar Meteorology (3) Students will learn the basic operation principles of weather radar as it affects the taking and interpreting of measurements of weather phenomena. To achieve this ability, students must master concepts of radar design and operation, electromagnetic propagation through and scattering by atmospheric constituents, and the characteristics of atmospheric scatterers. With these tools in hand, the class will focus on interpreting weather phenomena. One-third of each lecture will be dedicated to the discussion and interpretation of student-provided radar images. Students will actively participate in the class through bringing radar observations to class for discussion. They will be required to access data from the World Wide Web, organize it for a computer-based presentation, do an in-class presentation and lead the subsequent discussion. Students should have a basic background in electromagnetic theory, such as can be acquired in a physical meteorology course (METEO 437), as well as have either completed or be co-registered for a mesoscale meteorology class (METEO 414). Students will be evaluated based on class participation, homework and two exams.

Prerequisite: METEO437; Concurrent: METEO414

METEO 436: Radiation and Climate
3 Credits
Elements of earth-sun geometry, radiative transfer, photochemistry, remote sensing of the atmosphere, physical climatology, climate forcing. METEO 436 Radiation and Climate (3)This course covers radiation and how it interacts with the atmosphere and earth's surface to drive motions in the atmosphere. The fundamentals of radiative transfer at the molecular level, including absorption, scattering, transmission, and emission of radiation by matter, are discussed and applied to help describe the earth's energy budget. Crucial to understanding these processes in the atmosphere are the interactions of radiation with water in the vapor, liquid, and solid states. Applications of radiative transfer to the understanding of seasons and of climate and climate change are presented as well.

Prerequisite: METEO300; Concurrent: METEO431

METEO 437: Atmospheric Chemistry and Cloud Physics
3 Credits
Properties of aerosols and clouds, cloud nucleation and precipitation processes, atmospheric electricity, cloud and precipitation chemistry, biogeochemical cycles. METEO 437 Atmospheric Chemistry and Cloud Physics (3)This course develops an understanding of how the physical and chemical properties of the atmosphere influence cloud and precipitation formation, as well as how clouds in turn affect the properties of the atmosphere. The roles that chemistry and clouds play in modulating weather, climate, and atmospheric electricity are also treated.

Prerequisite: METEO300 and METEO431

METEO 440W: Principles of Atmospheric Measurements
3 Credits
Theory and practices used in measurement and analysis of meteorological variables. METEO 440W Principles of Atmospheric Measurements (3) The standard theories and practices used in measurement and analysis of atmospheric variables are surveyed in the lecture portion of the course. The laboratory portion of the course provides students hands-on experience with using standard and self-produced instruments to make reliable measurements and with analyzing meteorological observations to determine their significance. In the laboratory reports, students learn the fundamentals of appropriate scientific writing to summarize the objectives of the lab exercise, to provide an analysis of the observations, and to critique the results. The initial drafts of these reports are evaluated critically by the instructors and teaching assistants and then are revised by the students based on these evaluations. Discussion of scientific writing and of proper report protocols are presented in the course as well.

Prerequisite: METEO300, METEO437, STAT 301 or STAT 401 or E B F472 Writing Across the Curriculum

METEO 451: Introduction to Physical Oceanography
3 Credits
Air-sea interaction, wind-driven and thermohaline circulations, upwelling, El Nino, waves, and tides. METEO 451 Elements of Physical Oceanography (3) The primary objective of this course is to describe the circulation of the ocean and present a theoretical basis for understanding it. The focus is on the large-scale, basin-wide features of the ocean circulation, such as: 1) the subtropical ocean gyres that contain the wind-driven western boundary currents like the Gulf Stream, 2) the equatorial oceans that respond rapidly to external forcing to produce phenomena like El Nino, and 3) the thermohaline circulation that acts as a slow regulator of the earth's climate. A main goal is to demonstrate to meteorology students that the ocean is not a static, passive lower boundary to the atmosphere but a dynamic, evolving entity that is intimately coupled to the atmosphere through the exchange of heat, momentum, and water. Thus the oceans affect weather and climate. Students are evaluated on their comprehension of the relevant physical processes (as determined by written examinations) and by term papers and laboratory reports or a combination of the two. This course will be offered annually with an enrollment of about 12 students. Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Prerequisite: METEO421

METEO 452: Tropical Meteorology
3 Credits
Atmospheric processes in the tropics; mass, heat, energy, momentum, and water vapor budgets, cumulus convection, hurricanes and other disturbances.

Prerequisite: METEO411, METEO421
METEO 454: Introduction to Micrometeorology

3 Credits

Physical processes and their measurement in the lowest layers of the atmosphere; application to hydrology, plant systems, and air pollution. METEO 454 Introduction to Micrometeorology (3) Students will learn the basic fluid mechanics and thermodynamics of the atmospheric boundary layer (ABL), the lowest few hundred meters to few kilometers of the atmosphere. Specific topics covered include: 1. Introduction to micrometeorology 2. The surface energy budget 3. Radiation balance near the surface 4. Soil heat transfer 5. Air temperature and humidity in the boundary layer 6. Wind distribution in the boundary layer 7. Introduction to viscous flows 8. Introduction to turbulence in the boundary layer 9. Semi-empirical theories of turbulence

Prerequisite: METEO421 and METEO431 or EME 301

METEO 455: Atmospheric Dispersion

3 Credits

The basic principles of atmospheric flow, introduction to the modeling of turbulent diffusion, and the use of EPA dispersion models. METEO 455 Atmospheric Dispersion (3) Students will learn both the theory and current practice of numerical modeling of the turbulent dispersion of effluents from sources in the atmospheric boundary layer. Lab sessions involve hands-on experience with the numerical models used in the applied dispersion community. Classroom sessions cover the boundary-layer meteorology and dispersion theory on which these models are based. In laboratory sessions, students become acquainted with the present practice of short-range atmospheric dispersion modeling through: * exploring the air-quality resources available on the World Wide Web * examining the design of the air-quality models used today in permitting and hazardous-release applications * discussing the input data needed by the models, the nature and reliability of their predictions and the advantages of improved models including AERMOD * running the models SCREEN3 and ISC (the U.S. EPA’s Industrial Source Complex model). Lectures on boundary-layer meteorology include: * the atmospheric boundary layer, turbulence, and the surface energy budget * buoyancy, stability and their influence on the atmospheric boundary layer * mass conservation in fluid motion, turbulent and molecular fluxes and their roles in atmospheric dispersion * the contrast between instantaneous and average properties of turbulent flow, the convergence of averages and implications for dispersion models.

Prerequisite: EME 301, C E 360, M E 320, METEO454 or EGEE 470

METEO 460: Weather Risk and Financial Markets

3 Credits

This course will introduce the role that weather plays as a source of financial and operational risk for businesses, market and other institutions. METEO 460 Weather Risk and Financial Markets (3) The course introduces students to the role that weather plays as a source of financial and operational risk for business, markets, and other institutions. It also introduces the tools and concepts for weather risk management—the insurance products, financial instruments, and decision tools that organizations use to manage, reduce, and transfer their weather-related risks. Major topics include: (i) The concept of risk and the role of weather as a driver of economic risk; (ii) Probabilistic approaches to weather forecasting; (iii) Techniques for valuation of weather derivatives; (iv) Links between weather and markets for energy and agricultural commodities; and (v) Management of catastrophic hurricane risks. Weekly assignments culminate in a major student project on weather risk management.

Prerequisite: METEO411; E B F472 or STAT 301 or STAT 401; E B F301 or E B F473

METEO 465: Middle Atmosphere Meteorology

3 Credits

A topical survey of physical, chemical, and dynamical processes at work in the stratosphere and mesosphere (middle atmosphere).

Prerequisite: METEO421, METEO431

METEO 466: Planetary Atmospheres

3 Credits

A survey of planetary atmospheres and the chemical and physical processes by which they form and evolve.

Prerequisite: MATH 141, PHYS 211

METEO 469: From Meteorology to Mitigation: Understanding Global Warming

3 Credits

Examination of global warming and climate change: the basic science, projects, impacts, and approaches to mitigation. METEO 469 From Meteorology to Mitigation: Understanding Global Warming (3) Human-caused climate change represents one of the great environmental challenges of our time. As it is inextricably linked with issues of energy policy, a familiarity with the fundamentals of climate change is therefore critical for those looking to careers in the energy field. To appreciate the societal, environmental, and economic implications of policies governing greenhouse gas emissions, one must further understand the basic underlying science. METEO 469 serves to lay down the fundamental scientific principles behind climate change and global warming. A firm grounding in the science is then used as a launching point for exploring issues involving climate change impacts and mitigation. METEO 469 will introduce students to the basic information necessary for understanding Earth’s climate, including the relevant atmospheric processes, and aspects of other key components of the climate system such as the cryosphere, hydrosphere, and biosphere. Students will learn how to do basic computations and to use theoretical models of the climate system of varying complexity to address questions regarding future climate change. Students, further, will explore the impacts of various alternative greenhouse gas emissions scenarios and investigate policies that would allow for appropriate stabilization of future greenhouse gas concentrations. The structure of the course roughly parallels the treatment of the subject matter by the reports of the Intergovernmental Panel on Climate Change (IPCC), focusing first on the basic science, then the future projections and their potential impacts, and finally issues involving adaptation, vulnerability, and mitigation. METEO 469 will combine digital video, audio, simulation models, virtual field trips to on-line data resources, text, and interactive quizzes that provide instantaneous feedback.

Prerequisite: STAT 200 or MATH 110 or MATH 140
METEO 470: Climate Dynamics

3 Credits

The fundamental principles that govern Earth’s climate and their relevance to past and future climate change. METEO 470 Climate Dynamics (3) Climate Dynamics delves into the fundamental processes that control the earth’s climate of the past, present, and future. Fundamentals are developed from concepts of basic dynamic meteorology, radiative transfer, and thermodynamics. Basic atmospheric radioactive transfer, the surface energy and hydrologic budgets, and the atmospheric and oceanic circulation are covered. A survey of the earth’s climate through geologic history is also covered, including extinction events and the impacts on climate. The concepts developed in this course are applied to the topic of anthropogenic climate change and how various aspects of the system could be influenced by global warming.

Prerequisite: METEO300, METEO421, METEO431

METEO 473: Application of Computers to Meteorology

3 Credits

Application of statistical and numerical methods to practical problems in meteorology.

Prerequisite: CMPSC 101, CMPSC 201, CMPSC 202 or METEO 273

METEO 473H: Application of Computers to Meteorology

3 Credits

APPLICATION OF STATISTICAL AND NUMERICAL METHODS TO PRACTICAL PROBLEMS IN METEOROLOGY.

Honors

METEO 474: Computer Methods of Meteorological Analysis and Forecasting

3 Credits

Distribution of scalars and vectors; sampling; regression and correlation in two and three dimensions; time series, statistical forecasting; forecast verification. METEO 474 Computer Methods of Meteorological Analysis and Forecasting (3) Meteorology 474: Computer Methods of Meteorological Analysis and Forecasting explores the computationally intensive statistical methods used in the development of automated weather analysis and forecasting systems. The focus of the course is on learning to develop and use artificially intelligent automated systems to perform data quality control, quantitative analysis of large meteorological data sets, and weather forecasting. Coverage will include the relevant statistical, mathematical, and computational methods including matrix operations, data quality control, regression analysis, neural network construction, decision tree growth, and forecast system verification.

Students will leave the course with an understanding of how to efficiently develop accurate and robust statistical weather analysis and prediction systems. Thus, the course serves as a professional elective for those students wishing to pursue careers in statistical weather forecasting, meteorological data analysis, and associated fields. Meteorology 474 uses a project oriented lecture/lab format to provide students with hands-on experience in developing and testing weather analysis and forecast systems. Students will both code their own forecast system development programs and use off-the-shelf software designed for rapid development and testing of forecast systems. To tackle these assignments, students will team up in pairs using the computer laboratory facilities of the Meteorology Department and meteorological data sets of current interest. A key element of the resulting project reports will be an investigation into the origin of the observed forecast system errors. One section of Meteorology 474 will be offered each year with a capacity of approximately 20 students. The class size is tailored to in-class training with the software tools and open discussion with the instructor and classmates. Grading will be based on the team assignments and on a mid-term and final examination.

Prerequisite: STAT 301 or STAT 401 or E B 472

METEO 477: Fundamentals of Remote Sensing Systems

3 Credits

The review of fundamental physical properties leads into discussions of various techniques, including imaging, spectroscopy, radiometry, and active sensing.

Prerequisite: E E 330 or METEO436

Cross-listed with: EE 477

METEO 480M: Undergraduate Research

3 Credits

Undergraduate Research METEO 480M Undergraduate Research (3) The lecture portion of the course, which accounts for one-third of the course grade, covers topics such as the elements of good scientific writing, the structure of scientific manuscripts, the mechanics of oral and poster presentations at science meetings, scientific peer review, and ethics in science. For the remaining two-thirds of the course grade, students perform research under the guidance of a faculty member. Students select the faculty member based on matching general research interests. A student’s academic adviser typically assists in the process of matching a student to a research project supervisor. In consultation with their research project supervisor, students then decide on a specific research topic.

Prerequisite: junior or senior standing as a Meteorology Major

Honors

Writing Across the Curriculum

METEO 480W: Undergraduate Research

3 Credits

A research thesis will be prepared. A written and oral presentation required.

Prerequisite: junior or senior standing as a Meteorology Major

Writing Across the Curriculum

METEO 481: Weather Communications I

3 Credits

Multi-instructor weather communications survey including forecasting, science teaching and writing, television and radio broadcasting, climate studies, forensics, industrial applications.

Prerequisite: METEO201 or METEO0101
METEO 482: Weather Communications II
3 Credits
Multi-instructor workshop designed to mimic real-life applications of weather communications in industry, broadcasting, the courtroom, and the classroom.

**Prerequisite:** METEO481

METEO 483: Weather Communications III
3 Credits
Individualized course designed for in-depth study of weather communications in industry, broadcasting, the courtroom and/or the classroom.

**Prerequisite:** METEO411, METEO482

METEO 486: Pennsylvania Climate Studies
1-2 Credits/Maximum of 3
An overview of the Pennsylvania State Climate Office and an introduction to various aspects of its operations. METEO 486 Pennsylvania Climate Studies (1-2) Those interested in climate topics will become thoroughly acquainted with the important process of acquiring and assessing the quality of climate observations. Students will be introduced to the various observational networks and data formats. They will learn to manipulate large climate data fields using both flat and relational database management systems. Each student will contribute to the state climate web page and will conduct a research project during the second half of the semester. This course will be offered in fall and spring semesters.

**Prerequisite:** METEO101, or METEO200A and METEO200B, or METEO201

METEO 494: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

METEO 494H: Research Project
1-12 Credits/Maximum of 999
Supervised student activities on research projects identified on an individual or small-group basis.

METEO 494M: Thesis Research
3 Credits
In this course, students will write a professionally structured thesis based on solid research foundations. They will learn the elements of good science writing and effective oral presentation.

**Prerequisite:** METEO 494M

**Honors**

**Writing Across the Curriculum**

METEO 495: **SPECIAL TOPICS**
3 Credits/Maximum of 6

METEO 495A: Meteorology Communications Internship
3 Credits/Maximum of 6

METEO 495A Meteorology Communications Internship (3 per semester/maximum of 6) A student participates for at least 100 hours in an internship with an agency or company that focuses on communication of weather forecasts or other meteorological information. This internship is normally completed after the junior year. Given the focus of this internship and the paper requirement to relate the internship experience to a 400-level meteorology course, students must have completed the required course on synoptic meteorology. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student's Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student's internship supervisor.

**Prerequisite:** METEO411

METEO 495B: Meteorology Private Sector Internship
3 Credits/Maximum of 6

METEO 495B Meteorology Private Sector Internship (3 per semester/maximum of 6) A student participates for at least 100 hours in an internship with a private sector company that focuses on problems or applications that use meteorological information. This internship is normally completed after the junior year. Given the focus of this internship and the paper requirement to relate the internship experience to a 400-level meteorology course, students must have completed the required course on synoptic meteorology. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student's Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student's internship supervisor.

**Prerequisite:** METEO411

METEO 495C: Meteorological Operations Internship
3 Credits/Maximum of 6

METEO 495C Meteorological Operations Internship (3 per semester/maximum of 6) A student participates for at least 100 hours in an internship in an operational setting that focuses on the creation of time-sensitive meteorological products such as weather or climate forecasts. This internship is normally completed after the junior year. Given the focus of this internship and the paper requirement to relate the internship experience to a 400-level meteorology course, students must have completed the required course on synoptic meteorology. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student's Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student's internship supervisor.

**Prerequisite:** METEO411
METEO 495D: Meteorological International Internship

3 Credits/Maximum of 6

METEO 495D Meteorological International Internship (3 per semester/maximum of 6)A student participates for at least 100 hours in an internship in an international setting that focuses on applying meteorological knowledge. This internship is normally completed after the junior year. Given the focus of this internship and the paper requirement to relate the internship experience to 400-level meteorology coursework, students must have completed at least six credits of Meteorology courses. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student’s Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student’s internship supervisor.

Prerequisite: 6 credits of 400-level Meteorology coursework

METEO 495E: Meteorological Off-Campus Research Internship

3 Credits/Maximum of 6

METEO 495E Meteorological Off-Campus Research Internship (3 per semester/maximum of 6)A student participates for at least 100 hours in an internship whose focus is a research project requiring applications of meteorological knowledge. This internship is normally completed after the junior year. To provide sufficient background for performing atmospheric research successfully, students must have completed at least nine credits of 400-level Meteorology courses. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student’s Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student’s internship supervisor.

Prerequisite: 9 credits of 400-level Meteorology coursework

METEO 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

METEO 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

METEO 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

---

Microbiology (MICRB)

MICRB 106: Elementary Microbiology

3 Credits

Importance of microorganisms in health and disease, agriculture, and industry; descriptive course for students not planning advanced study in microbiology. The combination of MICRB 106 GN and 107 GN must be taken to receive General Education credit in biology. MICRB 106 Elementary Microbiology (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Microbiology 106 is an introductory lecture course intended for students who do not plan to pursue further study in microbiology. It is particularly appropriate for students in allied health fields, agriculture, environmental engineering, and restaurant and institutional food management. The course can be used to meet natural science (GN) General Education requirements. To receive GN credit, however, MICRB 106 must be taken with its companion laboratory course, MICRB 107. Students taking this course will come to understand and appreciate the unique nature of microorganisms and their importance to life on earth. Microbes were the first form of life to evolve, and even though different in structure from other forms of living things, many similarities can be found in terms of genetics, metabolism, and the roles they play in nature. Bacteria, viruses, and other forms of microscopic life will be examined in some detail, as will their biological activities both beneficial and harmful. Most people think of microbes in their negative roles: disease, food spoilage, and bio-deterioration. Indeed, we spend a lot of time and resources controlling microbes in our environment and treating diseases they cause. But microbes are found naturally on and within the human body with beneficial effect. They are also important in the production of food, vitamins, drugs, and other useful products. They are used extensively in biotechnology. They have important ecological roles and are essential to the continued existence of life on earth. MICRB 106 uses a lecture format supplemented with contemporary videos to highlight the current challenges and benefits that microbiology brings to our society and our collective and individual health. Also included in the course are active learning activities that involve critical thinking and investigation of internet resources.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

MICRB 106H: Elementary Microbiology

3 Credits

Importance of microorganisms in public health and disease, agriculture, and industry; descriptive course for nontechnical students.

General Education: Natural Sciences (GN)

Honors

MICRB 107: Elementary Microbiology Laboratory

1 Credit

MICRB 107 is an introductory laboratory course designed for students who do not intend to pursue further study in the field. The course demonstrates the use and practice importance of microbes in everyday life. Instruction begins with the proper handling and visualization of microorganisms. Almost by definition, the vast majority of microorganisms are too small to be seen with the naked eye. Therefore,
students must learn the correct use of the light microscope. Instruction in the proper care and maintenance of the microscope is provided. Students prepare and stain specimens using a number of methods designed to characterize microorganisms. The importance of working safely in a laboratory setting is emphasized throughout the course. Many skills are developed in this laboratory course. Aseptic technique skills allow for the transfer organisms properly from one culture medium to another. A variety of media are used and the reasons for their use are explained. Students also learn how to quantify the number of bacteria in specimens such as water, soil or food. The course demonstrates ways to control microbial growth by various means for example, temperature, osmotic pressure, pH, exposure to ultraviolet light and use of disinfectants. Students learn the importance of controlling microbial growth on their person and how failure to do so can lead to the spread of disease, especially in hospital settings. Other experiments illustrate methods used to preserve food products and test water for contamination and may include molecular techniques to study microbial genomes. While students learn to isolate and identify organisms from their own body, other common bacteria found in or on the human body are also studied. A variety of diagnostic cultural and physiological tests are employed to identify organisms students have isolated. This simulates in a very real way the process physicians depend on for diagnosis of infectious diseases. A related experiment demonstrates how antibiotics that are likely to be effective in treating an infection are selected. Taken together, most of the experiments conducted in MICRB 107 are designed to encourage students to investigate the many important roles microorganisms play in the living world. The specific examples covered each semester may vary based on student and instructor interest. As a course that meets general education (GN) requirements, students will increase their scientific literacy in the field of microbiology and develop critical and analytical thinking skills.

**Enforced Prerequisite or concurrent at Enrollment:** MICRB 106

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

**MICRB 150: Introductory Medical Laboratory Technology**

4 Credits

Introduction to basic principles and procedures of clinical laboratory work. Practicum emphasizes proper collection, handling, and preparation of biological samples.

**Enforced Prerequisite at Enrollment:** Admission to 2MLT program

**MICRB 151A: Clinical Chemistry for Medical Laboratory Technicians**

5 Credits

Basic principles and procedures for measuring chemical components of blood and other body fluids. MICRB 151A Clinical Chemistry for Medical Laboratory Technicians (5) This course is taken with (or before) MICRB 151D - Clinical Chemistry Practicum. Topics include: laboratory safety; phlebotomy; quality assurance; lab math; instrumentation in clinical chemistry; measurement of carbohydrates, proteins, electrolytes, lipids, hormones, enzymes, tests of kidney and liver function, and their clinical significance. Laboratory sessions focus on basic measurement techniques, using spectrophotometry.

**Enforced Prerequisite at Enrollment:** [(BIOL 163 and BIOL 164) or BIOL 240] and all of the following: CHEM 202 and MICRB 150 and MICRB 201 and MICRB 202

**MICRB 151B: Hematology for Medical Laboratory Technicians**

5 Credits

Blood cell identification and analysis. Related procedures for diagnosing normal or disease states of blood cells and coagulation. MICRB 151B Hematology for Medical Laboratory Technicians (5) This course is taken with (or before) MICRB 151E - Hematology Practicum. Topics include: hematopoiesis; measurement of red cells, white blood cells, and platelets; significance of hematology results in the diagnosis of hematological diseases; principles of coagulation and related disease states, with emphasis on common factor deficiencies and platelet abnormalities. Laboratory sessions focus on manual techniques, and microscopic identification of blood cells. A capstone project requires the student to research and present a patient case study to the class.

**Enforced Prerequisite at Enrollment:** [(BIOL 163 and BIOL 164) or BIOL 240] and all of the following: CHEM 202 and MICRB 150 and MICRB 201 and MICRB 202

**MICRB 151C: Immunohematology and Serology for Medical Laboratory Technicians**

4 Credits

Antigen-antibody interactions of diagnostic importance. Immunologic principles and procedures necessary for the transfusion of blood products. This course is taken with (or before) MICRB 151F - Immunohematology Practicum. Topics include: principles of normal immune function, with emphasis on humoral immunity; common serology tests used to diagnose infection and disorders of the immune system; selection and testing of donors and preparation of blood components; testing required to determine blood types and detect unexpected antibodies that impact selection of blood products; transfusion practice, transfusion reactions; hemolytic disease of the fetus and newborn. Laboratory sessions focus on manual techniques, ABO and Rh testing, antibody identification.

**Enforced Prerequisite at Enrollment:** [(BIOL 163 and BIOL 164) or BIOL 240] and all of the following: CHEM 202 and MICRB 150 and MICRB 201 and MICRB 202

**MICRB 151D: Clinical Chemistry Practicum**

2 Credits

Supervised experience at affiliated clinical laboratory. Focus is on the practical application of clinical chemistry procedures. Phlebotomy. MICRB 151D Clinical Chemistry Practicum (2) This clinical practicum enables the 2MLT student to gain experience in clinical chemistry, and includes approx. 110 hours of supervised experience in an affiliated clinical laboratory. The course is taken concurrently or after the lecture course Micrb 151A - Clinical Chemistry for Medical Laboratory Technicians. Topics include: specimen handling; common chemical analyses of blood and other body fluids; principles of operation, use, maintenance, and troubleshooting of clinical chemistry analyzers; quality control; safety; phlebotomy. Upon completion of Micrb 151D, the student will be able to: 1. Demonstrate mathematical calculations necessary to prepare reagents, gather data, calculate results, and analyze specimens in the clinical chemistry department. 2. Recognize errors in the collection of specimens for chemical analysis. 3. Demonstrate the
use of basic chemistry instruments; participate in the maintenance, and troubleshooting of these instruments. 4. Interpret the clinical significance of common chemical analyses. 5. Assess the validity of patient results by correlating laboratory data with quality control results. 6. Perform phlebotomy and routine chemistry procedures at appropriate mastery levels. 7. Demonstrate methods of maintaining a safe working environment in the chemistry department of the clinical laboratory. 8. Achieve specific standards of attitude and work habits at the clinical bench.

**Enforced Prerequisite or concurrent at Enrollment:** MICRB 151A

MICRB 151E: Hematology Practicum

2 Credits

Supervised experience at affiliated clinical laboratory. Focus is on the practical application of hematology and coagulation procedures. MICRB 151E Hematology Practicum (2) This clinical practicum enables the 2MLT student to gain experience in hematology and coagulation, and includes approx. 120 hours of supervised experience in an affiliated clinical laboratory. The course is taken concurrently or after the lecture course Micrb 151B - Hematology for Medical Laboratory Technicians. Topics include: hemopoiesis; hemostasis; common hematology and coagulation methods; the principles of operation, use, maintenance, and troubleshooting of hematology analyzers; microscopic examination of blood smears; quality control. Upon completion of Micrb 151E, the student will be able to: 1. Recognize pre-analytical factors affecting hematology and coagulation results. 2. Perform routine hematology and coagulation procedures at specific mastery levels. 3. Demonstrate the use of common hematology and coagulation analyzers, and participate in the maintenance and troubleshooting of these instruments. 4. Interpret the clinical significance of hematology and coagulation results. 5. Demonstrate methods of maintaining a safe working environment in the hematology department of the clinical laboratory. 6. Identify normal and abnormal physical properties of urine and other body fluids. 7. Follow protocol when reporting patient results. 8. Assess the validity of patient results by correlating laboratory data with quality control results. 9. Achieve specified standards of attitude and work habits at the clinical bench.

**Enforced Prerequisite or concurrent at Enrollment:** MICRB 151B

MICRB 151F: Immunohematology Practicum

2 Credits

Supervised experience at affiliated clinical laboratory. Focus is on the practical application of immunohematology procedures. MICRB 151F Immunohematology Practicum (2) This clinical practicum enables the 2MLT student to gain experience in pre-transfusion testing and serology, and includes approx. 110 hours of supervised experience in an affiliated clinical laboratory. The course is taken concurrently or after the lecture course Micrb 151C - Immunohematology and Serology for Medical Laboratory Technicians. Topics include: routine procedures for determining ABO and Rh blood type; antibody identification; crossmatching techniques; handling and storage of donor products; common serology tests; quality control. Upon completion of Micrb 151F, the student will be able to: 1. Perform routine immunohematology and serology procedures at specific mastery levels. 2. Follow protocol required for the handling, storage and the issue of blood products. 3. Interpret the clinical significance of common serology and immunology tests. 4. Maintain a safe working environment in the immunohematology and serology departments in the clinical laboratory. 5. Assess the validity of patient results by correlating laboratory data with quality control results. 6. Achieve specified standards of attitude and work habits at the clinical bench.

**Enforced Prerequisite or concurrent at Enrollment:** MICRB 151C

MICRB 151G: Clinical Microbiology and Body Fluids Practicum

2 Credits

Supervised experience at affiliated clinical laboratory. Focus is on the practical application of microbiology procedures and body fluid analysis. MICRB 151G Clinical Microbiology and Body Fluids Practicum (2) This clinical practicum enables the 2MLT student to gain experience in clinical microbiology and body fluid analysis, and includes approx. 150 hours of supervised experience in an affiliated clinical laboratory. The course is taken concurrently or after the lecture course Micrb 151W. Topics include: specimen handling; cultivation and identification of bacteria with a minor emphasis on parasitology and mycology; antibiotic sensitivity techniques; chemical and microscopic analysis of urine and body fluids; toxicology and therapeutic drug monitoring. Upon completion of Micrb 151G, the student will be able to: 1. Demonstrate methods of maintaining a safe working environment in the microbiology and urinalysis departments of the clinical laboratory. 2. Select and inoculate appropriate media for the culture of patient specimens. 3. Perform common biochemical, microscopic, serological, and molecular-based methods to identify microorganisms, at specified mastery levels. 4. Identify normal and abnormal physical properties of urine and other body fluids. 5. Recognize discrepant results when reviewing urinalysis findings. 6. Perform routine urinalysis and body fluid analysis at specified mastery levels. 7. Perform therapeutic drug monitoring and common tests for drugs of abuse. 8. Assess the validity of patient results by correlating laboratory data with quality control results. 9. Achieve specified standards of attitude and work habits in the clinical laboratory.

**Enforced Prerequisite or concurrent at Enrollment:** MICRB 151W

MICRB 151W: Clinical Microbiology and Body Fluid Analysis for Medical Laboratory Technicians

5 Credits

This course is taken with (or before) MICRB 151G - Clinical Microbiology and Body Fluids Practicum. Topics include: analysis of urine and body fluids; tests of renal function; collection of patient specimens; cultivation, identification and clinical significance of bacteria, with a minor emphasis on parasitology, mycology and virology; techniques to determine antibiotic susceptibility. Laboratory sessions include specimen collection, urine and spinal fluid testing, manual identification of common pathogenic and non-pathogenic bacteria, and concentration of ova and parasites. The student prepares a research paper on a topic related to clinical microbiology; this semester-long process includes instruction on library research techniques, and the writing of several documents in preparation for writing the research paper. This course is writing-intensive.

**Enforced Prerequisite at Enrollment:** [(BIOL 163 and BIOL 164) or BIOL 240] and all of the following CHEM 202 and MICRB 150 and MICRB 201 and MICRB 202

Writing Across the Curriculum
MICRB 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

MICRB 201: Introductory Microbiology

3 Credits

Elementary principles of microbial and viral structure, reproduction, genetics and physiology; relationship to food, water, soil, industrial and disease processes. MICRB 201 Introductory Microbiology (3)

MICRB 201, Introductory Microbiology, is a survey course that touches on the full range of topics generally considered to fall within the scope of microbiology. After a short overview of the origins of microbiology and the ways in which forms of life too small to be seen with the naked eye can be studied, the course launches into the following basic topics: 1) structure and function of the bacterial cell as compared with plant and animal cells 2) care, feeding, and controlling the growth of bacteria 3) how bacteria acquire and use energy 4) how energy and nutrients are used to make cell components and carry out life processes 5) how bacteria organize, replicate and control the expression of genetic information 6) how viruses differ organizationally and reproductively from bacteria, and finally 7) how bacteria are classified and why various classification schemes are important. The remainder of the course is concerned with specific roles bacteria and viruses play in nature. Issues addressed include: 1) role of bacteria in the cycling of elements in the terrestrial environment 2) importance of bacteria in aquatic environments, including the safety of drinking water and treatment of waste water 3) the role of bacteria and viruses in human health and disease. Bacteria existed long before higher life forms, so animals, including humans, evolved means to protect themselves from harmful bacteria while forming relationships with bacteria that are beneficial. These harmful and beneficial relationships are intimately connected to immunology, a field that has long been included in the study of microbiology. The study of disease-causing microbes includes the topics of how these organisms are spread and how they can be controlled using anti-bacterial and anti-viral agents. Selected diseases are used to explain the various mechanisms by which microbes are able to cause illness. Finally, the course also covers the role microorganisms play in the spoilage of foods and, more importantly, the myriad ways in which bacteria, yeast and fungi are used to manufacture such popular foods as breads, cheeses, wines, beers and many other fermented food and dairy products. At some point in the course, there is discussion of how microbes are used in the rapidly-expanding area of biotechnology and their potential for yielding products of benefit to agriculture and humankind. This topic also treats the controversial issues connected with biotechnology, including ethical, theoretical and practical issues that are or will eventually need to be addressed by society.

Enforced Prerequisite at Enrollment: CHEM 110 or CHEM 110H Honors

MICRB 201: Introductory Microbiology

3 Credits

Elementary principles of microbial and viral structure, reproduction, genetics and physiology; relationship to food, water, soil, industrial and disease processes. MICRB 201 Introductory Microbiology (3)

MICRB 201H, Introductory Honors Microbiology, is a survey course that touches on the full range of topics generally considered to fall within the scope of microbiology. After a short overview of the origins of microbiology as a science and the ways in which forms of life too small to be seen with the naked eye can be studied, the course covers the following basic topics: 1) the tree of life and the position of microbes in the biological world, 2) structure and function of the bacterial cell as compared with plant and animal cells, 3) microbial nutrition and growth, 4) molecular biology and gene regulation in microbes, 5) microbial genetics, 6) an overview of microbial classification and diversity, and 7) the principles of how microbes interact with their environment. Unlike the standard sections of MICRB 201, the honors course then moves on to an integrated description of microbial diversity and ecology in association with topics such as carbon metabolism, energy acquisition and utilization including photosynthesis, and the environmental impacts of microbial utilization of inorganic chemicals. This is followed by a section concerning eukaryotic or non-bacterial microbes, a section concerning the use of microbes in industry, and then a basic overview of viruses and how they work. The last part of the course deals with microbial interactions with other organisms with an emphasis on their interactions with man. This starts with a discussion of how microbial growth can be controlled, and then the various kinds of relationships that can exist between microbes and other organisms are covered. This is followed by a section on immunology or the mechanisms animals possess to defend themselves against potentially harmful microbes. The final section concerning a broad range of microbially-caused diseases is preceded by a description of microbial analysis in the clinical or medical laboratory as well as a discussion of how disease-causing microbes are spread in animal populations. MICRB 201H is taught so as to emphasize the impact of microbes on our everyday lives. One way this is accomplished is by class presentations made by small groups of students on topics of current interest in the community at large. Students also write a term paper that can involve any aspect of microbiology using an article from the popular press as their starting point. All students are also required to make a short in-class presentation in which they provide an overview of their term paper. While much of the instruction involves the standard lecture format, classroom discussion is encouraged at all times.

Enforced Prerequisite at Enrollment: CHEM 110 or CHEM 110H Honors

MICRB 202: Introductory Microbiology Laboratory

2 Credits

The goal of MICRB 202 is to inspire excitement and enthusiasm for the important science of microbiology, and to provide students with foundational knowledge of how microbiology techniques can be used to study key aspects of microbial biology such as antibiotic resistance, metabolism, cell structure, and genetics. Specifically, this course will introduce students to the techniques used in microbiology labs to isolate, stain, characterize, identify and control microorganisms. Through the exercises performed in this lab course, students will learn microbiology methods which have many uses and applications in science, medicine and industry. In addition, the exercises performed will help students appreciate the important role microbes play in the lives of all individuals.

Enforced Concurrent at Enrollment: MICRB 201 or MICRB 201H

MICRB 203: Inquiry-based Microbiology Laboratory

2 Credits

In this course, students learn the scientific method and important microbiological concepts and techniques by designing and executing
experiments. Through a series of experimental modules, students will practice and hone their skills at formulating interesting questions, developing testable hypotheses, designing experiments, and analyzing results. Module topics will cover identification and characterization of microbes, interactions between microbes and their environment, pathogenesis, and microbial communities. At the end of the course, students will be prepared to participate in engaged scholarship opportunities, such as performing independent research.

MICRB 251: Molecular and Cell Biology I
3 Credits

BMB 251 Molecular and Cell Biology I (3) is an introduction to the fundamental principles of molecular and cellular biology, with a primary focus on eukaryotic cells. Topics covered will include elementary biochemistry; structure and function of biological macromolecules, the cell and its organelles; the role of biological membranes in bioenergetics and sub-cellular compartments. There will be a particular emphasis on the molecular mechanism of heredity; the organization and expression of genetic information; experimental methods used in the analysis of gene expression and the relationship between gene/protein structure and function.

Enforced Prerequisite at Enrollment: CHEM 112 or CHEM 112H
Recommended preparations MICRB 201 or MICRB 201H
Cross-listed with: BMB 251

MICRB 252: Molecular and Cell Biology II
3 Credits

Continuation of BMB 251 / MICRB 251; cytoskeleton, cell growth, division, adhesion, signalling, germ cells, differentiation, immune system, nervous system, plant cells. BMB 252 / MICRB 252 Molecular and Cell Biology II (3) focuses on the internal organization on eukaryotic cells and their organization in multi-cellular organisms. Topics covered include cell communication, the cytoskeleton, cell cycle, fertilization and development of multi-cellular organisms, genesis of tissues, and the molecular mechanisms of cancer and immunity.

Enforced Prerequisite at Enrollment: BMB 251 or MICRB 251 or BMB 251H or BIOL 230W or BIOL 230M
Cross-listed with: BMB 252

MICRB 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

MICRB 399: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

MICRB 401: Microbial Physiology and Structure
3 Credits

Physiology and structure of bacteria important in microbiological research. Designed for science majors.

Enforced Prerequisite at Enrollment: (CHEM 202 or CHEM 202H or CHEM 210 or CHEM 210H) and (MICRB 201 or MICRB 201H) and (MICRB 202 or MICRB 203). Recommended Preparation: BMB 401 or BMB 401H

MICRB 405A: Seminar and Practicum in Medical Technology
8 Credits

Chemistry. Fundamental principles and the quantitative measurement of chemical components in the blood and other body fluids.

MICRB 405B: Seminar and Practicum in Medical Technology
1 Credits

Urinalysis. Identification of cellular and noncellular urinary sediments. Qualitative chemical analysis of urine.

MICRB 405C: Seminar and Practicum in Medical Technology
6 Credits

Hematology. Principles of red and white blood cell development. Identification of normal and pathological conditions.

MICRB 405D: Seminar and Practicum in Medical Technology
5 Credits

Immunohematology. Immunologic and genetic principles governing the transfusion of blood and blood products.

MICRB 405E: Seminar and Practicum in Medical Technology
7 Credits

Microbiology. Identification of normal and abnormal microbial flora from various locations on and within the human body.

MICRB 405F: Seminar and Practicum in Medical Technology
3 Credits

Serology-Immunology. Immunological principles and their application in the identification of present or past disease states of the human.

MICRB 408: Laboratory Instructional Practice
1-2 Credits/Maximum of 2

Participation in the instruction of undergraduate laboratory courses, including classroom preparation; discussion of principles and objectives of each exercise.

Enforced Prerequisite at Enrollment: 8 credits in microbiology and permission of department head

MICRB 410: Principles of Immunology
3 Credits

The MICRB 410 / VBSC 410 Theories of immunity (3cr.) course provides a basic foundation in immunology with a focus on the progression from antigen recognition and innate immune responses to the development of acquired immunity. During the course, students will have the opportunity to learn about key topics that lead to an understanding of how the human immune system functions. Such topics include the primary cells and anatomical sites of the immune system as well as the activation
and processes of innate immunity. In addition, students will learn about the organization and generation of lymphocyte antigen receptors, major histocompatibility complexes, and antigen presentation. Topics will also be presented that allow students to build an understanding of how antigen recognition and presentation leads to the development, selection, and survival of B and T lymphocytes. T-cell mediated immunity, humoral immunity, and the dynamics of the immune response will also be discussed in depth. Topics such as the immunobiology of allergy, transplantation, autoimmunity, immunodeficiency, diseases, vaccines, and/or cancer will also be presented in order to help students build an understanding of the interplay between the immune system and health and disease will be discussed throughout the semester.

**Enforced Prerequisite at Enrollment:** (MICRB 201 or MICRB 201H) and (BMB 251 or MICRB 251 or BMB 251H or BIOL 230W or BIOL 230M)

**MICRB 411:** Survey of Microbiology Literature

1 Credits/Maximum of 99

An introduction to readings and oral presentations in microbiology.

**Enforced Prerequisite at Enrollment:** 8 credits in MICRB courses

**MICRB 412:** Medical Microbiology

3 Credits

Characteristics, methods of identification, and pathogenesis of bacteria that cause human disease; principles of disease dynamics and control.

**Enforced Prerequisite at Enrollment:** MICRB 201 or MICRB 201H

**MICRB 413:** Microbial Diversity

2 Credits

Survey of microorganisms having special adaptive mechanisms for life in common and unique environments; topics include ecology, evolution, and bioremediation.

**Enforced Prerequisite at Enrollment:** MICRB 201 and MICRB 202

**MICRB 415:** General Virology: Bacterial and Animal Viruses

3 Credits

The interaction of different types of viruses with bacterial and animal cells, including mechanisms of infection and viral synthesis. MICRB 415 General Virology: Bacterial and Animal Viruses (3) General Virology: Bacterial and Animal Viruses covers the interactions of different types of viruses with animal and bacterial cells, emphasizing molecular and genetic concepts of viral infection and viral replication. Students are expected to apply basic concepts of microbiology as well as molecular and cell biology to understanding selected viral life cycles, particularly at the molecular level. Lectures are augmented by in-class discussion and homework assignments. Typically, students are evaluated by two hourly exams and a final exam that assess their knowledge of virology and their ability to apply basic concepts of gene expression and cell biology to explaining viral life cycles. This course builds on the common requirements of MICRB 201 and BMB 251/ MICRB 251 BMB 252 / MICRB 252. The instruction expands into the cellular and molecular bases of viral life cycles with regular reference to and comparison with cellular and molecular biology of uninfected cells. The content of this course complements those on the basic mechanisms of gene expression (BMB 400) and prepares the student for understanding the molecular basis of viral pathogenesis covered in BMB 435 / MICRB 435 / VBSC 435.

**Enforced Prerequisite at Enrollment:** (BMB 252 or MICRB 252 or BMB 252H or BIOL 230W or BIOL 230M) and (MICRB 201 or MICRB 201H)

**MICRB 416:** Microbial Biotechnology

2 Credits

The overall goal of BIOTC 416 / MICRB 416 is to introduce students to fundamentals of applied biotechnology and the use of microorganisms in the synthesis of biologically important and industrially useful products. The course will focus on the application of the tools of Microbiology, Molecular Biology, Biochemistry, Forensics, Environmental Biology and Bioinformatics to exploit microbes as ‘vessels’ to create an array of products to benefit humans, animals and the environment. Specifically, discussions will address the use of microbes in the cleanup of polluted environments (bioremediation) as well as their role in producing drugs (vaccines, antibiotics, etc.), industrially important enzymes (rennet, meat tenderizers, indigo production etc.), and biodegradable plastics to name a few. Furthermore, ethics and regulations surrounding the production, marketing and distribution of these biologics will be discussed. Students will also gain a deeper understanding of the application of recombinant DNA technology, genomics and bioinformatics.

**Enforced Prerequisite at Enrollment:** BMB 442 and (MICRB 201 or MICRB 201H) and (MICRB 202 or MICRB 203) Cross-listed with: BIOTC 416

**MICRB 421M:** Laboratory of General and Applied Microbiology

3 Credits

Laboratory exercises demonstrating fundamental techniques and principles of experimentation of general and applied microbiology.

Honors

Writing Across the Curriculum

**MICRB 421W:** Laboratory of General and Applied Microbiology

3 Credits

Laboratory exercises demonstrating fundamental techniques and principles of experimentation of general and applied microbiology.

**Enforced Prerequisite at Enrollment:** (MICRB 201 or MICRB 201H) and (MICRB 202 or MICRB 203)

**Writing Across the Curriculum**

**MICRB 422:** Medical Microbiology Laboratory

2 Credits

Advanced level microbiology laboratory course centered on medically important microorganisms including bacteria, fungi and parasites. Course content covers pathology and current techniques for identification of each microorganism, as well as the underlying concepts, such as physiological and biochemical properties.

**Enforced Prerequisite at Enrollment:** MICRB 202 or MICRB 203

**Concurrent Courses:** MICRB 412
MICRB 432: Advanced Immunology: Signaling in the Immune System  
3 Credits

The study of signaling pathways that regulate the immune response. BMB 432 / MICRB 432 / VBSC 432 Advanced Immunology: Signaling in the Immune System (3) This course will use the immune system as a model in which to study how cells communicate in order to coordinate an immune response. We will focus on signaling mechanisms that regulate such immune responses as T cell activation, Th1/Th2 differentiation, macrophage activation, and migration of immune cells to sites of inflammation. All lectures are based on recent reviews by key investigators in each field, as well as primary articles to present students with the most recent advances, techniques, and approaches used. The goal of the course will be to convey a basis understanding of intracellular signaling mechanisms that will pertain to all areas of biology, an appreciation for current questions and future directions in the field, and an in depth understanding of the signals that govern immune responses. The material presented will build on the basic concepts learned in BMB 400 and MICRB 410, and will lay the foundation for more advanced courses at the graduate level.

Enforced Prerequisites at Enrollment: (BMB 251 or MICRB 251 or BIOL 230W or BMB 251H or BIOL 230M) and (MICRB 410 or VBSC 410)
Cross-listed with: BMB 432, VBSC 432

MICRB 435: Viral Pathogenesis  
3 Credits

Viral Pathogenesis provides students with a general knowledge of medically relevant viruses, with a specific focus on important human viral pathogens. The course is meant to help students understand how viruses cause diseases in humans and animals. Lectures and in-class discussions will focus both on the fundamentals of viral infection and disease mechanisms, and on contemporary virology-related topics in the scientific literature. Topics discussed can be divided into two main areas: (1) general concepts related to viral pathogenesis and the control of viral infections; and (2) specific viruses that cause human disease including HIV-1, herpes viruses, papillomaviruses, influenza virus, West Nile virus, Ebola virus, and SARS virus. Although prior knowledge of virology is not required for taking this course, a working knowledge of molecular biology, cell biology, immunology, and some microbiology is helpful.

Enforced Prerequisite at Enrollment: (MICRB 201 or MICRB 201H) and (BMB 252 or MICRB 252 or BMB 252H) or (BIOL 230W or BIOL 230M)
Cross-listed with: BMB 435, VBSC 435

MICRB 447: Laboratory in Molecular Immunology  
1 Credit

Immunology laboratory course that centers on current molecular techniques that utilize immunological components. Students will learn to purify and label antibodies, detect antigens and titer antibodies. Example techniques taught in this course are Dot Blot, Western Blot and ELISA. Most techniques will be taught in a diagnostics or inquiry-based context.

RECOMMENDED PREPARATIONS: MICRB 410 or VBSC 410

MICRB 450: Microbial/Molecular Genetics  
2 Credits

This course will focus on understanding the mechanisms and applications of the tools of both classical and molecular genetics to the study of prokaryotic organisms. To that end, topics to be discussed will include: 1) structure and replication of bacterial genomes (chromosomes, plasmids, etc.); 2) the organization of genes on bacterial genomes (operons, regulons, etc.); 3) regulation of gene expression; 4) mutagenesis and DNA repair; 5) recombination; 6) extrachromosomal DNA elements (plasmids, transposable elements and bacteriophages); 7) gene transfer in bacteria; 8) mechanisms of ‘immunity’ to foreign DNA uptake; and 9) classical and molecular genetic analyses (complementation, conditional mutations, screens and selections, recombinant DNA, HTP techniques, nucleic acid mobility shift assays, blots, gene fusions, etc). The course will utilize a variety of formats including formal lecture presentations, guest lectures by BMB faculty performing research in the area of prokaryotic genetics, as well as student presentations.

Enforced Prerequisites at Enrollment: (BIOL 222 or BIOL 322) and (MICRB 201 or MICRB 201H)
Cross-listed with: BMB 450

MICRB 460: Cell Growth and Differentiation  
3 Credits

Mechanisms and regulation of protein trafficking, organelle biosynthesis, cell development, signaling and cell cycle control. Emphasizes experimental design and analysis. BMB 460 / MICRB 460 Cell Growth and Differentiation (3) is a unique course that uses the primary literature to teach significant content in advanced cell biology while simultaneously exposing students to the scientific craft of experimental design and analysis. In addition to exploring historical and current cell biology research articles, students will develop two vital scientific skills; critical thinking as applied to experimental data and creative thinking about solving unresolved questions in cell biology. In this course students will read from journals to explore questions about cell biology and how cell biologists decipher cell functions. Instead of a general survey of cell biology, we delve into specific issues, often looking at ‘classic’ papers describing how a specific phenomenon was first investigated to place current questions in context before progressing to the latest publications exploring how innovative techniques have been applied to deciphering cell function. The course is divided into units, each of which emphasizes content in a different area. Actual content may vary from year to year as the course is updated to reflect progress in a field of research. We have previously explored the general areas of cell membrane dynamics, intracellular protein trafficking, cell cycle regulation, cell signaling pathways and cancer cell biology. Finally, the course ends with a unit on stem cells and therapeutic cloning technology. A portion of the final unit is also devoted to discussing the ethical implications of stem cell research with an emphasis on how to make personal decisions about how our society should address these issues. Reading guides are provided for each assignment to help students find and understand important points in reading assignments. Class periods are devoted to explanations and instructor-led discussions about the readings with an emphasis on understanding the questions, the methods used to approach the questions, the experimental results and the interpretations of the results. Furthermore, periodic class periods are dedicated to experimental approach exercises where students work in groups to practice posing new questions as suggested by our readings and proposing experiments to answer these questions. These skills are vital part of what cell biologists do daily, and these exercises provide practice in thinking like a scientist. Students have previously reported that by taking this course they acquired the ability to read and understand the
primary literature and have gained an in-depth understanding about how to use various experimental techniques.

**Enforced Prerequisites at Enrollment:** BMB 252 or MICRB 252 or BMB 252H or BIOL 230W or BIOL 230M
Cross-listed with: BMB 460

**MICRB 480: Cancer Development and Progression**
3 Credits

BMB 480 / MICRB 480 Cancer Development and Progression (3) explores how cancer initiates and progresses with a focus on the interactions between tumor cells and normal tissues in the body. The goal of the course is to build fundamental knowledge of the mechanisms that drive cancer, and the current advances and challenges in cancer treatment. Genetic, biochemical, mechanical, and metabolic aspects of cancer will all be discussed along with relevant experimental techniques. RNA and DNA viruses that cause cancer will be highlighted as agents leading to the discovery of oncogene and tumor suppressor signaling pathways, and as ongoing contributors to cancer-related death. Significant attention will be given to the role of the immune system in cancer development, prevention, and treatment. By understanding mechanisms leading to the disruption of signaling pathways in cancer, students will develop a framework of how hallmark features of cancer arise and what corresponding therapeutic strategies have been developed to target them. Students are expected to participate in lectures and take part in discussion and analysis of scientific literature. This course applies core concepts from genetics, biochemistry, and cell biology to the study of cancer and provides a useful foundation for students interested in pursuing related graduate research or medical studies.

**Enforced Prerequisites at Enrollment:** (BMB 252 or MICRB 252 or BMB 252H or BIOL 230W or BIOL 230M) and (BIOL 222 or BIOL 322)

**RECOMMENDED PREPARATIONS MICRB 410 and BMB 460 and MICRB 415**

Cross-listed with: BMB 480

**MICRB 496: Independent Studies**
1-18 Credits/Maximum of 18

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**MICRB 497: Special Topics**
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**MICRB 499: Foreign Studies**
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

---

**Mineral Processing (MNPR)**

**MNPR 301: Elements of Mineral Processing**
3 Credits

Introduction to mineral process engineering. Sampling, sizing, comminution, physical and chemical processes, applications to industrial practice. Pollution control.

**Enforced Prerequisite at Enrollment:** (CHEM 110 or CHEM 106) and MATH 141

**MNPR 401: Mineral Process Engineering**
3 Credits

Unit operations for processing particulate materials: comminution, screening, classification, slurry pumping, thickening, filtration, etc.; application to mineral processing plant design.

**Enforced Prerequisite at Enrollment:** MNPR 301 and (MATH 250 or MATH 251)

**MNPR 401H: Mineral Process Engineering**
3 Credits

Unit operations for processing particulate materials: comminution, screening, classification, slurry pumping, thickening, filtration, etc.; application to mineral processing plant design.

Honors

**MNPR 413: Mineral Processing Laboratory**
1 Credits

A laboratory study of the chemical and physical principles involved in practical mineral processing operations.

**Enforced Prerequisite or Concurrent at Enrollment:** MNPR 301

**MNPR 426: Aqueous Processing**
3 Credits

A study of the chemical and engineering principles pertinent to metal processing in aqueous systems: hydrometallurgical extraction, plating, materials preparation. MATSE (MN PR) 426 Aqueous Processing (3) This 3-credit course deals with the chemical and engineering principles underlying the aqueous processing of metals: metal extraction from primary and secondary sources, electroplating, and metal finishing, powder synthesis, energy storage and conversion, and treatment of recycling of metal-containing toxic wastes.1. Physico-Chemical Principles - Thermodynamic, chemical kinetic and transport factors which control hydrochemical processes (leaching; precipitation; adsorption; solvent extraction; ion exchange; electrowinning, electrorefining and electroplating; membrane processes; energy storage and conversion); graphical representation of homogeneous and solid/solution equilibria; chemical reagents.2. Engineering Principles - Reactor design and staged operations; ideal batch, continuous stirred-tank and plug-flow reactors; fluidized bed reactors; electrochemical reactors; multistage separation processes (solid-liquid, liquid-liquid, and gas-liquid systems).3. Process Synthesis - Design of metal separation (extraction, refining, waste treatment) materials synthesis, metal finishing, and energy
storage/conversion processes and system-integration of unit operations, industrial practice. Emphasis on closing circuits to minimize or eliminate waste effluents.

**Enforced Prerequisite at Enrollment:** EME 301 or MATSE 401

Cross-listed with: MATSE 426

MNPR 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**Mining (MNG)**

MNG 223: Mineral Land and Mine Surveying

2 Credits

Surveying theory and practice applied to mineral lands and mines, traversing, leveling, mapping, underground surveying, microcomputer drafting and graphics. MNG 223 Mineral Land and Mine Surveying (2)

The objective of this course is to introduce students to mine surveying principles, techniques, and products. Topics covered include a brief history of surveying; a brief review of trigonometry and related math needed in applications; review and application of AutoCAD needed for completing assignments; review of coordinate systems in the U.S.; discussion of types of measurements, units, and conversions that will be done; methods for doing the different types of measurements; introduction of surveying equipment and how to operate them; and use of GPS, laser scanning, 3-D imaging and photogrammetric systems. Laboratory assignments emphasize learning by doing, where students perform basic surveying functions by performing field surveying on campus and at a nearby mine, and then perform necessary calculations and plotting. Students will learn about various measurement methods and devices, error calculations, performing field surveying for topographic mapping, construction control, and volume/area measurement in surface and underground environment.

**Prerequisite:** 2nd semester standing; 1/2 unit of secondary school trigonometry

MNG 230: Introduction to Mining Engineering

3 Credits

Examination, development, and exploitation of mineral deposits; mining methods; unit operations; mining equipment; fundamentals of explosives.

MNG 302: Mine Electrical Systems

3 Credits

The infrastructure of mines includes power systems, communication and tracking systems, and monitoring systems. Larger surface and underground mines often have power systems of similar size and complexity to a large town, but with additional engineering challenges created by the need to move the power system as mining advances, the confined spaces of underground mines, and the possible presence of combustible ores or explosive gases. Specialized communication systems are required in many underground mines because radio waves propagate poorly in these spaces. Personnel tracking systems are sometimes used to provide location information for all miners. Mine-wide monitoring systems are becoming increasingly common to improve personnel safety and equipment maintainability. In total, these mine electrical systems are a vital component of modern mines. Mining engineers take the lead role in the design and specification of these systems, just as they would for the materials handling, ventilation, and other ancillary systems of the mine. The goal of this course is to develop the necessary knowledge and engineering skills so that this work can be performed in a competent and safe manner. Circuit laws and network theorems are reviewed and the analysis of circuits is presented. The use of phasors and impedance diagrams, and the concepts of complex power and the power triangle are introduced. Models for two and three-winding transformers are presented, and the fundamental electromechanical concepts for motors and generators are given. The analysis of balanced three-phase is studied. Next, the basic concepts of power system protection are addressed. Grounding, ground bed design, and related topics are presented. Shock, fire, and explosion hazards are an everyday concern in mines, and the basic approaches for mitigating these hazards are covered. Distribution and utilization system arrangements, and the typical equipment for providing power within mines, are studied. Case studies from surface and underground mines are used to illustrate the concepts. The role of load flow and fault analyses in the design and operation of mine power systems is explained, and these concepts are applied using software tools. The application fundamentals of communications, tracking, and monitoring systems are presented, along with their operational advantages and limitations. The course culminates in a final project in which the mine electrical systems for a specific mine are designed.

**Prerequisites:** PHYS 212

MNG 331: Rock Mechanics

3 Credits

Ground stresses, laboratory rock properties, laboratory and field instrumentation, rock mass characteristics, subsidence, slope stability, design of mine workings. MNG 331 Rock Mechanics (3)

This course was designed to introduce the student to the subject of rock mechanics. It includes an introduction to experimental stress analysis, the physical properties of rock, underground stresses, laboratory and field instrumentation, model studies, rock mass properties, and the discussion of a number of rock mechanics field applications associated with mining, petroleum and civil engineering, and geoscience. A technical paper written on some field related to the laboratory and/or theoretical aspect of rock mechanics is required. A series of eight laboratory sessions are included. These give the students hands-on experience relative to the concepts and instrumentation problems discussed in lectures.

**Prerequisite:** E MCH210

MNG 401: Introduction to Mining Operations

1 Credits

An introduction to underground and surface mining methods; selection of extraction equipment; relevant auxiliary operations. Not intended for Mining Engineering majors.

**Prerequisite:** E MCH211

MNG 404: Mine Materials Handling Systems

2 Credits/Maximum of 2

The objective of this course is to provide students with the basic principles and methodology involved in design of material handling.
systems used in the mining industry. The course will cover various types of material handling methods and equipment including continuous and cyclic loading and transportation systems. The course will review surface mining equipment including loaders, shovels, draglines, trucks, rail, dozers and scrapers. It will also discuss underground mining and various equipment such as loaders, rail, shuttle cars and coal haulers, panel conveyance and vertical transportation including hoisting and vertical conveyors. The design approaches will be discussed including the calculation of cycles, capacity of the system and equipment selection.

**Prerequisite:** MNG 230

MNG 410: Underground Mining

3 Credits

Underground mine design; extraction techniques; description of auxiliary operations as they relate to the mining methods. MNG 410 Underground Mining (3) The purpose of this course is to describe the logic and discuss the steps taken in the planning and design of an underground mine. Since every underground mine incorporates a unique combination of technological, economic, legal, social, and environmental factors, the course will stress the auxiliary operations (ventilation, ground control, etc.) which must be accommodated, as well as the unit operations and equipment dealing with resource extraction.

**Prerequisite:** MNG 404, MNG 422, MNG 331

MNG 410H: Underground Coal Extraction

2 Credits

Underground coal-mine design; extraction techniques; description of the various auxiliary operations as they relate to the mining methods.

Honors

MNG 411: Mine Systems Engineering

2 Credits

Applied operations research and systems methods for decision making in mine operations; time and systems studies to improve productivity.

**Prerequisite:** MNG 404

MNG 412: Mineral Property Evaluation

3 Credits

Ore reserve estimation using statistics and geostatistics, mine cost estimation, engineering economy concepts applied to mineral deposits.

**Prerequisite:** MNG 030

MNG 422: Mine Ventilation and Air Conditioning

3 Credits

Quality, quantity, and temperature-humidity control of the mine atmosphere; general mine environmental control.

**Prerequisite:** C E 360, MNG 030. Prerequisite or concurrent: M E 300

MNG 441: Surface Mining Systems and Design

3 Credits

Design of surface mining for noncoal and coal minerals; emphasis on quarry and strip mining planning parameters: unit operations, systems, haulroads, draglines, spoil stability, reclamation, legal requirements, and health and safety.

**Prerequisite:** MN PR301, MNG 030

MNG 451W: Mining Engineering Project

1-5 Credits/Maximum of 5

Independent and integrative design and report of specific mine evaluation, layout, equipment selection, environmental control, permitting, and financial analysis.

**Prerequisite:** MNG 331, MNG 404, MNG 412, MNG 422 Concurrent: MNG 410 MNG 441

Writing Across the Curriculum

MNG 494H: Thesis Research

1-6 Credits/Maximum of 6

Independent research under the supervision of the Mining Engineering program.

**Prerequisite:** prior approval of program

Honors

MNG 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

**Mining Technology (MNGT)**

MNGT 100: Mining Technology Orientation

1 Credits

Introduction to the underground mining industry including history, terminology, current mining equipment and methods, regulations, organization. MNG T 100 Mining Technology Orientation (1) ‘Mining Technology Orientation’ is a first semester introduction to the underground mining industry from past to present. The student will be introduced to basic mining systems and their evolution over the last century. Mining terminology and its unique application will be discussed. The impact of mining regulations will be reviewed. Possible career paths and the organization of mining companies will be included in this orientation. Visits producing coal mines will be required. Students who successfully complete this course will be able to: a. Discuss changes in mining methods over the years. b. Demonstrate knowledge of terminology used in mining industry. c. Explain how state and federal regulations impact mine operation. d. List several career options in mining, and the skills required by each.
MNGT 110: Mining Administration and Law

3 Credits

Introduction to mine organization and management structure, and government regulations regarding permitting, reporting and recordkeeping. MNG T 110 Mining Administration and Law is a second semester course that provides a framework for the student to understand the mine organization and management structure and organization. It will also introduce the student to the state and federal regulations regarding permitting, reporting, and record keeping. This course provides a background for and is a prerequisite for MNG T 216. Students who successfully complete this course will be able to: a. Explain the basic organization of a mining operation from the general superintendent to the laborer. b. Know and understand the basic concepts of a safety program. c. Use and apply accident analysis statistics to further improve a safety program. d. Discuss the development of rules and regulations with focus on those that impact the first line supervisor. e. Understand the process for promulgating new rules and regulations. f. Demonstrate basic management techniques that a first line supervisor will use in performance of his/her job.

MNGT 202: Mining Ventilation

3 Credits/Maximum of 3

Introduction to mine ventilation systems at mine face, mine gases and use of gas detection equipment, state and federal regulations. MNG T 202 Mining Ventilation is an introduction course in mine ventilation systems, equipment and mine gases for students in the productions emphasis only. The course will emphasize ventilation systems used in mining sections at the mine faces. Gas detection devices will be demonstrated and students will become proficient in their uses. The requirements of both state and federal regulations will be discussed and reviewed. General complete mine ventilation will be discussed. CHEM 011 provides a background in combustion and gas reactions, while PHYS 150 provides a background on the static and dynamic forces of moving air. This course requires MNG T 030 as a prerequisite to ensure that students have a basic understanding of background mining methods and equipment. Students who successfully complete this course will be able to: a. Explain role of ventilation in the mining environment. b. Explain and understand section ventilation and long-wall ventilation systems. c. Demonstrate proper use of instruments to measure air pressure, flow rate and air quality, and interpret measured results. d. Describe and interpret federal and state regulations related to mine ventilation. e. Understand ventilation mapping and explain how flow is affected by various mining methods. f. Explain ventilation flow through a mine complex. g. Know all of the mine gases.

Prerequisite: CHEM 101, PHYS 150, MNG T030

MNGT 204: Mine Plant Technology

3 Credits

Electrical, transportation, ventilation, and other systems required to operate underground coal mine, and to transport and process coal.

Prerequisite: PHYS 150

MNGT 205W: Mining Systems Technology

3 Credits

Comparison of mining methods with focus on preventative maintenance, coal transport, and estimating production and manpower needs. MNG T 205W Mining Systems Technology is a fourth semester course for students in the maintenance emphasis only and provides a background in the application of electric power and safety issues related to the installation and maintenance of circuits and various power control devices from the transformer to the mine face. MNG T 204 is a prerequisite to ensure students have a basic understanding of mine plant equipment. Students who successfully complete this course will be able to: a. Explain the application of AC and DC power in mining, their effect on motors, and the advantages and disadvantages of each. b. Use electrical equations to determine AC and DC power requirements, voltage, amperage, and power factor. c. Understand and use of electrical cables and battery power in the mining industry, the maintenance requirements of each, and the advantages and disadvantages of each. d. Read electrical wiring schematics and identify symbols. Be able to identify differences between schematic and actual wiring. e. Determine the maintenance and record keeping required for electrical face equipment to maintain permissible condition and regulatory compliance.

Prerequisite: MNG T204

MNGT 207: Electric Mine Machine Circuits

3 Credits

Application of electric power and safety issues related to the installation and maintenance of circuits and various power control devices. MNG T 207 Electric Mine Machine Circuits is a fourth semester course for students in the maintenance emphasis only and provides a background in the application of electric power and safety issues related to the installation and maintenance of circuits and various power control devices from the transformer to the mine face. MNG T 204 is a prerequisite to ensure students have a basic understanding of mine plant equipment. Students who successfully complete this course will be able to: a. Explain the application of AC and DC power in mining, their effect on motors, and the advantages and disadvantages of each. b. Use electrical equations to determine AC and DC power requirements, voltage, amperage, and power factor. c. Understand and use of electrical cables and battery power in the mining industry, the maintenance requirements of each, and the advantages and disadvantages of each. d. Read electrical wiring schematics and identify symbols. Be able to identify differences between schematic and actual wiring. e. Determine the maintenance and record keeping required for electrical face equipment to maintain permissible condition and regulatory compliance.

Prerequisite: MNG T204

MNGT 208: Mine Power Distribution

3 Credits

Topics of high voltage curcuits, underground transmission, power stations, power conversion, safety regulations and power devices. MNG T 208 Mine Power Distribution is a fourth semester course for students in the maintenance emphasis only and provides a background into how to distribute and adequately protect the high voltage electricity supply throughout the mining environment to serve the underground transformer for distribution to the variety of electrical systems used. MNG T 204 is a prerequisite to ensure students have a basic understanding of mine plant equipment. Students who successfully complete this course will be able to: a. Explain state and federal safety requirements in relation to high-voltage mine power systems. b. Calculate total power requirements for given section of connected equipment, including recommended sectionalizing equipment and overload settings. c. Demonstrate knowledge of typical mine power distribution systems, identify the key components and how they function. d. Examine the requirements for splicing and terminating high-voltage mine power cables, and effects of improperly made repairs.
Prerequisite: MNG T204

MNGT 209: Mine Machinery Control Methods

2 Credits

Basic principles and applications of solid state, variable frequency, PLC, electro hydraulic and networked controls in mine machinery. MNG T 209 Mine Machinery Control Methods (2) ‘Mine Machinery Control Methods’ is a third semester course for students in the Maintenance emphasis and provides information on the current methods used to operate and control the various driven functions of speed in rotating mining equipment. The interface between motors and computer controls, including the safety and automated interlocks will be covered. MNG T 030 is a required prerequisite to provide a technical functional understanding of the operation of the equipment being controlled. MATH 082 and PHYS 150 are required prerequisites to ensure that the students can perform the required performance calculations. Students who successfully complete this course will be able to: a. Investigate various types of networked controls, their function and capability, and list the advantages and disadvantages of each. b. Explain the applicable state and federal regulations related to low, medium, and high voltage systems. c. Troubleshoot various types of control circuits to identify faulty wiring, components, or software. d. Demonstrate ability to install software, set operating parameters, default values, and recommend adjustments to optimize system reliability. e. Investigate the ramifications of automated systems in the underground environment, both positive and negative.

Prerequisite: PHYS 150, MNG T030, MATH 082

MNGT 210: Mine Machine Dynamics

3 Credits

Operation and interaction of mechanized equipment used at the coal face including common electrical, hydraulic and mechanical systems.

Prerequisite: PHYS 150

MNGT 211: Practicum in Mining Technology

3 Credits

Field and shop techniques in procedures of electrical, mechanical and ventilation phases of mine maintenance MNG T 211 Practicum in Mining Technology (3) ‘Practicum in Mining Technology’ is a fourth semester course that provides students with the practical application of modern equipment and techniques used during the installation, relocation, and repair of complex mining equipment and systems as they are applied in the underground environment. MNG T 204 is a prerequisite to ensure students have a basic understanding of mine plant equipment. Students who successfully complete this course will be able to: a. Plan the installation of all equipment required to successfully install a complete continuous miner section. b. Plan the successful relocation of a modern long-wall mining section from a completed panel to a new panel. c. Demonstrate an ability to conduct or supervise the safe repair of low, medium, and high-voltage equipment in compliance with all regulatory requirements. d. Explain and demonstrate how to safely troubleshoot and/or repair high-pressure mine hydraulic systems. e. Discuss and demonstrate the steps required to conduct ox-acetylene and electric arc-welding repair of equipment in compliance with regulatory requirements. f. Practice the application and safe operation of manual lifting aides and devices used to facilitate the repair of large mining components.

Prerequisite: MNG T204

MNGT 213: Strata Control Methods

3 Credits

Introduce pillar-design parameters, roof control planning, roof bolting, standing supports, rib stability, floor condition problems, and longwall strata control. MNGT 213 Strata Control Methods (3) Strata Control Methods is designed to introduce pillar-design parameters, roof control planning, roof bolting, standing supports, rib stability, floor condition problems, and longwall strata control in the Mining Environment. Pillar-design parameters, take into account the structural geology features related to mining. The impact of Geologic Data being extremely useful in assessing mining conditions and aiding in indicating necessary control measures to be taken with increased width, destructive stresses resulting in failure may be produced in the mine roof, bottom, and pillars causing serious limitations on pillar width. The effects of pillar design by incorporating Pillar Collapse through Failure Characteristics, Failure Mechanisms, and Failure Prevention, and the impact that may be contributed to Coal Bumps and Gas Outbursts. A review of the basic strata control theories and applications which incorporates Environmental Impacts of both Subsidence and Reclamation. Roof Control Planning reviews the strata control theories and applications by introducing the inter-related system of the mines roof, ribs and floor. The introduction of roof control theory and fundamentals with emphasis placed on ground control being a three part process of proper sizing of openings, proper sizing of pillars and selection of proper artificial supports. Also, within the element of roof control planning, MSHA requirements are introduced and incorporated. Roof Bolting and Standing Supports are brought to the forefront while maintaining an understanding of the three mechanisms of roof bolting which are: Beam Building, Suspension and Keying. Depending on conditions and applications, bolting may range from resin-anchored combination bolts, tensioned rebar, mechanically-anchored resin-assisted systems, cable bolts, and other specialty supplemental supports. The applications of standing supports are discussed in roof support planning as they are used either as remedial measures or throughout gate roads where bolting systems must be coupled with roof-to-floor supports.Rib Stability and Floor Condition Problems are addressed through rib stabilization methods and proper support installation along with floor condition problems, prevention and control. With the sources of Roof/Rib Hazards in Underground coal mines being associated with the two broad categories being Natural and Mining Related, Geologic hazards and high stresses associated with deep cover are addressed allowing for appropriate action to be identified and proper supports to be utilized. Longwall Strata Control theories and methods are discussed as they require special precautions to be taken in response to the elevated stress levels encountered. This is done through properly designed gate entry chain pillars to achieve roof/floor stability and mitigate bumps. Also, included are shields as roof support mechanisms and guarding installation on longwall equipment.

Prerequisite: GEOSC020

MNGT 214: Mining Management I

3 Credits

Leadership skill development for supervisors, managing change, tools to plan, organize, control, communicate and monitor effectively. MNG T 214 Mining Management I (3) ‘Mine Management I’ will provide students with the introductory skills for individual, group and one-on-one leadership skills to keep up with evolving management roles and responsibilities.
This course will explore how supervisors can maintain technical expertise while demonstrating effective leadership. This process includes the tools supervisors use to plan, organize, control, communicate and monitor effectively. This course serves as a prerequisite to MNG T 215. Students who successfully complete this course will be able to:

a. Succeed in a rapidly changing environment.
b. Plan, organize, communicate and monitor.
c. Apply the most appropriate supervisory style to individuals and situations.
d. Apply appropriate motivational techniques.
e. Use delegation for effective employee performance and development, time management, and motivation.
f. Create an action plan.
g. Develop interpersonal skills that help communicate, listen, and handle conflicts.
h. Analyze their own behavior style and recognize strengths and weaknesses.
i. Given a labor situation, describe a plan of action toward resolution.
j. Identify the characteristics of A & B personalities and explain how they might be managed differently.
k. Explain a given organizational chart and the focus and function at different management levels.
l. Given an emergency situation at a mining operation, recommend a hypothetical course of action to avoid loss of life and personal injury, and minimize impact on production capability and reserves.

MNG T 215: Mining Management II

3 Credits

Financial management, effective meeting management, critical thinking, project management and cost and risk control. MNG T 215 Mining Management II (3) ‘Mine Management If’ is a follow-up to Mine Management I (Mining Technology 214) for students in production emphasis only. The primary goals of the course are to further explore and develop management skills to be an effective leader in an ever-changing industry. This process includes financial management, effective meeting management, critical thinking, project management and cost and risk control. Students who successfully complete this course will be able to:

a. Get a firm grasp of the financial side of the job.
b. Understand the business dynamics of dollars and cents.
c. Set and meet goals for your projects.
d. Understand the principles of process management.
e. Apply process management to process issues and customer satisfaction.
f. Reduce the need for crisis supplies.
g. Identify the actions/approaches you can take to avoid or mitigate risk.
h. Build the trust and rapport necessary for effective coaching.
i. Effectively conduct meetings.
j. Interpret typical income and expense balance sheets.
k. Produce preliminary cost estimate (+/- 10%) for given application.
l. Demonstrate appropriate oral and written communication skills.
m. Prepare hypothetical request for capital improvements required to maintain or improve productivity, complete with financial justification.

Prerequisite: MNG T214

MNGT 216: Mine Regulations and Laws

3 Credits

State and federal mining regulations and application to underground coal mines. Relationship with company policies and consequences of non-compliance. MNG T 216 ‘Mine Regulations and Laws’ (3) ‘Mine Regulations and Laws’ is a fourth semester course that builds on the knowledge gained in the prerequisite, MNG T 110, by providing more advanced study into state and federal regulations and company policies regarding equipment and electrical inspection, personnel safety and egress, and measurement of related environmental conditions within the mine. This class includes discussions on the interaction of state and federal regulation and the conflicts created by applying each. The consequences of non-compliance are also discussed. Students who successfully complete this course will be able to:

a. This course is designed to familiarize the student with the applicable underground coal mining regulations and how they are interpreted and enforced.
b. For a specified situation, find and interpret appropriate sections of PA Bituminous Coal Mining Act.
c. Develop and evaluate alternative solutions to a proposed regulatory issue.
d. Conduct a discussion with a mining inspector, in regards to a violation and potential monetary penalty.

Prerequisite: MNG T110

Music (MUSIC)

MUSIC 4: Film Music

3 Credits

An introductory examination of music’s role in Hollywood narrative film from the classic era (1930s and 1940s) to the present. MUSIC 4 Film Music (3) (GA) The course examines the role of music in narrative film, the premier art form of the twentieth and twenty-first centuries. The popularity, significance, and value of film art would not be what it is today if music had not become an integral—indeed, indispensable—part of motion pictures from the outset. Preliminary objectives will include basic musical information (the fundamental elements of music; the broad stylistic eras of western music and their associated characteristics; the culturally encoded language of tonal music and associated musical meaning) and the main techniques of narrative film. The main objectives of the course are: to identify and recognize the principles of nondiegetic music in narrative film; to identify and recognize the purpose and functions of music in narrative film; to recognize some of the historic eras/genres/trends in Hollywood film making; to identify and recognize selected films, directors and composers; to analyze and articulate the role of music in a given scene and in a given film; and to recognize underlying assumptions and values of the culture conveyed through the diegesis. These objectives will be met by addressing such questions as: What are the underlying principles of music in film? What are the functions of music/sound within a particular scene and how does it achieve those functions? What do we see of what we hear, and what do we hear of what we see—and why? What secrets does music tell? To what extent does music influence—even control—our interpretation of a film? More broadly, to what extent do films reflect our culture, past and present—our interests, our values?

GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

MUSIC 5: An Introduction to Western Music

3 Credits

MUSIC 5 is a course on listening, with emphasis on the relationship between musical style and historical context. Students will learn the basic skills of informed music-listening: how to hear and describe melody (phrase structure; motive; developmental strategies), harmony (the basic principles of the tonal system), rhythm (meter, tempo, and their application), timbre (including a full knowledge of the instrumental families [strings, winds, brass, percussion] and voice types), and texture (monophony, homophony, polyphony). Students will also become familiar with the eras of western musical history, and to consider relationships between musical style and non-musical developments (e.g.
the intellectual environment of the Enlightenment and the Classical style in music). The course begins with an introduction to the elements of music. The goal of this section is to give all students, whether or not they have previous experience as performers, the basic skills necessary to approach any musical work as informed listeners. This activity takes four weeks. The remaining portion of the course is spent surveying the history of western music, with that history treated as a series of case studies: particular works are considered stylistically but also with regard to the historical circumstances of their production and consumption. From this activity students gain experience considering artworks in discipline-specific terms, even as they learn to relate particular artistic features to non-musical factors of culture and society. Two methods of evaluation are used. Examinations (the number determined by the instructor) test the students’ mastery of the course material. Concert reports (again in a number determined by the instructor) give students the opportunity to apply that knowledge to the act of listening in an authentic performance setting. Ample time is provided in lectures for questions and discussion of the course material and of repertoire and issues suggested by the students.

Bachelor of Arts: Arts
General Education: Arts (GA)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

MUSIC 7: Evolution of Jazz

3 Credits

Study of the origins and development of jazz as an art form. MUSIC 7 Evolution of Jazz (3) (GA;US)(BA) This course meets the Bachelor of Arts degree requirements. Evolution of Jazz is a course designed to examine the historical and sociological aspects of the American art form jazz. This general education course is for non-music majors. The material covered in this course begins with the precursors of jazz and then emphasizes the African American musical traditions and white American (initially European) influences that have shaped jazz as an American art form. This is followed by period studies of the various jazz styles: New Orleans Dixieland, Chicago Style, Swing, Bebop, Cool, Hard Bop, Modal Jazz, Free Jazz, Fusion Jazz, Neo-Bop, Latin Jazz, and the globalization of jazz. The various jazz styles are examined from musical, sociological, and economical perspectives. The major innovators and performers are identified and studied. As new styles are presented, a careful comparison to the previous style is done to help with classification. A major component of the course is listening. Early in the course listening skills are taught. Students learn how to recognize certain instruments, hear the various sections within a group, and identify forms. Evaluation methods may include quizzes, tests, open forums, discussion boards, a live jazz concert review, and a reflection paper. Students will receive GA credit for this course, as well as US designation. The course will not satisfy any requirements for the major or minor in music. For in-class sections of MUSIC 7, the course requires high-quality audio playback equipment, computer/projection, and keyboard/piano availability. For those sections of MUSIC 7 offered online, all pieces, excerpts, examples, videos, and texts will be made available to students online.

GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

MUSIC 8: Rudiments of Music

3 Credits

Introduction to the elements of music: notation, scales, meter, rhythm, intervals; basic chord structure, cadences. MUSIC 8 Rudiments of Music (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. Learning the rudiments of music can be compared to the learning of a language. Students must learn to hear melodic, harmonic, and rhythmic patterns (audiation) before they sing, play or write in notation. In this introductory class, students are introduced to melodic, harmonic and rhythmic patterns by imitating the instructor who establishes these patterns at the piano, or by singing or as in the case of rhythm by striking a drum head. Eventually students will take turns ‘tossing’ these patterns to teach other. Basic skills of improvisation can also be taught at this level of audiation by having students expand upon the basic patterns. As a result of these creative and aesthetic experiences, students will be able to translate the audiation of patterns into musical notation - moving from the smallest unit of a rhythmic motive towards the creation of a coherent rhythmic phrase. Similarly, at the melodic level, the student will begin with intervallic patterns and move towards the creation of a coherent melodic phrase. Intervals are then combined vertically to form harmonies. At the next stage of learning, students will learn to identify and to write that which they are hearing in dictation. This course in ‘musical literacy’ enables students: (1) to deepen their appreciation of music (2) to begin studying a musical instrument and (3) to enter the rigorous study of music theory required of music majors.

GenEd Learning Objective: Key Literacies

MUSIC 8H: Rudiments of Music Honors

3 Credits

Introduction to the elements of music: notation, scales, meter, rhythm, intervals; basic chord structure.

Bachelor of Arts: Arts
General Education: Arts (GA)
Honors

MUSIC 9: Introduction to World Music

3 Credits

This course introduces students to the study of world music as a cultural phenomenon through an examination of the music of Asia, Africa, West Asia, the Americas, and European folk. The course begins with an introduction to methods of examining world music and reframes the study of music as a cultural phenomenon, comprised not only of the music itself but also behavior and conception. This approach helps students move beyond their preconceived understanding of music in order to open their ears and minds to a wide variety of music and cultural concepts, forming the basis for the case studies that follow. The remainder of the course focuses on cultural conceptions of music, examined through the lens of a selection of case studies, including, but
not limited to, the music of the Celtic nations, the African continent, Central and West Asia, India, Indonesia, Japan, and the Native American culture groups. The music of these cultures is explored both as a product and reflection of culture and as an aesthetic art form. Through this approach, students not only develop a basic fluency in the characteristics of selected world musics but also gain a broader understanding of the general classifications and geographical divisions of world music and the ways in which music relates to and is a part of all world cultures. Assigned analyses and a final project provide students with the opportunity to explore particular types of world music not covered in the lessons in greater depth, examining both the music itself and the social context in which it is found. These analyses require students to think actively about contemporary musical developments around the world, including how they are affected by current socio-political events and cultural trends. World musics are best understood when students engage in the music and in discussions of the music and culture; thus there is also a class participation/discussion component for the purposes of evaluation. The course utilizes an interactive, multimedia online curriculum, including video-recorded performances, audio examples, and music notation files. The text and all musical examples are available to students online. The course is available for GA credit and also meets the definition of an International Cultures course. It does not satisfy any requirements for the major or minor in music.

MUSIC 11: Under the Hood: How Classical Music Works

3 Credits

This course examines selected works from twenty of the greatest composers of Western art music, with emphasis on the baroque, classical and romantic eras. The curriculum combines aspects of two existing courses, Rudiments of Music (MUSIC 8) and Introduction to Western Music (MUSIC 5), and includes curricular links to INART 50Z. Preliminary objectives will include basic musical information associated with tonality (the fundamental elements of music; the broad stylistic eras of Western music and their associated characteristics). The main objectives of the course are: to explore techniques of tonal composition in detail, with an emphasis on conceptual understanding; to hear and recognize musical sounds and compositional devices within such comparative contexts as scales vs. modes, diatonic vs. chromatic, consonance vs. dissonance, polyphony vs. homophony; to hear and recognize fundamental harmonic relationships between tonic and dominant, as well as their importance in the formal design of tonal music; to enhance appreciation for classical music and to encourage attendance of live performances. Students will acquire knowledge of fundamental elements of music but not be required to learn to read or write notated music as fully as are students in MUSIC 8. Students will acquire knowledge of Western music history, but they will not study as many composers nor as many pieces as is customary in MUSIC 5. Instead, students will be drawn closer to a smaller number of works, and closer to the performances and the performers. Specific compositional devices (e.g., suspension, sequence, textures, rhythms, harmonies) will be highlighted in detail. Curricular links to INART 50Z will introduce students to the arithmetic relationships between pitches, intervals, and the underlying natural phenomena upon which they are based. These objectives will be met by utilizing an interactive, multimedia online curriculum, including demonstration videos by the author, a virtual keyboard and music notation files (e.g., Sibelius). An essential component of the online curriculum will be the inclusion of selected video-recorded performances, along with commentary from the performers. Twelve members of our performance faculty have been video-recorded in studio performance, allowing students a close-up view of a substantial portion of the repertoire to be examined. The course will be available for GA credit. It will not satisfy any requirements for the major or minor in music. All musical pieces and excerpts will be made available to students online.

MUSIC 40: First-Year Seminar in Music Education

1 Credits

Introduction to the University, the School of Music, the music education degree program, and the music teaching profession. MUSIC 040S First-Year Seminar in Music Education (1)(BA) This course meets the Bachelor of Arts degree requirements. This course is offered to music majors during their first semester who are intending to apply to the Teacher Certification Degree Program in Music Education. It provides prospective music teachers with an opportunity to: - learn about aspects of and opportunities available at the University in general. - learn about aspects of and opportunities available specifically at the PSU School of Music. - learn about the PSU music education curriculum and program. - gain a general understanding of the music teaching profession. - begin and develop a professional relationship with his/her advisor.

Bachelor of Arts: Arts
First-Year Seminar

MUSIC 50: Beginning Piano: Non-Music Major

1 Credits

Introduction to the keyboard, notation, chord progressions, transposition, improvisation, and simple accompanying techniques for the non-music major. An additional fee is required for this course. MUSIC 050 Beginning Piano: Non-Music Major (1) (GA)(BA) This course meets the Bachelor of Arts degree requirements. MUSIC 050 is a course designed to provide the beginning non-music major student with strategies for developing some of the basic skills required for playing the piano. No knowledge of music or piano is assumed and there are no prerequisites for the course. The course emphasizes strategies for learning to read and interpret musical notation from two clefs and musically realize the notation in real time with a healthy physical approach to the keyboard. Practice of these strategies outside the class is expected and checked. Objectives include learning to accurately sight-play a single voice divided between the hands with some extensions and shifts beyond a five-finger position. Special facilities required to teach the course include a 17-keyboard midi piano lab with visual displays for teacher demonstrations. The course is offered every semester, including summers, often with multiple sections.

Bachelor of Arts: Arts
General Education: Arts (GA)

MUSIC 51: Intermediate Class Piano: Non-Music Major

1 Credits

Instruction in harmonizing melodies, accompanying techniques, improvisation, and repertoire. MUSIC 051 Intermediate Class Piano: Non-Music Major (1) (GA)(BA) This course meets the Bachelor of Arts degree requirements. MUSIC 051 is course designed to provide the intermediate non-music major student with strategies for developing some of the advanced skills required for playing the piano. Some knowledge of music or piano is assumed and MUSIC 050 or a placement audition is a prerequisite for this course. The course emphasizes strategies for learning to read and interpret musical notation from two clefs and musically realize the notation in real time with a healthy physical approach to the keyboard. Practice of these strategies outside the class is expected and checked. Objectives include learning to accurately sight-play a multiple voice musical texture with many extensions and shifts beyond a five-finger position. Special facilities required to teach the course include a 17-keyboard midi piano lab with visual displays for teacher demonstrations. The course is offered every semester.

Prerequisite: MUSIC050 or placement audition
Bachelor of Arts: Arts
General Education: Arts (GA)

MUSIC 52: Voice Class: Non-Music Major

1 Credits

Group study emphasizing development of rudimentary skills and their recreational use in a range of popular and art music. MUSIC 052 Voice Class: Non-Music Major (1) (GA)(BA) This course meets the Bachelor of Arts degree requirements. This course is designed to present and apply basic principles of singing. Students learn songs, and address topics such as posture, breathing, tone production, expressiveness, and vocal health. Objectives are proficiency of breath management, a resonant vocal timbre, and effective communication in song. Evaluation is based on accuracy of music learning, improvement in technique and expressiveness, possible writing or listening assignments, and possible written quizzes. The course is offered every spring semester. The maximum enrollment is fifteen.

Bachelor of Arts: Arts
General Education: Arts (GA)

MUSIC 53: Class Voice Practicum

1 Credits

Voice study in group and individual formats, supervised by in-class lessons and discussions, enhanced by additional individual instruction with pedagogy students. MUSIC 053 Class Voice Practicum (1) (GA)(BA) This course meets the Bachelor of Arts degree requirements. MUSIC 053 is a voice class experience that affords the pupil instruction in a class setting and in individual lessons. The weekly class meetings feature either demonstration lessons with his or her teacher (from the voice pedagogy curriculum). These lessons give the instructor the opportunity to monitor the progress of the pupils, supervise and evaluate the teaching of the pedagogy students, and make suggestions for further growth. Pupils and pedagogy students also have the opportunity to learn by observing the demonstration lessons of others in the class. Lesson evaluation forms are completed and turned in at the end of each meeting. Class concerts typically occur at mid-term and at the end of the semester. These performances give the pupils the opportunity to display their vocal and musical progress. The individual lessons that pupils receive out-of-class give them an occasion for concentrated work in a more relaxed atmosphere. It may be of interest that this is the only course offering individual voice instruction in the School of Music that does not carry an additional applied music fee. In addition to the vocal and musical advancement for pupils in MUSIC 053, this course also serves as a progressive training ground in teaching for advanced voice students. They gain important teaching experience in a closely supervised forum.

Prerequisite: audition
Bachelor of Arts: Arts
General Education: Arts (GA)
MUSIC 54: Beginning Class Guitar: Non-Music Major

1 Credits

Class instruction in guitar for non-music majors. MUSIC 054 Beginning Class Guitar: Non-Music Major (1) (GA)(BA) This course meets the Bachelor of Arts degree requirements. This course provides opportunity to explore the structure of various styles of folk music while developing basic skills for playing guitar and reading guitar tablature. Meter, tonality, harmonic progressions, texture, and form as well as stylistic features of various strumming techniques comprise the core knowledge that is developed through the process of playing guitar. The course assumes no previous formal study of music. Assessments are performance-based with students demonstrating knowledge and skill acquired through individual 'playing tests' scheduled throughout the semester.

Bachelor of Arts: Arts
General Education: Arts (GA)

MUSIC 76: Chamber Orchestra

1 Credits/Maximum of 8

Chamber orchestra rehearsal and performance.

Prerequisite: audition
Bachelor of Arts: Arts

MUSIC 77: Philharmonic Orchestra

1 Credits/Maximum of 8

Orchestra rehearsal and performance. MUSIC 077 Philharmonic Orchestra (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. The goals of this course are to develop the instrumental performing skills, music reading abilities, and interpretive capabilities of the class members within a large symphonic orchestra context. The repertoire includes the standard literature from the 19th and 20th centuries as well as new music written for symphony orchestra. Students will be assessed by the use of performance evaluation and assessment of participation and contribution to established goals of the ensemble. The course is for students who have advanced performance skills on standard orchestral string, wind, and percussion instruments. An audition is required.

Prerequisite: audition
Bachelor of Arts: Arts
General Education: Arts (GA)

MUSIC 78: Symphonic Wind Ensemble

1 Credits/Maximum of 8

Rehearsal and performance of wind repertoire and concert band literature. MUSIC 78 Symphonic Wind Ensemble (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. The goals of this course are to develop the instrumental performing skills, music reading abilities, and interpretive capabilities of the class members within a wind ensemble (one player per part) concert band setting. The repertoire includes original concert band literature, transcriptions, and concert marches. The available literature covers a range of historical time periods from pre-Baroque to contemporary music written by living composers. Students are assessed by the use of performance evaluations, assessment of participation and contribution to established goals of the ensemble, and attendance at rehearsals and concerts. The course is designed for those students who have advanced performance skills on standard wind and percussion instruments. An audition is required.

Prerequisite: audition
Bachelor of Arts: Arts
General Education: Arts (GA)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

MUSIC 80: Symphonic Band

1 Credits/Maximum of 8

Rehearsal and performance of wind repertoire and concert band literature. MUSIC 80 Symphonic Band (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. The goals of this course are to develop the instrumental performance skills, music reading abilities, and interpretive capabilities of the class members within a full concert band setting. The repertoire includes original concert band literature, transcriptions, and concert marches. The available literature covers a range of historical time periods from pre-Baroque to contemporary music written by living composers. Students are assessed by the use of performance evaluations, assessment of participation and contribution to established goals of the ensemble, and attendance at rehearsal sand concerts. The course is designed for those students who have advanced performance skills on standard wind and percussion instruments. An audition is required.

Prerequisite: audition
Bachelor of Arts: Arts
General Education: Arts (GA)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

MUSIC 81: Marching Blue Band

1 Credits/Maximum of 4

Rehearsal and performance of appropriate music and maneuvers for football games and related events. MUSIC 81 Marching Blue Band (1 per semester/maximum of 4) (GA)(BA) This course meets the Bachelor of Arts degree requirements. This course develops the instrumental
performance skills and marching skills of class members within the marching band setting. Objectives are to combine high level musical and visual performance with uniform marching style to create interesting and entertaining maneuvers suitable for parades, football games, and other athletic/outdoor venues. This course is open to students in all majors. Evaluation is based upon participation, achievement of individual music and marching performance requirements, and contribution to group performance goals. An audition is required for participation. Class meetings occur in an outdoor setting and require a facility with a fully lined football field. This course is offered every fall semester with an enrollment of 275.

**Prerequisite:** audition  
Bachelor of Arts: Arts  
General Education: Arts (GA)

**MUSIC 82: Concert Band**

1 Credits/Maximum of 8

Rehearsal and performance of concert band literature. MUSIC 82 Concert Band (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. The goals of the course are to develop the instrumental performance skills, music reading abilities, and interpretive capabilities of the class members within a moderately advanced large concert band setting. The repertoire includes original concert band literature, transcriptions, and concert marches. The available literature covers a range of historical time periods from pre-Baroque to the present. Students are assessed by the use of performance evaluations, assessment of participation and contribution to established goals of the ensemble, and attendance at rehearsals and concerts. The course is designed for those students who have moderate performance skills on standard wind and percussion instruments. An audition is required.

**Prerequisite:** audition  
Bachelor of Arts: Arts  
General Education: Arts (GA)

**GenEd Learning Objective:** Key Literacies  
**GenEd Learning Objective:** Crit and Analytical Think

**MUSIC 84: Jazz Ensemble**

1 Credits/Maximum of 8

Survey and performance of historic and contemporary big band styles. MUSIC 084 Jazz Ensemble (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. MUSIC 084, Jazz Ensemble, includes three sections - Centre Dimensions (001), Inner Dimensions (002), and Outer Dimension (003). These are performance groups of 1619 members each. Admission to the groups is by audition. Students are placed by ability level. The course consists of the study and performance of big band jazz from the mid 1920s to the present. Important composers of the idiom are routinely represented as well as newer contributors. There is a focus on ensemble group sound as well as individual solo improvisation. Part of the learning process includes working on the fundamentals of jazz playing, rhythm, articulation, and harmony. Each learning segment, or unit, is concluded with public performance of the music studied and learned. Section one, Centre Dimensions, represents the School of Music at collegiate jazz festivals as an advanced enhancement of the learning experience. Members are expected to learn their individual parts, attend sections and rehearsals, and participate in the performances. These courses are offered each fall and spring semester.

**Prerequisite:** audition  
Bachelor of Arts: Arts  
General Education: Arts (GA)

**MUSIC 86: Percussion Ensemble**

1 Credits/Maximum of 8

Study and performance of percussion chamber music in various instrumental combinations, focusing on the classical and contemporary repertoire. MUSIC 086 Percussion Ensemble (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. Percussion Ensemble involves the rehearsal and performance of works for various combinations of percussion instruments in a chamber music setting. It also involves the group study of the various percussion instruments and techniques as described by or demonstrated by the conductor of the ensemble (percussion faculty member). The objectives of the course are to teach the art of ensemble performing (i.e., performing music well in a collaborative sense rather than just individually), to augment the understanding of the role of percussion within the discipline of music, and to foster the skills of organization and cooperation through rehearsal and performance of music requiring (generally) three to twelve players. Due to the nature of this type of musical organization and given the wide variety and large number of instruments which may be involved at any given time, there is also an inherent study of logistics involved when setting up or moving the instruments from one venue to another. Students performing in Percussion Ensemble are generally also involved in performing in other larger heterogeneous instrumental performing groups such as the bands and orchestras. Skills learned in the Percussion Ensemble setting directly affect the ability of these students to contribute a highly developed sense of musical unity in the larger performing groups. They also learn specific skills which are necessary for successfully entry and acceptance into professional music performance circles. The course is offered each
semester and the enrollment is generally between eight and fifteen performers.

**Prerequisite:** audition
Bachelor of Arts: Arts
General Education: Arts (GA)

MUSIC 87: Mallet Ensemble
1 Credits

Study and performance of music for keyboard percussion instruments.

**Prerequisite:** audition
Bachelor of Arts: Arts

MUSIC 88: Campus Choir
1 Credits/Maximum of 8

Building skills needed for successful choral singing including vocal production, sight singing, ear training, and music fundamentals. MUSIC 088 Campus Choir (1) (GA)(BA) This course meets the Bachelor of Arts degree requirements. The goals of this course are to develop the vocal skills and sight-reading abilities of the class members within a choral context. The choral repertoire will include standard vocal and choral selections. Students will be assessed by the use of periodic quizzes and vocal performance examinations. The course is designed for those students who have an interest in choral singing but who have limited background. There is no audition necessary.

Bachelor of Arts: Arts
General Education: Arts (GA)

MUSIC 88H: Campus Choir
1 Credits/Maximum of 8

Building skills needed for successful choral singing including vocal production, sight singing, ear training, and music fundamentals. MUSIC 088 Campus Choir (1) (GA)(BA) This course meets the Bachelor of Arts degree requirements. The goals of this course are to develop the vocal skills and sight-reading abilities of the class members within a choral context. The choral repertoire will include standard vocal and choral selections. Students will be assessed by the use of periodic quizzes and vocal performance examinations. The course is designed for those students who have an interest in choral singing but who have limited background. There is no audition necessary.

Bachelor of Arts: Arts
General Education: Arts (GA)

MUSIC 89: University Choir
1 Credits/Maximum of 8

Rehearsal and performance of choral repertoire appropriate to mixed-voice ensemble of 100-150 voices. MUSIC 089 University Choir (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. The University Choir is the largest mixed-voiced ensemble on the University Park campus. The choir participates in two campus performances per semester and has toured Europe, Canada, and the eastern region of the United States. Membership is determined by audition and is open to both undergraduate and graduate students. The goal of the ensemble is to provide artistic, meaningful, and successful choral performances. To achieve this goal, the learning objectives for individual students include attention toward individual vocal development, increased musicianship skill, and the discovery of new means of artistic expression. In addition to these individual objectives, the conductor of the ensemble also teaches directly toward the objectives of ensemble tone, blend, balance, intonation, dynamics, diction, phrasing, etc. Grades are determined by a combination of vocal and musicianship assessments (both written and aural) and attendance at rehearsals and performances.

**Prerequisite:** audition
Bachelor of Arts: Arts
General Education: Arts (GA)

MUSIC 90: Glee Club
1 Credits/Maximum of 8

Rehearsal and performance of music composed for lower voices from the sixteenth to the twentieth centuries, including sacred and secular compositions. MUSIC 90 Glee Club (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. The Glee Club is an auditioned ensemble of 50-65 tenor/bass voices singing music from medieval chant to commissioned twenty-first century choral works. The Glee Club performs on campus at least once per semester, tours yearly and has performed throughout Pennsylvania, the United States, Europe and New Zealand. The goal of the ensemble is to provide artistic, meaningful, and successful choral performances. To achieve this goal, the learning objectives for individual students include attention toward individual vocal development, increased musicianship skill, and the discovery of new means of artistic expression. In addition to these individual objectives, the conductor of the ensemble also teaches directly toward the objectives of ensemble tone, blend, balance, intonation, dynamics, diction, phrasing, etc. Grades are determined by a combination of vocal and musicianship assessments (both written and aural) and attendance at rehearsals and performances.

**Prerequisite:** audition
Bachelor of Arts: Arts
General Education: Arts (GA)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

MUSIC 91: Oriana Singers
1 Credits/Maximum of 8

Rehearsal and performance of choral repertoire for treble voices from the sixteenth to twentieth centuries, including sacred and secular compositions. MUSIC 091 Oriana Singers (1.0 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. Oriana Singers was founded in 1994 to serve the musical needs of highly talented undergraduate and graduate women. The 65-voice ensemble performs repertoire representing every musical period, genre and style in its two campus concerts per semester. The choir has been invited to perform at prestigious regional and national music conferences and has participated in tours within the state of Pennsylvania. Membership is determined by audition. The goal of the ensemble is to provide artistic, meaningful, and successful choral performances. To achieve this goal, the learning objectives for individual students include attention toward...
individual vocal development, increased musicianship skill, and the
discovery of new means of artistic expression. In addition to these
individual objectives, the conductor of the ensemble also teaches directly
toward the objectives of ensemble tone, blend, balance, intonation,
dynamics, diction, phrasing, etc. Grades are determined by a combination
of vocal and musicianship assessments (both written and aural) and
attendance at rehearsals and performances.

Prerequisite: audition
Bachelor of Arts: Arts
General Education: Arts (GA)

MUSIC 92: Chamber Music for Voices
1 Credits/Maximum of 8

Select groups of singers performing choral chamber music. MUSIC 092
Chamber Music for Voices (3) (GA)(BA) This course meets the Bachelor
of Arts degree requirements. Chamber Music for Voices is a course which
includes four small auditioned chamber choirs comprising of members
of four large ensembles. The repertoire of these 9-16 member ensembles
is selected from a wide range of choral literature. Membership in Section
1 is open to Oriana Singers members; Section 2 is open to Glee Club
members; Section 3 is open to University Choir members; and Section
4 is open to Women's Chorale members. The goal of the ensembles is
to provide artistic, meaningful, and successful choral performances.
To achieve this goal, the learning objectives for individual students include
attention toward individual vocal development, increased musicianship
skill, discovery of new means of artistic expression, and the specific skills
necessary to sing in a small ensemble with only two or three singers per
voice part. In addition to these individual objectives, the conductor of the
ensemble also teaches directly toward the objectives of ensemble tone,
blend, balance, intonation, dynamics, diction, phrasing, etc. Grades are
determined by a combination of vocal and musicianship assessments
(both written and aural) and attendance at rehearsals and performances.

Prerequisite: audition
Bachelor of Arts: Arts
General Education: Arts (GA)

MUSIC 93: Essence of Joy
1 Credits/Maximum of 8

Rehearsal and performance of choral repertoire from the African/
American tradition. MUSIC 093 Essence of Joy (3) (GA;US;IL)(BA) This
course meets the Bachelor of Arts degree requirements. Essence of Joy
is a highly selective mixed choral ensemble that specializes in
repertoire written by African-Americans. The repertoire of the 45-voiced
ensemble includes all art, folk, and sacred genres within this large field of
study. Essence of Joy has performed at numerous prestigious national
and regional meetings of music educators and choral conductors. In
addition, the choir tours extensively and has presented performances
throughout Pennsylvania, the eastern region, the southern region, and
eastern Europe. Membership is open to undergraduate and graduate
students. The goal of the ensemble is to provide artistic, meaningful, and
successful choral performances of African-American choral music. To
achieve this goal, the learning objectives for individual students include
attention toward individual vocal development, increased musicianship
skill, and the discovery of new means of artistic expression. In addition
to these individual objectives, the conductor of the ensemble also
teaches directly toward the objectives of ensemble tone, blend, balance,
Bachelor of Arts: Arts

MUSIC 103: Concert Choir
1 Credits/Maximum of 8

Rehearsal and performance of choral repertoire appropriate to mixed-voice ensemble of approximately forty-five voices. MUSIC 103 Concert Choir (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. Repertoire is selected from a wide range of choral literature from medieval chant to commissioned twenty-first century choral works. Membership is open to undergraduate and graduate students. The goal of the ensemble is to provide artistic, meaningful, and successful choral performances. To achieve this goal, the learning objectives for individual students include attention toward individual vocal development, increased musicianship skill, and the discovery of new means of artistic expression. In addition to these individual objectives, the conductor of the ensemble also teaches directly toward the objectives of ensemble tone, blend, balance, intonation, dynamics, diction, phrasing, etc. Grades are determined by a combination of vocal and musicianship assessments (both written and aural) and attendance at rehearsals and performances.

Bachelor of Arts: Arts
General Education: Arts (GA)
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Critical and Analytical Thinking
GenEd Learning Objective: Effective Communication

MUSIC 104: Chamber Singers
1 Credits/Maximum of 8

Rehearsal and performance of choral repertoire appropriate to mixed-voice ensemble of approximately twenty-four voices. MUSIC 104 Chamber Singers (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. Chamber Singers is a premier chamber choir at the University. The repertoire of the 14-voiced ensemble is selected from a wide range of choral literature from medieval chant to commissioned twenty-first century choral works. Membership is open to undergraduate and graduate students. The goal of the ensemble is to provide artistic, meaningful, and successful choral performances. To achieve this goal, the learning objectives for individual students include attention toward individual vocal development, increased musicianship skill, and the discovery of new means of artistic expression. In addition to these individual objectives, the conductor of the ensemble also teaches directly toward the objectives of ensemble tone, blend, balance, intonation, dynamics, diction, phrasing, etc. Grades are determined by a combination of vocal and musicianship assessments (both written and aural) and attendance at rehearsals and performances.

GenEd Learning Objective: Critical and Analytical Thinking
GenEd Learning Objective: Effective Communication

MUSIC 106: Early Music Ensemble
1 Credits/Maximum of 8

Ensemble for the performance and study of Baroque or early music on instruments of the era. MUSIC 106 Early Music Ensemble (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. The Early Music Ensemble will meet for a single two-hour rehearsal each week. Extra rehearsals may be scheduled when circumstances warrant them, i.e., when visiting ensembles come to Penn State. Membership of the ensemble will remain essentially constant from one semester to the next. Vacancies arising when a student leaves or graduates will be filled as needed. It is integral to the ensemble’s activities that faculty and students perform alongside each other; thereby providing a unique learning opportunity for the students. A constant membership encourages performers’ understanding of early music performance practice. The ensemble will give concerts on campus. Off-campus performances may be considered outreach opportunities and as valuable experiences for the students.

Prerequisite: audition
Bachelor of Arts: Arts
General Education: Arts (GA)
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Critical and Analytical Thinking
GenEd Learning Objective: Effective Communication

MUSIC 109: The Music of the Beatles
3 Credits

The Beatles are the most significant musical group in the history of popular music. Their songs are derived from diverse sources, such as rhythm and blues, country and western, rockabilly, rock and roll, Motown, soul, folk rock, the British music hall, and the classical music traditions of Europe and India. MUSIC 109: The Music of the Beatles, an online course, will consider the music of the Fab Four by examining how John Lennon, Paul McCartney, and George Harrison developed as songwriters. Besides an exploration of the Beatles’ music, including the artists and styles of music that influenced them, this online course will include a study of the socio-cultural contexts from which the Fab Four emerged and in which they thrived. Finally, the course will introduce students to the fundamentals of music, as well as ways to integrate that knowledge with the interpretation of song texts.

Bachelor of Arts: Arts
General Education: Arts (GA)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Critical and Analytical Thinking
GenEd Learning Objective: Key Literacies

MUSIC 110: Keyboard Skills I: Music Major
1 Credits

Introduction to the keyboard, chord progressions, transposition, improvisation, and simple accompanying techniques.

Bachelor of Arts: Arts

MUSIC 112: Guitar Techniques I
0.5 Credits

Performance and teaching techniques for guitar. MUSIC 112 Guitar Techniques I (0.5)(BA) This course meets the Bachelor of Arts degree requirements. MUSIC 112 is offered for students who are tracking acceptance into the Teacher Education Degree Program in Music. The focus of the course is learning to play the guitar in order to accompany and learning techniques on how to teach the guitar in classroom settings. Topics include: beginning level guitar pedagogy, instrument care and maintenance, classroom structure and materials. The instructional format includes: performance, lecture, large and small group discussion, readings, and musical and teaching examples. Students complete several practical assignments, and present summations of small group
discussions. Two practice performances and a final playing and written exam are given.

Bachelor of Arts: Arts

MUSIC 113: Music Theatre—Class Voice I

1 Credits

Group study emphasizing development of sound vocal and musicianship skills fundamental for music theatre. This class is designed for freshman BFA Musical Theatre majors and freshman BFA Acting majors and is the start of a year long exploration of vocal musical production for the stage. The purpose of this class is to lay introductory foundations in singing techniques and skills currently required for a career in the theatre. Students become familiar with the basic concepts of voice production, as well developing an understanding and awareness of vocal health issues. Additionally, students are exposed to a variety of musical theatre and classical sung repertory while they are encouraged to develop perceptive listening skills by interacting and responding to their peers in class and other performers. In MUSIC 113, students are encouraged and required to develop an appreciation of all genres of sung performance from classical to contemporary. Another important element of the course is helping students develop the necessary vocabulary to respond in writing to vocal performance. Toward that goal, attendance at vocal events scheduled around campus and the community is required. These vocal events will include performances by professionals in many genres. Faculty will provide students with lists of approved events. To help students develop their music performance vocabulary, students are required to respond to some vocal events with written critiques. Aesthetically, students are encouraged to appreciate and practice vocal performance in a variety of stage genres. On the practical side, students learn effective practice skills, music reading, and appreciation of all areas of vocal performance. Students are evaluated based on readings, short writing assignments, evaluations of a number of memorized song performances, and classroom attendance and participation.

**Prerequisite:** Admission to BFA in Musical Theatre or BFA in Acting

Bachelor of Arts: Arts

MUSIC 114: Music Theatre—Class Voice II

1 Credits

Group study emphasizing development of sound vocal and musicianship skills fundamental for music theatre.

**Prerequisite:** MUSIC113

Bachelor of Arts: Arts

MUSIC 115: Beginning Voice Class

1 Credits

Class voice emphasizing the fundamentals of healthy singing technique. For Music Majors only. MUSIC 115 Beginning Voice Class (1) Intended for instrumental music education majors. Introduces instrumental music education majors to the basic skills of singing in preparation for MUSIC 116. Focus will be on intonation, tone production, breathing and posture, as well as rudimentary presentation and interpretation skills. Enrollment dependent upon the results of the voice proficiency exam and the recommendation of the music education and voice area faculties. Strongly suggested for the first semester of the music education degree.

Bachelor of Arts: Arts

MUSIC 116: Intermediate Voice Class

1 Credits/Maximum of 4

Class voice, emphasizing pedagogical experiences and techniques for public school music classrooms. For Music Majors only.

Bachelor of Arts: Arts

MUSIC 119: First-Year Music Seminar

2 Credits

Individual applied instruction and group activities; orientation, area recitals, and studio classes as required by instructor.

**Prerequisite:** permission of instructor

Bachelor of Arts: Arts

First-Year Seminar

MUSIC 121: Basic Musicianship I

1 Credits

Elementary sight singing and dictation.

**Prerequisite:** ability to reproduce simple rhythm and tonal patterns; Concurrent: MUSIC131

Bachelor of Arts: Arts

MUSIC 122: Basic Musicianship II

1 Credits

Continuation of Music 121.

**Prerequisite:** MUSIC121; Concurrent: MUSIC132

Bachelor of Arts: Arts

MUSIC 129S: First-Year Performance Seminar

3 Credits

Individual applied instruction and group activities; orientation, area recitals, and studio classes as required by instructor.

**Prerequisite:** permission of instructor

Bachelor of Arts: Arts

First-Year Seminar

MUSIC 131: Music Theory I

2 Credits

Review of rudiments; introduction to the fundamental linear and vertical features of tonal music, integration of written and aural skills.

**Prerequisite:** ability to read musical notation; knowledge of musical rudiments.; Concurrent: MUSIC121

Bachelor of Arts: Arts

MUSIC 131H: Music Theory I

2 Credits

Review of rudiments; introduction to the fundamental linear and vertical features of tonal music, integration of written and aural skills.
Honors

MUSIC 132: Music Theory II
2 Credits

Continuation of Music 131.

Prerequisite: MUSIC131; Concurrent: MUSIC122
Bachelor of Arts: Arts

MUSIC 151: Brass Techniques I
1 Credits

Introduction to basic performance techniques on brass instruments; teaching strategies and materials for use in a heterogeneous instrument setting. MUSIC 151 Brass Techniques I (1)(BA) This course meets the Bachelor of Arts degree requirements. Introduction to basic brass instrument performance techniques taught in a heterogeneous (mixed group of brass instruments) class setting. The course will provide students with basic introduction to embouchure formation, tone production, and executive skills on two brass instruments. Instructor and student modeled teaching strategies and methods for use in elementary school mixed instrument classes will be demonstrated. Published heterogeneous method books will be investigated and procedures for applying research-based tonal and rhythmic development activities to beginning instrumental instruction will be applied.

Bachelor of Arts: Arts

MUSIC 152: Percussion Techniques I
1 Credits

Introduction to basic performance techniques on percussion instruments; teaching strategies and materials for use in a heterogeneous instrument setting. MUSIC 152 Percussion Techniques I (1)(BA) This course meets the Bachelor of Arts degree requirements. Introduction to basic percussion instrument performance techniques. The course will provide students with a basic introduction to playing techniques for a variety of percussion instruments. Instructor and student modeled teaching strategies and methods for use in elementary and secondary school mixed instrument classes will be demonstrated. Published method books will be investigated.

Bachelor of Arts: Arts

MUSIC 153: String Techniques I
1 Credits

Performance techniques on stringed instruments for music education majors. MUSIC 153 String Techniques I (1)(BA) This course meets the Bachelor of Arts degree requirements. This course is required for students working toward entrance to the Bachelor of Music Education degree program. The purpose of the course is to allow students to develop proper performance techniques on two of the four orchestral bowed stringed instruments (violin, viola, cello, and double bass) at a sufficient level so that they can provide a desirable aural model for beginning and intermediate string students. Grades will be based on students’ musical achievement on the instruments. There will be two performance assessments (one midterm and one final) for each instrument during the course. Required repertoire lists and evaluation tools will be provided prior to all assessments. Students must receive a passing grade for both instruments in order to receive an overall passing grade for the course.

Bachelor of Arts: Arts

MUSIC 154: Woodwind Techniques I
1 Credits

Performance and teaching techniques for woodwind instruments. MUSIC 154 Woodwind Techniques I (1)(BA) This course meets the Bachelor of Arts degree requirements. This course is designed for students pursuing a degree in music education. Principles of teaching public school students to begin to play woodwind instruments will be covered and applied to the five woodwind instruments. Students will have the opportunity to perform on each instrument, and teach their peers using the principles of woodwind pedagogy and instrument-specific techniques. This course is a block of courses covering all band and orchestra instruments traditionally offered in public school music programs. Students can select to take more courses with more in-depth instruction on each instrument in order to further prepare them to teach the instruments in the public schools. Students will be advised to take such courses if their career goals include teaching band and/or orchestra in the public schools. Students will observe teaching techniques for teaching instrument-specific pedagogy through being students themselves. They will keep a journal of observed teaching techniques and instrument resources for future reference as a teacher. They will perform playing tests on their instrument to demonstrate proficiency on the instrument, and engage in peer-teaching activities to demonstrate understanding of pedagogical techniques. Music education majors will take this course as part of a sequence of music education courses. This course is offered as one of the early music education courses, and serves as a model and introduction for the pedagogical techniques and concepts the students will master in future courses.

Bachelor of Arts: Arts

MUSIC 162: Introduction to Music History
2 Credits

An introduction to Western music history and world music of selected cultures through the study of representative works. MUSIC 162 Introduction to Music History (2) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is an introduction to music history and world music. The course has four objectives: 1. to provide an overview of the different types of music that have prevailed in the West during the past 1500 years; 2. to introduce music from other parts of the world; 3. to examine the many ways that music has functioned in society; 4. to ‘stretch the students’ ears’ through exposure to a wide range of technical musical materials. The course serves as the first in a sequence of three music history courses taken by all music majors. Evaluation methods include written tests, listening tests, and class participation.

Concurrent: MUSIC132
Bachelor of Arts: Arts
International Cultures (IL)

MUSIC 170: Keyboard Skills II: Music Major
1 Credits

Instruction in secondary chord progressions, transposition, improvisation, accompanying techniques, simple score reading.
**Prerequisite:** MUSIC050, MUSIC110 or placement audition
Bachelor of Arts: Arts

**MUSIC 173: First-Year Composition Seminar**
2 Credits

Individual composition instruction for freshman composition majors (Fall semester) and group activities.

**Prerequisite:** admission to the BM degree in Composition
Bachelor of Arts: Arts
First-Year Seminar

**MUSIC 174: Composition II**
2 Credits

Composition instruction for first-year composition majors.
Bachelor of Arts: Arts

**MUSIC 181: Jazz Improvisation I**
2 Credits

A study of the fundamentals of jazz theory, harmonic functions, and their applications to jazz improvisation.

**Prerequisite:** MUSIC132
Bachelor of Arts: Arts

**MUSIC 182: Jazz Improvisation II**
2 Credits

A study of advanced harmonic concepts and their application to jazz improvisation.

**Prerequisite:** MUSIC181
Bachelor of Arts: Arts

**MUSIC 190: Chamber Music for Strings**
1 Credits/Maximum of 8

Preparation for performance of advanced chamber music literature involving primarily string instruments—string quartets, piano trios, clarinet quintets. MUSIC 190 Chamber Music for Strings (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. Chamber Music for Strings meets at least two hours per week - once with the instructor for coaching and at least once for an additional rehearsal without the instructor's presence. Course objectives include, but are not limited to, the development of rehearsal and ensemble skills, an increased awareness of musical styles, public performance(s) of works prepared, and the development of the interpersonal skills necessary for the players to operate as a unit. Chamber music is an integral part of instrumental musical training. It is an important partner with conducted ensembles in the performance preparation of musicians. Evaluation of student work is based on participation in rehearsals, the progress made by the ensemble, and the quality of the ensemble's performances. The course is offered during fall and spring semesters.

**Prerequisite:** permission of instructor
Bachelor of Arts: Arts
General Education: Arts (GA)

**MUSIC 191: Chamber Music for Woodwinds**
1 Credits/Maximum of 8

Preparation for performance of advanced chamber music literature involving primarily woodwind instruments—woodwind quintets and quartets. MUSIC 191 Chamber Music for Woodwinds (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. Chamber Music for Woodwinds meets at least two hours per week - once with the instructor for coaching and at least once for an additional rehearsal without the instructor's presence. Course objectives include, but are not limited to, the development of rehearsal and ensemble skills, an increased awareness of musical styles, public performance(s) of works prepared, and the development of the interpersonal skills necessary for the players to operate as a unit. Chamber music is an integral part of instrumental musical training. It is an important partner with conducted ensembles in the performance preparation of musicians. Evaluation of student work is based on participation in rehearsals, the progress made by the ensemble, and the quality of the ensemble's performances. The course is offered during fall and spring semesters.

**Prerequisite:** permission of instructor
Bachelor of Arts: Arts
General Education: Arts (GA)

**MUSIC 192: Chamber Music for Brass**
1 Credits/Maximum of 8

Preparation for performance of advanced chamber music literature involving primarily brass instruments—brass quartets and quintets. MUSIC 192 Chamber Music for Brass (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. Chamber Music for Brass meets at least two hours per week - once with the instructor for coaching and at least once for an additional rehearsal without the instructor's presence. Course objectives include, but are not limited to, the development of rehearsal and ensemble skills, an increased awareness of musical styles, public performance(s) of works prepared, and the development of the interpersonal skills necessary for the players to operate as a unit. Chamber music is an integral part of instrumental musical training. It is an important partner with conducted ensembles in the performance preparation of musicians. The course is offered during fall and spring semesters.

**Prerequisite:** permission of instructor
Bachelor of Arts: Arts
General Education: Arts (GA)

**MUSIC 193: Sonata Duos**
1 Credits/Maximum of 8

Preparation for performance of advanced sonata literature for various individual instruments with keyboard.

**Prerequisite:** permission of instructor
Bachelor of Arts: Arts
MUSIC 194: Studio and Recital Accompanying

1 Credits/Maximum of 8

Keyboard accompaniment of student soloists in the studio and in public performance under faculty supervision.

Prerequisite: KEYBD120J or KEYBD130J or consent of supervising faculty member
Bachelor of Arts: Arts

MUSIC 197: **SPECIAL TOPICS**

1 Credits

MUSIC 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

MUSIC 207N: Jazz and the African American Experience

3 Credits

The history and evolution of jazz is a significant cultural manifestation of the African American experience. The music and its artists provide a lens through which to examine questions surrounding the African American experience and what it means to be Black in America, engaging with questions about identity, authenticity, freedom, activism, gender, and sexuality, as well as the role of music in African American life.

Drawing upon curricular elements from MUSIC 7, Evolution of Jazz, and AFAM 100, Living While Black: Themes in African American Thought and Experience, this course traces the history of jazz through an examination of the lives and art of thirty great jazz artists, juxtaposed with an examination of seminal writings of twenty African American poets, playwrights, novelists, critics, activists, philosophers, and scholars.

Preliminary objectives will include basic musical information associated with tonality and with jazz. The main objectives of the course are: to explore the antecedents of jazz and the social-historical contexts in which they developed; to explore the pioneering artistry of selected twentieth-century jazz musicians, tracing the evolution of jazz styles in the process; to delve into the lives of these jazz artists and the social-historical contexts in which they lived; to explore the writings of historically contemporary African Americans, which articulate many of the major issues that have shaped black life in America; to enhance appreciation for the art of jazz and for the musical and literary contributions of African Americans; to encourage reflection, empathy, and a greater understanding of the cultural-historical circumstances that have informed the lives and art of African Americans. The narrowing of scope allows for a more detailed examination of the selected jazz artists, their music, and their lives. Similarly, the selected writings will allow students to reflect on the relationships and connections between these writings and the artistry and life experiences of the selected jazz artists. These objectives will be met by utilizing an interactive, multimedia online curriculum, including demonstration videos, a virtual keyboard, music notation files (e.g., Sibelius), audio recordings, audio-video recordings, selected readings, open forums, and discussion boards. Evaluation methods will include quizzes, tests, open forums, discussion boards, and reflection papers. Students will receive GA and GS credit for this course, as well as US designation. The course will not satisfy any requirements for the major or minor in music. All pieces, excerpts, examples, videos, and texts will be made available to students online.

MUSIC 209N: The Music of the Beatles and American Popular Culture

3 Credits

The Beatles are the most significant musical group in the history of popular music. Their songs are derived from diverse sources, such as rhythm 'n' blues, rock 'n' roll, country 'n' western, Motown, soul, folk music, folk rock, the British Music Hall, and European and Indian classical music traditions. Two ideas define their work: an emphasis on freedom, and how song texts can be interpreted in different ways. The Beatles had a great impact not only on American popular music during their heyday in the 1960s but also on the country's popular culture in which they were considered philosopher kings. Beatles albums mirrored changing trends in the culture, from the pre-Vietnam War youthfulness of A Hard Day's Night, to the psychedelia of Revolver and Sgt. Pepper, to the countercultural mindset of The White Album. This inter-domain course will focus on how the Beatles influenced American popular culture from the 1960s to the present day. It will examine how the Beatles were a part of a mid-twentieth-century British youth subculture that was shaped by the cultural attitudes of American rock 'n' roll. The course will then turn its attention to the seismic shift initiated by the Fab Four in both music and pop culture in the US from 1964 to 1970, demonstrating how it has permeated the popular culture of the 1970s to the present day. The course will enhance the appreciation of the Beatles and their music through its interdisciplinary focus, contextualizing the Fab Four's work in order to show how both popular music and culture can influence one another. One way the course will facilitate this goal is through the inclusion of selected readings from English literature and popular culture upon which students will write reflection essays.

MUSIC 210: Keyboard Skills III: Music Major

1 Credits

Playing accompaniments from chord symbols and full notation, transposition, improvisation, modulation, score-reading, and standard literature.

Prerequisite: MUSIC170 or placement audition
Bachelor of Arts: Arts
MUSIC 212: Guitar Techniques II

1 Credits

Intermediate performance and teaching techniques for guitar. MUSIC 212 Guitar Techniques II (1) MUSIC 212 is offered as an Individual Emphasis course for students who have been accepted into the Teacher Education Degree Program in Music. The focus of the course is on learning to play the guitar in a group class setting in order to accompany oneself and learning techniques for how to teach the guitar in classroom settings. Topics include: intermediate level guitar pedagogy, instrument care and maintenance, classroom structure and materials. The instructional format includes: performance, lecture, large and small group discussion, readings, and musical and teaching examples. Students complete several practical assignments and present summations of small group discussions. Two practice performances, a final playing and written exam are given, and a formal concert is performed.

Prerequisite: MUSIC112

MUSIC 216: Care and Nuture of Young Singing Voices

0.5 Credits

The nature of singing voices in children from birth through adolescence; strategies for helping all children become successful singers. MUSIC 216 Care and Nurture of Young Singing Voices (.5) The focus of this course is the nature of child and adolescent singing voices and strategies for assisting all children in learning to sing. Aural identification of various stages of vocal development or children and adolescents will be highlighted as well as strategies for nurturing the young singing voice in a classroom and rehearsal setting. Observations of teachers working with children will be included in the course experiences. This course is for music majors intending to apply to the Teacher Education Degree Program in Music and must be taken prior to entrance to the Degree program, typically during the sophomore year.

MUSIC 221: Basic Musicianship III

1 Credits

Intermediate sight singing and dictation.

Prerequisite: MUSIC122 Prerequisite or concurrent: MUSIC231 Bachelor of Arts: Arts

MUSIC 222: Basic Musicianship IV

1 Credits

Continuation of Music 221.

Prerequisite: MUSIC221 . Prerequisite or concurrent: Bachelor of Arts: Arts

MUSIC 231: Music Theory III

2 Credits

Intermediate concepts of tonal theory.

Prerequisite: MUSIC132 Bachelor of Arts: Arts

MUSIC 231H: Music Theory III

2 Credits

Intermediate concepts of tonal theory.

Bachelor of Arts: Arts
Honors

MUSIC 241: Music for Classroom Teachers

3 Credits

Development of competencies for guiding musical experiences of children in the elementary classroom.

Prerequisite: for students in the K-6 Teacher Certification Program only Bachelor of Arts: Arts

MUSIC 251A: Brass Techniques II: Trumpet

0.5 Credits

A class setting in which trumpet performance techniques, teaching/diagnostic strategies, instructional materials, and literature are taught, practiced, and developed. MUSIC 251A Brass Techniques II: Trumpet (.5) This course develops proper performance techniques on the trumpet in a class setting. Teaching techniques and materials specific to the trumpet are demonstrated and applied. Students will develop a performance level that will enable them to provide a desirable aural model for intermediate and advanced trumpet students. Students are introduced to appropriate trumpet teaching techniques; standard trumpet teaching materials including method books, etudes, and solo literature; effective strategies for diagnosing problems in student performances; and recommended instruments and equipment for all levels of trumpet study. Class meetings will occur twice per week for 1/2 semester. Students will be expected to practice outside of class meeting times. Grades will be based on students' musical achievement on the trumpet and understanding of material presented. There will be multiple performance assessments throughout the course. This course is recommended for students working toward entrance to the Teacher Education Program in Music and the Bachelor of Music Education degree.

Prerequisite: MUSIC151

MUSIC 251B: Brass Techniques II: Horn

0.5 Credits

A class setting in which horn performance techniques, teaching/diagnostic strategies, instructional materials, and literature are taught, practiced, and developed. MUSIC 251B Brass Techniques II: Horn (.5) This course develops proper performance techniques on the horn in a class setting. Teaching techniques and materials specific to the horn are demonstrated and applied. Students will develop a performance level that will enable them to provide a desirable aural model for intermediate and advanced horn students. Students are introduced to appropriate horn teaching techniques; standard horn teaching materials including method books, etudes, and solo literature; effective strategies for diagnosing problems in student performances; and recommended instruments and equipment for all levels of horn study. Class meetings will occur twice per week for 1/2 semester. Students will be expected to practice outside of class meeting times. Grades will be based on students' musical achievement on the horn and understanding of material presented. There will be multiple performance assessments throughout the course. This course is recommended for students working toward entrance to
the Teacher Education Program in Music and the Bachelor of Music Education degree.

**Prerequisite:** MUSIC151

MUSIC 251C: Brass Techniques II: Trombone

0.5 Credits

A class setting in which trombone performance techniques, teaching/diagnostic strategies, instructional materials, and literature are taught, practiced, and developed. MUSIC 251C Brass Techniques II: Trombone (.5) This course develops proper performance techniques on the trombone in a class setting. Teaching techniques and materials specific to the trombone are demonstrated and applied. Students will develop a performance level that will enable them to provide a desirable aural model for intermediate and advanced trombone students. Students are introduced to appropriate trombone teaching techniques; standard trombone teaching materials including method books, etudes, and solo literature; effective strategies for diagnosing problems in student performances; and recommended instruments and equipment for all levels of trombone study. Class meetings will occur twice per week for 1/2 semester. Students will be expected to practice outside of class meeting times. Grades will be based on students' musical achievement on the trombone and understanding of material presented. There will be multiple performance assessments throughout the course. This course is recommended for students working toward entrance to the Teacher Education Program in Music and the Bachelor of Music Education degree.

**Prerequisite:** MUSIC151

MUSIC 251D: Brass Techniques II: Euphonium/Tuba

0.5 Credits

A class setting in which euphonium and tuba performance techniques, teaching/diagnostic strategies, instructional materials, and literature are taught, practiced, and developed. MUSIC 251D Brass Techniques II: Euphonium/Tuba (.5) This course develops proper performance techniques on the euphonium and tuba in a class setting. Teaching techniques and materials specific to the euphonium and tuba are demonstrated and applied. Students will develop a performance level that will enable them to provide a desirable aural model for intermediate and advanced euphonium and tuba students. Students are introduced to appropriate euphonium and tuba teaching techniques; standard euphonium and tuba teaching materials including method books, etudes, and solo literature; effective strategies for diagnosing problems in student performances; and recommended instruments and equipment for all levels of euphonium and tuba study. Class meetings will occur twice per week for 1/2 semester. Students will be expected to practice outside of class meeting times. Grades will be based on students’ musical achievement on the euphonium and/or tuba and understanding of material presented. There will be multiple performance assessments throughout the course. This course is recommended for students working toward entrance to the Teacher Education Program in Music and the Bachelor of Music Education degree.

**Prerequisite:** MUSIC151

MUSIC 253: String Techniques II

0.5-1 Credits/Maximum of 2

Performance techniques on violin, viola, cello or string bass for music education majors. MUSIC 253 String Techniques II (0.5 - 1 per semester/maximum of 2) This course is recommended for students working toward the Bachelor of Music Education degree program, and who hope to teach string/orchestra classes. The purpose of the course is to allow students to develop proper performance techniques on the violin, viola, cello, or string bass at a sufficient level so that they can provide a desirable aural model for intermediate and advanced string students. Grades will be based on students' musical achievement on the instrument(s). There will be multiple performance assessments throughout the course. Required repertoire lists and evaluation tools will be provided prior to all assessments.

**Prerequisite:** MUSIC153

MUSIC 254A: Woodwind Techniques II: Flute

0.5 Credits

Performance and teaching techniques and materials selection for flute. MUSIC 254A Woodwind Techniques II: Flute (.5) This course is intended for music majors working toward the Teacher Education Degree Program in Music. This course may serve as a music education elective, and is best taken during the junior year. It should only be taken following successful completion of MUSIC 154 Woodwind Techniques I. The purpose of the course is to allow students to develop proper performance techniques in order to produce a characteristic sound on the flute at a sufficient level so that they can provide a desirable aural model for beginning and intermediate string students. Grades will be based largely on the performance achievement on the flute, in addition to development of resources for flute pedagogy and demonstration of appropriate diagnosis and prescription for flute performance problems. There will be two performance assessments during the course. There will be one midterm and one final assessment, weighted as listed: Midterm Assessment (performance and diagnosis) 30% Final Assessment (performance and diagnosis) 50% Resource journal 10% The required repertoire list will be provided approximately two weeks prior to each assessment. Students will also be provided with a copy of the measurement tool to be used in evaluating their performance. Students must receive a passing grade for both assessments in order to receive an overall passing grade for the course.

**Prerequisite:** MUSIC154

MUSIC 254B: Woodwind Techniques II: Oboe

0.5 Credits

Performance and teaching techniques and materials selection for oboe. MUSIC 254B Woodwind Techniques II: Oboe (.5) This course is intended for music majors working toward the Teacher Education Degree Program in Music. This course may serve as a music education elective, and is best taken during the junior year. It should only be taken following successful completion of MUSIC 154 Woodwind Techniques I. The purpose of the course is to allow students to develop proper performance techniques in order to produce a characteristic sound on the oboe at a sufficient level so that they can provide a desirable aural model for beginning and intermediate string students. Grades will be based largely on the performance achievement on the oboe, in addition to development of resources for oboe pedagogy and demonstration of appropriate diagnosis and prescription for oboe performance problems. There will be two performance assessments during the course. There will be one midterm and one final assessment, weighted as listed: Midterm Assessment (performance and diagnosis) 30% Final Assessment (performance and diagnosis) 50% Resource journal 10% The required repertoire list will be provided approximately two weeks prior
to each assessment. Students will also be provided with a copy of the measurement tool to be used in evaluating their performance. Students must receive a passing grade for both assessments in order to receive an overall passing grade for the course.

**Prerequisite:** MUSIC154

MUSIC 254C: Woodwind Techniques II: Clarinet

0.5 Credits

Performance and teaching techniques and materials selection for clarinet. MUSIC 254C Woodwind Techniques II: Clarinet (.5) This course is intended for music majors working toward the Teacher Education Degree Program in Music. This course may serve as a music education elective, and is best taken during the junior year. It should only be taken following successful completion of MUSIC 154 Woodwind Techniques I. The purpose of the course is to allow students to develop proper performance techniques in order to produce a characteristic sound on the clarinet at a sufficient level so that they can provide a desirable aural model for beginning and intermediate string students. Grades will be based largely on the performance achievement on the clarinet, in addition to development of resources for clarinet pedagogy and demonstration of appropriate diagnosis and prescription for clarinet performance problems. There will be two performance assessments during the course. There will be one midterm and one final assessment, weighted as listed: Midterm Assessment (performance and diagnosis) 30% Final Assessment (performance and diagnosis) 50% Resource journal 10%. The required repertoire list will be provided approximately two weeks prior to each assessment. Students will also be provided with a copy of the measurement tool to be used in evaluating their performance. Students must receive a passing grade for both assessments in order to receive an overall passing grade for the course.

**Prerequisite:** MUSIC154

MUSIC 254D: Woodwind Techniques II: Saxophone

0.5 Credits

Performance and teaching techniques and materials selection for saxophone. MUSIC 254D Woodwind Techniques II: Saxophone (.5) This course is intended for music majors working toward the Teacher Education Degree Program in Music. This course may serve as a music education elective, and is best taken during the junior year. It should only be taken following successful completion of MUSIC 154 Woodwind Techniques I. The purpose of the course is to allow students to develop proper performance techniques in order to produce a characteristic sound on the saxophone at a sufficient level so that they can provide a desirable aural model for beginning and intermediate string students. Grades will be based largely on the performance achievement on the saxophone, in addition to development of resources for saxophone pedagogy and demonstration of appropriate diagnosis and prescription for saxophone performance problems. There will be two performance assessments during the course. There will be one midterm and one final assessment, weighted as listed: Midterm Assessment (performance) 33% Final Assessment (performance and written exam) 66%. 

**Prerequisite:** MUSIC154

MUSIC 261: Survey of Music History I

3 Credits

The course is a survey of music history from antiquity through the Baroque period, with readings, listening, and lecture. The principal objectives are: to acquaint students with important musical works from this period of European and American history; to place these works in their larger social, cultural, economic, and intellectual contexts; and to introduce analytical methods useful for describing technical musical features and relating those features to extra-musical concerns. As the second course in the music history sequence designed for music majors and minors, Music 261 forms a part of the core music curriculum required for advanced (400-level) study in the discipline. Assignments and evaluation methods are designed to help students develop their critical faculties and communication skills, through listening, reading, in-class discussion, examinations, and writing. There is significant emphasis on intercultural and international competence through study of music from a range of European countries. Musical analysis is integrated with consideration of the historical, social, cultural, religious, and economic circumstances of the works' production. The course stresses development of criteria of aesthetic judgment, with respect to musical style (deployment of the various musical elements: melody, harmony, rhythm, texture, timbre) and the relationship of style to non-musical historical factors.

**Prerequisite:** MUSIC131, MUSIC162

Bachelor of Arts: Arts
International Cultures (IL)
General Education: Arts (GA)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies
MUSIC 262: Survey of Music History II
3 Credits

The course is a survey of music history from ca. 1750 to the present, with readings, listening, and lecture. The principal objectives are: to acquaint students with important musical works from this period of European and American history; to place these works in their larger social, cultural, economic, and intellectual contexts; and to introduce analytical methods useful for describing technical musical features and relating those features to extra-musical concerns. As the third course in the music history sequence designed for music majors and minors, Music 262 forms a part of the core music curriculum required for advanced (400-level) study in the discipline. Assignments and evaluation methods are designed to help students develop their critical faculties and communication skills, through listening, reading, in-class discussion, examinations, and writing. There is significant emphasis on intercultural and international competence through study of music from a range of European countries and the United States. Musical analysis is integrated with consideration of the historical, social, cultural, religious, and economic circumstances of the works' production. The course stresses development of criteria of aesthetic judgment, with respect to musical style (deployment of the various musical elements: melody, harmony, rhythm, texture, timbre) and the relationship of style to non-musical historical factors.

Prerequisite: MUSIC132, MUSIC162
Bachelor of Arts: Arts
International Cultures (IL)
General Education: Arts (GA)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

MUSIC 262H: Survey of Music History II
3 Credits

A survey of music history from 1750 to the present, with readings, listening, and lecture.

Honors

MUSIC 266: Basic Conducting
1 Credits

Basic instruction and practicum in conducting, both choral and instrumental.

Prerequisite: MUSIC221, MUSIC231
Bachelor of Arts: Arts

MUSIC 267: Techniques of Composition
2 Credits

Basic instruction in the techniques of composition in all idioms.

Prerequisite: or concurrent: MUSIC231
Bachelor of Arts: Arts

MUSIC 270: Keyboard Skills IV: Music Major
1 Credits

Instruction in secondary chord progressions, transposition, improvisation, accompanying techniques, score reading.

Prerequisite: MUSIC210 or placement audition
Bachelor of Arts: Arts

MUSIC 273: Composition III
2 Credits

Composition instruction for second-year composition majors.

Bachelor of Arts: Arts

MUSIC 274: Composition IV
2 Credits

Composition instruction for second-year composition majors.

Bachelor of Arts: Arts

MUSIC 295A: Early Field Experience in Music Education
1 Credits/Maximum of 1

MUSIC 295A Early Field Experience in Music Education (1)(BA) This course meets the Bachelor of Arts degree requirements. This course is offered to music majors during their fourth semester who are intending to apply to the Teacher Education Degree Program in Music. It provides prospective music teachers with an opportunity to observe various components involved in the music teaching process; develop basic music teaching skills; identify behaviors of effective music teachers; identify their own strengths and weaknesses as a teacher, set goals based on those traits, and apply strategies to improve; develop their ability to reflect on their own teaching; observe and interact with children of varying races, religious beliefs, national origins and socioeconomic backgrounds, particularly children for whom English is a second language and who are considered in need of early intervention; continue developing their own sight-singing and piano skills.

Prerequisite: fourth semester standing, MUSIC115, MUSIC210
Bachelor of Arts: Arts

MUSIC 296: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Arts

MUSIC 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Arts
MUSIC 299: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

MUSIC 312: Performance of Diverse Musical Styles
1 Credits
Exploration of world instruments and singing through performance and study. MUSIC 312 Performance of Diverse Musical Styles (1) The focus of the course is participation in a non-Western based music ensemble to gain knowledge of global music traditions and how to apply world music ensemble practices into K-12 teaching. Topics include: cultural knowledge and significance, playing technique and pedagogy, and applications for teaching. The instructional format includes: performance, lecture, small group discussion, readings, and musical examples. Students complete several practical assignments and present summations of small group discussions. A final playing and written exam are given, and a formal concert is performed.

MUSIC 331: Tonal Analysis
2 Credits
Introduction to standard procedures of tonal analysis, including concepts of form and structure.
Prerequisite: MUSIC221, MUSIC231
Bachelor of Arts: Arts

MUSIC 332: Analysis of Twentieth Century Music
2 Credits
Application of analytical techniques and compositional theories to music of the twentieth century.
Prerequisite: MUSIC331
Bachelor of Arts: Arts

MUSIC 336: Orchestration
2 Credits
Scoring for the orchestra.
Prerequisite: MUSIC222, MUSIC232
Bachelor of Arts: Arts

MUSIC 340: Music Learning and Development
2 Credits
Application of psychological principles to teaching of music, including curriculum design and contemporary practices in music education. MUSIC 340 Music Learning and Development (2)BA This course meets the Bachelor of Arts degree requirements. MUSIC 340 is offered every fall semester for students who have just been accepted into the Teacher Certification program in Music Education. The focus of the course is music learning and development and their application to curriculum design for school music settings. Topics include: philosophical frameworks for music education, skill and content learning sequences in music, writing instructional objectives, and the process for developing music curricula. The instructional format includes: lecture, large and small group discussion, readings, and musical and teaching examples. Students complete several practical assignments, present summations of small group discussions, and prepare two drafts of a philosophical statement. A midterm and final exam are typically given. Students in MUSIC 340 also enroll concurrently in MUSIC 341 and MUSIC 395A, a practicum course focusing on teacher delivery skills and application of content from MUSIC 340 and MUSIC 341.
Prerequisite: acceptance into Teacher Education Degree Program in Music; Concurrent: MUSIC341, MUSIC395A

MUSIC 341: Instructional Materials in Music
2 Credits
Exploration of instructional materials and repertoire for use in K-12 music settings. Limited to Music Education majors who have been accepted into the Teacher Education Degree Program in Music. MUSIC 341 Instructional Materials in Music (2) MUSIC 341 is offered to students who have been accepted into the Teacher Education Degree Program in Music. The focus of this course is to gain knowledge through exploration of the process for selecting instructional materials and repertoire for K-12 music across all settings, choral, general, and instrumental settings. Topics include: the exploration of instructional materials, the criteria for selection of materials, and strategies for arranging musical materials to meet the needs of students. The instructional format includes: lecture, large and small group discussion, readings, and musical examples. Students complete several practical assignments and present summations of small group discussions. A written midterm and final evaluation will be given to assess student learning.
Concurrent: MUSIC340, MUSIC395A

MUSIC 345: Instructional Practices in Music
2 Credits
For music education students to learn about instrucational techniques and practices for music performance and general music classes. MUSIC 345 Instructional Practices in Music (2) This course is designed to cover general principles in planning and delivery of instruction for, and assessment of the learning of, students in public school K-12 music rehearsals and classrooms. Further, this course will focus on application and implementation of strategies to specific settings in which students will be certified to teach. Course objectives enable students to develop an understanding of the interaction of planning and delivery of instruction and the assessment of student learning; develop an understanding of principles of presenting and leading students in music activities and performance experiences; develop strategies for planning music lessons and rehearsals; and develop strategies for assessing student learning. Students in the course will select appropriate instructional strategies reflecting technical and musical objectives and needs of the students; plan music lessons and rehearsals reflecting technical and musical objectives and needs of the students; and develop valid tools and procedures for assessing students’ music learning. The students in this course will be evaluated on their effectiveness in writing task analyses, lesson and rehearsal plans, designing assessment tools, and implementing plans and assessments in a variety of music settings in peer-teaching situations. Music education majors will take this course as part of a sequence of music education courses. This course is preceded by courses concerning musical development, teaching experiences, and courses in selection and design of instructional materials, and this course precedes a capstone course (MUSIC 441W, MUSIC 442W, MUSIC 443W,
MUSIC 444W, MUSIC 445W, or MUSIC 446W) in which students study one instructional setting and curriculum level (choral, band, orchestra, general music; elementary middle school, high school) in greater depth, depending on their future career goals. Approximately 25 students will be enrolled.

**Prerequisite:** MUSIC340, MUSIC341, MUSIC395A, piano and voice proficiencies passed.; Concurrent: MUSIC395B

MUSIC 366: Intermediate Conducting

1 Credits

Intermediate instruction in conducting; conducting techniques specific to instrumental or choral music; introduction to rehearsal technique.

MUSIC 366 Intermediate Conducting (1)(BA) This course meets the Bachelor of Arts degree requirements. MUSIC 366 focuses on the development of more advanced physical skills and gestures appropriate for conducting expressive performances and rehearsals of music ensembles. The instructional format includes instructor demonstrations, student conducting of the class ensemble, and active participation as a performer and observer for peer conductors. Outside of class, students are expected to practice conducting gestures and use basic score study skills as preparation for conducting assigned music. Students prepare several music scores and conduct the class ensemble in practice episodes and instructor-evaluated performances. Students receive feedback and peer feedback on their performances in both practice and evaluated conducting episodes. Students are graded through instructor evaluation of conducting performances, completion of self-assessments involving review of a video of their performances, and participation in providing feedback for peers.

**Prerequisite:** MUSIC266, MUSIC270, MUSIC331

Bachelor of Arts: Arts

MUSIC 373: Composition V

3 Credits

Composition instruction for third-year position majors.

Bachelor of Arts: Arts

MUSIC 374: Composition VI

3 Credits

Composition instruction for third-year composition majors.

Bachelor of Arts: Arts

MUSIC 387: Language Diction for Singers: Italian and English

1 Credits

Intensive drill in the pronunciation, phonetic transcription, and singing of Italian and English.

**Prerequisite:** VOICE170J or VOICE180J or 2 semesters of VOICE100J or VOICE110J

Bachelor of Arts: Arts

MUSIC 388: Language Diction for Singers: French

1 Credits

Intensive drill in the pronunciation, phonetic transcription, and singing of French.

**Prerequisite:** VOICE170J or VOICE180J or two semesters of VOICE100J or VOICE110J

Bachelor of Arts: Arts

MUSIC 389: Language Diction for Singers: German

1 Credits

Intensive drill in the pronunciation, phonetic transcription, and singing of German.

**Prerequisite:** VOICE170J or VOICE180J or two semesters of VOICE100J or VOICE110J

Bachelor of Arts: Arts

MUSIC 395: **SPECIAL TOPICS**

0.5-1 Credits

Bachelor of Arts: Arts

MUSIC 395A: Cohort Practicum I

1 Credits/Maximum of 1

MUSIC 395A Cohort Practicum I (1)(BA) This course meets the Bachelor of Arts degree requirements. MUSIC 395A is offered for students who are tracking acceptance into the Teacher Education Degree Program in Music. Students will enroll concurrently with the proposed course MUSIC 341 and the revised course MUSIC 340. The focus of the course is to provide students with opportunity to explore instructional materials and repertoire through interviews and observation of K-12 teachers. Topics include: the design and implementation of observational tools, and the leading and teaching of songs in a variety of settings. The instructional format includes: large and small group discussion, readings, and musical and teaching examples and experiences. Students complete several practical assignments including off campus observations, and present summations of small group discussions.

**Prerequisite:** Acceptance into Teacher Education Degree Program in Music; Concurrent: MUSIC340, MUSIC341

Bachelor of Arts: Arts

MUSIC 395B: Cohort Practicum II

1 Credits/Maximum of 1

Observation and teaching experiences in a variety of musical instruction settings.

**Prerequisite:** MUSIC341, MUSIC395A, piano proficiency passed; Concurrent: MUSIC345

Bachelor of Arts: Arts

MUSIC 395C: Practicum in Music Teaching

1-5 Credits/Maximum of 5

Field experiences in music teaching for undergraduate music education majors.
PREREQUISITE: acceptance into the School of Music; Concurrent: MUSIC344
Bachelor of Arts: Arts

MUSIC 399: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)
MUSIC 400: Solo Recital
1 Credits
Required recital for Performer’s Certificate.
Bachelor of Arts: Arts
MUSIC 412: Jazz Pedagogy
2 Credits
The development of advanced skills in pedagogy for teaching jazz bands.
PREREQUISITE: admission to the Music Education program or certification
Bachelor of Arts: Arts

MUSIC 414: String Pedagogy
1-2 Credits/Maximum of 2
The development of skills in pedagogy for teaching strings.
PREREQUISITE: completion of 300-level strings course
Bachelor of Arts: Arts

MUSIC 415: Woodwind Pedagogy
1-2 Credits/Maximum of 2
The development of skills in pedagogy for teaching woodwinds.
PREREQUISITE: completion of 300-level woodwind course
Bachelor of Arts: Arts

MUSIC 416: Brass Pedagogy
1-2 Credits/Maximum of 2
The development of skills in pedagogy for teaching brass.
PREREQUISITE: completion of 300-level brass course
Bachelor of Arts: Arts

MUSIC 417: Percussion Pedagogy
1-2 Credits/Maximum of 2
The development of advanced skills in pedagogy for teaching percussion.
PREREQUISITE: MUSIC152; PERCN320J or PERCN330J or permission of instructor
Bachelor of Arts: Arts

MUSIC 418: Voice Pedagogy
2 Credits
Analysis of techniques of teaching voice and studies of related music literature and pedagogical writings.
PREREQUISITE: VOICE270J or VOICE280J; or four semesters of VOICE100J or VOICE110J
Bachelor of Arts: Arts

MUSIC 419: Piano Pedagogy I
2 Credits
Analysis of beginning teaching methods and teaching strategies for children.
PREREQUISITE: KEYBD270 or KEYBD280; MUSIC331
Bachelor of Arts: Arts

MUSIC 420: Song Writing and Recording
3 Credits
Song composition, arranging and recording in a variety of style genres.
MUSIC 420 Song Writing and Recording (3) This course will take the student through the process of composing and producing a recorded song. The class will consist of a combination of class meetings and individual instruction. Topics will include form, lyric writing, arranging, audio/MIDI recording and sequencing. Familiarity with basic audio sequencing software and music theory concepts is essential. The focus of the class is vernacular song as opposed to classical art song, but all the basic concepts discussed in the class apply to either genre. The course requires the composition of original songs and the creation of high-quality recordings of them and their conversion to MP3 format. The student are expected to enter the class with a basic knowledge of digital audio and MIDI (MUSIC/INART 258 or equivalent).
PREREQUISITE: INART258, MUSIC232

MUSIC 420H: Vocal Accompanying Techniques
2 Credits/Maximum of 4
Instruction focusing on the accompanist’s problems of balance, interpretation, and musical communication.
Honors

MUSIC 421: Jazz Combo Class
1 Credits/Maximum of 8
Study and performance of small group jazz.
PREREQUISITE: MUSIC181
Bachelor of Arts: Arts

MUSIC 422: Jazz Harmony and Arranging
3 Credits
Analysis and composition of jazz tunes and chord progressions; instrumental and vocal arranging in the jazz idiom.
PREREQUISITE: MUSIC222, MUSIC232
Bachelor of Arts: Arts

MUSIC 424: Piano Pedagogy II

2 Credits

Analysis of techniques of teaching intermediate-early advanced level piano and studies of music literature and pedagogical writings.

**Prerequisite:** KEYBD270 or KEYBD280 ; MUSIC331

Bachelor of Arts: Arts

MUSIC 425: Advanced Voice Pedagogy

2 Credits

Analysis of techniques of teaching voice, supervised teaching, studies of studio materials and related topics.

**Prerequisite:** MUSIC418

Bachelor of Arts: Arts

MUSIC 429: Aural Review for Graduate Students

1 Credits

An intensive review of the aural skills required for a theoretical understanding of 18th- and 19th-century music.

**Prerequisite:** MUSIC221 or undergraduate core in music theory at an accredited university

Bachelor of Arts: Arts

MUSIC 431: Advanced Tonal Analysis

2-3 Credits

Advanced techniques of musical analysis.

**Prerequisite:** MUSIC331

Bachelor of Arts: Arts

MUSIC 432: Graduate Review of Twentieth-Century Analysis

2-3 Credits/Maximum of 3

The theory and analysis of style in music of the twentieth century.

**Prerequisite:** MUSIC262 , MUSIC331

Bachelor of Arts: Arts

MUSIC 433: Advanced Analysis of Twentieth Century Music

2-3 Credits

In-depth studies of selected twentieth-century repertoires and/or analytical models.

**Prerequisite:** MUSIC262 , MUSIC332

Bachelor of Arts: Arts

MUSIC 434: History of Electroacoustic Music

3 Credits/Maximum of 3

A HISTORY OF ELECTROACOUSTIC MUSIC AS A CONSEQUENCE OF DEVELOPMENTS IN CULTURE AND TECHNOLOGY FROM 1880 to PRESENT. HISTORY OF ELECTROACOUSTIC MUSIC (3) is an introduction to the development of music based in electronics, beginning with the invention of the phonograph and ending with current electronic dance music. The course traces interrelated developments in technology, art, culture, and music, and investigates music through written listening analyses.

**Prerequisite:** INART 258A or INART 258B

MUSIC 435: Score Reading

1 Credits

Introduction in score reading at the keyboard.

**Prerequisite:** MUSIC232 ; piano proficiency passed

Bachelor of Arts: Arts

MUSIC 438: The Business of Music

1 Credits/Maximum of 1

A survey of topics related to a music career in performance, private teaching, and college teaching. This course is a survey of topics related to a career in classical music performance, private teaching, and educational institution teaching. These are the principal means by which the freelance musician earns a living. Topics include résumé writing, biography writing, repertoire list writing, press release writing, website and flyer design, audio and video recordings, auditions, competitions, performance opportunities, networking, professional finances, fundraising, managing all aspects of a private teaching enterprise, and applying for institutional teaching positions. Panel discussions with professional musicians will be scheduled.

**Prerequisite:** Fifth-semester standing and permission of instructor

MUSIC 441W: Emphasis in Elementary General and Choral Music

3 Credits

Selection and application of materials, methods, teaching and assessment strategies for elementary general and choral music settings. MUSIC 441W Capstone Experiences in Elementary General and Choral Music (3) This course is intended for Music Education majors in their senior year who have particular interest in working with elementary school children in a general music or choral setting. Students will apply all previous Music Education course work to this teaching setting. They will learn how to construct a course of study, including assessment strategies. Students will then apply that course of study by working with one elementary music class in the local schools. Teacher delivery issues, reflective practice, and assessment of student achievement will become a major component of this experience. A review of traditional approaches to elementary music teaching will also be presented and critically discussed. In addition, students will prepare two drafts of a philosophical statement justifying the inclusion of music in every child's curriculum as well as four drafts of a paper reviewing and summarizing articles on a topic of interest related to elementary music teaching.

**Prerequisite:** MUSIC345 , MUSIC395B

Writing Across the Curriculum

MUSIC 442W: Emphasis in Secondary General Music

3 Credits

Emphasis in teaching in secondary general music settings. MUSIC 442W Emphasis in Secondary General Music (3) MUSIC 442W is offered to students who have been accepted into the Teacher Certification program
in Music Education. The focus of this course is to provide students with opportunity to explore secondary general music settings under the close supervision of a faculty member. Topics include: the design and implementation of curriculum in secondary general music, the leading and teaching of songs in these settings, and specific grade-level appropriate pedagogy. The instructional format includes: lecture, small group discussion, readings, musical and teaching examples, and off-campus observation and teaching in middle and high school classrooms. Students complete several practical assignments including off-campus observations, presentation of the summations of small group discussions, curriculum planning and models, and teaching within public schools in grades 5-12. This is a writing intensive course with focus on a detailed, multi-drafted topic paper relating to specific elements of teaching choral and general music at the secondary level.

**Prerequisite:** Limited to Music Education Majors. MUSIC 345, MUSIC 359B
Bachelor of Arts: Arts
Writing Across the Curriculum

**MUSIC 443W: Choral Emphasis in Secondary Music Education**

3 Credits

MUSIC 443W Choral Emphasis in Secondary Music Education (3). This course meets the Bachelor of Music (Music Education) degree requirements. The course is intended to prepare pre-service teachers to teach secondary choral (vocal) music. Preparation will include observation of current public school teachers and teaching techniques and methods, preparation and implementation of appropriate lessons including assessments, in-depth analysis (case study) of a student currently in the public schools, development of a written philosophy of music education and choir instruction, and consideration of practical matters associated with teaching in the public schools such as scheduling, recruitment and parent interaction. The course serves as a capstone to the prior courses in the music education curriculum. Previous courses in instructional planning, instructional materials, instrument techniques, conducting, piano and voice techniques will have developed necessary prior skills. Skills and concepts from these classes will be applied in this authentic context in the collegiate and public school classrooms. The students will be assessed according to their effectiveness in observation, teaching preparation, teaching and research. Evaluation will be in the form of written and verbal feedback, and completion of rubrics by the instructor and the students themselves (self- and peer-evaluation). Students will complete a field experience component in local middle or high schools.

Writing Across the Curriculum

**MUSIC 444W: Emphasis in Elementary and Intermediate Band**

3 Credits

Examination and application of teaching strategies and materials for students planning to teach band in the elementary and middle schools. MUSIC 444W Capstone Experiences in Elementary and Intermediate Band (3)(BA) This course meets the Bachelor of Arts degree requirements. The course is intended to prepare pre-service teachers to teach beginning through intermediate instrumental (band) music. Preparation will include observation of current public school teachers and teaching techniques and methods, preparation and implementation of appropriate lessons including assessments, in-depth analysis (case study) of a student currently in the public schools, development of a written philosophy of music education and band instruction, and consideration of practical matters associated with teaching in the public schools such as scheduling, recruitment and parent interaction. The course serves as a capstone to the prior courses in the music education curriculum. Previous courses in instructional planning,
Students pursuing the minor in Music Technology (MUTEC) are required to complete two elective courses, one of them upper division. This course will serve those students wishing to apply the minor to areas of software development. Along with MUSIC 455 Technology in Music, this course may also serve as the second part of an elective music technology cognate for students in the graduate and IUG programs in music theory.

**Prerequisite:** INART258A, MUSIC455, or permission of program

MUSIC 452: Computer Music Synthesis

3 Credits

Use of sound synthesis software for music creation.

**Prerequisite:** INART258A and INART050

Bachelor of Arts: Arts

MUSIC 453: Recording Studio Training

1 Credit

Training in how to use a professional multi-track recording studio. MUSIC 453 Recording Studio Training (1)(BA) This course meets the Bachelor of Arts degree requirements. This is a course in recording studio engineering, directed at students who wish to learn how to operate a professional level multi-track recording studio. Topics include microphone theory, signal flow, audio mixing and mastering, and maintenance issues.

**Prerequisite:** permission of program and successful completion of two of the following: INART050, THEA 484, MUSIC420, MUSIC458

MUSIC 455: Technology in Music

1-3 Credits/Maximum of 3

Survey of how musical information is stored and processed in computer systems. MUSIC 455 Technology in Music (3)(BA) This course meets the Bachelor of Arts degree requirements. This course provides a survey of how musical information is stored and transmitted in digital devices. It will be divided into three sections. Weeks 1 and 2 are an introduction to acoustical principles such as the nature of sound transmission and measurements of frequency, sound power level, phase, timbre, and localization. Computer basics will also be covered, with topics to include binary number representation and basic computer operation. Weeks 3 through 8 cover the MIDI transmission protocol that enables musical information to be stored and transmitted efficiently. Topics include the nature of the MIDI data structure, the types of messages that may be passed, and the suitability of MIDI for expressive performance. MIDI software is discussed, including notation software, editor/librarian software, and sequencers. The bulk of the course’s project component involves working with sequencing programs. Students are also exposed to using MIDI on the web, downloading files and importing them into various applications. Weeks 9 through 15 cover digital audio so that students may understand how instruments capable of understanding MIDI messages are able to translate the instructions into audio signals. Topics include sampling theory, digital vs. analog recording, filters, signal processing, and editing sound files. Projects involving digital audio also use a sequencing program that is able to combine MIDI and audio data. The students are expected to work independently to complete reading assignments according to the schedule outlined in the course syllabus. While due attention will be given to discussion of this material
in class, the primary focus of class sessions will be hands-on application, to ensure that students master a set of skills on the computer.

**Prerequisite:** CMPSC100, CMPSC101, CMPSC121, or MUSIC231
Bachelor of Arts: Arts

MUSIC 458: Electronic Music Composition
3 Credits

An introduction to the art of composition in the electronic audio medium. MUSIC 458 Electronic Music Composition (3)(BA) This course meets the Bachelor of Arts degree requirements. Music 458 will focus on the creative craft of musical composition in the medium of electronic audio. Topics covered will include but not be limited to: recording, MIDI and digital audio techniques, study of literature and the investigation of the creative process in musical composition. Students are expected to enter the class with strong fundamentals in both music theory and MIDI and digital audio. The student will be expected to complete several projects that demonstrate both their creativity and their technical competence in the medium.

**Prerequisite:** INART258A
Bachelor of Arts: Arts

MUSIC 460: Teaching Musical Cultures
2 Credits

Exploration of the world's musical cultures and the implication of and procedures for teaching multicultural music. Limited to upper division music majors or permission of program.

**Prerequisite:** MUSIC262 or permission of program

MUSIC 461W: Studies in Music History: Antiquity to 1600
3 Credits/Maximum of 6

In-depth study of selected aspects of music and culture from antiquity to 1600, with emphasis on writing and research.

**Prerequisite:** MUSIC261, MUSIC331
Bachelor of Arts: Arts

Writing Across the Curriculum

MUSIC 462W: Studies in Music History: 1550-1750
3 Credits/Maximum of 6

In-depth study of selected aspects of music and culture from 1550-1750, with emphasis on writing and research.

**Prerequisite:** MUSIC261, MUSIC331
Bachelor of Arts: Arts

Writing Across the Curriculum

MUSIC 463W: Studies in Music History: 1700-1900
3 Credits/Maximum of 6

In-depth study of selected aspects of music and culture from 1700-1900, with emphasis on writing and research.

**Prerequisite:** MUSIC262, MUSIC331
Bachelor of Arts: Arts

Writing Across the Curriculum

MUSIC 464W: Studies in Music History: 1850-Present
3 Credits/Maximum of 6

In-depth study of selected aspects of music and culture from 1850 to the present, with emphasis on writing and research.

**Prerequisite:** MUSIC262, MUSIC332
Bachelor of Arts: Arts

Writing Across the Curriculum

MUSIC 465: Advanced Conducting I
2 Credits

Advanced instruction in conducting; conducting techniques specific to instrumental or choral music; emphasis on score study and rehearsal technique.

**Prerequisite:** MUSIC366
Bachelor of Arts: Arts

MUSIC 466: Advanced Conducting II
2 Credits/Maximum of 8

Standard scores of symphonies, tone poems, operas, oratorios, and shorter vocal and instrumental works studied from the viewpoint of the conductor.

**Prerequisite:** MUSIC465
Bachelor of Arts: Arts

MUSIC 467: Opera Workshop
1-3 Credits/Maximum of 6

History, analysis, and production of operas from sixteenth century to present.

**Prerequisite:** audition
Bachelor of Arts: Arts

MUSIC 468: Acting for Singers
2 Credits/Maximum of 4

To help students develop authentic and specific characters/portrayals on stage through physical and emotional awareness. MUSIC 468 Acting for Singers (2)This is a course teaching singers the fundamentals of acting. All types of stage work related to vocal music will be explored from performing in recitals and concerts to the opera and excerpted scenes. The objective of the course is to make singers more comfortable on stage and more realistic/believable in their performances/presentations. This course differs from acting courses offered in other areas because the singer has restrictions placed upon him due to the requirements of the music, especially in regard to timing and the sense of time, and the use of texts which are often in foreign languages. The course will be offered to music majors currently studying voice at an advanced level (V220J or higher) so that vocal technique will not be the main issue; this includes students enrolled in the BM, BMA, BA, and BME programs. Exceptions can be made by permission of the instructor. The course is an elective 2 credit course which students may repeat for a maximum of 4 credits. An accompanist will be present to accompany students in their song/aria presentations. Every class meeting will begin with warm-up exercises and then continue with further exercises focusing on helping students develop a sense of timing and enabling them to explore the
'beats' (or central topic) of a scene. Emphasis will be placed on learning how to prepare for a scene, analyze it, and determining the goal(s) of the character. The students will be encouraged to learn how to be specific in their acting and to learn what will 'read' to an audience while accurately reflecting the portrayed emotion. Some work will be solo work, but there will also be opportunities to work with partners. Improvisation will also be incorporated.

**Prerequisite:** Must be currently enrolled for voice jury track at the level of V220J or higher or register with permission of the program

MUSIC 472: Eighteenth-Century Counterpoint

2 Credits

Imitative and nonimitative counterpoint in the style of Bach.

**Prerequisite:** MUSIC222, MUSIC232
Bachelor of Arts: Arts

MUSIC 473: Composition VII

3 Credits

Composition instruction for fourth-year composition majors.

Bachelor of Arts: Arts

MUSIC 474: Composition VIII

3 Credits

Composition instruction for fourth-year composition majors.

Bachelor of Arts: Arts

MUSIC 476W: B.A. Senior Project

3 Credits

A semester project appropriate to student's option in B.A. program (e.g., research paper, performance with program notes, or related paper).

**Prerequisite:** seventh-semester standing
Bachelor of Arts: Arts
Writing Across the Curriculum

MUSIC 478: Vocal Literature

3 Credits

Introduction to the literature for solo voice in opera, oratorio, cantata, art song, and chamber music from the baroque to the present.

**Prerequisite:** MUSIC262, MUSIC331
Bachelor of Arts: Arts

MUSIC 480: Opera Literature

3 Credits

Studies in the development of the opera from 1600 to the present, treating both libretto and music.

**Prerequisite:** MUSIC262, MUSIC331
Bachelor of Arts: Arts

MUSIC 481: Keyboard Literature

3 Credits

Studies in the development of keyboard music and instruments; a survey of all eras using listening, analysis, and performance.

**Prerequisite:** MUSIC262, MUSIC331
Bachelor of Arts: Arts

MUSIC 483: Seminar in Voice Pedagogy

2 Credits

Survey of literature relevant to the teaching of voice from historical sources through recent pedagogical scholarship.

**Prerequisite:** MUSIC418
Bachelor of Arts: Arts

MUSIC 485: Chamber Music Literature

3 Credits

Survey of chamber music for strings, winds, and brass instruments from the mid-16th century to the present day.

**Prerequisite:** MUSIC262, MUSIC331
Bachelor of Arts: Arts

MUSIC 487: Orchestral Literature

3 Credits

Survey of orchestral literature.

**Prerequisite:** MUSIC262, MUSIC331
Bachelor of Arts: Arts

MUSIC 488: Studies in the Major Performance Area

1-2 Credits

Selected studies in music literature specific to the student's major performance area. Will include research, analysis and performance. MUSIC 488 Studies in the Major Performance Area (1-2) The objective of Music 488 is to create a thorough knowledge of the literature and resources in the students' major performance area. The course will be taught in a seminar format. Students will be grouped according by general performance area: i.e., keyboard, strings, woodwinds, brass, percussion, voice. The course will include lectures, research, class presentations and performance. The course will be offered for variable credit in order to meet varying conditions of scheduling and credit requirements. Specific evaluation methods will be determined by the instructor, to include class presentations, class participation, exams and/or written work.

MUSIC 489: Studio and Recital Accompaniment

1 Credits/Maximum of 4

Advanced keyboard accompaniment of student soloists in the studio and in public performance under faculty supervision.

**Prerequisite:** MUSIC194 or permission of instructor
Bachelor of Arts: Arts
MUSIC 491: Advanced Chamber Ensemble
1 Credits/Maximum of 4

Preparation and performance of advanced chamber music. MUSIC 491 Advanced Chamber Ensemble (1 per semester/maximum of 4). Advanced Chamber Ensemble meets at least two hours per week - once with the instructor for coaching and at least once for an additional rehearsal without the instructor’s presence. Course objectives include, but are not limited to, the development of rehearsal and ensemble skills, an increased awareness of musical styles, public performance(s) of works prepared, and the development of the interpersonal skills necessary for the players to operate as a unit. Chamber music is an integral part of instrumental musical training. It is an important partner with conducted ensembles in the performance preparation of musicians. Evaluation of student work is based on participation in rehearsals, the progress made by the ensemble, and the quality of the ensemble’s performances. The course is offered during fall and spring semesters.

Prerequisite: MUSIC190, MUSIC191, or equivalent and permission of program

MUSIC 493: Sonata Duos
1 Credits/Maximum of 4

Preparation for performance of advanced sonata literature for various individual instruments with keyboard.

Prerequisite: MUSIC193 or equivalent; permission of instructor

Bachelor of Arts: Arts

MUSIC 494: Research Topics
1-3 Credits/Maximum of 6

Supervised research leading to senior thesis or project.

Bachelor of Arts: Arts

MUSIC 494H: Research Topics
1-3 Credits/Maximum of 6

Supervised research leading to senior thesis or project.

Bachelor of Arts: Arts Honors

MUSIC 495: Internship
1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Bachelor of Arts: Arts

MUSIC 495A: Student Teaching: General Music
5-7 Credits/Maximum of 7

MUSIC 495A Student Teaching: General Music (6-8)(BA) This course meets the Bachelor of Arts degree requirements. As required by the Pennsylvania Department of Education, all music education students seeking certification must enroll in a culminating student teaching experience which closely approximates a full-time working experience in the public schools of Pennsylvania. The objective of this course is to offer a transition between student life and professional life directly prior to graduation. This total immersion in the field of GENERAL MUSIC allows the student to learn from and work with a mentor teacher in an off-campus setting. During the semester prior to the course, cooperating music teachers and school districts are contacted requesting their participation and music education students interview with the teachers. The students then move to the community in which they will be student teaching and adopt the practices of that mentor teacher within that specific school district. Students are evaluated by both the mentor teacher and a Penn State supervisor who visits a minimum of four times per semester. This course is offered every semester.

Prerequisite: completion of all courses in the major with a grade of C or better; Concurrent: MUSIC442

Bachelor of Arts: Arts

MUSIC 495B: Student Teaching: Choral Music
5-7 Credits/Maximum of 7

MUSIC 495B Student Teaching: Choral Music (5-7)(BA) This course meets the Bachelor of Arts degree requirements. As required by the Pennsylvania Department of Education, all music education students seeking certification must enroll in a culminating student teaching experience which closely approximates a full-time working experience in the public schools of Pennsylvania. The objective of this course is to offer a transition between student life and professional life directly prior to graduation. This total immersion in the field of CHORAL MUSIC allows the student to learn from and work with a mentor teacher in an off-campus setting. During the semester prior to the course, cooperating music teachers and school districts are contacted requesting their participation and music education students interview with the teachers. The students then move to the community in which they will be student teaching and adopt the practices of that mentor teacher within that specific school district. Students are evaluated by both the mentor teacher and a Penn State supervisor who visits a minimum of four times per semester. This course is offered every semester.

Prerequisite: completion of all courses in the major with a grade of C or better; Concurrent: MUSIC443

Bachelor of Arts: Arts

MUSIC 495C: Student Teaching: Instrumental Music
5-7 Credits/Maximum of 7

MUSIC 495C Student Teaching: Instrumental Music (5-7)(BA) This course meets the Bachelor of Arts degree requirements. As required by the Pennsylvania Department of Education, all music education students seeking certification must enroll in a culminating student teaching experience which closely approximates a full-time working experience in the public schools of Pennsylvania. The objective of this course is to offer a transition between student life and professional life directly prior to graduation. This total immersion in the field of INSTRUMENTAL MUSIC allows the student to learn from and work with a mentor teacher in an off-campus setting. During the semester prior to the course, cooperating music teachers and school districts are contacted requesting their participation and music education students interview with the teachers. The students then move to the community in which they will be student teaching and adopt the practices of that mentor teacher within that specific school district. Students are evaluated by both the mentor teacher and a Penn State supervisor who visits a minimum of four times per semester. This course is offered every semester.
Prerequisite: completion of all courses in the major with a grade of C or better; Concurrent: MUSIC444
Bachelor of Arts: Arts

MUSIC 496: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Arts

MUSIC 496H: Independent Studies - Honors
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Arts Honors

MUSIC 497: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Arts

MUSIC 499: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Music-Brass (BRASS)

BRASS 100: Trumpet: Secondary
1 Credits/Maximum of 8

Individual instruction in trumpet one-half hour per week. BRASS 100 Trumpet: Secondary (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. The goals of this course are to introduce, define, and develop the musical and technical skills required to play the trumpet well in a variety of musical settings. The instrument is active in orchestral, band, chamber, and solo settings. Therefore, the basic goal for serious trumpet students as well as amateur trumpet students is to be proficient and versatile. The repertoire studied includes a variety of musical genre including the use of technical etudes, lyrical studies and standard solo works in a variety of styles. This course directly affects the student's ability to participate and contribute in the various ensembles on campus. The teacher and the student evaluate the student's progress and performance. Suggestions for improvement are agreed upon and developed. The course is offered to both music majors and non-majors. Students receive a one-half hour lesson per week, assuming at least 5 hours of practice. Enrollment can range from 5-8 per semester depending on the availability of staffing.

Bachelor of Arts: Arts
General Education: Arts (GA)
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Crit and Analytical Think

BRASS 101: French Horn: Secondary
1 Credits/Maximum of 8

Individual instruction in French horn one-half hour per week. For students who qualify, BRASS 101 French Horn: Secondary (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. The goals of this course are to introduce, define, and develop the musical and technical skills required to play the French horn well in a variety of musical settings. The instrument is active in orchestral, band, chamber, and solo settings. Therefore, the basic goal for serious horn students as well as amateur horn students is to be proficient and versatile. The repertoire studied includes a variety of musical genre including the use of technical etudes, lyrical studies and standard solo works in a variety of styles. This course directly affects the student's ability to participate and contribute in the various ensembles on campus. The teacher and the student evaluate the student's progress and performance. Suggestions for improvement are agreed upon and developed. The course is offered to both music majors and non-majors. Students receive a one-half hour lesson per week, assuming at least 5 hours of practice. Enrollment can range from 5-8 per semester depending on the availability of staffing.

Bachelor of Arts: Arts
General Education: Arts (GA)
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Crit and Analytical Think

BRASS 102: Trombone: Secondary
1 Credits/Maximum of 8

Individual instruction in trombone one-half hour per week. BRASS 102 Trombone: Secondary (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. The goals of this course are to introduce, define, and develop the musical and technical skills required to play the trombone well in a variety of musical settings. The instrument is active in orchestral, band, jazz, chamber, and solo settings. Therefore, the basic goal for serious trombonists as well as amateur trombonists is to be proficient and versatile. The repertoire studied includes a variety of musical genre including the use of technical etudes, lyrical studies and standard solo works in a variety of styles. This course directly affects the student's ability to participate and contribute in the various ensembles on campus. The teacher and the student evaluate the student's progress and performance. Suggestions for improvement are agreed upon and developed. The course is offered to both music majors and non-majors. Students receive a one-half hour lesson per week, assuming at least 5 hours of practice. Enrollment can range from 10-15 per semester depending on the availability of staffing.

Bachelor of Arts: Arts
General Education: Arts (GA)
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Crit and Analytical Think

BRASS 103: Euphonium: Secondary
1 Credits/Maximum of 8

Individual instruction in euphonium/baritone one-half hour per week. BRASS 103 Euphonium: Secondary (1 per semester/maximum of 8) (GA)
lyrical studies and standard solo works in a variety of styles. This course includes a variety of musical genre including the use of technical etudes, lyrical studies and standard solo works in a variety of styles. This course directly affects the student’s ability to participate and contribute in the various ensembles on campus. The teacher and the student evaluate the student’s progress and performance. Suggestions for improvement are agreed upon and developed. The course is offered to both music majors and non-majors. Students receive a one-half hour lesson per week, presuming at least 5 hours of practice. Enrollment can range from 12-15 per semester depending on the availability of staffing.

Bachelor of Arts: Arts
General Education: Arts (GA)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

BRASS 104: Tuba: Secondary
1 Credits/Maximum of 8

Individual instruction in tuba one-half hour per week. BRASS 104 Tuba: Secondary (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. The goals of this course are to introduce, define, and develop the musical and technical skills required to play the tuba well in a variety of musical settings. The instrument is active in orchestral, band, chamber, and solo settings. Therefore, the basic goal for serious tuba students as well as amateur tuba students is to be proficient and versatile. The repertoire studied includes a variety of musical genre including the use of technical etudes, lyrical studies and standard solo works in a variety of styles. This course directly affects the student’s ability to participate and contribute in the various ensembles on campus. The teacher and the student evaluate the student’s progress and performance. Suggestions for improvement are agreed upon and developed. The course is offered to both music majors and non-majors. Students receive a one-half hour lesson per week, presuming at least 5 hours of practice per week, presuming at least 5 hours of practice. Enrollment can range from 8-10 per semester depending on the availability of staffing.

Bachelor of Arts: Arts
General Education: Arts (GA)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

BRASS 111: French Horn: Secondary
2 Credits/Maximum of 16

Individual instruction in French horn one hour per week. For students who qualify. BRASS 111 French Horn: Secondary (2 per semester/maximum of 16) (GA)(BA) This course meets the Bachelor of Arts degree requirements. The goals of this course are to introduce, define, and develop the musical and technical skills required to play the horn well in a variety of musical settings. The instrument is active in orchestral, band, chamber, and solo settings. Therefore, the basic goal for serious horn students as well as amateur horn students is to be proficient and versatile. The repertoire studied includes a variety of musical genre including the use of technical etudes, lyrical studies and standard solo works in a variety of styles. This course directly affects the student’s ability to participate and contribute in the various ensembles on campus. The teacher and the student evaluate the student’s progress and performance. Suggestions for improvement are agreed upon and developed. The course is offered to both music majors and non-majors. Students receive a one-hour lesson per week, presuming at least 10 hours of practice. Enrollment can range from 5-8 per semester depending on the availability of staffing.

BRASS 113: Euphonium: Secondary
2 Credits/Maximum of 16

Individual instruction in euphonium/baritone one hour per week. BRASS 113 Euphonium: Secondary (2 per semester/maximum of 16) (GA)(BA) This course meets the Bachelor of Arts degree requirements. The goals of the course are to introduce, define, and develop the musical and I skills required to play the euphonium well in a variety of musical settings. The instrument is active in orchestral, band, chamber, and solo settings. Therefore, goal for serious euphonium students as well as amateur euphonium students is to be proficient and versatile. The repertoire studied includes a variety of musical genre including the use of technical etudes, lyrical studies and standard solo works in a variety of styles. This course directly affects the student’s ability to participate and contribute in the various ensembles on campus. The teacher and the student evaluate the student’s progress and performance. Suggestions for improvement are agreed upon and developed. The course is offered to both music majors and non-majors. Students receive a one-hour lesson per week, presuming at least 10 hours of practice. Enrollment can range from 12-15 per semester depending on the availability of staffing.

BRASS 120: Trumpet: Primary I
2 Credits/Maximum of 2

Individual instruction in trumpet one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 121: French Horn: Primary I
2 Credits/Maximum of 2

Individual instruction in French horn one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 121H: French Horn: Primary I
2 Credits/Maximum of 2

Individual instruction in French horn one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 122: Trombone: Primary I
2 Credits/Maximum of 2

Individual instruction in trombone one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 123: Euphonium: Primary I
2 Credits/Maximum of 2

Individual instruction in euphonium/baritone one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 124: Tuba: Primary I
2 Credits/Maximum of 2

Individual instruction in tuba one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 130: Trumpet: Performance I
3 Credits/Maximum of 3

Individual instruction in trumpet one hour per week. For B.Mus. trumpet performance majors.

BRASS 131: French Horn: Performance I
3 Credits/Maximum of 3

Individual instruction in French horn one hour per week. For B.Mus. French horn performance majors.

BRASS 132: Trombone: Performance I
3 Credits/Maximum of 3

Individual instruction in trombone one hour per week. For B.Mus. trombone majors.

BRASS 133: Euphonium: Performance I
3 Credits/Maximum of 3

Individual instruction in euphonium/baritone one hour per week. For B.Mus. euphonium/baritone majors.
BRASS 134: Tuba: Performance I
3 Credits/Maximum of 3
Individual instruction in tuba one hour per week. For B.Mus. tuba majors.

BRASS 170: Trumpet: Primary II
2 Credits/Maximum of 2
Individual instruction in trumpet one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 171: French Horn: Primary II
2 Credits/Maximum of 2
Individual instruction in French horn one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 172: Trombone: Primary II
2 Credits/Maximum of 2
Individual instruction in trombone one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 173: Euphonium: Primary II
2 Credits/Maximum of 2
Individual instruction in euphonium/baritone one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 180: Trumpet: Performance II
3 Credits/Maximum of 3
Individual instruction in trumpet one hour per week. For B.Mus. trumpet performance majors.

BRASS 181: French Horn: Performance II
3 Credits/Maximum of 3
Individual instruction in French horn one hour per week. For B.Mus. French horn performance majors.

BRASS 182: Trombone: Performance II
3 Credits/Maximum of 3
Individual instruction in trombone one hour per week. For B.Mus. trombone majors.

BRASS 183: Euphonium: Performance II
3 Credits/Maximum of 3
Individual instruction in euphonium/baritone one hour per week. For B.Mus. euphonium/baritone majors.

BRASS 184: Tuba: Performance II
3 Credits/Maximum of 3
Individual instruction in tuba one hour per week. For B.Mus. tuba majors.

BRASS 220: Trumpet: Primary III
2 Credits/Maximum of 2
Individual instruction in trumpet one hour per week. For School of Music B.A. and B.S. majors.

BRASS 221: French Horn: Primary III
2 Credits/Maximum of 2
Individual instruction in French horn one hour per week. For School of Music B.A. and B.S. majors.

BRASS 222: Trombone: Primary III
2 Credits/Maximum of 2
Individual instruction in trombone one hour per week. For School of Music B.A. and B.S. majors.

BRASS 223: Euphonium: Primary III
2 Credits/Maximum of 2
Individual instruction in euphonium/baritone one hour per week. For School of Music B.A. and B.S. majors.

BRASS 230: Trumpet: Performance III
3 Credits/Maximum of 3
Individual instruction in trumpet one hour per week. For B.Mus. trumpet performance majors.

BRASS 231: French Horn: Performance III
3 Credits/Maximum of 3
Individual instruction in French horn one hour per week. For B.Mus. French horn performance majors.

BRASS 232: Trombone: Performance III
3 Credits/Maximum of 3
Individual instruction in trombone one hour per week. For B.Mus. trombone majors.

BRASS 233: Euphonium: Performance III
3 Credits/Maximum of 3
Individual instruction in euphonium/baritone one hour per week. For B.Mus. euphonium/baritone majors.
BRASS 234: Tuba: Performance III
3 Credits/Maximum of 3
Individual instruction in tuba one hour per week. For B.Mus. tuba majors.

BRASS 270: Trumpet: Primary IV
2 Credits/Maximum of 2
Individual instruction in trumpet one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 271: French Horn: Primary IV
2 Credits/Maximum of 2
Individual instruction in French horn one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 272: Trombone: Primary IV
2 Credits/Maximum of 2
Individual instruction in trombone one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 273: Euphonium: Primary IV
2 Credits/Maximum of 2
Individual instruction in euphonium/baritone one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 280: Trumpet: Performance IV
3 Credits/Maximum of 3
Individual instruction in trumpet one hour per week. For B.Mus. trumpet performance majors.

BRASS 281: French Horn: Performance IV
3 Credits/Maximum of 3
Individual instruction in French Horn one hour per week. For B.Mus. French horn performance majors.

BRASS 282: Trombone: Performance IV
3 Credits/Maximum of 3
Individual instruction in trombone one hour per week. For B.Mus. trombone majors.

BRASS 283: Euphonium: Performance IV
3 Credits/Maximum of 3
Individual instruction in euphonium/baritone one hour per week. For B.Mus euphonium/baritone majors.

BRASS 284: Tuba: Performance IV
3 Credits/Maximum of 3
Individual instruction in tuba one hour per week. For B.Mus. tuba majors.

BRASS 300: Trumpet: Primary V
2 Credits/Maximum of 2
Individual instruction in trumpet one hour per week. For School of Music B.A. and B.S. majors.

BRASS 321: French Horn: Primary V
2 Credits/Maximum of 2
Individual instruction in French Horn one hour per week. For School of Music B.A. and B.S. majors.

BRASS 322: Trombone: Primary V
2 Credits/Maximum of 2
Individual instruction in trombone one hour per week. For School of Music B.A. and B.S. majors.

BRASS 323: Euphonium: Primary V
2 Credits/Maximum of 2
Individual instruction in euphonium/baritone one hour per week. For School of Music B.A. and B.S. majors.

BRASS 330: Trumpet: Performance V
3 Credits/Maximum of 3
Individual instruction in trumpet one hour per week. For B.Mus. trumpet performance majors.

BRASS 331: French Horn: Performance V
3 Credits/Maximum of 3
Individual instruction in French Horn one hour per week. For B.Mus. French horn performance majors.

BRASS 332: Trombone: Performance V
3 Credits/Maximum of 3
Individual instruction in trombone one hour per week. For B.Mus. trombone majors.

BRASS 333: Euphonium: Performance V
3 Credits/Maximum of 3
Individual instruction in euphonium/baritone one hour per week. For B.Mus. euphonium/baritone majors.
BRASS 334: Tuba: Performance V
3 Credits/Maximum of 3
Individual instruction in tuba one hour per week. For B.Mus. tuba majors.

BRASS 370: Trumpet: Primary VI
2 Credits/Maximum of 2
Individual instruction in trumpet one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 371: French Horn: Primary VI
2 Credits/Maximum of 2
Individual instruction in French horn one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 372: Trombone: Primary VI
2 Credits/Maximum of 2
Individual instruction in trombone one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 373: Euphonium: Primary VI
2 Credits/Maximum of 2
Individual instruction in euphonium/baritone one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 338: Tuba: Performance VI
3 Credits/Maximum of 3
Individual instruction in tuba one hour per week. For B.Mus. tuba majors.

BRASS 420: Trumpet: Primary VII
2 Credits/Maximum of 2
Individual instruction in trumpet one hour per week. For School of Music B.A. and B.S. majors.

BRASS 421: French Horn: Primary VII
2 Credits/Maximum of 2
Individual instruction in French horn one hour per week. For School of Music B.A. and B.S. majors.

BRASS 422: Trombone: Primary VII
2 Credits/Maximum of 2
Individual instruction in trombone one hour per week. For School of Music B.A. and B.S. majors.

BRASS 423: Euphonium: Primary VII
2 Credits/Maximum of 2
Individual instruction in euphonium/baritone one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 380: Trumpet: Performance VI
3 Credits/Maximum of 3
Individual instruction in trumpet one hour per week. For B.Mus. trumpet performance majors.

BRASS 381: French Horn: Performance VI
3 Credits/Maximum of 3
Individual instruction in French horn one hour per week. For B.Mus. French horn performance majors.

BRASS 382: Trombone: Performance VI
3 Credits/Maximum of 3
Individual instruction in trombone one hour per week. For B.Mus. trombone majors.

BRASS 383: Euphonium: Performance VI
3 Credits/Maximum of 3
Individual instruction in euphonium/baritone one hour per week. For B.Mus. euphonium/baritone majors.
BRASS 434: Tuba: Performance VII
3 Credits/Maximum of 3
Individual instruction in tuba one hour per week. For B.Mus. tuba majors.

BRASS 470: Trumpet: Primary VIII
2 Credits/Maximum of 2
Individual instruction in trumpet one hour per week. For School of Music B.A. and B.S. majors.

BRASS 471: French Horn: Primary VIII
2 Credits/Maximum of 2
Individual instruction in French horn one hour per week. For School of Music B.A. and B.S. majors.

BRASS 472: Trombone: Primary VIII
2 Credits/Maximum of 2
Individual instruction in trombone one hour per week. For School of Music B.A. and B.S. majors.

BRASS 473: Euphonium: Primary VIII
2 Credits/Maximum of 2
Individual instruction in euphonium/baritone one hour per week. For School of Music B.A. and B.S. majors.

BRASS 474: Tuba: Primary VIII
2 Credits/Maximum of 2
Individual instruction in tuba one hour per week. For School of Music B.A. and B.S. majors.

BRASS 480: Trumpet: Performance VIII
3 Credits/Maximum of 3
Individual instruction in tuba one hour per week. For B.Mus. tuba majors.

Music-Jazz (JAZZ)

JAZZ 100: Jazz Performance Studies
1 Credits/Maximum of 8
Jazz Performance provides individual instruction for vocal and instrumental musicians to develop theoretical, technical, and aural skills required by selected jazz performance styles. The style(s) to be studied are agreed upon between the student and instructor; these are drawn from Blues, Dixieland, Swing, Bebop, Cool Jazz, Modal Jazz, Jazz-Rock Fusion. The initial third of the semester is devoted to studying the technical norms of a given style: melodic materials (scales, modes), harmonic structure (vocabulary, norms of harmonic motion), characteristic rhythmic practices (with particular attention to syncopation), special aural requirements (the ability to connect musical hearing and musical thought) and typical frameworks of contrapuntal organization in the appropriate types of ensemble. The final two thirds of the course then deal with applications of these materials in improvisational contexts, with a short section during the last two weeks devoted to developing keyboard skills, an important area of musical competence for any jazz performer. This course is appropriate for any music major or minor with an interest in jazz. Instruction will be delivered in one half-hour lesson per week. Occasional performance in a combo will be a regular part of the course. Applied music fees are required for individualized instruction: $175 for a 1-credit course; $250 for a 2-credit course.

JAZZ 110: Jazz Performance Studies
2 Credits/Maximum of 16

This course is appropriate for any music major or minor with an interest in jazz. Instruction will be delivered in one hour-long lesson per week. Occasional performance in a combo will be a regular part of the course. Applied music fees are required for individualized instruction: $175 for a 1-credit course; $250 for a 2-credit course.
KEYBD 100: Piano: Secondary

1 Credits/Maximum of 8

Individual instruction in piano one-half hour per week. KEYBD 100 Piano: Secondary (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. KEYBD 100 is designed to provide the intermediate non-music major and/or music major student with strategies for developing some of the advanced skills required for playing the piano. Some knowledge of music or piano is assumed. Admission to the course is controlled by the piano faculty. Music 50, 51 (for non-music majors), completion of the piano proficiency (for music majors), or permission of the instructor is a prerequisite for this course. Students learn repertoire, sight-playing, score analysis, interpretive techniques, how to practice to the fullest possible communication of the composer's intent, scales, and a proper and healthy physical approach to the keyboard. Practice of these elements outside the class is expected. Objectives include learning score analysis and interpretive rendering of great masterworks of the piano. Evaluation is based on accuracy of music learning, improvement in technique and expressiveness, possible listening assignments, attendance at studio class and specific concerts. Special facilities required to teach the course are two well-maintained grand pianos for student performance and teacher demonstration. The course is offered every semester.

Bachelor of Arts: Arts
General Education: Arts (GA)
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Crit and Analytical Think

KEYBD 101: Organ: Secondary

1 Credits/Maximum of 8

Individual instruction in pipe organ one-half hour per week. KEYBD 101J Organ: Secondary (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. Keyboard 101J is designed to provide the intermediate non-music major and/or music major student with strategies for developing some of the advanced skills required for playing the organ. Some knowledge of music or piano is assumed. Admission to the course is controlled by the keyboard faculty. Students learn repertoire, sight-playing, score analysis, interpretive techniques, how to practice to the fullest possible communication of the composer's intent, scales, and a proper and healthy physical approach to the keyboard and pedals. Practice of these elements outside the class is expected. Objectives include learning score analysis and interpretive rendering of great masterworks of the organ. Evaluation is based on accuracy of music learning, improvement in technique and expressiveness, possible listening assignments, attendance at studio class and specific concerts. Special facilities required to teach the course are a well-maintained pipe organ for student performance and teacher demonstration. The course is offered every semester.

Music-Percussion (PERCN)

PERCN 100: Percussion: Secondary
1 Credits/Maximum of 8
Individual instruction in percussion one-half hour per week. For both music and non-music majors. PERCN 100 Percussion: Secondary (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. This course consists of private instruction in selected areas of percussion performance. Individualized instruction will guide the student toward competence playing the instrument(s), the study of appropriate repertoire, developing interpretive insights, acquisition of music reading skills, and acquiring both tonal and technical command. Skill building will enable the student to be active as a performer, participating in Penn State music ensembles by competitive audition. Evaluation of the student's progress will be graded by the instructor according to the criteria stated in the course syllabus and
will include: preparation of weekly assignments; solo and/or ensemble performances as assigned; attendance at recitals, concerts, and masterclasses, as assigned; acquisition of assigned material (music, etude books, etc.); essential accessories (metronome, practice pad, etc.); and appropriate instrumental needs (sticks, mallets, small instruments, etc.); attendance at lessons (as stipulated in the course syllabus). The course is offered fall and spring semesters by permission of the instructor, depending on studio enrollments and availability of staff.

STRNG 114: Guitar: Secondary
2 Credits/Maximum of 16

Individual instruction in guitar one hour per week. For School of Music majors whose primary instrument is not guitar; other qualified students. STRNG 114 Guitar: Secondary (2 per semester/maximum of 16) Individual instruction in guitar one hour per week. For music majors whose primary instrument is not guitar; other qualified students. Every semester. 1-5 students enrolled in individual instruction.

Bachelor of Arts: Arts
General Education: Arts (GA)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

STRNG 120: Violin: Primary I
2 Credits
Individual instruction in violin one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 121: Viola: Primary I
2 Credits
Individual instruction in viola one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 122: Violoncello: Primary I
2 Credits
Individualized instruction in violoncello one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 123: Double Bass: Primary I
2 Credits
Individual instruction in double bass one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 124: Guitar: Primary I
2 Credits
Individual instruction in guitar one hour per week. For School of Music B.A. majors; other qualified students. STRNG 124J Guitar: Primary I (2) Individual instruction in guitar one hour per week. For music majors in the BA program.
STRNG 130: Violin: Performance I
3 Credits
Individual instruction in violin one hour per week. For B.Mus. violin performance majors.

STRNG 131: Viola: Performance I
3 Credits
Individual instruction in viola one hour per week. For B.Mus. guitar performance majors.

STRNG 132: Violoncello: Performance I
3 Credits
Individual instruction in violoncello one hour per week. For B.Mus. violoncello performance majors.

STRNG 133: Double Bass: Performance I
3 Credits
Individual instruction in double bass one hour per week. For B.Mus. double bass performance majors.

STRNG 170: Violin: Primary II
2 Credits
Individual instruction in violin one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 171: Viola: Primary II
2 Credits
Individual instruction in viola one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 172: Violoncello: Primary II
2 Credits
Individual instruction in violoncello one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 173: Double Bass: Primary II
2 Credits
Individual instruction in double bass one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 174: Guitar: Primary II
2 Credits
Individual instruction in guitar one hour per week. For School of Music B.A. majors; other qualified students. STRNG 174J Guitar: Primary II (2) Individual instruction in guitar one hour per week. For music majors in the BA program.

STRNG 180: Violin: Performance II
3 Credits
Individual instruction in violin one hour per week. For B.Mus. violin performance major.

STRNG 181: Viola: Performance II
3 Credits
Individual instruction in viola one hour per week. For B.Mus. viola performance majors.

STRNG 182: Violoncello: Performance II
3 Credits
Individual instruction in violoncello one hour per week. For B.Mus. violoncello performance majors.

STRNG 183: Double Bass: Performance II
3 Credits
Individual instruction in double bass one hour per week. For B.Mus. double bass performance majors.

STRNG 220: Violin: Primary III
2 Credits
Individual instruction in violin one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 221: Viola: Primary III
2 Credits
Individual instruction in viola one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 222: Violoncello: Primary III
2 Credits
Individual instruction in violoncello one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 223: Double Bass: Primary III
2 Credits
Individual instruction in double bass one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 224: Guitar: Primary III
2 Credits
Individual instruction in guitar one hour per week. For School of Music B.A. majors; other qualified students. STRNG 224 Guitar: Primary III (2) Individual instruction in guitar one hour per week. For music majors in the BA program.
STRNG 230: Violin: Performance III
3 Credits
Individual instruction in violin one hour per week. For B.Mus. violin performance majors.

STRNG 231: Viola: Performance III
3 Credits
Individual instruction in viola one hour per week. For B.Mus. viola performance majors.

STRNG 232: Violoncello: Performance III
3 Credits
Individual instruction in violoncello one hour per week. For B.Mus. violoncello performance majors.

STRNG 233: Double Bass: Performance III
3 Credits
Individual instruction in double bass one hour per week. For B.Mus. double bass majors.

STRNG 270: Violin: Primary IV
2 Credits
Individual instruction in violin one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 271: Viola: Primary IV
2 Credits
Individual instruction in viola one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 272: Violoncello: Primary IV
2 Credits
Individual instruction in violoncello one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 273: Double Bass: Primary IV
2 Credits
Individual instruction in double bass one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 274: Guitar: Primary IV
2 Credits
Individual instruction in guitar one hour per week. For School of Music B.A. majors; other qualified students. STRING 274 Guitar: Primary IV (2) Individual instruction in guitar one hour per week. For music majors in the BA program.

Prerequisite: STRNG224J and permission of faculty jury

STRNG 280: Violin: Performance IV
3 Credits
Individual instruction in violin one hour per week. For B.Mus. violin performance majors.

STRNG 281: Viola: Performance IV
3 Credits
Individual instruction in viola one hour per week. For B.Mus. viola performance majors.

STRNG 282: Violoncello: Performance IV
3 Credits
Individual instruction in violoncello one hour per week. For B.Mus. violoncello performance majors.

STRNG 283: Double Bass: Performance IV
3 Credits
Individual instruction in double bass one hour per week. For B.Mus. double bass performance majors.

STRNG 320: Violin: Primary V
2 Credits
Individual instruction in violin one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 321: Viola: Primary V
2 Credits
Individual instruction in viola one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 322: Violoncello: Primary V
2 Credits
Individual instruction in violoncello one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 323: Double Bass: Primary V
2 Credits
Individual instruction in double bass one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 324: Guitar: Primary V
2 Credits
Individual instruction in guitar one hour per week. For School of Music B.A. majors; other qualified students. STRING 324J Guitar: Primary V (2) Individual instruction in guitar one hour per week. For music majors in the BA program.
STRNG 330: Violin: Performance V
3 Credits
Individual instruction in violin one hour per week. For B.Mus. violin performance majors.

STRNG 331: Viola: Performance V
3 Credits
Individual instruction in viola one hour per week. For B.Mus. viola performance majors.

STRNG 332: Violoncello: Performance V
3 Credits
Individual instruction in violoncello one hour per week. For B.Mus. violoncello performance majors.

STRNG 333: Double Bass: Performance V
3 Credits
Individual instruction in double bass one hour per week. For B.Mus. double bass performance majors.

STRNG 370: Violin: Primary VI
2 Credits
Individual instruction in violin one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 371: Viola: Primary VI
2 Credits
Individual instruction in viola one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 372: Violoncello: Primary VI
2 Credits
Individual instruction in violoncello one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 373: Double Bass: Primary VI
2 Credits
Individual instruction in double bass one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 374: Guitar: Primary VI
2 Credits
Individual instruction in guitar one hour per week. For School of Music B.A. majors; other qualified students. STRNG 374 Guitar: Primary VI (2) Individual instruction in guitar one hour per week. For music majors in the BA program.

STRNG 380: Violin: Performance VI
3 Credits
Individual instruction in violin one hour per week. For B.Mus. violin performance majors.

STRNG 381: Viola: Performance VI
3 Credits
Individual instruction in viola one hour per week. For B.Mus. viola performance majors.

STRNG 382: Violoncello: Performance VI
3 Credits
Individual instruction in violoncello one hour per week. For B.Mus. violoncello performance majors.

STRNG 383: Double Bass: Performance VI
3 Credits
Individual instruction in double bass one hour per week. For B.Mus. double bass performance majors.

STRNG 420: Violin: Primary VII
2 Credits
Individual instruction in violin one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 421: Viola: Primary VII
2 Credits
Individual instruction in viola one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 422: Violoncello: Primary VII
2 Credits
Individual instruction in violoncello one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 423: Double Bass: Primary VII
2 Credits
Individual instruction in double bass one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 424: Guitar: Primary VII
2 Credits
Individual instruction in guitar one hour per week. For School of Music B.A. majors; other qualified students. STRNG 424J Guitar: Primary VII (2) Individual instruction in guitar one hour per week. For music majors in the BA program.
STRNG 430: Violin: Performance VII
3 Credits
Individual instruction in violin one hour per week. For B.Mus. violin performance majors.

STRNG 431: Viola: Performance VII
3 Credits
Individual instruction in viola one hour per week. For B.Mus. viola performance majors.

STRNG 432: Violoncello: Performance VII
3 Credits
Individual instruction in violoncello one hour per week. For B.Mus. violoncello performance majors.

STRNG 433: Double Bass: Performance VII
3 Credits
Individual instruction in double bass one hour per week. For B.Mus. double bass performance majors.

STRNG 470: Violin: Primary VIII
2 Credits
Individual instruction in violin one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 471: Viola: Primary VIII
2 Credits
Individual instruction in viola one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 472: Violoncello: Primary VIII
2 Credits
Individual instruction in violoncello one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 473: Double Bass: Primary VIII
2 Credits
Individual instruction in double bass one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 480: Violin: Performance VIII
3 Credits
Individual instruction in violin one hour per week. For B.Mus. violin performance majors.

STRNG 481: Viola: Performance VIII
3 Credits
Individual instruction in viola one hour per week. For B.Mus. viola performance majors.

STRNG 482: Violoncello: Performance VIII
3 Credits
Individual instruction in violoncello one hour per week. For B.Mus. violoncello performance majors.

STRNG 483: Double Bass: Performance VIII
3 Credits
Individual instruction in double bass one hour per week. For B.Mus. double bass performance majors.

Music-Voice (VOICE)

VOICE 100: Voice: Secondary
1 Credits/Maximum of 8
Individual instruction in voice one-half hour per week. VOICE 100 Voice: Secondary (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. This course is designed to present and apply basic principles of singing. Students learn songs, and address topics such as posture, breathing, tone production, expressiveness, and vocal health. Objectives are proficiency of breath management, a resonant vocal timbre, and effective communication in song. Evaluation is based on accuracy of music learning, improvement in technique and expressiveness, possible writing or listening assignments, and a possible studio recital. The course is offered every semester. The maximum enrollment is 30 per semester.

Individual instruction in bassoon one hour per week. For both music and non-music students. WWNDS 113 Bassoon: Secondary (2 per semester/maximum of 16) (GA)(BA) This course meets the Bachelor of Arts degree requirements. Individualized instruction will guide the student toward mastery of the instrument, the study of repertoire, development of interpretive insights, and acquisition of both tonal and technical command. Skill building will enable the student to be active as a performer, participating in Penn State ensembles by competitive audition. Evaluation of the student’s progress will be graded by the instructor according to the criteria stated in the course syllabus and will include: preparation of weekly assignments; solo and/or ensemble performances as assigned; attendance at recitals, concerts, and masterclasses, as assigned; acquisition of assigned materials (music, books, etc.), essential accessories (metronome, tuner, etc.); attendance at lessons (as stipulated in the course syllabus). The course is offered fall and spring semesters by permission of the instructor, depending on studio enrollments and availability of staff.

Bachelor of Arts: Arts
General Education: Arts (GA)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies
WWNDS 114: Saxophone: Secondary
2 Credits/Maximum of 16

Individual instruction in saxophone one hour per week. For both music and non-music majors. WWNDS 120: Flute: Primary I
2 Credits

Individual instruction in flute one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 121: Oboe: Primary I
2 Credits

Individual instruction in oboe one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 122: Clarinet: Primary I
2 Credits

Individual instruction in clarinet one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 123: Bassoon: Primary I
2 Credits

Individual instruction in bassoon one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 124: Saxophone Primary I
2 Credits

Individual instruction in saxophone one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 130: Flute: Performance I
3 Credits

Individual instruction in flute one hour per week. For B.Mus. flute performance majors.

WWNDS 131: Oboe: Performance I
3 Credits

Individual instruction in oboe one hour per week. For B.Mus. oboe majors.

WWNDS 132: Clarinet: Performance I
3 Credits

Individual instruction in clarinet one hour per week. For B.Mus. clarinet majors.

WWNDS 133: Bassoon: Performance I
3 Credits

Individual instruction in bassoon one hour per week. For B.Mus. bassoon performance majors.

WWNDS 134: Saxophone: Performance I
3 Credits

Individual instruction in saxophone one hour per week. For B.Mus. saxophone performance majors.

WWNDS 170: Flute: Primary II
2 Credits

Individual instruction in flute one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 171: Oboe: Primary II
2 Credits

Individual instruction in oboe one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 172: Clarinet: Primary II
2 Credits

Individual instruction in clarinet one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 173: Bassoon: Primary II
2 Credits

Individual instruction in bassoon one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 174: Saxophone: Primary II
2 Credits

Individual instruction in saxophone one hour per week. For School of Music B.A. and B.S. majors.
WWNDS 180: Flute: Performance II
3 Credits
Individual instruction in flute one hour per week. For B.Mus. flute performance majors.

WWNDS 181: Oboe: Performance II
3 Credits
Individual instruction in oboe one hour per week. For B.Mus. oboe majors.

WWNDS 182: Clarinet: Performance II
3 Credits
Individual instruction in clarinet one hour per week. For B.Mus. clarinet majors.

WWNDS 183: Bassoon: Performance II
3 Credits
Individual instruction in bassoon one hour per week. For B.Mus. bassoon performance majors.

WWNDS 184: Saxophone: Performance II
3 Credits
Individual instruction in saxophone one hour per week. For B.Mus. saxophone performance majors.

WWNDS 220: Flute: Primary III
2 Credits
Individual instruction in flute one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 221: Oboe: Primary III
2 Credits
Individual instruction in oboe one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 222: Clarinet: Primary III
2 Credits
Individual instruction in clarinet one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 223: Bassoon: Primary III
2 Credits
Individual instruction in bassoon one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 224: Saxophone: Primary III
2 Credits
Individual instruction in saxophone one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 230: Flute: Performance III
3 Credits
Individual instruction in flute one hour per week. For B.Mus. flute performance majors.

WWNDS 231: Oboe: Performance III
3 Credits
Individual instruction in oboe one hour per week. For B.Mus. oboe majors.

WWNDS 232: Clarinet: Performance III
3 Credits
Individual instruction in clarinet one hour per week. For B.Mus. clarinet majors.

WWNDS 233: Bassoon: Performance III
3 Credits
Individual instruction in bassoon one hour per week. For B.Mus. bassoon performance majors.

WWNDS 234: Saxophone: Performance III
3 Credits
Individual instruction in saxophone one hour per week. For B.Mus. saxophone performance majors.

WWNDS 270: Flute: Primary IV
2 Credits
Individual instruction in flute one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 271: Oboe: Primary IV
2 Credits
Individual instruction in oboe one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 272: Clarinet: Primary IV
2 Credits
Individual instruction in clarinet one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 273: Bassoon: Primary IV
2 Credits
Individual instruction in bassoon one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 274: Saxophone: Primary IV
2 Credits
Individual instruction in saxophone one hour per week. For School of Music B.A. and B.S. majors.
WWNDS 280: Flute: Performance IV
3 Credits
Individual instruction in flute one hour per week. For B.Mus. flute performance majors.

WWNDS 281: Oboe: Performance IV
3 Credits
Individual instruction in oboe one hour per week. For B.Mus. oboe majors.

WWNDS 282: Clarinet: Performance IV
3 Credits
Individual instruction in clarinet one hour per week. For B.Mus. clarinet majors.

WWNDS 283: Bassoon: Performance IV
3 Credits
Individual instruction in bassoon one hour per week. For B.Mus. bassoon performance majors.

WWNDS 284: Saxophone: Performance IV
3 Credits
Individual instruction in saxophone one hour per week. For B.Mus. saxophone performance majors.

WWNDS 320: Flute: Primary V
2 Credits
Individual instruction in flute one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 321: Oboe: Primary V
2 Credits
Individual instruction in oboe one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 322: Clarinet: Primary V
2 Credits
Individual instruction in clarinet one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 323: Bassoon: Primary V
2 Credits
Individual instruction in bassoon one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 324: Saxophone: Primary V
2 Credits
Individual instruction in saxophone one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 330: Flute: Performance V
3 Credits
Individual instruction in flute one hour per week. For B.Mus. flute performance majors.

WWNDS 331: Oboe: Performance V
3 Credits
Individual instruction in oboe one hour per week. For B.Mus. oboe majors.

WWNDS 332: Clarinet: Performance V
3 Credits
Individual instruction in clarinet one hour per week. For B.Mus. clarinet majors.

WWNDS 333: Bassoon: Performance V
3 Credits
Individual instruction in bassoon one hour per week. For B.Mus. bassoon performance majors.

WWNDS 334: Saxophone: Performance V
3 Credits
Individual instruction in saxophone one hour per week. For B.Mus. saxophone performance majors.

WWNDS 370: Flute: Primary VI
2 Credits
Individual instruction in flute one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 371: Oboe: Primary VI
2 Credits
Individual instruction in oboe one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 372: Clarinet: Primary VI
2 Credits
Individual instruction in clarinet one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 373: Bassoon: Primary VI
2 Credits
Individual instruction in bassoon one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 374: Saxophone: Primary VI
2 Credits
Individual instruction in saxophone one hour per week. For School of Music B.A. and B.S. majors.
WWNDS 380: Flute: Performance VI
3 Credits
Individual instruction in flute one hour per week. For B.Mus. flute performance majors.

WWNDS 381: Oboe: Performance VI
3 Credits
Individual instruction in oboe one hour per week. For B.Mus. oboe majors.

WWNDS 382: Clarinet: Performance VI
3 Credits
Individual instruction in clarinet one hour per week. For B.Mus. clarinet majors.

WWNDS 383: Bassoon: Performance VI
3 Credits
Individual instruction in bassoon one hour per week. For B.Mus. bassoon performance majors.

WWNDS 384: Saxophone: Performance VI
3 Credits
Individual instruction in saxophone one hour per week. For B.Mus. saxophone majors.

WWNDS 420: Flute: Primary VII
2 Credits
Individual instruction in flute one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 421: Oboe: Primary VII
2 Credits
Individual instruction in oboe one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 422: Clarinet: Primary VII
2 Credits
Individual instruction in clarinet one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 423: Bassoon: Primary VII
2 Credits
Individual instruction in bassoon one hour per week. For School of Music B.A. and B.S. majors.

WWNDS 424: Saxophone: Primary VII
2 Credits
Individual instruction in saxophone one hour per week. For School of Music B.A. and B.S. majors.
develop their understanding of personal strengths, values and growth opportunities in the context of team, group and organizational leadership, as well as through the creation of a leadership vision and professional development plan. Students will develop knowledge, abilities and skills that will assist them as future officers to successfully operate in the context of complex military environments around the globe.

NAVSC 201: Sea Power and Maritime Affairs
3 Credits
Historical evolution of sea power and its effects on world history; current U.S. maritime strategy for employment of naval forces. NAVSC 201 Sea Power and Maritime Affairs (3) The curriculum for Sea Power and Maritime Affairs provides a U.S. Naval history survey emphasizing major developments in strategy, tactics, technology and the effects of political climate thereon. Primary topics include: significant naval engagements and milestones, prominent leaders and their contributions, the role of sea power in national policy and diplomacy in both peacetime and war through the present day. The course also studies Mahan's naval strategy along with the effects of maritime policy on global stability and the importance of Joint Warfare and power projection.

NAVSC 202: Naval Ships Systems I—Naval Engineering
3 Credits
Principles and applications of engineering concepts to ship construction, stability, and propulsion and auxiliary systems. NAVSC 202 Naval Ships Systems I—Naval Engineering (3) The Naval Engineering curriculum educates students on the construction and operation of naval ships, submarines, and aircraft exploring and discussing principles and applications of engineering concepts with regards to construction, stability, propulsion and auxiliary systems. Taught by an experienced naval officer, this course is designed to assist in the professional development of future leaders in the U.S. Navy. A background in calculus and physics is recommended as the student will perform various assignments in thermodynamics, fluid dynamics and nuclear fundamentals. Emphasis on theory-to-practice will be demonstrated throughout the curriculum and students will receive live demonstrations of engineering examples.

NAVSC 301: Naval Ships Systems II—Weapons
3 Credits
An analysis of electromagnetic wave theory, principles of underwater sound propagation, electro-optic theory, and weapons control systems. NAVSC 301 Naval Ships Systems II—Weapons (3) A continuation of Naval Ships Systems I: Naval Engineering, Naval Ships Systems II: Weapons educates students on the employment and basic operation of military weaponry and fire control technology. An analysis of electromagnetic wave theory, principles of underwater sound propagation, electro-optic theory and weapons control systems establishes the student's basic understanding and prepares them for a future career as a naval officer. Students will routinely participate in small group discussions over practical application of weapon technology and trends in future design. The course will culminate with a final project of the student's choosing over a germane topic.

Prerequisite: NAVSC 202
NAVSC 302: Navigation

3 Credits

Theory and principles of all types of piloting and navigation, including a practicum emphasizing correct documentation and plotting. NAVSC 302 Navigation (3) The curriculum for Navigation provides the basis for maritime focused ship piloting. Designed to be taught by a commissioned officer in the U.S. Navy with a Surface Warfare background, the course focuses on the theory and principles of various types of piloting and navigation while employing numerous practical exercises and case studies to aid learning. Primary topics of study include: Precision visual and electronic piloting, tides and currents, maneuvering boards and relative motion theory, international piloting laws and best practices.

NAVSC 311: Evolution of Warfare

3 Credits

Survey of development of military strategy, tactics, principles of war, and weaponry through the ages and recent U.S. applications. NAVSC 311 Evolution of Warfare (3) The curriculum for Evolution of Warfare provides students with an in-depth understanding of the art, science and concepts of warfare throughout history. The historical studies not only encompass notable progressions and innovations in warfare, but also illustrate failures which led to major paradoxical transformations in the military culture, tactics, techniques and procedures. Students will be able to garner an appreciation for critical analysis of challenges military organizations have faced in the past, present and will face in future environments. The conclusion of the course explores emerging threats, such as irregular and cyber warfare, which challenge our Nation today.

NAVSC 313: Marine Corps Leadership Theory and Techniques

3 Credits

Introduction to Marine Corps leadership theory and techniques and their application to military-related practical skills and subject matter. NAVASC 313 Marine Corps Leadership Theory and Techniques (3) The curriculum for Marine Corps Leadership Theory and Techniques provides students with an in-depth understanding of the physical and mental rigor Marine Corps Officers face while leading Marines in the contemporary operating environment. Student’s professional development as future Marine Corps leaders is enhanced through the examination of military-related skills, decision-making and management processes, organizational structures and associated micro-cultures within the military framework. Underlying concepts focus on a historical perspective of fundamentals of leadership, team building, establishing command, organizational safety (to include sexual assault prevention/response and suicide prevention) and equal opportunity coupled with humanistic functions leading to successful organizations.

NAVSC 401: Naval Operations and Seamanship

3 Credits

Introduction to naval operations; the theory and principles of the rules of the road; use of the maneuvering board. NAVSC 401 Naval Operations and Seamanship (3) The curriculum for Naval Operations and Seamanship provides for an in-depth study of shipboard procedures in the United States Navy. Designed to be taught by a warfare qualified commissioned officer in the U.S. Navy, the course focuses on advanced navigational practices, communications, naval warfare doctrine, joint operations and advanced shipboard evolutions. The course is primarily lecture based, but also employs practical laboratories and case studies to reinforce advanced topics.

Prerequisite: NAVSC205

NAVSC 402: Leadership and Ethics

3 Credits

The Navy’s Resource Management Program (personnel management), counseling techniques, military justice, prevention of substance abuse, and naval correspondence and publications. NAVSC 402 Leadership and Ethics II (3) NAVSCI 402 Leadership and Ethics (3) - A capstone course building upon the foundation of previous Naval Science courses, Leadership and Ethics ensures students have a solid understanding of and an appreciation for ethical standards and decision making. It provides midshipmen with the ethical foundation and basic leadership tools needed to be effective junior officers and provide the high quality leadership our country and Department of Defense will need in the 21st Century. The curriculum is divided into two distinct but overlapping sections; the first focused on ethical theory and major Western ethical philosophy followed by the practical application of leadership as it pertains to a junior officer’s duties and responsibilities. Ethical theory is introduced in an academic, discussion-oriented format in order to provide midshipmen with a solid foundation and understanding of various moral, ethical and leadership philosophies. This serves to guide, refine and strengthen a junior officer's character and increase one's awareness of different ethical decision-making tools. The latter portion of the course challenges the midshipmen to apply the first part of the course (i.e. ethical leadership theory) in discussions and practical application exercises of their future duties, responsibilities and expectations of a junior officer in the United States Navy or Marine Corps. Extensive use of case studies throughout the curriculum reinforces the importance of ethical decision-making by naval leaders.

Prerequisite: NAVSC401

NAVSC 411: Amphibious Warfare

3 Credits

A historical survey and evaluation of twentieth-century amphibious warfare operations. NAVSC 411 Amphibious Warfare (3) NAVSCI 411 Amphibious Warfare (3) - The curriculum for Amphibious Warfare provides students with an in-depth historical basis of the progressive development of military amphibious operations from the early 400 B.C. period to present day military operations. Integral to the course is the understanding of the evolution of military tactics, techniques and procedures in relation to technological advances throughout history and the role of time, space and logistics in military operations. Students conduct detailed research projects of current amphibious operations ranging from amphibious operations in the littorals, humanitarian assistance/disaster relief and non-combatant evacuation operations around the world. The conclusion of the course explores emerging threats which challenge future amphibious operations and the continuance of developing advanced technology, tactics, techniques and procedures currently in the research and development phase within the U.S. Marine Corps.

Prerequisite: 6 credits of Navy ROTC courses
Nuclear Engineering (NUCE)

NUCE 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

NUCE 299: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

NUCE 301: Fundamentals of Reactor Physics
4 Credits
Nuclear reactions and interactions relevant to nuclear engineering including fission, cross-sections, reaction rate calculations, energy depositions rates, and radioactive decay. This course is designed to acquaint junior-level undergraduate students with knowledge essential to the reactor physics and nuclear reactor systems. Students will learn nuclear reactions including radioactive decay, fission and fusion, reaction rates, energy deposition rates, various nuclear systems, and introductory diffusion theory.

Prerequisite: MATH 251 Concurrents: MATH 230; MATH 232, PHYS 214

NUCE 302: Introduction to Reactor Design
4 Credits
Static and dynamic reactor theory applied to basic reactor design problems.

Prerequisite: NUC E301 , NUC E309

NUCE 309: Analytical Techniques for Nuclear Concept
3 Credits
This course is structured to provide students with the necessary analytical techniques and terminology for radiation science, nuclear reactor design, and power system simulation. Students will be taught the basic mathematical methods needed for such topics as simplified reactor physics, fluid mechanics, heat and mass transfer, control theory, shielding, radiation detection, fission product decay, and risk assessment. The course will cover four general mathematical areas: partial differential equations, linear algebra, systems of ordinary differential equations, and probability and statistics. Linear ordinary differential equations are solved using Reduction to Separable Form, Superposition of Solutions, Laplace Transforms, and Numerical Methods. Linear partial differential equations are solved using Separation of Variables. Linear algebra is used to solve sets of linear equations, Least Squares Fit, and Finite Difference Methods. Eigenvalues and Eigenvectors found for a matrix are used to rotate a function to principle coordinates and to solve systems of ordinary differential equations. Probability and statistics includes sampling, permutations and combinations, binomial, Poisson, hypergeometric, and normal distributions. These statistical methods are then applied to radiation counting statistics.

Prerequisite: MATH 251 Concurrents: MATH 230; MATH 232

NUCE 310W: Issues in Nuclear Engineering
2 Credits
Societal and technical issues facing nuclear engineers, including safety, operations, waste, regulation, public acceptance, economics, ethics, and radiation.

Prerequisite: fifth-semester standing
Writing Across the Curriculum

NUCE 399: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

NUCE 401: Introduction to Nuclear Engineering
3 Credits
Fundamental concepts of nuclear engineering, including fission, reactor theory, shielding, and radioisotopes; intended for other than nuclear engineering students.

Prerequisite: MATH 250 or MATH 251

NUCE 403: Advanced Reactor Design
3 Credits
Physical principles and computational methods for reactor analysis and design. Multigroup diffusion theory; determination of fast and thermal group constants; cell calculations for heterogeneous core lattices.

Prerequisite: NUC E302

NUCE 403H: Advanced Reactor Design
3 Credits
Honors
Physical principles and computational methods for reactor analysis and design. Multigroup diffusion theory; determination of fast and thermal group constants; cell calculations for heterogeneous core lattices.

NUCE 405: Nuclear and Radiochemistry
3 Credits
Theory of radioactive decay processes, nuclear properties and structure, nuclear reactions, interactions of radiation with matter, biological effects of radiation. CHEM 406 Nuclear and Radiochemistry (3) CHEM 406 provides a basic introduction to many of the important physical phenomena in nuclear and radiochemistry and the theories that describe them. The exposition of both experimental phenomena and theory complements the content of other upper-level courses in physical chemistry such as CHEM 450 and 452. Specifically, the types of radioactive decay are described, and, using this information, the equations that relate the growth and decay, i.e., the kinetics, of radioactive nuclei are derived. In parallel, a variety of types of nuclear reactions, such as neutron capture are introduced and used to develop the equations that governing the kinetics of nuclear reactions, including the concept of cross section. To describe the nature of nuclear matter, the relationships between energy, binding energy, and mass, are
developed and augmented with the introduction of related quantities including the nuclear magnetic-dipole moment, total angular momentum of the nucleus, and Fermi-Dirac and Bose-Einstein statistics. A basic introduction to quantum mechanics, including several problems of increasing complexity, namely, the one-dimensional particle-in-a-box, the three-dimensional particle-in-a-cubic-box, and the particle-in-a-spherical box is then provided. The latter problem forms the basis for developing the single-particle shell-model of the nucleus, which is compared to the single-particle shell-model of the atom, namely, the hydrogen-atom problem. The barrier-penetration theory of alpha-decay, Fermi’s phase-space theory of beta-decay, and the selection rules for gamma-ray decay are then presented. Final topics include the interactions of radiation with matter and the biological effects of radiation.

**Enforced Prerequisite at Enrollment:** CHEM 452 or PHYS 237 or NUCE 301
Cross-listed with: CHEM 406

**NUCE 406: Introduction to Statistical Thermodynamics**
3 Credits

Statistical description of systems composed of large numbers of particles in the context of classical and quantum mechanics; basic concepts of probability theory and thermodynamics as they relate to statistical mechanics. M E (NUC E) 406 Introduction to Statistical Thermodynamics (3) This course is an introduction to probabilistic and statistical concepts in the physical sciences, which we refer to as ‘statistical thermodynamics.’ In areas such as design and processing of electronic devices, materials engineering, chemical engineering, and combustion engineering, the science of statistical mechanics is a particularly necessary, powerful, and important tool for the engineer. The underlying foundation of statistical mechanics is developed by (1) reviewing the basic ideas from probability theory, (2) deriving the binomial, Poisson, and Gaussian probability distributions, and (3) using these models to analyze several examples taken from science and engineering. To make a connection between macroscopic quantities and the corresponding probabilistic representation, classical thermodynamics is reviewed using the internal energy, entropy, and free energy functions in the context of the first and second laws. Statistical mechanics for classical and quantum-mechanical systems is presented via the micro-canonical, canonical, and grand canonical ensembles using the associated partition functions. During the syntheses of ideas, applications from various branches of science are presented. Some examples of applications are the Einstein crystal, the Debye crystal, the ideal gas, and black body radiation. This course covers the following program objectives:

- Demonstrate knowledge of basic chemistry and physics.
- Demonstrate a knowledge of atomic and nuclear physics.
- Demonstrate a knowledge of thermodynamics, heat transfer, and fluid flow.
- Understand and apply the basic concepts of particle transport.
- Understand and apply thermodynamics and heat transfer principles to the analysis of nuclear power components and systems.

**Prerequisite:** M E 300 or M E 201 or M E 302 or CH E 303; MATH 230 or MATH 231
Cross-listed with: ME 406

**NUCE 408: Radiation Shielding**
3 Credits

Radiation sources in reactor systems; attenuation of gamma rays and neutrons; point kernel methods; deep penetration theories; Monte Carlo methods.

**Prerequisite:** NUC E301

**NUCE 409: Nuclear Materials**
3 Credits

Nuclear reactor materials: relationship between changes in material properties and microstructural evolution of nuclear cladding and fuel under irradiation. NUC E (MATSE) 409 Nuclear Materials (3) NUC E/ MATSE 409 provides a background on the types of materials used in nuclear reactors and their response to neutron irradiation. Most of the materials problems encountered in the operation of nuclear power reactors for energy production are discussed here. The objective of the course is to give nuclear engineering students a background in materials, so they understand the limitations put on reactor operations and reactor design by materials performance. In the first part of the course, we review basic concepts of physical metallurgy, to develop a mechanistic and microstructurally based view of material properties. In the second part of the course, we present the methods to calculate displacement damage to the material produced by exposure to neutron irradiation. The microstructural evolution that results from the reactor exposure (including radiation damage and defect cluster evolution, and changes) is described. The aim is to create a linkage between these changes at the atomistic level and the changes in macroscopic behavior of the material. Special attention is given to property changes that affect fuel performance and operational safety. Both mathematical methods and experimental techniques are emphasized so that theoretical modeling is instructed by experimental data. Students use the TRIM and SPECTER codes to quantitatively evaluate neutron damage, as well as learn simple analytical models that describe microstructural evolution and property changes under irradiation.

**Prerequisite:** PHYS 214
Cross-listed with: MATSE 409

**NUCE 420: Radiological Safety**
3 Credits

Ionizing radiation, biological effects, radiation measurement, dose computational techniques, local and federal regulations, exposure control.

**Prerequisite:** NUC E301 or NUC E405

**NUCE 428: Radioactive Waste Control**
3 Credits

**Prerequisite:** NUC E301 or NUC E405
NUCE 430: Design Principles of Reactor Systems

3 Credits

Nuclear power cycles; heat removal problems; kinetic behavior of nuclear systems; material and structural design problems. NUC E 430 Design Principles of Reactor Systems (3) This course is designed to provide students in Nuclear Engineering with sufficient background to (a) understand the design of nuclear power reactors, how they work and why, (b) understand and apply design criteria which determine the power level and system efficiency in power reactor cores, (c) become familiar with and understand appropriate power reactor terminology and use, (d) learn how to perform thermal/hydraulic analysis for various reactor operation conditions, (e) learn the different accident classifications and reactor operating limits, and (f) become familiar with basic concepts on the analysis of two-phase flow.

Prerequisite: NUC E302 ; Prerequisite or concurrent: M E 410

NUCE 431W: Nuclear Reactor Core Design Synthesis

4 Credits

Technical and economic optimization of nuclear systems. NUC E 431W Nuclear Reactor Core Design Synthesis (4) This course provides a capstone design experience that will give the student an understanding of the design methodology and considerations applied to systems or components used in nuclear power reactors and/or in nuclear science. Students will learn design principles, understand and apply design criteria to create a synthesized design product, become familiar with and understand appropriate technical and design terminology and its use, and learn how to prepare technical reports and make technical presentations.

Prerequisite: NUC E403 , NUC E430 ; prerequisite or concurrent: ENGL 202C Writing Across the Curriculum

NUCE 441: Nuclear Security Threat Analysis and Assessments

3 Credits

Nuclear threat assessment and analysis for non-state actors to nuclear and radiological facilities and supply lines. NUC E 441 Nuclear Security Threat Analysis and Assessments (3) The primary goal of this course is to educate the student in such a manner that on completion they are able to conduct a threat assessment and analysis for non-state actors (i.e., terrorist and criminal organizations) and the threat which they present to nuclear and radiological facilities and supply lines. Approaching the subject matter in this way forces a student to efficiently and effectively identify security threats and ultimately craft and articulate plausible policy responses to such threats. Specifically, students will focus on threats emanating from nuclear weapons, radiological material, and related technology. After completing this course, the student should be able to: - Analyze current and future nuclear threats from countries and nonstate or sub-state actors and provide recommendations on how to address these security issues. - Define and analyze the various types of transnational threats and targets in order to craft effective policy responses. - Describe nuclear weapons proliferation, including incentives and disincentives for proliferation. - Analyze smuggling methods and counter-proliferation strategies. - Identify materials of concern and the physical characteristics of these materials. Also prioritize these materials based on their attractiveness, location, and the threat they pose. - Understand the history of terrorism, including its causes, motivations, strategies, and tactics, particularly regarding nuclear terrorism. - Explain counterterrorism strategies and policies and the role of intelligence in counterterrorism, with a particular emphasis on the efforts of the United States Government.

Prerequisite: NUC E302

NUCE 442: Nuclear Security System Design

3 Credits

Science and engineering associated with the design, evaluation, and implementation of systems to secure nuclear and radiological materials. NUC E 442 Nuclear Security System Design (3) The primary goal of this course is to educate the student to think with a security perspective such that they can design and evaluate systems to deter, detect, interdict, and respond to threats to the security of nuclear and radiological materials. After completing this course, the student should be able to: - Analyze motivations and capabilities of adversaries (terrorists, criminal groups, protesters, etc.) and be able to characterize a Design Basis Threat (DBT) that can be used to perform a threat-informed security evaluation. - Describe and explain the operation of detection, delay, and response technologies. Understand how to complete a performance evaluation of these technologies. - Evaluate insider threats to nuclear and radiological facilities and incorporate the insider threat in a DBT. - Formulate different response strategies (including deterrence, denial, containment, pursuit, and recapture) for different facilities and considering on-site and/or off-site response. - Use nuclear or radiological material facility characteristics and a DBT to design a performance-based security system for a facility that will be threat-informed, provide defense in depth, and achieve balanced protection while minimizing risk to an acceptable level. - Apply engineering principles to produce a cost benefit analysis for upgrade options for an existing nuclear facility. - Understand the unique security characteristics associated with transportation of nuclear materials, smuggling of nuclear materials, and protection of major public events and be able to apply a risk- and performance-based engineering approach to security systems for these scenarios. - Understand nuclear forensics as a component of a nuclear security system and be able to use nuclear forensics interpretation of measured data to predict infiltrator involvement in a nuclear security incident. - Discuss and critique the deterrence characteristics of nuclear security systems.

Prerequisite: NUC E302

NUCE 446: Reliability and Risk Concepts in Design

3 Credits

Introduction to reliability mathematics. Failure data collection and analysis. Components and systems reliability prediction. Effects of maintenance on reliability. Risk Analysis. Case studies in engineering applications. ME 446 / NUCE 446 Reliability and Risk Concepts in Design (3) The course covers materials reliability in design including mechanical, electrical and system aspects. Five main topics will be studied. The course starts by introducing engineering risk and reliability, highlighting its interdisciplinary nature and its significance in system design. The concept of reliability as a probability is introduced and the basic laws of probability are reviewed. The discussion centers on the mathematics needed to understand and analyze complex systems including components in series and parallel. The topics include the independence, mutual exclusivity, truth tables and Venn diagrams. These concepts are then applied to simple systems consisting of one, two and three components in various configurations. The equivalency of the various methods is discussed. The effect of maintenance on a system's reliability is presented along with discussions of various maintenance
strategies. Then, the failure modes and effects analysis is introduced and examples discussed. The concept of fault trees and event trees and their application to reliability analysis are presented. Risk analysis is then introduced as a case study in the application of reliability analysis. A nuclear power plant system is analyzed to quantify the risk to the public from its operation.

**Prerequisite:** MATH 250 or MATH 251; M E 345 or NUC E 309

Cross-listed with: ME 446

**NUCE 450: Radiation Detection and Measurement**

3 Credits

Theory and laboratory applications of radiation detectors, including proton, neutron, charged particle detectors, NIM devices, and pulse-height analysis.

**Prerequisite:** NUC E 301 or NUC E 405; NUC E 309

**NUCE 451: Experiments in Reactor Physics**

3 Credits

Acquisition and processing of nuclear and atomic data; application to nucleonic phenomena of importance in nuclear engineering.

**Prerequisite:** E E 212, NUC E 450

**NUCE 470: Power Plant Simulation**

3 Credits

Basic knowledge necessary for intelligent simulation and interpretation of simulations of transients in nuclear power plants.

**Prerequisite:** M E 320, MATH 251, NUC E 302

**NUCE 490: Introduction to Plasmas**

3 Credits

Plasma oscillations; collisional phenomena; transport properties; orbit theory; typical electric discharge phenomena.

**Prerequisite:** E E 330 or PHYS 467

Cross-listed with: AERSP 490, EE 471

**NUCE 494: Senior Thesis**

1-9 Credits/Maximum of 9

Students must have approval of a thesis adviser before scheduling this course. NUC E 494H Senior Thesis (1-9) All Schreyer Scholars are required to complete an undergraduate honors thesis. This work represents the culmination of a student’s honors experience. Through the thesis, the student demonstrates a command of relevant scholastic work and a personal contribution to that scholarship. The thesis project can take many forms - from laboratory experiments all the way to artistic creations. The thesis document captures the relevant background, methods and techniques, as well as describing the details of the completion of the individual project. Two Penn State faculty members judge the merits of this Scholar’s honors thesis, the student’s self-selected thesis supervisor and the department-selected honors advisor in the student’s area of honors.

**Prerequisite:** Junior or senior status in the University Scholars Program Honors

**NUCE 496: Independent studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**NUCE 497: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**NUCE 499: Foreign Studies**

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

**Nursing (NURS)**

**NURS 100: First Year Seminar in Nursing**

1 Credits

First year seminars in Nursing will introduce the student to the University and the College of Nursing. The primary focus will be engaging students in learning and orienting them to the scholarly community from the outset of their undergraduate studies in a way that will bridge to later experiences in the nursing major and facilitate the high expectations, demanding workload and other aspects of transition to college life. The course content will focus on enhancing opportunities that enable students to provide a holistic focus on the promotion of human health and initiatives that enhance quality of life.

First-Year Seminar

**NURS 115: Medications and the Elderly Client**

1 Credits

Nursing implications of medication therapy with the elderly client.

**NURS 197: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**NURS 200M: Principles of Nursing Research and Evidence-Based Practice-Honors**

3 Credits

NURS 200M is an introduction to principles and methods of nursing research and application of research evidence to practice. The course is a writing intensive Honors course. Students will work individually and in cooperative learning groups to analyze and discuss nursing research from multiple viewpoints with a focus on integrity, global perspectives and leadership in nursing research. Each honor student will identify an evidence-based practice topic that could potentially lead to an undergraduate thesis to study in depth. Every in-class and out-of-class
assignment is tailored to their topic. The students though, a series of writing intensive assignments, will be taught how to conduct a written peer review; will practice this in formative written review sessions on their peer’s projects. NURS 200M will culminate with the development of evidenced based practice paper, which will be delivered to their peers as they would at a scientific meeting. This paper will also serve as the first draft of their thesis proposal. Upon completion of the course students will be able to: Discuss the roles and responsibilities of the nurse related to research and evidence-based practice (EBP); compare and contrast the research process and EBP process; explain the interrelationship among nursing theory, practice, and research; identify sources of evidence as a basis for EBP; describe the process in formulating EBP questions; formulate EBP questions; describe basic concepts and steps of research process; interpret research findings; appraise current issue relevant to nursing; and critically appraise published research studies.

Recommended preparation for NURS majors: STAT 200 or STAT 250 and NURS 225. Recommended preparation for NURN majors: STAT 250 and NURS 390.

Writing Across the Curriculum

NURS 200W: Principles of Nursing Research and Evidence-Based Practice

3 Credits

Introduction to principles and methods of nursing research and application of research evidence to practice. NURS 200W is the introduction to principles and methods of nursing research and the application of research evidence to practice. The course is a writing intensive course with the goal to help the student communicate clearly and effectively while learning the basics of nursing research and its application to developing evidence based practice. Upon completion of this course the student will be able to: Discuss the roles and responsibilities of the nurse related to research and evidence-based practice (EBP); Compare and contrast the research process and the EBP process; Explain the interrelationships among nursing theory, practice, and research; Identify sources of evidence as a basis for EBP; Describe the process by which an EBP question is formulated; Formulate EBP questions that relate to relevant clinical problems and demonstrate critical thinking; Describe basic concepts and steps of the research process in nursing; Interpret research findings to determine statistical and clinical significance; Appraise current issue relevant to nursing research (such as cultural diversity issues and ethical conduct of research); Critically appraise published research studies.

Recommended preparation for NURS majors: STAT 200 or STAT 250 and NURS 225. Recommended preparation for NURN majors: STAT 250 and NURS 390.

Writing Across the Curriculum

NURS 203: First Aid and CPR

3 Credits

NURS 203 An introductory first aid course designed to provide the basic knowledge and skills to assist someone who is injured or ill. The course covers safety precautions of the responders including legal and ethical issues, teaches one-person CPR and airway obstruction, common injuries resulting in bleeding and how to control bleeding, common medical emergencies i.e. bleeding, water, ice, shock, thermal injuries. Heart attack, stroke and head injuries are a focus and the proper way to transfer individuals with injuries. Environmental emergencies includes disaster preparation, terrorism and triage.

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

NURS 225: Pathophysiology

3 Credits

Designed to explore the illness component of health with emphasis on the pathophysiological and psychosocial aspects. NURS 225 NURS 225 Pathophysiology (3) NURS 225 is designed to explore the illness component of health, with emphasis on the pathophysiological and psychosocial aspects. The required 3-credit course is a foundational course for all succeeding nursing courses. Upon completion of this course, the student will be able to identify knowledge from nursing and contributing disciplines as a foundation for the understanding of illness; describe selected theories of stress and adaptation; identify basic pathophysiological and psychosocial aspects of illness; relate common manifestations of illness to the underlying pathophysiological and psychosocial processes; identify physical environmental factors associated with the development of illness; recognize the significance of research to the evidence base of nursing practice related to illness; recognize the different pathological changes related to human variation and lifespan. Teaching strategies include lecture, audiovisual, case studies/discussion. Enrollment is limited to sophomore level nursing students. The course is offered each spring semester and successful completion is required prior to advancing to the Junior level nursing courses.

Enforced Prerequisite at Enrollment: NURS 225 Pathophysiology

NURS 230: Introduction to the Fundamentals of Nursing

4 Credits

Introduction to the nursing process, clinical competencies and psychosocial skills. NURS 210 NURS 230 Introduction to Fundamentals of Nursing (4) NURS 230 incorporates the analysis of the nursing process and introduction to clinical competencies and psychosocial skills. Students demonstrate beginning skills in utilizing the nursing process in the clinical setting to meet basic physical and psychosocial individual client needs. Upon completion of the course, students will be able to describe the characteristics of each step of the nursing process; demonstrate beginning skills in utilizing the nursing process in the clinical setting to meet basic physical and psychosocial individual client needs; demonstrate safe and competent performance of basic psychomotor nursing skills; demonstrate the ability to practice the principles of health and safety; perform basic interviewing techniques in collecting health status data; demonstrate communication skills that enable the student to establish appropriate interpersonal relationships; recognize variables influencing health status; recognize the psychosocial needs of individuals including basic needs related to loss, grief and the death experience; demonstrate a personal professional philosophy which addresses the individuality, dignity, values, beliefs, and culture of all clients; recognize the significance of evidence based practice as the basis for the use of the nursing process; recognize the importance of health teaching and health promotion across the life span; identify purposes and functions of appropriate community resources. Teaching strategies include lecture, discussion, audiovisuals, clinical experience, simulation laboratory demonstration and practice, self-learning
3 Credits

NURS 250: Professional Role Dev I: Intro to Professional Issues in Nursing Practice and Nursing Informatics

2 Credits

NURS 250 Professional Role Dev I: Intro to Professional Issues in Nursing Practice and Nursing Informatics (2) (US) is the first course in the baccalaureate nursing program and introduces the students to the profession of nursing, the science of nursing and the use of information technology in health care. Designed to explore the wellness component of health and the role that informatics plays in the planning and delivery of health care. Upon completion of the course, the student will be able to meet the following course objectives: identify concepts of health and wellness that contribute to a foundation for nursing practice; discuss the influence of diversity on health care delivery systems and utilization of services; identify the roles of the professional nurse in the delivery of health care to patients, families, communities and populations; define elements that contribute to professional, evidence-based nursing practice; describe nursing theory and its relationship to the implementation of the nursing process; describe nursing informatics and its applications in the planning and delivery of health care; demonstrate beginning competency in utilizing information technology/nursing informatics in selected areas of nursing practice (e.g. research, patient care); apply concepts of ethical and legal considerations to the use of information technology/nursing informatics in health care. The concepts of diversity and cultural competence are emphasized and integrated within each major topic discussed. Teaching strategies emphasize inquiry-based learning, competency in informatics and promote critical thinking and include lecture, selected readings, exploration of internet sites on health and nursing, case studies, small group activities, group discussions, audiovisuals, role playing, journaling, self-reflection, and field trips. Enrollment is limited to sophomore-level nursing students.

Enforced Prerequisite at Enrollment: BIOL 161 and BIOL 163

NURS 251: Health Assessment

3 Credits

Designed to broaden the student’s knowledge and skills in health assessment and physical examination across the lifespan. NURS 251 Health Assessment (3) NURS 251 is designed to broaden the student’s knowledge and skills in health assessment. The course enables the student to learn the methods of interviewing patients for completing a health history and the tools and techniques necessary to conduct a physical examination. Upon completion of this course, the student will be able to identify psychosocial, cultural and developmental factors affecting the health assessment process; demonstrate appropriate communication and interviewing techniques (including the use of new technology) with clients of all ages to facilitate the health assessment; demonstrate the ability to obtain a holistic, systematic and comprehensive health history and assessment; promote an environment of safety and caring to maximize client care outcomes; participate in education and activities that would promote cultural competency in nursing assessment; document the health history and current health status and the physical exam according to accepted standards; demonstrate competency in the use of inspection, palpation, percussion and auscultation when performing physical examination; demonstrate the ability to recognize and interpret signs of normal and abnormal health assessment findings; demonstrate critical thinking in the analysis of physical findings; demonstrate the ability to assess risk and promote security and safety in the clinical environment; recognize and document health assessment variations in clients throughout the life span. Teaching strategies include lecture, discussion, demonstration, hands-on practice, audiovisuals, simulation laboratory experiences. NURS 251 is the first required clinical course; is offered each fall semester; and is limited to nursing students. Clinical experience with sections of 14 students is conducted in the Simulation Laboratory where students receive the individualized attention to facilitate learning the techniques of physical assessment. Annual enrollment is approximately 120 students who must successfully complete the course to progress in the nursing program.

Enforced Prerequisite at Enrollment: BIOL 161 and BIOL 163

NURS 251: Health Assessment

3 Credits

Designed to broaden the student’s knowledge and skills in health assessment and physical examination across the lifespan. NURS 251 Health Assessment (3) NURS 251 is designed to broaden the student’s knowledge and skills in health assessment. The course enables the student to learn the methods of interviewing patients for completing a health history and the tools and techniques necessary to conduct a physical examination. Upon completion of this course, the student will be able to identify psychosocial, cultural and developmental factors affecting the health assessment process; demonstrate appropriate communication and interviewing techniques (including the use of new technology) with clients of all ages to facilitate the health assessment; demonstrate the ability to obtain a holistic, systematic and comprehensive health history and assessment; promote an environment of safety and caring to maximize client care outcomes; participate in education and activities that would promote cultural competency in nursing assessment; document the health history and current health status and the physical exam according to accepted standards; demonstrate competency in the use of inspection, palpation, percussion and auscultation when performing physical examination; demonstrate the ability to recognize and interpret signs of normal and abnormal health assessment findings; demonstrate critical thinking in the analysis of physical findings; demonstrate the ability to assess risk and promote security and safety in the clinical environment; recognize and document health assessment variations in clients throughout the life span. Teaching strategies include lecture, discussion, demonstration, hands-on practice, audiovisuals, simulation laboratory experiences. NURS 251 is the first required clinical course; is offered each fall semester; and is limited to nursing students. Clinical experience with sections of 14 students is conducted in the Simulation Laboratory where students receive the individualized attention to facilitate learning the techniques of physical assessment. Annual enrollment is approximately 120 students who must successfully complete the course to progress in the nursing program.

Enforced Prerequisite at Enrollment: BIOL 161 and BIOL 163

NURS 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

NURS 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

NURS 300: Honors Seminar in Nursing

3-12 Credits/Maximum of 12

Seminar activities on selected topics in nursing. NURS 300H NURS 300H Honors Seminar in Nursing (3-12) NURS 300H is an honors seminar course designed to follow the introduction to nursing research course for honor students only. Each class session focuses on a different element of the honors thesis proposal. Objectives for the course include: discussion of the role of health care research in the development of disciplinary knowledge; evaluation of researchable problems generated
from clinical practice and existing literature; critiquing proposals for clinical studies; describing the ethical issues involved in clinical research, with emphasis on investigator responsibilities and participant’s rights; discussing selected research designs used for clinical research; analyzing opportunities for replication of clinical studies; critiquing sampling techniques used in clinical research; and analyzing strengths and weaknesses of data collection techniques commonly used in clinical research. The course is taught in the spring semester only and is open only to nursing honor students. Teaching strategies include lecture, student presentations, handouts, individual conferences, and written research consent forms and proposals. Evaluation criteria of the course include a critique, protection of human subject packet preparation, class participation, and at the end of this course, students will be expected to have a fully developed honors thesis proposal. Proposals will be evaluated on how convincing the argument is for the proposed research (literature review and identified knowledge gaps), the logical procession of the thinking, the clarity of the writing, and the significance of the proposed research to nursing.

**Enforced Prerequisite at Enrollment:** NURS 250 and NURS 225 and NURS 230 and NURS 251 and admissions to the Schreyer’s Honors Program

NURS 301: Nursing Care of the Adult Client Requiring Medical-Surgical Intervention

**4 Credits**

Therapeutic nursing care of the adult client in a variety of primarily medical-surgical settings. NURS 301 Nursing Care of the Adult Client Requiring Medical-Surgical Intervention (4) NURS 301 focuses on nursing care of adult client requiring medical-surgical intervention including. The course is placed in the junior year and is considered a beginning level medical-surgical course. Upon completion of this course, the student will be able to assess risks and promote the health and safety of the adult client throughout the lifespan; formulate nursing actions that are based on scientific principles and concepts from contributing disciplines in caring for the adult client to maximize outcomes; recognize pathophysiological and pharmacological aspects related to the nursing care of the adult medical surgical client; recognize the impact of stress on the adult client to incorporate health promotional and health educational activities; demonstrate the ability to communicate effectively across the health care delivery system; promote factors that create a culture of safety and caring for the adult medical-surgical client; utilize assessment data and technology to plan, implement and evaluate interventions specific to the health of the adult client; practice legal, ethical and professional accountability in the delivery of care to the adult client; demonstrate the ability to practice in a holistic, culturally competent and caring manner; demonstrate the ability to utilize evidence based practice and technology to assess and critically respond to the needs of the adult client; demonstrate with guidance the role of the professional nurse in caring for the adult client. Teaching strategies include lectures, discussions, audiovisuals, clinical experiences, and simulation laboratory. Clinical sections of 8-10 students spend 90 hours (2 credits) caring for medical surgical adult clients. Enrollment is approximately 120 nursing students split between University Park and HERSHEY Medical Center Campus and is offered fall semester of the junior year.

**Enforced Prerequisite at Enrollment:** NURS 225 and NURS 230.
Recommended Corequisite: NURS 305 and NURS 310

NURS 303: Clinical Application of Laboratory Tests

**1 Credit**

A study of the background, meaning, and nursing implications of laboratory test results. NURS 303 Clinical Application of Laboratory Tests (1) NURS 303 is a study of the background, meaning, and nursing implications of laboratory test results. It is designed to assist the nursing student in comprehending the patient’s laboratory results in a clinical setting. Lab values are correlated to patient’s condition and physiology of the disease process. Physical assessment data are compared to the various blood and urine lab test results also. Students are evaluated through written examination and the interpretation of case study scenarios. The course is offered in the spring semester and is open to all nursing students who have completed the introductory nursing course at the 200 level. Enrollment is not limited. The course objectives follow: Upon completion of this course, the student will be able to: a. Identify important clinical implications associated with a wide variety of blood and urine tests. b. Correlate lab data with physical assessment findings and other indicators of patient status. c. Recognize constellations of changes that may precede deterioration in clinical status. d. Discriminate between changes in lab values that require immediate reporting to the physician and those changes that do not require immediate reporting. e. Synthesize laboratory test results with assessment findings and pathophysiology and identify appropriate nursing actions.

**Recommended Preparation:** NURS 250, NURS 225, NURS 230, and NURS 251

NURS 305: Introduction to Pharmacological Concepts

**3 Credits**

Study of basic concepts of pharmacology and relevant nursing implications. NURS 305 Introduction to Pharmacological Concepts (3) NURS 305 is the introduction to pharmacological concepts and identifies the pharmacodynamics of major classifications of drugs. Prototypes or original drug models from which subsequent types arise are summarized. This course is closely linked to pathophysiology (a prerequisite) as most medications are administered based on a pathophysiology condition. Pharmacologic principles covered in the course have practical application for students administering medications to clients in the clinical setting during the junior and senior years. Upon completion of this course, the student will be able to identify the measures taken in the United States to ensure drug safety; describe the process of drug development and evaluation; describe the methods of drug standardization; differentiate official and unofficial drug information sources; recognize the legal aspects and nursing responsibilities relative to the administration of drugs to ensure client safety; identify the pharmacodynamics of major classifications of drugs; recognize characteristics and nursing implications of the various types of pharmaceutical preparations and identify research related to pharmacology which influences nursing practice. Teaching strategies include videos, lectures, handouts and power point slides. Enrollment is limited to junior level nursing students or special permission from the instructor for non-nursing majors. The course is offered yearly during the fall semester.

**Enforced Prerequisite at Enrollment:** NURS 225 and NURS 230.
Recommended Corequisites: NURS 301 and NURS 310
NURS 306: Nursing Care of Children and Adolescents

3 Credits

Common health problems and nursing intervention for children and adolescents. NURS 306 Nursing Care of Children and Adolescents (3) NURS 306 focuses on common health problems and nursing intervention for children and adolescents. Upon completion of this course, the student will be able to formulate nursing actions that are based on scientific principles and concepts from contributing disciplines in caring for children and adolescents to maximize client care outcomes; develop interpersonal skills in responding in a humanistic manner to the unique needs of children, adolescents, and their families; recognize pathophysiological and pharmacological aspects related to the nursing care of the adult medical surgical client; assess the health needs of diverse populations of children and adolescents based on an understanding of the developmental, psychosocial, environmental, and cultural variables with an emphasis on health promotion; evaluate nursing care in a variety of settings to meet the health needs of children of various ages; utilize assessment data and technology to plan, implement, and evaluate interventions specific to the health care needs relevant to the characteristics of the child and adolescent client in interaction with the personal and suprapersonal environments; evaluate nursing care in a variety of settings to meet the health needs of children of various ages and promote healthy lifestyles; collaborate with colleagues in nursing and other health professions to promote the well being of children and adolescents in a variety of settings including the community; relate relevant research findings to child health nursing practice; practice legal, ethical and professional accountability in the delivery of child health care; participate in activities that advance personal and professional development, cultural competency, and the professional specialty of pediatric nursing and promote factors that create a culture of safety and caring for children and adolescents. Teaching strategies include lecture, discussion, audiovisuals, hands-on clinical care, laboratory simulation experiences. Emphasis is placed on delivery of safe and competent nursing care. Clinical sections of 8-10 students spend 45 hours caring for child/adolescent clients in a variety of settings (clinics, day care centers, elementary schools, and hospitals). Enrollment is approximately 120 nursing students (split between UP and HMC) and the course is offered each spring semester of the junior year.

Enforced Prerequisite at Enrollment: NURS 225 and NURS 230.

Recommended Corequisites: NURS 301 and NURS 305

NURS 320: Nursing Care of the Childbearing Family and Gynecological Client

3 Credits

Therapeutic nursing care of the childbearing family and gynecological client. NURS 320 NURS 320 Nursing Care of the Child Bearing Family and Gynecological Client (3) NURS 320 focuses on providing therapeutic nursing care of child-bearing family and gynecological client. Upon completion of this course, the student will be able to utilize knowledge from nursing and contributing disciplines related to reproductive health concerns, life events and health alterations of the child bearing family and gynecological client to maximize client care outcomes; recognize pathophysiological and pharmacological aspects related to the nursing care of the child bearing and gynecological client; demonstrate progressive development of communication skills including technology which supports the child bearing family and gynecological client; promote factors that create a culture of safety and caring for the child bearing family and gynecological client; assess the reproductive health of the child bearing family and gynecological client within the context of the developmental process and the personal and suprapersonal environments; utilize assessment data and technology to plan, implement, and evaluate interventions specific to the health of the child bearing family and gynecological client; evaluate nursing care in a variety of settings to meet the health needs of the child bearing family and promote healthy lifestyles; communicate pertinent client information, plan of care, and evaluation of goals to staff, instructors and other members of the health team; apply evidence based practice to maximize client outcomes in health promotional and educational activities for the older adult client; demonstrate with guidance the role of the professional nurse in caring for the older adult client; participate in activities that advance the personal and professional development, cultural competency in the professional specialty of gerontological nursing; practice legal, ethical and professional accountability in the delivery of care to the older adult client; recognize the importance of interdisciplinary care in meeting the bio-psycho-social needs of patients and families receiving end-of-life care. Teaching strategies include lecture, discussion, hands-on clinical care and simulation laboratory experiences. Clinical sections of 8-10 students spend 45 hours caring for clients in nursing homes and community settings with the focus on environmental assessment, individual health teaching and group health teaching. The course is offered fall semester and enrollment is approximately 120 nursing student (60 at UP and 60 at HMC).

Enforced Prerequisite at Enrollment: NURS 305

NURS 310: Therapeutic Nursing Care of the Older Adult Client in a Variety of Settings

3 Credits

Nursing concerns and intervention in promoting the health of the older adult. NURS 310 NURS 310 Therapeutic Nursing Care of the Older Adult Client in a Variety of Settings (3) NURS 310 focuses on nursing concerns and interventions in promoting the health of older clients. Upon completion of the course, the student will be able to utilize knowledge about aging from nursing and contributing disciplines as a foundation for nursing practice with the older adult client; recognize pathophysiological and pharmacological aspects related to the nursing care of the older adult client; demonstrate progressive development of communication skills including technology which supports the health care needs of the older adult client; promote factors that create a culture of safety and caring for the older adult client; utilize assessment data and technology to plan, implement, and evaluate interventions specific to the health of the older adult client; evaluate nursing care in a variety of settings to meet the health needs of the older adult client and promote healthy lifestyles; communicate pertinent client information, plan of care, and evaluation of goals to staff, instructors and other members of the health team; apply evidence based practice to maximize client outcomes in health promotional and educational activities for the older adult client; demonstrate with guidance the role of the professional nurse in caring for the older adult client; participate in activities that advance the personal and professional development, cultural competency in the professional specialty of gerontological nursing; practice legal, ethical and professional accountability in the delivery of care to the older adult client; recognize the importance of interdisciplinary care in meeting the bio-psycho-social needs of patients and families receiving end-of-life care. Teaching strategies include lecture, clinical experiences and laboratory simulation, discussion, post clinical conferences, audiovisuals-slides and case studies. The course is offered spring semester of the junior year with an
The study of the interaction of ethical, legal, and genetic concepts as they apply to current health care practice. NURS 350 Professional Role Development II: Ethics, Legal and Genetic Issues (2) NURS 350 is the second of three professional role development courses and addresses the interaction of ethical, legal and genetic concepts as they apply to current health care practice. Upon completion of the course the student will be able to define the fundamental ethical theories; define and integrate into evidence based practice the basic ethical concepts as they relate to nursing; state the American Nurses’ Association Code of Ethics for Nurses; demonstrate ethical behaviors such as honesty, integrity, responsibility, and dependability in clinical practice and everyday life; define and describe the concepts of standards of care and scope of practice; analyze nurse practice acts as they pertain to licensure and scope of practice; define the concepts of negligence verses malpractice; define and distinguish between the concepts of informed consent, patient confidentiality, and self-determination, right of refusal, and advance directives (such as living wills, durable power of attorney, and do not resuscitate orders); analyze the role of advocacy from an ethical and legal perspective; communicate effectively (including the use of new technologies) with patients and families regarding legal, ethical, and genetic issues; describe the concept of confidentiality from ethical and legal perspectives; identify the impact genetics has played in the practice of health care; describe the historical to current research findings in genetics that have or may change health care practice guidelines; identify the role ethics, legal issues, and genetics plays in providing health care to culturally sensitive populations; analyze and discuss historical and current biomedical dilemmas utilizing various ethical, legal and genetic perspectives. Teaching strategies include lecture, discussion, audiovisuals, small group activities, role-playing and group presentations. The course is offered spring semester and enrollment is limited to nursing majors.

Recommended Preparation: NURS 305

NURS 352: Advanced Health Assessment for the Registered Nurse

3 Credits

RECOMMENDED PREPARATION: NURS MAJOR CONTROL NURS 352 is a course designed to extend the RN student’s knowledge and skills in health assessment and physical examination across the lifespan. The course includes 45 hours of clinical and is intended for students who are already nurses and who have relevant basic education of health and physical assessment. This course enhances the RN student’s knowledge base with more advanced techniques of interview and examination. The course demands higher-level thinking about complex health assessment challenges and prepares RN students for health assessment study at the graduate level.

Recommended Preparation: ( NURS Major )

NURS 357: Introduction to Nursing Informatics

3 Credits

NURS 357 is an introduction to nursing informatics focusing on technology applications to the nursing profession. This course provides a broad overview of nursing informatics and the various applications of informatics principles in the healthcare setting. Students will explore the data-information-knowledge-wisdom paradigm of informatics and gain an appreciation of how informatics principles contribute to nursing knowledge and practice. Students will assess personal informatics competencies and set goals for building informatics skills, and explore future trends in healthcare technologies.

Recommended Preparations: ( NURS 301, NURS 306, NURS 310, NURS 320; NURN Major )

NURS 390: Transition and the Professional Nursing Role

3 Credits

Transition to baccalaureate education and professional nursing practice, emphasizing leadership, management, and issues influencing nursing education and practice. NURS 390 Transition and the Professional Nursing Role (3) (US) NURS 390 is the first nursing course that the registered nurse (RN) student completes. The course’s intent is to set the groundwork for transition of the RN to baccalaureate education and professional nursing practice. With the emphasis being on leadership, management, and issues influencing nursing education and practice, the RN has the foundation on which to build nursing expertise as nursing courses progress. The course prerequisite is a current and valid RN license. Teaching strategies include: lecture, discussion, audiovisuals, self-assessment, reflective analysis, critical thinking/problem solving, computer assignments and active/collaborative learning. Evaluation of the course is by grading of written assignments, presentations, and testing. The course is offered in fall, spring or summer semesters of the junior year with a projected enrollment of 10 - 15 students, and is a prerequisite to other nursing courses. Upon completion of this course, the student will be able to: 1. Explain the processes inherent in successful transition to the role of the baccalaureate prepared nurse. 2. Analyze
the influences that impact role development and nursing practice, especially self-regulation and accountability. 3. Appraise the health care environment as it relates to nursing roles and nursing practice. 4. Measure the impact of nursing theory and research on baccalaureate level nursing practice. 5. Evaluate the importance of nursing research to nursing practice and the legislative arena. 6. Critically analyze issues that influence nursing education and practice today and in the future.

United States Cultures (US)

NURS 401: Concepts of Health

3 Credits

Exploration of current and ancient concepts of health and their respective modes of intervention.

**Recommended Preparation:** PSYCH 100 or SOC 001

International Cultures (IL)

NURS 402: Holistic Health

3 Credits

Examination of emerging conceptualizations of health and therapy based on a holistic view of human beings.

**Recommended Preparation:** NURS 401

International Cultures (IL)

United States Cultures (US)

NURS 403: School Health and Emergency Care of Children and Adolescents

3 Credits

Techniques for higher-level care for school health and emergency situations and application-based education. NURS 403 School Health and Emergency Care of Children and Adolescents (3) This course is a part of the school nurse series and will provide participants with advanced techniques for school health professionals that respond to health and emergency situations. The topics covered will include abdominal, genitourinary, head, musculoskeletal, and sports-related injuries. Students also will review shock, respiratory, neurologic, psychological and behavioral emergencies, and a wide array of issues facing students with special needs. Additionally, the participant will review disaster planning, preparation, and response activities. The course will review major medical and accidental situations facing the school nurse including the inter-agency coordination with emergency response systems and community entities. Students will learn what to include in a report for the communication center and emergency medical services. Skills stations for orthopedic injuries, trauma, and medical situations will allow students to practice skills and receive immediate feedback. Students will participate in application based education that utilizes case studies to pull the concepts together. Students will be asked to provide return demonstration for skills reviewed in this course.

**Recommended Preparations:** ( BIOL 161, BIOL 163 )

NURS 404A: Nursing Care of the Adult Client with Complex Health Problems: Part A

4 Credits

In-depth study of care of patients with acute and complex health problems, utilizing evidence based practice. NURS 405A - Nursing Care of the Adult Client with Complex Health Problems: Part A (4) NURS 405A focuses on nursing care of adult clients with acute and complex health problems related to all major systems of the body. Upon completion of this course, the student will be able to synthesize knowledge from nursing and contributing discipline to maximize client care outcomes; recognize pathophysiological and pharmacological aspects related to the nursing care of the adult client; demonstrate the ability to communicate effectively including the use of technology with patients, families and the health care team; promote factors that create a culture of safety and caring for the adult client; demonstrate the ability to perform a comprehensive and systematic assessment and take appropriate nursing actions for the client with complex health problems; collaborate with colleagues from nursing and related disciplines using empirical and theoretical resources when defining nursing care priorities and determining nursing actions; utilize assessment data and technology to plan, implement, and evaluate interventions specific to the complex health problems of the adult client; participate in activities that advance the personal and professional developmental and cultural competency in the professional specialty of adult medical-surgical nursing; practice legal, ethical and professional accountability in the delivery of care to the adult medical-surgical client; apply evidence based practice to maximize client outcomes in health promotional and educational activities for the complex health needs of the adult client; demonstrate current and relevant knowledge of the social, health, behavioral and psychological sciences that can be applied to nursing practice for the adult client; demonstrate increasing self direction and confidence in providing nursing care for the adult client with complex health needs; demonstrate the role of professional nurse as a client advocate; demonstrate the ability to assess risk and actively promote the well being, safety, and security (patients and coworkers) in the work environment; demonstrate the ability with guidance to lead and coordinate a team, delegating care appropriately and safely; demonstrate the ability to respond appropriately to the emotional, psychological and spiritual needs of the adult client with complex care needs. Teaching strategies include lecture, discussion, laboratory simulation and clinical experiences. Evaluation methods include examinations, scholarly papers, simulation laboratory
experiences, preclinical preparatory written work, and mid-course and final clinical performance evaluations.

**Enforced Prerequisite at Enrollment:** NURS 305

NURS 405B: Nursing Care of the Adult Client with Complex Health Problems: Part B

4 Credits

In-depth study of care of patients with acute and complex health problems, utilizing evidence based practice. NURS 405B - Nursing Care of the Adult Client with Complex Health Problems: Part B (4) NURS 405B focuses on nursing care of adult clients with acute and complex health problems related to all major systems of the body. The emphasis is on enhancing critical thinking skills necessary for making sound nursing judgments and the demonstration of self-direction in providing nursing care for clients with complex medical-surgical problems. Upon completion of this course, the student will be able to: Synthesize knowledge from nursing and contributing discipline to maximize client care outcomes; Recognize pathophysiological and pharmacological aspects related to the nursing care of the adult client; Demonstrate the ability to communicate effectively including the use of technology with patients, families, and the health care team; Promote factors that create a culture of safety and caring for the adult client; Demonstrate the ability to perform a comprehensive and systematic assessment and take appropriate nursing actions for the client with complex health problems; Collaborate with colleagues from nursing and related disciplines using empirical and theoretical resources when defining nursing care priorities and determining nursing actions; Utilize assessment data and technology to plan, implement, and evaluate interventions specific to the complex health problems of the adult client; Participate in activities that advance the personal and the professional specialty of adult medical-surgical nursing; Practice legal, ethical and professional accountability in the delivery of care to the adult medical-surgical client; Apply evidence based practice to maximize client outcomes in health promotion and educational activities for the complex health needs of the adult client; Demonstrate current and relevant knowledge of the social, health, behavioral and psychological sciences that can be applied to nursing practice for the adult client; Demonstrate increasing self direction and confidence in providing nursing care for the adult client with complex health needs; Demonstrate the role of professional nurse as a client advocate; Demonstrate the ability to assess risk and actively promote the well being, safety, and security (patients and coworkers) in the work environment; Demonstrate the ability with guidance to lead and coordinate a team, delegating care appropriately and safely; Demonstrate the ability to respond appropriately to the emotional, psychological and spiritual needs of the adult client with complex care needs. Teaching strategies include lecture, discussion, laboratory simulation and clinical experiences. The course is offered fall semester with approximately 120 students enrolled (60 at UP and 60 at HMC) with clinical sections limited to 10 students per section.

**Enforced Prerequisite at Enrollment:** NURS 305

NURS 407: Drugs of Abuse and Mental Health Issues

3 Credits

RECOMMENDED PREPARATION FOR NURS 407 IS BB H 143 OR PSYCH 100. NURS 407 examines the issue of substance abuse in today’s society. It looks closely into the health care needs across the lifespan of clients who have an alcohol or other drug disorder in combination with a psychiatric disorder. Pharmacological, behavioral, biological, and sociocultural characteristics, along with factors and patterns of addiction, are discussed and then how these factors and characteristics relate to mental illnesses are further explored. The different classes of habit-forming drugs (alcohol, stimulants, marijuana, hallucinogens, inhalants and prescription drugs) are covered and various treatment options are examined.

**Recommended Preparation:** BBH 143 or PSYCH 100

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Soc Resp and Ethic Reason

NURS 408: Clinical Application of Pharmacological Concepts

1 Credits

Study of the application of pharmacological concepts to the clinical setting. NURS 408 Clinical Application of Pharmacological Concepts (1) NURS 408 is an elective course designed to provide the interested student an in-depth review of pharmacology. The application of pharmacological concepts in relation to the clinical setting is a primary focus of the course. The various drug classes are discussed with emphasis placed on care of the patient while administering different types of medications. Discussion of pharmacological principles and patient care requires knowledge and integration of anatomy, physiology, pathophysiology, and medical and nursing treatments for various disorders. NURS 408 provides an excellent review of medication classes as related to medical condition in preparation of the nursing student taking the NCLEX licensure examination upon graduation. The student is evaluated by written examination and/or case study interpretation. NURS 408 is placed in the spring semester and is open to all nursing students who have successfully completed administering medications in the 300 level nursing courses and are concurrently enrolled in the 400 level nursing courses. Enrollment is not limited in numbers. Course objectives are as follows.Upon completion of this course, the student will be able to: a. Categorize commonly used medications by major classifications of drugs. b. Predict classifications of medications given to specific clinical conditions. c. Develop patient teaching plans relevant to medication administration. d. Discuss research related to pharmacology which influences nursing practice.

**Recommended Preparation:** NURS 305

NURS 409: Introduction to Forensic Nursing

3 Credits

Provides an introduction to the forensic health sciences, forensic nursing, and the nursing role in the scientific investigation of violence. RECOMMENDED PREPARATION FOR NURS 409 IS NURS225, NURS 230, NURS 250. NURS 409 is an elective course and the first of three courses in a forensic nursing certificate. The course is designed to provide an introduction to the forensic health sciences, forensic nursing, and the nursing role in the scientific investigation of violence. The course focus is on the principles and philosophy of forensic nursing in acute care and community settings and the roles of the forensic science professional. The responsibilities of the advanced practice forensic nurse are explored. The course requires that the student have a basic understanding of the professional healthcare role, specifically that of the nurse. The course is appropriate for non-nursing majors interested in forensic health sciences.
**Recommended Preparation:** NURS 250, NURS 225, and NURS 230

NURS 410: Forensic Evidence Collection and Preservation

3 Credits/Maximum of 3

Examines nurses' role of recognizing patterns of injury. Evidence collection procedures are examined from collection to courtroom presentation, includes autopsy. Forensic Evidence Collection and Preservation examines the forensic nurse's role recognizing injuries/patterns of injury. Evidence collection procedures are examined from collection to courtroom presentation. NURS 410 will guide the student through a prerecorded autopsy, teaching general evidence identification, collection, preservation, and documentation techniques as well as a complete sexual assault kit evaluation. Students will be immersed in a case study allowing them to learn and then demonstrate their understanding of forensic procedures and protocols. Students follow actual forensic protocol used in practice including policies, procedures, and documentation tools. The final course evaluation includes an interactive assessment that draws upon the techniques taught in the course and prepares the student for employment in a forensic role.

**Recommended preparation or concurrent:** NURS 245 and NURS 409

NURS 411: Seminar in Forensic Nursing

3 Credits

Seminar to discuss current topics, trends and research related to forensic nursing.

**Recommended preparation or concurrent:** NURS 410

NURS 415: Community and Family Health Nursing

4 Credits

NURS 415 Community and Family Health Nursing - Concepts and Applications (4) (US;IL) NURS 415 US;IL focuses on nursing care of clients in the community and the family. This course allows students to work independently providing and improving health care of population groups within a diverse society. Upon completion of this course, the student will be able to synthesize knowledge from nursing, public health, family, and community theory as a foundation for culturally congruent community health nursing practice; utilize the nursing process and principles of primary, secondary, and tertiary prevention that are culturally appropriate in the care of community based clients who differ in terms of health beliefs, values, and practices; demonstrate interpersonal skills necessary for collaboration with and among culturally diverse consumers, community agencies, health professionals, and health related resources in the community; demonstrate the management and safety of client, family, and community care through appropriate use of concepts of leadership, case management, and group process; demonstrate understanding of epidemiological methods in gathering, analyzing, and utilizing data and be able to apply to diverse populations in the community; use coherent comprehensive, culturally sensitive and age appropriate communication in oral and written form; analyze biostatistical/epidemiological data and nursing evidence-based research findings to improve/enhance the delivery of nursing care to diverse populations in the community; identify recommended health screenings and immunizations and health promotional strategies throughout the life span; analyze the impact of culture as a significant influence on the health perceptions, interpretations, and behaviors of diverse groups; demonstrate the ability to perform comprehensive and risk assessments, to make critical decisions, and to take appropriate nursing actions in the area of community health; demonstrates the ability to practice the principles of health and safety in a caring manner to maximize client care outcomes across the lifespan. Teaching strategies include lecture, audiovisuals, student presentations, discussion, clinical experiences, guest speakers, laboratory simulation and clinical experiences in varied clinical settings where the students are responsible for assessing, planning, implementing, and evaluating the care of families within the context of a community. Students have the opportunity to analyze the impact of culture on health perceptions, interpretations, and behaviors of diverse groups.

**Enforced Prerequisite at Enrollment:** NURS 305

International Cultures (IL)

United States Cultures (US)

NURS 417: Family and Community Health Concepts

4 Credits

Study of the concepts of family and community based nursing care emphasizing multicultural influences on health practices. NURS 417 Family and Community Health Concepts (4) (US;IL) Upon completion of the course the student will be able to (a) Synthesize knowledge from nursing, public health, family, and community theory as a foundation for culturally congruent community health nursing practice that is sensitive to race, religion, gender, disability and sexual orientation; (b) Utilize the nursing process and principles of primary, secondary and tertiary prevention that are culturally appropriate in the care of community based clients who differ in terms of health beliefs, values, and practices; (c) Develop skill in the use of independent/interdependent nursing actions to deliver care to clients across the life span; (d) Demonstrate the management of client, family, and community care through appropriate use of concepts of leadership, case management and group process; (e) Describe collaboration at the collegial level with nurses and other members of the health care team to provide continuity of care through culturally appropriate communication, consultation, and referral; (f) Use coherent, comprehensive and culturally sensitive communication in oral and written form; (g) Analyze biostatistical/epidemiological data and nursing research findings to improve/enhance the delivery of nursing care to diverse populations in the community; (h) Analyze the impact of culture as a significant influence on the health perceptions, interpretations, and behaviors of diverse groups. Students will spend 40 hours practicing in a clinical setting. In that setting they will be responsible for assessing, planning, implementing and evaluating the care of families within the context of a community. Students will have the opportunity to analyze the impact of culture on health perceptions, interpretations, and behaviors of diverse groups. Evaluation methods: Students will be evaluated both theoretically and clinically by use of the following: (a) Guided study of complex family and community health patterns using collaboration case analysis; (b) Case findings and analysis; (c) Direct care to culturally diverse families in the community setting. Relationship/linkage of course to other courses: This course applies and integrates family and community nursing concepts to culturally diverse clients in the community. It is offered at the senior level and incorporates previously learned theoretical and clinical nursing knowledge with an appreciation for how diversity influences the health care behaviors of families and communities as they relate to the health care system. Relationship of course to major: This senior level nursing course is one of the components of the Advanced Standing Option. It is a required course that provides students with the opportunity to develop skill in delivery of health services to globally diverse populations across the life span. It is also designed to increase the student's knowledge base
related to the community based client including relationships, lifestyle and kinship patterns. Lastly, it provides an arena for community health planning for diverse populations. Special facilities required to teach the course: The clinical arena which will be used to teach this course includes but is not limited to high risk populations in the community, senior or special housing projects, prisons and missions. Frequency of offering an enrollment: The course will be offered every semester and enrollment varies from 10 to 20 students.

Enforced Prerequisite at Enrollment: NURS 390 and NURS 357.

NURS 430: Organization and Administration for the Nurse Manager

3 Credits

NURS 420: Mental Health Nursing

4 Credits

Emphasizes clinical application of mental health theory in nursing care of patients with acute and chronic mental health problems. NURS 420 focuses on care of clients experiencing mental health problems and emphasizes the clinical application of mental health theory in nursing care of patients with acute and chronic mental health problems. Upon completion of this course, the student will be able to synthesize knowledge from nursing and the social, health and behavioral sciences to describe the nature of mental adaptations throughout the lifespan; demonstrate effective therapeutic communication skills when dealing with clients, groups and families experiencing maladaptive responses to stress; assess the strengths and weaknesses of the client and family in the context of a group and community environment; demonstrate the ability to perform comprehensive and risk assessments, to make critical decisions, and to take appropriate nursing actions in the area of psychiatric mental health; utilize the nursing process as related to the Standards of Psychiatric and Mental Health Nursing practice; collaborate with nursing colleagues, mental health professionals and consumers in the practice of psychiatric mental health nursing; analyze individual and societal forces that effect nursing research and evidence based practice in the area of psychiatric mental health nursing; demonstrate the knowledge of self needed to be an effective therapeutic agent and a client advocate; demonstrate culturally competency and the ability to provide holistic psychiatric mental health nursing care; perform the principles of psychiatric mental health and safety in a caring, nonjudgmental manner; demonstrate a current and relevant knowledge base of legal and ethical issues that can be applied to psychiatric mental health nursing; identify and support mental health promotion and mental health educational activities to maximize client care outcomes and evaluate psychiatric mental health nursing as a professional specialty. Teaching Strategies include lecture, process recordings, discussion, selected readings, audiovisuals, laboratory simulation and clinical experiences. NURS 420 is offered fall and spring semesters with an annual enrollment of approximately 120 students (60 at UP and 60 at HMC) with clinical sections limited to 10 students each.

Enforced Prerequisite at Enrollment: NURS 305

NURS 430: Organization and Administration for the Nurse Manager

3 Credits

Introduction to organizational theory and principles of practice in the administration of nursing services and patient care. NURS 430 Organization and Administration for the Nurse Manager (3) NURS 430 is the first of four courses included in the nursing management series, which focuses on leadership and management in nursing. NURS 430 includes a study of the history of American management and the influences on management styles and approaches. Topics covered in the course includes: Leadership theory, Change theory, Health care organizational structure and functions, Legal and Ethical issues, Nursing Management structure, function, and roles, Power and politics; Communication; and Nursing care delivery systems.

NURS 431: Data Management for Nurse Managers

3 Credits

Analysis of information systems to manage nursing service organizations; includes financial management, the budgeting processes, and productivity measurement. NURS 431 NURS 431 Data Management for Nurse Managers (3) NURS 431 is the second of four courses included in the nursing management series, which focuses on leadership and management in nursing. NURS 431 includes a study of information systems and financial aspects of managing health care organizations and patient care delivery. Topics covered in the course include: Information systems in health care, Electronic medical record, Security and portability of health care information. Topics related to budget and finance include, operating and capital budget management, nurse staffing systems and productivity. Lab activities enable students to develop proficiencies with spreadsheet software. The course is offered in traditional classroom instruction, on-line through ANGEL at selected campus sites and through World Campus. Course evaluation criteria may include examination, case studies, and student projects or presentations as assigned by the faculty. Upon completion of all 4 courses, students receive a certificate of completion of the Nursing Management Series from the school of nursing.

Recommended Preparation or Concurrent: NURS 430

NURS 432: Nursing Management of Human Resources

3 Credits

Human resource management and related factors in nursing service organizations. NURS 432 NURS 432 Nursing Management of Human Resources (3) NURS 432 is the third of four courses included in the nursing management series, which focuses on leadership and management in nursing. NURS 432 includes a study of human resource management with an emphasis on application to nursing and health care organizations. Topics covered in the course include: Employment laws, hiring, termination and managing staff turnover, conflict management, staff development and productivity, organized labor and unions, the impaired nurse, and discussion of nursing standards, ethics, delegation and the nursing shortage. The course is offered in traditional classroom instruction, on-line through ANGEL at selected campus sites and through World Campus. Course evaluation criteria may include examinations, case studies, and student projects or presentations as assigned by the faculty. Upon completion of all 4 courses, students receive a certificate of completion of the Nursing Management Series from the school of nursing.

Recommended Preparations: NURS 430

NURS 433: Seminar for Nurse Managers

3 Credits

Course focuses on the application of management principles in the role of the nurse manager. NURS 433 NURS 433 Seminar for Nurse Managers (3) NURS 433 is the fourth of four courses included in the nursing
management series, which focuses on leadership and management in nursing. NURS 433 is designed to allow the student to explore issues that challenges individuals in the nurse manager role. Designed with a seminar approach the student will study the following topics: The future of nursing leadership, mentoring, networking, stress management for the nurse manager and avoiding burnout, managing patient care quality and regulatory compliance, and implementing change. Students also complete a field observational study with a nurse manager or nurse executive in a health care organization. It is recommended that students complete at least one of the previous nursing management (NURS 430, NURS 431, NURS 432) courses prior to enrolling in this course. The course is offered in traditional classroom instruction, on-line through ANGEL at selected campus sites and through World Campus. Course evaluation criteria may include examinations, case studies, and student projects or presentations as assigned by the faculty. Upon completion of all 4 courses, students receive a certificate of completion of the Nursing Management Series from the school of nursing.

Enforced Prerequisite at Enrollment: NURS 430

NURS 440: Trauma/Critical Care Nursing
3 Credits

Focuses on the impact of and the nursing care of persons experiencing acute trauma and/or critical illness. NURS 440 NURS 440 Trauma/ Critical Care Nursing (3) NURS 440 is designed as an introductory study of the impact of like-threatening physical problems across the life-span utilizing the nursing process. The course focuses on problems encountered in the hospital critical care setting and is a nursing elective. Upon completion of this course, the student will be able to meet the following objectives: Integrate knowledge from nursing and related disciplines into case study format for persons with life-threatening illnesses; Explore practice, ethical, legal and interpersonal dimensions within the critical care setting. Identify problems for nursing critical care research. Study the most common illnesses in the critical care setting for the neurological, respiratory, cardiac, renal, gastro-intestinal, trauma and multiple system organ failure systems. Students incorporate academic learning with some case study review to simulate the critical care setting. Success in the course is evaluated by in-class examinations, assigned research readings, and written critiques. NURS 440 is offered in the spring semester only, with an average enrollment of 40 students.

Enforced Prerequisite at Enrollment: NURS 305 or NURN major

NURS 441: Nursing Care of America's Veterans: An Introduction Into the Care of Military Veterans
3 Credits

This course offers information on caring for the unique population of United States military veterans. NURS 441 Nursing Care of America's Veterans: An Introduction Into the Care of Military Veterans (3) This course provides in-depth information on the American Veteran population from a nursing perspective. Nursing education focusing on the needs of this specific culture will result in improved patient care and outcomes for veterans. Health care needs are reviewed from the physical, emotional, social, and cultural aspects of care. The history of the Veterans Health Administration (VHA)/Veterans Administration (VA) system will be discussed as well as the benefits available for eligible veterans. Through addressing current events surrounding the VA quality care issues and access to care, nursing students will gain insight into the health care and health maintenance challenges experienced by many veterans in the United States.

Recommended Preparation: PSYCH 100 or SOC 1 or HDFS 129 or (NURS 230 and NURS 251)

NURS 442: Introduction to Perioperative Nursing
1 Credits

Perioperative nursing is a growing field with significant career opportunities for professional nurses. This course is designed to introduce undergraduate nursing students to the specialty of perioperative nursing through didactic teaching and simulation experiences. Throughout this course, students will experience the roles and responsibilities of the circulating and scrub nurse and the other members of the surgical team while applying the nursing process. Students will integrate knowledge from the sciences along with universal nursing principals to assure safe and effective nursing care in this clinical setting. In addition, students will have opportunities to explore the career opportunities found within the specialty while supporting the development of more specialized knowledge and skills required in the care of the surgical client.

Enforced Prerequisite at Enrollment: NURS 230

NURS 450A: Professional Role Development III: Leadership and Management
2 Credits

Study of leadership roles and various styles of nursing management and their implications for the professional nurse. NURS 450A - Professional Role Development III: Leadership and Management (2) NURS 450A is the senior level professional role development course that focuses on delegation of care, leadership and management. Upon completion of the course, the student will be able to analyze influences which impact role development and nursing practice; recognize the significance of professional, ethical, regulatory and legal codes within the context of nursing practice; recognize nursing skills necessary to respond to the client’s needs throughout the life span including end of life issues; recognize current and relevant knowledge of leadership and management theory as it relates to the health care environment; recognize current and relevant knowledge of ethical, legal, national and international policies as it relates to the health care environment; demonstrates current knowledge of nursing research and modern technologies to recognize nursing care that is rigorous and evidence based; assess the nursing profession’s responsibility for self-regulation and accountability in order to maximize client care outcomes; demonstrates the ability to promote, support, and facilitate the health, well being, and comfort of vulnerable populations as to enhance the quality of service delivery; recognize the principles of leadership, accountability and delegation that promote the well being, safety and security of patients and coworkers; recognize and promote the ability to communicate effectively (including the use of technology) with patients, families, social groups and the health care team; demonstrates increased awareness of the nurse generalist role and the value of life-long learning. Teaching strategies include lecture, audiovisuals, student presentations, discussion, guest speakers, simulation and role-playing. The course is offered each fall semester with approximately 120 students enrolled.

Enforced Prerequisite at Enrollment: NURS 305
NURS 450B: Professional Role Development III: Clinical Capstone

3 Credits

Senior level clinical capstone course that emphasizes the integration and application of theory and evidence based practice. NURS 450B is the clinical capstone course for the Nursing Program and provides a total of 135 clinical hours. Ninety (90) clinical hours will be spent with a preceptor in a clinical setting, where the student will be responsible for assessing, planning, implementing and evaluating the care of clients and will have the opportunity to employ management and delegation skills in the care of clients. The remaining 45 clinical hours will be obtained from simulation, case studies and other course work such as NCLEX review. All clinical hours focus on preparing the student to transition into the Registered Nurse role. Upon completion of this course, the student will be able to demonstrate the ability to practice in a holistic, culturally competent and caring manner; demonstrate the ability to practice within the context of professional, ethical, regulatory and legal codes of nursing practice; demonstrate the ability to promote, support, and facilitate the health, well-being, and comfort of vulnerable populations so as to enhance the quality of service delivery; demonstrate the ability to perform comprehensive and systematic assessments and take appropriate actions; demonstrate the ability to utilize evidence based practice and modern technologies to assess and respond appropriately to patient needs; utilize nursing skills to provide optimum care and to practice principles of health and safety in a caring, nonjudgmental manner; utilize nursing skills to respond to a person's needs throughout the life span, i.e. life choices, disability, and end of life issues; demonstrate current and relevant knowledge of the social, health, and behavioral sciences that can be applied to nursing practice; demonstrate current and relevant knowledge of ethical, legal, national, and international policies that can be applied to nursing practice; demonstrate current knowledge of nursing research to provide nursing care that is rigorous and evidence based; demonstrate the ability to communicate effectively (including the use of technology) with patients, families, social groups and the health care team; identify, manages and support health promotion and health educational activities to optimize patient safety and well-being; demonstrate the ability to lead and coordinate a team, delegating care appropriately; demonstrate the ability to assess risk and actively promote the well-being, safety, and security (patients and coworkers) in the work environment; demonstrate increased confidence in the nurse generalist role and in the value of life-long learning.

Enforced Prerequisite at Enrollment: NURS 305

NURS 452: Women's Health Issues

3 Credits

Recommended Preparations: BIOL 141; PSYCH 100; WMNST 100
N452 examines major health issues concerning women today. The topics covered include, but are not limited to: developing a healthy lifestyle—nutrition and exercise; family planning—birth control methods; violence against women–relationship rights and signs of a batterer; eating disorders—anorexia, bulimia, and binge eating; sexual wellness; substance abuse—alcohol, prescription drugs; menopause signs and symptoms, treatments; and medical conditions affecting women today such as cancer, arthritis, multiple sclerosis and heart disease. The course emphasizes that women's lives are influenced by social, economic, political, and cultural conditions.

Recommended Preparation: BIOL 141 or PSYCH 100 or WMNST 100
Cross-listed with: BBH 452, WMNST 452

NURS 452H: Women's Health Issues

3 Credits

Exploration of major health issues concerning women today, with an emphasis on social, cultural, and medical influences.

Cross-Listed

Honors

NURS 456: Novice Nurse Residency II

2 Credits

This course enhances the transition into professional nursing practice which focuses on leadership, professional development, quality care and evidence-based practice.

NURS 458: Ethical Challenges in Healthcare Informatics

3 Credits

A case based collaboratory designed for the exploration and analysis of the ethical dilemmas facing healthcare informatics practitioners. NURS 458 focuses on the challenges associated with managing private healthcare information as health informatics technologies evolve. Students explore and apply principles of ethical decision-making and professional codes of conduct and laws governing information privacy to selected case scenarios and then compare and contrast their reasoning with expert opinions. Students gain an appreciation for the benefits of healthcare technologies and the potential for inadvertent and negligent breaches in information security.

NURS 459: Legal and Professional Issues in School Nursing

3 Credits

Legal and professional issues of school nurses and delivery impact of health care in school environment. NURS 459 Legal and Professional Issues in School Nursing (3)This course is part of the school nurse series. This course encompasses the synthesis and analysis of the legal and professional issues faced by school nurses and other professionals in the school setting. Strategies on the legal and professional delivery of health care in the school environment are integral to the course. Objectives include: explore legal and ethical issues influencing school nursing practice; analyze attributes of the legal and professional issues faced by school nurses and other professionals; develop strategies for addressing school nursing, interdisciplinary or health care issues; analyze issues that impact the resolution of special problems in school-age populations; identify resources and management strategies available to the school nurse and other professionals in meeting the needs of at risk school-aged populations.

Recommended Preparation: PSYCH 100 or SOC 1 or HDFS 129

NURS 460: Advanced Concepts in Clinical Nursing Informatics

3 Credits

An exploration of clinical informatics tools to support informatics practice. NURS 460 Advanced Concepts in Clinical Nursing Informatics (3) Advanced Concepts in Clinical Nursing Informatics prepares nurses to support, promote, and assist in the implementation and efficient and safe use of informatics tools in the fast-paced, technology rich clinical
healthcare environment. Students will explore electronic health records, clinical decision support tools, database management and data mining, patient safety technologies, and the clinical workflow implications and meaningful use of each. Students will learn principles of health care organizational culture, change theory, and the System Development Life Cycle (SDLC) to prepare them to assist with project management as informatics tools are introduced in the clinical environment. The use of informatics tools to support knowledge management in an organization is also emphasized. Students will discover the benefits and barriers of Health Information Exchange (HIE) in the promotion of public health. Finally, students will discover the competencies, skills, roles, and standards of informatics nursing practice.

**Enforced Prerequisite at Enrollment:** NURS 357. Recommended Concurrent: NURS 458

NURS 461: Perioperative Nursing

4 Credits

Comprehensive introduction regarding fundamental principles and practices of the Operating Room Nurse when managing the care of the surgical patient. NURS 461 Perioperative Nursing (4) Comprehensive introduction regarding fundamental principles and practices of the Operating Room Nurse, when managing the care of the surgical patient. Upon completion of this course, the student will be able to define the roles and responsibilities of the circulating and scrub nurse and the other members of the surgical team; practice aseptic technique as related to the roles of the Perioperative Nurse; integrate knowledge from the sciences to function in a Perioperative setting with the specialized environment, procedures and equipment; discuss types of anesthesia and medications used in the Perioperative period; utilize the nursing process in meeting the physical, psychological, and educational care of the surgical client; discuss the various methods of sterilization related to the care of the surgical patient; recognize the complexity of the Operating Room environment related to patient safety; identify the legal and ethical responsibilities of the professional nurse related to the rights of the surgical patient. Course topics will specifically cover the roles and responsibilities of the perioperative nurses and the Operating Room team, aseptic technique, specialized environment, procedures and equipment, communication, documentation and legal issues, safety, medications an anesthesia, and specialty areas of the Operating Room. Since the course is a clinical preparation course for RNs, the clinical takes place in the Operating Room. Teaching strategies may include seminar/discussion, films/videos, guest speakers, student presentation. The course may be offered spring, summer or fall semesters.

**Enforced Prerequisite at Enrollment:** NURS major

NURS 463: Companionship Counseling for Children/Adolescents Dealing with Dying, Death, Other Life Crises

3 Credits

Explores issues involving dying, death and life crises which occur in today's world and affect school communities. RECOMMENDED PREPARATION FOR NURS 463 IS PSYCH 100 OR SOC 001 OR HD FS 129. NURS 463 explores the complex issues involving death in today's world as faced by children and adolescents. Content includes: counseling skills for nurses; child and adolescent development in the understanding of dying, death, and other life crises; exploring dying, death, and crises that are present in the lives of children and adolescents in the modern world; discussions of risks of death in the modern world including suicide, accidents, disasters, violence, war, and communicable diseases; description of death rituals and how societies cope with dying and death; identifying effective strategies to assist children and adolescents in coping with dying, death, and other life crises. The societal and school issues that affect not only an individual student but the milieu of the school and other students, parents, teachers, advisers, and administrators are inherent in the content. This course expands knowledge and interventions for those working with children and adolescents in the school setting.

**Recommended Preparation:** PSYCH 100 or SOC 1 or HDFS 129

NURS 464: Dying and Death

3 Credits

Explores attitudes toward death and dying; concept of grief; responsibilities to the dying person and the family. NURS 464 focuses on the exploration of attitudes toward death and dying, concept of grief, responsibilities to the dying person and the family. The student will explore theories and research related to death and dying, identify one's individual attitudes and beliefs about death, identify effective strategies to assist individuals and families to cope with death. Course topics include thanatology, expressions of attitudes toward death, factors affecting familiarity with death, learning about death, socialization, understanding death through the life course, a mature concept of death, death of a companion animal, social and cultural influences, cross-cultural and historical perspectives and inter faith dimensions and religious rituals, including traditional culture, western culture and cultural viewpoints and diversity. The course focuses on an overall understanding of the experience of loss, bereavement, grief and mourning as it relates to different populations and different methods of death for example suicide, war, illness and violence.

**Recommended Preparation:** PSYCH 100 or SOC 1 International Cultures (IL) United States Cultures (US)

NURS 465: Health Concepts for Adults with Complex Health Care Needs

3 Credits

In-depth study and application of the theoretical principles and roles of adult clients and families with complex healthcare needs. NURS 465 focuses on the application of concepts that relate to the adult high-risk client, family, or significant other in a complex health care setting. Upon completion of this course, the student will be able to: integrate theory and knowledge of nursing and related disciplines as a basis for professional nursing practice with adult high-risk clients; demonstrate interpersonal skills to support and guide clients/families/significant others in the selection of appropriate health patterns; utilize the nursing process to analyze complex adult high-risk situations occurring in acute care, transitional care, and/or community settings; apply critical thinking skills to clinical nursing practice situations involving the high-risk client/families/significant others; collaborate with colleagues in the design, implementation, and evaluation of nursing interventions; demonstrate in the clinical nursing practice setting the role of the professional nurse as case manager, change agent, advocate and researcher with the adult high-risk client/families/ significant others; demonstrate a comprehensive understanding of opportunities for clinical nursing research with the adult high-risk client/families/significant others; and demonstrate nursing practice within the professional legal and ethical guidelines. The RN student selects a clinical nursing practice experience related to complex health care of the adult high-risk client and, based on
course objectives, develops clinical practice objectives in collaboration with the course faculty.

**Enforced Prerequisite at Enrollment:** NURN major. Recommended preparation: NURS 390 and NURS 357

**NURS 466: Systems and Community Responses**

3 Credits

An exploration of the multidisciplinary response to child maltreatment. CMAS 466 / NURS 466 Systems and Community Responses (3) An exploration of the multidisciplinary response to child maltreatment. The roles, responsibilities, and interconnected relationships between the systems that interact when responding to child maltreatment issues will be analyzed. The forensic medical response, challenges, and multidisciplinary team best practices to child maltreatment case are examined. Students will explore responses and best practices within the health care, judicial, child protection, social service, educational, mental health, human service, and community systems. This course provides students with the opportunity to work with a variety of majors and understand more clearly the interdisciplinary nature of child maltreatment prevention, advocacy, and response.

**Enforced Prerequisite at Enrollment:** CMAS 258 or HDFS 258 or SOC 258

**NURS 468: Client Education Strategies for Nurses and Other Health Care Providers**

3 Credits

Explores current and emerging roles of client education in the knowledge era. RECOMMENDED PREPARATION FOR NURS 468 IS PSYCH 100 OR SOC 001 OR HD FS 129. NURS 468 explores current and emerging roles of client (patient) education in the knowledge era. Emphasis is placed on the application of teaching and learning strategies that deliver empowering and engaging health education to promote wellness, prevent health problems, and manage chronic illness. Upon completion of this course, the student will be able to: assess the challenges and issues facing nurses and health care providers enacting the role of client educator in the knowledge era; explore the promotion of client health at all levels of prevention: primary, secondary, tertiary; integrate the client education process for individuals, families, groups, and communities; assess learner motivation, readiness, and situational impacts such as psychosocial factors and cultural beliefs that affect the client education process; implement sound, effective teaching and learning strategies in selected clinical settings with special populations; develop teaching plans using taxonomies of educational objectives; select specific teaching strategies and delivery systems, including technology, appropriate for the developmental stage and needs of the learner; describe methods for evaluation of teaching; identify appropriate communication and documentation of the process and outcomes; and list topics in client education which can be further explored through research. This course may be used as a nursing elective or by nurses or other health care workers to increase knowledge and promote successful health teaching to clients.

**Recommended Preparation:** PSYCH 100 or SOC 1 or HDFS 129

**NURS 470: Autism Spectrum Disorders: Care Overview**

1 Credits

Overview of autism spectrum disorders including resources related to children with autism spectrum disorders. RECOMMENDED PREPARATION FOR NURS 470 IS PSYCH 100 OR SOC 001 OR HD FS 129. NURS 470 is an overview of autism spectrum disorders including Autism, Pervasive Developmental Disorders Not Otherwise Specified (PDD-NOS), Retts Syndrome, Childhood Disintegrative Disorder (CDD) and Aspergers Syndrome. The course will provide definitions, special care provisions, identification options, treatments, and resources that will assist any person who interacts with (educates or provides care to) children who are on the autism spectrum.

**Recommended Preparation:** PSYCH 100 or SOC 1 or HDFS 129

**NURS 472: Relational Aggression in the Healthcare Setting**

3 Credits

An exploration of research and interventions for relational aggression in the healthcare setting. RECOMMENDED PREPARATION FOR NURS 472 IS NURS MAJOR OR NURS 350. NURS 472 focuses on the problem of workplace bullying, also known as relational aggression. The course addresses the problem as it occurs within the healthcare professions, with a primary focus on the nursing profession and the nursing education process. The history, roles, and cultural influences of relational aggression will be explored. Students will also learn about related concepts such as horizontal violence and lateral violence. The psychological and physiological impact on the recipients of relational aggression will be reviewed. The consequences of relational aggression on patient care quality, safety, and the recruitment and retention of staff will be explored. Strategies and interventions designed for use by an individual, the work group, and management will be presented. Factors, such as education, mentoring, and leadership in combating relational aggression, will be emphasized.

**Recommended Preparation:** NURN major or NURS 350

**NURS 475: Integrated Concepts in Nursing Practice**

3 Credits

Project-based capstone course for application of nursing concepts to health promotion/disease prevention in populations. RECOMMENDED CONCURRENT FOR NURS 475 IS NURS 417 OR NURS 465. NURN MAJOR CONTROL. NURS 475 is a project-based capstone clinical course for the RN student with a focus on the application of nursing concepts and the RN's development of future career goals. The course is designed to provide opportunity for students to synthesize and apply the art and science of nursing to health promotion and disease prevention in culturally diverse populations in varied clinical settings of the global community. Upon completion of this course, the student will be able to synthesize knowledge from nursing and related sciences for application to evidence based nursing practice: interpret legislative and regulatory processes relevant to the capstone project; collaborate with members of the health team to provide continuity of care through appropriate communication, consultation, and referral; communicate effectively using written, oral, nonverbal and emerging technology methods; apply biostatistical, epidemiological, and research findings to enhance the delivery of evidence based nursing care; provide evidence based nursing care that contributes to safe and high quality patient outcomes within healthcare Microsystems; participate in the development and...
implementation of theory-based and a population-focused health promotion project; facilitate change in the healthcare microsystems affecting the provision of nursing care to diverse populations throughout the lifespan; demonstrate accountability in the delivery of professional nursing care; and integrate the concept of life-long learning into professional nursing practice.

**Enforced Prerequisite at Enrollment:** NURN major. Recommended Concurrent: (NURS 417 and NURS 475) or (NURS 465 and NURS 475)

NURS 480: NCLEX Prep

2 Credits

This course is designed to prepare nursing majors who are in their final semester to take the National Council Licensure Exam (NCLEX®) exam. Passing this exam is required to obtain licensure as a registered nurse (RN) in all US states and territories. Major topics include the structure and format of the exam, the NCLEX® test plan, test taking strategies, and review of key nursing concepts from across the curriculum that will be tested on the exam. The course is intended to be interactive and students are given extensive practice answering NCLEX®-style questions. Students are encouraged to identify areas in which they need further study to prepare for the exam. At the end of the course students are expected to develop a personal study plan to guide their preparation for the exam.

**Prerequisites:** NURS 405A Concurrent courses: NURS 405B

NURS 492: Emergency Care and Safety

3 Credits

NURS 492 is a comprehensive emergency care and safety course that incorporates basic first aid skills and knowledge and advanced topics such as oxygen therapy, hazardous materials, farm/rural incidents, disaster planning, incident command, triage, and mass casualty incidents. The course includes discussion of infectious diseases and the standard precautions utilized by rescuers to prevent the transmission of disease. Critical thinking and decision-making skills are enhanced through practical exercises using various scenarios to improve the rescuers response in emergency situations. Students successfully passing the practical skill testing receives cards in First Aid/Emergency Care and CPR for the Healthcare Provider/Professional CPR. NURS 492 is a complimentary course to NURS 203, which is a basic first aid/community CPR general education elective course designed for the non-nursing major who is required to have first aid/CPR certification for their course of study. NURS 492 provides emergency care at a higher level of training and is an excellent course for nursing students with advanced health care knowledge, community health care providers (i.e., school nurses), and any non-nursing major interested in emergency medical services (i.e., Kinesiology).

**Recommended Preparations:** BIOL 161 BIOL 163

NURS 494: Honors Thesis

1-6 Credits/Maximum of 6

Independent honors research project related to student’s interests directed by faculty supervisor and culminating in production of thesis. NURS 494H is the vehicle by which scholars in the Schreyer Honors College who are conducting honors research with a faculty member in the College of Nursing will register for the senior honors thesis credits. The course facilitates the development of an independent honors research project related to student’s interests directed by faculty supervisor and culminating in production of thesis.

Honors

NURS 495: Nursing Study in Specialized Setting

1-12 Credits/Maximum of 12

Designed to provide student with in-depth study and practice in clinical specialty area of choice. COURSE CONTROL. NURS 495 is designed to provide students with in-depth study and practice in clinical specialty area of choice. Students work with a faculty member in the development of course objectives and goals and with a clinical preceptor to accomplish them. Student evaluation is provided by both the faculty and clinical preceptor. All clinical hours focus on increasing the student’s self-confidence in transitioning into the Registered Nurse role and in the value of life-long learning that supports high quality care and evidence-based practice.

NURS 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

NURS 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

NURS 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

NURS 499: Foreign Study--Nursing

1-18 Credits/Maximum of 18

Study of nursing issues in a foreign country.

International Cultures (IL)

**Nutrition (NUTR)**

NUTR 100: Nutrition Applications for a Healthy Lifestyle

3 Credits

This course introduces students to nutrition principles necessary to promote a healthy lifestyle through assessment and application. Students will be better prepared to evaluate nutrition-related issues presented in the media and to make informed choices about their diet in order to promote health throughout their lives. Information about nutrients (proteins, carbohydrates, fat, vitamins, water, and minerals) and the physiological processes used to digest, absorb, and utilize them is presented and related to such topics as maintenance of ideal body weight, improvement in physical performance, and the role of nutrients in various disease states such as heart disease, diabetes, cancer, and osteoporosis. Topical issues such as alcohol ingestion, food insecurity,
and consumer concerns will be utilized to integrate and critically analyze information presented by various media outlets. This course is intended for non-nutrition major students and will fulfill 3 credits of the GHW requirement of general education. Students who have earned credit for NUTR 251 may not schedule this course.

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Soc Resp and Ethic Reason

NUTR 119: Elementary Foods
3 Credits
Basic principles and fundamental processes underlying food preparation. For non-nutrition majors only.

NUTR 120H: Food Preparation
3 Credits
Scientific principles of basic food preparation, with an emphasis on the physical and chemical aspects.

Honors
NUTR 170: Careers in Nutrition
1 Credit
Nutrition professionals describe career paths and opportunities for graduates in applied and science options; strategies for making effective career decisions.

NUTR 175: Healthy Food for All: Factors that Influence What we Eat in the US
3 Credits
This course encompasses the study of eating behavior and how fundamentals of nutrition-policy (e.g., farm bill, child nutrition act that provides food education and food assistance in relation to Dietary Guidelines for Americans and Dietary Reference Intakes), the food environment, and behavioral economics influence food choice thereby affecting the overall health, nutrition, and well-being of individuals and communities within the United States. While aspects of this are covered in a variety of disciplines (e.g., nutrition, food science, agriculture, economics, sociology, and others), these aren’t always integrated for students. The purpose of this course is to provide an interdisciplinary perspective of how individuals, including those living in poverty, make food choices within their communities, and how these choices impact health and wellness. Topics include an introduction to what we eat, why we eat, and the key roles of diet on health with focus on the links among poverty, food security and obesity. The politics of food discusses portions of the Farm Bill and Child Nutrition Act with focus on the Women, Infants and Children Supplementary Food Program (WIC), the Special Nutrition Assistance Program (SNAP), and school lunch, and the influence these programs have on what is produced and consumed. The behavioral economics of food will focus on determinants of food choice including taste, cost, nutrition, and convenience as well as provide an overview of the biology and psychology of eating through hand-on experiential activities. Through these experiences, students will gain household budgeting skills across income levels that provides perspective to barriers to eating healthy. Lastly, food access dimensions will be discussed (e.g., food desserts, food swamps, grocery stores, targeted advertising/marketing) will be discussed.

Enforced Prerequisites at Enrollment: NUTR 100 or NUTR 251 or FDSC 105
United States Cultures (US)
General Education: Health and Wellness (GHW)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Soc Resp and Ethic Reason

NUTR 175Z: Healthy Food for All: Factors that Influence What we Eat in the US - LINKED
3 Credits
This course encompasses the study of eating behavior and how fundamentals of nutrition-policy (e.g., farm bill, child nutrition act that provides food education and food assistance in relation to Dietary Guidelines for Americans and Dietary Reference Intakes), the food environment, and behavioral economics influence food choice thereby affecting the overall health, nutrition, and well-being of individuals and communities within the United States. While aspects of this are covered in a variety of disciplines (e.g., nutrition, food science, agriculture, economics, sociology, and others), these aren’t always integrated for students. The purpose of this course is to provide an interdisciplinary perspective of how individuals, including those living in poverty, make food choices within their communities, and how these choices impact health and wellness. Topics include an introduction to what we eat, why we eat, and the key roles of diet on health with focus on the links among poverty, food security and obesity. The politics of food discusses portions of the Farm Bill and Child Nutrition Act with focus on the Women, Infants and Children Supplementary Food Program (WIC), the Special Nutrition Assistance Program (SNAP), and school lunch, and the influence these programs have on what is produced and consumed. NUTR 199: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)
NUTR 211R: Applying Biochemistry to Nutrition

1 Credits

The course provides the student with a beginning understanding of how the biochemistry and metabolism under instruction applies to the human body. This includes the localization of biochemical processes within tissues and organs, the organ specific utilization of macronutrients as fuel sources, organ-specific specialization of macronutrient metabolism, and the anatomical features that accommodate and facilitate these functions. This course is supplemental to BMB 211: Elementary Biochemistry, and helps the student apply the biochemical activities taught in BMB 211 in the context of human physiology and nutrition. The beginning level coverage offered in both BMB 211 and NUTR 211R will prepare students for NUTR 445, Energy and Macronutrient Metabolism.

**Enforced Prerequisites at Enrollment:** (CHEM 202 or CHEM 202H or CHEM 210 or CHEM 210H) Corequisites: BMB 211

NUTR 251: Introductory Principles of Nutrition

3 Credits

NUTR 251 Introductory Principles of Nutrition (GHW) is a 3-credit course. This course is designed for nutrition majors and non-majors to provide a broad understanding of general principles of nutrition. Concepts covered include the essential nutrients, digestion, absorption, transport, and food sources. Additionally, major health issues related to some nutrients that are of public health concern in the United States are discussed in more detail giving insight into cause, treatment and prevention. Of major importance to students’ lives are health and nutrition implications of overweight and obesity, heart disease, diabetes, bone health, and energy balance as affected by diet and physical activity. Lastly, understanding of nutritional needs throughout the life span is introduced, with emphasis on pregnancy, lactation, and infant nutrition. All of these concepts at this introductory level are important for students in the major so that they are prepared for upper division courses.

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

NUTR 294: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

NUTR 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

NUTR 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

NUTR 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

NUTR 320: Science and Methods of Food Preparation

4 Credits

The purpose of this course is to teach students the science of food preparation, to develop culinary skills, to learn how to preserve the nutritional content of plant and animal foods, and how to apply food safety principles during food preparation. Additionally, for each food preparation method, students will learn the underlying chemical and physical principles responsible for the recipe outcome. Students will gain an understanding of production methods used by food manufacturers and the source of food additives used to make processed foods. Students will apply scientific principles of food preparation by modifying recipes to improve the nutritional quality of prepared foods while maintaining product quality. The course will include a didactic and cooking lab to reinforce the didactic concepts. During the lab sessions, students will learn basic culinary techniques and apply these techniques by reading recipes, preparing foods, and using sensory evaluation to analyze the prepared foods. Furthermore, students will apply the concepts learned during lecture and the assigned readings to evaluate the outcomes of the prepared recipes.

**Enforced Prerequisites at Enrollment:** NUTR 251 and CHEM 202

NUTR 358: Assessment of Nutritional Status

3 Credits

NUTR 358 is an introduction to the purpose, methods, and scientific basis for assessment of nutritional status in total health care for individuals and groups. Students will learn the role of nutritional assessment within the Nutrition Care Process model. Information is presented regarding current standards of food and nutrient intake adequacies and the use of these reference standards in nutritional assessment. Laboratory and case study assignments are included in the course to apply nutrition assessment principles and understand the role of anthropometric, biochemical, clinical, and dietary intake measurements as part of the nutritional assessment. Students will learn to measure, calculate, and interpret personal anthropometric and dietary intake variables. The course will teach students to collect and interpret personal nutritional assessment data and assess nutritional status.

**Enforced Prerequisites at Enrollment:** NUTR 251

NUTR 360: Nutrition Education and Behavior Change Theory

3 Credits

This course covers a range of topics related to providing evidence-based nutrition information to individuals as well as population-level health. It is designed to be an introductory course in nutrition education and theory within the Nutritional Sciences major. Students will explore the tenets of communication, education, and behavioral theories and models pertinent to the development and dissemination of nutrition information. Exploration of the fundamentals of food behavior, basic communication strategies essential to the nutrition counseling relationship, group facilitation, and working with diverse population groups will be examined through didactic lecture, individual practice, and project-based learning.
Using current technologies to locate and understand evidence-based research, guidelines and protocols will be emphasized. Students will apply information discussed to the development of culturally sensitive nutrition education materials that are appropriate for the target population that is being addressed.

**Enforced Prerequisites at Enrollment:** CHEM 202 and NUTR 251

**NUTR 391: Professional Preparation in Nutrition and Dietetics**

2 Credits

This course provides students with an introduction to current issues in public health, the healthcare industry, professional practice and consumer trends that impact nutrition and health careers. Students will participate in activities during class to explore current topics in public health and issues related to improving access, quality of care and affordability in health care. Ethics scenarios will be presented and discussed that are relevant to nutrition and other healthcare practitioners. This course also prepares students to develop a set of professional skills necessary to initiate a career in the field of dietetics and their required field experience. This course is designed to help students improve self-awareness, become cognizant of strengths and weaknesses, and develop more effective communication skills. Students will use these skills to obtain and successfully complete an advanced field experience in nutrition (NUTR 495).

**Enforced Prerequisites at Enrollment:** Nutrition Sciences, Dietetics option, 5th semester standing

**NUTR 393: Dietetic Internship Application Development**

1 Credits

This course is designed to assist students with the critical thinking skills required to prepare and implement post-graduate educational plans required to progress in the field of nutrition and dietetics. Students wishing to become a Registered Dietitian Nutritionist (RDN) must apply to and be selected for a post-baccalaureate professional supervised learning experience, also known as a dietetic internship, following graduation. The process is competitive, complex and requires self-awareness of professional strengths and weaknesses as well as knowledge of the individual characteristics and objectives of specific dietetic internships. This course will introduce students to this process and help them with the skills needed to clarify their goals and complete the materials needed for a dietetic internship application.

**Enforced Prerequisites at Enrollment:** CHEM 202 and NUTR 251

**NUTR 399: Foreign Studies**

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

**International Cultures (IL)**

**NUTR 400: Introduction to Nutrition Counseling**

2 Credits

This course introduces students to the principles and issues present in the nutrition counseling relationship. Topics will include techniques designed to promote and support nutrition behavior change such as motivational interviewing, cognitive behavior change, working with resistance, transference, countertransference, how to conduct a nutrition counseling session, ADIME charting, coding, and billing issues. Students will learn how to give advise effectively, improve their listening and self-reflection skills as they progress through the course. Challenging situations such as eating disorders, dual diagnosis, and obesity will be explored through role-playing and simulation. The dietitian’s role within
the healthcare team, skill development through practical application and an introduction to interprofessional interactions will be emphasized.

**Enforced Prerequisites at Enrollment:** NUTR 358 Concurrent Courses: NUTR 446

NUTR 407: Nutrition for Exercise and Sports

3 Credits

Interactions between nutrition, food selection, and timing of eating as they apply to exercise training and recreational physical activity.

**Enforced Prerequisites at Enrollment:** NUTR 251

NUTR 410: Eating and Weight Disorders

3 Credits

Eating behaviors vary widely across individuals, but only the extremes of these behaviors are considered pathological. This course provides an opportunity for students to attain a theoretical overview of eating and weight-related disorders, including anorexia nervosa, binge eating disorder, bulimia nervosa, obesity, and dieting. The course will discuss theories and current literature on the causes, diagnosis, symptoms, and treatment of eating and weight-related disorders. In addition, the course will also provide an overview of the differences in the prevalence, manifestations, and treatment of disordered eating in special populations, including men, children, athletes, and minorities. For each topic discussed, students will have related readings to provide insight on the history, theory, research and challenges related to this topic. At the end of this course, students will have an understanding of the history, definition, causes and controversies in eating and weight disorders. In addition, students will be able to define the various eating disorders and critically discuss research regarding their causes, consequences, treatment, and prevention.

**Enforced Prerequisites at Enrollment:** 5th semester standing NUTR 358

NUTR 421: Biocultural Perspectives on Public Health Nutrition

3 Credits

NUTR 421 (3) (IL) takes a public health perspective whereby the biocultural influences on health and nutrition are examined across global contexts. It will challenge students to consider the extent to which social and cultural factors contribute to food behaviors and nutritional status, particularly among vulnerable populations in low- and middle-income settings. The application of the social sciences, including key principles from nutritional anthropology, are a critical yet often overlooked aspect of public health nutrition interventions; this course will ask students to critique both over- and under-nutrition interventions through both biomedical and ethnomedical lenses. Students will describe key considerations for culturally-appropriate nutrition intervention development, implementation, and evaluation within the public health sphere.

**Enforced Prerequisites at Enrollment:** NUTR 251

International Cultures (IL)

NUTR 425: Global Nutrition Problems: Health, Science, and Ethics

3 Credits

This course is a survey of topics with a focus on an examination of the underlying reasons for malnutrition in developing countries and the nutrition-related health problems facing developing country populations, particularly women and children. The topics will range from climate change, clean water supply, and health, to micronutrient deficiencies during pregnancy and child development. Identification of ethical issues and the underlying values/principles of situations relevant to the lives of poor people in developing countries will be discussed, including the right to food in the context of humanitarian aid. Discussion of interventions and current solutions involving multi-country cooperation and agencies meant to alleviate these problems will be explored.

**Enforced Prerequisites at Enrollment:** NUTR 175Z or NUTR 175

International Cultures (IL)

NUTR 445: Energy and Macronutrient Metabolism

3 Credits

This course is designed to provide a foundation in the chemistry and metabolism of the macronutrients. Building on a knowledge base in biochemistry, physiology, and nutrition, this course will focus on the metabolism of proteins, carbohydrates, and lipids, and the integration of these metabolic pathways. The course provides the student with a sufficient application of biochemical processes, cellular molecules and their metabolism to serve as a basis for an advanced study of nutrition.

**Enforced Prerequisites at Enrollment:** BMB 211 and NUTR 251 and NUTR 211R and BIOL 161 and BIOL 162 and BIOL 163 and BIOL 164

NUTR 445H: Nutrient Metabolism I

3 Credits

Nutrients, their sources, metabolism, interrelationships and requirements with focus on carbohydrates, lipids, and proteins.

Honors

NUTR 446: Micronutrient Metabolism

3 Credits

Nutrition 446 is designed to provide a foundation in integrated metabolism, metabolic functions, biochemistry, as well as cellular and molecular biology of the micronutrients (vitamins and minerals). It is an advanced nutrition course that will build upon your basic knowledge in physiology, biology, chemistry and nutrition. Students need to have a solid understanding of macronutrient metabolism (NUTR 445) in order to fully understand the micronutrient metabolism material presented in this course.

**Enforced Prerequisites at Enrollment:** NUTR 445 Concurrent Courses: NUTR 452

NUTR 451: Nutrition throughout the Life Cycle

3 Credits

This course will take a lifecycle approach to the study of nutritional needs, status, conditions, and interventions. The same nutrients are needed from birth to older age, but the requirements change along with a plethora of other factors including food preferences, chewing ability, digestion, absorption, metabolism, growth, behaviors, and barriers to healthy eating. The course will be divided into nine life stages and will cover what is nutritionally important at each stage. The student will also learn how nutritional status at one stage can impact health in
later stages. By the end of this course, the student will have in-depth knowledge of nutritional needs and issues at each stage of life.

**Enforced Prerequisites at Enrollment:** NUTR 358
**Concurrent Courses:** NUTR 446

NUTR 452: Nutritional Aspects of Disease

3 Credits

This course will review the underlying nutritional components and pathophysiology of common human diseases/disorders. The focus is on the metabolic disturbances and nutritional interventions for the prevention of these diseases. Topics include nutritional aspects of obesity, diabetes, cardiovascular disease, GI and renal diseases, immunity and viral diseases, and cancer. The overall goal of this course is to expose students to the integrated nature of the disease process with a focus on nutritionally based or related diseases.

**Enforced Prerequisites at Enrollment:** NUTR 445 PreRequisite or
**Concurrent Courses:** NUTR 446

NUTR 453: Medical Nutrition Therapy

3 Credits

This Medical Nutrition Therapy course provides students with a strong understanding of how to best prescribe diets for patients, depending on the specific disease profile of the individual. This understanding comes from integrating knowledge of disease pathophysiology with nutrient roles and requirements. This knowledge of disease process informs dietary recommendations. In each case, students use the Nutrition Care Process to assess individual patient needs to determine best practice. Strong assessment skills will allow students to prioritize treatment for best outcomes at an individual level. This course covers prescribed medical nutrition therapy for major disease states encountered in clinical practice. Background pathophysiology lays the foundation for interpreting research and prescribing best practice diets for diseases including obesity, diabetes mellitus, cardiovascular disease, renal failure, and liver disease among others. Additionally, planning and usage of enteral and parenteral nutrition is covered. In each unit, students use their understanding of disease states to provide nutrition recommendations in case study examples. Prescriptive diets must reflect physiological states as well as individual patient preferences.

**Enforced Concurrent at Enrollment:** NUTR 452

NUTR 490W: Nutrition Seminar

3 Credits

It is essential for nutrition professionals to keep up with the latest discoveries in the field. In this course, students will learn how to review published literature, integrate and evaluate the information, and disseminate their findings to others both verbally and in writing. A major focus of the course is the preparation of the paper in which students will critically evaluate original research papers and other evidenced-based documents, summarize the findings, and provide conclusions based on a careful analysis of the cited literature. From these exercises, students will acquire skills in interpreting research results and communicate their findings of a nutrition-related topic in a professional manner in both written and oral formats. The overall goal of this class is to empower students to sort fact from fiction in nutrition information and to be able to communicate their findings effectively.
Occupational Therapy (OT)

**OT 100: Structural Foundations of Occupational Therapy Practice**
1 Credits

An overview of the structural foundations of the occupational therapy profession.

First-Year Seminar

**OT 101: Conceptual Foundations of Occupational Therapy Practice**
2 Credits

An overview of the conceptual foundations of occupational therapy practice. Observation of therapists in treatment settings. OT 101 Conceptual Foundations of Occupational Therapy Practice (3) The focus of the course is to provide students with the conceptual foundations of occupational therapy. These foundations form the basis for subsequent occupational therapy courses and are expanded upon in those courses. Topics will include: clinical reasoning, diversity issues, ethics and conflict management, occupation, models of OT, the Practice Framework, principles of management, and occupational therapy literature. Upon successful completion of OT 101 the student will be able to:1. Describe occupation from the perspective of an occupational therapy practitioner.2. Identify the critical differences between the models of OT theory: cognitive, biomechanical, Person Environment Occupation, and sensory integration.3. Identify cultural, contextual, and diversity issues which impact the practice of occupational therapy in a variety of practice settings and describe their impact.4. Identify and define types of clinical reasoning utilized in occupational therapy.5. Identify professional literature appropriate to the practice of occupational therapy; read and summarize selected articles.6. Demonstrate knowledge of liability issues related to OT and the AOTA Code of Ethics and apply the code to given situations which present ethical dilemmas.7. Identify issues common to the management of occupational therapy departments and the role of the OTA in these issues.

**Enforced Prerequisite or Concurrent at Enrollment:** OT 100S

**OT 103: Occupational Performance Across the Life Span**
3 Credits

Analysis of occupations from birth to death including descriptions of occupational performance and factors which influence performance. OT 103 Occupational Performance Across the Life Span (3) The focus of this course is an in-depth understanding of occupations across the life span. Students engage in an analysis of occupations including: activities of daily living, instrumental activities of daily living, education, work, play, leisure, and social participation. Specific descriptors are used to discuss occupational performance from the perspective of the Occupational Therapy Practice Framework. Areas which influence performance skills and patterns are studied and applied. Topics include: areas of occupations engaged in by individuals from birth to death; performance skills and patterns, context, activity demands, and client factors which impact occupational performance, definitions of grading, adapting, and analyzing occupational performance to support meaningful and socially relevant participation in day-to-day occupations. This course is required in the accredited 20T major and provides the foundation for understanding and applying the concepts related to occupations within the occupational therapy assistant intervention courses which follow. Evaluation methods include: written examination, and graded written/oral assignments. Enrollment is limited to students admitted to the 20T major.

**Enforced Prerequisite at Enrollment:** OT 100S and OT 101 United States Cultures (US)

OT 105W: Group Process Across The Lifespan

3 Credits

Group dynamics and interactions analyzed across the lifespan and practice settings. Interventions designed and facilitated by students.

**Enforced Prerequisite at Enrollment:** OT 103. Concurrent: PSYCH 100 Writing Across the Curriculum

OT 107: Activity Analysis: Assistive Technologies and Methods of Adaptation

3 Credits

Assistive technologies and methods of adaptation analyzed; selection criteria, methodologies, proper use, and precautions presented.

**Enforced Prerequisite at Enrollment:** OT 103

**OT 109: Management and Ethics in Occupational Therapy**
3 Credits

Consideration of basic management, ethics, and support tasks significant to the role of the occupational therapy assistant.

**Enforced Prerequisite at Enrollment:** OT 103

**OT 195A: Level I Fieldwork Experience**
1 Credits

Practicum related to 100 level occupational therapy assistant coursework.

**OT 195B: Level I Fieldwork Experience**
1 Credits

Practicum related to 200 level occupational therapy assistant coursework.

**Enforced Prerequisite at Enrollment:** OT 195A

**OT 195E: Fieldwork Level I Experience in Occupational Therapy**
1 Credits

This is the first fieldwork level I experience. It involves observation and engagement with individuals and/or groups to develop a better understanding of occupational performance, challenges and occupation-based interventions. The purpose is to process the information learned in didactic coursework as related practice. An emphasis is placed on
peer collaboration, professionalism and interactions with clients, on-site providers, and/or family members.

OT 197: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

OT 201: Clinical Reasoning and Documentation in Occupational Therapy
3 Credits

Clinical reasoning strategies in occupational therapy practice. Practical application will include case-based reasoning, multi-faceted strategies, and selected formats of documentation. OT 201 Clinical Reasoning and Documentation in Occupational Therapy (3) The objective of this course is to provide intense instruction in clinical reasoning strategies and documentation related to the practice of occupational therapy in a variety of settings. The student will be engaged in clinical reasoning and problem solving throughout the course via case-based scenarios and virtual examples. The process will address the student’s understanding of and documentation of how to relate textbook material to clinical data, client-centered practice, and professional judgment and knowledge. Course objectives include demonstrating the ability to utilize medical terminology and approved abbreviations in documentation reports, identify parts of a SOAP note, utilize narrative or SOAP (relates a form of documentation subjective, objective, assessment, plan) format, understand and utilize digital/electronic documentation methodologies, and write a concise note to document occupational therapy intervention, progress or discharge of a client. Student learning will take place in a classroom setting as well as through written assignments, peer critique, research of documentation requirements in specific contexts, and individual writing critique sessions with the course instructor.

**Enforced Prerequisite at Enrollment:** OT 105W and OT 107 or consent of program

OT 202: Occupational Therapy for Developmental Disabilities
3 Credits

Occupational therapy evaluation, intervention, and documentation for pediatric/developmental disability practice.

**Enforced Prerequisite at Enrollment:** BIOL 129 and BIOL 141 and BIOL 142 and HDFS 129 and OT 105W and OT 107

OT 204: Occupational Therapy for Behavioral Health
3 Credits

Occupational therapy evaluation, intervention, and documentation for behavioral health practice.

**Enforced Prerequisite at Enrollment:** OT 103 and BIOL 161 and BIOL 162 and BIOL 163 and BIOL 164 and Concurrent Courses: OT 207 and OT 209

OT 206: Occupational Therapy for Physical Disabilities
4 Credits

Occupational therapy evaluation, intervention, documentation methods for physical disability practice.

**Enforced Prerequisite at Enrollment:** BIOL 129 and BIOL 141 and BIOL 142 and HDFS 129 and OT 105W and OT 107

OT 207: Assistive Technologies and Methods of Adaptation
3 Credits

Addresses a variety of assistive technology and assistive devices people use to assist them in completing daily and life occupations. Students engage several assistive technologies and learn to identify, create, and practice implementation of adaptations for clients that optimize occupational performance. Students will be expected to identify, describe, explain, and demonstrate knowledge and skills related to assistive technology and methods of adaptation along with client and caregiver safety.

**Enforced Prerequisite at Enrollment:** OT 103 and BIOL 161 and BIOL 162 and BIOL 163 and BIOL 164 and Concurrent Courses: OT 205 and OT 209

OT 209: Management, Leadership and Ethics in Occupational Therapy
3 Credits

Focus on management, leadership and ethics in occupational therapy practice will be addressed. Importance of intraprofessional and interprofessional collaboration, as well as, reimbursement and policies related to the delivery of services will be emphasized. A keen understanding of the occupational therapy practitioner-client relationship driven by therapeutic use of self will be applied to all aspects the teaching-learning process. Interprofessional and intraprofessional collaborative practice will be addressed, as well as, the essentials of advocacy and professionalism.

**Enforced Prerequisite at Enrollment:** OT 103 and BIOL 161 and BIOL 162 and BIOL 163 and BIOL 164 and Concurrent Courses: OT 205 and OT 207

OT 210W: Clinical Reasoning and Documentation in Occupational Therapy
3 Credits

This courses entails a broad scope experience in clinical reasoning strategies, proficient writing and documentation skills required by the occupational therapy assistant across a wide variety of practice settings. The objective of this course is to provide intensive & rigorous teaching-learning opportunities for students to utilize verbal and written clinical reasoning to facilitate occupation-based assessments, interventions and discharge planning. Additionally, student will be able to demonstrate knowledge of the use of technology in practice for electronic documentation, virtual environments, and telehealth platforms.
Enforced Prerequisite at Enrollment: OT 205 and OT 207 and OT 209 and OT 195E Concurrent Courses: OT 212 and OT 214 and OT 216 and OT 295E

Writing Across the Curriculum

OT 212: Occupational Therapy for Child & Adolescent Health

3 Credits

Students will utilize clinical reasoning to facilitate occupation-based interventions that address client factors as related to conditions associated or the prevention of such with children and adolescents. Focused interventions will include areas of Course Justification occupation, performance skills, performance patterns, contexts and environments. Students learn about and gain skills related to occupational therapy evaluation, intervention, and documentation related to conditions associated with children & adolescents.

Enforced Prerequisite at Enrollment: OT 205 and OT 207 and OT 209 and OT 195E Concurrent Courses: OT 210W and OT 214 and OT 216 and OT 295E

OT 214: Occupational Therapy for Psychosocial and Behavioral Health

3 Credits

Students will utilize clinical reasoning to facilitate occupation-based interventions that address client factors as related to psychosocial and behavioral health. Focused interventions will include areas of occupation, performance skills, performance Course Justification patterns, contexts and environments. In-depth work will be engaged, as related to psychosocial and behavioral health interventions and programming in various clinical and community settings with individuals and groups. Overall, students will learn about and gain skills related to occupational therapy evaluation, intervention, doc

Enforced Prerequisite at Enrollment: OT 205 and OT 207 and OT 209 and OT 195E Concurrent Courses: OT 210W and OT 212 and OT 216 and OT 295E

OT 216: Occupational Therapy for Physical Health and Rehabilitation

4 Credits

Students will utilize clinical reasoning to facilitate occupation-based interventions that address client factors as related to physical health and rehabilitation. Focused interventions will include areas of occupation, performance skills, performance patterns, contexts and environments. Students learn about and gain skills related to occupational therapy evaluation, intervention, and documentation related to physical health and rehabilitation. Students will be expected to identify, describe, explain, and demonstrate knowledge and skills related to physical health and rehabilitation along with client and caregiver safety.

Enforced Prerequisite at Enrollment: OT 205 and OT 207 and OT 209 and OT 195E Concurrent Courses: OT 210W and OT 212 and OT 214 and OT 295E

OT 295: **SPECIAL TOPICS**

1-12 Credits/Maximum of 6

OT 295A: Field Experience in Occupational Therapy I

1-6 Credits

Part I of supervised experience in select occupational therapy settings in the role of an occupational therapy assistant; seminars included.

Enforced Prerequisite at Enrollment: Satisfactory completion of all didactic course work

OT 295B: Field Experience in Occupational Therapy II

1-6 Credits

Part II of supervised experience in select occupational therapy settings in the role of an occupational therapy assistant; seminars included.

Enforced Prerequisite at Enrollment: successful completion of all didactic course work and successful completion of OT 295A

OT 295E: Field Level I Experience in Occupational Therapy

1 Credits

This is the second fieldwork level I experience taken alongside of coursework during the 4th semester. It involves observation and engagement with individuals and/or groups to develop a better understanding of occupational performance, challenges and occupation-based interventions. The purpose is to apply knowledge and skills learned in didactic coursework to practice. An emphasis is placed on peer collaboration, professionalism and interactions with clients, on-site providers, and/or family members.

Enforced Prerequisite at Enrollment: OT 195E Concurrent Courses: OT 210W and OT 212 and OT 214 and OT 216

OT 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

OT 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

OT 395A: Field Level II Experience in Occupational Therapy

1-6 Credits

This is the first 8-week supervised fieldwork experience in a community or clinical based setting. Level II fieldwork may be completed in acute care facilities, rehabilitation facilities, outpatient centers, behavioral/mental health facilities, school systems, home health agencies, outpatient centers, or skilled nursing facilities. Level II fieldwork includes hands-on experience with individuals and/or groups. Knowledge of the occupational therapy processes, professional conduct, and effective communication between supervisor and student is essential to accomplish fieldwork goals and objectives. The goal of Level II Fieldwork
is to develop competent, entry-level, generalist occupational therapy assistants.

OT 395B: Fieldwork Level II Experience in Occupational Therapy
1-6 Credits

This is the second 8-week supervised fieldwork experience in a community or clinical based setting. Level II fieldwork may be completed in acute care facilities, rehabilitation facilities, outpatient centers, behavioral/mental health facilities, school systems, home health agencies, outpatient centers, or skilled nursing facilities. Level II fieldwork includes hands-on experience with individuals and/or groups. Knowledge of the occupational therapy processes, professional conduct, and effective communication between supervisor and student is essential to accomplish fieldwork goals and objectives. The goal of Level II Fieldwork is to develop competent, entry-level, generalist occupational therapy assistants.

Enforced Prerequisite at Enrollment: OT 395A

OT 412W: Introduction to Research
3 Credits

Introduction to quantitative and qualitative research process relative to occupational therapy.

Enforced Prerequisite at Enrollment: STAT 200 or STAT 250

Writing Across the Curriculum

OT 495: **SPECIAL TOPICS**
1-6 Credits/Maximum of 6

OT 496: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

Organizational Leadership (OLEAD)

OLEAD 100: Introduction to Leadership
3 Credits

The ability to lead others is increasingly valued in today's world of work, and this course introduces key leadership concepts and practices based on current theory and research from both a social science and humanities perspective to prepare students for either the Bachelor of Science or the Bachelor of Arts as well as serve as a general education social science requirement. Whether or not a person is in a formal position of leadership, Introduction to Leadership will help students to discover the knowledge and skills necessary for effective leadership. The course will view leadership from an interactional framework that analyzes leadership from the perspective of the leader, the followers, and the situation. In particular, the unit on the leader will introduce traits, behaviors, gender, leadership development, personal strengths, developing leadership skills, creating a vision, addressing ethics, power, influence, and character. The unit on the leader-follower dynamic will introduce the concepts of followership, motivation, job performance, job satisfaction, engagement, embracing diversity and inclusion, listening to out-group members, managing conflict, overcoming obstacles, as well as leading group and teams. The final unit will focus the impact of the situation on leadership and will introduce students to organizational culture and climate, contingency theories of leadership, change, innovation, and will revisit the interactional framework in total to have students reflect on what they have learned.

Bachelor of Arts: Humanities
Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Soc Resp and Ethic Reason

OLEAD 210: Evidence-Based Leadership
3 Credits

In evidenced-based leadership, students will learn how to use strong information and facts to increase the likelihood of success of leadership in organizations. In particular, this course starts by examining different kinds of evidence and analyzing their quality and usefulness. From there students will learn how to use that evidence to improve their leadership. Also covered will be convincing others to use strong evidence as well as implementing strategies based on that evidence to improve organizational effectiveness and success.

General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

OLEAD 409: Leadership Development: A Life-Long Learning Perspective
3 Credits

The course examines the continuing influence of social and environmental factors in shaping leadership and leadership development. OLEAD (LER) 409 Leadership Development: A Life-Long Learning Perspective (3)(BA) This course meets the Bachelor of Arts degree requirements. Current social conditions, such as financial crises, ineffective solutions to local, national, and international problems and corrupt leaders, call for more effective and ethical leadership on a broad scale. The positive and moral transformation of social institutions requires active participation and leadership of more authentic transformational leaders. This course will discuss authentic transformational leadership development from a life span developmental perspective. More specifically, it will focus on how an individual develops his/her leadership skills, potential, and capacity in his/her childhood, school, social organizations, colleges, and work organizations. The primary purpose of this course is to help students understand how family, educational, and other environmental factors have helped and/or will help them develop their transformational leadership potential and leadership effectiveness, in addition to gaining a better understanding of their strengths and weaknesses in respect to personality, individual difference, motivation, values, emotions, self-awareness, and identity. The fundamental objectives of this course are to help students 1) increase self-awareness; 2) to help students to know more about their sense of self, including self-identity, self-awareness, self-efficacy, and other types of self-concepts; 3) to understand the effect of life span influences in an individual's leadership development.

Prerequisite: 6th semester standing
Cross-Listed
Bachelor of Arts: Social and Behavioral Sciences

OLEAD 410: Leadership in a Global Context

3 Credits

This course explores the science and practice of leadership around the globe through pertinent scholarly literature and related instructional resources. OLEAD 410 Leadership in a Global Context (3)(IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will explore the science and practice of leadership across the globe. In particular, cross-cultural differences in leadership styles and methods from around the planet will be examined. Emphasis will be made on gaining knowledge of various cultural perspectives from around the world. That knowledge will then be used to examine successful leadership interactions between diverse cultures. Upon completion of Leadership in a Global Context, students will be able to understand differences within and between cultures, understand how diversity can impact an organization; recognize there are various sources of information to learn about culture; utilize various sources of information to gain knowledge of culture; develop the ability to recognize cultural differences in leadership situations, and think about developing leadership in global situations based on culture.

Prerequisite: OLEAD100
Bachelor of Arts: Other Cultures
International Cultures (IL)

OLEAD 411: Women and Leadership

3 Credits/Maximum of 3

Overviews scholarship relating to women in positions of leadership in groups and organizations, as well as obstacles to their success

Prerequisite: OLEAD 100

OLEAD 464: Communication Skills for Leaders in Groups and Organizations

3 Credits

Theory-and research-based communication skills for leaders dealing with work-related problems in contemporary groups and organizations. LER 464 Communication Skills for Leaders in Groups and Organizations (3)(BA) This course meets the Bachelor of Arts degree requirements. LER 464 Communication Skills for Leaders in Groups and Organizations is a survey of theory, research, and practice related to the communication processes by which individuals in groups and organizations exercise influence, whether or not they occupy positions of acknowledged leadership, and may be taken as part of an Labor and Industrial Relations major or minor, or as an elective by students in other disciplines. The course is offered once each academic year and has an enrollment limit of 40 students per offering. It requires no special facilities. L I R 465 extends to other courses in the major, primarily in the areas of Industrial Relations and Human Resources. It is also complementary to courses dealing with decision making in groups and organizations in sociology, psychology, and management. Of particular interest are decision making processes, as well as theories that account for them, in single-motive situations (in which participants in the process are pursuing a common goal) and mixed-motive situations (in which two or more of the participants are competitively related, but must cooperate to achieve their objectives). Hence, the course deals both with (1) conventional decision making, as in the case of boards, task forces, problem-solving groups, and quality circles or teams, appropriate to single-motive situations and (2) processes, such as bargaining, negotiation, and dispute management/ resolution, appropriate to mixed-motive situations. The course also deals with the influence of organizational culture on decision-making in both types of situations. Upon completing L I R 465, students will have been exposed to a broad array of theoretical perspectives on decision making in groups and organizations, will be familiar with research testing these theories, and be aware of decision making practices suggested by theory and research that are useful in situations requiring collective choice and action. These terminal outcomes reflect the objectives.

Cross-listed with: LER 464
Bachelor of Arts: Social and Behavioral Sciences

OLEAD 465: Collective Decision Making

3 Credits

Application of theories of decision making to work-related issues in groups and organizations requiring collective resolution and action. LER 465 Collective Decision Making (3)(BA) This course meets the Bachelor of Arts degree requirements. This course presents a broad overview of theories, research, and practices in decision making as related to work-related choice making in groups and organizations and is open to students majoring or minoring in Labor and Industrial Relations, as well as to students who may wish to use the course as an elective. The course is offered once each academic year and has an enrollment limit of 40 students per offering. It requires no special facilities. L I R 465 extends to other courses in the major, primarily in the areas of Industrial Relations and Human Resources. It is also complementary to courses dealing with decision making in groups and organizations in sociology, psychology, and management. Of particular interest are decision making processes, as well as theories that account for them, in single-motive situations (in which participants in the process are pursuing a common goal) and mixed-motive situations (in which two or more of the participants are competitively related, but must cooperate to achieve their objectives). Hence, the course deals both with (1) conventional decision making, as in the case of boards, task forces, problem-solving groups, and quality circles or teams, appropriate to single-motive situations and (2) processes, such as bargaining, negotiation, and dispute management/ resolution, appropriate to mixed-motive situations. The course also deals with the influence of organizational culture on decision-making in both types of situations. Upon completing L I R 465, students will have been exposed to a broad array of theoretical perspectives on decision making in groups and organizations, will be familiar with research testing these theories, and be aware of decision making practices suggested by theory and research that are useful in situations requiring collective choice and action. These terminal outcomes reflect the objectives.

Cross-listed with: LER 465
Bachelor of Arts: Social and Behavioral Sciences

OLEAD 495: OLEAD Internship

1-12 Credits/Maximum of 12

Supervised practicum in organizational leadership.

OLEAD 496: Independent Study

1-18 Credits

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Prerequisite: OLEAD100
Petroleum and Natural Gas Engineering (PNG)

PNG 301: Introduction to Petroleum and Natural Gas Engineering

3 Credits/Maximum of 3

The first part of the course will introduce the student to the design and implementation of the systems used in the extraction of oil and gas, including geology, production, reservoir, and facilities engineering. The course will give an initial overview of the history of the oil industry and the origins of petroleum and natural gas reservoirs, followed by a description of the conventional and unconventional reservoir types. All aspects of petroleum engineering from upstream to downstream will be included in this discussion, including transportation, marketing, and environmental impacts. The remainder of the course will present the various key disciplines in petroleum and natural gas engineering in the chronological order of how the disciplines interact. Key problems in each of these disciplines will be reviewed and solved, using Excel and introductory statistics/computer programming (using Matlab). First, the discipline of drilling engineering will be presented. This will focus on the different types of wells, bits, casing designs, and completion techniques. Topics in the discipline of reservoir engineering will be presented next and will include basic petrophysics, reservoir types and fluids, as well as basic extraction methods. The life cycle of a reservoir and its efficient and environmental friendly management will be discussed, including enhanced oil recovery methods, such as carbon dioxide injection and surfactant flooding. Topics in production engineering will be presented next, and will center on tubing design, artificial lift, stimulation using acids and fracturing, and cased-hole logging. Topics in facility engineering, the last discipline to be discussed, will focus on surface facilities such as separators, gas and water gathering systems, pipelines, stock tanks, chokes, and recycle plants. Finally, differences between unconventional and conventional extractions and systems will be described as this is now critical to the energy security of the United States. Focus here will be on shale properties, fluid property changes owing to tiny pores, diffusion, absorption, and hydraulic fracturing. The course will explain how fracturing in shale reservoirs differs from conventional ones. Transport of oil or gas from these tight rock matrices by diffusion through the fracture network will be presented. Environmental considerations will also be discussed.

Prerequisites: (PHYS 211; or PHYS 250) Concurrent Courses: GEOSC 1

PNG 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

PNG 405: Rock and Fluid Properties

3 Credits

Reservoir rock properties, rock and fluid properties (interaction between rock and fluids), flow behavior in reservoir, and fluid properties. P N G 405 Rock and Fluid Properties (3) The objective of this course is to introduce students to basic reservoir rock and fluid properties. The course is divided into three sections: rock properties, rock and fluid properties (interaction between rock and fluids), and fluid properties. In the rock properties, Lithology of Reservoirs, Porosity and Permeability of Rocks, Darcy's Law, and Distribution of Rock Properties are discussed. In Rock and Fluid Properties Section, Existence of Multi-phases, Saturation, Wettability, Capillary Pressure, Effective and Relative Permeability, concepts are covered. Fluid properties topics include Phase Behavior of Single and Multi Component Systems, Compositional and Black-Oil models, Solution Gas-Oil Ratios, Formation Volume Factor, Compressibility, Density, Viscosity, and Interfacial Tension. This is also the first course that Petroleum and Natural Gas Engineering students take in the major. Therefore, an introduction to petroleum and natural gas engineering is also made. This course is a pre-requisite for most of the Petroleum and Natural Gas Engineering major courses. It is an elective course for majors such as Environmental Systems Engineering. It is offered every Fall semester.

Prerequisite: PHYS 211

PNG 406: Rock and Fluid Laboratory

1 Credits

Systematic study of oil reservoir rocks and fluids; their interrelation applied to petroleum engineering.

Prerequisite: PHYS 211; Concurrent: P N G405

PNG 410: Applied Reservoir Engineering

3 Credits

Analysis and prediction of reservoir performance by use of material balance and steady and nonsteady state flow equations.

Prerequisite: P N G405 , P N G406 , PHYS 211

PNG 411: Introduction to Petroleum and Natural Gas Extraction

1 Credits

Introduction to the design and implementation of the systems used in the extraction of oil and gas. Not intended for petroleum and natural gas engineering majors.

Prerequisite: PHYS 211

PNG 420: Applied Reservoir Analysis and Secondary Recovery

3 Credits/Maximum of 999

Application of material balance/transient flow solutions to water influx problems; displacement theory as it applies to design behavior of flooding. P N G 420 Applied Reservoir Analysis and Secondary Recovery (3) This course addresses two major issues in petroleum engineering: water influx and water flooding. The displacement of oil or gas by water is a complicated physical process that has a great impact on recovery efficiencies. The first objective of the course is to merge the material balance method and transient flow solutions for the aquifer into one analysis tool for understanding and predicting water influx cases. Several analytical and numerical methods are presented including: linear and radial diffusion equation solutions, super position, Hurst simplified, Schiltius and Hurst modified. The second objective of the course is to understand the fundamentals of displacement theory and practice. The extension of the Buckley and Leverett water flooding theory is presented for three-phase flow. Three-phase relative permeabilities are determined from experimental data. Several geometrical patterns are discussed in the course including: five spots, staggered line drive, direct line drive, four spots, seven spots, and nine spots. The efficiency of each pattern
The fundamentals of drilling fluids and drilling fluid design, and applying the students science of drilling and completion. This includes learning becomes more critical. The objectives of this course are to introduce increasingly more challenging to drill wells. Thus, engineering design formation and fracture gradient window becomes narrower, all making through could easily reach 350°F and 20,000 psi or higher, and the temperature of the formation that petroleum engineers need to drill more than 10,000 feet, with the longest at 40,000 feet. The temperature in 1859. The true vertical depth of the well has grown from 69.5 feet from then to more than 15,000 ft, with the deepest at more than 40,000 feet. The horizontal length of a well has grown from theoretically zero to more than 10,000 feet, with the longest at 40,000 feet. The temperature and pressure of the formation that petroleum engineers need to drill through and evaluate the engineering properties of oil and gas bearing reservoir formations.

**Prerequisite:** PNG 420H: Applied Reservoir Analysis

Water influx theory. Application of principles of reservoir analysis to the determination of reservoir behavior and education.

Honors

**PNG 425: Principles of Well Testing and Evaluation**

3 Credits

Mathematical basis for pressure analysis. Theory and practice of pressure testing techniques.

**Prerequisite:** MATH 251, PNG 420

**PNG 430: Reservoir Modeling**

3 Credits

The numerical simulation of petroleum reservoir processes by the use of models; scaling criteria and network flow.

**Prerequisite:** MATH 251, PNG 410; CMPSC201 or CMPSC202

**PNG 440W: Formation Evaluation**

3 Credits

Study of those methods used to evaluate the engineering properties of oil and gas bearing reservoir formations.

**Prerequisite:** PNG 440W, PNG 410; CMPSC201 or CMPSC202

**PNG 440W: Formation Evaluation**

3 Credits

Design and analysis of oil-field drilling operations and equipment. PNG 450 Drilling Engineering (3) This course addresses a critical issue in petroleum and natural gas engineering: of how to drill and complete oil and gas wells in an engineering sound, economical, and environmentally safe manner. Drilling technology has advanced greatly since the first commercial oil well in the U.S. was drilled in northwest of Pennsylvania in 1859. The true vertical depth of the well has grown from 69.5 feet from then to more than 15,000 ft, with the deepest at more than 40,000 feet. The horizontal length of a well has grown from theoretically zero to more than 10,000 feet, with the longest at 40,000 feet. The temperature and pressure of the formation that petroleum engineers need to drill through could easily reach 350°F and 20,000 psi or higher, and the formation and fracture gradient window becomes narrower, all making drilling and completion more challenging. In summary, it is becoming increasingly more challenging to drill wells. Thus, engineering design becomes more critical. The objectives of this course are to introduce the students science of drilling and completion. This includes learning the fundamentals of drilling fluids and drilling fluid design, and applying fluid mechanics and quantify drilling hydraulics for complex fluid flow through drilling string and annular spaces. The course will also discuss the concepts and quantify the formation pressure and fracture pressure gradients for different methods of drilling. A key task for students will be to learn the methods for characterization, selection and optimization of casing design, and optimized bit design, and finally the course will discuss how to design directional and horizontal wells to optimize production and recovery from mature fields and unconventional resources, such as coalbed methane, shale gas, and tight oil in Pennsylvania. This course is a prerequisite for petroleum and natural gas engineering major courses. It is an elective course for majors such as chemical engineering, mechanical engineering, civil engineering, etc. The knowledge, methods, and practical skills in this course could also be used in various other industries including geothermal HVAC, ground water drilling, mineral exploration, and scientific research.

**Prerequisite:** (EME 303 and EMCH 210 ) ( EMCH 211, EMCH 213 for EMCH 210) Concurrent: PNG450

**PNG 451: Drilling Laboratory**

1 Credits

Practice in well-control procedures. Measurement of drilling fluid properties. Practice in well-control procedures. Measurement of drilling fluid properties. PNG 451 Drilling Laboratory (1) This course is serves as the laboratory component for PNG 450 Students will apply the concepts and skills gained from lectures and discussions in PNG 450. The aim is for student to become familiar with drilling fluids and with how to quantify the fluid properties analytically. Students will also receive practical experience with drilling equipment, and will practice solving practical well-control problems in the laboratory. Students in this course will gain experience using our state-of-the-art rig floor simulator and drilling fluid and cement laboratory, which are equipped with the advanced facilities currently used in the oil and gas industry.

**Prerequisite:** (EME 303 and EMCH 210 ) ( EMCH 211, EMCH 213 for EMCH 210) Concurrent: PNG450

**PNG 456: Hydraulic Fracturing Analysis**

1 Credits/Maximum of 1

Industry professionals teach hydraulic fracture design and analysis.

**PNG 457: Pump Systems for Oil and Gas Production**

1 Credits/Maximum of 1

Industry professionals teach about sucker-rod pump technology.

**PNG 458: Assessment, Classification, and Reporting of Reserves and Resources**

1 Credits/Maximum of 1

Industry professionals teach how to define and estimate reserves.

**PNG 459: Well Control Certification**

1 Credits/Maximum of 1

Using the most advanced simulator system, industry professionals teach students how to avoid and resolve operational difficulties. Students who successfully complete the course receive a certificate.
PNG 475: Production and Completions Engineering

Design and selection of mechanical components used in the production of fluids from subsurface reservoirs.

**Prerequisite:** E MCH210

PNG 480: Surface Production Engineering

Analysis and evaluation of surface production processes, fluid separation, storage, measurement, treating, custody transfer; transmission, disposal, corrosion, and other operations. P N G 480 Production Process Engineering (3) Surface production engineering involves the extraction of reservoir fluids, their treatment at the surface and movement to a commercial market via a common carrier. It is the primary objective of this course to provide the fundamentals of surface production operations and underlying operational principles and design criteria for equipment utilized in the surface handling of petroleum production fluids. Surface production facilities are described in detailed as systems in charge of the separation of the wellstream fluids into three single-phase components (oil, gas, water) and of their transport and processing into marketable products or their disposal in an environmentally acceptable manner. A detailed overview of hydrocarbon fluid behavior, analysis of hydrocarbon and water separation processes, analysis and design of surface transportation systems and flow assurance problems is provided along with a comprehensive look at the engineering aspects involved in production operations. Topics include purpose and description of onshore and offshore surface production facilities and the function of the equipment used in these processes, including wellheads and Christmas trees, gathering systems, production manifolds, field processing of crude oil, field processing of natural gas, phase separation of gas, oil and water, water-in-crude oil emulsification, heater-treaters and dehydration of crude oil, natural gas dehydration, stock tank batteries and transportation. Discussion includes oil and gas quality checks, oil and gas metering, typical contractual hydrocarbon sales specifications, and typical specifications for produced waters and other by-products. Hydrocarbon fluid behavior topics includes an overview of hydrocarbon thermodynamics, hydrocarbon PVT behavior, thermodynamics of liquid and vapor separation, and fluid behavior prediction models including modern cubic equations of state. In the context of surface facility design, a process simulation or compositional simulation is implemented to predict how the components make up the well fluids react to changes in pressure and temperature as they are processed through the facility through a succession of phase changes where liquids flash to vapor or vapors condense into liquid. Equipment design topics comprise design of 2-phase and 3-phase vertical and horizontal separators, derivation of design equations, design of crude and condensate stabilization trains, design and operation of glycol dehydrator towers, and flow assurance topics such as hydrate, corrosion, and wax prevention. The ultimate purpose of surface equipment design is to recommend the most suitable and cost-effective equipment type and size that meets the specified service and system condition, contractual obligations, and industrial health and safety and environmental regulations.

**Prerequisite:** EME 301 , EME 303

PNG 482: Production Engineering Laboratory

Measurement and analyses of the physical and chemical properties of hydrocarbon fluid systems in a production environment. P N G 482 Production Engineering Laboratory (1) The task of production engineers is to optimize the extraction, treatment and delivery rate of hydrocarbons. For this optimization to be realistic, quantitative values of some relevant parameters and properties that characterize the system should be known preferably by way of measurements. It is the primary objective of this laboratory course to give the student an understanding of the available measurement techniques; an opportunity to gain hands-on experience in carrying out the experiments as well as operating the apparatus and some practice in the art of technical report writing. The Production Engineering Laboratory has been designed to expose the student to the principles and procedures of production engineering for oil and gas analysis (physicochemical characterization and quality control) and the transport of fluids in pipes and conduits. The main objective is to familiarize students with the basic measurements that must be taken in production monitoring and control, as well as basic production engineering principles. It is also aimed to enhance the error analysis, critical evaluation and technical report writing skills of the student. Major pieces of equipment in this laboratory include: viscosimeters, oxygen bomb calorimeters, gas chromatograph, densitometers, centrifuges, dead weight testers, dwell point testers, and a meter run setup. Laboratory experiences include, but are not limited to, the determination of density of clear organic substances and petroleum distillates that can be handled as liquids at test temperatures between 10 and 40 °C using digital density meters, the determination of the API gravity (or specific gravity) of crude oil, petroleum products normally handled as liquids (e.g. stabilized crude oil, stabilized gasoline, naphthene, kerosene, gas oils, lubricating oils, and non-waxy fuel oils) and alcohols using hydrometer and pycnometer methods, the calibration of Bourdon type pressure gauges by means of a dead weight testers and constructing of calibration charts for gauges that are not adjustable, the determination of water and sediment in crude oils by means of the centrifuge procedure, the determination of the heat of combustion of organic substances ranging in volatility including oil samples with volatiles ranging from that of distillates to that of residuals, the measurement of viscosity of crude oil and liquid petroleum products by means of measuring the time for a volume of liquid to flow under gravity through a calibrated glass capillary viscosimeter, the determination of water vapor content of gases by measurement of the dew point temperature and the calculation there from of the water vapor content, and the determination of a gas flow rates in pipelines by means of orifice plates and axial full-flow turbine meters.

**Prerequisite:** EME 301 , EME 303; Concurrent: P N G480

PNG 490: Introduction to Petroleum Engineering Design

Introduction to the concepts of engineering design as applied to petroleum and natural gas projects. P N G 490 Introduction to Petroleum Engineering Design (1) The objective of this course is to introduce to the students the principles of engineering design as applied to petroleum and natural gas projects. The course focuses on the analysis of physical data with respect to error and use of this data in design. Other topics to be visited include a definition of what is a project deliverable and establishment of timelines for their implementation. The salient points of the course are as follows: (1) This course is the first capstone
Engineering design course in the sequence of three courses. In this portion of the course students’ principal goal is to characterize the reservoir. In this process necessary basic sciences and engineering skills are utilized. (2)In reservoir characterization, students typically collect and analyze the data available in the literature and other related data provided by the operators. (3)In making a preliminary assessment towards field development students consider factors involving economic, environmental, social, ethical, health and safety considerations. (4)In this course, students work in teams. In each team, team members assume responsibilities as petrophysicist, drilling engineer, geologist, geophysicist production engineer, reservoir engineer and implement the necessary technical skill to fulfill their obligations. (5)This project starts from the ground level and ends with a complete field development plan. Within the context of the project (reservoir characterization) students have the opportunity to use the necessary skills to identify and formulate and solve the engineering problems and challenges that are faced. (6)In selecting the lease area the potential impact of project on the social and physical environments is considered and all the ethical responsibilities are studied in depth. (7)During every phase of the project the impact of decisions are considered within the framework of global, economic, environmental and societal context. (8)In this course the main contemporary issue the need for unconventional energy resources is the driving force behind the project. (9) In every phase of the project students are exposed to contemporary methodologies and engineering tools including forecasting, scenario planning and reservoir simulation. Also, whenever applicable the necessary engineering software is also incorporated in the development of the project.

**Prerequisite:** ECOn 102 or E B F 200; P N G 405; Concurrent: EME 460

PNG 491: Capstone Design in Drilling and Completions

1 Credits

Application of the concepts of reservoir, production, drilling and completions, and economics to petroleum engineering design projects. Engineering design by definition is the integration of knowledge and skills acquired throughout experience, reading and formal instruction into a final product, the design. To that end, this course is the second course of a 3-course, 3-semester sequence that will result in a comprehensive capstone-engineering project. As such, PNG 491 will utilize the knowledge gained from PNG 450, 451, and 475 to the project design initiated in PNG 490. The class will be divided into teams and students will be evaluated on the basis of their contribution to the team effort. All reports and presentations will be presented as a product of the team.

**Prerequisite:** PNG 491

PNG 492H: Petroleum Engineering Capstone Design

1 Credits

Integration of petroleum and natural gas engineering concepts to project design. PNG 492 Petroleum Engineering Capstone Design (1) Engineering design by definition is the integration of knowledge and skills acquired through experience, reading and formal instruction into a final product, the design. To that end, this course is the third course of a 3-course, 3-semester, sequence that will result in a comprehensive capstone-engineering project. As such, PNG 492 will utilize the knowledge gained from three semesters of formal instruction to the project design initiated in PNG 490 and continued on in P N G 491. Course material will include the application of spreadsheet programming to petroleum and natural gas project design and its use in project economic analysis and risk analysis. The class will be divided into teams and students will be evaluated on the basis of their contribution to the team effort. All reports and presentations will be presented to the class as a product of the team.

Honors

PNG 494: Thesis

1-6 Credits/Maximum of 6

A problem in petroleum engineering involving review of the literature and experimental data obtained in the field or laboratory.

PNG 494H: Thesis

1-6 Credits/Maximum of 6

A problem in petroleum engineering involving review of the literature and experimental data obtained in the field or laboratory.

Honors

PNG 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

PNG 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

**Philosophy (PHIL)**

PHIL 1: The Big Questions

3 Credits

This course plunges students into the deepest philosophical questions: Why is there something rather than nothing? Can I be sure about
PHIL 1H: The Big Questions - Honors

3 Credits

This course plunges students into the deepest philosophical questions: Why is there something rather than nothing? Can I be sure about anything? What is the purpose of life? Is morality real or conventional? Can the existence of God be proven or disproven? Can science explain everything? Students will meet a range of historical and contemporary formulations of philosophical questions such as these, study various types of response, and acquire the analytical and expository skills to develop and defend their own perspectives. The course proceeds through discussion, reading, writing, and other assignments.

PHIL 2: Individuals in Society

3 Credits

This course provides a philosophical introduction to pressing social and political issues. We will ask, for example, what justifies having a government; whether inequality is ever justified; what obligations citizens have toward each other and toward non-citizens; what exactly is wrong with racism, sexism, and other injustices and what we should do about them; the limits and benefits of privacy; and the role of families, schools, churches, clubs, and employers in public life. We study prominent philosophers and theorists on these questions, and address recent events or policies. Students will develop an appreciation for thinking about values in the context of conflicting political visions, and the analytical and expository skills for examining and discussing them.

PHIL 3: Ethical Life

3 Credits

This course offers students an overview of ethical issues, moral reasoning, and questions concerning the good and flourishing life for individuals and groups. It engages the work and critical interpretation of major figures in moral thinking, and enters into the full complexity of contemporary moral problems. Students will study and evaluate competing accounts of the right way to live, including their overall plausibility, their background assumptions, and their practical implementation.

PHIL 4: The Human Condition

3 Credits

This course introduces central philosophical questions about the lives we humans live: Can our lives have meaning, and does their value depend on it? Does each of us have a true self to be discovered, or a shared human nature we cannot escape? What do we mean by 'authenticity,' is it worth striving for, and can it be achieved? What difference does recognizing your mortality make to anything? We explore these questions in conversation with influential historical perspectives and contemporary theories, while approaching them from everyday concerns. Doing so provides a path for introducing philosophical ideas and evaluations into ordinary life.

PHIL 5: Film and Philosophy

3 Credits

This course examines film as both an aesthetic medium and as a medium for the exploration of philosophical questions. In addition to watching films, class assignments will include the reading of interpretative texts about specific films, philosophical discussions of film as a form of art-work, and writings by major film makers and film critics. With its origins in the late 19th-century, film is an quintessentially modern form of art that reflects changes in modern society (consumer culture, political organization, and cultural modes of perception), advances in technologies (cameras, sound recording, computer graphics), and aesthetic forms of expression. This complex intersection of society, technology and art will be a focal point in understanding what is both novel and traditional about films: how do films change our perception of the world? How can films shape our collective consciousness? How are traditional structures of narrative transformed through the unique combination of visual and auditory experience in films? These and other questions are central to an understanding of film as a modern form of art. From the beginning of film-making, films have often been used by directors and screen-writers as a medium for the exploration of the human condition, social consciousness, and historical awareness. The genres of historical fiction and science fiction have traditionally represented two important forms in which film raises and seeks to answer philosophical questions. Film is also a medium for the exploration of the social structures and values: family relations, love, friendship, and other social forms of existence are often the main theme of scrutiny and experimentation in films. How can we read what a film reveals about such social relations and individual psychologies? How can film explore basic questions of human existence? Can such philosophically minded films also aspire to art-works of poetical beauty? This richness in how films can provoke us to reflect upon the past, the present, and the future will be
PHIL 6: Literature and Philosophy

3 Credits

Explores fundamental issues of human existence through the traditions of western literature and philosophy. CMLIT 6 / PHIL 6 Philosophy and Literature in Western Culture (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is designed to introduce students to the various interpretive approaches to literature and philosophy. The class will explore key philosophic themes as these are exhibited in imaginative literature, and in doing so will practice both philosophical interpretation of literature and literary treatment of philosophy. The central themes of this course could include, for example, self-knowledge and self-deception; self-isolation, alienation and community; conflict of moral responsibilities; the use and abuse of language; the meaning of art; the ideal of a 'simple life;' normalcy and madness. The class will ask such questions as what counts as literature, what purpose it serves, what is the relationship between literature and ideology, and whether a text can be considered independently from what the author wanted to say in it. This course is a non-major General Education Humanities course. It may be used to fulfill minor requirements in philosophy. This course may be used to fulfill an additional-course requirement in either the minor or the major in Comparative Literature, although it is geared primarily towards non-majors.

Cross-listed with: CMLIT 6
Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

PHIL 7: Asian Philosophy

3 Credits

This class is an introduction to the major intellectual philosophical traditions of Asia: Hinduism, Buddhism and Zen Buddhism, Jainism, Confucianism and Neo-Confucianism, and Taoism. It proceeds through careful study of major, representative texts and authors of each of these traditions, and may range from foundational works to modern and contemporary developments.

Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

PHIL 8: Gender Matters

3 Credits

Feminism is one approach to addressing systematic oppressions of both women and men. This course examines various feminist philosophical approaches to issues such as the construction of gender, sex, sexualities, the nature of gender injustice, and the intersectionality of oppressions. It also addresses contemporary issues, including sexual harassment and assault, abortion, explicit and implicit bias, and discrimination and exclusion.

Cross-listed with: WMNST 8
Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Soc Resp and Ethic Reason

PHIL 9: Race, Racism, and Diversity

3 Credits

This course offers a critical examination of the ways we today often think about race and racism, the latter considered in its cultural, institutional, and systemic forms, as well as in its individual manifestations as slurs, beliefs, and attitudes. This course also takes up the philosophical issues raised by the concept of race in intersection with class, gender, and related concepts. It aims to promote diversity by fostering an appreciation and respect of differences especially in respect of race, ethnicity, gender, and religious affiliation.

Bachelor of Arts: Humanities
United States Cultures (US)
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

PHIL 10: Critical Thinking

3 Credits

This course provides a critical awareness of the function, nature, strengths, and weaknesses of argumentation in its various real-world and academic forms and contexts. Students examine the construction of persuasive arguments, discover types of fallacy, and learn how to evaluate reasoning for validity and soundness (that is, logicality and truth).

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

PHIL 10H: Critical Thinking

3 Credits

This course provides a critical awareness of the function, nature, strengths, and weaknesses of argumentation in its various real-world and academic forms and contexts. Students examine the construction of persuasive arguments, discover types of fallacy, and learn how to evaluate reasoning for validity and soundness (that is, logicality and truth). There will be specific application to moral and social-political
issues, and to the nature of education. As an Honors section, this course will expect considerable engagement and creativity by members of the class.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
Honors
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

PHIL 10Z: Critical Thinking
3 Credits

This course provides a critical awareness of the function, nature, strengths, and weaknesses of argumentation in its various realworld and academic forms and contexts. Students examine the construction of persuasive arguments, discover types of fallacy, and learn how to evaluate reasoning for validity and soundness (that is, logicality and truth).

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

PHIL 11: Science and Truth
3 Credits

This course investigates the nature of science, scientific reasoning, and the ‘scientific method.’ The value of objectivity and explanation will be considered in relation to our knowledge of the world and ourselves. Students will compare scientific truth claims to others, such as those from common sense, religion, the humanities, and pseudo-science. Key concepts include hypothesis, falsification, evidence, models, and theory. We ask: How do facts relate to proofs? What is the role of subjectivity in interpreting data? Does science progress? Are there questions science cannot answer? The goal of the course is for students to understand better the meaning, value, and limitations of the scientific enterprise.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

PHIL 12: Symbolic Logic
3 Credits

This course is an introduction to symbolic logic. Logic is the science of correct reasoning, and symbolic logic is a particular branch of logic that studies correct reasoning using a formal or artificial language. In this course, students will first learn basic vocabulary for argument analysis, standards for evaluating arguments that are expressed in English, and basic methods for testing these arguments along with the shortcomings of said methods. The deficiencies of the more natural approach to evaluating and testing arguments motivates a turn to learning symbolic logic as it purports to provide a more precise way of evaluating arguments. To this end, students will learn the symbols, syntax, and semantics of two different logical (formal, symbolic) languages (propositional and first-order predicate logic) and how to translate sentences from English into these formal languages. Once the languages are formulated, students will learn how to make use of mechanical tests (truth tables and/or truth trees) that allow for evaluating arguments for validity as well as testing propositions and sets of propositions for other logical properties (e.g., consistency, tautology, etc.). In addition to mechanical tests, students will learn how to solve proofs in two different languages. That is, they will learn a set of inference, derivation, or ‘proof’ rules and use these rules to show that a conclusion follows from a set of premises.

Bachelor of Arts: Quantification
General Education: Quantification (GQ)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

PHIL 13: Nature and Environment
3 Credits

What is nature, and what is the appropriate human relationship with it? What are our obligations toward non-human animals, endangered species, or ecosystems? Is contemporary industrial society alienated from nature, and, if so, what should be done about this? What alternatives for living differently are genuinely available to us today? These questions are addressed through discussion of current environmental issues (e.g., consumerism, agriculture, wilderness protection, environmental justice, climate change, environmental activism) as well as influential historical and contemporary philosophical approaches, such as deep ecology, social ecology, ecofeminism, bioregionalism, and eco-phenomenology. PHIL 13 Philosophy, Nature, and the Environment (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. This course familiarizes students with concepts regarding the central and very old philosophical problem of describing and understanding nature and the place of human beings in it. This philosophical discourse has evolved in the past 25 years into a firm sub-discipline of philosophy itself, usually under the title of ‘Environmental Philosophy’ or ‘Philosophy of nature.’ The discipline addresses a complex of crucial problems of contemporary society, politics, and ethics revolving around the relation of human beings and the environment. Students will learn the various and conflicting views on nature and the environment, and they will develop the ability to critically navigate these various positions as well as the assumptions underlying the contemporary environmental debate. Students will be graded on participation, case study analyses, a group presentation and response, and a final paper. PHIL 13 satisfies the GH requirement and is geared towards non-Philosophy majors. It may be used to fulfill minor requirements in philosophy. This course is offered once a year with an enrollment of 50-200 students.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Soc Resp and Ethic Reason
GenEd Learning Objective: Key Literacies

PHIL 14: Love and Sex
3 Credits

This course examines the dominant philosophical and theological theories of love and sexuality in the Western world, historical and recent critiques of those theories; and the relevance of gender, race/ ethnicity, and sexual orientation to all such thinking about love and sex. Related ethical issues include monogamy, same-sex marriage, cultural
differences, pornography, and consent, especially in contemporary US context.

Bachelor of Arts: Humanities
United States Cultures (US)
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

PHIL 14H: Love and Sex - Honors
3 Credits

This course examines the dominant philosophical and theological theories of love and sexuality in the Western world; historical and recent critiques of those theories; and the relevance of gender, race/ethnicity, and sexual orientation to all such thinking about love and sex. Related ethical issues include monogamy, same-sex marriage, cultural differences, pornography, and consent, especially in contemporary US context.

Honors
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

PHIL 15: How to Live
3 Credits

Philosophy, uniquely, studies how best to live. But being better at questions than at answers, philosophy mainly provides hypotheses about the nature of good life and the various routes to it. Does it mean minimizing mental suffering, through elimination of superstition and fear? Or control of one's bodily desires, through feats of endurance? Or modesty about what you know, through examination of one's beliefs? Or reducing the amount of injustice you do, by thinking about the consequences of every action? Or changing the way people think, by revealing the power dynamics beneath everyday social institutions? Each week this course articulates one hypothesis from Western (e.g., Greek, Roman, European, American) or non-Western (e.g., Indian, Chinese) philosophy, historical or contemporary, then makes sense of the reasons for it, and then puts it into personal (or group) practice for five days. Students track, process, and evaluate their experiences through journaling, blogging, and other modes of writing, some of which will involve discussion with other students. Each week also features philosophical, literary, spiritual, or journalistic readings expressing the tenets of the particular way of life, defending it against other ways of life, or exploring the particular historical/cultural context that occasioned it. These readings may include, for example, Socratic dialogues, Stoic handbooks, meditation mantras, existential dramas, political manifestos, nature journals, or book reviews. At the semester's end, students invent their own philosophical 'best way of life,' formulating and justifying rules, models, or virtues to live by, and engage in conversation with other students on this topic. Students should leave the class recognizing the diversity and challenge of a range of way-of-life ideals, their historical context and contemporary promise, how to decide on their appropriateness for themselves, and what it would mean to adopt, refine, and support their own 'philosophy' of life.

Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

PHIL 60N: Philosophy and 1960s Counterculture
3 Credits

Explores some of the central philosophical ideas, values, and social scientific theories that motivated, attended, and/or were presupposed by signature events, projects, and persons typically associated with the 1960s Counterculture. PHIL 60N Philosophy and 1960s Counterculture. Students examine original texts and experience other forms of media to enhance their understanding of central philosophical and social scientific assumptions and theories underlying historically prominent projects and events that are typically associated with the 1960s Counterculture, including, for example, ones that address the relationship of individuals to society, the conditions and ideals of the good life, and the nature of dominance and social control. Students are guided in the design and completion of mini-research projects that address specific counter-cultural phenomena and that are intended to further foster the development of interdisciplinary research skills and inquiry. PHIL 60N satisfies 3 credits of the General Education Integrative Studies Requirement and may be used to fulfill 3 credits of the GH and GS requirements.

General Education: Humanities (GH)
General Education: Social and Behavioral Sci (GS)
General Education - Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

PHIL 83: First-Year Seminar in Philosophy
3 Credits

First-year seminars in philosophy provide critical introductions to fundamental philosophical issues and problems. Each first-year seminar develops a broad overview of historical and contemporary thought through readings, discussions, and student writings. In this way, students will gain an understanding of important figures, ideas, problems, and theories that have shaped and continued to influence thought and practice around the world. Students will examine diverse viewpoints that will allow them to understand a wide range of views and challenge them to defend their own positions. First-year seminars involve active use of writing, speaking, and group projects. They provide opportunities for gathering information, analyzing problems, and synthesizing diverse perspectives. Finally, each first year seminar in philosophy allows students to link theory to their own lives.

Bachelor of Arts: Humanities
First-Year Seminar
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies
PHIL 98: Special topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Bachelor of Arts: Humanities

PHIL 102: Existentialism
3 Credits

This course introduces students to the evolution of Existentialism, with its kernel in mid-nineteenth century reflection on Christianity's loosening grip on culture, its influence by the early-twentieth century experience of war's utter and widespread destructiveness, and its development in mid-twentieth century industrial and capitalist modernity. It concerns especially what it means to define one's own life in light of social pressures, interpersonal conflict, and economic forces, with or without the aid of traditional or religious guidance. This that means the course focuses on metaphysical, moral, and social issues concerning reality, the nature of the self, the basis of values, and the relations between individuality and community, and studies philosophical treatises, imaginative literature, and other genres of writing. Representative authors include Kierkegaard, Nietzsche, Marcel, Wright, Ellison, Jaspers, Fanon, Camus, Beauvoir, Sartre, and Lorraine Hansberry.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think

PHIL 103: Ethics
3 Credits

Through reading and discussion of classical and contemporary sources, this course provides an introduction to the basic questions of ethics, the major currents in traditional ethical theory (virtue ethics, deontology, consequentialism), and more recent developments (e.g., care ethics). These schools of thought offer distinct answers about how we should decide what to do and about what makes a character, a decision, an action good or bad, right or wrong. Students will gain a basic understanding of concepts such as agency, autonomy, and moral responsibility, while also reflecting on the foundations, scope, and limits of moral reasoning: Are ethical norms universal, particular, or culturally relative? How is the moral life of the individual related to political life? Are there moral solutions to social problems or vice versa?

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Soc Resp and Ethic Reason

PHIL 103H: Honors Ethics
3 Credits

Through reading and discussion of classical and contemporary sources, this Honors course provides an introduction to the basic questions of ethics, the major currents in traditional ethical theory (virtue ethics, deontology, consequentialism), and more recent developments (e.g., care ethics). These schools of thought offer distinct answers about how we should decide what to do and about what makes a character, a decision, an action good or bad, right or wrong. Students will gain a basic understanding of concepts such as agency, autonomy, and moral responsibility, while also reflecting on the foundations, scope, and limits of moral reasoning: Are ethical norms universal, particular, or culturally relative? How is the moral life of the individual related to political life? Are there moral solutions to social problems or vice versa?

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Soc Resp and Ethic Reason
PHIL 105H: Honors Philosophy of Law

3 Credits

This course surveys philosophical questions concerning any legal system. What counts as a law? Do judges interpret or create new law? How can laws be unfair? What kinds of punishment, if any, are appropriate? When is civil disobedience justified? Could there be international law, and how can rights be enforced? These questions will often be asked in the context of the American system of common law and statutes, and thus will overlap with questions of federalism, constitutionalism, democracy, the police and prison systems, and social and economic structures. They will also require investigating the views of human nature underlying various philosophical positions. In general, the course examines the relations between human values, ethics, and law and the way these relations affect the organization of broader social, political, and religious institutions.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
Honors
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Soc Resp and Ethic Reason

PHIL 106: Business Ethics

3 Credits

Business ethics is not just about CEOs behaving badly. Even if sweatshops treat humans poorly, do they deserve thanks for their labor market expansion? Must corporate trustees seek only profit for their shareholders, or also benefit their surrounding communities? Who picks up the cost of environmental degradation by airlines, factories, and farms? What exactly does 'truth in advertising' mean, and how limited should marketing be to children, or about alcohol and pharmaceuticals? How should the imperatives of the 'free market' or 'capitalism' be treated in democratic decision-making? The course will develop a student's critical skills in evaluating the philosophical foundations and justifications for business and economic systems, the relation between morality and contemporary business practices, and central positions and figures in the history of philosophical analysis of these questions.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Soc Resp and Ethic Reason

PHIL 107: Philosophy of Technology

3 Credits

This course surveys different views about technology: what counts as technology, what role it plays in society and human development, what benefits it might promote, and what obvious or hidden effects deserve criticism. The course's readings and discussions prompt reflection on the purpose and consequences of technology for your own life, what possibilities it opens and forecloses, and how it modifies, sometimes irreversibly, your environment. Required readings may include current news articles and blog posts, science fiction, historical analyses of technological change, and philosophical investigations of the concept of technology.

Bachelor of Arts: Humanities

PHIL 108: Social and Political Philosophy

3 Credits

This course studies philosophical views about large-scale human relations: in groups, communities, populations, nations, and countries. By studying prominent philosophers and positions it investigates the following kinds of questions: Why might anarchy give way to government? How do political arrangements differ from domestic, friendship, or business obligations? Ought people organize to pursue a common good or goal? What does fundamental opposition about religion, morality, financial interest, and human sentiment mean for integration into a public realm? Is the personal always political, and what deserves to be kept private? Such questions have animated philosophy since its origins, is of vibrant contemporary interest, requires development of a view of human nature, and relates to ethics, psychology, sociology, law and criminology, economics, and political science. By the course's end, students should have a greater critical understanding of the nature of social and political organization, influences on human values, and the traditional philosophical problem concerning the good society.

PHIL 108W: Social and Political Philosophy

3 Credits

This WAC course studies philosophical views about large-scale human relations: in groups, communities, populations, nations, and countries.
By studying prominent philosophers and positions it investigates the following kinds of questions: Why might anarchism give way to government? How do political arrangements differ from domestic, friendship, or business obligations? Ought people organize to pursue a common good or goal? What does fundamental opposition against religion, morality, financial interest, and human sentiment mean for integration into a public realm? Is the personal always political, and what deserves to be kept private? Such questions have animated philosophy since its origins, is of vibrant contemporary interest, requires development of a view of human nature, and relates to ethics, psychology, sociology, law and criminology, economics, and political science. By the course’s end, students should have a greater critical understanding of the nature of social and political organization, influences on human values, and the traditional philosophical problem concerning the good society.

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Soc Resp and Ethic Reason
Writing Across the Curriculum

PHIL 109: Aesthetics

3 Credits

Aesthetics is the philosophical study of our experience of certain natural and artistic objects that incite pleasure or displeasure in us, and which we judge to be beautiful, ugly, or sublime. Aesthetics asks: What makes something beautiful? Are our judgments of beauty universal? What counts as art? What are the relations between beauty, morality, and truth? The objective of this course will be to provide students with a survey of historical and contemporary perspectives on these questions. The students should leave the course with a good grounding in aesthetic theory as well as an understanding of how the theoretical considerations apply in art criticism.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

PHIL 110: Philosophy of Science

3 Credits

This course examines core philosophical questions about science, scientific reasoning and scientific practice. What is scientific method, and what role do deduction, induction and abduction play in it? How does scientific method differ from one science to another? What role do mathematics, mathematical models and computation play in the various sciences? How does reductionism (the claim that parts determine the whole according to specified laws) help science develop but also limits it? Why must philosophical reflection on science also encompass the history of science? If we pay close attention to the role of science in culture, we find that it has ethical as well as epistemological aspects, as it interacts with religion and politics.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

PHIL 113: Philosophy of Literature

3 Credits

This course investigates the expression of philosophical ideas in literary form and, likewise, literature's contributions to a philosophical inquiry into fundamental questions of human existence. Its central themes may include the nature of love and desire, personal identity and relationships with others, and ethical concerns of good and evil. Readings are drawn from the history of world literature and philosophy, from Classical Greek texts to contemporary science fiction.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

PHIL 114: Feminist Philosophy

3 Credits

This course familiarizes students with concepts and challenges in feminist philosophies. Students will investigate the intersections of gender, race, sexuality, class, and other dimensions of identity through feminist analysis of epistemological and metaphysical assumptions (e.g., What is a woman? Does one's sex and/or gender provide special access to certain types of knowledge?), social structures, language, and the character of power.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

PHIL 115: Philosophy and Education

3 Credits

This course surveys the core philosophical questions that arise when thinking about education and teaching: What ought people to learn? How are instruction and experience related? What counts as knowledge and truth? How do we discover the human nature that underlies our educational theories? What are the moral implications of leading young people out of innocence or ignorance? What is there to education beyond classrooms, schooling, and reading? How much education ought a society to require or expect of its population? How important is intellectual and moral maturity? The course also considers the historical contexts from which philosophical theories about education have arisen and their ideological, political, social, and economic implications.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

PHIL 118: Environmental Philosophy

3 Credits

This course explores current environmental problems and human development in the context of historical and contemporary views of the relation of humans and nature. It examines differing conceptions of nature's value, human values, and the human condition more generally.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Integrative Thinking
It also investigates how distinct social, economic, and political ideologies and systems affect the human relation to nature, and how the ethical problems that arise from such systems may be critically evaluated and potentially resolved.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Soc Resp and Ethic Reason

PHIL 119: Ethical Leadership
3 Credits

Leaders, in whatever context, make difficult decisions, distribute scarce resources, direct and influence the conduct of others, and represent the goals of the enterprise they lead. Thus they ought to exemplify prudence, fairness, integrity, honesty, trustworthiness, sincerity, and morally upright behavior. This course investigates these concepts and the moral dilemmas that arise in developing or applying them. It also explores, philosophically as well as practically, the ways leaders might identify ethical challenges, analyze them, imagine possible solutions, and be motivated to do the right thing. Students may read a variety of literature, from classic plays and novels, to prominent philosophical texts, to recent studies of ethics and leadership.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Soc Resp and Ethic Reason

PHIL 120N: Knowing Right from Wrong
3 Credits

Knowing Right from Wrong provides a comprehensive understanding of the nature of moral ideas, beliefs, and behaviors in contemporary contexts. What roles do nature and nurture play in the development of moral sensibilities? How do moral emotions and moral reasoning interact to produce moral behavior? What defines moral character and how does it influence what we do? Is it possible to derive what ought to be done from what is known about the world? How do we respond when moral demands compete with another? How do our moral convictions color our perceptions of world events? Can individuals and groups with differing moral commitments communicate with one another and live together peacefully? The course integrates perspectives from philosophy, psychology, and sociology, and prepares students to think about (and act in) a world in which morality (and its linked concepts, such as judgment of others) plays an increasingly important social and political role. The course treats morality as both an aspirational concept and as an actual social practice, and focuses on three major themes: (1) the origins and development of moral reasoning and ethical systems, (2) the influence of moral emotions and moral intuitions on moral reasoning and behavior, and (3) the influence of social and contextual factors on moral behavior and expression. Integrating the philosopher's interest in ethics, with the psychologist's interest in the mind and body, and the sociologist's interest in groups, the course provides a comprehensive introduction to morality in contemporary society, and the ways in which it shapes the lives of people in everyday situations.

PHIL 122: Philosophy of History
3 Credits

This course surveys the core questions that arise when thinking about history, the relevance of the past, and the writing of history: How can we know history? What does it explain and what does it teach? Are those who don't know it doomed to repeat it? Is it objective? How is it related to human nature and progress? And what exactly is history? Is it simply everything that has happened, or specific sequence of events, or a narrative we apply to make sense of some aspect of the past or present? In addressing these questions, the course emphasizes the thought of influential figures, including Hume, Vico, Hegel, Marx, Mill, Ricert, Dilthey, Croce, Collingwood, and Hempel. In general this course helps students think philosophically about the fact that humans live essentially through time and across generations. It also contributes to understanding the practice of studying, research, writing, and talking about history.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

PHIL 123: Media Ethics
3 Credits

This course surveys the core philosophical questions connected with mass media: What is newsworthy? What is the whole story, and what makes it true? How ought media's form influence the power of its content? What authorizes journalists to interpret the facts? How much does individual self-understanding and social organization depend on media images and tropes? Does it make sense to speak of 'the media' as a unified phenomenon? As we work to formulate and answer these questions, students will acquire ethical understanding, media literacy, and an appreciation for the role media plays in the formation of cultural expectations about knowledge, values, and technology.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

PHIL 124: Philosophy of Religion
3 Credits

This course surveys perennial philosophical questions connected with religion: What is God, deity, or divinity? What is the nature and significance of religious experience? Is it rational to hold religious beliefs? How persuasive are arguments about the existence of God? How compatible is religion with modern science? What are the meanings of miracles, immortality, and creation? In what ways might morality depend on religion? What role ought religion to play in society and the
PHIL 125: Theories of Knowledge

3 Credits

This course surveys the core questions in epistemology. What do we mean when we claim to know something, as opposed to merely having an opinion about it? What sorts of things, if anything, are ultimately knowable? What role ought sensation, perception, observation, experience, authority, testimony, or reason play in forming, changing, justifying, or defending claims to knowledge? Are such claims to knowledge always conditioned by the social and historical situation, and limited by the knowers’ standpoint, or are there universal standards to establish them? Through analysis and discussion of classical historical and contemporary texts, the course introduces students to these and related problems of knowledge and acquaints them with the most influential strategies that philosophers have developed in response to them.

Writing Across the Curriculum

PHIL 126: Metaphysics

3 Credits

This course considers key concepts, problems, and figures in metaphysics, the investigation into the nature of reality. We will ask the deepest questions about what exists and how things relate to one another on a fundamental level. For example: Does everything ultimately reduce to simple substances, or is reality organized into types? Does time exist objectively, or is it dependent on the mind? Does effect follow cause as a matter of universal law or only as a statistical probability? What factors determine whether a thing is the same over time or differs at every instance? We will also query the most basic assumptions about reality, that a pencil will not fall through a desktop, the sun will rise tomorrow, and the world was not created a minute ago. Students will develop skills in reading difficult texts, evaluating arguments, and formulating their own philosophical views through discussion and in writing.

PHIL 127: Philosophy of Mind

3 Credits

The course wonders, 'What is a mind?' - especially in its relationship to the brain, the person, and the world. We study whether consciousness defines a mind, what limitations if any subjectivity places on the scientific investigation of the mind, and how to build a robot with a mind. Readings may include texts from the history of philosophy and contemporary philosophy, as well as neuroscience and psychology. Students will learn a broad range of skills needed to understand and synthesize the variety of information relevant to the mind.

Writing Across the Curriculum
Climate change is a complex issue that involves the ethical dimensions of many scientific disciplines. It requires an interdisciplinary approach, encompassing fields such as engineering, forestry, agriculture, and others, to understand the changing climate while fulfilling general science requirements by giving an overview of the role played by various scientific disciplines in climate change research. This course aims to help students think more critically and argue from specific moral theories when evaluating issues concerning human behavior and its ethical implications. Students will come away with a better sense of the moral dimensions of this phenomenon and the implications for human civilization and the biosphere.

Cross-listed with: BIOET 100
Cross-listed with: METEO 133N, RLST 133N
Cross-listed with: FDSC 134

This course surveys core topics in recent bioethics - the study of ethical problems arising from genetic, medical, and biotechnology issues. The course will address questions such as the value of life and death, abortion and euthanasia, and the distinction between biological and moral conceptions of human, the enhancement of human beings, and the moral implications of food, medicine, or drugs. It will also explore questions about anorexic, overweight, or eating unhealthily mean and do? How strong are the arguments for vegetarianism, veganism, or raw-food-ism? Ought we to eat as our Paleolithic ancestors did? If the future holds engineered meat, GMO fruit, and Soylen shakes, what are we to think? Should food companies be allowed to advertise to children? Is alcohol more like food, medicine, or like drugs? Students will pursue answers to such food-ethical questions by learning relevant moral and social theory, discussing past and contemporary approaches to these issues, and analyzing case studies. We will pay particular attention to food as a symbol with psychological, social, and spiritual meanings and effects.

Cross-listed with: FDSC 134
PHIL 135: Ethics in Jewish Tradition and Thought

3 Credits

This course takes as its starting point the idea that modern ethical frameworks are deeply rooted in the soil of older traditions. By examining the development of Jewish intellectual traditions and their roots in the Bible, it provides students with an opportunity to study ethics in a philosophically textured, culturally rich, and historically informed way. And by focusing on Jewish engagement with the Bible, the course illuminates other traditions that derive from biblical monotheism: for example, those associated with Christianity, Islam, and the Enlightenment. The first part of the course takes up the idea of tradition and includes a study of biblical texts that serve as the foundation for key moral concepts. Following the traditional division of the scriptures, it examines questions of human identity and responsibility in the Torah, social ethics in the Prophets, and the quest for wisdom in the Writings. The final topic in this unit is the development of ethical tradition among the great sages of Jewish antiquity. The second unit shifts focus to the appropriation of tradition in modern Jewish thought. After reviewing important developments in Jewish thought in the medieval and early modern periods, it turns attention to the ways that some recent figures have addressed perennial concerns in light of commitments and ways of being that are integral to Jewish identity. By reading closely the works of such seminal thinkers as James Kugel, Joseph Soloveitchik, and Abraham Heschel, we will gain a deep acquaintance not only with important vocabulary but also with the ways that traditional words and concepts may be used dynamically to produce fresh ways of looking at questions in moral philosophy.

PHIL 136N: Art and Philosophy in Ancient Greece

3 Credits

Ancient Greece provided Western Civilization much in terms of art and philosophy. The influence of the Greeks can be seen in such areas as architecture, sculpture, concepts of beauty, literature, etc. These are independent domains, but there is often integration between the two disciplines. This course will uncover the ways in which philosophy informed Greek ideals and the role played by both visual art and literary art. To that end, sections will focus on each of those two disciplines. Study will also display how the disciplines come together in the following areas: 1) Beauty and 2) The interrelation of art, religion, philosophy and the state. Early in the course, students will thoroughly examine the concept of Beauty, with an emphasis on Ideal Beauty. Students will explore objective and subjective definitions by developing models of each and then synthesizing competing ideas in their own unconventional definitions of Beauty. Foundational work will include study of specific Greek artists/thinkers, and involve students in working toward identifying traces of early thinking in contemporary society. This will include both written and visual work. Analyses will target philosophical thought, sculpture and architecture primarily from Early Classical and High Classical/Golden Age works as students explore the Greek search for perfection. The periods and styles that will be covered include: Geometric which includes the Orientalizing period; Archaic; Classical (Early, High, and Late); and Hellenistic. Next students will examine and discuss different philosophical topics such as metaphysics, epistemology, aesthetics, etc. An emphasis will be placed on Plato and Aristotle but the Pre-Socratics may also be considered. Art and philosophy are also integrated in Ancient Greece. Plato considered beauty, art, the artist and tragedy in works such as The Republic, Philebus, Ion and Hippias Major. Aristotle's major contribution to aesthetics is in the Poetics. The last section will consider the relationship between literary art (plays) and the Greek understanding of authority, particularly the gods, the state and the individual. Much of the art in the Greek culture (as it is in most cultures) is best understood in terms of the dominant religion. The themes developed gave rise to a great deal of philosophical reflection in terms of the place of religion, and how the individual saw themselves in relation to the gods and the state. Through an examination of plays and philosophical texts, students will explore this relation between the individual and an authority (gods or rulers).

Bachelor of Arts: Humanities
International Cultures (IL)

PHIL 200: Ancient Philosophy

3 Credits

This course examines key themes, texts, and persons in ancient Greek philosophy, with the works of Plato and Aristotle at the core. We ask: What did Socrates mean when he said 'the unexamined life is not livable by humans'? Or when Thales said 'All begins in water'? Or when Epicurus said 'Only pleasure is valuable'? Or when Parmenides said 'You cannot speak of what is not'? To answer these questions, we examine the cultural background of philosophical thinking (Homer and Hesiod; Near Eastern traditions; trade and empire), and we survey views about,
and can we ever be certain of this knowledge? Are natural phenomena related to the 'material body'? How do we acquire knowledge of reality, genuine qualities of things? What is the nature of the mind, and how is it related to the 'material body'? How do we acquire knowledge of reality, and can we ever be certain of this knowledge? Are natural phenomena determined by causal laws? Does God exist and, if so, what is his role in relation to a material world governed by causal laws? The lively debates over these questions gave birth to two rival schools of thought, one seeking answers in the innate principles of the mind (rationalism), the other in our experience of the world (empiricism).

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

PHIL 203: Nineteenth Century Philosophy

3 Credits

The nineteenth century is a period of political upheaval and ongoing social, cultural, and scientific transformation, shaped in equal parts by the French Revolution and the Industrial Revolution. This transformative character is reflected by the epoch's most influential philosophers. Kant's 'critical' philosophy emphasizes the primacy of practice and the subject's active role in constructing reality. Hegel focuses on the rationality implicit in the historical growth of religion and the political institutions of the state. As the century wears on, escalating social and political conflicts lend credibility to outspoken critics of such optimistic rationalism. Schopenhauer's pessimism, Kierkegaard's existentialist focus on the irrationality of faith, Marx's historical materialism and emphasis on class struggle, Nietzsche's 'genealogical' anti-realism and philosophy of power are prominent examples. The embrace of new paradigms in morality (Mill), natural science (Bergson), and psychology (Freud, James) round out the picture of a century in transition from 'classical' European modes of thought to the self-conscious secularism and dynamism of the 20th century. By reading a broad selection of representative texts, students will learn about the major figures and streams of thought that shaped the course of this eventful period in the history of Western philosophy.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

PHIL 204: Twentieth Century Philosophy

3 Credits

The 20th century can be characterized as a crisis of foundations, doubt about the ultimate grounding or demonstrability of our beliefs concerning the world and ourselves. So-called continental philosophy sought a ground of knowledge in phenomenology, the view that human subjective experience ('phenomena') reveals essences, how things actually are. By mid-century, deconstructionist critique shattered confidence about the underlying distinctions assumed here. So-called analytic philosophy began the century with a commitment to eliminating metaphysical speculation in favor of narrowly empirical truths, on the model of scientific investigation; but the eventual unconvincingness of this view led to theories of knowledge and metaphysics that allowed for the absence of foundations. Rooted in this and earlier rejections of foundations, so-called pragmatism began as way to assess competing ideas by the difference they make in human action. A crisis in political foundations generated the social and philosophical movements of Marxism, critical race theory, and feminism. The ramifications of these crises continue to be acutely felt in contemporary philosophy, making the
20th century a period of particularly diverse and relevant resources. This course satisfies BA and GH requirements.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Soc Resp and Ethic Reason

PHIL 205: American Philosophy: 1840-Present
3 Credits

American philosophy comes into its own in the mid-nineteenth century, emancipating itself both from its origins in Protestant religion and from the tutelage of European role-models. The 1840s see the rise of the New England Transcendentalists (Emerson, Thoreau), who emphasized imagination, individualism, equality, and moral progress. During the decades of national reconsolidation following the Civil War, Pragmatism rises (Peirce, James, Dewey, Royce). Its practitioners innovations help set the tone for many twentieth-century intellectual developments: the emphasis on history, practice, and pluralism; the break with metaphysics and intellectualistic approaches to science, morality, and society; and the commitment to a 'radical empiricism' broad enough to embrace scientific observation, religious experience, and social experimentation. Fuller's early feminism, Addams's social progressivism, and Du Bois's reflections on racial inequality constitute uniquely American moments in the history of philosophy. Certain more recent philosophers (Putnam, Rorty, Cavell, and Brandom) have renewed and extended the pragmatist legacy. The course evaluates the problems raised by these philosophers and traces their influences on American society, politics, and culture. One of the principal goals is to enable students to understand better this rich philosophical tradition and its importance-both critical and constructive-in the contemporary American landscape.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

PHIL 208: Contemporary Philosophy
3 Credits

Treating contemporary philosophy as history encourages us to ask what current ideas are likely to resonate in the future. The course focuses on philosophical work that crosses disciplinary boundaries, addresses new social and political problems, introduces experimental styles, and opens novel areas of investigation. By engaging with the ideas of philosophers who are writing and thinking right now, students gain the opportunity to consider how well philosophy addresses issues of concern to a world that they themselves belong to. Examples include climate change, racism, posthumanism, globalization, gender and sexual identity, and the science of the mind. Working with living philosophers also affords the opportunity to see the authors speak about their work on video or, when practical, in person.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Soc Resp and Ethic Reason

PHIL 233: Ethics and the Design of Technology
3 Credits

Ethics and individual and group decision-making in the design of technology including design projects and specific attention to institutional ethics. PHIL (S T S) 233 Ethics and The Design of Technology (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. Technology has been around nearly as long as humans have been around. Humans have always created artifacts and artificial environments to aid us in our survival and to help fulfill our needs and desires. Moreover, today technology is all pervasive, transforming and conditioning our social and political relations, our cultural understanding of ourselves, and our relationship with other animals and the natural environment. Yet not much thought has been expended upon the meaning of technology, particularly in its moral dimensions. This course takes several steps to correct this deficiency. Because technologies can have far reaching effects well beyond the domain of their immediate application, the role of designers is crucial in deciding whether we take an intelligent or unintelligent approach to technology. All technologies exist to serve one human need or another. Designers make important choices concerning the creation, development, and deployment of many if not most technological innovations. Consequently, the task of the designer is an ethical one. Our goal is twofold: First, we will try to broaden our moral imaginations by taking into account the wider ranging effects that technologies have in order to reveal the moral significance of design choices. Second, we will examine the process of design itself, particularly in the way that the design process is similar to ethical reasoning in general. It is hoped that by accomplishing these two tasks, we will be empowered as designers, customers, citizens, and future employers to make choices that better fulfill the moral task of technological innovation. Two means will be used to achieve our course goals. Much of the time will be spent thinking about and discussing the various impacts that particular technologies have upon the social, cultural, and political lives of human beings and upon the natural environment. To facilitate thoughtful discussion, we will read a number of authors, writing short papers in preparation for critical discussion in class. In this way we will be better prepared to discuss and think about the issues at hand by having had the chance to organize our thoughts in advance. The second means is aimed at putting our ideas into practice by working in teams on several design projects. These design projects will require the integration of readings, discussion, and research and their synthesis to solve a design problem. Student teams will work cooperatively on these projects and make oral progress reports as well as final written and oral reports.

PHIL 242N: Happiness and Well-Being
3 Credits

PHIL 242N : Happiness and Well-Being. 3 credits. (Inter-Domain), (GH), (GS), (BA). This course provides a general introduction to the topics of human happiness and well-being as these topics are both approached from the humanities discipline of philosophy and the social and behavioral science discipline of psychology. The course will introduce the distinct methods of inquiry into the topic of well-being in philosophy and psychology and highlight the disciplinary commitments of the two fields more generally. Students will understand and evaluate the empirical research into well-being and positive psychology in psychology.
Students will understand and evaluate the three major theories of well-being in philosophy: hedonism, the desire satisfaction theory, and the objective theory. We will appraise whether the empirical results affect the viability of the philosophical theories. We will appraise whether the philosophical theories affect the significance of the empirical results. We will consider such questions as: What are the strengths, weaknesses, and complementarities of the philosophical and psychological approaches to well-being? Are psychologists and philosophers talking past each other, or can the two disciplines learn from each other’s research results and philosophical theories? What implications do the results and theories studied have for concrete choices I should make in order to increase my well-being? Are there implications for choices of social policies aiming to increase well-being?

**Prerequisites:** ENGL 15; or any PHIL course
Bachelor of Arts: Humanities
Bachelor of Arts: Social and Behavioral Sciences
General Education: Humanities (GH)
General Education: Social and Behavioral Sci (GS)
General Education - Integrative: Interdomain
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

PHIL 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
Bachelor of Arts: Humanities
PHIL 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
Bachelor of Arts: Humanities
PHIL 299: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
Bachelor of Arts: Humanities
International Cultures (IL)
PHIL 401: American Philosophy
3 Credits
Survey of key figures and movements in American thought, including the Transcendentalists, the Pragmatists, and contemporary developments.
**Prerequisite:** 9 credits of philosophy, or 6 credits of philosophy at the 200-level or 5th semester standing
Bachelor of Arts: Humanities

PHIL 402: European Philosophy
3 Credits/Maximum of 6
Survey of key figures and movements of Europe, including phenomenology, existentialism, structuralism and post-structuralism, and critical theory.
**Prerequisite:** PHIL 102, 6 credits of philosophy at the 200 level or 5th semester standing
Bachelor of Arts: Humanities
PHIL 403: Environmental Ethics
3 Credits
Examines ethical theories, justice, rights, community, and human values revolving around such issues as preservation, conservation, pollution, sustainability, and population.
**Prerequisite:** 9 credits of philosophy, including PHIL 103 or 6 credits of philosophy at the 200 level or 5th semester standing
Bachelor of Arts: Humanities
PHIL 405: Philosophy of Law
3 Credits
Examines philosophical views of the nature of law, legal ethics, law and society through questions regarding definition, interpretation, and institutions.
**Prerequisite:** 9 credits of philosophy, including PHIL 105 or 6 credits of philosophy at the 200 level or 5th semester standing
Bachelor of Arts: Humanities
PHIL 406: Seminar in Business Ethics
3 Credits
This course examines ethical issues introduced and engaged by business. These may include the relation between morality and contemporary business practices, the nature of money, corporate social responsibility, self-regulation and government, advertising, social consequences of systems of production, environmental economics, economic inequality and justice, the relationship between business and politics, the philosophical foundations and justifications for business and economic systems, and central positions and figures in the history of these questions.
**Prerequisite:** fifth-semester standing
Bachelor of Arts: Humanities
PHIL 407: Technology and Human Values
3 Credits
Interrelationships of twentieth-century technological change and human values. Emphasis on the social and ethical aspects of technological progress.
**Prerequisite:** 9 credits of philosophy, including PHIL 107 or 6 credits of philosophy at the 200 level
Cross-listed with: STS 407
Bachelor of Arts: Humanities
PHIL 408W: Social and Political Philosophy
3 Credits

Historical and philosophical foundations of political organization, authority, and justice, and contemporary issues of rights, community, and culture.

Prerequisite: 9 credits in philosophy including PHIL 108 or 6 credits at the 200 level
Bachelor of Arts: Humanities
Writing Across the Curriculum

PHIL 409: Seminar in Aesthetics
3 Credits

Aesthetics examines questions related to the nature of art and beauty as well as the nature of aesthetic judgment and experience. Building on its precursor (PHIL 109), this course explores selected topics in traditional or contemporary aesthetics in greater depth. Typical issues include the distinction between beauty, sublimity, and ugliness; the nature of aesthetic experience and artistic value and their relation to knowledge; the basis and validity of aesthetic judgments; the relationship between art, morality, and society; and the influence of social identities (race, class, gender, sexuality, ability, etc.) on the production and reception of art. In addition to familiarizing themselves with theoretical approaches, students will typically also engage in the discussion and critical interpretation of specific artworks (e.g. paintings, sculptures, photographs, films, musical compositions or performances, literary works), both as a way of exemplifying particular aesthetic issues and approaches, and with a view to enhancing students’ aesthetic perception and experience.

Prerequisite: 9 credits of philosophy, including PHIL 109 or 6 credits of philosophy at the 200 level, or 3 credits of art or 5th semester standing
Bachelor of Arts: Humanities

PHIL 410: Philosophy of Science
3 Credits

Historical and contemporary foundational and methodological issues such as causality, relativity and epistemological relativism, teleology, and the nature of reality.

Prerequisite: 9 credits of philosophy, including PHIL 110 or 6 credits of philosophy at the 200 level
Bachelor of Arts: Humanities

PHIL 413: Philosophy of Literature
3 Credits

Discusses truth, belief, illusion, imagination and creativity through philosophical literature, as well as problems of philosophical writing.

Prerequisite: 9 credits of philosophy, including PHIL 113 or 6 credits of philosophy at the 200 level
Bachelor of Arts: Humanities

PHIL 416: Philosophy of Social Science
3 Credits

Examines the philosophical nature and foundations of methodology, structures and objects, value-neutrality and objectivity in the social sciences.

Prerequisite: 9 credits of philosophy, including or 6 credits of philosophy at the 200 level
Bachelor of Arts: Humanities

PHIL 418: Ethics
3 Credits

Examines ethical theories, justice, rights, community, and human values revolving around such issues as preservation, conservation, pollution, sustainability, and population.

Prerequisite: 9 credits of philosophy including PHIL 103 or 6 credits of philosophy at the 200 level or 5th semester standing
Bachelor of Arts: Humanities

PHIL 418W: Topics in Ethical Theory
3 Credits

This course builds on lower level courses in ethics and value theory (e.g., PHIL 103). This class goes deeper into questions of the meaning, justification, and motivational grounding of ethical judgments. Topics may include ‘normative ethical systems’ such as utilitarianism, Kantian ethics, Aristotelian virtue theory, and feminist care ethics. Also included are more abstract issues in ‘meta-ethics’ such as whether ethical statements can be true or false, whether they stand in logical relation to each other as do other propositions, what connection do such judgments have to the psychological make-up of human beings, and the like. Also considered are questions such as the objectivity (or relativity) of ethical judgments and their relation to the meaning and evaluation of social practices and institutions.

Prerequisite: 9 credits of philosophy, including PHIL 103 or 6 credits of philosophy at the 200 level
Bachelor of Arts: Humanities
Writing Across the Curriculum

PHIL 424: Seminar in Philosophy of Religion
3 Credits

This course builds on its precursor (PHIL 124) to provide a deeper perspective on specific topics and issues, typically through discussion of classical or contemporary writings by recognized philosophers of religion. Though the course will typically focus on one or a few selected questions, these may range as broadly as the field itself, for example: how and to what extent is religious faith compatible with reason, scientific rationality, and our knowledge of history? Are there universal types of religious experience and what is their human value and objective significance? Are religion and morality mutually independent or does one rest on or constrain the other? Arguments concerning the existence of God, the interaction between religion, society, and politics, and religious pluralism are further possible topics. Beyond gaining familiarity with canonical texts and honing their skills as critical readers and writers, students will find opportunities to reflect both on religion’s historical, social, and moral
significance as a dimension of human life, and on the specific challenges it raises.

**Prerequisite:** 9 credits of philosophy, including PHIL 124 or 6 credits of philosophy at the 200 level or 5th semester standing

**PHIL 425W: Epistemology**

3 Credits

The nature of cognition and perception, the conditions of experience, and the justification and truth of belief.

**Prerequisite:** 9 credits of philosophy, including PHIL 125 or 6 credits of philosophy at the 200 level; in addition to ENGL 015 or ENGL 030

**PHIL 426W: Metaphysics**

3-6 Credits

Examines the nature of reality, the existence of freedom, and the nature of matter, mind, and values.

**Prerequisite:** 9 credits in philosophy, including PHIL 126 or 6 credits of philosophy at the 200 level

**PHIL 427: Philosophy of Mind**

3 Credits

Investigates problems of mind from the standpoint of traditional metaphysical views, modern scientific psychology, neuroscience, and artificial intelligence.

**Prerequisite:** 9 credits of philosophy, including PHIL 127 or 6 credits of philosophy at the 200 level

**PHIL 432: Medical and Health Care Ethics**

3 Credits

Examines ethical, political, and social issues in the research, implementation, and practice of medicine, medical technologies, and healthcare.

**Prerequisite:** fifth-semester standing

**PHIL 433: Ethics in Science and Engineering**

3 Credits

Ethical issues arising in the practice of science and engineering and their philosophical analysis.

**Cross-listed with:** STS 433

**PHIL 434: Philosophy of Science**

3 Credits

The role of science in society, the nature of scientific method, and the philosophical implications of scientific findings.

**Prerequisite:** 9 credits of philosophy, including PHIL 200 or 6 credits of philosophy at the 200 level

**PHIL 435: The Interrelation of Science, Philosophy, and Religion**

3 Credits

The historical and transformative interactions between science and Western philosophical and religious views of nature, humanity, and God.

**Cross-listed with:** STS 435

**PHIL 437: World Philosophies and Cultures**

3 Credits

Philosophical traditions, problems, and authors in African, Asian, Middle-Eastern, Native American, or other non-Western cultures and intellectual traditions.

**Prerequisite:** 9 credits of philosophy, including 6 credits of philosophy at the 200 level or 5th semester standing

**PHIL 438: Feminist Philosophy**

3 Credits

Examines the central currents of feminist philosophy, selected problems and concepts regarding difference, gender and sex, identity, and political culture.

**Prerequisite:** 9 credits of philosophy, including 6 credits of philosophy at the 200-level or 5th semester standing

**PHIL 439: Asian Philosophies and Issues**

3 Credits

Exploration of the traditions, problems, and authors of one or more of the philosophical systems of Buddhism, Hinduism, Taoism, and Confucianism.

**Prerequisite:** PHIL 007 9 credits in philosophy, including PHIL 007, or 5th semester standing

**PHIL 441: Capstone Course in Philosophy**

3 Credits

This course is intended as the Capstone Course for Philosophy majors and is to be taken during their senior year or during the last semester of their junior year.

**Prerequisite:** 6th semester standing and up

**PHIL 453: Topics in Ancient Philosophy**

3 Credits/Maximum of 6

Examines the philosophy of central figures in ancient philosophy from the pre-Socratics to the post-Aristotelians and Neoplatonists.

**Prerequisite:** 9 credits of philosophy, including PHIL 200 or 6 credits of philosophy at the 200 level
Bachelor of Arts: Humanities

PHIL 455: Topics in Modern Philosophy
3 Credits/Maximum of 6
Descartes to Kant, including mind and reality, space and time, God and nature, morality and autonomy.

**Prerequisite:** 9 credits of philosophy, including PHIL 202 or 6 credits of philosophy at the 200 level
Bachelor of Arts: Humanities

PHIL 456: Topics in Nineteenth Century Philosophy
3 Credits/Maximum of 6
Hegel to Nietzsche, including nature and spirit, history and human nature, ideology and morality.

**Prerequisite:** 9 credits of philosophy, including PHIL 203 or 6 credits of philosophy at the 200 level
Bachelor of Arts: Humanities

PHIL 457: Topics in Twentieth Century Philosophy
3 Credits/Maximum of 6
Topics in the philosophy of figures such as Husseri, James, Russell, Wittgenstein, Heidegger, Merleau-Ponty, and Dewey.

**Prerequisite:** 9 credits of philosophy, including PHIL 204 or 6 credits of philosophy at the 200 level or 5th semester standing
Bachelor of Arts: Humanities

PHIL 458: Topics in Contemporary Philosophy
3 Credits/Maximum of 6
Topics in the philosophy of contemporary figures such as Foucault, Habermas, Rorty, Derrida, Rawls, Davidson, and MacIntyre.

**Prerequisite:** 9 credits of philosophy, including PHIL 208 or 6 credits of philosophy at the 200 level
Bachelor of Arts: Humanities

PHIL 460: African American Philosophy
3 Credits
Major works by African American Philosophers, on topics of race, freedom, citizenship, nationhood, law and society.

**Prerequisite:** AF AM100 or PHIL 009 and 5th semester standing
Cross-listed with: AFAM 460
International Cultures (IL)
United States Cultures (US)

PHIL 461: Plato
3-6 Credits/Maximum of 6
Examines the metaphysics, epistemology, politics, aesthetics, and moral theory of this central figure in the history of philosophy.

**Prerequisite:** 9 credits of philosophy, including PHIL 200 or 6 credits of philosophy at the 200 level
Bachelor of Arts: Humanities

PHIL 468: Jewish Philosophy
3 Credits
Explores major figures and trends in Jewish philosophy and their influences on other philosophical traditions.

Cross-Listed
Bachelor of Arts: Humanities

PHIL 473: German Idealism
3 Credits/Maximum of 6
Critically examines the philosophy of central German idealists, including Kant, Fichte, Schelling, and Hegel, and its impact on later philosophy.

**Prerequisite:** 9 credits of philosophy, including either PHIL 202 or PHIL 203, or 6 credits of philosophy at the 200 level
Bachelor of Arts: Humanities

PHIL 474: Kant
3-6 Credits/Maximum of 6
Critical examination of the metaphysics, epistemology, aesthetics, legal and moral philosophy, and influence of Immanuel Kant.

**Prerequisite:** 9 credits in philosophy, including PHIL 202 or 6 credits of philosophy at the 200 level
Bachelor of Arts: Humanities

PHIL 476: Hegel
3-6 Credits/Maximum of 6
Critical examination of the metaphysics, moral theory, epistemology, and philosophy of history of this central figure of 19th-century philosophy.

**Prerequisite:** 9 credits of philosophy, including PHIL 203 or 6 credits of philosophy at the 200 level
Bachelor of Arts: Humanities

PHIL 478: Ethics After the Holocaust
3 Credits
This course analyzes the ethical and philosophical consequences of the Holocaust. Primary areas of examination will be (1) the nature of pre-Holocaust ethical theories and how those theories have failed to sufficiently account for the Holocaust, both philosophically and empirically, and (2) possibilities for a post-Holocaust ethics. Course topics will include the history of ethical theory, the nature and problem of evil, goodness and suffering, witnessing and testimony, and the promise of an ethics. In addition, recent approaches to trauma theory and rights discourse will also be introduced, with some emphasis on how post-Holocaust ethics have been utilized in contemporary human rights work. This course provides students with philosophical approaches to the issues that emerge out of the events of the Holocaust. The course will help students expand their knowledge of the events of the Holocaust through a philosophical approach that does not merely expose them to what happened, but asks them to think about the implications of what happened: most specifically, how do we understand ethical life, if it cannot stop or confront evil? The course will encourage students to think critically, write effectively and express their thoughts logically. Student evaluation will be based on both regular writing assignments and in-class work, possibly including presentations and group-work. This course
covers material in the history of philosophy, contemporary philosophy, and writings pertaining to the Holocaust in various forms (historical, literary documentary, and so forth). It provides links to other major areas in the history of philosophy, postmodernism, ethics, philosophy of religion, and Jewish history.

Prerequisite: One course in either JST or PHIL
Cross-listed with: JST 478, RLST 478
Bachelor of Arts: Humanities

PHIL 479: Critical Theory
3 Credits/Maximum of 6

In this course, the term Critical Theory refers to a distinctive approach to social, cultural, and political theory associated with the Institute for Social Research in Frankfurt am Main, Germany, which was founded in 1923. Members of what came to be called the Frankfurt School were sharply critical of the political structures, social institutions, and culture of late capitalist societies such as Germany and the United States (where they lived and worked in exile during the Second World War). They were heavily influenced by the post-Kantian German philosophical tradition, especially the work of Hegel, Marx, Nietzsche, and Freud. This course will focus on the historical development of Critical Theory, with an emphasis on the major figures of the early Frankfurt School: Theodor Adorno, Max Horkheimer, Walter Benjamin, and Herbert Marcuse. However, since Critical Theory is also an ongoing theoretical project, we will also study some contemporary representatives of this tradition, as well as some of its trenchant critics. After some introductory material, including discussion of the Marxist background of early Critical Theory, the course will focus on the following themes: Modernity, History, and Progress; Psychoanalysis and Critique; Culture and Art; and Race, Antisemitism, and Imperialism. In addition to the authors mentioned above, we will discuss work by such thinkers as Jürgen Habermas, Axel Honneth, Nancy Fraser, Seyla Benhabib, Enrique Dussel, and Angela Davis.

Prerequisite: 9 credits of philosophy, including either PHIL 203 or 6 credits of philosophy at the 200 level
Bachelor of Arts: Humanities

PHIL 485: Heidegger
3 Credits/Maximum of 6

Studies Heidegger's metaphysical thought from his early to later works regarding being, history, subjectivity, aesthetics, language, and his influence.

Prerequisite: 9 credits of philosophy, including PHIL 402 or 6 credits of philosophy at the 200 level
Bachelor of Arts: Humanities

PHIL 486: Wittgenstein
3-6 Credits/Maximum of 6

Examines Wittgenstein's early and late work, including logical atomism, meaning, language games, forms of life, and the private-language argument.

Prerequisite: 9 credits of philosophy, including PHIL 204 or 6 credits of philosophy at the 200 level
Bachelor of Arts: Humanities

PHIL 490: Dewey
3 Credits/Maximum of 6

Critically examines the metaphysics, epistemology, ethics, logic, aesthetics, education theory, and social and political philosophy of this major American pragmatist.

Prerequisite: 9 credits of philosophy, including PHIL 401 or 6 credits of philosophy at the 200-level
Bachelor of Arts: Humanities

PHIL 494: Research Project
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities

PHIL 494H: Research Project
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities Honors

PHIL 496: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Humanities

PHIL 497: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Humanities

PHIL 499: Foreign Study--Philosophy

Photography (PHOTO)

PHOTO 99: Foreign Studies--Photo
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.
PHOTO 100: Introduction to Photography

3 Credits

An introduction to the aesthetics, history, and science of photography including practical and critical approaches to the art of photography. PHOTO 100 Introduction to Photography (3) (GA) PHOTO 100 is an introduction to the aesthetics, history, and science of photography including practical and critical approaches to the art of photography for beginning students. The course will introduce students to photography as an art form and as an important medium in commercial applications, news and journalism, science, and industry. The course will look at photography in a social/historical context and showcase the work of important photographers. The course will examine the impact of technological, economic, and cultural forces on photography and, in turn, the role that it plays in our daily life, culture, and society. The course will also expose students to the various styles and techniques used in making photographs and give them the opportunity to gain experience and practical know-how in creating their own photographs. Through the process of assembling and critically examining ‘galleries’ of their own work and the work of others, they will be encouraged to develop a more informed critical point of view about photography as an art and important form of human expression. Grading will be based on three photographic assignments that will account for 50% of the semester grade. In addition, there will be four exams (on photographic history, aesthetics, technical aspects of photography, and image manipulation) that will account for 40% of the semester grade. The remaining 10% of the semester grade will be based on participation in class critiques. Students will be required to have access to a digital camera and the internet. PHOTO 100 will be offered in the fall and spring semesters each year.

Bachelor of Arts: Arts
General Education: Arts (GA)

PHOTO 101: Culture of Photography

3 Credits

This is a non-technical introductory photography course where students photographically and intellectually examine the role of photography in modern culture. PHOTO 101 expands students' depth of appreciation, knowledge, and understanding of the medium by providing them with a creative and intellectual background to realize its broad cultural scope. The course accomplishes this through photographic and written explorations of social, political and ethical issues relevant to photography. Photography yields unprecedented influence as a primary visual medium and students constantly use photography in their personal lives as both a communications tool and as a creative outlet. The ubiquitous smart phones with built in cameras are responsible for much of this explosive popularity with social media providing appealing venues for publicly displaying photography. Over the first decade of the new millennium, social media sites saw the volume of photo uploads increase dramatically, eventually exceeding 10 billion per month. In light of photography being a key medium students use to share and communicate information about themselves to the world at large, the course is designed to help them to think critically and ethically about the photographs they take, share, view and use. The major course teaching topics will address a broad range of contemporary issues relevant to how photography and culture affect one another. Students will become aware of photography as a constantly evolving medium, whose relatively short historical trajectory has culminated in the development of an easily accessible egalitarian art form that bridged the digital divide to interact intimately with personal computing, cell phone communications, the Internet, and social media. In the course, students will take photographs to fulfill photographic assignments, share them with peer audiences, and then engage in critical conversations regarding the aesthetic and communicative meaning and effectiveness of the photos. They will also engage in written assignments where the course presents them with case studies regarding current issues in photography such as, the impact of technological developments in the medium, ethical uses of photography, photography as free speech, and photography as social media. Students will conduct research on the topics and develop informed written position statements, which they will share with their classmates for peer evaluation and feedback. In addition, students will engage with selected readings regarding aspects of photography addressed in the major teaching topics.

General Education: Arts (GA)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Soc Resp and Ethic Reason

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

PHOTO 200: Photo Studio I

3 Credits

A beginning level course that explores the fundamentals of photography. PHOTO 200 Photo Studio I (3) PHOTO 200 is a beginning level course focused on the aesthetics and practical application of photography. Employing lectures, demonstrations and hands-on photographic assignments, it concentrates on teaching basic photographic techniques. Digital and film camera use, imaging software, basic digital scanning, digital printing methods, and basic darkroom practice are covered. A digital camera and access to a 35mm film camera is required. Grading is based on the quality of work in required creative projects (70%) and tests/quizzes (30%). PHOTO 200 will be offered fall and spring semesters. PHOTO 100 is the prerequisite for PHOTO 200.

Prerequisite: PHOTO100

PHOTO 201: A Chronological Survey of Photography

3 Credits

A survey of photography’s place and influence in a social, cultural, and historical context. ART H 250 A Chronological Survey of Photography (3) This course explores the role played by photography over time in providing understanding and insight in a social, cultural, and historical context of the impact of the development of the photographic medium and its effect on social, political, cultural and technological events. Emphasis will be given to understanding the context that surrounds the scientific and aesthetic development of photography. This is a survey of the chronology of events in western culture that transpires from the inception of photography until the year 2000. It includes the influences and outcomes of photographers and those associated with the medium on our culture. Emphasis will be placed on the influence of photography on the world around it, and significant events and individuals in the development of the medium as a vital art form. The structure of the course will consist of research and discussion of events and individuals that characterized years selected for examination. Each week one or two
decades of western culture will be highlighted. Although the thrust of research will relate to photographic subject matter, the events studied will span the culture. We will explore the development of art, literature, music, and photography, as well as, historic landmarks, and the events that have shaped present society. Each week a selection of visual material will be presented highlighting selected events, students will read literature from the period of discussion, significant pieces of music will be introduced, and accounts of periodic events will be surveyed. Each week, a group of students will be assigned to research at least one decade. Each student will gather information about a significant figure or event that occurred in the course of a given period. The student will be expected to prepare a short paper and give a five-minute oral presentation about his/her assigned year, historical figure or event. As each student presents, the chronology of events becomes clear and the multiple threads of history weave a brilliant tapestry of our culture. For the final presentation the student will prepare a ten-page research paper about a historical figure or event. Students will be graded on the quality of the weekly oral presentations and the demonstrated level of commitment to research. Another significant part of their grade will be derived from the length of committed scholarship given to the ten-page term paper. Students must exhibit a level of originality, clarity, and insight. The student must demonstrate the capacity for the assimilation of facts and events relative to their subject and demonstrate how their subject relates to other events that occurred around the same time of their event. Toward this end students will be encouraged to work together to illustrate the interconnection of the chronology.

Cross-listed with: ARTH 250

PHOTO 202: Fundamentals of Professional Photography
3 Credits

This professionally oriented photography course gives students a foundation in the techniques and other competencies relevant to professional photography. PHOTO 202 Fundamentals of Professional Photography is a professionally oriented problem-based learning class where students are introduced to the fundamental technical and creative aspects of client-centered photography relevant to careers in photography and photography related or dependent fields. Students will be introduced to the photographic techniques; professional practices; creative sensibilities; and cultural knowledge significant to the work of a professional photographer and fields reliant on or related to professional photography. The course content focuses student attention on mastering the technical fundamentals of professional photography in the context of the photographer/client relationship. The learning problems place emphasis on the communication, collaboration, and cooperation necessary to solve visual photographic problems in a professionally oriented setting. Under these conditions, students must collaborate with their clients to foster creatively productive relationships and meet their photographic needs. This problem requires developing communication and interpersonal relation skills, which require clearly understanding the clients’ needs and educating them about the creative possibilities and limitations. Under this teaching and learning model, students must learn to merge their own creative vision with the needs and desires of their professional clients. These skills are directly applicable to the real world problems students will encounter in professionally oriented circumstances after they graduate. In the learning problems student peers, with the instructor’s guidance, will play dual roles of clients and photographers with the goal of concentrating the photographers’ attention on communicating with their clients to create effective and creative purpose-driven images. Consequently, the course places a greater emphasis on communication, collaboration, and cooperation than it does on personally and individually motivated expression. Since the advent of digital photography, the medium has undergone an unprecedented period of technological, creative, and cultural flux. Digital photography, computer technology, and social media have had dramatic impact on the medium, which we expect will continue into the future. Consequently, we have used a problem-based learning approach to ensure we can continuously address the most relevant and current topics and information. We have also chosen major teaching and learning topics, which will continue to meet the fundamental needs of the students even as technology continues to shift. At the beginning of each semester, students and the instructors will work collaboratively to develop five student learning-problems. These problems or projects will address the major teaching and learning topics under a variety of conditions designed to reinforce the subject matter, encourage flexible creative thinking, and allow students to pursue the subject with greater critical depth and awareness.

PHOTO 210: Introduction to Architectural Photography
2 Credits

Exploration of approaches to photographing architectural interiors, exteriors, and architectural models.

Prerequisite: Students in Architecture or by permission of the program.

PHOTO 295: Internship
1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

PHOTO 296: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

PHOTO 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

PHOTO 299: Foreign Studies--Photo
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

PHOTO 300: Photo Studio II
4 Credits

An intermediate course that explores advanced processes and applications in digital photography, digital image processing, and photographic inkjet printing. PHOTO 300 Photo Studio II (4) PHOTO 300 is an intermediate course in the aesthetics, processes, and practical applications of digital photography, digital image processing, and photographic inkjet printing.A digital camera is required.Students will employ digital photographic applications and techniques to create images and expand their personal photographic vision. The course will
help students to: 1. Gain a deeper understanding of the medium of digital photography artistically, critically, and as a technical process. 2. Explore the potential of the medium’s ability to express ideas in new ways. 3. Understand advanced digital camera methods. 4. Learn advanced skills in the use and application of Adobe Photoshop. 5. Learn high quality film and object scanning procedures. 6. Learn to make photographic quality color archival inkjet prints and develop critical color awareness. Grading is based on the quality of work in required creative projects (80%) and presentations / participation in formal critique sessions / tests-quizzes (20%). The final course grade will be dropped one full grade for each absence or late submission beginning with the second late submission or absence. The prerequisite for PHOTO 300 is PHOTO 200. PHOTO 300 will be offered fall and spring semesters.

Prerequisite: PHOTO 200

PHOTO 301: Beyond Photoshop: Techniques in Digital Photographic Imaging

3 Credits

Students will learn aspects of photographic image making by capturing, processing, editing, retouching, and manipulating of digital photographs. Through a series of learning problems, students will focus on developing new skills and knowledge needed to accomplish techniques used in the creation of photo-based digital imagery. With awareness and knowledge of the total process, they will synthesize photographic shooting practices with computer-based image post-processing for creative, and professionally oriented image-making results. They will develop creative, critical and conceptual sensibilities needed to discuss and evaluate their work and the work of others using these methods. Students will identify, research, and analyze effective professional and creative practices in the field of photography with emphasis on developing skillful digital post-processing techniques. These practices include previsualization of images, shooting practices for enhanced digital workflow and choosing the image post-processing techniques most appropriate for the end-use of images. Manipulation of photos has a history dating back to the 1850s, however it is only over the last twenty years with digital technology that these techniques have entered the popular mainstream. This shift has raised ethical challenges in photography-reliant fields such as the arts, sciences, advertising, and journalism. Students will analyze and assess factors necessary to recognize in making ethical image-making decisions. Web sites and social media outlets have presented new popular venues for photographs and thus greatly increased the demand for photos of all sorts with much of the Internet relying on photography for its visual content. As part of the spectrum of digital media digital, photography is often integrated with other modes that can be transmitted or shared using the Internet such as webpage technology, digital video, 3D imaging, etc. Students will learn to integrate their photography with other media and evaluate its effectiveness with relation to the broader media environment.

Prerequisite: PHOTO 100

PHOTO 303: Professional Photography: Studio Technique and Photocomposition

3 Credits/Maximum of 6

PHOTO 303 Professional Photography: Studio Technique and Photocomposition is an intermediate-level problem-based learning class where students acquire practical skills, and learn creative techniques relevant to professional photographic image making. The course focuses on building and synthesizing career oriented competencies in the areas of intermediate to advanced digital photography, photocomposition, studio lighting, and image processing related to professional photography. This is a technically oriented course, which emphasizes image making for professional purposes such as for clients or specific audiences. Using this approach, students will practice methods to tailor their own creative vision to the needs of collaborators such as art directors or other professionals. Students will focus on using lighting, cameras & lenses, and creative design techniques as tools to achieve professional quality photographs appropriate for creative artist portfolios used for photography and related careers. Students will develop the skills necessary to recognize and deconstruct lighting, camera, and design techniques in professional photography they may encounter in advertising, magazines, websites and other places where professional photography is used. After they graduate, students will be able to continue using these critical skills to learn and experiment with new techniques, which drive the constantly changing styles in photographic design and thus keep their work looking fresh and current. They will additionally develop and hone visual and verbal skills necessary to critically analyze their own photos and the photos of their peers. The course will culminate with students producing professional portfolios of their work suitable for career purposes.

Prerequisite: PHOTO 200 or PHOTO 202 or by Portfolio review.

PHOTO 304: Fashion Photography

3 Credits/Maximum of 6

Students will learn the primary technical, aesthetic, and stylistic photographic techniques and knowledge required for the creation, presentation, and marketing of professional fashion photographs. The course will additionally address the relevant business practices associated with the field. Other essential material covered in the course will involve student research culminating in presentation projects relating to the history, aesthetics, and ethics of fashion photography. The course features a problem based learning approach where students and instructors work collaboratively to develop five student learning-problems. These problems or projects will address the major teaching problems. These problems or projects will address the major teaching and learning topics under a variety of conditions designed to reinforce the subject matter, encourage flexibly creative thinking, and allow students to pursue the subject with greater critical depth and awareness. Like fashion itself, fashion photography is subject to constant aesthetic, stylistic, and cultural change. To address these problems practitioners need to develop an awareness of style and trends in both the fashion industry and the fashion publishing industry, which are dependent on photography for marketing and advertising. Photography additionally adds historic value as a stylistic and creative archive for these industries. Fashion photographers must have the skills and mindset necessary to constantly learn and experiment with new techniques, which keep their work technically proficient and stylistically innovative and fresh. This problem based learning approach will allow the course to remain dynamic and address, in real-time, changing issues relevant to the industry and our students.

Prerequisite: PHOTO 200 or PHOTO 202 or by Portfolio review.

PHOTO 321N: Flow Visualization: The Art and Physics of Fluid Motion

3 Credits/Maximum of 3

In this course, student will explore techniques for the visualization of the physics of fluid flows including seeding with dyes and particles. Students will also gain technical expertise in a range of flow visualization
and photographic techniques drawn from the course topics, such as photographing atmospheric clouds. Assignments are student-driven, to individuals and mixed teams of undergrad students from different majors. This course will reveal the techniques of making laboratory and everyday fluid flows visible for both scientific and aesthetic purposes. Students will create images using photographic techniques, and document their work in written reports. Questions such as ‘what makes an image scientific?’ and ‘what makes an image art?’ will be explored.

General Education: Arts (GA)
General Education: Natural Sciences (GN)
General Education - Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Integrative Thinking

PHOTO 397: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

PHOTO 399: Foreign Studies--Photo
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

PHOTO 400: Digital Photography in the Studio
4 Credits

Concepts and technology of the digital photography studio; large format digital cameras, electronic studio lighting and digital printing. PHOTO 400 Digital Photography in the Studio (4) PHOTO 400 is a wholly digital, in-depth course in photography that explores the visual, technical, and creative application of digital photographic technologies in a studio setting. Students will employ digital photographic applications and techniques to create images and expand their personal photographic vision. The course will help students to: 1. Gain a deeper understanding of the medium of digital photography artistically, critically, and as a technical process. 2. Explore the potential of the medium’s ability to express ideas in new ways. 3. Master the fundamental studio practices and technologies of digital photography. o Professional large format digital view cameras o Professional electronic studio lighting o Adobe Photoshop o Digital printing o DVD-CD-Rom storage o Presentation and distribution utilizing the World Wide Web. PHOTO 400 follows a workshop/critique format. A collaborative team approach is utilized to enhance students’ abilities in working together to solve creative problems. Students will have to think critically, develop strategies to solve problems, and engage in class critiques as a normal expectation of the course. Grading is based on the quality of work in required creative projects (80%) and participation in formal critique sessions (20%). The final course grade will be dropped one full grade for each absence or late submission beginning with the second late submission or absence. PHOTO 400 will be offered spring semesters.

Prerequisite: PHOTO200
Bachelor of Arts: Arts

PHOTO 401: Fashion Photography
3 Credits/Maximum of 6
Students will learn the primary technical, aesthetic, and stylistic photographic techniques and knowledge required for the creation, presentation, and marketing of professional fashion photographs. The course will additionally address the relevant business practices associated with the field. Other essential material covered in the course will involve student research culminating in presentation projects relating to the history, aesthetics, and ethics of fashion photography. The course features a problem-based learning approach where students and instructors work collaboratively to develop five student learning problems. These problems or projects will address the major teaching and learning topics under a variety of conditions designed to reinforce the subject matter, encourage flexible creative thinking, and allow students to pursue the subject with greater critical depth and awareness. Like fashion itself, fashion photography is subject to constant aesthetic, stylistic, and cultural change. To address these problems practitioners need to develop an awareness of style and trends in both the fashion industry and the fashion publishing industry, which are dependent on photography for marketing and advertising. Photography additionally adds historic value as a stylistic and creative archive for these industries. Fashion photographers must have the skills and mindset necessary to constantly learn and experiment with new techniques, which keep their work technically proficient and stylistically innovative and fresh. This problem-based learning approach will allow the course to remain dynamic and address, in real-time, changing issues relevant to the industry and our students.

Prerequisite: PHOTO 200 or PHOTO 202 or by Portfolio review.

PHOTO 402: Photographic Narratives
4 Credits/Maximum of 8

The development of a photographic project that leads to the creation of a handmade book. PHOTO 402 Photographic Narratives (4 per semester/maximum of 8) PHOTO 402 is a project course in photography focused on the construction of a handmade book that features a student’s photographs as the central content of that book. The course gives the student the opportunity to choose a subject and explore it through photographic means over an extended period of time, in this case, an entire semester. Emphasis is placed on the quality of photography and the organization of those photographs in a book for their display. Students will be evaluated on their abilities to understand the medium through classroom instruction. Evaluation will also be determined by a student’s imaginative capabilities through visualization and through the completion of a series of finished pieces. The prerequisite to PHOTO 402 is PHOTO 200. PHOTO 402 will be offered fall and spring semesters.

Prerequisite: PHOTO200
Bachelor of Arts: Arts

PHOTO 402H: Photographic Narratives
4 Credits/Maximum of 8

The development of a photographic project that leads to the creation of a handmade book. PHOTO 402 Photographic Narratives (4 per semester/maximum of 8) PHOTO 402 is a project course in photography focused on the construction of a handmade book that features a student’s photographs as the central content of that book. The course
of the photographers' problem solving abilities, when lighting varied

PHOTO 405 Photography (2) This advanced level course will introduce the practice either digital or photochemical process (or a combination of the two) and products for print and product advertising. PHOTO 406 Product Photography (2) This advanced level course will explore the practices of photographing personal and individual vision. Projects may be developed using students and engage them in photographic assignments that expand their personal and individual vision. Much of the work of the capstone course will focus on reflection, refinement, and synthesis.

Prerequisite: PHOTO 300 or PHOTO 303 or by Portfolio review.

PHOTO 404: Professional Photography Capstone Seminar: Self-Marketing and Professional Presence

4 Credits

PHOTO 404: Professional Photography Capstone: Self-Marketing and Professional Presence is a culminating problem based learning course where students analyze, synthesize, and organize their creative, academic, co-curricular, internship and photographic experiences to present to audiences of potential clients and employers in preparation for careers in professional photography or related fields. Trends in effective self-marketing and professional presence change over time with shifts in cultures, styles, and technologies. The Internet has given rise to global niche markets as well, which photographers often accommodate. As a result, there is no clear one-size-fits-all approach to this inconstant problem. We have chosen to apply a problem-based learning approach to this course with the intent that students will work with their instructors and peers to tailor the course learning problems to be relevant to each individual student and still meet the course learning objectives. To achieve that, in collaboration with their instructor and peers, every student will design five individualized capstone projects specifically pertinent to his or her situation. Each project will directly address at least two of the course major teaching topics. Much of the work of the capstone course will focus on reflection, refinement, and synthesis.

Prerequisite: PHOTO 200 or PHOTO 300 or by Portfolio review.

PHOTO 405: Creative Projects in Photography

4 Credits/Maximum of 8

Special individual problems related to photographic vision. PHOTO 405 Creative Projects in Photography (4 per semester/maximum of 8)

PHOTO 405 is a project course in photography designed to challenge students and engage them in photographic assignments that expand their personal and individual vision. Projects may be developed using either digital or photochemical process (or a combination of the two) and may be organized as either group or individual assignments. PHOTO 405 will be offered fall and spring semesters.

Prerequisite: PHOTO201 , PHOTO300

Bachelor of Arts: Arts

PHOTO 406: Product Photography

2 Credits

This advanced level course will explore the practices of photographing products for print and product advertising. PHOTO 406 Product Photography (2) This advanced level course will introduce the practice of photographing products with a focus on advertising. The development of the photographers’ problem solving abilities, when lighting varied surfaces, will be considered. The importance of lighting for scale will be examined along with how or when to contribute to the context of a product by introducing appropriate set propping. Aesthetic and intellectual concepts of rendering of products for specific end uses will be explored. Theory will be applied and practiced by the student in a studio environment. As a practical course, lectures and studio demonstrations are major elements of the instruction. The lecture time will modify throughout the course to allow each student the flexibility to practice learned skills. Students will be responsible for scheduling individual studio time with the Integrative Arts Photo Services unit. A digital camera and a laptop computer with a copy of Adobe Photoshop installed are required.

Prerequisite: PHOTO200

PHOTO 407: Portrait Photography

2 Credits

This advanced level course investigates contemporary portrait photography and traditional and modern styles of photographic lighting. PHOTO 407 Portrait Photography (2) This advanced level course will investigate what portrait photography is and how portrait lighting evolved from the influences of early painting. Throughout the course there will be an ongoing investigation of the successes of historic, contemporary & influential photographers. Styles of photographic lighting will be explored as well as natural and artificial light sources. Why posing is important to portrait photography will be considered as well as how or when to suggest or direct a subject to acquire a pleasing pose will be examined and practiced. Theory will be applied and practiced by the student in environmental and studio locations. Through the study of character and expression, the student Portrait Photographer will introduce their style to portrait making. The course will enable the student to make intellectual and aesthetic choices when choosing appropriate equipment and technique, command the application of skillful lighting, develop sensitivities of interaction in prelude to the direction of the photo session and understand the incorporation of space or environment and it’s relationship to the individual subject. A digital camera and a laptop computer with a copy of Adobe Photoshop installed are required.

Prerequisite: PHOTO200

PHOTO 410: Photographing Motion and Athletic Events

2 Credits

A practicum course in photographing sports and athletic events.

Prerequisite: PHOTO200

PHOTO 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

PHOTO 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.
PHOTO 497: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

PHOTO 499: Foreign Studies—Photo
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Physical Therapy (PT)

PT 100: Physical Therapist Assistant—Introduction
3 Credits

This course is a general introduction into the field of physical therapy. The definition, role and function of physical therapists (PTs), physical therapist assistants (PTAs), and other health care providers as members of the health care team will be covered. The history of physical therapy and the PTA will be presented. The organizational structure and operation of physical therapy service in a variety of settings will be studied. Students will become familiar with values-based behaviors that are essential for PTAs as well as the components of legal, ethical, and safe physical therapy practice. Medical terminology and abbreviations commonly used in physical therapy will be studied and an overview of the diseases/disorders specific to each body system will be presented. Students will become familiar with the responsibilities of the PTA, including communication, interventions, documentation, and billing. Laboratory topics include basic patient care, infection control procedures, data collection techniques, and mobility and guarding techniques. There are lecture and laboratory components in this class, and students will be expected to pass both written examinations and lab practical examinations. Enrollment is limited to students accepted into the PTA major.

PT 100S: Physical Therapist Assistant—Introduction
3 Credits

This course is a general introduction into the field of physical therapy. The definition, role and function of physical therapists (PTs), physical therapist assistants (PTAs), and other health care providers as members of the health care team will be covered. The history of physical therapy and the PTA will be presented. The organization of physical therapy departments and health care teams will be studied. Students will become familiar with values-based behaviors that are essential for PTAs as well as the components of legal, ethical, and safe physical therapy practice. Medical terminology and abbreviations commonly used in physical therapy will be studied and an overview of the diseases/disorders specific to each body system will be presented. Students will become acquainted with the responsibilities of the PTA, including communication, interventions, documentation, and billing. Laboratory topics include basic patient care, infection control procedures, as well as mobility and guarding techniques. The course will include an introduction to campus resources and personnel to help students adjust to student life. This course should help students develop strategies to lead to success in the PTA major. Enrollment is limited to students accepted into the PTA major.

First-Year Seminar

PT 101: Introduction to Computer Skills for the PTA
1 Credits

Introduction to basic computer skills for the physical therapist assistant.

First-Year Seminar

PT 120: Human Musculature and Functional Anatomy
2 Credits

This course is designed to give the learner a clear understanding of the locations, actions, and innervations of muscles in the human body and provide a foundation for learning and applying the principles of muscle strength testing. Course objectives include: demonstrating knowledge in the properties of muscle tissue and the basic mechanisms for muscle contraction; identifying and naming attachments and innervations of the muscles of the trunk and extremities; demonstrating competence in identifying muscle strength and weakness through manual muscle testing of trunk and skeletal musculature; and identifying different types of muscle contraction and interaction. The specific muscles involved in movement and stability of the appendicular and axial skeleton will be studied in detail. The information in this course is foundational to the application of physical therapy modalities and exercise, which are included in the PTA curriculum. The course will include lecture and laboratory components. Course content will be delivered in lecture and on-line materials. Enrollment is limited to students admitted to the 2PTA major.

Enforced Concurrent at Enrollment: (PT 100 or PT 100S) and BIOL 161 and BIOL 162

PT 150: Physical Therapist Assistant Procedures I
2 Credits/Maximum of 2

This course is an introductory study of the general principles for physical therapy interventions including massage, thermal modalities, therapeutic light, ultrasound, and compression therapies. Introductory information regarding modalities and relevant information regarding inflammation and healing will also be covered. The course is designed to give the PTA student a working knowledge in the application and theory of physical agents in order to enhance the rehabilitation process. Interventions will be discussed and practiced in relation to the overall clinical management of patients and their specific disorders. Data collection skills associated with the interventions covered in this course will also be included. By the completion of this course, students should be able to discuss the rationale for and demonstrate the application of various thermal modalities, ultrasound, light therapies, compressive therapies and massage. Course content will be delivered in lecture, laboratory, and on-line materials. This course is available only to students enrolled in the 2PTA major.

Enforced Prerequisite at Enrollment: Grade of C or better required in (PT 100 or PT 100S) and PT 120 Enforced Concurrent at Enrollment: PT 384 and (PT 270 or PT 270W or PT 271 or PT 271W)

PT 160: Therapeutic Exercise I
3 Credits

This course provides an introduction to the principles of exercise in the management of disease and injury which will help prepare the student for
enforced prerequisite or concurrent at enrollment: course syllabus. will vary by location and instructor. for these details, check the specific courses. class size, frequency of offering, and evaluation methods will vary by location and instructor. for these details, check the specific course syllabus. Enforced prerequisite at enrollment: grade of C or better in (PT 100 or PT 100S) and PT 120 Enforced Concurrent at enrollment: PT 384

PT 201: Licensure Preparation for the PTA

1 Credits

Preparation for the national PTA licensure examination. P T 201 Licensure Preparation for the PTA (1) This course is an elective course for PTA students, in preparation for the national licensure examination. The course will consist of a review of the entire PTA curriculum through the use of licensure examination practice tests. The course will also include practice sessions with the computerized licensure tests. A review of strategies for succeeding on multiple choice tests will be presented. Prerequisites for this course are a C or better in the P T 100 and P T 384 courses. Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details, check the specific course syllabus.

Enforced prerequisite or concurrent at enrollment: PT 250 and PT 260 and PT 395E and [PT 280 or PT 280W or (PT 281 and PT 282) or (PT 281 and PT 282W)]

PT 202: Pediatric PT

1 Credits

A study of physical therapy as it applies to pediatric patients. P T 202 Pediatric PT (1) This course is an elective course for those Physical Therapists Assistant students interested in further study in pediatric physical therapy. The course will focus on various conditions affecting children, which may include cerebral palsy, spina bifida, and Down syndrome. The students will be given the opportunity to learn about pediatric physical therapy in lecture/discussion sessions and/or laboratory settings, some of which will take place at PSMA and some which may take place at other locations where they will observe children with various disabilities.

Enforced prerequisite at enrollment: grade of C or better in PT 384 and (PT 270 or PT 270A or PT 270W), Enforced prerequisite or concurrent: PT 280 or PT 280W or (PT 281 and PT 282) or (PT 281 and PT 282W) and PT 260

PT 204: Seminar in Physical Therapy

1 Credits

Specialized physical therapy topics investigated in the framework of clinic visitations and presentations by clinical experts. P T 204 Seminar in Physical Therapy (1) The purpose of P T 204 is to provide Physical Therapist Assistant students with an opportunity to explore special topics in physical therapy. The format of the course will be seminar based. The course will consist of a series of presentations led by faculty or outside lecturers and may involve travel to hospitals and clinics. Evaluation of student performance will be based on attendance, completion of all criterion and assignments. This course will typically be offered in the last semester of classroom instruction, before the students begin their final clinical affiliations. This class will be limited to 12-16 students per section. This is an optional PTA course, which may be taken to satisfy the elective requirements of the PTA program. Prerequisites for this course are a C or better in the P T 100 and P T 384 courses. Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details, check the specific course syllabus.

Enforced prerequisite at enrollment: Grade of C or better in PT 384 and (PT 270 or PT 270A or PT 270W). Enforced prerequisite or concurrent: PT 280 or PT 280W or (PT 281 and PT 282) or (PT 281 and PT 282W) and PT 260

PT 205: Human Musculature

1-2 Credits

Comprehensive review of Human Musculature. P T 205 Human Musculature (1) This course is an elective course for those PTA students interested in a review of human musculature. The course is designed to provide advanced students with a comprehensive review of the human muscles including identification of the muscles, their actions, insertions, origins, and innervations. Students will be graded on preparation, participation, class attendance, and completion of self-assessments. Prerequisites for this course are a C or better in the P T 100, P T 384 and BIOL 129 courses. Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details, check the specific course syllabus.

Enforced prerequisite at enrollment: Grade of C or better in BIOL 129

PT 250: Physical Therapist Assistant--Procedures II

3 Credits

The student will be introduced to the basic concepts and principles of spinal traction, neuromuscular excitation, nociception, electrical currents, and electromagnetic fields. The student will develop satisfactory skills in applying electrical stimulation systems, electromyographic biofeedback, iontophoresis, and supine/prone pelvic and cervical traction techniques. Wound care interventions, including the use of electrical stimulation, products and dressings will be addressed. Treatment methods will be discussed and practiced in relation to the overall clinical management of patients and their specific disorders. Data collection skills associated with the interventions covered in this course will also be included. By the completion of this course, students should be able to articulate the basic concepts behind the use of selected physical therapy modalities and demonstrate the safe and effective use of the modalities. In addition, they should be able to discuss and demonstrate appropriate interventions for the PTA regarding wound care. Course content will be delivered in
PT 260: Therapeutic Exercise--II

3 Credits

Advanced principles and application of exercise in the treatment of disease and injury will be explored. Students will learn concepts and skills necessary to promote healing through exercise and will be able to apply these skills appropriately for a variety of populations. Topics of instruction may include but are not limited to: pre/post-surgical interventions for specific conditions, exercise as a conservative intervention for orthopedic conditions, women's health, cardiovascular endurance exercise, postural dysfunction, industrial medicine, exercise and interventions for respiratory problems, and aquatic exercise. Specific objectives for this course include students' gaining competence in performing therapeutic skill and discussing the relevance of, indications, contraindications and precautions for interventions in the following areas: soft tissue injuries and disorders, bony and joint disorders, neck and back pain and postural dysfunction, disorders of the peripheral nervous system, respiratory dysfunction, cardiovascular dysfunction, women's health issues, aquatic exercise, industrial medicine, and data collection. This course includes both lecture and lab components and students will be expected to demonstrate competence in both written and practical examinations. Enrollment is limited to students admitted to the 2PTA major.

Enforced Prerequisite at Enrollment: Grade of C or better in PT 150

PT 270: Pathophysiology

5 Credits

This course is designed to give the PTA student a working knowledge of the physiology of disease and conditions commonly seen in physical therapy. Basic signs, symptoms, causes, and processes of disease and conditions will be covered. Diagnostic criteria, progression, and interventions, including physical therapy interventions, medical and surgical interventions, and pharmaceutical interventions will be addressed. Areas of study in the course may include, but are not limited to, inflammation and healing, infection, immunity and immune disorders, and disorders of the following systems: cardiovascular, respiratory, musculoskeletal, integumentary, endocrine, lymphatic, neurological, hematologic, hepatic, gastrointestinal, hepatic and biliary, renal and urological, genital and reproductive. Genetic disorders, cancer, and mental health will also be addressed. By the completion of this course, a student should be able to: (1) Define and apply terminology used in Pathophysiology and the ICF Disablement Model (2) Discuss inflammation and healing, (3) Discuss the immune system in terms of its function and possible disorders (4) Identify infectious conditions and describe their transmission and progression (5) List and describe conditions affecting the integumentary system and discuss the role of physical therapy in treating skin conditions (6) Discuss conditions of and applications for physical therapy for the following systems: cardiovascular, respiratory, lymphatic, musculoskeletal, neurological, and endocrine. (7) Identify conditions, diseases, and problems with the body systems, including the neurological, hematologic, gastrointestinal, hepatic and biliary, renal and urological, genital and reproductive. Genetic disorders, cancer, and mental health will also be addressed. (8) Discuss cancer in terms of pathophysiology, risk factors, and various types of cancer. (9) Discuss special considerations for the PTA when working with patients who are geriatric, in specialized acute care units, and with various comorbidities. (10) Identify mental health issues and appropriate interactions and interventions with patients with mental or emotional health issues. Course content will be delivered in lecture and on-line materials. Enrollment is limited to students admitted in the 2PTA major.

Enforced Prerequisite at Enrollment: Grade of C or better in: (PT 100 or PT 100S) and BIOL 161 and BIOL 162 and BIOL 163 and BIOL 164

PT 270W: Pathophysiology

5 Credits

This course is designed to give the PTA student a working knowledge of the physiology of disease and conditions commonly seen in physical therapy. Basic signs, symptoms, causes, and processes of disease and conditions will be covered. Diagnostic criteria, progression, and interventions, including physical therapy interventions, medical and surgical interventions, and pharmaceutical interventions will be addressed. Areas of study in the course may include, but are not limited to, inflammation and healing, infection, immunity and immune disorders, and disorders of the following systems: cardiovascular, respiratory, musculoskeletal, integumentary, endocrine, lymphatic, neurological, hematologic, hepatic, gastrointestinal, hepatic and biliary, renal and urological, genital and reproductive. Genetic disorders, cancer, and mental health will also be addressed. By the completion of this course, a student should be able to: (1) Define and apply terminology used in Pathophysiology and the ICF Disablement Model (2) Discuss inflammation and healing, (3) Discuss the immune system in terms of its function and possible disorders (4) Identify infectious conditions and describe their transmission and progression (5) List and describe conditions affecting the integumentary system and discuss the role of physical therapy in treating skin conditions (6) Discuss conditions of and applications for physical therapy for the following systems: cardiovascular, respiratory, lymphatic, musculoskeletal, neurological, and endocrine. (7) Identify conditions, diseases, and problems with the body systems, including the neurological, hematologic, gastrointestinal, hepatic and biliary, renal and urological, genital and reproductive. Genetic disorders, cancer, and mental health will also be addressed. (8) Discuss cancer in terms of pathophysiology, risk factors, and various types of cancer. (9) Discuss special considerations for the PTA when working with patients who are geriatric, in specialized acute care units, and with various comorbidities. (10) Identify mental health issues and appropriate interactions and interventions with patients with mental or emotional health issues. Course content will be delivered in lecture and on-line materials. Assessment of mastery of content will be determined through any or all of the following methods: written tests and quizzes, papers, individual or group projects, homework, in-class assignments. Enrollment is limited to students admitted in the 2PTA major.

Enforced Prerequisite at Enrollment: Grade of C or better in: (PT 100 or PT 100S) and BIOL 161 and BIOL 162 and BIOL 163 and BIOL 164 Writing Across the Curriculum

PT 271: Pathophysiology I

3 Credits

This course is designed to give the PTA student a working knowledge of the physiology of disease and conditions commonly seen in physical therapy. Basic signs, symptoms, causes, and processes of disease and conditions will be covered. Diagnostic criteria, progression, and
interventions, including physical therapy interventions, medical and surgical interventions, and pharmaceutical interventions will be addressed. Areas of study in the course may include, but are not limited to, inflammation and healing, infection, immunity and immune disorders, and disorders of the following systems: cardiovascular, respiratory, musculoskeletal, integumentary, endocrine, lymphatic, and neurological. By the completion of this course, a student should be able to: (1) Define and apply terminology used in Pathophysiology and the ICF Disablement Model (2) Discuss inflammation and healing, (3) Discuss the immune system in terms of its function and possible disorders (4) Identify infectious conditions and describe their transmission and progression (5) List and describe conditions affecting the integumentary system and discuss the role of physical therapy in treating skin conditions (6) Discuss conditions of and applications for physical therapy for the following systems: cardiovascular, respiratory, lymphatic, musculoskeletal, neurological, and endocrine. This course is available to students enrolled in the PTA major. Course content will be delivered in lecture and on-line materials.

**Enforced Prerequisite at Enrollment:** Grade of C or better in: (PT 100 or PT 100S) and BIOL 161 and BIOL 162 and BIOL 163 and BIOL 164

PT 271W: Pathophysiology I

3 Credits

This course is designed to give the PTA student a working knowledge of the physiology of disease and conditions commonly seen in physical therapy. Basic signs, symptoms, causes, and processes of disease and conditions will be covered. Diagnostic criteria, progression, and interventions, including physical therapy interventions, medical and surgical interventions, and pharmaceutical interventions will be addressed. Areas of study in the course may include, but are not limited to, inflammation and healing, infection, immunity and immune disorders, and disorders of the following systems: cardiovascular, respiratory, musculoskeletal, integumentary, endocrine, lymphatic, and neurological. By the completion of this course, a student should be able to: (1) Define and apply terminology used in Pathophysiology and the ICF Disablement Model (2) Discuss inflammation and healing, (3) Discuss the immune system in terms of its function and possible disorders (4) Identify infectious conditions and describe their transmission and progression (5) List and describe conditions affecting the integumentary system and discuss the role of physical therapy in treating skin conditions (6) Discuss conditions of and applications for physical therapy for the following systems: cardiovascular, respiratory, lymphatic, musculoskeletal, neurological, and endocrine. This is a writing-intensive course that will include instructor written evaluation and feedback of student writing. Writing assignments will be specific to the Physical Therapy discipline and include multiple and varied assignments. Writing will be a factor in the final grade for this course. Course content will be delivered in lecture and on-line materials. Assessment of mastery of content will be determined through any or all of the following methods: written tests and quizzes, papers, individual or group projects, homework, in-class assignments. This course is available to students enrolled in the PTA major.

**Enforced Prerequisite at Enrollment:** Grade of C or better in: (PT 100 or PT 100S) and BIOL 161 and BIOL 162 and BIOL 163 and BIOL 164

Writing Across the Curriculum

PT 272: Pathophysiology II

2 Credits

This course is designed to give the PTA student a working knowledge of the physiology of disease states and conditions commonly seen in physical therapy. Basic signs, symptoms, causes, and processes of disease and conditions will be covered. Diagnostic criteria, progression, and interventions, including physical therapy interventions, medical and surgical interventions, and pharmaceutical interventions will be addressed. Areas of study in the course may include, but are not limited to, disorders of the following systems: neurological, hematologic, hepatic, gastrointestinal, hepatic and biliary, renal and urological, genital and reproductive. Genetic disorders, cancer, and mental health will also be addressed. By the completion of this course, students should be able to: (1) Identify conditions, diseases, and problems with the body systems, including the neurological, hematologic, gastrointestinal, hepatic, biliary, renal and urological, genital and reproductive. (2) Discuss cancer in terms of pathophysiology, risk factors, and various types of cancer. (3) Discuss special considerations for the PTA when working with patients who are geriatric, in specialized acute care units, and with various comorbidities. (4) Identify mental health issues and appropriate interactions and interventions with patients with mental or emotional health issues. Course content will be delivered in lecture and on-line materials. This course is available to students enrolled in the PTA major.

**Enforced Prerequisite at Enrollment:** Grade of C or better in: PT 271 or PT 271W

PT 280: Rehabilitation

5 Credits

This course introduces the basic principles, diagnoses, impairments, and treatment interventions utilized by the PTA in the rehabilitation setting. Participants will review basic skills necessary for treating rehabilitation patients safely and overview common mobility equipment used in a rehabilitation setting. The following topics will be addressed in lecture and/or lab sessions: basic principles of normal movement and neuro-rehabilitation, teaching and learning theories, and motor relearning; data collection techniques and tools associated with neurological rehabilitation; functional mobility and motor function training techniques for patients with varying levels of disability; wheelchair mobility training and appropriate fitting and adaptations; environmental assessment and ADA considerations; gait deviations and training with and without assistive devices; orthotics; amputations and prosthetics; selected diagnoses in neuro-rehabilitation. This course will address rehabilitation techniques for patients with selected conditions seen in physical therapy neurological and rehabilitation settings. Selected neurological conditions will be covered, including etiology, clinical presentation, medical management, and physical therapy interventions. Neurologic conditions and developmental delays associated with pediatric clients will also be included. In this course, neuroanatomy and neurophysiology will be reviewed and principles of specific neuro-rehabilitation techniques, and neuromotor development will be explored. By the completion of this course, students should be able to recognize and verbalize general signs and symptoms of neurological deficit and demonstrate basic skills used in physical therapy for patients with selected neurological disorders and amputations. Students should also be able to identify specific areas in the brain, spinal cord, and peripheral nervous system associated with neurological signs, symptoms, and conditions; perform and discuss the value and use of various data collection tools associated with neuro-rehabilitation; demonstrate safe and effective physical
therapy interventions as applied to patients with neurological disorders; discuss and demonstrate basic physical therapy interventions for patients with vestibular dysfunction; discuss the basic developmental milestones associated with human growth and development; and demonstrate and discuss safe and effective handling and positioning principles used with pediatric patients. Gait deviations and interventions, wheelchair fitting and use, and specific physical therapy interventions for various diagnoses will be covered. Using extensive examples, exercises, and real life scenarios, this course teaches students skills to assess, treat and document functional outcomes in a clear and logical progression. Lecture, lab activities, and written assignments will be used to discuss clinical decision-making and intervention strategies for related impairments. Enrollment is limited to students admitted to the 2PTA major.

Enforced Prerequisite at Enrollment: Grade of C or better in (PT 100 or PT 100S) and PT 120. Concurrent Courses: PT 384 and (PT 270 or PT 270W or PT 271W)

PT 280W: Rehabilitation

5 Credits

This course introduces the basic principles, diagnoses, impairments, and treatment interventions utilized by the PTA in the rehabilitation setting. Participants will review basic skills necessary for treating rehabilitation patients safely and overview common mobility equipment used in a rehabilitation setting. The following topics will be addressed in lecture and/or lab sessions: basic principles of normal movement and neuro-rehabilitation, teaching and learning theories, and motor relearning; data collection techniques and tools associated with neurological rehabilitation; functional mobility and motor function training techniques for patients with varying levels of disability; wheelchair mobility training and appropriate fitting and adaptations; environmental assessment and ADA considerations; gait deviations and training with and without assistive devices; orthotics; amputations and prosthetics; selected diagnoses in neuro-rehabilitation. This course will address rehabilitation techniques for patients with selected conditions seen in physical therapy neurological and rehabilitation settings. Selected neurological conditions will be covered, including etiology, clinical presentation, medical management, and physical therapy interventions. Neurologic conditions and developmental delays associated with pediatric clients will also be included. In this course, neuroanatomy and neurophysiology will be reviewed and principles of specific neuro-rehabilitation techniques, and neuromotor development will be explored. By the completion of this course, students should be able to recognize and verbalize general signs and symptoms of neurological deficit and demonstrate basic skills used in physical therapy for patients with selected neurological disorders and amputations. Students should also be able to identify specific areas in the brain, spinal cord, and peripheral nervous system associated with neurological signs, symptoms, and conditions; perform and discuss the value and use of various data collection tools associated with neuro-rehabilitation; demonstrate safe and effective physical therapy interventions as applied to patients with neurological disorders; discuss and demonstrate basic physical therapy interventions for patients with vestibular dysfunction; discuss the basic developmental milestones associated with human growth and development; and demonstrate and discuss safe and effective handling and positioning principles used with pediatric patients. Gait deviations and interventions, wheelchair fitting and use, and specific physical therapy interventions for various diagnoses will be covered. Using extensive examples, exercises, and real life scenarios, this course teaches students skills to assess, treat and document functional outcomes in a clear and logical progression. Lecture, lab activities, and written assignments will be used to discuss clinical decision-making and intervention strategies for related impairments. This is a writing-intensive course that will include instructor written evaluation and feedback of student writing. Writing assignments will be specific to the Physical Therapy discipline and include multiple and varied assignments. Writing will be a factor in the final grade for this course. Course content will be delivered in lecture and/or on-line materials. A variety of evaluation tools will be used to assess student performance in this course. Written examinations, quizzes, written assignments, including homework may be utilized to assess cognitive understanding of course content. For assessment of psychomotor skills, lab practical examinations, skill evaluations, and oral questioning may be used. Group projects and peer assessment might also be included at some campuses. Enrollment is limited to students admitted to the 2PTA major.

Enforced Prerequisite at Enrollment: Grade of C or better in (PT 100 or PT 100S) and PT 120. Concurrent Courses: PT 384 and (PT 270 or PT 271)

Writing Across the Curriculum

PT 281: Rehabilitation-1

2 Credits

This course introduces the basic principles, diagnoses, impairments, and treatment interventions utilized by the PTA in the rehabilitation setting. Participants will review basic skills necessary for treating rehabilitation patients safely and overview common mobility equipment used in a rehabilitation setting. The following topics will be addressed in lecture and/or lab sessions: basic principles of normal movement and neuro-rehabilitation, teaching and learning theories, and motor relearning; data collection techniques and tools associated with neurological rehabilitation; functional mobility and motor function training techniques for patients with varying levels of disability; wheelchair mobility training and appropriate fitting and adaptations; environmental assessment and ADA considerations; gait deviations and training with and without assistive devices; orthotics; amputations and prosthetics; selected diagnoses in neuro-rehabilitation. By the completion of this course, students should be able to recognize and verbalize general signs and symptoms of neurological deficit and demonstrate basic skills used in physical therapy for patients with selected neurological disorders and amputations. This course includes both lecture and lab components and students will be expected to demonstrate competence in both written and practical examinations. Enrollment is limited to students admitted to the 2PTA major.

Enforced Prerequisite at Enrollment: Grade of C or better in (PT 100 or PT 100S) and PT 120 Concurrent Courses: PT 384 and (PT 270 or PT 270W or PT 271 or PT 271W)

PT 282: Rehabilitation-2

3 Credits

In this course, neuroanatomy and neurophysiology will be reviewed and principles of specific neuro-rehabilitation techniques, and neuromotor development will be explored. This course will address rehabilitation techniques for patients with selected conditions seen in physical therapy neurological and rehabilitation settings. Selected neurological conditions will be covered, including etiology, clinical presentation, medical management, and physical therapy interventions. Neurologic conditions and developmental delays associated with pediatric clients will also be included. By the completion of this course, students should
be able to identify specific areas in the brain, spinal cord, and peripheral nervous system associated with neurological signs, symptoms, and conditions; perform and discuss the value and use of various data collection tools associated with neuro-rehabilitation; demonstrate safe and effective physical therapy interventions as applied to patients with neurological disorders; discuss and demonstrate basic physical therapy interventions for patients with vestibular dysfunction; discuss the basic developmental milestones associated with human growth and development; and demonstrate and discuss safe and effective handling and positioning principles used with pediatric patients. Gait deviations and interventions, wheelchair fitting and use, and specific physical therapy interventions for various diagnoses will be covered. Using extensive examples, exercises, and real life scenarios, this course teaches students skills to assess, treat and document functional outcomes in a clear and logical progression. Lecture, lab activities, and written assignments will be used to discuss clinical decision-making and intervention strategies for related impairments. Enrollment is limited to students admitted to the 2PTA major.

**Enforced Prerequisite at Enrollment:** Grade of C or better in: PT 281 and (PT 270W or PT 271W)

**PT 282W: Rehabilitation-2W**

3 Credits

In this course, neuroanatomy and neurophysiology will be reviewed and principles of specific neuro-rehabilitation techniques, and neuromotor development will be explored. This course will address rehabilitation techniques for patients with selected conditions seen in physical therapy neurological and rehabilitation settings. Selected neurological conditions will be covered, including etiology, clinical presentation, medical management, and physical therapy interventions. Neurologic conditions and developmental delays associated with pediatric clients will also be included. By the completion of this course, students should be able to identify specific areas in the brain, spinal cord, and peripheral nervous system associated with neurological signs, symptoms, and conditions; perform and discuss the value and use of various data collection tools associated with neuro-rehabilitation; demonstrate safe and effective physical therapy interventions as applied to patients with neurological disorders; discuss and demonstrate basic physical therapy interventions for patients with vestibular dysfunction; discuss the basic developmental milestones associated with human growth and development; and demonstrate and discuss safe and effective handling and positioning principles used with pediatric patients. Gait deviations and interventions, wheelchair fitting and use, and specific physical therapy interventions for various diagnoses will be covered. Using extensive examples, exercises, and real life scenarios, this course teaches students skills to assess, treat and document functional outcomes in a clear and logical progression. Lecture, lab activities, and written assignments will be used to discuss clinical decision-making and intervention strategies for related impairments. This is a writing-intensive course that will include instructor written evaluation and feedback of student writing. Writing assignments will be specific to the Physical Therapy discipline and include multiple and varied assignments. Writing will be a factor in the final grade for this course. Course content will be delivered in lecture and on-line materials. A variety of evaluation tools will be used to assess student performance in this course. Written examinations, quizzes, written assignments, including homework may be utilized to assess cognitive understanding of course content. For assessment of psychomotor skills, lab practical examinations, skill evaluations, and oral questioning may be used. Group projects and peer assessment might also be included at some campuses. Enrollment is limited to students admitted to the 2PTA major.

**Enforced Prerequisite at Enrollment:** Grade of C or better in PT 281 and (PT 270 or PT 271) and Concurrent Courses: PT 272

**Writing Across the Curriculum**

**PT 285: Clinical Reasoning for the PTA**

2 Credits

This course will provide PTA students with opportunities to synthesize, prioritize, and apply rehabilitation principles from many different PTA courses. Students will learn strategies to combine data collection skills, interventions, and techniques in an integrated manner. Communication, documentation skills and therapeutic intervention skills will be developed through activities and class assignments. Patient scenarios will be utilized to afford students opportunities to develop their skills in choosing and applying effective treatment strategies for patients with complex diagnoses and/or cultural or intellectual differences, all while simultaneously addressing their patient's comorbidities, past medical history, family dynamics and anticipated discharge destination. Using extensive examples, exercises, and real life scenarios, this course teaches students skills to assess, treat and document functional outcomes in a clear and logical progression. Additionally, concepts, principles, skills and techniques will be reviewed in preparation for the final clinical experiences and the PTA licensure examination. This course is available to students enrolled in the PTA major.

**Enforced Prerequisite at Enrollment:** Grade of C or better in PT 150 and PT 160 and PT 290 and (PT 270 or PT 270W or PT 272) and Concurrent Courses: PT 395E and PT 250 and PT 260 and (PT 280 or PT 280W or PT 282 or PT 282W)

**PT 290: Professional Issues in Clinical Practice**

2 Credits

This course is an introduction to the professional issues related to the physical therapist assistant's role in the current health care environment. The course is designed to foster professional development of the physical therapist assistant student and to prepare the student to complete essential competencies and behaviors of health care related to the field of physical therapy. The course will guide the student in preparing the necessary documents for clinical practicum. Areas of study in the course may include but are not limited to, the role of the physical therapist assistant as defined by the American Physical Therapy Association and state practice acts, Values-Based Behaviors for the Physical Therapist Assistant, Standards of Ethical Conduct for the Physical Therapist Assistant, ethical problem solving in healthcare including recognizing and discussing legal and ethical issues in physical therapy, cultural diversity and cultural competence, lifelong learning and continuing competence, professional communication in clinical situations including HIPAA, billing and reimbursement in physical therapy, and medical documentation including the value and necessity of thorough documentation, recognition of the PTA role in documentation, completion of appropriate medical documentation and appropriate use of medical abbreviations. Enrollment is limited to students admitted to the 2PTA major.

**Enforced Prerequisite at Enrollment:** Grade of C or better in PT 100 or PT 1005 and Concurrent Courses: PT 150 and PT 160 and (PT 270 or PT 270W or PT 271 or PT 271W)
PT 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

PT 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

PT 384: Applied Kinesiology
3 Credits
The focus of PT 384, Applied Kinesiology, is to incorporate anatomical structure of the human body, principles of biomechanics, kinetics, and kinematics with the study of human motion and mobility. Areas of instruction include: joint structure and function; arthro- and osteokinematics; muscular kinesiology; posture; normal gait; leverage systems and the forces involved in moving the human body; and joint motion assessment through goniometry and functional measures. This course prepares PTA students for integration of kinesiological concepts into the application of physical therapy interventions. Course objectives include: defining key kinesiological and biomechanical terms and applying concepts to human movement scenarios; demonstrating understanding of: joint configuration and movement; joint motion measurement; muscular kinesiology; posture; and gait. Course content will be delivered in the classroom, laboratory and on-line. The course will include lecture and laboratory components and students will be expected to demonstrate competence in both written and practical examinations. Enrollment is limited to students admitted to the 2PTA major.

Enforced Prerequisite at Enrollment: Grade of C or better in BIOL 161 and BIOL 162 and Concurrent Course: PT 120

PT 395E: Physical Therapist Assistant--Practicum I
3 Credits
PT 395E is the beginner level practice of physical therapist assistant skills in a clinical setting under the direction and supervision of a licensed physical therapist and/or physical therapist/physical therapist assistant team. Course expectations include, but are not limited to: understanding and adhering to the Standards of Ethical Conduct for the Physical Therapist Assistant and the Values-Based Behaviors for the Physical Therapist Assistant, demonstration of appropriate verbal, non-verbal and written communication, safe and effective implementation at an intermediate skill level with associated therapeutic interventions and data collection with patients of varying complexities as outlined in the plan of care established by the physical therapist. Students will be guided to apply current knowledge, theory and clinical judgement to progress or modify patient treatment within the established plan of care. This course includes both clinical experience and online learning activities that students will be expected to complete. Enrollment is limited to 2PTA major.

Enforced Prerequisite at Enrollment: Grade of C or better in PT 250 and PT 260 and (PT 280 or PT 280W or PT 282 or PT 282W) and (PT 270 or PT 270W or PT 272) and PT 285 and PT 395E

PT 395F: Physical Therapist Assistant--Practicum II
4 Credits
PT 395F is the intermediate level practice of physical therapist assistant skills in a clinical setting under the direction and supervision of a licensed physical therapist and/or physical therapist/physical therapist assistant team. Course expectations include, but are not limited to: understanding and adhering to the Standards of Ethical Conduct for the Physical Therapist Assistant and the Values-Based Behaviors for the Physical Therapist Assistant, demonstration of appropriate verbal, non-verbal and written communication, safe, effective and efficient implementation of therapeutic interventions and data collection with patients of varying complexities as outlined in the plan of care established by the physical therapist. Students will be guided to apply current knowledge, theory and clinical judgement to progress or modify patient treatment within the established plan of care. Essential skills for clinical practice will be emphasized in preparation for career entry into the current healthcare environment. This course includes both clinical experience and online learning activities that students will be expected to complete. Enrollment is limited to 2PTA major.

Enforced Prerequisite at Enrollment: Grade of C or better in PT 395F

Physics (PHYS)

PHYS 1: The Science of Physics
3 Credits
PHYS 1 The Science of Physics (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Introduction to the basic concepts of physics at a conceptual level for students in non-technical majors. This course provides a broad survey of the history, concepts, and applications of physics including topics such as classical mechanics in one- and two-dimensions, Newton's laws of motion, work and energy, momentum, rotational motion, vibration, sound, waves, heat and the laws of thermodynamics, electricity and magnetism (including simple
electrical circuits), and topics in 20th century physics, including relativity and quantum mechanics. Course objectives include the development of an understanding of the scientific method, and its application to physics problems of historical interest, and modern physics applications; providing an appreciation of the historical role played by physics in the development of modern science, its role in important cultural and societal issues, and in understanding the basic laws of nature, as applied to everyday experience, natural phenomena, or applications technologies (old and new); the development of scientific literacy, to help motivate the many connections of physics to other fundamental scientific fields and applications disciplines; providing experience in problem solving and the conceptual understanding of physics, and emphasizing the recurring role of a few important concepts, cutting across many scientific disciplines, such as the fundamental laws of classical mechanics, the basic laws of thermodynamics (including conservation of energy), and applications of modern quantum theory. PHYS 001 The Science of Physics (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Introduction to the basic concepts of physics at a conceptual level for students in non-technical majors. Provides a broad survey of the history, concepts, and applications of physics including topics such as classical mechanics in one- and two-dimensions, Newton's laws of motion, work and energy, momentum, rotational motion, vibration, sound, and waves, heat and the laws of thermodynamics, electricity and magnetism, including simple electrical circuits, and topics in 20th century physics, including relativity and quantum mechanics. Course objectives include the development of an understanding of the scientific method, its application to physics problems of historical interest, as well as to modern applications; providing an appreciation of the historical role played by physics in the development of modern science, its role in important cultural and societal issues, and in understanding the basic laws of nature, as applied to everyday experience, natural phenomena, or applications technologies (old and new); the development of scientific literacy, to help motivate the many connections of physics to other fundamental scientific fields and applications disciplines; providing experience in problem solving and the conceptual understanding of physics, and emphasizing the recurring role of a few important concepts, cutting across many scientific disciplines, such as the fundamental laws of classical mechanics, the basic laws of thermodynamics (including conservation of energy), as well as applications of modern quantum theory.

General Education: Natural Sciences (GN)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

PHYS 1H: The Science of Physics

3 Credits

Historical development and significance of major concepts, with emphasis on the nature of physics and its role in modern life. (For students in non-mathematical fields.)

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
Honors

PHYS 10: Physics Behind the Headlines

3 Credits

Select topics in modern physics with emphasis on understanding science related articles in the news. (For students in non-mathematical fields.) PHYS 10 Physics Behind the Headlines (3) (GN) Introduction for non-science majors to select topics in the modern physics of quantum mechanics and relativity with the goal of understanding recent technological advances, scientific breakthroughs and social events related to science as they appear in the news. These range from the discovery of the Higgs boson and dark energy to developments in lasers or superconductors. Social events in the news where science played a large role such as the Roswell ‘UFO’ event in 1947 or the Fukushima nuclear crisis in 2011 will also be discussed. Course objectives include the understanding of the scientific method and scientific reporting; learning the conceptual aspects of the structure of matter from atoms to quarks, waves, energy and light; quantum mechanics and its applications to high tech such as computers and lasers; relativity E=mc2, nuclear forces, gravity and the Big-Bang theory. Particular emphasis will be put on learning the scientific standards for a hypothesis to be truly established as a working theory and how the simple laws of physics apply broadly to many different systems. This class will emphasize conceptual aspects and there is no mathematics prerequisite.

General Education: Natural Sciences (GN)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

PHYS 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

PHYS 114: Sound and Light for Educators

4 Credits/Maximum of 4

Waves, sound, and light concepts highlighted by evidence-based explanations and scientific discourse in preparation for K-6 science teaching. This course has two main focus areas: physics content typically addressed in elementary science curriculum and effective pedagogy for supporting children's meaningful science learning. An introduction to waves is used to construct an initial model, which is applied to sound phenomena and elaborated. The more robust model is then applied to understanding light phenomena and again elaborated. As the model develops across units of instruction, students are engaged in constructing explanations from evidence, model-based reasoning, and scientific discourse. Instructional approaches that are grounded in research on children's learning are used to engage education majors in their own learning, while teaching applications provide opportunities for them to unpack their experiences and apply them to school science teaching.

Cross-listed with: SCIED 114
PHYS 150: Technical Physics I

3 Credits/Maximum of 3

Elementary treatment of topics in mechanics, heat, wave motion, and sound leading toward an understanding of technical applications. PHYS 150 Technical Physics I (3) (GN) (BA) This course meets the Bachelor of Arts degree requirements. Technical Physics provides an algebra-based introduction to mechanics, heat, wave motion, and sound exemplifying scientific method and leading toward an understanding of technical applications. PHYS 150 is the first course in a two-course sequence with PHYS 151 surveying all of physics. It includes topics such as measurement, dimensional analysis, systems of units, describing motion in one dimension, scalars and vectors, describing motion in two and three dimensions, projectile motion, circular motion, particle dynamics via Newton's Laws of Motion, forces, work and energy, momentum, systems of particles, collisions, rotational motion of rigid bodies, torque, moment of inertia, static equilibrium, mechanical advantage, mechanical properties of materials, fluids, vibrations, wave motion, sound, temperature, heat, thermodynamics, and heat transfer. Students attend two lecture/recitation classes and one two-hour laboratory/activity period per week. Classes emphasize conceptualizing the basic ideas, terminology, and principles of the physical phenomena of nature; their quantitative expression through algebra and trigonometry; their relation to applications in science and technology; and their use in quantitative problem solving. Both computer-based and traditional lab exercises and activities illustrate class material and scientific method while giving students experience with a variety of measuring tools and the general principles of measurement, including the analysis of error. Students work collaboratively in small groups to plan their measurements, collect and analyze data, make judgments based on their results, and communicate their efforts and conclusions in a written lab/activity report. This course requires some algebra as a prerequisite. It is a prerequisite for PHYS 151 and is a required course for many engineering technology programs. It is offered at least once per academic year at all Penn State locations with engineering technology programs. Course evaluation is based on a combination of regular homework assignments and/or quizzes, written lab/activity reports, two or three exams, and a final exam.

Enforced Prerequisite at Enrollment: PHYS 150
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Critical and Analytical Thinking
GenEd Learning Objective: Key Literacies

PHYS 197: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

PHYS 211: General Physics: Mechanics
4 Credits

PHYS 211 General Physics: Mechanics (4) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Calculus-based introduction to classical mechanics, including such topics as: measurement, dimensional analysis, motion in one-dimension, vectors, motion in 2 and 3 dimensions, relative and circular motion, force and dynamics, Newton's Laws, friction, kinetic energy, work, potential energy, energy conservation, systems of particles, center of mass and momentum, elastic and inelastic collisions, rotation (moments of inertia), rolling motion, torque, angular momentum, static equilibrium, gravitational force and Kepler's laws, gravitational potential energy, oscillations, waves (transverse and longitudinal, superposition of waves). This course is designed to provide students with a working knowledge of the elementary physics principles mentioned above, as well as their applications, and to enhance their conceptual understanding of physical laws. The exact model of instruction varies at different campuses due to different resources and class sizes. Students attend several class meetings including at least one lab or activity period per week. Use of a combination of computer-based and traditional lab exercises is expected and collaborative learning exercises will be used in both small class sessions. The introduction of data acquisition and analysis methods (often making use of modern computer tools) will be stressed in the laboratory/activity period. Course evaluation is based on a combination of regular homework assignments and quizzes, lab reports, midterms and final exams, and other evaluative tools.
The course is an important prerequisite for later work in many science and engineering disciplines.

**PHYS 212H:** General Physics: Electricity and Magnetism
4 Credits/Maximum of 4

Calculus-based introduction to classical electricity and magnetism, including such topics as, electric charge and electric fields, Gauss’s law, electric potential, capacitance, current, resistance, and circuits, magnetic fields, and fields due to currents, induction and inductance, magnetism of matter, Maxwell’s equations, and electromagnetic oscillations. This course is designed to provide students with a working knowledge of the elementary physics principles mentioned above, as well as their applications, and to enhance their conceptual understanding of physical laws. The exact model varies at different campuses due to different resources and class sizes. Students attend several class meetings including at least one lab or activity period per week. Use of a combination of computer-based and traditional lab exercises is expected and collaborative learning exercises will be used in both small class session. Use of a combination of computer-based and traditional lab exercises is expected and collaborative learning exercises will be used in both small class settings. The introduction of data acquisition and analysis methods (often making use of modern computer tools) will be stressed in the laboratory/activity period. As an honors course, compared to PHYS 211, in this course examples from the current research literature and more applications to physics research/applications can be made. The course is an important prerequisite for later work in many science and engineering disciplines.

GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies
PHYS 213: General Physics: Fluids and Thermal Physics

2 Credits

Calculus-based study of the basic concepts of fluids and sound, heat, kinetic theory, and entropy. PHYS 213 General Physics: Fluids and Thermal Physics (2) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Calculus-based introduction to the basic concepts of fluids and sound, heat, kinetic theory, and entropy, including such topics as: fluid mechanics and motion, sound Waves: speed, harmonic waves, intensity, temperature and heat: thermal expansion, heat capacity, conduction and radiation, kinetic theory of gases: First Law of Thermodynamics, internal energy of a gas, heat capacities, adiabatic expansion, entropy and the Second Law: concept of equilibrium and entropy, heat engines, efficiency of heat engines and refrigerators, introduction to statistical mechanics. This course is designed to provide students with a working knowledge of the elementary physics principles mentioned above, as well as their applications, and to enhance their conceptual understanding of physical laws. The exact model of course instruction varies at different campuses due to different resources and class sizes. Students attend several class meetings including at least one lab or activity period per week. Use of a combination of computer-based and traditional lab exercises is expected and collaborative learning exercises will be used in small class settings.

Enforced Prerequisite at Enrollment: MATH 141 and PHYS 211
Concurrent Courses: MATH 141
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

PHYS 214: General Physics: Wave Motion and Quantum Physics

2 Credits

Calculus-based study of the basic concepts of wave motion, geometrical optics, interference phenomena, photons, wave mechanics, and the structure of matter. PHYS 214 General Physics: Wave Motion and Quantum Physics (2) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Calculus-based introduction to the basic concepts of wave motion, geometrical optics, interference phenomena, photons, wave mechanics, and the structure of matter, including such topics as: electromagnetic waves: Poynting Vector, polarization and reflection, geometrical optics: mirrors, refraction, lenses, optical instruments, interference and diffraction, photons and matter waves, energy quantization, structure of matter: hydrogen atom, conduction of electrons in solids, and nuclear physics and nuclear energy. This course is designed to provide students with a working knowledge of the elementary physics principles mentioned above, as well as their applications, and to enhance their conceptual understanding of physical laws. The exact model of course instruction varies at different campuses due to different resources and class sizes. Students attend several class meetings including at least one lab or activity period per week. Use of a combination of computer-based and traditional lab exercises is expected and collaborative learning exercises will be used in small class settings. The introduction of data acquisition and analysis methods (often making use of modern computer tools) will be stressed in the laboratory/activity period. The course is an important prerequisite for later work in many science and engineering disciplines.

Enforced Prerequisite at Enrollment: MATH 141 and PHYS 211 and PHYS 212
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

PHYS 230: Introduction to Relativity

3 Credits

Introduction to special and general relativity including space-time diagrams and relativistic kinematics, length contraction, time dilation, equivalence principles, curved space and cosmology. PHYS 230 Introduction to Relativity (3) This course is designed for science or engineering students who have successfully completed calculus-based physics courses through electricity and magnetism (PHYS 212), and differential and integral calculus (MATH 140 and MATH 141). Concurrent courses of linear algebra (MATH 220) and vector calculus (MATH 230 or MATH 231) are required. This course should provide the student with a mathematical and physical understanding of relativity theory beyond that which one encounters in semi-popular treatments of the subject. The mathematical skills which this course will develop, e.g. tensors and tensor analysis, should be especially useful to students in a wide range of science and engineering fields from computer science to physics and electrical engineering.

Enforced Prerequisite at Enrollment: PHYS 212 and MATH 141
Prerequisite or concurrent: MATH 220 and (MATH 230 or MATH 231)

PHYS 237: Introduction to Modern Physics

3 Credits

Relativity and quantum theory applied to selected topics in atomic, molecular, solid state, and nuclear physics. PHYS 237 Introduction to Modern Physics (3) A broad survey of post-classical physics, taken by physics and other science and engineering students. Required of all physics majors, it is typically taken in the fourth-semester. The course covers much of the modern physics curriculum including topics such as special relativity, the concepts and mathematical formalism of quantum mechanics, both in one- and three-dimensional model systems, and the applications of quantum theory to topics ranging from atomic/molecular, nuclear, particle, and condensed matter physics to astrophysics. The course is a prerequisite for a junior-senior course in quantum mechanics.

Enforced Prerequisite at Enrollment: PHYS 212 or Concurrent: PHYS 214

PHYS 237H: Introduction to Modern Physics

3 Credits

Relativity and quantum theory applied to selected topics in atomic, molecular, solid state, and nuclear physics. PHYS 237H Introduction to Modern Physics (3) The course covers much of the modern physics curriculum including topics such as special relativity, the concepts and mathematical formalism of quantum mechanics, both in one- and three-dimensional model systems, and the applications of quantum
theory to topics ranging from atomic/molecular, nuclear, particle, and condensed matter physics to astrophysics. In contrast to the non-honors version, PHYS 237H typically makes more frequent use of higher level mathematical concepts and involves the solution of more sophisticated problems. A number of topics are considered in more depth, and these often focus on connections of the material to real-life science research applications.

**Prerequisite:** PHYS 212

Honors

**PHYS 250: Introductory Physics I**

*4 Credits*

PHYS 250 Introductory Physics I (4) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Algebra-based introduction to classical mechanics, including such topics as one- and two-dimensional motion, vectors, relative and circular motion, force and dynamics, Newton's laws of motion, work and kinetic energy, potential energy and energy conservation, momentum, rotational motion and angular velocity, static equilibrium and properties of materials, static and moving fluids, vibrations, simple harmonic motion, general properties of waves, sound and human hearing, temperature and kinetic theory, heat and calorimetry, and the basic laws of thermodynamics. This course is designed to provide students with a working knowledge of the elementary physics principles mentioned above, as well as their applications to everyday phenomena and to the life sciences, to enhance their conceptual understanding of physical laws, and to increase their problem solving abilities especially as applied to physical systems. The mathematical prerequisites for this course (and the prerequisite PHYS 250) are mathematics at the level of algebra and trigonometry, demonstrated by suitable coursework. Students attend several class meetings including at least one lab or activity period per week. Students perform laboratory experiments, discuss their results, and write up their conclusions in weekly lab reports. The course is a prerequisite for the second semester continuation, PHYS 251.

**Enforced Prerequisite at Enrollment:** PHYS 250

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

**PHYS 250H: Introductory Physics I**

*4 Credits*

Selected topics in mechanics, heat, and sound.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
Honors

**PHYS 251: Introductory Physics II**

*4 Credits*

Selected topics in light, electricity, and magnetism. PHYS 251 Introductory Physics II (4) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Algebra-based introduction to classical electricity and magnetism, optics, and areas of modern physics, including such topics as electric charge and fields, electrical potential and energy, electric currents and resistance, direct current (DC) circuits, magnetism, electromagnetic induction and applications to devices, electromagnetic waves, light and geometrical optics, wave nature of light, basic optical instruments (microscopes, telescopes, etc.), basics of quantum mechanics, applications of quantum theory to atoms, molecules, and solids, nuclear physics and radioactivity, applications of nuclear energy and radiation. This course is designed to provide students with a working knowledge of the elementary physics principles mentioned above, as well as their applications to everyday phenomena and to the life sciences, to enhance their conceptual understanding of physical laws, and to increase their problem solving abilities, especially as applied to physical systems. The mathematical prerequisites for this course (and the prerequisite PHYS 250) are mathematics at the level of algebra and trigonometry, demonstrated by suitable coursework or demonstration of satisfactory performance on the mathematical proficiency exam. The exact model of instruction varies at different campuses due to different resources and class sizes. Students attend several class meetings including at least one lab or activity period per week. Students perform laboratory experiments, discuss their results, and write up their conclusions in weekly lab reports. The course is a continuation of the first-semester course PHYS 250.

**Enforced Prerequisite at Enrollment:** PHYS 250

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

**PHYS 296: Independent Studies**

*1-18 Credits/Maximum of 18*

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**PHYS 296H: Study of the Historical Background, Formulation and Consequences of Einstein's Theory of Rela**

*1 Credits*

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

**PHYS 297: Special Topics**

*1-9 Credits/Maximum of 9*

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
PHYS 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

PHYS 400: Intermediate Electricity and Magnetism

3-4 Credits

Electrostatics and magnetostatics in vacuum; electrical and magnetic properties of matter; electrodynamics, Maxwell's equations, conservation laws, electromagnetic waves and radiation. PHYS 400 Intermediate Electricity and Magnetism I (3-4) A second undergraduate course in electricity and magnetism, required of all physics majors who typically take it in their fifth or sixth semester. The course includes a review of vector calculus, and in-depth discussions of electrostatics, magnetostatics, in vacuum and in matter, time-varying electric and magnetic fields and electrodynamics, leading to Maxwell's equations. Discussions of conservation laws for charge, energy, and momentum, electromagnet waves (in vacuum and in matter and at boundaries), electromagnetic vector and scalar potentials and fields, and an introduction to radiation are included.

Enforced Prerequisite at Enrollment: PHYS 212 and PHYS 213 and PHYS 214 and (MATH 250 or MATH 251) and (MATH 230 or MATH 231)

PHYS 400H: Intermediate Electricity and Magnetism I

3 Credits

Electrostatics, steady-state magnetic field; electrical and magnetic properties of matter; Maxwell's equations, boundary-value problems, and wave propagation.

Honors

PHYS 402: Electronics for Scientists

4 Credits

Circuit and network theory; active devices; amplifiers; introduction to digital electronics; noise theory. PHYS 402 Electronics for Scientists (4) A junior-senior theory/laboratory course providing a survey of modern electronics from a data acquisition and analysis point of view. One of several possible lab-based courses taken by physics majors in several options to satisfy a lab requirement, typically taken by physics majors in their senior year. This course is very useful for students interested in experimental research work and includes examples such as digital data acquisition, the lab study of various electronic devices, fast Fourier transform methods and other topics.

Enforced Prerequisite at Enrollment: (MATH 250 or MATH 251) and PHYS 212 and PHYS 213 and PHYS 214

PHYS 406: Subatomic Physics

3 Credits

Introductory treatment of elementary particles, fundamental strong and electroweak interactions, nuclear structure, accelerators, particle detection, nuclear astrophysics.

Enforced Prerequisite at Enrollment: PHYS 410

PHYS 410: Introduction to Quantum Mechanics I

3-4 Credits

Basic postulates; Schrodinger wave equation; stationary states; variational method; scattering in one dimension; orbital angular momentum; hydrogen atom; numerical methods.

Enforced Prerequisite at Enrollment: (MATH 250 or MATH 251) and (MATH 230 or MATH 231) and PHYS 237

PHYS 410H: Introduction to Quantum Mechanics I

4 Credits

Basic postulates; Schrodinger wave equation; stationary states; variational method; scattering in one dimension; orbital angular momentum; hydrogen atom; numerical methods.

Honors

PHYS 411: Introduction to Quantum Mechanics II

3 Credits

General theory of angular momentum; approximation methods; scattering theory; radiation theory; applications to atomic, molecular, condensed matter, nuclear and particle physics.

Enforced Prerequisite at Enrollment: PHYS 410

PHYS 412: Solid State Physics I

3 Credits

Crystal symmetry, X-ray structure analysis, lattice vibrations, thermal properties, free electron transport theory, elementary one-electron quantum theory of solids.

Enforced Prerequisite at Enrollment: MATH 230 or MATH 231 or Concurrent: PHYS 410

PHYS 412H: Solid State Physics I

3 Credits

Crystal symmetry, x-ray structure analysis, lattice vibrations, thermal properties, free electron transport theory, elementary one-electron quantum theory of solids.

Honors

PHYS 413: Solid State Physics II

3 Credits

Quantum theory of electronic and optical properties of solids, semiconductors, dielectrics, magnetic properties, crystal imperfections, low-temperature effects, and superconductivity.

Enforced Prerequisite at Enrollment: PHYS 412
PHYS 414: Solid State Physics

3 Credits

Crystal structure; reciprocal lattice; X-ray diffraction; lattice vibrations; thermal properties; free electron gas model; energy bands; semiconductors; magnetism.

**Enforced Prerequisite at Enrollment:** MATH 230 and PHYS 237

PHYS 414H: Solid State Physics

3 Credits

Crystal structure; reciprocal lattice; X-ray diffraction; lattice vibrations; thermal properties; free electron gas model; energy bands; semiconductors; magnetism.

**Honors**

PHYS 419: Theoretical Mechanics

3 Credits

Principles of Newtonian, Lagrangian, and Hamiltonian mechanics of particles with applications to vibrations, rotations, orbital motion, and collisions. PHYS 419 / MATH 419 Theoretical Mechanics (3) A second course in classical mechanics, required of all physics majors who typically take it in their 5th or 6th semester. The course includes a review of relevant mathematics, detailed discussions of advanced topics in Newtonian mechanics, introductions to Lagrangian and Hamiltonian dynamics, and applications to such forced oscillations, orbital motion, vibrational motion and normal modes, rigid body motion, and collisions. It is a prerequisite for Physics 461, which is a second semester extension. It is also a valuable background for most 400-level physics courses, especially Physics 410.

**Enforced Prerequisite at Enrollment:** (MATH 230 or MATH 231) and (MATH 250 or MATH 251) and PHYS 212 and PHYS 213 and PHYS 214

Cross-listed with: MATH 419

PHYS 419H: Theoretical Mechanics

3 Credits

Principles of Newtonian, Lagrangian, and Hamiltonian mechanics of particles with applications to vibrations, rotations, orbital motion, and collisions.

**Cross-Listed**

Honors

PHYS 420: Thermal Physics

3 Credits

Basic postulates of statistical mechanics and thermodynamics, microscopic quantum states and macroscopic parameters; partition functions; Maxwell-Boltzmann and quantum statistics.

**Enforced Prerequisite at Enrollment:** (MATH 250 or MATH 251) and (MATH 230 or MATH 231) and PHYS 237

PHYS 421W: Research Methods in Physics

3 Credits

Methodology focusing on the theory of measurement and experiment design.

**Enforced Prerequisite at Enrollment:** PHYS 237

PHYS 430: Introduction to Computational Physics

3 Credits

This course will cover basic techniques for writing computational simulations of systems of interest to physicists. The course will aim to provide tools and techniques necessary for simulating initial value problems, chaotic systems, particle distributions on a grid or in the continuum, random processes (Monte Carlo), phase transitions, and numerical solution of equations. Numerical techniques which will also be covered include numerical differentiation (ordinary and partial differential equations), numerical integration, Fourier transforms, linear and nonlinear fitting, root finding, plotting and data presentation. Physical systems to study can include chaotic pendulum motion, diffusion driven motion, the Ising spin model, and dilute gas molecular dynamics. Students will learn to simulate multiple physical systems, and analyze their simulated data using multiple numerical techniques in order to compare their results to expected theoretical behavior. Students' competency in simulation, analysis and presentation of simulated results will be assessed through independently designed programming projects using learned techniques.

**Enforced Prerequisite at Enrollment:** (CMPSC 200 or CMPSC 201 or CMPSC 121 or CMPSC 131) and (MATH 230 or MATH 231) and (MATH 250 or MATH 251) and PHYS 237

Corequisite or prerequisite: PHYS 420

PHYS 444: Topics in Contemporary Physics

2 Credits

Modern research topics and career opportunities in physics; employment, graduate education, and tailoring the physics curriculum to meet career goals. PHYS 444 Topics in Contemporary Physics (2) A course required of all Physics majors, designed to be taken in the Spring semester of the junior year. Introduces students to modern research areas in physics at Penn State and elsewhere. Provides background on career choices available with an undergraduate physics degree, including employment opportunities, planning for graduate study, and tailoring the physics curriculum to meet career goals. The course structure is typically comprised of talks by Penn State faculty, outside visitors, students panels, and other information speakers, with students writing short and long reports using the class presentations discussions, and research from outside sources (research journals, internet, etc.) as background material.

**Prerequisite:** PHYS 237 and 3 credits of physics at the 400 level

PHYS 446: The Year in Physics: A Seminar on the Latest Research

1 Credits

Discussion recent research in physics.

**Enforced Prerequisite at Enrollment:** PHYS 211
PHYS 457: Experimental Physics

1-3 Credits/Maximum of 3

Selected experiments in various fields of physics. PHYS 457 Experimental Physics (1-3) An intermediate laboratory course, required of all Physics majors and taken by other students, typically in their junior/senior years, this course provides an introduction to modern laboratory techniques and instrumentation used in research labs. Typical 'short' experiments include X-ray diffraction, Compton scattering, velocity of light determination, high-temperature superconductors, Raman scattering, Hall effect, scanning tunneling microscopy (STM), and many others, as well as long experiments. This three-credit course also serves as the writing intensive course at the 400-level for most physics majors. One- and two-credit versions of 457 (without the writing-intensive component) are taken by science and education students outside of physics.

Enforced Prerequisite at Enrollment: PHYS 212 and PHYS 213 and PHYS 214 and PHYS 237

PHYS 457W: Experimental Physics

3 Credits

Selected experiments in various fields in physics. PHYS 457W PHYS 457W Experimental Physics (3) An intermediate laboratory course, required of all Physics majors and taken by other students, typically in their junior/senior years, this course provides an introduction to modern laboratory techniques and instrumentation used in research labs. Typical 'short' experiments include X-ray diffraction, Compton scattering, velocity of light determination, high-temperature superconductors, Raman scattering, Hall effect, scanning tunneling microscopy (STM), and many others, as well as long experiments. This three-credit course also serves as the writing-intensive course at the 400-level for most Physics majors. One- and two-credit versions of Physics 457 (without the writing-intensive component) are taken by science and education students outside of Physics.

Enforced Prerequisite at Enrollment: PHYS 212 and PHYS 213 and PHYS 214 and PHYS 237

Writing Across the Curriculum

PHYS 458: Intermediate Optics

4 Credits

Geometrical and physical optics: theory of lens systems, aberrations, apertures, interference, diffraction, polarization. PHYS 458 Intermediate Optics (4) An intermediate optics course which builds on the wave and optics used in the 200-level introductory course, this course (which includes a lab component) focuses on physical and geometrical optics, propagation of light and its interaction with matter, polarization, interference, and diffraction. Optical components such as lenses, mirrors, prisms, fiber optics, spectrometers, and interferometers are discussed and employed. The laboratory component includes a number of 1-2 period experiments designed to illustrate the principles of applied geometrical and physical optics. Longer (5 period) experiments are also included which utilize modern, computer-controlled multi-channel detection systems and are applied to such systems as thin-film optics and the optics of semi-conductors.

Enforced Prerequisite at Enrollment: PHYS 212 and PHYS 213 and PHYS 214 and (MATH 250 or MATH 251) and (MATH 230 or MATH 231)

PHYS 462: Applications of Physics in Medicine

3 Credits

Recommended Preparations: (PHYS 212, PHYS 213, PHYS 214, PHYS 251) Applications of physics in human physiology and in instrumentation for medical diagnosis and treatment. PHYS 462 Applications of Physics in Medicine (3) This course is a general survey of applications of physics in understanding the physiology of the human body and the physical principles behind diagnostic medical measurement, including imaging modalities: X-ray, nuclear, magnetic resonance, and ultrasound. Treatment applications such as laser surgery and radiation therapy are also covered. The course is appropriate for students intending work in a health profession.

Enforced Prerequisite at Enrollment: PHYS 211 or PHYS 250

PHYS 465: Network analysis of biological systems

3 Credits/Maximum of 3

The survival of a cell, organism or population in a variable environment depends on mounting specific responses to external stimuli. Each of these responses is governed by the coordinated action of multiple (potentially numerous) individual functional components. Understanding the collective behavior of such a complex interacting system is enabled by representing the system as a network, where we denote the components of the system with nodes and their interactions by edges. The properties of these interaction networks can then be analyzed by computational methods. This analysis can lead to important conclusions and predictions about the possible collective, dynamical behaviors of the system. The course will cover examples of network analysis and modeling in biology and medicine, focusing on systems at the molecular and cellular level. After taking this course students will be able to integrate information to construct a network model corresponding to a biological system, to use graph theoretical measures to describe this network, and to use mathematical or computational methods to model the dynamic processes that take place in this system. These skills are important for careers in life science and medical research, in bioengineering and biotechnology.

Enforced Prerequisite at Enrollment: MATH 140 or BIOL 230W or BMB 251 or BME 201. Recommended Preparation: MATH 140B or MATH 141B or MATH 297.

PHYS 472: Elements of Nuclear Physics and its Applications to Medical Imaging and Treatments

3 Credits

Introduction to the theory of nuclei, interactions with fast particles, and applications to medical imaging and radiation oncology. PHYS 472 Elements of Nuclear Physics and its Applications to Medical Imaging and Treatments (3) Modern physics tools are used now in numerous medical diagnostic methods, for various treatments of tumors, and so on. The class will focus several aspects of modern physics relevant to medical applications: (i) mechanisms of interaction of high energy particles, i.e. photons, electrons, protons, neutrons, and nuclei, with materials and methods of generating beams of such particles, (ii) applications of such beams for obtaining images of the body, (iii) radioactive decays of nuclei and use of the nuclear decays for imaging of dynamical processes in the body, (iv) shell structure of nuclei and applications of nuclear magnetic resonance in imaging. The course will allow students to understand the physics underlying the medical application of modern physics.
and physics of a wide range of new tools used in medicine, including computer tomography, positron emission tomography, and magnetic resonance imaging, as well as use of photon, proton and nuclear beams for tumor treatments.

**Enforced Prerequisite at Enrollment:** PHYS 211 and PHYS 212 and PHYS 213 and PHYS 214 and PHYS 237

PHYS 479: Special and General Relativity

3 Credits

Mathematical description, physical concepts, and experimental tests of special and general relativity. MATH 479 / PHYS 479 Special and General Relativity (3) This course is intended as an elective course (within the undergraduate Physics program) for Physics majors to be taken in their senior year. Intended to be cross-listed with MATH, it can also be used in support of a Mathematics minor and, in some options, within the Math program as a program elective as well. The course significantly expands upon the introduction to Special Relativity (SR) seen in PHYS 237, including discussions of experimental tests of SR and applications to relativistic mechanics. It then introduces students to the mathematical machinery required to understand General Relativity (GR), starting with the description of curved spacetimes and geodesics. It discusses solutions to the Einstein equations and surveys the classic tests which established the validity of General Relativity. It concludes with applications of GR in such areas as black hole physics, the generation and detection of gravitational waves, other topics (such as cosmology, relativistic astrophysics, etc.).

**Enforced Prerequisite at Enrollment:** PHYS 237 and PHYS 400 and PHYS 419 and (MATH 250 or MATH 251) and (MATH 230 or MATH 231) Cross-listed with: MATH 479

Bachelor of Arts: Quantification

PHYS 494: Physics Research Project

1-12 Credits/Maximum of 12

Investigation of an original research problem, including a literature search. Preparation of a formal thesis is optional.

PHYS 494H: Physics Research Project

1-12 Credits/Maximum of 12

Investigation of an original research problem, including a literature search. Preparation of a formal thesis is optional.

Honors

PHYS 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor

PHYS 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

PHYS 496H: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

PHYS 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

PHYS 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

**Plant (PLANT)**

PLANT 129N: Chocolate Worlds

3 Credits

This course will examine the ‘world’ of chocolate throughout human history. First cultivated by the ancient peoples of the Americas and then manufactured by Europeans and Pennsylvanians alike, chocolate has played a privileged role as a luxury good. An interdomain course, 'Chocolate Worlds' is interdisciplinary, taught by faculty in the departments of Plant Science, Anthropology, and History. As a team we investigate the how diverse societies have differentially interacted with this crop. Rather than be organized chronologically, this course will be divided into course Units, such as the history of cocoa uses and cultivation, cocoa plant science and farming issues, chocolate making and markets, and the state of the global chocolate industry. The course’s lectures and assigned readings work in concert equally directed by scientific inquiry and the queries of the social sciences and humanities. Assignments will address real world questions relating to contemporary cocoa cultivation and production, and its role in international development and social justice. As a class we will take field trips to sites such as local chocolate manufacturing facilities and cocoa research sites and laboratories. The learning objectives of this course include students’ broad knowledge of cacao production, its history, and ethical issues surrounding its cultivation in today’s global economy. Additionally, students will gain an historical appreciation for the role this crop has played in diverse human societies and a scientific understanding of its genetic structure.

Cross-listed with: ANTH 129N, HIST 129N

Bachelor of Arts: Humanities

Bachelor of Arts: Other Cultures

General Education: Humanities (GH)

General Education: Natural Sciences (GN)

General Education - Integrative: Interdomain

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Effective Communication

General Education: Natural Sciences (GN)

Maintaining residential landscapes and edible gardens through hands-on session where students gain practical skills needed for developing and profit from gardening activities. This course includes a weekly laboratory and processing fruits and vegetables for home use and ideas for making mistakes in the garden and landscape, gardening resources, storage and processing fruits and vegetables for home use and ideas for making climates on plant development and food production.

Prerequisites: BIO 110 and SOILS 101

PLANT 217: Landscape Soil and Water Management

3 Credits

PLANT 217 Landscape Soil and Water Management (3) PLANT 217 is a course developed to meet the needs of the Landscape Contractors program. This course covers the following topics: Influence of weather on irrigation management; design, layout and management of residential and commercial landscape irrigation systems; sprinkler selection, scheduling and irrigation system management; irrigation uniformity and control systems; the importance of drip and subsurface irrigation; the effects of rainfall and irrigation on soil erosion and sedimentation on landscape sites especially under construction. The course also includes short field trips to various local industry-related facilities for educational evaluation.

PLANT 220: Gardening for Fun and Profit

3 Credits

The objective of PLANT 220 (GN), Gardening for Fun and Profit is to provide students with science-based fundamentals of establishing and maintaining residential landscapes and gardens. The course provides information that is especially useful to those with minimal to intermediate knowledge of horticultural plants. A background in gardening or landscaping is not needed. Class topics are presented by guest speakers who are scientists and experts in the topic area. Major topics include proper plant selection, soil preparation for establishing plantings, the basics of seeding, growing transplants and planting, the basics of planting and maintaining trees and shrubs, avoiding common mistakes in the garden and landscape, gardening resources, storage and processing fruits and vegetables for home use and ideas for making profit from gardening activities. This course includes a weekly laboratory session where students gain practical skills needed for developing and maintaining residential landscapes and edible gardens through hands-on activities and field trips.

General Education: Natural Sciences (GN)
GenEd Learning Objective: Effective Communication
Professionals in the field will provide study materials and guide students as they study and prepare for the exam. Students will be guided through the technical material and requirements necessary to successfully complete the exam. This course and successful completion of the exam will make the graduate more employable than students that have not obtained this professional certificate. The course is intended for students in the Crop Production option, but students outside the option and with the necessary prerequisites may take the course. Upon completion of this course, students can take the licensing exam offered by the American Society of Agronomy to become a Certified Crop Advisor.

**CONCURRENT:** AGRO 423, AGRO 425, AGRO 438

**PLANT 461: Emerging Issues in Plant Sciences**

3 Credits

A discussion-based capstone course that elucidates the current and up-and-coming issues in the plant sciences. PLANT 461 Emerging Issues in Plant Sciences (3) Emerging Issues in Plant Sciences is a capstone course designed for the Plant Sciences, and is also available to students from other majors. This highly participatory course emphasizes many of the interdisciplinary topics in the plant sciences today, with a focus on balancing plant production with environmental conservation. Topics include: conservation cropping systems and tillage, soil health; transgenic crops; managing landscapes for ecosystem services, climate change, pest and nutrient management alternatives; biofuels; urbanization and regional food systems. It is a team taught course with guest lectures by experts on specific topics and includes student analysis and discussion with the guidance of the instructors. Students will read and write about publications from the peer reviewed literature and research and present about an emerging issue.

**Prerequisite:** AGRO 028 or HORT 101, AGE CO 201 or BIOL 127 or HORT 202, ENT 313, and SOILS 101

**PLANT 494: Undergraduate Research**

1-6 Credits/Maximum of 6

Independent study directed by faculty supervisor a Plant Science faculty member.

**Prerequisite:** junior or senior status, approval of a Plant Science faculty supervisor, and approval of the Undergraduate Program Coordinator

**PLANT 494H: Honors Thesis Research**

1-6 Credits/Maximum of 6

Independent study directed by faculty supervisor culminating in a Plant Science honors thesis.

**Prerequisite:** junior or senior status in the Schreyer Honors College and permission of a Plant Science honors advisor

**PLANT 499: Foreign Studies**

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

---

**Plant Pathology and Environmental Microbiology (PPEM)**

**PPEM 120: The Fungal Jungle: A Mycological Safari From Truffles to Slime Molds**

3 Credits

This course is an introduction to the world of fungi and their impact on humans and the environment around us. Fungi represent one of five or one of sixteen Kingdoms of biological organisms depending on the system used. Either way the Fungi are an integral and essential component of the biological world worthy of study by scientists and non-scientists alike. However, despite their importance to the ecosystem and to human affairs Fungi are among the least studied groups of biological organisms. This is unfortunate since Fungi are often quite beautiful and impact everyone’s life. The goal of the proposed course is to provide a framework and context for students to become familiar with the Fungi and their importance to other life forms including humans. For example, food production is both positively and negatively impacted by Fungi in quite profound ways from serving a source of highly sought-after products such as truffles to plant pathogens such as wheat rust destroying crops. This course explores questions such as: What are Fungi? Why are they important? How do they work in the ecosystem? How have humans harnessed the unique capabilities of Fungi? How are Fungi portrayed in the media, and are these accounts accurate? Students will also practice using their fungal knowledge to evaluate the potential efficacy of consumer products aimed at control of Fungi. Some course concepts will be explored through hands on activities and visits to relevant campus locations. At course conclusion students will have a deeper understanding of the fascinating Kingdom Fungi, and a greater appreciation for their importance, diversity, and beauty.

General Education: Natural Sciences (GN)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Global Learning

**PPEM 225: Mushroom Cultivation**

3 Credits

Students will learn about commercial production of edible mushrooms and how to cultivate them on both a small and commercial scale. PPEM 225 Mushroom Cultivation (3) Pennsylvania’s growers account for nearly 2/3 of the US total mushroom production. The production of the button mushroom, Agaricus bisporus, is a technically challenging process that requires a thorough understanding of substrate preparation and pasteurization (Phase I and Phase II composting) to be successful. The class will follow an Agaricus bisporus crop, at the Mushroom Research Center on campus, for the 11 week cropping cycle, participating in all aspects of button mushroom production. The course will also cover specialty mushroom production (including shiitake, oyster, maitake, enoki), which can be achieved on a small scale with some basic training and understanding of the different nutritional and substrate preparation techniques. Because cultivation of many specialty mushrooms is easier than button mushroom production, we will cultivate shiitake mushrooms both on sawdust logs as well as traditional oak logs. The class will have the opportunity to cultivate at least one other specialty mushroom, such as the oyster or lion’s mane, in lab as well. We will schedule one Saturday field trip to visit several commercial mushroom farms in southeast
Pennsylvania. Though this trip is not mandatory, it will be a good chance to view all aspects of commercial mushroom farming.

**Prerequisite:** BIOL 110 or equivalent

PPEM 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

PPEM 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

PPEM 300: Horticultural Crop Diseases

3 Credits

The concepts of plant pathology are introduced to describe how plants, the environment, and biotic and abiotic plant pathogens interact over time to cause disease. Understanding these relationships can help to prevent disease problems or increase management and control options. Students learn how plant pathogens survive, reproduce, and spread. The role that plant pathogen distribution and regulation have played in shaping history and their influence on our economics, trade, and the environment is discussed. Common and significant plant diseases are illustrated to explain their causes, diagnosis, management, and national and international importance. All information is presented in online modules and all assessments are submitted online. Students should be able to recognize common garden plants in the NE United States such as maples, oaks, roses, crabapples, lilacs, peony, pachysandra, etc. Internet access and a digital camera are required (phone cameras are usually fine). Weekly assignments, quizzes, and labs are all submitted online. Several diagnosis exercises reinforce the practical aspects of identifying and controlling plant pathogens and the Plant Disease Assessment Report provides experience in plant disease site evaluation and management. Students customize many assignments to use their favorite plant materials and locations. The online modules supply course content but students apply the lessons in their own local area. Original student photographs are needed for diagnoses and the Plant Disease Assessment Report. Plant diseases have significant influences on plant aesthetics, economics, edibility, and viability. They have had profound influences on world history, and roles in modern national and international trade and bio-security. Students will gain an appreciation of the impact that horticultural crop diseases can have on society and the environment, including how the global trade of horticultural crops has resulted in the spread of pathogens important to agricultural crops and native plants.

**Prerequisite:** 3 credits in a biological science

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Soc Resp and Ethic Reason

PPEM 318: Diseases of Forest and Shade Trees

2 Credits

Introduction to diagnosis and management of forest and shade tree diseases. PPEM 318 Diseases of Forest and Shade Trees (2) Diseases of Forest and Shade Trees, is a practical, hands-on, lab and lecture course designed primarily for forestry and landscape-contracting students. However, the course is also appropriate for any student interested in tree diseases, or for any student who simply wants to know 'What is wrong with my tree?' The course content covers the important tree diseases of Pennsylvania, with emphasis on tree diseases that also have national and international implications. New and emerging tree diseases are discussed during the last two weeks of the semester.

PPEM 318H: Diseases of Forest and Shade Trees

2 Credits

Introduction to diagnosis and management of forest and shade tree diseases. PPEM 318 Diseases of Forest and Shade Trees (2) Diseases of Forest and Shade Trees, is a practical, hands-on, lab and lecture course designed primarily for forestry and landscape-contracting students. However, the course is also appropriate for any student interested in tree diseases, or for any student who simply wants to know 'What is wrong with my tree?' The course content covers the important tree diseases of Pennsylvania, with emphasis on tree diseases that also have national and international implications. New and emerging tree diseases are discussed during the last two weeks of the semester.

Honors

PPEM 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

PPEM 405: Microbe-Plant Interactions: Plant Disease and Biological Control

3 Credits

Survey of microbe-plant interactions causing plant disease, mechanisms of pathogenesis, disease management, and microbial and molecular biological control strategies. PPEM 405 Microbe-Plant Interactions: Plant Disease and Biological Control (3) Plant health in both natural and agricultural ecosystems is essential for sustaining human society and all other life forms on Earth. Plant disease epidemics are common and diverse and have devastating effects on our population and economy by debilitating the ecosystems on which we depend. This course focuses on biological and environmental factors that influence microbe-plant interactions which in turn determine plant health and initiate plant disease epidemics. Developing strategies for maintaining healthy plants in both natural and agricultural ecosystems requires an understanding of pathogen and host biology, as well as the role of the environment in disease epidemiology. Students will learn about the survival and spread of important plant-infecting fungi, bacteria, phytoplasma, and viruses and how mechanisms for microbial pathogenicity are influenced by the environment. The final section of the course will focus on the use of beneficial microorganisms to maintain and improve plant health. Grades will be based on student performance on a wide variety of activities including labs, quizzes, seminar reports, and exams.
Prerequisite: BIOL 110

PPEM 412: Turfgrass Disease Management

3 Credits

Introduction to biology of turfgrass pathogens and management of cool- and warm-season turfgrass disease. PPEM 412 Turfgrass Disease Management (3) This course will provide an introduction to concepts of disease processes in plants and biology of plant pathogens, principles of turfgrass disease diagnosis based on symptom development, recognition of signs and microscopic structures of the pathogens, environmental and cultural management factors influencing disease development, significance of pathogen life cycle in disease epidemic development, and integrated turfgrass disease management practices for root and foliar disease. Disease of various turf types for golf courses, residential lawns, landscapes, and athletic fields will be discussed. Disease topics will include diseases that commonly occur in winter, disease that develop in spring and persist into summer, and disease that initiate in summer and remain active until late fall in most regions of North America. A number of non-infectious disorders of turf caused by extreme environmental conditions and improper cultural practices will also be discussed.

Prerequisite: TURF 230, TURF 235, CHEM 101 or CHEM 110, BIOL 127

PPEM 416: Plant Virology: Molecules to Populations

3 Credits

An exploration of the molecular biology and population dynamics of the virus-plant interaction. PPEM 416 Plant Virology: Molecules to Populations (3) This will be the departmental foundation course for plant viruses, one of the four major pathogen groups. The course will entail an exploration of the history, nature, cause, socioeconomics, symptomatology, physiology, diagnosis, ecology, epidemiology, and control of viral diseases on plants. Special emphases will be placed on replication, and evolution of plant viruses, molecular biology of the virus-plant interaction, replication, virus-like agents (viroids & prions), natural and genetically engineered disease resistance, virus-vector relationship, and population dynamics.

Prerequisite: BIOL 110, BIOL 120

PPEM 417W: Mechanisms of Bacterial Pathogenesis in Plants

3 Credits

This course covers the mechanisms that certain bacteria use to infect and cause disease in plants. We will consider the molecular, genetic, biochemical, and physiological systems that are used by plant-pathogenic bacteria to move about and infect plants, cause disease symptoms, evade plant immune responses, and derive nutrition from the plant. We will cover these topics through a combination of lectures and close readings of current and classic primary research articles. The course also has a major, hands-on laboratory component that includes experiments on bacterial genetics related to disease, bacterial physiology and behavior, and the stimulation of plant immune responses during bacterial infection. Students taking this class can expect to gain experience reading primary plant bacteriology research literature and designing and implementing experiments in plant-bacterial interaction.

Prerequisite: BIOL 110

Writing Across the Curriculum

PPEM 425: Biology of Fungi

4 Credits

BIOL 425 / PPEM 425 (4 cr.) is a lecture and laboratory survey of the diversity of Fungi, consisting of two 75-minute lecture and two 180-minute laboratory/field activity periods per week. The course moves from branch to branch in the Fungal tree of life, covering aspects of ecology, morphology, physiology and life history, as well as current and historical importance to human affairs in medicine, agriculture and industry. Topics covered as students move through the Fungal tree include: 1) Macrofungi seen in the field; 2) Fungal evolution; 3) Fungal reproduction and dispersal; 4) Fungal growth, development and structure; 5) Fungal genetics and genomics; 6) Fungi as mutualistic symbionts of plants, animals and other organisms; 7) Fungal diseases of plants, animals and humans; 8) Fungi as toxin producers; 9) Fungi as sources of food, pharmaceuticals and enzymes; and 10) Fungi as research organisms used to understand basic biological processes. Some laboratory sessions consist of field trips to local forests to observe and collect Fungi for observation in the laboratory.

Enforced Prerequisite at Enrollment: BIOL 110 and (AGECO 201 or BIOL 127 or BIOL 220W or BIOL 220M or BIOL 222 or BIOL 230W or BIOL 230M or BIOL 240W or BIOL 240M or MICRB 251 orHORT 232 or PPEM 120 or PPEM 225 or PPEM 405)

Cross-listed with: BIOL 425

PPEM 427: Mycotoxins: Effects of Fungal Toxins on Human and Animal Health

3 Credits

Description and history of mycotoxicoses. Mycotoxin formation, occurrence, control, economic and social impacts, and regulatory issues. PPEM 427 Mycotoxins: Effects of Fungal Toxins on Human and Animal Health (3) This course will provide a comprehensive overview of the multi-disciplinary subject of mycotoxicology. Mycotoxins are chemicals produced by fungi that are toxic to humans and animals. Students will become familiar with the history and description of mycotoxins and mycotoxicoses, formation of mycotoxins, biology of mycotoxigenic fungi, methods of mycotoxin analysis, fate of mycotoxins in food processing, management and prevention of mycotoxins, regulations, and economic and social impacts. This course is appropriate for students who wish to learn more about fungi beyond the introductory level, as well as for those with interests in animal science and husbandry. The subject of mycotoxicology involves most aspects of the agriculture-food system so students of food science, crop and soil science, entomology and plant pathology will find relevant topics in mycotoxicology. Biology and microbiology students especially those with interests in plant-associated microbes and ecology will also benefit from this course. Course format will be two lectures per week and one period of discussion that will include laboratory activities, field trips, case study discussions, and student presentations.

Prerequisite: BIOL 110 or BIOL 011 and BIOL 012; CHEM 112, CHEM 113

PPEM 430: Air Pollution Impacts to Terrestrial Ecosystems

3 Credits

Overview of the direct and indirect effects of air pollutants on terrestrial plants and ecosystems. E R M (PPEM) 430 Air Pollution Impacts to Terrestrial Ecosystems (3) Pollutant sources, transport, meteorology, and temporal and spatial trends of pollution dispersion and deposition.
are introduced. An overview is presented of the direct and indirect effects of air pollutants on terrestrial ecosystems with an emphasis on plant life. The effects of ozone, sulfur dioxide, nitrogen oxides, particulate matter, halogens, and combined pollutants leading to acidic atmospheric depositions are presented. Emphasis is placed on air pollutants as plant pathogens leading to symptoms and eventual long-term accumulative effects to entire ecosystems. Methods of diagnostics, factors affecting plant response, ecosystem decline and resiliency, pest interactions, assessment of loss and cost/benefit analysis leading to abatement follows. Final parts of the course include perspectives of public awareness, development of National Ambient Air Quality Standards, compliance prevention of significant deterioration, and the Clean Air Act reforms of 1990.

**Prerequisite:** BIOL 220W or FOR 308

Cross-listed with: ERM 430

PPEM 440: Environmental Microbiomes: Concepts and Analysis Tools

3 Credits

The development of next-generation sequencing (NGS) technologies was initially spurred by the desire for a human genome sequence, but these tools are now essential to all areas of biology. The amount of data produced by NGS allows us to ask questions about processes that occur across genomes, communities, and even landscapes. In particular, NGS has revolutionized the study of environmental microbiology, allowing us to investigate the thousands of microbial ‘species’ that co-occur in a given environment, even though most of these microorganisms have not been captured or observed in culture. The entire complement of microorganisms (and their genes) that occur in a particular environment is frequently referred to as the ‘microbiome’ of that environment. The field of microbiome research is evolving rapidly, which means that there are many opportunities to contribute to exciting new discoveries. However, this fast pace of change has made it difficult to properly prepare students for microbiome-focused graduate work. In this course, you will learn about the development of NGS techniques, as well as recent applications of NGS to natural and agricultural soil systems, including how these tools can be used to understand both targeted and unintentional human-induced changes to microbiomes. You will also develop the ability to interpret microbiome-related literature and to work with NGS data using freely available software. In your second assignment, you will explore additional software not used in class, in order to learn how to use unfamiliar bioinformatics tools. This course is intended for students with very little background in programming or bioinformatics, but with a strong understanding of microbial biology, molecular biology, and/or ecology. At the conclusion of this course, students will be able to: - Interpret microbiome terminology and figures. - Understand and present a summary of a microbiome-based journal article. - Analyze microbiome-based high-throughput sequencing data using freely available software. - Apply microbiome analysis tools to unknown data. - Express their interpretation of microbiome data in oral, written, and graphical contexts.

**Prerequisites:** BIOL 463; MICRB 413

PPEM 454: Virus Ecology

3 Credits

Virus ecology describes how viruses interact with their hosts, and how those interactions modulate the hosts’ interactions with their environment. PPEM 454 Virus Ecology (3) In this course students will learn about the interplay among viruses, hosts and the environment. The diversity of viruses, which infect all known life forms, will be explored. The important role viruses play in the ecology of the planet, including carbon cycles, host adaptation to extreme environments, host health or disease, and host evolution will be discussed in depth using specific examples. Students also will learn to critically read the scientific literature. Learning will be assessed through a combination of written and oral assignments and exams.

**Prerequisite:** BIOL 110 or equivalent

PPEM 456: From the Tame to the Wild: The Environments and Ecologies of Microbes

3 Credits

This is a lecture based course that will broaden students’ understanding of the diverse biotic and abiotic interactions relevant to microbes in diverse environments. In particular, this course focuses on ecological interactions between microbes in a common environment or between microbes and their eukaryotic hosts (e.g. plants and animals). In addition to learning about ecological theory as it applies to microbes, students will learn about historical and contemporary approaches to studying microbes in different environments. This will include substantial focus on cutting edge ‘-omics’, microscopic, and direct functional analytical approaches to understand both the distribution of microbial taxa (i.e. who’s there) and what processes they carry out in their natural environments (i.e. what they’re doing). In the latter portions of the class, students will apply the theory and techniques to understanding the ecology of specific environments, including environmental, agricultural, and food environments. The objectives of this course include: provide students with a firm understanding of contemporary microbial ecology and environmental microbiology; conceptually link processes that occur in disparate environments, such as plant roots, termite guts, and cheese rinds; provide students with the language to discuss these concepts and processes; make students familiar with and conversant in ‘omic’ and other cutting edge functional techniques used to study microbes in their natural environments; provide select examples of how humans take advantage of microbial ecology for our benefit (such as suppression of pathogens or promotion of waste decomposition). The course will conclude with a research and writing project where students will review the microbial ecology of a specific environment. This course expects students to have an understanding of basic microbiological concepts.

**Prerequisites:** MICRB 201; MICRB 201H

PPEM 494: RESEARCH PROJECT

1-6 Credits/Maximum of 6

Supervised student activities on research projects identified on an individual or small-group basis.

PPEM 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

PPEM 496H: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Enforced Prerequisite at Enrollment: PLET 222 or Prerequisite or concurrent: EGT 121

PLET 235: Tool Design & Machining  
2 Credits

Study of the methods used to create the tooling used in plastics fabrication and the methods of maintaining tooling. PL ET 235 Tool Design & Machining (2) This course will provide the students with an understanding of the construction methods and materials used in the creation of plastics tooling. Various methods of mold manufacture are introduced along with the fabrication practices needed to permit successful mold operation. The course concludes with a study of the materials used in mold construction and plastics tooling preventative maintenance practices. The course objective is to provide the knowledge needed to properly design parts for manufacturability. Students will also learn how to set up a system to maintain tooling to reduce catastrophic failures. Through the lab portion of this class, the students will obtain hands-on experience in the actual construction methods. This course uses knowledge gained in earlier plastics materials and processing courses to guide tooling design and fabrication decisions.

Enforced Prerequisite at Enrollment: Prerequisite or concurrent: PLET 232

PLET 296: Independent Studies  
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

PLET 304: Plastic Material Properties and Applications  
3 Credits

Synthesis, polymerization, and characterization of thermoplastic and thermoset polymeric materials. PL ET 304 Plastic Material Properties and Applications (3) This course studies the fabrication of polymers and macromolecules. Current commercial techniques are covered in detail and encompass the reactions and processes currently being used in the plastics industry today. Also covered is the technology for creating different grades of polymers by using various fillers, additives, and blends to create variations within the known polymers. This is supplemented by laboratory exercises that draw together theory and practice. Polymer synthesis is a key link between the atoms present before they become a part of a polymer molecule and the molded article, the end produce of the molding operation. The course objective is to establish a basic knowledge of these processes to enable a deeper understanding of the capabilities of molding, designing, and the performance of polymer articles. Students will be able to start with a handful of carbon atoms, a synthesis procedure, and an injection molding machine, and understand what affects the polymer at each stage, rather than being limited to understanding a given molding process. It will allow students to adapt to industrial needs and the push towards a scientific approach to problem solving, rather than acting as traditional molding machine processors. Students will also be able to correlate the polymerization process to the performance derived in plastics processes and molded articles. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40 to 50 students.

Enforced Prerequisite at Enrollment: PLET 206W

PLET 323: Packaging Processes  
3 Credits

In-depth studies and laboratory experiments will be conducted on processes such as blow molding, thermoforming, extrusion, and rotational molding, and other packaging processes. PLET 323 Packaging Processes (3) In this course the student will learn about plastic packaging processes of blow molding, thermoforming, extrusion. Other minor processes will be presented. The course objectives are to develop student proficiencies in identifying the polymer material requirements for each process, in identifying the mold design and construction techniques for each process, and knowing how plastic packaging processes differ from injection molding. The laboratory will include experiments that show the advantages of each process and to develop student competency in running equipment for each process explored. The students shall also develop competency in conducting elementary process troubleshooting for each process. Student competency is assessed by graded lab reports and projects.

Enforced Prerequisite at Enrollment: PLET 227 and PLET 304

PLET 330: Advanced Tooling & Rheology  
4 Credits

Tooling design strategies are developed considering a material's physical and rheological influences on processing and part formation. PL ET 330 Advanced Tooling & Rheology (4) This course is intended to allow the student to develop an understanding of the critical relationship between the physical and rheological properties of plastic materials and their influence upon processing and part formation. The course objective is to establish this relationship since it is the basis of establishing tooling design strategies for optimizing part quality, moldability, and productivity. Upon completing the course, the student will have proficiency in the use of injection molding analysis software (Moldflow) and be able to develop strategies for its efficient and effective application. The software is used as a means to accelerate and enhance the students understanding of the injection molding process. Students will learn how software usage can be interwoven with knowledge of polymer melt rheology, shrinkage, warpage, residual stresses and their relationship to tooling to enable proper process and molded part design. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40 to 50 students.

Enforced Prerequisite at Enrollment: PLET 206W and PLET 227 and PLET 232 and PLET 235 and PHYS 250

PLET 345: Heat Transfer  
2 Credits

Fundamentals of heat transfer including conduction, convection, and radiation. PL ET 345 Heat Transfer (2) The course is intended to allow the student to develop the ability to conceptually evaluate heat transfer problems, and solve practical problems that might be encountered in the plastics industry including those that relate to energy management in plastic materials or processes. The course objectives are accomplished by establishing the concepts of the three principle mechanisms of heat transfer, solving plastics related problems illustrative of each mechanism, and reinforcing theoretical concepts learned through the use of simulation software and hands-on laboratory experiments. During this course students will build upon the knowledge gained in an earlier course in the thermal and fluid sciences. Student competency is assessed by
graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40 to 50 students.

**Enforced Prerequisite at Enrollment:** PLET 366

**PLET 350: Design of Plastic Parts**

4 Credits

Designing plastic parts utilizing CAD, FEA, and CAE technologies for the design and for structural, dimensional, and process evaluation and optimization. PL ET 350 Design of Plastic Parts (4) The educational object of this course is to develop knowledge in the process of designing plastic parts and products. The course focuses on the critical relationship between the part design and the plastic material, tooling and the specific manufacturing methods used to produce the part. Use of CAE technologies are used for enhancing concurrent engineering strategies and evaluating manufacturability of a design. The course develops special design guidelines to accommodate plastic material characteristics and production requirements. The course also addresses issues of assembly and decoration of plastic parts. Upon completing the course students will demonstrate competency in relating how engineering properties of plastic materials and their unique characteristics relate to product design. This includes understanding viscoelasticity and the effects of time, strain, rate and temperature and environment on plastic materials and the product. During this course students will build upon the knowledge gained in previous courses on strength of materials, plastic materials, part and tool design and finite element methods. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40-50 students.

**Enforced Prerequisite at Enrollment:** MCHT213 and PLET232 and PLET304 and PLET330. Prerequisite or concurrent: MET 418

**PLET 366: Fluid and Thermal Sciences**

3 Credits

Fundamentals of thermodynamic principles, fluid statics, and fluid dynamics. PL ET 366 Fluid and Thermal Sciences (3) This course is intended to develop the student's ability to conceptually evaluate thermal or fluid problems, and solve practical problems that might be encountered in the plastics industry. The course objectives are: to introduce the fundamentals of thermodynamic behavior by defining pertinent material properties that define an equilibrium state based on temperature and pressure, to study internal energy, enthalpy, and the specific heats of liquids, solids, and gases, including ideal gas behavior and changes in energy level as a result of phase changes, and to introduce mechanical and electrical work leading to applications of the First Law of Thermodynamics. Other objectives are to study fluid static principles involving submerged body behavior by investigating topics of buoyancy and centers of pressure. Fluid dynamics studies explore the Bernoulli and Energy equations, head losses, and calculation of pump requirements from pressure drop and volumetric flow data. Criteria for determining laminar and turbulent flow are established. Viscosity of fluids and fluid rheology topics are also introduced. Students will apply the lessons learned in a subsequent course on heat transfer. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40 to 50 students.

**Enforced Prerequisite at Enrollment:** MATH 083 and PHYS 250 and PLET 222 and PLET 227. Prerequisite or concurrent: PLET 330

**PLET 380: Introduction to Plastic Medical Devices**

1 Credits

Introduction to plastic medical devices and their manufacture. Also covers the regulatory requirements of plastic medical devices. PL ET 380 Introduction to Plastic Medical Devices (1) This course serves as the introductory course required for the new Certificate in Medical Plastics. It will provide students with an overview of the medical plastics industry. This will be accomplished by providing students with an understanding of the medical device regulatory environment and its impact on medical plastics design, manufacture and material selection.

**Enforced Prerequisite at Enrollment:** PLET 205 and PLET 222

**PLET 397: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.

**PLET 425: Automation for Plastics Processes**

2 Credits

Control methods, sensors, and other hardware used in the manufacture of plastic products.

**PLET 464: Plastics Failure Analysis**

3 Credits

Fundamentals of Plastics Materials Process and Design Failure Analysis. PL ET 464 Plastics Failure Analysis (3) This course is intended to give the student an introduction to failure analysis for plastic articles. Course objectives are to: provide methods for the identification of common failure problems associated with modern molded plastic parts, perform a causal analysis for each failure type, provide an introduction, instruction, and allow operation of several analytical tools used to establish failure mechanisms, and review the relevant polymer physics and chemistry concepts involved in failure analysis. During the course students will be using concepts studied earlier in plastic material properties and applications. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year as a technical elective with an enrollment of 15 to 20 students.

**Enforced Prerequisite at Enrollment:** PLET 304

**PLET 466: Thermoplastic Composites**

3 Credits

This class will explore both well-established and emerging composite plastic systems, including the basic chemistries and driving forces to explain composite material properties from micro to nanoscale composite systems. Microcomposites are discussed in terms of both common commercial materials (Glass/nylon, polypropylene/talc, for examples) as well as for cutting-edge composite systems that are explained through the use of current technical literature. The common theme of chemistry to promote interfacial adhesion is developed for each system. Characterization techniques that are common to composite
Prerequisites: PLET 304
PLET 468: Rapid Commercialization
3 Credits

Techniques to help get plastic products to market quicker and to build solids and surface modeling skills. PL ET 468 Rapid Commercialization (3) The educational objective of this course is to develop the student’s ability in using techniques to reduce the time to design a product and get it into production. The course objectives are to enable students to understand how to evaluate the differing points of view of each group during the concurrent engineering of plastic products and to analyze various rapid prototyping and tooling methods to determine their applicability to plastic products. Several simulations packages will be used to show their use in the preliminary design stages. During the course students will be using concepts studied earlier in plastic part design. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year as a technical elective with an enrollment of 15 to 20 students.

Enforced Prerequisite at Enrollment: PLET 350
PLET 477: Novel and Emerging Technologies
2 Credits

Study of novel and emerging technology in plastics.

Enforced Prerequisite at Enrollment: PLET 323 and PLET 350
PLET 481: Plastic Product Development
3 Credits

This course provides students with an in-depth overview of the integrated new product development process. PL ET 481 Plastic Product Development (3) Current product development trends have moved toward an integrated and interdisciplinary development process that includes team members from all aspects of the corporation. This course serves as an overview of that integrated product development process. Prior to this course, students will have studied methods and processes for the detailed and structural design requirements for plastic components. In this course, the students will be taught how their detailed design process fits into the remainder of the overall product development process. This will be accomplished by traditional lectures on the process and is underscored by a semester long project in which the students will form teams, invent a product idea, and develop that idea to a prototype state. Among the topics addressed are: -Concept development and selection -Working in an interdisciplinary team environment -Gathering and organizing customer needs -Translating customer needs into product specifications -Product development economics -Prototyping methods and purpose -Industrial design -Intellectual property

Enforced Prerequisite at Enrollment: PLET 350

PLET 482: Medical Product Development
1 Credit

This course provides students with medical device development requirements and processes. The course is to be taken in conjunction with PL ET 481 as both courses will utilize a semester project to invent and design a new product. Over the course of the semester students will review the FDA classifications, filing requirements, and recommended practices for medical device development. This knowledge will be applied and practiced through the semester projects. Students will learn techniques for Failure Modes and Effects Analysis and how to properly document and manage product change through the development process. PL ET 482 Medical Product Development (1) This course provides students with medical device development requirements and processes. The course is to be taken in conjunction with PL ET 481 as both courses will utilize a semester project to invent and design a new product. Over the course of the semester students will review the FDA classifications, filing requirements, and recommended practices for medical device development. This knowledge will be applied and practiced through the semester project. Students will learn techniques for Failure Modes and Effects Analysis and how to properly document and manage product change through the development process.

Enforced Prerequisite at Enrollment: PLET 380 and PLET 350 or Concurrent: PLET 481
PLET 483: Plastics in Medical Applications
3 Credits

This course focuses on plastics materials and properties and how they meet the unique medical application and device requirements. PL ET 483 Plastics in Medical Applications (3) This course studies plastics materials in medical applications and devices. The course focuses on the properties that are important to medical devices such as chemical resistance, sterilization and biocompatibility. A broad range of polymers will be reviewed including commodity resins, such as polyolefins, engineering resins such as polycarbonates, acrylics, nylons and advanced polymers including polysulfones, polyetherether ketones and aramids. The synthesis, production and structure property relationships will be studied with particular emphasis on the effect on sterilization, biocompatibility and FDA regulatory requirements. The effect of additives, stabilizers, fillers and blends will also be reviewed.

Enforced Prerequisite at Enrollment: PLET 304 and PLET 380
PLET 484: Medical Manufacturing Methods
3 Credits

This course provides instruction in the methods and practices used in the manufacturing of plastic devices in the medical industry. PL ET 484 Medical Manufacturing Methods (3) This course provides instruction in the methods and practices used in the manufacturing of plastic devices in the medical industry. The course includes both manufacturing and regulatory requirements. A large portion of the class will involve a simulated process validation exercise. The concepts will be introduced in lecture, parts will be manufactured and measured in the processing lab, and data analysis will be completed in a computer lab. Injection molding will be emphasized as the major plastic part production method, but other processes will be used as needed. Clean room requirements, sterilization and material handling, and common assembly methods will also be covered.
The course will provide an introduction to and basic understanding of Polish language. The objective of the course is to provide a comprehensive introduction to Polish language. Students are able to command a functional vocabulary of at least 500 words by end of semester; read basic Polish texts with understanding; engage in simple everyday dialogues; and write in elementary Polish by the end of semester. Adopting the communicative approach, instruction begins with simple in-classroom phrases to enable interaction exclusively in Polish from day one; and proceeds through building situational vocabulary and grammar, as well as activities and authentic materials that put it to immediate use. Students will be introduced to listening, speaking, reading, and writing in the Polish language, with equal emphasis on all the skills. Along with special Polish characters in the alphabet and Polish grammar, basic conversation involving real-life situational dialogues will be presented. Students will be exposed to some aspects of Polish culture via e.g. level-appropriate films and canonical children’s poems. Because learning a new language requires not just regular attendance in class, but also considerable effort and preparation outside the classroom, students will be encouraged to practice vocabulary skills, pronunciation, and grammar on a regular basis as an aid to language acquisition.

Bachelor of Arts: 2nd Foreign/World Language (All)

POL 2: Level One Polish B

4 Credits

The course will build on the basic knowledge of reading, grammar and vocabulary acquired in the introductory course to impart fluency and command over written and oral expression; and to introduce further points of basic grammar and idiomatic usage. Students will practice reading, writing, listening and speaking in Polish through a series of structured exercises involving stories, news, grammar books, songs, games, situational dialogues and role-playing in an interactive classroom environment in which everyone feels comfortable to practice their language skills without hesitation. The objective of the course is to impart functional literacy to students: at the end of the semester, students should be able to read and understand instructions in Polish, carry on everyday conversations such as those involving ordering food, seeking directions, handling a medical emergency and common social situations. Students should be able to participate with understanding in conversations involving idiomatic expressions. Accordingly, an important element of classroom practice is skill with listening comprehension. The course will emphasize the progress on students' oral and written language competencies through constant practice.

Recommended Preparations: Consultation with instructor and prior study of elementary Polish is recommended.

Bachelor of Arts: 2nd Foreign/World Language (All)

POL 3: Level Two Polish A

4 Credits

The course lays equal emphasis on reading, writing, listening and speaking. Nuanced points of grammar and syntax are introduced. More complex reading and cultural exposure includes folk tales, poems, and essays selected from Polish literature and media. Writing and oral assignments focus on the use of culturally appropriate language, in a wide range of expressive settings, ranging from everyday conversation to more formal persuasive or descriptive essays. To encourage oral expression of ideas, class activities and debates are organized. Listening comprehension exercises introduce different styles of speaking popular in media and news.

Recommended Preparations: Equivalent of one year of Polish study - recommended consultation with instructor

Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Foreign/World Lang (12th Unit)

POL 197: Special topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.
This course examines the American democracy by looking at the dynamic interaction between the founding ideals of the United States government, the institutions established by the Constitution, and the ongoing contest for power within and through those institutions. Students will learn how Congress, the Presidency and the Supreme Court shape law and public policy; how the electoral process influences the decisions of voters and political parties; and how the media, interest groups, political action committees, and public opinion impact political outcomes. Through these topics the course takes up questions such as, Who has a voice in American politics and why are some political actors more influential than others? Do the electoral and policy making processes uphold democratic values? How responsive is the United States government to public wants? How does the media influence citizens¿ political preferences and behavior? The course both provides a foundation for further study of politics and equips students with the capacity to act politically on their own behalf and in concert with their communities. Students are empowered to interpret and pursue their interests, rights, and opportunities within the US political system in relation to the values of democratic equality and liberty the system was organized to secure, and to influence the process through which policies that shape their lives in critical ways are made. The course supports honors students in their progress toward independent research by focusing on what political scientists studying American politics do, the types of questions they ask, and the methods they employ to answer those questions. Engagement with scholarly literature prepares students to draw on existing research to frame their own research questions about American politics.

PLSC 2: American Public Policy

3 Credits

Examination of selected areas of public policy in America. Analysis of policy content, alternatives, and impact.

Prerequisite: PLSC001
Bachelor of Arts: Social and Behavioral Sciences

PLSC 3: Comparing Politics around the Globe

3 Credits

This course examines the variety of ways that people seek and wield power around the world. Through cross national comparison and individual country analysis, the course considers different forms of democratic and authoritarian regimes, sources of stability and change in different regime types, and the relationship between cultural, economic, and social factors and political processes. Students are introduced to the central questions in comparative politics, including What is the state and where did it come from? What is democracy? Why are some countries democracies whereas others are dictatorships? Does the kind of regime a country has affect the prosperity and well-being of its citizens? Why are ethnic groups politicized in some countries but not in others? Why do some countries have many parties whereas some have only a few? How do governments form, and what determines the type of government that takes office? What are the material and normative implications associated with different types of government?

The course examines competing answers to questions such as these and evaluates the explanations for their logical consistency and empirical accuracy. Students learn to compare political phenomena across disparate contexts and how to use such comparisons to test claims about the political world. In doing so, they learn about the similarities and differences among countries and a range of approaches to analyzing the political world. The course supports honors students in their progress toward independent research by focusing on what political scientists studying Comparative Politics do, the types of questions they ask, and the methods they employ to answer those questions, including game theory and statistical analysis. Engagement with scholarly literature prepares students to draw on existing research to frame their own research questions about Comparative Politics.

PLSC 7N: Contemporary Political Ideologies

3 Credits

This course provides a comparative analysis of the beliefs, values and ideas that constitute the major political ideologies in contemporary politics, such as liberalism, conservatism, socialism, anarchism, fascism and environmentalism. The course focuses on ideologies as traditions of thought developed through contentious political action with attention both to the unique features of each ideology and the ways that they overlap in theory and practice. It considers what ideologies are, what they do, and how we can study them. Each ideology is examined with respect to its historical origin; the major ideas, thinkers, events and political activists associated with its genesis; and how it has developed and changed in response to new circumstances. Students learn to think about ideologies as distinct from parties, regimes and political actors, and to establish criteria for classifying them in order to observe their influence on and through political action and organization. As the belief systems that underlie or justify political action, ideologies include views about human nature, history, and the scope and purpose of government. Ideologies implicitly or explicitly suggest an ideal form of socio-political organization that articulates who owes what to whom and establishes criteria for evaluating the status quo. The course will investigate how different ideologies understand the political community, the role of government, access to knowledge, institutional legitimacy and change. Students will learn to identify the value commitments various ideologies entail, as well as how those values shape the perception of political problems and the actions they necessitate.

PLSC 10: Scientific Study of Politics

3 Credits

This course introduces students to both the scientific study of politics, and the way that a scientific approach to political phenomena advances our understanding of political actors, events, processes, and institutions. It provides information about the elements of scientific reasoning, and introduces systematic approaches to studying politics through the lens of important puzzles and questions about international relations, comparative politics, and American politics. Students learn about relevant data sources, as well as how to interpret data appearing in graphs and tables. The course consists of three parts. The first part of the course offers an overview of the elements of scientific inquiry including causal explanation, empirical verification, theories and hypotheses, and dependent and independent variables. The second part of the course examines dominant approaches to studying politics, including experiments; observational methods such as surveys and elite interviewing; formal models; archival research; and computational methods such as text analysis. Each approach will be presented using a similar format. Students will be introduced to the approach through a combination of lectures and assigned readings. They will then look at and learn about data sources suited to and consider questions or puzzles that can be addressed by each approach. Careers that make use of the analytic skills associated with each approach also will be discussed. The final part of the course considers the benefits of scientific approaches over less systematic analysis and the challenges inherent in trying to explain complex political behavior, institutions, and events. By the end of the course, students will understand what it means to ‘do’ political science: i.e., to ask questions about political phenomena, form theories related to those questions, collect data, pick an approach to analyze the data, and draw inferences from the analysis.

PLSC 14: International Relations

3 Credits

What causes war and what makes it stop? When is international aid or military intervention effective? Why are some states wealthy and others plagued by poverty and underdevelopment? How does international trade affect developing countries? What can and should states do to protect human rights around the world? This course provides students with the background and conceptual tools to answer these and similar questions. It teaches students to think systematically about the complex relationships that constitute world politics and to critically engage prevailing academic and policy arguments about global affairs. Students are introduced to the international political system as the arena in which states develop foreign policies of cooperation and competition with other states to pursue power, enhance security and develop economically. They explore how various non-state actors (NGOs, social movements, corporations) and international governmental organizations (UN, IMF, World Bank, WHO) influence interactions among states and between states and their citizens in matters such as interstate and civil wars, terrorism, ethnic conflict, human rights, inequality, global trade, resource scarcity and climate change. The course supports honors students in their progress toward independent research by focusing on what political scientists studying International Relations do, the types of questions they ask, and the methods they employ to answer those questions, including game theory, statistical analysis and historical and contemporary case studies. Engagement with scholarly literature prepares student to draw on existing research to frame their own research questions about international relations.

PLSC 17N: Introduction to Political Theory

3 Credits

This course focuses on the concepts, principles and values used to explain, justify and challenge the organization and use of collective power. It introduces the field of political theory as an intellectual tradition that combines reflection on what political life is and what it should accomplish with investigation of the values manifest through existing political institutions and how those institutions can be best organized to achieve desired outcomes. Through analysis of selected works of major thinkers, beginning with the Ancient Greeks and extending through the contemporary period, students consider questions and problems that philosophers, political leaders and citizens have grappled with for millennia: What is a political community? What is justice? Who is included in the realm of justice? What is the best form of government? What do I owe to the state? What does the state owe to me? What is the proper purpose and scope of government? Students learn to critically
engage arguments in canonical texts to understand both how they contributed to debates in their own time and how subsequent theorists and activists have interpreted them to articulate and challenge various forms of exclusion and oppression. Ultimately, students are invited to see political theory as a conversation across time to clarify concepts that are fundamental to the study and practice of politics yet remain contested, such as freedom, equality, democracy and justice, and to distinguish between the legitimate purposes of government and the arbitrary use of power. Through the course students will learn to employ and evaluate political concepts with care and precision so they can participate in that conversation productively as democratic citizens as well as in further study of political theory. Students may not get credit for both PLSC 17N and PLSC 17W

Writing Across the Curriculum

PLSC 60: Society and Cultures in Modern Israel

3 Credits

An introduction to the society and cultures of the State of Israel from 1948 to the present.

Cross-listed with: ANTH 60, JST 60, SOC 60
International Cultures (IL)
General Education: Social and Behavioral Scien (GS)

PLSC 83: First-Year Seminar in Political Science

3 Credits

Exploration of current topics of interest in political science, international relations, and/or political theory. PL SC 083S First-Year Seminar in Political Science (3) (GS,FYS)(BA) This course meets the Bachelor of Arts degree requirements. Every first-year seminar in Political Science focuses on several of the major questions of the field. Many of these questions concern the constitutional arrangements of governments: What is it that we want governments to do, and what is the ideal government arrangement? Why does every nation (and every state and city) have somewhat different constitutional provisions for legislation, judicial, military and executive functions of government? What can we learn from careful comparisons of different types of government? What is unique to the American system and what are the consequences of this uniqueness? Other questions concern power. To what extent do wealthy individuals and wealthy organizations have disproportionate power in society? Is this appropriate or not? What is the impact of governmental attempts to limit the influence of the wealthy? We are also very much interested in the international system: What types of foreign policies and diplomatic strategies reduce the likelihood of war? What is the role of international organizations (such as the UN or World Bank) and multinational corporations in shaping conflicts between nations? Finally, we are interested in ordinary citizens: Do citizens know enough to formulate rational opinions on public issues? Why are many citizens apathetic? What motivates citizens to support one candidate over another or to favor particular policies and philosophies? Each first-year seminar will select a special topic of interest and use that topic to explore a subset of these questions in order to provide a challenging introduction to political science. In the course of doing so, each first-year seminar in political science will also introduce students to specialized materials (such as government documents), library resources, and appropriate electronic media. In addition, each seminar will emphasize the standards of evidence, logic, and critical thinking required to develop effective and persuasive reports and oral presentations. Students will write essay exams and one or more written reports on the relevant topic of their own choices. Class participation is required. The course fulfills both a first-year seminar and a general education or Bachelor of Arts social/behavioral science requirement. The course will be offered three times per year with a maximum of 20 seats per offering. In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them, including the opportunity to develop
PLSC 90: Introduction to Security
3 Credits

The study of security issues is more critical than ever, considering a series of global trends. Those reach from violent radicalization to arctic transformation, as well as technology trends. All of those have an impact on security in our daily lives, in the public sector, and in the private sector. Together, both states and individuals are confronted with many pressing and often competing local, national, and global security challenges that demand thoughtful responses and solutions. Particularly challenging is the need to put in place security measures while ensuring that they do not infringe on the values they aim to protect. The multifaceted security crises of our time is rooted in a broad spectrum of hazards. It among other things stretches across lone wolf terrorists, natural disasters, public health emergencies, transnational organized crime, and cyber attacks; and it includes global counterterrorism, counterproliferation, and environmental change. All of those represent significant problems facing our world today. At the same time, they provide opportunities for us to bring about changes that will significantly increase the ongoing quality of life around the world. In order to do so, it is essential to develop analytical skills for risk assessment, policy analysis and strategy development. Critical thinking skills are also crucial since we need to be able to identify security gaps, unreasonable securitization trends, and point out fallacies of reasoning and misrepresentation of facts that may occur when responding to security threats. In this course, we will review the historical evolution of security studies, national and international security policies and strategies, human security and security management in business and industry. Further, in the rapidly changing world of security studies, it is important to understand the critical differences between concepts like strategic security, counterterrorism, protection, intelligence, homeland security, criminal justice, conflict studies, emergency management, threat assessment, human security, crisis management, disaster management, and related terms. Based on this, students will learn how security issues relate to their chosen academic discipline and professional goals. Using real-world examples, students will develop understanding of the academic, historical, and technological evolutions that gave rise to the field of security studies, and go in-depth to examine the main areas in which security strategists, analysts, and practitioners work.

PLSC 111: Debating the Purpose of Government
3 Credits

Students will become acquainted with a variety of political theories and debate their usefulness in considering contemporary political controversies in the US. and another country. PLSC 111 Debating the Purpose of Government (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. Although governments must always attend to urgent matters that cannot be put off, government attention is, and perhaps should be, directed as well toward matters that are of fundamental importance. However, there is substantial disagreement about what those matters are. In this course, through brief summarizing readings and through lectures, students will encounter the arguments of various political philosophers making the case that one or another purpose is most essential to government. Among the candidates for the status of primary purpose of government will be civic and moral education, the defense of life and property, the dismantling of the economic foundations of inequality, and the institution of justice in accordance with universal moral principles. The compatibility of the various conceptions of the purpose of government with the experiences and aspirations of women will receive special attention. After a brief exposure to each perspective, teams of two students each will research and debate the pros and cons of each perspective in light of what it can contribute to our understanding of contemporary political events and controversies (if there are more than twenty-six students enrolled, some time will be taken from lectures to accommodate debates). Each student will take a turn as debater and a turn at researching, composing, and organizing the content of the team's opening statement. Approximately twenty minutes after each debate will be allocated to questions and comments from students who were not part of either team that day.

PLSC 112N: Ethics in Citizenship, Politics, and Government
3 Credits

This course meets the Bachelor of Arts degree requirements. It is often said that politics is a dirty business, meaning that unethical behavior is prevalent in politics. But this is often said with a twinge of disappointment, sometimes with bitterness or anger. We wish that it were not so. One part of an effort to improve the ethical character of politics is to strive for a clear understanding of what ethical political action is. This course endeavors to arrive at that understanding by considering some of the most profound and influential ways of understanding ethical action. One example is that which is derived from Aristotle and supplemented by Martha Nussbaum. Another example is that which is derived from the writings of Immanuel Kant. We will use perspectives written at this level of generality in the analysis of detailed case studies of ethical choices made by citizens, government employees, and elected officials.

PLSC 114Z: Winning Political Support Through Persuasion
3 Credits/Maximum of 3

The purposes of this course are to introduce students to the comparative study of political systems, some of their parts, and the functioning of those parts, and to develop a capacity for effective, ethical citizenship. Real-world attempts to convince various audiences will be analyzed with respect to their appeals to the emotions of their respective audiences, often through framing the candidacy or policy under consideration in ways intended to stimulate fear, hope, or anxiety in order to command the attention of audiences. The use of words, other symbols, and non-verbal stimuli with strong emotional and normative content will be highlighted. The class will also evaluate efforts to establish credibility with audiences through references to endorsements, demonstrations or claims of expertise, goodwill, and good sense. Lastly, the logical validity of inferences and deductions made in the attempts to convince will be considered so that flattery, manipulation, bargaining, deception, and intimidation can be distinguished from genuine persuasion. Materials presented in Philosophy 10 (GH), 'Critical Thinking,' to which PLSC 114 is linked, will provide students with the tools to do this. So that students might see how characterizations of attempts to convince might be placed into a provisional context, the study is comparative. It will look at attempts in the U.S. as well as some other country. In general, so that the attempts at winning over audiences might be as comparable and as comprehensible as possible, the issue should be as similar as possible and the other country should be Anglophone. Although systems of elections and governance and controversial issues inevitably vary within and between countries, it is possible to find elections and policy controversies with sufficient similarities to make cross-national comparisons of attempts at convincing their respective audiences a fruitful exercise. For example, one might build the course around the televised debates and campaign ads for the mayoral elections in Vancouver and Seattle and the efforts to generate support and opposition to oil pipelines in the two countries. By looking at the different strategies used in attempts to convince elites, the citizenry and parts of the citizenry in the two countries, it is possible to raise questions about the workings of the political systems in the two countries. Specifically, students can examine some of the ways that historical geopolitical, constitutional, economic, and demographic differences between and within the two countries are manifested in the political processes of the two countries. By leading students to consider such questions, this course can induce them to undertake further study that will equip them with the methodological tools to investigate these issues in greater depth. Moreover, by providing students with the basic outlines of well-supported valid inferences and challenging them to detect of the most common informal fallacies in efforts to convince and create an outline for their own attempt at political persuasion, PLSC 114 (GS) will help build capabilities that are necessary for responsible and effective and ethical citizenship.

3 Credits
Pennsylvania political processes; executive, legislative, judicial decision-making, and electoral behavior; selected public policies.

Bachelor of Arts: Social and Behavioral Sciences

PLSC 132: The Politics of International Intolerance
3 Credits
Introductory course emphasizing psychological, historical, and political aspects of global intolerance towards minorities. PLSC 132 The Politics of International Intolerance (3) (GS;IL)(BA) This course meets the Bachelor of Arts degree requirements. PLSC 132 is an introductory survey concerning the social phenomenon of ‘intolerance’ i.e., attitudes or behaviors that seek to exclude or eliminate groups perceived to be different. Here ‘differences’ encompasses such features as nationality, belief, race, gender, or sexual orientation. Often these aspects of the human condition are the targets of majority discrimination or collective violence. The course presumes the following assumptions: (1) Intolerant attitudes are not just ‘another point of view’ but also an utterly destructive form of behavior inimical to civilized values. (2) Few, if any, societies have existed without some forms of intolerance. (3) The causes of intolerance are usually multi-causal (economic, political, and psychological) and are understood through social science. (4) ‘Politics’ implies both the ideology and organization of intolerant movements and the relation of such movements to public authorities. Students should expect fairly extensive readings involving primary source material, analyses of intolerant behavior drawn from different disciplines, and comparison of intolerance phenomena from a global perspective.

PLSC 135: The Politics of the Ecological Crisis
3 Credits
The political implications of the increasing scarcity of many of the world’s resources. PL SC (S T S) 135 The Politics of the Ecological Crisis (3) (GS)(BA) This course meets the Bachelor of Arts degree requirements. ‘The Politics of Scarcity’ examines some ‘big’ questions about the prospects for humans in general and democracy in the United States in particular. Much of the reading assumes that our civilization faces the twin problems of increasingly serious shortages of resources and a growing ecological crisis that threatens the basis of life. Further, it argues that these ‘twin crises’ feed upon each other, and that together they pose serious short and long run challenges to survival. Some readings attribute these problems to the dominant values that characterize modern Western society. The course does consider some dissents from this perspective, arguments that things will be just fine. However, it concentrates on problems and predictions of trouble. Thus, the class does not claim to present an evenly balanced assessment. Rather, it recognizes that most of what we learn, read, and see supports the status quo and assumes our civilization and energy-dependent way of life will continue. Consequently it makes sense to emphasize the less frequently...
argued position that we may be headed for disaster. The class aspires to appeal to students regardless of major or college – to scientists, engineers, students of the humanities, and even economists and political scientists. It fulfills the University-wide general education requirement in Social Science. Although it discusses the role of politics in general and the role of the American political system in particular in discussing the ‘twin crises,’ it mostly grapples with fundamental questions of value that underlie and guide the play of power in our political system and with how the massive changes now taking place globally both affect and are affected by politics.

PLSC 140: Contemporary Controversies in International Relations  
3 Credits

Contemporary issues of international security presented rigorously using analytical tools of international relations and political science. PL SC 140 Contemporary Controversies in International Relations (3) (GS) PL SC 140 investigates international security in the post-Cold War world. It does so by focusing on critical, ongoing, international conflicts and problems. These include the rise of China, resurgence of Russia, and international terrorism. After a brief introduction to key theories and tools of International Relations and some historical context, we will focus on the division of the post-Cold War world into zones of peace (characterized by liberal, free market democracies) and turmoil (characterized by ethnonationalist, religious, and territorial conflict). The course will also cover a range of related security topics including terrorism, the proliferation of weapons of mass destruction, and instability in the developing world.

General Education: Social and Behavioral Scien (GS)

PLSC 155: Understanding Tyranny  
3 Credits

Exploration of the rationales, methods, and consequences of highly repressive political regimes through novels, films, and memoirs.

Bachelor of Arts: Social and Behavioral Sciences

PLSC 177N: Politics and Government in Washington DC  
1-3 Credits

The course centers on a Spring Break trip to Washington DC, with students meeting on campus before and after the trip. PLSC 177N Politics and Government in Washington DC (1-3) This course centers on a Spring Break trip to Washington DC, where students will meet with their members of Congress, get briefings at foreign embassies and international organizations, meet with leaders of federal government agencies, participate in seminars led by interest groups and political party officials and consultants, and tour government offices and facilities. The class will meet before the trip to discuss the history, culture, and context of politics and government in the capital city of the United States and will continue to meet after the trip so that students can analyze what they have learned about politics and government in Washington as a result of their experiences during the trip. The course is open to and appropriate for students in all majors.

Bachelor of Arts: Humanities

PLSC 178 Organized Crime, Law, and Politics (3) This course will address laws, politics, and policies related to organized crime issues. PL SC 178 Organized Crime, Law, and Politics (3) This course addresses the role and impact of organized crime in US laws, politics, and policies over the past century, with particular attention to modern organized crime groups. The course will look at how organized crime syndicates influenced and often cooperated with some political leaders and law enforcement agencies in the twentieth century, while other political leaders became famous for prosecutions of organized crime figures. Modern legal tools in the fight against organized crime will be discussed, such as RICO and witness protection programs. And the course will look at many examples of modern organized crime groups that originated in Europe, Asia, or Latin America, but which now have an impact on US society, and the policies that attempt to limit the influence of modern organized crime. Included in the examination of modern organized crime will be the connection to modern terrorist activities.

PLSC 183N: The Cold War in Literature, Politics, and History  
3 Credits

The course will focus on the history and politics of the Cold War and its depiction in literature and film, especially in British and American literature, but also in that of other countries. Students will read political science and history texts, novels, short stories, and poetry, and view films. Students will analyze the reasons that the Cold War has been and continues to be a major inspiration for literary production and a transformative influence on literary style. Students will be encouraged to explore alternative methodologies for research on cold war topics including the use of primary sources, for ex. documents from the intelligence community archives that have since been declassified. In addition to a class field trip, students will be encouraged to make additional site visits to appropriate institutions in U.S. intelligence history. They’ll be making a series of visits to relevant sites.

PLSC 200N: Government and Politics of Europe
3 Credits

This course introduces students to the politics and governing institutions of European countries through an historical and comparative perspective. It examines the development of the political systems in Europe during the 20th Century by applying the tools of political science to significant historical events, such as the rise of Nazism, transitions to democracy in Southern Europe, and the collapse of state socialism in Eastern Europe. Students will learn the structure, rules and key actors in different contemporary systems across Europe and in the European Union. They will explore how the design of democratic institutions impacts political representation and a government’s accountability to citizens. They will discuss theories of voting, the development of the party system, and non-electoral politics such as protest and social movements. Cross national comparisons enable students to understand differences in voting patterns, types and consequences of collective action, social and economic policy, orientation toward Europe, and business and legal environments among European countries as well as to see the political issues that are relevant to Europe as a whole. The course is a good choice for any student preparing to live and work in a globally interconnected world. It will be particularly appealing to students interested in the organization, development and breakdown of democratic systems and politics – including US politics as a fruitful point of comparison. For majors, the specific focus on the European context is an effective follow up to PLSC 3, PLSC 14 or PLSC 7.

PLSC 209: Democratic Leadership
1 Credits

Penn State has a special opportunity to create new leaders who learn deliberative approaches to politics and public life. This one-credit course provides a background for this approach to democratic leadership, and it also prepares students for the Nevins Fellows paid internship program. Those who complete this course will have first priority when awarding these internships each year. The centerpiece of this course are day-long workshops that introduce students to effective civic leaders in government or the non-profit sector. Bracketing these workshops are a handful of seminars, which introduce ideas, discuss reading assignments, and reflect on the workshops. In addition to short reaction papers, students will produce a narrative essay at the end of the course that describes how they could see themselves advancing democracy in the United States (or elsewhere) and what kind of internship experience will help them prepare for such a career. For those who opt to seek an internship, this essay will supplement their formal application. Credit for the course requires attendance at every class meeting and workshop, or equivalent makeup assignments, if permitted.

PLSC 210N: Rights in America
3 Credits

This course is an introduction to the emergence and enforcement of rights in the United States. The course provides an overview of how rights have been codified into law and interpreted by the courts. The primary focus is how and why the conception of rights has changed over time. Emphasis is placed on the rights of groups that were denied equal citizenship when the Constitution was ratified. We will examine how these marginalized groups have engaged in a continual struggle for basic rights since the American founding. The course begins with an overview of different types of rights and the role of the legal system in articulating and enforcing them. Students are introduced to debates about the sources of rights, including the implications of conceptions of rights as grounded in natural law and as arising from positive law. They look specifically at the role of rights in the founding documents of United States and how civil rights are interpreted through pivotal Supreme Court cases as ascribing - or denying - particular powers and responsibilities to individuals and groups. The second section of the course focuses on the rights of African Americans and women. It progresses chronologically from slavery to the modern civil rights movement, from coverture to women’s rights. Particular attention is given to the NAACP’s campaign against racial discrimination in housing, education, and in the criminal justice system. The final part of the course emphasizes campaigns for rights recognition in modern times, including LGBTQ rights and disability rights. The course concludes with a discussion of how context impacts rights, including students' rights and rights during wartime, and examination of the potential and limitations of rights as a basis for political protection. Throughout the course students are introduced to the interdependent political, legal and philosophical dimension of rights and how rights in the United States have come to be recognized and enforced through political action, legal codification, and judicial interpretation.

The course concludes with a discussion of how context impacts rights, including students' rights and rights during wartime, and examination of the potential and limitations of rights as a basis for political protection. Throughout the course students are introduced to the interdependent political, legal and philosophical dimension of rights and how rights in the United States have come to be recognized and enforced through political action, legal codification, and judicial interpretation. As an honors course, PLSC 210H provides Schreyer Scholars and aspiring Paterno Fellows with a rigorous and intellectually enriching exploration of the multiple dimensions of rights and the critical role of the struggles for rights in American history. The course material is developed through analysis and discussion of primary texts and scholarly research. The small class size and emphasis on participation and written assignments give students the opportunity for enhanced feedback to refine their reasoning skills, and a sustained experience of the benefits of collaboration, argument, and critical feedback in generating and refining ideas.

PLSC 220: Politics of the Developing World

3 Credits

The developing world refers to countries with a weak or emerging industrial economy; low per capita income; and low scores on measures of human well-being such as health, education, and human rights security. The developing world includes countries in Africa, Asia, Latin America, and the Middle East. It encompasses a large portion of the world's population and considerable diversity with respect to economic development, political systems, and social conditions. Developing countries often share a history of colonization and problems of poverty, inequality, authoritarianism, corruption, and political instability. This course focuses on the common patterns and differences among these countries in an effort to answer questions such as, Why do some countries develop robust economies and stable democracies while others do not? What is the connection between economic development and democracy? How do ethnic, religious, and cultural divisions interact with development? The course begins by introducing different ways of conceptualizing development. It describes the most prominent explanations of the differences between developing and developed countries and among developing countries. Students will learn the key domestic and international institutions and processes shaping political and economic development. They will explore the sources and consequences of democratization and authoritarianism, and consider the relationship between development and factors such as religion, ethnicity, and gender.

PLSC 222N: Science and Politics of the Female Athlete

3 Credits

The purpose of this course is to explore gender differences in sport and politics that emerge from physiology, culture, history, politics, and policy. The engagement of women in sport has unique physiological considerations and ethical dilemmas as well as a rich history of defining moments and important ties to feminism and politics. In this course, students will learn how physiology differences affect female athletic performance and the effects of exercise on the female body, as well as how cultural, historical, and political forces shaped women's participation in sport. Students will also see how similar historical, cultural, and political forces affect women's involvement in politics. Combined, students will understand how similar forces shape gender norms and participation two different, yet related, aspects of society. Additionally, students will learn about the push for evidence-based policymaking and apply that knowledge to topics including doping, pregnancy, and gender verification. Students will integrate physiology and policy in a final assignment advocating for evidence-based sport policy. They will also educate their peers through a public education project.

PLSC 223N: Ethnic and Racial Politics

3 Credits

This course explores the roles race and ethnicity play in politics and government. Students will learn how social groups organize to achieve political goals, how and why opposition to those goals arises in plural societies, and what policies governments can pursue to defuse tensions between groups. Students will be introduced to research explaining the historical and cultural basis of ethnic identities. Additionally, students will examine and compare case studies of political disputes that arise when groups differentiate themselves from one another. Ethnic and racial politics in the United States will be compared to ethnic and racial politics in other countries, such as Canada, Indonesia, Bosnia, Switzerland, Rwanda, and South Africa, with attention to political movements and government policies. The course will also explore the complex relationship between government and social groups by looking at immigration policy, the role of ethnic groups in shaping foreign policy, and the legacy of settlement and conquest. Through individual cases and cross national comparison, students will critically assess the sources of inter-group conflict, coexistence, and integration to identify best practices in order to achieve peaceful and inclusive plural societies. The course draws upon resources from a variety of disciplines, including political science, anthropology, sociology, economics, history, linguistics, and religious studies.

PLSC 230: American Political Campaigns and Elections

3 Credits

Campaigns and elections are the mechanisms used to place people into office in American government. Electoral outcomes are the product of rules that govern who can run and participate in voting, the choices made by candidates and their campaigns, and the individual decisions rendered by voters at the ballot box. This course explores each of these items to provide a comprehensive understanding of how campaigns and elections operate in the United States. The topics covered include how candidates are selected and elected, ballot propositions, election laws and administration, how voters choose among candidates, campaign strategies and advertising, campaign fundraising and spending, and proposed reforms to the American election process. Students are introduced to different types of election systems in the United States and in democratic countries around the world. They will discuss alternatives to the election systems currently used in Pennsylvania and in most places in the United States. The electoral college method of selecting a president will be examined in depth. Various laws that either make it easier or more difficult to vote will be addressed. Students will examine some recent examples of the ballot initiative process and discuss its role in democratic governance. A substantial portion of the course will address which political parties various voter groups tend to prefer and why, how party bases have changed in American history, and why parties other than Democrats and Republicans have had limited success in the past century. Key components of campaign strategies and how candidates raise money, as well as famous political advertisements, will be presented.

PLSC 267N: Government and Politics of the Middle East

3 Credits

This course provides an introductory overview of the politics of the Middle East. It introduces students to the political development of Middle Eastern countries and the construction of the Middle Eastern state system through a historical examination of the period of Islamic Empires through Colonialism and Independence. It discusses the major political ideological factors that have influenced political development in the Middle East. It examines the political economy of Middle Eastern states as well as the political economy of development of the region. The course studies the politics of gender, ethnicity and other identities in the region. It also covers major political conflicts within the Middle East and between Middle Eastern countries and the outside world.

PLSC 290N: Comparative Violence: Political and Criminological Perspectives

3 Credits

This course will cater to the interests of anyone who has ever asked oneself: what are the origins of individual and mass violence and why some parts of the world or one's own country have more of it than others? This course is designed to critically approach this question, based on the broad, cross-disciplinary perspective of security research and new security studies. This course will enable students to understand the distinctions and overlaps between political and criminal violence, analyze the levels from individual to mass violent behaviors, and assess theoretical approaches to studying violence. Students will engage in comparative exploration of different disciplinary perspectives on the origins and types of violent behaviors, including political science, criminal justice, international relations, and others. The course will provide the critical basis (theoretical and empirical) for students to evaluate the puzzle from multiple angles.

PLSC 291: Introduction to Peace and Conflict Studies
3 Credits
This course is an examination of how human beings get into and out of violent conflicts, and how conflicts transform. It sizes up the costs of war, examines the processes and challenges of peace, and reflects on the characteristics of human conflicts at all levels. The course is interdisciplinary, drawing together perspectives from political science, global and international studies, cultural anthropology, psychology, sociology, economics, military history, war game theory, and studies of literature and expressive culture. Course modules engage with diplomacy, nonviolence, failed states, ethnic struggle, gender mainstreaming, psychology and sociology of human aggression, economics of war and peace, globalization and conflict, and cyber warfare.

PLSC 306: Senior Thesis Writing Workshop
1-3 Credits/Maximum of 3
This seminar supports the writing and editing of senior honors theses. PL SC 306 Honors Senior Thesis Writing Workshop (1-3)(BA) This course meets the Bachelor of Arts degree requirements. This is a workshop for honors students in their senior year writing their thesis in political science. There are no assigned readings or written assignments outside of those necessary for the completion of your thesis. Participants are expected to make progress on their own thesis and to contribute to the collaborative enterprise of discussing thesis progress and problems while critiquing one another’s work. Each participant is expected to make progress on their thesis, to collectively discuss and consider the research process during workshop sessions, and come prepared to offer useful feedback and criticism on other participants’ research.

Bachelor of Arts: Social and Behavioral Sciences

Honors

PLSC 308: Introduction to Political Research
3 Credits
Introduction to conceptualization, research design, and measurement in political research. PL SC 308 Introduction to Political Research (3) This course introduces students to the research process in political science. The course can be taken by itself or as the first in a two course sequence with PL SC 309. It is intended to give political science majors the skills needed to conduct research in political science, or in related fields such as public policy. The course introduces students to the scientific approach to accumulating knowledge, it examines conceptual and theoretical thinking about politics (e.g. understanding what concepts, variables and hypotheses are), it covers different methods of collecting social science data (interviews, surveys, observation, experiments, analysis of documents, etc.) and it provides an introduction to the interpretation of that data. Ethical issues in research are discussed, and students are also introduced to basic statistical concepts. The course typically includes multiple take home and/or in-class assignments that require students to utilize different data collection methods and practice the generation and interpretation of those data.

Prerequisite: any 3 credits in Political Science

PLSC 309: Quantitative Political Analysis
3 Credits
Data analysis and statistical applications in political research, including data processing; inferential statistics; contingency analysis; correlation and regression; multivariate analysis. PL SC 309 Quantitative Political Analysis (3) This course introduces students to the basic statistical techniques used to study politics quantitatively. It can be taken by itself or as the second course in a two course sequence with PL SC 308. It is required for all Liberal Arts Fellows. Students in 309 learn about developing questions suited to empirical research; constructing hypotheses; measuring political concepts; and conducting basic univariate and multivariate analyses. The course includes sections on the basic principles of probability, sampling, and statistical inference so that students can understand and implement statistical techniques for describing and explaining political phenomena. There is also extensive coverage of the use and application of various statistical techniques. Exercises both in and out of class will require students to engage with
PLSC 397: Special Topics
1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor
Bachelor of Arts: Social and Behavioral Sciences

PLSC 398: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)

PLSC 403: The Legislative Process
3 Credits

Analysis of the policy process within the legislative system; the effects of environmental factors on policy alternatives and legislative decision making.

**Prerequisite:** PL SC001 or PL SC003
Bachelor of Arts: Social and Behavioral Sciences

PLSC 404: Analyzing Public Policy in the American States
3 Credits

This course provides students with the tools to empirically evaluate policy proposals and outcomes in the American states. PL SC 404 Analyzing Public Policy in the American States (3) Developing public policies is the proximate goal of any government. In the United States national, state, and local lawmakers steeped in their own traditions, procedures, and political environments establish rules that determine their citizen's quality of life. In the states specifically, laws affect citizens's access to and their ability to afford an education; the quality of the roads they travel on; the wages they earn; whether and to what extent they qualify for subsidized health care; how they cast their ballot in elections; and myriad other aspects of their lives. This course focuses on policymaking in the American states and how those policies can be evaluated using social science methods. The course begins with a discussion of what makes states distinct from one another & their populations, governmental institutions, and political values. The focus then shifts to how statistical techniques can be used to describe variation in state policy; to develop causal arguments to explain variation; and to assess the efficacy and value of different approaches to the same social problems. Students learn how to measure and gather data relevant to public policy debates, to describe and categorize policy, to model policy outcomes, and to draw conclusions about alternative approaches to solving the policy problems being addressed. Students then apply this knowledge to major policy debates in state government. The course concludes by with an exploration of the ethical implications of using data to make policy decisions and with attention to how technical and statistical information can be effectively communicated to professional and nonprofessional audiences. Students are required to have an understanding of introductory statistics (equivalent to the knowledge they would gain from PL SC 309 or STAT 200) prior to taking this course.

**Prerequisite:** ANY 3 CREDITS IN POLITICAL SCIENCE
Bachelor of Arts: Social and Behavioral Sciences
Honors

PLSC 399: Foreign Studies
1-9 Credits/Maximum of 9

PLSC 405H: The American Presidency
3 Credits

An examination of the selection methods for, and powers of, the American presidency, as well as other chief executives.

**Honors**

PLSC 408: Democracy and Its Impacts
3 Credits/Maximum of 3

This course examines advances in democratization around the globe, and compares the performance of democratic and authoritarian governments. This course examines the impacts of international democracy aid around the globe, and compares the performance of democratic and authoritarian governments in promoting citizens' well-being. Democracy assistance for activities such as conducting elections and strengthening
civil society has become a key component of foreign aid provided by longstanding democracies. Its use is based on a widespread belief that democracies perform better than autocracies in a number of policy domains. The course focuses on how such aid affects recipient countries, and how performance of democratic and authoritarian regimes actually differs. It traces the expansion of international democracy aid, explores the different types of assistance that donor countries provide, and reviews empirical research on the impacts in recipient countries. It then turns to a comparison of the performance of democratic vs. authoritarian regime type in generating public goods such as economic prosperity, socioeconomic equality, and civic peace.

**Prerequisite:** PL SC 001; PL SC 003; PL SC 014; or PL SC 022

PLSC 409: Democratic Deliberation

3 Credits

Explores the theory and practice of democratic deliberation in elections, town meetings, juries, legislatures, and other public institutions. CAS (PL SC) 409 Democratic Deliberation (3) Many modern democracies have made strides to become more deliberative in how they make decisions. This course looks closely at the most promising innovations in self-government while also reviewing the persistent anti-deliberative and undemocratic features of modern societies and governments. Topics covered in the course include deliberative democratic theory, political conversation, common forms of public meetings, mediated deliberation, campaigns and elections, the jury system, and deliberative democracy on larger social scales.

**Prerequisite:** CAS 137, CAS 175, CAS 201, CAS 202, CAS 216, CAS 250, CAS 272 or PL SC001, PL SC017, PL SC112, PL SC130

Cross-listed with: CAS 409

PLSC 410: Strategy and Politics

3 Credits

This course examines political behavior using social choice theory and game theory. PL SC 410 Strategy and Politics (3)(BA) This course meets the Bachelor of Arts degree requirements. Strategic behavior is central to politics. It is common for political outcomes to be determined by the interaction of individuals seeking goals in an environment in which goal attainment is complicated by the choices of other actors. This course introduces various methods for analyzing strategic behavior using social choice and game theories. We will employ these approaches to better understand a wide range of political phenomena in international politics, comparative politics, and American politics, such as war, terrorism, voting, electoral competition, government formation, and democratic transitions. By the end of the course, students will, among other things, have experience using games to analyze a range of political behaviors and institutions. The course assumes no prior knowledge of social choice theory or game theory.

**Prerequisite:** PL SC001, PL SC003, or PL SC014

Bachelor of Arts: Social and Behavioral Sciences

PLSC 412: International Political Economy

3 Credits

The transnational politics of trade, investment, aid, raw materials, and the environment; nation-states, multinational corporations, and the U.N. PL SC 412 International Political Economy (3)(BA) This course meets the Bachelor of Arts degree requirements. This course is an introduction to the scientific study of international political economy (IPE), an interdisciplinary field related to international politics and international economics. Some exemplary issues IPE addresses include the collective action problem among nation states, the management and openness of international economy, the determinants of foreign economic policies, and the causes and consequences of economic globalization. IPE examines the interaction between politics and economics at the international level as well as between the international and domestic levels, involving various political and economic actors (governments, MNSs, interest groups, as well as individuals). The course aims to develop the analytical skills of students in explaining theoretically international political and economic events.

**Prerequisite:** ECON 102, ECON 104, ECON 014, IB 303, or BUS 364

Bachelor of Arts: Social and Behavioral Sciences

PLSC 413: The Rise and Fall of the Soviet Union

3 Credits

Background, organization, and operation of the Communist Party and the government of the Soviet Union.

**Prerequisite:** 3 credits from: PL SC003, PL SC014, PL SC155, or RUS 100

Bachelor of Arts: Social and Behavioral Sciences

PLSC 414: Dictators and Their Demise

3 Credits/Maximum of 3

Dictators and Their Demise examines the political economy of authoritarian rule. PL SC 414 Dictators and Their Demise (3) Dictators and Their Demise provides a broad exploration about how nondemocratic governments throughout the world rule. We examine: the conditions that give rise to authoritarianism; the variety of authoritarian regimes; the strategies authoritarian leaders use to stay in power; the consequences of different types of authoritarianism for outcomes such as economic growth and human development; and the domestic and international sources of authoritarian demise. The course covers cases of authoritarian rule in: Chile, the Dominican Republic, Egypt, Malaysia, Mexico, and the former Zaire (now the Democratic Republic of the Congo or DRC). The course builds knowledge about the governments under which most people in the Global South lived during the 20th century. Even today, roughly half of the world’s population lives under some form of non-democratic government. Yet almost all courses currently in the curriculum, particularly in the field of comparative politics, focus exclusively on democratic forms of government. This course therefore examines a new topic not currently offered in the curriculum. In additional to learning about different types of authoritarian rule, students form an understanding of how common foreign policy tools, such as economic sanctions, foreign aid, and human rights shaming, are likely to affect domestic politics in these countries. This knowledge helps students critically evaluate foreign policy relationships between democracies, such and the United States, and dictatorships. Course materials cover theoretical approaches to the study of authoritarian rule, in-depth case studies (including novels, biographies, and documentary), and empirical research. This course requires student presentations, weekly reading assignments, descriptive analysis of quantitative data in graphs, multiple written assignments, and a final take-home essay exam. Students develop analytic skills through the weekly written homework assignments in which they apply the broad theoretical concepts to analyze counter factual situations from specific cases of authoritarian rule. Oral presentations develop inter-personal skills and require students to research specific cases of authoritarian rule currently
in the news. This helps students critically evaluate current events. Finally, the written assignments require students to develop skills working with real data. Students collect and graphically present basic descriptive data about economic and human development in non-democratic countries: economic data, infant mortality, literacy, and indicators of women’s well-being. Using real world data to make international comparisons helps students develop skills to form and articulate complex arguments, and teaches them the basics of research design.

Bachelor of Arts: Social and Behavioral Sciences
PLSC 418: International Relations Theory
3 Credits
A survey of traditional and contemporary conceptual frameworks and theoretical approaches for the analysis of international relations. **Prerequisite:** PL SC014
Bachelor of Arts: Social and Behavioral Sciences
PLSC 418H: International Relations Theory
3 Credits
A survey of traditional and contemporary conceptual frameworks and theoretical approaches for the analysis of international relations. **Prerequisite:** PL SC014
Bachelor of Arts: Social and Behavioral Sciences Honors
PLSC 418W: International Relations Theory
3 Credits
A survey of traditional and contemporary conceptual frameworks and theoretical approaches for the analysis of international relations. **Prerequisite:** PL SC014
Bachelor of Arts: Social and Behavioral Sciences Writing Across the Curriculum
PLSC 419: The Bureaucratic State
3 Credits
Overview of structural, technological, decision-making, behavioral, and political subsystems of bureaucracy; emphasis on bureaucratic dynamics within larger environmental, interorganizational contexts. **Prerequisite:** PL SC001, PL SC002, or PUBPL304W
Bachelor of Arts: Social and Behavioral Sciences
PLSC 420: State Making
3 Credits
Students learn about how national states arise, expand the territory and population they control, and persist or fail. **Prerequisite:** PL SC003 or PL SC014
PLSC 422: Comparative Urban Politics
3 Credits
Relationships between structure and evolution of city systems and patterns of political behavior. **Prerequisite:** PL SC003, PL SC020, PL SC022, or PL SC417
Bachelor of Arts: Social and Behavioral Sciences
PLSC 423: Post-Soviet Politics
3 Credits
Aspects of political transition and institutions of the fifteen Soviet successor republics; emphasis on Russia and republican confederation. **Prerequisite:** PL SC003, PL SC155, or RUS 100
Bachelor of Arts: Social and Behavioral Sciences
PLSC 424: Topics in Comparative Government and Institutions
3 Credits
Topics in the comparative analysis of representative contemporary Western and non-Western governmental institutions. **Prerequisite:** 3 credits from PL SC003, PL SC020, PL SC022
Bachelor of Arts: Social and Behavioral Sciences
PLSC 425: Government and Politics of the American States
3 Credits
Comparative analysis of political processes; executive, legislative, and judicial decision making and behavior; examination of systems functioning; selected public policies. **Prerequisite:** PL SC001
Bachelor of Arts: Social and Behavioral Sciences
PLSC 426: Political Parties and Interest Groups
3 Credits
Interest group basis of American politics, analysis of party and group behavior in electoral politics and the policy process. **Prerequisite:** PL SC001
Bachelor of Arts: Social and Behavioral Sciences
PLSC 427: Political Opinion
3 Credits
Nature and development of mass attitudes and opinions; political socialization; voting behavior; relation between opinions and public policy. **Prerequisite:** PL SC001
Bachelor of Arts: Social and Behavioral Sciences
PLSC 428: Gender and Politics
3 Credits
Gender in politics in the United States and around the world; major areas of women and politics research. PL SC (WMNST) 428 Gender and Politics (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is designed as an overview to the field of women and politics. It examines the role that women play in politics in the United States and around the world. Students will begin by examining how women are socialized differently from men and how that socialization effects women's political attitudes and participation. Then students will focus on women in different political offices and how
their behavior compares to that of their male counterparts. Students will then analyze the women's movement in the United States. Finally, students will turn to different theories of the ideal position of women and men in politics and use those theories to explore the issue of pornography. Students will be evaluated on a final exam, short essays (4-3-5 page essays), class participation, and a research paper (15 pages). This is an advanced course with 6 credits prerequisite in Women's Studies or Political Science. This course fulfills the American Politics and Comparative Politics distribution as well as the advanced course requirement for the Political Science major. It is an elective for a Women's Studies major. It also fulfills an International/Intercultural competency requirement. This course will be offered once a year with 35 seats per offering.

**Prerequisite:** 3 credits in political science or women's studies
Cross-listed with: WMNST 428
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)

**PLSC 429: Analysis of Electoral Politics**
3 Credits

The new politics, its technology, and the strategic perspectives that underlie it. PL SC 429 Analysis of Electoral Politics (3)(BA) This course meets the Bachelor of Arts degree requirements. This course engages students in the empirical study of electoral politics in the United States. Elections in the U.S. are about voters, candidates and the rules that determine what these actors do to structure the course of the election and that lead to the final outcome. In empirical political science, analysis involves the systematic examination and evaluation of relevant data to solve a problem or answer a question. In this course, then, students use data about voters to systematically analyze their actions and decisions in U.S. presidential elections, with an emphasis on understanding why they make the choices they do to produce the resulting election outcomes. Throughout the course, students will draw on a range of publicly available data and use statistical analyses to investigate the ‘cost’ of voting; evaluate competing theories of voter choice; examine how candidate evaluations, candidates’ issue stances and retrospective evaluations of candidates influence voter choice; assess how vote choice is shaped by an individual’s partisan identification; and evaluate how social demographic trends shape election outcomes. At the conclusion of the course, students will have the substantive knowledge and analytic skills to evaluate the assertions and conclusions of politicians, pundits, and political scientists as they contemplate campaigns and election outcomes. Students are required to have an understanding of introductory statistics (equivalent to the knowledge they would gain from PL SC 309 or STAT 200) prior to taking this course.

**Prerequisite:** PL SC001 , and PL SC309
Bachelor of Arts: Social and Behavioral Sciences

**PLSC 430: Selected Works in the History of Political Theory**
3 Credits

Detailed examination and analysis of a selected major work, thinker, or tradition in the history of political theory.

**Prerequisite:** PL SC017 or PL SC007
Bachelor of Arts: Social and Behavioral Sciences

**PLSC 430W: Selected Works in the History of Political Theory**
3 Credits

Detailed examination and analysis of a selected major work, thinker, or tradition in the history of political theory. PL SC 430W Selected Works in the History of Political Theory (3) The course will examine the tradition of ‘liberal’ political philosophy, focusing principally on the social contract tradition in Western political philosophy. We will examine the work of the ‘classic’ social contract theorists -Hobbes, Locke, Rousseau, and Kant - and discuss some more recent variants. We will then consider broad contemporary critiques of this tradition. In particular, we will consider charges of exclusion, parochialism, and biased conceptions of the self allegedly manifested in liberal theories, especially as those charges that center on considerations of race and gender.

**Prerequisite:** PL SC017 or PL SC007
Bachelor of Arts: Social and Behavioral Sciences
Writing Across the Curriculum

**PLSC 431: Ancient, Medieval, and Renaissance Political Theories**
3 Credits

Political theories of Plato and Aristotle; selected Greek, Roman, medieval, and Renaissance theorists through Machiavelli.

**Prerequisite:** PL SC017 or PL SC007
Bachelor of Arts: Social and Behavioral Sciences

**PLSC 432: Modern and Contemporary Political Theories**
3 Credits

Political theories of the seventeenth through the twentieth centuries, including Hobbes, Locke, Rousseau, Marx, Mill, Mosca, Weber, and selected theorists.

**Prerequisite:** PL SC017 or PL SC007
Bachelor of Arts: Social and Behavioral Sciences

**PLSC 433: Political Foundations of the Early American Republic**
3 Credits

The course introduces students to the major political and philosophical movements that influenced the founders of the early American republic. PL SC 433 Political Foundations of the Early American Republic (3) The course introduces students to the major political and philosophical movements that influenced the founders of the early American republic. The first section of the course, set in the ancient world, will examine the earliest experiments in democratic government in both Greece and the Roman Republic. In addition to studying the structure and traditions of ancient governments, students will consider competing theories for why these early democratic experiments ultimately failed. The second section of the course traces the gradual evolution of representative democracy in Britain from the signing of Magna Carta to the quiet subjugation of the monarchy in the 19th Century. Recognizing that the theoretical structures of political power remain somewhat fixed in this period, students will consider how legal precedent can gradually transform seemingly static political institutions. The third section of the course examines American efforts to establish stable representative institutions in the aftermath of the Revolutionary War. Looking back at both ancient and modern constitutional traditions, students will examine how prior democratic experiments heavily influenced the deliberations of the founders both at
the Constitutional Convention and in the establishment of the new federal republic.

**Prerequisite:** PL SC001 or HIST 020 or PL SC017

PLSC 434: War and Development in Africa

3 Credits

This course will examine the relationship between war and development in sub-Saharan Africa in the post colonial era. PLSC 434 / AFR 434 War and Development in Africa (3) (IL) This course will examine the relationship between development and war in sub-Saharan Africa in the modern era. Specifically, it will analyze the extent to which the processes of state building, nation building, and international intervention have contributed to the incidence of both civil war and international conflict in Africa. We will begin with a review of several theoretical arguments on the causes of warfare in Africa and then turn to a discussion of theses on African political development. This course complements the present offerings in international relations and comparative politics in the PLSC department and can serve as an advanced undergraduate offering in the African Studies concentration in AFR. The course directly complements our present offerings in international conflict given that we don't have a regularly offered course that focuses on conflict in a specific region. In addition, it will augment our comparative politics offerings with an examination of prominent issues in comparative politics such as political development, democracy, and modernization. The course will fulfill the IL requirement and encourage students understanding of the historical background as well as the political, economic, and cultural factors that influence African politics. African conflicts are often viewed as 'ethnic conflicts' and in this class students have an opportunity to assess the extent to which ethnic, linguistic, or religious factors influence the likelihood of conflict and contribute to development in African states. Students will also be required to write essays evaluating the contribution of a range of theoretical arguments on Africa's conflicts in order to assess the degree to which cultural more than political or economic factors contribute to their onset. Students will then have the opportunity to conduct more extensive research on a specific African case to develop their analyses further. These exercises will often require that students reevaluate their beliefs about social identities such as race (e.g. in Rwanda the difference between Tutsi and Hutu is often viewed as a 'racial' difference between black Africans, which is at odds with most Western conceptions of race). They also require students to challenge stereotypes regarding the subordination of African values in conflicts to a simple concern with 'tribe'. Students will gain a broader knowledge and appreciation of the different values, traditions, and cultures evident in Africa and understand how these can both exacerbate and mitigate conflict. Evaluation in the course will consist largely of examination of the students' brief expository essays and larger case studies for which students will be encouraged to conduct original research. The course should be offered biannually with a class limit of about 40 students.

**Prerequisite:** PL SC014 , PL SC003 , AFR 110

Cross-listed with: AFR 434

Bachelor of Arts: Social and Behavioral Sciences

International Cultures (IL)

PLSC 435: Foundations of American Political Theory

3 Credits

Political theories of colonial, revolutionary, and constitutional periods presented through works of selected thinkers and analysis of particular political problems.

**Prerequisite:** PL SC001 , PL SC017 , or PL SC007

Bachelor of Arts: Social and Behavioral Sciences

PLSC 436: Civil Wars

3 Credits

This course examines factors influencing the onset, duration, severity, termination, recurrence, and consequences of civil wars around the world. PL SC 436 Civil Wars (3) This course provides a broad exploration of the causes, characteristics, and consequences of civil wars. In particular, it investigates what makes civil wars more likely to occur, what influences how long they last, how severe they are, and how likely they are to recur, while also considering their consequences for the states that experience them. It considers the scholarly research on this topic over the past decade or more, and builds an awareness both for what are the known regularities as well as what are the continuing uncertainties about the place of civil war in the contemporary international system. It does this specifically within the context of scientific research about civil wars, and thus also advances student knowledge about how social scientists learn what they know about how the world works. Building on this perspective, and after absorbing the lessons to be learned from the literature, students will gain even greater appreciation for the quality of knowledge about civil wars by conducting their own detailed analysis of a civil war (each student will study one civil war of their choosing) asking how well the civil war they study fits patterns identified by the literature. This course complements, without duplicating, existing political science courses about militarized political conflict, and qualifies as one course majors can take to satisfy their 400-level course hours requirement. In addition to political science majors, it should be of interest to international politics majors, students in other social science majors, and perhaps Masters students in the School of International Affairs as well.

**Prerequisite:** PL SC001 or PL SC014

PLSC 437: War in World Politics

3 Credits

Causes, resolution, and consequences of crises and wars; testing theories of conflict using both case and statistical studies.

**Prerequisite:** PL SC014

Bachelor of Arts: Social and Behavioral Sciences

PLSC 438: National Security Policies

3 Credits

Impact of national security on U.S. government and foreign policy; roles and interaction of President, Congress, government agencies, interest groups.

**Prerequisite:** PL SC001 or PL SC014

Bachelor of Arts: Social and Behavioral Sciences
PLSC 439: The Politics of Terrorism

3 Credits

Analysis of political terrorism as a violent alternative for peaceful change and traditional warfare in the nuclear age.

Prerequisite: CRIMJ100 or PL SC014, or permission of program
Cross-listed with: CRIMJ 439
Bachelor of Arts: Social and Behavioral Sciences

PLSC 439H: The Politics of Terrorism

3 Credits

Analysis of political terrorism as a violent alternative for peaceful change and traditional warfare in the nuclear age.

Cross-Listed
Honors

PLSC 440: Globalization and Its Implications

3 Credits

This course explores the socioeconomic implications of globalization.

Enforced Prerequisite at Enrollment: AFAM 100 or AFR 110 or PL SC 3 or PL SC 14 or PL SC 200N or PL SC 220

3 Credits

Interactions of governmental and economic activity in American life. Survey of governmental (national, state, local) promotional, regulatory, and ownership policies.

Prerequisite: 3 credits in political science or economics

Bachelor of Arts: Social and Behavioral Sciences

PLSC 445Y: Politics of Affirmative Action

3 Credits

Examines history, politics, and economics of the use of special programs to advance racial interests in the U.S. PL SC 445Y / AFAM 445Y / LER 445Y Politics of Affirmative Action (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. The objectives of this course are to introduce students to the relationship between affirmative action and other policies purportedly designed to end racial inequality in the U.S. This course approaches the study of affirmative action in the context of the historic racial discrimination and inequality that Black Americans have faced since the founding of the Nation. The purpose of this course is to help students think about how contemporary and historic affirmative action policies relate to race, concepts racial inequality, the historic and continuing causes for racial inequality, public opinion, American politics and economic thought. The course materials will lead students through scholarly and popular articles, books and video presentations on the topic. It is hoped that students will become familiar with the history of affirmative action from its conception. Students will gain an intimate understanding of affirmative action economic and social outcomes on various racial groups. No prior knowledge is assumed, however a knowledge of civil rights history, quantitative methods, and constitutional law will be useful. The Politics of Affirmative Action satisfies the requirements for major and minor electives for the African American Studies, and major and minor electives for Political Science, and Labor Studies and Industrial Relations. Students are evaluated on the basis of an examination, term paper, class participation and class presentations of papers.

Prerequisite: AAA S 100 level course and PL SC001 or PL SC007
Cross-listed with: AFAM 445Y, LER 445Y
Bachelor of Arts: Social and Behavioral Sciences
United States Cultures (US)
Writing Across the Curriculum

PLSC 446: Business and Government Relations

3 Credits

An examination of the interaction between business and government across different types of political systems. PL SC 446 Business and Government Relations (3) This course examines the interaction between business and government across different types of political systems. Intellectual approaches from various disciplines will be used to understand different dimensions of business and government interactions. Models of interaction to be covered in the course include pluralism, corporatism, business as capital, business as firm models, sectoral models, network models, and clientalism. Particular attention will be given to the interactions of business and government during the policy process, from formation to implementation. Case studies from developed and developing countries, and examples of specific policy proposals will be utilized to help students analyze business interactions with government, and political interactions with business. Specifically, students will analyze variation in the structure of business-government relations across countries' different political systems, economic systems, and development levels. Through this course, students will be able to construct an appropriate framework to evaluate the business and political implications of adopting different business-government models, and construct analytical frameworks to understand the policy implications of adopting different models for the same policy.
Prerequisite: PL SC001; PL SC003; or PL SC014

PLSC 447: Analysis of Public Opinion and Political Attitudes

3 Credits

This course engages students in the empirical study of public opinion. PL SC 447 Analysis of Public Opinion and Political Attitudes (3) The essence of democracy is popular sovereignty. The voice of the people must be freely expressed and send a clear message to elected officials. In turn, those officials must be responsive to citizens. This class focuses on the voice of the people with particular attention to several analytic questions: How do we measure public opinion? Do public opinion polls and other methods provide an accurate measure of public sentiment? How can we know if public opinion has changed? How can we utilize public opinion data to assess political polarization, civic competence, and levels of the public's trust in government? In this course, students will learn how to answer questions like these using the same data reported by the press, utilized by government officials, and examined by political scientists to assess the success of democracy in the United States and throughout the world. The course is organized around a series of contemporary policy topics (such as foreign policy, welfare or education) integrated with specific analytic techniques. By the end of the semester, students will be familiar with public opinion on many contemporary policy debates and they will learn a series of data analytic skills that can be applied to any topic. Students are required to have an understanding of introductory statistics (equivalent to the knowledge they would gain from PL SC 309 or STAT 200) prior to taking this course.

Prerequisite: PL SC001 and PL SC309

PLSC 450H: Genocide and Tyranny

3 Credits

This course focuses on the conceptualization and socio-political determinants of genocide and tyrannical regimes, with an emphasis on the Holocaust.

Prerequisite: PL SC003, PL SC007 or PL SC014 or HIST 121 Cross-listed with: JST 450H Honors

PLSC 451: The Politics of Human Rights

3 Credits

This course examines the politics of human rights and repression, focusing on the causes and consequences of state sponsored violence and human rights violations.

Prerequisite: PL SC001, PL SC003, or PL SC014 Bachelor of Arts: Social and Behavioral Sciences

PLSC 452: Government and Politics of Central Europe

3 Credits

Politics and society in the Communist Era, the revolutions of 1989, and problems of adjustment to democracy and market.

Prerequisite: PL SC003, PL SC020, PL SC022, or PL SC155 Bachelor of Arts: Social and Behavioral Sciences

PLSC 453: Political Processes in Underdeveloped Systems

3 Credits

Comparative analysis of the political, social, and economic problems characteristic of underdeveloped systems.

Prerequisite: PL SC003, PL SC020, or PL SC022 Bachelor of Arts: Social and Behavioral Sciences International Cultures (IL)

PLSC 454: Government and Politics of Africa

3 Credits

Contemporary African politics, institutions, and ideologies; patterns of change, social forces, and nation building in selected African states. PLSC 454 / AFR 454 Government and Politics of Africa (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. In this course, we will discuss the current democratization trend in Africa by focusing on the experiences of African countries. The course is divided into three sections. Part One considers a range of factors that affect politics in Africa. We will discuss in depth the following factors: colonialism, nationalism, the relationship between state and society, ruler-ship, the military, political parties, and economic development. Then, we will consider the experiences of our four cases, to gain a historical background. In part two, we will focus on democratic transitions. We will discuss the factors that enable transitions to occur, as well as the process that transitions follow. Then, we will consider four transitions: two that resulted in the installation of a democratic government (Nigeria in 1979, Sudan in 1986) and two that ended in continued authoritarianism (Angola in 1992, Kenya in 1978). Part three considers the prospects of democracy. We will discuss the probability of a democratic transition occurring in the near future. The goals of this class are four fold. First, students will gain detailed knowledge about four African countries. Second, we will learn how to compare countries. Third, students will have a better understanding of the democratization process in general, and will be able to explain or predict democratization beyond the four cases discussed in this class. Finally, the experiences of these four countries offer a deeper understanding of what democracy is and provide students with greater flexibility to fulfill requirements in either the African and African American Studies major or the Political Science/International Politics major. PLSC 454 / AFR 454 will be offered once per year with 35-50 seats per offering.

Prerequisite: 3 credits from: AFR 110, PL SC003, PL SC020, or PL SC022 Cross-listed with: AFR 454

Bachelor of Arts: Other Cultures Bachelor of Arts: Social and Behavioral Sciences International Cultures (IL)

PLSC 455: Governments and Politics of Western Europe

3 Credits

Comparative analysis of political and governmental structures of major West European nations; main functions and processes of such structures.

Prerequisite: PL SC003 or PL SC020 Bachelor of Arts: Social and Behavioral Sciences
PLSC 456: Politics and Institutions of Latin-American Nations  
3 Credits  
Social forces and processes, governmental institutions, foreign policies of major states of Latin America.  
**Prerequisite:** HIST 179, PL SC003, PL SC020, or PL SC022  
Bachelor of Arts: Social and Behavioral Sciences  
PLSC 458: Government and Politics of East Asia  
3 Credits/Maximum of 3  
This course examines the political systems, institutions, and leadership of East Asian countries. This course examines the political systems, institutions, and leadership of East Asian countries. Students will learn about the nature and extent of political change that has occurred across East Asia, with particular attention to the history of the region, and the regime changes that have occurred in East Asian countries. Students also will compare the political development and experiences of different countries in the region, and consider how their development and experiences compare to countries beyond East Asia. Upon completion of the course, students will have knowledge of the government and politics of East Asian regimes, and the region’s role in global politics.  
**Prerequisite:** 3 credits from PL SC003, PL SC020, PL SC022  
Bachelor of Arts: Other Cultures  
Bachelor of Arts: Social and Behavioral Sciences  
PLSC 459: Culture and World Politics  
3 Credits  
Role of culture in world politics.  
**Prerequisite:** PL SC014  
Cross-listed with: AFR 459  
Bachelor of Arts: Social and Behavioral Sciences  
International Cultures (IL)  
PLSC 460: Science, Technology, and Public Policy  
3 Credits  
The all-pervasive importance of science and technology policy in modern societies and mechanisms and processes by which it is made.  
**Prerequisite:** 3 credits in natural sciences or engineering, 3 credits in social and behavioral sciences  
Cross-listed with: STS 460  
Bachelor of Arts: Social and Behavioral Sciences  
PLSC 461: Politics of the European Union  
3 Credits  
This course introduces students to the history, institutions and politics of the European Union. PL SC 461 Politics of the European Union (3) (IL) This course introduces students to the history, institutions and politics of the European Union. We will survey the central theories of political and economic integration, and compare them to how European integration has unfolded. We will analyze the EU’s institutions and political processes, and review major EU policy areas.  
**Prerequisite:** PL SC003 or PL SC020  
International Cultures (IL)  
PLSC 462: Marxist and Socialist Political Theory  
3 Credits  
Analysis of major problems and key works in the Marxist and Socialist tradition; dialectical materialism, alienation, class warfare, etc.  
**Prerequisite:** PL SC017, PL SC007, PL SC413, or PL SC452  
Bachelor of Arts: Social and Behavioral Sciences  
PLSC 463: Government and Politics of China  
3 Credits/Maximum of 3  
This course will present an overview of modern Chinese politics since 1949.  
**Prerequisite:** PL SC 003, PL SC 014, PL SC 022, or ASIA 100  
Cross-listed with: ASIA 463  
Bachelor of Arts: Other Cultures  
International Cultures (IL)  
PLSC 464: Extractive Industries in Africa  
3 Credits  
Socioeconomic and environmental impacts of extractive industries in Africa.  
**Prerequisite:** AFR 110 or at least one of the following: PL SC003 or PL SC014 or PL SC022  
Cross-listed with: AFR 464  
International Cultures (IL)  
PLSC 465Y: Democratization in Asia  
3 Credits  
A course which identifies components of democracy, such as definitions, measures, datasets, and the democratization process. PL SC (ASIA) 465Y Democratization in Asia (3) (IL) This class is an upper-level seminar on democratization in Asia. How do countries move from having an authoritarian regime to a democratic government? Why are some democratic governments stable while others are not? In this class, we will focus on democratization theory and how it applies to countries in Asia. This course is organized into two parts. In the first part of the course, we will discuss democracy and democratization theory. We will cover such components as: definitions, measures, datasets, and the different stages of the democratization process. In the second part of the course, we will apply these concepts and measures to specific Asian countries. Course topics will be explored through readings from textbooks, articles, datasets, and media sources. By the end of the course, students will have a deep knowledge about a wide range of Asian countries. Students will develop the skills to compare countries, will understand the democratization process within Asia, and will be able to generalize from their knowledge to evaluate democratization events around the world. Finally, students will gain a deeper understanding of what is democracy and how easy or difficult it is to install and maintain. This course fulfills the distribution requirement for comparative politics, as well as the advanced and related course requirements for Political Science majors. In addition, the course fulfills the supporting course requirement for International Politics majors and the related areas.
requirement for Asian Studies majors. Finally, the course fulfills the requirements for writing across the curriculum and other cultures.

Writing Across the Curriculum

PLSC 466: Political Psychology
3 Credits

An interdisciplinary investigation of the major topics and debates characterizing the subfield of political psychology. PL SC 466 Political Psychology (3) This course offers an interdisciplinary investigation of the major topics and debates characterizing the subfield of political psychology. It draws on research being done in a variety of disciplines and disciplinary subfields including social, developmental and clinical psychology; the cognitive neurosciences; biological anthropology; genetics; evolution; and behavioral economics to examine political behavior. Specifically, the course will examine the thinking and actions of both political elites and the mass public, and consider the reasoning processes they employ in order to make sense of the political world. Topics to be covered include how emotions (e.g., fear, lust) shape human reasoning, how preferences develop; how differences in cognition, emotion and personality inform political judgment and shape political leadership; how prejudices develop and affect war and other conflicts; how political and social identities develop and how they affect individuals’ political judgments and decisions; how neurobiological influences operate in conjunction with social and cultural factors to affect how individuals process information; and how genetics and hormones affect individuals political development and behavior. Through these and other topics covered in the course, students will develop an understanding of how political elites and ordinary citizens process information, develop preferences and make decisions, and why, as a consequence, they act as they do. This course fulfills the distribution requirement for American politics and comparative politics, as well as the advanced and related course requirements for Political Science majors. The course also fulfills the supporting course requirement for International Politics majors.

Prerequisite: PL SC001, PL SC003, PL SC014, or PSYCH100
Bachelor of Arts: Social and Behavioral Sciences

PLSC 467: International Relations of the Middle East
3 Credits

The international relations of the Middle East, stressing national security policies of regional and outside actors, and major contemporary conflicts.

Prerequisite: PL SC014 or HIST 181
Bachelor of Arts: Social and Behavioral Sciences

PLSC 468: Politics and the Media
3 Credits

An examination of how politics and public policy affect and are shaped by the news media, as a political institution, in America.

Prerequisite: PL SC001, PL SC003, PL SC022, PL SC049, CAS 409, CAS 175, CAS 201, CAS 272, COMM 100 or COMM 110
Bachelor of Arts: Other Cultures
Bachelor of Arts: Social and Behavioral Sciences

PLSC 469: Government and Politics of South Asia
3 Credits

This course offers an overview of the politics of modern South Asia with specific focus on Afghanistan, India and Pakistan. ASIA (PL SC) 469 Government and Politics of South Asia (3) (IL) This course provides an overview of the politics of modern South Asia with particular attention to the experiences of Afghanistan, India and Pakistan. It examines theories of political and economic development and ethnic politics, the impact of the British colonial experience on South Asia, the rise of nationalism, and the emergence of independent nation states in the region. Three important themes are explored throughout the course: (1) the state of economic development in the three countries; (2) the relationship between identity politics and violence; and (3) the international relations of these countries, with particular attention to terrorism and nuclear policy. Course topics will be explored through readings from textbooks and assigned articles, articles from current news sources and, documentary films from the three countries. By the end of the course, students will have knowledge of the politics of Afghanistan, India and Pakistan and the political factors that have shaped their development over the past century. Students will acquire the tools necessary to evaluate critically the impact of war, the legacy of colonialism, and the challenge in building durable democratic institutions. This course fulfills the distribution requirement for comparative politics, as well as the advanced and related course requirements for Political Science majors. The course also fulfills the supporting course requirement for International Politics majors and the related areas requirement for Asian Studies majors.

Prerequisite: PL SC003, PL SC014, PL SC022 or ASIA 100

International Cultures (IL)

PLSC 470W: Legal Brief Writing
3 Credits

Writing of legal briefs as practiced in American courts.

Prerequisite: PL SC001
Bachelor of Arts: Social and Behavioral Sciences
Writing Across the Curriculum

PLSC 471: American Constitutional Law
3 Credits

The origins of judicial review, landmark decisions of the Supreme Court, and their impact on the American form of government.

Prerequisite: PL SC001
Bachelor of Arts: Social and Behavioral Sciences

PLSC 471H: American Constitutional Law
3 Credits

The origins of judicial review, landmark decisions of the Supreme Court, and their impact on the American form of government.

Bachelor of Arts: Social and Behavioral Sciences
PLSC 472: The American Legal Process

3 Credits

Analysis of the roles, procedures, and policies characterizing the American legal system.

Prerequisite: PL SC 001
Bachelor of Arts: Social and Behavioral Sciences

PLSC 473: American Judicial Behavior

3 Credits

Analyzes behavior of judges and other participants in the legal process; examines how and why courts function as policymaking bodies.

Prerequisite: PL SC 001
Bachelor of Arts: Social and Behavioral Sciences

PLSC 474: Civil Liberties and Due Process

3 Credits

Fundamental problems relating to civil liberties and due process.

Prerequisite: PL SC 001
Bachelor of Arts: Social and Behavioral Sciences

PLSC 476: Empirical Legal Studies

3 Credits

This course engages students in the empirical study of law and the courts. PL SC 476 Empirical Legal Studies (3) The tools of social science affect both how scholars understand the workings of the judicial system and how lawyers practice law. This course engages students in the empirical study of law and the courts. It provides them with the substantive knowledge, and statistical and analytic skills they need to understand both (1) how social scientists use empirical evidence to make inferences about laws, judges, and legal institutions and (2) how statistical methods are used in legal practice. Through the course, students will undertake statistical analyses and learn how to present these analyses to nontechnical audiences, such as jurors, employers, and the general public. The course begins with an overview of the social scientific study of law and the courts, and then investigates a series of topics, including how social science and empirical evidence are used to make legal claims and establish legal standards, to provide a context for judicial decisions, and to litigate cases.

Prerequisite: PL SC 001, and PL SC 309

PLSC 477: Sex, Race, & Justice: The U.S. Supreme Court and Equality

3 Credits

The American judicial system has played an active role in policing the rights of disadvantaged groups in American history. In this course, we will draw upon political science and legal approaches to examine the judiciary's approach to ensuring equality through an examination of cases involving same-sex rights, affirmative action, and voting rights. We will explore difficult questions such as: How does the Court define equality? Are justices' decisions driven by law, ideology, or both? Is the current Supreme Court particularly activist? Readings include court cases, newspaper articles, and essays from political science and law journals.

Prerequisite: PL SC 014 or INTST 100
Bachelor of Arts: Social and Behavioral Sciences

PLSC 480W: Congress and the Presidency

3 Credits

Basic characteristics and processes of the national legislature and executive; roles and interaction of these institutions in the policy process.

Prerequisite: PL SC 001
Bachelor of Arts: Social and Behavioral Sciences

Writing Across the Curriculum

PLSC 481: Global Political Economy

3 Credits

This course examines states, markets, power, production, and the relations between the various transnational agents who act in these areas. Students may not receive credit for PL SC 481 and PL SC 412. PL SC 481 Global Political Economy (3) Changes in the international system in the 1970s led to increased interest on the part of students of international relations in the political economic processes underlying change. Important debates among scholars in both mainstream theoretical traditions and in critical theory gave rise to International Political Economy as an increasingly visible sub-field in International Relations. This seminar tracks the historical relations between the development of capitalism as an economic system and the emergence and transformation of global politics, using concepts developed in the study of political economy. Seminar discussion, examinations, and a short research paper will be used to evaluate students' learning.

Prerequisite: PL SC 014 or INTST 100
Bachelor of Arts: Social and Behavioral Sciences

PLSC 482: American State and Urban Politics

3 Credits

Explores basic characteristics and processes of American state and urban politics; nature of intergovernmental relations involving these governmental levels.

Prerequisite: PL SC 001
Bachelor of Arts: Social and Behavioral Sciences

PLSC 484W: The Foreign Policy of Soviet Successor States

3 Credits

Relations between Russia and The Newly Independent States (NIS); Russia's relations with selected foreign states and political Institutions; regional impact of the NIS in Baltic, Asian, and Central Asian areas.

Prerequisite: PL SC 003
Bachelor of Arts: Social and Behavioral Sciences

Writing Across the Curriculum

PLSC 486: International Culture in East Asia

3 Credits

Study of the role of culture in East Asian regional and East-West international relations. ASIA 400 (PL SC 486/HIST 489) International Culture in East Asia (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine the place of culture in
international history through a comparative look at the role of cultural circulation and exchange in relations among China, Korea, and Japan (and between East Asia and the West) from the propagation of Buddhism in the first century A.D. to present-day circulation of popular music, movies, and comics. We will explore the international politics of culture and the politics of international culture, considering questions of what constitutes culture, whether it is ever entirely separate from politics, and how that separation has evolved over time. These larger themes of the course will be tackled by following the historical movement of concrete objects and people throughout the region. This is a course in international history, but it also seeks to explore aspects of international relations. The goals of the class are not only to gain an understanding of the uses and impact of culture in international relations, but also to develop the skill of building such an understanding through primary and secondary sources, both written and visual. Students in this class will think critically about assigned texts to develop their own interpretations of their meanings. Through readings, discussions, presentations, and the final project, students will enhance their ability to think critically and to express their ideas clearly in both speech and writing. Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. This participatory approach is intended to deepen students’ appreciation of the assigned readings, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytic and expressive abilities.

**Prerequisite:** ASIA 100; ASIA 101; ASIA 102; ASIA 103; ASIA 104; ASIA 172; ASIA 174; ASIA 175; ASIA 197; JAPNS 120; JAPNS 121; CHNS 120; CHNS 121; KOR 120; KOR 121

Cross-listed with: ASIA 400
Bachelor of Arts: Other Cultures
International Cultures (IL)

PLSC 487: International Law and Organizations

3 Credits

Major topics and issues of international law with special attention to institutional arrangements (international organizations) through which that law operates. PL SC 487 International Law and Organizations (3) The course is useful in two distinct ways. First, it aids in the understanding of how countries conduct their relations with one another. Second, studying international law—it is a distinct system of law—helps students to assess whether they might be suited for law school. The course introduces international law and international governmental organizations (the two are closely linked) and their role in the management of peaceful relations among countries as well as during international conflict. Both the contributions and limitations of international law will be analyzed. International law is viewed both as a body of norms countries feel an obligation to follow and as a means of communication among countries. Major topics covered include sources of international law, human rights law, environmental law, economic law, law of the sea, and the use of force. There are several hundred major intergovernmental organizations. Several of the most prominent will be discussed including the UN, the WTO, the European Union, the International Labor Organization, and the International Court of Justice. Examinations are principally of the essay variety although a command of factual information is essential to success in the course. Students also prepare critiques of important international legal cases (many of which have been decided by national courts) and of treaties (the principal modern manifestation of international law).

**Prerequisite:** PL SC003 or PL SC014

Bachelor of Arts: Social and Behavioral Sciences

PLSC 488: Comparative Public Policy

3 Credits

Comparative methodology and public policy implementation in postindustrial societies; selected case studies of policy output. PL SC 488 Comparative Public Policy (3) Comparative Public Policy is an upper level political science course that includes components of comparative politics, public administration, and descriptive economics. The course presumes that developed industrial democracies confront common challenges in meeting human needs and that policy comparison is worthwhile despite distinctive societies and political cultures. For example, government involvement in the provision of health care varies widely from Britain’s National Health Service to the largely private approach of the United States. Nevertheless all health care systems confront rising technology costs, an ageing population, and rising performance expectations. A primary purpose of the course is to consider the origin and development of individual country programs while assessing the common challenges. Cross national comparison becomes relevant to the course by including some available data on costs, implementation and outcomes. Because the course includes about six distinct areas, e.g., education, taxation, urban planning income support, and overall macroeconomic policy, the course will depict profiles of policymaking in Europe, North America and Japan. Ideally comparison should help students to evaluate the effectiveness of policy choices of a particular country and government. A second objective of the course will be to examine the national approaches to the relationship between the state and private economic activity. Not only does government expenditure amount to nearly half of some country’s total output, government choices create distinctive legal environments for business activity. Antitrust, health, wage, and consumer regulation offer an excellent point of comparing different incentives for economic activity in the United States and Europe. Apart from policy choices mentioned in the first paragraph, the regulation of economic activity has cumulative results for employment and the distribution of income. This portion of the course is intended to be somewhat more elementary than the first because of the probability that students will be less familiar with its content. The primary objective will be to help students understand the variations among market economies and reasons for their description as ‘neo-liberal,’ ‘social market,’ or ‘corporatist.’ Finally, the course will examine some current ideas about recent changes in the global economy and their consequences for national policy. Clearly ‘globalization’ has become a matter of political concern owing to its consequences for the creation of wealth, employment, growth and distribution. While the course cannot devote detailed or exclusive to the European Union, Europe’s response to rapid movements in short term capital and investment presents an interesting point of comparison with the United States and Japan. The course should enable students to understand the meaning and criticism of ‘globalization’ as a factor in shaping some national policies.

**Prerequisite:** PL SC003
Bachelor of Arts: Social and Behavioral Sciences

PLSC 489: Public Administration

3 Credits

A survey of the major approaches to the management of most governmental agencies. PL SC 489 Public Administration (3) Government Management is a three-credit Political Science course that teaches the role and function of bureaucracy. Although some investigation is made about state and local government functions, the primary focus of the
A course is on the federal bureaucracy. In particular, the course illustrates how the interrelationship between the three branches of government exists using the various federal agencies as functionaries. The course first examines the basic functions of bureaucratic agencies in the modern world; primarily their distributive, re-distributive and regulatory activities. In addition to these functions, the various external and internal political forces that form the mission of the agencies are examined. Next the internal function of a bureaucracy is examined by highlighting the various roles of the people who comprise a typical large agency. The roles of the political appointee, the career professional, the general civil servant and the union laborer are examined, with the GS system of the federal government used as a guide to show the hierarchy that exists in a large agency. By highlighting both the functions of a typical agency and examining its role in the larger government structure, and by looking inside the bureaucracy to see the various short and long term roles of the people who comprise those agencies, the student appreciates how large bureaucracies are at the same time always changing, and always staying the same.

**Prerequisite:** PL SC001
Bachelor of Arts: Social and Behavioral Sciences

PLSC 490: Policy Making and Evaluation
3 Credits

Advanced analysis of public policy, emphasizing policy evaluation and the factors that determine policy success and failure.

**Prerequisite:** PL SC001, PL SC002, or PUBPL304W
Bachelor of Arts: Social and Behavioral Sciences

PLSC 491: Peace and Conflict Studies Seminar
3 Credits

Advanced study of major contemporary issues of peace and conflict; includes anthropological, technological, psychological, and economic perspectives.

**Prerequisite:** PL SC014, PL SC091
Bachelor of Arts: Social and Behavioral Sciences

PLSC 494: Research Project
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Social and Behavioral Sciences

PLSC 494H: Research Project
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Social and Behavioral Sciences Honors

PLSC 495: Political Science Internship
1-6 Credits/Maximum of 6

Combining experience in government offices, related agencies, or law firms, with appropriate readings and a research paper/report.

**Prerequisite:** prior consent of supervisor, adviser, or department head; applicable departmental internship requirements such as satisfactory completion of required 300- or 400-level courses appropriate for the internship program selected
Bachelor of Arts: Social and Behavioral Sciences

PLSC 496: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Social and Behavioral Sciences

PLSC 497: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Social and Behavioral Sciences

PLSC 498: Special Topics
1-9 Credits/Maximum of 9

Formal courses offered infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

PLSC 499: Foreign Study--Government
1-12 Credits/Maximum of 12

Study, in selected foreign countries, of political institutions.

**Prerequisite:** PL SC003, 3 credits in economics, history, political science, or sociology
Bachelor of Arts: Social and Behavioral Sciences International Cultures (IL)

**Portuguese (PORT)**

PORT 1: Elementary Portuguese I
4 Credits

For beginners. Grammar, with reading and writing of simple Portuguese; oral and aural work stressed.

Bachelor of Arts: 2nd Foreign/World Language (All)

PORT 2: Elementary Portuguese II
4 Credits

Grammar, reading, and conversation continued; special emphasis on the language, literature, and life of Brazil.

**Prerequisite:** PORT 001
PORT 3: Intermediate Portuguese

4 Credits
Grammar, reading, composition, and conversation.

**Prerequisite:** PORT 002
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Foreign/World Lang (12th Unit)

PORT 51: Elementary Intensive Portuguese for Graduate Students I

3 Credits
Intensive introduction to Portuguese: first half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. PORT 051 Elementary Intensive Portuguese for Graduate Students I (3)This is the first in a series of three courses designed to give students an intensive introduction to Portuguese. This is the first half of elementary sequence in reading, writing, speaking, listening, and cultural contexts. Students will learn the Portuguese vocabulary and will learn to create simple sentences. Lessons are taught in an authentic cultural context.

**Prerequisite:** graduate standing

PORT 52: Elementary Intensive Portuguese for Graduate Students II

3 Credits
Intensive introduction to Portuguese: second half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. PORT 052 Elementary Intensive Portuguese for Graduate Students II (3)This is the second in a series of three courses designed to give students an intensive introduction to Portuguese. This is the second half of graduate intensive sequence in elementary reading, writing, speaking, listening, and cultural contexts. Students will learn the Portuguese vocabulary. Lessons are taught in an authentic cultural context.

**Prerequisite:** PORT 051 and graduate standing

PORT 53: Intermediate Intensive Portuguese for Graduate Students

3 Credits
Continued intensive study of Portuguese at the intermediate level: reading, writing, speaking, listening, cultural contexts. PORT 053 Intermediate Intensive Portuguese for Graduate Students (3)This is the third in a series of three courses designed to give students an intermediate intensive knowledge of Portuguese. Continued intensive study of Portuguese at the intermediate level: reading, writing, speaking, listening, and cultural contexts. Lessons are taught in an authentic cultural context.

**Prerequisite:** PORT 052 or equivalent, and graduate standing

PORT 123: Portuguese for Romance-language Speakers

2-3 Credits
This course offers an introduction to Brazilian Portuguese for students who already have a good grasp of grammar and vocabulary in Spanish, French, Italian, or Latin. This intensive course will address all four language skills (listening, speaking, reading, and writing) and provide an overall view of Portuguese, its basic linguistic structures, and vocabulary. Emphasis will be placed especially on the differences between Portuguese and Spanish. By building on students’ prior knowledge of Romance languages, the class moves quickly to cover the content of the three-semester basic language sequence in a single semester. As students acquire linguistic fluency over the semester, they will gain insight into Brazilian culture by analyzing song lyrics, articles, poems, short stories, and films. Students will gain the language skills necessary to study, live, and work in Brazil, such as reading a variety of literary and non-literary texts, carrying on conversations on a range of personal, academic, and professional topics, write letters and other short pieces in Portuguese, and understand, for the most part, native speakers. Students must have the equivalent of three-semesters of college Spanish, French, Italian, or Latin, or the prior approval of the instructor to take this course. This course counts as 3 credits for undergraduate students and 2 credits for graduate students in the M.A. programs in Spanish literature and Spanish linguistics. Students are asked to register accordingly with the appropriate number of credits.

**Prerequisites:** SPAN 3; FR 3; IT 3; LATIN 3; or prior approval from the instructor
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Foreign/World Lang (12th Unit)

PORT 197: Special topics

1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Bachelor of Arts: Humanities

PORT 199: Foreign Studies

1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Humanities

International Cultures (IL)

PORT 200: Advanced Portuguese via the Arts

3 Credits
This course provides a more detailed study of the Portuguese language that builds upon the grammar, vocabulary, and communicative abilities developed in the basic language sequence. Students will review and extend their abilities in all four language skills (listening, speaking, reading, and writing) as they learn more about the linguistic and cultural diversity of the Portuguese-speaking world. The course uses a textbook paired with written, audio, and video workbook activities and supplemented by authentic language materials and artistic works that generate communicative exercises that allow students to practice and refine their spoken and written Portuguese. As students improve their understanding of the Portuguese language, they also gain insight into Luso-Afro-Brazilian cultures by analyzing music, films, videos, paintings, photos, essays, chronicles, news articles, short stories, and poems. Students learn about the distinct contexts in which Portuguese is spoken as they examine artistic works and linguistic variations that develop within specific countries and region. This class serves as a transition course between basic and intermediate language classes and more advanced composition, literature, and culture courses taught at the 300 and 400-level. The class is conducted entirely in Portuguese. Students
must have taken Portuguese 3 or 123, or received permission of the instructor, in order to enroll in this course.

**Prerequisites:** PORT 3; PORT 123; Bachelor of Arts: Foreign/World Lang (12th Unit)

PORT 297: SPECIAL TOPICS
1-9 Credits
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

PORT 299: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Humanities
International Cultures (IL)

PORT 365: Imagining Brazilian Cities
3 Credits
This course traces the transformation of Brazilian cities, as represented in literature and the arts, from the modernization projects of the late 19th century through the exponential growth of urban areas in recent decades. Studying these urban transformations will provide students with insight into how contemporary Brazil developed into an urban nation with seventeen of its cities featuring populations of one million or more. This class focuses primarily on artistic representations of the global metropolises of Rio de Janeiro and São Paulo, the modernist capital of Brazil, and the northeastern city of Recife. Readings will highlight the diverse experiences and expressions of urban life in essays, poems, short stories, and avant-garde novels. Music, film, and photography will complement students' literary tour of an urban Brazil. Critical readings from urban studies, architecture, anthropology, history, and other interdisciplinary fields will allow us to further explore the question of the city in Brazil. This course will be conducted in Portuguese. Students must be able to complete the readings, informal and formal written assignments, and in-class discussion and activities in Portuguese.

**Prerequisites:** PORT 405
Bachelor of Arts: Foreign/World Lang (12th Unit)
Bachelor of Arts: Humanities

PORT 397: SPECIAL TOPICS
1-9 Credits
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

PORT 399: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Humanities
International Cultures (IL)

PORT 405: Advanced Composition and Conversation
3 Credits
Intended to strengthen the advanced student's ability to speak, read, and write in modern Brazilian Portuguese.

**Prerequisite:** PORT 003
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities

PORT 473: Luso-Brazilian Cinema
3 Credits
This course studies social, political, economic, and cultural issues in the Portuguese-speaking world through the lens of film. This course meets the Bachelor of Arts degree attributes in Humanities and the International Cultures requirement. Through examinations of feature films and documentaries, the class explores how cinema approaches social, cultural, political, and economic realities in Brazil, Portugal, and Lusophone Africa. Students will learn about national histories, political struggles, social movements, and cultural practices of the Luso-Afro-Brazilian world as they gain the skills and appropriate vocabulary to analyze and discuss film. The course materials will invite students to consider how films examine legacies of imperialism, colonialism, and dictatorial regimes, as well as ongoing divisions and injustices on the basis of race, class, gender, and sexuality. Questions to be considered in this course include: How do filmmakers grapple with traumas of the past, questions of memory, and debates around truth and reconciliation? How do forms of fiction and documentary intersect, serve as complements, or contradict each other in film? How does film represent the convergences and divergences between different parts of the Portuguese-speaking world? What are the possibilities and limitations of studying these works in a comparative Lusophone framework? Readings on film, history, and Luso-Afro-Brazilian culture, and interviews with filmmakers will complement our studies of the films. The course will be conducted in English. No prior knowledge of Portuguese is necessary, as the films will have subtitles and required readings will all be in English. Students pursuing the Portuguese minor may receive credit for the minor if they complete all of their written assignments in Portuguese.

**Prerequisite:** Students counting this course toward their Portuguese minor must already have taken or be concurrently enrolled in Portuguese 405.

Bachelor of Arts: Humanities

PORT 494: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

1-3 Credits
Facilitate student's adjustment to the high expectations, demanding workload, increased academic liberties, and other aspects of the transition to college life. PSU 008 First-Year Seminar University College (1-3) From a practical perspective this course will provide an advanced introduction to university life at Penn State, highlighting the many resources available to help students succeed. Topics covered will include the challenges of balancing life and school, academic success strategies, dealing with financial aid, choosing a major, as well as understanding academic discourse and university policy and procedure. In addition, we will read and discuss some of the latest research on the experiences of first year college students. We will think about the particular challenges first year students face, and consider what steps could be taken to address those challenges at the level of university and governmental policy. This is a student-led, discussion-oriented course where we talk about a range of issues in a small, informal setting, and our goal will be to create a collaborative environment in which everyone is comfortable participating. In addition to discussions, we will explore university resources and the pragmatic issues of college through lectures, guest speakers, and hands-on practice.

First-Year Seminar

PSU 8T: First-Year Seminar University College
1-3 Credits
Facilitate student's adjustment to the high expectations, demanding workload, increased academic liberties, and other aspects of the transition to college life. PSU 008T First-Year Seminar University College (1-3) Proposed PSU 008 as variable 1-3 credit course is designed to
introduce the entering college student to the academic side of college
life for honors students, and to help prepare students to negotiate the
academic environment from their standpoint. In addition, its purpose
is for honor students to look beyond college life to wider communities,
gear up skills to focus on Honors level students, societal issues, and
toward a considered discernment of one's potential contribution in our
complex global society. Accordingly, this course emphasizes academic
proficiency, the mission and the values of Penn State University, the
application of acquired knowledge; higher level thinking; and social
awareness. This is a personal development course focusing on strategies
of academic success and the development of related living skills, which
go beyond the academic environment. From a practical perspective this
course will provide a major focus on in-depth career exploration, also
an advanced introduction to university life at Penn State, highlighting
the many resources available to help honor students succeed. Topics
covered will include the challenges of balancing life and school, academic
success strategies, dealing with financial aid, choosing a major, as
well as understanding academic discourse and university policy and
procedure. Furthermore, we will read and discuss some of the latest
research on the experiences of first year honors college students. We
will think about the particular challenges first year honors students face,
and consider what steps could be taken to address those challenges
at the level of university and governmental policy. This is a student-led,
discussion-oriented course where we talk about a range of issues in
a small, informal setting, and our goal will be to create a collaborative
environment in which everyone is comfortable participating. In addition
to discussions, we will explore university resources and the pragmatic
issues of college through lectures, guest speakers, and hands-on
practices.

First-Year Seminar
Honors

PSU 9: First-Year Seminar Communications
1 Credits
Facilitate student's adjustment to the high expectations, demanding
workload, increased academic liberties, and other aspects of the
transition to college life.

PSU 16: First-Year Seminar Science
1 Credits
Facilitate student's adjustment to the high expectations, demanding
workload, increased academic liberties, and other aspects of the
transition to college life.

First-Year Seminar

PSU 17: First-Year Seminar College of Information Sciences and
Technology
1 Credits
Facilitate student's adjustment to the high expectations, demanding
workload, increased academic liberties, and other aspects of the
transition to college life. PSU 017 First-Year Seminar College of
Information Sciences and Technology (1) This course will help students
be successful in the College of Information Sciences and Technology
(IST) at Penn State University. It involves two elements: how to be
a successful learner in general; and how to explore the academic
challenges of the information sciences and related technologies. Through
lectures, class discussions, assignments, and guest presentations
students learn what it takes to be successful in college. Through a
group project they learn what IST is about, the majors in the College,
the learning formats that they will encounter, and what is expected of
them as students and citizens in the College. More broadly, this course is
centered on learning: learning about learning and learning about what it
means to be a student in IST.

First-Year Seminar

PSU 97: Special Topics
1-3 Credits
Formal courses given infrequently to explore a topical of special interest
in the context of transitioning to university life.

First-Year Seminar

Psychology (PSYCH)

PSYCH 83S: First-Year Seminar in Psychology
3 Credits
Implications of contemporary psychological research and theory.
PSYCH 83S First-Year Seminar in Psychology (3) (GS,FYS) (BA) This
course meets the Bachelor of Arts degree requirements. Modern science
provides perspectives on human beings that may conflict with our
intuitive and conventional views of ourselves as individuals capable
of free choice and responsibility. These perspectives raise important
questions for how we understand ourselves and others. The goal
of this course is to help students to understand the basis of these
contemporary scientific views of human beings, and to think critically about the ways in which these views shape human experience. The specific research and theories discussed will vary by section. Students will read selections from the scholarly literature in psychology, as well as popular or media selections related to the topic. The class format will be open discussion, and students will be expected to come to class prepared to discuss the assigned readings. Evaluation will be based on short writing assignments, exams, in-class presentations, and class participation. Writing assignments will generally require that students apply concepts discussed in class to particular topics, or that they use library and Web resources to find relevant material. In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them including the opportunity to develop relationships with faculty and other students who share their academic interests. This course fulfills the first-year seminar requirement as well as a general education or Bachelor of Arts social/behavioral science requirement.

Bachelor of Arts: Social and Behavioral Sciences
First-Year Seminar
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

PSYCH 100: Introductory Psychology
3 Credits

This course is required and foundational for students who are majoring or minoring in psychology and it is a prerequisite for other psychology courses. Psychology is a scholarly discipline, a scientific field, and a professional activity. Its overall focus is the scientific study of behavior and experience, and of associated mental and physiological processes. As a scholarly discipline, psychology represents a major field of study in academic settings, with an emphasis on theories and principles of behavior and experience. As a science, psychology is a domain of research in which investigators analytically and systematically study behavior and experience to develop theories and principles and to understand their application to real-world situations. As a profession, psychology involves the practical application of knowledge, skills, and techniques for enhancing well-being and quality of life, as well as solving or preventing individual and social problems. This course, which serves as a prerequisite for most upper-level psychology courses, provides an overview of the field of psychology, including research, theory, and application, and promotes thinking about how students can apply psychology to enhance their lives. Specific topics include the biological bases of behavior, sensation and perception, learning, cognition, motivation and emotion, development, social cognition and social influence, personality and individual differences, and mental disorders and therapy. Evaluation is primarily through exams, papers, projects, or presentations and assesses psychological knowledge, skills, conceptual thinking, and critical analysis. After taking this course, students should be able to make more-informed decisions about participating in future psychology courses and have a better understanding of both psychology as a science and human behavior. Introductory Psychology is required for the Psychology major and minor. This honors version of the course is designed to provide the opportunity for students to engage with the material at greater depth and with greater emphasis on the scientific basis for the content.

General Education: Social and Behavioral Scien (GS)
Honors
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Soc Resp and Ethic Reason

PSYCH 100S: Introductory Psychology
3 Credits

Introduction to general psychology; principles of human behavior and their applications.

Bachelor of Arts: Social and Behavioral Sciences
First-Year Seminar
General Education: Social and Behavioral Scien (GS)

PSYCH 105: Psychology as a Science and Profession
3 Credits

Overview of history and methods of psychology as a science and profession; applications and ethical issues in psychology. PSYCH 105 Psychology as a Science and Profession (3)(BA) This course meets
the Bachelor of Arts degree requirements. The purpose of this course is to introduce Psychology majors and prospective majors to basic principles of research and practice in scientific psychology. The course provides a survey of the subfields of psychology, their history, and their current importance in both academic and applied settings. The focus is on common principles and issues important across these subfields. Students will learn how psychological research is conducted, survey applications of psychological research, consider ethical issues in psychological research and practice, and learn about careers in a variety of subfields in psychology. Students will be evaluated on the basis of multiple-choice exams (75%), in-class activities (10%), and short writing assignments (15%). The course will be required for the Psychology B.A. and Psychology B.S. (all options) majors, but will not be a prerequisite for any other course. The course will be offered each fall and spring semester in large sections of 300-350 students.

**Prerequisite:** PSYCH100
Bachelor of Arts: Social and Behavioral Sciences

**PSYCH 109N: The Psychology of Artistic Creativity**

3 Credits

Creativity is an essential component of people’s lives. It plays a critical part in advancing our society via art, design, and science. However, what is creativity? What contributes to it? Moreover, how can one become more creative? The goal of this introductory course is to answer these questions by integrating art and psychology. The course begins with a discussion of what is creativity. In the process, the class will discuss how context, culture, and narrative play a key role in answering this question. Next, the course will examine who is creative. Here, the class will discuss what, if anything, contributes toward a creative personality, what role developmental factors play in the creative process, and if there is a link between mental illness and creativity. Lastly, the course will discuss the creative process. Here, students will learn how the brain and body help people process, understand, and create information, how emotions influence thought and are conveyed to others, how motivational processes can both encourage and hinder creative endeavors, and how inter- and intra-personal processes can facilitate and destroy creative expression. Students will learn about these processes by examining creativity via two perspectives: the perspectives of various artists, art scholars, and art educators and from the perspectives of various disciplines within psychology, including personality, clinical, development, and social psychology. Students also will complete exercises that encourage critically evaluating these perspectives and actively applying their potential insights to their own artistic endeavors. Thus, a key element of this course is not only to understand more about creativity, but to be able to apply artistic and psychological practices and knowledge to better understand and improve one’s own and other’s creative potential.

**General Education: Arts (GA)**
**General Education: Social and Behavioral Scienc (GS)**
**General Education - Integrative: Interdomain**
**GenEd Learning Objective: Integrative Thinking**
**GenEd Learning Objective: Key Literacies**

**PSYCH 120N: Knowing Right from Wrong**

3 Credits

Knowing Right from Wrong provides a comprehensive understanding of the nature of moral ideas, beliefs, and behaviors in contemporary contexts. What roles do nature and nurture play in the development of moral sensibilities? How do moral emotions and moral reasoning interact to produce moral behavior? What defines moral character and how does it influence what we do? Is it possible to derive what ought to be done from what is known about the world? How do we respond when moral demands compete with another? How do our moral convictions color our perceptions of world events? Can individuals and groups with differing moral commitments communicate with one another and live together peacefully? The course integrates perspectives from philosophy, psychology, and sociology, and prepares students to think about (and act in) a world in which morality (and its linked concepts, such as judgment of others) plays an increasingly important social and political role. The course treats morality as both an aspirational concept and as an actual social practice, and focuses on three major themes: (1) the origins and development of moral reasoning and ethical systems, (2) the influence of moral emotions and moral intuitions on moral reasoning and behavior, and (3) the influence of social and contextual factors on moral behavior and expression. Integrating the philosopher’s interest in ethics, with the psychologist’s interest in the mind and body, and the sociologist’s interest in groups, the course provides a comprehensive introduction to morality in contemporary society, and the ways in which it shapes the lives of people in everyday situations.

**PSYCH 144Z: Climate Change: Individual Behaviors and Group Attitudes**

3 Credits

PSYCH 144Z: Climate Change - Individual Behaviors and Group Attitudes is intended to be an introduction to environmental attitudes and behavior research within the social sciences, especially the fields of social and environmental psychology. This course allows students to understand the varied psychological processes, including individual attitudes, societal values, and personality traits, that shape a person’s interactions with and feelings toward the physical environment within the context of global climate change. Drawing on methodology and theory in the areas of attitude change, social cognition, environmental perception, pro-social behavior, and emotions, this course will provide students with insight into how individual and group actions and mental processes can impact beliefs and actions toward global climate change while also providing a foundation for ways to alter those behaviors in meaningful ways. By linking with other courses on climate change in the arts (GA) and natural sciences (GN), this course represents one piece of a larger discussion in which global problems such as climate change are studied and prevented from multiple perspectives and disciplines. PSYCH 144Z fulfills 3 credits of the GS Domain General Education requirements. PSYCH 144Z may also be used in combination with either ART 144Z or BIOL 144Z as linked courses to fulfill 6-credits of Integrative Studies.

**General Education: Social and Behavioral Scienc (GS)**
**GenEd Learning Objective: Crit and Analytical Think**
**GenEd Learning Objective: Integrative Thinking**
**GenEd Learning Objective: Key Literacies**
PSYCH 169N: What it means to be human

3 Credits

This course will investigate the distinctiveness of Homo sapiens, using fossil and non-human animal comparisons to highlight how modern humans are both similar to and different from other species. Basic elements from the fields of biology, genetics, anatomy, physiology, ecology, cognition, neuroscience, social psychology, and anthropology will be integrated for a complete and robust picture of humans and their place in the animal world. Furthermore, students will expand upon this integration of fields to make inferences about how an individual's or society's perspective on human uniqueness, or the lack thereof, impacts decisions and behaviors relevant to research ethics, environmental policy, educational policy, religion, and/or social issues.

PSYCH 175N: Mental Illness and the Movies

3 Credits

This course serves as an introduction to the integration of psychology and film analysis, with a focus upon mental health. PSYCH 175N / COMM 175N seeks to help students understand the extent to which cinema can influence our perceptions of mental illness, and how the experience of mental illness can influence cinema. Students will be guided to critically analyze and discover how cinema can build or break the stigma and stereotypes regarding various types of mental illnesses and their treatments. The course is designed to familiarize students with various mental disorders (e.g., autism, schizophrenia, bipolar disorder, dissociative identity disorder, anxiety disorders, substance abuse, and dementia), aspects of their treatment (e.g., psychotherapy, medication, and ECT), and the creative ways in which filmmakers can choose to portray mental illness and its treatment (e.g., camera angles, lighting, music, costuming, casting, editing, method acting, and marketing) across cinema formats (e.g., in feature, independent, and documentary films). Students will be guided to consider how the cinema has shaped their own perceptions of mental illness, and how they could guide a filmmaker to generate a creative, compelling, and accurate portrayal of various types of mental illness and their treatments. PSYCH 175N / COMM 175N emphasizes integrative thinking, and seeks to help students develop critical reading, viewing, and thinking skills. The course incorporates lectures and assigned readings with the viewing of feature films during a weekly practicum period. Most lectures incorporate case examples and video clips to help students exercise their critical thinking skills. Introductory lectures provide a critical social and historical context for each week's film screening. Follow-up lectures and discussions offer critical and integrative analysis. Course assessment includes both objective measures and essay exams. PSYCH 175N / COMM 175N is an Interdomain General Education course that incorporates student learning criteria from both the arts (GA) and the social sciences (GS). It assumes prior exposure to psychology or film studies. As such, the course is designed to have broad accessibility, primarily for introductory level students.

PSYCH 197: Special Topics

1-9 Credits/Maximum of 9

Formal course given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

PSYCH 197C: Special Topics - InterDomain

3 Credits/Maximum of 9

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GA/GS GenEd course.

PSYCH 197I: Special Topics - InterDomain

3 Credits/Maximum of 9

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GA/GS GenEd course.

PSYCH 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Social and Behavioral Sciences International Cultures (IL)

PSYCH 200: Elementary Statistics in Psychology

4 Credits

This course provides an introduction to the descriptive and inferential statistics commonly used in psychology, and to hypothesis testing as a method of scientific investigation. It also explores the ways in which the assumptions of statistical tests place constraints on experimental design and, conversely, how the design of experiments can dictate the statistical test appropriate for data analysis. The ability to understand and perform statistical analyses, and to evaluate the match between statistical analysis and experimental procedures, is critical to reading and understanding the empirical research that psychology is based upon, and that will be covered in upper-level psychology courses such as PSYCH 301W, for which PSYCH 200 is a pre-requisite, most 400-level courses, and certain lower-level psychology courses. In addition to performing some statistical tests by hand, students may also conduct statistical tests via statistical software packages commonly used
Developmental psychology involves the scientific study of the social, emotional, and intellectual changes that enable progression from infancy to adulthood. As part of a scholarly discipline, scientific field, and professional activity, the overall focus of developmental psychology is the scientific study of age-related changes in emotions, cognitions, language, personality and social relations and the relationships of these changes to familial, peer, and cultural experiences, biological development, and personal efforts to make sense of the social and object worlds. As an important area of psychological science, developmental psychology is a domain of research in which investigators analytically and systematically study behavior and experience to develop theories and principles and to understand their application to real-world situations. As part of a profession, developmental psychology involves the practical application of knowledge, skills, and techniques for enhancing the well-being and quality of life of children, adolescents, and their families, as well as the development of age-relevant solutions to and strategies for the prevention of individual and social problems. This course provides an overview of the field of developmental psychology, including its history, research methodologies, theories, and applications. Specific topics include but are not limited to the biological bases of development, parent-infant attachment, the development of sensation and perception, cognition and linguistic development, emotional development, moral development, and identity development. Content is presented through a combination of lectures, readings, activities, and demonstrations. Evaluation is primarily on the basis of objective exams.

Prerequisite: PSYCH100
Bachelor of Arts: Social and Behavioral Sciences
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

PSYCH 217N: The Science of Human Resilience
3 Credits/Maximum of 3

This course provides a comprehensive understanding of resilience from both a biological and psychological perspective. It provides students with an integrative approach to understand the dynamic interplay between nature and nurture in understanding children's at-risk behaviors as well as understanding children's resilient behaviors. The study of resilience will be examined with a systems approach using a strengths-based framework of positive youth development. Topics will include brain development, the biology of stress, environmental factors influencing resilience, children's mental health, growth mindset, and the science of resiliency. Specific attention will be directed towards understanding the neuroplasticity of resilience. Content will be presented using interactive lectures, in-class activities, readings, and small group discussions. After taking this course, students will increase their understanding of how specific environmental factors interact with biological underpinnings to affect children's levels of resilient and at-risk behaviors (e.g., depression). Strategies to optimize children's positive developmental outcomes will be emphasized throughout. This course includes a service learning component where students have the opportunity to apply newly acquired skills to mentor children in supervised school/community settings.

Prerequisites: PSYCH 100 Recommended Preparation: Due to the service learning component of this course, students will have to complete their clearances.
General Education: Natural Sciences (GN)
General Education: Social and Behavioral Science (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

PSYCH 220: Community Psychology
3 Credits

The purpose of this course is to provide an overview of the history and development of Community Psychology as a field. In addition, you will be exposed to key concepts and values associated with Community Psychology, as well as examples of Community Psychology in action. You will learn about multiple levels of intervention, including the individual, small group, community, and societal levels, as well as the interrelationship between these levels. You will also learn to examine psychological phenomena in context. Course Goals: In this course, you will: 1. understand what Community Psychology is, including being able to explain the seven core values of Community Psychology; 2. develop a deeper understanding of what working with communities entails; 3. analyze what kinds of issues Community Psychologists must be aware of when working with diverse populations; 4. analyze how human diversity impacts our everyday life; 5. evaluate problems that might arise around human diversity and pose possible solutions to problems.

Prerequisites: PSYCH 100 Recommended Preparations: PSYCH 270

PSYCH 221: Introduction to Social Psychology
3 Credits

Introduction to Social Psychology discusses how people's thoughts, feelings, and behaviors are influenced by other people (real or imagined). The course will provide an overview of the field, potentially covering such topics as: attitudes, persuasion, person perception, automatic vs. conscious thought, the self, prosocial behavior, aggression, interpersonal attribution, conformity, obedience, culture, groups, prejudice and discrimination from a psychological perspective.

Prerequisite: PSYCH100
Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Science (GS)
PSYCH 230: Introduction to Psychologies of Religion

3 Credits

Introduction to major Western psychologies of religion (James, Freud, Jung) and to subsequent extensions of and departures from them.

Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)

PSYCH 230H: Introduction to Psychologies of Religion

3 Credits

Introduction to major Western psychologies of religion (James, Freud, Jung) and to subsequent extensions of and departures from them.

Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS) Honors

PSYCH 231: Introduction to the Psychology of Gender

3 Credits

The focus of this course in general is on the psychological study of gender in historical and contemporary perspective. The historical roots of gender studies in women's studies, as a correction to a traditional focus on male and masculine perspectives, will be covered. Through both traditional and feminist research methods, psychologists have sought to clarify what is general among genders, and what may be individualized to specific persons or groups. Conceptions of gender and gender identity are examined in relation to other social identities in the United States, and beyond the US with cross-cultural comparisons. Historical changes in the US and outside the US are also discussed. Major topics include the role of gender in development, self-concept, social relations, and mental health. Relevant major theories of gender development and behavior are covered, such as gender schema theory. Emphasis of study is upon those experiences that are specifically related to gender, such as stereotypes and expectations of femininity and masculinity, violence against women, economic and work-related constraints, and pregnancy and childbirth.

Prerequisite: PSYCH100
Bachelor of Arts: Social and Behavioral Sciences
United States Cultures (US)
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Soc Resp and Ethic Reason

PSYCH 232: Cross-Cultural Psychology

3 Credits

PSYCH 232 provides a comprehensive overview of cross-cultural research in a broad range of areas including human development, perception, emotion, motivation, social behavior, personality, cognition, and abnormal behavior. It investigates the similarities and differences in individual psychological functioning among various cultural groups and explores the interaction of psychological, socio-cultural, and biological influences on human thought and behavior. In addition, the course addresses important international applications to acculturation, ethnic and minority groups, work, and communication. By studying psychology from a cross-cultural perspective, you should become more aware of the diversity of the international community and develop an increased understanding and tolerance of attitudes and viewpoints different from your own.

Prerequisite: PSYCH100
Bachelor of Arts: Other Cultures
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Global Learning

PSYCH 238: Introduction to Personality Psychology

3 Credits

Personality psychology involves examining theories of human nature and evaluating them in an empirical fashion. Personality psychology begins with the observation that each person is (to paraphrase Harvard psychologists Kluckhohn and Murray) in certain respects (a) like all other persons, (b) like some other persons, and (c) like no other person. In other words, personality psychology concerns itself with the study of (a) universal aspects of human nature, (b) psychological traits and types, and (c) individual uniqueness. Principal goals of the discipline include constructing descriptive taxonomies of personality, inquiring into the evolutionary and developmental origins of human universals and individual differences, and assessing the impact of personality on the life course. This course aims to cultivate in students a breadth of understanding through an analysis of some of the major intellectual statements concerning human nature. Psychoanalysis, humanism, existentialism, symbolic interactionism, biological, and neuropsychological are primary perspectives that may be examined. Questions considered within the course include: How can we determine what might be a part of fundamental human nature? What are the relative contributions of conscious rationality and unconscious irrationality to human behavior? Can human behavior be explained by a finite set of motives? Do explanations in psychology differ in kind from explanations in the natural sciences? Can personality be quantified? Short-answer examinations and class participation are used to evaluate the degree to which students have successfully comprehended course material. Students should understand why it is difficult for a theorist to create a view of human nature that transcends the theorist’s own personality and cultural/historical context, and how empirical research can help overcome these obstacles. Students are to learn how to identify and evaluate the assumptions (either implicit or explicit) about human nature and individual differences that underlie any social or behavioral science. By the end of the course, students should be able to describe the basic tenets of the major theories, to be able to compare and contrast the theories, and to be able to evaluate the strengths and weaknesses of each theory. A good understanding of the course material will prepare students for advanced study in personality theory and measurement, as well providing a useful context for courses in abnormal, clinical, developmental, health, historical/philosophical, industrial/organizational, and social psychology, as well as for courses in other social sciences, certain humanities, and some applied fields such as business which at least tacitly presuppose some view of personality.
Prerequisite: PSYCH100
Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

PSYCH 243: Introduction to Well-being and Positive Psychology
3 Credits

The introduction to well-being and positive psychology involves the application of empirically derived principles of psychology to address everyday experiences and focuses on ways to enhance one's life. More specifically, students will be introduced to the field and learn that positive psychology encompasses much more than the study of happiness, a common misconception. Students will learn to embrace strengths, foster personal growth, and enhance well-being based on scientific research. As part of a scholarly discipline, positive psychology, and professional activity, the overall focus of the course is the study of the psychological processes that relate to enhancing one's life. As an important area of psychological science, positive psychology is an area of research in which investigators develop and systematically test theories about the 'good life.' As part of a profession, it involves the application of this empirically gained knowledge to enable people to cultivate areas of their lives that will lead to greater contentment and fulfillment. This course provides an overview of the field of positive psychology. It introduces the field by exploring its history and considers its place in the field of psychology more generally. Topics discussed include but are not limited to positive emotions, positive thinking, character strengths, values, relationships (intimate and friendships), and the meaning of life. Cultural considerations within the field are also explored. Content is presented through a combination of lectures, readings, active learning activities, and demonstrations. Assessment is based on objective exams and writing assignments (which includes the use of scientific research to support personal experiences). Discussion and questions are encouraged in all sections to facilitate understanding of the material. After taking this course, students should have a better understanding of the field of positive psychology and what it encompasses and will acquire tools for applying the concepts learned to their own lives.

Prerequisite: PSYCH100
Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Integrative Thinking

PSYCH 244: Introduction to the Psychology of Human Factors Engineering
3 Credits

Introductory course in engineering/human factors psychology, emphasizing the application of core psychological principles and research to designing products and systems. PSYCH 244 Introduction to the Psychology of Human Factors Engineering (3) Human Factors Psychology is an area of psychology where the overall focus is the scientific study of human behavior and how it can be applied to the use, design and development of products and systems. Students will learn basic principles of how people process information, perceive and interact with the world in various circumstances. They will learn how psychologists conduct research on human thought and behavior in an effort to measure peoples’ perceptions, attitudes, and behaviors. These basic principles will be illustrated and explored with a series of hands-on activities that relate the material to everyday life. Topics to be covered include: research design and methods, sensation and perception, memory and language, and social psychology. Psychological principles from these areas will be used to discuss ways to improve the safety of tools and systems, reduce human error and increase user satisfaction. Students will also gain a better understanding of the influence of stress and workload on human performance. A major topic will be ways to develop reliable and valid evaluation techniques for assessing performance, safety and ease of use of systems. In order to design effective systems, individual differences in age, gender and culture must be taken into account. People in different regions of the world have cultural differences that influence the way they perceive the world and process information. These individual differences will be addressed throughout the semester. Topics are presented through a combination of lectures, readings, demonstrations, and in-class activities. Active learning elements such as library/internet research, writing activities, and collaborative learning experiences will be applied. Evaluation is on the basis of content-based quizzes, objective exams, brief written reports of hands-on exercises, and collaborative assignments. A major goal of the course is to show how questions relating to proper use and design of tools, computers and other systems are addressed through empirical research. The course introduces students to theories, research, and procedures used in psychological research and practice. It also promotes students to think critically about how they can apply this knowledge to enhance their lives. After taking this course students should have more sophisticated knowledge of the relationship between the brain, our thought processes and behavior. They should be able to make more informed decisions about what makes a usable product as well gain a better appreciation of the science and profession of human factors psychology.

Prerequisite: PSYCH100 or 3 credits of GS
General Education: Social and Behavioral Scien (GS)

PSYCH 246N: Human Factors in Design & Art
3 Credits

Within human factors engineering, a critical component to the design of products is understanding the physical and cognitive elements of the human. Within artistic design are fundamental elements to all visual expression. Thus, every artist, designer and visual communicator needs an awareness of formal elements and principles, variations within forms, relationships among forms. We must be aware of the impact evoked within viewers and users by formal conditions. This course and topics within it are inherently interdisciplinary in nature and could not be accomplished as effectively on their own. Without art, we cannot understand the design process effectively. Without human factors psychology, we cannot understand the human behavior effectively. Human factors is a discipline within psychology that deals with how humans interact and understand their world. This is necessary in product design. Art focuses on the creative process of design and is essential as well.

General Education: Arts (GA)
General Education: Social and Behavioral Scien (GS)
General Education - Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies
PSYCH 253: Introduction to Psychology of Perception

3 Credits

The goal of this course is to give students a detailed introduction to the basic questions in the study of how the energies and information in the external world become part of our immediate experience. This includes questions about how patterned energies (such as light, sound, etc.) are coded by our sensory systems and how those codes are used to support psychological experience. These are fundamental and fascinating questions and concern the most basic ways in which we interact with and experience the physical world. Students will consider these questions in detail with respect to the visual and auditory systems, and time permitting, with other sensory systems. Because these questions are such fundamental questions, they have long intellectual histories. Philosophers and scientists have been working on these questions for centuries, and the scientific study of them forms the basis for much of contemporary scientific psychology. We will be examining some of this intellectual history and be discussing the connection between the scientific study of sensation and perception and the other natural sciences, including biology, chemistry, physics, and mathematics (including computer science). The class will also focus on some of the tools and techniques that have been developed for the study of sensation and perception. The course will show that these tools and techniques are very general and have application to a broad range of issues in human psychology. Students will learn the basic procedures for data collection and analysis, and the procedures for evaluating inferences on the basis of that data. The study of perception requires the integration of techniques, methods, and tools from a variety of other sciences, including mathematics. Physics, algebra, and geometry are involved in understanding light as a source of information. Chemistry is involved in the absorption of light by photoreceptors as well as the mechanisms of neural communication in all sensory systems. Probability and electrical engineering contribute the tools used to conduct signal detection analyses of perceptual performance. It is not assumed that students are experts in any of these fields, nor do we expect that students will be when the course is complete, however, we do expect students to be willing to consider their importance to perceptual psychology.

Prerequisite: PSYCH100
Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

PSYCH 256: Introduction to Cognitive Psychology

3 Credits

This course is an introduction to cognition, an area of psychology that investigates the ways in which we acquire, store, create and use knowledge. Cognition includes a wide range of mental processes that are used every day in almost all human activities. These include neuroscience, attention, perception, memory, imagery, language, problem solving, creativity, and reasoning. Cognition refers to a theoretical approach in psychology that emphasizes the role of people’s knowledge, reasoning, and expectations and this approach has had a broad influence on all areas of psychology. It also involves developing sophisticated methodologies to study processes that are not always observable. Cognitive research can be applied in order to improve mental functioning, e.g., developing programs for improving memory or cognitive rehabilitation for brain injury. It can also be used to address serious societal issues and problems such as understanding how people develop and use stereotypes, or why distraction by a cell phone is dangerous. Cognitive psychology has applications to many fields including medicine, the legal system, education, and understanding mental disorders. In addition, cognitive psychology is part of the active interdisciplinary field of cognitive science that also includes disciplines such as philosophy, neuroscience and artificial intelligence. This course provides an overview of the field of cognitive psychology, including its research, theory, and application. Content is presented through a combination of lectures, readings, activities, and demonstrations. A major goal of the course is to show how the major questions in cognition are addressed through empirical research. It also promotes critical thinking and encourages students to apply this knowledge to enhance their lives.

Prerequisite: PSYCH100
Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

PSYCH 260: Neurological Bases of Human Behavior

3 Credits

An introduction to biopsychology, emphasizing the structure and function of the human brain. BB H (PSYCH 260) 203 Neurological Bases of Human Behavior (3) The nervous system provides the biological underpinning of behavior, and several scientific fields are concerned with the relationship between the nervous system and behavior. The goal of this course is to introduce the principle methods, findings, and theories of these scientific fields. Topics include (a) the anatomy and physiology of the nervous system, (b) how the nervous system gives rise to perception, action, language, memory, emotion and reproductive behavior, and (c) how drugs and mental illnesses affect the nervous system and alter normalperceptual, cognitive, and emotional behavior. The course prepares students for a number of more advanced courses in Psychology and Biobehavioral Health that address specialized topics in neuroscience, and may satisfy a requirement of these majors.

Cross-listed with: BBH 203

PSYCH 260A: Neurological Bases of Human Behavior

3 Credits

Biological Psychology is an area of psychology where the overall focus is the scientific study of behavior and experience, and underlying associated neurological and physiological processes. This course provides an overview of the biological bases of behavior and includes a presentation of the research, theory, and application of this knowledge. Specific topics include the basic anatomy and physiology of the central and peripheral nervous system, neural transmission and the function of various neurotransmitters. The majority of the course will focus on how these basic processes contribute to the processing of information from the senses, simple and complex learning, and cognitive processes such as memory, and language. Topics will include cover brain development, developmental and acquired neuropsychological disorders and therapeutic techniques. Content is presented through a combination of lectures, readings, demonstrations, and in-class activities. A major goal of the course is to show how questions relating brain and neural function to behavior are addressed through empirical research. The course introduces students to theories, research, and procedures used in psychological research and practice. It also promotes thinking about how
students can apply this knowledge to enhance their lives. After taking this course, students will be able to explain the relationship between brain and behavior. They will make more informed decisions about participating in future psychology courses and gain a better appreciation of the science and profession of psychology.

**Prerequisite:** PSYCH100

Bachelor of Arts: Social and Behavioral Sciences

General Education: Social and Behavioral Science (GS)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

**PSYCH 261: Introduction to Psychology of Learning**

3 Credits

This course provides a general survey of the study of learning and behavior. It will focus on investigating historical and current learning perspectives, their respective research methods, and how each contributes to our understanding of both human and animal behavior. The course also provides an investigation of human and animal experiments and how those studies inform our understanding of learning principles. Students should learn about the processes of classical and operant conditioning and other related phenomena. The course provides a foundation for further understanding of learning principles and prepares students to analyze and distinguish between different types of learning they will witness in their everyday lives. Questions discussed would include: How are behaviors and habits formed or changed? How are many of our social behaviors reinforced or weakened? What are the limits of learning, if any? How do learning principles help us with devising clinical interventions and treatments? Students will be able to encounter new situations, both social and otherwise, apply learning principles they have studied, and have an enriched experience because of the application of that knowledge.

**Prerequisite:** PSYCH100

Bachelor of Arts: Social and Behavioral Sciences

General Education: Social and Behavioral Science (GS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

**PSYCH 263N: Science of Learning**

3 Credits

This course is an introduction to the field of cognitive and learning sciences. It provides an integrative approach to how we learn and remember with particular emphases on the scientific approach to the concepts and application of the theory to education. Learning science is an interdisciplinary field that examines learning from many perspectives and applies the knowledge gained from such studies to improving learning, instruction, and learning environments. This field draws upon contributions from areas of psychology (cognitive, developmental, educational and biological psychology), neuroscience, computer science, as well as sociology and anthropology. Learning scientists use a scientific approach to understand learning, those who do the learning, and the context in which learning occurs. Many learning scientists also seek to apply this information to improve the learning environment, educational practices, and inform educational policies. In this course, students will learn the foundations of learning theory, the important neurological bases of learning, and current information on relevant aspects of cognition. Material will demonstrate the application of this information to educational settings. Course content will be presented in lectures, readings, activities, and demonstrations. As a science-based laboratory course, students will study the scientific method and complete a series of laboratory exercises. This course is designed for primarily for education and psychology majors. It will fulfill the laboratory requirement for education majors. For psychology majors at Penn State, it may fulfill category 3. cognitive/experimental or be applied to the Science Option in the BS Major. It may fulfill Category B. developmental, cognitive, learning at Berks Lehigh Valley college and the Commonwealth College. It may be used to fulfill the Social Behavior sciences requirements. Evaluation will be through examinations, laboratory reports, and additional activity assignments. This course will be offered once a year at Penn State Erie. As a laboratory course, sections will be capped at 25.

**Recommended Preparation:** EDPSY 14; PSYCH 100

General Education: Natural Sciences (GN)

General Education: Social and Behavioral Science (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

**PSYCH 268: Animal Minds**

3 Credits

This course covers select topics in animal cognition and communication. This course will focus mostly on the behavioral level. It will focus on observations and controlled behavioral experiments rather than on neurophysiological experiments (though it will cover some mechanisms that are implicated through behavioral research). One of the main goals of this course is to discuss how we can scientifically approach the study of animal minds. One of the recurring themes of the course will be methodological: how can we pose a question to a being that does not have language? Another goal of the course is to teach critical thinking about experiments in this field. It will discuss how to run a well-controlled experiment and closely examine the claims that are made by each experimenter. Through a class project, students will gain some experience trying to observe behavior and designing experiments. This course addresses an active research area in psychology, of broad interest to students in Psychology and other disciplines. Because of this broad appeal, no background in psychology is assumed, and no prerequisite is required. The course will fulfill a 200-level requirement for students in the PSY majors and minors. Students typically will be evaluated by two midterm exams (25% each), a final exam (35%), and a research project (15%). The course will typically be offered once each academic year with an enrollment limit of 50.

**PSYCH 269: Evolutionary Psychology**

3 Credits

Survey of evolutionary perspectives in current psychological research. PSYCH 269 Evolutionary Psychology (3) (BA) This course meets the Bachelor of Arts degree requirements. This course demonstrates how knowledge and principles from evolutionary biology are used to conduct research on the design of the human mind. The course explains how evolutionary psychologists identify adaptive problems faced by our ancestors and test hypotheses about psychological mechanisms.
designated by natural selection to solve these adaptive problems. The psychological mechanisms discussed are involved in phenomena such as perception and the control of activity, learning and cognition, mate selection and courting, development and parenting, altruism, aggression, and social structure. Evolutionary psychology is thus not a topic area such as perception, learning, or motivation, but rather a way of thinking that can be applied to any topic within psychology. The course, therefore, shows how evolutionary psychology is (1) changing how scientists approach old topics, (2) opening up new areas of research, and (3) beginning to provide a unifying framework for integrating the various subdisciplines of psychology. Students will learn to understand and evaluate evolutionary hypotheses about a range of topics in psychology and related social sciences. Evaluation will be based on a combination of methods, including for example traditional exams, written homework, papers, and participation in class and group discussions. The course is offered as a perspective that can be used to think about the subject matter in any particular content course in psychology. Students may choose this course to fulfill a requirement in the major.

**Prerequisite:** PSYCH100; ANTH 021, BI SC002, BIOL 133, or BIOL 222
Bachelor of Arts: Social and Behavioral Sciences

PSYCH 270: Introduction to Abnormal Psychology
3 Credits

Overview of assessment, causes, and treatments of psychological disorders. PSYCH 270 Introduction to Abnormal Psychology (3)(BA) This course meets the Bachelor of Arts degree requirements. This course focuses on some of the topics and questions people most commonly ask about psychology: What are the different psychological disorders, and what are they like? How do clinicians diagnose someone with a disorder? What do therapists actually do in therapy? Course objectives include: (a) examine historical and current conceptions of normal and abnormal behavior; (b) survey the origins, symptoms, and characteristics of several adult psychological disorders; and (c) introduce the main treatment approaches for psychological disorders. The course is designed to be accessible to both Psychology majors and others. Psychology B.A. and Psychology B.S. majors may use the course toward the 200-level breadth requirement of the major. Students will be assessed primarily with objective exams.

**Prerequisite:** PSYCH100
Bachelor of Arts: Social and Behavioral Sciences

PSYCH 281: Introduction to Industrial-Organizational Psychology
3 Credits

This course introduces the concepts and methods used to study people within and as they relate to the world of work. This is a survey course that provides an introduction to many topics ranging from determining what individuals do in their jobs, to the design and operation of organizations. Topics include (but are not necessarily limited to): recruitment, selection, training, teamwork, employee motivation, leadership, and organizational culture.

**Prerequisite:** PSYCH100
Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

PSYCH 294: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.
Bachelor of Arts: Social and Behavioral Sciences

PSYCH 295: Internship
1-18 Credits/Maximum of 18
Supervised off-campus nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.
Bachelor of Arts: Social and Behavioral Sciences

PSYCH 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

PSYCH 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
Bachelor of Arts: Social and Behavioral Sciences

PSYCH 297C: Special Topics - InterDomain
3 Credits/Maximum of 9
Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GA/GS GenEd course.
General Education: Arts (GA)
General Education: Social and Behavioral Scien (GS)
General Education - Integrative: Interdomain

PSYCH 297F: Special Topics - InterDomain
3 Credits
Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GN/GS GenEd course.
General Education: Natural Sciences (GN)
General Education: Social and Behavioral Scien (GS)
General Education - Integrative: Interdomain

PSYCH 299: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
This course familiarizes students with the needs and abilities of people with varying physical challenges through academic and experimental exercises. PSYCH 370 Psychology of Differently-Abled (3) (US) In 1991 President Bush signed the Americans with Disabilities Act (ADA) which recognized that the hundreds of thousands of Americans living with disabling conditions form a class which should receive protection under the law. Many people look at the ADA as civil rights legislation which is intended to offer disabled Americans the same legal rights to access as the Civil Rights legislation of the 60s offered to Americans of color. While discrimination in the workplace, in housing, and in other areas based on race is no longer openly practiced, people with different physical abilities are still fighting an uphill battle. Often the barriers they face are due to ignorance of their needs. The intent of this course is to increase awareness and sensitivity to the needs of people who are different in the physical dimension. Additionally, policy and economic implications will be studied. The content will include multiple modalities, such as mobility and visual differences. The focus will be positive, emphasizing how differences in one area are overshadowed by similarities in most areas. Language in the course will focus on the positive as well, hence Psychology of the ‘Differently-Abled’ rather than ‘Disabled’. Accomplishments of people such as FDR and Mozart will be discussed in the context of significant contributions made by people who were physically different. Finally, direct experience with people will be obtained through a community service component of the course. The objectives of this course are to first familiarize students with the causes and consequences of different physical challenges. The long term objective is to increase sensitivity to the needs of people who are different from most of us in some ways, but very similar to us in most ways. Research has shown that familiarity is a critical tool in raising comfort levels and decreasing discriminatory and hurtful acts. Evaluation Methods: Examinations 40%, mid-term and final Community Service 30%, this will be assigned through the same form Internship supervisors use to evaluate students for PSYCH 395 Research Paper 25% Oral Presentation 5%, 15 minute presentation to class regarding their community service experience. This course will draw on materials covered in General Psychology. No other course preparation will be needed. The course is an Intercultural and International Competence (GI) course, focusing on intercultural aspects only.
Prerequisite: PSYCH100, SOC 001, PSYCH 200, STAT 200, and PSY 201. This course presupposes critical thinking skills and basic competencies in statistics and research methods. For the Psychology major (PSHBS or PSHBA) at Penn State Erie, this course is important for students who will be entering graduate school or going into practice in the areas including, but not limited to: community psychology, social psychology, industrial-organizational psychology, sports psychology, or the general social services field. This course can count towards: a) the advanced course requirement, b) the special interest course requirement, or c) elective credit. Psychology minors at Penn State Erie can apply this course toward the 15 credits in psychology beyond the PSYCH 100 requirement. Students in other majors should consult with their academic advisers to determine how this course fits into their program of study. This course will be offered once annually (fall semester).

Prerequisite: PSYCH100 or SOC 001; PSYCH200 or STAT 200; PSYCH301W

PSYCH 410: Child Development

3 Credits

Study of the psychology of the growing person from conception through adolescence, focusing more on periods up to middle childhood. PSY 410 Child Development (3) PSYCH 410 Child Development is intended for undergraduate students majoring in psychology, education and related disciplines. The purpose of this course is to introduce students to the theories and the influences on child development from conception through adolescence. Students will be introduced to research concerns in developmental psychology, including descriptions of research designs and ethical considerations in research with children and adolescents. Course content will include an in-depth review of prevailing theories and influences on development from conception through adolescence. Application of the principles and influences will be applied to the physical, cognitive, and social development of children. Requirements for the course will include objective examinations, as well as written assignments. Written assignments will involve comparisons and critiques of major developmental theories. Examples of such assignments include descriptions of the key points of a major developmental theory, or process of child development, detailed description of an observation of a child and how the child's behavior relates to a major developmental theory, descriptions of how application of developmental theory apply to the student's chosen major or occupation, or comparisons and critiques of developmental theory.

Prerequisite: PSYCH100, 6 additional credits of PSYCH

PSYCH 412: Adolescence

3 Credits

Physical, cognitive, and personality development during adolescence.

Prerequisite: PSYCH100

PSYCH 413: Cognitive Development

3 Credits

Development of reasoning and related cognitive skills, such as perception and language.

Prerequisite: PSYCH100, PSYCH212

PSYCH 414: Social and Personality Development

3 Credits

Development of social and personality attributes.

Prerequisite: PSYCH100, PSYCH212

PSYCH 414H: Social and Personality Development

3 Credits

Development of social and personality attributes.

Honors

PSYCH 415: Topics in Developmental Psychology

3 Credits

Special topics in developmental psychology.

Prerequisite: PSYCH413 or PSYCH414

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 416: Development Throughout Adulthood

3 Credits

Processes of development and change of behavior from early adulthood through old age, emphasizing theory, method, and empirical research.

Enforced Prerequisite at Enrollment: HDFS 249 and (HDFS 312W or PSYCH 301W) and (PSYCH 200 or STAT 200 or 3 credits in STAT) and (6 credits in HDFS or PSYCH or SOC)

Cross-listed with: HDFS 445

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 419: Psychology and a Sustainable World

3 Credits

Students study relationships between humans and the natural world and psychological factors contributing to environmental problems and sustainable solutions. PSYCH 419 Psychology and a Sustainable World (3) This course examines psychological dimensions of humans' connection to the natural world, causes of human contributions to environmental problems, and psychological approaches for encouraging sustainable behavior. The course draws on the new field of conservation psychology and responds to the University's commitment to becoming a leader in sustainability education. This course is designed for upper-level undergraduate students to satisfy requirements for Psychology degree programs, the Psychology minor, and the Sustainability Leadership minor. Major topics covered include psychological foundations of environmental problems (psychological understanding of unsustainable behavior, psychological perspectives on ethical dimensions of environmental problems, people's place in nature, psychological approaches to promoting sustainable behavior), and the application of psychological principles to specific environmental topics (consumerism and sustainable lifestyles, population overshoot, climate change, land use, water use, energy use, food production and consumption, pollution and waste). Students will be able to apply concepts, theories, and findings to change cognition, motivation, and behavior, with the goal of reducing negative human impacts on the environment. They will be able to write and communicate about their work in the form of a final paper and
a class presentation that conform to the standards of psychological research. Assessment methods include weekly journal assignments that
document students’ application of lecture and reading material to their
experiences with nature, their observations about their own negative
impacts on the environment, and their actions to reduce negative impacts
on the environment. In addition, students will develop a conservation
intervention program that targets a specific problem on campus or in
a community, for which students review relevant literature, design an
intervention program, give a presentation of the program, and submit a
final paper on the program.

**Prerequisite:** PSYCH100, PSYCH221

PSYCH 420: Advanced Social Psychology

3 Credits

In depth study of selected research areas in human social behavior.

**Prerequisite:** PSYCH100, 6 additional credits of PSYCH

PSYCH 421: Self and Social Judgment

3 Credits

Individual’s perceptions, evaluations, and decision-making strategies
about themselves, others, and social situations or issues.

**Prerequisite:** PSYCH100, PSYCH221

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 422: Human Sexuality

3 Credits

Psychological influences on human sexual behavior such as love, sexual
orientation, gender, intercourse, contraception, sexually transmitted
diseases, dysfunctions, and paraphilias. PSYCH 422 Human Sexuality
(3) PSYCH 422, Human Sexuality, is intended to examine the influence
of psychological factors on human sexual behavior. Information on
male & female anatomy, on the roles/influences of hormones, and on
conception/pregnancy will be covered as well as information on gender,
sexual orientation, communication, love, sexual harassment, paraphilias,
sexually explicit material, and sexual dysfunction. Evaluation will be by
means of exams (60% of grade), papers (15% of grade), small group
projects (10% of grade), and a poster presentation (15% of grade). The
prerequisite for this course is satisfactory completion of PSYCH 100.
As the course presupposes critical thinking skills and an awareness
of research methods in psychology, it is an advanced undergraduate
level course requiring junior/senior level standing. For the Psychology
major (PSHBS or PSHBA) at Penn State Erie, this course can count either
toward (a) the diversity basic course requirement, (b) the advanced
course requirement, (c) the special interest course requirement, or
(d) elective credit. Psychology minors at Penn State Erie can apply
this course toward the 15 credits in psychology beyond PSYCH 100
requirement. Students in other majors should consult with their academic
advisors to determine how this course fits into their program of study. No
special facilities are required for this course, though students will need to
prepare a poster for presentation. This course is expected to be offered at
least once every four semesters.

**Prerequisite:** PSYCH100, 6 additional credits of PSYCH

PSYCH 423: Social Psychology of Interpersonal/Intergroup Relationships

3 Credits

In-depth study of relationships among individuals (e.g., intimate
relationships) or groups (e.g., prejudice, cooperation, competition,
aggression, and negotiation).

**Prerequisite:** PSYCH100, PSYCH221

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 424: Applied Social Psychology

3 Credits

Application of social psychological theories and research methods to
field settings and to the study of social issues.

**Prerequisite:** PSYCH100, PSYCH221

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 425: Psychology of Human Emotion

3 Credits

Reviews, critiques, and applies major historical and contemporary
psychological theories of emotion experience, understanding, and
expression.

**Prerequisite:** PSYCH100, 6 additional credits of PSYCH

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 426: Language and Thought

3 Credits

Relations between language and cognition; cognitive implications of
normal and impaired language development; cognition and bilingualism.
LING (PSYCH 426) 429 Language and Thought (3)(BA) This course meets
the Bachelor of Arts degree requirements. Is language a special and
uniquely human ability that develops and functions independently of
other cognitive processes? Do individuals who speak different languages
also have different concepts about the meaning of objects and ideas?
Does language development depend on exposure to spoken language?
In this course we will examine the relation between language and
thought by considering evidence on language and cognition in both
children and adults. Topics to be covered include the typical development
and use of language as well as language and cognition in individuals
whose language and/or cognition is impaired in some form. The latter
include individuals with aphasia who have sustained brain damage
following stroke or head injury, schizophrenics whose language reflects
aspects of their disorder, children diagnosed with Williams Syndrome
who appear to have good or even precocious language abilities in
the face of severe cognitive impairment, and Alzheimer’s patients in
whom semantic memory has begun to deteriorate. The course will also
discuss the acquisition of sign language among deaf individuals and the
consequences of bilingualism for children raised with two languages
and for adults with proficiency in more than a single language. The
purpose of this course is to provide a survey of current scholarship
on the relation of language and thought, including a review of recent
developments in the primary literature. The necessary background is
covered in introductory Psychology and Linguistics courses, which serve
as alternative prerequisites. Students will learn about the consequences
of typical and impaired development for relations between cognition
and language ability. It is distinguished from PSYCH 457, Psychology
of Language, by a focus on the implications of language, language
development, and language impairment, for cognitive processes. It covers some topics also addressed by current courses in Linguistics and in Communications Sciences and Disorders, but is distinguished from those courses by its focus on perspectives and theories from cognitive psychology. This course may be used toward the 400-level PSY requirements of the PSYBA and PSYBS majors, and toward the PSY minor. Students typically will be assessed on the basis of class participation and discussion (20%), four papers (total 60%), and an in-class presentation based on reading original research literature (20%). The course typically will be offered once each year at the University Park campus with an enrollment limit of 50.

**Prerequisite:** PSYCH 100, LING 001, or LING 100

Cross-listed with: LING 429

Bachelor of Arts: Social and Behavioral Sciences

**PSYCH 427: L1 Acquisition**

3 Credits

How children learn their first language; psycholinguistic aspects of lexical, syntactic, semantic, and phonological development. LING 446 (PSYCH 427) L1 Acquisition (3) (BA) This course meets the Bachelor of Arts degree requirements. This course focuses on how children learn their first language from the theoretical perspectives of imitation theories, social construction theories, and innateness theories. In addition, the course covers the various stages of language acquisition including phonological (sound system), morphological (word meaning), syntactical (grammar) and semantic (meaning) development from birth to adulthood. Other related subfields covered in the course include the acquisition of Pidgin and Creole languages, bilingual and multilingual acquisition, and language acquisition and linguistic change.

**Prerequisite:** LING 100; PSYCH 100

Cross-listed with: LING 446

Bachelor of Arts: Social and Behavioral Sciences

**PSYCH 432: Multicultural Psychology in America**

3 Credits

This course focuses on the central role of culture, race, and ethnicity in the human condition.

**Prerequisite:** PSYCH 100, 6 additional credits of PSYCH

Bachelor of Arts: Social and Behavioral Sciences

United States Cultures (US)

**PSYCH 434: Psychology of Gaming**

3 Credits

Upper level course examining the core psychological principles as they apply to the topic of games. GAME 434 / PSYCH 434 Psychology of Gaming (3) This course looks at how the field of psychology can be applied to understand and improve the world of games. This requires the application of theories and research based in experimental, cognitive and several other disciplines within psychology, including but not limited to cognitive, social, motivation & emotion, and experimental psychology. By applying different theories within these disciplines we can start to understand how humans interact with games and in turn how games have evolved as a result. This course addresses an active research area in psychology, of broad interest to students in Psychology and other disciplines. The course will fulfill a 400-level requirement for students in the PSYCH majors and minors as well as those in the GAME minor.

Students typically will be evaluated by exams, research project, in-class activities, homework, and article discussions.

**Prerequisite:** 3 credits of psychology or 3 credits of a gaming course

Cross-listed with: GAME 434

**PSYCH 436: Humanistic, Existential, and Religious Approaches to Psychology**

3 Credits

Existential, humanistic, and religious approaches to the psychology of experience, consciousness and will.

**Prerequisite:** PSYCH 100 or RL ST001

Bachelor of Arts: Social and Behavioral Sciences

**PSYCH 438: Personality Theory**

3 Credits

Personality theories and their application to social and personality development and personality dynamics.

**Prerequisite:** PSYCH 100, 6 additional credits PSYCH

**PSYCH 439: History and Systems of Psychology**

3 Credits

Historical antecedents to scientific psychology; development of contemporary psychological theories and research areas from the formal establishment of psychology.

**Prerequisite:** PSYCH 100, 6 additional credits of PSYCH

**PSYCH 441: Health Psychology**

3 Credits

Overview of the field with an emphasis on how psychological research contributes to an understanding of health and behavior.

**Prerequisite:** PSYCH 100, 6 additional credits of PSYCH

**PSYCH 442: Trauma and Resiliency**

3 Credits

This course will provide an overview of the current state of knowledge and research on traumatic stress, resiliency, and treatment.

**Prerequisite:** PSYCH 100 and one other PSYCH class

**PSYCH 443: Treatment and Education in Developmental Disabilities**

3 Credits

Covers etiology, classification, intervention (treatment and education), ethical and legal issues related to individuals with developmental disabilities.

**Prerequisite:** PSYCH 100, 6 additional credits of PSYCH
PSYCH 444: Engineering Psychology
3 Credits

Methods and results of experimental psychology pertinent to problems which involve man-machine relationships.

**Prerequisite:** PSYCH100, 6 additional credits of GQ or PSYCH 444

PSYCH 444: Forensic Psychology
3 Credits

Relations between psychological theory and research and the law, legal processes, and social policy. PSYCH 445 Forensic Psychology (3)(BA)

This course meets the Bachelor of Arts degree requirements. This course focuses on the interplay between psychological theory and research and the law, legal processes, and social policy. Students will be exposed to the dilemmas faced in the law and how overlap with the knowledge base and expertise of psychologists. Students will learn about the roles psychologists might play in the court system and the history of their involvement. This will include roles of consultant, policy evaluator, expert witness, assessor, and advocate. Legal issues that emerge in psychological practice will also be covered (e.g., limits to confidentiality, duty to warn, consent issues). Students will gain an understanding of the basic theories of the law and how psychological theories may intersect with these. The emphasis of discussion will be on those affecting children, youth and families. These will include topics such as divorce, child maltreatment, juvenile delinquency, domestic violence, and social welfare. Other topics of the law will also be highlighted (insanity plea, civil commitment). Particular attention will be paid to issues dealing with race, ethnicity, and social class and law and social policy. This course expands the PSY curriculum at the 400-level to include a popular and socially significant topic, and will fulfill a 400-level PSY requirement for Psychology majors and minors. It addresses in detail legal and social policy implications of topics covered in other psychology courses. Significant background in psychology is assumed; thus PSYCH 270 (Introduction to Abnormal Psychology) is a prerequisite. Students typically will be assessed on the basis of three exams (20% each), a paper (30%), and class participation (10%).

**Prerequisite:** PSYCH100, PSYCH238, PSYCH243, or PSYCH270

PSYCH 445: Forensic Psychology
3 Credits

PSYCH 445: Forensic Psychology
3 Credits

This course provides an introduction to specific counseling and helping skills used by various counseling/psychotherapy models across the major theoretical orientations. During the course, an emphasis will be placed on the skills and techniques that a counselor uses to establish and maintain an effective counseling relationship. In both content and process, the focus is on integration of theory with practice through experiential learning. Students will learn and apply skills that range from basic attending and listening skills to interviewing skills. In order to facilitate learning, a variety of instructional strategies are to be used including: 1) Lectures and demonstration by the instructor, 2) videotaping of students as they are practicing their skills and providing feedback, 3) small group work for the purpose of practicing skills, analyzing other students' performances, and sharing reactions to the counseling process, and 4) completion of exercises/worksheets handed out in class. Upon successfully completing this course, the learner is expected to be able to engage in basic counseling and interviewing, demonstrate ethical counseling principles relevant to the content of the course, describe a model that represents the counseling process, including the stages of counseling, assess the role of nonverbal communication in counseling, identify and demonstrate basic listening skills, probing, interpretation skills, challenging skills, summarizing skills, and informing skills, assess the use of each basic skill in a multicultural environment, evaluate personal and peer mastery of basic skills, and conduct a brief one-session counseling intervention that facilitates client development and change.

**Prerequisites:** PSYCH 100

PSYCH 451: Psychology of Action
3 Credits

Basic and applied science of action, from psychological, computational, and physiological perspectives. PSYCH 451 Psychology of Action (3) In all walks of life, people must adaptively control their physical movements. Whether in industrial settings, on the highway, in the kitchen, in the studio, in the concert hall, or on the football field, skillful physical action is essential. This course will focus on the means by which skilled physical behaviors are learned, planned, and controlled. The course will focus on a broad range of basic behaviors (e.g., reaching, walking, looking, speaking, and typewriting) as analyzed from several perspectives (physiologically, psycho-logically, and computationally). Basic science as well as practical applications will be emphasized, as will links between movement control and other, related topics such as perception, cognitive development, and robotics. This course addresses topics in an active research area in cognitive psychology. It assumes some prior knowledge of cognitive psychology, requiring PSYCH 100 and PSYCH 256 as a prerequisite. The course will cover some topics addressed in several Kinesiology courses, but does so from the perspective of cognitive psychology. It will fulfill a 400-level PSY requirement for Psychology majors and minors. Students typically will be assessed on the basis of midterm (25%) and final (35%) exams, brief writing assignments and in-class activities (15%) and research papers or projects (25%). The course will normally be offered once each academic year.

**Prerequisite:** PSYCH100, PSYCH256

PSYCH 452: Learning and Memory
3 Credits

General survey of learning and memory processes as revealed in experimental work with animals and humans.

**Prerequisite:** PSYCH100, PSYCH256

PSYCH 455: Cognitive Neuroscience
3 Credits

Cognitive Neuroscience strives to understand the brain bases of cognition. This course is intended to provide an overview of the cognitive and neural processes that support major components of cognition such as attention, vision, language, motor control, navigation, and memory. The course will introduce students to basic neuroanatomy, functional imaging techniques including electrophysiology and functional Magnetic Resonance Imaging (fMRI), as well as behavioral measures of cognition. We will discuss the experimental techniques and the ways in which inferences about the brain bases of cognition are made. We will consider evidence from healthy adults, as well as from patients with neurological
diseases such as Alzheimer's disease, Parkinson's disease, Huntington's disease, amnesia, and stroke.

**Prerequisites:** PSYCH 256; PSYCH 260A; PSYCH 456: Advanced Cognitive Psychology

3 Credits

In depth study of complex mental processes: thinking, problem-solving, imagery, symbolic behavior, information-processing, attention, artificial intelligence, and language.

**Prerequisite:** PSYCH100, 6 additional credits of PSYCH

PSYCH 457: Psychology of Language

3 Credits

Overview of psychological research and theory on language processes, including speech perception, word recognition, meaning representation, comprehension, and language acquisition. LING (PSYCH) 457 Psychology of Language (3)(BA) This course meets the Bachelor of Arts degree requirements. How do we process language? Why do we easily adjust to a speaker with a foreign accent? How do young children come to speak the language to which they are exposed? Why is it difficult to learn a second language as an adult? This course focuses on the cognitive processes engaged by language use. Topics to be covered include speech perception, word recognition, representation of word meaning, comprehension of sentences, spoken production of words and sentences, and first and second language acquisition. In addition, the role of language in the study of thought and the role of biological mechanisms in theories of language learning will be discussed, as well as ways in which research on the language of special populations (e.g., deaf signers, dyslexics, aphasics) can inform theories of language processing and representation.

**Prerequisite:** PSYCH100 or LING 100

Cross-listed with: LING 457

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 458: Visual Cognition

3 Credits

Overview of concepts and methods in cognitive visual-spatial processing.

**Prerequisite:** PSYCH100, 6 additional credits of PSYCH

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 460: Comparative Psychology

3 Credits

Behavior from standpoint of phylogenetic growth and development; biological implications; comparison of different types of animals, including man.

**Prerequisite:** PSYCH100; PSYCH260

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 461: Advanced Conditioning and Learning

3 Credits

An examination of basic learning processes that have been determined within the context of classical, instrumental, and operant learning situations.

**Prerequisite:** PSYCH100, 6 additional credits of PSYCH

PSYCH 462: Physiological Psychology

3 Credits

Study of the biological bases of behavior and experience, including the anatomy and physiology of the brain and nervous system.

**Prerequisite:** PSYCH100; PSYCH260 or 3 credits of BIOL

PSYCH 464: Behavior Genetics

3 Credits

Survey of gene mechanisms and gene-environment interactions in the determination of behavior; emphasis on deviant human behavior.

**Prerequisite:** PSYCH100; ANTH 021, BI SC002, BIOL 133, or BIOL 222

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 466: The Psychology of Evil

3 Credits

This seminar will provide a critical study of evil from a psychological science perspective: how to define evil; popular perceptions about evil; the motivations people have to commit evil acts; the situational and personal factors that remove restraints to commit evil acts; and, the process of healing (forgiveness/reconciliation) after evil. By reading primary and secondary literature, we will critically think about these important, empirical questions about human nature. This course will wrestle with provocative questions about human nature. Are humans basically motivated to be good, evil, or both? Who should we trust more in recounting evil actions: victims or perpetrators (or neither)? Does 'pure evil' exist? Can we ever completely stop evil from happening? How do we heal after experiencing evil?

**Prerequisite:** PSYCH 100 Recommended Preparation: PSYCH 200, PSYCH 301W

PSYCH 467: Psychology of Serial and Mass Murderers

3 Credits

It is essential in understanding human behavior for students to include the darker side, murder - without conscience. This course will enable students to understand the definition of murder, within various classifications of it used in the United States, in particular the phenomenon of serial and mass murder. Students will be able to examine and understand within a historical context the cultural development of monsters, demons and evil and this relationship to serial and mass murder. Importantly, students will explore the biological and genetic foundations of human behavior, develop an understanding of the Diagnostic and Statistical manual (DSM-V) spectrum of personality disorders and how these disorders relate to violent behavior. Hare's PCL-R (Psychopathy Check List- Revised) factors will be examined alongside the examination of serial murder committed by legally insane offenders. Some, but not all serial killers have documented cases of
mental illness (e.g. schizophrenia), personality disorders (e.g. borderline and antisocial), and psychopathy, albeit most mass murderers suffer from various psychoses. In addition, students will be able to understand sociological theories as they pertain to violent behavior and include factors such as, the role of the family, sexual and physical abuse, and maladaptive childhood behaviors. Often serial murders are preceded by perpetrators’ (i.e., males) use of various types of criminal paraphilia (violent or non-violent). These are examined by students to understand the roles these play in the sexual fantasy development of (i.e., males) perpetrators and specific types of sex crimes. The healthcare industry, a hidden, but important environment for serial murderers, is examined by students in order to understand how occupations are important to serial murderers, as by way of their employment, many have easy access to victims. There are numerous differences between male and female serial killers, and team killers. These differences are explored by students by reviewing case studies of each, which include their profiles, mobility and techniques. Finally, global mass and serial murder is to be explored by students, which compare methods, motives and demographics. Numerous case studies of serial and mass murderers will be reviewed to link the psychological, biological and sociological factors to enable students to construct their own profile of a serial or mass murder by researching particular murderers and their psychological, biological and sociological factors.

**Prerequisites:** PSYCH 100 Recommended Preparation: PSYCH 270

**PSYCH 470: Abnormal Psychology**

3 Credits

Causes, dynamics, symptoms, and treatment of neuroses, psychoses, personality disorders, and other psychological disorders of adulthood.

**Prerequisite:** PSYCH100; PSYCH238, PSYCH243, or PSYCH270

**PSYCH 471: Psychology of Adjustment and Social Relationships**

3 Credits

Theory and application of psychological principles to problems in personal and social adjustment.

**Prerequisite:** PSYCH100, 6 additional credits of PSYCH

**PSYCH 472: Human Development, Health, & Education From A Global Perspective**

3 Credits/Maximum of 3

Intended to address the University’s global community objectives and provide scholarly background on India for Schreyer Honors students.

**Prerequisite:** PSYCH100H

Cross-listed with: SPSY 472

International Cultures (IL) Honors

**PSYCH 473: Behavior Modification**

3 Credits

Principles of advanced behavior modification techniques.

**Prerequisite:** PSYCH100, 6 additional credits of PSYCH
PSYCH 480: Advanced Mental Health Practicum with Children

3 Credits

This course involves a continuation and extension of the training and practicum work initiated in PSYCH 477 Mental Health Practicum with Children. The advanced training provided in this course extends understanding of intervention and prevention program logic models and implementation strategies, and includes a focus on tailoring interventions to account for individual, contextual, and cultural factors. Students began their practicum working with children in PSYCH 477 and continue to receive training and supervision for ongoing, linked practicum work in this course. The key goals of this course are to help students: 1) build up a ‘toolbox’ of therapeutic skills, techniques, and intervention approaches to use in the accompanying practicum and to use in future work with high-risk children, 2) understand how therapeutic group interventions with high-risk children are organized and conducted, and identify the key mechanisms of action that inform intervention design and drive positive child benefits, and 3) become familiar with the resource-base of evidence-based prevention programs and implementation supports to foster dissemination in communities. Lectures, class discussions, and presentations are included, along with practicum work review and supervision; accompanying practicum work with children is required. The class requires a commitment of 9 hours per week, which includes class sessions, practicum work, and assignments.

Prerequisite: PSYCH 477

PSYCH 481: Introduction to Clinical Psychology

3 Credits

Diagnostic procedures, treatment approaches, occupational settings, and ethical considerations relevant to the profession of the clinical psychologist.

Prerequisite: PSYCH100, PSYCH238, PSYCH243, or PSYCH270

PSYCH 482: Selection and Assessment in Organizations

3 Credits

Background in personnel testing, performance measurement, selection strategies, with emphasis on validity and measurement reliability.

Prerequisite: PSYCH100, PSYCH200 or STAT 200, PSYCH281

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 484: Work Attitudes and Motivation

3 Credits

Survey of theory and research with respect to attitudes, morale, and motivation of employees and management.

Prerequisite: PSYCH100, PSYCH200 or STAT 200 or 6 credits of GQ

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 485: Leadership in Work Settings

3 Credits

Review of research and application of behavior principles in the areas of management and supervision.

Prerequisite: PSYCH100, PSYCH281 or 3 credits MGMT
PSYCH 495: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

PSYCH 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

PSYCH 496A: **SPECIAL TOPICS**
1-6 Credits

PSYCH 496B: **SPECIAL TOPICS**
3 Credits

PSYCH 496F: **SPECIAL TOPICS**
1-6 Credits

PSYCH 496H: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

PSYCH 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

PSYCH 499: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)

Public Policy - CA (PUBPL)

PUBPL 201: Introduction to Homeland Security
3 Credits
An introduction to homeland security, and defense, with a focus on policy, legal issues, organization, and administration. PUBPL 201 Introduction to Homeland Security (3) Introduction to Homeland Security provides a baseline of common knowledge for understanding the nature of homeland security. The course achieves this goal by focusing on homeland security, the motivation and nature of terrorists, the policies established by governments, pertinent governmental plans to meet homeland security goals, who the key players are in homeland security, and the relevant legal issues framing efforts to defend the nation’s security. As an introduction to the broad area of study, this course serves as a basis for specialized study such as critical infrastructure protection, emergency response management (including natural disasters), border security, security administration, national security, and terrorism. Understanding key principles of homeland security will be expected from students who complete this course.

PUBPL 222N: Science and Politics of the Female Athlete
3 Credits
The purpose of this course is to explore gender differences in sport and politics that emerge from physiology, culture, history, politics, and policy. The engagement of women in sport has unique physiological considerations and ethical dilemmas as well as a rich history of defining moments and important ties to feminism and politics. In this course, students will learn how physiology differences affect female athletic performance and the effects of exercise on the female body, as well as how cultural, historical, and political forces shaped women's participation in sport. Students will also see how similar historical, cultural, and political forces affect women's involvement in politics. Combined, students will understand how similar forces shape gender norms and participation two different, yet related, aspects of society. Additionally, students will learn about the push for evidence-based policymaking and apply that knowledge to topics including doping, pregnancy, and gender verification. Students will integrate physiology and policy in a final assignment advocating for evidence-based sport policy. They will also educate their peers through a public education project.

Cross-listed with: KINES 222N, PLSC 222N
General Education: Health and Wellness (GHW)
General Education: Social and Behavioral Sciences (GS)
General Education: Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Critical and Analytical Thinking
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Social Responsibility and Ethics

PUBPL 241: Computer Applications in Public Affairs/Criminal Justice
3 Credits
Introduction to computer applications for criminal justice and public affairs agencies. CRIMJ 241 CRIMJ (PUBPL) 241 Computer Applications in Public Affairs (3) The student will gain a working knowledge of microcomputer and Internet applications to utilize them in course and/or job functions. The class will be treated primarily as a lab. The purpose is to make the student familiar with popular computer applications in current use. Applications covered include: Word Processing (Microsoft Word); Spreadsheet (Microsoft Excel); Presentation Package (Microsoft PowerPoint); Database (Microsoft Access). Internet Applications include: email - Webmail; World Wide Web Browser - Netscape Communicator and Internet Explorer; and creating a Homepage.

Cross-listed with: CRIMJ 241

PUBPL 304W: Public Policy Analysis
3 Credits
The use of analytic models for describing and explaining the forces shaping policy and the consequence of policy decisions. PUBPL 304W Public Policy Analysis (3) This course provides an overview of the policy process and an examination of specific policy areas in the American political system. We will focus on what constitutes public
policy and basic aspects of the policy process, including agenda setting, implementation, and policy evaluation. The course covers important contemporary policies such as health care, education, energy, welfare reform, and defense. It also will provide us with an opportunity to consider the utility of policy studies, and the various ways knowledge about particular issues is put to use by academics, partisan political figures, journalists, policy advocates, and policy makers.

Writing Across the Curriculum

PUBPL 305: Leadership Studies

3 Credits

Exposure to a wide range of leadership issues that will bring students to a new understanding of leadership as responsibility.

Prerequisite: fourth-semester standing

PUBPL 306: Introduction to Crisis and Emergency Management

3 Credits

An introduction to emergency management in mitigating, preparing for, responding to and recovering from hazards. PUBPL 306 Introduction to Crisis and Emergency Management (3) The course offers an overview of the field of emergency management in dealing with routine emergencies, crises or disasters, and mega disasters. Specific topics emphasized include: the roles and interactions of the public, nonprofit, and private sectors in emergency management; the legal and organizational structure of the national emergency management system; and the problems and policy issues associated with emergency management. This is done by examining the four phases of emergency management: mitigation, preparedness, response and recovery as they relate to resilience, the attempt to; and an overview, including case studies, of various human-made and, technological disasters as well as disasters related to natural hazards. Emergency management as conducted within the U.S. integrated emergency management system (IEMS) by local state and national emergency management agencies, not terrorist incidents, is the course focus rather than the emerging field of homeland security and terrorist events.

PUBPL 475: Critical Infrastructure Protection

3 Credits

This course provides knowledge about protection of critical infrastructure as an aspect of homeland security. PUBPL 475 Critical Infrastructure Protection (3) Critical Infrastructure Protection provides a definition of critical infrastructure and examines the importance of protecting it in the post-9/11 era. The course focuses on policies and programs designed to prevent catastrophic events and to protect and maintain the nation's critical infrastructure. It examines such activity through an understanding of the network of organizations at all levels of government and in the private sector responsible for protecting infrastructure. Case examples are provided of catastrophic events to provide an understanding of risks involved in infrastructure protection. Understanding key principles will be measured through preparation of a written analysis of a key homeland security/defense issue with alternative strategies consistent with current policy and legal constraints.

Prerequisite: PLSC 201; HLS 404

PUBPL 476: Homeland Security Intelligence

3 Credits/Maximum of 3

The Homeland Security Intelligence course provides a depth of knowledge of key intelligence issues for homeland security professionals.

Prerequisite: PLSC 201; HLS 404

PUBPL 481: Seminar in Environmental Policy

3 Credits

Fundamentals of evolution; impacts on natural resources; interaction of environmental issues, current decision-making process policy, enforcement mechanisms; future actions.

Prerequisite: seventh-semester standing

PUBPL 482: Seminar in Health Policy

3 Credits

Introduction to policy analysis of issues of current interest and importance to public administrators in the health industry.

Prerequisite: seventh-semester standing

PUBPL 483: Seminar in National Security Policy

3 Credits

Course will examine the inter-relationship of foreign, military and economic policy.

Prerequisite: seventh-semester standing

PUBPL 490: Seminar in Public Policy

3 Credits/Maximum of 99

A survey of the major policy issues, actors and institutions involved in the policy-making system of contemporary society. (May be repeated for credit.)

Prerequisite: seventh-semester standing

PUBPL 495: Internship

1-12 Credits/Maximum of 12

Experience in a public service agency related to knowledge gained through academic course work, reading, and discussion.

Prerequisite: fifth-semester standing

PUBPL 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

PUBPL 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.
Radiological Sciences (RADSC)

RADSC 101: Radiographic Introduction and Procedures/Lab I
4 Credits
Radiology history, basic radiation protection principles, medical terminology, introduction to radiography and radiographic procedures/lab. As is consistent with the core courses in the Radiography program, a passing grade for enrolled radiography students is 75%.

**Enforced Co-requisite at Enrollment**: BIOL 161 and BIOL 162

RADSC 102: Radiographic Procedures/Lab II
4 Credits
Continuation of Radiographic Procedures/Lab I to include finish appendicular skeleton, axial skeleton and introduction to skull anatomy and positioning.

**Enforced Prerequisite at Enrollment**: RADSC 101 and RADSC 110 Co-requisites: BIOL 163 and BIOL 164 and RADSC 295B

RADSC 103: Radiographic Procedures/Lab III
3 Credits
Continuation of Radiographic Procedures/Lab II to include digestive, urinary, and biliary systems and facial bone work.

**Enforced Prerequisite at Enrollment**: RADSC 102 Co-requisites: RADSC 295C

RADSC 110: Patient Care in Radiologic Sciences
3 Credits
This course includes the basic concepts of patient care, including consideration for the physical and psychological needs of the patient and the family. Routine and emergency patient care procedures are addressed from the radiographer’s perspective. Students will learn proper infection control techniques and will prove competency in CPR for healthcare workers. Students will learn drug nomenclature, legend drugs and different types of contrast used for procedures. As is consistent with the core courses in Radiological Sciences, students must achieve a grade of ‘C’ or better

**Enforced Co-requisite at Enrollment**: RADSC 101 Concurrent Courses: BIOL 161 and BIOL 162. Recommended Preparation: Clinical orientation on campus

RADSC 204: Radiographic Exposure I
3 Credits
This course is a requirement of the radiography (radiological sciences) curriculum and could be utilized as an option for students interested in a visual study of disease process such as health science and biology majors or for students in need of a writing-intensive course. As is consistent with the core courses in the Radiography program, a passing grade of a C or higher is required for all RADSC majors.

**Enforced Prerequisite at Enrollment**: BIOL 161 and BIOL 162, BIOL 163 and BIOL 164 Co-requisites: RADSC 295E

RADSC 207: Registry Review
4 Credits
Registry Review includes material from all radiological science courses, with emphasis on National Certification Examination, and career planning.

**Enforced Prerequisite at Enrollment**: RADSC 206

RADSC 210W: Radiographic Pathology
3 Credits
RADSC 210W Radiographic Pathology (3) A writing-intensive study of the basic fundamentals of pathology (disease process) with emphasis placed on radiographic presentation. Material covered includes the basic concepts of disease and terms related to pathology, systemic classifications of disease including etiology, examples, complications and prognosis, radiographic procedures and presentation, and the health process. Writing requirements include shorter and longer sequenced papers. All papers will receive instructor feedback and subsequent submission of a final revised paper. An informal writing assignment with peer review is also required. The writing process evolves throughout the course as the student applies knowledge learned to current assignments. This course is a requirement of the radiography (radiological sciences) curriculum and could be utilized as an option for students interested in a visual study of disease process such as health science and biology majors or for students in need of a writing-intensive course. As is consistent with the core courses in the Radiography program, a passing grade of a C or higher is required for all RADSC majors.

**Enforced Prerequisite at Enrollment**: BIOL 161 and BIOL 162 and BIOL 163 and BIOL 164

RADSC 220: Radiation Biology and Protection
3 Credits
Study the principles of interaction of radiation with living systems, effects on cells and tissues, biological response, and radiation protection. The content of this course includes the basic fundamentals of radiation interactions, basic biology with emphasis placed on effects of radiation
exposure on cells and on radiation protection mandates and techniques. This course is a requirement of the radiography (radiologic technology) curriculum and could be utilized as an option for other students interested in radiation effects such as health science, biomedical engineering, health physics or physics and biology majors. As is consistent with the core courses in the Radiography program, a passing grade for enrolled radiography students is 75%.

**Enforced Prerequisite at Enrollment:** RADSC 101

RADSC 230: Radiographic Physics

3 Credits

Basic knowledge of atomic structure, characteristics of radiation, x-ray production, photon interactions, circuitry, imaging equipment and quality control. This course is a requirement of the radiography curriculum and could be utilized as an option for other students interested in radiation interactions and imaging equipment such as health science, biomedical engineering, health physics or physics majors. As is consistent with the core courses in the radiography program, a passing grade for enrolled radiography students is 75%.

RADSC 240: Pharmacology and Drug Administration

2 Credits

Basic concepts of pharmacology, the basic techniques of venipuncture, and the administration of diagnostic contrast agents and/or intravenous medications. RADSC 240 Pharmacology and Drug Administration (2)

The content of this course includes the basic concepts of pharmacology, basic techniques of venipuncture, and the administration of diagnostic contrast agents and intravenous medications. Material covered includes drug nomenclature and categories, routes of administration, current practice status, and legal and ethical issues of medication administration. Students are required to prove competency in venipuncture using the arm phantom. This course is a requirement of the radiography (radiologic technology) curriculum and could be utilized as an option for other students interested in pharmacology such as Health Science and Biology majors. As is consistent with the core courses in the Radiography program a passing grade for enrolled radiography students is 75%.

**Enforced Prerequisite at Enrollment:** BIOL 141 and RADSC 110

RADSC 295: **SPECIAL TOPICS**

1-2 Credits/Maximum of 2

RADSC 295A: Radiologic Science Clinical Internship I

1.5 Credits/Maximum of 1.5

Supervised off-campus, non-group instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Enforced Prerequisite at Enrollment:** RADSC 101 and RADSC 110

RADSC 295B: Radiological Sciences Clinical Internship II

1 Credits/Maximum of 1

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Enforced Prerequisite at Enrollment:** RADSC 295D Co-requisites: RADSC 206

RADSC 295C: Radiological Sciences Clinical Internship III

2 Credits/Maximum of 2

Supervised off-campus group instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Enforced Prerequisite at Enrollment:** RADSC 103 and RADSC 295C

RADSC 295E: Radiologic Science Clinical Internship V

1.5 Credits

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Enforced Prerequisite at Enrollment:** RADSC 295G

RADSC 295F: Radiologic Science Clinical Internship VI

2 Credits/Maximum of 2

Supervised clinical education activities under the direction of registered radiologic technologists.

**Enforced Prerequisite at Enrollment:** RADSC 295E

RADSC 295G: Radiologic Science Clinical Internship VI-A

1 Credits

Supervised clinical education activities under the direction of registered radiologic technologists.

**Enforced Prerequisite at Enrollment:** RADSC 295E

RADSC 295I: Radiologic Science Clinical Internship VII

2 Credits/Maximum of 2

Supervised clinical education activities under the direction of registered radiologic technologists.

**Enforced Prerequisite at Enrollment:** RADSC 295G

**Railroad Transportation Engineering (RTE)**

RTE 294: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.
RTE 301: Railroad Industry Overview and Economic Regulation
3 Credits
This course explores the relationship between railroads and customers, competitors, and the political, regulatory, and economic environment.

**Prerequisite:** ECON 102; Concurrent: RTE 303

RTE 302: Railroad Track Location, Construction and Maintenance
3 Credits
Principles of railroad track location, alignment, elements and safety regulations.

**Prerequisite:** C E 310, C E 336; Concurrent: C E 335, C E 360

RTE 303: Railroad Operation and Safety
3 Credits
Basics of rail operations, including the role of terminals and safety principles.

**Concurrent:** RTE 301

RTE 305: Railroad Communications and Signals
3 Credits
Principles of the separation of trains, including signals, interlocking, and communications.

**Prerequisite:** PHYS 212, CMPSC201 or CMPSC202; Concurrent: RTE 303

RTE 402: Railroad Operations Practicum
3 Credits
Practicum (lectures, supervised field work, laboratories) exploring practical problems in rail operations and safety.

**Prerequisite:** RTE 303, RTE 305

RTE 403: Railroad Track Practicum
3 Credits
Practicum (lectures, labs, supervised field experiences) exploring the construction and repair of track.

**Prerequisite:** RTE 302, C E 310; Concurrent: C E 333W, C E 335

RTE 404: Railroad Mechanical Practicum
3 Credits
Practicum (lectures, labs, supervised field experiences) examining the repair of locomotives and cars.

**Prerequisite:** RTE 303, PHYS 211, PHYS 212, E MCH213

RTE 406: Railroad Capstone Project
4 Credits
Capstone project to integrate course knowledge in a team-based project.

**Prerequisite:** C E 333W, RTE 305, RTE 402, RTE 403, RTE 404, C E 332, 7th semester standing

RTE 495: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

RTE 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

RTE 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

**Recreation, Park, and Tourism Management (RPTM)**

RPTM 1: Introduction to Outdoor Pursuits
1.5-3 Credits/Maximum of 12
Introduction to Outdoor Pursuits (KINES 1/ RPTM 1) is a course that is designed to introduce the student to selected outdoor pursuit activities. The selected activities will depend on the time of the year and availability of resources. The activities could include but are not limited trail day hiking, mountain biking, backpacking, orienteering, kayaking, canoeing, cross country skiing, or to rock climbing experiences. All selected activities will follow the same basic format of skill development and training procedures, history and philosophical underpinnings of the activity, available written resources and professional organizations related to the activity, logistical equipment preparation, appreciation of environmental impact of partaking in the selected activity, safety management / risk assessment and future opportunities to participate in the activity. It is a purpose of this course to allow the student to explore different outdoor pursuit activities and then to make a more informed decision as to which activities they might choose to further develop their skill base and competency necessary to partake in the activity at a more advanced level on a life long basis. Through opportunities to develop camaraderie through collaborative work/ teamwork, students practice safe participation in the selected activities with attention to environmental impact. Students will experience a common skill base from which to engage in the activities. After completion of the course, students are encouraged to engage in adventure recreation programs, and other appropriate courses to help with the continued development of life skills. This course fulfills credits toward the GHW General Education requirement.

Cross-listed with: KINES 1

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Soc Resp and Ethic Reason
RPTM 12: Introduction to Outdoor Pursuits - LINKED
1.5-3 Credits/Maximum of 6

Introduction to Outdoor Pursuits (KINES 12/ RPTM 12) is a course that is designed to introduce the student to selected outdoor pursuit activities. The selected activities will depend on the time of the year and availability of resources. The activities could include but are not limited to trail day hiking, mountain biking, backpacking, orienteering, kayaking, canoeing, cross country skiing, or to rock climbing experiences. All selected activities will follow the same basic format of skill development and training procedures, history and philosophical underpinnings of the activity, available written resources and professional organizations related to the Course Justification activity, logistical equipment preparation, appreciation of environmental impact of partaking in the selected activity, safety management / risk assessment and future opportunities to participate in the activity. It is a purpose of this course to allow the student to explore different outdoor pursuit activities and then to make a more informed decision as to which activities they might choose to further develop their skill base and competency necessary to participate in the activity at a more advanced level on a life-long basis. Through opportunities to develop camaraderie through collaborative work/ teamwork, students practice safe participation in the selected activities with attention to environmental impact. Students will experience a common base from which to engage in the activities. After completion of the course, students are encouraged to engage in adventure recreation programs, and other appropriate courses to help with the continued development of life skills. This course fulfills credits toward the GHW General Education requirement. KINES 12/RPTM 12 is linked to ENGL 183Z; the two courses must be taken concurrently.

Enforced Prerequisites at Enrollment: ENGL 183Z
General Education: Health and Wellness (GHW)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Soc Resp and Ethic Reason

RPTM 98: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest

RPTM 100: Introduction to Golf Management
2 Credits

First year seminar for students enrolled in the Professional Golf Management option of RPTM. RPTM 100S Introduction to Golf Management (2) This course is designed to provide 1st year students enrolled in RPTM - Professional Golf Management Option, an introduction to the University, to their major / option, and to the Professional Golfers' Association of America. The course objectives are to introduce students to active learning as a way to make the transition to a more demanding academic environment. Students in the class will participate in collaborative group projects, which should also provide opportunities for them to establish relationships with faculty and peers. Students will investigate career opportunities within their field, as well as develop cover letters, resumes and reference sheets that will be necessary in obtaining internships for the summer session following their first year. Course content will also include information to help students become better students, by introducing them to available resources at the University, as well as develop skills in areas such as time management, study skills, note-taking etc. In addition, information will be introduced to help students become responsible members of the University community.

First-Year Seminar

RPTM 100A: PGA Tournament Golf A
3 Credits/Maximum of 12

For students enrolled in the PGA Accredited Golf Management Option in RPTM This is a course that will be offered in the fall semester only for students pursuing Professional Golf Management which seeks to provide students with the knowledge and skills necessary to play golf at a high enough level to become a PGA Professional. The primary focus of the course will be on golf movement skills, on-course performance, and mental training for performance. At the completion of this course, students will be equipped to better evaluate each aspect of their golf game and design effective practice strategies that ultimately lead to his/her tournament performance. In addition, students will have the necessary knowledge of how to track his/her performance, and also how to most effectively implement proper practice and training programs that result in improved performance. There are a couple of other unique features of this course. The PGA requires this course to have an 8 to 1 student to PGA instructor ratio. Because of this, the students work with the faculty members and PGA Professionals from the Professional Golf Management Program and also the PGA Professionals from the Penn State Golf Courses. Additionally, students have regular access to the Golf Teaching and Research Center and the Penn State Golf Courses and their practice facilities, also a PGA accreditation requirement.

RPTM 100B: PGA Tournament Golf B
3 Credits/Maximum of 12

For students enrolled in the PGA Accredited Golf Management Option in RPTM This is a course that will be offered in the spring semester only for students pursuing Professional Golf Management which seeks to provide students with the knowledge and skills necessary to play golf at a high enough level to become a PGA Professional. The primary focus of the course will be on golf movement skills, on-course performance, and mental training for performance. At the completion of this course, students will be equipped to better evaluate each aspect of their golf game and design effective practice strategies that ultimately lead to his/her tournament performance. In addition, students will have the necessary knowledge of how to track his/her performance, and also how to most effectively implement proper practice and training programs that result in improved performance. There are a couple of other unique features of this course. The PGA requires this course to have an 8 to 1 student to PGA instructor ratio. Because of this, the students work with the faculty members and PGA Professionals from the Professional Golf Management Program and also the PGA Professionals from the Penn State Golf Courses. Additionally, students have regular access to the Golf Teaching and Research Center and the Penn State Golf Courses and their practice facilities, also a PGA accreditation requirement.
forces shaping leisure behavior, and relationships among leisure, the
cultures, and to apply what was learned in class. Travel option will give the students an opportunity to experience different
experiences, sales and merchandising, tournament operations, and
golf tourism. The travel component for this course takes place over the
environment, and social institutions. Special attention is given to the
role of leisure in individual health and wellness. Main topics include: the
role of leisure in past and present societies; the ways in which leisure,
recreation, and play relate to personal health and wellness, the economy,
personal identity, work, religion, sexuality, race, class, socio-economic
status, time use patterns, and education; leisure's contribution to human
development throughout the life course; the role of leisure in one's
life, specialization in leisure activities, leisure careers, serious forms
of leisure, and leisure and addiction; and trends in the world economy
culture, technology, urbanization and suburbanization, governance,
demography and how they may influence leisure behavior. Student
performance is evaluated through exams and concept maps undertaken
in class. Students also examine their own leisure by constructing a one-
week diary. The diary involves providing a detailed account of time
allocated to work, personal maintenance, and free time. Students analyze
their data, calculate statistics about their time use, and write a reflexive
essay that connects their findings to class concepts. The time diary also
includes wearing a pedometer for one week to gauge physical activity.

RPTM 140: Outdoor School Field Experience
2 Credits/Maximum of 6
To provide students with educational leadership skills and teaching
opportunities working with children in an outdoor residential camp
setting. RPTM (SCIED) 140 Outdoor School Field Experience (2 per
semester/maximum of 6) The Outdoor School Field Experience course
allows students to observe, learn, and apply leadership techniques
and teaching methodologies in an experiential education program that
occurs off campus. This field-based experience provides students with
numerous opportunities to practice and refine their leadership and
teaching skills through active participation in one week of Outdoor School
Field Experience, a residential outdoor/environmental education program.

Enforced Prerequisites at Enrollment: Students must apply for and be
accepted into the Outdoor School Field Experience.
Cross-listed with: SCIED 140

1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively
narrow subject that may be topical or of special interest.

RPTM 199: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

RPTM 201: Introduction to Community Recreation
3 Credits
This course introduces students to the role of community and non-profit recreation agencies in generating benefits for individuals and communities. Using experience industry design/management and social justice perspectives, this course focuses on designing meaningful experiences that serve people from a variety of backgrounds and circumstances. Topics covered in this course include: the history of community and non profit recreation; environmental, economic, health, social and human development benefits of recreation; access and equity issues in recreation and community sport; engaging communities in decision making; the experience industry; and designing community recreation programs and spaces for meaningful experiences. Students will develop their ability to describe the benefits of community and non-profit recreation to individuals and society; identify disparities in access to recreation and the role of community and non-profit recreation in addressing these; describe methods and techniques for engaging community members in decision making; explain how theory informs the design of meaningful experiences; describe ways in which programs and places can be designed to facilitate meaningful experiences; and explain how individual and group characteristics should influence design to result in greater benefits.

RPTM 210: Introduction to Commercial Recreation and Tourism
3 Credits
Introduction to Commercial Recreation and Tourism is designed to introduce students to the historical and contemporary perspectives of the field of commercial recreation and tourism, and to serve as an introduction to the 'Commercial Recreation and Tourism' option within the Recreation, Park, and Tourism Management curriculum. The course will begin by offering a broad overview of this multifaceted field, highlighting the various roles that commercial recreation and tourism play locally, regionally, nationally, and globally. The course then shifts to focus on managerial considerations for practitioners in the field, preparing students to pursue a career in this expansive and exciting field.

RPTM 220: Sustainability, Society, and Well-being
3 Credits
We live in a world increasingly connected via global processes and social networks, and increasingly challenged by exponential growth in demands on our planet's finite environmental resources. This makes sustainability more of an imperative each day. But what exactly is sustainability? How does it relate to your career in RPTM or to your studies in other departments at Penn State? This course is designed to provide students with strong foundational knowledge about sustainability and how it relates to their career in Recreation, Park and Tourism Management. To develop students' understanding of the concept of sustainability, the course explores how interconnected social, economic, and environmental systems have resulted in the contemporary sustainability challenges we face both globally and locally. Each week students are presented with the large scale, global status of a particular issue related to sustainability before then exploring these challenges in increasingly local contexts of the U.S., Pennsylvania, and a career path in RPTM. In contemplating the broad scope of sustainability, students will become better informed about the many ways that their career in RPTM is influenced by this global context of challenges to social, environmental, and economic sustainability. In exploring how RPTM activities exert an influence on sustainability goals, students will be better equipped to address sustainability challenges within the organizations in which they work as well as in their everyday lives.

RPTM 230: Teambuilding Facilitation
3 Credits
Learn leadership and teambuilding skills to facilitate group dynamics and adventure, team activities. RPTM 230 Teambuilding Facilitation (3)Through hands-on experience, discussion, and observation students will develop a sound background to the basics of teambuilding. This course will focus on the philosophy of team activities and experiential education, and the skills required to lead and facilitate teambuilding events. In addition to learning skills, the students will be asked to apply their knowledge of teambuilding to lead actual activities for their peers. Finally, students will be exposed to information about career opportunities in the field of teambuilding and adventure education. Main topics include: An introduction to teambuilding philosophy and its relation to the outdoor education field. General concepts to be covered include: challenge by choice, full value contracts, the experiential learning cycle and the adventure wave. Activity understanding to include icebreakers, problem solving activities and trust events; Programming and activity sequencing; Leadership skills and the role of the facilitator; Stages of group development; Debriefing activities, transfer of learning and metaphorical transfer; Activity safety: emotional and physical; Risk Management and the elements of good judgment; Group assessment and program creation; Program evaluation. This course is one of the selections for RPTM majors in the adventure-based programming emphasis of the Outdoor Recreation Option. Students in other majors are welcome after RPTM majors have scheduled.

RPTM 236: Leadership and Group Dynamics in Recreation Services
3 Credits
Supervision in recreation services, including theories, strategies, group dynamics, applied leadership and decision-making skills. RPTM 236 Leadership and Group Dynamics in Recreation Services (3)The primary objectives of RPTM 236 are for students to examine both leadership and group dynamics as a function of leisure and recreation services. Students in RPTM 236 will be given a variety of leadership opportunities, both in and out of class, to begin to develop leadership skills as well as observe others in recreation leadership positions. Information on leadership theory and group dynamics (group development, roles in groups, group decision making) will be provided through group exercises and hands on experiences. Main topics include: Leadership theory; Approaches to leadership; leadership styles; Definition of group including characteristics and effective group management; Group decision making and problem solving; Recreation leadership skills including behavior management, interpersonal skills and motivation; Teaching as a leadership skill; learning theory; Communication as a leadership skill; Teambuilding RPTM 236 is a required course for RPTM majors. Students in other majors are welcome. It is strongly suggested that RPTM 236 be taken prior to, not concurrent with RPTM 356.

RPTM 240: Instruction and Leadership in Environmental Education
3 Credits
Outdoor School is a residential outdoor environmental education program attended by upper elementary-aged school children from school districts throughout central Pennsylvania. While serving as Outdoor School
Leaders, RPTM 240 provides students with experience in two main areas, leadership/mentorship as well as residential outdoor environmental education lesson planning and delivery. They are approached in the following manner: Group management and leadership techniques will be examined regarding working with peers (students taking RPTM 140 who are serving as Outdoor School Counselors) and effectively guiding youth participants in an outdoor setting. Outdoor School Leaders will explore what effective mentorship looks like, working with the Counselors to help them work towards their personal developmental goals by the end of the week. Outdoor School Leaders will also explore the intricacies of teaching outdoors, using the environment to keep the group focused and engaged in the learning process. By stepping into this broader leadership role, students taking this course expand the breadth of their responsibilities compared to RPTM 140. Students will enhance their residential outdoor educational skills by designing lesson plans on natural history topics and implementing these lesson plans in an outdoor setting. Class sessions and assignments are designed to develop skills prior to the immersive field experience of applying these techniques as an Outdoor School Leader. Outdoor School lesson plans include topics such as ecosystem science, sensory experiences in the outdoors, teambuilding, and the basic biology of native Pennsylvania fauna (sometimes taught using live animals). Students build upon the initial teaching experience provided in RPTM 140 by extending the creative process, granting students flexibility in how they plan and deliver lesson content as they develop a personal teaching style. While working towards mastery in the previous two areas, Outdoor School Leaders are also expected to contribute to the daily operations and logistics of their Outdoor School week. This includes items such as understanding relevant emergency protocols, applying sound risk assessment methodologies, and helping general programming run smoothly and safely.

**Enforced Prerequisites at Enrollment**: RPTM 140

RPTM 250: PGA Facility Management 1

2 Credits

For students enrolled in the PGA Accredited Golf Management Option in RPTM The PGA of America promotes its members as experts in the game and business of golf. Based on our current PGA Accreditation, RPTM 250 (PGA Facility Management) is a course designed to explore the various responsibilities and tasks associated with administering a full-service golf facility. Students will explore and apply management strategies to Business Planning, Customer Relations, Merchandising & Inventory Management, Tournament Operations, Rules of Golf, Golf Car Fleet Management, and Turfgrass Management. The course focuses on managing the golf operation in a way that delivers upon the business plan, offering the desired level of service to customers while also maintaining a viable, sustainable business. Students learn about the PGA Business Planning Model and use case studies to apply business planning concepts. The course also utilizes the PGA Work Experience Portfolio to document relevant training and experience. Students learn the business value of customer service and describe the components of the PGA Customer Relations Model. The course highlights the information about the importance of the golf car to the customer, the golf professional, and the facility. The course utilizes policies and procedures necessary for the operation of a safe and efficient golf car program. Students learn how golf shop design affects merchandise sales. Students will also learn the key terms used in the Rules of Golf and locate and apply Rules to frequently encountered situations. We will examine staff requirements for tournament operations, how to prepare for an event, and communicate tasks required for tournament execution. Students will also learn the types of grasses and soils, nutrient needs and the impact of climate and traffic stress. The course will also focus on common practices for maintaining healthy turfgrass including mowing, watering, fertilizing, aerating, pest control, and disease management.

RPTM 254: PGA Teaching and Coaching 2

2 Credits

RPTM 254 is the second course in the PGA of America’s education program in the subjects of golf teaching and coaching. This is a required course for program accreditation. Upon successful completion of the course, students will understand how various types of feedback function and influence performance, the effects of various communication styles, design appropriate practice conditions including the use of various swing methodologies, assess physical capabilities of golfers, and make necessary basic golf equipment adjustments. Students will have the knowledge to proficiently teach the game of golf to a variety of populations, knowledge required of all Professional Golf Management graduates. The final major topic, player development programs, teaches students how to identify the components of comprehensive player development programs and understand the needs and interests of diverse populations. This course continues to build upon the learning objectives of the PGA Teaching and Coaching 1 course (KINES 93), and is followed up by the PGA Teaching and Coaching 3 course (RPTM 354).

**Enforced Prerequisites at Enrollment**: KINES 93 Recommended Preparation: For students enrolled in the PGA accredited Golf Management option in Recreation, Park, and Tourism Management

RPTM 277: Inclusive Leisure Services

3 Credits

The course provides a review of leisure services and programs designed to be inclusive of individuals from underrepresented groups and an overview of professional, legal, and ethical issues. Students receive information about the history of social movements toward inclusive leisure services and acquire knowledge about people who experience oppression, marginalization, and are disenfranchised as well as strategies to enhance their leisure. The course highlights information about the psychological and sociological significance of discretionary time, recreation, and leisure for all people. In addition, the course provides details on social, psychological and physical circumstances that create barriers to leisure engagement. The course addresses current issues related to inclusive leisure services and ethical and professional behavior in the reduction of barriers and subsequent delivery of such services. The course focuses on increasing students’ awareness of the needs and interests of diverse populations as well as promotes understanding of principles and procedures for effective social, cultural and environmental design of leisure services, areas, and facilities that facilitate inclusion. Students learn about legal foundations and responsibilities of leisure service providers in serving all people and develop an understanding of ways to comply with professional, legal, and regulatory standards. The course provides students with guidelines to follow so that they help people experience the psychological, social, and physical benefits of leisure. Students receive information on ways to endorse people's culture, with culture used broadly to include characteristics such as ethnicity, religion, sexual orientation, and race. In this course, students explore various characteristics such as people’s abilities, age, gender, economic resources, and family and the influence that these aspects of their lives have on their leisure and how to design community leisure services that address challenges in any of these areas. The course is based on ethical
principles including the belief that everyone is deserving of respect and has right to be self-determined and that no one can be reduced to a single characteristic. Another cluster of ethical principles focus on the notion that inclusion is good and diversity enriches our world. Finally, since service providers have substantial power and responsibility, they are encouraged to have ethical beliefs drive their behaviors as they consider perspectives other than their own and engage in critical and constructive thinking to contribute to a more just society. Students are exposed to the historical background, development, and current configurations of various groups in our pluralistic American culture. Such exposure will promote an understanding of complex issues of inter-group relations and many kinds of cultural contributions that have shaped our nation. The course strives to increase students’ understanding of contemporary United States society.

United States Cultures (US)

GenEd Learning Objective: Global Learning
GenEd Learning Objective: Soc Resp and Ethic Reason

RPTM 280: Wilderness First Aid

1 Credits

Wilderness First Aid focuses on the basic skills of Response and Assessment, Musculoskeletal Injuries, Environmental Emergencies, Survival Skills, Soft Tissue Injuries, and Medical Emergencies. Successful completion of this course includes a certification in Wilderness First Aid by an outside, certifying organization.

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Soc Resp and Ethic Reason

RPTM 294: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

RPTM 295: **SPECIAL TOPICS**

1-4 Credits

RPTM 295A: Introduction to Golf Management

1-4 Credits/Maximum of 4

Introduction to various phases of golf operations in public, private, municipal, or military settings.

Enforced Prerequisites at Enrollment: 2.00 cumulative grade point average
Full-Time Equivalent Course

RPTM 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

RPTM 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

RPTM 299: Foreign Studies

1-12 Credits/Maximum of 12

Foreign Studies in RPTM.

Enforced Prerequisites at Enrollment: RPTM 199

International Cultures (IL)

RPTM 300Y: Tourism and Leisure Behavior

3 Credits

Examination of the impact of recreational sociocultural, governmental, economic, and physical environment on the leisure traveler within the tourism industry. RPTM 300 Tourism and Leisure Behavior (3) (IL) The objective of this course is to help students understand the tourism concept from a national and international perspective. The students will debate the motivations that lead people to engage in tourism and in hosting tourists. They will also examine the social, economic and ecological impacts that tourism development can bring to host communities and to tourists. The students will finally apply all the learned materials to conceptualize sustainable development strategies that aim at improving the quality of live of host communities, provide quality experiences to visitors, and protect the existing cultural and ecological resources of the destination. Main topics typically include: History - How people engage in tourism throughout all periods of history and the influence of major historic events on modern tourism; Socio-cultural impacts - How host cultures are transformed through tourism; Economic impacts - Revenues and costs to host economies due to tourism; Ecological impacts - Ways in which tourism helps and hurts the environment; International terrorism and peace - Why tourism is called the peace industry and how it is affected by terrorism and political instability; Sex tourism - Why tourism can alleviate or aggravate the exploitation of vulnerable segments of society; Tourism planning and policy - How to plan and manage tourism in ways that it produces sustainable benefits to the host community This is a required course for RPTM majors in the Community and Commercial Recreation option. Students in other majors are welcome.

International Cultures (IL)
RPTM 325: Principles of Environmental Interpretation

3 Credits

Introduction, history, practice, and principles of contemporary interpretive activities common to natural and cultural history program sites. RPTM 325 Principles of Environmental Interpretation (3) The primary objective of this course is to provide students with an overview of the field of environmental interpretation with special emphasis in understanding and applying the principles inherent in effective programs and presentations. The second objective is to provide information about career opportunities in the interpretive profession. The third objective is to provide students with a variety of service learning opportunities to help them refine their career aspirations. Main topics typically include: Becoming aware of the history, professional resources, and best practices in the field of environmental interpretation; Creating and using effective interpretive materials including exhibits and visual aids in non-formal programs; Demonstrating sound interpretive methods and techniques by conducting short presentations; Gaining an awareness of the operation of a visitor center and the experience of using live animals in interpretive programming; Demonstrating a competency in program development by participating in the planning, presenting, and evaluation of the children's Halloween Trail at Shaver's Creek Environment Center. This course is one of the selections for RPTM majors in the Environmental Interpretation emphasis and the Adventure-based Programming emphasis of the Outdoor Recreation Option. Students in other majors are welcome. This course is a pre-requisite for RPTM 326, 327, 425, and 430.

Enforced Prerequisites at Enrollment: RPTM 325
RPTM 330: Adventure-Based Program Leadership

3 Credits

Both theoretical and experiential components are included as the role of the leader in outdoor adventure programs is examined. RPTM 330 Adventure-Based Program Leadership (3) Both theoretical and experiential components are included as the role of the leader in adventure-based programs is examined. This course will focus on the philosophy, ethics, and current practices in the area of adventure-based programming. Focus of instruction will be upon program design, developing skills for facilitating personal growth and providing leadership for outdoor pursuits including rock climbing, canoeing, teambuilding, hiking and backpacking. Main topics to be covered: *Leadership aspects of teambuilding: spotting, the purpose of teambuilding initiatives, debriefing *Leadership aspects of rock climbing: belaying, safety, climbing skills, a look at top rope set up *Leadership aspects of whitewater canoeing: preparation, reading the river, rope rescues, righting a capsized canoe, paddling skills *Leadership aspects of backpacking: leave no trace environmental ethics, how to pack and prepare, 2-night backpacking trip to Black Moshannon State Park, planning a trip, reading a topographic map, acquiring a permit RPTM 330 is one of the selections for RPTM majors in the adventure-based programming emphasis of the Outdoor Recreation Option. The course is open to students from all majors.

RPTM 334: Non-profit Recreation Agency Operations

3 Credits

Recreation agencies in voluntary and semiprivate sectors will be investigated through membership strategies, fund raising, volunteer management, etc. case studies. RPTM 334 Non-Profit Recreation Agency Operations (3) The primary objective of this course is to expose students to the operational practices and missions of nonprofit recreation and tourism organizations. In particular, this course will allow students to investigate voluntary and semi-private sectors through membership strategies, fundraising and development roles, and volunteer management. Primary topics taught in this course will typically include the following: *The role of non-profit organizations in providing park recreation and tourism opportunities *Missions, governance procedures, and societal roles associated with non-profit organizations *Program support functions and non-profit fundraising strategies *Skills and roles of professional staff in non-profit organizations This course is a requirement for RPTM majors in the park management emphasis of the Outdoor Recreation Option. This is also a supporting course (i.e., department list) for RPTM majors in the Commercial and Community Recreation Management Option. Students in other majors are welcome after all RPTM majors have been scheduled.

RPTM 335: Outdoor Recreation Consortium

3 Credits

The purpose of the Outdoor Recreation Consortium is to provide students with hands-on exposure to outdoor recreation resources management in a National Park. It is designed to increase students’ understanding and appreciation of outdoor recreation resources, the agencies managing those resources, the management strategies used, and the factors affecting management, including issues related to the nearby ‘gateway communities’ and the park’s broader environment. The course format is one which focuses on problem solving, encourages a high level of interaction among participating students, faculty, managers, and gives participants an opportunity to connect with nature.

RPTM 336: Accounting in Recreation, Park, and Tourism Management

3 Credits

This course provides the student with the core knowledge needed to understand the kinds of data generated by the financial systems of recreation operations, prepare budgets, perform forecasting and breakeven analysis, and provide control over the financial aspects of the recreation/park/tourism business. Main topics typically include: Introduction to managerial decision-making; Cost behavior analysis; Cost, volume and profit analysis; Pricing decisions; Preparation of operational budgets; Calculation and interpretation of cost and revenue variances; Preparation of cash budgets and control over cash; Preparation of the statement of cash flows; and Preparation of financial statements in the recreation/park/tourism industry.

RPTM 345: Guest Activities Practicum

3-6 Credits/Maximum of 6

The purpose of the Guest Activities Practicum is to provide students with hands-on exposure to the guest experiences industry within commercial recreation settings. Students interact with faculty, other students and professionals from industry in the collaboration and sharing of ideas. The course is designed to increase students’ understanding and appreciation of the guest experience, the issues related to delivering recreation services in commercial recreation settings, principles of tourism, management strategies, and the factors affecting guest services. The course format is one that focuses on problem solving, encourages a high level of interaction among participating students, faculty, industry partners, and gives participants an opportunity to actively engage with customers. The course includes an embedded travel component in which students and faculty visit a guest experiences focused commercial recreation such as a resort or cruise ship and then work with industry partners on a designated project with student recommendations that might be implemented on site. The course includes course fees for travel.

Enforced Prerequisites at Enrollment: RPTM 120, Permission of program through application Recommended Preparation: Permission of program through application.

RPTM 350: PGA Facility Management Level 3

2 Credits

Based on our current PGA Accreditation Standards and Criteria, RPTM 350 (PGA Facility Management Level 3) is a course designed to continue to explore the various responsibilities and tasks associated with administering a full-service golf facility. Students will explore and apply management strategies to business planning, golf operations, merchandising and inventory management, golf car fleet management, supervising and delegating, turfgrass management, food and beverage control, and career enhancement. The course focuses on managing the golf operation in a way that delivers upon the business plan, implementing operational policies and procedures while maintaining a viable, sustainable business. Students learn about assessing the current state of business and analyze financial history to create a financial forecast and operating budget. The course aligns and implements operational policies and procedures and technology systems to support the business plan. Students will learn about merchandise assortment plans, ordering and receiving merchandise, and promotional campaigns and events to sell through merchandise. Students will also learn to project golf car fleet revenue, cost, and profit, and identify how budgeting changes will impact the bottom line. Students will learn how to describe
the performance system for supervising and delegating and use elements to the performance system to delegate assignments and how performance problems are managed appropriately. The course will also examine practices that improve the golf course while protecting the environment and students will learn about the process to design a new golf course or renovate an existing course. We will examine the features and benefits of a successful food and beverage operation and identify areas where food services and the golf operations should coordinate efforts. Students will also learn the components of an employment agreement or contract, negotiation strategies for compensation packages, and how to access PGA employment resources.

**Enforced Prerequisites at Enrollment:** RPTM 250 Recommended Preparation: For students enrolled in the PGA Accredited Golf Management Option in RPTM

RPTM 354: PGA Teaching and Coaching 3

2 Credits

Based on our current PGA accreditation standards and criteria, RPTM 354 is the final course in the PGA of America’s education program in the subject of golf instruction. This is a required course for program accreditation. Upon successful completion of the course, students will be able to explain how learning occurs in the process of golf skill development as well as the theories and factors that influence the transfer of learning. Students will be able to use a variety of techniques to measure performance levels of golfers and also understand the effects of golf club fitting on ball flight and golfer performance. The final major topic, player development programs, teaches students how player development programs contribute to facility operations and will be able to develop, market, and promote comprehensive player development programs.

**Enforced Prerequisites at Enrollment:** RPTM 254 Recommended Preparation: For students enrolled in the PGA Accredited Golf Management Option in RPTM

RPTM 360: Golf Operations Management 3 Credits

The course will focus on business planning, budgeting, inventory management, and financial controls within golf operations. RPTM 360 Golf Operations Management (3)The primary purpose of this course is to prepare a student in the fundamentals of retail management pertaining to effectively operating a golf shop. Although successful retail management of a golf shop requires many different considerations, this course specifically emphasizes the planning and controlling of both the operational and merchandising effort. The first objective is to teach the student about the planning process that is necessary to effectively manage a retail business. The second objective is to provide a student with an understanding of the practices and procedures in operating a golf shop. The third objective is to teach the student effective merchandising and pricing techniques. Main topics typically include: Types of plans that are needed in order to operate a retail business effectively; Developing strategic plans and business plans; Effective merchandising techniques for purchasing, pricing and selling; Planning techniques concerning both the purchasing and selling process; Quantitative open-to-buy planning as well as effective assortment planning procedures; Vendor selection and relations as well as negotiable terms of sale; Techniques regarding pricing, merchandise presentation and promotion. This is a required course for RPTM majors in the Golf Management Option. It is usually scheduled during the student’s sixth semester. Students from other majors may enroll after RPTM majors have registered.

**Enforced Prerequisite at Enrollment:** BA 304

RPTM 370: Introduction to Arena Management 3 Credits

Introduction to arena and facilities management including operations, budgeting, marketing and staffing. Course is taught on site at a sports/entertainment arena. RPTM 370 Introduction to Arena Management (3) Introduction to Arena Management introduces students to the complex skills and duties required to manage a sports/entertainment arena. The course is taught on-site at the Bryce Jordan Center at University Park. Main topics include: facility design and facility law; event planning and production; history of the touring industry; entertainment and sports booking; ticketing; marketing and public relations; crowd management, safety and implications of the Americans with Disabilities Act; technology and ticketing systems; professional and collegiate sports management; and partner agencies i.e. food and beverage. Student performance is evaluated through exams and special projects, including a formal small group presentation. Students are provided with exposure to a variety of experiential learning opportunities in service departments throughout the arena. Assignments are targeted to current events in the arena management industry.

**Enforced Prerequisites at Enrollment:** RPTM 120

RPTM 390: Political and Legal Aspects of Recreation Services 3 Credits

The primary objective of this course is to examine the governmental systems that influence the delivery of recreational services. The formal structure of government is considered along with the day-to-day political processes that determine public policy. All three levels of government—federal, state, and local—are studied. Particular attention is given to the judicial systems of these governments. The course also gives considerable attention to tort liability by examining case law as it relates to recreation facilities and services. The course also explores federal and state laws pertaining to employer/employee relations and administrative responsibilities. Main topics include: The Court Systems, legislative branches; planning and development: historical perspective, land use, zoning, mandatory dedication, easements, building codes; liability: elements of negligence, situations giving rise to law suit, product liability, defenses & risk management, review; personnel laws; Federal laws, State Human Relations Acts, Civil Service, Hatch Act, FLSA, finance, garnishment & bankruptcy; the Americans with Disabilities Act; Public Relations Law: copyright, photography, lotteries, libel, slander, privacy; Administrative Law: purchasing, entrepreneurship, Federal Tax laws. This is a required course for all students majoring in Recreation, Park and Tourism Management. It is open to students of other majors, providing they have met the pre-requisite.

**Enforced Prerequisites at Enrollment:** RPTM 120

RPTM 394: Orientation to Internship 1 Credit

Plan and prepare for internship in Recreation Services. Analyze career opportunities, internship process, and associated requirements. For RPTM majors only. RPTM 394 Orientation to Internship (1) The primary
objective of this course is to assist students with planning and preparing for their professional Practicum experience. The supporting objectives are: to provide awareness of the role and significance of the Practicum experience, including its relationship with professional practice; assist students in their understanding of the placement process, including prerequisites for placement; provide students with a working knowledge of their requirements while on Practicum, including contractual arrangements, on-site professional conduct, written assignments, evaluation procedures and evaluation criteria; and to provide the students with knowledge of post-practicum concerns, including resources for professional employment and professional certifications. Main topics typically include: ♦ Introduction to the practicum experience and pre-requisite requirements ♦ Personal and professional needs assessments and the importance of determining deficit skill and competency areas as related to the student’s intended career. ♦ Development of career and practicum goals and their relative importance to practicum site research and selection. ♦ Preparation of a professional cover letter and resume. ♦ Searching for and selecting possible practicum sites ♦ Professional approaches to contacting, communicating and following-up with prospective practicum agencies. ♦ Interviewing skills, including various interview formats, commonly asked questions, appropriate body language, and professionalism. ♦ Practicum requirements, including assignments, communication with the university and agency supervisor, and academic and performance evaluation. ♦ Post-practicum concerns, including graduation, employment, and professional certifications. This course is required of RPTM majors (except Golf Management Option), and is usually taken two semesters prior to the semester that a student plans to participate in RPTM 495A (Internship in Recreation Services). The course is not open to students from other majors. Students are evaluated by performance on written assignments and quizzes. This course is offered both spring and fall semesters with typical enrollments of 70-90 in the fall and 50-70 in the spring.

**Enforced Prerequisites at Enrollment:** 5th semester standing

RPTM 395A: Internship in recreational services

1-3 Credits

The internship provides a paraprofessional experience in which students simultaneously acquire skills in the field while using classroom knowledge to solve problems and generate new ideas in a commercial recreation, event or tourism setting. Under the guidance of the agency supervisor and the faculty coordinator, students will develop management and leadership skills as well as be exposed to strategic planning. The internships provide opportunities to increase knowledge and develop skills in event and program design, site and program management and approaches to assessments and evaluation. In addition, students will practice the art of customer service and stakeholder management. In addition to developing professional knowledge, students have the opportunity to develop professional performance (e.g. goal setting and achieving, time management, problem-solving), professional demeanor (e.g. professional courtesy, appearance, interpersonal communication) and professional attitudes (e.g. professional curiosity, respecting departmental policies, accepting direction and constructive criticism, and maintaining productivity and efficiency in age of distraction).

RPTM 395B: Participation in Golf Management

1-4 Credits/Maximum of 4

RPTM 395B Participation in Golf Management (1-4)The primary objective of this course is to complete a 40-hour per week internship at an approved golf property. While on internship the student will complete assignments involving: turfgrass management, analysis of the golf swing, and pre-work in merchandising and inventory management. Main topics include: Turfgrass Management: routine and non-routine maintenance, practices, traffic management, environmental issues, pest control, communications with superintendent. Analysis of the Golf Swing: video lessons, business plan for teaching, clubfitting systems. Merchandising and Inventory Management (pre-work): explore OTB practices, compare product lines, profile vendors, pricing methods, and evaluation of merchandise displays. This is a required course for RPTM majors in the Golf Management Option. The internship is not open to students in other majors.

**Enforced Prerequisites at Enrollment:** RPTM 295A or 2.00 cumulative grade point average

Full-Time Equivalent Course

RPTM 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

RPTM 399: Foreign Studies

1-12 Credits

Foreign Studies in RPTM.

International Cultures (IL)

RPTM 410: Marketing of Recreation Services

3 Credits

Theoretical/practical application of marketing/advertising strategies in the development/delivery of recreation services. RPTM 410 Marketing of Recreation Services (3) The primary objective of this course is to provide students with an overview of marketing in general and recreation/tourism marketing in particular. Supplemental objectives are to (a) provide students with a review of different marketing theories and practices and (b) help students apply marketing principles to practical recreation/tourism situations. Main topics typically include: Introduction to marketing and its evolution; Parameters of the recreation/tourism experience and how this affects marketing practices; Defining and segmenting the consumer market; The marketing mix; Conducting marketing research in an effort to develop effective marketing strategy; Service quality and its impact on marketing strategy; Customer loyalty and its impact on marketing strategy; Recognizing and responding to the changing needs of consumer markets. This is a required course for RPTM majors, generally taken after completion of the introductory courses in the major. Students in other majors, including those pursuing the Liberal Arts Business minor, are welcome after RPTM majors have scheduled.

**Enforced Prerequisites at Enrollment:** 5th semester standing

RPTM 415: Commercial Recreation Management

3 Credits

Planning, developing, and managing profit-oriented recreation opportunities. RPTM 415 Commercial Recreation Management (3) Building upon subject matter presented in many of the core RPTM courses, the primary objective of this course is to provide students with an understanding of strategic management processes and how they
apply to recreation/tourism businesses. A second objective is to develop students’ decision-making and analytical abilities. Main topics typically include: An overview of the strategic management process; Having the mindset of an entrepreneur/intrapreneur; The ‘ins and outs’ of conducting feasibility studies; The pros and cons of different forms of business; Generating and setting short- and long-term goals and objectives for recreation/tourism businesses; Capitalizing, financing and budgeting for recreation/tourism businesses; Planning, organizing, managing and controlling recreation/tourism businesses; Regulations, taxation and licensure of recreation/tourism businesses; Recognizing the importance of developing and maintaining relationships with various constituencies; Options for strategic growth This course is required of RPTM majors in the Commercial and Community Recreation Management option. Students take this course after or concurrent with RPTM 410. Students in other majors who have met the pre-requisites, including those pursuing the Liberal Arts Business minor, are welcome after RPTM majors have scheduled.

**Enforced Prerequisites at Enrollment:** RPTM 210 and RPTM 410 and 5th Semester standing

**RPTM 425: Principles of Interpretive Materials**

3 Credits

Principles, practices, application of non-personal interpretive activities common to natural/cultural history, including exhibits, audio-visual and illustrative materials. RPTM 425 Principles of Interpretive Materials (3) The primary objective of this course is for students to follow the exhibit creation process from conceptualization through construction to completion. Along the way, students will present their works-in-progress to fellow students and instructors for modification and improvement. Their final products will be used in a practical environment in the exhibit room at Shaver’s Creek Environmental Center and at various educational functions around the state - PA State Farm Show, Central PA Festival of the Arts, Penn State’s Ag Progress Days, etc. Main topics to be covered:

*Topics vs. Themes: narrowing the unifying concepts in exhibit design
*Flow in an exhibit and museum space: how to guide logical progression of thought in both an exhibit and exhibition area
*Color Schemes
*Computer aided design techniques
*Woodworking skills
This course is one of the selections for RPTM majors in the environmental interpretation emphasis of the Outdoor Recreation option. Students from other majors may enroll in this course if they have met the pre-requisite (RPTM 325).

**Enforced Prerequisites at Enrollment:** RPTM 325

**RPTM 430: Environmental Education Methods and Materials**

3 Credits

Methods and materials for developing, implementing, and evaluating environmental education programs within formal and non-formal educational settings. RPTM (AEE) 430 Environmental Education Methods and Materials (3) The primary objective of this course is to provide students with an introduction to Environmental Education (EE) methods (pedagogy) and materials for both formal and non-formal settings. A second objective is to provide the student with an opportunity to apply specific methods and materials to practical situations at Shaver’s Creek Environmental Center. These opportunities include Outdoor School, School Day Programs, Maple Harvest Festival, and Scout Programs. A third objective is to provide information about gaining access to EE materials through web-based, written, and personal contacts. Main topics typically include: Introduction to the history, definition, and philosophy of Environmental Education (EE); Differences between formal and non-formal EE settings; PDE Environment & Ecology Standards; Models of EE pedagogy; Place-based-education labs covering: The Land, Water Resources, Fauna, and Flora; Keystone Aquatic Resource Education; teacher resource workshop (or other national curricula - i.e. P WILD, PLT, Project WET, etc.); EE Resources available at SVEC, the web, and other EE centers. This course is one of the selections for RPTM majors in the environmental interpretation emphasis and adventure-based programming emphasis within the Outdoor Recreation option. Students from other majors may enroll in this course if they have met the pre-requisite (RPTM 325).

**Enforced Prerequisites at Enrollment:** RPTM 325

RPTM 433W: Program Evaluation and Research in Recreation Services

3 Credits

Systematic, structured problem-solving process for decision making in recreation and parks. Research techniques/evaluation procedures; quantitative, qualitative methodologies; deductive, inductive reasoning.

RPTM 433 Program Evaluation and Research Services (3) The goal of this course is to provide students with the background necessary to understand and evaluate research reports and to conduct research projects of moderate complexity in the field of recreation, parks, and tourism management. The research focus of the class is on evaluation and assessment. Class topics include introductions to the philosophy of science, including the nature of theories, hypotheses, concepts and constructs, to measurement theory, to applied sampling techniques, and to methods of scale construction. Both quantitative and qualitative research methods are addressed. In-class activities include the conceptualization and execution of an applied evaluation project. This project involves practice in interviewing, in-class focus groups, survey questionnaire development, data collection, and data analysis. The course will provide students with a conceptual map of how research is conducted, the resources available to them, the vocabulary of research, and guidance in writing a research report. Additionally, this is a Writing Across the Curriculum class. Students will prepare several short writing projects, some based on interviews or observational studies that they have conducted, as well as a final report based on the evaluation research conducted by the entire class. The course material is divided into units of study with topical areas within each unit sequentially presented to parallel the research process itself. Students are expected to have read assigned materials and to attend class prepared to discuss them. Classes involve lectures, discussions, and in-class activities such as focus groups, survey questionnaire development and presentations of research results. This class is required of all undergraduate majors in Recreation, Park and Tourism Management. RPTM 356 and a 3-credit course in statistics are prerequisites for this course. Students from other majors are welcome in this course, providing they have met the pre-requisites.

**Enforced Prerequisites at Enrollment:** 5th semester standing

Writing Across the Curriculum

RPTM 435: Recreation Facilities Planning and Management

3 Credits

Planning and management of selected facilities with emphasis upon maintenance, activity, and support provisions. RPTM 435 Recreation Facilities Planning and Management (3) The purpose of this course is to introduce students to planning, design, and maintenance practices at recreation and park facilities. This course will emphasize the activity and support provisions of recreation facilities and will identify standards of
The purpose of the peer-mentoring course is to provide students who have successfully completed and demonstrated leadership ability in RPTM 456 with an opportunity to gain additional leadership and event planning skills by mentoring a group of students currently enrolled in the class. Peer mentors serve as facilitators to teams of students in RPTM 456 who are charged with planning, promoting, implementing and evaluating a special event for a community or campus-based organization. Peer mentors are expected to help teach a minimum of 2 classes during the semester. Peer mentors take a leadership role in helping students understand and apply course content. Additionally, peer mentors serve as a liaison between the course instructor, the agency supervisor they are working with, and their assigned team.

Enforced Prerequisites at Enrollment: RPTM 236 and RPTM 456

RPTM 470: Recreation and Park Management

3 Credits

Management of recreation and park services in public/non-profit settings; planning, budgeting fiscal development, resources allocation, decision-, making, computer applications. RPTM 470 Recreation and Park Management (3) The primary objective of this course is to provide advanced standing RPTM students with an understanding of management and administration procedures that are essential to operating and managing park facilities and recreation programs. Secondarily, students will be given an opportunity to be exposed to park and recreation governance processes and will be asked to synthesize the roles that key stakeholders play in the management of public-sector park and recreation organizations. Key topics covered in this course include: * A historical account of park and recreation operating environment as well as trends in park support and positioning of the field * Inter-organizational partnerships and collaborations in the park and recreation field * Financing, budgeting and fiscal control processes...
*Human resource management principles and policies
*Creating effective working relationships with community stakeholders and park and recreation board members
*Comprehensive recreation, park and open space planning
This course is required for RPTM majors in the park management emphasis within the Outdoor Recreation Option. Students in other majors are welcome providing there are seats available after RPTM majors have been scheduled.

**Enforced Prerequisites at Enrollment:** RPTM 320

RPTM 475: Advanced Arena Management

3 Credits

Advanced Arena Management develops advanced skills and understanding in arena and live entertainment management fields including operations, budgeting, marketing and staffing. Course is taught on site at a sports/entertainment arena and also includes off-campus site visits to at least two (2) major live entertainment venues. Off campus travel with the class group is required for this course. Topics include; developing events from inception to delivery; booking, contract negotiation, scheduling, ticketing, food/beverage and alcohol service, safety and security, fan experience, risk management, and business management. Students are provided with management level exposure to a variety of departments throughout the arena and are given the opportunity to learn directly from department managers.

**Enforced Prerequisites at Enrollment:** RPTM 370

RPTM 494: Senior Honors Thesis

1-6 Credits/Maximum of 6

Senior Honors Thesis

Honors

RPTM 495A: Internship in Recreation Services

12 Credits/Maximum of 12

Meet educational objectives through participation in organized practical experience; direct observation and professional supervision in full-time work experience.

**Enforced Prerequisites at Enrollment:** RPTM 394 or seventh-semester standing or 300 hours practical experience and a 2.0 grade-point average or current and valid certification in advanced first aid and cardiopulmonary resuscitation

RPTM 495B: Internship in Golf Management

1-4 Credits/Maximum of 12

Observation and participation under supervision in golf operations in public, private, municipal, or military settings.

**Enforced Prerequisites at Enrollment:** RPTM 395B or 2.00 cumulative grade point average

Full-Time Equivalent Course

RPTM 495D: Internship in Golf Management

1-4 Credits/Maximum of 4

Observation and participation under supervision in golf operations in public, private, municipal, or military settings.

**Enforced Prerequisites at Enrollment:** RPTM 495C or 2.00 cumulative grade point average

Full-Time Equivalent Course

RPTM 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

RPTM 497: Special Topics

1-9 Credits/Maximum of 9

International Cultures (IL)

RHS 100: Introduction to Disability Culture
3 Credits
This course is designed to increase student awareness of personal, interpersonal, and societal aspects of disability, including how disability can be defined and understood differently in varied individual, institutional, and cultural contexts. Students will learn models of disability that will help them to (a) clearly distinguish different ways of conceptualizing disability and (b) critically think about how disability is represented and understood in varied cultural contexts, including in the US and in other countries. Through discussion of class readings and completion of class assignments, students will examine the ethical, economic, and social implications of disability and the dynamics of group and individual behavior that impact social interactions among people with and without disabilities. A strong emphasis will also be placed on understanding disability from a variety of cultural perspectives and assessing the impact of racial, ethnic, gender, socioeconomic, and socio-political factors, both domestically and internationally, on disability status.

RHS 300: Introduction to Rehabilitation and Human Services
3 Credits
This course serves as an introduction to Rehabilitation and Human Services practice settings. The course reviews the human services profession, including introductory information about social problems within a socio-political context to show how culture and ideology influence experiences and perspectives. The foundation of the human services profession is explored by examining educational standards and professional requirements: its roots as a helping profession within the history of social welfare provision, its ethical standards, theoretical underpinnings, and the nature of the generalist practice model, with an emphasis on helping people with disabilities.

RECOMMENDED PREPARATIONS: 6 credits in psychology, sociology, human development and family studies and/or crime, law and justice

RHS 301: Introduction to Counseling as a Profession
3 Credits
Overview of the counseling theories that are often used in human service and rehabilitation practices.

RHS 302: Client Assessment in Rehabilitation and Human Services
3 Credits
Provides a practical understanding and skills to utilize assessment in the helping process.

Prerequisite: 3 credits in statistics

RHS 303: Group Work in Rehabilitation Practice and Human Services
3 Credits
An overview of essential elements and dynamics for conducting groups and various team-related activities will be the major focus.

Prerequisite: 6 credits in psychology, sociology, or human development

RHS 397: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

RHS 399: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

RHS 400W: Case Management and Communication Skills
3 Credits
Principles and practices of obtaining, recording, evaluating, and utilizing case data in rehabilitation planning; implementation of rehabilitation plans.

Prerequisite: RHS 300

Writing Across the Curriculum
RHS 401: Community Mental Health Practice and Services
3 Credits

Community mental health roles, historical points, current trends, and ethical standards; funding and impact on service provision.

**Prerequisite:** 6 credits in psychology and/or sociology

RHS 402: Children and Families in Rehabilitation Settings and Human Services
3 Credits

Contemporary family issues, child development, legal considerations, cultural and familial factors within rehabilitation and human services practice will be addressed.

**Prerequisite:** RHS 301

RHS 403: Medical Aspects of Disability
3 Credits

Common disabling illnesses, injuries, and congenital defects; their symptomatology, prognosis, and treatment; implications for personal, social, and vocational adjustment.

**Prerequisite:** 6 credits in psychology and/or sociology

RHS 410: Employment Strategies for People with Disabilities
3 Credits

Develop knowledge, skills, and resources necessary to understand and practice effective employment strategies in working with people with disabilities. This course is designed for students to develop knowledge, skills, and necessary resources to understand and practice effective employment strategies in working with people with disabilities, including individuals from culturally diverse backgrounds. Students will develop skills on networking with employers (e.g., social media, professional organizations, interviewing employers, etc.) for building professional contacts and networks. Various forms of labor market information will be analyzed to identify both challenges and opportunities for people with disabilities in different sectors of the labor market (primary and secondary). Throughout the course, students will learn about disability issues in the workplace (e.g., laws, policy, stigma, accommodations, etc.). A strong emphasis will be on understanding how laws and policies impact employment for people with disabilities, and students will identify legal and illegal practices. Best employer practices will be identified regarding mitigating disability impact on both employees (current and future) and employers. This course will incorporate Assistive Technology (AT) applications so students will be able to identify appropriate AT devices to assist people with disabilities in obtaining and retaining employment along with applicable strategies for working with employers in developing employment opportunities in today's changing world of work. Students will understand how disability is a critical component of workforce diversity and strengths people with disabilities bring to the workplace. Students will identify how people with disabilities should prepare for the employment process including training opportunities (formal and informal), resume development, interview preparation, and initiatives to promote increased employment outcomes. Different disability populations (e.g., youth, Veterans, aging workers, etc.) will be discussed including common barriers for employment as well as how to create opportunities in different employer settings.

Cross-listed with: LER 410

RHS 420: Culture & Disability: Study Abroad in Ireland
6 Credits

Study aspects of culture and disability through lecture, visiting Irish disability service agencies, and guest speakers from various disability agencies. This course is designed to increase student awareness of disability from a cross-cultural comparison between the United States and Ireland including: personal, interpersonal, and societal aspects of disability, including how disability can be defined and understood differently in varied individual, institutional and cultural contexts. Students will learn models of disability that will help (a) clearly distinguish different ways of conceptualizing disability and (b) critically think about how disability is represented and understood in varied cultural contexts. Students will examine ethical, economic, and social implications of disability. Dynamics of group, family and individual behavior that impact interactions between people, with and without disabilities, will be addressed. Interactions and assignments will aid in the introduction of students to interpersonal communication and interaction issues among international cultures. A strong emphasis will be placed on understanding disability from a variety of cultural perspectives and assessing the impact of racial, ethnic, gender, socioeconomic, and socio-political factors on disability status. Throughout the course students will engage with various service providing agencies (which may include sensory disabilities, intellectual/ cognitive disabilities, and physical disabilities). Class time will be allotted to prepare for engagement and reflection as well as providing background information for understanding global policy and how to make comparisons. Students will participate in a culminating activity, such as attending the International Disability Summer School that equips students with the insights and skills necessary to translate the generalities of international positions on disabilities into tangible reform for persons with disabilities and understand disability from a global perspective. This course meets the requirement for RHS 100 (RHS majors and RHS minors and honors students), and/or up to 6 credits toward 400 level elective requirements for RHS minors. SPLED students can earn up to 6 credits towards the SPLED minor

Cross-listed with: SPLED 420
International Cultures (IL)
United States Cultures (US)

RHS 428: Rehabilitation Corrections
3 Credits

An overview of rehabilitation in different correctional settings focusing on history, classification, risk assessment, intervention strategies, and community reentry.

**Prerequisite:** RHS 300

RHS 433: Trauma-informed care for school & human service professionals
3 Credits

Many helping professionals interact with people who have survived, or are at risk for trauma, even when these professionals are not directly involved in either the design or delivery of direct interventions for trauma symptoms. This class is intended for students who wish to pursue one of these human services careers. In this class, students will learn how to conceptualize their students’ and/or clients’ struggles using a trauma-
sensitive perspective that can enhance service outcomes. Course topics include types of traumas and adversities; the lasting effects of chronic trauma; laws and reporting procedures; how to identify appropriate resources and evidence-based practices; communication strategies; and risk, protective and resiliency factors; understanding the connection to professional wellness and vicarious trauma; and populations at highest risk for types of trauma. The application of these topics to settings such as schools, healthcare, and the criminal justice system will be discussed.

RHS 495: **SPECIAL TOPICS**
15 Credits

RHS 495A: Rehabilitation and Human Services Internship
15 Credits/Maximum of 15

Full-time practicum in rehabilitation and related human services agencies and institutions providing psychosocial, vocational, educational, and/or residential services to people with disabilities.

**Prerequisite:** students must have successfully completed all other required coursework for the major (grade of C or higher) as well as fulfilled general education requirements.

RHS 496: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

RHS 497: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical of special interest.

**Religious Studies (RLST)**

RLST 1: Introduction to World Religions
3 Credits

The course introduces students to the academic study of religion as well as to some of the major religious traditions of the world. Beginning with an introduction to polytheism, the course primarily focuses on the five major religions of the modern world—Buddhism, Christianity, Hinduism, Islam, and Judaism.

Bachelor of Arts: Humanities

General Education: Humanities (GH)
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Key Literacies

RLST 3: Introduction to the Religions of the East
3 Credits

Religious experience, thought, patterns of worship, morals, and institutions in relation to culture in Eastern religions. RLST 3 / ASIA 3

Introduction to the Religions of the East (3) (GH:IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will explore the foundations, development, and diversity of religious traditions in Asia, focusing mostly on Hinduism, Buddhism, Confucianism, Daoism, and Shinto. It is organized according to two sections: Foundations and Developments. The Foundations section provides an introduction to the worldviews and practices of Eastern teachings. We will also discuss the structure of society, the social expectations on individuals based on gender and class, and rituals, which expose us to rich mythologies or intricate ceremonies. The second section, Developments, traces the evolution of religious doctrine and practice through history. Here, we learn to distinguish among large and small-scale movements and schools, and to familiarize ourselves with the geographical scope of each religion in South, Southeast, and East Asia. An abiding emphasis in this course will be on how to read and interpret the varied scriptures and primary texts of these religions.

RLST 4: Jewish and Christian Foundations
3 Credits

This course seeks to help students better understand the Bible and appreciate its role as an authoritative collection of sacred texts for Jews and Christians. The Bible is a difficult book, one that is demanding on many levels. In order to read the Bible intelligently, it is important to understand the historical and cultural backgrounds of the biblical writings. This course explores the history and geography of ancient Near Eastern civilizations that shaped the experience of ancient Israel and, later, the Greek and Roman imperial contexts that shaped Second Temple Judaism and early Christianity. The focus of the course, however, is on the biblical narrative itself and the particular ways that the story of Israel and its covenant with God was represented in scripture: in tales, poems, hymns, dialogues, and genealogies. A basic goal of the course, then, is to promote intelligent, well-informed reading of the Bible. Also important is the willingness to read the Bible closely and critically, with a view toward larger questions raised by biblical texts: how is God to be known and understood? What is the purpose of human life in the world? What moral obligations ought to structure our common life? Does human history have direction and purpose? What is the good and how do we follow it? The Bible takes up these questions and many more. Though an ancient anthology shaped by the succession of Assyrian, Babylonian, Persian, Hellenistic, and Roman empires, the Bible is not merely a product of its original contexts. Millennia of transmission and interpretation have made it a product of history in a much more extended and dynamic sense. In this course, we will examine larger questions raised by the biblical writers and consider the ways that the Bible has shaped, informed, and guided Jewish and Christian ways of life.

RLST 12: Lands of the Bible
3 Credits

Textual and archaeological evidence for the lands, cities, and peoples associated with the Hebrew Bible and Christian scriptures. CAMS (J ST/RL ST) 012 Lands of the Bible (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. CAMS/J ST/RL ST 012 introduces students to the lands, cities, and peoples associated with the Hebrew and Christian scriptures. Using methodologies from historical geography, archaeology, ancient history, epigraphy, and anthropology, students study the Fertile Crescent, from the Nile Valley, through the Levant and its Jordan River valley, to Mesopotamia—the river valleys of the Tigris and Euphrates. Students will study the cities and states of the cultures along these rivers in the Bronze and Iron Ages, including Memphis/Saqqarah, Thebes, Ugarit, Jerusalem, Lachish, Megiddo, Shechem, Samaria, Hazor, Ebla, Babylon, Ur, Petra, Jericho, 'Akko, and others. These are the lands of the Hebrew and Christian scriptures, but also cities that have been revealed through modern study. For example, the texts excavated at Ugarit (Syria) in the 1920's shed light on the relations between ancient Israelites and their Canaanite neighbors in the period of the 'Conquest' and the monarchies of the Iron I and Iron II periods. Students will learn that the culture of the ancient Near East is inexorably intertwined with an understanding of the religious traditions that grew up in the region, including Judaism, Christianity, and Islam. Classes will be a combination of lecture, discussion, and problem-solving, with frequent use of slides and occasional use of artifacts to illustrate the topics at hand. Students are evaluated on three of the following five means: a midterm test, a final essay examination, a five to seven page term paper, a team research oral presentation, a team research poster presentation. Participation in class discussion will also be evaluated. This course fulfills three credits of the General Education or the B.A. Humanities requirement. For majors in CAMS, the course fulfills the requirement of three credits in Near Eastern literature and language, civilization, or archaeology. The course fulfills the three credit requirement for courses in RL ST 001-099 for the Religious Studies major, and the Jewish Studies major's requirements. The course also would fulfill three credits of the six credit requirement for courses in RL ST 001-099 for the Religious Studies major, and the Jewish Studies major's requirements. The course will then examine the rise of apocalypticism and its modern manifestations in the coalition of conservative Christians and Jews in 'Zion' -- the new Jerusalem. Additional emphasis will be placed on the religious and political interactions which manifest themselves in the prophetic movements—then and now—including the rhetoric of ideology and propaganda. Important figures and events illustrate these cultural and political trends, in antiquity, and in the contemporary setting.

RLST 83: First-Year Seminar in Religious Studies
3 Credits

Critical approaches to the dimensions and directions in Religious Studies. RL ST 083S First-Year Seminar in Religious Studies (3) (GH;FYS)(BA) This course meets the Bachelor of Arts degree requirements. Students will be expected to master material relative to the introductory study of a major world religion or aspect thereof, as well as to acquire basic skills useful to the study of the liberal arts. Students will learn to read books and original documents, discuss them, formulate effective arguments, and write essays and papers. The course will challenge students to express themselves and to gather information through discussion and writing of papers about major world religion(s) or aspect(s) of world religion(s). It will challenge students to think about social behavior, the nature of community, and the value of scholarly endeavor as these relate to the particular topic of the seminar. Frequently, the course will deal with intercultural and international topics, though some of the variable topics may not readily lend themselves to such analysis. Through readings, discussions, lectures, and research projects, students will become acquainted with major figures and developments in a major world religion, as well as to acquire basic skills useful to the study of the liberal arts.
This course meets the Bachelor of Arts degree requirements. Jerusalem, beginning with its earliest settlement during the fourth and third millennia BC, its role as the capital of biblical Israel and Judah during the First and Second Temple periods, and its transformation as a center of Christianity and later Islam are studied utilizing the testimony of artifacts, architecture, and iconography in relation to the written word. Throughout the ages and continuing into the 21st century, Jerusalem remains a contested city for the three monotheistic faiths. The holy city's impact on the politics of the modern Middle East will be critically examined in light of Jerusalem's history and recent archaeological discoveries and their modern-day interpretation. Objectives include the critical evaluation of archaeo-logical, historical and literary evidence and its relationship to modern-day political and religious perceptions of Jerusalem. The course will encourage research skills (including library training sessions) and writing and oral communication skills based on an analytical approach to the texts and material culture relevant to Jerusalem. This course will fulfill three credits of the General Education or the B.A. humanities requirement and the GI requirement. For majors in CAMS, the course will fulfill the requirement of three credits in Near Eastern literature and language, civilization, or archaeology; and for those in the CAMS ancient Mediterranean archaeology option it will fulfill the three credits of archaeology course work requirement. The course will fulfill three credits of course work concerned with the ancient period or with the land of Israel.

3 Credits

Social, cultural, religious, political, and archaeological history of Jerusalem from earliest times (c. 3000 BCE) to present. CAMS 90 / JST 90 / RLST 90 Jerusalem: Past, Present, and Future (3) (GH;IL)(BA)
This course meets the Bachelor of Arts degree requirements. Jerusalem, a holy city for Judaism, Christianity and Islam, is symbolically depicted in art and literature as the physical and spiritual center of the world. Throughout its history, this 'city of peace' was a focal point attracting numerous cultures and peoples, the latter sometimes as prophets and more often as conquerors. The reasons for Jerusalem's centrality and significance during the past five millennia as a heavenly and earthly capital are explored in this course. The course curriculum will survey the religious, political, archaeological and historical record of ancient Jerusalem, beginning with its earliest settlement during the fourth and third millennia BC. Jerusalem's urbanization in the second millennium BC, its role as the capital of biblical Israel and Judah during the First and Second Temple periods, and its transformation as a center of Christianity and later Islam are studied utilizing the testimony of artifacts, architecture, and iconography in relation to the written word. Throughout the ages and continuing into the 21st century, Jerusalem remains a contested city for the three monotheistic faiths. The holy city's impact on the politics of the modern Middle East will be critically examined in light of Jerusalem's history and recent archaeological discoveries and their modern-day interpretation. The course will fulfill three credits of course work concerned with the ancient period or with the land of Israel.

Cross-listed with: CAMS 90, JST 90
the classical Hindu worldview may have emerged from the philosophical foundation of the Vedantas, and later built the groundwork for the Hindu Bhakti (devotion) movements. The second part of the course focuses on the various regional Bhakti traditions from the middle ages onwards, analyzing how the regional cultures may have related with the great classical Brahmanic tradition. The course concludes with a discussion of how Hinduism in the post 1800s responded to the forces of colonization, exploring how the different religious and cultural traditions of south Asia may have interacted with other religious cultures (both indigenous and foreign) like Buddhism, Jainism, Islam, and Christianity. We shall read excerpts from noteworthy thinkers and writers of nineteenth and twentieth century to understand the very interesting dynamics between religion and civil society of more recent times. This course concludes with a discussion of how Hinduism in the post 1800s responded to the forces of colonization, exploring how the different religious and cultural traditions of historical south Asia may have interacted with other religious cultures (both indigenous and foreign) like Buddhism, Jainism, Islam, and Christianity. 3 Credits

Historical development of Hinduism to the present.
Honors

RLST 104: Introduction to Buddhism
3 Credits

A general survey of the basic doctrine, practice, and historical development of Hinayana and Mahayana Buddhism. RLST 104 / ASIA 104 Introduction to Buddhism (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is a general survey of the historical development, basic doctrines, and practices of Hinayana, Mahayana, and Vajrayana Buddhism. The course is structured around the 'Three Jewels' of Buddhism: Buddha, Dharma, and Sangha. That is to say, we will learn about the Buddha as a historical figure and spirit; we will come to understand the basic elements of his doctrinal teachings; and we will examine the community of followers who have practiced his teachings. Special attention will be paid to the various 'geographies' of Buddhism as expressed through different cultures in ancient India, Southeast Asia, and East Asia. At the conclusion of the course, we will encounter Buddhism as a relatively new cultural force in America. The course revolves around the discussion of key issues in the philosophy, ethics, and theology of various forms of Buddhism.

RLST 105: Buddhism in the Western World
3 Credits

A general survey of the development of Buddhism as a religious tradition in the West, focusing especially on America. RL ST 105 Buddhism in the Western World (3) (GH;US;IL) (BA) This course meets the Bachelor of Arts degree requirements. The academic study of religion is distinct from instruction in a religion in so far as one seeks simply to learn about religion, or religions, by considering the history, texts, major figures, and belief systems of one or more traditions. Because religions are always deeply intertwined with the entire cultural history of a region, studying a religion has always involved placing it in a larger cultural context. Buddhism in the Western World (RL ST 105) provides an intense concentration on a particular topic from the Buddhist religious tradition, focusing on historical, comparative, and phenomenological concerns. The course concentrates on the major figures involved, integrated with significant issues and religious practices in the development of the aspect of the Buddhist religious tradition under investigation. In many cases, across the face of Indian, Chinese, and Japanese Buddhism, gender, racial, and ethnic issues play critical roles in the development of the tradition studied, and these are explored in depth. Finally, the course examines the symbols, myths, and rituals of culture or cultures involved, which are radically different than our own, providing for each student the opportunity to compare, consider, and assess a wide variety of expressions of religiosity. Evaluation is research paper. Buddhist in the based on discussion, written assignments, and a major Western World, RL ST 105, offers a special focus on a particular aspect of one of the major religious traditions of the world. Because general approaches and methodologies in the academic study of religion are employed throughout the course, RL ST 105 is linked to all other courses in religious studies. RL ST 105 may be used to fulfill 3 credits in the Humanities, and may also be used to fulfill a US;IL requirement in the major or minor.

RLST 111: Early Judaism  
3 Credits  
Early Judaism will introduce students to the history of Judaism as reflected in Jewish literature from the period of the Babylonian exile (587/6 BCE) to the closure of the Babylonian Talmud (ca. 600 CE). This course will analyze the development of Judaism from its emergence out of the ancient Israelite religion through the formative period of rabbinic Judaism. Attention will be given to the diversity of ideas and practices that characterized early Judaism and the influence the larger Persian, Hellenistic, and Roman worlds had on Judaism's development. We will examine selections from the Hebrew Bible, and from other literature, including the Dead Sea Scrolls, the Apocrypha, the New Testament, the Mishnah, and the Talmud.

RLST 113: Jewish Myths and Legends  
3 Credits  
Comparative study of diverse interpretations of stories from the Bible in Judaism and Christianity. CMLIT 113 / JST 113 / CAMS 113 / RLST 113  
Myths and Legends of the Jews (3) (GH, IL)  
The impact of the Bible on Western culture is immense. Beyond its religious importance, the motifs and images from its myths and stories permeate literature and art, providing a basic frame of reference that for much of history could be taken for granted. A degree of familiarity with these motifs so as to be truly fluent is no longer common, and so it requires special effort to discern allusions to biblical traditions. Moreover, these traditions are not static: religious communities continually re-interpret them and appropriate them in very different contexts. Many prominent traditions in Judaism, Christianity, and Islam do not appear explicitly anywhere in the Hebrew Bible, but are the product of imaginative and ingenious interpretation and re-tellings. Why, for example, is Noah an example of a righteous person in Christian tradition, but in rabbinic tradition is more often portrayed as a profane, earthy-minded man who was saved only because he was the least bad of an evil generation? Why is Moses commonly portrayed with horns in medieval art? Underlying such different traditions are centuries of debate and reflection on these texts as sacred scripture, and competing religious communities often authorized their distinctive beliefs and practices by reading them into scripture. The differences are often too subtle to discern apart from careful comparison. This course will explore the boundaries between Scripture and tradition by means of a close examination of the myths and stories in the Hebrew Bible and their subsequent interpretation and re-tellings in Judaism, Christianity, and Islam. Using methods from comparative mythology and folklore, as well as comparative midrash, our procedure will be to compare these traditions closely with the biblical text, asking: What are the main motifs in the mythology of Judaism? Does Judaism have a coherent mythology? How do their myths compare with the myths of their neighbors? Where did these myths come from? How do these traditions relate to the Bible? What was the function of these myths? Why are they competing myths? How is it possible that Judaism affirms belief in only one God, but has myths that include other divine beings? We will also compare with later interpretive traditions (Jewish, Christian, Islamic). Can we trace trajectories of interpretation? Can we discern particular interpretive methods in operation? We will seek to answer: what do these re-workings of the traditions tell us about the development and function of Scripture, and the social circumstances of the communities? Finally, we will seek to detect reflections of these interpretive traditions in literature and art from the medieval to the modern periods. The course is organized around major topics in the Jewish Scriptures: God, creation, heaven and hell, Torah, Sabbath, Abraham and other ancestors, Israel and holy land, exile, and Messiah.
Throughout we will consider how sacred stories function to form ethical perspectives and values.

RLST 114: Modern Judaism
3 Credits

This course will explore the developments in Judaism since the Enlightenment and the French Revolution. Major changes have come to the world since 1700—changes represented by terms such as the Enlightenment, Emancipation, Industrialization, Nationalism, Urbanization, Immigration, and Egalitarianism/Feminism. These broad social changes led to the break-up of traditional communities and, among other things, reformulations of Jewish Life and Jewish Religion. The effects can be seen in a number of Jewish responses—Assimilation, Hassidism, Self-Defense and Nationalism, Denominationalism, and Egalitarianism/Feminism—which we shall study in this class. In particular, we shall look at Jewish spirituality—its historical and theological development, its many historical and modern manifestations, and how it works.

RLST 115: The American Jewish Experience
3 Credits

Chronological and topical survey of the story of Jewish life in America. We will trace the social, religious, cultural, and political developments in the Jewish community from the Colonial Period to the present. Topics to be covered include immigration, acculturation, ethnicity, gender, politics, and communal and religious innovation. While ‘knowing the facts’ is obviously important to historical understanding, this course helps students develop critical thinking skills. These skills include: close and thoughtful reading and analysis of primary and secondary sources; looking for a broader coherence or ‘order’ to the material; independent analysis and effective articulation (both in writing and in class discussion) of well-reasoned, well-crafted conclusions and interpretations and arguments (conclusions/interpretations/arguments which are supported by specific factual evidence derived from a variety of sources). The three specific course objectives underscore its scholarly dimensions: (1) Students will gain a knowledge and understanding of the relationship between the experiences of members of the American Jewish community and United States history as a whole. (2) Students will gain an understanding and knowledge of the political, economic, and social processes that shaped the American Jewish experience. (3) Students will learn how to ‘think historically’ by placing documents written in the past in their historical contexts, and to consider the relationship of the past to the present. By the end of the course students will: Demonstrate an understanding of the chronology of American Jewish history. Demonstrate an understanding of the diverse experiences of different groups of Americans. Demonstrate an understanding of the social, political, and ideological structures that shaped the American Jewish experience and continue to shape the modern United States.

RLST 116: Muslims in America
3 Credits

This course is a study of Muslims from multiple racial, cultural, and national perspectives; it explores what it means to be a Muslim in America. RLST 116 Muslims in America (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is a study of Muslims in the United States. It examines the multiple racial, cultural, and national groups that comprise this diverse community; we will question what it means to be a Muslim in America. It traces the trajectory of this seventh century faith as a transplanted faith in the New World. The course interrogates Islam in America starting with the historical record of the surviving Muslims that came to the shores of the Americas as African slaves and their enduring efforts to remain Muslims. Next, we examine African American Islam in its myriad formations. The influx of immigrants in the 1960s from the Arab Muslim world, Africa and Asia, including Central Asia became the second historical chronicle of Islam in America. This inquiry examines the narratives of each wave of Islam as a cultural and religious force in the development of Muslim identity in America. The course will examine how Muslim populations during each of these divergent waves confronted American pluralism, diversity and democracy. The course examines the transformation of the Islamic tradition from its origins in the Arabian peninsula to the shores of North America, including questions of authority, the growing salience of American Muslim women’s conception of gender jihad, the struggle of Muslim trans gender community to gain acceptance, institution building, and the efforts to develop an American Muslim identity. The course will also examine the musical genre of rap music with special reference to the second generation of Muslim. We will also examine the role of Islam in American prisons. The course will examine how the Islamic tradition has been adapted to the American cultural milieu and how Muslim culture is also influencing America. The course will examine how Islam and Muslim populations have been conceptualized in America before and after 9/11.

RLST 120: New Testament
3 Credits

CAMS 120 / JST 120 / RLST 120 New Testament (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. This course provides an introduction to the collection of early Christian writings that
make up the New Testament. It begins with an examination of the first-century context in which these writings took shape—one overshadowed by the Roman empire, influenced by Hellenistic culture, and based, above all, on varieties of Judaism. From there, the course takes up a few guiding questions. How, in this ancient context, did the first Christians understand and portray the figure at the center of their communities, Jesus of Nazareth? What do the New Testament writings reveal about the beliefs and aspirations of these communities as they advanced a movement that would, in time, become among the most consequential in world history? By the end of the course, students will have gained knowledge of the historical context of New Testament writings and an understanding of why the New Testament has been such an important and influential collection of writings.

RLST 121: Jesus the Jew

3 Credits

Although Jesus of Nazareth is the object of Christian devotion, he was not a Christian himself, but a pious Jew. What can be known about the historical figure of Jesus the Palestinian Jew? How would his teachings and actions have fit in the context of Judaism of his day, in the Greco-Roman world? What did he mean when he proclaimed the coming kingdom of God? Because almost all of our source material espouses Jesus as the Christ of Christian faith, the first step is to understand the aims and perspectives of these Christian sources, including the canonical Gospels as well as non-canonical Gospels. Through careful examination of these sources in light of critical scholarship and the social and historical context of Judaism in the Greco-Roman world, we will consider how much the historian is able to reconstruct of Jesus using historical method, what the limits of this investigation are, and how relevant the task is. We will consider and evaluate a few of the different scholarly reconstructions of the historical Jesus. Major emphases will include the historical, social, religious, political, and cultural contexts of Jesus, including important precursors; the political, institutional, and cultural history of the teachings and actions of Jesus in their Jewish setting, and how these are reinterpreted by his followers after his death. Attention will be paid to the development of variant Christian traditions about Jesus including Jesus as Messiah, his death as a saving event, the resurrection as exaltation of Jesus as Lord, the memorialization of Jesus in Christian ritual practice, and the cultural and religious impact of Jesus throughout history. In addition to the early Christian sources on Jesus (especially the canonical Gospels, but also other New Testament texts and non-canonical writings), on each topic students will read selections from early Jewish writings in order to illuminate the cultural context. These include the Dead Sea Scrolls, Philo, Josephus, Jewish texts among the so-called Apocrypha and Pseudepigrapha, early rabbinic texts, and epigraphical writings. Relevant archeological evidence and Greco-Roman sources will also be considered. Broader issues of historical, cultural, linguistic, political and geographical context will be covered in lectures and secondary readings.

RLST 122: Apocalypse and Beyond

3 Credits

Apocalypse and Beyond is a topic (and title) meant to suggest that apocalyptic imagination about the end of the world, first begun in the Ancient Near East with certain Jewish and Christian writings, is constantly re-envisioned for each new age. Apocalyptic literature and world views are frequently produced by marginalized groups who perceive themselves to be persecuted, and who envision a violent (often divine) intervention, which alone will bring justice. In Part One of the course, we will examine the ancient literary genre of apocalypse, which was popular in the Ancient Near East from around 200 BCE to 200 CE, especially in Jewish and Christian writings both in the Bible (e.g., Daniel and Revelation) and outside of it (e.g., First Enoch, the Apocalypse of Peter, and the Apocalypse of Paul). The authors of these apocalypses expected the evil age in which they were living to dramatically end in their lifetimes; although that did not happen, apocalyptic thinking became foundational to the three world religions stemming from the Near East Judaism, Christianity, and Islam to varying degrees. In Part Two, we will examine the ideology, sociological underpinnings and some historical examples of apocalyptic groups and movements in medieval to modern times, and look at the impact that apocalyptic world views have had on the secular world, including philosophy, political movements, and popular culture, such as movies.

RLST 123: History of God: Origins of Monotheism

3 Credits

This course examines the early history of God; that is, the concept of the divine as a single supreme being. In particular, it focuses on the origins of monotheism and the development of its three major traditions in the Near East: Judaism, Christianity, and Islam, from their respective beginnings to around 1000 C.E. The course will begin with an analysis of the polytheistic religious milieu of the Ancient Near East in the second and first millennia B.C.E., and will consider the question of how, when, and why belief in one God first appeared in ancient Israel. Various modern theories about the origins of Israel’s national God (Hebrew Yhwh/Yahweh and Aramaic Yhw/Yhwo) will be analyzed, with careful attention to the evidence of ancient texts and archaeology. Following a discussion of the nature of the religion(s) of early Israel, the course will then turn to the development of Judaism as the world’s first monotheism. It will then examine the subsequent emergence of Christianity in Roman-era Palestine and Islam in Late Antique Arabia, with a brief glance at the
Persian religion of Zoroastrianism, which shares some commonalities. Finally, the course will compare and contrast some of the major beliefs, practices, and significant historical trends and movements within the first centuries of the three major monotheisms.

RLST 124: Early and Medieval Christianity
3 Credits
This course provides an introduction to the history of Christianity. It traces, specifically, the development of the Christian movement from its beginnings as a small Jewish sect in Jerusalem to its unlikely emergence as the religion of the Roman Empire and, finally, its subsequent spread and development in Europe, Asia, and Africa. In form and structure, the course is historical, following figures and events in a more or less chronological sequence and taking up questions of causality, influence, and social identity. Yet the course is also concerned with the ideas, concepts, and philosophical viewpoints that have shaped Christianity and given it a certain intellectual coherence over time. The course begins with first-century construals of messianic identity and also with the figure of Jesus, as he was portrayed in the New Testament gospels. It then follows the first generations of the Christian movement, considering it within the context of first-century Judaism and the early Roman empire. Topics include persecution, martyrdom, and the important contributions of Origen. The middle section of the course looks at the second, third, and fourth centuries through three lenses, as it were: the office of bishop, the rise of monasticism, and the realities of empire. Bishops, monks, and emperors all shaped Christianity in essential ways, creating a rich and complicated spiritual, moral, theological, intellectual, and geo-political legacy for generations to come. The final third of the course looks at the development of Christianity beyond the fourth century in geographical groupings including churches in Africa, Asia, the Middle East, western Europe, Byzantium, and the Slavic lands. It is hoped, in all of this, that students will gain an understanding not only of Christian history but also of what made - and what makes - Christianity a distinctive and influential religion.

RLST 125W: Modern Christianity
3 Credits
Analysis in cultural context of selected thinkers, ideas, and movements in Christianity from the sixteenth century to the present.

Bachelor of Arts: Humanities

General Education: Humanities (GH)
Writing Across the Curriculum

RLST 130: The Ethics of Western Religion
3 Credits
History of the ethical-social ethics of the Judaeo-Christian tradition.

Bachelor of Arts: Humanities
General Education: Humanities (GH)

RLST 131: Introduction to Bioethics
3 Credits
Studies questions of ethics in relation to biotechnology research and implementation, genetic engineering, medicine, animal and human rights. RL ST 131 Introduction to Bioethics (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. The course, as other 100-level Religious Studies Program and Philosophy courses, is intended for Liberal Arts majors and others likely to take Religious Studies and Philosophy courses rather than for Religious Studies majors. This course will provide a critical survey of key concepts, problems, and figures in the short history of bioethics and in contemporary studies and possible futures. The course will develop the student's analytical and critical skills through study of different views on the nature of life and what experimentation with life-forms morally entails. The course will examine the increasingly technoscientific definition of the nature of life and the human condition and evaluate such arguments and positions of practice in regard to opposing views of life as inherently sacred. It will investigate the extent and breadth of moral arguments in regard to differing life forms and consider the rights of humans and non-human animals. Students will be graded on participation, case study analyses, a group presentation, and a final paper. RL ST 131 satisfies the GH requirement and it may be used to fulfill major and/or minor requirements in Philosophy and Religious Studies. This course is offered every other year with an enrollment of 35-50 students.

Bachelor of Arts: Humanities
General Education: Humanities (GH)

RLST 133N: Ethics of Climate Change
3 Credits
Climate change is not only a political, economic, and social crisis, it presents one of the great moral problems of our time. This course will cover the science, policy, and ethics of climate change. It fulfills general science requirements by giving an overview of the role played by such diverse scientific disciplines as chemistry, earth systems, ecology, and geology in understanding our changing climate while also exploring mitigation and adaptation strategies being developed in the fields of engineering, forestry, agriculture, and others. It fulfills humanities requirements by delving into the ethical dimensions of climate change, including religious and humanistic theories of human flourishing, deontological and teleological theories of ethics, and analysis of specific choices addressed by international negotiators. A hallmark of this course is using Penn State as a 'living laboratory' by taking advantage of both faculty expertise and the real-world activities of the Office of Physical Plant. Every week, students will interact with experts from various quarters of the University in order to see how climate change is being approached in a multi-disciplinary fashion. The first
third of the course will feature guest lectures by EMS faculty working on paleoclimate, modeling, carbon sinks, ocean acidification and other aspects of climate science. The second portion will engage humanists, economists, historians, and artists at Penn State. The third will include tours of Penn State facilities, such as the East Campus Power Plant, and interviews with researchers developing new energy and sequestration technologies. In addition to exams and papers, students will prepare for a mock negotiation by learning about the energy profile and history of assigned countries. They will then have to set specific CO2 and temperature goals and come up with solutions to achieve these. The goal is to understand the role played by ethical ideals in the pragmatic process of producing an equitable solution. In short, this course will give students the tools to understand the basic science of climate change and its ethical implications. Students will come away with a better sense of the moral dimensions of this phenomenon and the implications for human civilization and for the biosphere.

RLST 135: Ethics in Jewish Tradition and Thought

3 Credits

This course takes as its starting point the idea that modern ethical frameworks are deeply rooted in the soil of older traditions. By examining the development of Jewish intellectual traditions and their roots in the Bible, it provides students with an opportunity to study ethics in a philosophically textured, culturally rich, and historically informed way. And by focusing on Jewish engagement with the Bible, the course illuminates other traditions that derive from biblical monotheism: for example, those associated with Christianity, Islam, and the Enlightenment. The first part of the course takes up the idea of tradition and includes a study of biblical texts that serve as the foundation for key moral concepts. Following the traditional division of the scriptures, it examines questions of human identity and responsibility in the Torah, social ethics in the Prophets, and the quest for wisdom in the Writings. The final topic in this unit is the development of ethical tradition among the great sages of Jewish antiquity. The second unit shifts focus to the appropriation of tradition in modern Jewish thought. After reviewing important developments in Jewish thought in the medieval and early modern periods, it turns attention to the ways that some recent figures have addressed perennial concerns in light of commitments and ways of being that are integral to Jewish identity. By reading closely the works of such seminal thinkers as James Kugel, Joseph Soloveitchik, and Abraham Heschel, we will gain a deep acquaintance not only with important vocabulary but also with the ways that traditional words and concepts may be used dynamically to produce fresh ways of looking at questions in moral philosophy.

RLST 137 / JST 137 / WMNST 137 Women and Religion (3) (GH;US;IL)  
Women and Religion examines the historical and contemporary role of women in society and in religion, how those roles are shaped by religious doctrines around leadership, ritual, language, and the valuation of women's experience and history, and the diversity of women's voices speaking to these issues. An historical inquiry begins with a review of early goddess-based religion and an examination of gender roles promoted in selected creation narratives, including those from Genesis. Additional biblical and non-canonical texts are studied for their various characterizations of woman, the influence of marital status, and her place in the public and private spheres. Historical debates about women consider what roles women played in leadership structures, in religious ceremonies and in the creation of a theological tradition as well as the places women created for themselves outside 'official' institutional churches or the formalities of worship. We study prominent women in biblical history, the early church, the medieval past, and in modern American history. What are their stories and what noteworthy contributions did they make in the history of religion? What do we know of their lives and thought? Furthermore, the course addresses contemporary issues of importance to women and how those issues are resolved from the multiple perspectives within Judaism and Christianity. Such issues may include dating, marriage, family and divorce; spousal and gender relations; reproductive rights; homosexuality; sexual violence toward women; work outside the home; and religious leadership and inclusion. Finally, the course examines women's diverse understandings of the ways of being religious. Women are not a homogeneous group and are responding in a multitude of ways to the decisions they face about staying within or working outside established institutions. We consider their choices, from redefining and recreating new traditions and rituals, both within and outside formal worship settings, to returning to goddess worship and other innovations inspired by the most recent feminist movement. All topics are discussed in light of the different beliefs and understandings across the movements within Judaism as well as within Roman Catholicism and the many Protestant denominations. In addition, the diversity of scholarly interpretation is emphasized, including that offered by feminist theologians and the breadth of women's experience arising from factors of race, ethnicity, sexual orientation, and class and educational background.

RLST 147: The Life and Thought of Malcolm X
3 Credits

The life of Malcolm X/El Hajj Malik El Shabazz (1925-1965) and his social, political, economic, and moral thought. AFAM 147 / RLST 147 The Life and Thought of Malcolm X (3) (GH;US)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine in-depth the life, speeches, and thoughts of Malcolm X/El Hajj Malik El Shabazz. While the Autobiography will be a major source, we will also use other sources to develop an understanding of the philosophy and thought of Malcolm X. We will explore the social, economic, political, cultural, religious, moral, and spiritual context of America in general and of African Americans in particular. We will examine Malcolm X's influence on the period in which he lived and since his assassination. We will compare and contrast his view on issues of race, culture, politics, education, crime, human rights, civil rights, morality, and economics with those of other African American leaders and with the prevailing views of most Americans on those subjects. We will devote a large portion of the course to the examination of the social movements that impacted on Malcolm and those that he influenced. The speeches of Malcolm X and the writings about Malcolm X are instructive and will be utilized along with other documents. Videotapes and audiotapes will also be employed as instructional materials. Students are expected to be ACTIVE participants in the learning/teaching experience. Students are required to participate in class discussions centered on the readings and related topics. There will be a written mid-term examination and a written final examination. Students are expected to complete an individual research project related to the course and write a paper on that research as well as to participate in a collaborative group project of their choosing on a subject related to the class. This course will count in the supporting courses category of the major and minors in African/African American studies. It also will fulfill credits in the Religious Studies Program. It may also be used to fill GH and US requirements.

RLST 153: Dead Sea Scrolls
3 Credits

The discovery of the Dead Sea Scrolls was one the most important archeological discoveries of the 20th century. This collection of over 900 scrolls found in caves by the Dead Sea includes the oldest manuscripts of the Hebrew Bible (Old Testament) and hundreds of other Jewish writings dating from the 2nd century BCE to the 1st century CE, many of which were previously unknown. In this course we will examine select examples of the Dead Sea Scrolls in order to understand how these writings have revolutionized our understanding of the formation of the Bible, Jewish groups in the Greco-Roman period, and the origins of Christianity and rabbinic Judaism, and why there is so much scholarly debate around them. We will consider such issues as Jewish law, biblical interpretation, messianism, apocalypticism, prayer and rituals. The course will include discussion of the archaeology of the Qumran settlement and caves, scribal practices and the production of scrolls, and scholarly methods in reconstructing and interpreting ancient texts. We will study this one sectarian movement as a microcosm of the issues related to Jewish identity in this critical period that birthed both rabbinc Judaism and Christianity. We will focus on the beliefs and practices by which this movement constructed their particular community identity and worked out their place in the world.

RLST 160: Sacrifice in the Ancient World
3 Credits

Sacrifice (from Latin sacer 'holy + facere 'to make') is one of the most prevalent yet troubling aspects of religion. Its destruction and violence is often at odds with other rituals and core understandings within a religion, so why is it done and what good does it do? For the sacrificer, does it represent a gift to the gods, a renunciation, an exchange, a surrogate, or something else? This course will examine some competing definitions and theories of sacrifice, as well as its manifestations in the cultures and religions of the ancient Mediterranean world, especially those of Greece, Rome, Egypt, Mesopotamia, Hatti, Israel, and Phoenicia. A brief look at religious sacrifice elsewhere, such as ancient Mesoamerica and India, will conclude the course.

RLST 235: The Church and the Jews
3 Credits
Examination of the relationship between Western church and the Jews from the First Century to Enlightenment. HIST 235 HIST 235 The Church and the Jews (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine a key aspect of western history - the complex relationship between the Western (Roman Catholic) Church and the Jews, from the first century to the present. We will analyze ideas and policies regarding Jews as expressed in different realms, from theology and canon law to church art and popular preaching. We will also examine how changing conditions led to striking changes in church attitudes and policy, and how church policy was often at odds with popular sentiments about Jews. The course will be designed to enable students to grasp the fluidity of attitudes over time, and the interplay of economic, social, political, and theological factors; to grasp of essential elements of a key area of conflict in western culture; and to develop their skills in the close reading of primary texts. Students will be evaluated on the basis of three quizzes and a final exam. The course would offer a chance for students to develop perspectives previously gained in a number of courses, particularly HIST 001 and 002 (The Western Heritage), RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), HIST 107 (Medieval Europe), HIST 407 (Early Medieval Society), and J ST 010 (Jewish Civilization). It would complement such courses as HIST 108 (The Crusades), HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), HIST 414 (Renaissance and Reformation), J ST 111 (Early Judaism), J ST 110 (Hebrew Bible), RL ST 120 (New Testament), and RL ST 124 (Early and Medieval Christianity). The course will count for 3 credits toward a) the 22 credits required for the minor in Jewish Studies, b) the 33 credits required for the major in Jewish Studies, c) the 30 credits
required for the major in Religious Studies, and d) the 36 credits required for the History major.

RLST 280: Women and Judaism
3 Credits

Explores the Jewish views of women that have influenced the roles of women within both the religion and Western culture. J ST (WMNST;RL ST) 280 Women and Judaism (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. Women and Judaism will introduce students to the roles and views of women as seen in the Jewish tradition. Because Judaism is not monolithic, these views will vary even within time periods and even among rabbis. The goal of this course, therefore, is not for students to leave the class with one idea of what a Jewish woman is or one idea of what issues are at stake for women in Judaism. Rather, the goal is for students to understand the complex relationship women have to this religion. This course will also explore the views of Jewish women and the issues that concern them in contemporary society. Objectives include the following: students will begin to understand the stereotypes that influence how Western society views Jewish women, and as a result, how they have come to view themselves. They will be asked to examine the many important roles that Jewish women have played both in their religion and the society at large. They will be asked to examine how the Jewish tradition both helped and hindered women to play these roles. They will see how Jewish women contributed to the development of their own religion and to the larger culture in which they live. They will develop a deeper appreciation for the complexity of the relationship between women and religion. Topics include images of Jewish women in the Bible and the media, women and Jewish views of sexuality, Jewish ethics, Judaism and feminism, and women and Jewish theology. Students will be evaluated by examination, writing ability (several short papers or one larger paper), and group presentations.

3 Credits

Comparative and interdisciplinary study of two or more systematic theories of religion: anthropological, psychological, sociological, philosophical/theological.

Prerequisite: 6 credits in religious studies or seventh-semester standing Bachelor of Arts: Humanities

RLST 405: Jews and Food
3 Credits

Jewish laws, customs and attitudes with regard to food production, agricultural policy and eating from biblical to modern times. JST 405 / RLST 405 Jews and Food (3) (IL) This course examines Jewish laws, customs and attitudes with regard to food production, agricultural policy and eating from biblical to modern times. These tenets of the Jewish tradition presently underwrite modern movements concerned with land use and food sustainability, as well as ethical behaviors in food production. The goal of the course is to understand how Jewish tradition can inform and contribute to improvements in the modern food system. The starting point is the ancient world of the Israelites. Students will study agrarian interpretations of the Hebrew Bible as well as extra-biblical sources and archaeological data. The biblical attitudes toward food, eating, and agricultural practices are then traced into the post-biblical period and rabbinic periods. The course then jumps ahead to the present day, to shed light on a number of modern Jewish agricultural and food initiatives concerned with issues such as healthy land use, sustainability, and justice in food production and distribution. These movements proceed from various interpretations of Jewish law and custom, and illustrate how some modern Jewish attitudes toward food and eating are responsible for reimagining, and in some cases reinvigorating, biblical ideas and practices. At the conclusion of this course, students will be able to identify and understand the historical and theological significance of diet and eating practices of ancient Israelites and will understand the development of Jewish food laws and practices in the post-exilic and early rabbinic eras. Students will be able to evaluate the extent to which ancient Jewish thought has influenced modern Jewish attitudes and actions regarding food and social responsibility, and will be able to envision the ways in which Jewish tradition, both ancient and modern, can contribute to current progress and future improvement in our systems of food production, distribution and consumption. While a wide variety of derivative topics will be discussed, this course is particularly appropriate for students pursuing programs of study dealing with the biblical world, the development of early Judaism, Jewish ethics, and/or modern Jewish thought, as well as those studying agriculture and food systems who are interested in how Jewish tradition addresses these universal concerns.

RLST 407Y: Antisemitisms
3 Credits

Surveys the history of anti-Semitism from antiquity through the Middle Ages to the present. HIST (J ST) 409Y (RL ST 407Y) European Anti-Semitism from Antiquity to the Present (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course analyzes major
episodes in the history of anti-Semitism and tries to clarify the motives and dynamics involved. It seeks to understand what these episodes have in common and what is unique in each case—is there a single universal, eternal antisemitism? Or are there rather 'anti-Semitisms' each belonging to a unique historical context? Is there a single continuous line of development in anti-Semitism? What is the relationship of a particular anti-Semitism to the national culture in which it originates? We will be reading the major original texts of anti-Semitism from Roman and ancient writers, through early Christian texts and medieval Christian Blood Libels against the Jews, documents of the Spanish expulsion, Lutheran tracts, Voltaire's essays, German philosophical texts from Kant to Marx, Wagner's racial essays, the Protocols of Zion, and documents of Nazi anti-Semitism by Hitler and Streicher. The major part of the grade will depend on a short research paper which will be presented in various drafts, so that the final version represents the culmination of discussion and constructive criticism and advice. This course is a parallel course to J ST/HIST 416 (Zionist History) and J ST/HIST 118 (Modern Jewish History). This course will count toward the Religious Studies, Jewish Studies, and History majors and minors in the 400-level category.

RLST 410: Jews in the Medieval World

3 Credits

Trends in medieval Jewish society under Islam and Western Christendom. HIST 410HIST 410 Jews in the Medieval World (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. The Jews lived in widely scattered communities under Christian and Islamic rule in the medieval period. This course will examine how Jews adapted the traditions they developed in Palestine and Babylonia in the early centuries C.E. to the new conditions they encountered in Europe and the Mediterranean region from the ninth to the fifteenth centuries. It will focus on the general problem of how traditional societies survive in rapidly changing circumstances, particularly when their members are a minority population. The course will aim at developing students' skills in comparative analysis as they compare the adaptive strategies of Jews in different cultural spheres (the Franco-German region versus Spain, for example). They will also be asked to compare the different polemical stances Jews adopted vis-a-vis Christianity, on the one hand, and Islam, on the other. They will be encouraged to understand the ways in which Jews internalized certain aspects of the majority culture and rejected others. It is hoped that they will come to see how deeply Jewish history was intertwined with medieval Christian and Islamic history, despite inter-religious hostilities and the frequent need for Jews to defend against majority aggression. Students will be evaluated on the basis of two mid-term exams (the first after the survey of the Muslim world, the second after the examination of the Franco-German region) and a comprehensive final exam. The course will be linked to most of the courses taught in the field of Jewish Studies, especially J ST 111 (Early Judaism), J ST 114 (Modern Judaism), and J ST 118 (Modern Jewish History from 1492). It will also be linked to offerings in Religious Studies: RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), RL ST 107 (Introduction to Islam), RL ST 124 (Early and Medieval Christianity), and RL ST 165 (Introduction to Islamic Civilization). Further, it would complement HIST 001 and 002 (The Western Heritage), HIST 107 (Medieval Europe), HIST 108 (The Crusades), HIST 407 (Early Medieval Society), HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), and HIST 471W (Classical Islamic Civilization, 600-1258). The course will count for 3 credits toward: a) the 22 credits required for the minor in Jewish Studies, b) the 33 credits required for the major in Jewish Studies, c) the 30 credits required for the major in Religious Studies, and d) the 36 credits required for the History major. It will be offered once a year with an enrollment of approximately 60 students.

RLST 424: Monotheism and the Birth of the West
3 Credits

The birth of monotheism and its relation to social organization, the idea of individuality, and science. RL ST (J ST/HIST) 424H (PHIL 434H) Monotheism and the Birth of the West (3) (BA) This course meets the Bachelor of Arts degree requirements. Learn about the formation of Western culture, while learning to analyze the texts and other evidence about its formation from a critical, rather than naive, viewpoint. The idea of monotheism probably arose very early, and was even briefly implemented as a state cultic policy in Egypt in the 14th century BCE. Why, then, did it take another seven centuries to become widespread—appearing in ancient Judah, Babylon, and Ionia almost simultaneously? To answer this question, the course focuses on several developments, through the medium of primary texts and archaeology: the shift from a state hinterland based in extensive agriculture and household processing to one organized for intensive agriculture and industrial processing the rise of recognizable modern science; the promotion of individuation and an international elite culture in the context of Assyrian and Babylonian imperial ambitions; the development of the historical and archaeological arts in the context of archaizing in order to reinvent local traditions; and the socialization of monotheism and of democracy. Students will be evaluated on their discussion of the textual evidence as well as on reports in class and a final paper. This is the sole honors course treating the birth of the West. It expands on knowledge acquired in courses listed as prerequisites and in RL ST/CAMS/J ST 012; CAMS 044; ANTH/CAMS 133; CAMS/PHIL 200; HIST 100; HIST/J ST 102; and PHIL 200 and enriches the students experience in CAMS 400, CAMS 440, and CAMS 480; HIST 402; J ST 411; PHIL 437; PHIL 453, and PHIL 461. This course counts toward the major in Jewish Studies, History, Religious Studies and toward the minor in Jewish Studies and Religious Studies.

RLST 425W: Books of the Bible: Readings and Interpretation
3 Credits/Maximum of 12

Study of a biblical book/topic in terms of literary, historical, and cultural contexts, history of interpretation, and critical scholarship. CAMS (J ST/RL ST) 425W Books of the Bible: Readings and Interpretation (3 per semester/maximum of 12) The Bible is a diverse collection of writings sacred to Jews and Christians written over about 1000 years, in a variety of different genres and historical circumstances. This course allows students the opportunity to study in depth a particular book of the Bible, from either the Hebrew Bible/Old Testament or the New Testament. We will explore the literary, historical and cultural context of the book in question. A literary analysis of the book will include consideration of genre and literary devices, and a close reading of the text. A historical analysis will consider the date of composition, its source materials, comparative traditions in other cultures, and relevant historical and cultural factors relevant to understanding the text. The course will introduce students to various other approaches to interpretation of the Bible in modern scholarship, including feminist and post-colonial critiques. We will also explore the varied interpretations and uses of the book in Judaism, Christianity, and Islam throughout history, and its influences in Western culture, including art and literature. The course will be offered once a year with varying content, and students may repeat it when taught with different content.

Prerequisite: 3 credits in CAMS or J ST or RL ST, recommended CAMS/J ST/RL ST 110 or 120; or ENGL 104.
Cross-listed with: CAMS 425W, JST 425W
Writing Across the Curriculum

RLST 440Y: The Orthodox Christian Tradition
3 Credits

History, culture, and beliefs of the Eastern Orthodox religious tradition with special reference to Russia.

Prerequisite: RL ST004, RL ST124, RL ST125W, RUS 100 or RUS 110
Bachelor of Arts: Humanities
International Cultures (IL)
United States Cultures (US)
Writing Across the Curriculum

RLST 461: Sociology of Religion
3 Credits

Contemporary religion in the global perspectives: beliefs, structure, and function of major religious traditions, denominations, and cults.

Prerequisite: 3 credits of sociology or religious studies
RLST 471Y: Classical Islamic Civilization, 600-1258
3 Credits
Pre-Islamic Arabia; Muhammad; Arab conquests; Islamic beliefs and institutions; literary, artistic, and scientific achievements; relations with Europe; breakdown of unity.

Cross-listed with: HIST 471Y
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)
Writing Across the Curriculum

RLST 478: Ethics After the Holocaust
3 Credits
This course analyzes the ethical and philosophical consequences of the Holocaust. Primary areas of examination will be (1) the nature of pre-Holocaust ethical theories and how those theories have failed to sufficiently account for the Holocaust, both philosophically and empirically, and (2) possibilities for a post-Holocaust ethics. Course topics will include the history of ethical theory, the nature and problem of evil, goodness and suffering, witnessing and testimony, and the promise of an ethics. In addition, recent approaches to trauma theory and rights discourse will also be introduced, with some emphasis on how post-Holocaust ethics have been utilized in contemporary human rights work. This course provides students with philosophical approaches to the issues that emerge out of the events of the Holocaust. The course will help students expand their knowledge of the events of the Holocaust through a philosophical approach that does not merely expose them to what happened, but asks them to think about the implications of what happened: most specifically, how do we understand ethical life, if it cannot stop or confront evil? The course will encourage students to think critically, write effectively and express their thoughts logically. Student evaluation will be based on both regular writing assignments and in-class work, possibly including presentations and group-work. This course covers material in the history of philosophy, contemporary philosophy, and writings pertaining to the Holocaust in various forms (historical, literary documentary, and so forth). It provides links to other major areas in the history of philosophy, postmodernism, ethics, philosophy of religion, and Jewish history.

Prerequisite: One course in either JST or PHIL
Cross-listed with: JST 478, PHIL 478
Bachelor of Arts: Humanities

RLST 483: Zen Buddhism
3 Credits
The development and current state of Zen Buddhist thought and practice.

Cross-listed with: ASIA 487
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)

RLST 494H: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities Honors

RLST 495: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, non-group instruction, including field experience, practica, or internships.

Prerequisite: prior approval of proposed assignment by instructor
Bachelor of Arts: Humanities

RLST 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Humanities

RLST 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Humanities

RLST 499: Foreign Study--Religious Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Humanities

International Cultures (IL)

Risk Management (RM)

RM 214: Applications of Probability Theory to Actuarial Science
1.5 Credits
This course introduces students to actuarial science topics and the actuarial profession. To become an actuary, individuals must pass a series of professional examinations that accredit them as professionals in the field. This course provides an introduction to the material on the earlier exams such as applications of probability theory to insurance, financial mathematics (compound interest and annuities), and provides instruction on spreadsheets, so that students can perform their homework using them. Topics covered include applications of the following to insurance and actuarial science: conditional probability, independence, combinatorial principles, Bayes Theorem, and random variables. Specific probability distributions used include the binomial, uniform, Poisson, geometric, negative binomial, hyper-geometric, and multinomial discrete distributions, as well as the exponential, normal, uniform, and gamma continuous distributions. Expectations, distribution
parameters, means, medians, modes, variances, skewness, and moment generating functions are also covered. The more advanced topics of joint, marginal, and conditional distributions are used, along with functions and transformations of random variables. The application of probability theory to risk management is addressed. Throughout the course, sample problems will be reviewed to help prepare students for the actuarial professional exams.

**Enforced Prerequisite at Enrollment:** C or better in MATH 141 Corequisite: STAT 414 or MATH 414 Concurrent Courses: MATH 230 or MATH 231

**RM 296: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**RM 297: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**RM 301: Risk and Decisions**

3 Credits

Introduction to decision-making under uncertainty. Mathematical probability and statistics, decision theory and game theory will be studied. Risk taking requires special analytical problem solving skills and careful consideration of the relevant data. In this course, you will learn how to conceptualize decisions involving risk, how to analyze your choices, how to estimate the risk, and how to communicate and defend your analysis to others. The skills and tools you will learn come from economics, probability, statistics, and game theory. The focus will be on how the tools from these fields are applied to real world business decisions in risky environments. The concept of risk diversification will be discussed under both independent and correlated risks. Decision rules such as expected value maximization and expected utility maximization will be covered. The role of risk aversion of the decision-making process will be discussed along with how it can be measured. The study of decision analysis will include the use of decision trees. The basic concepts in game theory will be introduced. Students will learn what a Nash equilibrium is and how to derive such an equilibrium. More complicated games with incomplete information will be introduced which are important in decision-making where parties often are missing key pieces of information but must still choose a business strategy. Problems of asymmetric information will be studied; these situations arise when one party to a transaction or contract has more information relevant to the decision than the other party. For these types of problems, such as adverse selection and moral hazard, optimal solutions will be discussed.

**Enforced Prerequisite at Enrollment:** (BA 301 or FIN 301) and (MATH 110 or MATH 140) and (STAT 200 or SCM 200)

**RM 302: Risk and Insurance**

3 Credits

Introduction to the principles and methods of handling business and personal risks; emphasis on insurance techniques.

**Enforced Prerequisite at Enrollment:** 4th semester standing

**RM 303: Real Estate Fundamentals**

3 Credits

Introduction to urban real estate; economic forces affecting property rights; real estate markets and finance; land-use analysis; government policies.

**Enforced Prerequisite at Enrollment:** 4th semester standing

**RM 320W: Risk Management and Insurance**

3 Credits

Goals and methods of risk management. Commercial insurance and alternative risk transfer (ART) methods in addition to the characteristics of insurance markets and intermediaries used by risk managers. This course covers the risk management process used by organizations to deal with the risks that they face with an emphasis on the types of risk commonly handled through the commercial insurance market. It addresses the costs and benefits of risk management, the goals of the process and the methods available to handle risks. The methods covered include both traditional and nontraditional ones including retention, commercial insurance, captive insurers, loss sensitive contracts, finite risk plans and securitization. The characteristics of the insurance markets and intermediaries used by risk managers are studied. These include insurance company organizational forms, operational structures, measures of performance, regulation and the role of brokers. The risks to organizations that are addressed include risks to employees, risks to customers, risks to shareholders and risks to third parties. The types of insurance covered include workers compensation, employment practices liability, products liability, general liability, directors and officers liability and environmental impairment liability. In addition, the failure of risk management during the recent financial crisis is analyzed. The course ends with a case study of risk management at Penn State University to give students a detailed perspective of the risk management program of a complex organization and to provide insight into how changes in the market environment can significantly affect such a program.

**Enforced Prerequisite at Enrollment:** FIN 301 and (MATH 110 or MATH 140) and (STAT 200 or SCM 200)

**Writing Across the Curriculum**

**RM 330W: Real Estate Risk Analysis**

3 Credits

Risk and value associated with real estate decision making, which includes purchasing, leasing renovation, financing, and investing. The purpose of this course is to demonstrate how value and risk is central to virtually all real estate decision making, including whether and how to lease, buy or mortgage a property acquisition; whether to renovate, refinance, demolish or expand a property; and when and how to divest a property. The goal is to finish the course with a value oriented framework based on a set of valuation and decision making tools that can be applied in a variety of real world situations and to understand industry indicators (external factors) that determine the level of risk associated with real estate ventures.

**Enforced Prerequisite at Enrollment:** 5th - 11th Semester standing

**Writing Across the Curriculum**
RM 395: Internship
1-3 Credits/Maximum of 3
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: prior approval of proposed assignment by instructor

RM 399: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

RM 401: Fundamentals of Private Pensions
3 Credits
Analysis of pension regulation, funding, vesting, retirement annuities under insured and self-insured plans, actuarial cost analysis, plan termination insurance.

Enforced Prerequisite at Enrollment: RM 302 or RM 320W

RM 405: Corporate Risk Management
3 Credits
Risk management for firms and organizations; loss control, risk transfer, and loss financing alternatives; Corporate employee benefit program design and financing.

Enforced Prerequisite at Enrollment: RM 302 or RM 320W

RM 410: Financial Mathematics for Actuaries
3 Credits
Compound interest and annuity functions; life annuities; equations of value; determination of yield rates; bonds; introduction to derivatives.

RM 410 Financial Mathematics for Actuaries (3) The first section of the course focuses on Interest Theory, including compound interest, annuities-certain, and life annuities; equations of value; loans and their valuation; the pricing of bonds (with and without default), determining their yields to maturity and outstanding balances; determination of yield rates, spot rates, forward rates, and At-Par rates; duration of an asset or liability, and immunization of interest rate risk. The second section introduces students to derivatives, including the description, payoffs, and profits of forwards, futures, puts, calls, and swaps, and how to use them to manage a company’s or investor’s financial risks. The course helps prepare actuarial students for the international actuarial exam FM (Financial Mathematics).

Enforced Prerequisite at Enrollment: C or better in (STAT 414 or MATH 230 or MATH 231)

RM 411: Actuarial Mathematics I
3 Credits
A study of the mathematical theory of life contingencies, single-life functions, and their applications. The course provides a solid understanding of the mathematics of life insurance and annuities, and helps actuarial students prepare for the international MLC actuarial exam (Models in Life Contingencies). Students will produce a paper on selling insurance to someone they know, which includes pricing it based on the person’s age and gender. Topics covered include: 1) The mathematics, statistics, and interest theory supporting life contingencies, 2) In depth study of survival models and mortality tables, including Select, Ultimate, and Aggregate Mortality, 3) Pricing and understanding life insurance, and in particular, Whole Life Insurance, Endowment Insurance, and Term Insurance, 4) Pricing and understanding life annuities, including temporary and deferred annuities, 5) Determination and understanding of premiums for life insurance and annuities, and 6) Determination and understanding of life insurance reserves, and multiple ways of calculating them.

Enforced Prerequisite at Enrollment: C or better in RM 410

RM 412: Actuarial Mathematics II
3 Credits
Joint-life and survivor-life functions, population life tables, and multiple decrement theory, with applications to disability and retirement problems.

Enforced Prerequisite at Enrollment: RM 411

RM 415: Modeling for Actuarial Science
3 Credits
Modeling for Actuarial Science provides detailed actuary principles dealing with models of interest rates used to price liabilities, and models of stock prices and options used to price employee options and cash balance accounts. The first section of the course focuses on discrete models, such as binomial option pricing, which can be used for pricing employee stock options. The second section covers put-call parity, the effects of style, maturity, and strike price on option prices, generalized parity, and exchange options. The third section looks at continuous models such as: 1) the Black-Scholes formula and it’s applications to options on stocks, currencies, futures, and market-making, 2) Delta-Hedging and the understanding of and pricing of exotic options (Asian, Barrier, Compound, Gap, and Exchange Options), 3) understanding lognormal distributions, Monte Carlo testing, Brownian motion, Ito’s Lemma, historic and implied volatility, Sharpe ratios, interest rate models, and the application of these to liabilities. The course assists in preparing students for the international actuarial exam MFE (Models in Life Contingencies).

Enforced Prerequisite at Enrollment: C or better in RM 410

RM 420: Property, Casualty, and Health Insurance
3 Credits
Actuarial methods and concepts used to model property, casualty and health insurance losses along with credibility theory. RM 420 Property, Casualty, and Health Insurance (3) This course provides a solid understanding of actuarial methods and concepts used to develop loss models for property and casualty insurance and health insurance. The course makes use of real world numerical examples in order to demonstrate how actuaries use historical claims and pricing data, both company specific and industry, to determine rates and increases. The class also gives students a foundation in Credibility Theory and simulation to prepare for the actuarial examination on loss models.

Enforced Prerequisite at Enrollment: C or better in RM 412
RM 424: Real Estate Law

3 Credits

Analyze contemporary law applicable to various types of ownership interests and rights, methods of transferring ownership, and use of real property. B LAW 424 B LAW (R M) 424 Real Estate Law (3) Analysis of contemporary law applicable to various types of ownership interests and rights, methods of transferring ownership, and use of real property. The objectives for this course are: (1) to provide students with an understanding of essential U.S. real estate property law, including the rights private property owners may obtain, how ownership and transfer are handled in view of present and future interests, constitutional issues that impact real estate ownership, and the legal aspects of modern real estate contractual transactions; (2) to teach students the ability to spot the legal issues arising from the above as future business leaders and (3) to introduce students to the legal reasoning process necessary to address and avoid the legal dilemmas presented by such issues. Instructional methods for the course will include detailed lectures and classroom discussion of readings and other materials. Student progress and mastery of the material will be evaluated through periodic examinations.

Enforced Prerequisite at Enrollment: BLAW 341 or BLAW 243
Cross-listed with: BLAW 424

RM 425: Business and Environmental Regulation

3 Credits

Examines the interplay between environmental regulation and commercial activities, including property interests. B LAW (R M) 425 Business and Environmental Regulation (3) R M/B LAW 425 is an advanced business law course based on foundation knowledge in legal regulation, property rights, and enterprise. The course explores the interplay between environmental laws and property rights and includes topics such as: common law regulation of the environment, government power and private rights, zoning, protecting endangered species, regulating the transportation and storage of hazardous materials, and Federal regulation of water quality. Students will develop their comprehension and analysis of the legal reasoning processes along with the ability to identify legal issues from the perspectives of the government, property owners, and environmental interest groups. The instructional methods will include class discussions of readings and video presentations. To facilitate thorough analysis of the competing interests affecting environmental law, this course will employ the Socratic teaching method and place a special emphasis upon class discussion and interaction.

Enforced Prerequisite at Enrollment: BLAW 341 or BLAW 243
Cross-listed with: BLAW 425

RM 430: Life and Health Insurance

3 Credits

Industrial organization of the US life-health insurance industry; economic issues related to organizational structure, operational functions, and the supply and demand for life-health products.

Enforced Prerequisite at Enrollment: RM 302 or RM 320W

RM 440: Risk, Strategy, and Decision Making

3 Credits

To examine key strategic concepts, ranging from cognitive to organizational, that are critical for managing risk at the enterprise level. RM 440 Risk, Strategy, and Decision Making (3) One of the key ways that a business attempts to manage risk it anticipates and confronts in markets is through organizational-level elements such as its business strategy, structure, and culture. These elements emerge from a series of decisions guided by the insights and biases of individuals. As such, the management of enterprise risk must also include an understanding of how individuals (e.g. managers) approach risk through their decisions and decision making processes. In this course, we look at some of these critical elements separately and then together as they integrate to guide and define enterprise risk management. The basic course objectives are to come away with an understanding of the following: Forms of strategic risk - From market to internally-driven risk; from emotional to economic-driven, how does strategic risk present itself? How do executives recognize/assess and respond to the 'portfolio of risk' that they must address to make the business successful? Business strategy and structure - One way risk is addressed and articulated is through a business strategy. What is strategy? What are the key decisions that comprise a business strategy? How are organizations structured to implement these strategies and move information across the firm? Where and how is risk assessed in these processes and structures, and incorporated into a strategic risk plan? Decision making - Decision making around strategy and risk management plays out in various forms and across different levels (i.e., individuals and groups). What goes right and wrong? How are these processes systematically linked to perceptions and actions associated with risk management. Organizational culture - Perhaps one of the most critical elements in enterprise risk management is the role played by organizational culture (or simply 'How we do things around here and my role as an organizational member doing it.') We examine the roots of organizational culture and how it is aligned to perspectives of risk and its management. Descriptive vs. prescriptive perspectives - Once we 'described' what does/could go on, we need to engage in looking at ways that organizations can prevent pitfalls and correct suboptimal practices.

Enforced Prerequisite at Enrollment: RM 320W or RM 330W

RM 450: Contemporary Issues in Real Estate Markets

3 Credits

Historical performance, land use issues, market valuation, real estate development, public policy issues.

Enforced Prerequisite at Enrollment: RM 303 or RM 330W

RM 460: Real Estate Financial Analysis

3 Credits

Debt and equity financing, capital structure, 'creative financing', risk analysis, corporate asset management. FIN (R M) 460 Real Estate Financial Analysis (3) The objective of this course is to provide in-depth coverage of real estate investment and financing decisions. The focus is on the private market, including corporate asset management. Investment analysis moves from the basics of forecasting cash flows, through advanced topics including the impact of real option value on investment and development decisions. Risk measurement is given particular attention with a focus on sensitivity and simulation analysis.
There is some coverage of asset pricing models like the Capital Asset Pricing Model, which is critically analyzed with respect to its applicability in real estate markets. The impact of illiquidity, management costs, and the suspicion of non-normally distributed returns are explored, as are the implications of relative market inefficiency. The financing module begins with the basics of mortgage debt mathematics, which is then extended to include comparisons of various repayment programs. Included are interest-only, balloon, shared appreciation, growing equity, graduated payment and reverse annuity loans, as well as various creative financing of commercial properties. The latter include participating mortgages, convertible mortgages, and mezzanine debt. Featured in the corporate asset management section is the lease/buy decision. Other topics may be addresses based on current events. It is anticipated that guest speakers will be invited where appropriate.

**Enforced Prerequisite at Enrollment:** FIN 305W or RM 303 or RM 330W

**Cross-listed with:** FIN 460

**RM 470: Real Estate and Capital Markets**

3 Credits

Analysis of publicly-traded real estate of both the equity (REITs) and debt (MBSs) sides. The course also provides international perspectives. FIN 470 / RM 470 Real Estate and Capital Markets (3) The objectives of this course are to expose the student and explore the issues associated with the analysis of public ("Wall Street") real estate, including both equities (such as Real Estate Investment Trusts or REITs) and debt vehicles (such as Mortgage-Backed Securities or MBSs). In addition, the course will focus on the increasingly globalization of real estate capital markets as the real estate sector becomes integrated into the global financial system. The differences between private and public real estate analysis will also be explored, including the suitability of traditional asset pricing models for real estate analysis. Topics include the growing impact of institutional real estate forces on the real estate sector, the use of modern financial economics methods to real estate including the concept of market efficiency, modern portfolio theory applications, market measures of risk and return, the use of option-based models, and other advances. The rise of Wall Street’s interest in real estate securities is an important institutional development and serves as the underlying background for the analysis of MBSs using fixed-income security techniques. As globalization has spread, the real estate sector has moved with these changes and prospects for a global real estate market are examined and evaluated. This course serves as a compliment to FIN 460, which emphasizes traditional financial analyses of individual real estate projects. In FIN 470, real estate securities are viewed as a natural extension towards the complete integration of real estate and capital markets. In this sense, these courses will enable traditional and modern analyses of the real estate sector for years to come.

**Enforced Prerequisite at Enrollment:** FIN 305W or RM 303 or RM 330W

**Cross-listed with:** FIN 470

**RM 475: Quantitative Analysis for Business**

3 Credits

This course provides students with working knowledge of some widely used quantitative methods, such as Monte Carlo simulations, t-tests, linear regressions, nonlinear regressions, regressions with dummy variables, and regressions with interacting explanatory variables, as well their applications in business. The course will focus on understanding and applying each method, but not on statistical theory or their proof. Monte Carlo simulations will be used to substitute for mathematical proofs. By the end of the course, students should understand the purposes of the above methods and how to use them to solve real estate, financial, marketing, and risk management problems. Students should also be able to interpret results in ways that are correct, insightful, and useful, should be aware of potential problems of each method, such as the omitted variable bias, multicollinearity, heteroskedasticity of regressions, and should know how to make corrections if these problems are present. Students should also have developed working knowledge of R, which is a programming language and software environment widely used by quantitative analysts. Students should know how to use R to conduct basic data manipulation, do simple Monte Carlo simulations, do t-tests, and run linear and non-linear regressions.

**Enforced Prerequisite at Enrollment:** SCM 200 or STAT 200

**RM 480: International Real Estate Markets**

3 Credits

International perspectives on real estate as property, evaluation of land use regulations, and differences in real estate markets across countries.

**Enforced Prerequisite at Enrollment:** RM 303 or RM 330W

**Cross-listed with:** IB 480

**RM 494: Research Project**

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

**RM 494H: Honors Research Project**

1-6 Credits/Maximum of 6

Supervised honor student research projects identified on an individual or small-group basis.

Honors

**RM 496: Independent Studies**

1-18 Credits/Maximum of 18

Creative Projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**RM 497: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**RM 499: Foreign Studies**

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)
**Rural Sociology (RSOC)**

**RSOC 11: Introductory Rural Sociology**

3 Credits

Basic sociological concepts applied to rural societal institutions and rural communities; causes and consequences of rural social change. This course meets the Bachelor of Arts degree requirements. The objectives of the course are (1) to acquaint students with the fundamental concepts, principles and research methods of rural sociology; and (2) to assist students in applying these concepts and principles to gain an understanding of rural societal institutions and the forces leading to social change in rural America and globally. Lectures and readings are designed to encourage students to examine their assumptions and understanding of the structure and functioning of rural communities, the forces leading to rural social change, and the likely course of these changes in the future. A major objective is to challenge students to critically analyze rural society and rural social institutions from a sociological perspective. Understanding the changing nature of rural society in an increasingly urbanizing and integrated world is a key consideration. The course meets requirements in the Agricultural Business Management and Environmental and Renewable Resource Economics Majors, as well as one General Education requirement.

Bachelor of Arts: Social and Behavioral Sciences
United States Cultures (US)
General Education: Social and Behavioral Scien (GS)

**RSOC 400N: Exploring Indigenous Ways of Knowing in Great Lakes Region: Lecture**

3 Credits

Exploring Indigenous Ways of Knowing in the Great Lakes Region explores concepts and values distinctive to indigenous ways of knowing (IK) in the Great Lakes Region through readings, video segments, and lectures. Five structural concepts or key themes - local knowledge, relational knowledge, empirical knowledge, spiritual knowledge, and traditional knowledge - provide a conceptual framework for understanding indigenous cultures and knowledge production and their unique contributions to western society in the 21st century. Students will be introduced to the Algonquian cultures of the Great Lakes Region and to the Ojibwe (Anishinaabeg), Odawa, and Potawatomi (Three Fires) cultures in particular. This course will introduce students to the distinctive ways of knowing that Indigenous people understand, and how the world through their relationship with the land or region to which they belong.Too often, colonizers around the world have ignored indigenous knowledge systems even though these ways of knowing have sustained peoples, cultures, and environments for thousands of generations. Because these ways of knowing are generally preserved and transmitted through stories, music, ceremony, and embodied traditions, they are seldom understood and frequently dismissed by those who control the production of knowledge in the modern world. The knowledge of the indigenous peoples of the Great Lakes region will, in this course, be presented as an empirically grounded scientific body of knowledge and theory comparable and complementary to the European tradition and, in specific ways, enhancing the sustainability of western scientific knowledge and practice. This course is a prerequisite for the Maymester field experience - Exploring Indigenous Ways of Knowing among the Ojibwe CED 401 which offers students an opportunity to experience indigenous ways of knowing by engaging with Ojibwe educators, traditional knowledge holders, elders, and families in several of the three largest Ojibwe reservations in the US.

**Prerequisites:** RSOC 11; SOC 1
United States Cultures (US)
General Education: Humanities (GH)
General Education: Social and Behavioral Scien (GS)
General Education - Integrative: Interdomain
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Soc Resp and Ethic Reason

**RSOC 496: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**RSOC 497: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**Russian (RUS)**

**RUS 1: Elementary Russian I**

4 Credits

Audio-lingual approach to basic Russian; writing. Students who have received high school credit for two or more years of Russian may not schedule this course for credit, without the permission of the department.

Bachelor of Arts: 2nd Foreign/World Language (All)

**RUS 2: Elementary Russian II**

4 Credits

Audio-lingual approach to basic Russian continued; writing. Students who have received high school credit for four years of Russian may not schedule this course for credit, without the permission of the department.

**RUS 3: Intermediate Russian**

4 Credits

Emphasis on reading unsimplified texts; composition; grammatical analysis.

**Prerequisite:** RUS 001
Bachelor of Arts: 2nd Foreign/World Language (All)

**RUS 4: Advanced Russian I**

4 Credits

Advanced Russian I courses are designed for students who have completed RUS 2 or an equivalent course. Students who have completed RUS 3 or an equivalent course may not schedule this course for credit, without the permission of the department.

**Prerequisite:** RUS 002
Bachelor of Arts: 2nd Foreign/World Lang (12th Unit)
RUS 51: Elementary Intensive Russian for Graduate Students I

3 Credits

Intensive introduction to Russian: first half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. RUS 051 Elementary Intensive Russian for Graduate Students I (3) This is the first in a series of three courses designed to give students an intensive introduction to Russian. This is the first half of elementary sequence in reading, writing, speaking, listening, and cultural contexts. Students will learn the Russian vocabulary and will learn to create simple sentences. Lessons are taught in an authentic cultural context.

Prerequisite: graduate standing

RUS 52: Elementary Intensive Russian for Graduate Students II

3 Credits

Intensive introduction to Russian: second half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. RUS 052 Elementary Intensive Russian for Graduate Students II (3) This is the second in a series of three courses designed to give students an intensive introduction to Russian. This is the second half of graduate intensive sequence in elementary reading, writing, speaking, listening, and cultural contexts. Students will learn the Russian vocabulary. Lessons are taught in an authentic cultural context.

Prerequisite: RUS 051 and graduate standing

RUS 53: Intermediate Intensive Russian for Graduate Students

3 Credits

Continued intensive study of Russian at the intermediate level: reading, writing, speaking, listening, cultural contexts. RUS 053 Intermediate Intensive Russian for Graduate Students (3) This is the third in a series of three courses designed to give students an intermediate intensive knowledge of Russian. Continued intensive study of Russian at the intermediate level: reading, writing, speaking, listening, and cultural contexts. Lessons are taught in an authentic cultural context.

Prerequisite: RUS 052 or equivalent, and graduate standing

RUS 83: First-Year Seminar in Russian

3 Credits

Russia’s cultural past and present. RUS 083S First-Year Seminar in Russian (3) (GH; FYS; US; IL) (BA) This course meets the Bachelor of Arts degree requirements. Russia, the world’s largest country stretching over eleven time zones in Europe and Asia, is currently undergoing a dramatic transformation. For the past hundred years, Russia has served as a laboratory of gigantic dimensions as various social ideals were implemented with unprecedented radicalism. At the same time, Russia’s great writers raised ‘ultimate questions’ about social justice, the existence of God, and the meaning of human life with an unparalleled acuity and intensity. This course surveys Russia’s cultural past and present. Although it touches on aspects of Soviet culture, the main emphasis lies on what some people would call the ‘real Russian culture,’ eclipsed for seventy years under the Communist regime and now about to be resurrected. At this crucial juncture in the history of Russia, the notion of a ‘real’ culture remains highly problematic and controversial. The course surveys the various attitudes of Russian thinkers and authors toward the question of national identity and national destiny. Examples of Russian high culture (philosophy, literature, art, music) and the Russian religious faith (Orthodoxy) are discussed alongside with daily life in post-communist Russia. Special emphasis will be placed on the in-depth study of a few seminal works of Russian literature. The course also includes some Russian films. A knowledge of Russian is not required. Each section of this course will be limited to twenty students who will be instructed by an experienced professor. Questions and discussion are strongly encouraged. This course can be used to fulfill the General Education or Bachelor of Arts Humanities requirement, the United States and International Cultures requirement, and the first-year seminar requirement. A series of short papers will train students in the skills of information gathering and written expression. The course grade will be based on oral participation and on the grade for the papers, which will be evaluated both for content and writing. This course will help to prepare students for a variety of additional courses in the fields of literature and Russian/East European area studies. In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them, including the opportunity to develop relationships with faculty and other students who share their academic interests.

International Cultures (IL)

RUS 100: Russian Culture and Civilization

3 Credits

RUS 100 Russian Culture and Civilization (3) (GH; IL) (BA). This course meets the Bachelor of Arts degree requirements and is a prescribed course for the Russian major and minor. The course acquaints students with the general contours of Russian culture and civilization from the origins to the recent past. Students will read the story of the Russian people, which includes their ongoing quest for national identity between east and west, their triumphs and tragedies, and their important contributions to world culture. The course surveys history, politics, language, literature, folklore, religion, music, and art. Students will be acquainted with various attitudes of Russian thinkers and authors towards the question of national identity and national destiny. Examples of Russian high culture (philosophy, literature, art, music) and the Russian religious faith (Orthodoxy) are discussed alongside views of daily life. Although the course’s focus is on Russian culture and civilization rather than on history, some historical background is necessary to properly understand and interpret the culture. That is why a historical frame is systematically provided. As a General Education course, Russian 100 incorporates the following four elements of active learning: international competence (which is inherent to the subject matter), information gathering and analysis, active use of writing, and dialogue pertaining
to social behavior, community, and scholarly conduct, which will be provoked by the reading material. A knowledge of Russian is not required, as class lectures and discussions, as well as all additional readings, are in English. The course materials include weekly lectures designed as multimedia presentations, readings assigned through the Penn State Libraries electronic reserve system, and some films.

GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Global Learning

RUS 101N: Russian Cinema
3 Credits

RUS 101N Russian Cinema (3) (GH; GA; IL). From the beginning, cinema has been an intersection of technology, art, entertainment, industry, commerce, politics, and more. The course acquaints students with major filmmakers who shaped Russian cinema over the 20th century and beyond. The course surveys Russian cinema from its beginnings to the present, with emphasis on historical, political, and cultural contexts. Russian cinema is defined as feature films and documentaries produced in pre-revolutionary Russia, as well as in the Soviet Union and post-Soviet Russia. The course will chronologically overview the developments in Russian film mapping these onto major historical events and artistic and cultural trends. It will also introduce students to fundamental concepts and terminology for film analysis. The course is taught exclusively in English; neither prior knowledge of Russian history and culture nor of film history and terminology is required. To preserve as much authenticity as possible, all movies will be viewed in Russian with English subtitles. Films will cover different genres, such as melodrama, historical film, screen adaptation of literary comedy, propaganda film, and documentary. Readings will provide a historical perspective and acquaint students with classical writings by filmmakers and theorists. Short papers and/or presentations will provide students with opportunities for personal research and active use of writing. The course is designed to satisfy General Education Inter-Domain course requirements as a GH (General Humanities), as a GA (General Arts), and as an IL (International Cultures) course.

RUS 110: Russian Folklore
3 Credits

Study of byliny, lyrical and historical songs, folktales, drama, ceremonial poetry, chants, charms, proverbs, and mythology of Russia. In English. RUS 110 Russian Folklore (3) (GH; IL)(BA) This course meets the Bachelor of Arts degree requirements. Russian 110 is a general survey of Russian folklore for English-speaking students. It concerns itself not with the aristocratic and intelligentsia culture of Russia, but with the rites of passage, agricultural ceremonies, beliefs, legends, folktales, and epics of the Russian peasants, most of whom were illiterate. Students are evaluated on the basis of three examinations (half short-answer and half essay), a legend collecting project, and a final. The legend project requires students to collect a legend or tale (usually from the American tradition), evaluate it against folklore indices, present it to the other students, and write it up. Russian 110 may be counted toward the major in Russian Translation (BS). It may also be used to fulfill General Education Humanities and International/Intercultural Competency requirements. This course will be offered once a year with 50 seats per offering.

International Cultures (IL)
Writing Across the Curriculum

RUS 142Y: Russian Literature in English Translation: 1870 to Present
3 Credits

Dostoevsky, Tolstoy, Chekhov, Gorky, symbolists, selected Soviet authors. Writing assignments will serve as a major way of exploring subject matter.

Bachelor of Arts: Humanities
International Cultures (IL)
Writing Across the Curriculum

RUS 143: The Culture of Stalinism and Nazism
3 Credits

This course, which is cross-listed between Russian and German, aims to acquaint students with an important and troubling chapter of 20th-century culture. The regimes of Stalin and Hitler have had a decisive impact not only on life in Russia and Germany, but in much of Europe and the world at large. There is no consensus among scholars about how to classify these systems, whether the term ‘totalitarian’ is appropriate to describe them, and whether Stalinist Russia and Nazi Germany are essentially similar or essentially different historical phenomena. Espousing a comparative perspective, this course explores the culture produced by Stalinist Russia and Nazi Germany, taking into account both the culture of daily life and selected works of ‘high culture,’ including literature, the visual arts, architecture, music, and film. The ideological underpinnings of both systems will be discussed and compared. The classics of Stalinist Socialist Realism and Nazi propaganda will be analyzed both as political statements and works of art. The course will also include a reading of authors who attempted to create critical representations of life in Stalinist and Nazi societies, such as Lydia Chukovskaya, Varlam Shalamov, Primo Levi, and George Orwell. The course is designed to be suitable for all students generally interested in Russian and/or German culture, or interested in various fields of humanistic study, whether or not they have previously studied the culture
of Russia or Germany. A knowledge of Russian or German is not required, as class lectures and discussions as well as all reading assignments will be in English. This course is designed to count as General Education, as a GH 'Humanities,' and as an IL 'International Cultures' course. It meets the BA requirements in the humanities by asking students to demonstrate competence in 20th-century German and Russian history, political philosophy, literature, art and film.

4 Credits
A continuation of intermediate Russian with a comprehensive grammar review and focus on reading, writing and speaking Russian.

Prerequisite: RUS 003 or permission of program
International Cultures (IL)

RUS 204: Intermediate Russian II
4 Credits
Intensive practice of Russian reading, writing, listening and speaking; review of Russian grammar. RUS 204 Intermediate Russian II (4) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will provide intensive Russian language training at the intermediate level, stressing the four skills of reading, writing, listening, and speaking. Together with its companion course, Russian 214, the course will provide a complete review of Russian grammar. It will include a discussion of participles and verbal adverbs, verbs of motion, and problems of Russian syntax in conjunction with conversation practice and writing assignments. Russian 214 will be a required course for Russian majors. It can be taken before or after Russian 204 (which will also be required). Grading will be based on regular written tests and a final exam which will include an oral component. Students will be encouraged to use the new language training equipment available at Sparks Building.

Prerequisite: RUS 003

Bachelor of Arts: Humanities
International Cultures (IL)

RUS 305: Advanced Russian Conversation
3 Credits

Discussion and role-playing based on real-life situations and current events; supervised by a native speaker. RUS 305 Advanced Russian Conversation (3) (IL) RUS 305 is the basic conversation course for the B.A. in Russian. It centers around discussion and role-playing on such topics as ordering plane tickets, traveling on Russian trains, Russian restaurants, cooking at home, traveling to and from work, summer jobs and career plans, sports and other forms of leisure, movies and television, and interviews with famous people. Some current events are also discussed, e.g. Russian attitudes towards the Romanovs, the AIDS crisis, the economic situation in Russia. Evaluation is based on individual and group oral presentations, regular quizzes, and short compositions. No special facilities are required, but students are encouraged to use the new language training equipment available in Sparks Building.

Prerequisite: RUS 204, RUS 214
Bachelor of Arts: 2nd Foreign/World Language (All)
International Cultures (IL)

RUS 395: Internship

RUS 400: Senior Seminar in Russian Culture
3 Credits

Senior seminar devoted to topics in Russian culture; conducted in Russian. RUS 400 Senior Seminar in Russian Culture (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. RUS 400 will be the senior seminar for Russian majors. Building on linguistic and cultural material covered in the second and third levels of study toward the Russian major, it will add depth and sophistication to the students' understanding of basic concepts in Russian culture and improve their ability to discuss and write about these concepts in Russian. The materials for RUS 400 will be arranged chronologically and will cover the 'big themes' of Russian culture: e.g., the legacy of Kievan Rus, the cultural/historical preconditions for the 'Third Rome' theory, the rift between the people and the upper classes following Peter the Great, Westernizers versus Slavophiles, the Bolshevik Revolution, the Stalinist terror. Readings will be selected from a wide variety of genres and will reflect a diversity of linguistic styles: e.g., passages from the ancient chronicles, folk legends, memoirs and autobiography, letters, historical and literary texts. Some films will be used. Students will be evaluated on the basis of frequent quizzes and oral participation. In addition, each student will write a short research paper and present it in Russian to the class. These papers will help round out the presentation of central themes in Russian culture. Research papers might cover such topics as Andrey Rublev, religious sectarianism, peasant beliefs about nature, the biography of Lenin. RUS 400 will be a required course for both the B.A. and B.S. in Russian. Students must complete RUS 204, 214, and 304 prior to RUS 400.

Prerequisite: RUS 204, RUS 214, RUS 304
Bachelor of Arts: Humanities
International Cultures (IL)

RUS 401: Advanced Russian A
3 Credits

Advanced Russian grammar, conversation, and composition. RUS 401 Advanced Russian A (3) RUS 401 is an advanced Russian language course that covers topics in grammar in the context of the spoken and written language. It is taught in Russian and serves as a complement to RUS 402. Emphasis will be placed on verbal aspect, reflexive and passive verbs, un-prefixed verbs of motion, relative pronouns, and participles. Classes will include group and individual oral presentations, analyses of written texts, and assignments using the internet to access recent oral and written materials in Russian that treat current events and illustrate particular linguistic usage. Students will also view one feature film.

Prerequisite: RUS 200
RUS 402: Advanced Russian B
3 Credits

Advanced Russian grammar, conversation, and composition. RUS 402 Advanced Russian B (3) RUS 402 is an advanced Russian language course that covers topics in grammar in the context of the spoken and written language. It is taught in Russian and serves as a complement to RUS 401. Emphasis will be placed on prefixed verbs of motion, use of the imperative, comparative and superlative forms, and complex and conditional sentences in Russian. Classes will include group and individual oral presentations, analyses of written texts, and assignments using the internet to access recent oral and written materials that treat current events and illustrate particular linguistic usage. Students will also watch one feature film during class time.

Prerequisite: RUS 200
RUS 403: Advanced Russian Conversation and Composition
3 Credits

A conversation and composition course that includes situational topics as well as complex academic discourse. RUS 403 Advanced Russian Conversation and Composition (3) (IL) The Russian 403 course is intended primarily to develop students' oral and composition skills in Russian. The main focus of the course will be on speaking and understanding spoken Russian and writing on a variety of themes. The students will engage in different oral activities on a number of topics from the everyday life of an average Russian person to more complex discussions of current events, culture, history, the arts, and politics. The students will be expected to do a good deal of talking in Russian both with classmates and with the instructor in class, and prepare oral and written assignments at home. The written exercises will enhance
the students’ ability to perform well on the class assignments. The course will include a practical review and practice of some of the most complex and troublesome aspects of Russian grammar. There will be a considerable emphasis on vocabulary, word-formation for vocabulary building, and communicative strategies in the course. One of the goals of the course is also to increase the students’ understanding of Russian culture and the Russian way of life based on Russia’s history and current reality.

**Prerequisite:** RUS 200 or permission of program; Concurrent: RUS 400, RUS 401, RUS 402, RUS 405, RUS 412

RUS 404: Advanced Reading and Composition

3 Credits

Advanced Russian Reading and Composition. RUS 404 Advanced Reading and Composition (3) RUS 404 focuses on reading and writing in Russian. Some time is spent on reading strategies, methods of building a working Russian vocabulary, sentence structure, and word order. Reading materials are at the advanced level and for the most part treat the history of the Russian Revolution and Civil War, the Stalinist era and the Thaw. Literary selections complement the historical readings and include works of Blok, Akhmatova, Zoshchenko, Bulgakov and Solzhenitsyn.

**Prerequisite:** RUS 401, RUS 402, or RUS 403

RUS 405: Seminar in Russian Literature

3-6 Credits/Maximum of 6

Readings in classical Russian literature; Topics vary. RUS 405 Seminar in Russian Literature (3 per semester/maximum of 6) (IL) In no other culture has literature attained the centrality it enjoyed in nineteenth- and twentieth-century Russia. Political, social and historical constraints propelled Russian writers into figures of witness, prophecy and moral instruction. Yet far from being limited to the vast, dark novels of legend, Russian literature offers a great deal of variety, including much humor, lyricism and fantasy. Russian 405 is a senior-level seminar devoted to the in-depth study of selected texts of classical nineteenth- and twentieth-century Russian literature. It presupposes a solid reading knowledge of Russian. The choice of authors and texts will vary from one year to the next. Writers discussed on a regular basis will include such major figures as Alexander Pushkin, Mikhail Lermontov, Nikolai Gogol, Ivan Turgenev, Fyodor Dostoevsky, Lev Tolstoy, Anton Chekhov, as well as selected writers from the Soviet and post-Soviet period. The thematic emphasis will vary from one year to the next. The focus may be on the oeuvre of a single writer, on the development of a particular genre (e.g., lyric poetry or the short story), on a particular time period (e.g., the so-called ‘Silver Age’ at the beginning of the twentieth century), or a particular theme (e.g., the conflict between liberalism vs. radicalism, the ‘woman question’, the role of religion, Russia vs. the West, Russian ‘Orientalism’, the Communist Revolution and its discontents, etc.). The literary texts will be read in Russian. They will be analyzed both in their socio-historical context and as aesthetically compelling manifestations of verbal art. Explorative analytical writing and class discussion will be essential means to explore the subject matter.

**Prerequisite:** RUS 401, RUS 402, or RUS 403

RUS 406: Russian Film

3 Credits

Conversation and Composition based on classical Russian films. RUS 406 Russian Film (3) (IL) Taught in Russian, this course offers an overview of the development of the film industry in the USSR/Russia within its historical context: from the silent classics of the Soviet Golden Age, to the mass entertainment movies of Socialist Realism, the new-wave productions of the cultural thaw of the 60s, the popular genres of the ‘stagnating’ 70s, the liberated films of the glasnost period, and the most recent movies reflecting Russia’s difficult economic transition. Russian cinema will be discussed as an index of sociopolitical trends over the years, as well as a medium in its own right. Therefore, attention will be devoted to historical turning points that affected the cultural policies of the Soviet Union, and consequently the styles, themes, and quality of filmmaking. At the same time, the course will consider the film as text, and analyze the feelings it stirs, the moods it evokes, and the ideological message it conveys. To this end, the course will cover the basic elements and techniques of film language (shots, montage, mise en scene, etc.) and the process of visual perception that affects the audience.

**Prerequisite:** RUS 401, RUS 402, or RUS 403

International Cultures (IL)

RUS 410: Heritage Russian 1

3 Credits

Introductory course for heritage speakers of limited linguistic proficiency aiming at teaching basic reading, writing, and grammar skills in Russian. RUS 410 Heritage Russian 1 (3) (IL) The course is aimed at ‘heritage speakers’ of Russian, i.e., those who grew up speaking Russian in the family without a full Russian educational and cultural background. It is designed for students who have speaking and comprehension ability in Russian, but have minimum or no exposure to writing and reading. This course teaches basic skills of writing, reading, and grammar. It includes simple original reading material (fairy tales, poems, songs), as well as visual and multimedia material, such as cartoons, advertising, etc.) The course will enhance the students’ knowledge and understanding of Russian culture as well as increase their awareness of their own complex cultural identity (Students with reading and limited writing proficiency should consider Heritage Russian II (RUS 411)).

**Prerequisite:** basic speaking proficiency in Russian; placement test and consent of instructor

International Cultures (IL)

RUS 412: Russian Translation

3 Credits/Maximum of 6

Translation from Russian into English of complex texts from the humanities, social sciences, and technical fields.

School of Science Engineering and Technology (SSET)

SSET 295: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, individual training including practical field experiences or internships where written and oral critique of the activity is required. SSET 295 Internship (1-18) The objectives of the Penn State Harrisburg, Capital College Internship Program are to:◆ Attract and retain capable students to pursue their educational and career goals in mathematics, engineering, engineering technology, and the sciences, ◆ Connect students with professionals who practice engineering, mathematics, technical, and science skills daily, ◆ Establish mentoring programs to break down the barriers between student learners and practicing professionals, ◆ Create service learning and internship experiences designed to reinforce classroom learning in technical and theoretical subjects, ◆ Retain students in the College and in the region by developing a seamless transition from the academy to the workplace. The instructional and cooperative arrangements with business and industry will begin early, will be sustained throughout the four-year educational program, and will be supported by strong partnerships linking educational, business, industrial, and the intellectual communities in operative regional networks. Cooperation, collaboration, and a commitment to the future of the profession are essential if the 'brain drain' is to be reversed in this region. Another aspect of the internship program is to assist students in finding career-related, temporary employment opportunities, and to provide support and training for such positions while pursuing their education at Penn State Harrisburg, Capital College. The Internship Program will be administered by the School of Science, Engineering, and Technology. The staff is versed in handling student/employer relations and handles student orientations, resume/job listing database management, interview schedules, registration, evaluations, and final reports. Students who utilize the Internship Program in any way will be required to register for courses applicable to each program. The course credits may range from one to three depending upon the particular program requirements. The utilization or substitution of internship credits to meet degree requirements is strictly a program decision. This course requires that students submit a report that is of professional quality, concise, and focused on answering the provided questions. It must be typed in 12-point font and double-spaced. Students will be assigned either an SA (satisfactory) or UN (unsatisfactory) grade based on their reports and employer evaluations. The original report, portfolio, and evaluation forms are due on the last day of instruction for the semester or session. The grading will be based on the following criteria: 20% Internship Plan 20% Portfolio 20% Final Report 40% Employer Evaluation No special on-campus facilities are required for the course. The course will be offered every semester including the summer session.
Prerequisite: prior approval of the proposed assignment by the program

SSET 395: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, individual training including practical field experiences or internships where written and oral critique of the activity is required. SPSY 496: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Science (SC)

SC 60N: Art in the Natural World
3 Credits

This course will foster appreciation of art and the natural world through exploration of the flora, fauna, geology, and water systems. Students will use scientific and artistic observation skills to understand, relate, and respond to connections in nature. Students will learn how to identify species in the field and gain a base knowledge of natural history. Students will develop observational skills and a deeper awareness of their natural surroundings through scientific observation, visual expressions, and writing responses. Using a common visual language, utilizing the elements and principles of design, students will begin to
develop an aesthetic awareness through observational collecting. Nature presents an installation ready to analyze, deepening the students' natural curiosity and ability to make connections. Most course work will be in the field and will include use of tools such as binoculars, microscopes, cameras, and sketchbooks. Goals for this course will include enhancing effective communication and critical and creative thinking. Students will use visual, oral, and written communication to express their observations of the natural world. Critical and creative thinking will be used to analyze and synthesize observations to develop independent research projects and presentations.

General Education: Arts (GA)
General Education: Natural Sciences (GN)
General Education - Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

SC 100: Introduction to Research
1 Credits

Introduces essential elements of laboratory safety, laboratory techniques, research ethics, and scientific communication skills. Especially for undergraduate research students. SC 100 Introduction to Research (1)
The main objective of the course is to prepare students for a fulfilling and successful learning experience in the research laboratory. Students who engage in undergraduate research often continue to project for four to six semesters. This course provides students with the necessary introductory information to the undergraduate research experience so that the entire experience is more satisfying and productive for the students. A corollary goal is to introduce research students to other, like-minded students. Several in-class activities will involve group work combined with an explicit discussion of productive group dynamics.
The course will cover four major issues associated with a sustained research project: safety, techniques, ethics, and communication. The course will make students more cognizant of the importance of each of these areas and will provide justification for the importance of each activity in the research enterprise. Students will be evaluated via a series of assignments in which the students reflect on the components of each area and the importance of that area to the continuation of scientific knowledge. Students will be quizzed on safe laboratory practices, usually with a laboratory practical on safety. Students will be assessed on the satisfactory performance common laboratory techniques such as using a pipette, using an analytical balance, using a power source, and proper handling of large equipment like super speed centrifuges. Ethics will be assessed via assignments that require students to contemplate a variety of ethical issues. As part of ethical conduct students will be expected to learn the proper composition of a laboratory notebook. The notebook will provide a segue between ethics and communication skills. Students will examine several recent scientific research articles and discuss the way in which the article is written. They will be assessed on their ability to summarize and critique the article in writing. A book on scientific writing could be assigned for this portion of the course because a student would find use of such a resource as they progress on an independent research project. The laboratory technicians or laboratory managers might assist the faculty member who is teaching the course.

SC 101: Job Placement Skills and Strategies
1 Credits

Strategies and skills designed to identify career/life goals and implement career decisions.
Cross-listed with: AG 100

SC 103N: When Data Meets Design
3 Credits

The student will become an effective generator and consumer of the data visualizations that saturate public and professional discourse. The student will examine the rules of design and how they can be used to construct compelling visualizations of data. The student will use this knowledge to critique data visualizations from the media and their peers. The student will produce data visualizations of their own using data sets that they generate and analyze. Though the focus throughout the course will be on natural science, we will also consider data relevant to areas such as business, science, history, education, and politics. The student will emerge from this course with an appreciation of how data visualizations influence their life, as well as the skill set to craft persuasive visualizations to support issues of interest to them. For the purposes of this course no prior knowledge is assumed in science, data handling, or design. We will build the knowledge and vocabulary needed in order to pair these two domains and equip you with a lifelong tool for creating persuasive data-driven explanations.

Enforced Prerequisite at Enrollment: Completion or placement beyond MATH 21.
General Education: Arts (GA)
General Education: Natural Sciences (GN)
General Education - Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

SC 120N: Plants, Places, and People
3 Credits

Students learn about plants from the perspective of sustainability, agriculture, food, genetics, textiles, and medicine, across history and around the globe, after spending a few weeks learning about basic plant biology. Students engage with a group project in collaboration with other students to deepen their understanding and appreciation of plant biological and historical connections with human civilization. Students share these projects with the class in a peer-teaching and learning exercise in the final weeks of class.

GenEd Learning Objective: Soc Resp and Ethic Reason
SC 125N: History of Infectious Disease and Epidemiology

3 Credits

Infectious diseases once thought to be nearly eradicated have seen a resurgence in recent years. The majority of the cases arose from people who deliberately chose not to vaccinate their children against these diseases. Even in the twenty-first century the nature of disease and how to prevent it is not merely a matter of science, but an issue laden with cultural, political, and religious concerns. This course charts the history of disease both as a subject of scientific inquiry and a cultural and religious phenomenon. We will begin with early Greek and Egyptian attempts to understand disease as a foreign entity attacking the body and end in the twenty-first century with current ideas surrounding the use of antibiotics, vaccines, and emerging threats throughout the world. Along the way we will discuss the impact of significant epidemics - for example, Bubonic Plague, Syphilis, and Influenza - as well as changing scientific thinking of both how to deal with disease and how to understand the natural world. In tandem with the historical background key scientific ideas necessary for studying disease - including current understanding of the microbial world, microscopy techniques, and modern gene theory - will be presented to the students through classroom instruction and virtual laboratories.

GenEd Learning Objective: Integrative Thinking

SC 135N: Society and Disease Management

3 Credits

Society and Disease Management is an interdisciplinary general education course to educate students in the biological mechanisms of diseases, treatment of individual patients, and how disease burden is managed within communities. In addition to studying how infectious diseases spread through populations, societal impacts and global health approaches to managing disease interventions will be examined. Foundations of this course include the basics of the human immune system, development of vaccines and antibiotics, emergence of drug resistant diseases, as well as applications from economics, systems theory, and health policy. Specific diseases will be examined within a historical context leading to a survey of present day concerns relating to treatments, and then explore issues regarding future methods to control or eradicate disease. This longitudinal approach will provide students with a full awareness of disease management from its beginnings, to both early and modern treatment methods, culminating in how to potentially combat a disease using advances in genomics medicine and biotechnology all within the cultural framework of a community.

General Education: Social and Behavioral Sciences (GS)
General Education - Integrative: Interdomain
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Soc Resp and Ethic Reason

SC 142N: Science in Literature

3 Credits

The course explores two streams in parallel. Students will examine selected historic landmarks in science (e.g. evolution, atomic energy/weapons, climate change, biotechnology), with a focus on common misconceptions about the facts and practice of science. The course will also examine the development of literary and popular portrayals of science and scientists in their political, economic, social and cultural contexts, paired to these particular scientific developments. By considering past and current scientific problems, students will refine their quantitative and analytical skills. By considering scientific writing, novels, short stories, graphic novels, cinema, poetry, and other forms, students will refine their critical and reflective writing and speaking about both the rhetorical and discursive practices of science writing, and the social and cultural impact of literature in popular understandings of science.

Cross-listed with: ENGL 142N
General Education: Humanities (GH)

General Education - Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

SC 145N: The Visual Body

3 Credits

This course uses the field of anatomical illustration to explore the history of medicine and our understanding of the human body. Charting the influence of visual art and imaging systems as essential aspects of medicine, this survey of art and historical imagery connects the study of human anatomy with principles of visual literacy and design. In addition to researching historical publications through writing and discussions, students will produce a research portfolio based on illustrations examined in the course. Lab activities with human cadavers will help students learn the basics of human anatomy within a historical context. No fine arts skills are required to take this course: only an enthusiasm for the study of human anatomy and its visual history. Scientific research is often concerned with a constant progress toward future discoveries - but it is vital to understand the research and discoveries that came before our time. For medicine, this history is uniquely linked to the evolution of art, printing technology, and education. Any scientist would be well served by some knowledge of art and design. Experiments rarely change the world on their own, and much can be gained and lost in the communication of their results. But anatomy is especially reliant on images and illustrations (even after the invention of photography). In order to explore the unique relationship between medical discovery and art history, we have designed this course to be a space for interdisciplinary research. Co-taught by an artist and an anatomist, we will take advantage of an on-site cadaver lab and digital media resources to reimagine the history course as a site of discovery, design, and discussion.

GenEd Learning Objective: Integrative Thinking
SC 200: Science in Our World: Certainty and Controversy

3 Credits

A science appreciation course, aimed at making non-scientists more informed consumers of science. SC 200 Science in Our World: Certainty and Controversy (3) (GN) Science is frequently in the news. That's because it affects our everyday lives, shapes our view of the world and our place in it, and will have a profound impact on our future. This course teaches an appreciation of science and scientific thinking. It is aimed at making non-scientists more informed consumers of science by improving their ability to distinguish good science from bad science, and science from non-science. The course assumes no background knowledge. It is not for scientists. Teaching is delivered by case studies of controversies within science and/or the public domain, some of which are resolved, some of which are not. The first section of the course illustrates general principles by studying arguments now largely resolved, but which still resonate, such as child health and IQ, smoking, and why the peacock has such a ridiculous tail. The second section focuses on unresolved scientific controversies which might include climate change, personalized genetic medicine, passive smoking, nanotechnology, the scientific evaluation of the healing power of prayer, or deer management in Pennsylvania. The third section evaluates unresolved scientific issues in the contemporary media: why it is in the news, what are the scientists involved actually doing and arguing about, and how is the media handling the science? This will be likely focused on real time analysis of media reaction to a scientific paper published by PSU faculty during the course. The fourth section will discuss paradigm shifts which have occurred during the students' lifetimes, particularly those involving our view of ourselves and our universe, and end by speculating on the paradigm shifts that could occur in the next twenty years. The course will draw on experts from within and outside of PSU. Throughout, the focus is on the nature of the debates, looking at how scientists evaluate problems, and why that can generate controversy within science and beyond science — but at the same time, generate knowledge which profoundly affects our well being and our understanding of ourselves.

General Education: Natural Sciences (GN)

SC 210: Sophomore Science Seminar

2 Credits

Covers topics related to success in upper level courses including critical thinking, library resources, reading primary literature, and communication skills. SC 210 Sophomore Science Seminar (2) The main objective of this course is to serve as a bridge between the first two years of a science program and the last two years. Sophomore students need to understand that upper-level coursework in the sciences requires higher order cognitive skills as well as an intellectual maturity that enables the student to meet the challenge of upper level coursework. Students also require an ability to access the multitude of scientific information available on the web and in library databases therefore students will be expected to demonstrate their ability to retrieve information. Sophomore students are faced with many exciting possibilities that they should be aware of including undergraduate research and cooperative education. This course will enable students to make more informed decisions about how to best structure their own educational needs while meeting the
demands of upper level coursework. Students will be assessed via a variety of methods including participation in discussion, actively seeking information from seminar guest speakers (in the form of questions), written reports (interview with faculty member, summary of scientific article, synthesis of newspaper reports about recent discoveries, individually selected research topic), and oral presentations (critique of recent science information in newspapers, independent topic, interview with faculty member).

SC 220: Principles and Strategies for Effective STEM Learning I

1 Credits/Maximum of 1

This course is designed to prepare undergraduate peer-learning mentors for their role in facilitating student centered learning activities. This course is designed to prepare peer-learning mentors for their role in facilitating student centered learning activities. The course content includes a blend of strategies for effective teaching and learning coupled with the opportunity to practice strategies of effective mentorship and feedback to peers and faculty. Through selected readings and course discussions students are introduced to the basic tenants of learning: the role of prior knowledge, the organization of knowledge into networks, the role motivation plays in learning, tools for the development of gaining mastery, effective practice and feedback, the importance of course climate, and the role metacognition plays in achieving self-regulated learning. Each of these topics is covered in one of the seven class periods. The students who have completed this course will be able to understand: - How prior knowledge affects learning and suggest alternate examples to help peers see the information through another perspective - How the organization of knowledge affects long term learning and share with peers the knowledge networks most commonly utilized in STEM disciplines - Factors that motivate student learning and apply this knowledge to assist faculty in motivating student engagement - How students develop mastery and assist peers to engage in activities that promote mastery through directed practice - How practice and feedback enhance learning and provide effective feedback when working with their peers - How course climate affects learning and provide faculty with valuable feedback in regard to the climate of their course learning spaces - How learners develop stronger metacognitive skills to be able to reflect on their own learning experiences and share this with their peers. Student mastery of the material is typically assessed through weekly written reflection assignments based on the readings and in class discussions. These reflections are graded and feedback is provided to assist students in growth in becoming effective learning facilitators. A final reflection assignment is typically given in which the students are asked to describe how these course topics will be put to use in the assignment as a learning assistant.

SC 240: Learning Assistant Experience

1-2 Credits/Maximum of 8

This course is experiential training in facilitating collaborative active learning in science. The students in this experiential learning course are selected by the course instructors to participate as a part of their instructional team to facilitate active learning activities in their classroom and or laboratory courses. Students engaged in this experience must have demonstrated mastery of the course material covered in the course they are facilitating. These students encourage and guide group work, lead problem solving sessions, and provide faculty with student feedback. They are required to attend all laboratory or course sessions as well as attend weekly team meetings to debrief on the week’s activities and prepare for upcoming activities.

Enforced Prerequisite Concurrent at Enrollment: SC 220

SC 294: Research Project Courses

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

SC 295: Science Co-op Work Experience I

1-3 Credits/Maximum of 3

A supervised work experience where the student is employed in a scientific position. To be offered for SA/UN grading.

Prerequisite: acceptance into the Eberly College of Science co-op program

Full-Time Equivalent Course

SC 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

SC 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

SC 297E: Special Topics - InterDomain

3 Credits

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GH/GN GenEd course

General Education: Humanities (GH)

General Education: Natural Sciences (GN)

General Education - Integrative: Interdomain

SC 395: Science Co-op Work Experience II

1-3 Credits/Maximum of 3

A supervised work experience where the student is employed in a scientific position. To be offered for SA/UN grading.

Enforced Prerequisite at Enrollment: SC 295

Full-Time Equivalent Course

SC 400: Consequences of Science

1 Credits

A series of lecture/discussions in which science faculty members show the social implications of their research specialty.
SC 401: Basic Science and Disease

1 Credits

Clinical aspects of various disease and how basic scientific information contributes towards understanding and treating disease. SC 401 Basic Science and Disease (1)The purpose of this course is to provide students with some general background on the symptoms, risk factors, prevention, and treatment of various diseases. Along with the clinical aspects of the diseases, we examine how basic scientific research studies contribute information towards helping to understand the mechanisms underlying disease development and control. This one-credit course is targeted to all students that have a general interest in health and science, and may include students in the following majors: premedicine, science, biology, chemistry, biochemistry and molecular biology, forensic science, biobehavioral health nursing, kinesiology and nutrition. Enrollment priority is given to students with fourth semester or above status. Examples of topics discussed are: Hypertension, Osteoporosis, Infectious Diseases, Asthma, Chronic Obstructive Pulmonary Disease, Cancer, Diabetes, Sickle Cell Anemia/Anemia, Blood Disorders, Hypercoagulability, Coronary Artery Disease, Alcoholism/Alcohol Poisoning, HIV/AIDS, Tuberculosis, Irritable Bowel Syndrome, Hepatitis, Thyroid Disease, Congestive Heart Failure, Parkinson's Disease, and Arthritis This course is structured as a seminar. Most lectures are powerpoint presentations by invited speakers, which usually will be local physicians sometimes paired with Penn State research faculty. The speakers introduce the disease topic by discussing the basic anatomy and physiology of the system or body part most affected by the disease. (e.g. lungs, heart, kidneys, etc.) Once the foundation is established the pathophysiology is discussed. Risk factors and prevention are also highlighted. One important goal of each seminar is to indicate to students how advances in basic science research can impact the understanding and treatment of disease. Students are encouraged to ask questions after the lecture. The speaker(s) remain afterwards to allow students to ask more specific questions about the disease topic. On occasion, speaker physicians also talk about their medical school training and/or life as a practicing physician. The students that enroll in this course receive a letter grade based on attendance (students must attend 9 out of 10 classes), quizzes and a 2-3 page reaction paper on one of the disease topics. Random short-answer quizzes are sometimes administered at the end of a seminar, testing on information presented during the seminar. Also, reading assignments are sometimes given prior to a seminar, or information handout materials are provided during the seminar. If a student needs to miss class due to an evening exam they need to fill out an Excused Absence Form, which can be obtained from the instructor (no other activities are excusable except for athletic competitions for students in varsity sports).

Enforced Prerequisite at Enrollment: 4th semester standing or higher

SC 402: Science-Related Employment: Corporate Organization, Opportunities, and Expectations

1-3 Credits/Maximum of 3

Present undergraduate and graduate students with information and skills necessary for success in science-related job positions available in industry.

Enforced Prerequisite at Enrollment: 5th semester standing or permission of program

SC 451: Science Outreach and Communication

1 Credits

SC 451 will provide students with the skills and experience necessary to design outreach activities based on their research and interests, communicate their science in multiple modes, and engage with diverse audiences. Lectures will provide foundational material via a focus on the fundamentals of science communication and outreach, as well as some of the pedagogical basics of science education. Guest speakers will build upon this groundwork by leading modules on lesson planning for effective outreach and communicating with audiences through a variety of platforms, including social media, personal or professional blogs, media interviews, and press releases. These guest modules will be supplemented by panel discussions (with outreach and research professionals from Penn State) on science engagement in different settings (e.g., museums, extension meetings, public science lectures, K-12 classrooms, etc.), disseminating research via social media, and creating and integrating research-related outreach into broader impact statements for grant proposals. The design of student outreach projects will provide a unifying thread throughout the semester, as students work in small groups to create, refine, and implement unique outreach activities following best practices outlined in lectures and panel discussions. Students will be encouraged to choose topics outside of their normal studies, expanding their ability to communicate science with which they are less familiar. Students will have multiple opportunities to both receive feedback from their peers and instructors and offer feedback on their peers’ projects. Students will exhibit their activities at an event, and in doing so, practice the communication and engagement skills they developed throughout the semester. Through this process, students will gain experience disseminating science, as well as confidence in their ability to accomplish successful science outreach. Afterward, students will evaluate and reflect on their experience and use this self-evaluation to refine their activities for future use.

Enforced Prerequisite at Enrollment: ENGL 15 or CAS 100 or ENGL 137H or CAS 138T or ESL 15

SC 475N: Anatomy in Italy: Cadavers, Culture, and Science

3 Credits

Anatomy is more than learning to name structures. Students will practice creative and analytical skills, and develop key literacies while studying human cadavers and learning to predict a structure’s function by observing its shape, texture, and tissues. Students will practice creative and integrative thinking while discussing the historical circumstances that gave rise to, supported, and sometimes hindered the development of anatomy as a science by synthesizing original arguments (written and oral) that explore the evolution of anatomic science within the context of Italian history, politics, and culture. Students will also study the ethics of acquiring cadavers within contemporary and renaissance contexts, identify individual graphics and historical sculptures that demonstrate anatomic understanding, and discuss their origins and implications for renaissance-era society. Students will also develop their communication skills: presenting original posters, leading class discussions, writing term papers, and creating webcasts as part of a service project. During spring break, students will travel with the instructors to Italy and study: anatomic wax specimens born through collaborations between anatomists and artists; Michelangelo’s hidden anatomy in the Sistine Chapel; and the history of medicine. As preparation for their study abroad
experience, students must concurrently enroll in IT 197: Italian Language and Culture for Study Abroad

**Enforced Prerequisite at Enrollment:** Consent of Instructor and BIOL 129 or BIOL 141 or BIOL 240W or BIOL 472 or KINES 202

General Education: Humanities (GH)
General Education: Natural Sciences (GN)
General Education - Integrative: Interdomain
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking

SC 476: Human Dimensions of Health Care

3 Credits

Field experience in five or more medical settings; complementary exposure to the scientific literature; weekly discussions. SC 476 Human Dimensions of Health Care (3) This course, delivered jointly by Penn State and the local medical community, is designed to provide field experience for students with plans for a future in the health professions. The course is structured around rotations through multiple no less than five medical settings, which may include Community Medicine, Dentistry, Emergency Room, Family Medicine, Hospice Care, Oncology, Optometry, Palliative Care, Pediatrics, Physical Therapy, Senior Services, Wound Care, and other specialties. The first four weeks consist of an introduction and orientation to the goals each setting. The purpose of these sessions is to acquaint the students with the requirements of the course as well as expectations for the on-site rotations. During this time, the students become familiar with the health care issues associated with each setting through literature specific to particular medical settings. At the end of these sessions the students write a course plan, in which they review the major issues common to each setting, and project how they expect to gain and how they expect to contribute in each setting. During the next nine weeks, the students rotate through the medical settings, spending two afternoons per week in rotation. Students are scheduled to assignments with one of the medical settings for the afternoon. At these times the students are under direct supervision of the setting’s staff. Where feasible, students may also sit in on physicians’ staff meetings, attend lectures, or receive other forms of special instruction provided by medical staff. All students will maintain a logbook of activities during the rotations. Weekly meetings on campus are devoted to reports of experiences by each of the students, discussions based on the questions developed during the orientation period, and resolution of issues which may arise. In this way, students assigned to each rotation inform those students who will later enter that setting.

**Prerequisite:** 5th semester standing; BIOL 230W and BIOL 240W or equivalent; approval of health sciences committee or coordinator

SC 494: Research Project Courses

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

SC 494H: Research Project Courses

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

**Honors**

SC 495: Science Co-op Work Experience III

1-3 Credits/Maximum of 3

A supervised work experience where the student is employed in a scientific position. To be offered for SA/UN grading.

**Enforced Prerequisite at Enrollment:** SC 395

Full-Time Equivalent Course

SC 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

### Science Education (SCIED)

SCIED 110: Introduction to Engineering for Educators

3 Credits

This course focuses on physics content, engineering design principles, and elementary science education pedagogy.

Cross-listed with: ENGR 110

SCIED 112: Climate Science for Educators

3 Credits

Concepts of climate sciences highlighted by evidence-based explanations and scientific discourse in preparation for K-6 science teaching. This introductory, multidisciplinary course will focus on the interactions among physical science concepts, earth science concepts, and scientific practices to develop understandings about Earth’s climate system. The course is primarily intended for prospective elementary school teachers (Childhood and Early Adolescent Education, PK-4 and 4-8 majors), although it is available to other non-science majors. The development of models is an integral part of the course as a means to facilitate climate systems thinking by serving as a means to explain phenomena and predict outcomes. In addition, students in the course consider how what they are learning applies to teaching by offering opportunities to think about how they might extend their knowledge to teaching contexts. This course consists of integrated lectures and laboratory investigations in class meetings each week, with work on collaborative projects outside of class.

Cross-listed with: EARTH 112

SCIED 114: Sound and Light for Educators

4 Credits/Maximum of 4

Waves, sound, and light concepts highlighted by evidence-based explanations and scientific discourse in preparation for K-6 science teaching. This course has two main focus areas: physics content typically addressed in elementary science curriculum and effective pedagogy for supporting children’s meaningful science learning. An introduction to waves is used to construct an initial model, which is applied to sound phenomena and elaborated. The more robust model is then applied to understanding light phenomena and again elaborated. As the model develops across units of instruction, students are engaged in constructing explanations from evidence, model-based reasoning, and scientific discourse. Instructional approaches that are grounded
in research on children's learning are used to engage education majors in their own learning, while teaching applications provide opportunities for them to unpack their experiences and apply them to school science teaching.

Cross-listed with: PHYS 114

SCIED 116: Introduction to Astronomy for Educators
3 Credits

This course is designed to engage students with the big ideas of astronomy in ways that will help them understand both the content of astronomy, as well as the practices of science as carried out by astronomers. The course is designed for prospective elementary and middle school teachers (PK-4 and 4-8 majors), although it is available to other non-science majors. Throughout the course, students engage in a series of investigations that lead towards the development of evidence-based explanations for patterns observed in the current Solar System. Investigations will include computer-based simulations, night-sky observations, and use of simple laboratory equipment. These investigations lead students towards an understanding of how observations of the current Solar System can be explained by the model of its formation. The course is designed to build from students’ own personal observations of the day and night sky towards developing increasingly sophisticated explanations for those phenomena and beyond. Conducting these astronomy investigations will help students understand fundamental aspects of physics, thus broadly preparing them for future science teaching in these domains. The course models evidence-based pedagogy, thus helping to prepare students for future teaching careers as they learn effective strategies for teaching science.

Cross-listed with: ASTRO 116

SCIED 118: Field Natural History for Teachers
3 Credits

The purpose of this course is to equip students with knowledge of central Pennsylvania flora and fauna, familiarize students with different techniques for teaching about natural history, and to engage students with citizen science efforts. This class uses lectures sparingly and is instead designed to be an experiential and hands-on class that will engage students with the natural world on and around our home sites. Analyzing natural history-based educational programs and the pedagogical methods for teaching in both outdoor and indoor settings is a core component of this class, alongside participation with citizen science data collection efforts and dissemination of findings. The overall goal of this course is to familiarize students with the natural history and biodiversity of Pennsylvania and techniques for educating in, for, and about the outdoors. At the end of the course, students will be able to: (1) Analyze the importance of interrelationships between all living organisms and how this contributes to a healthy planet. (2) Identify common Pennsylvania flora and fauna. (3) Regard living things as teaching tools for science classrooms. (3) Evaluate methods for teaching about different natural history topics in both indoor and outdoor settings. (4) Demonstrate their natural history observations and understandings by contributing to a citizen science project.

SCIED 140: Outdoor School Field Experience
2 Credits/Maximum of 6

To provide students with educational leadership skills and teaching opportunities working with children in an outdoor residential camp setting. RPTM (SCIED) 140 Outdoor School Field Experience (2 per semester/maximum of 6) The Outdoor School Field Experience course allows students to observe, learn, and apply leadership techniques and teaching methodologies in an experiential education program that occurs off campus. This field-based experience provides students with numerous opportunities to practice and refine their leadership and teaching skills through active participation in one week of Outdoor School Field Experience, a residential outdoor/environmental education program.

Enforced Prerequisites at Enrollment: Students must apply for and be accepted into the Outdoor School Field Experience.

Cross-listed with: RPTM 140

SCIED 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

SCIED 298: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

SCIED 410: Using Technology to Enhance Science Teaching
3 Credits

This course explores contemporary practice and research associated with applications of technology to enhance science learning and teaching.

Prerequisite: admission to one of the science teaching options in SECED

SCIED 411W: Teaching Secondary Science I
3 Credits

Introduction to teaching secondary school science, including curriculum, learning theory, media, evaluation as they relate to student progress. SCIED 411W Teaching Secondary Science I (3) Science Education 411W is an introduction to secondary school science education. The course is a project based course for individuals planning to teach science in grades 7-12 and has a significant emphasis on professional writing. The course is also appropriate for those interested in teaching or in program development of out-of-school science learning environments (e.g., science centers, nature centers, museums). Students will participate in activities that are designed to help forge a 'philosophy of science teaching' that is supported by research based findings on 1) learning and assessing learning, 2) best practices for teaching, 3) images of science and scientific inquiry, and 4) the effective design of lessons and activities. There are several peer-teaching assignments where students teach each other and two student teaching assignments with middle school children from area schools. Students are expected to complete written reports and reflections on-type assignments for lesson plan reviews, curriculum assessments, science research reports, and clinical interviews. One of the major goals of SCIED 411 is to promote reflection in action' and 'reflection on action' among the students. These are two constructs put forth by Donald Schon that argues an important meta cognitive dynamic for teachers is to think about what they are doing while teaching (in action), and to also think about what they will do differently in future episodes of teaching (on action). On each occasion in 411 when students compete a peer teaching or clinic teaching experience
they are requested to compete a 'reflection writing assignment'. Criteria for success on the writing assignments is 1) to provide an accurate description (which may include a lesson plan or references to the lesson plan) of the teaching; 2) to diagnose and identify the successes and the shortcomings of the lesson in terms of student learning; 3) to make connections to course readings that offer suggestions for adapting the lesson to promote learning. The reflection assignments are typically 2 to 3 single-spaced pages accompanied by the lesson plan. Across the semester, from the first 'reflection' assignment to the last 'reflection' assignment there is an expectation that the 411 students will demonstrate a increasing depth and sophistication of reflection, analysis and attention with respect to the construction of learning goals and instruction strategies that promote working with students prior knowledge, employing formative assessment tasks to make students' thinking visible, and using questions and strategies that frame a student-centered discourse learning environment. The course professor will grade the written assignments and provide written and oral feedback. Each assignment will be revised and posted to an on-line student portfolio. Written communication is important in the field of education and science. In this course, the importance of written communication as a means to learn and reflect on the subject matter of the science disciplines and on teaching is emphasized. The value of scientific reports, analysis of curricular materials, development and reflection on lesson plans, and statements regarding the student's philosophy of science teaching will be evident through written assignments, feedback, and revision. Through the experience of reading, discussion, development of lessons, and practice teaching, students will develop the ability to do the following: (a) Use appropriate techniques to probe students' prior knowledge and understandings of scientific concepts. Knowledge about students' alternative conceptions and intuitions is then used to design effective lesson plans and assessments. (b) Plan and teach science lessons employing sound research-based techniques for inquiry teaching. Students will complete both peer and student teaching assignments that are videotaped. (c) Prepare written reflections and evaluations that incorporate analytical perspectives that are based on personal experiences and on course readings and research-based frameworks and practices. Students will be offering written reflective comment on their own teaching and that of classmates. The course goals include the ability to develop a 'reflection in action' and 'reflection on action' decision-making orientation that is informed by evidence-based practices linked to student learning.

Prerequisite: C I 295 ; appropriate courses for certification option and approval of department
Writing Across the Curriculum

SCIED 412: Teaching Secondary Science II

3 Credits

SCIED 412 is the second of two sequenced methods courses for preservice science teachers who are pursuing certification to teach in grades 7-12. In SCIED 412, prospective science teachers learn to effectively plan, deliver, and assess science instruction. The course emphasizes contemporary theory and practice associated with science education in public school classroom settings. As in SCIED 411W, emphasis is placed on developing professional science teachers; this includes promoting development of the knowledge, skills, and dispositions that lead to reflective practice, collaborative action, and lifelong inquiry into teaching and learning. Students will develop an understanding of science learning theories and the approaches that diverse learners take to construct knowledge; develop competence in the use of science content and inquiry processes and materials for planning instruction relevant to learners' needs; develop skills in instructional, communicative, managerial, and evaluative strategies; and will demonstrate facility in selecting and integrating appropriate technological tools into instruction. Throughout the course, special attention is given to identifying and addressing the needs of diverse learners, including English Language Learners and students with special needs. Students also develop familiarity with state and national curriculum standards that guide science, technology, and engineering education; they also demonstrate the ability to plan and deliver lessons that address those standards. SCIED 412 is scheduled concurrently with a supervised field experience in a middle or secondary school, where students have the opportunity to apply and evaluate their developing instructional skills.

Prerequisite: SCIED 411W

SCIED 457: Environmental Science Education

3 Credits

Philosophy, techniques, and skills for teaching environmental science, including curriculum development, fieldwork, and the use of appropriate technologies. SCIED 457 Environmental Science Education (3) This course provides an introduction to teaching environmental science to children. Although our emphasis is school-based instruction in the middle and secondary sciences, the course is also appropriate for grade K-6 teachers and teachers of other environmentally related subjects (e.g., social studies, agriculture), as well as educators who plan to work in nonformal educational settings such as nature centers and museums. The course builds students' knowledge in the philosophy, methods, and skills of environmental education; engages students in environmental curriculum analysis and development; and provides hands-on training in classroom-based and field-based environmental investigations. Training and practice with appropriate environmental technologies is included, including CBLS, GPS, and computer software.

Prerequisite: 3 credits of calculus, 9 credits of sciences, 400-level teaching methods course

SCIED 458: Teaching Science in the Elementary School

3 Credits

Interpreting children's science experiences and guiding development of their scientific concepts; a briefing of science content material and its use. SCIED 458 Teaching Science in the Elementary School (3) SCIED 458 is designed to support teacher candidates in developing their own reflective practice in science teaching for young learners. Candidates in this course engage in a series of experiences that move them from their own understanding of engagement in science, to understanding children's engagement in science, and finally towards methods of designing science instruction for young learners. Candidates in this course engage in a series of experiences that move them from their own understanding of engagement in science, to understanding children's engagement in science, and finally towards methods of designing science instruction for young learners. Central to this work is a focus on reflective practice; expert teachers reflect on their own teaching practices. During this course, candidates learn to be critical of their own learning, instructional design, and teaching. Candidates use this to revise their practice as they grow as science teachers. The course activities, assignments, readings, and placement experiences offer multiple opportunities for candidates to learn essential knowledge and practices to support children's curiosity about the world. Course assignments and in-class experiences are designed to help teacher candidates understand the importance of engaging their future students in a strongly integrated focus on science content and practice. This encompasses both how scientists work (the practice of doing science and building our knowledge of the world) and how children learn the skills and practices of doing...
science. Helping children understand the practices of science is of equal importance as helping them learn the content of science. To start understanding ways of supporting children in learning to do science in age-appropriate ways, teacher candidates in this course contrast their understanding and experiences with those of children. Assignments are designed to help facilitate exploration of the links between understanding children's prior knowledge and beliefs, using knowledge of how people learn, and making pedagogical choices to move children towards specific content and practice goals. Candidates consider the role of differentiated instruction and methods of assessment in science teaching. Finally, the course examines methods of adapting science curriculum using knowledge of children and specified learning goals. Teacher candidates bring together what they have learned about the practices of science, social constructivist instructional methods, and assessment to think critically about how to support elementary students learning science across time. SCIED 458 is a part of a block of courses in a PSU teacher education program that is unified by a basic set of principles and a field experience component.

**Prerequisite:** LL ED400, LL ED401, LL ED402, three credits each in biological, earth, and physical sciences; Concurrent: C I 495AOR C I 495B; MTHED420, SS ED430W

SCIED 458H: Teaching Science in the Elementary School
3 Credits
Interpreting children's science experiences and guiding development of their scientific concepts; a briefing of science content material and its use.

Honors

SCIED 460: Trends and Issues in Science, Technology, Engineering, and Mathematics (STEM) Education
3 Credits/Maximum of 3
Develops understandings of Science, Technology, Engineering, and Mathematics (STEM) education research and practices for Prek-12 teaching and learning

**Prerequisite:** 7th Semester Standing
Cross-listed with: MTHED 460

SCIED 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

SCIED 496A: **SPECIAL TOPICS**
1.5 Credits/Maximum of 18

SCIED 496H: Honors in Science Education
1-12 Credits/Maximum of 12
Independent studies course.

Honors

**Science, Technology, and Society (STS)**

STS 47: Wilderness, Technology, and Society
3 Credits
Impact of developments in science, literature, and art on changing attitudes toward nature; consequences for conservation, preservation, environmental ethics.

Cross-listed with: SOC 47
Bachelor of Arts: Social and Behavioral Sciences

STS 55: Space Science and Technology
3 Credits
The science and technology of space exploration and exploitation; physical principles; research and development; history, space policy, and social implications.

Cross-listed with: AERSP 55
Bachelor of Arts: Natural Sciences
Bachelor of Arts: Social and Behavioral Sciences
General Education: Natural Sciences (GN)

STS 100: Science, Technology, and Culture
3 Credits
A survey of the development and culture of science, technology, and medicine in world history. STS 100 Science, Technology, and Culture (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. 'Science, Technology, and Culture' surveys the development and culture of science, technology, and medicine in world history. This course will introduce students to using the humanities, social sciences, and the arts to understand the development and uses of science, technology, and medicine in human history. The course focuses on broad trends and changes over time in their social and cultural contexts. The course is intended to address the needs of a wide range of students. For students majoring in the arts, humanities and social sciences, the course provides a deeper understanding of the relationship between lay/popular and techno-scientific cultures. For the scientific and technically oriented student, the class exposes students to the study of technical and scientific problems from a broader cultural and historical perspective. All students will develop a knowledge of the values that have motivated and informed scientific, technological, and clinical ventures as well as an appreciation of important cultural dimensions of techno-scientific work, including the influence of religious concepts and practices, the
impact of race, class, and gender, the significance of language and symbols, and the role played by local and global traditions. The course also asks students to think critically about the role of science, technology, and medicine in world history and the impact of that history on today's world. Topics include: the role of scientific and technical expertise in society; the social and economic conditions that have fostered and impeded scientific development and technological innovation; the social, aesthetic, and symbolic considerations that have shaped the way scientific ideas have been framed and used; and the impact of scientific notions and technological innovations on social life. Students are required to read both primary and secondary texts. Students are also required to augment their classroom readings with scholarly material that they find through library and electronic research. In addition to regular classroom discussions, students will also participate in team-based learning activities and projects that require the students to interact with their peers and to present their thoughts publicly.

Bachelor of Arts: Humanities
General Education: Humanities (GH)

STS 100H: The Ascent of Humanity
3 Credits
A survey of some of the intellectual achievements that highlight humanity's attempts to understand nature and shape the environment.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
Honors

STS 101: Modern Science, Technology, and Human values
3 Credits
Relationships of science and technology to human aspirations, values, and arts.

Bachelor of Arts: Humanities
General Education: Humanities (GH)

STS 105: Food Facts and Fads
3 Credits
This course is an introduction to the central role of food and food production in all areas of human life. The social and technological bases of various food systems are examined from the hunter-gatherer to the agrarian to the modern industrial system and its discontents. The course also considers how different types of food (e.g., meat, milk, cereals, chocolate) are preserved and distributed, examining both the effects of the development of the science and technology on society and vice versa. The roles of various food components (e.g., proteins, carbohydrates, fats, and vitamins) are examined both within the foods as determinants of quality, and also in terms of human nutrition and health. Finally, various other ways food may be considered appropriate or inappropriate will be studied including scientifically based reasons (e.g., safety, taste, adulteration) and non-scientifically based reasons (e.g., ethical, legal, religious).

Cross-listed with: FDSC 105
Bachelor of Arts: Social and Behavioral Sciences
General Education: Health and Wellness (GHW)

GenEd Learning Objective: Soc Resp and Ethic Reason
GenEd Learning Objective: Integrative Thinking

STS 110N: Chemistry in World Wars I and II
3 Credits
The study and assessment of chemical developments during the First and Second World Wars will form the backbone of this course. As the course is historically focused on the period from 1914 to 1945, the students will develop a basic understanding of the significant historical events that led to the development of chemical innovations in materials, medicine, and weapons. To understand the scientific context of these developments, the students will also learn about the basics of chemistry, including recognizing the nature of the scientific process and discovery. In addition, the students will read, evaluate, and discuss primary and secondary sources to provide them with further insight into significant figures, events, and developments. These lectures, readings, and discussions (along with other assignments) will allow students to explore the ethical dimensions, the economic effects, the social consequences, and the public health impact that these scientific discoveries had on scientists, soldiers, and civilians. The students will also ascertain how many of the scientific discoveries made between 1914 and 1945 have had both beneficial applications and detrimental effects since 1945.

International Cultures (IL)
General Education: Humanities (GH)
General Education: Natural Sciences (GN)
General Education - Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Soc Resp and Ethic Reason

STS 122: History of Science I
3 Credits
A history of science and culture from Stonehenge to the scientific revolution. S T S (HIST) 122 History of Science I (3) (GH) (BA) This course meets the Bachelor of Arts degree requirements. The purpose of this course is to explore the earliest developments in science, beginning with the prehistoric roots of technology and theories of human origins, followed by an engagement with the achievements of the Mayans, Aztecs, and native North Americans. We then turn to science and technology in the ancient Greek and Egyptian worlds, followed by an analysis of early Chinese and East Indian science, medieval science in Europe, selected African sciences, and the rise of modern science in Scientific Revolution and beyond. The point of the course is to show that science is a world tradition with an ancient history, and that many social, political, cultural, and economic forces can push or pull this peculiar form of knowing in one direction rather than another. There are other history of science courses offered at Penn State, but none treats the history of science in general in relation to its social context and influences. Other history of science courses are more thematic than survey courses. HIST/S T S 123, ‘History of Science II’, treats science from the scientific revolution to the present. Students may take either course alone or out of sequence; the first will not be a prerequisite for the second. The expectation is that students will combine knowledge acquired in this course with knowledge from their required general education courses in science to develop a broader understanding of history and science. HIST/S T S 122 may be used to fulfill a requirement for the History major and the History minor and it is an essential part of the recently proposed
science and technology history theme within the Science Technology & Society minor. Nonmajors may use it to fulfill a general education humanities requirement.

Bachelor of Arts: Humanities
General Education: Humanities (GH)

STS 123: History of Science II

3 Credits

A history of science and culture from the scientific revolution to the present. S T S (HIST) 123 History of Science II (3) (GH) (BA) This course meets the Bachelor of Arts degree requirements. The purpose of this course is to explore the earliest developments in science, beginning with the prehistoric roots of technology and theories of human origins, followed by an engagement with the achievements of the Mayans, Aztecs, and native North Americans. We then turn to science and technology in the ancient Greek Egyptian worlds, followed by an analysis of early Chinese and East Indian science, medieval science in Europe, selected African sciences, and the rise of modern science in the Scientific Revolution and beyond. The point of the course is to show that science is a world tradition with an ancient history, and that many social, political, cultural, and economic forces can push or pull this peculiar form of knowing in one direction rather than another. There are other history of science courses offered at Penn State, but none treats the history of science in general in relation to its social context and influences. Other history of science courses are more thematic than survey courses (e.g., 'History of Mathematics' and 'History of Gender in Science and Archaeostronomy'). HIST 122, 'History of Science I', treats science from Stonehenge to the scientific revolution. Students may take either course alone or out of sequence; the first will not be a prerequisite for the second. The expectation is that students will combine knowledge acquired in this course with knowledge from their required general education courses in science to develop a broader understanding of history and science. HIST/S T S 123 may be used to fulfill a requirement for the History major and the History minor and it is an essential part of the recently proposed science and technology history theme within the Science, Technology and Society minor. Students will learn historical techniques for the objective evaluation of readings and the formulation of clear and valid responses. Students’ grades will be formed from a combination of a midterm and a final. Students are also required to do a paper for the class, the topic being subject to the approval of the instructor.

Bachelor of Arts: Humanities
General Education: Humanities (GH)

STS 124: History of Western Medicine

3 Credits

This course explores the history of health, illness, and medicine in western society from Ancient Egypt through the modern world. Relying on both primary and secondary sources, the course examines major developments in the understanding of health, illness, medical treatment, and medical practice in western society from Ancient Egypt to the present. The course will explore such themes as the changing status of medical practitioners, the experience of patients in different historical settings, artistic depictions of illness and healing, and the increasingly prominent role of medicine in public policy in order to better understand the links between medicine and its social, cultural, intellectual, and political contexts.

Cross-listed with: HIST 124

General Education: Humanities (GH)
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

STS 135: The Politics of the Ecological Crisis

3 Credits

The political implications of the increasing scarcity of many of the world’s resources. PL SC (S T S) 135 The Politics of the Ecological Crisis (3) (GS)(BA) This course meets the Bachelor of Arts degree requirements. 'The Politics of Scarcity' examines some 'big' questions about the prospects for humans in general and democracy in the United States in particular. Much of the reading assumes that our civilization faces the twin problems of increasingly serious shortages of resources and a growing ecological crisis that threatens the basis of life. Further, it argues that these 'twin crises' feed upon each other, and that together they pose serious short and long run challenges to survival. Some readings attribute these problems to the dominant values that characterize modern Western society. The course does consider some dissenters from this perspective, arguments that things will be just fine. However, it concentrates on problems and predictions of trouble. Thus, the class does not claim to present an evenly balanced assessment. Rather, it recognizes that most of what we learn, read, and see supports the status quo and assumes our civilization and energy-dependent way of life will continue. Consequently it makes sense to emphasize the less frequently argued position that we may be headed for disaster. The class aspires to appeal to students regardless of major or college – to scientists, engineers, students of the humanities, and even economists and political scientists. It fulfills the University-wide general education requirement in Social Science. Although it discusses the role of politics in general and the role of the American political system in particular in discussing the 'twin crises,' it mostly grapples with fundamental questions of value that underlie and guide the play of power in our political system and with how the massive changes now taking place globally both affect and are affected by politics.

Cross-listed with: PLSC 135
Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Science (GS)

STS 150: Out of the Fiery Furnace

3 Credits

A history of materials, energy and man, with emphasis on their interrelationships. For nontechnical students.

Cross-listed with: EMSC 150
Bachelor of Arts: Humanities
Bachelor of Arts: Natural Sciences
International Cultures (IL)
General Education: Natural Sciences (GN)
STS 151: Technology and Society in American History
3 Credits

Development of technology in America from colonial times; its reception and its influence on social, economic, and political life.

Cross-listed with: HIST 151
Bachelor of Arts: Social and Behavioral Sciences
United States Cultures (US)
General Education: Social and Behavioral Scien (GS)

STS 157: Science, Technology, and Gender
3 Credits

The role of women and gender in science, technology, and engineering. S T S (WMNST) 157 Science, Technology, and Gender (3) (GS;US)(BA) This course meets the Bachelor of Arts degree requirements. S T S/WMST 157 examines the role of gender in science, engineering, and technology. The course offers a broad interdisciplinary overview of scholarly research and theory pertaining to women and issues of gender in science, engineering, and technology. The course is interdisciplinary (drawing materials from the natural and social sciences) and cross-cultural (taking a comparative approach to western and non-western sciences and technologies), and it examines the ways that different beliefs and practices related to gender have shaped the practice of science in different times and places. Students study great women scientists and also barriers institutional and ideological - that women have had to overcome in order to participate in science, asking how the presence and absence of women have affected those studies. Students will be graded by several quizzes and two short exams during the semester. To evaluate progress in developing critical thinking skills, the students will be required to write a response journal and/or response papers to major topic areas during the semester. Also, one individual or group presentation will be required. These instruments enable the instructor to assess students' acquisition of knowledge relevant to the general objectives of General Education.

United States Cultures (US)

STS 197: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently; in-depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Social and Behavioral Sciences

STS 197F: Special Topics - InterDomain
3 Credits

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GN/GS GenEd course.

General Education: Natural Sciences (GN)
General Education: Social and Behavioral Scien (GS)
General Education - Integrative: Interdomain

STS 200: Critical Issues in Science, Technology, and Society
3 Credits

An overview of interactions between science, technology, and society from social sciences and humanities perspectives.

Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)

STS 200S: Critical Issues in Science, Technology, and Society
3 Credits

An overview of interactions between science, technology, and society from social sciences and humanities perspectives.

Bachelor of Arts: Social and Behavioral Sciences
First-Year Seminar
General Education: Social and Behavioral Scien (GS)

STS 201: Climate Change, Energy, and Biodiversity
3 Credits

Studies of global warming, energy options, and biodiversity; their interrelations as sciences and as societal issues.

Bachelor of Arts: Natural Sciences
Bachelor of Arts: Social and Behavioral Sciences
General Education: Natural Sciences (GN)

STS 233: Ethics and the Design of Technology
3 Credits

Ethics and individual and group decision-making in the design of technology including design projects and specific attention to institutional ethics. PHIL (S T S) 233 Ethics and The Design of Technology (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. Technology has been around nearly as long as humans have been around. Humans have always created artifacts and artificial environments to aid us in our survival and to help fulfill our needs and desires. Moreover, today technology is all pervasive, transforming and conditioning our social and political relations, our cultural understanding of ourselves, and our relationship with other animals and the natural environment. Yet not much thought has been expended upon the meaning of technology, particularly in its moral dimensions. This course takes several steps to correct this deficiency. Because technologies can have far reaching effects well beyond the domain of their immediate application, the role of designers is crucial in deciding whether we take an intelligent or unintelligent approach to technology. All technologies exist to serve one human need or another. Designers make important choices concerning the creation, development, and deployment of many if not most technological innovations. Consequently, the task of the designer is an ethical one. Our goal is twofold: First, we will try to broaden our moral imaginations by taking into account the wider ranging effects that technologies have in order to reveal the moral significance of design choices. Second, we will examine the process of design itself, particularly in the way that the design process is similar to ethical reasoning in general. It is hoped that by accomplishing these two tasks, we will be empowered as designers, customers, citizens, and future employers to make choices that better fulfill the moral task of technological innovation.
Two means will be used to achieve our course goals. Much of the time will be spent thinking about and discussing the various impacts that particular technologies have upon the social, cultural, and political lives of human beings and upon the natural environment. To facilitate thoughtful discussion, we will read a number of authors, writing short papers in preparation for critical discussion in class. In this way we will be better prepared to discuss and think about the issues at hand by having had the chance to organize our thoughts in advance. The second means is aimed at putting our ideas into practice by working in teams on several design projects. These design projects will require the integration of readings, discussion, and research and their synthesis to solve a design problem. Student teams will work cooperatively on these projects and make oral progress reports as well as final written and oral reports.

Cross-listed with: PHIL 233
Bachelor of Arts: Humanities
General Education: Humanities (GH)

STS 235: Science and Religion
3 Credits

This course investigates the relationship between science and religion in multiple cultures. S T S 235 Science and Religion (3) (GH) The purpose of this course, designed to fulfill general education requirements in the humanities (GH), is to encourage students to investigate the relationships between the disciplines of science and religion. While most of the emphasis of the course will be on the historical interaction between science and Western religion, we will also investigate science ('natural philosophy') in the Islamic, Hindu, and Eastern religious traditions. Students will read classic texts that discuss science and religion from scientists such as Newton and Darwin as well as from world Scriptures and contemporary positions of various influential scientists and religious scholars concerning views of the material world as it relates to the spiritual world. There will be no attempt to encourage students to accept a particular religious or secular viewpoint. Rather, the course will be successful if at its conclusion the student can articulate a personal viewpoint while appreciating the reasons others might have for holding alternative opinions. Students will develop an understanding of the arguments and the historical context in which they originated which lead to differing positions. Thus, individual students will be expected to demonstrate this understanding in a series of examinations scheduled throughout the semester, and in a final examination if required by the instructor. Discussion and debate are useful devices in the search for understanding. In order to facilitate such discussion, students will be required to make one presentation to the class on an assigned topic. This presentation will serve as the starting point for class exploration of the topic. To encourage active and collaborative learning, the student presentations may be group efforts, however, no group will consist of more than three students.

Prerequisite: completion of a basic composition course or the equivalent, S T S 100 or S T S 101, or completion of 30 credits of coursework
General Education: Humanities (GH)

STS 245: Globalization, Technology, and Ethics
3 Credits

An investigation of technology and ethics in the globalized world from contemporary, socio-cultural, and historical perspectives. S T S 245 Globalization, Technology, and Ethics (3) (GS; IL) The objective of Globalization, Technology, and Ethics is to prepare students (especially but not limited to engineering and business students) who are headed into the corporate or government world for the challenges and realities of working in a rapidly globalizing world. This course will encourage students to become leaders in a mobile and diverse transnational workplace and help them to become critical citizens of that world. Through team-centered projects and readings from the social sciences and humanities, students will broaden their understanding of engineering, technology, and culture and then be given an introduction to how one makes ethical decisions about that world. The course is designed to provide skills, theories and experiences that will help them to be respectful, diplomatic and professional while being able to successfully work with technology in multiple cultures and contexts. Globalization, Technology, and Ethics will also address topics of critical international and economic importance by including discussion of the World Trade Organization, World Bank, and International Monetary Fund. Students will understand their relationship to global manufacturing and technology use, off-shoring, outsourcing, international debt financing, and restructuring of world economies based upon different models of globalism. In addition, the class will address issues of ‘glocalization’ and student’s and citizens’ role in the globalized world and the multiple interactions that shape our technological world today.

International Cultures (IL)
General Education: Social and Behavioral Sciences (GS)

STS 407: Technology and Human Values
3 Credits

Interrelationships of twentieth-century technological change and human values. Emphasis on the social and ethical aspects of technological progress.

Prerequisite: 9 credits of philosophy, including PHIL 107 or 6 credits of philosophy at the 200 level
Cross-listed with: PHIL 407
Bachelor of Arts: Humanities

STS 408: Cultural Foundations of Communications
3 Credits

Examination of oral, scribal, print, industrial, and electronic cultures; analysis of impact of technology on communications and social structure. COMM 408 / STS 408 Cultural Foundations of Communications (3) (BA) This course meets the Bachelor of Arts degree requirements. COMM 408 / STS 408 traces the development of communications technologies and their impact on culture over the last 500 years. Students will examine how different tools for communicating changed the way people organized and made sense of their worlds. The course begins by looking at oral cultures and moves on to the scribal, print, industrial, electronic and post-industrial or postmodern cultures, studying the media developments that marked each of these eras. With each period and its corresponding technology students will examine how and why the new media altered not only the form of communication (the type of speech, form of writing and/or speed of information transfer), but also how such changes altered the content of knowledge (how people made sense of their lives and communities). Readings are drawn from a range of disciplinary perspectives on the issues, from history, sociology and anthropology, to philosophy, communication studies and cultural theory. The historical and theoretical knowledge provided by the course will give students a solid foundation for coming to terms with media trends in present-day society and for thinking through their
possible epistemological, political and cultural impacts. The course is a communications elective for the Journalism and Telecommunications majors and the Media Studies minor.

**Enforced Prerequisite at Enrollment:** Select 3 credits from the following: COMM 100 or COMM 110 or COMM 118 or COMM 150 or COMM 180 or COMM 251 or COMM 320 or COMM 370

Cross-listed with: COMM 408

Bachelor of Arts: Social and Behavioral Sciences

STS 416: Race, Gender and Science

3 Credits

The class will focus on race and gender as products of science, and how societal values shape scientific activity.

Cross-listed with: AFAM 416

International Cultures (IL)

United States Cultures (US)

STS 420: Energy and Modern Society

3 Credits

Technology and economics of energy resources, production, and consumption; environmental factors, exhaustion, new technology.

**Prerequisite:** 3 credits in Sociology

Cross-listed with: EMSC 420, SOC 420

Bachelor of Arts: Social and Behavioral Sciences

STS 428: The Darwinian Revolution

3 Credits

The origins and implications of evolutionary theory.

**Prerequisite:** an introductory science course and a history course

Cross-listed with: HIST 428

Bachelor of Arts: Humanities

International Cultures (IL)

STS 432: Medical and Health Care Ethics

3 Credits

Examines ethical, political, and social issues in the research, implementation, and practice of medicine, medical technologies, and healthcare.

**Prerequisite:** fifth-semester standing

Cross-listed with: PHIL 432

Bachelor of Arts: Humanities

STS 433: Ethics in Science and Engineering

3 Credits

Ethical issues arising in the practice of science and engineering and their philosophical analysis.

Cross-listed with: PHIL 433

Bachelor of Arts: Humanities

Bachelor of Arts: Social and Behavioral Sciences

STS 435: The Interrelation of Science, Philosophy, and Religion

3 Credits

The historical and transformative interactions between science and Western philosophical and religious views of nature, humanity, and God.

Cross-listed with: PHIL 435

Bachelor of Arts: Humanities

STS 460: Science, Technology, and Public Policy

3 Credits

The all-pervasive importance of science and technology policy in modern societies and mechanisms and processes by which it is made.

**Prerequisite:** 3 credits in natural sciences or engineering, 3 credits in social and behavioral sciences

Cross-listed with: PLSC 460

Bachelor of Arts: Social and Behavioral Sciences

STS 470: Technology Assessment and Transfer

3 Credits

Nature of technology assessment and technology transfer in product design and development process from federal and university labs, and internationally.

Bachelor of Arts: Social and Behavioral Sciences

**Security and Risk Analysis (SRA)**

**SRA 1: First-Year Seminar in Security and Risk Analysis**

1 Credits

Provides introduction to the field of Security and Risk Analysis and assessments of key skills. SRA 001S First-Year Seminar in Security and Risk Analysis (1) SRA 001S gives first-year students a concrete overview of the field of Security and Risk Analysis (SRA), including discussion of the knowledge and competencies required for careers in this field, familiarity with the variety of career paths and the specific requirements of each, and an understanding of the skills, abilities and knowledge that is common across career paths within this field. As part of this course, students will participate in a Developmental Assessment Center, which will assess their current skill levels in the areas of Oral and Written Communication, Leadership, Conflict Resolution, Decision Making and Problem Solving, as well as other core areas to be identified. Working with the assessment team, the will create specific, individualized plans to develop skills in areas where they are currently deficient and to build on current strengths.

First-Year Seminar

**SRA 99: Foreign Studies**

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)
Introduction to Security and Risk Analysis

This introductory course spans areas of security, risk, and analysis covering contexts in government agencies and business organizations.

Overview of Nature, Scope, and Seriousness of Threats to Security as a Result of Terrorism and Crime

Provides an overview of the nature, scope, and seriousness of threats to security as a result of terrorism and crime. This course is designed to acquaint students with the security threats posed by both terrorist and criminal activity, and with strategies to combat these threats. Terrorism and security are defined as well as terrorism in its historical context.

General Education: Social and Behavioral Sciences (GS)

Foreign Studies

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Threat of Terrorism and Crime

Provides an overview of terrorism and crime, including unreliable data, biased estimates and a lack of understanding of terrorist and criminal motives and objectives.

Overview of Information Security

Provides an understanding of the overview of information security including security architecture, access control, and internet secure applications.

Decision Theory and Analysis

Provides an overview of decision theoretical and analytical concepts and tools in the security risk analysis field.

Overview of Information Security

This course introduces the fundamental principles, methods, and tools of visual analytics that enable security and risk analysts to synthesize data and information.
information and derive insight from massive, dynamic, ambiguous, and often conflicting data. Decisions in risk and security management are increasingly driven by data. Analysts are faced with a continuously growing set of data originated from a wide range of sources and in a wide variety of formats. Such data need to be analyzed in order to understand a situation and react promptly. This causes significant information overload to analysts and prevents them from developing good situation awareness. Visual Analytics (VA) offers an effective solution for making sense of massive datasets by exploiting interactive visualization technologies to extend human cognitive abilities. It helps analysts in detecting the expected and discover the unexpected, providing timely, defensible, and in communicating findings and assessment effectively for action. SRA 268 provides students with a quick overview of the current state of the art in visual analytics and their applications in data-driven security investigation and risk assessment. It prepares students with advanced data analytic skills and critical thinking with data. Cases studies and projects showcase the applications of visual analytics in cyber security and intelligence analysis, emergency and crisis management, and business intelligence.

**Enforced Prerequisite at Enrollment:** SRA 111

SRA 294: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

SRA 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

SRA 297: Special Topics

1-9 Credits

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

SRA 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

SRA 311: Risk Analysis in a Security Context

3 Credits

Assessment and mitigation of security vulnerabilities for people, organizations, industry sectors, and the nation. SRA 311 Risk Management: Assessment and Mitigation (3) Risk Analysis in a Security Context is focused on developing analytical skills aimed at producing credible and meaningful answers to critical questions of risk management. Risk is considered at all levels within this course, including those created by intelligent adversaries, including cybercriminals and terrorists, although risks may also include natural disasters, system failures, accidents, etc. Students successfully completing this course are capable of applying a diverse set of analytic techniques to answer questions in contexts such as information security, counterterrorism and intelligence, or any other particular field where protection is an issue. Topics in this course include critical thinking, systems analysis, risk assessment and associated analysis methods, risk communication, and risk control.

**Enforced Prerequisite at Enrollment:** SRA 231

SRA 311W: Risk Analysis in a Security Context

3 Credits

This intermediate course is appropriate for students majoring in Security and Risk Analysis. This course provides students with the background, experience and perspective required to document risk and identify policies and procedures that effectively deal with hazards and threats to which the organization is vulnerable, jeopardizing its mission. This writing intensive course requires students to identify and assess organization risks, and recommend controls to executive decision makers. Individual and group writing assignments provide practical experience preparing organizational-level documents that effectively communicate the risk context, risk analysis (e.g., identification and assessment), risk communication, and risk control elements for a risk management plan. Students receive and provide peer feedback on writing assignments, as well as instructor feedback, with the goal of improving writing skills and conforming writing styles to organization and industry expectations.

**Enforced Prerequisite at Enrollment:** SRA 231

Writing Across the Curriculum

SRA 365: Statistics for Security and Risk Analysis

3 Credits

Theoretical foundations and practice of intermediate statistics. SRA 365 Statistics for Security and Risk Analysis (3) SRA 365 is an intermediate-level statistics course emphasizing how to summarize data using descriptive statistics, how to make data-driven decisions using inferential statistics, and how to critically evaluate data presented in the media, all within the context of security, risk, and analysis. This is both a theory and application course. Students will learn about statistical theories, such as regression, and chi-square analyses, and apply their knowledge of these theories by analyzing and interpreting data using a statistical software package.

**Enforced Prerequisite at Enrollment:** STAT 200

SRA 397: Special Topics

1-9 Credits

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

SRA 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

SRA 421: The Intelligence Environment

3 Credits

The Role of information and intelligence introduces students to the architecture and policies of the U.S. Intelligence Community (IC) and
examines how U.S. intelligence policies and practices relate to overall U.S. foreign policy objectives and are influenced by today’s global environment and emerging technologies. The course examines the users and processes of IC, participants of Competitive Intelligence, and comparative intelligence communities. SRA 421 The Intelligence Environment (3) This course examines intelligence structures and policies and explores the role and use of information and intelligence in the 21st Century, in support of individual citizens, national defense and corporate America. It will introduce the major actors in the U.S. intelligence community and frame U.S. intelligence policies in terms of overall U.S. foreign policy objectives in the current globalized international arena. The course discusses the history and evolution of U.S. intelligence policies, capabilities and information requirements as well as the legal and constitutional foundations of those policies. The course will examine and apply methods and techniques of the information user and intelligence practitioner. The course will also provide experience in applying principles and techniques learned in the context of a team-based intelligence-analysis simulation exercise.

**Enforced Prerequisite at Enrollment:** SRA 111 and SRA 211 and SRA 231

- **SRA 433: Deception and Counterdeception**

  3 Credits

  Deception tactics, technologies and procedures and approaches to counterdeception analysis. SRA 433 Deception and Counterdeception (3) This course introduces deception and counterdeception and their role in support of security risk analyses in competitive environments. The course covers fundamental theories of deception, human cognition and its vulnerabilities to deception, and the vulnerabilities of technical collection systems and sensors to deception. The course discusses deceptive practices in use by attackers and defenders, including both non-technical and technical means. The course also provides experience applying technical and non-technical counterdeception techniques to security risk analysis problems.

  **Enforced Prerequisite at Enrollment:** SRA 211 and SRA 221 and SRA 231 and SRA 311

- **SRA 440W: Security and Risk Analysis Capstone Course**

  3 Credits

  This course is designed to provide IST seniors enrolled in the SRA major to experience a semester-long security and risk analysis scenario or problem-solving exercise by providing realistic analytic dilemmas requiring solutions that incorporate facets of the three SRA Options. The problems selected for the Capstone should lend themselves to team collaboration and group solutions.

  **Enforced Prerequisite at Enrollment:** SRA 221 and SRA 311 and (ENGL 202C or ENGL 202D)

- **Writing Across the Curriculum**

  - **SRA 450: Cyber-Crime and Cyber-Warfare**

  3 Credits

  Cyber-crime and cyber-warfare are among the most critical areas facing information security professionals. Both have emerged as strategic issues facing the United States. This importance is recognized by NSA, DHS and industry. This course will familiarize students with the history, tools, methods, players, laws and policies regarding cyber-crime and cyber-warfare. This course will add to the offerings in the MPS Information Security and Forensics major as well as the SRA BS ICS and IAM options.

  **Enforced Prerequisite at Enrollment:** SRA 111 and SRA 231

- **SRA 468: Visual Analytics for Security Intelligence**

  3 Credits

  Introduce visual analytic techniques for security informatics and intelligence. It covers analytical techniques on visualizing threats, risk, and vulnerability. SRA 468 Visual Analytics for Security Intelligence (3) This course surveys techniques for visualizing and analyzing security information and for communicating and using information about threats, risk and vulnerability decision-makers. It will motivate students by the needs for better intelligence in a broad range of homeland security applications. Through case studies and problem-based learning, students will develop understanding of important concepts and issues, such as data source and data quality, associations and integration of incidence, hazards, and risk factors, and the difficulties of analyzing and communicating knowledge. Various visual analytical methods for homeland security intelligence will be discussed, such as: (1) mapping and visualizing patterns of crime and incidence, (2) identifying targets and agents of terrorist attacks, (3) spatial analysis of social, economic and environmental risk indicators, and (4) prediction of threat and risk. It also pays special attention to the interpretation of analytical results for actions. Geographical information systems and associated spatial analytical tools will be used to exemplify the kinds of information environment available to intelligence community. The course will prepare students to become immediate workforce for security-related industries and government agencies.

  **Enforced Prerequisite at Enrollment:** SRA 111

- **SRA 471: Informatics, Risk, and the Post-Modern World**

  3 Credits

  Provides in-depth study of how security informatics is influenced by the risk and post-modern culture. SRA 471 Informatics, Risk, and the Post-Modern World (3) The post-modern world provides a changing climate and context for defining and understanding threats, intelligence, decisions, and risk. Likewise, post-modern cultures consist of beliefs that are heavily influenced by psychology, social connectivity, collective behavior, religion, ethnicity, and political systems. This system of systems is heavily dependent upon and influenced by information, information technology, and the web (social informatics). When examining human behavior as it impacts risk, these various social-technical factors must be considered in planning for terrorism, intelligence analysis, and emergency events. As the post-modern world becomes increasingly complicated, the ability to discern, identify, and address threats in terms of risk becomes exceedingly more difficult. Provision of learning underlying psychological, social, political, religious, and technical components of how risk accelerates through various stages will be critical for protection of national and international interests within the security sphere. Security informatics will be at the heart of both recognizing emerging situations and employing tools/agents/measures to assuage emergency, terrorist, or even national disaster events. This course provides the student with a broad perspective to critically examine both theories and practice of security informatics as related to the cultures in which threats emerge asymmetrically. Students will be placed on the role of systems analysts to problem solve and analyze information from a broad bandwidth of information specifically as informed by culture, post-modern thought, psychological intent, and situation awareness. The course will be
grounded by participation in case studies and/or analyzing exercises of risk. Students will be required to do comprehensive reading assignments, engage in team cognition-social interaction, and become familiar with social informatics concepts and tools as related to risk, terrorism, and information warfare. As the post-modern world becomes increasingly complicated, the ability to discern, identify, and address threats in terms of risk becomes exceedingly more difficult. Provision of understanding some of the underlying psychological, social, political, religious, and technical components of how risk accelerates through various stages will be critical for protection of national and international interests within the security sphere. As extreme events become more prevalent in society, security informatics will be at the heart of both recognizing emerging situations and employing tools/agents to assure emergency, terrorist, or even national disaster events.

**Enforced Prerequisite at Enrollment:** SRA 231

SRA 472: Integration of Privacy and Security

3 Credits

Exploration of technological, operational, organizational and regulatory issues related to maintenance of individual privacy, confidentiality of organizations, and information protection. SRA 472 Integration of Privacy and Security (3)This course is designed to introduce students to the major organizational, technical, operational and regulatory issues in information privacy and security, and to give them experience in performing a privacy analysis, designing privacy-aware applications and developing privacy policy in organizations. Topics covered include: conceptualizations and theories of privacy and security, privacy laws and compliance, building a privacy organizational infrastructure, integrating privacy in the software development process, performing a privacy analysis, privacy issues in outsourcing and cross-border data transfers, integrating privacy into customer relationship management and vendor management, information systems audit and intentional standards on privacy and security. This course will mix technical details, applied value and organizational insights of assuring privacy and security through the use of case studies, real-life problems, hands-on exercises and team projects.

**Enforced Prerequisite at Enrollment:** SRA 211 or SRA 221

SRA 480: Crisis Informatics

3 Credits

This course examines how information and communication technologies have played a role in saving lives specifically in the areas of technologies used toward emergency response. It explores disaster response and the inter-connectedness of information, people, and technologies in a crisis. In particular, it examines how information is managed, organized, coordinated, and disseminated during a crisis; it analyzes information needs and seeking behaviors during a crisis, and explores how information and communication technologies can support communities in a crisis. Students reflect on lessons learned from past crises, and develop strategies to manage future crises. This course will equip students with the knowledge and skills to enable them to be key players in crisis response.

**Enforced Prerequisite at Enrollment:** SRA 111 and SRA 211

SRA 494: Research Project

1-12 Credits

Supervised student activities on research projects identified on an individual or small-group basis.

SRA 496: Independent Studies

1-18 Credits

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

SRA 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

**Slavic (SLAV)**

SLAV 99: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

SLAV 147: East European Jewish History

3 Credits

The study of East European Jewish history, fascinating in its own right, is also key to understanding the lived experience of modernity in a complicated and compelling part of the world. This course will thus seek to examine East European Jewry from the inside and from the outside. We will see how a minority community weathered the storms of modernity, while at the same time noting how their experiences reflect on the broader culture and forces around them. We will look to examine the entire East European Jewish landscape, but with particular attention to Russia and Poland. In addition to the textbooks, we will read articles on economics, culture, politics, gender, religion and literature, as well as reading primary documents. Students who complete the readings and written assignments and participate in class should expect to expand their knowledge of the East European Jewish past as well as enhancing their skills as historians.

Cross-listed with: HIST 147, JST 147

Bachelor of Arts: Humanities

International Cultures (IL)

General Education: Humanities (GH)

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

SLAV 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)
SLAV 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

SLAV 494: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

SLAV 494H: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

Honors

Social Data Analytics (SODA)

SODA 308: Research Design for Social Data Analytics
3 Credits
This course engages students in the study and use of research design tools for the analysis of 'big data.' SODA 308 Research Design for Social Data Analytics (3) The tools of social science and social data analytics affect how data scientists and social scientists understand the world. This course engages students in the study and use of research design tools for the analysis of social systems and 'big data.' Topics to be addressed include: how the scientific method relates to a practice of establishing the validity of propositions and the role that analytics can play in that process when the observations are vast and varied; how the validity of systematic patterns in data are assessed as well as how spurious or biased patterns in the data are ruled out; and how the scientific method can guide the use of exploratory techniques such as machine learning and visual analytics. Through the course, students will learn to develop innovative research designs in an effort to improve the statistical analyses used with social data and how to present these analyses to nontechnical audiences, such as non-profits, employers, and the general public. Course requirements include several short memoranda that require the development and presentation of a research design and data analysis plan. Students will also gain practical experience working with several 'big data' sets. Students are required to have an understanding of introductory statistics (equivalent to the knowledge they would gain from PL SC 309) prior to taking this course.

Prerequisite: PL SC309

SODA 496: Special Topics
1-18 Credits/Maximum of 999
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

SODA 497: Special Topics
1-9 Credits/Maximum of 999
Formal courses offered infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Social Science (SOSC)

SOSC 1: Urbanization
3 Credits
AN OVERVIEW OF THE SOCIAL SCIENCES, INCLUDING AN INTERDISCIPLINARY ANALYSIS OF THE URBAN PROCESS.

Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)

SOSC 480: Quantitative Methods in the Social Sciences
4 Credits
Students will learn to conduct, analyze and write up quantitative social scientific research according to appropriate professional standards. SO SC 480W Quantitative Methods in the Social Sciences (4) Students in this course will gain a working understanding of the rationale for the use of a variety of quantitative research methods and become familiar with the design, constraints and appropriate applications of those most frequently used in the applied behavioral and social sciences. They will gain experience designing and conducting research through a blend of class exercises and field research applications. Students will also gain a basic familiarity with the use of tools such as the Statistical Package for the Social Sciences (SPSS) to analyze the data gathered through quantitative research. Finally, through classroom instruction coupled with a process of writing, revising and individual consultation with the instructor regarding their research reports, students will master APA style and develop their academic and professional writing skills including critical thinking and conceptualization in addition to the basics such as spelling and grammar where necessary.

Prerequisite: permission of program
Writing Across the Curriculum

SOSC 481: Qualitative Research Methods in the Social Sciences
4 Credits
Students will learn how to conduct, analyze and write up qualitative social research according to appropriate professional standards. SO SC 481 Qualitative Research Methods in the Social Sciences (4) Students in this course will gain a working understanding of the philosophy, conceptualization and application of qualitative and participatory research methods in the behavioral and social sciences including such methods as ethnographic research and participant observation, conceptual mapping and interviewing techniques and explore their applications in participatory and action research. Students will also learn how to analyze and write up the results of such research endeavors according to the standards of the field including the use of computerized qualitative data analysis packages (such as NUD*IST or the Ethnograph) and mastery of APA style.

Prerequisite: permission of program
SOSC 492: Current Topics in the Social Sciences

3 Credits/Maximum of 3

This course allows for various current topics to be offered as suitable to the needs of the program. SO SC 492 Current Topics in the Social Sciences (3) As the umbrella course for the Social Sciences, this course allows for various current topics to be offered as suitable to the needs of the program. Description varies by each instructor teaching the class.

Prerequisite: permission of program

Social Studies Education (SSED)

SSED 200: American Heritage

3 Credits

Recommended Preparations: HIST 20 Essentials of American Heritage for heritage interpretative education applications. SS ED 200 American Heritage (3)(US) SS ED 200 is designed to introduce students to Heritage Education as a career opportunity for students interested in teaching history/heritage, working at history museums and heritage sites, Public History, and/or working in related fields and/or to diversify, enhance, and enrich their teacher certification, and/or to enrich their understanding of America's founding. SS ED 200 is the first in a series of four courses that lead to the Heritage Education Certificate (15 credits). Students who complete the program shall be eligible and prepared to complete the requirements for the Certified Interpretative Guide credential as offered by the National Association for Interpretation. In this course, students will synthesize knowledge and understandings of American heritage focused on America's founding as found in past and prevailing curricular sources and more importantly as represented at America's heritage sites and historical museums. Students will have opportunities to apply this knowledge through curricular and presentation experiences. Taking advantage of Penn State's central location and access to heritage/history museums and heritage and historical sites throughout the Northeast, the course will include visitations to select heritage and historical sites and museums. Pending outside funding, one to three field trips to local and regional heritage sites shall be included in this course. Pending arrangements with local and regional sites, typically, trips scheduled shall be 'day-trips.' Students unable to travel will be provided with alternative assignments. As part of these visits, students will observe heritage presentations by staff, engage staff, view exhibits/collections, make and record observations via technology (pictures, video, and personal notes). Student assessments will include critical essay reviews on past and present presentations of America's founding as found in relevant sources together with assessments of local, regional, and national heritage sites. Two exams shall also be required.

Prerequisite: any U.S. History selection (3 credits)

United States Cultures (US)

SSED 411: Teaching Secondary Social Studies I

3 Credits

SSED 411 Teaching Secondary Social Studies I is the first methods courses in a two-course sequence in preparation for teaching social studies in the secondary grades (7-12), with emphasis on the the subjects most frequently taught in schools and specified in academic standards (civics/government, economics, geography, and history). The principal goal is to provide prospective teachers with a better understanding of the nature, curriculum, and educational structures of social studies in the U.S.; of how to identify, select, instruct, and assess rigorous content and learning outcomes; and of effective strategies for designing, planning, and implementing instruction. Additional topics may be included as determined by the section instructor.

Prerequisites: GEOG 30N Recommended Preparations: Completion of at least 6 credits of Social Studies Teaching Option Requirements for Additional Courses or Supporting Courses and Related Areas

SSED 412W: Teaching Secondary Social Studies II

3 Credits

Writing-intensive course focusing on study of the social studies teacher's role in planning instruction; strategies for teaching. SS ED 412W Teaching Secondary Social Studies II (3)Advanced study and practice of teaching social studies in the secondary grades (7-12) with emphasis on content and methods for the major subject areas (citizenship and government, economics, geography, and history). The principal goal is to provide prospective teachers with intellectual preparation and relevant practice in selecting and applying rigorous content knowledge to higher-order thinking in the classroom and practical experience designing, planning, and implementing social studies instruction. Topics include the social studies teacher's role in planning and practicing instruction, strategies for implementing and assessing teaching in the social studies, and others as determined by the section instructor. As a writing course (W), SS ED 412W engages students in professional in-depth writing experiences that involve planning, process, development, teaching and learning social studies content, and other relevant writing that teachers are expected to perform.

Prerequisites: SSED 411 Corequisites: CI 495C

Writing Across the Curriculum

SSED 430W: Teaching Social Studies in the Elementary Grades

3 Credits

Principles underlying use of social studies in the elementary school; practical demonstration of desirable methods. SS ED 430W Teaching Social Studies in the Elementary Grades (3) Social studies transforms the social sciences and humanities to promote civic competence (National Council for the Social Studies, 2002). In this course, teacher candidates learn to coordinate and conceptualize the richness of anthropology, economics, geography, history, civics, and sociology for elementary classroom pedagogy. Candidates become familiar with various instructional strategies that support social studies. Candidates gain an understanding of the information, concepts, theories, analytical approaches, and different perspectives— including global and multicultural perspectives—that are important to teaching social studies. Candidates also learn how to assess social studies learning in a variety of ways. This course stresses technology, content integration, social science competence, differentiated instruction, multicultural/global knowledge, teaching social historical inquiry, and constructing democratic learning communities. Teacher candidates learn how to apply the State Learning Frameworks and National Standards in their classroom instruction. At the conclusion of the course, candidates have a good understanding of elementary social studies and are able to develop and demonstrate powerful social studies curricula. Being a W' course, SS ED 430 incorporates both formal and informal writing into in-class and graded assignments to encourage teacher candidates to develop as critical thinkers and productive writers. This writing includes an essay describing one's own experiences as a social studies learner, reading responses, the creation of a unit of instruction, and several
lesson plans that describe significant activities. These writing tasks are meant to professionalize the communication skills required to effectively teach social studies as well as to effectively communicate with parents, educators, and administrators. SS ED 430W is a part of a block of courses in a PSU teacher education program that is unified by a basic set of principles and a field experience component.

**Prerequisite:** LL ED400, LL ED401, LL ED402, nine credits in history and the social sciences; Concurrent: C I 495AOR C I 495B; MTHED420, SCIED458

**Writing Across the Curriculum**

**SSED 470: Issues in Social Studies Education**

1-6 Credits/Maximum of 6

Concentration on particular issues, trends, and developments in the social studies.

**Prerequisite:** Instructional I certificate and teaching experience

**SSED 496: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**SSED 497: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**Sociology (SOC)**

**SOC 1: Introductory Sociology**

3 Credits

The nature and characteristics of human societies and social life. SOC 001S Introductory Sociology (3) (GS)(BA) This course meets the Bachelor of Arts degree requirements. Introductory Sociology provides perspectives and information useful in understanding all societies. The major theories (functionalism, conflict, and symbolic interactionism) and concepts provide the foundation upon which the remaining material rests. Learning how sociologists do research provides the tools for understanding the production of knowledge and for evaluating the validity of sociological assertions. Familiarity with systematic theorizing and conceptual development, along with some comprehension of the nature of the scientific method as it is applied in sociology, enhances critical reasoning. To promote a more complete understanding of human social life, both in its inherent constraints and in the opportunities it provides; the nature and reality of culture and social structure are explored. The study of socialization provides perspectives on how one becomes a member of society. Exploring social interaction adds insight into the formation of the social self and the salience of group identities and norms. Ending this first section with a discussion of social control highlights the forces of stability and change in society. The course then progresses to considerations of social stratification and inequality. The nature of privilege and oppression are discussed and considered in the specific contexts of race, ethnicity, gender, and age. The focus then shifts to social institutions. The essential work of society is accomplished via its major institutions: family, education, health care, economy and work, religion, and politics. Applying theoretical perspectives to the form and function of these institutions enhances an understanding of how different social structures provide varying constraints and opportunities to their inhabitants. Finally, considering large-scale forces for change provides a platform to comprehend where human societies have been, are now, and might be headed. Throughout the course, the lectures as well as the textbook draw amply on cross-cultural and cross-national material. In addition, the course emphasizes the complexity of human social life and describes the many variables (social structural, cultural, interpersonal,
and psychological) that influence behavior. A special component of the course deals with topics pertinent to the social behavior and norms of students of the ages typically taking this course. Depending on the faculty member, these topics could include sexual behavior, alcohol use, and problems in interpersonal relationships. Discussion and questions are encouraged in all sections. Sections of this course may include group research projects, debates, and library or internet-based research. Along with personal contact, students have the opportunity to communicate with teaching assistants and faculty members via e-mail. Writing assignments, along with in-class examinations, are required in all sections. This course meets a general education requirement in the social and behavioral sciences.

The essential work of society is accomplished via its major institutions: family, education, health care, economy and work, religion, and politics. Applying theoretical perspectives to the form and function of these institutions enhances an understanding of how different social structures provide varying constraints and opportunities to their inhabitants. Finally, considering large-scale forces for change provides a platform to comprehend where human societies have been, are now, and might be headed. Throughout the course, the lectures as well as the textbook draw amply on cross-cultural and cross-national material. In addition, the course emphasizes the complexity of human social life and describes the many variables (social structural, cultural, interpersonal, and psychological) that influence behavior. A special component of the course deals with topics pertinent to the social behavior and norms of students of the ages typically taking this course. Depending on the faculty member, these topics could include sexual behavior, alcohol use, and problems in interpersonal relationships. Discussion and questions are encouraged in all sections. Sections of this course may include group research projects, debates, and library or internet-based research. Along with personal contact, students have the opportunity to communicate with teaching assistants and faculty members via e-mail. Writing assignments, along with in-class examinations, are required in all sections. This course meets a general education requirement in the social and behavioral sciences.

Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)

Writing Across the Curriculum

SOC 3: Introductory Social Psychology

3 Credits

The impact of the social environment on perception, attitudes, and behavior. SOC 003 Introductory Social Psychology (3) (GS)(BA) This course meets the Bachelor of Arts degree requirements. Social psychology is a discipline that bridges sociology and psychology. Sociology focuses on large-scale social trends while psychology emphasizes the individual organism and its functioning. Social psychologists borrow perspectives and methods from both sociology and psychology. The major thrust, however, is on the influence of the social group areas such as socialization, social influence, conformity, group decision-making, interpersonal relationships, and social power. This course provides an overview of the major ideas and research streams that characterize modern social psychology. Eight major goals guide the form and content of this course: (1) Survey existing theory and research in contemporary social psychology, (2) Enhance students' understanding of how social scientists conduct research, (3) Provide insight into the influence of social settings on human behavior, (4) Relate social psychology to other areas of social and behavioral science, (5) Help students to understand the interface between theory and research in social psychology, (6) Demonstrate the nature and outcomes of different cultural and sub-cultural processes, (7) Relate course material to contemporary personal and social problems, and (8) Provide opportunities for students to sharpen their critical thinking about human behavior. In general, this course is designed to enhance students' understanding of themselves, other individuals, and the world in which they live. For example, after taking the course, students will have a better understanding of why people sometimes help others in trouble and sometimes ignore them, what kinds of situations promote conformity to authority, what factors result in anger and violence, why intergroup conflict is so pervasive, and how attitudes are acquired. Assessment is based on a combination of objective tests, a written group research project, individual papers, or a series of short research projects, depending on the instructor. All courses have at least one graded writing assignment. Group projects involve research on social influence. For example, students may use the Internet to study how political or religious groups attract supporters. Individual papers sometimes involve a critical book review. Alternatively, individual papers may be based on short research activities, such as examining the roles of women and men in rock videos or television commercials. Discussion and questions are encouraged in all sessions. Sociology 003 meets a general education requirement in the social and behavioral sciences. This course also provides a useful foundation for advanced social science courses in economics, marketing, political science, counseling, child development, and law enforcement. It is a prerequisite for Sociology 403: Advanced Social Psychology.

Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)
SOC 3H: Honors Introduction to Social Psychology

3 Credits

This is an honors course that enables students to learn, apply, and evaluate basic social psychology concepts, theories, and research, all from a sociological perspective. Social Psychology is the social scientific study of human minds and social behaviors. This course focuses on sociological perspectives on human development, social interaction between individuals, group influences on individuals, and interaction between groups. Social Psychology is an interdisciplinary area of study that bridges sociology and psychology. However, sociological contributions to this field will be primarily emphasized. This course is especially appropriate for students in the Schreyer Honors College and Paterno Fellows. A key theme of this course is for students to demonstrate understanding of how sociology helps us understand ‘real world’ human behavior and experience, including students’ own. Secondary objectives of this course are: 1) for students to demonstrate a basic understanding of where sociological knowledge comes from and how it is evaluated, helping students to become more effective consumers of social science knowledge; 2) for students to write clearly and effectively.

GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Critical and Analytical Thinking

SOC 5: Social Problems

3 Credits

Current social problems such as economic, racial, and gender inequalities; social deviance and crime; population, environmental, energy, and health problems. SOC 005 Social Problems (3) (GS)(BA) This course meets the Bachelor of Arts degree requirements. This course is designed to introduce students to the main societal issues facing humanity at the present time and in the foreseeable future. Although the course examines a number of social issues in the United States (such as crime and poverty), the course generally takes an international and intercultural perspective. The primary social issues that affect individuals and their children today are global, rather than national, in scope. For this reason, globalization is a recurring theme in the course. Discussion and questions are encouraged in all sections. Assessment is based partly on objective and short-answer tests taken in class, including a final examination. All sections also include writing assignments that involve either library or Internet research. For example, in one commonly used assignment, students write a paper describing and analyzing a serious social problem in some country other than the United States, such as Ireland, Egypt, New Zealand, Ethiopia, Argentina, or Indonesia. An alternative writing assignment requires that students investigate and describe a local problem in Centre County. Another variation requires students to research the views of other students and groups on campus and compose a letter to the Penn State university president about an issue or problem on campus involving student behavior. SOC 005 provides excellent preparation for most upper-level sociology courses. Because this course introduces students to social problems that will confront their generation in the near future, it also is relevant to other majors and disciplines, such as political science, economics, and health and human development. This course meets a General Education requirement in the Social and Behavioral Sciences.

Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)

SOC 5H: Social Problems

3 Credits

Current social problems such as economic, racial, and gender inequalities; social deviance and crime; population, environmental, energy, and health problems.

Honors

SOC 7: Introduction to Social Research

3 Credits

Fundamental concepts and problems in social science research; design, measurement, sampling, causation, validity, interpretation.

Bachelor of Arts: Social and Behavioral Sciences

SOC 12: Criminology

3 Credits

Explanations and measurement of crime; criminal law; characteristics of criminals and victims; violent, property, white-collar, organized, and sexual crimes. SOC (CRIMJ / CRIM) 012 Criminology (3) (GS) (BA) This course meets the Bachelor of Arts degree requirements. Criminology is the study of the causes of criminal behavior. As such this course is an introduction to the topic with special focus on the major theories explaining criminal behavior including differential association, anomie, control theory and labeling theory. A key focus of the class is examining the most recent scientific research testing the basic theories. The students learn the various research techniques that have been used to study criminal behavior including crime statistics such as the Uniform Crime Report that serves as a monitor on crime trends. Several important areas of study that link understanding criminal behavior and its distribution across the social system are investigated including age, gender, race and ethnicity. One goal of the course is to promote a more complete understanding of crime and how it is enmeshed in human social life. The course concludes by using the knowledge base generated in the course to study the link of our understanding of criminal behavior and the emerging crime control policies of the past few decades. Finally, the course reviews the impact and effectiveness of some of these policies. Throughout the course, the lectures as well as the readings emphasize the complexity of explaining human behavior and criminal behavior in particular. One aspect of the course is the use of a term paper on the objective and subjective availability of crime to the student. This paper emphasizes the complexity of the student’s social life and the role that these factors may have on whether they have engaged in criminal behavior and their analysis of the causes of their criminal behavior. This project personalizes the various theories and helps the student understand the importance of their social environment in whether they have or will engage in crime. Discussion and questions are encouraged in all sections. Sections of this course may include group research projects, debates, and library or internet-based research. Along with personal contact, students have the opportunity to communicate with teaching assistants and faculty members via e-mail.
Writing assignments, along with in-class examinations, are required in all sections. This course meets a General Education requirement in the Social and Behavioral Sciences for non majors, is required for the CLJBA and CLJBS majors, and may be used in the SOC majors and minors.

Cross-listed with: CRIM 12, CRIMJ 12
Bachelor of Arts: Social and Behavioral Sciences

SOC 12H: Honors Criminology
3 Credits
Criminology is the study of the causes of criminal behavior. As such this course is an introduction to the topic with special focus on the major theories and concepts explaining criminal behavior. This honors version of Introduction to Criminology is especially designed to be appropriately challenging for Schreyer Honors College students. A key focus of the course is examining the most recent scientific research testing the basic theories in criminology. Students learn the various research methods and data sources used to study criminal behavior. Several important areas of study that link understanding criminal behavior and its distribution across the social system are investigated including age, gender, race and ethnicity. One goal of the course is to promote a more complete understanding of crime and how it is enmeshed in human social life. Students read a general text, as well as scholarly articles in criminology.

SOC 19: Sociology of Popular Culture
3 Credits
In this course students will be introduced to the theories, concepts, and research techniques sociologists use by applying them to study popular culture. Popular culture is pervasive in modern societies and comes in many forms both in and out of the mainstream—from pop songs, TV series, and fashion trends to Manga, Burning Man, and Furries. Thanks to social media and the Internet pop culture morphs and spreads rapidly from person to person, across time and space, making it a global culture. As a scientific approach to studying the moving parts that make societies tick, sociology is well suited to helping us make sense of a topic this diverse and complex. To make the topic of pop culture more manageable for a single course, students will explore how popular culture is shaped by the social dividing lines commonly found in modern societies and in turn helps to shape how factors such as race, social class, gender, sexuality, and nationality affect people’s lives. The course is organized to meet two instructional goals. First, to demonstrate to students how questions about pop culture stemming from varied sociological perspectives can be answered using different research methods. Second, to help students think sociologically about pop culture by helping them to conduct their own investigations of types and aspects of pop culture that they are curious about. Along the way the class will discuss such issues as creativity and innovation in culture production, the commercialization of popular culture, cultural capital and social distinctions; popular culture as an identity resource; the political uses of pop culture; subcultural deviance; music scenes; cultural colonialism and hybridization; YouTube stars, ‘binge-watching,’ and the latest pop culture trends and developments. The hope is that by studying popular culture as part of social processes and human relationships students become more sociologically savvy observers of their cultural environment and gain a richer awareness of the significance of popular culture in their own lives. Practically speaking, the course offers students a foundation for further study in sociology and related social sciences, as well as academic and applied disciplines that focus on popular culture and other types of art and culture.

Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think

SOC 20N: Critical Media Literacy
3 Credits
We live in a world in which we are surrounded with media messages that influence how we think and act. Since we are so immersed in media culture, it is important that we know how to analyze media content, production and reception, so that media can become tools for liberation and creativity, not control. In this course, we will learn to critically analyze work produced in different forms of mass communication. The course focuses on power, ideology and social inequality, analyzing relationships between media producers and audiences, and between information, the politics of representation, and power, including a focus on the crucial areas of gender, sexuality, class, and race. The course takes a dialectical perspective that focuses on both theory and practice, providing students with the opportunity and knowledge necessary to produce their own short film using the resources of Penn State’s media commons.

SOC 23: Population and Policy Issues
3 Credits
Local, national, and international population trends; basic techniques of demographic analysis; population problems; implications for public planning and policy. SOC 023 Population and Policy Issues (3) (GS) (BA) This course meets the Bachelor of Arts degree requirements. Demographic changes are some of the most important factors in understanding the future of specific professions, our nation, and the world. This course introduces students to the discipline of demography, including an overview of demographic issues, theories of population, and major findings from demographic research. Focusing on the state, national, and global level, students will learn how the discipline of demography and how population structure and age are related to social institutions and public policy issues. Students will receive hands-on experience with the data and methods used by professional demographers and health and urban planners. Thus, this course should provide students with 1) a global perspective on population changes, 2) knowledge of demography research and theory, 3) analytical skills for the application of demography to public policy, 4) an awareness of how the diversity of a population (e.g., age structure, race, ethnicity, sex, and culture) is related to public policy, and 5) the active learning of demographic techniques. The instructors encourage discussion and questions in all sections. Assessment is based on objective tests taken in class, writing assignments, and student research projects called population analysis exercises. The analysis exercises allow students to use the data and methods of professional demographers. Some sections will also hold in-class debates and will require the performance of in-class assignments. This course meets a General Education requirement in Social and Behavioral Sciences.

SOC 30: Sociology of the Family
3 Credits
This course examines the family in American society by looking at individually lived family experience, the family as a systematic social institution influenced by larger social processes and social structure and context, and the ways in which family patterns and processes influence broader social patterns. Students will learn how researchers resolve issues related to the definition of family; how researchers develop theories and conduct research on family issues; how family experiences are shaped by factors such as race/ethnicity, social class, and the larger social context; how the key stages of the family life course and family challenges may be experienced by individuals and influenced by the larger social context; how family choices and processes impact the larger society. The course both provides a foundation for further study in both general sociology and sociology of the family, and prepares students to make informed choices about their future family-related issues. Throughout the course students are empowered to reflect on their individual experiences, and to link individual experience to the larger social context and the family as a key social institution.

SOC 35: Sociology of Aging
3 Credits
Introduction to the sociological study of aging. SOC 035 Sociology of Aging (3)(BA) This course meets the Bachelor of Arts degree requirements. The sociology of aging covers social aspects of aging, including common beliefs about older people, the diversity of the aged, and how institutions such as the economy and family influence the aging process. Evaluation methods include two exams, each worth 20 percent of the final grade, and a series of written assignments. For example, there is one 5-7 page paper and a second shorter one on aging
in another society. The course serves as a basis for taking SOC 435, Social Gerontology. It can be counted toward the major or minor in Sociology or Human Development and Family Studies.

Bachelor of Arts: Social and Behavioral Sciences

SOC 60: Society and Cultures in Modern Israel

3 Credits

An introduction to the society and cultures of the State of Israel from 1948 to the present.

Cross-listed with: ANTH 60, JST 60, PLSC 60
International Education: Social and Behavioral Sciences (GS)

SOC 83: First-Year Seminar in Sociology

3 Credits

Critical approaches to issues in the structure of society. SOC 083S First-Year Seminar in Sociology (3) (GS;FYS)(BA) This course meets the Bachelor of Arts degree requirements. Each section of this course will be limited to 20 students who will be instructed by an experienced faculty member. Each section will focus on a well-defined body of scholarship that addresses a relatively specific topic while at the same time provide an opportunity for surveying broadly existing knowledge in the discipline. The specific content of the course will vary from offering to offering, and depending on the interests of the instructor, will introduce students to a sociological perspective on particular social issues. For example, one section examines racism and sexism as axes of privilege and oppression. Other sections may deal with major social institutions, such as the family or religion, or with fundamental social processes (e.g., demographic, social, and psychological). Finally, some sections may have a heavier policy emphasis—examining responses to social issues—while others might take a comparative or international approach. Each section will emphasize the development of discussion, writing, and analytical skills and will give students the opportunity to work individually and in small groups. Students can expect to receive a general introduction to the University as an academic community and to explore their responsibilities as members of that community. They will also become familiar with the learning tools and resources available to them, and they will be able to establish relationships with faculty and other students who share their academic interests. This course fulfills a general education or Bachelor of Arts requirement in the social/behavioral sciences.

Bachelor of Arts: Social and Behavioral Sciences

SOC 110: Sociology of Gender

3 Credits

Changing sex role expectations and behavior for men and women in contemporary society. SOC (WMNST) 110 Sociology of Gender (3) (GS;US) (BA) This course meets the Bachelor of Arts degree requirements. This course provides an introduction to the analysis and understanding of how men's and women's lives are different and how they intersect with each other. The course focuses on the social construction of gender and the impact of gender on experiences in a variety of social contexts and institutions throughout the life course, including cross-cultural comparisons of gender expectations. An overriding objective is to help students better assess and analyze the effects of gender throughout history and in their everyday lives. Class sessions are a mixture of lectures, discussions, group exercises, guest speakers, and films designed to engage the students in the learning process. Each session helps students to critically evaluate the effects of gender discussed in their readings and experienced in their everyday lives. The evaluation tools used for this course extend this critical evaluation. Although the specific evaluation methods vary by sections, all sections use some form of reaction papers, book reviews, and/or journals. These writing assignments require students to demonstrate an understanding of the class readings, lectures, and activities, and to offer an evaluation and assessment of these readings and presentations. Because the social construction of gender is intertwined with family, work, religion, education, government, and all interpersonal interaction, the course overlaps with courses in each of these areas. This course meets a General Education requirement in Social and Behavioral Sciences. It can be used as a lower-level sociology course in the Sociology BA major and the Sociology minor. It can also be used as a supporting course in the Women's Studies major and minor.

SOC 119: Race and Ethnic Relations
4 Credits

Historical patterns and current status of racial and ethnic groups; inequality, competition, and conflict; social movements; government policy. SOC 119 Race and Ethnic Relations (4) (GS,US)(BA) This course meets the Bachelor of Arts degree requirements. This course has three objectives. First, the course will help you to think critically about issues related to race and ethnicity in American society. These issues include the meaning of race and ethnicity; the extent of racial and ethnic inequality in the U.S., the nature of racism, discrimination, and racial stereotyping; the pros and cons of affirmative action; the development of racial identity; differences between assimilation, amalgamation, and multiculturalism; and social and individual change with respect to race relations. The second objective is to foster a dialogue between you and other students about racist and ethnocentric attitudes and actions. The third objective is to encourage you to explore your own racial and ethnic identity and to understand how this identity reflects and shapes your life experiences. The course is offered in both a large and a small enrollment format. In large enrollment courses, you not only attend lectures, but also participate in weekly discussion groups run by teaching assistants. These discussion groups typically have between 10 and 15 students. Your course grade is based on a combination of objective examinations, participation in group discussions, and short writing assignments. One example of a written assignment involves weekly journals. Each of your journal entries (typewritten and one or two pages in length) will focus on personal reactions to course material and answers to questions posed by the instructor. The course also requires out-of-class attendance at two campus events related to race or ethnicity, such as films, speakers, or workshops. For each event, a one-page written summary and personal reaction is required. Teaching assistants provide feedback on writing. Small (or moderate) sections of the course usually operate without separate discussion sections. In these courses, however, instructors set aside a substantial amount of class time for discussion of course material, equivalent to about one class session per week. During discussions, the class may remain together or divide into smaller discussion groups. After addressing a topic, you may be asked to submit a short written reaction to the issues raised in the discussion. Assessment is based partly on objective examinations. In addition, the course requires a library research project in which you explore in greater detail a controversial topic covered in class. These papers require the use of multiple sources (books, journal articles), excluding the textbooks for the course. The instructor provides written feedback, prior to the end of the semester, on your papers. This course meets a general education requirement in the social and behavioral sciences as well as a general education requirement in intercultural and international competence.

Bachelor of Arts: Social and Behavioral Sciences
United States Cultures (US)

SOC 120N: Knowing Right from Wrong
3 Credits

Knowing Right from Wrong provides a comprehensive understanding of the nature of moral ideas, beliefs, and behaviors in contemporary contexts. What roles do nature and nurture play in the development of moral sensibilities? How do moral emotions and moral reasoning interact to produce moral behavior? What defines moral character and how does it influence what we do? Is it possible to derive what ought to be done from what is known about the world? How do we respond when moral demands compete with another? How do our moral convictions color our perceptions of world events? Can individuals and groups with differing moral commitments communicate with one another and live together peacefully? The course integrates perspectives from philosophy, psychology, and sociology, and prepares students to think about (and act in) a world in which morality (and its linked concepts, such as judgment of others) plays an increasingly important social and political role. The course treats morality as both an aspirational concept and as an actual social practice, and focuses on three major themes: (1) the origins and development of moral reasoning and ethical systems, (2) the influence of moral emotions and moral intuitions on moral reasoning and behavior, and (3) the influence of social and contextual factors on moral behavior and expression. Integrating the philosopher's interest in ethics, with the psychologist's interest in the mind and body, and the sociologist's interest in groups, the course provides a comprehensive introduction to morality in contemporary society, and the ways in which it shapes the lives of people in everyday situations.

SOC 145N: The Holocaust and Human Rights
3 Credits

This inter-domain course integrates historical (GH) study of the Holocaust with sociological (GS) perspectives on the Holocaust and human rights. Topical content begins with historical antisemitism ('the longest hatred') and elaborates the history of the Holocaust in Germany and in Europe. A second half of the course explores subsequent definitions of genocide and human rights, globally established by the United Nations through international law. Post-war campaigns to reduce prejudice and to raise 'Holocaust consciousness' are presented along with sociological insights into problems of persecution through eugenics, xenophobia, and racialized inequalities. Survivor testimonies underscore the value of resilience and the ethics of standing up against injustice, including discrimination or persecution based on cultural or another group identification.

SOC 162N: Communicating Care
3 Credits/Maximum of 3

Communicating Care ENGL 162N / SOC 162N / CAS 162N What do we talk about when we talk about health? Our states of well-being and illness are topics that, like the weather, drive our daily conversations, but we rarely have time to study and practice these vital exchanges. Spoken in emergency rooms or on long-distance calls, by medical professionals, family members, or strangers making small talk, the languages we use to share pain and recovery require our knowledge of long-established scripts and our willingness to improvise. By exploring how these encounters draw from and work as textual and dramatic performances, this course will guide students to achieve a new level of literacy in the most essential communicative art of caring. Students will analyze health conversations in literary texts, such as short stories, poems, memoirs, and graphic novels. They will explore real-life scenarios drawn from their own experiences, fieldwork, social science theories, and published case studies. Developing skills in the humanities (GH), they will see how subjective, often individual experience, historical perspectives, and creative expression help people to communicate about health and care. Developing their abilities in the social and behavioral sciences (GS), they will see how theory provides insights to predict and understand health and practices of care, investigate objective perspectives and recognize the contributions of fieldwork and data-driven studies to analyzing and improving communication when health is a main concern. They will integrate these methodologies especially to pursue these fields' common goals of making beneficial connections between individuals and groups, and managing private and public life.

SOC 201: Presumed Innocent? Social Science of Wrongful Conviction
3 Credits

Social science of how wrongful convictions occur; disparities in the criminal justice system; risks, factors, and policies.

Cross-listed with: CRIM 201
General Education: Social and Behavioral Scien (GS)

SOC 205N: Critical Race Theory in the Humanities and Social Sciences
3 Credits

This course closely examines the place and power of race in America. By tracing the history of how race works in particular American institutions, such as public education, criminal justice, and federal housing, students will gain a deep sense of how social categories and understandings shape material conditions and human welfare. Through the study of policies, court cases, memoirs, documentary films, and freedom struggles, this course will interrogate the many Americas that race has created and their implications for democracy and justice. Not only will this course focus on making race visible, but also the many ways that race intersects with class, gender, and sexuality and how these concepts empower and marginalize at the same time. All the while, students will use Critical Race Theory methods to reach empathy and strengthen social (GS) and historical (GH) literacies. Discussion, writing, critical reading, and primary source analysis will be integral to this class. Class sessions will include whole- and small-group discussion where active listening and thoughtful participation will be taught and required. Students will be encouraged to explore their own conceptions of race and how those ideas shape knowledge and experience. Ultimately, this is a course that will weave data, theory, and story as we encourage students to move toward empathy through comprehensive understandings of race. This course therefore examines race as both deeply personal and structural.

SOC 207: Research Methods in Sociology
3 Credits

Experiential-based course covering the four main social research methods: available data, survey research, experiments, and field research.
**Prerequisite:** 3 credits in Sociology
Bachelor of Arts: Social and Behavioral Sciences

**SOC 208N: Visual Representations of the Middle East in the US and Middle East**

3 Credits

This course is an introduction to the visual culture, the visual experience and sociological/historical context of images of the Middle East in the US mass media. The focus of the course will be on reading and interpreting visual images (painting, photography, film, illustration, digital media) and analyzing the larger social and cultural forces that shape the production, distribution and consumption of these media forms. We will explore these issues by focusing on a series of images/case studies located in a specific historical context, allowing us to introduce some of the major movements in visual culture, explore the social contexts of these images, and the ways in which the visual experience shapes our social lives and personal identities. Course evaluations will include exams, writing assignments, a class blog, and a final art project. The course examines visual representations of cultures over time, providing students with the artistic, historical, political and sociocultural context of their production. This integrative framework will enable students to understand how the creation of visual media and its interpretations both influence and are influenced by social context. It will introduce students to integrative thinking by providing them with interpretive techniques of the social sciences and the arts to increase their powers of visual analysis so that they can discuss an image's medium, composition, style and iconography. The course will examine the ways that the arts can be an expression of cultural values, helping students to comprehend the hegemonic aspects of image composition, production, exhibition and distribution. The course will explore the social milieu in which media is created, often depicting stereotypical images that poorly represent the complexity of the myriad cultural groups in the Middle East.

**SOC 209: Poverty in Africa**

3 Credits

African countries are generally considered to be among the poorest countries on the planet. On average, their incomes are low as are their levels of education. Poor African countries also have a range of peculiar characteristics that negatively affect their living standards. As these standards decline, western audiences have increasingly been targeted by aid organizations seeking donations to help the African cause. Despite growing awareness of African poverty, however, few attempts have been made to locate discourses on African poverty within historical, theoretical, and contemporary contexts. This course provides an overview of the key issues foundational for understanding the dynamics of poverty and human development in African societies. It examines various academic conceptualizations of poverty, the dimensions of poverty in African countries, as well as poverty's various causes and consequences. The course also intends to highlight the complex nature of the social, political, and economic causes of African poverty and their implications. Furthermore, it will identify the important challenges to poverty alleviation in African societies, the effectiveness of foreign aid, and alternative strategies to poverty alleviation. The course will also provide unique opportunities for students to develop a focused understanding of specific issues that affect Africa’s socioeconomically vulnerable groups as well as related issues relevant for understanding the dynamics of poverty in specific areas on the continent.

**SOC 210Z: Social Determinants of Health**

3 Credits/Maximum of 3

How is it that the United States spends more on medical care than any other country and yet ranks poorly on many indicators of health and well-being? Why are there so many and important health disparities across different population groups within the United States? How do our social, economic and political conditions ‘get under the skin’ to affect our health and well-being? These kinds of questions are fundamental in the growing interdisciplinary field of population health and will be addressed in this course. The purpose of this course is to introduce you to the social factors that influence health, such as race, class, gender, social networks, families, and public policies. We will explore the range of broader social factors that influence health, key sociological concepts and theories that help us understand these processes, and methods used to study them. The course will enhance student education and engagement in the area of vulnerable populations and health equity. After taking this course, students will be able to: - Describe the social and economic factors that influence health and disease patterns - Describe and discuss the social and economic factors that contribute to health inequalities across populations, particularly in the United States - Understand the important role social determinants play in the health of individuals and society HDFS 210Z and SOC 210Z are linked

**SOC 211Z: Health Inequality: Understanding the Geographies of Life and Death**

3 Credits/Maximum of 3

This course provides an introduction to the concepts, measurement and study of health and health inequality across geographic scales from the international to the local scale, and to study health inequality in diverse contexts (including urban and rural; historical and contemporary). The lectures will cover the nature, causes and consequence of health inequality, temporal trends and spatial patterns in health indicators, and examine associations between socioeconomic and environmental factors and health. The emphasis will be on easily measured and available primary health indicators such as mortality and morbidity, communicable and non-communicable disease as well as mental health. The lab component of the course will focus on finding, critiquing, interpreting and presenting health-related data and will introduce students to fundamental
cinematic representations of various global actors, issues, institutions and cultural theorists, and will link those key texts to a diverse array of familiar with key texts on globalization produced by social scientists global social phenomena. Through course readings, students will become This course explores how films reflect (and in some cases attempt to testify in court, etc.). By definition, this course will detail issues relevant legal issues (e.g., termination of parental rights, children's advocacy, prosecution, and prevention of child maltreatment as well as the treatment of adverse health outcomes for children who have been maltreated. Specific topics include the causes, correlates, and consequences of child maltreatment, best practices for reporting and investigating an allegation of child maltreatment, evidence-based prevention and intervention programs, the Child Welfare System, and relevant legal issues (e.g., termination of parental rights, children's testimony in court, etc.). By definition, this course will detail issues related to the abuse and neglect of children. This material can be difficult to hear, view, and discuss. This course is a required course, and a prerequisite for all advanced courses, for a Minor in Child Maltreatment and Advocacy Studies.

Cross-listed with: CMAS 258, HDFS 258

SOC 258: Introduction to Child Maltreatment and Advocacy Studies
3 Credits
Introduction to the multidisciplinary field of child maltreatment. CMAS (HD FS) 258 Introduction to Child Maltreatment and Advocacy Studies (3) This course will focus on the identification, investigation, service, advocacy, prosecution, and prevention of child maltreatment as well as the treatment of adverse health outcomes for children who have been maltreated. Specific topics include the causes, correlates, and consequences of child maltreatment, best practices for reporting and investigating an allegation of child maltreatment, evidence-based prevention and intervention programs, the Child Welfare System, and relevant legal issues (e.g., termination of parental rights, children's testimony in court, etc.). By definition, this course will detail issues related to the abuse and neglect of children. This material can be difficult to hear, view, and discuss. This course is a required course, and a prerequisite for all advanced courses, for a Minor in Child Maltreatment and Advocacy Studies.

Cross-listed with: CMAS 258, HDFS 258

SOC 290N: Cinema and Globalization
3 Credits/Maximum of 3
This course explores how films reflect (and in some cases attempt to explain, promote and memorialize) the emergence and transformation of global social phenomena. Through course readings, students will become familiar with key texts on globalization produced by social scientists and cultural theorists, and will link those key texts to a diverse array of cinematic representations of various global actors, issues, institutions and processes, as well as historical and theoretical interpretations and debates on globalization. The course introduces students to the work of internationally recognized film directors (for example, Euzhan Palcy, Jia Zhangke, Stephen Frears, Rainer Werner Fassbinder, or Majid Majidi) and studies of globalization (by scholars such as Arjun Appadurai, Guy Standing, Saskia Sassen, John Tomlinson, Robbie Robertson), and asks students to link scholarly perspectives with the visual rhetoric of cinema artists.

Enforced Prerequisite at Enrollment: ENGL 15 and COMM 150

1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

SOC 300: Preceptorship in Sociology
1-4 Credits/Maximum of 8
Supervised experience as a teaching assistant under the supervision of an approved faculty member.

Prerequisite: 3 credits in course work related to the subject of the course Bachelor of Arts: Social and Behavioral Sciences

SOC 309: Sociology of Health
3 Credits
Sociological concepts and principles operative in public and private areas of health and illness, including cultural, ethnic, and ecological factors.

Prerequisite: 3 credits in Sociology Bachelor of Arts: Social and Behavioral Sciences

SOC 376: Introduction to Human Service Organizations
3 Credits
This course is designed to acquaint students with the role of various social agencies. The course covers the history of social service organizations in the United States, with an emphasis on the growing diversity of theory and practice in human service settings. Focus is placed on understanding social service organizations through the conflict, symbolic interactionist, and functionalist perspectives. Other perspectives are also considered. The course centers on the kinds of social services that exist and their operation in society. An emphasis is placed on ethical behaviors and best practices in human service professions, with the goal of preparing students for work in social service settings.

SOC 381: Junior Honors Seminar in Sociology
1 Credits
Supervised experience in planning the honors thesis and a sociological career.

Prerequisite: sociology major, junior standing, and admission to the Schreyer Honors College Bachelor of Arts: Social and Behavioral Sciences Honors

SOC 400W: Senior Research Seminar
3 Credits
Major concepts and principles of sociology through reading, data analysis, and writing. Capstone course for senior Sociology majors.

Prerequisite: SOC 470 Bachelor of Arts: Social and Behavioral Sciences Writing Across the Curriculum

SOC 403: Advanced Social Psychology
3 Credits
Analysis of the major theoretical approaches and research findings of contemporary social psychology.

Prerequisite: SOC 003 Bachelor of Arts: Social and Behavioral Sciences

SOC 404: Social Influence and Small Groups
3 Credits
The study of social influence, leadership and status, and social cohesion and commitment processes in small groups.

Prerequisite: SOC 003 or PSYCH420 Bachelor of Arts: Social and Behavioral Sciences

SOC 405: Sociological Theory
3 Credits
Overview of the development of sociological theory; current issues and controversies.

Prerequisite: 3 credits in the Sociology Bachelor of Arts: Social and Behavioral Sciences

SOC 406: Sociology of Deviance
3 Credits
Theory and research concerning deviant behaviors and lifestyles viewed as significant departures from a group’s normative expectations. SOC (CRIMJ/CRIM) 406 Sociology of Deviance (3) (BA) This course meets the Bachelor of Arts degree requirements. Sociology of Deviance focuses on the theory and research in social construction of social norms, the violation of norms, and social reaction to the violation of norms. The course focuses on the role of social structure and power in the definition of deviance, on structural, cultural, and social psychological processes involved in deviant behavior, and the dynamics of social reaction to deviance. The course includes some content focusing on criminal deviance, but also emphasizes non-criminal deviance, as well as the role of social movements and social change in constructing and contesting deviance definitions. CRIMJ/SOC/CRIM 012 and CRIM/CRIMJ 250W are prerequisites. This course may be counted toward the credits required for the B.A. and B.S. in Crime, Law, and Justice. It would fulfill one of the 400-level requirements in the ‘Crime’ component of the major. The course may also be counted toward credits required for the B.A. and B.S. in Sociology for students with the Deviance and Criminology specialization.

Prerequisite: SOC 012, SOC 013, or SOC 005, or permission of program Cross-listed with: CRIM 406, CRIMJ 406 Bachelor of Arts: Social and Behavioral Sciences

SOC 406H: Sociology of Deviance
3 Credits
Theory and research concerning deviant behaviors and lifestyles viewed as significant departures from a group’s normative expectations.

Cross-Listed Bachelor of Arts: Social and Behavioral Sciences Honors
SOC 408: Urban Ecology

3 Credits

Spatial and temporal aspects of urban structure; urban growth, neighborhoods, racial and ethnic groups, mental illness; cross-cultural perspectives.

Prerequisite: 3 credits in sociology
Bachelor of Arts: Social and Behavioral Sciences

SOC 409: Racial and Ethnic Inequality in America

3 Credits

The impact of inequality and discrimination on individual and group identity among various racial and ethnic groups. SOC 409 / AFAM 409 Racial and Ethnic Inequality in America (3) (US) (BA) This course meets the Bachelor of Arts degree requirements. This course explores the impact of inequality and discrimination experienced by local and national populations, a significant portion of the class will address issues rooted in international structures and institutions. Students are evaluated on quizzes, reaction papers, and analysis journals. AFAM 409 / SOC 409 is not required in Sociology; it is, however, an optional 400-level course for all majors and minors that fulfills one of their upper-level course requirements. AFAM 409 / SOC 409 is not required for the major or minor, but it is one of several optional courses from which they can choose to fulfill major and minor requirements.

Prerequisite: 3 credits in Sociology
Cross-listed with: AFAM 409
Bachelor of Arts: Social and Behavioral Sciences
United States Cultures (US)

SOC 411: Racial and Ethnic Diversity and the American Family

3 Credits

This course will explore the nature and determinants of racial and ethnic variation in family processes in the United States. HD FS 416 (SOC 411) Racial and Ethnic Diversity and the American Family (3) During the last several decades, the racial and ethnic composition of the U.S. population has changed dramatically. At the end of the 20th century, non-Hispanic whites accounted for less than 75 percent of the U.S. population. While blacks remained the largest minority group, there were nearly as many Hispanics as blacks, and the number of Asians was increasing. Population projections indicate that by the middle of the 21st century, Hispanics will make up nearly one-fourth of the U.S. population. Blacks, Asians, and American Indians together will comprise an additional fourth of the population. The last several decades have also brought significant changes in family life in the United States, including declining rates of marriage, a rising age-at-marriage, an increase in cohabitation, and a dramatic rise in the proportion of births outside of marriage. These trends in family life have been experienced by all racial and ethnic groups, there is substantial variation in family patterns by race and ethnicity. The course will build on other courses in social inequality and the family. The course does not overlap with any existing courses in the Department of Sociology or with courses offered in other relevant departments. This course will explore the nature and determinants of racial and ethnic variation in family processes in the United States. The student will read articles from major sociological journals and learn to extract major points and issues. He/she will learn to synthesize and critique various arguments on major issues in the field. The student will acquire skills in summarizing and evaluating arguments in essay form. He/she will also develop oral presentation skills. Final grades for the course will be based on class participation, a brief (approximately 5 pages) paper, a group presentation, a midterm examination (essay format) and a final examination (essay format). The course is not required for the Sociology minor or major. However, the course can count as one of the 400-level elective courses in Sociology for the Sociology minor, B.A. or B.S.

Enforced Prerequisite at Enrollment: 3 credits in SOC
Cross-listed with: HDFS 416
United States Cultures (US)

SOC 412: Crime, Social Control, and the Legal System

3 Credits

Legal and extralegal control; public opinion on crime; criminal justice and correctional processes; legal sanctions; control strategies. Field trip.

Prerequisite: SOC 012 , SOC 013 , or SOC 005
Cross-Listed
Bachelor of Arts: Social and Behavioral Sciences

SOC 413: Advanced Criminological Theory

3 Credits

This course provides an in-depth look at theories of crime and examines influential empirical studies designed to these theories. CRIMJ 413 CRIMJ (CRIM/SOC) 413 Advanced Criminological Theory (3) Advanced criminological theory is intended to extend and deepen students’ knowledge of core ideas in criminology. The course has four main emphases: 1) learning major schools of thought in criminology; 2) learning about the uses and construction of theory; 3) learning about approaches to integrating criminological theories, and 4) exploring how criminological concerns are grounded in and interrelated with core issues in sociology. The course is offered once a year with 50 seats per offering. CRIMJ/CRIM/SOC 012 is a prerequisite. Students will be evaluated on research or analytical papers, written assignments on course readings, and/or in-class essay-style exams. This course may be counted toward the credits required for the B.A. and B.S. in Crime, Law, and Justice. It would fulfill one of the 400-level requirements in the major. The course may also be counted toward credits required for the B.A. and B.S. in Sociology for students with a Deviance and Criminology specialization.

Prerequisite: CRIMJ012 , CRIMJ250W
Cross-listed with: CRIM 413, CRIMJ 413

SOC 414: Criminal Careers and the Organization of Crime

3 Credits

Research on and theory of criminal careers and crime organizations, emphasizing recruitment and disengagement; offender characteristics and lifestyles; policy implications.

Prerequisite: CRIMJ012 , or CRIMJ013 , or SOC 005
Cross-listed with: CRIMJ 414
Bachelor of Arts: Social and Behavioral Sciences
SOC 416: Sociology of Education
3 Credits
The theoretical, conceptual, and descriptive contributions of sociology to education.
Cross-listed with: EDTHP 416
Bachelor of Arts: Social and Behavioral Sciences
United States Cultures (US)

SOC 419: Race and Public Policy
3 Credits
Seminar format course in which sociological theory and research are applied to current race policy issues.
Prerequisite: 3 credits in Sociology
Bachelor of Arts: Social and Behavioral Sciences
United States Cultures (US)

SOC 422: World Population Diversity
3 Credits
Survey of world diversity in national population growth/composition; the impacts of demographic change on the economic/social life of nations/people.
Prerequisite: 3 credits in Sociology
Bachelor of Arts: Social and Behavioral Sciences

SOC 423: Social Demography
3 Credits
Social demographic perspectives on fertility, mortality, morbidity, migration, population density, demographic transitions, social mobility, family, the aged, and minorities.
Prerequisite: SOC 023 or SOC 422
Bachelor of Arts: Social and Behavioral Sciences

SOC 424: Social Change
3 Credits
Critical review of classical and recent theories of social change, emphasizing the transformations occurring in the modern world.
Prerequisite: 3 credits in sociology
Bachelor of Arts: Social and Behavioral Sciences

SOC 425: Social Conflict
3 Credits
An analysis of the variables affecting intergroup and international conflict and cooperation.

SOC 428: Homelessness in America
3 Credits
Survey of social science research on homelessness in the contemporary United States.

SOC 429: Social Stratification
3 Credits
Structure and dynamics of class, caste, and status systems; class differentials and social mobility; current theoretical and methodological issues.
Prerequisite: 3 credits in sociology
Bachelor of Arts: Social and Behavioral Sciences

SOC 430: Family in Cross-Cultural Perspective
3 Credits
Sociological analysis of family systems in various cultures and subcultures.
Prerequisite: 3 credits in Sociology
Bachelor of Arts: Social and Behavioral Sciences

SOC 431: Family Disorganization: Stress Points in the Contemporary Family
3 Credits
Focuses on divorce, remarriage, incest, family violence as well as problems associated with family formation and parent-child relations.
Enforced Prerequisite at Enrollment: 6 credits in HDFS or 6 credits in PSYCH or 6 credits in SOC or (3 credits in HDFS and 3 credits in PSYCH) or (3 credits in HDFS and 3 credits in SOC) or (3 credits in PSYCH and 3 credits in SOC)
Cross-listed with: HDFS 431
Bachelor of Arts: Social and Behavioral Sciences

SOC 432: Social Movements
3 Credits
Why and how people mobilize to promote or retard social change. Factors predicting success or failure of social movements.
Prerequisite: 3 credits in sociology
Bachelor of Arts: Social and Behavioral Sciences
SOC 435: Perspectives on Aging

3 Credits

An analysis of the demographic, social, and cultural factors affecting the aged population in American society.

**Enforced Prerequisite at Enrollment:** HDFS 312W and 6 credits in sociology

Cross-listed with: HDFS 434

Bachelor of Arts: Social and Behavioral Sciences

SOC 440: Family Policy

3 Credits

An in-depth examination of family policy. HDFS (SOC) 440 Family Policy (3)(BA) This course meets the Bachelor of Arts degree requirements. This course is designed to provide an in-depth examination of family policy. Students will identify and critically analyze major issues, controversies, and policies that affect families. Attention will be devoted to recognizing both intended and unintended consequences of family policies and understanding policy challenges and trade-offs. Students will gain an understanding of how policies are shaped by both facts and myths, as well as our values. Students will examine historical and current trends in family patterns (e.g., divorce, women's labor force participation, nonmarital births) to understand the implications they hold for individuals, families and society. Students will gain an awareness of the social, economic, historical, legal, and political contexts within which family policies exist and are proposed. Although the main focus is on U.S. family policy, some time will be devoted to learning about family policies in other countries. We will learn about several specific family policies in-depth (e.g., welfare), but a final goal is to help students develop a general way of looking at family policy that they can then use to understand any issue of family policy that unfolds throughout their lifetime. This course will foster thoughtful reflection and critical thinking, writing skills, research skills, and skills of synthesis, logic, and argument. Course goals will be accomplished through course readings, writing assignments, lectures, class discussions, debates and group projects. Mastery of course material and student evaluation are assessed in several ways. Students will take a midterm and final exam that cover lectures, class discussions, and assigned readings. Two papers are also required. The first paper is based on an analysis of newspaper articles dealing with family policy issues that students will collect and relate to course materials. The second paper is a literature-based analysis of a family policy in a society outside the United States. Class participation is also essential and its evaluation will be based on a combination of class attendance, contributions to class discussions, participation in group debates and projects, and an oral presentation of the final paper on a non-U.S. family policy.

**Enforced Prerequisite at Enrollment:** 3 credits of SOC or HDFS

Cross-listed with: HDFS 440

Bachelor of Arts: Social and Behavioral Sciences

SOC 445: U.S. Immigration

3 Credits

This class examines theories of U.S. immigration and immigrant adaptation, effects of immigration, and policy. SOC 445 U.S. Immigration (3) The United States has long been known as a nation of immigrants. People have come for all sorts of reasons, including economic opportunity, political asylum, and religious freedom. Immigration continues to be a fundamental source of demographic and social change today. However, the nature of the changes brought about by immigration will depend on the pathways immigrants and their descendants take as they incorporate into American society. This course is designed to introduce students to theories of immigration, patterns of immigrant incorporation, immigration's impact on the U.S., and political debates about immigration issues. Topic to be discussed include: -Why do immigrants come to the U.S.? -In what kinds of communities do immigrants live? -What is the economic impact of immigration on U.S. society? -What is the social impact of immigration? -Are new immigrants assimilating? -What are the problems with current immigration policies and what are the alternative approaches to reform?

**Prerequisite:** 3 credits in Sociology

SOC 446: Political Sociology

3 Credits

Sociological analysis of types of political organization and their relations with other elements of social life.

**Prerequisite:** 3 credits in sociology

Bachelor of Arts: Social and Behavioral Sciences

SOC 447: Ethnic Minorities and Schools in the United States

3 Credits

Analysis of the social and cultural factors which affect educational outcomes among minority pupils, especially Blacks, Hispanics, and Indians.

Cross-listed with: EDTHP 447

United States Cultures (US)

SOC 448: Environmental Sociology

3 Credits

Examination of the relationship between the physical environment and society.

**Prerequisite:** 60 credits, at least 9 of which are in the social sciences, graduate status, or permission of the program

SOC 450: Justice and the Environment

3 Credits

Considers notions of justice in relation to environmental philosophy, environmental movements, and general environmental concerns.

**Prerequisite:** 90 credits, graduate status, or permission of the program

SOC 451: Health, Disease & Society

3 Credits

This course provides an introduction to the concepts, measurement and study of inequality across spatial scales and in diverse contexts.

SOC 451 Health, Disease & Society (3) (GS) Health is not simply a matter of biology, but involves a number of factors that are social, cultural, political, geographic, and economic in nature. This course will focus on the critical role social factors play in determining or influencing the health of individuals, groups, and the larger society. The emphasis in the
course is on the social patterning of health and disease with focusing on variation by age, gender, race/ethnicity, disability status, socioeconomic status (income, education, occupation) and neighborhood/community. There will be selected coverage of the ‘sociology of medicine’ with some discussion of medical power and knowledge, the organizational structure of health care, and the experience of illness and such issues such as stigma.

**Prerequisite:** 3 credits in sociology or the social and behavioral sciences and 5th semester standing

General Education: Social and Behavioral Scien (GS)

SOC 452: Spatial Inequality

3 Credits

This course provides an introduction to concepts, measurement and study of spatial inequality in the US and across the globe. SOC 452 Spatial Inequality (3) This is a lecture and lab-based course that provides an introduction to the concepts, measurement and study of inequality across spatial scales from international and national through to sub-national and local scales, and to study spatial inequality in diverse contexts (urban and rural; historical and contemporary). This will cover diverse substantive topics such as racial segregation, housing and labor markets, exposure to risks (e.g., pollution, crime, NIMBY facilities) and access to resources (e.g., supermarkets, schools, and health care). The lab component introduces undergraduates to geographic information system software and basic spatial analysis. The lecture component of the course has four main sections. In Section 1 the focus is on fundamental questions such as: Why inequality? How to measure inequality? What are the key dimensions of inequality? This section will be wrapped up by an overview of the causes and consequences of inequality. In Section 2 the focus is on inequality between nations and inequality within nations (i.e., non-US). Section 3 will focus on the United States and specifically examining different levels or ‘territories’ of inequality; neighborhood-level to state-level differences. This section focuses on urban spatial inequality and issues such as spatial segregation, access to services and exposure to risks. Section 3 concludes with discussions of rural inequalities focusing on access to health services. Section 4 focuses on 21st century challenges regarding rapid urbanization in the developing world and revisits themes related to ‘Global’ inequality. The lab components of the course will parallel lectures and provide opportunities for practical learning. Specifically the labs are designed to expose students in sociology and across the social sciences to the use of geospatial data, geographic information systems and basic spatial analysis tools providing them with skills that help them to accurately summarize and report data on spatial inequalities. Students will learn how to find, critique, and use data appropriately to measure and map inequality. They will be introduced to spatial analytical concepts and learn how to assemble geospatial databases. They will learn skills associated with basic exploratory spatial data analysis and understand concepts such as scale, spatial heterogeneity, and spatial dependence.

**Prerequisite:** 3 credits in sociology or the social and behavioral sciences

SOC 454: The City in Postindustrial Society

3 Credits

Postindustrial social organization in the United States and Europe; consequences for metropolitan social stratification, community power, and environmental quality.

**Prerequisite:** 3 credits in Sociology
primary texts, creative works, and scholarly analyses. The assignments will be structured to facilitate preliminary experience in independent analysis, library research, or field research. The course will be offered approximately once a year. Enrollment will be limited to 30 students in order to promote active, engaged learning. Evaluations will be based on short papers and outlines that will prepare students for their final, term papers.

**Prerequisite:** ANTH 001 or ANTH 045, HEBR 010, JST 010, SOC 001, SOC 005, SOC 007, SOC 015
Cross-listed with: ANTH 457, JST 457
International Cultures (IL)
United States Cultures (US)

SOC 459: Communities and Crime
3 Credits

In this course you will learn about how crime levels vary across different types of neighborhoods and about the role of different socioeconomic, demographic, spatial, and informal social control aspects of neighborhoods in promoting or buffering crime. We will address the patterns, concepts, theories, methods, and policies related to communities and crime. We will critically assess theory and research on the effects of neighborhood structure and social organization on crime, focusing in particular on the classic and contemporary thinking on poverty, social disorganization, disorder, collective efficacy, institutional trust, cultural heterogeneity, segregation, immigration and how they affect criminal behavior and victimization. Through readings, class discussions, and activities, writing projects, and presentations, you will be given the opportunity to reflect on what you are learning and to apply the theoretical concepts to real-life examples and to new contexts in and out of the class.

**Prerequisites:** SOC 12 or CRIM 12
Cross-listed with: CRIM 459

SOC 461: Sociology of Religion
3 Credits

Contemporary religion in the global perspectives: beliefs, structure, and function of major religious traditions, denominations, and cults.

**Prerequisite:** 3 credits of sociology or religious studies
Cross-listed with: RLST 461
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)

SOC 467: Law and Society
3 Credits

Law and society studies the social origins of law and legal systems; occupational careers, and decision-making of legal officials. SOC (CRIMJ/CRIM) 467 Law and Society (3) (BA) This course meets the Bachelor of Arts degree requirements. Law and society teaches students’ knowledge of key concepts and core ideas about the role of law in society. The course will cover the basics of key legal philosophies, major social science theories of law and society, research in law and society, the structure of the legal profession, and vital contemporary issues involving the role of law in society. CRIM/CRIMJ 113 and CRIM/CRIMJ 250W are prerequisites. The evaluations methods will include written assignments on course readings, and essay-style exams. Law and Society may be counted toward the credits required for the B.A. and B.S. in Crime, Law and Justice. It would fulfill one of the 400-level requirements in the 'Law' component of the major. The course may also be counted toward credits required for the B.A. and B.S. in Sociology for students with the Deviance and Criminology specialization.

**Prerequisite:** CRIMJ100 or CRIMJ113 or permission of program
Cross-listed with: CRIM 467, CRIMJ 467
Bachelor of Arts: Social and Behavioral Sciences

SOC 468: Mood-Altering Substances in Society
3 Credits

Perspectives of cultures throughout the world toward mood-altering substances are reviewed in light of public policy, benefits, and problems.

SOC 469: Techniques in Small Group Facilitation
1-4 Credits/Maximum of 12

This course is the training course for students working as facilitators with the World in Conversation Project. SOC 469 Techniques in Small Group Facilitation (1-4 per semester/maximum of 12) SOC 469 is an advanced training course for students who have been selected to be facilitators for the World in Conversation Project. In this course, students draw on sociological theories and methods to learn how to sharpen their group facilitation skills in order to lead small group dialogues on race relations. The main objective is to learn how to create an ideologically neutral environment in which participants will think critically and speak candidly about their views and roles in race relations. All evaluations are accomplished through ‘live’ observations of students actually facilitating dialogue. In order to be considered for a position as facilitator with the World in Conversation Project, a student must successfully complete SOC 119 (Race and Ethnic Relations) and SOC 300 (Preceptorship in Sociology). There are different learning objectives for students who take SOC 469 the first time as compared to those returning for multiple semesters. The general objectives are as follows: Semester 1: During the first semester, students develop advanced facilitation skills. In the context of work with the World in Conversation Project, this means that they acquire the tools they need to encourage critical thinking, to address complex racial and culture-related subjects and emotions, to lead ‘ideologically neutral’ dialogue, and to more adeptly understand and implement the Socratic Method. At the core of their learning is study of the sociological dynamics of group process. Semester 2: During the second semester, students develop their social and emotional intelligence as the foundation for implementing successful conversational interventions. The core of their learning involves integrating a more advanced understanding of their own personal cultural identity with more advanced facilitation techniques. In other words, in order to master small group facilitation and group process, students need to explore the nuances of their own personal racial and cultural identities and how these enter into their work as facilitators. Semester 3: Students stay on for a third semester only if they can clearly articulate the advanced facilitation/observation/interpretation skills learned during the first two semesters in a way that allows them to assume the role of a peer mentor with new facilitators. A student is only invited back for subsequent semesters of SOC 469 if they have successfully accomplished the learning objectives set forth for each semester. The method of evaluation is standard for each semester that a student takes the class, and consists of a combined approach that includes: 1) live observations via an audio/video monitoring system and performance goal-setting with instructors and WCP staff (weekly), 2) self-evaluation and personal goal-setting through review of recorded
small group dialogue sessions (three times per semester), and 3) personal meetings with course instructors (twice per semester). For
Your Information: What is the WCP? These are campus wide 90 minute, peer facilitated small groups where trained undergraduate students (former SOC 119 facilitators) help participants explore their personal stories, views, biases and roles in race relations using a version of the Socratic Method. These inquiry-based sessions are designed to discuss the true nature of race relations face to face in an ideologically neutral environment. The conversations are extremely popular with participants (85 percent rate them as valuable and worthwhile) and the number offered each year has grown from 140 to over 800 in just six years. Currently twenty facilitators work for the project, all Penn State undergraduate students. The WCP Mission Statement: The mission of the RRP is to create an ideologically neutral environment for dialogue where individuals can voice their true concerns about race relations and begin to address these concerns in a productive and meaningful way. WCP Philosophy: Our guiding assumption is that the articulation of one’s viewpoint on an issue is the beginning of greater understanding and knowledge of that subject. And the experience of doing so with others in a group setting creates a kind of synergy that advances critical thinking as well as bridge building.

Prerequisite: SOC 119 and SOC 300

SOC 470: Intermediate Social Statistics

4 Credits

Descriptive and inferential statistics in social research: central tendency and variation, normal distribution, measures of association, confidence intervals, hypothesis testing.

Prerequisite: SOC 207
Bachelor of Arts: Social and Behavioral Sciences

SOC 471: Qualitative Research Methods in Sociology

3 Credits

Theory, methods, and practice of qualitative data collection, including observation, participant observation, interviewing; supervised projects in natural settings.

Prerequisite: 3 credits in Sociology
Bachelor of Arts: Social and Behavioral Sciences

SOC 477: Sociology of Sexuality

3 Credits

An analysis of the demographic, social, and cultural factors affecting the developments and experience of sexuality in contemporary society.

Prerequisite: 3 credits in Sociology
Cross-listed with: WMNST 477

SOC 481H: Senior Honors Seminar in Sociology

1 Credits

Supervised experience in planning and writing the honors thesis.

Prerequisite: sociology major, senior standing, and admission to the Schreyer Honors College
Honors

SOC 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Social and Behavioral Sciences

SOC 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Social and Behavioral Sciences
Honors

SOC 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor
Bachelor of Arts: Social and Behavioral Sciences

SOC 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Social and Behavioral Sciences

SOC 496H: Independent Studies

3 Credits

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Social and Behavioral Sciences
Honors

SOC 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Social and Behavioral Sciences

SOC 499: Foreign Study--Sociology

2-6 Credits/Maximum of 6

Study, in selected foreign countries, of groups, institutions, and social problems.

Prerequisite: 3 credits in Sociology
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
Software Engineering (SWENG)

SWENG 311: Object-Oriented Software Design and Construction
3 Credits

Design, documentation, testing, and construction of software using software engineering strategies embodied in object-oriented programming languages. SWENG 311 Object-Oriented Software Design and Construction (3) Object-oriented design and programming embody powerful design strategies that are based on practical and proven software engineering techniques. In this class, students will learn how existing object-oriented languages support these strategies, how to apply these strategies to moderately-sized systems, and how to use a visual object-oriented modeling tool such as the Unified Modeling Language (UML). Students will build on programming skills acquired in prerequisite programming courses by programming in a major object-oriented programming language.

Enforced Prerequisite at Enrollment: CMPSC 122

SWENG 395: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor

SWENG 396: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

SWENG 400: Introduction to Software Engineering Studio
3 Credits
Provides an introduction to the principles of software engineering and includes complementary instruction in one programming language.

Enforced Prerequisite at Enrollment: Senior standing or above

SWENG 411: Software Engineering
3 Credits
Software engineering principles including life cycle, dependability, process modeling, project management, requirements specification, design analysis, implementation, testing, and maintenance. SWENG 411 Software Engineering (3) This is an introductory course in software engineering, addressing the software development process, including aspects such as software requirements documentation, design specification, implementation, system integration, testing, and maintenance by individuals and teams. Topics include software process modeling, requirements elicitation and documentation, software architecture design and analysis, detailed design and programming, graphical user interface (GUI's) design and prototyping, software quality assessment, software testing, software maintenance and evolution management, personal and team-based development. In lab students gain practical experience by completing programming assignments and utilizing computer-aided software engineering (CASE) tools for their personal projects tailored to each stage of the software life cycle. A semester long team-based project is required that reinforces teamwork fundamentals and the concepts covered in lecture. The projects and assignments provide an opportunity for student teamwork, document writing, and oral presentations.

Enforced Prerequisite at Enrollment: CMPSC 122 and Concurrent: SWENG 311

SWENG 421: Software Architecture
3 Credits
The analysis and design of software systems using canonical design patterns. SWENG 421 Software Architecture (3) This course introduces the frequently-used software infrastructures in software development by experienced engineers. The formal UML notations are utilized to design software architecture and help communicate the design visually. Students will learn the real practice of architectural styles, design patterns and design reuse. As to certain complex problems, alternative architectures will be proposed and their design trade offs will be evaluated. For instance, students compare two-tier with three-tier client/server architectures for distributed systems, and employ multi-process and multi-thread concurrent architectures for high performance computation systems. Moreover, students learn to conduct high level quality analysis from the design artifacts. The quality evaluation will focus on a number of attributes, including reusability, extendibility and performance. A great deal of effort is placed on the major categories of design types containing dozens of separate design patterns. Students first review the most fundamental design patterns. Afterwards, they apply creational patterns to effectively create objects, partitioning patterns to categorize objects, structural patterns to allocate objects, behavioral patterns to interface the communication between objects, and concurrent patterns to handle tasks simultaneously. These skills will enable students to extend their own knowledge after graduation by giving them the skills to learn new patterns on their own. Finally, students will integrate their programs with native code applications to enlarge the application domains. To achieve best reusability, they also learn modular designs to develop component-based software. These help them meet today's software needs of cross applications and architectures.

Prerequisite: SWENG411

SWENG 431: Software Verification, Validation, and Testing
3 Credits
Introduction to methods of software verification, validation, and testing; mathematical foundations of testing, reliability models; statistical testing. SWENG 431 Software Verification, Validation, and Testing (3) Provides a background necessary for verification, validation, and testing of software systems. Verification addresses the question: 'are we building the product right?' In other words, does the product meet the engineering specifications? Validation addresses whether the right product is being built and if it meets the design requirements. The testing aspect of the course addresses many of the methods available to test software systems. The levels of testing explored are 1) unit level (each module is tested independently), 2) integration testing (where the modules are integrated together and tested as a complete system), and 3) acceptance testing (the testing requirements of the users). Following this, specific test methodologies are addressed. By the end of this course the student should also be able to develop an appropriate test plan.
The design and implementation of real time systems. SWENG 452W Embedded Real Time Systems (3) Real time operating systems is the study of hardware/software systems in which timing constraints must be met for correctness. Real time systems are embedded in applications ranging from the antilock brakes in cars to the flight control systems for jetliners. Students are first introduced to the concept of systems with real time constraints by examining case studies. The unified modeling languages (UML) with real time extension is introduced allowing students to capture the constraints present in the systems in a variety of models allowing the problem to be described at several levels of abstraction. Tasks and messages are introduced as programming structures which can satisfy the constraints described by the UML models. With a basic understanding of real time systems and how to implement them, the focus of the course shifts away from these technical concerns towards understanding the documentation of the requirements using the Volere Requirements Specification template. All the writing assignments in the class will revolve around Volere in one way or another. Increasingly complex case studies will give the class the opportunity to explore more sophisticated inter-task communications mechanisms as well as common pitfalls present in RTOS applications. Students will learn how to verify the correctness of their applications in order to guarantee that the real time constraints can be met when the system is deployed. Discussion will turn to application programmer interfaces used by hardware vendors to port hardware into a RTOS. The class will end by designing and building a complex RTOS by a team of students using the techniques learned in the class. The project will outline the needs of the RTOS application in a project proposal using the Volere template. The proposal will be developed iteratively with the faculty member until its scope and definition are clear. This proposal will be developed into a complete requirement specification including a time-line and identification of development benchmarks. This system resulting from the development will be documented in the final report write-up.

Enforced Prerequisite at Enrollment: CMPSC 472 or CMPSC 473 or CMPEN 441

Writing Across the Curriculum

SWENG 455: Engineering Quality and Security in Software

3 Credits

Software systems are becoming an integral part of our daily life. In many domains the failure of a software system is not acceptable. Such a failure will have catastrophic effects. Hence, the quality of such software systems becomes so crucial. This course introduces software quality, the associated quality factors, software errors and the software quality assurance system. As software systems advance in complexity so does the threats that they face. Hence, the security of these systems has become so essential. Traditionally, security has been thought off as an add-on to an existing system. In this course, students will understand that this is not sufficient. Students will learn to consider security throughout the development process by extending the traditional software development life cycle and UML. For the requirements phase, this course will teach students to collect secure requirements, perform security requirements planning, and perform vulnerability mapping. For the design phase, this course will teach students to design a secure software architecture and perform architectural risk analysis. For the implementation phase this course will introduce students to secure coding. For the testing phase, the course will introduce students to secure testing. Finally students will be introduced to secure deployment and secure maintenance. A semester long team-based project will be part of this course to practice the concepts covered in the class.

Prerequisites: SWENG 411

SWENG 465: Web Services

3 Credits

This course introduces the students to a contemporary computing paradigm called 'service-oriented computing. SWENG 465 Web Services (3) This course focuses on a new computing paradigm called 'service-oriented computing', which has been greatly impacting a wide array of software systems. It covers 'service-oriented architecture.' Students will not only gain an in-depth understanding of the concepts and technical issues underpinning Web services, but also gain hands-on experience of the development of software systems built upon Web services.

Enforced Prerequisite at Enrollment: SWENG 311 or CMPSC 221

SWENG 480: Software Engineering Design

3 Credits

Concepts of engineering ethics, economy, and project management, senior capstone project selection, and technical communication skills. SWENG 480 Software Engineering Design (3) This course prepares senior software engineering students for industrial engineering design and project management. It covers the engineering design process, project planning and evaluation, engineering ethics, and engineering economy. In addition, students select, specify, and start their capstone design project, which is completed, in the follow-up course, SWENG 481. Students are expected to carry out a group design project that is on par with industrial expectations. Upon completion of this course a student should have a solid understanding of the engineering design process, a clear capstone project description, should have completed some preliminary design work, and be adequately prepared to complete the project in SWENG 481.

Enforced Prerequisite at Enrollment: SWENG 431

SWENG 481: Software Engineering Project

3 Credits

Capstone group design projects in software engineering. SWENG 481 Software Design Projects (3) In this course students complete their group senior design project started in SWENG 480. Design groups meet regularly with a faculty advisor to report progress and resolve technical issues. Oral and written progress reports are expected at selected times. The class culminates with a final technical defense of the project.

Enforced Prerequisite at Enrollment: SWENG 480

SWENG 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.
Students will complete the class with: 1) a survey of the key issues in sustainable environmental choices, to fundamental ecological principles and to basic concepts of soil science and environmental science, 2) Challenges to Sustainability, in which we consider what has been done to achieve environmental protection while sustainably increasing food production and students are challenged to develop their own sustainability solution to a current issue somewhere in the world. The class will include 'soils cases' in which examples from environmental soil science are used to convey principles of sustainability, and 'sustainability activities' to see examples of sustainable environmental choices on campus or in State College. Students will complete the class with: 1) a survey of the key issues in global environmental sustainability, 2) exposure to current scientific concepts related to these issues, 3) an enhanced ability to interpret environmental data, 4) an increased knowledge of the role of soils in maintaining environmental quality, 5) an increased understanding of how environmental problems and solutions are global phenomena, requiring cooperation among many international cultures, and 6) a significant depth of knowledge about 'what it takes' to feed 10 billion people while maintaining a healthy environment.

General Education: Natural Sciences (GN)
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Soc Resp and Ethic Reason

**SOILS 101: Introductory Soil Science**

3 Credits

This survey and foundational course introduces students to a broad range of subject matter from most sub-disciplines of soil science. We study a range of soil characteristics and seek to understand their relationship to soil function, land use, plant growth, environmental quality, and society/culture. This course introduces students to the variety and complexity of soils on a local, national, and international scale. We identify the physical, chemical, and biological properties and processes of soils and relate these to the way that societies use and abuse soils. Students acquire a working knowledge of the technical terminology of soil science and begin developing observational skills needed to describe and/or locate soil properties for specific locations and to interpret those properties for various uses. We learn to recognize and explain various land use and management practices and to select those that are appropriate at a given site. Students also evaluate the impact of land use and management decisions on agricultural productivity and sustainability, environmental and ecological health, and on community relationships. This course is required or on a list from which students select for many environmental and agricultural majors. It is specifically listed as a prerequisite for many other SOILS courses and for several soils-related courses taught at Penn State.

**Bachelor of Arts: Natural Sciences**

General Education: Natural Sciences (GN)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

**SOILS 102: Introductory Soil Science Laboratory**

1 Credits

Laboratory exercise and field trips designed to develop student competency in soil description, analysis, and assessment. SOILS 102 Introductory Soil Science Laboratory (1) This laboratory course is designed for students who plan to work directly with soils, make land use and management decisions, or to be involved in projects requiring practical application of soil science principals. By conducting weekly laboratory and field exercises and writing reports on their work, students will deepen their understanding of, and learn to apply, the fundamental soil properties and processes introduced in SOILS 101. This laboratory course, in conjunction with the SOILS 101 lecture course, will provide foundational learning in soil science and prepare students for upper level soil science courses. This laboratory course is also designed to provide students with hands on experience in analytical procedures for...
soil assessment, testing, and interpretation, as well as field experience in observing, characterizing and describing soils.

**Prerequisite:** SOILS 101

SOILS 296: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

SOILS 299: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

SOILS 401: Soil Composition and Physical Properties
3 Credits

Advanced study of mineralogical and physical properties of soils which affect soil-plant-water relationships.

**Prerequisite:** SOILS 101

SOILS 402: Soil Nutrient Behavior and Management
3 Credits

Chemical and biological behavior of soil nutrients; management for plant availability and fate in the environment. Laboratory emphasizes soil testing and soil-plant relationships. SOILS 402 Soil Nutrient Behavior and Management (3) Soil Nutrient Behavior and Management is a senior/graduate level course that covers the chemical and biological processes that determine the behavior of essential plant nutrients in soils. As this understanding of basic nutrient behavior is developed in the course, it is applied directly to explain the basis for management of nutrients for optimum plant availability. This same nutrient behavior is linked to the fate of nutrients either applied as sources of plant nutrition or through disposal of nutrient containing materials on soils, which is a major environmental issue. Management practices necessary to minimize environmental impacts from nutrients are also covered. From this background students will be able to understand nutrient behavior and management recommendations and adapt management to a variety of soil-plant systems and situations both for plant growth and environmental protection. Real world examples of developing and adapting management systems are used to illustrate this process. The laboratory exposes the student to common soil testing procedures, methods for studying soil nutrient-plant interactions, and examples of practical application of management practices in the field. Evaluation will be based on 3 exams, laboratory reports, homework assignments.

**Prerequisite:** CHEM 112, SOILS 101

SOILS 403: Soil Morphology Practicum
2 Credits/Maximum of 4

Students develop field skills to describe soil morphology, classify soils, and make land use interpretations. SOILS 403 Soil Morphology Practicum (2 per semester/maximum of 4) SOILS 403 is an eight week course that provides students with the opportunity to: make detailed soil morphological descriptions and interpretations; evaluate soil properties and their suitability for different land uses; and observe various soils throughout the Northeastern U.S. SOILS 403 synthesizes techniques used to describe soil morphology and site characteristics, classify soils, and make land use interpretations. The field skills taught are highly applicable to those pursuing careers in fields of environmental studies, engineering, waste disposal, horticulture, landscape architecture, agricultural, forestry, consulting, and by those describing soils for research. Students also have the opportunity to try out for the Penn State Undergraduate Collegiate Soil Judging Team each fall.

**Prerequisite:** SOILS 101 or equivalent

SOILS 404: Urban Soils
3 Credits

This course introduces the student to natural and human-influenced soils. SOILS 404 Urban Soils (3) This course introduces the student to the management of soils in urban and suburban settings via comparisons in soil physical, chemical, and biological properties. The soil is also examined as the interface between the biotic and abiotic components of an urban site. Therefore, site management of soil during or following placement is examined in detail. Urban soil physical and chemical properties are discussed in terms of site stability. The interactions between stormwater management, erosion control, soil mechanics, and the soil’s ability to support vegetation are examined in the context of sustaining urban environments. The soil design process is presented: site assessment, biophysical analysis, profile construction, specification formulations, and conformance testing and inspection protocols. Professional practical examples such as mine reclamation, brown field restoration, and landscape construction are presented to illustrate the process. The student completes a series of exercises to gain experience in soil examination, soil/land use interpretation, site assessment, soil erosion calculations and a group assignment that evaluates soil issues on a reclamation or construction project.

**Prerequisite:** SOILS 101

SOILS 405: Hydropedology
3 Credits

Soil and water interactions across scales, integrated studies of landscape-soil-water relationships, fundamental processes of water flow and chemical transport. SOILS (GEOSC) 405 Hydropedology (3) Hydropedology is the study of the fluxes, storages, pathways, residence times, and spatio-temporal organization of water in the root and deep vadose zones, and their relations to climate, ecosystem, land use, and contaminant fate. The aim is to characterize integrated physical, chemical, and biological processes of soil-water interactions across scales (including chemicals and energy transported by water flow). This course embraces interdisciplinary and multiscale studies of interactive pedological and hydrological processes in the earth’s surface and subsurface environments. The course will address the fundamental issues and practical applications of hydropedology (as a sister discipline of hydrogeology). This course emphasizes situs soils that have distinct characteristics of pedogenic features, structures, layers, and soil-landscape relationships in the real world. Students will gain an in-depth understanding of soil and water interactions across scales from point observations to watershed phenomena, and will gain skills in predicting flow pathways and water fluxes in the landscape. This course promotes active learning, critical thinking, and hands-on skills. Course format will consist of two lectures and one laboratory/field exercise each week. The course will utilize a network of local watersheds
with different land uses for demonstrations and class projects. Grading will be based on weekly lab/field exercise (20%), class research project (40%), homework (10%), one midterm exam (15%), and one final exam (15%). Since hydropedology is linked to a wide array of environmental, ecological, geological, agricultural, and natural resource issues of societal importance, SOILS (GEOSC) 405 will support interdisciplinary training of students in Soil Science as well as in other disciplines of the College of Agricultural Sciences, especially Agricultural and Biological Engineering, Agronomy, and Forest Resources. Students in the College of Earth and Mineral Sciences, College of Engineering, Eberly College of Science, and the Intercollege Graduate Degree Program in Ecology also will find this course useful when undertaking research on the vadose zone, the hydrologic cycle, and the earth system.

**Prerequisite:** SOILS101
Cross-listed with: GEOSC 405

SOILS 412W: Soil Ecology

3 Credits

Introduction to soil organisms; includes interactions between organisms, their processes, and metabolism with a major focus on microorganisms.

**Prerequisite:** BIOL 011, BIOL 127, or BIOL 110

Writing Across the Curriculum

SOILS 416: Soil Genesis, Classification, and Mapping

4 Credits

Lecture and laboratory course on the genesis of soils, their classification, mapping, and interpretation for land use. SOILS 416 Soil Genesis and Classification (3) The study of soil genesis, classification, and mapping examines the evolution of soils, their organization into natural units, and their distribution throughout the world. Physical, chemical, and morphological soil characteristics are studied both in the field and classroom and then used to classify soils. These classification units are in turn used to study the processes that influence soil development. Students acquire a detailed knowledge of the technical terminology of soil genesis and develop observational and analysis skills needed to describe and/or interpret soil morphologies in the context of the landscape a profile is found in. Students learn to recognize and explain soil genetic pathways due to current or past soil forming periods (as affected by climate change for example). Students also evaluate the effect of soil genesis on land use and management decisions, learn how to map soils at multiple scales, and deliver soil mapping information. The course is comprised of weekly lectures and a laboratory. Exercises in the field and laboratory are designed to further develop a student's ability to ascertain a natural soil's origin using the five soil forming factors. Field skills that will be refined over the course of the semester include profile description, site description, soil mapping, and measurement and characterization of soil physical and chemical properties. Upon completion of SOILS 416, students will demonstrate: 1) deep understanding of fundamental soil processes that result in the genesis of soils around the world; 2) familiarity with soil analytical and testing protocols for common laboratory and field measurements used in studying the genesis of soils; 3) skills for interpreting soil profiles from the soil orders of the world; 4) accurate prediction of soil genesis pathways for a given landform; 5) the ability to interpret soil profile physical and chemical data, classify a soil according to US Soil Taxonomy, map soils to an order 1 level, and be able to apply soil profile information as gathered from the US Soil Survey program to make land use interpretations.

**Prerequisite:** SOILS101

SOILS 418: Nutrient Management in Agricultural Systems

3 Credits

Comprehensive review of nutrient flow in animal agricultural systems, environmental regulations, and environmental stewardship practices. AGECO 418 / ANSC 418 / SOILS 418 Nutrient Management in Agricultural Systems is a senior level course that applies the fundamentals of animal, plant and soil sciences to the issues and solutions in the area where livestock production intersects with water and air quality. Modern regionalization and concentration of animal production systems comes with environmental implications due to a net influx of nutrients to livestock farms. While some nutrients leave the farm in the form of animal products, 60 to 70% of the nutrients are excreted and applied to nearby crop land. If not properly managed these nutrients represent a risk to environmental quality. Students in this cross-listed course gain both scientific and practical understanding of sound nutrient management principals and strategies. The course considers big picture concepts such as nutrient cycling as well as farm-level implementations such as Nutrient Management Planning.

**Prerequisite:** BIOL 110; BIOL 11, BIOL 12; BISC 3
Cross-listed with: AGECO 418, ANSC 418

SOILS 419: Soil Environmental Chemistry

3 Credits

Introduction to chemical constituents and processes occurring in soils. Topics include mineral weathering, soil solution chemistry and adsorption of solutes. GEOSC 418GEOSC 418 (SOILS 419) Soil Environmental Chemistry (3) Upon completion of the course, the students will be able to identify the soil components and properties responsible for the chemical reactivity of soils and will know the fundamental chemical processes that occur in soils. The students will also be able to link theoretical concepts to real life environmental problems. The students will be evaluated on examinations, homework, and class participation. GEOSC 418 (SOILS 419) is offered every Spring semester. Class limit: 25 students.

**Prerequisite:** CHEM 112, SOILS101

SOILS 420: Remediation of Contaminated Soils

3 Credits

Basic principles and technical aspects of remediation of contaminated soils. SOILS 420 Remediation of Contaminated Soils (3) Remediation of contaminated soils is an introduction to the basic principles and techniques of remediation. Upon completion of this course, students will be able to determine what type of remediation technology needs to be used in real-world conditions depending upon the chemical nature and extent of contamination and learn about protocols for soil sampling and leach testing. They will learn about regulatory background and many different types of wastes that will be encountered in contaminated soils. Students gain knowledge of various cationic and anionic species of metal contaminants and how best to fix these using chemical fixation and solidification technique, which is an established remediation technology. In addition, they will learn about other established technologies such...
as on-site and off-site incineration and innovative technologies such as bioremediation, phytoremediation, vacuum extraction, thermal desorption, soil washing, solvent extraction, ex-situ supercritical oxidation, in-situ vitrification etc. They will be able to determine which technology is cost-effective for a particular contaminated soil. Students are evaluated through written testing of their understanding of basic remediation concepts and an oral presentation about a novel remediation technology through literature search. Soils 420 has no laboratory component.

**Prerequisite:** SOILS 101

**SOILS 422: Natural Resources Conservation and Community Sustainability**

4 Credits/Maximum of 4

Conservation, land-use, and community (soil, water, air, plants, animals, and humans) impacting quality of life and sense of place. Soils 422 provides the student with practical knowledge of community and natural resources conservation. The course covers symbiotic aspects of soil, water, air, plants, animals, and humans and their impact on the community. The course focuses on developing methods for the conservation and sustainable use of resources. This involves understanding the land ethic and developing a sense of place. Conservation awareness has grown in recent years. Originally, erosion control was the sole reason for conservation planning. Eventually water conservation also became a concern addressed by planning. We have now moved into an era of ecosystem-based planning, where soil health, water and air quality, sustainable communities, and much more are considered in conservation planning. This planning involves both natural and human resources. Soils 422 covers understanding, designing, and developing best management practices (BMPs) for addressing resource conservation and maintaining sustainable farmland and communities. Calculating runoff and soil loss are researched and integrated into conservation planning as tools for establishing the need for BMPs. Resources and technologies are covered, such as soil surveys, geographic information systems (GIS), global positioning systems (GPS), and ground penetrating radar (GPR). Networking and partnerships are also covered to give the student a practical knowledge of the critical nature of teamwork. Additionally, workings and interactions between federal, state, and local organizations and agencies are explored. Land-use patterns, such as urban and suburban sprawl, mining, logging, and resource utilization are explored. Education is enhanced in the form of a community/sense of place project. This project utilizes classroom knowledge and incorporates student research into a practical plan for developing an appreciation and awareness for one's community. Throughout the course the various aspects of soil, water, air, plants, animals and humans are woven together to emphasize the importance of all decisions on the ecosystem. After completing Soils 422, the student will be equipped to make valuable and educated decisions to positively affect the community. Hands-on aspects of the course include various field trips to experience field conservation and community stability. At the end of the course the student will be able to evaluate effects of human activities on the landscape; make sustainable landuse decisions; determine the need for, and design best management practices; and develop a sense of place and describe individual roles and responsibilities in the community.

**Prerequisite:** SOILS 101

**SOILS 450: Environmental Geographic Information Systems**

3 Credits

Use of geographic information systems (GIS) and digital spatial databases to characterize landscapes for environmental assessment and management.

**Prerequisite:** SOILS 101

**SOILS 489: Supervised Experience in College Teaching**

1-3 Credits/Maximum of 3

Participate with instructors in teaching an undergraduate soil science course; assist with teaching and evaluation and with development of instructional materials.

**Prerequisite:** permission of the SOILS program

**SOILS 494: Undergrad Research**

1-6 Credits/Maximum of 6

Independent study directed by a faculty supervisor that culminates in the production of a SOILS honors thesis. The course involves research and other scholarly activities (such as writing) necessary for completion of an approved SOILS honors thesis.

**Prerequisite:** Enrollment in the Schreyer Honors College and permission of a SOILS honors adviser

**SOILS 494H: Honors Thesis Research**

1-6 Credits/Maximum of 6

Independent study directed by a faculty supervisor that culminates in the production of a SOILS honors thesis. The course involves research and other scholarly activities (such as writing) necessary for completion of an approved SOILS honors thesis.

**Prerequisite:** Enrollment in the Schreyer Honors College and permission of a SOILS honors adviser

**SOILS 495: Internship**

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor

**SOILS 496: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses. 

**SOILS 497: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.
Spanish (SPAN)

SPAN 1: Elementary Spanish I

4 Credits

Audio-lingual approach to basic Spanish; writing. Students who have received high school credit for two or more years of Spanish may not schedule this course for credit, without the permission of the department.

Bachelor of Arts: 2nd Foreign/World Language (All)

SPAN 2: Elementary Spanish II

4 Credits

Audio-lingual approach to basic Spanish continued; writing. Students who have received high school credit for four years of Spanish may not schedule this course for credit, without the permission of the department.

Prerequisite: SPAN 001
Bachelor of Arts: 2nd Foreign/World Language (All)

SPAN 3: Intermediate Spanish

4 Credits

Audio-lingual review of structure; writing; reading.

Prerequisite: SPAN 002
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Foreign/World Lang (12th Unit)

SPAN 10: Intensive Spanish

6 Credits

Basic Spanish grammar, oral, aural, and writing skills (essentially equivalent to SPAN 001 and first half of SPAN 002).

Bachelor of Arts: 2nd Foreign/World Language (All)

SPAN 20: Intensive Spanish

6 Credits

Basic and intermediate Spanish grammar, oral, aural, and writing skills (essentially equivalent to second half of SPAN 002 and all of SPAN 003).

Prerequisite: SPAN 010
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Foreign/World Lang (12th Unit)

SPAN 51: Elementary Intensive Spanish for Graduate Students I

3 Credits

Intensive introduction to Spanish: first half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. SPAN 051 Elementary Intensive Spanish for Graduate Students I (3) This is the first in a series of three courses designed to give students an intensive introduction to Spanish. This is the first half of elementary sequence in reading, writing, speaking, listening, and cultural contexts. Students will learn the Spanish vocabulary and will learn to create simple sentences. Lessons are taught in an authentic cultural context.

Prerequisite: graduate standing

SPAN 52: Elementary Intensive Spanish for Graduate Students II

3 Credits

Intensive introduction to Spanish: second half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. SPAN 052 Elementary Intensive Spanish for Graduate Students II (3) This is the second in a series of three courses designed to give students an intensive introduction to Spanish. This is the second half of graduate intensive sequence in elementary reading, writing, speaking, listening, and cultural contexts. Students will learn the Spanish vocabulary. Lessons are taught in an authentic cultural context.

Prerequisite: SPAN 051 or equivalent, and graduate standing

SPAN 53: Intermediate Intensive Spanish for Graduate Students

3 Credits

Continued intensive study of Spanish at the intermediate level: reading, writing, speaking, listening, cultural contexts. SPAN 053 Intermediate Intensive Spanish for Graduate Students (3) This is the third in a series of three courses designed to give students an intermediate intensive knowledge of Spanish. Continued intensive study of Spanish at the intermediate level: reading, writing, speaking, listening, and cultural contexts. Lessons are taught in an authentic cultural context.

Prerequisite: SPAN 052 or equivalent, and graduate standing

SPAN 83: First-Year Seminar in Hispanic Literatures and Cultures

3 Credits

Introduction to the study of Hispanic literatures and cultures. SPAN 083S First-Year Seminar in Hispanic Literatures and Cultures (3) (GH; FYS; IL) (BA) This course meets the Bachelor of Arts degree requirements. The first-year seminar in Spanish will introduce students to the study of Hispanic literatures and culture in their first semester at the University. Students will read (in English) significant literary texts, view art works (including films and videos), listen to music and explore the Hispanic world in general. These experiences will help prepare them for additional courses in literature and in Spanish, but will also serve as an introduction to things Hispanic, and as a point of comparison with U.S. culture. In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them including the opportunity to develop relationships with faculty and other students who share their academic interests. This course will introduce students to the study of Hispanic literatures and culture in their first semester at the University. This experience will help prepare them for additional courses in literature and in Spanish. The course satisfies both the first-year seminar and a general education humanities or Bachelor of Arts humanities requirement.

Bachelor of Arts: Humanities
International Cultures (IL)
First-Year Seminar
General Education: Humanities (GH)

SPAN 99: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Humanities
International Cultures (IL)

SPAN 100: Intermediate Grammar and Composition
3 Credits
An intermediate level grammar review that also incorporates directed and original composition exercises.

Prerequisite: SPAN 003 or placement
Bachelor of Arts: 2nd Foreign/World Language (All)

SPAN 100A: Intermediate Grammar and Composition for Spanish Bilinguals
3 Credits
A review of grammar and practice with composition focusing on needs and problems specific to Spanish-speaking bilinguals.

Prerequisite: placement
Bachelor of Arts: Humanities

SPAN 100B: Intermediate Grammar and Composition for Students in Medical-Related Fields
3 Credits
Intermediate Grammar and Composition for Students in Medical-Related Fields. SPAN 100B Intermediate Grammar and Composition for Students in Medical-Related Fields (3) The main goals of the course are to help students develop their competence in using medical terminology in Spanish and to become familiar with the cultural aspects in the health care of Latinos/Hispanics in the United States. In addition, the course will review intermediate level Spanish-language grammar and will provide structure to improve students receptive (listening and reading) and productive (speaking and writing) skills needed for this specialized vocabulary. During the semester students will learn and practice health terminology in Spanish, and they will apply the specialized vocabulary through case scenarios, noticias (news) and readings. Participants will be exposed to Spanish from the first day and are expected to stay up-to-date with the current health news as it relates to the Hispanic/Latino population of the United States. The course is intended for those who are beyond the basic level of Spanish (must have taken SPAN 003), but participants are not expected to be fluent speakers.

Prerequisite: SPAN 003

SPAN 100C: Intermediate Grammar and Composition for Students in Communication-related Fields
3 Credits
This course focused on grammar and the media environment replaces Spanish 100 for students going into Communication majors. SPAN 100C Intermediate Grammar and Composition for Students in Communication-related Fields (3) Intermediate Grammar and Composition for Students in Communication-related fields (Spanish in the Media) is an online content-based course for Spanish majors aimed to develop communication skills through a focus on mass media in Hispanic culture. This online course is a perfect match for double majors in Spanish and Media (Advertising/Public Relations, Media Studies, Journalism, etc). This course is restricted to students who are Communication majors or pre-majors. Completing this course achieves 15th credit level proficiency and replaces SPAN 100.

Prerequisite: SPAN 003 or placement

SPAN 100H: Intermediate Grammar and Composition
3 Credits
An intermediate level grammar review that also incorporates directed and original composition exercises.

Bachelor of Arts: 2nd Foreign/World Language (All) Honors

SPAN 105: Elementary Spanish I for Students in the Agricultural Sciences
4 Credits
The course covers basic Spanish, grammar, and oral, aural, and writing skills for students in the Agricultural Sciences. Students who have received high school credit for two or more years of Spanish may not schedule this course for credit without the permission of the instructor. This course does not count toward Spanish majors or the Spanish minor. SPAN 105 Elementary Spanish I for Students in the Agricultural Sciences (4)(BA) This course meets the Bachelor of Arts degree requirements. The class will focus on the development of basic language skills, socio-cultural awareness and discourse. The class periods will be used to develop: (1) the student’s knowledge of Spanish as a linguistic code through mastery of a personalized vocabulary as well as common idiomatic language structures important to the student’s ability to communicate with Spanish speakers employed in their area of agricultural interest; (2) the student’s understanding of major grammatical concepts critical to effective communication in work management within the food, agriculture and natural resources industries; (3) the student’s cultural awareness of the varied Spanish speaking cultures with which the student will come into contact in the workplace; and (4) the student’s ability to be creative with their knowledge of the language as it relates to the development of self-confidence and effective communicative proficiency in Spanish. Frequent short quizzes and the collection and grading of are important components of the course as they are used to encourage the use of Spanish on a daily basis. Classroom activities will be designed to require students to use and develop their communication skills in Spanish to communicate efficiently and relate personally to Spanish speakers. Students will be evaluated based on homework, quizzes, exams, and class participation. Students who have received high school credit for four years of Spanish may not schedule this course for credit, without the permission of the instructor. This course does not count toward Spanish majors or the Spanish minor.

Bachelor of Arts: Humanities
SPAN 106: Elementary Spanish II for Students in the Agricultural Sciences

3 Credits

Further development of basic Spanish skills and the cultural awareness needed to work with Spanish speakers in the agricultural industries.

SPAN 106 Elementary Spanish II for Students in the Agricultural Sciences

(4) The class will focus on further development of the elementary language skills, socio-cultural awareness and discourse introduced in SPAN 105. It will also build on the agricultural concepts introduced in Spanish 105. The class periods will be used to develop further: (1) the student's knowledge of Spanish as a linguistic code through further mastery of a personalized vocabulary as well as common idiomatic language structures important to the student's ability to communicate with Spanish speakers employed in their area of agricultural interest; (2) the student's understanding of major grammatical concepts critical to effective communication in work management within the food, agriculture and natural resources industries; (3) the student's cultural awareness of the varied Spanish speaking cultures with which the student will come into contact in the workplace; and (4) the student's ability to be creative with their knowledge of the language as it relates to the development of self-confidence and effective communicative proficiency in Spanish. Frequent short quizzes and the collection and grading homework assignments are important components of the course as they are used to encourage the use of Spanish on a daily basis. Classroom activities will be designed to require students to use and develop their communication skills in Spanish to communicate efficiently and relate personally to Spanish speakers. Students will be evaluated based on homework, quizzes, exams, and class participation. Students who have received high school credit for four years of Spanish may not schedule this course for credit, without the permission of the instructor. This course does not count toward Spanish majors or the Spanish minor.

Prerequisite: SPAN 105

SPAN 110: Intermediate Conversation

3 Credits

Practice in oral expression in Spanish, with emphasis on aural comprehension, idiomatic usage, and fluency. Use of journalistic materials.

Prerequisite: SPAN 003 or placement
Bachelor of Arts: 2nd Foreign/World Language (All)

SPAN 120: Intermediate Reading

3 Credits

Emphasis on rapid reading comprehension. Selected readings from contemporary Hispanic literature, social sciences, current events, etc.

Prerequisite: SPAN 003 or placement
Bachelor of Arts: 2nd Foreign/World Language (All)

SPAN 130: Iberian Civilization

3 Credits

Spanish 130 is a general education course on Iberian culture and civilization. The goal of this course is to provide the student with a broad, general introduction to the lands, peoples, history, and cultures of the area known as Spain and Portugal; to inform the student about the region's ethnic diversity, cultural heritages, and problems of development; to investigate vital symbols, myths, figures, icons, superstitions, and faiths; to foster critical thinking and associative skills; to suggest continuity and draw parallels between past and present; and to allow for a framework for undertaking further study. This course will survey the civilizations of these European lands and we will get an overview of the main historical events that make up this rich and complex history. The course is designed to expose students to the full range of Iberian history and diversity. Since we are covering centuries of history and several other variables (linguistic, artistic, ethnic, religious, political, economic, geographic, biologic, etc.), this tour will of necessity be pretty rudimentary. However, students will acquire an understanding of the diverse cultural currents and historical milestones that contributed to the creation of modern Spain and Portugal.

GenEd Learning Objective: Integrative Thinking

SPAN 131: Ibero-American Civilization

3 Credits

SPAN 131 Ibero-American Civilization (3) (GH; IL; US) (BA): Spanish American and Brazilian life from the Conquest to the present; including studies of literature, art, the indigenous heritage, and contemporary problems. This course meets the Bachelor of Arts degree requirements. The nations and peoples of Latin America have a unique, interesting history and cultural heritage that are rooted in the traditions, beliefs, experiences, values, and struggles of Native American, European, African and other populations. As close neighbors and major trading partners of the United States, Latin American republics have both benefited and suffered from the proximity and foreign policies of the northern capitalist democracy, and have contributed to its strength and growing ethno-racial diversity. This course aims to provide the student with a broad, general introduction to the lands, peoples, and history of Latin America; to inform the student about the region's ethnic diversity, cultural background, and problems of development; and to promote appreciation for the values and practices of other cultures, and a better understanding of relations between the nations of the region and the United States. Traditional resident classes will usually combine presentation of content and discussion of reading assignments, with an expectation of high student participation. Films, videos, and recordings will enhance and illustrate readings. This course will fulfill the Humanities Breadth and Cultural Diversity requirements. The course does not count toward credits in the major or minor in Spanish because it is taught in English. Nevertheless, it will complement the department's offerings by providing students with a greater appreciation of Latin America's cultural origins, socioeconomic development, and everyday realities.

Spanish American and Brazilian life from the Conquest to the present; literature, art, the indigenous heritage, and contemporary problems. This course meets the Bachelor of Arts degree requirements. The nations and peoples of Latin America have a unique, interesting history and cultural heritage that are rooted in the traditions, beliefs, experiences, values, and struggles of Native American, European, African and other populations. As close neighbors and major trading partners of the United States, Latin American republics have both benefitted and suffered from the proximity and foreign policies of the northern capitalist democracy, and have contributed to its strength and growing ethno-racial diversity. This course aims to provide the student with a broad, general introduction to the lands, peoples, and history of Latin America; to inform the student about the region's ethnic diversity, cultural background, and problems of development; and to promote appreciation for the values and practices of other cultures, and a better understanding of relations between the nations of the region and the United States. Classes will usually combine lecture and discussion of reading assignments, with an expectation of high student participation. Films, videos, and recordings will enhance and illustrate readings. Three examinations (each covering approximately one third of the lessons presented), an occasional quiz, a book report or an annotated bibliography, participation and attendance will be the basis for evaluation of student learning and grades. Students are required and expected to read assignments, to attend class regularly, and to be prepared to participate in class discussions by answering and raising questions relevant to the lessons. Poor attendance will adversely affect a students standing and grade. This course will fulfill the Humanities Breadth and Cultural Diversity requirements. The course does not count toward credits in the major or minor in Spanish because it is taught in English. Nevertheless, it will complement the department's offerings by providing students with a greater appreciation of Latin America's cultural origins, socioeconomic development, and everyday realities.

SPAN 132: Afro-Hispanic Civilization

3 Credits

A general introduction to human and cultural elements of African origin in Spanish- and Portuguese-speaking countries of Latin America. This course meets the Bachelor of Arts degree requirements. The nations and peoples of Latin America have a unique, interesting history and cultural heritage that are rooted in the traditions, beliefs, experiences, values, and struggles of Native American, European, African and other populations. This course focuses on the presence and participation of African peoples and their descendants in the formation and development of societies and cultures in representative areas of the Caribbean, South America, and Central America and on the evolution, diversity, and richness of the African heritage there. Course content includes the African background, the experience and impact of slavery, the social, cultural, and economic heritage of slavery, the role of race in Latin America, and Afro-Hispanic intellectual, literary, and artistic developments (e.g., aspects of folklore, music). The course aims to provide students with a general introduction to human and cultural elements of African origin within the Spanish- and Portuguese-speaking nations of the Americas so that they may be more knowledgeable of the meaning, significance, and widespread influence of the African diaspora. It proposes to provide the student with a better understanding of Africa's contribution to Latin American identity, diversity, culture, and development; to promote appreciation for the values and practices of other cultures, and greater awareness of the relations between the nations of the region and the United States.

3 Credits
Introduction to generic distinctions, critical methods, and approaches
to Hispanic literature. SPAN 253W Introduction to Hispanic Literature
(3)(BA) This course meets the Bachelor of Arts degree requirements.
During the semester students will learn how to write, and will practice
writing, critical and analytical essays based upon the different genres
of literature studied in class. All students will write three compositions
during the semester, which will be written twice incorporating in the final
draft suggestions made by their peer editors and by their instructor. The
writing of the second version will be preceded by a conference with the
instructor in which s/he will make comments and suggestions to the
students about how to avoid the same errors made in the first draft. The
themes for all papers must be chosen in consultation with the professor.

work, psychology, and the legal and medical professions. SPAN 305
Spanish for Social Services (3) SPAN 305 Spanish for Social Services (3)
provides practical language applications for students going into social
work, psychology, and the legal and medical professions. At the same
time, there is an emphasis on the wide range of historic, linguistic and
cultural influences that make up the Hispanic community in the US today.

Prerequisite: SPAN 200 and SPAN 215 or SPAN 253W
SPAN 305H: Spanish for Social Services
3 Credits
Practical Spanish for social workers, medical personnel, law enforcement officers, etc.; emphasis on Puerto Rican vocabulary, idiom, and pronunciation.

Honors
SPAN 310: Business Spanish
3 Credits
No description.

SPAN 314: Spanish Sounds
3 Credits
Spanish phonetics and phonemics; systematic means of correcting pronunciation defects; other audio-lingual applications.

Prerequisite: SPAN 200 , SPAN 215

SPAN 315N: Spanish and Spanish-speakers in the U.S.
3 Credits
In this course, we investigate various aspects of the language(s) and language behaviors of U.S. Latinos. The course is premised on the idea that language is a crucial component in the formation of identity. To understand Latina/o identity formation in the U.S., then, one must analyze what role languages--Spanish and English--have played in identity formation. The class commences with a brief historical assessment of the various U.S. Latino communities, including Mexican-American, Cuban-American, and Puerto Rican communities. Such a historical purview proves significant in the study of the cultural traditions that persist in these communities, chief among these, the Spanish language. In exploring the Spanish language in U.S. Latino communities, we consider several major sets of questions, among them the following: In what ways do the languages of U.S. Latino communities differ from those of monolingual Spanish- (and English-) speaking communities? What factors contribute to the maintenance and loss of Spanish in these communities? How does language contribute to the creation of individual and societal identity? How is language exploited in the representation of other U.S. Latino cultural traditions? We consider these questions across a variety of genres: poetry, prose (autobiography in particular), film, art, television, and music. These texts reveal how social environments determine language use as well as how artists have used language to reshape social environments, through, for example, the development of new language practices such as Spanish-English code switching. The course also connects these cultural practices to debates on Spanish in public life and policy.

SPAN 316: Building Words and Sentences in Spanish
3 Credits
Building words and sentences in Spanish. Analysis of Spanish work structure and its relationship to syntactic structures. SPAN 316 Building Words and Sentences in Spanish (3) Building words and sentences in Spanish is an introduction to the study of Spanish morphology and syntax. In linguistics, morphology is the study of the morphemes (e.g. affixes, words, roots) of language and how they combine together to form words. Syntax is the study of how words combine together to form phrases and sentences. Because this course is for Spanish majors and minors, the focus in this course is on the structure of words, phrases, and sentences in Spanish, how Spanish compares to other languages, and how morphology and syntax vary across Spanish dialects. Special focus will be made on explaining the kinds of errors typical of English-speaking learners of Spanish as a second language, and a primary goal of the course is for students to improve their proficiency in using Spanish morphosyntax. The course is taught in Spanish.

Prerequisite: SPAN 200 , SPAN 215

SPAN 326: Reading the Border/Lands
3 Credits
This course examines representations of the U.S.-Mexico border in relation to the actual geographic space. SPAN 326 Reading the Border/Lands (3) Reading the Border/Lands is an introduction to the study of the U.S.-Mexico borderlands in cultural theory and practice. ‘Borderlands’ is understood as a transcultural space filled with physical, cultural, economic, political, and mythical elements. The aim is to view how different artists from the Borderlands, both northern Mexican and Chicanos, mediate their borders reality. That is to say, the goal of the class is to examine the different ‘imaginative geographies’ in the borderlands. We examine a wide-ranging mix of cultural texts that includes prose, poetry, essays, and performance art, as well as film and video art. We explore how writers have historically rethought notions of citizenship, identity, and culture to create more fluid spaces of representation in cultural contact zones. We will, in particular, pay close attention to the relationship between national geography and the shaping of regional identities and popular cultures -between the maps that nations draw and the cultural forms that cut across them.

United States Cultures (US)
General Education: Humanities (GH)

SPAN 353: Topics in the Cultures of Spain
3 Credits
This course offers a comparative study of the literature, artistic manifestations, intellectual traditions, and cultural productions of Spain. This course offers a comparative study of the literature, artistic manifestations, intellectual traditions, and cultural productions of Spain. Depending on the semester focus, topics related to literary movements, comparative approaches to genre, and/or connections between textual representation and politics, social movements, and/or Spain’s long and complex history (both locally and globally) may be at the center of discussion. Additionally, varied issues of gender, race and ethnicity, rural and urban environments, religion, and evolving conceptions of nationhood may be included as overarching themes. Particular literary genres and representative works may be foregrounded in yet another iteration of the course, wherein students will study and discuss principal...
readings against cultural backdrops framed by exposure to art, film, music, and/or other historical, intellectual, sociopolitical, and/or media-based materials of relevance to the semester-specific context at hand.

**Prerequisite:** SPAN 200 and SPAN 253W  
Bachelor of Arts: 2nd Foreign/World Language (All)  
Bachelor of Arts: Humanities

**SPAN 354: Topics in Border Studies**  
3 Credits

This course offers a study of borders as key sites of contact, exchange, conflict, hybridity, and identity production in and across varied contexts of Spanish, Latin American, and/or Latina/o culture(s). This course offers a study of borders - geopolitical, social, intellectual, literary, artistic, and/or historical - as key sites of contact, exchange, conflict, hybridity, and identity production in and across varied contexts of Spanish, Latin American, and/or Latina/o culture(s). While diverse variables (including diaspora, gender, race and ethnicity, sexuality, colonialism, nationhood and transnationalism) will inform particular iterations of the course, approaches and text selection will be shaped by an understanding of borders as constructs defined by conditions of dynamic interaction and transformation. Materials to be considered in the course, which will vary according the focus, may include literary, artistic, and intellectual works, film, media-based texts, music, and/or historical documents.

**Prerequisite:** SPAN 200 and SPAN 253W  
Bachelor of Arts: 2nd Foreign/World Language (All)  
Bachelor of Arts: Humanities

**SPAN 355: Topics in the Cultures of Latin America**  
3 Credits

This course offers a comparative study of the literatures, artistic manifestations, intellectual traditions, and cultural productions of the Latin American region. This course offers a comparative study of the literatures, artistic manifestations, intellectual traditions, and cultural productions of the Latin American region. Throughout the course, we will reflect on the (im)possibility of characterizing a vast region by taking into account ongoing factors its broader history and culture, as well as national and local particularities. Topics will vary by semester and may include: literary and artistic periods and movements, (post)coloniality and decoloniality, the politics of race, gender, and sexuality, urban and rural sociopolitical movements, (self-)representations in old and new media, discourses of the political (populisms, revolutions, dictatorships, and neoliberalism), and migration studies. Students will engage with literary texts, historic documents, art, music, and other materials in order to understand different kinds of writing and forms of representation. While most materials will be in Spanish, the course may also include works in translation from Brazil, as well as the English- and/or French-speaking Caribbean.

**Prerequisite:** SPAN 200 and SPAN 253W  
Bachelor of Arts: 2nd Foreign/World Language (All)  
Bachelor of Arts: Humanities

**SPAN 356: Topics in the Cultures of the Americas**  
3 Credits

This course offers a comparative study of the literatures and cultures of the Americas, bringing Latin America into dialogue with the United States (and, in some instances, Canada). Throughout the course, we will explore the (dis) continuities that both connect and divide the hemisphere, and we will trace the movement of people, artistic practices, and ideas across borders while paying attention to the distinctive aspects of national and local cultures. Topics will vary by semester and may include: empire and colonialism, the literary and cultural legacies of slavery, the figure of the ‘native,’ crime literature or science fiction in the Americas, theater of the Americas, literatures and cultures of the Spanish-American War, media and the U.S./Mexico border, and cultures of the Caribbean diaspora. Although the course may cover English-language materials, or works in translation from Brazil and/or the French-speaking Caribbean, most of the texts/recordings/films will be in Spanish, as will all assignments written by students.

**Prerequisite:** SPAN 200 and SPAN 253W  
Bachelor of Arts: 2nd Foreign/World Language (All)  
Bachelor of Arts: Humanities

**SPAN 395: Internship**  
1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor  
Bachelor of Arts: Humanities

**SPAN 397: Special Topics**  
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Humanities

**SPAN 399: Foreign Study--Spanish**  
1-12 Credits/Maximum of 12

Advanced training in Spanish language skills.

**Prerequisite:** SPAN 003  
International Cultures (IL)

**SPAN 410: Advanced Oral Expression and Communication**  
3 Credits

Emphasis on achieving practical command of spoken Spanish and the comprehension of native speech. Use of journalistic materials.

**Prerequisite:** SPAN 200  
Bachelor of Arts: 2nd Foreign/World Language (All)

**SPAN 410H: Advanced Oral Expression and Communication**  
3 Credits

Emphasis on achieving practical command of spoken Spanish and the comprehension of native speech. Use of journalistic materials. Honors
SPAN 412: Translation

3 Credits

Techniques of written translation from Spanish to English and vice versa, particularly for business, literature, and social work. Students will learn translation theory and best practices, as well as strategies for overcoming the most common translation problems in Spanish-English translation. Some time will be spent on a review of grammar issues that most commonly result in errors in translation. Students will also learn how to deal with colloquial language and cultural references in a Spanish source text, and will be taught to consider the function of dialect, style and register in a source text and their impact in translation. In the final weeks of the semester, the focus shifts from the theoretical to the practical, as students apply their skills to the translation in advertising, scientific and technical texts, documents, and literary and artistic translation.

Prerequisite: SPAN 200

SPAN 412H: Translation

3 Credits

Techniques of oral and written translation from Spanish to English and vice versa, particularly for business, literature, and social work.

Honors

SPAN 413: Interpretation

3 Credits

Introduction to the art of interpretation, with particular attention to the professions for which it is most commonly required. SPAN 413 Interpretation (3) Spanish 413 will provide students with demonstrations and exercises designed to develop the skills required in sight translation and in consecutive, simultaneous and summary interpretation. The course does not presume to provide the training needed for entrance into the profession; it is intended to give students sufficient understanding of the rigors and demands of the profession and to help them determine whether they have the interest and skills to pursue further training in this area. At the same time, it will provide students with a unique opportunity to improve their listening comprehension and fluency in the target language, whether English or Spanish.

Prerequisite: SPAN 412

SPAN 417: How Languages Are Learned

3 Credits

This class is a linguistics course that focuses on language acquisition in children and adults. Linguistics is the scientific study of language and its structure, and linguistic inquiry focuses on various levels of language: phonology examines the sounds of language, morphology examines the structure of words (e.g., root words and their inflections), and syntax focuses on the structure of phrases and sentences. Using the tools of phonology, morphology, and syntax, this course will address the following questions. What is unique about human language? How is language learned in infancy? How do humans learn additional languages after they have learned their first language? How does bilingual language development compare to monolingual language development? Can knowing more than one language actually be detrimental? What are the different languages spoken by bilinguals in the Spanish-speaking world? What sorts of bilingual education programs are there in the Spanish-
SPAN 470: Youth Cultures in Latin(a/o) America

3 Credits

Young people have been at the center of political and cultural revolutions around the world and throughout history. For example, revolutions, urban movements, ethnic/racial pride, LGBTQ+, feminist movements, music basaars, DJs and rave parties, and 'barras de futbol' are only some of the manifestations associated with young people in Latin(a/o) American literature, film, music, and journalism. Nevertheless, the concept of 'youth' as an academic category only appeared in the 1960's. In this course, we will study different manifestations of youth cultures in the Hemispheric Americas, paying special attention to the Latinx communities in the U.S. and Latin America, since the 1960's and until the contemporary moment. The key question that will guide us is: How does each of these literary, artistic, and media representations of youth enter into dialogue with political events in which young people have been at the center of efforts to bring about political changes in the U.S. Latinx communities and Latin American? Using short fiction, film and documentaries, songs, blogs, and other cultural materials (YouTube clips, images, graffiti, etc.), we will identify and compare different youth cultures in Latinx communities in the U.S. and Latin America in terms of their productions, representations, and effects in the public sphere. We will enrich our analysis of primary materials with theoretical and critical readings that will help us to contextualize the different manifestations in our study.

Prerequisite: SPAN 253W

Cross-listed with: LTNST 470

SPAN 472: The Contemporary Spanish American Novel

3 Credits

The regionalist and social novel since 1910, together with the social background.

Prerequisite: SPAN 253W

Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities

SPAN 474: Many Mexicos

3 Credits

Overview of Mexican literature, culture and history from pre-colonial period to present.

Prerequisite: SPAN 253W

SPAN 476: Masterpieces of Spanish American Literature

3 Credits

Reading, analysis, and discussion of selected major works representative of Spanish American prose and poetry.

Prerequisite: SPAN 253W

Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures

SPAN 479: U.S. Latina/o Culture en Espanol

3 Credits

This course is conducted in Spanish and will analyze some of the central themes that shape the diverse Latina/o experiences in the United States. Some of the main topics that the course will address include: the politics of labeling; definitions of displacements; the politics of language; imaginary homelands and geographic spaces; and conceptualizations of race, gender, and sexuality. These themes will be seen through the lens of Latina/o literature and film. The main objective of this course is to help students think critically about the conceptual, theoretical, historical, and social issues that inform the Latina/o experience in the United States.

Prerequisite: SPAN 253W

Cross-listed with: LTNST 479
United States Cultures (US)
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

SPAN 488: War, Revolution, and the Struggles for Modernity: Spain 1898-1939

3 Credits

This course, conducted in Spanish, examines Spanish literature from 1898 to 1939.

Prerequisite: SPAN 253W

SPAN 490: Masterpieces of Spanish Prose

3 Credits

Reading, analysis, and discussion of selected masterpieces of Spanish novels, short stories, etc.

Prerequisite: SPAN 253W

Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities

SPAN 491: Masterpieces of Spanish Drama and Poetry

3 Credits

Reading, analysis, and discussion of selected masterpieces of Spanish drama and poetry.

Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities

SPAN 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities
SPAN 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
Bachelor of Arts: Humanities
SPAN 496H: Independent Studies
3 Credits
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
Bachelor of Arts: Humanities
Honors
SPAN 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
Bachelor of Arts: Humanities
SPAN 499: Foreign Study--Spanish
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)
SPLED 99: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

Special Education (SPLED)

SPLED 395W: **SPECIAL TOPICS**
3 Credits
Prerequisite: EDPSY101. PA Act 34 clearance required. In addition, non-Pennsylvania residents must provide evidence of an FBI background information check. (Forms: 228 Chambers)
Writing Across the Curriculum
SPLED 399: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)
SPLED 400: Inclusive Special Ed Foundations: Legal, Characteristics, Collaboration, Assessment, and Management
4 Credits
Legal issues, learner characteristics, collaboration skills, assessment, and behavior management related to educating students with disability in inclusive settings. SPLED 400 Teaching Exceptional Students in General Education Settings (4)This course is delivered via a model of blended instruction and addresses foundational skills (assessment and management) and knowledge (laws, etiologies, collaboration) for those working with students with special education needs in general education classrooms. Almost 30% of the content includes student understanding of the history and current relevance of special education law; roles and responsibilities of general education teachers in providing services to students with special education needs; characteristics and etiologies relevant to providing effective instruction to students with mild and severe disabilities; and developing and maintaining effective education teams. Roughly 35% of content is relevant to assessment in inclusive settings and is centered on sound instructional decision making as well as linking instruction to standards based curricula. Coverage includes understanding formative and summative assessment; creating and administering curriculum-based assessments in reading, mathematics, and writing; designing systems to collect behavioral data; interpreting a variety of norm-referenced test scores; using brief experimental analyses is adequate for a given purpose. Roughly 35% of content is relevant to applying principles of Applied Behavior Analysis (ABA) to managing and motivating learners with special needs placed in inclusive settings. Broad objectives include student acquisition of knowledge and skills related to ABA principles and interventions such as: identifying the nature (positive and negative) of consequences maintaining or decreasing specific behaviors; operationally defining behavior; establishing a classroom and school environment conducive to learning for all students; creating class-wide, school-wide; and individual motivation systems; intervening to decrease specific behavior; and using functional behavioral assessments (FBAs) and positive behavior supports.
Prerequisite: EDPSY014 and EDPSY010 or relevant child development course (e.g. HD FS 229, HD FS 239). Fifth semester standing or higher
SPLED 400H: Inclusive Special Ed Foundations: Legal, Characteristics, Collaboration, Assessment, and Management

4 Credits/Maximum of 4

Legal issues, learner characteristics, collaboration skills, assessment, and behavior management related to educating students with disability in inclusive settings.

Prerequisite: EDPSY014 and EDPSY010 or relevant child development course (e.g. HD FS 229 or HD FS 239).

Honors

SPLED 401: Motivating Exceptional Learners

4 Credits

GROUP AND INDIVIDUAL TECHNIQUES TO PROMOTE STUDENT TASK ENGAGEMENT AND PROSOCIAL BEHAVIOR.

Prerequisite: or concurrent: a grade of C or better required in SPLED395W

SPLED 402: Human Rights: Historical and Current Issues in Special Education

3 Credits

Litigation, legislation, regulation, and advocacy issues impacting on educational and related services for individuals with academic and/or physical disabilities.

Prerequisite: or concurrent: SPLED404 or SPLED425

SPLED 403A: Evidence-Based Instruction for Elementary Students with Disabilities in Reading, Math, and Writing

3 Credits

Evidence-based methods for design, delivery, and adaption of instruction for elementary students with disabilities in reading, mathematics, and writing. SPLED 403A Evidence-Based Instruction for Elementary Students with Disabilities in Reading, Math, and Writing (3)This course is delivered via a model of blended instruction and addresses aspects of designing, delivering, and adapting instruction for students across the range of disability (i.e., mild, moderate, and severe) in elementary, inclusive settings. Content on relevant learner characteristics of special needs students is found throughout the course. About half the course covers content relevant to a variety of procedures and approaches to help students with special education needs gain meaningful access to secondary curriculum content without watering it down or ignoring the instructional needs of students without disabilities. Broadly this content includes ways of planning and delivering instruction to help all students, including those with learning problems, understand and retain critical course content. Topics include using graphic organizers, options for presenting content, mnemonics; task specific learning strategies; cooperative groups and peer focused interventions; study guides and guided notes; advance organizers; text structures for narrative and expository text; single and multiple-approaches for reading comprehension; writing mechanics, prompts, and rubrics; narrative, informative, and persuasive writing; problem solving (including Polya's model); analogies; elaborative interrogation; and practice for problem solving.

Prerequisite: SPLED400

SPLED 403B: Evidence-Based Methods for Teaching Secondary Students with Disabilities in Inclusive Settings

3 Credits

Evidence-based methods for designing, delivering, and adapting instruction for students with disabilities in inclusive secondary education settings. SPLED 403B Evidence-Based Methods for Teaching Secondary Students with Disabilities in Inclusive Settings (3)This course is delivered via a model of blended instruction and addresses aspects of designing, delivering, and adapting instruction for students across the range of disability (i.e., mild, moderate, and severe) in secondary inclusive settings. Content on relevant learner characteristics of special needs students is found throughout the course. About half the course covers content on: designing direct and explicit instruction; self-regulated learning; assistive technology; adaptations and accommodation for learners with several disabilities; and the hierarchy of taxonomical units relative to instructional design. The remaining half of the course covers content relevant to a variety of procedures and approaches to help students with special education needs gain meaningful access to secondary curriculum content without watering it down or ignoring the instructional needs of students without disabilities. Broadly this content includes ways of planning and delivering instruction to help all students, including those with learning problems, understand and retain critical course content. Topics include using graphic organizers, options for presenting content, mnemonics; task specific learning strategies; cooperative groups and peer focused interventions; study guides and guided notes; advance organizers; text structures for narrative and expository text; single and multiple-approaches for reading comprehension; writing mechanics, prompts, and rubrics; narrative, informative, and persuasive writing; problem solving (including Polya's model); analogies; elaborative interrogation; and practice for problem solving.

Prerequisite: SPLED400

SPLED 403H: Evidence-Based Instruction for Elementary Students with Disabilities in Reading, Math, and Writing

3 Credits

Evidence-based methods for design, delivery, and adaption of instruction for elementary students with disabilities in reading, mathematics, and writing.

Honors

SPLED 404: Working with Families and Professionals in Special Education

3 Credits

STRATEGIES FOR PRODUCTIVE INTERACTIONS BETWEEN SPECIAL EDUCATORS AND OTHERS SUCH AS COLLEAGUES, EMPLOYERS, PARENTS, SERVICE PROVIDERS, PROFESSIONALS, AND STUDENTS.

Prerequisite: or concurrent: a grade of C or better required in SPLED425

SPLED 408: Meeting Instructional Needs of English Language Learners with Special Needs

3 Credits

The course content and activities focus on instruction and assessment for English Language Learners with special needs. EDPSY (SPLED) 408 Meeting Instructional Needs of English Language Learners with Special
Prerequisite: EDPSY010, EDPSY014, Prerequisite or concurrent: SPLED395W, SPLED425
Cross-listed with: EDPSY 408

SPLED 409A: Fundamental Literacy Skills for Students with Special Needs

3 Credits

Effective reading curriculum and teaching methods to teach students with special needs. SPLED 409A Fundamental Literacy Skills for Students with Special Needs (3) Effective classroom-based assessment, curriculum development, and instructional strategies for teaching reading to educate students with special needs will be described in this course. Students will learn how to assess, develop curriculum, and provide scientifically based best practice instruction in reading to K-12 students with special needs. Students will learn how to select reading skills necessary to scaffold and enhance students’ present reading skills. Methods for using researched based assessment strategies and developing foundational reading skills within a classroom context, will be described. This course builds on prerequisite Special Education courses in curriculum and instructional methods. Students in SPLED 409A extend knowledge of explicit instructional strategies in the context of reading. The content offered in this course complements 409B and 409C through the integration of researched based methods and sound instructional design within a curriculum to most effectively teach students with special needs.

Prerequisite: A grade of C or better required in SPLED425, SPLED395W, SPLED401, SPLED409A, SPLED412, SPLED454, SPLED495E

SPLED 409B: Writing and Content Literacy for Students with Special Needs

3 Credits

Effective curriculum and materials for teaching writing and content literacy to students with special needs. SPLED 409B Writing and Content Literacy for Students with Special Needs (3) Effective application of classroom-based measurement, curriculum development, and instructional strategies for teaching writing and content literacy to educate students with special needs will be described in this course. Students will learn how to use assessment to develop curriculum and provide scientifically based best practice instruction in writing mechanics (handwriting, spelling, capitalization & punctuation) and written expression (pre-planning to revision) to K-12 students with special needs. Students will learn how to identify, select, and teach content text structure. Methods for using assessment to develop a reading comprehension curriculum within a content classroom context and teach K-12 students with special needs to read and comprehend narrative and expository text (such as text found in Math, Science, Social Studies, and other content textbooks) will be described. Methods for using assessment to develop curriculum and teach K-12 students with special needs to respond to content text and materials through writing will also be examined. This course builds on prerequisite Special Education courses in curriculum and instructional methods. Students in SPLED 409B will have achieved mastery in basic reading theory, assessment, curriculum, and instructional methods. The content offered in this course adds to the existing course content by specifically addressing writing mechanics, written expression, and content reading, curriculum development, and instructional methods (including plans for generalization and maintenance) for students with special needs. Written responses for assigned readings will be required for each topic area. Written evaluations and class assignments (including case studies) will be given to assess student learning throughout the course time period. Students’ learning will be further evaluated through projects that demonstrate understandings of applying classroom-based measurement, curriculum development, and the instructional methods required to effectively teach writing and content learning to students with special needs. Student applied projects, in coordination with practicum placement, for writing instruction will include: (1) the collection of baseline writing data for a student with special needs, (2) development of a curriculum scope and sequence, (3) development of a research validated instructional intervention, (4) implementation of the intervention, (5) the collection of writing data throughout instruction and after instruction, and (6) development and implementation of an instructional plan for maintenance and generalization. To demonstrate understandings of teaching content reading and writing, students will prepare a presentation of an identified research-based content reading or writing instructional strategy or approach taught within a curriculum scope and sequence.

Prerequisite: a grade of C or better required in SPLED425, SPLED395W, SPLED401, SPLED409A, SPLED412, SPLED454, SPLED495E

SPLED 409C: Mathematics Instruction for Students with Special Needs

3 Credits

Research-based practices for teaching mathematics skills to students with special needs. SPLED 409C Mathematics Instruction for Students with Special Needs (3) Research-based assessment, instruction, and intervention strategies for teaching mathematics skills to students with special needs will be described in this course. Students will identify (a) the risk factors associated with mathematics disabilities, (b) effective prevention and remediation models of mathematics disabilities, (c) characteristics of scientifically-based instruction in content-area skills (e.g., counting, addition, fractions, problem solving, geometry) for K-12 students with disabilities, and (d) how to effectively provide and assess the effects of such instruction while provided in general and special education classrooms. This course builds on prerequisite Special Education courses in curriculum and instructional methods. Students in SPLED 409C will have achieved mastery in assessment, curriculum, and instructional methods. The content offered in this course adds to the existing course content by specifically addressing how to teach content-
area skills for students with special needs. Written responses for assigned readings will be required for the topic areas. Written evaluations and class assignments will be given to assess student learning throughout the course time period. Students’ learning will be further evaluated through projects that demonstrate understanding of classroom-based assessment, curriculum development, and the instructional methods required to effectively teach content-area mathematics skills to students with special needs. Student applied projects, in coordination with practicum placement, for mathematics instruction will include: (1) the collection of baseline mathematics performance data for a student with special needs, (2) development of a curriculum scope and sequence, (3) development of a research validated instructional intervention, (4) implementation of the intervention, (5) on-going data collection throughout instruction and after instruction, and (6) development and implementation of an instructional plan for maintenance and generalization. To demonstrate understandings of teaching content area mathematics skills, students will prepare a presentation of a self- or instruction-selected research-based curriculum and instructional strategy or approach that meet ‘best practice’ standards (e.g., those identified through previous meta-analysis).

**Prerequisite:** a grade of C or better required in SPLED425, SPLED395W, SPLED401, SPLED409A, SPLED412, SPLED454, SPLED495E

SPLED 411: Intervention for Students with Severe Disabilities

3 Credits

Assessment, teaching strategies, curricula, materials, and assistive techniques for use with individuals having severe disabilities (mental and physical).

**Prerequisite:** a grade of C or better required in SPLED395W, SPLED401, SPLED425

SPLED 412: Instruction for Students with Mild Disabilities

4 Credits

Appropriate teaching strategies, curriculum sequences, and materials selection and evaluation for children with mild special needs.

**Prerequisite:** a grade of C or better required in SPLED395W, SPLED401, SPLED425, SPLED454

SPLED 415: Early Special Education

3-4 Credits/Maximum of 4

Includes early identification methods, assessment, curricula, parent involvement, and program evaluation for exceptional preschoolers in mainstreamed or segregated settings.

**Prerequisite:** a grade of C or better required in the following courses SPLED454; a course in child development

SPLED 418: Technologies for Persons with Disabilities

3 Credits

Sensory aids, communication systems, computer systems, expert systems, simulations, and other technologies for students with disabilities.

**Prerequisite:** SPLED400 or SPLED425

SPLED 419: Assistive Technology for General Education Teachers

2-3 Credits

Strategies to support use of assistive technologies by students with disabilities in general education classrooms. SPLED 419 Assistive Technology for General Education Teachers (2-3) This course will teach students the role of the general education teacher in supporting the use of assistive technology (AT) by students with disabilities in general education classrooms. Students will learn the role of the general education teacher in the AT process, including (as appropriate) how to identify student AT needs, obtain information on common AT applications and devices, make first-hand use of current AT solutions, and evaluate the use of AT to address specific student needs. Particular attention will be given to the use of AT to assist students with disabilities in reading, writing, math, communication, and the development of social skills. Students will learn the role and responsibilities of the general education teacher on the AT team, as well as issues of 'scope of practice', and the roles and responsibilities of the other licensed professionals on the AT team. Students will also be provided with resources and strategies for making use of state and national information resources and services related to AT.

**Prerequisite:** SPLED400, SPLED403A or SPLED403B

SPLED 420: Culture & Disability: Study Abroad in Ireland

6 Credits

Study aspects of culture and disability through lecture, visiting Irish disability service agencies, and guest speakers from various disability agencies. This course is designed to increase student awareness of disability from a cross-cultural comparison between the United States and Ireland including: personal, interpersonal, and societal aspects of disability, including how disability can be defined and understood differently in varied individual, institutional and cultural contexts. Students will learn models of disability that will help (a) clearly distinguish different ways of conceptualizing disability and (b) critically think about how disability is represented and understood in varied cultural contexts. Students will examine ethical, economic, and social implications of disability. Dynamics of group, family and individual behavior that impact interactions between people, with and without disabilities, will be addressed. Interactions and assignments will aid in the introduction of students to interpersonal communication and interaction issues among international cultures. A strong emphasis will be placed on understanding disability from a variety of cultural perspectives and assessing the impact of racial, ethnic, gender, socioeconomic, and socio-political factors on disability status. Throughout the course students will engage with various service providing agencies (which may include sensory disabilities, intellectual/cognitive disabilities, and physical disabilities). Class time will be allotted to prepare for engagement and reflection as well as providing background information for understanding global policy and how to make comparisons. Students will participate in a culminating activity, such as attending the International Disability Summer School that equips students with the insights and skills necessary to translate the generalities of international positions on disabilities into tangible reform for persons with disabilities and understand disability from a global perspective. This course meets the requirement for RHS 100 (RHS majors and RHS minors and honors students), and/or up to 6 credits toward 400 level elective requirements for RHS minors. SPLED students can earn up to 6 credits towards the SPLED minor

Cross-listed with: RHS 420
International Cultures (IL)
United States Cultures (US)

SPLED 425: Foundations of Special Education, Etiologies, Law, and Implications for Practice

4 Credits

An introduction to exceptional individuals being served in special education programs across the life span. SPLED 425 Foundations of Special Education, Etiologies, Law, and Implications for Practice (4)

This course is designed to provide an introduction to all exceptionalities included in special education programs as delineated by the most recent federal legislation guiding services for individuals with special needs. An important component of this course is the exploration of typical developmental stages and milestones used to monitor children's growth and progress over time. Fourteen (14) categories of disability are defined in relation to how states define who is eligible for a free appropriate public education under special education law. In addition, recent legislation is explored in relation to services provided, funding requirements, accommodations and classroom placement. The primary objective of this course to provide future educators with a solid foundation for their understanding disabilities, services, and legislation as they enter into the special education profession. Secondary objectives include preparing students to (a) address common misconceptions and myths associated with special education, (b) work with interdisciplinary teams in the formation of Individualized Education Program (IEP), and (c) promote the preparation of exceptional individuals to assume adult roles.

**Prerequisite:** admission into the SPLED Undergraduate or Graduate Program.

SPLED 430: Foundational Skills for Working with Students with Special Education Needs in General Education Clas

1 Credits

Introduction to working with students with special education needs in the general education classroom, including history and legal foundation.

**Prerequisite:** teacher certification or permission of instructor

SPLED 454: Assessment for Instruction

4 Credits

**ORIENTATION TO EVALUATION OF SPECIAL STUDENTS WITH EMPHASIS ON THE CREATION, USE, AND INTERPRETATION OF TEACHER-MADE ASSESSMENT PROCEDURES.**

**Prerequisite:** a grade of C or better required in EDPSY101

SPLED 461: Introduction to Autism Spectrum Disorders: Issues and Concerns

3 Credits

Overview of issues, characteristics, and evidenced-based assessment strategies, and approaches for individuals with autism/PDD. SPLED 461 Introduction to Autism Spectrum Disorders: Issues and Concerns (3)

This course will center on working with individuals having Autism Spectrum Disorders (ASD) and Pervasive Developmental Disorders (PDD) in educational and related settings. Topics include an overview of characteristics and diagnosis, ethical issues in treatment, assessment, the use of science in treatment approaches, working effectively with families, and strategies for successful inclusion of students with ASD/PDD in integrated settings. Course content will be delivered through DVD lectures, and required as well as supplemental readings. Evaluation procedures will include on line multiple-choice exams. The course will be changed to assess students through 6 (v.4) online multiple choice exams. Multiple choice format offers immediate feedback to students. To ensure assessment of applications skills, exams will include case studies in which students must apply skills to areas such as child assessment, data analysis, and strategies for working effectively with parents.

**Prerequisite:** EDPSY010 or EDPSY014 or equivalent or admission into the Professional Development Certificate in Autism or relevant child development course

SPLED 462: Autism and Applied Behavior Analysis

3 Credits

This course addresses principles of applied behavior analysis and empiricism related to instruction and special issues affecting individuals with autism. SPLED 462 Autism and Applied Behavior Analysis (3) This world campus course will include an overview of basic principles of applied behavior analysis (ABA) and elements of empiricism and ethics in educational settings. Course objectives will center on acquisition of content related to: a) principles of ABA instruction; b) ethical standards in education; c) best practice interventions for learning; d) strategies for diagnosing and programming for behavioral issues; e) special issues affecting individuals with ASD and their families. Course content will be delivered through DVD lectures, and required as well as supplemental readings. Evaluation procedures will include on one multiple-choice exams, and on line assignments.

**Prerequisite:** 4th semester standing or higher

SPLED 463: Communication and Social Competence

3 Credits

Overview of deficits and strategies in speech, language, and communication across the Autism Spectrum Disorder. SPLED 463 Communication and Social Competence (3) Communication and Social Competence is the third course in the 5 course (12 credit) series leading to the Professional Development Certificate in Autism. All information, activities, and assignments are through video taped and web-based learning. Content includes an overview of the deficits in the area of speech, language, and communication across the Autism Spectrum Disorders (ASD). Basic information on the nature of these deficits is provided from both a psycholinguistic model as well as a behavioral model. In addition to information on deficits, the majority of the course content will provide practical information related to intervention.

**Prerequisite:** SPLED461

SPLED 464: Assessment and Curriculum

3 Credits

Overview of screening, diagnosis, and identification of skills in developmental domains and curricula for individuals with autism. SPLED 464 Assessment and Curriculum (3) Assessment and Curricula is the fourth course in the 5 course (12 credit) series leading to the Professional Development Certificate in Autism. All information, activities, and assignments are through video tape and web-based learning. Content includes types of assessment and identification of skills in developmental domains. Practical strategies will be outlined.
Prerequisite: SPLED451

SPLED 495: **SPECIAL TOPICS**

3-15 Credits/Maximum of 15

SPLED 495E: Experience with Exceptional Children

3 Credits

Supervised activities with exceptional children in a variety of possible settings, e.g., schools, institutions, day care centers, vocational settings.

Prerequisite: a grade of C or better required in SPLED395W, SPLED401, SPLED425 SPLED454. PA Act 34 clearance required. In addition, non-Pennsylvania residents must provide evidence of an FBI background information check. (Forms: 228 Cha)

SPLED 495F: Practicum in Special Education

15 Credits

Teaching experience with mildly/moderately disabled children in age appropriate settings, e.g., infant/preschools, schools, vocational/job sites.

Prerequisite: a grade of C or better required in SPLED495G. PA Act 34 clearance required. In addition, non-Pennsylvania residents must provide evidence of an FBI background information check. (Forms: 228 Chambers)

SPLED 495G: Experience with an Integrated Inclusion Classroom

3-4 Credits/Maximum of 4

Supervised teaching in integrated general classrooms with activities in assessment, diagnosis, and direct intervention with students in need or with disabilities.

Prerequisite: a grade of C or better required in SPLED495G. PA Act 34 clearance required. In addition, non-Pennsylvania residents must provide evidence of an FBI background information check.

SPLED 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

SPLED 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Statistics (STAT)

STAT 100: Statistical Concepts and Reasoning

3 Credits

Statistics is the art and science of decision making in the presence of uncertainty. The purpose of Statistics 100 is to help students improve their ability to assess statistical information in both everyday life and other University courses. Topics covered include methods for collecting and summarizing data, analyzing the relationship between variables, and using basic probability concepts to draw conclusions about populations based on data. The course is less technical and more conceptual than Statistics 200. Statistical concepts and interpretations will dominate over techniques and calculations, but students should be comfortable working with fractions and square roots.

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

STAT 184: Introduction to R

2 Credits

R is a powerful, open-source programming language used widely for applications in statistics and data science. It is easily extensible, and thousands of user-created packages are publicly available to extend its capabilities. This course will introduce students to data computing fundamentals and a reproducible workflow using the R programming language and related tools. Students will be expected to access, join, wrangle, clean, and visualize real data from various sources (e.g. CSV, HTML scraping, web URL, R packages). The course will emphasize use of 'tidyverse' R packages (e.g. dplyr, ggplot2), although students will also be exposed to Base R and other packages. In addition, students will be exposed to one or more integrated development environments (e.g. RStudio) and will be expected to write well-documented code using a reproducible workflow (e.g. RMarkdown, Git/GitHub). The course focuses on descriptive and graphical summary techniques rather than inferential statistical techniques.

Enforced Prerequisite at Enrollment: Placement into MATH 21 or higher

STAT 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

STAT 200: Elementary Statistics

4 Credits

Descriptive statistics, frequency distributions, probability, binomial and normal distributions, statistical inference, linear regression, and correlation. STAT 200 Elementary Statistics (4) (GQ)(BA) This course meets the Bachelor of Arts degree requirements. STAT 200 is a standard first course in statistics. Students who have successfully completed this course will understand basic concepts of probability and statistical inference, including common graphical and numerical data summaries; notions of sampling from a population of interest, including the sampling distribution of a statistic; construction and interpretation of confidence intervals, test statistics, and p-values; and connections between probabilistic concepts like the normal distribution and statistical inference. They will recognize various types of data, appropriate statistical methods to analyze them, and assumptions that underlie these methods. They will also gain extensive experience in the use of statistical software to analyze data and the interpretation the output of this software.

Enforced Prerequisite at Enrollment: Placement into MATH 21 or higher
Bachelor of Arts: Quantification
General Education: Quantification (GQ)

STAT 240: Introduction to Biometry
3 Credits

Statistical analysis, sampling, and experimentation in the agricultural sciences; data collection, descriptive statistics, statistical inference, regression, one factor AOV, probability. Students may take only one course from STAT 200, 220, 240, 250 for credit. STAT 240 Introduction to Biometry (3) (GQ)(BA) This course meets the Bachelor of Arts degree requirements. This is a course concerned with statistical analysis pertaining to the natural and agricultural sciences. The objective of the course is to provide students with a good basis for understanding uncertainty and its effects on understanding observational studies and experiments. Course content includes data collection, descriptive statistics, statistical inference, regression, and ANOVA. Students will learn through lectures, individual and group problem solving, computer-based activities, and case study discussions. Since real-life use of statistics relies upon computers, this course will provide a strong hands-on analysis element necessitating regular access to computer labs. The statistical background gained by students will provide them with a base for future use of statistics in both their course work and careers.

Enforced Prerequisite at Enrollment: Placement into MATH 21 or higher
Bachelor of Arts: Quantification
General Education: Quantification (GQ)

STAT 250: Introduction to Biostatistics
3 Credits

Statistical analysis and interpretation of data in the biological sciences; probability; distributions; statistical inference for one- and two-sample problems. STAT 250 is a standard first course in statistics, with an emphasis on applications and statistical techniques of particular relevance to the biological sciences. Students who have successfully completed this course will understand basic concepts of probability and statistical inference, including common graphical and numerical data summaries; notions of sampling from a population of interest, including the sampling distribution of a statistic; construction and interpretation of confidence intervals, test statistics, and p-values; and connections between probabilistic concepts such as normal distributions and statistical inference. They will recognize various types of data, appropriate statistical methods to analyze them, and assumptions that underlie these methods. Students will use statistical software to analyze real data.

Enforced Prerequisite at Enrollment: Placement into MATH 21 or higher
Bachelor of Arts: Quantification
General Education: Quantification (GQ)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

STAT 296: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

STAT 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

STAT 300: Statistical Modeling I
3 Credits

This course is designed to serve as a bridge between introductory statistics (including AP statistics) and more advanced applied statistics courses. The course will emphasize applied statistical modeling for real data using computer software (e.g. R, Minitab). Broad statistical topics include simple linear regression, multiple linear regression, analysis of variance (ANOVA) and factorial designs, logistic regression, multiple linear regression.

Enforced Prerequisite at Enrollment: STAT 100 or STAT 200 or STAT 240 or STAT 250 or SCM 200 or PSYCH 200 or DS 200 or IE 323

STAT 301: Statistical Analysis I
3 Credits

Probability concepts; nature of statistical methods; elementary distribution and sampling theory; fundamental ideas relative to estimation and testing hypotheses.

Prerequisite: 3 credits of calculus
Bachelor of Arts: Quantification
General Education: Quantification (GQ)

STAT 318: Elementary Probability
3 Credits

Combinatorial analysis, axioms of probability, conditional probability and independence, discrete and continuous random variables, expectation, limit theorems, additional topics. Students who have passed either MATH(STAT) 414 or 418 may not schedule this course for credit.

Enforced Prerequisite at Enrollment: MATH 141
Cross-listed with: MATH 318
Bachelor of Arts: Quantification

STAT 319: Applied Statistics in Science
3 Credits

Statistical inference: principles and methods, estimation and testing hypotheses, regression and correlation analysis, analysis of variance, computer analysis. Students who have passed MATH 415 / STAT 415 may not schedule this course for credit.

Enforced Prerequisite at Enrollment: MATH 318 or STAT 318 or MATH 414 or STAT 414
Cross-listed with: MATH 319
Bachelor of Arts: Quantification

STAT 380: Data Science Through Statistical Reasoning and Computation
3 Credits

A case study-based course in the use of computing and statistical reasoning to answer data-intensive questions. STAT 380 Data Science
Through Statistical Reasoning and Computation (3) This course addresses the fact that real data are often messy by taking a holistic view of statistical analysis to answer questions of interest. Various case studies will lead students from the computationally intensive process of obtaining and cleaning data, through exploratory techniques, and finally to rudimentary inferential statistics. This process will exploit students’ exposure to introductory statistics as well as the R programming language; hence the required prerequisites—yet novel computing and analytical techniques will also be introduced throughout the course. For the collection of data, students will learn scripting and database querying skills; for their exploration, they will employ R capabilities for graphical and summary statistics; and for their analysis, they will build upon the basic concepts obtained in their introductory statistics course. The varied case studies will elucidate additional statistical topics such as identifying sources of bias and searching for high-dimensional outliers. A possible textbook for this course is Data Science in R: A Case Studies Approach to Computational Reasoning and Problem Solving (2015) by Deborah Nolan and Duncan Temple Lang.

**Enforced Prerequisite at Enrollment:** STAT 200 and STAT 184

**STAT 399:** Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

**International Cultures (IL)**

**STAT 400:** Statistical Modeling II

3 Credits

This course is intended to build directly upon STAT 300 (Applied Statistical Modeling I) for students pursuing a major in statistics or a closely related program. Topics include likelihood-based inference, generalized linear models, random and mixed effects modeling, multilevel modeling. In particular, the applied nature of the course seeks to examine the advantages and disadvantages of various modeling tools presented, identify when they may be useful, use R software to implement them for analysis of real data, evaluate assumptions, interpret results, etc.

**Enforced Prerequisite at Enrollment:** STAT 184 and MATH 220 and (STAT 300 or STAT 462)

**STAT 401:** Experimental Methods

3 Credits

Random variables; probability density functions; estimation; statistical tests, t-tests; correlation; simple linear regression; one-way analysis of variance; randomized blocks.

**Enforced Prerequisite at Enrollment:** MATH 111 or MATH 141

**STAT 414:** Introduction to Probability Theory

3 Credits

STAT 414 / MATH 414 is an introduction to the theory of probability for students in statistics, mathematics, engineering, computer science, and related fields. The course presents students with calculus-based probability concepts and those concepts can be used to describe the uncertainties present in real applications. Topics include probability spaces, discrete and continuous random variables, transformations, expectations, generating functions, conditional distributions, law of large numbers, central limit theorems. Most students are recommended to sequentially take MATH 230 or MATH 231 prior to STAT414 / MATH 414, although the alignment of the topics in each class permit concurrent enrollment. Students may take only one course from STAT 414 / MATH 414 and STAT 418 / MATH 418.

**Enforced Prerequisite at Enrollment:** MATH 230 or Concurrent: MATH 232 or (MATH 231 and RM 214)

Cross-listed with: MATH 414

**STAT 415:** Introduction to Mathematical Statistics

3 Credits

A theoretical treatment of statistical inference, including sufficiency, estimation, testing, regression, analysis of variance, and chi-square tests.

**Enforced Prerequisite at Enrollment:** MATH 414 or STAT 414

Cross-listed with: MATH 415

**STAT 416:** Stochastic Modeling

3 Credits

Review of distribution models, probability generating functions, transforms, convolutions, Markov chains, equilibrium distributions, Poisson process, birth and death processes, estimation.

**Enforced Prerequisite at Enrollment:** (STAT 318 or MATH 318 or STAT 414 or STAT 414 and MATH 230)

Cross-listed with: MATH 416

**STAT 418:** Introduction to Probability and Stochastic Processes for Engineering

3 Credits

Introduction to probability axioms, combinatorics, random variables, limit laws, and stochastic processes. Students may take only one course from MATH414 / STAT 414 and MATH 418 / STAT 418 for credit. STAT 418 / MATH 418 Introduction to Probability and Stochastic Processing for Engineering (3) This course gives an introduction to probability and random processes. The topics are not covered as deeply as in a semester-long course in probability only or in a semester-long course in stochastic processes only. It is intended as a service course primarily for engineering students, though no engineering background is required or assumed. The topics covered include probability axioms, conditional probability, and combinatorics; discrete random variables; random variables with continuous distributions; jointly distributed random variables and random vectors; sums of random variables and moment generating functions; and stochastic processes, including Poisson, Brownian motion, and Gaussian processes.

**Enforced Prerequisite at Enrollment:** MATH 230 or MATH 231

Cross-listed with: MATH 418

**STAT 418H:** Probability

3 Credits

Fundamentals and axioms, combinatorial probability, conditional probability and independence, probability laws, random variables, expectation; Chebyshev’s inequality. Students may take only one course from STAT(MATH) 414 and 418 for credit.

Cross-Listed
Honors

STAT 440: Computational Statistics

3 Credits

Topics related to computing in statistics, including numerical linear algebra, optimization, simulation, numerical integration, and bootstrapping. STAT 440 Computational Statistics (3)This course introduces many important ideas in statistical computing. Students are expected to possess knowledge of mathematical statistics at the level of STAT 415 and matrices at the level of MATH 220. Students will learn the statistical computing environment called R and use R to implement many of the theoretical computing topics, which include numerical linear algebra, optimization, numerical and Monte Carlo integration, random number generation and simulation, and bootstrapping. Other statistical and mathematical software may be treated briefly, including symbolic mathematics environments like Mathematics and Maple.

Enforced Prerequisite at Enrollment: STAT 200 and MATH 220 and (STAT 415 or MATH 415)

STAT 460: Intermediate Applied Statistics

3 Credits

Review of hypothesis testing, goodness-of-fit tests, regression, correlation analysis, completely randomized designs, randomized complete block designs, latin squares.

Enforced Prerequisite at Enrollment: STAT 200 or STAT 240 or STAT 250 or STAT 401

STAT 461: Analysis of Variance

3 Credits

Analysis of variance for single and multifactor designs; response surface methodology.

Enforced Prerequisite at Enrollment: STAT 200 or STAT 240 or STAT 250 or STAT 401

STAT 462: Applied Regression Analysis

3 Credits

Introduction to linear and multiple regression; correlation; choice of models, stepwise regression, nonlinear regression.

Enforced Prerequisite at Enrollment: STAT 200 or STAT 240 or STAT 250 or STAT 401

STAT 463: Applied Time Series Analysis

3 Credits

Identification of models for empirical data collected over time; use of models in forecasting. STAT 463 Applied Time Series Analysis (3)This course covers many major topics in time series analysis. Students will learn some theory behind various time series models and apply this theory to multiple examples. An introduction to time series and exploratory data analysis will be followed by a lengthy study of several important models, including autoregressive, moving average, autoregressive moving average (ARMA), autoregression integrated moving average (ARIMA), and seasonal models. For each model methods for parameter estimation, forecasting, and model diagnostics will be covered. Additional topics will include spectral techniques for periodic time series, including power spectra and the Fourier transform, and one or more miscellaneous topics chosen by the instructor, such as forecasting methods, transfer function models, multivariate time series methods, Kalman filtering, and signal extraction and forecasting. The use of statistical software will be a central component of this course, as will the proper interpretation of computer output. Students enrolling for this course are assumed to have taken a semester-long course on regression.

Enforced Prerequisite at Enrollment: STAT 462 and (STAT 318 or MATH 318 or STAT 414 or MATH 414)

STAT 464: Applied Nonparametric Statistics

3 Credits

Tests based on nominal and ordinal data for both related and independent samples. Chi-square tests, correlation.

Enforced Prerequisite at Enrollment: STAT 200 or STAT 240 or STAT 250 or STAT 401

STAT 466: Survey Sampling

3 Credits

Introduction to design and analysis of sample surveys, including questionnaire design, data collection, sampling methods, and ratio and regression estimation. STAT 466 Survey Sampling (3)This course covers classical sampling design and analysis methods useful for research and management in many fields. Topics include design of questionnaires; methods of data collection, sample-survey designs including simple random sampling, stratified sampling, cluster sampling, and systematic sampling ratio, regression, and difference estimation; two-stage cluster sampling; population size estimation; methods for dealing with nonresponse; and possibly other topics at the discretion of the instructor. Statistical software will be used to apply many of the techniques covered by this course.

Enforced Prerequisite at Enrollment: STAT 200 or STAT 240 or STAT 250 or STAT 401

STAT 470W: Problem Solving and Communication in Applied Statistics

3 Credits

This is a capstone course intended primarily for undergraduate statistics majors in their last semester prior to graduation. The course is designed to reinforce problem solving and communication skills through development of writing ability, interaction with peers and the SCC, statistical consulting center (SCC), and oral presentations. Course objectives are tailored to the needs of each cohort and may include the application of statistical reasoning to real-world problems and case studies, recognition or recommendation of appropriate experimental designs, proficient use of ANOVA & GLMs with understanding of associated modeling assumptions, ability to identify concerns about the use or interpretation of statistical models in context, and both written and verbal communication of statistical findings.

Enforced Prerequisite at Enrollment: STAT 461 and STAT 462 and 7th Semester standing

Writing Across the Curriculum
STAT 480: Introduction to SAS

1 Credits

Introduction to SAS with emphasis on reading, manipulating and summarizing data. STAT 480 Introduction to SAS (1) STAT 480 addresses the fundamentals of the SAS programming language. It addresses the programming environment and major aspects of the Base SAS software, including reading in, manipulating, and transforming data. It also addresses techniques for reshaping and restructuring data files, merging and concatenating data sets, creating summaries and subsets of data sets, formatting and printing data, as well as using some of the basic statistical procedures.

Enforced Prerequisite at Enrollment: 3 credits in Statistics

STAT 481: Intermediate SAS for Data Management

1 Credits

Intermediate SAS for data management. STAT 481 Intermediate SAS for Data Management (1) STAT 481 builds on the skills and tools learned in STAT 480 to provide intermediate level ability to use the Statistical Analysis System (SAS). It covers additional capability and major uses of the program, such as error checking, report generation, date and time processing, random number generation, and production of presentation quality output for graphs and tables. Other possible topics include advanced merging, PROC SQL, importing and exporting data sets, SAS GRAPH, and the Output Delivery System.

Enforced Prerequisite at Enrollment: STAT 480

STAT 482: Advanced Topics in SAS

1 Credits

Advanced statistical procedures in SAS, including ANOVA, GLM, CORR, REG, MANOVA, FACTOR, DISCRIM, LOGISTIC, MIXED, GRAPH, EXPORT, and SQL. STAT 482 Advanced Topics in SAS (1) STAT 482 builds on the skills and tools learned in STAT 480 and STAT 481 to provide advanced programming ability to use the Statistical Analysis System (SAS). It provides a survey of the major statistical analysis procedures, such as the TTEST, GLM, REG, MANOVA, FACTOR, DISCRIM, LOGISTIC, and MIXED procedures. Other topics include using the TABULATE procedure to create reports, generating random numbers, exporting data from SAS data sets, using the SAS/GRAPH module to produce presentation quality graphs, using the SQL procedure to query and combine data tables, and using macros to write more efficient SAS programs. Credit cannot be received for both STAT 482 and STAT 480/481/483.

Enforced Prerequisite at Enrollment: STAT 480 and STAT 481

STAT 483: Statistical Programming in SAS

3 Credits

Introduction, intermediate, and advanced topics in SAS. Credit cannot be received for both STAT 483 and STAT 480/481/482. STAT 483 Statistical Analysis System Programming (3) The three-credit STAT 483 course is a combination of the three one-credit courses STAT 480, STAT 481, and STAT 482. In STAT 480, students are introduced to the SAS windowing system, basic SAS programming statements, and descriptive reporting procedures, such as the FORMAT, PRINT, REPORT, MEANS, and FREQ procedures. In STAT 481, the focus is primarily on extending the programming skills of the students, as they learn how to read messy data into SAS data sets, how to combine SAS data sets in various ways, how to use SAS character functions, how to read and process date and time variables, how to use arrays and do loops to write more efficient programs, and how to use the Output Delivery System to create SAS output in a variety of formats. STAT 482 provides a survey of the major statistical analysis procedures, such as the TTEST, GLM, REG, MANOVA, FACTOR, DISCRIM, LOGISTIC, and MIXED procedures. Other STAT 482 topics include using the TABULATE procedure to create reports, generating random numbers, exporting data from SAS data sets, using the SAS/GRAPH module to produce presentation quality graphs, using the SQL procedure to query and combine data tables, and using macros to write more efficient SAS programs. Credit cannot be received for both STAT 483 and STAT 480/481/482.

Enforced Prerequisite at Enrollment: 3 credits in Statistics

STAT 484: The R Statistical Programming Language

1 Credits/Maximum of 1

Builds an understanding of the basic syntax and structure of the R language for statistical analysis and graphics. R is a popular tool for statistical analysis and research used by a growing number of data analysts inside corporations and academia. The flexibility and extensibility of R are key attributes that have driven its adoption in a wide variety of fields. This course begins with an overview of the R language and the basics of R programming. Building upon these basic understandings and procedures, this course then provides students with hands on experience in implementing statistical analysis of data in univariate, bivariate and multivariate contexts using the R software. In addition, the course works through accessing, importing and manipulating data. Documentation of work and report writing are also important aspects of the course content, and R Markdown is utilized to illustrate best practices.

Enforced Prerequisite at Enrollment: 3 credits in Statistics

STAT 485: Intermediate R Statistical Programming Language

1 Credits

Builds an understanding of the basic syntax and structure of the R language for statistical analysis and graphics. R is a popular tool for statistical analysis and research used by a growing number of data analysts inside corporations and academia. The flexibility and extensibility of R are key attributes that have driven its adoption in a wide variety of fields. This course begins with an overview of the R language and the basics of R programming. Building upon these basic understandings and procedures, this course then provides students with hands on experience in implementing statistical analysis of data in univariate, bivariate and multivariate contexts using the R software. In addition, the course works through accessing, importing and manipulating data. Documentation of work and report writing are also important aspects of the course content, and R Markdown is utilized to illustrate best practices.

Enforced Prerequisite at Enrollment: 3 credits in Statistics

STAT 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small group basis.

Enforced Prerequisite at Enrollment: 6 credits in Statistics
Supply Chain Management (SCM)

STAT 494H: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small group basis.

Enforced Prerequisite at Enrollment: 6 credits in Statistics Honors

STAT 495: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practica, or internships.

Enforced Prerequisite at Enrollment: 6 credits in Statistics

STAT 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

STAT 496A: **SPECIAL TOPICS**
1-18 Credits

STAT 496H: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

STAT 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

STAT 499: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

Supply Chain Management (SCM)

SCM 200: Introduction to Statistics for Business
4 Credits

SCM 200 introduces basic statistical concepts and models within the framework of business problems and applications. Students learn about the usefulness of business statistics to decision making, how to perform basic statistical and analytical procedures, and how to interpret, critically evaluate, and analyze data. Special emphasis is given to active learning methods.

Enforced Prerequisite at Enrollment: MATH 21 or higher or satisfactory score on the mathematics placement examination
General Education: Quantification (GQ)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

SCM 200H: Honors Introduction to Statistics for Business
4 Credits

SCM 200H Honors Introduction to Statistics for Business introduces basic statistical concepts and models within the framework of business problems and applications. Students learn about the usefulness of business statistics to decision making, how to perform basic statistical and analytical procedures, and how to interpret, critically evaluate, and analyze data. Special emphasis is given to active learning methods.

Enforced Prerequisite at Enrollment: MATH 21 or higher or satisfactory score on the mathematics placement examination
General Education: Quantification (GQ)
Honors
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

SCM 299: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

SCM 301: Supply Chain Management
3 Credits

SCM 301 is an introductory course that provides an overview of key logistics and supply chain management processes, concepts, and methodologies. Emphasis is given to the framework for supply chain management, the analysis of logistics cost, and service trade-offs among inventory, transportation, and warehousing activities, the strategic role of information technology in supply chains, the use of third-party logistics providers, and the methods of measuring the value of logistics performance. Instruction is based on problem-based learning pedagogy.

Enforced Prerequisite at Enrollment: ACCTG 211 and ECON 102 and (SCM 200 or STAT 200)

SCM 301H: Supply Chain Management - Honors
3 Credits

SCM 301H focuses on supply chain management concepts, principles, and methodologies for effective and efficient management of product
and service operations across supply chain networks. The course explores the framework for supply chain management, the key issues and challenges, the key cost and service elements, the basic analytical tools, and the strategic role of information technology. Major themes embedded in this course include: principles and framework of supply chain management such as processes, drivers, and common decisions; the complexities of matching supply and demand in an uncertain business environment; performance metrics in determining a corporation's top and bottom lines; and the globalization of supply chains and the integration of these chains throughout all business disciplines.

Enforced Prerequisite at Enrollment: ACCTG 211 and ECON 102 and (SCM 200 or STAT 200)
Honors

SCM 320: Transport Systems
3 Credits

Strategic role of freight transportation systems and services in supply chain networks. Not available to baccalaureate business students in Smeal. SCM 320 Transport Systems (3) SCM 320 develops an understanding of the strategic role of freight transportation systems in supply chain networks. Emphasis is given to the components of transportation systems, including their technological features, operational processes, and cost conditions, the buyer-seller channels for acquiring transportation services, and the strategic and tactical alternatives for transport procurement. Instruction is based on problem-based learning pedagogy.

Enforced Prerequisite at Enrollment: SCM 301 or MKTG 301

SCM 340: Introduction to Supply Chain Analytics
3 Credits

Supply Chain Analytics studies key decision areas in supply chain design and operation using data driven methodologies. The course introduces students to strategic, tactical and operational supply chain problems including demand forecasting, risk analysis, revenue management, distribution and facility location. Through this course, data visualization and communicating data insights will be discussed. Finally, through the analysis and discussion of data students will learn to obtain useful insights on how to optimize the value of supply chain processes and operations and present these findings in the most relevant way.

Enforced Prerequisite at Enrollment: SCM 301

SCM 399: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

SCM 404: Demand Fulfillment
3 Credits

Analysis of demand fulfillment and the role of distribution operations management in the supply chain. SCM 404 Demand Fulfillment (3) This course introduces the student to how customer demand is managed and how subsequent orders are filled in both business-to-business and business-to-consumer markets. Topics focus on the demand fulfillment process, which encompasses flows of goods, information, and funds from the moment a business receives an order from a customer until all requirements for the order are satisfied in full. These topics include:
- *role of demand management and distribution operations in the supply chain*
- *transportation management/distribution center processes*
- *inventory control and order management elements/facility costing and productivity analysis*
- *strategic demand management and distribution operations issues in the supply chain* Both theoretical and quantitative perspectives will be offered on these topics. Additionally, each topic will be addressed from strategic and financial perspectives. After completing this course, students will have the knowledge, skills, and abilities to:
- *Explain the role of demand management in the supply chain*
- *Explain the role of distribution operations in demand management*
- *Determine the strategic and financial impacts of demand management and distribution operations management*
- *Articulate the role of information systems in demand management and distribution operations management*
- *Use quantitative techniques to analyze supply chain processes*
- *Describe related system software. This is one of three prescribed foundation courses for the Supply Chain and Information Systems major for which SCM 301 Supply Chain Management is a prerequisite. This course also satisfies the prerequisite for SCM 421 Supply Chain Modeling and Analysis. Student evaluations are based on individual and group homework assignments and computer-lab exercises, as well as on at least three written examinations.

Enforced Prerequisite at Enrollment: BA 302 or SCM 301

SCM 405: Manufacturing and Services Strategies
3 Credits

Investigates manufacturing and services strategies in supply chain networks. SCM 405 Manufacturing and Services Strategies (3) This course examines manufacturing and services strategies, with special emphasis given to quality management concepts, methods, and issues. After completing this course, students will have the knowledge, skills, and abilities to:
- *Articulate how the various components of a manufacturing strategy are integrated, particularly with respect to the use of information technologies for supply chains*
- *Effectively apply operational and quality tools useful in implementing manufacturing strategies. Individual and team assignments form the basis for evaluation. Evaluation methods include a combination of class participation, exams, ‘hands-on’ exercises, case studies, and written assignments. This is one of three prescribed foundation courses in the Supply Chain and Information Systems major for which BA 302 ‘Supply Chains’ is a prerequisite. The course is also an important prerequisite for the capstone course in the major, SC&IS 450 ‘Supply Chain Leadership.’*

Enforced Prerequisite at Enrollment: SCM 301 or BA 302

SCM 405H: Manufacturing and Services Strategies
3 Credits

Investigates manufacturing and services strategies in supply chain networks.

Honors
SCM 406: Strategic Procurement

3 Credits

Analysis of strategic procurement in the supply chain. SCM 406 Strategic Procurement (3) SCM 406 provides an in-depth analysis of the procurement process and supplier management, with strong emphasis placed on managing a supplier base for both products and services. Elements examined include the strategic role of procurement in supply chains, the identification and evaluation of requirements, the strategic make-versus-buy decision, how to identify, evaluate, and select potential suppliers and conduct a post-purchase evaluation; and the impact of information technology on strategic procurement. Both theoretical and quantitative perspectives will be offered. In addition, the topics will be addressed from strategic, financial, and global perspectives. In light of these perspectives, the course objectives are to develop a comprehensive understanding of: (1) the supplier selection and evaluation process (2) the relationship between product design and the supplier base (3) the types of relationships that exist between buyers and sellers (4) the impact of information technology on strategic purchasing and supply management. Students will also develop skills in using quantitative tools to select and evaluate suppliers. This is the third of three prescribed foundation courses in the Supply Chain and Information Systems major.

**Enforced Prerequisite at Enrollment:** SCM 301

SCM 415: Project Portfolio Management and Organizations

3 Credits

An advanced course in project management focusing on portfolio planning and control within the context of specific organizational challenges. MGMT 415 Project Portfolio Management and Organizations (3) Project Portfolio Management (PPM) is a strategically-focused course on the management of projects, programs, and portfolios in organizations. The management of individual projects is a complex, multi-level challenge involving myriad issues of planning, organizing, and controlling all project elements. Project portfolio management addresses a more strategic need; namely, the process of project selection in order to develop a balanced portfolio of projects designed to support organizational initiatives. As a result, this course addresses the critical issues of maximizing value in a portfolio, linking projects to organizational strategy, understanding the critical organization effects of structure, environment, and culture on project success, and creating a coherent PPM framework for the firm. Because the focus is more strategic, the role of the instructor in this course is to go beyond the mechanics of planning and controlling a single project to training students how to think strategically where projects and programs are concerned; to recognize their role in creating a PPM plan for an organization, selecting projects for value, rebalancing a project portfolio, and maintaining this focus within the organization.

**Enforced Prerequisite at Enrollment:** SCM 301 and (MGMT 409 or MGMT 410)

SCM 416: Warehousing and Terminal Management

3 Credits

Administration of warehouse and terminal functions in logistics systems, with analysis of customer service, forecasting, inventory, investment, design, and operation. Not available to baccalaureate business students in Smeal.

**Enforced Prerequisite at Enrollment:** SCM 301
fundamental supply chain knowledge, skills, and abilities developed in foundation and intermediate courses. Students must complete SCM 421 before taking this course. SCM 450W is a writing-intensive course. In addition to written assignments encompassing case studies, hands-on exercises, and examinations, student evaluations include oral presentations and class participation.

**Enforced Prerequisite at Enrollment:** SCM 421

Writing Across the Curriculum

SCM 455: Logistics Systems Analysis and Design

3 Credits

Customer service, inventory management, transportation, warehousing, purchasing, international logistics, site location planning and analysis, and total cost analysis.

**Enforced Prerequisite at Enrollment:** SCM 301 or SCM 310

SCM 460: Purchasing and Materials Management

3 Credits

Purchasing policies, procedures, order specifications and agreements, supplier selection, and the role of purchasing in production planning and inventory management. Not available to baccalaureate business students in Smeal. This is an online introductory Web course on purchasing and materials management. As such, its focus will be on the management of the purchasing and materials management functions. We will emphasize the overall goals of purchasing, which include: providing an uninterrupted flow of materials and services; keeping inventory at a minimum to achieve the objectives of the company; maintaining quality standards; developing competent suppliers; standardizing the items bought; obtaining the lowest ultimate price; improving the organization’s competitive position; and achieving good external and internal working relationships. Key topics to be covered include: purchasing policies and procedures, order specifications and agreements, supplier selection, and the role of purchasing in production planning and inventory management. The use of SAP R/3 Enterprise Resource Planning system will be an integral component of this course. Students will complete numerous lab projects consisting of hands-on assignments in the use of the SAP R/3 Materials Management application. SAP R/3 assignments will include the processing of material master records, vendors, requisitions, request for quotes, quotation analysis, purchase order creation, purchase receipts, and invoice processing.

**Enforced Prerequisite at Enrollment:** SCM 301 or SCM 310

SCM 465: Electronic Business Management

3 Credits

A problem-based exploration of the various electronic business tools and technologies required to efficiently manage a supply chain. Not available to baccalaureate business students in Smeal.

**Enforced Prerequisite at Enrollment:** SCM 301 or SCM 310

SCM 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

SCM 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

SCM 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

SCM 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

SCM 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

**Surveying (SUR)**

SUR 111: Plane Surveying

4 Credits

Plane surveying principles; basic measurement statistics; use and care of equipment; traversing, area, and coordinate computations; differential leveling; RTK-GPS measurements. SUR 111 Plane Surveying (4) The objectives of this first course in surveying is to introduce the surveying profession and cover the fundamental methods of plane surveying which include use and care of equipment, field procedures, computations, and measurement error theory. As a result of completing the classroom component of the course, students will be able to: (1) make accurate conversions between commonly used surveying units, (2) apply the rules of significant figures to surveying measurements and calculations, (3) identify sources and types of error in surveying measurements, (4) understand differential leveling theory including note-form, survey closure, and loop adjustment, (5) compute the standard error of a set of repeated measurements and establish an acceptable range of observed values based upon a specified level of confidence, (6) adjust a set of measured angles and compute line directions for a closed traverse, (7) compute and adjust by compass rule the departures and latitudes of a closed traverse, (8) apply coordinate geometry methods to compute coordinates, direction, distance, and area. As a result of completing the laboratory component of this course, students will be able to: (1) perform a differential leveling survey within FCGS third order work, (2) perform a closed traverse survey with a relative precision of 1/10,000 using a total station, (3) use the RTK-GPS field method to measure position of stations in a closed traverse, and (4) complete a set of traverse computations for a closed traverse and present them in a prescribed format. SUR 111 is a prerequisite to all SUR courses. Student performance is based upon a mixture of homework, field exercises, writing assignments, quizzes, exams and a course portfolio. The final exam is comprehensive. All field
exercises are held outside and on the campus grounds. Students must dress for weather conditions of the day of the laboratory exercise.

Prerequisite: or concurrent: MATH 026 or MATH 040 or MATH 140

SUR 162: Methods in Large Scale Mapping

3 Credits

CAD applications in mapping; data collection using traditional and satellite techniques; map compilation; COGO. SUR 162 Methods in Large Scale Mapping (3) SUR 162 is the basic mapping course in the curriculum. The concept of reference datum is introduced; the US national spatial reference system is described. Map design considerations such as scale are introduced. Map compilation emphasizes computer aided drafting. Basic standards and procedures of control and mapping surveys are introduced. Basic concepts of coordinate geometry are introduced. Laboratory exercises incorporate practice in control and mapping surveys, in map compilation and in application of coordinate geometry. As a result of completing the classroom component of the course students will be able to (1) describe hardcopy and softcopy maps, (2) describe the standard series of maps in the US National Mapping Program, (3) describe US national map accuracy standards, (4) apply map design considerations such as map clarity, order and balance, (5) calculate scale and map layout, (6) apply procedures of interpolation to calculate positions of contours, (7) describe the use of triangulated irregular networks to create contours, (8) describe components of the US national spatial reference system, (9) describe design considerations for triangulation, trilateration, traverse and precise leveling, (10) describe the survey procedures used to locate contours, (11) describe procedures to make a digital elevation model, (12) design a survey to collect mapping data using a data collector to enable efficient drawing, (13) use coordinate geometry to calculate position and elevation of a feature, to calculate direction and distance of a line, to calculate coordinates of a station using intersection, to calculate coordinates of an occupied station using resection. As a result of completing the laboratory component of the course students will be able to (1) set up a new map compilation project in a mapping program, (2) create and use blocks for standard map features (eg borders, title boxes), (3) use mapping program COGO features, (4) use mapping program contouring capabilities to create a digital terrain model, (5) use mapping program features to load collected positional data and draft a manuscript, (6) design and conduct a control traverse, and a mapping survey to collect data using an electronic data collector.

Prerequisite: SUR 111, EDSGN100

SUR 212: Route and Construction Surveying

4 Credits

Circular, compound, spiral horizontal curves; equal, unequal tangent vertical curves; alignments, earthwork; control, building, pipe, street, and as-built construction surveys. SUR 212 Route and Construction Surveying (4) SUR 212 builds directly upon the fundamental surveying principles presented in SUR 111 (Plane Surveying), particularly traverse methods and coordinate geometry calculations. The course covers the fundamental geometric computations for street alignment design starting with simple circular, compound circular and spiral horizontal curves. This includes computation for intersection angles, radius, length, tangents, degree of curvature, stationing and stake-out calculations using coordinate geometry methods. The topics of vertical curve analysis follow which includes street grade, rate of change of grade, stationing, low and high points, passing a curve through fixed point and other alignment related analysis and design. Both equal tangent and unequal tangent vertical curves are discussed. Vertical curves are followed by street cross-sections, templates, slope stake locations, cut/full, earthwork computations and other aspects of 3-D alignment design. Once curve geometry and street alignment calculations are covered, the course moves into field stake-out methods for construction. Street alignment stake-out is covered first, using industry standard software with traditional and RTK-GPS equipment. A road alignment project is used to combine the aspects of geometric analysis and design with field stake-out methods including a control survey. Beyond street stake-out, other construction surveys are addressed including building, pipe line, culverts, storm and sanitary sewers, as-built and other construction related surveys. The laboratory exercises present field methods for construction projects in accordance with design specifications. Computations of earthwork volumes are also covered for other construction projects beyond that of street alignments.

Prerequisite: SUR 162

SUR 222: Photogrammetry

3 Credits

Basic principles of metric photogrammetry with single and stereopair photos; coordinate transformations; map production with stereo imagery; flight planning. Lab. SUR 222 - Photogrammetry (3) Photogrammetry covers the basic principles of aerial photography and the geometry of the optics in relation to aerial cameras. Mathematical theories for refining and processing measurements from single aerial photographs are developed. Such measurements are transformed to obtain real world coordinates of features on the surface of the earth. Two-dimensional conformal, affine, and projective coordinate transformation equations and the three-dimensional conformal coordinate transformation equations are developed and applied to the measurements on the photographs. In addition, the theory underlying the geometry of stereopairs of photographs are developed and used to determine elevations of features on the photograph. Stereographic equipment and software are used to produce accurate topographic maps of the overlap areas between stereopairs. The course also covers procedures and considerations for planning an aerial photography mission which include flight planning, cost analysis, equipment selection, placement of photo controls, and overall project management.

Prerequisite: Prerequisite or concurrent: SUR 162

SUR 241: Surveying Measurement Analysis

3 Credits

Statistical error analysis of surveying measurements; propagation of random errors; confidence intervals and statistical testing. Lab. SUR 241 Surveying Measurement Analysis (3) Surveying Measurement Analysis explores the fundamental concepts of statistical error analysis with applications to surveying measurements. It covers the normal distribution function and theories describing the fundamental procedures in data including measures of central tendency and measures of data variation. It then explores sampling distribution theory and develops statistical confidence intervals and testing using the X2, students t, and F distributions. Fundamental concepts in the propagation of variance are developed and applied to the traditional surveying observations of angles, distances, azimuths, elevation differences. These error propagation techniques are further used to explore the propagation of variance in
traditional traverse computations. The accompanying lab exercises help reinforce and validate the theoretical foundations of this class.

**Prerequisite:** SUR 111; Concurrent: MATH 083 or MATH 140

SUR 262: Coordinate Systems in Map Projections

2 Credits

Introduction to coordinate systems used in the Lambert, Mercator, Transverse Mercator, and UTM map projections; reduction of surveying observations. SUR 262 Coordinate systems in Map Projections (2) Coordinate systems in map projections covers the fundamental relationships between the physical earth, the geoid, the ellipsoid, and map projections. It will explore the use of map projections in state plane coordinate systems, and the use of these coordinate systems in large mapping and construction projects. The course explores the corrections that must be made to properly use these coordinate systems including the reduction of observed elevations, distances, azimuths and angle.

**Prerequisite:** Prerequisite or concurrent: MATH 110 or MATH 140; SUR 162

SUR 272: Cadastral Surveying

3 Credits

Evolution of land records systems; PLS: property ownership and conveyancing; common and statute law; rules of construction; boundary location procedures.

**Prerequisite:** SUR 111

SUR 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

SUR 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

SUR 313: Integrated Surveying

3 Credits

Control, boundary, mapping and construction surveys; survey planning, coordinating; report and record map preparation. SUR 313 Integrated Surveying (3) SUR 313 is intended for SRT and SUR E students in their last year in the programs. Objectives of SUR 313 are directed toward providing instruction and practical experience in activities common in surveying practice, experience requiring the integration of virtually all abilities gained in previous surveying courses. The class is organized as a student surveying company with the instructor as general supervisor. Objective 1 of the student surveying company is to analyze a letter from a client (the instructor) requesting a survey. The letter will request a survey (typically ALTA boundary or construction). The client letter will specify standards (ALTA and other) the survey is to meet, standards commonly required in survey practice. The client letter will specify products to be delivered, typically a report of record of survey maps and analyses showing the degree to which required survey standards have been met. In addressing objective 1, students determine exactly what work needs to be done to satisfy client requirements. Typically these include several sub-surveys: (1) a relatively long-range satellite (GNSS) survey to bring control into the project area, (2) a traditional local control survey to create a control network to control subordinate surveys and the surveys producing what the client has requested, typically boundary retracement and mapping surveys. The result of work on objective 1 is the organization of the class into coordinating groups, one per sub-survey plus two additional groups for report compilation and editing and map production and editing. Objective 2 of the student surveying company is to develop detailed work plans for sub-surveys, report preparation and map production. The result of work on objective 2 is the set of work plans. A written contract (as a letter of understanding) between the student surveying company and the client is prepared. Objective 3 is to perform that record search, field work, data analysis, mapping and preliminary report writing for the sub-surveys necessary to meet client requirements. Objective 4 is to compile the final report of survey.

**Prerequisite:** SUR 162; Concurrent: SUR 212, SUR 272

SUR 341: Adjustment Computations

3 Credits

Matrix methods in least squares; random error propagation; observation equation model; conditions between parameters; basic post-adjustment statistical analysis. SUR 341 - Adjustment Computations (3) Adjustment computations covers the basic theory and mechanics of a least squares adjustment using the traditional surveying observations of distances, angles, azimuths, and elevation differences. It explores the theory of error propagation, and uses this theory to determine the precision of indirectly measured quantities. It explores post-adjustment analysis through the use of various statistical tests, and error ellipse computation and analysis. This course primarily focuses on the least squares adjustment and analysis of differential leveling, triangulation, trilateration, traverse and network observations.

**Prerequisite:** SUR 262; Prerequisite or concurrent: CMPSC201, STAT 401, SUR 241

SUR 351: Geodetic Models

3 Credits

Three dimensional geodesy; computations on the ellipsoid; map projections; reduction of observations and elements of physical geodesy. SUR 351 Geodetic Models (3) Course covers the basic gravimetric and geometric geodesy aspects as related to surveying. Motions of the Earth and the effect on reference systems are explored. The Earth's gravity field, its measurement, reduction of gravity observations to the geoid, uses for gravity and gravity anomalies are studied. Different coordinate reference systems are studied including astronomic, geodetic, and satellite coordinate systems. Transformation between the various coordinate systems is covered while also considering crustal plate motion. Basic mathematical representations and transformations between various representative ellipsoids are explored. Satellite navigation and positioning is discussed at a rudimentary level. Both point positioning and relative positioning techniques are discussed.

**Prerequisite:** MATH 141, SUR 262
SUR 362: Introduction to Geospatial Information Engineering

3 Credits

Basic concepts in geographic information engineering; spatial reference frameworks; map and text data; digital environments; software and hardware platforms. SUR 362 Introduction to Geospatial Information Engineering (3) Land has varied meaning and value to different cultures and generations. There is a need to manage land and its resources in order to sustain life and meet the demands of competing interests. Geospatial information technology provides a means through which data about land can be analyzed to obtain information that may be used to support land management decisions. The geospatial information engineering course is the foundation course in the surveying engineering program that introduces students to the technology. The objective of this course is to teach students to collect and process spatial data, analyze and make decisions, and to communicate the results using maps and other information delivery formats. This course begins with the introduction of geospatial technology and its application in decision making, resource allocation and management, a socio-economic development. Students learn the different types of data that are used in geospatial information technology. They learn about graphical data structures as well as descriptive databases and how to build them. Three spatial data models are discussed together with their advantages and drawbacks, as well as descriptive databases. Students capture various datasets from the field, convert them into usable formats, and process them using the models that have been discussed so as to reinforce the knowledge. Spatial reference systems and map projections are discussed. Procedures for performing geospatial analyses and querying databases are discussed and students conduct laboratory exercises using the field data that they captured. Map making techniques are discussed and students learn to communicate the results of analysis through maps.

Prerequisite: SUR 162, SUR 272; Concurrent: MATH 110 or MATH 140, SUR 222

SUR 372W: Legal Aspects of Land Surveying

3 Credits

Legal research; rules of evidence including classification and evaluation; unwritten rights; land description composition; easements.

Prerequisite: SUR 272

Writing Across the Curriculum

SUR 381: Stormwater Hydraulics and Hydrology

4 Credits

Hydraulics: statics, continuity, energy, friction; hydrology: rainfall, abstractions, travel time, runoff; stormwater design: sewers, culverts, basins, erosion; municipal regulations. SUR 381 Stormwater Hydraulics and Hydrology (4) Stormwater Management Hydraulics and Hydrology is an elementary treatment of common design practices used to create stormwater management plans for small to medium sized land development projects. Erosion and sedimentation design is also addressed within the context of a stormwater management plan. The course is intended for engineering students who are not required to take formal fluid mechanics or hydrology courses, yet have a need to understand or complete the design aspects of stormwater management as it relates to their professional practice. Some state professional registration laws refer to this type of engineering design as ‘minor engineering’ which is engineering design as it relates to land surveys connected to land development activities. Other types of ‘minor engineering’ include street alignment, sanitary sewers, water lines, utilities and site grading. The course contains three segments. The first segment covers the elementary hydraulics necessary to design drainage structures and stormwater detention facilities. These topics include fluid statics, continuity, conservation of mass, conservation of energy, friction losses, minor losses, energy grade line, open channel flow, weirs and orifices. The second segment covers elementary hydrology methods used to analyze runoff from land development sites and small to medium watersheds. The hydrology topics include watershed characteristics, rainfall, abstractions, runoff, time of concentration, peak flow methods, hydrograph methods, basic channel routing and detention basin routing. The third segment covers government regulations and common design methods used to design storm sewers, detention basins and erosion control plans. A project includes the design of a multiple-element storm sewer system, a stable open channel, a detention facility with a multiple outlet structure, and some erosion control measures.

Prerequisite: MATH 141, 6th semester standing; Concurrent: PHYS 213

SUR 422: Digital Photogrammetry

3 Credits

Mathematical methods for processing digital imagery, creating digital elevation models and ortho-photographs, and applications in spatial data infrastructure. SUR 422 Digital Photogrammetry (3) As a continuation to an existing photogrammetry course, this course is designed to provide a deeper understanding of the mathematical principles of photogrammetry as well as current applications of photogrammetric mapping. In recognition of the increasing use of digital images in geospatial technologies, especially in applications involving natural resource inventory and mapping, this course provides advanced knowledge in softcopy photogrammetry. This course deals with mathematical methods for processing tilted aerial photographs. Two- and three-dimensional coordinate transformation methods for correcting the geometry of digital imagery are taught. These are followed with the development of collinearity equations for analytical aerotriangulation and the adjustment of a block of photographs. Extraction of contours and development of elevation models are also taught. Creation of digital ortho-photographs, mosaics and color balancing of mosaicked images are discussed. Applications of ortho-rectified digital images in geospatial technologies are also taught. Laboratory exercises include the use of computer hardware and software to enhance and classify remotely sensed images, apply softcopy photogrammetry methods to develop contour maps, digital elevation models, and digital orthophotographs from a block of photographs. The course has direct relationship to photogrammetry, adjustment computations, and multipurpose land information systems which are all taught in the surveying program. It is a required course which is offered to baccalaureate degree students in the surveying engineering program. Academic achievement is evaluated through quizzes, home works, and examinations.

Prerequisite: MATH 220, SUR 362

SUR 441: Data Analysis and Project Design

3 Credits

Post least squares adjustment analysis of control networks, statistical testing, blunder detection, network design considerations, and computer optimization techniques.
Prerequisite: STAT 401 or STAT 451, SUR 341

SUR 455: Precise Positioning Systems

3 Credits

Stellar coordinate systems; geodetic reference coordinate systems; satellite orbital theory; global positioning systems; pseudo-ranging; GPS vector adjustments.

Prerequisite: SUR 351. Prerequisite or concurrent: SUR 441

SUR 462: Parcel-Based Geospatial Information Systems

3 Credits

Acquisition processing of land parcel data; development of land information system and applications in geospatial information technology. SUR 462 Parcel-Based Geospatial Information Systems (3) People and cultures around the world have different perceptions of land. Land has different value to many people. As a natural resource, with finite size, there are always competing interests when it comes to allocation use and management of units of land. The basic unit of land is the parcel. All activities are associated with land parcels. With such competing interests, it is important to manage land and its resources in an effective manner so as to ensure its sustainability. To ensure proper stewardship of land, data about each land parcel must be maintained so that information from parcel-based geodatabases may be used to support decisions involving land, people, and communities. Parcel-based information technology serves as a component of the geospatial technology with special applications in placed-based information. This course builds on the knowledge obtained from SUR 362, Geospatial Information Engineering course. It begins by considering various perceptions of the use and value of land to different cultures, communities, and organizations. A justification is made for the need to manage land and resources in land in order to promote good stewardship. The use of technology for land parcel information management is discussed. From there the course progresses through land parcel data types and sources, data conversion and geodatabase development. Applications of land parcel data in place-based information management are discussed. Accuracy considerations for parcel data in various applications are also discussed. Spatial analysis and methods for presenting or communicating results are discussed.

Prerequisite: SUR 362, SUR 372W

SUR 471: Professional Aspects of Land Surveying

3 Credits

Ethical issues and legal limits of practice; surveyor as an expert witness; surveyor-client relationship; responsibilities to the profession.

Prerequisite: SUR 372W

SUR 482: Land Development Design

3 Credits

The land development process; geometric, environmental, aesthetic aspects of development; local regulatory requirements; preparation of final plat and report. SUR 482 Land Development Design (3) Land development design is designed for seniors in Surveying Engineering and covers the basic principles of residential design and development. The objective of the course is to provide students with exposure to elements of the land development process from an engineering perspective. Topics covered include land development regulations, site analysis of soils, site evaluation in terms of opportunities and constraints, sketch design, site layout, preliminary design, street layout including horizontal and vertical design, grading plan, drainage design, stormwater management, sewer and water, and erosion and sedimentation controls. Students work in teams of two or three on a design project for a local property. Students will utilize AutoCAD Civil 3D (or similar software) and the Virginia Tech/Penn State Urban Hydrology Model (VTPSUHM) (or similar) in the project design. A site visit to the design property is included in the course. At the end of the course, student teams will exchange their project designs and critique each other's work from the viewpoint of a township engineer. Designs are evaluated for adherence to a pre-selected municipal subdivision and land development ordinance (SALDO). Students are required to present their final designs to the class. They must be prepared to explain their work and defend any design elements that are questioned during the presentation. After completion of this course, students will be able to: 1) evaluate a site for land development potential, 2) prepare sketch designs for a proposed land development site, incorporating opportunities and constraints, 3) prepare a preliminary design including street alignment for a residential subdivision, sanitary sewer for a residential subdivision, storm sewer with inlets and inverts and a grading plan; and 4) prepare a mock final plan for public review and presentation.

Prerequisite: SUR 212, SUR 372W; Prerequisite or concurrent: SUR 381

SUR 490: Seminar in Surveying

1 Credits

Individual or group work in surveying.

Prerequisite: senior standing

SUR 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

SUR 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Sustainability (SUST)

SUST 150N: The Science of Sustainable Development

3 Credits

This course will focus on how human society depends on the environment for its continued existence. It will examine several major topics relating to environmental and social sustainability including ecosystem conservation, sustainability of food systems with special reference to the water-food-energy nexus, and current and future trends in urbanization. Within each of these topics, students will learn fundamental scientific principles and use this information to gain a better understanding of what human behaviors have led to our current resource production and consumption crisis. This class will explore ways people can modify behavior to relieve poverty in developing nations and meeting
It is influenced by what other groups and individuals have written or said about it. Sustainability debates are shaped by more than simply 'the facts' surrounding environmental issues; they are also shaped by the persuasive tactics and rhetorical choices writers and speakers make. Students will spend the semester analyzing, discussing, and creating texts that engage the key issues and most important topics of sustainability and environmentalism.

**Enforced Prerequisite at Enrollment:** ENGL 15 or ENGL 30

**General Education:** Humanities (GH)
**General Education:** Social and Behavioral Sciences (GS)
**General Education - Integrative:** Interdomain

**GenEd Learning Objective:** Critical and Analytical Thinking

**GenEd Learning Objective:** Key Literacies

**GenEd Learning Objective:** Integrative Thinking

**GenEd Learning Objective:** Global Learning

**GenEd Learning Objective:** Societal Responsibility and Ethical Reasoning

**GenEd Learning Objective:** Key Literacies

**GenEd Learning Objective:** Integrative Thinking

**GenEd Learning Objective:** Global Learning

**GenEd Learning Objective:** Societal Responsibility and Ethical Reasoning

**SUST 197E: Special Topics - InterDomain**

3 Credits/Maximum of 3

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GN/GH GenEd course.

**General Education:** Humanities (GH)
**General Education:** Natural Sciences (GN)
**General Education - Integrative:** Interdomain

**SUST 200: Foundations of Leadership in Sustainability**

3 Credits

Science, ethics, and leadership in social, environmental, and economic sustainability.

**General Education:** Social and Behavioral Sciences (GS)

**SUST 242N: Issues in Sustainability**

3 Credits

This course is part of the General Education Integrative Studies curriculum. As such, it combines Humanities (GH) and Social and Behavioral Sciences (GS) through the topic of sustainability. Students will read, write, and think integratively by considering the humanistic values of sustainability and how those values are connected to the political, social, and cultural forces that shape sustainable activities. The course examines the concepts and key issues of sustainability through a variety of literary, scientific, political, and popular texts. Class discussions will trace the roots of sustainability in environmental writing, will analyze the diverse debates surrounding sustainability, and will consider local, national, and international texts about sustainability. Students will interact with invited guest speakers, conduct field research on sustainability in local communities and institutions, and create their own narratives and scenarios for sustainable futures based on their findings and speculations. The course will address central issues of sustainability in society today, including: - What are the historical and cultural foundations of sustainability? - How is sustainability a political, social, and ethical issue? - How do crises and disasters create challenges for sustainability? - How is sustainability connected to local, urban, and transnational environments? The goal of the course is to develop two types of awareness. First, students will develop an awareness of the key discussions about sustainability in society today. Second, students will cultivate a critical awareness of how debates about sustainability are shaped through the written and spoken word. Sustainability is more than just protecting the great outdoors or using a recycling bin. It is also a product of the discourse surrounding it. In other words, sustainability—and what we think, say, and do concerning it—is influenced by what other groups and individuals have written or

Swahili (SWA)

SWA 1: Elementary Swahili I
4 Credits
Listening, speaking, reading, writing Swahili: an introduction for beginners; basic structures and vocabulary; cultural elements.
Bachelor of Arts: 2nd Foreign/World Language (All)

SWA 2: Elementary Swahili II
4 Credits
Listening, speaking, reading, and writing Swahili; structures and vocabulary; cultural elements.
Prerequisite: SWA 001
Bachelor of Arts: 2nd Foreign/World Language (All)

SWA 3: Intermediate Swahili
4 Credits
Further development of listening, speaking, reading, and writing skills in Swahili: structures and vocabulary; cultural elements.
Prerequisite: SWA 002
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Foreign/World Lang (12th Unit)

SWA 199: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

SWA 295: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.
Prerequisite: prior approval of proposed assignment by instructor

SWA 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

SWA 494: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

SWA 494H: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.
Honors

SWA 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

Temporary Education Abroad Registration (EDAB)

EDAB TEMPH: Temporary Education Abroad Registration
1-18 Credits/Maximum of 18
This course is used to temporarily register students that are studying overseas. Permanent courses will be entered after the student returns.

EDAB TEMPI: Temporary Education Abroad Registration
15 Credits/Maximum of 99
This course is used to temporarily register students that are studying overseas. Permanent courses will be entered after the student returns.

EDAB 199: Temporary Education Abroad Registration
1-18 Credits/Maximum of 99
This course is used to temporarily register students that are studying overseas. Permanent courses will be entered after the student returns.

EDAB 499: Temporary Education Abroad Registration for
1-15 Credits/Maximum of 99
This course is used to temporarily register students that are studying overseas. Permanent courses will be entered after the student returns.

Theatre (THEA)

THEA 1S: First-Year Seminar: Theatre Production Practices
1 Credits
An orientation to the School of Theatre production practices, resources, faculty, and practicum. THEA 001S First-Year Seminar: Theatre Production Practices (1)(BA) This course meets the Bachelor of Arts degree requirements. THEA 001S will serve as the First-Year Seminar for all undergraduate majors in the School of Theatre. In all School of Theatre degree programs, backstage production is one of the primary curricular and experiential areas held in common. It is in this area that most theatre
students gain their first practical experience in producing theatre on our stages. This course will provide the necessary training and experience for all students to safely practice in the production of live theatre in our spaces. This course will orient first-year students to faculty, facilities, and practices of production utilized in the School of Theatre season. Students will be introduced to the faculty and their areas of expertise. They will be oriented to the spaces and equipment in our theatres and taught safe operation of the equipment. They will learn the practical and professional expectations placed on students participating in a School of Theatre production. Learning will take place both in lecture/demonstration format and through the practical experience of working on a School of Theatre production. Students will be evaluated by: 1. Backstage practices and safety will be evaluated through knowledge based quizzes and/or skill demonstrations as appropriate to each section. 2. Professionalism evaluated through attendance, reliability and skill growth as observed during the execution of practicum assignments.

Prerequisite: admission into Theatre Program
Bachelor of Arts: Arts
First-Year Seminar

THEA 80: Pit Orchestra
1-3 Credits/Maximum of 3

Rehearsal and performance of contemporary and historical musical theatre styles, including operetta and light opera. THEA 80 Pit Orchestra (1-3 per semester/maximum of 3) (GA) (BA) This course meets the Bachelor of Arts degree requirements. THEA 80 provides an introduction to the particular demands of the orchestral pit player, with an emphasis on the musical theater repertoire. The course objectives is to prepare the student for a professional theatre engagement. This course parallels the orchestra ensembles in the School of Music (Philharmonia, Chamber Orchestra) but with the added techniques of theatre orchestra: standard vamps, 'vocal last time' vamps, fade on cue, cut on cue, etc. Grades are determined by (1) level of performance and improvement, and (2) attendance at all rehearsals, sectionals and performances. The special facilities for this course will include orchestral rehearsal space in the School of Music, as well as the Pit/Performance space in the School of Theatre. Enrollment will vary depending on the needs of individual musical scores; however, the performance schedule is such that an ensemble large enough to accommodate both players and substitutes is desirable. This is a repeatable course. Students will comprise the orchestra for a School of Theatre's production each semester. An audition is required for admission to this course. Emphasis will be placed on precision ensemble playing, as well as the skill of playing together as a section while simultaneously following the conductor. Because of the highly technical nature of theatrical productions, there are frequent cues given by the conductor which are vitally important to the performance. Mastering the specialized skill of splitting one's attention evenly between the music stand and the podium will be a major objective of this course. In the process of preparing the music for each production other skills will be taught and acquired, such as: learning when to accompany and when to play in a solo manner; when to follow and when to lead as a section player; for brass players, developing the 'Broadway' sound: big, bright, and focused; for reed doublers, the techniques involved in performing on multiple instruments in a single number; for all musicians, familiarity with the plethora of styles now being performed on Broadway: traditional Broadway, pop, rock, and the more classical styles of some of the contemporary theatre composers.

Prerequisite: audition

Bachelor of Arts: Arts
General Education: Arts (GA)

THEA 100: The Art of the Theatre
3 Credits

THEA 100 The Art of the Theatre (3) (GA,US,IL) (BA) This course meets the Bachelor of Arts degree requirements. This course is a survey of all aspects of the living art of the theatre. Throughout the semester, the in-class analysis of written scripts, performance contexts, dramatic structure, and theatrical genres will give insights into the imaginative impulses of theatre artists and their audiences. As a variety of individual texts are explored, scenes are used to illustrate the various topics under consideration. The course is concerned with the universality of the theatrical impulse, and includes a selection of international and multi-ethnic voices and performance techniques. Students will experience American theatre history as a conversation that parallels the country's struggle for identity in the 19th, 20th, and 21st Centuries. Students learn about Western performance traditions alongside traditions happening elsewhere in the world in the same time period within political contexts, to create a global perspective of theatre. This course provides the groundwork for all other theatre courses and is also designed to allow the general student to experience and understand the art of the theatre.

Bachelor of Arts: Arts
International Cultures (IL)
United States Cultures (US)
General Education: Arts (GA)
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

THEA 101N: Performance and Society
3 Credits

Inspired by the evolving field of performance studies, THEA 101: Performance & Society introduces theatre and performance as artistic practice, creative action, a way of knowing, and a record and unfolding of culture. Combining the disciplinary domains of social science and the arts, the performances and performance practices we study range from the sacred, to the artistic, to the commerical (and often more than one of these at once). This course positions the study of performance as interdisciplinary-drawing from foundational texts in sociology, anthropology, and literature, just as it draws from such other art forms as visual art, architecture, dance, and music. We work from the following three interrelated premises: art and culture shape each other; performance happens everywhere—in many geographies, and in spaces real and virtual; and theatre and dance are human endeavors that tell us about the past, rehearse the present, and point to possible futures. To test these ideas, students will participate in projects that explore the limits and extremities of performance through the lenses of theatre studies and social science, fields that view performance as human endeavor, and everyday life as performance, respectively. As the preceding suggests, this class is an integrative domains course that fulfills GA (arts) and GS (social science), positioning Theatre and Sociology as disciplinary partners. Thus, we take a 'dramaturgical approach' to analyzing performance, as sociologist Erving Goffman terms it in the foundational work, The Presentation of Self in Everyday Life (1956). It is this correspondence between social science and theatre that Introduction to Performance and Society will explore. Students will:
Learn their major theories, ways of thinking, and methodologies used in sociology; understand ‘performance’ as an agile term used in sociology, theatre, performance studies, and other fields; experience a variety of performance spaces and places— from theatres, studios, and public places, to ad hoc and virtual spaces such as the Internet, social media platforms, and the mind; complete creative projects such as scripts, designs, dances, and collaborative performances that allow them to experience what performing artists do and how they do it; and attend and write about theatrical productions as art and social event THEA 101 asks students to study, share, and live the course’s premises through collaborative activities, creative projects, and writing. Class activities ask students to interrogate the meanings of ‘liveness,’ ‘community,’ and ‘performance,’ as well as articulate theatre’s role as an art and social practice in the past, present, and future.

GenEd Learning Objective: Integrative Thinking

THEA 102: Fundamentals of Acting
3 Credits
Introduction to the art and craft of acting for non-theatre majors. THEA 102 Fundamentals of Acting (3) (GA) (BA) This course meets the Bachelor of Arts degree requirements. THEA 102 aims to introduce the student to basic principles of the art and craft of acting, focusing on HOW and WHY actors do what they do in preparation of and for a performance less than on the attainment of performance skills themselves. Students will become acquainted with acting processes, theatre terminology, script analysis, improvisation, and other fundamentals to give them a more inclusive sense of the totality of the actor’s work as craftsperson and artist. 

To do so, the student actors must tap their own powers of concentration, observation, creativity, and imagination. A major focus in the course is the development of the ability to analyze one’s own work and the work of peers in the class. Problem-solving in solo, paired, and/or large group contexts is a daily requirement in class. THEA 102 is NOT an acting course designed to develop fine actors; it is a course ABOUT acting. Thus, the course objectives are these: 1. To introduce the concept of acting as a process and craft. 2. To develop an understanding of acting skills, script and character analysis, and theatre/acting terminology. 3. To heighten powers of observation, focus, invention, imagination, and the ability to accurately and positively analyze and critique peer’s work. 4. To experience the commitment and discipline that acting requires. 5. To learn how best to score, interpret, and use the script as the fundamental source or criterion for truthful behavior on stage. Educational strategies: to accomplish the above objectives, a variety of strategies will be employed, including lectures, discussions, readings from the text, instructor critiques of student work(s), experiential activities that require full student commitment and participation, presentation of assignments after significant rehearsal outside of class, and other preparations and teaching strategies as necessary and appropriate.

Bachelor of Arts: Arts
General Education: Arts (GA)
THEA 107: Introduction to Dramatic Structure
3 Credits
An introduction to structural analysis in dramatic literature.
General Education: Arts (GA)

THEA 111: The Fundamentals of Singing and Vocal Production
3 Credits
The origin of singing predates the development of spoken language. Singing is the act of producing musical sounds with the human voice and provides a medium for communication universally across cultures. This course explores the fundamentals of voice production and offers tools to help singers at any level develop their singing voices. Preliminary objectives will include a basic understanding of musical information associated with singing. The main objectives of the course are: to explore and understand the four systems of singing (respiration, phonation, resonance and articulation) and how they relate to voice production; to provide a greater understanding of fundamental elements of singing; to understand basic laryngeal anatomy as it relates to voice production; to build an awareness of body alignment as it relates to singing; and to provide practice tools for continued education and vocal growth through an applied vocal exercise database. This entry level, non-major, course offering provides greater accessibility to personalized voice instruction which can often only be found in the one on one studio setting. Additionally, as singing is highly personal, this course offers students the opportunity to practice and explore singing at their own pace and in private. The objectives will be accomplished by utilizing an interactive, multimedia online curriculum including instructional videos that demonstrate vocal concepts, selected readings, selected supplementary videos, and a vocal exercise database. Evaluation methods will include quizzes, reflections and assessments of recordings of the students own singing. Students will receive (3) credits for this course, as well as (GA) designation. All videos, texts and examples will be made available to students online.

General Education: Arts (GA)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think

THEA 112: Introduction to Musical Theatre
3 Credits
Beginning with developing an understanding of basic musical theatre terminology, Introduction to Musical Theatre will proceed to examine musical theatre development as it parallels the quixotic historical landscape. The course is designed to allow the general student to experience and understand the art of the musical theatre. The course will begin with an exploration of foundational vocabulary and subsequently move through seven major periods of musical theatre history: Greek Tragedies (BCE-1800), Opera (1800-1900), Cinderella Musicals (1900-1928), Champagne Musicals (1928-1943), Golden Age Musicals (1943-1966), Concept Musicals (1966-1983), and Pop Musicals (1983-Present). Students will be asked to read a libretto, and listen to the score of, one show from each of these periods to fully understand, and compare, the artistic transitions that epitomized each era. Each of these productions are seminal works in the evolution of the musical: HMS Pinafore, No, No, Nanette, Show Boat, Oklahoma, Guys and Dolls, Cabaret, Company, A Chorus Line, Rent, and Next to Normal. In addition to the studying of these works, students will be taught, in chronological order, the persons and movements that helped shape the discourse of musical theatre, as well as looking at other shows that fostered dialogues between audiences and artists. While musical theatre is a primarily American art form, the development of musical theatre in other countries will be discussed as students will explore the contributions musical theater made in the countries of Greece, South Africa, Japan, China, England, France, Italy, and parts of Latin America. Each week students will be quizzed on the content they have studied and there will be two midterms and one cumulative final examination.

Bachelor of Arts: Arts

GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

THEA 113: Musical Theatre Theory I
3 Credits
Studies in the fundamentals of music notation and sight-singing.
THEA 113 Musical Theatre Theory I (3) (BA) This course meets the Bachelor of Arts degree requirements. THEA 113 is designed to provide the beginning musical theatre student with the fundamentals of music theory and diatonic harmony as well as the analytical skills with which to approach and appreciate the structure of songs and musical theatre scores. It is focused primarily on the musical theatre literature to enable the beginning student to learn and appreciate more efficiently the literature that will be central to the performance classes in the major. The class places a rigorous emphasis on pitch and rhythmic identification to develop a high degree of musicianship in the beginning student, both to provide a solid basis for the classes to come and to make the performer more competitive in the musical theatre industry. It is designed to be entry-level in preparation for THEA 114 (Musical Theatre Form and Analysis) and the upper-level theory classes (THEA 212 and THEA 214). The course presupposes no previous musical training or experience. For those with some previous musical theory education, the course may function successfully as a refresher before the more rigorous analysis courses to follow. It satisfies a significant need in that it focuses on the specific theoretical knowledge the musical theatre student needs to know to become competitive in a professional career.

Prerequisite: admission into Musical Theatre Option
Bachelor of Arts: Arts

THEA 114: Music Theatre: Form and Analysis
3 Credits
A survey of music theatre as an art form.
Prerequisite: admission into Musical Theatre Option
Bachelor of Arts: Arts

THEA 115: B.F.A. Acting Foundations
2 Credits
Fundamental aspects of training the actor's body, voice, mental focus, and imagination. THEA 115 B.F.A. Acting Foundations (2) THEA 115 is an introduction to the awakening and enhancement of beginning students' physical, vocal, mental, and imaginative instrument in preparation for the demanding work to follow in later acting, voice/speech, and movement
The course will introduce physical conditioning and breathing exercises specifically for actors, introduce exercises to enhance mental focus/concentration, and lead students through a series of exercises designed to stimulate and enhance the actor’s imagination and trust in the world of fantasy. Students will be exposed to a variety of techniques from which they may, over time, develop their own individual physical/mental training discipline. They will be encouraged to accurately assess their own physical/vocal/mental self-image, to develop a plan (with the instructor) to minimize intrusive mannerisms and to maximize positive traits and work habits. Grading will be based on each student's commitment to the training regimen, application of past lessons in present assignments, quality of daily work, and the ability to accurately perform the exercises taught.

Prerequisite: admission to B.F.A. in Musical Theatre

THEA 116: Musical Theatre Theory II

2 Credits/Maximum of 4

THEA 116 develops continues music theory for musical theatre majors and augments theory with practical piano skills. THEA 115 is an introduction to the awakening and enhancement of beginning students' physical, vocal, mental, and imaginative instrument in preparation for the demanding work to follow in later acting, voice/speech, and movement studios. The course will introduce physical conditioning and breathing exercises specifically for actors, introduce exercises to enhance mental focus/concentration, and lead students through a series of exercises designed to stimulate and enhance the actor’s imagination and trust in the world of fantasy. Students will be exposed to a variety of techniques from which they may, over time, develop their own individual physical/mental training discipline. They will be encouraged to accurately assess their own physical/vocal/mental self-image, to develop a plan (with the instructor) to minimize intrusive mannerisms and to maximize positive traits and work habits.

Prerequisite: THEA 113 CONCURRENT: A ED 103, ED 135, MU ED 186, THEA 193

THEA 120: Acting I

3 Credits

Fundamental skills and training in acting. Emphasis on physical/vocal awareness and the nature of dramatic communication. Theatre majors only.

Prerequisite: THEA 100 or THEA 105

Bachelor of Arts: Arts

THEA 121: Fundamentals of Acting II

3 Credits

This course is a continuation of THEA 120 and designed to build upon the basic foundation of acting. THEA 121 Fundamentals of Acting II (3) THEA 121 is a continuation of THEA 120 and designed to build upon the basic foundation of acting. Regardless the style or medium, good acting boils down to the process of 'living truthfully under imaginary circumstances.' THEA 121 will provide the student with practicum experiences in scene study and Monologue/Auditioning technique. The course will also deepen and expand the range of student experience to include a more sophisticated and diverse immersion into the craft of acting.

Prerequisite: THEA 120

THEA 130: Introduction to Theatre Scenic and Costume Technology

3 Credits

Introduction to the methods, materials, equipment, concepts and processes involved in the construction of scenery and costumes for the theatre. THEA 130 Introduction to Theatre Scenic and Costume Technology (3) This course will familiarize students with the methods, materials, equipment, concepts, and processes involved in the construction of scenery and costumes for the theatre. The emphasis of this course will be on the physical process that results in the production of both scenery and costumes. Lecture topics include: Soft Goods Layout and Construction Basic Flat Layout and Construction Dimensional Scenery Rigging and Paint The Costume Shop/The Big Picture Designer’s Sketch to Wearable Costume Hand Sewing Techniques Sewing Techniques/The Sewing Machine additon to lectures, students will be expected to participate in hands-on laboratory activities that will reinforce and inform the classroom theory. These activities will give students an opportunity to apply the principles they will learn in the lecture component. These courses enable our students to converse intelligently with all of the members of the theatre community, regardless of their specific theatre emphasis. Students will develop a fundamental understanding of the relationship between the various areas of theatre production.

THEA 131: Introduction to Theatre Sound and Lighting Technology

3 Credits

Introduction to the methods, materials, equipment, facilities, concepts and processes used to create theatre lighting and sound. THEA 131 Introduction to Theatre Sound and Lighting Technology (3) This course will familiarize students with the methods, materials, equipment, facilities, concepts and processes used to create theatre sound and lighting. The emphasis of this course will be on the physical process that results in the production of both lighting and sound. Lecture topics include: Mixers Connectors & Cable Playback vs. Reinforcement Safety & Hanging Lights Focusing, Circuits and Dimmers Instrument types, Qualities of Light In addition to lectures, students will be expected to participate in hands-on laboratory activities that will reinforce and inform the classroom theory. These activities will give students an opportunity to apply the principles they will learn in the lecture component. These technical theatre courses enable our students to converse intelligently with all members of the theatre community, regardless of their specific theatre emphasis. Students will develop a fundamental understanding of the relationship between the various areas of theatre production.

THEA 132: Survey of Theatre Production Practice

3 Credits/Maximum of 3

Survey and application of Scenic, Costume, Lighting, and Sound techniques and practices.

THEA 146: Basic Theatrical Makeup

2 Credits

Both straight and corrective makeup, with character and styling techniques for stage, film, and television.

Bachelor of Arts: Arts
THEA 150: Fundamentals of Design for the Theatre
3 Credits
Exploration of the philosophy and technique of scenic, costume, and lighting design.
Bachelor of Arts: Arts
THEA 152: Theatrical Design Foundations for the BFA
3 Credits/Maximum of 3
Study and practice of the philosophy, processes, and techniques of the theatrical designer.

THEA 189: Principles of Stagecraft, A Look Behind the Curtain
1.5 Credits/Maximum of 6
THEA 189 Principles of Stagecraft, A Look Behind the Curtain (1.5 per semester/repeatable up to 4 times) (GA)/(BA). For non-theatre major students only, theatre minors are ok. This course meets the Bachelor of Arts degree requirements. Ever see a show and wonder how did they build that? THEA 189 provides introductory knowledge in to scenic, property and costume construction painting techniques, lighting technology, and safety used in theatre today. This is accomplished through online and lab components. The online component is presented in the form of modules that students take at their own pace. These modules delve into the various topics listed above. Since the course is repeatable, multiple modules are available for each topic. Once the student has taken the class once, the next time they take the class they will simply complete another module on each topic. The lab component will provide hands-on experience in the topics learned online. Students will have the ability to work within one of the technical areas of scenery, props, paints, costumes or lighting, helping to build, hang, costume, prop or paint a produced show. NOTE: the labs are by appointment only. At the beginning of the semester students will be given access to a calendar with several labs available to sign up for. Labs may vary from week to week and include both weekday and weekend time slots. Students will be required to sign up for approximately 10-12 slots during the semester or the equivalent of about 40 hours of lab time. Students should plan their schedules accordingly to ensure they have adequate time to complete the lab portion of the class. There is no set time for this class.

Bachelor of Arts: Arts
General Education: Arts (GA)
GenEd Learning Objective: Crit and Analytical Think
THEA 197: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

THEA 198: Special Topics
1-9 Credits
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

THEA 199: Foreign Studies--Theatre Arts
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
Prerequisite: approval by department
Bachelor of Arts: Arts
International Cultures (IL)
THEA 200: Script Analysis
2 Credits
An introduction to script analysis for theatre majors, which focus on full text analysis as a foundation for area specific analysis. Two styles of analysis (contextual and structural) are studied. THEA 200 Script Analysis (2) THEA 200 is a course designed to teach theatre majors and minors the art and craft of understanding play texts. The course begins by exploring the nature and means of transmitting meaning through theatre texts. Discourse theory and contextual analysis are applied to at least two examples of American realism. The second method of analysis is a structuralism approach that will also be applied to at least two examples of American realism. The third area of study is the application of historicism and structuralism to non-realistic scripts. Students will work individually and in small groups to create written and oral presentations of their analyses. The course is designed to teach through practice and application of methods to a variety of types of scripts written for the theatre.

Prerequisite: THEA 100 or THEA 105
THEA 201W: Script Analysis for Design
3 Credits
An introduction to script analysis for theatre designers and technicians. Specific techniques for the analysis of dramatic work and integrating design into the storytelling process.

Prerequisite: THEA 152
Writing Across the Curriculum
THEA 202: Beginning Scene Study
3 Credits
Introduction to the fundamentals of scene study through readings, improvisations, exercises and scene work. THEA 202 Beginning Scene Study (3) A continuation of work started in THEA 102, this course is designed for theatre minors who wish to further advance their understanding of the art of acting. Advanced scene work, exercises, improvisations, and text analysis are explored, along with peer evaluations and instructor feedback on both processes and performances.

Prerequisite: THEA 102 and enrollment in the Theatre Minor
THEA 207: Gender and Theatre
3 Credits
A study of theatre and drama literature as formed by issues of gender, race, and ethnic background. THEA 207 Gender and Theatre (3) (GA;US) (BA) This course meets the Bachelor of Arts degree requirements. Theatre 207 provides a basic survey of issues of representations of gender
identity in theatre. The course will trace women's experiences in theatre from their absence on European classical stages to the more recent formation of feminist theatres. The course will explore issues of sexual orientation and gender identity as presented through drama and performance. The plats and writings chosen for study may include selections from African, European, African American, Latina, Asian American, Anglo American, and Native American playwrights. The course will examine issues of gender as they are presented by women of different cultures, by men of different races and cultures, and by women and men of various sexual orientations. The goal of the course is to examine the ways theatre and theatrical performances have portrayed individuals within a pluralistic society based on gender identity and ethnicity. Theatre has existed in every known civilization, but until recently, the contributions of predominantly white European males have provided the basis for the study of theatre. Most drama anthologies include plays written predominantly by white European males. By focusing on gender as it has been and is portrayed in theatre from diverse perspectives, THEA 207 will encourage an aesthetic appreciation of the art of theatre while exploring issues of gender identity on artistic creation and critical response.

Bachelor of Arts: Arts
United States Cultures (US)
General Education: Arts (GA)

THEA 208: Workshop: Theatre in Diverse Cultures
3 Credits
A performance-oriented class which explores the historic and contemporary theatrical works of various culturally diverse peoples. THEA 208 / AFAM 208 Theatre Workshop in Diverse Cultures (3) (GA;US;IL) (BA) This course meets the Bachelor of Arts degree requirements. Theatre Workshop in Diverse Cultures is a performance-oriented class that aims to introduce students to the broad cultural diversity that exists in artistic expression. The class will focus on several plays throughout the semester that will represent cultural, ethnic, and gender diversity as well as different literary styles. Students will be exposed to various cultures by working on plays created by artists from those cultures. The course will concentrate on a specific playwright, culture, or region, such as plays from the Caribbean. Students will be required to read, study, analyze, and perform plays from the genre. For example, the class may focus on the works, life, and philosophy of August Wilson and read Joe Tumer's Come and Gone, Seven Guitars, Piano Lesson, and Fences. The class may explore Asian styles such as Noh Theatre and Asian American works by D. H. Hwang or work by Nigerian playwright and Nobel Prize winner Wole Soyinka. The presentation of these plays will be a principle part of the class, but the reading and discussion of the material will be as important. Students will participate in some capacity with the production of these plays in areas such as stage management, dramaturgy, sets and props, lights, sound, costumes, house management, publicity, and acting. These pieces will be performed in class, in workshop, and occasionally for the general public. Students will work as an ensemble and become acquainted with basic acting and theatre techniques. The course objectives are: 1) to develop and enhance students' appreciation for the discipline and commitment required for multicultural theatrical presentations 2) to help to sensitize all students to the broad cultural diversity in artistic expression 3) to provide students with an introductory engagement with drama. THEA 208 / AFAM 208 serves as a primary selection for students pursuing the Theatre minor.

Cross-listed with: AFAM 208

Bachelor of Arts: Arts
International Cultures (IL)
United States Cultures (US)
General Education: Arts (GA)

THEA 209: Hip Hop Theatre
3 Credits
Hip Hop Theatre defines and explores Hip Hop as an art form. The student will explore Hip Hop culture through Hip Hop Theatre aesthetics: Emceeing, Dejaying, Beat boxing, graffiti art, and dance. Hip Hop Theatre is designed for students with an interest in Hip Hop Theatre/culture. This class introduces students to Hip Hop Theatre through Hip Hop aesthetics: Emceeing, Dejaying, Beat boxing, graffiti art, and dance. In addition, this class includes lecture sessions and discussions about Hip Hop culture, theatre as a global, multi-ethnic, grassroots youth culture committed to social justice and self-expression through specific modes of performance. This course seeks to introduce students to a culturally significant art form, enhance theatrical discourse, and provide practical opportunities for students to apply skills learned in class via collaborative creations, text, and performance. This course is directly related to dance, theatre, African American history and other arts based and humanities based courses. Students will be evaluated on their attendance, participation in class, willingness to learn, and the effort put forth in class.

Prerequisite: Admission to the B.F.A. in Acting or permission of Instructor

THEA 210: Hip Hop Theatre Performance Workshop
3 Credits/Maximum of 9
Hip Hop Theatre Performance Workshop expands on the Hip Hop Theatre lecture component and experience from Hip Hop Theatre, and delves more into a performance and workshop structure. Students will apply themes studied in Hip Hop Theatre 209 or DANCE 271 to this course, which focuses on performance experiences. THEA 210 Hip Hop Theatre Performance Workshop (3 per semester/maximum of 9) Hip Hop Theatre Performance Workshop is designed for students who want to expand their experience in Hip Hop Theatre and/or African American Dance History to a performance level. The student will use his/her knowledge of Hip Hop aesthetics, historical and cultural references, and natural talent to collaborate in creating an original theatre production. Students will demonstrate their understanding of Hip Hop as a global, multi-ethnic, grassroots youth culture through performance. This course is directly related to dance, theatre, African American history, and other arts and humanities courses. Student work will be observed throughout the semester. Student progress will be evaluated by his/her level of contribution to the process, engaging in discussions, and participation in the culminating performance. Class attendance and effort will also be assessed.

Prerequisite: THEA 209 or DANCE 411 or permission of the program

THEA 211: Dramaturgy
3 Credits
THEA 211 is an introduction to the history, theory, and practice of production dramaturgy. Students will learn to: practice theory-driven and production-oriented play analysis; to write thoughtful dramatic criticism, informed by theatre theory and critical thinking; and to practice a range of scholarly, artistic and interpersonal skills; in order to advocate...
for the emergent production at hand. To do this, students will study historical and contemporary dramaturgical theory, a transhistorical set of essays that argue for a certain form, content, or purpose of theatre and performance. Students will learn the historical and contemporary role of the dramaturg in production, and will practice the skills associated with the contemporary dramaturg. These include providing research support for theatre production, designing audience events such as talkbacks and receptions, and writing program pieces such as playwright bios and production histories. The cumulative dossier students create can serve as a dramaturgy portfolio for those who wish to pursue dramaturgy through graduate study or through taking the role in productions going forward. For all students, the portfolio develops an understanding of the dual role of dramaturg as scholar and artist.

**Prerequisites:** DANCE 100; THEA 100; THEA 101; THEA 106
Bachelor of Arts: Arts

THEA 212: Musical Theatre Theory III

3 Credits/Maximum of 3

Intermediate studies in diatonic harmony, analysis, sight-singing and dictation. THEA 212 Musical Theatre Theory II (3) (BA) This course meets the Bachelor of Arts degree requirements. THEA 212 is designed to provide the intermediate musical theatre student with the mastery of harmonic and melodic analysis with which to approach and appreciate the structure of songs and musical theatre scores. It is designed to enable the intermediate student to sight-read more efficiently the literature that is central to the performance classes in the major, and to develop basic accompaniment and transposition skills that will become indispensable to the professional career. A continued emphasis on pitch and rhythmic identification will enable the intermediate student to maintain a high degree of musicianship in the performance classes required in the major and will make the performer more competitive in the musical theatre industry. THEA 113, the entry-level theory course and THEA 114, Music Theatre Form and Analysis are prerequisites to THEA 212, which is designed as the third course of the theory-form-and-analysis sequence. The course satisfies a significant need in that it focuses on the specific theoretical knowledge the musical theatre student requires to become competitive in a professional career.

**Prerequisite:** THEA 113, THEA 114, THEA 116, and admission into Musical Theatre Option
Bachelor of Arts: Arts

THEA 214: Musical Theatre Theory IV

3 Credits/Maximum of 3

Advanced studies in the technique and practice of chromatic harmonic analysis and sight-singing. THEA 214 Musical Theatre Theory III (3) (BA) This course meets the Bachelor of Arts degree requirements. THEA 214 is designed to provide the advanced musical theatre student with the analytical skills with which to approach and appreciate the harmonic and melodic structure found in the various compositional styles of musical theatre literature. It is focused specifically on musical theatre literature that is representative of the current repertoire to enable the advanced student to function more effectively in auditions and other performance venues. The course is designed to function as the culmination of the theory-form-and-analysis sequence, connecting up the terminology, techniques, and repertoire, developed throughout the four-semester process. The course satisfies a significant need in that it focuses on the specific theoretical knowledge that the musical theatre student is required to master in order to become competitive in a professional career.

Bachelor of Arts: Arts

THEA 220: Acting II

3 Credits

Principles of acting through improvisation, exercises, and character analysis, with emphasis on basic skills of voice and movement. For theatre majors only.

**Prerequisite:** THEA 120
Bachelor of Arts: Arts

THEA 221: Acting III

3 Credits

A continuation of Thea. 220. For theatre majors only.

**Prerequisite:** THEA 130 or THEA 131 and School of Theatre approval
Bachelor of Arts: Arts

THEA 222: Acting Laboratory

2 Credits

Laboratory experience in student-directed scenes and/or one-act plays.

**Prerequisite:** THEA 120
Bachelor of Arts: Arts

THEA 223: Musical Theatre Performance I

2 Credits

Studio training in the unique performance skills, repertoire and business of professional music theatre. THEA 223 Musical Theatre Performance I (2) (BA) This course meets the Bachelor of Arts degree requirements. The purpose of this class is to introduce sophomore BFA musical theater students to the art of performing the solo song based on the book musical. While utilizing the performer’s skills in acting, singing and dance/movement, the student will learn how to communicate clearly and compellingly 1. who his/her character is 2. to whom the character is singing 3. why the character is singing these particular words to this particular music at this particular time. The student must understand his/her environment, relationships, obstacles, tactics, and stakes in order to accomplish this task. This is the class that begins to synthesize the student’s performance training for the special demands of musical theatre. Most of the work will concentrate on solo performance, building the student’s power and confidence and beginning to explore both their individual uniqueness and their crucial relationship to their audience. Students must prepare two contrasting musical theatre pieces from ‘book’ musicals preferably from ‘The Golden Age’ (1920-1960s). These songs must be chosen in collaboration with musical theatre faculty and the student. Students must obtain copies of the music and lyrics for their songs and the book. A thorough knowledge of the book is as important as a through knowledge of the music and lyrics in order to make informed performance choices. Students are required to keep a journal. Written exercises about passive, active, stage directions, and character analysis as well as in-class exercises on these topics will be part of the class assignments.
Prerequisite: THEA 114, THEA 115, THEA 116, THEA 212, admission into Musical Theatre option
Bachelor of Arts: Arts

THEA 224: Musical Theatre Performance II

2 Credits

Studio training in the unique performance skills, repertoire and business of professional music theatre. THEA 224 Musical Theatre Performance II (2) (BA) This course meets the Bachelor of Arts degree requirements. This course will cover three primary areas of study: musical theatre scene work, the study of the major repertoire in musical theatre from 1965-1990 (excluding Sondheim and Webber), and performance power training. Scenes that contain songs require special techniques of the actor-singer. Using the preparation and presentation of four such scenes, the musical theatre student will begin to develop successful performance strategies for musical theatre scene work. Through the use of in-class reports the musical theatre student will continue to gain understanding and appreciate the rich musical theatre literature of the late 1960s and the 1990s. Primarily, the course will cover the works and lives of Bock and Harnick, Jerry Herman, Kander and Ebb, Jule Styne, Jones and Schmidt, and Maltby and Shire. Through exercises, studies, and improvisation designed to sharpen the student's use of energy, focus, structuring skills, imagining, stylizing, and coordinating, the musical theatre student will obtain a significant increase in his/her performance power. The musical theatre student will prepare three duet scenes with song and an ensemble scene with song during the semester. Students will have two opportunities to present each duet scene. THEA 224 is a continuation of Musical Theatre Performance I. These studies represent the core of the musical theatre training program.

Prerequisite: THEA 223, admission into Musical Theatre Option
Bachelor of Arts: Arts

THEA 225A: B.F.A. Acting Studio I

2 Credits

Exercises to develop truthful listening and responding as a foundation for acting studio scene study. Listening and responding in an unadorned, truthful way is the lynch-pin of the actor's work. In THEA 225A, students will begin with exercises designed to foster and increase the depth of truthful behavior on stage. In addition, this coursework includes exercises to increase awareness of the sensory world around us and its effect on the actor's imagination, availability to emotion, and mental focus. Contentless scene work leads the student through the basics of behavior on stage: playing for a purpose (goal), encountering obstacles, and finding the necessary tactics to behave appropriately in the imaginary circumstances. The final stage of the semester applies the skills acquired to a full scene from a play.

Prerequisite: THEA 115

THEA 225C: B.F.A. Voice/Speech Studio I

2 Credits

Introduction to actor voice and speech training. THEA 225C is the first in a sequence of voice and speech courses for the actor. This first semester installment will focus on awareness and conditioning activities related to breath, posture, resonance and articulation. Prose and poetry readings will be used for application activities. Students will experience activities that will heighten their physical awareness of vocalizing. Most activities will involve a re-learning of how they speak, bringing to their conscious awareness the processes of voice/speech which were initially learned through early childhood nurturing. Class events will include awareness of breath patterns and the means to release inhibitive behaviors related to spinal posture, head and neck alignment, and musculature along the breath/vocal tract. Students will also gain awareness of how breath relates to their expressive/emotional system. Class activities will also include physical awareness of the consonant and vowels sounds and their phonetic transcriptions. Each event will strive to improve actors' intelligibility and increase musicality of speech. Through application assignments with word lists, sentences, poetry and prose, students will increase language sensitivity. This semester will also address voice quality issues directly and how they relate to the above. Specific events will focus on vibratory awareness in primary resonators and how to apply this awareness in all vocal life. Issues of vocal health, projection and emotional demands will be addressed.

Prerequisite: THEA 115

THEA 250: Introduction to Scene Design

3 Credits

Introduction to the history, processes, materials, and concepts involved in designing scenery for the theatre. THEA 250 Introduction to Scene Design (3) This course is the introductory course to the art and practice of designing scenery for the stage. The primary goals of the course are to introduce students to the history and profession of scene design, and to help students learn a fundamental design process to apply to the evolution and presentation of design for stage scenery. This process includes play analysis, script and visual research methods, analysis of dramatic action, concept evolution, and visual communication methods. Evaluations will be based on the following: 1. Students will submit papers to demonstrate text analysis skills and to explore the work of specific designers or historical trends (25%) 2. Students will receive in-class critiques to evaluate their design concepts and communication skills (25%) 3. Students will receive comment sheets for each studio project critiquing specific aspects of their design process (50%)

Prerequisite: THEA 130, THEA 131, prerequisite or concurrent: THEA 251

THEA 251: Theatre Drafting Techniques

2 Credits

Introduction to drafting of floor plans, section drawings, construction graphics, and mechanical perspective for the theatre. THEA 251 Theatre
Drafting Techniques (1) (BA) This course meets the Bachelor of Arts degree requirements. Theatre 251 is a foundation course for all students studying theatre design or technology. Students will learn the lexicon of lines and marks that make up the language of theatre drafting. They will be instructed in traditional drafting techniques and work to master the skills required to execute complete, accurate, and clear draftings. Drafting is the basic form of communication in theatre design and technology. All students involved in these disciplines will use drafting extensively throughout their careers. As such, the skills introduced and practiced in this course form a necessary foundation for all other design and technology courses. This course prepares students by teaching them a language necessary to advanced coursework. Theatre 251 is a required course in the theatre B.F.A. Production program. Throughout the course students complete draftings of increasing complexity. These draftings will be evaluated for content, clarity and skill. Individual drafting projects will be assigned a point value.

Bachelor of Arts: Arts

THEA 252: Design Presentation Techniques
1 Credits

Media and materials exploration; sketching, rendering, and modeling methods.

Bachelor of Arts: Arts

THEA 253: Scene Painting
1 Credits

Introduction to painting scenery for the theatre; methods and materials.

Bachelor of Arts: Arts

THEA 260: Introduction to Costume Design
3 Credits

Introduction to costume design process through character analysis and the use of color, line, and texture. THEA 260 Introduction to Costume Design (3) (BA) This course meets the Bachelor of Arts degree requirements. THEA 260 provides the student the opportunity to experience the costume design process from the reading of the script to the creation of a fully rendered costume design. The work of a costume designer begins with the ability to read the play script from both the perspective of the audience and that of the human beings depicted in the imaginary premise. The student is given a specific methodology for reading a play and determining the plot, the dramatic action, and the theme or significance of the action of the play. Next, the student is exposed to research methods and techniques that illuminate historical periods and genres and allow the designer to fully appreciate the lives of human being in different times and locations. Beginning projects are derived from contemporary dramatic material that requires relatively little examination into the social and historical period. Subsequent projects, however, move farther away from contemporary realism and require extensive research to grasp the essence of the period. The next section of the course is devoted to an examination of how this research and analysis is used by the costume designer to make artistic choices. Students are introduced to a specific technique for analyzing a character and determining what kind of clothing would be appropriate for the individual based on the student’s analysis of their personality, social status, and function in the play. The final project involves the creation of a costume design for the entire play. The student is guided through the process of improving rendering skills, creating a finished representation of each garment worn in the play, and enhancing their ability to communicate these choices to a director and actors.

Bachelor of Arts: Arts

THEA 261: Introduction to Costume Construction Techniques
3 Credits

Intermediate study of the methods, materials, equipment, concepts and processes involved in the construction of costumes for the theatre. THEA 261 Introduction to Costume Construction Techniques (3) This course will advance the knowledge of students in the methods, materials, equipment, concepts and processes involved in the construction of costumes for the theatre. The emphasis of this course will be on the specialized processes that result in the production of theatrical costumes. Formal course material in the form of lecture/demonstrations will address the specialized approach to the construction and tailoring of theatrical costumes for men’s and women’s wear. Examination of the historic context of the clothing technique, as well as the contemporary application of such techniques for theatrical use will also be addressed. In addition to lectures and demonstrations, students will be expected to participate in hands-on laboratory activities that will reinforce and inform the classroom theory. These activities will give students an opportunity to apply the principles they learn in the lecture component.

Prerequisite: THEA 130

THEA 270: Introduction to Lighting Design
3 Credits

This course will focus on helping each student to develop a design process that takes them from script to stage. THEA 270 Introduction to Lighting Design (3 per semester/maximum of 99)(BA) This course meets the Bachelor of Arts degree requirements. Introduction to Lighting Design will focus on helping each student to develop a design process that takes him or her from script to stage. Students will study each step of the lighting design process and use these steps to create the design for a fictional production. Students will also have the opportunity to hone their design skills with a series of practical projects that will allow them to experiment with intangible qualities of light. This class will use a traditional proscenium presentation for the development of these techniques.

Bachelor of Arts: Arts

THEA 280: Introduction to Technical Direction for the Theatre
3 Credits

Introduction to the methods, materials, equipment, facilities, concepts and processes associated with Technical Direction for the Theatre. THEA 280 Introduction to Technical Direction for the Theatre (3) This course will familiarize students with the methods, materials, equipment, facilities, concepts and processes used by Theatre Technical Directors to produce the spectacle of theatre. The concepts of project management will be introduced and the processes associated with project management will be explored. The steps involved in producing a technical package that will facilitate the implementation and completion of a production will be introduced and explored. The emphasis of this course will be on exploring how Technical Directors bring designs to reality on the stage. The planning and management processes will be
introduced and explored through the use of exercises and projects that will reinforce and inform the lectures.

**Prerequisite:** THEA 130, THEA 131

THEA 282: Production Practicum

3-6 Credits/Maximum of 6

Introduction to all aspects of theatre production—analysis, design, construction, production, performance—for non-theatre majors. THEA 282 THEA 282 Production Practicum (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. This course will introduce and expand skills in the performance and production of plays. Students will learn about the play, the playwright, the time period, the performance history of the chosen play, and its relation to theatre history and the cultural values of society particularly as they are depicted in the arts. Students will participate actively in individually selected aspects of design/construction and performance (students may choose to focus on performance, to work primarily with the design/construction team, or to combine performance with design/technical work). After the completion of the production, students will evaluate their work.

Bachelor of Arts: Arts
General Education: Arts (GA)

THEA 285: Introduction to Sound Design

3 Credits

An introduction to sound design for the theatre. THEA 285 Introduction to Sound Design (3) The purpose of this course is to provide an overview of the techniques and the tools of sound design and the sound designer’s role in the collaborative design process in the theatre setting. The goal of this course is to develop a method of understanding sound and sound design, and discovering a language with which to express this understanding in a theatrical context. In order to accomplish these goals, there is fundamental exposure to the terms and techniques of contemporary sound design that is necessary along with an understanding of the challenges and problems inherent in designing sound for the stage. The course also serves as an introduction to continuing advanced study in topics such as audio recording and advanced sound design that relate to sound design. Projects will make up the majority of the assignments for the class, and therefore will constitute the majority of the grading. The evaluation of these projects will not only consist of written and audio submitted portions, but also the student's presentation of the project to the class. During the sections of the class based on the terminology and tools of theatrical sound design, quizzes will be administered in order to check the progress of the students and ensure their comprehension of the material. Each student will complete a final project in lieu of a final exam: the sound design of a theatrical script. This project will not only consist of the final design work, but also the class presentation of the conceptual basis for the design as well as the implementation of the design.

**Prerequisite:** INART258A or THEA 150

THEA 289: Theatre Production Practicum

1 Credits/Maximum of 3

Supervised experience in production techniques. THEA 289 Theatre Production Practicum (1 per semester/maximum of 3) (BA) This course meets the Bachelor of Arts degree requirements. The course is designed to provide practical training in the production techniques of theatre arts. In preparing the physical productions for the School of Theatre, the student will encounter the technology of theatre arts. Diverse areas such as construction, electricity, painting, mechanics, plastics, electronics, costuming, and sewing are experienced in an organized and directed laboratory situation. The course complements the introductory theatre production courses and the advanced production practicum course. The B.A. program and the B.F.A.–production option requires a maximum of two credits of this course, and the B.F.A.–musical theatre option requires three credits.

Bachelor of Arts: Arts

THEA 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Arts

THEA 296H: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, supervised on an individual basis and which fall outside the scope of formal courses.

Honors

THEA 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a subject which may be topical or of special interest.

Bachelor of Arts: Arts

THEA 297C: Special Topics - InterDomain

3 Credits

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GA/GS GenEd course.

General Education: Arts (GA)
General Education: Social and Behavioral Scien (GS)
General Education - Integrative: Interdomain

THEA 298: Special Topics

1-9 Credits

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Bachelor of Arts: Arts

THEA 322: Voice and Speech I

2 Credits

Vocal techniques for the actor: articulation, voice control, support, and projection. In this class students will be working in three areas: practical voice and speech work to include relaxation, body alignment, breath,
The students will develop a set of exercises that help to release tension and build breath, muscularity and strength, and good resonance. In addition, students will build an awareness of how the voice works (anatomy) and work with poetic and dramatic text to see how the imaginative demands of the text can be fulfilled by the voice. Students will also learn to use voice with language that is not their own and to be confident and clear in their speech. The final goal is to develop an awareness of ‘healthy voice’ usage.

**Prerequisite:** THEA 115 or THEA 120

**Bachelor of Arts: Arts**

**THEA 324: Movement for Actors I**

2 Credits

Techniques and skills in physical expression, awareness, control, and stage movement.

**Prerequisite:** THEA 120 or THEA 115

**Bachelor of Arts: Arts**

**THEA 325: Movement for Actors II**

2 Credits

Continuation of THEA 324.

**Prerequisite:** THEA 324

**Bachelor of Arts: Arts**

**THEA 326: Music Theatre Performance Workshop**

1 Credits/Maximum of 3

Performance studies in cabaret, revue, and club environments.

**Prerequisite:** DANCE234, THEA 224, audition, enrollment in Musical Theatre Option

**Bachelor of Arts: Arts**

**THEA 327: Musical Theatre Auditions**

2 Credits

Research and preparation of auditions for work in professional musical theatre venues. THEA 327 Musical Theatre Auditions (2) (BA) This course meets the Bachelor of Arts degree requirements. Theatre 327 offers junior and senior musical theatre students an opportunity to examine the art of the musical theatre audition from research to performance. Since these students have completed two to three years of vocal and acting study, piano, and music theory, they are ready to work at honing their skills for professional auditions. Each student will prepare four to six professional auditions and simulate them in class. Feedback is provided by the class and visiting guests from the profession. All audition material is memorized and professional attitude as well as dress is required. The audition material is different for each student in the class. Grading is based on the student’s ability to prepare quickly and accurately, take direction, and incorporate it into the audition on the spot. The continued research and performance of new material is required weekly. Theatre 327 is an elective course in the B.F.A. theatre musical theatre option.

**Prerequisite:** THEA 224

**Bachelor of Arts: Arts**

**THEA 386: Stage Managing Fundamentals I**

3 Credits

This is a Stage Manager’s Essential Tool course. Through the semester students will specialize in foundational activities and skills required of professional stage managers entering the industry. Those tools cover a wide gamut of skills stage managers in both the regional and commercial markets are required to possess. Beginning with preproduction, students will acquire the necessary knowledge to prepare for the rehearsal process, understanding what is expected of them in preproduction, and to develop the necessary organizational skills to advance to the next levels of production work in theatre.

**Prerequisite:** THEA 100; THEA 11S

**THEA 400: Advanced Theatre Projects**

1-6 Credits/Maximum of 99

Individual and group-directed study of in-depth projects involving reading, discussion, performance, and critical analysis by faculty.

**Prerequisite:** seventh-semester standing or 12 credits in theatre or related areas

**Bachelor of Arts: Arts**

**THEA 401: Theatre History I: Ancient to 1700**

3 Credits

Survey of drama and theatre from primitive rites through the Renaissance.

**Bachelor of Arts: Arts**

**International Cultures (IL)**

**THEA 401H: Theatre History I**

3 Credits

Survey of drama and theatre from primitive rites through the Renaissance.

**Honors**

**THEA 402: Theatre History II: From 1700 to Present**

3 Credits

Survey of European drama and theatre from the eighteenth century through the modern period. THEA 402 Theatre History II: From 1700 to Present (3) A survey of drama and theatre from the seventeenth century through the modern period. The course is a sequential second half of the history of world theatre. Beginning with the post-Shakepearean era, students study major theatre movements in play writing, acting, theatre architecture and design. Some eras include the English Restoration and Georgian periods, the French Neoclassical period, German Romanticism, and the rise of the Beijing Opera. In addition, emerging post-colonial theatres of Africa and Asia will be explored. For each major era or movement, a play by one of the acknowledged masters of the form will be read and discussed in class. Students will write brief responses to their assigned readings, as well as experience a variety of assessment techniques.

**Prerequisite:** THEA 401
THEA 405: Theatre History: American Theatre
3 Credits/Maximum of 3
Survey of American drama and theatre from the colonial period to the present. THEA 405 Theatre History - American Theatre is a course that introduces students to the rich history of American theatre from the colonial era to today. Each week plays and supporting materials become the focus of conversations about the intersections of race, gender, class, religion, and art. Early plays from the colonial and post-colonial years reveal the peculiar love/hate relationship between colonists and theatre. After the Revolutionary War plays become the rallying cry as the new nation attempts to forge an identity separate from and equal to Europe. In the decades that follow theatre provides a voice to previously silent Americans: women, former slaves, immigrants, and non-Christians. The course culminates in the present with readings of the three most recent Pulitzer Prize winning plays and discussion of their impact. This is a Writing-Intensive course.

Prerequisite: THEA 100
Bachelor of Arts: Arts
United States Cultures (US)
Writing Across the Curriculum

THEA 407W: Women and Theatre
3 Credits
A study of theatre practice and dramatic literature as informed by issues of gender, race, and ethnic background. THEA (WMNST) 407 Women and Theatre (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. Theatre 407 approaches the study of theatre/performance as a valuable site for the exploration of race, class, and gender as social constructs. The focus will be on 20th century developments of women in United States Cultures (US)
Bachelor of Arts: Arts
Cross-listed with: WMNST 407W
Writing Across the Curriculum

THEA 408W: History of American Musical Theatre
3 Credits
A survey of the history of American musical theatre presented in a social, cultural, and aesthetic prospective.

Bachelor of Arts: Arts
United States Cultures (US)
Writing Across the Curriculum

THEA 410: Play Analysis
3 Credits
Advanced skills in textual analysis of plays and screenplays.

Prerequisite: THEA 100 or THEA 105
Bachelor of Arts: Arts

THEA 411: Dramaturgy Practicum
1-3 Credits/Maximum of 12
Dramaturgy Practicum is a variable credit course (1-3) that trains theatre students in the practices of dramaturgy for production. Students may be paired with a particular School of Theatre production or project as an in-rehearsal dramaturg. Others will be assigned to dramaturgy teams or will complete particular dramaturgy tasks. These can include keeping group-sourced or single-authored blogs; posting to social media; taking and sharing photos and videos of the design process; interviewing artists in production; writing program notes; making lobby installations; hosting talkbacks with performers, audiences, and designers. Students might instead be assigned to a research or archiving project with the School of Theatre in order to learn theatre archiving skills. The 3-credit option is only open to students who have taken THEA 211 - Dramaturgy. These students will take on a major project, most typically the role of production dramaturg for a School of Theatre production or other major project. For the 1-credit option, students will either work on a dramaturgy team, or else they will focus on one kind of dramaturgy practice for several productions, such as production photography, social media posting, talkbacks, program notes, or outreach events.

Recommended Preparations: THEA 211

THEA 412: African American Theatre
3 Credits
Exploration of the development of African American theatre from its roots in Africa through the diaspora, to the present time. THEA 412 / AFAM 412 African American Theatre (3) (US;IL) (BA) This course meets the Bachelor of Arts degree requirements. In this course, we will explore the development of African American theatre from its roots in Africa and Europe, through the diaspora, to the present time. We will learn something of the rich diversity of African American people and their contribution to the world’s creative mainstream. We will become acquainted with both historical and contemporary artists who created and continue to create this unique American art form. The goals of the course are: 1) to develop familiarity with African American theatre and the socio-historic context in which it was created 2) to develop an understanding of the relationship of African American theatre to mainstream American theatre 3) to acquire an appreciation of the schools, styles, and techniques of African American theatre. We will do this by reading and engaging plays in the context of the period in which they were created, viewing films of plays, and attending relevant productions where possible.

Prerequisite: THEA 100 or THEA 105
Cross-listed with: AFAM 412
Bachelor of Arts: Arts
International Cultures (IL)
United States Cultures (US)

THEA 420: Scene Study I
3 Credits/Maximum of 9
Advanced monologue and scene study techniques. Principal focus on realism. THEA 420 Advanced Scene Study is a course in which students are allowed to explore and deepen their understanding of the art and craft of acting. The course is repeatable for credit and taught by a variety of instructors. This allows students to experience the processes of different pedagogical methodologies. Regardless of the instructor, the shared
emphasizes include: scene work in a variety of styles (from classical verse plays to cutting edge contemporary material) tailored to the needs of the individual student; movement toward increased technical proficiency; deepening awareness that 'acting is living truthfully under imaginary circumstances;' however similar or different those circumstances may be to the actor's personal life; and, growing self-sufficiency through self-directed scenes and individual rehearsal discipline. The environment of the classroom/rehearsal space is both safe and critical, as students begin to accept that risk is integral to successful acting. The student is also engaged in giving constructive criticism to their peers, learning to be honest, detailed, and nurturing in the process. This critical process requires students to give unconditional support to their peers, support that is geared toward mutual improvement and emotional/physical safety.

**Prerequisite:** THEA 221 or THEA 427A and approval by program Bachelor of Arts: Arts

THEA 421: Advanced Acting: Physical Approaches

3 Credits

This course builds on the physical approach to character and story creation explored in THEA 420, and aims to equip the student with a working knowledge informed by direct experience and application of physical approaches like, but not limited to, those of Jacques Lecoq, Kari Margolis, and the work of Dell Arte International School of Physical Theatre. Physical approaches are part of 21st Century theatre-making, and our students must have knowledge of current approaches that will both take their work to a more fully-embodied level, and prepare them for work in the theatre field of today.

**Prerequisite:** THEA 420

THEA 422: Advanced Scene Study

3 Credits

This course introduces the actor to the skills necessary for successful auditions and performances in television, film, digital media and other commercial venues.

**Prerequisite:** THEA 421

THEA 423: Musical Theatre Performance III

2 Credits

Studio training in the unique performance skills, repertoire and business of professional musical theatre. THEA 423 Musical Theatre Performance III (2) (BA) This course meets the Bachelor of Arts degree requirements. In depth preparation and performance of scenes from the works of Sondheim and Webber. Also, exploration of the adjustments needed to perform successfully in non-traditional performance venues. The third in a musical theatre performance studio sequence, THEA 423 applies performance technique and methodology studied in previous studio classes to the works of contemporary composers, particularly Stephen Sondheim and Andrew Lloyd Weber. The course also explores the adjustment to performance needed when working in non-traditional stage spaces such as ballrooms, cruise ships, and industrials. THEA 423 is a continuation of Musical Theatre Performance II. These studios represent the core of the musical theatre training program. Grading will be based on the quality of the musical theatre student's studio work, report, and demonstrated respect for the professional studio environment.

**Prerequisite:** THEA 224, seventh-semester standing in the Musical Theatre Option Bachelor of Arts: Arts

THEA 424: Musical Theatre Performance IV

2 Credits

Studio training in the unique performance skills, repertoire and business of professional musical theatre. THEA 424 Musical Theatre Performance IV (2) (BA) This course meets the Bachelor of Arts degree requirements. This studio is designed for senior musical theatre majors to hone their skills in acting, singing, and dancing in the last semester of their college career. The majority of the class will be the preparation of the Senior New York Showcase where each student will have the opportunity to perform for an invited audience of agents, alumni, and special guests. Students are responsible for all research and preparation of showcase material. Showcase material will be coached in class, but the main body of preparation relies on the students themselves, utilizing skills and techniques learned throughout their studio training. Grading will be based on attendance, preparation, and attitude. These are all critical factors for entering the profession and for successfully completing this course. Deadlines and appointments must be kept. Students must do adequate outside preparation. THEA 424 is a continuation of Musical Theatre Performance III. These studios represent the core of the musical theatre training program.

**Prerequisite:** THEA 421

THEA 425: B.F.A. Acting Studio II

2 Credits

Scene Study THEA 425A B.F.A. Acting Studio II (2) THEA 425A is a laboratory or practicum course requiring active student presentation of work in progress for critiques by the instructor and input from peers. Working in pairs, students will be assigned a five-minute scene from modern American realism. Students must read the play from which the assigned scene is taken, do the necessary historical/analytical homework; develop a character biography and a scene score, and present the result of their work in the initial on-the-feet working sessions for faculty critique and peer input. Taking away responses from each working session, the students are expected to rehearse outside of class to address any issues raised in the previous working session and to ready the scene for the next viewing. In THEA 425A, the instructor will serve, not as a director, but as an acting coach, asking probing questions and using his or her own energy to exhort, guide, and discipline the students, It is expected that faculty intervention will decrease and student self-reliance will increase with each passing studio.

**Prerequisite:** THEA 115, THEA 225A; Concurrent: THEA 425C

THEA 425C: B.F.A. Voice/Speech Studio II

2 Credits

Advanced voice and speech training for BFA Musical Theatre students. THEA 425C B.F.A. Voice/Speech Studio II (2) In THEA 425C, B.F.A. Musical Theatre students will continue to develop and expand their vocal instrument. Basics of vocal production will be repeated and expanded with a greater focus on the individual actor's application of his/her voice in the performance of various texts. The first ten weeks will recall the basics of the past two semesters of voice/speech work and continue to expand the actors' capabilities. Extended work in the area of breath
support and release, resonance and vocal range, and speech/articulation will all be explored with appropriate texts. In the last five weeks of the semester, work will focus on text in the performance setting. A short program of text performances will be devised and presented in the last week of class.

**Prerequisite:** THEA 225C; Concurrent: THEA 425A

THEA 427A: B.F.A. Acting Studio III

2 Credits

Continuation of THEA 425A THEA 427A B.F.A. Acting Studio III (2)THEA 427A is an extension of THEA 425A, a laboratory or practicum course requiring active student presentation of work in progress for critiques by the instructor and input from peers. Working in pairs, students will be assigned a five-minute scene from modern American realism. Students must read the play from which the assigned scene is taken, do the necessary historical/analytical homework, develop a character biography and a scene score, and present the result of their work in the initial ‘on-the-feet’ working sessions for faculty critique and peer input. Taking away responses from each working session, the students are expected to rehearse outside of class to address any issues raised in the previous working session and to ready the scene for the next viewing. In THEA 427A, the instructor will serve, not as a director, but as an acting coach, asking probing questions and using his or her own energy to exhort, guide, and discipline the students. It is expected that faculty intervention will decrease and student self-reliance will increase with each passing studio.

**Prerequisite:** THEA 425A; Concurrent: THEA 427C

THEA 427C: B.F.A. Voice/Speech Studio III

2 Credits

Stage Dialect Studies THEA 427C B.F.A. Voice/Speech Studio IV (2)THEA 427C focuses on the acquisition of stage dialects and accents. For each dialect the student becomes aware of the resonance, phonetic, inflection, and rhythm changes necessary to perform dramatic text with an accent or dialect. Vocal agility, phonetic recall and the ability to integrate the altered vocal behavior to the demands of acting are the primary goals. Each dialect unit will have an introductory instruction, a review session, and a presentation of a reading of a dialect monologue. The final project will be the performance of two dialect monologues. Students will be evaluated upon preparedness, work ethic, focus, openness to change, growth, degree of self-reliant recall, and creative application of new skills. This studio performance class offers opportunity for assessment from the instructor in each class session. Periodic assignments will be made to assess self-reliant application of the work.

**Prerequisite:** THEA 425C; Concurrent: THEA 427A

THEA 427H: Theatre Makeup

2 Credits

Advanced makeup techniques, casting with moulage and rubber, construction of prosthetics, hair work.

THEA 428: Musical Theatre Performance Studio V

2 Credits/Maximum of 4

Students will prepare and present workshop reading of a new musical theatre piece

**Prerequisite:** THEA 224

THEA 429: Theatre Performance Practicum

1-3 Credits/Maximum of 99

Supervised experience in rehearsal and performance of significant roles.

**Prerequisite:** admission by audition only

Bachelor of Arts: Arts

THEA 434: Introduction to Directing

3 Credits

Introduction to principles and procedures of play direction.

**Prerequisite:** THEA 114 or THEA 410; THEA 170, or THEA 180

Bachelor of Arts: Arts

THEA 434H: Introduction to Directing

3 Credits

Introduction to principles and procedures of play direction.

Bachelor of Arts: Arts

Honors

THEA 436: Directorial Processes

3 Credits

Preparing a play for production including the scoring of the script, developing ground plan, casting, and staging projects in American realism.

**Prerequisite:** THEA 434 and approval of instructor prior to registration

Bachelor of Arts: Arts

THEA 437: Artistic Staff for Production

1-6 Credits/Maximum of 6

To provide students with experience in choreography, dramaturgy, combat, staging, voice/speech, musical direction, assisting in direction, for major productions.

**Prerequisite:** approval of the proposed assignment by the instructor prior to registration

Bachelor of Arts: Arts

THEA 440: Principles of Playwriting

3 Credits/Maximum of 6

Structure, dramatic effect, characterization, and dialogue; the writing, reading, and criticism of original one-act plays. THEA 440 Principles of Playwriting (3 per semester/maximum of 6)(BA) This course meets the Bachelor of Arts degree requirements. THEA 440 is a course in which students are allowed to explore, deepen, and exercise their understanding of the craft of playwriting. This course is repeatable and taught by one
instructor. This course utilizes diverse critical commentary, craft-based texts, and plays that elaborate and illustrate the core writing techniques of structure, dramatic effect, characterization, and dialogue. The writing requirement of the class concentrates on the construction of several ten-minute plays, which are shared in the class as works-in-progress. The students engage with giving and getting constructive criticism inside a safe and nurturing space, and the students work towards articulating and exercising the technical aspects of writing in a clear, concise, and effective manner.

**Prerequisite:** THEA 100 or THEA 105

Bachelor of Arts: Arts

THEA 447: Make-Up Design for Production

1-6 Credits/Maximum of 6

Materials, research, preparation, design, execution of make-up for major University Theatre productions.

**Prerequisite:** approval of proposed assignment by the instructor prior to registration

Bachelor of Arts: Arts

THEA 450: Advanced Topics in Scene Design

3 Credits/Maximum of 6

Design emphasis on a variety of production techniques, genre, and styles. THEA 450 Advanced Topics in Scene Design (3 per semester/maximum of 6)(BA) This course meets the Bachelor of Arts degree requirements. This course will build upon the basic design process introduced in THEA 250. Students will explore design solutions for shows requiring multiple locals. Students will also be introduced to shows reflecting a variety of dramatic styles and will explore effective design solutions within stylistic constraints. In addition to previously introduced graphic skills, emphasis will be placed on graphic techniques involved in the production of scenery, including design drafting, pin drawings, and paint elevations. As this course may be repeated, there will be a rotation of topics to ensure that students receive different content each semester.

**Prerequisite:** THEA 250 or portfolio review

Bachelor of Arts: Arts

THEA 451: Drafting, Drawing, and Painting for the Theatre

1 Credits

Drafting, freehand drawing including perspective methods and property development, rendering techniques, and painter’s elevations.

**Prerequisite:** THEA 251, THEA 252 and prior approval of instructor; first-year MFA theatre candidacy

Bachelor of Arts: Arts

THEA 453: Advanced Scene Painting

1-3 Credits/Maximum of 12

Practicum study in painting techniques currently in professional use. Exploration of tools, available paints, and texturing materials.

**Prerequisite:** THEA 253

Bachelor of Arts: Arts

THEA 454: Period Research for the Theatre

3 Credits

History of decor, styles, and movements in art and architecture.

**Prerequisite:** BFA theatre arts candidacy or permission of instructor

Bachelor of Arts: Arts

THEA 456: Scenic Projects for Production

1 Credits/Maximum of 6

Special projects for production; painting, properties, design assistance.

**Prerequisite:** approval of proposed projects by instructor prior to registration

Bachelor of Arts: Arts

THEA 457: Scene Design for Production

1 Credits/Maximum of 6

Design and execution of production projects.

**Prerequisite:** approval of proposed project by instructor prior to registration

Bachelor of Arts: Arts

THEA 458: Digital Imaging for the Theatre

1 Credits

Introduction to imaging software and its application in theatrical design and production. THEA 458 Digital Imaging for the Theatre (1) This course will provide students with an introduction to digital imaging software and explore the use of this software in the theatrical design and production process. An introduction to Photoshop or similar programs will make up the first part of the course. As part of the introduction to software, course time will be devoted to image acquisition using techniques such as Web based research, scanning, and use of the digital camera. The remainder of the course will focus on applying imaging software to the process of evolving and presenting designs for scenery, costumes, and lighting. Design presentation will include output of images for applications such as projection, Web pages, and both large and small-scale printing. Students will execute a number of projects that will be turned in digitally to the instructor. Each project will have a specific objective and the grade will be outlined in a comment sheet.

**Prerequisite:** Design or Visual Arts major or permission of program

THEA 459: Theatre Portfolio & Business Practices

2 Credits

Life as a professional theatre designer. Contracts, taxes, record-keeping, resumes, portfolios, interviewing, job hunting, and legal considerations.

THEA 459 Theatre Portfolio & Business Practices (2) (BA) This course
meets the Bachelor of Arts degree requirements. This course is designed to prepare the student of design for life as a professional theatre designer. There are many challenges to working in the business of design, arising primarily from the fact that most theatre designers are self-employed. It’s not enough to be a talented designer; one must also be a savvy business person. Contracts, taxes, recordkeeping, resumes, portfolios, interviewing, job hunting, and legal considerations will all be addressed, as they relate to life as a freelance designer. Special attention will be paid to the assembly of a professional portfolio, which is the centerpiece of any designers’ work.

Prerequisite: B.F.A. Theatre candidacy
Bachelor of Arts: Arts

THEA 460: Advanced Topics in Costume Design
3 Credits/Maximum of 6

Developing and executing a design concept in a variety of the performing arts. THEA 460 Advanced Topics in Costume Design (3 per semester/maximum of 6) (BA) This course meets the Bachelor of Arts degree requirements. THEA 460 places emphasis on the use of text analysis and extensive historical research to make artistic choices as a costume designer in a production of a classical play, opera, or dance. Plays of this sort are of a size and scope not often found in contemporary material, which places exceptional demands on a designer. This course investigates the manner in which the theatrical imagination can be liberated to fulfill the particular requirements of classic theatre, opera, and dance. The course will require several large-scale projects that reinforce the costume design process in a variety of the performing arts. Each area of work within a project is separately graded. These projects will contain written segment components such as a design statement or character analysis, an oral presentation or explanation of the designer’s choices and process, and (where applicable) a demonstration of the fully realized costume renderings. The student is expected to master the process that takes a costume designer from reading a script or listening to a piece of music to the creation of a design concept to the visual presentation of renderings from which clothing can be constructed. Particular emphasis is placed on developing the oral presentation skills necessary to communicate with the director and other theatre artists.

Prerequisite: THEA 260, THEA 464
Bachelor of Arts: Arts

THEA 461: Advanced Topics in Costume Construction and Technology
3 Credits/Maximum of 6

A specialized course in advanced costume construction techniques and theatrical costume technologies. THEA 461 Advanced Topics in Costume Construction and Technology (3 per semester/maximum of 6) (BA) This course meets the Bachelor of Arts degree requirements. THEA 461 addresses the skills and techniques of theatrical costume construction necessary for the undergraduate student to understand and master in preparation for work within a professional costume setting. Emphasis is placed upon the creation of an historic silhouette as illustrated by a theatrical costume rendering for both men and women, with an eye to theatrical execution. Focus is placed on the production of clothing, as well as the creation of theatrical properties and accessories for the historic figure. The course will require several large-scale projects that reinforce the costume construction process in a variety of historic eras. Each area of work within a project is separately graded. These projects will contain supporting research and examine the understanding and identification of construction and accessory techniques as manifested in the costume rendering. A student’s approach to problem solving, personal process, communication skills, and successful time management will also be addressed.

Prerequisite: THEA 261
Bachelor of Arts: Arts

THEA 464: History of Fashion
3 Credits

Survey of dress from Egyptian period to contemporary fashion.

Prerequisite: THEA 100 or THEA 105
Bachelor of Arts: Arts

THEA 465: History of Fashion II
3 Credits

Survey of dress from 1800 to contemporary fashion. THEA 465 History of Fashion II (3) (BA) This course meets the Bachelor of Arts degree requirements. The course is the second part of the history of fashion that is an elective for graduate theatre students, is required for the B.F.A. Costume Design emphasis, and is an elective for the undergraduate theatre minor. The goal of the course is to identify and examine movements and trends in clothing and fashion from 1800 to the present. Each period is studied by using primary sources, slide presentations, and actual garments to illustrate the relationship between clothing and broad social, historical and artistic developments. Emphasis will be placed on plays that serve as particularly good examples of a period or style of fashion covered in the course. Grading will be based on periodic quizzes covering topics from class lectures, slide presentations, and textbook readings. There will be one oral presentation, a written comprehensive final exam, and assigned graphic presentations or ‘redrawings’ of clothing pieces. To complete these ‘redrawings’ the student will find a primary source or a photographic reproduction of a primary source and ‘redraw’ the garment. For example, a student may find a painting, a sculpture, or a photo of a garment (usually on a figure) that represents the period being discussed in class. The student would then ‘redraw’ or copy that image, not trace, for the purposes of identifying the clothing pieces that are shown in the original. The ‘redrawings’ are graded not on the student’s ability to draw but rather on the content, detail, and thoroughness of the pencil sketch.

Prerequisite: THEA 100 or THEA 105
Bachelor of Arts: Arts

THEA 466: Costume Construction for Production
1 Credit/Maximum of 6

Execution of production projects in construction and shop management.

Prerequisite: approval of proposed project by instructor prior to registration
Bachelor of Arts: Arts

THEA 467: Costume Design for Production
1 Credit/Maximum of 6

Design and execution of production design projects.

Prerequisite: approval of proposed project by instructor prior to registration
Prerequisites:

The work. Small-group problem solving and system troubleshooting will ample time devoted to process discussions and post-show critiques of designers as part of the hands-on production aspect of the class, with Students will serve as master electricians and/or as assistant lighting how these new technologies are all integrated into a functional system. technology that is being introduced to the world of lighting functions and show up no matter what. Students will learn how all of the advanced requirements. Advanced Topics in Lighting Design will utilize a rotating curriculum and may be taken twice for credit. Topics will include lighting design for opera, dance, non-traditional spaces, architecture, advanced technology, and color theory. Students will also learn to write and critique their own work, as well as the work of others, and to speak knowledgeably about design topics. There will also be some flexibility to allow students to pursue individual interests and group-directed projects.

Prerequisite: THEA 270
Bachelor of Arts: Arts

THEA 472: Lighting Technology

3 Credits

An introduction to the basics of electricity, dimmer protocols, lightboard programming, lighting paperwork, and master electrician & assistant lighting design practices. THEA 472 Lighting Technology (3) THEA 472 is an introduction to the basics of electricity, dimmer protocols, lightboard programming, lighting paperwork, and master electrician & assistant lighting design practices. This course will help prepare theatre designers to understand the inner workings of all of the equipment, working practices and safety requirements that are involved with the business of lighting design. This course will also provide students with many of the skills needed to get their foot in the door and get started in the business. Special attention will be paid to safety, stressing the need for safe working practices and environments over the need to get the show up no matter what. Students will learn how all of the advanced technology that is being introduced to the world of lighting functions and how these new technologies are all integrated into a functional system. Students will serve as master electricians and/or as assistant lighting designers as part of the hands-on production aspect of the class, with ample time devoted to process discussions and post-show critiques of the work. Small-group problem solving and system troubleshooting will be discussed in depth and applied to real production situations.

Prerequisites: THEA 131; Concurrent Courses: THEA 132

THEA 476: Lighting Technology for Production

1 Credits/Maximum of 6

THEA 476 is a 1-credit course fulfilling, in part, the requirements of the Theatre BFA Design & Technology Major. Students who are assigned to School of Theatre productions in the Lighting area as an Assistant Master Electrician, Master Electrician, Moving Light Programmer, or Lighting Systems Engineer, in support of the Lighting Design, are eligible to register. The course will be delivered as an independent study with the School's Lighting Design faculty, building on the skills learned in classes and previous productions.

Prerequisites: School of Theatre BFA Majors only

THEA 477: Lighting Design for Production

1 Credits/Maximum of 6

Design and execution of design projects.

Prerequisite: approval of proposed project by instructor prior to registration
Bachelor of Arts: Arts

THEA 480: Advanced Topics in Technical Direction for the Theatre

3 Credits/Maximum of 6

Advanced study of the methods, materials, equipment, facilities, concepts and processes associated with Technical Direction for the Theatre. THEA 480 Advanced Topics in Technical Direction for the Theatre (3 per semester/maximum of 6) This course will build on the foundations established in THEA 280. Students will be engaged in studying advanced topics through discussions and explorations of current theatre technology, communication and the management systems used to control the processes associated with modern technical direction. Examples of topics include project management, current trends in drafting, advanced technical packages, and structural design for the stage. This course is repeatable and topics will vary. Students will participate in class discussions, hands-on exploration of equipment, investigate current practices through observation and research, and will complete projects associated with the topics studied.

Prerequisite: THEA 280
THEA 480B: Technical Production IV

3 Credits

Discussion of problems of the technical director: personnel management, time management, scheduling, budgeting, purchasing, and the technical drawing of production.

Prerequisite: THEA 381
Bachelor of Arts: Arts

THEA 481: Stage and Production Management

3 Credits

Production planning, scheduling, assignment of personnel, rehearsal procedures, and budgeting.

Prerequisite: THEA 170, THEA 180
Bachelor of Arts: Arts

THEA 482: Technical Production - Rigging

3 Credits

In-depth exploration of current rigging techniques used in entertainment.

Bachelor of Arts: Arts

THEA 484: Sound Recording Techniques

3 Credits

Multi-track audio recording and post production techniques. THEA 484 Sound Recording Techniques (3) THEA 484 will provide fundamental skills in recording an audio production. The first four weeks will cover basics of current recording equipment, basic microphone theory and placement
according to principles of sound propagation within performance spaces. The second four weeks will expand on the principles of the first four weeks, considering the problems of recording in a variety of different locations and specific techniques for recording particular instruments. The final seven weeks will focus on work within a recording studio. Students will need to configure a mixer with a multi-rack digital recorder and create a mastered CD with all appropriate post processing (EQ, compression, reverberation, etc.). Students will work on teams for various recording projects, with one student serving as producer for each, so that they gain a comprehensive knowledge of the various duties involved in setting up and operating recording equipment. Team projects will make up the majority of the grading for the class. Periodic quizzes will be administered in order to check the progress of the students and ensure their comprehension of the material. Each student will complete a final project in lieu of a final exam. During the production of this project, they will also be expected to serve in ancillary roles for their classmates’ projects. Their participation in these other projects will be considered in the grading of their final project.

**Prerequisite:** INART258A or THEA 285
THEA 485: Sound for Theatre Production
3 Credits/Maximum of 6
Aesthetics of live and recorded sound; recording and editing techniques for the stage.

**Prerequisite:** THEA 100, THEA 150
Bachelor of Arts: Arts
THEA 486: Stage Management for Production
1-9 Credits/Maximum of 9
Stage manager for University Theatre production.

**Prerequisite:** approval of proposed assignment by instructor prior to registration
Bachelor of Arts: Arts
THEA 487: Technical Projects for Production
1 Credits/Maximum of 6
Execution of practical production projects.

**Prerequisite:** approval of proposed project by instructor prior to registration
Bachelor of Arts: Arts
THEA 489: Theatre Production Practicum
1 Credits/Maximum of 99
Supervised experience in production techniques. For theatre majors only.

**Prerequisite:** THEA 160, or THEA 180
Bachelor of Arts: Arts
THEA 490: London Study Tour
3 Credits
An intensive academic and cultural experience in the theatre capital of the English-speaking world. THEA 490H London Study Tour (3) Theatre-going forms the heart of the LST and of its academic identity. London is the outstanding theatre city of the English-speaking world, offering consistently superb choices in classic plays, contemporary and avant-garde theatre, musical theatre, opera and dance. Students will see a minimum of seven theatre and dance performances: some will be purchased in advance by the instructor, and others will be selected by participants from a wide range of choices. As a complement to the theatre core, the LST’s faculty leaders will provide students with an orientation to London and its history, culture, and sights.

**Prerequisite:** program approval
Honors
THEA 494: Research Projects - Honors
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

Honors
THEA 495: Internship Practicum
1-6 Credits/Maximum of 12
Professional field experience in theatre performance, production, and management assignments.

**Prerequisite:** approval of internship by instructor prior to registration
Bachelor of Arts: Arts
THEA 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Arts
THEA 496H: Independent Studies - Honors
1-18 Credits/Maximum of 18
Creative projects, including research and design, supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Arts
THEA 497: Special Topics
1-9 Credits/Maximum of 999
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Arts
THEA 498: Special Topics
1-9 Credits
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Bachelor of Arts: Arts
Introduction to turfgrass species, establishment, maintenance, and pest control of turfgrass species used for sports, lawn/utility turf, and golf courses. TURF 100 is an introduction to turfgrass management and covers identification, growth and development, adaptation, and practical uses of turf. Students will be introduced to turfgrass establishment and renovation. The importance and timing of cultural practices will be covered as well as an introduction to turfgrass pest management. There are demonstration labs including field trips and hands-on activities. There will be three exams and seven quizzes. The students will also be graded on projects including identifying various turfgrass species, seeds, insects, diseases, and weeds. This course is designed for non-science majors with little experience in plant science and culture. This course serves primarily as a service course for the Professional Golf Management Option in the College of Health and Human Development.

This course has numerous web-based resources that the students can access independently. The students are required to make several visits to a demonstration lab in the research greenhouses. There are also a number of scheduled field trips.

TURF 230: Turfgrass Pesticides
3 Credits
Course covers chemical toxicity, formulations, environmental fate, labels, MSDS, calibration, IPM, safety, handling, storage, and Pennsylvania certification and regulations.

TURF 235: The Turfgrass
3 Credits
Characterization of the primary plant species used for sports, lawn and utility turf; includes turfgrass morphology, environmental adaptation, and cultural requirements.

TURF 238: Turf and Ornamental Weed Control
3 Credits
Students will be introduced to the development of integrated weed management strategies utilizing a variety of cultural and chemical methods.

Characterization of soil physical properties for the establishment and maintenance of sports turf; includes root-zone construction. TURF 434 Turfgrass Edaphology (3) is offered to students that are entering their final year of the turfgrass science major. This course builds on introductory turfgrass and soil courses. In this course you will learn to interpret soil physical results using the United States Golf
Associated specifications for greens construction. You will learn how to evaluate and manipulate the physical properties of a soil in order to provide a quality turfgrass stand under varying conditions. You will use new information as well as physical and quantitative tools provided in soil management decisions. You will defend your decisions to other students in group-exercises conducted on a computer bulletin board. You will also submit your decision-making process and defend your decisions in writing, in the form of business proposals. This class has a series of labs, some of which run over several weeks. You will use class material and the physical and quantitative tools learned in the labs to inform your decision-making processes. Your grade will be based on exams, lab reports, and practicums. The practicums and the labs are interrelated. The practicums, which are mini-case studies of actual turfgrass situations and problems, require you to apply techniques and information learned in the physical lab periods. The practicums are graded on initial draft, final draft, and your critique of other student's solution to a problem. TURF 434 is an advanced course in soil physical properties.

**Prerequisite:** SOILS101, TURF 235

TURF 435: Turfgrass Nutrition

4 Credits

Study of turfgrass nutrition and growth; emphasizing constructed and mineral soil fertility, nutrient uptake and function, and fertilizer use efficiency. TURF 435 Turfgrass Nutrition (4) Turfgrass Nutrition is a study in the nutrition and growth of turfgrass plants. Upon completion of this course, students will be able to distinguish the function and requirements of nutrients in the turfgrasses; describe how soil physical and soil chemical properties/conditions affect nutrient availability; select soil amendments to remedy soil chemical limitations; identify the best fertilizers and application methods to satisfy site-specific nutritional requirements; prepare nutrient management plans by appraising edaphic and environmental conditions and current cultural management and use; and will have discovered how best to sample soil, tissue, and water; submit samples, choose appropriate specialty tests, and interpret reports. TURF 435 compliments Turfgrass Edaphology, by examining soil chemical (rather than physical) properties as turfgrass growth parameters and addressing ameliorative measures in concept and operation. Students are introduced to the many classes of specialty fertilizers used in turfgrass management and their specific attributes are revealed through laboratory and field exercises. Students are evaluated through written testing of plant growth and nutrition concepts, interpretation of soil analysis, recommendations of fertilizer type and rate, and nutrient fate and management. TURF 435 has a substantial laboratory component.

**Prerequisite:** SOILS101, TURF 235

TURF 436W: Case Studies in Turfgrass Management

3 Credits

Case study and discussion considering integrated management of selected turfgrass sites; emphasis on problem analysis, principle application, and decision making. TURF 436 Case Studies in Turfgrass Management (3) Case Studies in Turfgrass Management is a three credit, writing intensive course for students in the final year of the Turfgrass Science major. The goal of this capstone course is to provide students with an understanding of processes involved in solving turfgrass and soil problems at the managerial level. Using several real-life scenarios provided by the instructor, students will learn to gather facts associated with a problem, analyze the problem, formulate a set of options for solving the problem, implement a plan of action, and evaluate the results of the action. Once these processes are assimilated, students will form teams and select challenging turf and soil problems, analyze them, formulate options for solving the problems, select the most feasible solutions, and evaluate outcomes. Teams will submit reports and develop presentations for class. Teams will also be charged with questioning presenting teams and evaluating team members. Students will be evaluated through exams, reports, presentations, and class participation.

**Prerequisite:** TURF 238, TURF 425

Writing Across the Curriculum

TURF 490: Colloquium

1 Credits

Oral presentations developed by students in consultation with the course instructor.

**Prerequisite:** seventh semester standing

TURF 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practical, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor

TURF 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

TURF 499: Foreign Studies

1-8 Credits

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

TURF 499B: Foreign Studies

1-8 Credits

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

**Ukrainian (UKR)**

UKR 1: Elementary Ukrainian I

4 Credits

Reading, writing, and speaking Ukrainian.

Bachelor of Arts: 2nd Foreign/World Language (All)
UKR 2: Elementary Ukrainian II
4 Credits
Reading, writing, and speaking Ukrainian.

Prerequisite: UKR 001
Bachelor of Arts: 2nd Foreign/World Language (All)

UKR 3: Intermediate Ukrainian
4 Credits
Reading, writing, and speaking Ukrainian.

Prerequisite: UKR 002
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Foreign/World Lang (12th Unit)

UKR 100: Ukrainian Culture and Civilization
3 Credits
Survey of Ukrainian culture and civilization from the Middle Ages to the present. UKR 100 Ukrainian Culture and Civilization (3) (GH;IL) The course acquaints students with Ukrainian culture from the origins of Kyivan-Rus in the 9th Century to the present day. The course will examine the many facets that make up culture: history, politics, language, literature, folklore, religion, science, music, and art. The course will place Ukrainian culture in the broader context of the Slavic nations and peoples. It will focus on the development of national identity from the origins of the Ukrainian people through the colonial period under tsarist Russian domination, through Soviet domination, and finally to post-independence identity following the dissolution of the Soviet Union in 1991. The course will include films and expert guest lectures. The course format will consist of lectures, slide, video and audio presentations. Readings will all be in English. Questions and discussion on class lectures and readings and on topical matters will be strongly encouraged. At the end of the course, students will be familiar with the problems that post-colonial Ukraine faces at present. They will have a basic general knowledge of Ukrainian history and geography, and will be acquainted with representative achievements of Ukrainian high and folk culture. There will be a mid-term (30%), a final exam (30%), and a research paper (30%). The latter will be graded both for content and writing ability. Ten percent of the class grade will be for class participation, including attendance and active participation in discussions. Students may also receive extra credit by making a 10-15 minute oral presentation in class on a pre-approved topic, which will offer students the opportunity to practice public speaking. The exams will include written identification questions, brief essay questions, and a longer essay question that synthesizes knowledge acquired in class. As a General Education course, Ukrainian 100 incorporates the following four elements of active learning: international competence (a much lesser know part of the East European world), information gathering and analysis, active use of writing, and dialogue pertaining to social behavior, community and scholarly conduct. The case of Ukraine as a 'submerged nation,' subsumed under tsarist Russia and the Soviet Union, will provide students with a colonial paradigm of development of a minority culture and language under a politically stronger colonizing culture. Students need to write a 10-page paper for the course and will learn to explore library and internet resources. The paper will be graded for content, clarity, structure, and effective use of language. As an extra-credit option, students may volunteer to give a class presentation on their research topic or another topic of interest. Students may also acquire extra-credit by writing reaction papers on topical extracurricular lectures

or visits to Ukrainian cultural sites (like the Ukrainian Museum in New York, the Ukrainian Embassy in Washington, DC, or historic Byzantine Rite Ukrainian churches). Ukrainian 100 is not required for the B.A. degree in Russian, but may be used under the rubric of 'Additional Courses' for the B.S. degree in Russian Translation. UKR 100 may be used to satisfy the Gen Ed Humanities and United States Cultures and International Cultures requirements.

International Cultures (IL)
General Education: Humanities (GH)

UKR 197: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

UKR 494: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small group basis.

UKR 494H: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small group basis.

Honors

Veterinary and Biomedical Sciences (VBSC)

VBSC 50: Mechanisms of Disease
3 Credits
Introduction to the study of disease pathogenesis and careers in Animal Health Research and Service. VB SC 050S Mechanisms of Disease (3)Mechanisms of Disease is a first year seminar directed to students with an interest in a career in veterinary medicine or in bio-medical disciplines. Students are introduced to the concepts of epidemiology, cell biology, clinical medicine and toxicology through use of appropriate case material. The importance of basic science courses to the understanding of this material is emphasized. Reading and written assignments are related to the case study material as well as adaptation to the college experience. Grading is based on class participation and written assignments.

First-Year Seminar

VBSC 101: Careers in Veterinary Medicine and the Allied Professions
1 Credits
Exploring career pathways in veterinary medicine and the allied health industry. VB SC 101 Careers in Veterinary Medicine and the Allied Professions (1) The course is intended for first year students with an interest in careers in veterinary medicine or in the allied industries. Upon completion of the course students will have an understanding of the various careers possible in veterinary medicine; including types of specialization by species and/or by discipline. Students will have the
opportunity to discuss careers in industries related to animal health and animal health research. Student learning will occur through the use of guest speakers, written assignments and on-line discussion groups. Student evaluation will be based on performance on assignments and on-line discussion groups.

VBSC 130: Understanding Human Disease

3 Credits

All humans are impacted by disease, either personally or through friends or family members who are affected. Understanding Human Disease is an overview of disease processes for individuals not majoring in a scientific field. Students will have the opportunity to study the basic knowledge tools required to understand how different diseases arise, how they progress, how they are treated and in many cases, how they can be prevented. The course material is divided into two segments: the first portion discussing the different ways that diseases develop and includes explanations on normal and abnormal inflammatory processes, different types of infectious diseases, genetic diseases and congenital abnormalities (birth defects), diseases that affect the immune system and metabolic diseases. Diseases that are affecting significant populations such as HIV, diabetes, cancer and heart disease will be discussed. The second segment includes a discussion of the significant diseases affecting different organ systems of the body. Student participation is encouraged through questions. Additional topics of immediate interest as identified by the news media or class interest will be discussed. The course is intended for those who wish to better understand published medical journalism, for individuals who want to be able to discern the caliber of medical information in the popular press, for those students who wish to make healthy choices in their lifestyle and for individuals who may not be destined for a career in a scientific field.

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Soc Resp and Ethic Reason

VBSC 190: Careers in Veterinary and Biomedical Sciences

1 Credits

Career strategic planning and opportunities for Veterinary and Biomedical Sciences.

VBSC 211: The Immune System and Disease

3 Credits

Introduction to the immune system that emphasizes the immune response to infection and consequences of a defective immune response.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

VBSC 230: The Science of Poisons

3 Credits

An introduction to toxicology using real world examples to highlight the impact of toxicants on environmental, biochemical and physiological processes. VB SC 230 The Science of Poisons (3) Toxicology is the study of poisons (natural and man-made) and how these agents adversely affect living organisms. It involves the prevention of harm and the development of measures to assess risk. As a science it borrows from many disciplines including biochemistry, chemistry, epidemiology, genetics, and physiology. It also has great societal impact with regard to the development and testing of consumer products, exposure to industrial chemicals, and maintaining safe food and water. The course format will be lectures that incorporate real world examples of the effects of toxicant exposure on many levels (cell, organ, whole body, environmental). Students will be evaluated by quizzes, exams, and class participation. Students are required to have a basic understanding of biology and chemistry. The course is offered once per year in the Fall semester.

Prerequisite: CHEM 110, BIOL 110

VBSC 231: Introduction to Cancer Research and Medicine

3 Credits

An understanding of the terminology, basic concepts, techniques, multidisciplinary approaches and challenges in cancer research and medicine. VB SC 231 Introduction to Cancer Research and Medicine (3) Introduction to Cancer Research and Medicine is designed for second year undergraduate students preparing for careers in biomedical research. Students will develop an understanding of the theories, scope, approaches and challenges of cancer related biomedical research. The lectures and discussions will emphasize the interdisciplinary character of the discovery process. Students will be introduced to topics on cellular mechanisms responsible for cancer development and progression; techniques in cancer research involving generation and banking of research materials, and methods for performing molecular, genomic and proteomic analyses; approaches for discovery and validation of diagnostic and prognostic biomarkers as well as systems for high through put screening of targets for rational development of interventional therapeutics. Student evaluation will be based on performance on examinations and class participation.

Prerequisite: BIOL 110

VBSC 280: Current Issues in Veterinary Medicine

2 Credits

Discussion of the social, ethical and economic aspects of current and emerging issues related to animal ownership and veterinary medicine. VB SC 280 Current Issues in Veterinary Medicine (2) Current Issues in Veterinary Medicine is designed to provide students with the opportunity to research, present and discuss the social, ethical and economic issues important in Veterinary Medicine. Students will be expected to research the literature on specific topics within the general area of discussion, prepare and deliver an in class presentation and discuss their findings. Students are evaluated on class presentations and on three written position papers during the semester. The course is offered every spring semester.

VBSC 290: Undergraduate Research Colloquium

1 Credits

Presentations by appropriate faculty on research opportunities for undergraduates. VB SC 290H Undergraduate Research Colloquium (1) The goal of the course is for students to acquire the skills necessary to obtain an independent research project of the scope and scale required to complete an Honors Thesis. Students will learn to use online tools to approach primary literature in order to familiarize themselves with
faculty research topics. Department faculty will present overviews of their research programs, including potential opportunities for undergraduate projects. First year honors students in the Veterinary and Biomedical Sciences, Immunology and Infectious Disease, and Toxicology majors should take this course in their second semester. Other interested students may take the course with department approval.

**Prerequisite:** permission of program
Hons

VBSC 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

VBSC 340: Introduction to Human and Veterinary Public Health

3 Credits

This course introduces students to the history of human and veterinary public health, the structure of the human and veterinary public health system (CDC, FDA, and USDA) and the various sectors of veterinary and human public health practice, in order to gain an understanding of the complex factors that determine the health status of a human and animal populations. National, state, and local level practices will be analyzed, as well as the roles that law and government play in human and veterinary public's health. The course will simulate the students' interest in other public health course and program offerings.

VBSC 395: Internship

1-10 Credits/Maximum of 10

Independent study and supervised field experience related to the student's professional interest. Limited to students in animal agriculture majors.

**Prerequisite:** fifth-semester standing in an animal agriculture major; approval by department of proposed plan before registration

Full-Time Equivalent Course

VBSC 402W: Biology of Animal Parasites

3 Credits/Maximum of 3

An introduction to animal parasitology. Emphasis placed on host/parasite interactions, parasites of zoonotic importance, control programs and taxonomy. VB SC 402W Biology of Animal Parasites (3) This course provides students an opportunity to obtain an introduction to the field of animal parasitology. Material presented emphasizes life cycle patterns of animal parasites, host-parasite interactions and pathology, disease patterns and zoonotic potential of parasites to human disease, economic importance of parasitic diseases, taxonomy and parasite control programs. Information presented in this course will be useful to students interested in pursuing a career in veterinary medicine or careers dealing with animal care and management. Evaluation of student performance is achieved by 6 quizzes, three examinations and 3 writing assignments. The course is offered each spring semester with an enrollment of 15 to 25 students.

**Prerequisite:** BIOL 110
Cross-listed with: ENT 402W
Writing Across the Curriculum

VBSC 403: Principles of Animal Disease Control

3 Credits

Principles of disease control based on knowledge of the multiple causes of animal disease.

**Prerequisite:** MICRB106 or MICRB201 . Prerequisite or concurrent: AN SC301

VBSC 403H: Principles of Animal Disease Control

3 Credits

Principles of disease control based on knowledge of the epidemiology of animal disease. VB SC 403H Principles of Animal Disease Control (3) Animal Health and well being has emerged as a clear concern of society. The general public is concerned about the health and well-being of their companion animals as well as the animals that provide them with portions of their daily diet. The Foot and Mouth Disease outbreak that occurred in Great Britain in the spring of 2001 coming on the heels of increased concern about Bovine Spongiform Encephalopathy and its possible links to the human disease; variant Creutzfeldt Jacob Disease, resulted in an increased awareness for the potential for animal disease to have adverse effects on society. These effects range from availability of wholesome food products to the zoonotic transmission of diseases between humans and animals. The goal of this course is to introduce students to the principles of animal disease prevention. This requires the student recall relevant background knowledge in biology, nutrition, microbiology and animal husbandry and management. Students will develop an understanding of the complex physiological, biochemical and microbiological mechanisms of importance to the maintenance of health and the prevention of disease. Examples of certain diseases are used to illustrate the application of general principles of disease control. Diseases of world wide importance as discussed in addition to the major diseases of importance to Pennsylvania animal owners. Collectively, the course material should provide animal owners, managers and future animal health professionals with the background to improve the decision making process required to maintain animal health and prevent losses from disease. The inherent, environmental and special factors involved in the maintenance of health and the prevention of disease will be emphasized.

**Prerequisite:** MICRB106 or MICRB201 . Prerequisite or concurrent: AN SC301

VBSC 405: Laboratory Animal Science

3 Credits

Principles involved in maintaining laboratory animals. Emphasis is on management, preventive medicine, and surgical considerations used in laboratory animal colonies. VB SC 405 Laboratory Animal Science (3) This course in Laboratory Animal Science introduces students to the biology and characteristics of a variety of laboratory animal species, explores the care and use of animals in various research environments and examines ethical/legal issues pertaining to the use of animals in research and teaching. The laboratory section reinforces topics discussed in lecture and provides an opportunity for students to learn basic animal handling techniques in a safe and professionally supervised environment. Students work with live laboratory animals including mice, rats, hamsters, guinea pigs, and rabbits. They learn handling techniques, administration techniques (such as by injection), and sample collection techniques (such as blood collection). They also learn surgical principles and
The course will provide students with basic and foundational knowledge regarding herd health programs in ruminant production systems. The student will explore crucial areas of managing production systems such as implementation and development of standard operating procedures (SOPs) and protocols and biosecurity programs for common diseases that threaten the sustainability of the human food supply worldwide, such as Brucellosis and Tuberculosis. Furthermore, the student will explore important concepts regarding diagnosis, treatment, management and prevention of ruminant diseases in an organized manner, moving from younger to older animals, and following them through their production cycle. In addition, the course will integrate on-farm field data collection with farm record analysis to provide students with critical thinking skills for troubleshooting a variety of health issues in production systems. Students enrolling in this course must possess basic information regarding animal biology and farm management. The information provided in this course will complement several courses regarding cattle operation management and prevention of diseases in production animals.

**Prerequisites:** ANSC 308 or ANSC 309 or VBSC 403; ANSC 310

**VBSC 409: Wildlife Diseases**

3 Credits

The purpose of this course is to provide students with an appreciation of the changing role of wildlife diseases as they relate to wild vertebrate species. The student will learn disease terminology and mechanisms, wildlife disease information resources, selected diseases of historic and current importance for the major Taxa, legal aspects of wildlife diseases, the opportunities for careers in wildlife disease investigation, and scientific writing as it relates to wildlife disease. In particular, the student will gain detailed knowledge of the ecology of diseases that affect wildlife species as well as domestic animals and humans, wildlife diseases with zoonotic potential, those having a significant economic impact on humans, and those which may threaten species survival.

**Prerequisite:** BIOL 110

**VBSC 410: Principles of Immunology**

3 Credits

The MICRB 410 / VBSC 410 Theories of immunity (3cr.) course provides a basic foundation in immunology with a focus on the progression from antigen recognition and innate immune responses to the development of acquired immunity. During the course, students will have the opportunity to learn about key topics that lead to an understanding of the how the human immune system functions. Such topics include the primary cells and anatomical sites of the immune system as well as the activation and processes of innate immunity. In addition, students will learn about the organization and generation of lymphocyte antigen receptors, major histocompatibility complexes, and antigen presentation. Topics will also be presented that allow students to build an understanding of how antigen recognition and presentation leads to the development, selection, and survival of B and T lymphocytes. T-cell mediated immunity, humoral immunity, and the dynamics of the immune response will also be discussed in depth. Topics such as the immunobiology of allergy, transplantation, autoimmunity, immunodeficiency, diseases, vaccines, and/or cancer will also be presented in order to help students build an understanding of the interplay between the immune system and health and disease will be discussed throughout the semester.

**Enforced Prerequisite at Enrollment:** (MICRB 201 or MICRB 201H) and (BMB 251 or MICRB 251 or BMB 251H or BIOL 230W or BIOL 230M)
will involve work with preserved specimens and will focus heavily
on anatomic structure identification and function. Topics include
anatomic directional terminology, vertebrate classification systems, early
embryonic development and a detailed examination of the various organ
systems. Specimens are selected to illustrate the anatomy of ancestral
vertebrate species, the evolutionary changes observed in descendant
species and the association of morphology with lifestyle. Although
students will invest the major time of their coming familiar with the
anatomy of a representative mammal (the cat), multiple species will be
examined, and students will be expected to recognize selected anatomic
structures in each species studied.

**Enforced Prerequisite at Enrollment:** BIOL 129 or BIOL 141 or BIOL 220W
or BIOL 220M or BIOL 230W or BIOL 230M or BIOL 240W or BIOL 240M or
BMB 251 or BMB 251H
Cross-listed with: BIOL 421

VBSC 423W: Pathology of Nutritional and Metabolic Diseases

3 Credits
Overview of nutritional and metabolic diseases of animals integrating
concepts from biochemical and physiologic aberrations to clinical
applications. VB SC 423W Pathology of Nutritional and Metabolic
Diseases (3)Nutrition plays a critical role in health, disease and
convalescence of man and animals. Understanding the role of nutrition
in disease pathogenesis, recovery and prevention requires an integration
of biochemical and physiologic sciences and clinical practice. The intent
of this course is to help the student integrate their knowledge from
various basic science disciplines to real-world clinical issues related to
the role of nutrition in disease pathogenesis, management and prevention
across various animal species. Common nutrition and metabolic disease
of production and companion animals will be used to demonstrate
various principles of disease pathogenesis from a biochemical to
whole animal basis. Deficiency and toxicity diseases of all essential
nutrients will be addressed. In addition, a secondary role of nutrition
in disease susceptibility and recovery mediated through immunologic
structures in each species studied.

**Prerequisite:** B M B 211 or B M B 401, AN SC301 or equivalent nutrition
course
Writing Across the Curriculum

VBSC 425: Principles of Avian Diseases

3 Credits
Principles of pathogenesis and control of diseases in poultry and other
avian populations. Case material used where appropriate. ANSC 425 /
VBSC 425 Principles of Avian Diseases (3) This course discusses the
major diseases of domestic poultry, with etiology, prevention, and
treatment reviewed on each disease. Since many of these diseases
also affect wild birds and pet birds these are also reviewed. Lastly,
avian disease with zoonotic (human public health) potential are also
discussed in the course. This course is required by those seeking
a poultry minor. Previous coursework in pathogenic microbiology is
beneficial.

**Prerequisite:** MICRB 106 and MICRB 107 or MICRB 201 and MICRB 202
CONCURRENT: AN SC 211, AN SC 311
Cross-listed with: ANSC 425

VBSC 430: Principles of Toxicology

3 Credits
Introduction to the biomedical aspects of toxicology with emphasis
on the mechanisms and fate of chemical interaction with biological
systems.

**Prerequisite:** BIOL 110, BIOL 240W ; B M B 211 or B M B 401

VBSC 431: Environmental Toxicology

3 Credits
Effects of pollutants on animal health at the chemical, physical, and
cellular level.

**Prerequisite:** BIOL 110, CHEM 110, CHEM 112
Cross-listed with: ERM 431

VBSC 432: Advanced Immunology: Signaling in the Immune System

3 Credits
The study of signaling pathways that regulate the immune response.
BMB 432 / MICRB 432 / VBSC 432 Advanced Immunology: Signaling
in the Immune System (3)This course will use the immune system
as a model in which to study how cells communicate in order to
coordinate an immune response. We will focus on signaling mechanisms
that regulate such immune responses as T cell activation, Thl/Th2
differentiation, macrophage activation, and migration of immune cells
to sites of inflammation. All lectures are based on recent reviews by
key investigators in each field, as well as primary articles to present
students with the most recent advances, techniques, and approaches
used. The goal of the course will be to convey a basis understanding
of intracellular signaling mechanisms that will pertain to all areas of
biology, an appreciation for current questions and future directions in the
field, and an in depth understanding of the signals that govern immune
responses. The material presented will build on the basic concepts
learned in BMB 400 and MICRB 410, and will lay the foundation for more
advanced courses at the graduate level.

**Enforced Prerequisites at Enrollment:** (BMB 251 or MICRB 251 or
BIOL 230W or BMB 230H or BIOL 230M) and (MICRB 410 or VBSC 410)
Cross-listed with: BMB 432, MICRB 432

VBSC 433: Molecular and Cellular Toxicology

3 Credits
In-depth coverage of processes by which drugs/chemicals interact with
biological systems and the experimental approaches used to study these
interactions.

**Enforced Prerequisites at Enrollment:** BMB 401 or BMB 401H or BMB 211
Cross-listed with: BMB 433
Veterinary and Biomedical Sciences, Animal Science, Biochemistry and microbiome for students majoring in Immunology and Infectious Disease, understanding of mucosal immunology and its interactions with the immune system. The topics presented here will provide a greater provide an experimental framework for understanding the mucosal literature will be presented and discussed. These articles will also topics presented in the textbook. In addition, articles from the primary course including lecture and discussion of the in the microbiome and the effects on disease will also be a major theme presented in MICRB410 and provide a detailed discussion of the effects of disruptions in the microbiome and the effects on disease will also be a major theme of the course. The course will include lecture and discussion of the topics presented in the textbook. In addition, articles from the primary literature will be presented and discussed. These articles will also provide an experimental framework for understanding the mucosal immune system. The topics presented here will provide a greater understanding of mucosal immunology and its interactions with the microbiome for students majoring in Immunology and Infectious Disease, Veterinary and Biomedical Sciences, Animal Science, Biochemistry and Molecular Biology, Biology, Microbiology, Food Science and Nutrition. The course would also be appropriate for Graduate students seeking more information about mucosal immune responses.

Prerequisite: MICRB 410

VBSC 444: Epidemiology of Infectious Diseases
3 Credits
Overall, the emphasis of this course will be on the core epidemiologic concepts of infectious diseases. Epidemiology is the study of how health and diseases are distributed in populations and the factors that influence or determine this distribution. Infectious disease epidemiology monitors the occurrence of diseases and develops strategies for preventing and controlling disease. In addition to understanding basic epidemiological methods, the course will provide an introduction to infectious disease epidemiology. It will focus on tools and epidemiological methods used for identifying, preventing and controlling infectious disease problems and present a review of epidemiology of many major infectious diseases. The lectures and discussions are designed to provide theoretical and practical framework and principles of infectious disease epidemiology to prepare students majoring in biology, pathobiology, animal science, food science, molecular biology and human nutrition to face the infectious diseases challenge in real world.

Prerequisites: BIOL 110 and ( STAT 200 or STAT 250 )

VBSC 445: Molecular Epidemiology of Infectious Diseases
3 Credits
A discussion and practicum of the molecular laboratory techniques used to study molecular epidemiology of infectious diseases.

Prerequisite: BIOL 220, STAT 200 or STAT 250 and VB SC444

VBSC 448W: Current Topics in Immunology
3 Credits
Study of current approaches and questions driving research in immunology and infectious diseases.

Prerequisite: MICRB410, B M B400

Writing Across the Curriculum

VBSC 450: Medical Entomology
3 Credits/Maximum of 3
Transmission of human and animal pathogens by insects, mites and ticks, including emergent pathogens, envenomization, and forensic entomology. This course presents principles of transmission of human and animal pathogens by insects, mites and ticks. Non-transmission based aspects of medically important arthropods such as envenomization, forensic entomology and genomics will be discussed also. Basic arthropod biology with special attention to biological properties of vectors and their interactions with pathogens will be presented. We will cover basic components of arthropod disease cycles and principles of pathogen transmission dynamics. The major groups of arthropod–borne pathogens and vectors will be discussed. Special topics will include emergent pathogens, vector genetics, traditional and modern disease control strategies and venous arthropods.
Prerequisite: ENT 313, or BIOL 011 and BIOL 012, or BIOL 110 or BIOL 220W

VBSC 451: Immunotoxicology of Drugs and Chemicals

3 Credits

An in depth discussion of the effect of xenobiotics and drugs on host immune mechanisms. VB SC 451 Immunotoxicology of Drugs and Chemicals (3) Maintaining good health is a priority for most of us, and a key element in staying healthy is a properly functioning immune system. However, we are constantly exposed to a barrage of chemicals in the environment both natural and man-made. Some of the key questions asked included: 1) do environmental chemicals affect the generation of immunity?, 2) is our environment to blame for bad health?, and 3) can natural compounds cause immunotoxicity? These questions and more will be addressed in Immunotoxicology. This course will focus primarily on the effects of chemicals in the environment but will also cover the impact of other factors such as therapeutics, recreational drugs, and dietary factors on the immune system. Immunomodulatory mechanisms will be examined at systemic, cellular and molecular levels. Discussions will include theory, principles, and methodology and key issues in immunotoxicity, host immune mechanisms, and tumorigenesis. Key issues in regulatory immunotoxicology will be discussed to make students prepared for jobs in Federal Regulatory Agencies. Grading for undergraduates will include midterm and finals, and class participation; while graduate students will be required to also write a short, immunotoxicology-related research proposal. Our intent is to provide a bridge between the two sciences and the undergraduate majors of Immunology and Toxicology, with an introduction to the basic interaction between human and animal populations driven by growth of comparative medicine. The course will also explore short and long term approaches to address the problems that emerge from growing interaction between human and animal populations driven by growth in the human population, new trends in animal production practices, industrial pollution, changing patterns of wildlife populations, human intrusion on new ecosystems, and trans-border mobility of humans, animals, and food.

Prerequisite: MICRB201 or B M B251

VBSC 455: One Health

3 Credits

This course addresses the challenges and opportunities at the convergence of One Health/public health, animal health, and environmental/ecosystem health. This interdisciplinary course will introduce the concept of One Health as an increasingly important approach to a holistic understanding of disease prevention and the maintenance of human and animal health. The list of topics will include lectures that emphasize the bidirectional impact of animal health on human health, the impact of the earth’s changing ecology on health, issues of food and water security and preparedness and the benefits of comparative medicine. The course will also explore short and long term approaches to address the problems that emerge from growing interaction between human and animal populations driven by growth in the human population, new trends in animal production practices, industrial pollution, changing patterns of wildlife populations, human intrusion on new ecosystems, and trans-border mobility of humans, animals, and food.

Prerequisites: VBSC 340

VBSC 456: Case Studies in Global One Health

3 Credits

The lectures will cover a variety of topics ranging from measures of health and disease in populations through events occurring in globalization of health. Students will do class presentations of case studies based on evidence-based reports that justify and elaborate upon the major one-health efforts that can and have changed the health status of millions of people globally. The case studies will cover key aspects of One Health including assessment, policy development and quality assurance on one-health programs. The case studies will reveal the magnitude and understanding of current health challenges facing the world. The case studies will show how countries with minimal financial resources and limited health infrastructure, through sensible and systematic efforts have improved the health of their people. Through these case studies, the students will learn to identify critical factors that have contributed to successes as well as failures of various institutions and initiatives intended to address one-health issues.

Prerequisites: VBSC 455 VBSC 444

VBSC 485: Human Genomics and Biomedical Informatics

3 Credits

The purpose of this course is to introduce students to the field of Human Genomics and Biomedical Informatics, in particular in the context of genetic architecture of complex human diseases and traits. The field of Human Genomics has experienced a massive explosion in data generation technologies, new discoveries, and increasing popularity in many scientific fields. This course will cover the molecular, statistical, population, and analytical aspects of modern human genomics and translational aspects of this field in biomedical informatics. Current methods to uncover the complex underpinnings of disease including methods to explore gene-gene and gene-environment interactions and data integration will also be covered.

Enrolled Prerequisite at Enrollment: BIOL 322 and (STAT 200 or STAT 250 or STAT 301 or STAT 401)

Cross-listed with: BMB 485

VBSC 494: Honors Thesis

1-6 Credits/Maximum of 6

Independent study directed by a faculty supervisor that culminates in the production of a Veterinary and Biomedical Sciences honors thesis.

Prerequisite: junior or senior status in the Schreyer Honors College and permission of the Veterinary and Biomedical Sciences honors advisor Honors

VBSC 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

VBSC 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.
and are related to the interests of the students enrolled in the course. Previous activities have included participating in a night-time owl playback survey and generating transects for a deer pellet count.

**Prerequisite:** WILDL 101
First-Year Seminar
Honors

WILDL 204: Wildlife Mensuration

4 Credits

Estimation and analysis of animal populations and their habitats, including sampling considerations and basic biometry.

**Prerequisite:** 3 credits in mathematics

WILDL 207: Outdoor Recreation

3 Credits

Sociology, history, and economics of recreational demand; recreational areas and management procedures.

WILDL 208M: Terrestrial Wildlife Management (Honors)

3 Credits

Ecological characteristics and manipulation of terrestrial habitats; control of wildlife populations. This course provides an overview of ecological characteristics of terrestrial habitats and the influence of those characteristics on wildlife populations. Course goals include (1) acquisition of knowledge related to how wildlife (at the individual and population level) interact with and are influenced by changes in their environment, (2) application of management and survey techniques (emphasized in the laboratory component of course), (3) understanding the application of techniques and principles learned in this class and others to wildlife management scenarios at the local, state, federal, and international level, (4) acquisition of critical thinking, reading, writing, and research skills, and (5) collecting and organizing data and presenting it in a professional format. Writing, editing, and peer review are emphasized. The honors section of the course includes an in-depth exploration of a survey technique or method or additional field experience(s). The activities for the honors section vary by semester and are related to the interests of the students enrolled in the course. Previous activities have included additional bird banding opportunities, a trip to a local workshop on disease, and preliminary analysis of saw-whet owl banding data.

**Prerequisite:** FORT 150, WILDL 101, WILDL 103, WILDL 106
Honors

Writing Across the Curriculum

WILDL 208W: Terrestrial Wildlife Management

3 Credits

This course provides an overview of ecological characteristics of terrestrial habitats and the influence of those characteristics on wildlife populations. Course goals include (1) acquisition of knowledge related to how wildlife (at the individual and population level) interact with and are influenced by changes in their environment, (2) application of management and survey techniques (emphasized in the laboratory component of course), (3) understanding the application of techniques and principles learned in this class and others to wildlife management scenarios at the local, state, federal, and international level, (4) acquisition of critical thinking, reading, writing, and research skills, and
(5) collecting and organizing data and presenting it in a professional format. Writing, editing, and peer review are emphasized.

**Prerequisite:** FORT 150, FORT 160, WILDL101, WILDL103, WILDL106, WILDL204

Writing Across the Curriculum

WILDL 209: Animal Handling and Care

4 Credits

Techniques in capturing, marking, and maintaining wild animals in captivity. Wildlife physiology, parasitology, and necropsy procedures are covered.

**Prerequisite:** WILDL101

WILDL 211: GIS and Aerial Photo Interpretation in Wildlife Management

4 Credits/Maximum of 4

Use of Geographic Information Systems and aerial photo technology with applications in wildlife management and natural resources.

WILDL 213: Wetlands and Fisheries Management

4 Credits

Introduction to basic limnology. Ecology and management of swamp, marsh, pond, and stream habitats and their animal populations.

**Prerequisite:** WILDL 101, WILDL 103, WILDL 106S, WILDL 204

WILDL 295: Internship in Wildlife Technology

1-6 Credits/Maximum of 6

Supervised off-campus field experience related to student’s major.

**Prerequisite:** prior approval of proposed assignment by instructor.

WILDL 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

WILDL 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**Wildlife and Fisheries Science (WFS)**

WFS 150S: First-Year Seminar

2 Credits

The objectives of this first-year seminar course are to: (1) Engage and prepare first-year college students for academic success by orienting them to the scholarly community and introducing them to available academic resources. (2) Introduce students to Pennsylvania’s forests and some of the research and other activities currently underway at Penn State to prepare for careers related to forestry, wildlife/fisheries, and other natural resources disciplines.

First-Year Seminar

WFS 209H: Wildlife and Fisheries Conservation

3 Credits

Survey of current and historical issues in wildlife and fisheries conservation; emphasis on vertebrate biodiversity, habitat management and protection, and populations.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

Honors

WFS 209N: Wildlife and Fisheries Conservation

3 Credits

The conservation and management of our natural resources is critical to all aspects of human existence. Wildlife and fishery resources are integral to our food supplies, the quality of our lands, and form a deep foundation of our culture. This course will introduce students to fisheries and wildlife and basic ecological principles as they relate both to the natural and human-influenced environment. It is open to all students with a basic background in biology. Students will learn to identify and analyze the interacting components of fisheries and wildlife systems and to apply basic ecological principles to current wildlife and fisheries management and conservation issues. The course will explore the basic tools, practices, and concepts used in the conservation and management of fish, wildlife, and their respective habitats. The course will also explore the human dimensions aspects of managing common property resources, like fish and wildlife, including the roles various stakeholders have in the management of these resources.

**Recommended Preparation:** a course in high school biology

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

WFS 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

WFS 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

WFS 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.
Overview of the evolution, systematics, ecology, and behavior of the subphylum vertebrata. W F S 300 The Vertebrates (2) The purpose of this course is to introduce students to vertebrate zoology and will include overviews of vertebrate evolution, systematics, anatomy, physiology, ecology, and behavior. The course will begin by introducing the phylum Chordata. The cephalochordata, amphioxus (Branchiostoma lanceolatum), will be discussed and used as a model of a prevertebrate. The basic organization and theories of vertebrate evolution will be reviewed. The superclasses, Agnatha and Gnathostomata, will be introduced. The origin of each of the major group of vertebrates will be traced. The general approach will be phylogenetic and include discussions of the major changes associated with each group’s evolution and selected elements of their extant diversity and biology.

Prerequisite: BIOL 110

WFS 301: Vertebrate Laboratory (2)

Overview of the anatomy, identification, collection, and preservation of the vertebrates. W F S 301 Vertebrate Laboratory (2) The purposes of this course are to introduce students to the anatomy of the vertebrates and to expose students to the diversity of vertebrates that reside in Pennsylvania. Students will dissect and learn the anatomy of the dogfish, frog, and cat or mink. Additional laboratory periods will concentrate on collecting/observing, and identifying fish, amphibians, reptiles, birds, and mammals. Museum curation techniques will be taught, and students will be required to construct dichotomous keys to specimens that inhabit Pennsylvania. The identification part of the course is meant to introduce students to representatives of the taxa that occur within the Commonwealth in preparation for higher-level courses in ichthyology, herpetology, ornithology, or mammalogy. Collection techniques will emphasize the proper collection and preservation of organisms for natural history museums.

Prerequisite: or concurrent: W F S209 , W F S300

WFS 310: Wildlife and Fisheries Measurements (3)

Introduction to field and laboratory approaches for collecting, analyzing, and communicating data regarding wildlife and fish populations and their habitats. W F S 310 Wildlife and Fisheries Measurements (3) This course will introduce students to basic measurements used to describe fish and wildlife populations and their habitats. Laboratory exercises will stress sampling approaches and implementation, common techniques for collecting information about amphibians, fish, birds, and mammals and their respective habitats, mapping and orienteering, and methods for summarizing and reporting findings.

Prerequisite: or concurrent: W F S209 , STAT 240

WFS 406: Ornithology Laboratory (2)

Ornithology Laboratory establishes the basic skills for identifying bird species in the field. This laboratory and field course is open to students with some background in wildlife and should be taken after completing or at the same time as the ornithology lecture course. The objectives of this course are for students to use laboratory specimens, identification software, field guides, and instructor-led field trips to 1) define, locate, and recognize anatomical features used to describe birds and characterize families; 2) recognize and identify approximately 160 species of birds by sight and approximately 60 by song in the field and/or lab; and 3) describe habitat, seasonal abundance, and distribution of bird species within the state. Most weeks include an introductory lecture followed by field instruction.

Prerequisite: or concurrent: W F S209 , W F S407

WFS 407: Ornithology Laboratory (2)

Introduction to the biology, ecology, adaptations, and conservation of birds.

Prerequisite: BIOL 110 , W F S209

WFS 408: Mammalogy Laboratory (3)

Identification, systematics, characteristics, adaptations, ecology, behavior, natural history and conservation, and socio-economic aspects of mammals.

Prerequisite: BIOL 110

WFS 409: Mammalogy Laboratory (2)

Laboratory and field identification of mammals, ecology and behavior of mammals, field survey techniques. W F S 409 Mammalogy Laboratory (2) Mammalogy Laboratory provides the necessary skills for identifying North American mammals. Taken concurrently with or after completing the mammalogy lecture course, this laboratory and field course is open to students with some background in wildlife. The objectives of this course are for students to 1) identify North American mammals by skulls and skins, 2) identify eastern North American mammals by tracks in the field, 3) capture and measure small mammals, and 4) gain an understanding of the characteristic behavior and ecology of North American mammals. Fields skills include animal handling, tracking, and observation. Additional skills may include skin and skull preparation and museum techniques for the care of mammals.

Prerequisite: or concurrent: W F S209 , W F S408

WFS 410: General Fishery Science (3)

Introduction to the study, management, and uses of fish populations; methods of investigation, culture, and harvest of fishes.

Prerequisite: BIOL 210 or W F S209
WFS 422: Ecology of Fishes

3 Credits

Role of fishes in aquatic communities and general ecosystems. Environmental factors influencing fish as individuals, populations, and communities.

Prerequisite: BIOL 220W or W F S209

WFS 430: Conservation Biology

3 Credits

The application of biological principles to issues in the conservation of biodiversity. FOR (W F S) 430 Conservation Biology (3) This course applies basic principles of ecology and genetics to issues regarding the conservation forested ecosystems and their associated fisheries and wildlife. The objective of this course is to provide a broad appreciation of the concepts in conservation biology that are important to solving contemporary natural resources problems. Students will be exposed to the history of conservation biology, values of biodiversity, definitions of species concepts, protecting the genetic structure of species, extinction as a natural process, vulnerability to extinction, biodiversity at the community, ecosystem, and landscape levels, habitat fragmentation, metapopulations, legal aspects of conservation, ecosystem management, exotic species, population, human population issues, measuring genetic diversity, attitudes towards nature, ex-situ conservation, and ecosystem restoration.

Prerequisite: BIOL 220W or FOR 308 or W F S209
Cross-listed with: FOR 430

WFS 435: Limnology

3 Credits

Biogeochemistry and natural history of freshwater ecosystems. W F S (E R M) 435 Limnology (3) This course will define and describe major principles (physical, chemical, biological, and ecological) that govern the structure and function of freshwater ecosystems (ponds, lakes, and rivers). Current scientific literature will be critically reviewed and discussed in relation to comparative philosophy, methodology, and case studies that cover a range of topics in limnology. The objectives of E R M (W F S) 435 are to familiarize students with the major physical properties, chemical cycles, taxonomic groups of organisms, and ecological interactions that define and describe the natural function of aquatic ecosystems. The course will use case studies to illustrate and examine pertinent issues (e.g., excessive material loading, introduction to exotic species, habitat fragmentation, and climate change) that can alter the structure and function of aquatic ecosystems. Knowledge of these basic ecosystem principles will be applied towards formulating real-life solutions to the issues identified in class, in order to better manage aquatic ecosystems. This course will be useful to both undergraduate and graduate students seeking degrees in Environmental Resource Management and Wildlife and Fisheries Science, as well as graduate students pursuing degrees in Ecology, Forest Science, Wildlife and Fisheries Science, Watershed Stewardship, and other related subjects. At the undergraduate level, the course will serve as a 400-level elective in Environmental Resource Management degree program, Wildlife and Fisheries Science degree program, and the inter-college Marine Science option. At the graduate level, the course will complement several Forest Science and Wildlife and Fisheries courses. Moreover, the course can also satisfy the requirements for the ecosystems ecology focus in the inter-college Ecology graduate program and serve as a breadth course in Water Resources for graduate students in the Watershed Stewardship program.

Prerequisite: BIOL 110, BIOL 220W, CHEM 110
Cross-listed with: ERM 435

WFS 436: Limnological Methods

3 Credits

Application of current methodologies to evaluate the biological, chemical, and physical characteristics of aquatic ecosystems. E R M (W F S) 436 Limnological Methods (3) Limnological Methods will instruct students to apply state of the art analytical measurements in order to gain an understanding of how and why ecosystems support specific biodiversity and biogeochemical cycles. The course will help students define key ecological elements (e.g., ecosystem metabolism, resource limitation, predator-prey relations) in both qualitative and quantitative terms, thereby making them tangible, tractable, and readily understandable. The course will use an instructional rubric to integrate conceptual, analytical, and communicative exercises in order to instruct students about how to evaluate variation in natural ecosystems. This course provides experiential training in the scientific process (rubric), so students can learn by doing, thereby internalizing their knowledge. Course content is organized into three 5-week sections, each of which will emphasize one component of the biogeochemical cycle (physical, chemical, biological). In each section, students will carry out a focused group study designed to evaluate how a pertinent environmental perturbation can affect that component of the aquatic biogeochemical cycle. The course content in each five-week block will have students: 1) review the experimental design and hypothesis, 2) implement the experimental design in the field or laboratory, 3 and 4) process and analyze samples in the laboratory, and 5) make statistical and graphical evaluations of the experimental results relative to their hypothesis (in class) and present these findings in written form. Knowledge of these basic ecosystem principles will be applied towards formulating real-life solutions to the issues identified in class, in order to better manage aquatic ecosystems. This course will be useful to undergraduate students seeking degrees in Environmental Resource Management and Wildlife and Fisheries Science, as well as graduate students pursuing degrees in Ecology, Forest Science, Wildlife and Fisheries Science, Watershed Stewardship, and other related subjects. At the undergraduate level, the course will serve as a 400-level elective in Environmental Resource Management degree program, Wildlife and Fisheries Science degree program, and the inter-college Marine Science option. At the graduate level, the course will complement several Forest Science and Wildlife and Fisheries courses. Moreover, the course can also satisfy the requirements for the ecosystems ecology focus in the inter-college Ecology graduate program. Grades will be based on three research papers, and a final laboratory practical.

Prerequisite: BIOL 110 and CHEM 110
Cross-listed with: ERM 436

WFS 446: Wildlife and Fisheries Population Dynamics

3 Credits

Concepts and estimation of mammalian, avian, and fish populations; processes of mortality, natality, growth, and regulation.

Prerequisite: W F S209
WFS 447M: Wildlife Management

3 Credits

Management of renewable wildlife resources by applying ecological concepts, habitat evaluation, and decision-making; writing and editing reports are emphasized.

Honors
Writing Across the Curriculum

WFS 447W: Wildlife Management

3 Credits

Management of renewable wildlife resources by applying ecological concepts, habitat evaluation, and decision-making; writing and editing reports are emphasized.

Prerequisite: W F S209 or W F S309
Writing Across the Curriculum

WFS 450: Wetland Conservation

3 Credits

Wetland types, classification, functions and values; hydrology, soils, and plants; introduction to wetland identification and delineation; wetland regulations. E R M (W F S) 450 Wetland Conservation (3) Wetlands are unique ecosystems, differing in many ways from both terrestrial and aquatic environments. They provide recognized values and functions to society, although these values and functions remain difficult to quantify. The study of wetlands is interdisciplinary, requiring background knowledge in science, management and policy disciplines. This course will explore the variety of wetland types and functions, and emphasize the diverse hydrological, biological, chemical, and physical interactions that occur within wetlands. Because wetlands are recognized as valuable assets in the landscape, issues surrounding wetland management and regulation have taken on increased importance; we will address these issues as well. Topics will also include the restoration of degraded wetlands and wetland creation, along with the construction of wetlands for pollution abatement. Students will become familiar with different wetland types and how they are classified, and will develop skills in understanding the interactions between wetland hydrology, hydric soils and hydrophytic vegetation. They will also develop an understanding of important national and state policies and regulations pertaining to wetlands and their protection and delineation. Classroom assessment will be based on three cumulative exams, homework assignments, and a final project. The course will fulfill 3 credits of electives or technical selections in the Wildlife and Fisheries Science major. Other students university-wide may be interested in the course, and the intention is to develop a course that is accessible to a wide variety of traditional and non-traditional students. For proper instruction, a technology classroom with computer projection equipment will be required. E R M 450 will be offered each fall semester. Enrollment will be limited to 60-80 students.

Prerequisite: E R M300 or W F S209
Cross-listed with: ERM 450

WFS 452: Ichthyology

2 Credits

Study of the structure, taxonomy, systematics, and natural history of freshwater and marine fishes.

Prerequisite: BIOL 110, BIOL 240W

WFS 453: Ichthyology Laboratory

2 Credits

Identification of fishes, major fish families, use of keys.

Prerequisite: BIOL 110, BIOL 240W. Prerequisite or concurrent: W F S452

WFS 454: Field Ichthyology

2 Credits

Introduction to collection and field identification of the fishes of Pennsylvania. W F S 454 Field Ichthyology (2) This course is designed to familiarize students with collection, observation, and field identification of Pennsylvania’s fish fauna. Students are taught how to collect, preserve, catalog, curate, and observe fishes. Additionally, they are taught how to gather pertinent in situ behavioral and distributional information on fishes and how to manage, record, and store field data. With the increasing emphasis on biodiversity and environmental monitoring, students need to be able to collect, manage, and store data as well as secure the chain of custody. This course is offered annually at the end of spring semester at the Tom Ridge Environmental Center in Erie, PA. Classes begin Sunday night at 1800 and extend until 1700 on Friday. After the three-hour introductory class, students meet each day at the Tom Ridge Environmental Center at 0700. Field collections/observations begin promptly, and end about 1700. Students reassemble in the laboratory at 1830 for a two-hour discussion of the day’s activities. On one day, a series of night collections is made that extends until midnight. Students are responsible for their motel and food expenses during the week. All transportation to and from the collection sites is provided.

Prerequisite: BIOL 110, BIOL 240W

WFS 460: Wildlife Behavior

3 Credits

Scholarly discussion and critique of history, concepts, and application of wildlife behavioral concepts to conservation issues. The course will give an in-depth coverage of concepts related to an understanding of wildlife behavior. Particular focus will be given to a discussion, critique, and development of these concepts and their application to contemporary issues in conservation and natural resource management of wildlife because there is a general lack of understanding of behavior by conservationists and natural resource managers.

Prerequisite: at least 6 credits in general wildlife or biology

WFS 461: Animal Welfare: Science and Ethics

3 Credits

Understanding animal welfare and well-being in farmed, wild and captive animals, and the implications for policy, legislation and conservation. Whether we interact with farmed animals, wild animals in natural settings, or captive reared wild animals bred for research or for reintroductions, there is a growing interest in their welfare. What do animals need to manifest good welfare and well-being? To find answers we need to devise experiments that determine what animals want and what they find aversive. This allows us to find ways to decrease fear and stress associated with handling and captivity. This course covers the practical issues of animal welfare; animal ethics in wildlife management, conservation, and agriculture; and the use of animals...
Women's Studies (WMNST)

in research. The course provides a framework with which to consider philosophical positions on animal use (covering aspects such as rights-based views versus utilitarian views) and the history of ethical debate over the interactions that humans have with other species. The course also addresses the current social, economic, and legal developments related to animal welfare and animal ethics.

**Prerequisite:** BIOL 110 or W F S 209

WFS 462: Amphibians and Reptiles

3 Credits

Critique of global evolution and conservation of amphibians and reptiles, focusing on Northeastern U.S. natural history and ecology. W F S 462 Amphibians and Reptiles (3) This course explores the evolution, ecology, and conservation of amphibians and reptiles. This course is open to all students with some background in biology. The objectives of this course are for students to 1) describe the evolution, anatomy, reproduction, and physiology of amphibians and reptiles, 2) place contemporary research in the context of the natural history traits and behavioral ecology of herps, and 3) critically evaluate the application of these concepts to natural resource management for salamander, frog, turtle, lizard, and snake species and populations. Evaluation methods include minute papers and exams.

**Prerequisite:** 5th semester standing or higher and 6 credits of general biology

WFS 463W: Fishery Management

3 Credits

Management of sport and commercial fisheries, including biological, political, social, and economic factors; regulations and other management techniques. W F S 463W Fishery Management (3) This course will introduce students to the management of recreational and commercial fisheries. The course emphasizes fishery management as a goal-oriented process that adapts over time to changes in fish populations and societal goals. Students will learn to recognize and understand that ecological, economic, political, and social forces shape this management process. Major methods of fisheries management involving people, population, and habitat management will be surveyed. Case studies highlighting the application of these management strategies to current fishery management are explored. Writing reports and management plans is emphasized.

**Prerequisite:** W F S 209, W F S 300, W F S 301, W F S 310 Writing Across the Curriculum

WFS 489: Supervised Experience in College Teaching

1-3 Credits/Maximum of 3

The Supervised Experience in College Teaching course provides select undergraduate students with formal, supervised teaching experience in a Wildlife and Fisheries Science course. Faculty recruit students who excel in a particular course to serve as undergraduate teaching assistants for subsequent offerings of that course. Duties may include serving as peer tutors, teaching assistants, or laboratory assistants, and developing and/or evaluating course activities and materials. Students participating in this course will develop a deeper understanding of the focus course material by actively helping teach the material. The course is only available to students who are invited to serve as teaching assistants for a Wildlife and Fisheries Science course and enrollment is by permission of the instructor.

**Prerequisites:** Permission of program

WFS 494: Undergraduate Research

1-12 Credits/Maximum of 999

Supervised student activities on research projects identified on an individual or small group basis.

**Prerequisite:** Permission of the Wildlife and Fisheries Science Program

WFS 494H: Undergraduate Research

1-12 Credits/Maximum of 999

Supervised student activities on research projects identified on an individual or small group basis.

**Prerequisite:** Permission of the Wildlife and Fisheries Science honors adviser, Schreyer Honors College Honors

WFS 495: Wildlife/Fisheries Internship

1-6 Credits/Maximum of 6

Supervised field experience related to the student's major.

**Prerequisite:** approval of proposed assignment by instructor prior to registration

Full-Time Equivalent Course

WFS 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

WFS 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

WFS 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

**Women's Studies (WMNST)**

WMNST 1: Introduction to Women's Studies

3 Credits

Interdisciplinary consideration of the scholarly theories and research pertaining to women's experiences and women's status in contemporary American society.

Bachelor of Arts: Social and Behavioral Sciences
Feminism is one approach to addressing systematic oppressions of both women and men. This course examines various feminist philosophical approaches to issues such as the construction of gender, sex, and sexuality, the nature of gender injustice, and the intersectionality of oppressions. It also addresses contemporary issues, including sexual harassment and assault, abortion, explicit and implicit bias, and discrimination and exclusion.

Cross-listed with: PHIL 8
Bachelor of Arts: Humanities
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Soc Resp and Ethic Reason

WMNST 83N: First-Year Seminar in Women's Studies
3 Credits

WMNST 83N First-Year Seminar in Women's Studies (3) This course introduces first-year students to the complex and interdisciplinary field of Women’s, Gender, and Sexuality Studies. Students develop an understanding of a feminist approach to understanding stratifications of power and privilege in society not only impact but co-constitute the concepts of interdisciplinary vs. multidisciplinary research and scholarship; to intersectional analysis of identity, power, and oppression; to scholarly conduct and responsibilities. Students will be expected to develop an understanding of current issues and debates within and beyond the field of women’s and gender studies as they relate to contemporary fiction and nonfiction writing as well as feminist thought through social media. Students will recognize that social variables such as gender, age, social class, religion, ethnicity, race, sexual orientation, and place of residence affect the way people view the world, behaving, and communicate. Students will develop the ability to locate, organize, and evaluate information about these identity intersections from a variety of sources and use them to synthesize and analyze their own ideas as well as come to an understanding regarding the stratification of power and privilege in society.

WMNST 100: Introduction to Women’s and Gender Studies
3 Credits

This introductory survey course fulfills requirements for General Education in Social Sciences, the Bachelor of Arts degree in Social and Behavioral Sciences, and US and International Cultures competence. It is also a prerequisite for upper-level courses in Women’s, Gender, and Sexuality Studies. This class focuses on women's shared and unshared experiences, issues of gender roles and stereotyping, questions related to sex/gender systems, and the different disciplinary approaches to the study of women and gender. The course asks how women's behavior, activities, accomplishments, roles, sexuality and status have been shaped by biological, psychological, sociological, cultural, historical, and political determinants, as well as by women's experiences based on their racial, class and sexual identities. Topics include the history of women's liberation movements, women's experiences in home, work and educational settings, gender roles and stereotyping as influenced by media, culture, education, and other social institutions, health and body image issues, and multiple forms of oppression. The course will focus equally on feminist issues in both the US and on a global scale and is both interdisciplinary and cross-listed with: PHIL 8

WMNST 104: Women and the American Experience

3 Credits

Selected aspects of the role of women in United States history and culture from colonial to modern times. AMST 104 / WMNST 104 Women and the American Experience (3) (GH;US)(BA) This course meets the Bachelor of Arts degree requirements. AMST 104 / WMNST 104 is a broad-ranging introduction to women in American culture. While specific topics may vary from class to class, the course examines the history and literature of American women, paying particular attention to issues of race and diversity. Students will be evaluated on essay tests, papers, journal entries, and attendance. The course offers students valuable experience in critical thinking, analysis, and writing. The course offers students a broad introduction to American women’s issues, and so serves as preparation for more advance courses in American studies, American literature, American women's history, and Women's studies. AMST 104 / WMNST 104 counts towards the American Studies major and minor and the Women's Studies major and minor. Non-American Studies majors and minors may use this course to fulfill a general education humanities (GH) or Bachelor of Arts humanities credit requirements.

WMNST 105N: Living in a Diverse World

3 Credits

This introductory survey course fulfills General Education Integrative Studies requirements in humanities and social sciences, and also meets the requirements for the United States Cultures Designation and Bachelor of Arts in Humanities and Social and Behavioral Sciences. This course uses literature, film and scholarly texts to inspire students to explore how conceptions of social difference, such as those linked to categories of gender, race, sexuality, class, ethnicity, and disability, shape society and everyday interactions historically and today. The course takes an intersectional perspective to explore how and why these categories vary over time and space, the effects of such variations for individuals and communities, and the connections between identity and the exercise of power. Geographically, the course emphasizes the relationship between social difference and power in the U.S. history and society, but takes a transnational perspective when possible by making comparisons to contexts beyond the United States. Furthermore, the class examines how individuals and communities most directly marginalized by these processes contest and re-imagine dominant categories and assumptions. Materials and discussions in the class trace broad social and historical trends as well as dive into the facets of everyday life. The class is designed to encourage reflection on the ethical challenges that arise when we become aware of how privilege, power and difference are intertwined in our world and daily lives. Students who successfully navigate this course will be able to: 1. Apply basic theories of identity, difference, social power and privilege to a wide range of textual and visual materials, and to their own interactions in the context of day-to-day life. 2. Critically engage at an introductory level histories of how race, gender, sexuality, class and disability have been constructed in the U.S. context. 3. Consider transnational dimensions of similar dynamics and contrast these with the U.S. context. 4. Identify and analyze the multiple ways individuals, communities and social movements have resisted and remade categories of identity and changed relations of power over time.
and space. 5. Recognize and explore the ethical dimensions of social, political and/or economic marginalization rooted in constructions of social identity.

WMNST 106N: Representing Women and Gender in Literature, Art and Popular Cultures

3 Credits

Interdisciplinary consideration of primary works and scholarship pertaining to women in the humanities and the arts. WMNST 106N Representing Women and Gender in Literature, Art and Popular Cultures (3) (GA;GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This is an introductory survey course that fulfills General Education Integrative Studies requirements in humanities and arts, and also fulfills United States and International Cultures requirements. The course is a prerequisite for upper level women's studies courses. WMNST 106N is an introduction to the interdisciplinary field of Women's, Gender, and Sexuality Studies, with an emphasis on the experiences, achievements, and status of women in the arts and humanities in the U.S. and global context. While providing a broad overview of scholarly research and theory pertaining to women and gender, students will also see many examples of contemporary women's creative practice through the visual arts, media, and popular culture. Students will learn about the challenges women artists have faced in making their way in a male-dominated arts and media industry; they will learn how these artists sought and continue to seek new languages and forms, whether in paint, words, film, music, crafts, to reassess and re-imagine notions of sex and sexuality, gender, race and ethnicity that underlie many forms of social injustice. Class meetings will be a mixture of lectures, group discussions, individual and group exercises, films, and guest speakers. Assigned readings and class meetings are designed to help students reassess predominant modes of thought and to give students tools to appreciate the creative work of highly diverse women. Given that this is an honors section, assignments will be geared towards taking advantage of small class sizes and fully engaged learners to generate dynamic classroom discussions and creative innovation.

WMNST 106Q: Representing Women and Gender in Literature, Art and Popular Cultures

3 Credits

This course is an interdisciplinary consideration of primary works and scholarship pertaining to women in the humanities and the arts. This course meets the Bachelor of Arts degree requirements in Arts and Humanities and fulfills General Education Integrative Studies requirements in both Arts and Humanities, as well as U.S. and International Cultures requirements. It is a prerequisite for upper level courses in the department of Women's, Gender, and Sexuality Studies. This course is an introduction to the interdisciplinary field of Women's, Gender, and Sexuality Studies, with an emphasis on the experiences, achievements, and status of women in the arts and humanities in the U.S. and global context. While providing a broad overview of scholarly research and theory pertaining to women and gender, students will also see many examples of contemporary women's creative practice through the visual arts, media, and popular culture. Students will learn about the challenges women artists have faced in making their way in a male-dominated arts and media industry; they will learn how these artists sought and continue to seek new languages and forms, whether in paint, words, film, music, crafts, to reassess and re-imagine notions of sex and sexuality, gender, race and ethnicity that underlie many forms of social injustice. Class meetings will be a mixture of lectures, group discussions, individual and group exercises, films, and guest speakers. WMNST 110: Sociology of Gender

3 Credits

Changing sex role expectations and behavior for men and women in contemporary society. SOC (WMNST) 110 Sociology of Gender (3) (GS;US) (BA) This course meets the Bachelor of Arts degree requirements. This course provides an introduction to the analysis and understanding of how men's and women's lives are different and how they intersect with each other. The course focuses on the social construction of gender and the impact of gender on experiences in a variety of social contexts and institutions throughout the life course, including cross-cultural comparisons of gender expectations. An overriding objective is to help students better assess and analyze the effects of gender throughout history and in their everyday lives. Class sessions are a mixture of lectures, discussions, group exercises, guest speakers, and films designed to engage the students in the learning
process. Each session helps students to critically evaluate the effects of gender discussed in their readings and experienced in their everyday lives. The evaluation tools used for this course extend this critical evaluation. Although the specific evaluation methods vary by sections, all sections use some form of reaction papers, book reviews, and/or journals. These writing assignments require students to demonstrate an understanding of the class readings, lectures, and activities, and to offer an evaluation and assessment of these readings and presentations. Because the social construction of gender is intertwined with family, work, religion, education, government, and all interpersonal interaction, the course overlaps with courses in each of these areas. This course meets a General Education requirement in Social and Behavioral Sciences. It can be used as a lower-level sociology course in the Sociology BA major and the Sociology minor. It can also be used as a supporting course in the Women's Studies major and minor.

WMNST 117: Women in United States History
3 Credits

HIST 117 / WMNST 117 provides students with an overview of the most important historical developments in the history of women in the United States, including women's actual experiences as members of a class, a race, and an ethnic community, the progress women have made as individuals, workers, and citizens as well as the opposition they have faced. While knowing the facts is obviously important to historical understanding, this course helps students develop critical thinking skills. These skills include: close and thoughtful reading and analysis of primary and secondary sources; looking for a broader coherence or order to the material; independent analysis and effective articulation (both in writing and in class discussion) of well-reasoned, well-crafted conclusions and interpretations and arguments (conclusions/interpretations/arguments which are supported by specific factual evidence derived from a variety of sources). The three specific course objectives underscore its scholarly dimensions: (1) Students will gain a knowledge and understanding of the diverse experiences of different groups of American women. (2) Students will gain an understanding and knowledge of the political, economic, and social processes that shaped the history of women in the United States. (3) Students will learn how to think historically by placing documents written in the past in their historical contexts, and to consider the relationship of the past to the present. By the end of the course students will: Demonstrate an understanding of the chronology of United States women's history. Demonstrate an understanding of the diverse experiences of different groups of American women. Demonstrate an understanding of the social, political, and ideological structures that shaped the history of American women and continue to shape the modern United States.

WMNST 120: Sex, Gender, and the Body
3 Credits

This introductory course considers core topics in the field of feminist sexuality studies to both unsettle popular mainstream discourses on sexuality and to aid students in developing a more comprehensive, inclusive, and ethical lens through which to view intersections of gender, sexuality, and the body. Over the course of the semester, students will engage critical conversations in the field of feminist sexuality studies, from debates on pornography and sex work to subcultural and queer sexual practices to the emergence 'hook-up culture' and new technologies transforming the landscape of sexual knowledge and practice. The course also substantively engages the ethics of sexual consent, sexual pleasure, and sexual communication. Utilizing an intersectional approach, the course examines how sexual identities and experiences are informed by differences of race, ethnicity, gender, class, and dis/ability status. The course is interdisciplinary and grounded in the behavioral and social sciences, drawing from feminist sociological, psychological, historical, ethnographic, and public health literatures in order to provide students with a comprehensive and multi-faceted introduction to recent, contemporary, and emergent scholarship on sexual health and diverse forms of sexual practice. Geographically, the course emphasizes the relationship between social difference, power, and sexuality in U.S. history and society, but takes a transnational perspective when possible by making comparisons to contexts beyond the United States. Furthermore, the class examines how individuals and communities most directly marginalized by these processes of sexual stigmatization contest and re-imagine dominant categories and assumptions. Materials and discussions in the class trace broad social and historical trends as well as dive into the facets of everyday life. The class is designed to encourage reflection on the ethical challenges that arise when we become aware of how privilege, power and difference impact sexual knowledge and practice.

WMNST 136: Race, Gender, and Employment

3 Credits

This course will ask how race and gender affect work in the contemporary United States. We will consider how race and gender shape people's work opportunities, their wages at work, and whether they participate in paid or unpaid labor (or both). We will begin with an overview of work and the changes in the workforce over time; we will move to investigate how workplace structures reproduce gender and race inequalities; will ask how race and gender inequalities are informally maintained through education systems and social networks; will consider differing dimensions of inequality across poverty, immigration, and sexuality; and will consider how studying unpaid labor helps us better understand the formal paid economy.

WMNST 137: Women and Religion

3 Credits

Jewish and Christian religious views on womanhood; thought and lives of important religious women; and feminist understandings of these.

RLST 137 / JST 137 / WMNST 137 Women and Religion (3) (GH;US;IL)
Women and Religion examines the historical and contemporary role of women in society and in religion, how those roles are shaped by religious doctrines around leadership, ritual, language, and the valuation of women's experience and history, and the diversity of women's voices speaking to these issues. An historical inquiry begins with a review of early goddess-based religion and an examination of gender roles promoted in selected creation narratives, including those from Genesis. Additional biblical and non-canonical texts are studied for their various characterizations of woman, the influence of marital status, and her place in the public and private spheres. Historical debates about women consider what roles women played in leadership structures, in religious ceremonies and in the creation of a theological tradition as well as the places women created for themselves outside 'official' institutional churches or the formalities of worship. We study prominent women in biblical history, the early church, the medieval past, and in modern American history. What are their stories and what noteworthy contributions did they make in the history of religion? What do we know of their lives and thought? Furthermore, the course addresses contemporary issues of importance to women and how those issues are resolved from the multiple perspectives within Judaism and Christianity. Such issues may include dating, marriage, family and divorce; spousal and gender relations; reproductive rights; homosexuality; sexual violence toward women; work outside the home; and religious leadership and inclusion. Finally, the course examines women's diverse understandings of the ways of being religious. Women are not a homogeneous group and are responding in a multitude of ways to the decisions they face about staying within or working outside established institutions. We consider their choices, from redefining and recreating new traditions and rituals, both within and outside formal worship settings, to returning to goddess worship and other innovations inspired by the most recent feminist movement. All topics are discussed in light of the different beliefs and understandings across the movements within Judaism as well as within Roman Catholicism and the many Protestant denominations. In addition, the diversity of scholarly interpretation is emphasized, including that offered by feminist theologians and the breadth of women's experience arising from factors of race, ethnicity, sexual orientation, and class and educational background.

WMNST 157: Science, Technology, and Gender

3 Credits

The role of women and gender in science, technology, and engineering. S

T S (WMNST) 157 Science, Technology, and Gender (3) (GS;US)(BA) This course meets the Bachelor of Arts degree requirements. S T S/WMST 157 examines the role of gender in science, engineering, and technology. The course offers a broad interdisciplinary overview of scholarly research and theory pertaining to women and issues of gender in science, engineering, and technology. The course is interdisciplinary (drawing materials from the natural and social sciences) and cross-cultural (taking a comparative approach to western and non-western sciences and technologies), and it examines the ways that different beliefs and practices related to gender have shaped the practice of science in different times and places. Students study great women scientists and also barriers institutional and ideological - that women have had to overcome in order to participate in science, asking how the presence and absence of women have affected those studies. Students will be graded by several quizzes and two short
exams during the semester. To evaluate progress in developing critical thinking skills, the students will be required to write a response journal and/or response papers to major topic areas during the semester. Also, one individual or group presentation will be required. These instruments enable the instructor to assess students’ acquisition of knowledge relevant to the general objectives of General Education.

WMNST 166: History of Sexuality

3 Credits

Discusses the ideas, practices, and identities surrounding sexuality over several centuries in a variety of contexts, focusing primarily on the US. HIST (WMNST) 166 History of Sexuality (3) (GH;US)This is a 100-level course on the history of sexuality, spanning several centuries and a wide range of contexts. The study of sexuality offers a particularly good lens for developing students’ analytical ability to think historically about something that is often considered both ‘natural’ and exclusively ‘modern.’ Topics will include the role of religion, medicine, law, and politics in controlling and shaping sexuality; change and controversy over birth control, abortion, and gender roles; the connections between prescriptive literature and lived experience; the origins and meanings and racial violence in the context of ideas about sexuality; the role of marriage in defining sex, race, and respectability; and the experiences and conflicts that have shaped the emergence of modern lesbian and gay identities. By closely and critically examining one aspect of human thought and experience, the course will teach students to evaluate large questions about sources, methods, and analysis that historians face, including: How do we recover stories of ‘private life’ from societies and eras different from our own? How does our own understanding of what sexuality complicate our historical exploration? What are the connections between gender identity and sexual practices? What can we learn about gender and sexuality, repression and resistance, deviance and acceptance, identity and community from studying the lesbian and gay past? How has racism been employed to justify particular reproductive and sexual practices, as well as to limit claims to sexual respectability? To what extent is the study of sexuality inherently a study of gender, sex roles, and feminism? While focused primarily on the United States, the course will offer students opportunities to examine these questions in other contexts, including India, the Middle East, and Latin America. It will be especially attentive throughout to the varieties of sexual practices and identities across different races, classes, ethnicities, and religious groups.

WMNST 175N: Fashion, Gender, and Identity

3 Credits

Do clothes really ‘make’ the woman? In this course, we explore how the living art and practice of fashion intersects with gender, and shapes our multiple identities. This is an integrative learning course, which means we bring together the methods, theories and skills taught in general education arts courses (GA) with those practiced in general education humanities courses (GH). Our course is grounded in visual literacy, and we learn how to read clothing through the study of formal elements including material, color, form, line, texture and mood. Our inquiries place women’s fashion into cultural, political and social contexts. We concentrate on three areas of study: the construction of particular kinds of femininity through fashion, challenges and subversions, and the contributions of women at all levels of the fashion industry, from factory labor to haute couture. Along the way, we will be encountering diverse individuals who have shaped women’s fashion, from Michelle Obama to the pop star Selena to Vera Wang. Finally, in this class we connect theory to practice by situating ourselves as creators of fashion. During interactive laboratories, we empower ourselves by acquiring skills including basic sewing, cutting, sketching, draping, and embellishing garments; we also digitally design a collection using specialized software.

WMNST 194: Women Writers

3 Credits

Short stories, novels, poetry, drama, and essays by English, American, and other English-speaking women writers. ENGL (WMNST) 194 Women Writers (3) (GH;US,IL)(BA) This course meets the Bachelor of Arts degree requirements. English 194 will constitute a wide-ranging study of works by American, British, and other English-speaking women writers, including novels, short stories, poems, plays, and prose. The class will approach this literature from a variety of thematic, historical, and/or generic vantages. Authors under consideration will vary from class to class, but may include writers such as Bradstreet, Woolstonecraft, C. Rossetti, M. Shelley, Austen, C. Bronte, E. Bronte, G. Eliot, D. Wordsworth, Dickinson, Wharton, Stowe, Freeman, Jewett, Fuller, H.D., Moore, Sitwell, Bishop, Brooks, Plath, Cather, Woolf, Stein, Lessing, Bowen, O’Connor, Welty, Porter, Oates, Olsen, Sarton, Gordimer, Atwood, Morrison, Kinkaid, McCarthy, and Churchill. The course seeks to make students aware of the extensive body of literature written by women through the analysis, evaluation, and appreciation of specific works by women writers. The course also seeks to help students understand the female perspectives—the varying values and interests of women—reflected in the texts at hand and to position these perspectives within wider social, historical, and political contexts. The course also seeks to make students aware of the special problems faced by both women writers and the female inhabitants of the societies they describe in their work. As a course in women’s literature, ENGL/WMNST 194 concerns itself with questions of gender. In so far as some of these women writers are black or women of color, it concerns itself with questions of race and ethnicity. In as far as the course looks at women’s literature in the context of men’s literature, it is concerned with the inter-relationship between dominant (male) and non-dominant (female) culture in the United States as well as in Britain. In so far as the course covers lesbian writers, it is concerned with sexual orientation. Topics under consideration will vary from class to class, but may include a chronological introduction to the development of women’s literature, a consideration of a principle theme or themes common to women’s literature through a number of works from across a number of historical periods, a consideration of a number of women’s works in the context of historical events central to their creation, a consideration of a number of women’s works in the context of formal or aesthetic elements common to those works and their various effects. This class
will prepare students for advanced courses in women's literature as well as other academic courses that engage in the verbal and written analysis of complex written texts.

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

WMNST 200: Global Feminisms
3 Credits

This course introduces students to the complexity of feminisms in the context of contemporary globalization. Much of the course focuses on the variety of feminist movement transnationally, particularly as those movements respond to not only local culture and politics, but also to global politics, and as such it touches again and again on the history of power. Explorations of the interanimating systems of power in a given area or region includes attention to ideologies of gender, race, sexuality, colonialism, imperialism, health and welfare, any or all of which are either supported or disrupted by globalization. The course holds a feminist lens to issues such as: gender and sexualities; the politics of the body; ongoing effects of colonialism-in theory and practice-on women worldwide; women¿s health; women and the environment; women¿s labor; political economy; transnational migrations; global class relations; women and/in the media; violence against women; women and war; the global sex/human trafficking trades; silence and marginalization; citizenship politics; women in politics and activism around the globe. The course examines contemporary feminist theory in the Global North and the Global South, highlighting the ways in which the term ‘feminism’ continues to be contested. Given that we no longer talk about ‘feminism’ in the singular in the United States, lack of agreement on the priorities of feminists worldwide is even more acute, given diverse cultural, political and economic positions of women around the globe. Thus the course also asks students to resist the kinds of generalizations that have led to inadequate feminist response to urgent challenges faced by women around the world. At the same time, the course will ask what kinds of connections can be made between local feminisms, and transnational feminist movement.

At the same time, the course will ask what kinds of connections can be made between local feminisms, and transnational feminist movement.

WMNST 202N: Women, Gender, and Feminisms in Africa
3 Credits

This introductory course provides students with a broad interdisciplinary overview of scholarly research and theory related to women and gender studies in Africa, using both historical and contemporary examples from across the continent. We will explore the complex, and oftentimes contradictory, meanings attached to gender and sexuality in various African contexts. For example, what does it mean to be a ‘good’ woman in Uganda today? How does this definition change (or not) if she comes out as a lesbian? What if s/he identifies as a transgender man or rejects gender binaries altogether? What if gender did not matter, or even, did not exist? In addition to exploring these types of questions, we will also examine African feminist thought, paying close attention to the ways in which African feminisms are similar to and/or different from
other forms of feminism worldwide. We will also consider what these movements looked like in practice. What strategies did African feminists utilize to promote social change? What challenges did they face? What victories resulted from their efforts? Although topics may vary from semester to semester, key themes include environmental activism, anti-war/peace activism, political activism, sex worker rights activism, activism to support peoples living with HIV/AIDS, and activism against harmful traditional practices. Finally, we will examine the ways in which African feminists have contributed to global debates and initiatives on women's rights and gender equity. Students in this course can expect to engage with diverse texts from the humanities (esp. history, literature, film studies, and philosophy), as well as from the social and behavioral sciences (esp. anthropology, geography, sociology, and political science).

WMNST 205: Gender, Diversity and the Media
3 Credits

COMM (WMNST) 205 Women, Minorities, and the Media (3) (GS;US)(BA)
This course meets the Bachelor of Arts degree requirements. This course is aimed at consumers of media in any form. It explores the relationship between the media and society through critical analysis of media and its role in education about and creation of social reality. Students research literature on human diversity issues in media representation. Students explore economic, political and social implications of media practice. Course content is designed to help build deeper understanding of gender, race, ethnicity, ability, sexual orientation and class diversity in media. Students explore the role of media and media literacy within the pluralistic democratic US society in the context of a diverse global society. Communication theory helps explain how media representations impact human construction of meaning in social relationships.

WMNST 207N: LGBTQ+ Identity, Culture and The Arts
3 Credits

WMNST 207N: LGBTQ+ Identity, Culture and the Arts will blend theories and methods in the Social and Behavioral Sciences (GS) with those of the Integrative Arts (GA). The course introduces key ideas, concepts and issues related to LGBTQ+ identity and culture, while highlighting aesthetic values of LGBTQ+ expression. The course broadly traces the historical, global, political and academic trajectories of LGBTQ+ studies and considers contemporary topics (for example, global-local influences, intersectionality, activism, and the media) as they relate to LGBTQ+ identity and the arts. The course is attentive to the ways that sexual identities intersect with other types of identities, such as age, gender, race/ethnicity, ability, religion. The course will also help students develop arts-related skills and teach students to recognize and value the arts as an integral part of LGBTQ+ cultural expression. Students will write critical papers, participate in discussions with artists and scholars, explore queer art and art spaces, as well as create a performance or installation art project. Incorporating seminar - and lecture-style instruction with constructivist-creative learning and experiential strategies, the course seeks to develop a learning community stimulated by discourse, collaboration, and creative/aesthetic exploration. This course is a General Education interdomain (N) course for General Education Social and Behavioral Sciences (GS) and General Education Arts (GA), with US Cultures (US), International Cultures (IL) designate. The course is cross listed in both Women's Studies and Arts.

WMNST 220: Beyond Birth Control: Feminist Perspectives on Women's Sexualities
3 Credits
This course explores various aspects of women's sexualities from an interdisciplinary and intersectional feminist perspective. Assigned reading from feminist theory, social science research, and feminist sexologists will explore: the female body and embodied identities; the social construction of sexualities; sexual rights; sexual pleasure and desire; impacts of racism, poverty, sexism, heterosexism and transphobia on sexual identities; and how women make meaning of their sexual experiences. We also investigate models of sex and sexuality education that attend to queer and trans desire, sexuality and sexual identities.

WMNST 225N: Sexuality and Modern Visual Culture

3 Credits

ENGL 225N / ARTH 225N / WMNST 225N Sexuality and Modern Visual Culture (3) (GA;GH) An examination of the visual expression of gender and sexual identities in English-speaking cultures since the late nineteenth century. The terms 'feminist' and 'homosexual' were invented by the Victorians and reflect profound shifts in conceptions of identity. Another invention of the nineteenth century was the idea of the literary and artistic 'avant-garde' as a minority contingent with politically and/or aesthetically advanced views. These ideas of minority culture were deeply enmeshed with one another, and have exerted profound influence ever since. This course explores that history with the objectives of expanding students' knowledge of modern art and literature, and of fostering more sophisticated understandings of how evolving sociopolitical ideas affect our sense of who we are and how we relate to texts and images. The course is relevant to students of American and English studies, art, art history, and women's, gender and sexuality studies.

WMNST 227: Introduction to Queer Theory

3 Credits

ENGL 227 Introduction to Sexuality Studies (3) (GH;US) This course focuses on the body of critical writings known as queer theory in order to analyze issues of sexuality and gender since 1969. The course interrogates sexual norms and their deviations, with a particular focus on the relationships between sexuality, imagination, and ethics in the making of sexual communities and fostering activism around sexuality and gender. We will study how class, race, and gender have been shaped, and themselves shape, the production of and resistance to sexual norms. Queer Theory engages issues ‘queer space’ and ‘queer time’, related concepts that relate bodies and environments to history and memory, and to fantasy, imagination, and utopianism. We will also explore the ways marginalization, shame, and criminalization have been transformed into visionary acts of ‘world-making’ that have changed contemporary understandings of bodies, identities, social formations, literature and visual culture. Throughout, our focus will be on the relationships between sexuality and ethics, and how both shape the history of queer culture and activism.

WMNST 240Q: Artistic Patronage in Europe

3 Credits

This course surveys the institutions and social networks in which European fine arts were created, consumed and critiqued. Beginning with the medieval period and ranging to the early 20th century, the course will examine the variety of communities where public and private often intersected and which sponsored innovations in the arts. Often indexing social movements and political change, such communities include convents and cathedrals, royal academies and courts, coffee houses, salons, and theaters. Artists, performers, patrons, politicians, journalists, and others collaborated and competed in these spaces. Such communities could embody political and economic power, or foster resistance to it. This approach to the history of the arts in western culture puts the focus less on the individual creative genius of great composers, writers, painters, and sculptors, and more on the social exchanges and institutions that sponsored and received their work. Such an approach brings to light particularly the ways in which women played significant roles in the production and reception of culture: as salon hostesses, patronesses, and divas, women often enabled and enacted cultural production. Some examples of particular units of study might include: the German convent of Hildegard of Bingen (1098-1179), where monophonic chant and allegorical morality plays developed; the Mantuan (Italy) court of Isabella d'Este, the first lady of the world, (1474-1539) where the roots of the madrigal began and where notable painters found support and sponsorship; the French salons of Mme. Geoffrin (1699-1777) and Mme. de Staël (1766-1817); and the student residences in Madrid where avant-garde writers and artists interacted. Each unit will also consider the relationships between the aesthetic norms and values of a period and the economic and political realities of sponsorship. The course will require that students attend at least one musical performance or concert held on campus during the semester and complete a brief writing project based on that experience. This requirement will encourage students to think about their own university as a contemporary space of cultural sponsorship.

Concepts of affectional and sexual orientation over life span, with emphasis on lesbian and gay male personal, family, and community adaptation. HD FS (WMNST) 250 Sexual Identity over the Life Span (3) (US) This course reviews concepts of sexual identity as informed by a human development perspective. Concepts of sexual orientation are discussed in the context of a review of lesbian, gay male, and bisexual lives. Developmental processes of lesbian and gay life are detailed: personal change from the teenage years through adulthood, changes in family and relationship patterns, and impact of communities, laws, and culture. These processes are contrasted to the developmental processes of women and men who identify themselves as heterosexual. The complex effect of gender, race, ethnicity, class status, and historical time on sexual orientation and its expression has generated ongoing controversies in scholarship as well as in public discourse. The course will be an introduction to these controversies as informed by human development research.

WMNST 266Y: Sex and Violence in Nineteenth-Century America

3 Credits

Historical Overview of Sex and Violence in the Nineteenth-Century United States. HIST (WMNST) 266Y Sex and Violence in Nineteenth-Century America (3) (GH;US)(BA) This course meets the Bachelor of Arts degree requirements. ‘Sex and Violence in Nineteenth-Century America’ is an introductory course in the social and cultural history of the United States designed to reveal the importance of the past to the present by showing how two basic human activities have changed over time in both ideology and practice. Both sex and violence are incredibly broad topics; this class will not provide a comprehensive overview. Rather we will focus on a few intriguing topics, including courtship, prostitution, the early popular culture of sports, slavery, military violence including the Civil War, exploitative journalism, and sex and violence as metaphor. We will also examine the ‘creation’ of homosexuality in the nineteenth century, and manner in which masculinity has been historically constructed. The main purposes of the course are to introduce students to some major issues in nineteenth-century social and cultural history, and to acquaint students with ‘historical method,’ those techniques historians use to research and interpret the past.

WMNST 300: Latinx Gender and Sexuality Studies
3 Credits

WMNST/ LTNST 300 Latinx Gender and Sexuality Studies (3) (GH/US/BA) This course examines the historical development, theoretical premises, and political, social, and artistic contributions of Latinx feminisms in the United States. It shows the connections to as well as the divergences from Latin American feminism by beginning with an analysis of how the Spanish conquest, the imposition of Catholicism, and subsequent years of colonialism shaped gender and sexual identities. It examines the contemporary effects of these historical issues and inquires into the common concerns of Latin American feminists and Latinx feminists. It asks how theories and practices have diverged given different geographies, both within the U.S. and Latin America and within the U.S. The course will examine changes in the 1960s and 1970s in the U.S., when Chicano and Puerto Rican nationalist movements also gave rise to a feminist consciousness amongst Latinas; the conjuncture of race, ethnicity, gender, and sexuality is considered, with attention to how Latinas critiqued Anglo feminism's narrow focus on gender. The course will focus on family formations, considering social science and feminist discourse on the issues of patriarchy. How have Latinx feminists valued yet also rearticulated the traditional family? What critiques have made been against heterosexism? How has the LGBTQ community formulated new kinds of families? How does migration shape family relations? The course will explore how Latinx artists in different genres have responded to and resisted traditional gender and sexual roles. Literature, film, poetry, performance art, and hip hop are all examined for their diverse representations of sexual desire.

WMNST 301N: Sexualities, Gender and Power: Feminist Thought and Politics
3 Credits

WMNST 301N Sexualities, Gender and Power: Feminist Thought and Politics (3) (GH/GS/US;) This course is an interdisciplinary survey of historical and contemporary feminist theories in both the United States and international contexts. While attention is given to key historical moments in feminist thought, the course stresses theoretical trends and debates in feminism today. Course themes will include: (1) feminist epistemology and standpoint theory, epistemic privilege and epistemologies of ignorance; (2) postcolonial critiques of western feminism, and contemporary efforts to define a transnational and anti-racist feminism, (3) gender identity and the very viability of the category; (4) the concept of freedom, liberation, and of women's agency in feminist narratives of liberation, (5) theoretical implications for defining productive labor for women that is not exclusively the labor of childbirth, and the subsequent care of children and family; (6) the ongoing search for new paradigms of embodiment and interdependency (such as feminist
disability and care studies) that counter patriarchal epistemologic constructions.

WMNST 303: Race and Gender in the Americas: Latin American and Caribbean Cultures

3 Credits

Utilizing a theoretical framework of intersectionality, this course examines historical and cultural constructions of race and gender in Latin America and the Caribbean. AFAM 303 / ANTH 303 / WMNST 303 Race and Gender in the Americas: Latin American and Caribbean Cultures (3) (GS:IL) Utilizing a theoretical framework of intersectionality, this course examines how racial, gender, sexual, and class identities are constructed in Latin American/Caribbean societies. The course applies an anthropological perspective to a wide range of countries in the region to reflect on how historical events such as the conquest, colonization, slavery, and independence movements are relevant to understanding the region today, as well as how race, gender, and sexuality inform contemporary themes of empire, nation-building, imperialism, neo-colonialism, revolution, violence, militarization, social movements, religion, neoliberalism, U.S. involvement/relations, and popular culture. The course addresses issues of power, culture, racial formation, and citizenship by incorporating interdisciplinary material beyond ethnography such as newspapers, grassroots media, biographies, films, music, novels, personal testimonies, etc. Rooted in feminist anthropological scholarship, this course emphasizes how power (from above and below) and culture mediate relationships between individual/community agency and institutions/structures. As an effort to encourage students to think about Anthropology and culture beyond superficial or romanticizing celebrations of multiculturalism, food, and music, the course stresses the theoretical importance of situating power and privilege amidst difference. We conceptualize culture not only as socially transmitted patterns of behavior and ideas/meanings, but as a complex and dynamic process/medium grounded in unequal relations in which power is constituted and resisted. The ethnographic emphasis of the course centers on the complex lived realities and voices of people, encouraging students to learn, understand, and respect cultural difference. The course offers students a broad sense of how power is central in the production of knowledge (particularly within the disciplines of Anthropology and History). Students will critically engage an array of topical issues in Latin America beyond dichotomous thinking. Discussion of course material includes contemplating issues of ethics, subjectivity, bias, and privilege. Conversations regarding processes of 'Othering' and traditional 'us vs. them' debates that often occur when discussing developing countries will prompt students to situate their own power/privilege and challenge our assumptions and preconceived notions of Latin America. Moreover, this course teaches Latin American Cultures within a global context of racialization. As such it also stresses the historical and contemporary social, economic, cultural and political significance of the U.S. in Latin America, to demonstrate how we are connected and responsible to what happens 'over there'. In order to promote service learning, a core tenant of feminist pedagogy, this course also offers students the opportunity to participate in an optional embedded program entitled 'Cuba: Identity, Diversity and Popular Culture'. This two week course in Havana, Cuba promotes interactive learning in and outside the classroom with international study. This course component successfully combines academic classes, hands-on activities, and service learning.

WMNST 350: Gender, War, and Militarism

3 Credits

This interdisciplinary seminar uses feminist theory to critically examine the ways in which war and militarism are deeply gendered. We will look at women's experiences of armed conflict across the world, but also the militarization of everyday life and the politics of gender within various military structures, both in the US and abroad. We will also examine the differential ways that men and women are affected by the war system and will consider the role of women and gender norms in peace and anti-militarism movements. This course focuses on women who actively participate in and/or support war, as well as those who actively oppose war and mobilize for peace. It also considers the experiences of those who become victims of the war system. Given that men and militarized understandings of masculinity play such a prominent role in warfare, the course will also explore the ways that masculine gender norms have been used to perpetuate cultures of war. Students can expect to engage with a variety of different types of texts: documentaries, feature films, memoirs, novels, newspapers, scholarly books and articles.

United States Cultures (US)

WMNST 364N: Black & White Sexuality

3 Credits

This course explains how narrow, 'black and white', ways of thinking limit our understanding of the diverse expressions of human sexuality. The course title’s double meaning also references the various ways that sexuality is socially constructed in relation to race. For example, we will explore how stereotypical beliefs about the sexuality of people of African descent persist in the United States and have been legitimized historically by various cultural discourses, social institutions, and academic fields. Course assignments will require us to rethink and challenge what we understand as 'sexuality' and consider its many influences like race, gender, class that shape our emotions, needs, desires, relationships, representations, practices, and public policies. An aim of this course is to begin to make sense of the long, entangled, and inextricable relationship between race and sexuality in the United States.

WMNST 400N: Debates in Contemporary Feminism
3 Credits
This course is an advanced seminar in feminist and gender theory. The primary focus is critical engagement with social, political, and cultural theories of the social construction of gender and gender difference, and of the sources, causes, and effects of gender inequality and strategies for reducing or eradicating inequality. While emphasis will be placed on gender difference and inequality, substantial time will be spent on theories of how gender is implicated in and supported by other forms of inequality such as sexuality, race, ethnicity, and class. Standpoint and intersectional approaches will ground much of the course, and provide one dominant framework for thinking about identity, oppression and social power inequalities. Students will also take on more advanced readings addressing feminist epistemology and ontology, methodology and praxis. While topics change from instructor to instructor (for example: reproductive rights; women’s health; labor; politics and voting; creative arts and representation; individual and social identities; gender and militarism) students can expect a balance between US and transnational contexts. This balance reflects contemporary feminism’s acknowledgement of US global hegemony, and thus the impacts of US policies on the welfare of other nations and regions, while also emphasizing both oppositional and coalitional movements in those same nations and regions. Case studies of effective activist intervention at both local and global levels will support the bi-focal emphasis of the course.

3 Credits
Advanced analysis of feminist theory and the nature of its integration (sometimes uneasily) within feminist movements and practices. WMNST 401 Feminist Perspectives on Research and Teaching (3)The course explores current themes organizing debates and discussions within feminist discussions of teaching and research. Students will become familiar with various research perspectives that feminist researchers use including interviews, ethnography, and action research. The course will examine debates within feminist research and teaching including power, difference, and race. Key themes will include questions around the politics of representation, the relationship of research to colonialism, the authority of the researcher, researcher-researched relations, and power/knowledge relations in research, classrooms, and knowledge production broadly defined. The aim is not to identify a feminist orthodoxy but rather: 1) to identify and understand the varieties of feminism existing today; 2) to become knowledgeable about a range of themes currently emerging in feminist debates on teaching and research; and 3) to arrive at an appreciation of the transformative effect upon teaching and research these new paradigms, debates, and themes have meant across a range of disciplinary boundaries.

Prerequisite: WMNST100 , or WMNST106 , or WMNST005 and WMNST301

WMNST 407W: Women and Theatre
3 Credits
A study of theatre practice and dramatic literature as informed by issues of gender, race, and ethnic background. THEA (WMNST) 407 Women and Theatre (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. Theatre 407 approaches the study of theatre/performance as a valuable site for the exploration of race, class, and gender as social constructs. The focus will be on 20th century developments of women and theater. Feminist theory and theatrical practice will be a focus of the course and will reflect conflicts and differences present within feminism.

WMNST 412: Education and the Status of Women
3 Credits
An examination of the relationship of education to the status of women in American society.

Cross-listed with: EDTHP 412

WMNST 420W: Gender and International Development
3 Credits
This course examines gendered processes of economic and social change in the Global South in a context of rapid globalization. We will study how gender inequities and inequalities shape and are shaped by economic restructuring, environmental change, international migration, the global spread of ideas and culture, and the shifting goals of International Development agencies. Readings and discussions are organized around three main learning units: 1) Approaches to Gender in Development; 2) Gender, Work, and Identity in the Global Economy; and 3) Rights, Reproduction and the Body. Particular attention will be paid to representations of women and men by Western organizations acting in the name of Feminism and/or Development, and to the responses of feminist communities in the South to these portrayals. In studying these issues, we will resist the tendency to conflate ‘gender’ with ‘women’, instead looking comprehensively at the identities, rights, and lived experiences of diverse gendered identities. We will carefully consider differences using an intersectional frame that considers social factors.
such as sexuality, race, economic class, and legal status. Students will explore issues through diverse materials including reports, articles, book chapters, documentaries, presentations, and popular media.

WMNST 426W: Gendered Worlds

3 Credits

Gendered Worlds examines how systems of dominance manifest in everyday life. Through an intersectional approach to social differences, such as gender, race, class, ethnicity, age, ability, and sexuality, the course highlights the significance of difference in shaping experiences of space and place in a global context. The course incorporates approaches from cultural, postcolonial, subaltern, queer, gender, and critical race studies, all of which have influenced current debates across the field of geography. Feminist scholars have long been concerned with the spatial politics of cultural difference. As a point of entry to discussions of gender and geography, this course will explore the diverse ways in which geographers have conceived of, analyzed, and redefined gender as a contested spatial practice that intersects with other facets of identity such as race, class, and sexuality. Using contemporary geographic texts, we will explore the gendered dynamics of geographic research, citizenship, violence, security, nationalism, nature, and globalization.

The purpose of this course is to examine how gender is understood and utilized in the field of geography. This course also aims to enhance students’ ability to engage in first-hand critical research, as well as collaborative learning, through a reflective and on-going process of research and writing over the course of the semester. At the end of the course, the successful student will be able to: 1. Deploy contemporary debates around gender theory, gendered spatial practices, and cultural difference. 2. Critique the cultural and social construction of gender across time and cultures. 3. Analyze representations of gender in social institutions such as the media. 4. Apply theories of gender and cultural difference in the context of critical written analysis.

WMNST 428: Gender and Politics

3 Credits

Gender in politics in the United States and around the world; major areas of women and politics research. PL SC (WMNST) 428 Gender and Politics (3) (US) This course meets the Bachelor of Arts degree requirements. This course is designed as an overview to the field of women and politics. It examines the role that women play in politics in the United States and around the world. Students will begin by examining how women are socialized differently from men and how that socialization affects women's political attitudes and participation. Then students will focus on women in different political offices and how their behavior compares to that of their male counterparts. Students will then analyze the women's movement in the United States. Finally, students will turn to different theories of the ideal position of women and men in politics and use those theories to explore the issue of pornography. Students will be evaluated on a final exam, short essays (4-5 page essays), class participation, and a research paper (15 pages). This is an advanced course with 6 credits prerequisite in Women's Studies or Political Science. This course fulfills the American Politics and Comparative Politics distribution as well as the advanced course requirement for the Political Science major. It is an elective for a Women's Studies major. It also fulfills an International/Intercultural competency requirement. This course will be offered once a year with 35 seats per offering.

**Prerequisite:** 3 credits in political science or women's studies

WMNST 430: Women in American Society

3 Credits

A historical study of women's roles and experiences in the United States.

**Prerequisite:** 6 credits of American Studies, Sociology, or Women's Studies
Cross-listed with: AMST 430
WMNST 438: Feminist Philosophy

3 Credits
Examines the central currents of feminist philosophy, selected problems and concepts regarding difference, gender and sex, identity, and political culture.

Prerequisite: 9 credits of philosophy, including 6 credits of philosophy at the 200-level or 5th semester standing
Cross-listed with: PHIL 438
Bachelor of Arts: Humanities

WMNST 439: Women and the Holocaust

3 Credits
Analysis of women's experience in the Holocaust and exploration of the role of gender in Holocaust Studies. J ST (HIST/WMNST) 439 Women and the Holocaust (3) Most of the early study of the Holocaust focused almost exclusively on the experiences of Jewish men. It was men who wrote the first and most widely read Holocaust memoirs and men who produced the first studies of the Holocaust. The first question motivating this class is thus what we can learn from examining women's experiences. Is it possible that the ghetto, the camp, and the forest look different from women's perspectives? Are there factors we miss when we read primary documents written by only half of the participants in these historical events? Beyond this, however, our exploration will also lead us to look more broadly at gender as a category of analysis. What do we gain by bringing questions of gender to bear on our study of the Holocaust? Are there any ethical concerns that should inform our approach?

Prerequisite: J ST 010 or J ST 121 or HIST 121 or consent of program
Cross-listed with: HIST 439, JST 439

WMNST 450Y: Gender and Sexuality in Ancient Greece and Rome

3 Credits/Maximum of 3
An examination of gender, sexuality, and sexual desire in ancient Greece and Rome. This course examines issues of gender and sexuality in Greece and Rome. Through close analysis of ancient texts and artifacts, we will explore representations of gender in literature and art, medical theories of the male and female body, sexual norms and codes, and views on marriage, rape, adultery, and prostitution. In addition, we will consider how eroticism and gender both support and subvert political and social ideologies. The objective of this course is to enable students to analyze gender identities and conventions surrounding sexuality in the context of the Greek and Roman worlds. This course will also invite students to consider the influence of ancient conceptions of gender and sexuality on modern discussions and debates. Authors and texts may include Homer, Hesiod, Sappho, Sophocles, Aristophanes, Plato, Aristotle, the Hippocratic corpus, Catullus, Virgil, Ovid, and Augustine. These ancient readings will be supplemented with selections from modern feminist theorists and gender studies.

WMNST 452: Women's Health Issues

3 Credits
Recommended Preparations: BIOL 141; PSYCH 100; WMNST 100
N452 examines major health issues concerning women today. The topics covered include, but are not limited to: developing a healthy life style—nutrition and exercise; family planning—birth control methods; violence against women—relationship rights and signs of a batterer; eating disorders—anorexia, bulimia, and binge eating; sexual wellness; substance abuse—alcohol, prescription drugs; menopause signs and symptoms; treatments; and medical conditions affecting women today such as cancer, arthritis, multiple sclerosis and heart disease. The course emphasizes that women’s lives are influenced by social, economic, political, and cultural conditions.

Recommended Preparation: BIOL 141 or PSYCH 100 or WMNST 100
Cross-listed with: BBH 452, NURS 452
United States Cultures (US)

WMNST 453: Women and the Criminal Justice System

3 Credits
This course focuses on the experiences of women as offenders, victims, and professionals in the criminal justice system. CRIMJ 453 / CRIM 453 / WMNST 453 Women and the Criminal Justice System (3) (US) The course will examine the role of women in the criminal justice system and look at the issues related to women as offenders, victims of crime, and as professionals in the system. Students will gain an understanding of the issues concerning women in the criminal justice system, examine how societal arrangements affect women as offenders, victims, and criminal justice professionals, and better understand the overlooked problems faced by women in the criminal justice system. Students will be evaluated on the basis of exams, presentations, and papers. CRIMJ 453 / CRIM 453 / WMNST 453 is a supporting course for both WMNST and CLJ majors, as well as the WMNST minor. This course may also be used to satisfy a GI requirement. This course will be offered twice a year with 60 seats per offering.

Prerequisite: CRIMJ100 or WMNST100
Cross-listed with: CRIM 453, CRIMJ 453
United States Cultures (US)

WMNST 455: Gender Roles in Communication

3 Credits
Explores the literature on gender research in the discipline of human communication. CAS (WMNST) 455 Gender Roles in Communication (3) (US) This 400-level course is a theory and application course which also satisfies an intercultural requirement. CAS/WMNST 455 strives to ensure that students understand female and male differences and similarities in communication patterns, perceptions of the opposite sex, and expectations and stereotypes regarding the opposite sex. Many researchers find that gender communication is 'cross cultural' i.e., that women and men come from two different cultures, and therefore misunderstanding of each others’ intent and expectations may frequently occur. This course examines how distinctions in meaning and interpersonal dynamics may create these two differing cultures, and promotes understanding and possibilities for adaptation. It also investigates when and if changing communication styles is desirable, and in which settings. A goal of the course is to help students to solve puzzles toward understanding those we work with and relate to, as
well as to apply their knowledge to their own lives and contexts. The course content and format reflects these goals. CAS/WMNST 455 begins with theoretical information, later applying it to situations of interest to most – relationships, language use differences (verbal and nonverbal), media messages, and workplace issues. Lecture incorporates considerable discussion and exploration of gender issues, and most topics are followed by activities, which illustrate how theories work in real life. This course is useful for any students seeking an intercultural course. It is recommended to Communications Arts and Sciences and Women’s Studies majors and minors due to emphasis on communication theory and gender issues. Business, counseling, psychology, sociology, education and any social science majors may fulfill a US requirement through 455.

**Prerequisite:** CAS 202  
Cross-listed with: CAS 455  
United States Cultures (US)

**WMNST 456: Gender, Occupations, and Professions**  
3 Credits

The role of gender in shaping contemporary North American patterns of employment, occupational roles, and statuses.

**Prerequisite:** WMNST100 or 3 credits in Sociology  
Cross-listed with: SOC 456  
Bachelor of Arts: Social and Behavioral Sciences

**WMNST 458: Critical Feminist Issues in Reproduction**  
3 Credits

This course examines women’s reproductive health issues from a feminist perspective. Reproduction has always been thought of as ‘women’s work,’ yet decisions about reproduction are rarely made by women. This course will focus on how various political institutions (e.g., religious, economic, governmental, legal, medical, etc.) influence all aspects of human reproduction, and how these influences affect women’s reproductive health, both ideologically and practically, as well as how women’s reproduction affects women’s lives. This course will examine four aspects of reproduction from a feminist perspective: reproductive rights, including access to birth control and abortion along with the right to be free of forced sterilization; infertility and the new conceptional technologies; pregnancy, including screening, sex selection, maternal and ‘fetal rights’; and childbirth options. Throughout the course, we will return to the question of the ‘politics of reproduction’ by asking ourselves which powerful institutions govern each particular aspect of reproduction and whether the decisions made are good for women. Using a feminist perspective, we’ll focus on making women and their health needs the center of discussion and examining the relative lack of power held by women in decisions made about their reproductive health. In addition to class readings (which are both theoretical and applied in nature) students will learn through class discussions, films, and group projects.

**Enforced Prerequisite at Enrollment:** WMNST 100 or WMNST 100U or WMNST 105N or WMNST 106N or WMNST 106Q or WMNST 301 or PSYCH 100

**WMNST 462: Reading Black, Reading Feminist**  
3 Credits

Female identity and its construction in textual representations of gender, class, color, and cultural difference in English-language literatures. ENGL (WMNST) 462 Reading Black, Reading Feminist (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. ENGL/WMNST 462 provides two important learning opportunities for undergraduate students. The first is to examine the construction of female identity in the textual representations of gender, class, color, and cultural differences by black American women. The second is to identify, explore, and analyze the major issues concerning the discovery and development of a black feminist literary tradition. Authors under consideration will vary from class to class, but may include writers such as Hortense Spillers, Harriet Jacobs, Harriet Wilson, E. Genovese, Hazel Carby, Francis Harper, J. Fauset, Nella Larsen, Zora Neale Hurston, Gwendolyn Brooks, Margaret Walker, Nikki Giovanni, Sonia Sanchez, Maya Angelou, Lorraine Hansberry, Adrienne Kennedy, E. Brown-Guillory, Toni Morrison, S. A. Williams, Alice Walker, Paula Marshall, and Octavia Butler. The course will focus on the complex relationship of slavery and post-slavery black experience to the literary imagination of African American women, and of issues of gender in black identity in America. Topics covered will vary, but will include issues of the legacy of slavery, the development of black feminist thought, nineteenth-century conceptions of black womanhood, women’s roles in the Harlem Renaissance, representations of black womanhood by male writers, and self-representation by female writers, women ‘Black Power’ poets, black female playwrights, neo-slave narratives, the aesthetics of contemporary black feminism, and post-modernism and the challenge to understandings of canonicity posed by black women’s writing, and the like. This class will prepare students for advanced courses in African American and feminist literature, as well as other academic courses that engage in the verbal and written analysis of complex written forms. Students will be evaluated by class participation, a group oral presentation, small group problem solving exercises, three out-of-class essays (of 5-8 pages each), and an in-class final examination consisting of essays and short answers. In addition to satisfying requirements for students emphasizing in African American literature within the English major, this course will be important in the offerings of African/African American Studies, American Studies, Women’s Studies, and History. The course may be used as English Major elective credit or as credit towards the English minor, and will be offered once every other year, with 40 seats per offering. The course can be used to complete the major and minor in Women’s Studies Arts and Humanities area and it also satisfies the Women of Color (WOC) sub-requirement.

**Prerequisite:** ENGL 015 or ENGL 030  
Cross-listed with: ENGL 462  
Bachelor of Arts: Humanities  
United States Cultures (US)

**WMNST 464: Feminine/Masculine**  
3 Credits

Study of sex role learning; investigating feminine/masculine labeling; implications for contemporary society. BE SC 464 BE SC (WMNST) 464 Feminine and Masculine (3) (US) This course provides a critical examination of the concepts of masculinity and femininity through a consideration of how these have shifted and changed historically and cross-culturally. It considers a variety of theories of gender difference. It investigates how gender is socially constructed and practiced. Thus,
it examines how gender is enacted in interpersonal relationships and defined, reinforced, and challenged through processes of socialization as well as through the various institutional spheres of social life. The course addresses the diversity of masculinities and femininities within a single society. Thus, attention is given to race and class-based differences as well as to trans-genderism and homosexuality.

**Prerequisite:** general psychology or general sociology

Cross-listed with: BESC 464

United States Cultures (US)

WMNST 466: Lesbian and Gay History

3 Credits

Critical exploration of the history of sexuality, focusing especially on the emergence of modern lesbian and gay identities. WMNST (HIST) 466 Lesbian and Gay History (3) (US;IL) This course will explore the relationships in different cultures and historical periods between the dominant culture and homosexuals, whom the culture deemed, at different times, sinful, deviant, criminal or, more recently, a minority community. Students will confront the very nature of difference, and how it has been played out in European and American history. The course will challenge students to deal with how societies define difference itself; how they isolate or punish deviants; and how the creation of the ‘homosexual’ helped establish not simply difference but ‘normalcy’ in a highly sexualized modern culture. Finally, the course will explore notions of identity itself, focusing on the creation of a modern gay and lesbian identity and its impact on broader questions of gender, community, civil rights, and political discourse in the United States. An example of evaluation methods would be: course presented in a seminar format with grades based on class participation, brief analytical papers, and a longer research or historiographic paper.

**Prerequisite:** WMNST100, WMNST117

Cross-listed with: HIST 466

International Cultures (IL)

United States Cultures (US)

WMNST 471: The Psychology of Gender

3 Credits

Theories and research on gender differences and gender roles. Emphasis on women’s and men’s current positions in society.

**Prerequisite:** PSYCH100, PSYCH221

Cross-listed with: PSYCH 479

United States Cultures (US)

WMNST 472: Work-Life Practices and Policies

3 Credits

Explore the causes and consequences of conflicts between work, family, and other life commitments, and how these may be resolved. LER 472 Work-Life Practices and Policies (3)(BA) This course meets the Bachelor of Arts degree requirements. The interdisciplinary field of work-family and work-life developed as a result of middle-class women’s entry into the labor force, a movement that generated conflict between family and paid work commitments. Overall, the course addresses the reasons the field developed, relevant theoretical perspectives regarding the issues, and related problems as well as proposed solutions at both the public and private sector levels. The overarching objectives of the course are to expand students’ understanding of conflicts between work and family commitments, and how these might be resolved through private and public sector initiatives. Specifically, the course concerns how individuals, families, and organizations interact to help hinder the achievement of balance between work and life commitments, and relevant effects on those involved. The changing demographics of the family, laws and trends around working time, father and mother time with children, the expanded need for elder care, work-life programs such as flextime, concierge services, paid parental leave, part-time careers, paid time-off banks, and the role of unions, corporations and government legislation are covered. The course attempts to link the likely future needs of students to broader trends in society and how balance could be achieved at the level of individuals, families, other stakeholders in the community, and for society as well. Fields of research relevant to the course include labor studies, women’s studies, Industrial/Organizational psychology, the sociology of work and of family, and child development. Students will be evaluated on the basis of class participation, through two in-class examinations, and through a final written or oral project providing a chronology and analysis of an adult’s work-family history. The course is offered most fall and spring semesters, and typically 30 students are enrolled.

**Prerequisite:** 3 credits of LER

Cross-listed with: LER 472

Bachelor of Arts: Social and Behavioral Sciences

WMNST 476W: Anthropology of Gender

3 Credits

Cross-cultural construction of gender and sex roles; theories of gender construction; case studies and practical effects. ANTH 476 / WMNST 476 Anthropology of Gender (3) Students will learn the current theoretical approaches in anthropology to the cultural construction of gender and sex roles. The first 2-3 weeks of the course will concentrate on exploring and understanding these theoretical approaches. The remaining weeks will focus on case studies of non-Western gender systems, and on the practical effects of those systems, but students will also be encouraged to relate these systems to their own experience. Each meeting will be based on discussion of the readings assigned for that meeting and students will be expected to participate. During the period devoted to theoretical approaches, discussion will focus on the assumptions, advantages, and disadvantages of each approach. For the part of the course devoted to readings on individual societies, one reading each week will be the basis for a critical essay of approximately five pages. These essays will be expected to include: 1) an identification of the theoretical approach that informs the work, 2) a statement of the author’s arguments or questions, 3) a discussion of the methods used to provide data in support of the arguments or to answer questions, 4) a critique of the adequacy of data, and 5) a statement suggesting which additional elements might make for a better study. These essays will be graded for both content and form and students will have the option of rewriting essays (and improving their grade) after they receive comments. These essays will provide 60% of the course grade, while participation in discussions will provide another 15%. A short research paper will also be required. The paper must focus on a question or hypothesis concerning gender, and a preliminary proposal that includes the focus of the paper, its relevance to the course, and a beginning bibliography is required. A first draft of the paper will be required two weeks before the end of the semester. The research paper will provide 25% of the course grade. The course complements other courses in Anthropology that deal with sex differences, but will provide a perspective on gender that is not available elsewhere in the curriculum. The course can be used to fulfill a Behavioral Anthropology requirement in both the major and minor in Anthropology.
and a writing across the curriculum requirement. It will also provide students in other departments with the opportunity to study aspects of diverse, non-western cultures. The course is currently identified as one that may be taken to fulfill the requirements of the Women's Studies minor.

**Prerequisite:** 3 credits in women's studies or anthropology

Cross-listed with: ANTH 476W

Writing Across the Curriculum

WMNST 477: Sociology of Sexuality

3 Credits

An analysis of the demographic, social, and cultural factors affecting the developments and experience of sexuality in contemporary society.

**Prerequisite:** 3 credits in Sociology

Cross-listed with: SOC 477

WMNST 480: Italian Women Writers Through the Centuries

3 Credits

Analysis of the works of women authors in their historical and literary contexts. IT 480 Italian Women Writers Through the Centuries (3) Italian women have been stereotyped as the 'mamma' or grandmother who cooks, prays, and idolizes her sons. Such an image does not accommodate the wide variety of experiences, perspectives, and contributions of Italian women throughout history. This seminar will explore the writings of female authors from delimited historical periods (alternating among Renaissance, 19th and 20th Centuries). Depending on time period, genres will include autobiography, poetry, historical novel, drama, film, nonfiction. Throughout the course we will consider the political and social developments in Italy with an emphasis on issues of special relevance to women. As we approach each text, we will examine such questions as: the significance of its form; the author's use of language; the ways in which masculinity and femininity are constructed; intersections with the text's historical moment; the political, philosophical and/or theological questions posed by the text; the ways in which the text inserts or distances itself from the Italian literary canon; and the text's depictions, re-evaluations and uses of history. Through their journal assignments in class discussion, students will be encouraged to reflect upon the implications of course concepts in their own culture and historical moment. Evaluation methods include participation in class discussion, journal entries, short analysis papers, and a longer (8-10 page) research paper. In Italian. Prerequisite: any 300-level Italian course. This course is conducted in Italian and counts for the Italian major and minor. The ability to screen VHS and DVD videos is necessary. Enrollment is limited to 20, and the course will be offered at least once every four semesters.

**Prerequisite:** junior standing or permission of program

Cross-listed with: IT 480

WMNST 489: British Women Writers

3 Credits

A study of selected British women writers. ENGL (WMNST) 489 British Women Writers (3) This course provides the opportunity to study writing by British Women from a historical perspective and to explore the views these women have of themselves as artists. The course will concentrate on a careful reading of works by a variety of authors. It will address the question of the role gender plays in the selection of literary forms and the development of character, theme, symbols, and rhetorical strategies. It will also explore what particular dimensions British women writers have brought to the British literary tradition. Students will be active learners through keeping reading journals, presenting background reports on the history of women in England, participating in small-group discussions about the texts, and writing 2 shorter essays and one longer research essay for the class. This course focuses on an area of British literature, which more traditionally structured courses tend to obscure. The course will be attractive to students from a variety of programs, including English majors, Women's Studies minors, and Interdisciplinary Humanities students. The course will be offered once every two years. Estimated class size 20.

**Prerequisite:** 6 credits of ENGL

Cross-listed with: ENGL 489

Bachelor of Arts: Humanities

WMNST 490: Women Writers and Their Worlds

3 Credits

American and British literature written from the perspective of women. ENGL (WMNST) 490 Women Writers and Their Worlds (3) (US/IL/GB) This course meets the Bachelor of Arts degree requirements. ENGL/WMNST 490 covers particular aspects of American and British literature written from the perspective of women. The courses stress the diversity of women's authorial worlds, both through time and/or space. The readings and specific focus vary from semester to semester. ENGL/WMNST 490 seeks to make students aware of the extensive body of literature written by women, but, unlike ENGL 194, which is a survey course of women's literature, ENGL/WMNST 490 can be a more intensive course, focusing on selected themes and topics of particular concern to women as reflected in the poetry and fiction of twentieth-century American and British women writers. The class can also be taught in relationship to earlier periods, dealing, for instance, with English women novelists from 1775-1865. In such a class, readings would include fiction by Fanny Burney, Mary Wollstonecraft, Ann Radcliffe, Jane Austen, Mary Shelly, Emily Bronte, Elizabeth Gaskell, and George Eliot. The course would then place each novel in its historical, social, intellectual, and literary context, and explore the various ways in which some of England's best writers transformed their female experience of the world into fiction that extended the range and influenced the development of the novel. Regardless of the particular focus, all sections of the course pose the following questions throughout: Do women use the same myths, archetypes, and literary conventions as male writers? Or do they sometimes have to modify the myths, archetypes, and literary conventions originated by their male precursors in order to adapt them to female experience? Is there such a thing as a distinctively female imagination, with a symbolic language of its own? Is there such a thing as a chain of literary influence linking women writers to each other? What are the strategies for coping with the anxieties of authorship? What is the interaction between gender and genre? In what ways are creativity and procreativity modes of defying prevailing ideologies? Does a woman's psychological development have an effect on the plots a woman novelist conceives? How does women's literature reflect the realities of women's lives? As a course in women's literature, ENGL/WMNST 490 concerns itself with questions of gender. In so far as some of these women writers are black or women of color, it concerns itself with questions of race and ethnicity. In as far as the course looks at women's literature in the context of men's literature, it is concerned with the inter-relationship between dominant (male) and non-dominant (female) culture in the United States as well as in Britain. In so far as the course covers lesbian writers, it is concerned with sexual orientation. Students should expect to complete a
minimum of three written assignments in the course, two course papers, and an essay final exam in class. The papers each will ask students to choose a text to analyze in relationship to one of the thematic modules the course has chosen, for instance, to discuss how Virginia Woolf’s Mrs. Dalloway analyzes the position of upper-middle class women in a particular moment in history when women had achieved the vote, but were still largely constrained by patriarchal social norms. In addition to written assignments, students will be evaluated on class discussion and general participation. The course not only prepares students for taking up literary and cultural analysis in English classes, but also in any other class that engages in the verbal and written analysis of complex written texts, and in other classes in Women’s Studies or in other Penn State departments that address the social, cultural, or ethical issues of gender. The course may be used as English Major elective credit or as credit towards the English Minor; it may also be used in the Women’s Studies major and minor. It will be offered once a year with 40 seats per offering.

**Prerequisite:** ENGL 015 or ENGL 030
Cross-listed with: ENGL 490
Bachelor of Arts: Humanities
International Cultures (IL)
United States Cultures (US)

**WMNST 491: American Women Writers**

3 Credits

A study of selected American women writers. ENGL 492 / AMST 476 / WMNST 491 American Women Writers (3) A study of selected women writers, this course provides the opportunity to study writing by American women from an historical perspective and to explore the views these women have of themselves as artists. The course will concentrate on a careful reading of works by a variety of authors. It will raise the question of the role that gender—as well as other differences such as race, class, and ethnicity—play in the selection of literary forms and the development of character, theme, symbol, and rhetorical strategy. It will also explore the dimensions American women have brought to the American literary tradition. The course satisfies the area requirement in culture for American Studies majors and is open to all majors meeting the prerequisite requirements. The course will be offered once every two years and enrollment is 25.

**Prerequisite:** 6 credits of ENGL
Cross-listed with: AMST 476, ENGL 492
Bachelor of Arts: Humanities

**WMNST 492W: Contemporary Feminist Analysis: The Capstone Senior Seminar**

3 Credits

Applied critical analysis of any aspect of society and/or culture from a contemporary feminist perspective. WMNST 492W Current Feminist Issues This course is the capstone course for the Women’s Studies major. We keep the course small (15-20 students) and offer it every spring. It is constructed to provide you the opportunity to apply the knowledge and skills you have developed in Women’s Studies to some of the major topics being addressed in current academic feminist discourse. The first goal of the course is for each student to become familiar with the major arguments and evidence regarding some of the current major topics in feminism. The second goal is for each student to learn more about the multidisciplinary perspectives of women’s studies. The third goal of the course is for each student to develop and demonstrate her skill at carrying out feminist scholarship. There are two core elements of the course. The first is class discussion of readings addressing some of the major current feminist issues. Each year a new set of these topics is put together by the instructor, drawing upon the suggestions of other Women’s Studies faculty and majors. The second core element of the course is each individual student doing a term paper. Work on these papers will take place both publicly and privately, so that everyone in the course will learn something about how feminist projects are constructed in the various disciplines represented by the students’ choices of topics for their papers. Because this is a W course, 2/3 of your grade will be based on writing assignments. Throughout the course, you will write short (2 page) papers on the readings that we will be discussing in our seminars. You will also write a term paper and some preliminary assignments related to it, including a topic justification paper, an annotated bibliography accompanied by a text description of the major themes identified in the bibliography, a class presentation on your paper topic, and the final 10-15 page paper. The other third of your grade will be based on your participation in seminar discussions.

**Prerequisite:** WMNST001, WMNST301, WMNST400

Writing Across the Curriculum

**WMNST 494: Research Project**

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

**WMNST 494H: Research Project**

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

**WMNST 495: Internship**

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor

**WMNST 496: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside scope of formal courses.

**WMNST 497: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**WMNST 499: Foreign Studies**

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

**Wood Products (WP)**

WP 200W: Professional Careers in Forest Resources

3 Credits

Introduction to managing forests for products and services to meet human needs; developing career goals and an academic plan.

**Concurrent:** WP 203

Writing Across the Curriculum

WP 203: Anatomical Properties of Wood

1 Credit

Provide information on tree form/growth, cell wall formation/ composition, structure of wood/bark cells; macroscopic/microscopic identification of hardwood/softwood cells. WP 203 Anatomical Properties of Wood (1) The purpose of this course is to introduce students to the basic concepts of the anatomical properties of wood and bark cells. Students taking this class will learn: 1) basic information on tree form and growth 2) basic information on cell wall chemical composition, formation and structure 3) identification and differentiation of different hardwood and softwood cells. Course grade will be based on weekly quizzes. WP 203 is a foundation course for the wood products major and a basic information course for the forest science major. The course will be taken by students in the fall semester in their sophomore or junior year for Wood Products major and in the their sophomore, junior or senior year for the Forest Science major. This course provides essential background information for students in the Wood Products major. The information presented in this course will be needed for understanding advanced concepts present in 400-level courses. All wood products and forest science students will be required to take this course. It is listed as a prerequisite for most WP 400-level courses. The course is designed to provide information necessary for understanding advanced concepts presented in WP 400-level courses. Macroscopic and microscopic hardwood and softwood cell identification will be taught in a specialized laboratory made available by the School of Forest Resources.

WP 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

WP 495: Wood Products Internship

1-6 Credits/Maximum of 6

Supervised field experience related to the student’s major.

**Prerequisite:** WP 200W

Workforce Education and Development (WFED)

WFED 1: Education for Work: Trends and Issues

3 Credits

Overview of the history and philosophies of education for employment, current issues, and school to work transition system.

WFED 100: Orientation to Teaching Vocational Industrial Education/ Health Occupations Education Subjects

2 Credits

Basic elements of preparing to teach vocational trade and industrial/ health occupations education subjects in the schools of Pennsylvania.

WFED 101: Early Field Experience in Teaching Vocational Industrial Education/ Health Occupations Education Sub

1 Credit

Discussion and observation of in-school practices to aid the student in making vocational industrial education/health occupations education career decisions.

WFED 105: Integrated Curriculum Implementation

3 Credits

Occupational analysis for instructional planning; emphasis on instructional methods to deliver a competency based program in an integrated learning environment.

**Prerequisite:** EDPSY014
WFED 106: Program and Facilities Management
3 Credits
Organization and management of learning laboratory to facilitate the delivery of a competency based program in a safe environment.

WFED 197: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

WFED 207W: Assessment Techniques
3 Credits
Assessment, recording, and reporting of learning in an integrated competency based vocational education system.
Prerequisite: WF ED105 Writing Across the Curriculum

WFED 270: Introduction to Industrial Training
3 Credits
Overview of training profession. Introduction to economic and psychological foundations. Examination of relationship of industrial training to education. WF ED 270 Introduction to Industrial Training (3) This course is designed to prepare individuals for a variety of training practitioner roles in businesses and industry. This course is actually the first of two courses and is an introduction to the required core courses for emphasizing the training and development professional curriculum in the Department of Adult Education, Instructional Systems and Workforce Education and Development. It is the intent of this course to equip participants with entry-level knowledge and skill to successfully pursue other designated professional core courses on needs assessment, organization development, and cross-cultural training. All of theses courses fall into the category called Human Resource Development (HRD). Industry trainers have had the opportunity to provide formal training to many persons with a wide variety of skills and competencies. Previous train-the-trainer courses in this series have addressed presentation techniques, assessment, facilities management and safety. This course will help trainers gain a total understanding of their role in the larger picture of Human Resource Development. Although traditional education is often focused on helping individuals lead better lives, training is usually focused specifically on the work that people do in one organizational setting. HRD deals with the financial value of human beings to organizations. In this course, the HRD field will be examined with respect to the training component with which participants are connected.

WFED 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

WFED 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

WFED 310: Leadership Competencies for Supervisors
3 Credits
Designed to teach contemporary supervisory leadership competencies for mid-career learners with front-line supervisory responsibilities in the workplace. WF ED 310 Leadership Competencies for Supervisors (3) Leadership Competencies for Supervisors is a course designed primarily for adult learners engaged in supervisory roles and functions in the workplace. Its purpose is to ensure that all students are equipped with the contemporary supervisory leadership competencies that are needed to function effectively in today's workplace. Upon completion of this course, the student should be able to a) Recognize the important role and function of supervisory leadership, b) Relate common critical situations experienced by supervisors and how they were handled, c) Demonstrate proficiency in competency areas important to supervisory success such as effective communication strategies, methods for resolving conflict, managing employees, etc., and d) Demonstrate ability to develop individuals and teams. Students will be assessed and evaluated through quizzes, instructor and peer observation, self-assessments and reflection, and demonstration of project deliverables.
Prerequisite: two years of work experience, or fourth-semester standing, or prior approval by instructor

WFED 323: Vocational Student Organizations
3 Credits
Methods in originating, managing, and advising vocational student organizations.

WFED 395A: Trade and Industrial Occupational Experience
1-8 Credits/Maximum of 24
Individual work experience in manufacturing environment or skilled craft area to develop professional competence in specific occupation.
Prerequisite: completion of an occupational learning period in the field of certification or field of specialization

WFED 395B: Occupational Resources Competence
1-8 Credits/Maximum of 24
WF ED 395B Occupational Resources Competence (1-8 per semester/maximum of 24) Occupational Resources Competence is a course designed primarily for adult learners who demonstrate an adequate understanding of contemporary resource usage and management related competencies that are needed to function effectively in today's global business environment. These competencies include: resource usage, resource management, computer and basic literacy, and understanding of systems in the workplace. Students will demonstrate competence through documentation of tasks performed and reflection on specialized accomplishments.
**WFED 395C: Occupational and Professional Competence**

3 Credits

This course is designed primarily for adult learners who demonstrate high leadership potential and who may not have significant supervisory and managerial responsibilities. Its purpose is to ensure that all students develop an adequate understanding of the contemporary professional leadership competencies that are needed to function effectively in today's global business environment. These competencies include: collaboration / multi-disciplinary team-building, leadership in diversely distributed team environments, interpersonal communication in the workplace, conflict resolution / human performance management, project management, problem-solving / creative thinking / ethical decision making, and contemporary and emerging technology usage. Students will be assessed and evaluated through quizzes, instructor and peer observation, self-assessments and reflection, and team projects and presentations.

**Prerequisite:** two years of work experience, or fourth-semester standing, or prior approval by instructor

Cross-listed with: ENGR 405

**WFED 410: Leadership Competencies for Professionals**

3 Credits

Designed to teach contemporary professional leadership competencies for workforce professionals who do not currently have supervisory responsibilities. WF ED 410 Leadership Competencies for Professionals (3) Leadership Competencies for Professionals is a course designed primarily for adult learners who demonstrate high leadership potential and who may not have significant supervisory and managerial responsibilities. Its purpose is to ensure that all students develop an adequate understanding of the contemporary professional leadership competencies that are needed to function effectively in today's global business environment. These competencies include: collaboration / multi-disciplinary team-building, leadership in diversely distributed team environments, interpersonal communication in the workplace, conflict resolution / human performance management, project management, problem-solving / creative thinking / ethical decision making, and contemporary and emerging technology usage. Students will be assessed and evaluated through quizzes, instructor and peer observation, self-assessments and reflection, and team projects and presentations.

**Prerequisite:** two years of work experience, or fourth-semester standing, or prior approval by instructor

**WFED 411: Occupational Safety and Health for Workforce Education and Development Professionals**

3 Credits

This course assists participants in creating and supporting workplaces and educational environments free of occupational safety and health hazards. WF ED 411 Occupational Safety and Health for Workforce Education and Development Professionals (3) This course is designed to offer participants the knowledge and skills they need to create and support workplaces and educational environments free of occupational safety and health hazards. It provides Occupational Safety and Health Administration (OSHA) compliance and workplace safety training to educators, managers, supervisors, and other employees in the Career and Technical Education field as well as the Oil and Gas Drilling Industry, Advanced Manufacturing, and Construction industries.

**Prerequisite:** a minimum of 2 years work experience or 4th semester standing
WFED 413: Vocational Education for Special-Needs Learners

3 Credits

Introduction to program modifications, supplementary services, and resources required for special-needs learners in vocational and practical arts education programs.

WFED 414: Teaching Career and Technical Education Content to Diverse Learners

3 Credits

This course explores the legal aspects of transitioning students from school to college and work, to assist Career and Technical Education (CTE) teachers in becoming active participants in assisting learners with special needs. Topics such as the role of assessment and how it can be used to bring about positive changes in curriculum and pedagogy to promote enhanced learning and skill development will be addressed. This course will also introduce participants to instructional tools and strategies that will help teach to multiple levels of student abilities. This course explores the legal aspects of transitioning students from school to college and work, to assist Career and Technical Education (CTE) teachers in becoming active participants in assisting learners with special needs. Topics such as the role of assessment and how it can be used to bring about positive changes in curriculum and pedagogy to promote enhanced learning and skill development will be addressed. This course will also introduce participants to instructional tools and strategies that will help teach to multiple levels of student abilities. Workforce education program modifications, supplementary services, and resources required for diverse learners will be provided throughout this course. Students will learn to develop specialized adaptations and accommodations based on educational research to promote the transfer of knowledge and skill. Special attention will be placed on data driven decisions in workforce education and the role CTE teachers.

Prerequisite: WFED 105

WFED 424: Facilitating Career Development

3 Credits

This course provides individuals with relevant skills and knowledge to assist others in planning careers and obtaining meaningful work. CN ED (WF ED) 424 Facilitating Career Development (3) This course provides individuals with relevant skills and knowledge to assist others in planning careers and obtaining meaningful work. This course addresses the following 12 Career Development Facilitator (CDF) competencies: 1) helping skills, 2) labor market information and resources, 3) assessment, 4) diverse populations, 5) ethical and legal issues, 6) career development models, 7) employability skills, 8) training clients and peers, 9) program management/implementation, 10) promotion and public relations, 11) technology, and 12) consultation. These 12 competencies are identified by the National Career Development Association (NCDA) for those who will deliver career development programs and services in a variety of settings. Potential job titles of CDFs include career group facilitator, job search trainer, career resource center coordinator, career coach, career development case manager, intake interviewer, occupational and labor market information resource person, human resource career development coordinator, employment/placement specialist, and workforce development staff. With certain years of work experience in career development, students who complete this course are eligible to apply for the Global Career Development Facilitator (GCDF) certification through the Center for Credentialing & Education (CCE), which is affiliated with the National Board for Certified Counselors (NBCC). A GCDF is a person who works in any career development setting or who incorporates career development information or skills in their work with students, adults, clients, employees, or the public. As of January 2011, about 18,000 individuals acquired the GCDF certification world-wide including Bulgaria, Canada, China, Germany, Japan, Romania, Turkey, South Korea, and New Zealand. The goal of the GCDF credential was to provide standards, training specifications, and credentialing for diverse career development practitioners. This GCDF credential differentiates two levels of career practice, which are 1) career counseling and 2) career facilitation that does not require a counseling degree. This differentiation reflected the reality where many individuals who are currently providing career assistance are not professional counselors. This course is taught by a nationally and internationally trained CDF Instructor (CDFI) who is certified by the NCDA. In addition, the CDF curriculum is updated every three years by the Career Development Leadership Alliance (CDLA) under the supervision of the NCDA CDF Advisory Council in order to keep up with recent changes in the field.

Prerequisite: 300-400 level Psychology, HD FS, or Education courses or permission of the program
Cross-listed with: CNED 424

WFED 428: Fiscal Accounting and Management for Workforce Development Professionals

3 Credits/Maximum of 3

This course explores the subject of accounting through the sub-disciplines of financial and managerial accounting for Workforce Development Professionals.

Prerequisite: two years of work experience, or fifth semester standing, or prior approval by instructor

WFED 441: Conceptual and Legal Bases for Cooperative Vocational Education

2 Credits

History, conceptual and legal bases for a cooperative vocational education program.

Prerequisite: WF ED445

WFED 442: Operating Cooperative Vocational Education Programs

2 Credits

Student and training station selection, training plan and related subject development, records and reporting systems, school-industry coordination.

Prerequisite: WF ED441

WFED 445: Vocational Guidance

3 Credits

Problems and possibilities of vocational guidance; the field of guidance and guidance literature; methods of field work; school guidance techniques.

Prerequisite: WF ED105; fourth-semester standing
WFED 450: Cultural Diversity in the Workplace
3 Credits
Provides opportunities for students to explore different cultures and mores that are changing the dynamics of the workplace.

International Cultures (IL)
United States Cultures (US)

WFED 451: Lean-Sigma for Professionals
3 Credits
The course focuses on essential lean and six sigma concepts to improve processes in any industry.
Prerequisite: two years of relevant work experience or fourth semester standing or prior approval by program

WFED 471: Training in Industry and Business
3 Credits
Appraisal of training functions and development of competencies in work analysis, design, development, delivery, and evaluation of training.
Prerequisite: seventh-semester standing or higher

WFED 495: Internship
1-6 Credits/Maximum of 6
Supervised off-campus, nongroup instruction including field experiences, practicums, or internships. Written and oral critique of activity required.
Prerequisite: prior approval of proposed assignment by instructor

WFED 495A: Cooperative Education Practicum
2 Credits
Validation of competencies learned in prerequisite courses during interaction with professional staff while functioning under the supervision of a certified cooperative coordinator.
Prerequisite: WF ED445
WFED 495C: Student Teaching
10 Credits/Maximum of 10
Supervised observation and practice teaching in approved vocational industrial schools/health occupations education settings.
Prerequisite: successful completion of occupational competency evaluation. PA Act 34 clearance required. In addition, non-Pennsylvania residents must provide evidence of an FBI background information check. (Forms: 228 Chambers)
WFED 495D: Instructional Internship in Industrial Training
5 Credits
Supervised internship in industrial training. Interns will be expected to perform instructional duties in industrial environments.
Prerequisite: WF ED105, WF ED106, WF ED207W, WF ED270, WF ED471; successful completion of occupational competency examination

WFED 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

WFED 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

World Languages Education (WLED)

WLED 300: Foundations of Second Language Teaching
3 Credits
Critical understanding of basic concepts and principles in second language acquisition and teaching. WLED 300 Foundations of Second Language Teaching (3)This course is designed to give prospective World Languages teachers a critical understanding of basic concepts and principles in, first and second language acquisition and teaching. The core of the course explicates processes of language acquisition viewed from major theories of first and second language acquisition and common issues within these major theories are presented and debated. This course should be taken concurrently with WLED 295A (Early Field Experience for World Languages Teacher preparation). Using the field experience component, students will be able to critically examine language teaching methodologies derived and implied from first and second language acquisition theories and to apply them while in their field experience. This course requires participating in the field experience component, group-reflections and self-critique as well as to complete the required readings, and to develop a professional growth portfolio including the four domains stated in the Penn State model of Teacher Preparation (planning and preparing for student learning; teaching; inquiring and analyzing learning and teaching- and professionalism). This course should be taken concurrently with the Early Field Experience for World Languages Teacher Preparation (WLED 295A).
Concurrent: WL ED295A

WLED 399A: Language Learning Through Study Abroad
3 Credits
Use of online technologies during study abroad to promote language and culture learning and to consider implications for teaching.
Prerequisite: WL ED300

WLED 400: Foundations of Language in Second Language Teaching
3 Credits
Critical understanding of basic concepts and principles in second language acquisition and teaching. WLED 400 Foundations of Language in Second Language Teaching (3)This is an advanced course designed for practicing classroom teachers who want to further their knowledge of language acquisition/language teaching. It provides a critical understanding of basic concepts and principles in first and second
language acquisition and teaching. The core of the course explicates processes of language acquisition viewed from major theories of first and second language acquisition and common issues within these major theories are presented and debated. Using their classroom experiences, students will be able to critically examine language teaching methodologies derived and implied from first and second language acquisition theories and to apply them in their classrooms. This course requires active participation, group-reflections and self-critique, and completion of required readings; 20-30 hours of volunteer work in an ESL setting; and development of a professional growth portfolio including the four domains stated in the Penn State Model of Teacher Preparation (planning and preparing for student learning; teaching; inquiring and analyzing learning and teaching; and professionalism) and the competencies for English Usage and Developing Linguistic Awareness stated by the Pennsylvania Department of Education.

**Prerequisite:** PA Instructional I or II teaching certificate

WLED 411: Methods of Teaching World Languages in Grades 1-5

3 Credits

Exploration of the complexity of teaching World Languages and development of curricular designs for teaching in grades 1-5 schools. WLED 411 Methods for Teaching World Languages in Grades 1-5 In this course prospective World Languages teachers will engage in a variety of theoretical, pedagogical and reflective events to explore the complex nature of language learning/teaching including (1) individual beliefs and knowledges, (2) issues related to language/power, (3) language/cultural diversity, and (4) development of curricular designs for teaching World Languages in grades 1 - 5. This course will be conducted in a workshop style. It will have three parallel strands: (a) we will review together basic concepts and principles of language learning/teaching through readings, class discussions and presentations; (b) make connections between the readings and the L2 experience in the Practicum-World Languages Teaching in grades 1-5 (WLED 495B); and (c) as a group, the class will design thematic units, class plans, activities and didactic materials.

**Prerequisite:** EDPSY014, EDTHP115, WL ED295A, WL ED300; Concurrent: WL ED495B

WLED 412M: Methods of Teaching World Languages in Grades 6-12

3 Credits

Exploring the complexity of teaching World Languages and development of curricular designs for teaching World Languages in grades 6-12. WLED 412M Methods of Teaching World Languages in Grades 6-12 (3) The purpose of this course is to help students develop a principled approach to designing and implementing lessons in their World Language classroom. Specifically, students will work towards an understanding of the processes of developing abilities in a second language that acknowledges a range of theories and associated methods but that is also situated within a particular theoretical framework of language and language learning. In this way, students will be better positioned to make the myriad instructional decisions they will face in middle school and high school contexts, ranging from materials development to lesson planning and classroom management to assessment. This is a writing-intensive course. Students will engage in a variety of formal and informal writing activities both in and out of class. Taken together, these activities function to enhance students’ abilities as both producers and consumers of a range of texts relevant to their teaching practice. In addition, writing is understood to be a process integral to the fulfillment of each of the course goals.

**Prerequisite:** WL ED300 or WL ED400

WLED 483: Evaluating Schools Performances and Programs with English Language Learners (ELLs)

3 Credits

Using/adapting multiple techniques to assess English Language Learners (ELLs) language and other school subjects. WL ED 483 Evaluating Schools Performances and Programs with English Language Learners (ELLs) (3) This course provides students with knowledge of a variety of assessment instruments to identify and monitor levels of second language and content proficiencies of English Language Learners (ELLs). Students will learn multiple assessment models used in English as a Second Language (ESL) programs. Students will establish connections
between assessment and instruction for English Language Learners, as well as gain knowledge about services available, such as instructional support, multidisciplinary teams, and other assessment services for English Language Learners. This course requires active participation, group-reflections, discussions and activities as well as to develop a professional growth portfolio including the four domains stated in the Penn State model of Teacher Preparation (planning and preparing for student learning; teaching; inquiring and analyzing learning and teaching; and professionalism) and the competences for English Language Learners (ELLs) Language and Support Services Knowledge stated by the Pennsylvania Department of Education.

**Prerequisite:** WL ED300 or WL ED400

WLED 495: **SPECIAL TOPICS**

3 Credits

WLED 495B: Field Experience for World Languages Teacher Preparation in Grades 1-5

3 Credits/Maximum of 3

WL ED 495B Field Experience for World Languages Teacher Preparation in Grades 1-5 (3) Practicum situation where Prospective World Language teachers will demonstrate acquired knowledge on second language learning/teaching and educational theories. Prospective World Language teachers will have assigned school placements and will attend a weekly seminar where issues in World Language learning and teaching will be discussed. At their assigned school placement, prospective World Language teachers will have many opportunities to observe/work with children in grades 1-5 (1) focusing on second language learning/teaching and the socio/cultural issues associated to classroom practices while implementing and self-evaluated own designed activities and lessons; (2) weekly seminars will engage students in reflective activities that will enable them to analyze each week’s events; (3) inquiry projects on teaching and learning of World Languages.

**Prerequisite:** EDPSY014, EDTHP115, WL ED295A, WL ED300; PA Act 34 and Act 151 Clearances required; FBI background information check; and Professional Liability insurance.

WLED 495C: Field Experience for World Languages Teacher Preparation in Grades 6-12

3 Credits/Maximum of 3

WL ED 495C Field Experience for World Languages Teacher Preparation in Grades 6-12 (3) Practicum situation where prospective World Language teachers will demonstrate acquired knowledge on second language learning/teaching and educational theories. Prospective World Language teachers will have assigned school placements in grades 6-12 and will attend a weekly seminar where issues in World Language learning and teaching will be discussed. At their assigned school placement, prospective World Language teachers will have many opportunities to observe/work with students in grades 6-12 (1) focusing on second language learning/teaching and the socio/cultural issues associated to classroom practices while implementing and self-evaluating their own designed activities and lessons, (2) weekly seminars will engage students in reflective activities that will enable them to analyze each week's events, and (3) inquiry projects on teaching and learning of World Languages.
