Anatomy of wood and bark; cell wall formation and composition; and identification of wood by gross and microscopic qualities. FORT 200 Wood Identification and Properties (1) FORT 200 is a third-semester, one-credit course at Mont Alto. It will introduce students to the basic concepts of the anatomical properties of wood and bark cells. Students taking this class will learn: basic information on tree form and structure; basic information on cell wall chemical composition, formation, and structure. A significant part of the course will be learning to identify and differentiate selected hardwood and softwood species from gross and microscopic characteristics. The course objectives are for students to gain an understanding of wood formation and structure and to be able to identify assigned wood samples from gross and/or microscopic characteristics. Grades will be determined from weekly quizzes in wood identification and exams on lecture material.

FORT 210: Arboriculture
3 Credits

Selection, planting, care, and maintenance of woody ornamental plants and shade trees grown in urban, suburban, and rural landscapes. FORT 210 Arboriculture (3) FORT 210 is a third-semester, three-credit forestry elective in the Forest Technology curriculum. The course is recommended for students who have a basic knowledge of tree/plant identification and forestry but with the instructor's permission is open to third-semester-standing students interested in arboriculture. A significant portion of the course includes labs where tree-climbing skills are taught using climbing saddles, ropes, and applicable hardware. Course objectives include an understanding of the importance of the urban-community forest, the importance of trees and woody plants, how they grow and how to care for them. Students will gain the basic knowledge and experience needed for employment in the field of urban forestry and arboriculture. Course grades will be based on assignments, lecture exams, a final examination, lab performance, and reports and quizzes.

Prerequisite: second-year standing
FORT 220: Forest Ecosystem Protection

4 Credits

Principles and concepts involved in managing the forest ecosystem in regard to fires, insects, and diseases. FORT 220 Forest Ecosystem Protection (4) FORT 220 is a third-semester, four-credit course that builds upon information learned in FORT 150 (Dendrology) and FORT 160 (Silvicultural Practices). This course will provide students with tools to identify and understand the effects of insects, disease, and fire on individual trees, forests, and ecosystems. They will learn signs and symptoms of insects and disease, integrated pest management principles, tactics of fire suppression, and will complete the PA-130 wildland fire training course. Emphasis is placed on recognition, prevention, and control of insects and pathogens. A case-study approach is used for the major pest problems of the northeastern United States. Course objectives include development of assessment and diagnostic skills for major plant pests, recognition of signs and symptoms of abiotic and biotic disease, knowledge of integrated pest management, basic fire behavior and control techniques, and development of verbal and written communication skills. Course grading will be based on scheduled lecture exams and quizzes, a final comprehensive examination, lab reports, and participation.

FORT 230: Introduction to Remote Sensing

2 Credits

Remote sensing technologies applied to forest resource analysis and management. FORT 230 Introduction to Remote Sensing (2) FORT 230 is a third-semester, two-credit course that explores the applications of aerial photography in forest and natural resource management. Both black-and-white and infrared photographs at diverse scales will be used. Photographic measurements of distance, area, and elevation will be studied. The use of aerial photos in ecological classification, forest vegetation mapping, and forest inventory will also be covered. Lab exercises will include forestry operations such as logging road layout, timber harvest mapping, and property boundary mapping. Linkages with global positioning system (GPS) and geographic information systems (GIS) will be stressed. The course objectives are for students to develop skills in interpreting and using aerial photos for forest resource management. Grading will be based on tests, quizzes, lab exercises, and student participation.

Prerequisite: GEOG 160, GEOG 161

FORT 240: Forest Soils and Hydrology

3 Credits

The study of forest soils and hydrology, especially as they are affected by forest management activities. FORT 240 Forest Soils and Hydrology (3) FORT 240 is a fourth-semester, three-credit course in the Forest Technology program. The course includes the study of soils and forest hydrology, especially as they are affected by forest management activities. Land reclamation activities in the reclamation and re-vegetation of disturbed sites found in the coal mining areas of Pennsylvania are also considered. This course uses outdoor and indoor labs to reinforce material discussed in lectures. Course objectives are for students to develop an understanding of the physical, chemical, and organic properties of soils, of forest hydrology, and the impacts of forest management activities of the reclamation process and activities, and of the importance of soil and water resources and their conservation. Course grades will be based on scheduled quizzes, lab reports, assignments, lecture exams, a cumulative final, and attendance and participation.

Prerequisite: second-year standing

FORT 250: Forest Management Practices

3 Credits

Practical techniques for implementing management plans for forest stands under various ownerships and management regimes. FORT 250 Forest Management Practices (3) FORT 250 is a capstone course in the forest technology program taught in the fourth semester. It will give students the opportunity to use the various skills they have learned in other courses to develop management plans for forests managed with varying objectives. Concepts of valuation, timber procurement, and discounted cash flow will be covered. Regulatory, management certification, public sector, and private sector management issues will also be explored. The skills will be applied as students work on a semester-long management plan of a selected forest tract. The objective of the course is for students to develop skills in creating and executing forest management and timber harvesting plans in forest stands. Course grades will be based on quizzes, homework, laboratory exercises, management plans, and exams.

Prerequisite: FORT 110, FORT 160

FORT 260: GIS for Natural Resources Management

3 Credits/Maximum of 3

Geographic Information Systems technology including mapping and GIS data management procedures with emphasis on natural resource management applications. FORT 260 GIS for Natural Resources Management (3) In this course, students will acquire the basics of spatial data analysis using geographic information systems technology. The course will cover acquiring data, manipulating databases, and displaying the results to solve spatial analysis problems. Problems will come largely from natural resources sciences and forest management. GIS is rapidly becoming a standard technology in many disciplines that use data having a spatial component. Students with knowledge and experience in GIS may improve their job prospects significantly.

Prerequisite: GEOG 160, GEOG 161

FORT 295: Forest Technology Internship

1-4 Credits/Maximum of 4

Supervised field experience related to the student’s major.

Prerequisite: Permission of program

FORT 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

FORT 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
impacts of global change factors on ecosystems.

3) define what constitutes an ecosystem and the controlling factors, critically evaluate information about global change and ecosystems, complete this class with the ability to: 1) interpret scientific figures, 2) examine the coupling of human and natural systems. Students will impacting our ecosystems, and 4) ecosystem services, where we will change impacts, where we will identify how global change factors are where we will explore the diversity of Earth's ecosystems, 3) global

courses across the planet are impacted by global change factors, including climate change, land-use change, and pollution, 2) life on land, where we will explore the diversity of Earth's ecosystems, 3) global change impacts, where we will identify how global change factors are impacting our ecosystems, and 4) ecosystem services, where we will examine the coupling of human and natural systems. Students will complete this class with the ability to: 1) interpret scientific figures, 2) critically evaluate information about global change and ecosystems, 3) define what constitutes an ecosystem and the controlling factors, 4) describe Earth's biomes and major ecosystems, and 5) describe the impacts of global change factors on ecosystems.

Prerequisite: 3 credits of science
General Education: Natural Sciences (GN)

FOR 203: Field Dendrology

3 Credits

Field identification of native and introduced trees and shrubs. FOR 203 Field Dendrology (3) This course establishes the basic skills of woody plant and tree species identification necessary for students of natural resource management, ecology, and natural history. The objectives of the course are for students to 1) recognize many of the common woody plant species encountered in Pennsylvania (and the region) and the taxonomic traits used in their identification, 2) employ the diagnostic skills useful for woody plant identification, including the use of dichotomous keys, and 3) identify resources for identification and continued study of woody plants in Pennsylvania and the region. This field-based course introduces native, ornamental, and invasive woody plant species in a diversity of landscapes including forested, urban, suburban, and riparian areas.

FOR 204: Dendrology

2 Credits

Taxonomic and silvic characteristics, ranges, genetic relationships, and uses of important forest tree species.

Prerequisite: FOR 203

FOR 228: Chainsaw Safety, Maintenance, and Operation in Forest Management

1 Credits

Safety, maintenance, skills, and techniques for effective chainsaw operation in forest management. FOR 228 Chainsaw Safety, Maintenance, and Operation in Forest Management (1) This course covers the detailed use of the modern chainsaw. The course begins with safety and personal protective equipment (PPE), Occupational Safety and Health Agency (OSHA) regulations, saw selection, and an introduction into safe saw handling skills and techniques. The course then transitions to saw maintenance and proper care of the chainsaw, and then to a hazard recognition, mitigation, and avoidance component that addresses both the work site and the resource being harvested and processed. Once these objectives have been understood, the remaining two-thirds of the course focus on the practice of chainsaw handling skills and techniques that are necessary for safe operation. This course has an extensive hands-on, experiential learning component in actual tree-felling and processing in the forest, including on-site discussion of harvesting as a forest management tool. The course concludes with training in proper log manufacturing, including scaling and grading of the harvested resource. Efficient recovery of the timber resource that minimizes damage on the residual stand is emphasized.

Prerequisite: FOR 203 and W P 203

FOR 242: Elements of Project Supervision in Forestry

3 Credits

Supervisory techniques developed through an understanding of the behavioral sciences applied to field forestry personnel management.
FOR 255: GPS and GIS Applications for Natural Resources Professionals
3 Credits

Using Global Positioning Systems (GPS) and Geographic Information Systems (GIS) for mapping and analysis of natural resources data. 

FOR 255 and GIS Applications for Natural Resources Professionals (3) FOR 255, GPS and GIS Applications for Natural Resources Professionals teaches students to apply Global Positioning Systems (GPS) and Geographical Information Systems (GIS) in the management of natural resources. Students learn how GPS works and how to use GPS to find locations in the field and to capture spatial data and transfer it to a GIS system. Students learn how GIS data are structured and how to find, use and edit existing GIS databases and to create new ones. They learn to use various software applications to work with and analyze GIS databases, including both spatial and non-spatial data, to address a variety of natural resources management questions and issues. Finally, they learn to present spatial information in a map that effectively communicates information relevant to a variety of natural resources situations.

Prerequisite: MATH 022 and MATH 026; or MATH 040; or MATH 041; or MATH 110; or MATH 140

FOR 266: Forest Resources Measurements
4 Credits

Measurement systems used in forest and wildlife management and urban forestry.

Prerequisite: FOR 203; FOR 255; MATH 022 and MATH 026, or MATH 040, or MATH 041, or MATH 110, or MATH 140; STAT 200, STAT 240, or STAT 250

FOR 295: Forestry Internship
1-4 Credits/Maximum of 4

Supervised field experience related to the student's major.

Prerequisite: Permission of program

FOR 296: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

FOR 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

FOR 299: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

FOR 303: Herbaceous Forest Plant Identification and Ecology
3 Credits

Survey of common herbaceous plant taxa occurring within forested habitats in Pennsylvania and eastern North America. Botanical characteristics, ecological interrelations, commercial importance, and field specimen collection methods are covered.

Prerequisite: 3 credits in plant or biological sciences

FOR 308: Forest Ecology
3 Credits

Effects of environment, spacing, and age on trees; forest influences; origin and development of forest communities. FOR 308 FOR 308 Forest Ecology (3)This class will provide the basic concepts of forest ecology and silvics. The class will emphasize (a) community concepts such as sampling, succession, productivity, disturbance, and animal factors, (b) ecosystem concepts such as nutrient and energy cycles and plant-soil relationships, and (c) environmental factors such as light, temperature, moisture, and pollution, and their effects on individual tree species and community structure and function. Other special topics of interest (allelopathy, seed behavior, tropical forests, etc.) will be included as time permits. The class will also include a field component that allows students to observe the effects of various conditions or treatments on forest community structure and growth, and to practice field methods commonly used to measure site factors and environmental processes in forest communities.

Prerequisite: or concurrent: FOR 203

FOR 320: Forest Fire Management
2 Credits

Principles and concepts involved in managing the forest ecosystem in regard to fire. FOR 320 Forest Fire Management (2) This course will cover the principles and concepts involved in managing forest ecosystems in regard to fire. It will enable students to think analytically and operationally about fire in forested landscapes, taking into account a complex of physical/biological factors, management objectives, and public interest. Wildland fire processes, fuels, and behavior, fire weather, fire ecology, the sociology of fire, fire presuppression, fire containment/suppression, post-fire rehabilitation, prescribed fire, and fire management planning will be covered. Evaluation will be based on exams, individual assignments, and group assignments.

Prerequisite: FOR 308

FOR 350: Forest Ecosystem Monitoring and Data Analysis
3 Credits

Quantitative approaches for characterization, monitoring, and comparison of forest ecosystems. FOR 350 Forest Ecosystem Monitoring and Data Analysis (3) The overall goal of this course is to provide students with opportunities to develop a quantitative approach to the management and conservation of forest ecosystems. The course comprises three sections, each of a different length. The first section reviews descriptive statistics and basic concepts needed to understand sampling design in the context of forest ecosystem monitoring and data analysis. The second section addresses concepts and steps for designing a monitoring plan, and sampling designs for forest ecosystem monitoring. Sampling designs discussed include (but are not limited
to): simple and stratified random sampling, double sampling, and cluster sampling. The third section covers data analysis and modeling tools. Students are expected to know two-sample inference, correlation analysis, analysis of variance and linear regression. The focus of this third section is on the application of these to forest ecosystem issues. The course also covers concepts of statistical model development, selection, and evaluation. Students will develop an understanding of strengths and limitations of using statistical models for forest ecosystem management and conservation. Finally, a broad overview of spatial statistical analysis will be offered. The objective is for the students to know about available tools and be able to look for more information. Major emphasis is placed on case studies and real-world data.

**Prerequisite:** STAT 200 , STAT 240 , STAT 250 or equivalent, with a C or higher grade

FOR 400: Senior Forest Practicum

2 Credits

Application of forest management concepts and principles. Students will collect, analyze, and interpret forest management data and present project solutions.

**Prerequisite:** FOR 203 , FOR 255 , FOR 266 , FOR 308 , FOR 421 , ECON 102 , SOILS101 , and STAT 200 , STAT 240 , or STAT 250

FOR 401: Urban Forest Management

3 Credits/Maximum of 3

Nature’s role in community development, landscapes, arboriculture, administering urban forestry programs, land-use planning and regulatory policy, open-space conservation, civic environmentalism. The purpose of this course is to provide a broad exploration of planning for and managing trees and natural landscapes to support development of community. Healthy natural resources such as air, water, soil, and vegetation are critical components of community development. Students will explore arboriculture practices, goal-oriented urban forest management, land use planning and regulatory policy, and civic environmentalism. They will learn about ecosystem services of trees and landscapes; arboricultural practices including tree planting in urban areas, tree pruning, tree risk assessment, and amenity tree valuation; policy development and analysis including street tree ordinances and municipal tree commissions; street and park tree assessments and inventories; development of community tree plans and goal oriented urban forest management; land use planning and regulatory policy to conserve natural resources including zoning, subdivision and land development ordinances, comprehensive plans, and open space conservation; civic environmentalism and volunteerism; and conflict resolution. This course will provide students a practical understanding of planning for, and managing, trees and other natural resources associated with human communities.

**Prerequisite:** Fifth-semester standing

FOR 403: Invasive Forest Plants: Identification, Ecology, and Management

3 Credits

Survey of common nonnative ('exotic') herbs, forbs, shrubs, trees, and vines that invade forested habitats in Pennsylvania and the region. Field identification, life history traits, ecosystem-related challenges and problems, and management options and considerations are reviewed.

**Prerequisite:** 6 credits in plant or biological sciences

FOR 409: Tree Physiology

2 Credits/Maximum of 2

Fundamentals of the relationship of the basic physiological functions of forest trees to form. Tree Physiology is the study of how trees grow and develop in terms of genetics; biochemistry, cellular, tissue, and organ functions; and interaction with environmental factors. While many physiological processes are similar in trees and other plants, trees possess unique properties that help determine their outward appearance. These processes include carbon relations (photosynthesis, carbohydrate allocation), cold and drought resistance, water relations, and mineral nutrition. The characteristics of trees that define their physiology are longevity, height, and simultaneous reproductive and vegetative growth. Trees have physiological processes that are more adaptable than those in other plants. Height allows trees to successfully compete for light, but also creates transport and support problems. This course investigates the anatomy, morphology and physiology of growth, development, and responses of woody plants with particular consideration of the influence of environmental factors on physiological processes. To develop an understanding of tree physiology the following topics will be presented: Organization, development, and function of woody plant tissues Photosynthesis, respiration, and assimilation in forest trees Water relations and mineral nutrition. Tree growth responses to atmospheric and soil condition. Physiology variation among tree species. Herbicides and tree physiology. Methods and tools of tree physiology research.

**Prerequisite:** BIOL 110 or BIOL 127

FOR 410: Elements of Forest Ecosystem Management

3 Credits

Fundamentals of forest ecosystem management for goods and services.

**Prerequisite:** 3 credits in both ecology and biology

FOR 418: Agroforestry: Science, Design, and Practice

3 Credits

Agroforestry integrates trees in agricultural landscapes, and/or agriculture products into forested areas for multiple benefits. FOR 418 Agroforestry: Science, Design, and Practice (3) (US,IL) Agroforestry is the intentional design of land use systems that combine tree crops with plants and/or animals in a manner that seeks to promote ecological and economic benefits within the landscape. Two possible arrangements for such systems are (1) the integration of trees within non-forested settings; and/or (2) the introduction of high value ‘crop’ species into existing forestlands. The objective of the course is to foster a practical working knowledge of agroforestry as it is experienced both in Pennsylvania and throughout the world, so that students from a variety of backgrounds can integrate agroforestry practices and thinking into their own disciplines, interests, and lives. Although agroforestry is an ancient land use approach, it is new in many places, and improvements and adaptations to traditional practices are needed to meet local circumstances. This course will provide a framework for critical assessment and implementation within this context. One of the fundamental aspects of agroforestry is that it is a land use system that operates at a landscape or ecosystem scale. For agroforestry to succeed, many factors, including ones external to the agroforestry practice itself must be considered. Therefore the course is interdisciplinary in nature and topics in ecology, economics, sociology, and policy that are related to agroforestry practices will be
discussed. In evaluating the students, the primary emphasis is on class discussion. Students will be expected to review and discuss papers and contribute to the ongoing dialogue and debate about agroforestry as a sustainable land use. Students will be required to carry out critical reviews of agroforestry papers and publications as well as design and develop an agroforestry project pertinent to their individual field of interest and expertise. The course will be offered every Spring semester.

International Cultures (IL)
United States Cultures (US)

FOR 421: Silviculture
3 Credits

The application of the principles of forest ecology to control of establishment, composition, and growth of forest stands.

Prerequisite: FOR 308, FOR 266

FOR 430: Conservation Biology
3 Credits

The application of biological principles to issues in the conservation of biodiversity. FOR (W F S) 430 Conservation Biology (3) This course applies basic principles of ecology and genetics to issues regarding the conservation forested ecosystems and their associated fisheries and wildlife. The objective of this course is to provide a broad appreciation of the concepts in conservation biology that are important to solving contemporary natural resources problems. Students will be exposed to the history of conservation biology, values of biodiversity, definitions of species concepts, protecting the genetic structure of species, extinction as a natural process, vulnerability to extinction, biodiversity at the community, ecosystem, and landscape levels, habitat fragmentation, metapopulations, legal aspects of conservation, ecosystem management, exotic species, pollution, human population issues, measuring genetic diversity, attitudes towards nature, ex-situ conservation, and ecosystem restoration.

Prerequisite: BIOL 220W or FOR 308 or W F S 209
Cross-listed with: WFS 430

FOR 439: Timber Sale Administration
3 Credits/Maximum of 3

Practical aspects of the logistical, environmental, managerial, and regulatory oversight of active and retired timber sales. FOR 439 Timber Sale Administration (3) This course provides hands-on experience with all of the activities associated with overseeing a timber sale, including the legal aspects of arranging a sale, marking timber and calculating volume, road and sale layout, best management practices, inspections, harvesting equipment, working with contractors and loggers, and liability issues. The objectives of the course are to 1) obtain and translate a property deed onto the ground and create a professional map of the timber sale area; 2) design a timber sale, including cutting boundaries, skid trails, haul roads, and landings such that site impact is minimized, harvesting efficiency and safety is maximized and productivity is maintained; 3) collect sufficient information for a professional timber sale prospectus, including which harvesting systems would be best suited to the situation; 4) complete an erosion and sedimentation plan, a stream crossing permit, and local harvesting ordinance requirements; 5) develop a timber sale contract and a landowner-consultant contract to protect all parties and address all possible legal scenarios; 6) work with, inspect, supervise and provide meaningful feedback to harvesting, road building and landscape contractors; 7) retire a timber sale area to prevent erosion, create habitat variety and/or recreational opportunities, and maintain aesthetic qualities. This course is offered every fall, and class size is restricted.

Prerequisite: FOR 203 and FOR 266; and prerequisite or concurrent: FOR 421

FOR 440: Forest and Conservation Economics
3 Credits

The role and application of economics and finance to forest resource conservation and management. FOR 440 economic and financial concepts and tools used in managing forests and natural resources. Specifically, they will: a) use financial tools including cost-benefit analysis to analyze forest investments, b) recognize forest-related business operations and management issues, c) apply economic principles to forest and natural resource management decisions including environmental and nonmarket valuation methods, and d) discuss current issues in forest management and economics such as climate change, bioenergy and tropical deforestation. Students will carry out a case study of a forest-related business.

Prerequisite: ECON 102 or ECON 104

FOR 455W: Remote Sensing and spatial Data Handling
3 Credits

Remote sensing systems, with emphasis on application to forest ecosystem analysis. Includes introduction to computer systems for spatial data handling. FOR 455 Remote Sensing and Spatial Data Handling imparts a basic understanding of remote sensing and related spatial data technologies such as geographic information systems (GIS) and digital elevations models (DEM) in a natural resources context. Lectures cover the nature of electromagnetic radiation, electronic remote sensing systems, air photo systems, photo grammetry, and GIS fundamentals. Laboratory work includes stereo viewing, basic photo grammetry, introductory photo interpretation, air photo mission planning, digital image analysis, topographic analysis and landforms, GIS mapping, and some basic GIS analysis. Emphasis is on learning by doing, with one lecture and two 2-hour labs each week.

Prerequisite: MATH 110, 3 credits in computer science, 6 credits in ecological and/or geological sciences

FOR 466W: Forest Management and Planning
3 Credits

Rationale, process, and tools for forest management decision-making and planning. Developing and communicating forest plans for forested properties. FOR 466W Forest Management and Planning (3) Students
learn the rationale, processes, and tools for forest management decision-making and planning. They learn to identify and obtain information needed for management decision-making and planning. They learn to develop management alternatives and to use appropriate data and tools to evaluate those alternatives. Students learn to apply financial analysis to evaluate the financial viability of stand-level forest management activities. Students develop and write forest management plans for small (≤ 250 acres) and large (> 250 acres) forested properties. Students identify how alternative forest management objectives are balanced in developing management plans. Students evaluate and critique public agency forest management plans.

**Prerequisite:** FOR 255, FOR 421, and FOR 440

**Writing Across the Curriculum**

**FOR 470: Watershed Management**

3 Credits

Management of wild land watersheds for control of the amount and timing of water yield, water quality, erosion, and sedimentation. FOR 470 Watershed Management (3) in FOR 470 Watershed Management students are expected to learn the fundamentals of watershed hydrology and how management of natural resources, especially forest resources, can be adapted to protect and enhance the natural flow, quantity and quality of water resources. Emphasis is placed on acquisition of available hydrologic and climatic data over the internet, solving basic hydrologic problems using the proper units, writing short essays summarizing assigned papers or lectures, and in-class tests on managing impacts of timber harvesting, road construction, application of forest chemicals, and other land uses activities. The course is primarily, but not exclusively, intended as a course for upper-level undergraduate and graduate students in forest resources and wildlife and fisheries majors or other majors such as ERM with related natural resources backgrounds and interests. The course is a Prescribed Course for Forest Resources undergraduates in the Forest Management and Watershed Management options and is a Water Science breadth course for students in the Graduate Option in Watershed Stewardship. A companion one-credit course FOR 471 - Watershed Management Laboratory - may be taken concurrently with or following FOR 470. This course is offered each Spring Semester and generally has an enrollment of about 80-90 students.

**Prerequisite:** 3 credits in Soils

**FOR 471: Watershed Management Laboratory**

1 Credits

Introduction to hydrologic and climatic measurements and computations useful in watershed management.

**Prerequisite:** or concurrent: FOR 470

**FOR 475: Principles of Forest Soils Management**

3 Credits

Effect of current forest management practices on the properties and productive capacity of forest soils.

**Prerequisite:** FOR 308, 3 credits in soils

**FOR 480: Policy and Administration**

3 Credits

Forest resources policy objectives; criteria and goals of society; policy implementation by ownership classes; planning, administration, and evaluation of programs.

**Prerequisite:** 3 credits of social or behavioral science

**FOR 488Y: Global Forest Conservation**

3 Credits

Ecological, economic, technological, and political aspects of forested ecosystems in a global context, emphasizing tropical and developing countries. FOR 488Y Global Forest Conservation (3) forested ecosystems cover one third of world's land area, and about two billion people depend on forest products for their livelihood. Students in this course will learn about trends in global forest cover, human demands on forests in different parts of the world, and how national and international institutions and policies regulate forest use. Topics covered include tropical deforestation, biodiversity, climate change, poverty, forest production and trade. Students come away from the course with an understanding of the diversity of forestry practices around the globe.

**Prerequisite:** 3 credits in natural sciences, and 3 credits in social and behavioral sciences

**International Cultures (IL)**

**Writing Across the Curriculum**

**FOR 494: Undergraduate Research**

1-12 Credits/Maximum of 999

Supervised student activities on research projects identified on an individual or small group basis.

**Prerequisites:** Permission of the Forest Ecosystem Management Program

**FOR 494H: Honors Thesis Research**

1-6 Credits/Maximum of 999

Independent study directed by a faculty supervisor that culminates in the production of a Forestry honors thesis. This course is the means by which Forest Ecosystem Management honors students receive credit for thesis research. The course involves research and other scholarly activities (such as writing) necessary for completion of an approved honors thesis.

**Prerequisite:** Enrollment in the Schreyer Honors College and permission of a Forest Ecosystem Management honors adviser

**Honors**

**FOR 495: Forestry Internship**

1-6 Credits/Maximum of 6

Supervised field experience related to the student’s major.

**Prerequisite:** approval of proposed assignment by instructor prior to registration.

**Full-Time Equivalent Course**
FOR 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

FOR 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

FOR 499: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

French (FR)

FR 1: Elementary French I
4 Credits
Grammar, with reading and writing of simple French; oral and aural work stressed. Students who have received high school credit for two or more years of French may not schedule this course for credit, without the permission of the department.

Bachelor of Arts: 2nd Foreign/World Language (All)

FR 2: Elementary French II
4 Credits
Grammar and reading continued; oral and aural phases progressively increased. Students who have received high school credit for four years of French may not schedule this course for credit, without the permission of the department.

Prerequisite: FR 001
Bachelor of Arts: 2nd Foreign/World Language (All)

FR 3: Intermediate French
4 Credits
Grammar, reading, composition, oral and aural exercises.

Prerequisite: FR 002
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Foreign/World Lang (12th Unit)

FR 51: Elementary Intensive French I for Graduate Students
3 Credits
Intensive introduction to French: first half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. FR 051 Elementary Intensive French I for Graduate Students (3)This is the first in a series of three courses designed to give students an intensive introduction to French. This is the first half of elementary sequence in reading, writing, speaking, listening, and cultural contexts. Students will learn the French vocabulary and will learn to create simple sentences. Lessons are taught in an authentic cultural context.

Prerequisite: graduate standing

FR 52: Elementary Intensive French II for Graduate Students
3 Credits
Intensive introduction to French: second half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. FR 052 Elementary Intensive French II for Graduate Students (3)This is the second in a series of three courses designed to give students an intensive introduction to French. This is the second half of graduate intensive sequence in elementary reading, writing, speaking, listening, and cultural contexts. Students will learn the French vocabulary. Lessons are taught in an authentic cultural context.

Prerequisite: FR 051 or equivalent, and graduate standing

FR 53: Intermediate Intensive French for Graduate Students
3 Credits
Continued intensive study of French at the intermediate level: reading, writing, speaking, listening, cultural contexts. FR 053 Intermediate Intensive French for Graduate Students (3)This is the third in a series of three courses designed to give students an intermediate intensive knowledge of French. Continued intensive study of French at the intermediate level: reading, writing, speaking, listening, and cultural contexts. Lessons are taught in an authentic cultural context.

Prerequisite: FR 052 or equivalent, and graduate standing

FR 83: First-Year Seminar in French
3 Credits
Critical approaches to the dimensions and directions in French/ Francophone literatures and cultures. FR 083S First-Year Seminar in French (3) (GH;FYS;IL)(BA) This course meets the Bachelor of Arts degree requirements. Through the reading of texts, discussions (in-class, study groups, listservs), debates, and collaborative research projects, students are introduced [a] to French/Francophone literatures and/or cultures; [b] to the humanities and to the nature of research and scholarship; [c] to cross-cultural issues (international); and [d] to scholarly conduct and responsibilities. Students develop international competence by cultivating curiosity about and empathy for other cultures; by recognizing that social variables, such as age, gender, social class, religion, ethnicity, race, sexual orientation, and place of residence, affect the way people view the world, behave, and communicate; and by developing the ability to locate, organize, and evaluate information about he culture(s) from a variety of sources (print, electronic, people, personal observations). The points of departure for the development of all of these competencies are literary and cultural texts from France and French-speaking regions/ counties of the world. All texts are in translation, and knowledge of the French language is not required. Students will be evaluated through written essays, quizzes, class discussions, and a collaborative group project. This course will prepare the students for other courses in the humanities by giving them the opportunity to gain insights into the study of the humanities through literary and cultural texts. In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of
that community. Students will develop an understanding of the learning tools and resources available to them including the opportunity to develop relationships with faculty and other students who share their academic interests. The Department of French plans to offer three (twenty student limit per seminar) first-year seminars per academic year. The course fulfills the first-year seminar requirement as well as one of the humanities requirements in general education or a Bachelor of Arts humanities requirement. This course does not require any special facility or equipment to be taught effectively.

Bachelor of Arts: Humanities
International Cultures (IL)
First-Year Seminar
General Education: Humanities (GH)

FR 111: Elementary French

6 Credits

Acquisition of basic skills in the active use of French: listening, speaking, reading, and writing.

Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities

FR 112: Intermediate French

6 Credits

Reinforcement of basic skills previously acquired in the active use of French in FR 111.

Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Foreign/World Lang (12th Unit)

FR 121G: Fundamentals of Reading French

3 Credits

Instruction in fundamental skills required for reading expository French prose, primarily for research purposes. (This course may not be used to satisfy any baccalaureate degree requirements. No graduate credit is given for this course.)

Prerequisite: seventh-semester standing

Bachelor of Arts: Humanities

FR 122G: Practice in Reading French

3 Credits

Development and reinforcement of basic reading skills, with emphasis on the individual student’s area of research. (This course may not be used to satisfy any baccalaureate degree requirements. No graduate credit is given for this course.)

Prerequisite: FR 121G

Bachelor of Arts: Humanities

FR 137: Paris: Anatomy of a City

3 Credits

Survey of the cultural, artistic, literary, and social life of the city of Paris from Gallo-Roman times to the present. FR 137 Paris: Anatomy of a City (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. FR 137, taught in English, is an introductory survey of the cultural, artistic, literary, and social life of the city of Paris. We will explore painting, sculpture, architecture, music, dance, theatre, literature, as well as the history and geography of this great city through the ages. Beginning with Gallo-Roman Paris and ending with the Paris of today, the course will explore the continuities as well as the changes in more than 2000 years of Parisian history. Students will read representative texts from every period and be exposed to the artistic movements through slides, films, and virtual tours. There will be extensive use of technology (CDs, DVDS, internet). In discussion sections, students will get a chance to discuss readings and fine-tune their analytical skills. In addition to the three examinations (short answer and essay), there will be short writing assignments and group research projects. This course will complement the Departments of Art History, Architecture, Comparative Literature, Geography, Music History, History. It will require a room equipped for technology and will be offered every semester.

Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)

FR 138N: French Culture Through Film

3 Credits

This course presents a survey of important cultural and historical moments in France with a special emphasis on the ways in which these moments are represented in film. The course has a dual focus: 1.) a chronological and historical overview of major moments in 20th and 21st century French history as they have been represented, imagined and presented through the selected films and 2.) the artistic and cinematic movements and concepts that inform our understanding of these films. Beginning with WWI, the historical trajectory outlined by the course will cover the Interwar period, the Occupation and Liberation, the consumer culture of France in 1950s, France as a former colonial power and the Algerian war, France in the 60s, May 1968, France in the 1970s and les trente glorieuses, Mitterrand’s 1980s, and Immigration and French identity. We will grapple with these historical moments as they have been filtered through the lens of cinema. Our attention will remain focused on both the historical time periods in which the films of the course were made as well as the moments they are representing. Our approach to the filmic corpus of the course will be one that seeks to understand and situate the films within the broader context of the aesthetic movements that have characterized film both within France and in world cinema. Movements and moments such as Poetic Realism, Neorealism, the French New Wave, Left-Bank filmmaking, cinema vérité, documentary filmmaking and le ciné du Look will serve as an artistic backdrop and provide a framework for understanding the cinematic choices of the directors studied. No prior coursework in film is required; FR 138 will introduce students to the special vocabulary and building block concepts that allow them to deeper comprehend and analyze film on a formal basis. Concepts covered include mise en scène, editing, approaches to narrative, dialogue and soundtrack, lighting, set pieces, characterization, camerawork, CGI special effects, and the technology of film making. Students can expect to come away with a set of tools to analyze not only other French films but also visual texts in general.

Bachelor of Arts: Arts

General Education · Integrative: Interdomain
FR 139: France and the French-speaking World
3 Credits

An introduction to the culture of France and its impact on the world. FR 139 France and the French Speaking World (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. By studying the artistic, social and intellectual components of the French cultural ethos, the undergraduate student will develop an appreciation of a major Western European humanistic tradition and its impact and adaptation on several continents. The notion of a national culture, which has become an international phenomenon integrates a broad spectrum of subject areas in the arts, humanities, and social sciences. The elements to be articulated embrace: socioeconomic, linguistic, and demographic profiles, social stereotypes (internal, external, and colonial), social structures (family, gender, childhood/old age), and selected 'high' and 'popular' cultural themes (cuisine, architecture, dress, painting, social philosophy). Using today's metropolitan French culture as a point of departure, and its historical legacy, the course will explore the consequences of French cultural hegemony in various French-speaking areas (Belgium, Switzerland, North and West Africa, North America, Maghreb-Middle East, Orient). In brief, the course introduces Penn State students to the dynamics of cultural pluralism, a crucial acquisition in today's 'global village.'

International Cultures (IL)
GenEd Learning Objective: Humanities (GH)
GenEd Learning Objective: Critical and Analytical Thinking
GenEd Learning Objective: Global Learning

FR 142: French Fiction, Drama, and Film (In English)
3 Credits

An introduction, in English, to French and francophone literature and cultural history through film, theater, and literature. FR 142 French Fiction, Drama, and Film (In English) (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. Taught entirely in English with no assumption of prior knowledge of French, this course is a broad introduction to French/francophone literature and cultural history through a selection from the best-known authors and famous masterpieces of the French-speaking world. The course promotes an informed reflection on narratives, plays, and films; develops critical methods for enjoying all three genres; and may be complemented with FR 137, 138, and/or 139. The course will satisfy a General Education humanities and International Cultures requirement for students in all majors except French and Francophone Studies.

1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Humanities
FR 299: Foreign Study--French
3-12 Credits/Maximum of 12
Writing practice at postintermediate level. Cultural readings about French civilization.

Prerequisite: FR 199
Bachelor of Arts: 2nd Foreign/World Language (All) International Cultures (IL)
FR 301: Advanced Grammar And Conversation
3 Credits
FOR MAJORS, MINORS, AND OTHERS WITH ADEQUATE PREPARATION; INTENSIVE GRAMMAR REVIEW, COMPOSITION, AND CONVERSATION.

FR 316: French Linguistics
3 Credits
Survey of the theory and methods of linguistics as they apply to the major subfields. FR 316 French Linguistics (3) The goal of this course is to provide the undergraduate student with a solid overview of the theory and methods used by linguists seeking to develop a formal account of French grammar. Specifically, the student will become acquainted with the basic assumptions of the field (e.g. the prescriptive/descriptive distinction, the notion of competence versus performance, various methods of data collection, and the notion of Universal Grammar). In addition, a selection of the major subfields of linguistics will be surveyed (these include: phonetics, phonology, syntax, semantics, and morphology with the focus being on the linguistic rules found in the French language).

Prerequisite: FR 201, FR 202
FR 331: French and Francophone Culture I
3 Credits
French and francophone history and culture from the Middle Ages to 1789. It aims to familiarize students with major literary works of this time period through close textual reading and analysis. Taught in French, this course also aims to help students develop further facility in written and spoken French through a combination of readings, writing assignments, class lectures, conversation and in-class activities. The course is designed as a complement to the French and francophone literature survey sequence. In addition, it serves as an important basis for 400-level language, literature and culture courses.

Prerequisite: FR 201, FR 202
Bachelor of Arts: Humanities International Cultures (IL)
FR 332: French and Francophone Culture II
3 Credits
French and francophone history and culture from the French Revolution through the Third Republic. FR 332 French and Francophone Culture II (3) (IL) This course, which fulfills the Humanities requirement within the Bachelor of Arts degree, will present a survey of French and francophone culture and civilization from the French Revolution to the collapse of the Third Republic with the onset of World War II. The course aims to familiarize students with the major events and themes in French and francophone history of this period; prominent artistic and other cultural developments; and French social and daily life. Students will gain a rich appreciation of this period through frequent exposure to web sites, films, music and other audio-visual materials. Taught in French, the course also aims to help students develop further facility in written and spoken French through a combination of readings, writing assignments, class lectures, conversation and in-class activities. The course is designed as a complement to the French literature survey sequence. In addition, it serves as an important basis for 400-level language, literature and culture courses.

Prerequisite: FR 201, FR 202
Bachelor of Arts: Humanities International Cultures (IL)
FR 351: French and Francophone Literature I
3 Credits
This course presents a survey of selected works of French and francophone literature from the Middle Ages to 1789. It aims to familiarize students with major literary works of this time period through close textual reading and analysis. Taught in French, it also aims to help students develop an appreciation for a wide variety of styles, genres, themes, literary movements, and historical contexts. It also serves to develop students’ written and oral language skills. This course is designed as a complement to the French and francophone culture sequence.

FR 409: Commercial and Technical Translation
3 Credits
Translation from English to French of commercial and technical materials; vocabulary building; writing of abstracts and summaries.

Prerequisite: FR 402Y
Bachelor of Arts: Humanities

International Cultures (IL)

FR 410: French Press
3 Credits
Extensive readings of selected French daily and weekly newspapers and magazines, along with newscast viewings. FR 410 French Press (3) (IL)
This course, which is taught in French, is designed to introduce students to the history and current state of French press and media (including newspapers, magazines, radio and television) while introducing them to French society and culture through media coverage of current and recent events. The course is also designed to help students perfect reading, writing and oral communication in French. The course starts with a brief history of the press in France, including the creation of dailies such as Le Journal de Paris and the impact of some well-known journalists or writers upon events such as the Dreyfus Affair. It will then focus more specifically upon the origins of high-circulation, contemporary newspapers and magazines. Quickly moving to the post-WWII period, students will be introduced to radio and television in France and, as they become more familiar with French and Francophone press and media, will be given several opportunities to study current or recent events of the French and Francophone world, in fields such as sports, politics, culture and economics. Library holdings and internet sites will allow the class to regularly read daily newspapers such as Le Monde and Le Figaro and view newscasts on channels such as TF1 and FR2. Once they are familiar with the available resources, students will share research with fellow classmates through oral presentations, for example in the form of simulated newscasts. Students will also develop with the guidance of the instructor an independent, final paper which will explore some aspect of the French press and media. One of several departmental offerings in the area of French Civilization, FR 410 course can be used to fulfill a 400-level requirement for the French Business, French-Engineering, Applied French, and French Language and Culture options, as well as for the French minor. By covering the way in which the range of social identities and the cultural beliefs and values of French-speaking peoples are reflected in various media, and by assisting students in finding and assessing information about current events in the Francophone world, the course can also fulfill an "IL" requirement. Evaluation methods include a series of short quizzes to cover historical and factual data; a short midterm paper based on primary (newspaper-based) research; a longer final paper based on primary and secondary research; other written work of a short-response nature; a group oral presentation summing up the previous week's news and events; and participation, including presence. The course is offered once a year, usually in the spring semester.

Prerequisite: FR 331 or FR 332
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities
International Cultures (IL)

FR 417: French Phonology
3 Credits
A formal study of the sound pattern of French. FR 417 French Phonology (3) (IL) The goal of this course is to present an introduction to the linguistic analysis of the sound pattern of French as it is actually spoken by real speakers. by the end of the semester, the student should be able to: -transcribe French phonetically; -discern patterns of pronunciation in different varieties of the language; -analyze real speakers' pronunciation
on your own; create your own teaching/learning unit about some aspect of French phonology.Evaluative Methods: Student performance in this course is generally based on a series of assignments, quizzes, transcriptions, a research project and presentation, an evaluation of other students’ presentations, and preparation/participation.

**Prerequisite:** FR 201, FR 202
Bachelor of Arts: Humanities
International Cultures (IL)

FR 418: French Syntax

3 Credits

A formal theory of word order and related issues in French grammar. FR 418 French Syntax (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. The aim of this course is to provide the upper level undergraduate student with the background needed to understand modern generative syntactic theory, as well as to eventually enable him or her to do creative and informed research in this area. Roughly three-quarters of the semester will be devoted to an in-depth overview of the historical development of generative syntax, focusing particularly on modern Chomsky theory - the so-called Minimalist Program. The remainder will build upon and round out this knowledge of syntax by exploring in depth a number of topics that any syntactician must be familiar with in order to do informed research in the field. This section of the course will involve lectures based on close readings of articles and book chapters exploring such topics as the syntax of negation, raising verbs, auxiliary verbs, adverbs, middle constructions, and/or verb movement. (Only a subset of these topics will be discussed, selected on the basis of student interest.)

**Prerequisite:** FR 201 and FR 202
Bachelor of Arts: Humanities
International Cultures (IL)

FR 419: French Semantics

3 Credits

The study of meaning in human language with a special focus on how it is encoded in French. FR 419 French Semantics (3) The aim of this course is to provide upper level undergraduate students in French with a relatively informal introduction to the field of semantics as it applies to the French language. Semantics is the subfield of theoretical linguistics that seeks to make explicit the rules native speakers use to interpret stable aspects of the meaning of natural language sentences. The course will begin by comparing and contrasting semantic and pragmatic aspects of meaning -an important undertaking since only the former are assumed to be subject to invariable rules of grammar. The conclusions reached in this portion of the course will then be extended to account for a very special type of language -humor -in a particular context, France. That as, it will be shown that a more complete understanding of this linguistic behavior entails recognition of the relative contributions of pragmatics and semantics. We will then turn to a survey of the classic model-theoretic approach to lexical and compositional aspects of semantic meaning, with important (sociolinguistic) refinements to the standard approach to lexical semantics being discussed in detail. With a survey of the fundamentals of the field in place, we will then undertake an investigation of specific topics in semantics, looking first at the status of thematic roles in semantic theory (focusing on work by David Dowty). Here we will examine the important implications his work holds for the initial mapping of arguments into sentence structure, not only for primary transitive verbs, but also unaccusative and psych-verbs. We will then examine current analyses of causation in French, certain aspectual distinctions, and semantic, pragmatic, and syntactic approaches to negative and positive polarity items, n-words, and minimizers.

**Prerequisite:** FR 316

FR 426Y: French Literature of the Renaissance

3 Credits

Survey of key texts from sixteenth century France, with attention to historical and philosophical currents of French social thought.

**Prerequisite:** FR 351 or FR 352
Bachelor of Arts: Humanities
International Cultures (IL)

FR 430: Contemporary France

3 Credits

This course surveys contemporary French historical, cultural, economic, and political changes from the end of WW II to the present day. A significant portion of the course is devoted to examining key events and transformations of the time period. The second half explores major themes that emerge from the evolutions characterizing these tumultuous decades. Taught entirely in French, students will gain an understanding of and an appreciation for modern France through exposure to web sites, films, music, and authentic written texts.

**Prerequisites:** FR 331; or FR 332; or FR 332H
Bachelor of Arts: Humanities
International Cultures (IL)

FR 436: French and Francophone Theater

3 Credits

French Theater: From ‘classical unities: to Contemporary Performances.

**Prerequisite:** FR 351 or FR 352
Bachelor of Arts: Humanities
International Cultures (IL)

FR 440: Teaching of Romance Languages

3 Credits

Theories of second language acquisition. Current classroom practices in the teaching of Romance languages.

**Prerequisite:** 15 credits beyond the elementary level
Bachelor of Arts: Humanities
International Cultures (IL)

FR 445Y: Self and Society in Eighteenth-Century France

3 Credits

The changing relationship of the individual to society in pre-Revolutionary France will be explored in texts by major writers.

**Prerequisite:** FR 351. Prerequisite or concurrent: FR 352
Bachelor of Arts: Humanities
International Cultures (IL)

Writing Across the Curriculum
FR 452Y: Nineteenth-Century French Literature

3 Credits

Selected readings in romanticism, realism, and symbolism, including Balzac, Stendhal, Sand, Baudelaire, and others, with emphasis on cultural issues. FR 452Y Nineteenth-Century French Literature (3) (IL) This course offers an overview of Nineteenth-Century French literature. It includes reading material representative of the major literary movements of the period (romanticism, realism, symbolism). It also gives students a chance to examine a great variety of literary genres (novels, plays, short stories, poems, children’s narratives among others). In addition to developing close textual reading skills, emphasis is placed throughout the semester on the larger relationship between literary production, aesthetics and Nineteenth-Century history (political systems, education, social transformations, industries and technologies, etc.). Anthologies and complete texts will be used.

Prerequisite: FR 351 or FR 352
Bachelor of Arts: Humanities
International Cultures (IL)
Writing Across the Curriculum

FR 453Y: La Belle Epoque: Politics, Society, and Culture in France, 1880-1914

3 Credits

Interdisciplinary perspectives on the politics, society, and culture of France, 1880-1914. FR 453Y La Belle Epoque: Politics, Society, and Culture in France, 1880-1914 (3) (IL) The goal of this course is to present and analyze the period of extraordinary changes in all domains known as the 'Belle Epoque.' The starting point for an examination of these changes is Guy de Maupassant’s novel, Bel-Ami (1885), which describes the social and professional ascension of an egotistical Parisian parvenu, Georges Duroy. The reading of this novel will allow us at the same time to study in detail one of the novel’s protagonists: Paris. Through our discussions and through consideration of a wide range of primary and secondary texts, we will examine the complex rapport between literature (as well as art) and society at the end of the nineteenth century, and we will attempt to answer questions such as: how did the changing Parisian landscape inspire the authors, artists et musiciens of this era? How did the new Parisian space encourage the development of new ‘places of pleasure’ cafes, cabarets, cafes-concerts, theaters, racetracks, restaurants, etc.? How did innovations in architecture and the decorative arts, which flourished under the name of Art Nouveau, reflect both social developments and the transforming profile of Paris? What was, in fact, the new social and artistic geography of the capital?

Prerequisite: FR 351 or FR 352
Bachelor of Arts: Humanities
International Cultures (IL)
Writing Across the Curriculum

FR 458: African Literature of French Expression

3 Credits

Genesis of Franco-African literature in the 1930s; phases of the negritude movement; colonial and national literature. FR 458 African Literature of French Expression (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. African literature in French is one of the most vigorous of the many new literatures in French that are emerging throughout the vast francophone world. Writers from a variety of countries, from Senegal to Djibouti, from Algeria to Congo, are producing works in French, that reflect their own very distinct cultural experiences. They must often modify both the French language and traditional Western genres such as the novel to convey African ways of speaking and narrating. In this course, students will read novels, poems and an epic that has been translated into French from an African language. The subjects range from autobiographical accounts of growing up in an African town and going off to Europe to study during the colonial era to sharp criticism of both the French colonial regime and the subsequent national governments that took over after independence, an event that occurred in 1960 in most francophone African countries. For the new wave of women writers that has emerged on the literary scene in the last two decades, more personal themes such as love, family, personal freedom, and the task of balancing traditional customs with the needs of contemporary life in large cities have marked their works. Students who take this course will discover the diversity of African literature written in French, the traits that distinguish this literature from metropolitan French literature, the links between the oral tradition and the written tradition, and the changing role of women in society today. Students will be evaluated on written essays, submission of questions in advance of classroom discussion of each work, presentation of a talk in class on some aspect of the works read, a midterm and final exam. French 458 satisfies the literature course requirements in the French major and the 400-level course requirement in the French minor. It can also satisfy the diversity requirement for General Education. FR 458 will be offered once a year with 18 seats per offering.

Prerequisite: FR 351 or FR 352
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)

FR 460: Contemporary French Literature

3 Credits

Major authors and movements in French novel, drama, and poetry from Proust to the present. FR 460 Contemporary French Literature (3) This course is designed for advanced undergraduate work and it is taught in French. To function well in this course, students need to have passed an intermediate introductory course to French literature. The primary goal of FR 460 is to facilitate students acquisition of a coherent view of major contemporary literary movements, from modernism in poetry and drama, through surrealism, both lay and Christian humanistic fiction, and existentialism, to the absurd theatre, the nouveau roman, and post-modernism, écriture feminine, anti-colonial and post-colonial literatures. Major authors are presented thru one of their works, taking into account the cultural, historical context in which they were developed. Instruction also comprises an initiation to basic theoretical notions on genres, literary techniques, and critical reading methodology. Contents will vary according to instructors choices but balance between periods, movements and genres is implied. Multi-media resources abound for the purpose of illustration and interdisciplinary considerations but the primary thrust is cultural/ literary enrichment, and the development of students reading and analytical skills in French. Web resources, excerpts, and shorter whole texts will be incorporated to the reading materials and will supplement the required books. Students are expected to read between ten and thirty pages according to the level of difficulty of the materials. No manual or anthology has been established a satisfactory choices for this course even though such tools exist, they generally do not treat the last third of the period properly. So FR 460 instructors have relied on a variety of primary texts to achieve as comprehensive yet coherent a survey of this overflowing century as possible. Occasionally a
Thematic approach has been attempted to introduce more cohesiveness in the selected readings but this must be combined with traditional, diachronic approaches so as to facilitate the students ability to see linkages between literature and history as well as other arts, as they pursue their French and other Liberal Arts majors.

**Prerequisite:** FR 351 or FR 352
Bachelor of Arts: Humanities
International Cultures (IL)

FR 470: Race and Gender Issues in Literatures in French

3 Credits

A critical presentation, taught in French, of changing ideas and values on race and gender in French and Francophone literatures. FR 470 Race and Gender Issues in Literature in French (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. In addition to presenting subject matter that fosters an appreciation of literatures written in French while exploring racial and gender-related aspects of French and Francophone cultures, this course aims at developing a sophisticated, analytical outlook on peoples of different races and cultures and on women as authors, subjects, and literary 'constrictions' evolving over time. It provides a sense of the historical development of these questions and the interconnectedness of literature with society, and culture. One example of the issues and selections is the vindication of women - including Middle Eastern and Biblical figures- in Christine de Pisan's City of the ladies, in the early 15th c.; it is shown to have links with the 1970 modernistic and satirical text by Monique Wittig, Les Guirlbres. Other examples can be the famed surrealist negritude poetry of Aim Csaire of Martinique, or a classic saga of European Jews by Andr Schwarz-Bart, or the humorous narrative of an African boy in contemporary Paris by Calixthe Beyala. Evaluation is based on a balance of in-class and take home exams and a final paper. Participation is expected, including electronic communication with the instructor. Attendance and participation are assigned a significant proportion of the grade (20%) as is feasible and desirable in small classes with fifteen students or less. The class is led in French, the language of most materials presented, and it is designed primarily for French majors and minors. The printed sources and documents are supported and illustrated with video excerpts and films available outside class. Internet research is encouraged and expected. It is offered every three with 18 seats per offering, alternating with FR 470 (Race and Gender Issues in Literatures in French), or special topics courses ("The Francophone Short Story") and period-bound courses ("Twentieth Century French Literature"). This course fulfills the French major 400-level requirements in either the literature or the culture options, or the French minor similar requirement, and is also meant to fulfill the General Education requirement in race/gender and cultural diversity.

Bachelor of Arts: Humanities
International Cultures (IL)

FR 475: Women's History in Post-Revolutionary France

3-6 Credits/Maximum of 6

Women's history and creativity in post-revolutionary France.

**Prerequisite:** FR 332 or FR 352

FR 487: Topics in French Film History and Theory I: 1895-1945

3 Credits

Provide background needed to understand the broad outlines of French film history and theory in their first fifty years (1895-1945). FR 487 Topics in French Film History and Theory I: 1895-1945 (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. The aim of this course is to provide the upper level undergraduate student with the background needed to understand French film in the period up to the end of World War II. This will greatly aid the student in understanding French literature and culture of the period as well. Topics will include the invention of cinema and the early days of French film; adventure serials and commercial films; avant-garde and surrealism of the 1920s and 30s; and finally, the period often considered the 'golden age' of French film, the 1930s and 40s, and the so-called 'poetic realism' movement. Films will be supplemented with readings in criticism by writers and filmmakers of the period, as well as by the scholarship of critics and theorists writing today. The course would allow upper-level undergraduate students to partially fulfill the 400-level course requirement for French majors and minors. This course may also be used to fulfill a requirement in the newly proposed Film Studies minor. A student's performance in this course will normally be evaluated through an in-class expose, two in-class essay tests, and a short research paper. The class will be offered once a year with 50 seats per offering.

**Prerequisite:** FR 351 and FR 352 or COMM 250
Bachelor of Arts: Humanities
FR 488: Topics in French Film History and Theory II: 1945-2002

3 Credits

Provide background needed to understand the broad outlines of French film history and theory in their second half-century (1945-2002). FR 488 Topics in French Film History and Theory II: 1945-2002 (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. The aim of this course is to provide the upper level undergraduate student with the background needed to understand French film in the period from the end of World War II to the present. This will greatly aid the student in understanding French literature and culture of the period as well. Topics will include the French commercial film of the early postwar period; the ground breaking film criticism of the 1950s, and the films it spawned (the early 'New Wave'); the later, more experimental films done in the later 1960s and 1970s by other critic-directors; and, finally, films made in more recent years specifically concerned with the historical memory of social trauma-the Occupation and Holocaust-and the possibility of the cultivation and preservation of this memory in and through the film medium. The analysis will include readings by critics (many of the filmmakers) writing at the time the films were made, as well as more recent scholarship and criticism. The course would allow upper-level undergraduate students to partially fulfill the 400-level course requirement for French majors and minors. It will be offered every other year. This course may also be used to fulfill a requirement in the newly proposed Film Studies minor. A student's performance in this course will normally be evaluated through an in-class expose, two in-class essay tests that will determine the student's analytical skills; and a short research paper. This course will be offered once a year with 50 seats per offering.

Prerequisite: FR 351 and FR 352 or COMM 250
Bachelor of Arts: Humanities
International Cultures (IL)

FR 494: Research Project
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.
Bachelor of Arts: Humanities

FR 494H: Research Project
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.
Bachelor of Arts: Humanities
Honors

FR 495: Internship
1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor
Bachelor of Arts: Humanities

Fuel Science (FSC)

FSC 401: Introduction to Fuel Technology
3 Credits

An introduction to the scientific and engineering principles of fuel technology. For non-fuel science majors; fuel science majors will not receive credit.

Prerequisite: CHEM 112 , PHYS 211

FSC 431: The Chemistry of Fuels
3 Credits

Nature and properties of fossil and other fuels, including aerospace, in relation to use; preparation of fuels; by-products; fuel analysis. FSC 431 The Chemistry of Fuels (3) The course deals with the formation, composition and properties of the principal naturally occurring fossil hydrocarbons (coal, petroleum, natural gas), and their refining, upgrading, and conversion chemistry. The objectives of this course are to equip students with a fundamental knowledge of the chemistry for the fossil hydrocarbon resources and their energy use for transportation and stationary fuels as well as their use as chemical feedstocks. It also helps to prepare students for the challenges, opportunities, and changes in the world of energy and resource-related enterprises. The primary emphasis is on petroleum, natural gas, coal, and liquid transportation fuels. This is a required course for the Energy Engineering Major.
A ‘serious game’ is a game designed for a primary purpose other than pure entertainment, such as education, scientific exploration, health care, emergency management, city planning, military, engineering, religion, etc. The fourth segment looks at simulations and virtual worlds and their multiple models and uses (entertainment, learning, business, research, etc.), and the development of related online communities. The final section will examine the interrelationship of these industries with the other entertainment industries in terms of planning, marketing, finance, production, etc. It will conclude with a look ahead at new technologies, markets, business models, advancements in artificial intelligence and the convergence of virtual and material worlds. The course will employ presentations, class discussions, outside readings, demonstrations, videos, class exercises, online explorations, guest experts (in person and via technology), and experiences in virtual worlds.

GAME 160N: Introduction to Video Game Culture
3 Credits

This course is a comparative introduction to the nature and history of video games as cultural artifacts, from Pong to online role-playing. It introduces students to academic discussion on and creative work in new digital forms including hypertexts, video games, cell phone novels, machinima, and more. Students will survey major debates over the meaning and value of video games, and study some of the major theoretical terms and perspectives developed to elaborate the cultural and sociological value of video games. The course extends students' skills in literary interpretation to a variety of new objects, and makes them aware of the role medium plays in aesthetic development and production. Students will leave with a far sharper understanding of how the interpretive tools used in the humanities can be extended to include new media, and with a sense of the historical role video games have played and will continue to play in global cultural production. Because the course is historically focused, it will spend significant time looking at the differential development of video games in three major regions: the United States, Europe, and East Asia (especially Japan).

GAME 180N: The Art and Science of Virtual Worlds
3 Credits

GAME 180N is a multidisciplinary course which introduces students to the theories, concepts, and technologies behind virtual worlds. This course will focus on the myriad ways that narrative arts and physical sciences relate to the development of technologically mediated virtual worlds. Designing the physical and narrative voyages of avatars through virtual worlds is necessarily a team-centered undertaking requiring
recursive editing from a macroscopic and microscopic point of view to refocus project goals and deliverables. Besides learning the requisite computing and technical skills involved in virtual world development, students enrolled in this course will produce a world design proposal, and storyboards, interactive fiction graphics, or world maps for their virtual world; in this way, they will explore some of the ways that creative writing, particularly interactive fiction and storytelling techniques drawn from non-VR and VR gaming contribute to the planning, design, and execution of virtual worlds. Students will also learn about the basic science behind virtual world concepts such as the physical environment, physical processes (e.g. kinematics, motion), and light; ultimately, they will produce an immersive time-space experience in their proposed world and reflect on the complexity of integrating design elements in a way that creates a satisfying immersive experience. The objectives of the course include: (1) students will work in teams to design a proposed virtual world using world making principles found in interactive fiction narratology and physical principles that embody the avatar and allow it to move in a virtual world environment; (2) students will work in teams to construct a virtual scene, movement in time/space, from that world using computer software tools and mediated through virtual reality hardware; (3) students will be able to discuss developing immersive technology and applications of virtual worlds in business, society, and academia; (4) students will analyze and critique the virtual world designs of other student teams; (5) students will demonstrate comprehension of interactive fiction scene and level structures and world maps as they relate to designing the voyage of the avatar in a virtual world; and (6) students will demonstrate comprehension of physical principles (e.g. kinematics, light) as they apply to virtual worlds. In addition to directed readings, discussions, and quizzes in computing, narrative arts, and physics (related to concepts inherent in virtual worlds), the course will incorporate hands-on lab exercises and online discussions. A semester-long team project will be the primary means of student evaluation.

During this semester-long team project students will design and create their own virtual environment(s) and character(s) using software tools and accepted world design principles. Students will apply a variety of computing concepts in the world creation, including some combination of programming, 360-degree video, and digital imagery. The course will culminate in the oral and visual presentation of their creative and technological works. The semester-long team project will be heavily integrated into the in-class experience and assessed using rubrics that draw on examples and assignment descriptions provided to students.

**GAME 220: Introduction to Game Design**

**3 Credits**

Design of games as aesthetic objects and cultural artifacts that people find meaningful and entertaining. In his 2007 book Persuasive Games, Professor Ian Bogost writes about the power of digital games in social, political, artistic, and psychological meaning-making through what he calls ‘procedural rhetoric’. ‘Procedural rhetoric entails persuasion by change of opinion or action - to convey ideas effectively.’ Procedural rhetoric is a subdomain of procedural authorship; it’s arguments are made not through the construction of worlds or images, but through the authorship of rules and behavior, the construction of dynamic models.’ (Bogost 2007, 29). As games become cultural objects with artistic value, achieving orchestral performances in the opera houses of the world, permanent exhibits in the Smithsonian, and having numerous charitable organizations entirely devoted to the appreciation of games, their art, and their rhetoric it behooves educators to enable the next generation of students to become literate in this new and emerging form of expression. This course will provide students with an introduction to game design. It will focus on the design of games as aesthetic objects, both inasmuch as video games have significant aesthetic properties (lighting, narrative, animation, sound design) but also, more generally, inasmuch as games are cultural artifacts that people find meaningful and entertaining. Because GAME 220 takes this broad perspective, students will learn design principles that are used not only in video game design but in traditional ‘pen-and-paper’ games, such as board games, card games, role playing games, and so forth. The course will teach students how to design artful, creative games in general.

**General Education: Arts (GA)**
**GenEd Learning Objective: Key Literacies**
**GenEd Learning Objective: Crit and Analytical Think**

GAME 250: Technical Game Development

**3 Credits**

Introduction to the tools and techniques required to implement games in a virtual environment. GAME 250 / CMPSC 208 Technical Game Development. First, students learn about game and player elements by creating characters and objects and the means of user interactivity. Both orthographic and perspective views are introduced to assist in character design. Objects and characters are created using fundamental geometric primitives like scale, rotation, translation and extrusion. The set operations, union, intersection, and subtraction, are applied to create compound objects. Bezier and NURB curves are introduced to create objects with irregular contours. Students also learn to design graphical user interfaces (GUIs) and handle mouse and keyboard events to support user interactions. Second, students are introduced to methods of storytelling and guide them to build narratives for games. Methods of proximity and collision detection in the environment are studied for both static and dynamic objects. Dynamic objects are programmed to move and behave in a deterministically, random, or probabilistically under a variety of lighting methods including ambient, directional, point and diffuse lights are introduced. A number of particle systems are developed with different considerations of randomness, vector direction and velocity. The concept of linear interpolation is illustrated and applied to texture mapping to improve the look and feel of objects. Third, students are introduced to functions, propositional logic, loops, and randomness to model game behavior. Students will learn to combine a series of primitive actions into a function for control and reuse. Propositional logic will guide students to define conditions and develop game rules. Loops are introduced to simplify the implementation of repeated game behavior. Randomness enables the simulation of many life-like object movements. Students will learn and practice how to write concurrent, event drive and sequential processing algorithms for game objects. Fourth, students are introduced to the game development process of pre-production, production and post-condition phases and have them apply it to their own project. The topic of maintenance will be introduced with an emphasis on refactoring techniques, critical to improving the quality of game and providing flexibility for future updates. This course has a significant applied element. Game engine tools are used to develop prototypes of games and playtest them. Lab assignments are given throughout the
semester and a final project requires students to demonstrate mastery of all aspects of the course.

**Prerequisites:** MATH 21
Cross-listed with: CMPSC 208
Bachelor of Arts: Quantification
General Education: Quantification (GQ)
GenEd Learning Objective: Key Literacies

GAME 251: 2D Game Programming

3 Credits

Introduction to programming 2D Games with HTML5 and Javascript.
GAME 251 2D Game Programming (3) (GQ) An introductory course on web programming, GAME 251 introduces students to HTML Programming for online, browser-based, and mobile games. HTML is a versatile programming and markup language that allows for a lot of flexibility in game development. Throughout the course, students will learn HTML programming using the Canvas element, programmed in Javascript, using a variety of engines and technologies. Students will receive a primer in database management using MySQL, and will interface that database with their games using AJAX calls through PHP. The versatility and cross-platform nature of the HTML programming standard allows games to be compiled across numerous platforms seamlessly - a practice with which students will become accustomed.

**Prerequisites:** MATH 21
Bachelor of Arts: Quantification
General Education: Quantification (GQ)
GenEd Learning Objective: Key Literacies

GAME 420: Advanced Game Design

3 Credits

Develop the habits of successful game designers - playing games thoughtfully, and documenting those thoughts. GAME 420 Advanced Game Design (3) Topics covered in this class will include independent game development, marketing, scheduling, and analysis of contemporary games for design choices in something called a 'post-mortem.' This is done with the intent of training students in the habits of successful game designers- namely, playing games thoughtfully, and then documenting those thoughts. The successful student will have a clear and thoughtful record of at least 15 games he or she has played and analyzed with a critical eye by the end of the semester. These should be peppered with thoughtful critique on the games industry, and musings on trends in game design. This will of course become clear as the course progresses. The culmination of this course will result in a portfolio of at least 15 games he or she has played and analyzed with a critical eye by the end of the semester. These should be peppered with thoughtful critique on the games industry, and musings on trends in game design. This will of course become clear as the course progresses. The successful student will have a clear and thoughtful record of at least 15 games he or she has played and analyzed with a critical eye by the end of the semester. These should be peppered with thoughtful critique on the games industry, and musings on trends in game design. This will of course become clear as the course progresses. The culmination of this course will result in the creation of a professional, competent game designer portfolio and blog that can be used in search of a job, to represent oneself as an independent game developer, and to showcase the talents and skills developed over this course and its prerequisite.

**Prerequisite:** GAME 220

GAME 430: Simulations of Human Behavior

3 Credits

In Modeling and Simulation, students will develop an understanding of the systems, processes, tools, and implications of this field.

**Prerequisite:** 3 credits of programming; 3 credits of mathematics

Cross-listed with: DIGIT 430
GAME 434: Psychology of Gaming

3 Credits

Upper level course examining the core psychological principles as they apply to the topic of games. GAME 434 / PSYCH 434 Psychology of Gaming (3) This course looks at how the field of psychology can be applied to understand and improve the world of games. This requires the application of theories and research based in experimental, cognitive and several other disciplines within psychology, including but not limited to cognitive, social, motivation & emotion, and experimental psychology. By applying different theories within these disciplines we can start to understand how humans interact with games and in turn how games have evolved as a result. This course addresses an active research area in psychology, of broad interest to students in Psychology and other disciplines. The course will fulfill a 400-level requirement for students in the PSYCH majors and minors as well as those in the GAME minor. Students typically will be evaluated by exams, research project, in-class activities, homework, and article discussions.

**Prerequisite:** 3 credits of psychology or 3 credits of a gaming course

GAME 450: Advanced Game Programming

3 Credits

Autonomously generating object behavior and content in games. GAME 450 Advanced Game Programming (3) The course is developed in two parts, creating programs to automatically generate object behavior and world content. Students are first introduced to the mathematical basis of vectors and transforms. This is necessary to create engaging characters that properly display behaviors and interact with the player and the world. These behaviors can range from orientating towards the player or pursuing/fleeing from some object in the game. In the presence of obstacles these behaviors require path finding algorithms like A* in order to navigate through the world. Students then learn how to create challenges that adapt their difficulty level based on the user's proficiency and skill in the game. In order to reduce costs and meet the demand to get a product to market, the gaming industry is looking for ways to automate the content generation. Instead of hiring a room-full of artists to generate the layout of a city, a computer can be programmed to dynamically generate this content at run-time, saving not only the work-load of the artists, but also the storage space necessary for the representation of the city. An optimization method like genetic algorithms is presented so that dynamically generated content like the layout of buildings and streets in a city can be produced at run-time. From the beginning of video games mazes and labyrinths have been a common theme and one of the first examples of run-time generated content. Students are introduced to a variety of maze generation methods using a variety of methods. Fractal geometry is introduced to provide a powerful tool to recursively generate natural looking content like plants and terrain. The mathematical basis of chaotic systems provides the theoretical background necessary to understand the limits of these methods as well as how to apply them to create new content. In addition to the technical content, students are required to demonstrate effective communication skills in these disciplines. Students are required to read and report out on a research paper of historical note or in an emerging field in content generation. Finally, a final project in the course will demonstrate the application of two or more of the concepts covered in the class.
Prerequisite: GAME 250, CMPSC 122, and MATH 220

GAME 460: Video Game Lit Studies

3 Credits

A comparative look at the nature and history of video games as cultural artifacts, from Pong to contemporary role-playing. CMLIT 490 Video Game Studies (3) (BA) This course meets the Bachelor of Arts degree requirements. The video game industry is larger than the film industry, and yet the academic study of video games has only just begun. This course is a comparative introduction to the nature and history of video games as cultural artifacts, from Pong to online role-playing. It introduces students to academic discussion on and creative work in new digital forms including hypertexts, video games, cell phone novels, machinima, and more. Students will learn basic narrative theory, and study its impact on game studies and game production. They will survey major debates over the meaning and value of video games, and review its history from Pong to contemporary games, including online world-based games. The course extends students' skills in literary interpretation to a variety of new objects, and makes them aware of the role medium plays in aesthetic development and production. Students will leave with a far sharper understanding of how the interpretive tools used in the humanities can be extended to include new media, and with a sense of the historical role video games have played and will continue to play in global cultural production.

Prerequisite: GAME 160, GAME 140, or 3 credits in literature; Concurrent: GAME 160 or GAME 140 if desired
Cross-listed with: CMLIT 490
Bachelor of Arts: Humanities

GAME 480: Game Development Project

3 Credits

A team of students manages the production of a game from concept to implementation. GAME 480 Game Development Project (3) in this course students take the entire semester to creating a game that will be published. Students are assembled into teams and will be expected to create a game from conception to publication in a very short period of time. What will result from the completion of this course is a demonstration of the knowledge accumulated in previous GAME courses and in important components of your portfolio to enable you to obtain a job in the industry.

Prerequisite: 3 credits of 400 level GAME classes

GAME 495: Internship

1-18 Credits/Maximum of 999

Supervised off-campus, non-group instruction including field experiences, practicums, or internships. Written and oral critique of activity required.

Prerequisite: 3 credits of GAME courses. Prior approval of proposed assignment by instructor

Geography (GEOG)

GEOG 1N: Global Parks and Sustainability

3 Credits

This course uses parks and protected areas - both in the U.S. and globally - as a framework for exploring broad themes of sustainability, conservation, and socio-ecological systems. Case studies that exemplify U.S. and international parkscapes (i.e., parks and protected areas embedded within complex landscapes) are used to convey stories of evolving attitudes and approaches toward conservation and sustainability. These stories help explain the historical, transitioning, and future role of conservation in societies shaped by local ecologies, conflict, and change. The unique geographies of conservation parkscapes - past and future - reinforce and challenge a globally dynamic conservation discourse. Examining the sustainability of conservation activities themselves, as well as the socio-ecological systems in which they are embedded, can provide a lens through which we can begin to understand other cultures, aesthetic values and value systems, and the diverse ecologies of Earth. In this course, we will: - Explore the history of parks and protected areas globally, including the development of the U.S. National Park system, and the globalization of conservation and sustainability policies and approaches - Examine globally representative case-studies to assess how parks and protected areas are part of both social and ecological landscapes ('parkscapes') - Assess new challenges and opportunities for conservation in an era of rapid change and conflict - Evaluate the history, current socio-ecological condition, and future approaches in sustainability for a particular global parkscape By the end of the course students should be able to: - Describe why the idea of 'wilderness' is both influential and contested - Explain temporal and spatial trends in national and international conservation management - Compare and contrast contemporary conservation approaches - Illustrate a parkscape as a coupled socio-ecological system - Identify key drivers of future ecological change affecting conservation management

GEOG 2N: Apocalyptic Geographies: How can we prevent the end of the world?

3 Credits

This course explores various visions of the apocalypse and their relevance for addressing major contemporary social, ecological, and economic issues. These issues include global climate change, nuclear war, the growing refugee crisis, the breakdown of democratic governance, economic recession and forms of everyday violence and social fracture. Students will develop and employ critical and analytical thinking skills to engage a diversity of texts from the humanities (e.g., historical and literary accounts, graphic novels, films and other historical and contemporary media) and contemporary popular culture in order to situate these apocalyptic visions in particular historical, cultural, and
political contexts. Students will utilize integrative thinking skills and an interdisciplinary geographic approach to connect these visions with contemporary social issues in order to consider how we might address these complex problems while imagining and actualizing alternative futures. Students will practice global learning, drawing on course material that engages U.S. and cross-cultural perspectives in recognition of the global reach of the interconnected social, economic, political, and cultural systems that shape humanity's shared fate.

GEOG 3N: Food and the Future Environment

3 Credits

GEOG 3 introduces students to the multiple connections of people and the environment through the dynamics of food and the places where it is produced, processed, and consumed. It introduces an integrated human-environment perspective on food systems in the United States, with emphasis on the Northeast and Western U.S., as well as in diverse locations around the world. The course offers a global perspective on the major challenges and opportunities facing food systems, including the sustainability of agriculture, organization of global food systems and local food initiatives, food insecurity, and the influence of modern diets on human health. This course promotes critical thinking regarding key concepts in Environment and Society Geography such as coupled human-environment systems, the Anthropocene; anthropogenic landscapes and domestication; carrying capacity; ecological footprint; life-cycle analysis; globalization; urbanization, dietary change and land use; soils and society; environmental and social justice; climate change and resilience; agrobiodiversity and adaptive capacity; human-environment interactions involving vulnerability; regional analysis; geography and culture of food systems; development and food security; and social-ecological systems. Students are encouraged to examine their role and responsibilities for the sustainability of the social-ecological systems we inhabit and to take action in their own lives to contribute to a more equitable and sustainable environment. The course will provide students with the opportunity to read, learn, and debate the ways in which humans value, use, affect, and are affected by small-scale and large-scale human-environment interactions. It will provide skills for the critical analysis and evaluation of the ways in which humans have transformed the environment in different parts of the world. Students will also learn how to assess what future pathways are sustainable and ethically sound. One key course goal is to help students increase their sensitivity, awareness, and knowledge concerning the global and international context of human interactions with nature. Upon completion of this course, students will be able to:
1. Survey and analyze environmental resources in relation to systems of food production, land use, and consumption; 2. Survey and analyze how human food systems significantly alter the earth’s environmental systems and landscapes; 3. Use environment and society geography to understand the resilience of agri-food systems in contexts of climate change, human population changes, and socioeconomic, cultural and policy factors.

GEOG 6N: Maps and the Geospatial Revolution

3 Credits

The rapid evolution of digital mapping technology via personalized digital mapping applications and location-aware devices has completely transformed how we use place and space to make decisions about human and environmental problems. This course introduces the fundamentals of cartography, geographic information science, and associated technologies through mapping and spatial analysis to answer key human and environmental problems. The class explores the power and utility of geographic information to transform how we navigate, tell stories about data, and make decisions that impact people and the planet. The course also encourages students to become knowledgeable, critical, and ethical consumers of maps and geographic data produced by government agencies, industry, and the media. Hands-on laboratory exercises, individual creative mapping projects, and course lecture contents are designed to reveal the many ways in which geographic information can play a role in shaping contemporary society. In addition, key course elements focus on the diversity and growth associated with the geospatial industry, an industry that is expected to grow rapidly over the next twenty years. Students who successfully complete Geography 6N will be able to: - Describe and explain fundamental concepts in Geographical Information Science (GIScience) and related technologies for making maps and solving spatial analysis problems; - Explain how and why organizations create and use geographic data, including reference, thematic, and imagery sources - Demonstrate geographic information literacy to identify the kinds of geographic information needed for a particular task, determine whether needed data are available, use relevant technologies to acquire data, and to interpret and explain maps of the data critically; - Create digital thematic maps to tell stories about geographic phenomena

GEOG 10: Physical Geography: An Introduction

3 Credits/Maximum of 3

Survey and synthesis of processes creating geographical patterns of natural resources, with application of basic environmental processes in resource management. GEOG 010GEOG 010 Introduction to Physical Geography (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Introduction to Physical Geographysystematically examines the spatial patterns and interrelationships among physical
elements at the earth's surface. Particular emphasis is given to developing an integrative view of how atmospheric, hydrologic, geomorphic, and biotic processes control the patterns of climate, water, landforms, soils, and biota across a local-to-global continuum. Those physical elements that influence and/or are influenced by people are the primary focus of study. Physical geography does not simply discuss the atmosphere, hydrosphere, lithosphere, and biosphere in isolation; instead, it concentrates on understanding the interaction of these realms of the natural world. For example, the study of weathering processes demonstrates how the physical and chemical breakdown of Earth's surface material depends on the interaction of air, water, and biota with rock. The focus of physical geography is unlike the component disciplines from which it draws. On the one hand, meteorology focuses on the atmosphere above our heads. Hydrology focuses on water in isolation from people. Geology and soil science focus on the Earth beneath our feet. Biology and ecology focus on the plants, animals, and ecosystems in isolation from people. One the other hand, physical geography concentrates on the surface of the Earth where the atmosphere, hydrosphere, lithosphere, and biosphere intersect. Introduction to Physical Geography is concerned with the human habitat-the life layer in which humans interact with their natural world. Like all geography, five recurring themes permeate Introduction to Physical Geography: location, place, regions, movement, and human-environment relationships. Physical geographers not only are interested in where natural phenomena are located on Earth's surface, but also they want to know the answers to such questions as: 1. What is special about the physical processes that take place in a location? 2. How does the physical geography of a place relate to other places in the region? 3. How does energy and mass flow into and out of a region? 4. How do biophysical processes change as we move up and down spatial scales? 5. How do people influence natural processes? How do these processes influence people? Other disciplines typically do not cover these spatial and nature-society themes systematically. Physical geographers have developed and adopted many tools to address these themes. Maps are obvious choices, but geographers also use a wide array of photographic and imaging technologies to study the distribution of Earth processes and the processes themselves. They use geographic information systems and computer models to manipulate, display, and analyze spatial data. Introduction to Physical Geography acquaints students with many of these tools. When the above points are taken together, physical geography emerges as a unique field of science. Introduction to Physical Geography provides a learning experience that students can get in no other discipline-one that takes an integrated view that makes the nature environment relevant.

GEOG 30N: Environment and Society in a Changing World
3 Credits
GEOG 30N 'Environment and Society in a Changing World' introduces students to the relationships between humans and the natural environment, in addition to the theories and methods that geographers employ in addressing them. The course begins with an overview of theories and key concepts to examine the interactions between social and ecological systems, across settings in the United States and globally. The course will provide students with the opportunity to read and learn about the ways in which humans think about, use, and are affected by the natural environment. It will also provide skills for analyzing and evaluating the ways in which humans have transformed the environment in different parts of the world through the integration of knowledge from the natural and social sciences. This class is designed to address big questions in human-environment interactions at the present time, while drawing upon their histories and key conceptual ideas. 1. What is a human-environment system? How does the geographic discipline contribute towards understanding human-environment systems and sustainability? 2. Why do we conserve what we conserve? Is it possible to conserve natural resources and also meet human needs? 3. What are ways to manage the effects of economic development upon the natural environment? Is sustainable development possible? 4. How is climate change impacting social and ecological systems? Can we adapt to the impacts of climate change? One of the hallmarks of the discipline of geography is attention to how social and ecological processes interact and spread across spatial scales. This means that specific events, such as the consumption of particular product or the emission of greenhouse gases, connect sites within countries and across the globe. GEOG 30N meets the definition for both a US and international cultures course by emphasizing how current human-environment systems developed over time in the U.S. and internationally. GEOG 30N examines how various political, economic, and cultural factors influenced the creation of the different forms of human-environment systems that exist today. Further,
it teaches students to see nations, cultures, and social identities in relation to one another, exploring how decisions made in relation to a human-environment system in one place or by one group can impact other people or places.

Bachelor of Arts: Social and Behavioral Sciences

GEOG 40: World Regional Geography
3 Credits

World Regional Geography examines a world that is undergoing political, economic, social, and environmental transformations at many different spatial scales. Viewing content through the lens of the Six Essential Elements of Geography (National Geographic Society) and other geographic concepts such as scale, place, and human-environment interaction, this course examines international linkages, such as economic globalization, which help to forge a world community. The course also examines more regional and localized manifestations that contradict our understanding of a global community and examines a variety of regions’ physical systems, cultures, economic systems, environmental challenges, and political realities. Larger concepts such as North and South, developed and developing, and environmental degradation and climate change, take on new meaning when they are explored at a regional level.

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

GEOG 107N: Immersive Technologies - Transforming Society Through Digital Innovation
3 Credits/Maximum of 3

Immersive technologies are an emerging field. Although envisioned and available for several decades, technological challenges of the past made their application in education, research, and everyday life a rather specialized endeavor, restricted to research labs rather than being open to communities. This is changing with the advent of consumer grade VR headsets offered essentially by every major tech company and smartphones becoming devices to augment any physical reality. We refer to these technologies as xR as they comprise everything from augmented to virtual reality. This development is occurring at an incredible pace and is opening new opportunities for the integration of this technology into every aspect of human life. xR is revolutionizing how humans communicate, how we experience spatially and temporally remote places, how we are able to view, understand, and analyze data, and how we train people. Instead of interacting with data on a 2D desktop screen, researchers and decision makers can immerse themselves in virtual environments where geospatial data are represented in intuitive, immersive, and flexible ways. In parallel to developments in xR we are witnessing an incredible increase in creating content for immersive experiences; with the ready availability of massive amounts of environmental data (e.g., LiDAR) and efficient 3D modeling technologies (e.g., SketchUp, CityEngine), realistic immersive scenarios are easier to create than ever before. We are seeing a paradigm shift which enables new methods of environmental decision making from urban planning to climate change. The combination of xR and automated 3D modeling enables models of real-world places to be integrated within data visualization workbenches. This course will provide students with the basics of what xR technologies are and what their history is, it will connect xR to recent developments in 3D modeling and environmental sensing as two sides of the same coin in that one is focusing on content creation and the other on accessing content. The course will theoretically address what the key features of xR are and introduce students to core concepts such as immersion, presence, and reality-trade off. Furthermore, the course will provide students with hands on experiences to create their own xR experiences focusing on entry level technologies such as 360 cameras, modeling using SketchUp, photogrammetry techniques such as structure from motion mapping, and Unity, a game engine flexible to cater to a broad range of needs.

General Education: Social and Behavioral Scien (GS)
General Education - Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Integrative Thinking

GEOG 110: Climates of the World
3 Credits/Maximum of 3

Introduction to climatology, including principal processes of the global climatic system and their variation over space and time. GEOG 110

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

GEOG 110H: Climates of the World
3 Credits

Introduction to climatology, including principal processes of the global climatic system and their variation over space and time. GEOG 110

GEOG 115: Landforms of the World
3 Credits/Maximum of 3

Distribution of the world's landform features and mineral resources; their characteristics, causes, and significance. Practicum includes correlated field trips and laboratory studies. GEOG 115

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
GEOG 122: The American Scene

3 Credits

Historical perspectives on the social and cultural forces associated with the production of distinctive American landscapes. GEOG 122 The American Scene (3)(GH;US)(BA) This course meets the Bachelor of Arts degree requirements. The American Scene offers a broad introduction to the historical geography of the United States through analysis of distinctive elements of regional landscapes. Archival evidence and contemporary photography are utilized to assist in an understanding of ‘landscape’, ‘place’ and ‘region’, each important frames for geographical inquiry. It offers a humanistic perspective on the transformation of the United States from a land first occupied by Indian groups, then colonists from specific European realms, some supported by indentured or enslaved labor, as well as later immigrants in the national period, that pursue agricultural economies in an array of rural and urban settlement systems. Landscapes of modernity, associated with manufacturing, urban growth and new transportation systems, are also considered, as well as the transformation of landscapes now emerging in the post-industrial era. At the conclusion of the course, students should have a deeper understanding of some of the issues involved in the analysis of place at a variety of spatial scales, and a better sense of the historical layering in the landscapes that they encounter each day and on their travels. The course is organized regionally and temporally. Case studies are drawn from a dozen regions, each emphasizing a different historical moment in the transformation of landscape since the end of the last Ice Age. Some examples draw on material at the scale of a single house or farm and others at the level of a multi-state industrial corporation such as US Steel in the early twentieth century. Any student interested in how the distinctive landscapes of the United States evolved to this point should enroll in The American Scene. It draws on scholarship in historical and cultural geography, as well as architectural history and art history.

Bachelor of Arts: Humanities
United States Cultures (US)
General Education: Humanities (GH)

GEOG 123: Geography of Developing World

3 Credits

Patterns of poverty in poor countries; conventional and non-conventional explanations; focus on solutions; case studies of specific regions.

Bachelor of Arts: Other Cultures
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
General Education: Social and Behavioral Sciences (GS)

GEOG 124: Elements of Cultural Geography

3 Credits

Locational analysis of changes in non-Western cultures. Problems of plural societies, economic development, population growth, and settlement. GEOG 124 Elements of Cultural Geography (3) (GS;IL)(BA) This course meets the Bachelor of Arts degree requirements. Elements of Cultural Geography, provides an overview of the impact of cultural processes at multiple scales, from the global to the local. Class time will include lectures and discussions in relation to how social identities, such as race and class, just to name a few, impact and are impacted by geographic concepts such as landscape, place and space. The course aims to survey and explore a range of perspectives on the nature of human integration with the environment and the manifestation of human culture on the landscape. The course will engage philosophical and metaphysical questions in addition to those of landscapes and place. The ultimate objective is for participants to develop a deep and multidimensional understanding of how social identities and the environment are inter-related. This course is a selection for majors; it has no prerequisites and is not a prerequisite for any other course. It provides a foundation for understanding human-environment interactions at a global scale, including the regional interactions involved.

Bachelor of Arts: Other Cultures
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
General Education: Social and Behavioral Sciences (GS)

GEOG 124H: Elements of Cultural Geography

3 Credits

Locational analysis of changes in non-Western cultures. Problems of plural societies, economic development, population growth, and settlement.

General Education: Social and Behavioral Sciences (GS)
Honors

GEOG 126: Economic Geography

3 Credits

The geographic location and organization of economic activities and outcomes at global, national, regional, and local scales. GEOG 126 - Economic Geography (3) (GS;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is an introductory course on economic geography and serves as background for any course on international economics, economic development, international political economy, and international business management. It will provide a balanced view of contemporary globalization processes across the world through a geographical lens, focusing on a wide range of topics including the history of globalization, spatial structures of firms and business, international trade, and state interventions based on detailed case studies. The course consists of lectures, in class discussions, films, student presentations and exams.

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)
General Education: Social and Behavioral Sciences (GS)

GEOG 128: Geography of International Affairs

3 Credits

Contemporary international affairs in their geographical setting; geographic elements in the development of national power, political groupings, and international disputes. GEOG 128

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
General Education: Social and Behavioral Sciences (GS)
GEOG 160: Mapping Our Changing World

3 Credits

Fundamental concepts of GIS, cartography, remote sensing, and GPS in the context of environmental and social problems. GEOG 160 Mapping Our Changing World (3) (GS)(BA) This course meets the Bachelor of Arts degree requirements. Mapping involves producing and using geographic data. Geographic data specify the locations and characteristics of people, the objects people create, and the various phenomena of the natural environment with which people interact. Geographic data are produced by several methods, including land surveying, aerial photography and photo grammetry, satellite remote sensing and positioning systems, and social surveys such as those conducted by the U.S. Census Bureau. Geographic information systems (GIS) and related technologies are used to turn data into maps, tables, and other kinds of information people need to make informed decisions. In a rapidly changing world, detailed, up-to-date geographic data are indispensable for governance, for commerce, and for research intended to improve our understanding of social and environmental systems. GEOG 160 helps students begin to develop the knowledge, skills, and dispositions that constitute geographic information literacy - the ability to ‘recognize when information is needed and ... to locate, evaluate, and use effectively the needed information’ (ALA 1989). Geographic information science (GIScience) is a search enterprise concerned with the design, development, and use of geographic information technologies to help institutions and individuals not only respond to, but ideally to predict, environmental and social change. GEOG 160 is an introduction to GIScience that provides students with the technical and contextual knowledge they need to become knowledgeable consumers of geographic data and information produced by government agencies, industry, and popular media. The course is intended to be of value not only to future specialists in the geographic information enterprise, but also to every student who is concerned with social and environmental research and policy-making. Like other information technologies, GIS is evolving rapidly. People who work with GIS understand that learning is a way of life, not just a prelude to a career. With this in mind, GEOG 160 aims not only to help students learn about geography and GIS, but also to develop the disposition to become effective lifelong learners.

Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)

GEOG 161: Applied Geographic Information Systems

1 Credits

An introduction to GIS (Geographic Information Systems) with emphasis on applications and analysis. GEOG 161GEOG 161 Applied Geographic Information Systems (1) GEOG 161 is a one-credit two-hour laboratory course to be taken concurrently with GEOG 160, Mapping Our Changing World. GEOG 160 and GEOG 161 will be offered concurrently as a required course pair for the proposed Environmental Studies Option within the B.S. Science major (SCNBD) at Behrend College. The courses can also be choices in the ‘Supporting Courses and Related Areas’ list for the B.S. Science major’s General, General Pre-certification, and Earth & Space Science Pre-certification options. The purpose of the course is to familiarize students with GIS and provide them with the ability to use GIS software commonly used by industry, academia, and government agencies. GEOG 161 will provide students with training and experience in computer-based practical applications of concepts and theory learned in GEOG 160. They will analyze and solve ‘real-world’ problems using hands-on, problem-solving, and inquiry-based approaches to learning. Students will work individually and in small teams in a GIS software-equipped computer laboratory. Students will be evaluated based on the quality of laboratory reports/assignments and on a larger research project with a presentation conducted during the final five weeks of the semester. GEOG161 will be offered at least once per year. Enrollment is expected to be 8-20 students.

Prerequisite: or concurrent GEOG 160

GEOG 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

GEOG 197F: Special Topics - InterDomain

3 Credits

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GN/GS GenEd course.

General Education: Natural Sciences (GN)
General Education: Social and Behavioral Scien (GS)
General Education - Integrative: Interdomain

GEOG 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Prerequisite: prior approval of program

International Cultures (IL)

GEOG 210: Geographic Perspectives on Environmental Systems Science

3 Credits

This lecture, lab and field-based course explores Earth’s physical environment and its interactions with human activities. While it is intended primarily for Geography majors and minors, the subject matter and approach are sufficiently broad to be relevant to any student with interests in the environmental and natural sciences. We survey the geographic patterns and physical processes attending Earth’s environmental and landscape systems; its climate, hydrology, landforms, soils and vegetation, and their mutual interactions of energy and mass (water, sediment). We adopt both spatial ‘map-able’ and temporal perspectives; for example, the evidence for, causes of, and impacts from, past and contemporary environmental changes such as glaciations, pluvials (wet periods), and warming. An important emphasis involves human interactions with the natural environment; how human activities are constrained by, yet also constrain processes and alter features of, the physical landscape across spatial and temporal scales. Representative topics include the burning of fossil fuels and emissions of greenhouse gases and particulates into the atmosphere, natural gas fracking and earthquakes, river diversion and dam construction, ground-water withdrawal and land subsidence, urbanization and the ‘heat island’ effect, land clearance and deforestation, irrigated agriculture, wildfire fire, the introduction of invasive species, and coastal over-development. Our examples will come from across the globe, from areas as diverse as tropical oceans to the polar deserts. An important outcome of the
course is that students become better scientific observers of Earth’s environmental system and its spatio-temporal variations.

**RECOMMENDED PREPARATIONS:** (ENGL 15 or ENGL 30 or ENGL 137 or CAS 137 or ESL 15) or EMSC 100
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

GEOG 220: Perspectives on Human Geography

3 Credits

Why are some countries richer than others? How do consumption patterns in one part of the world affect ‘far flung’ peoples and environments? How does global warming shape land use patterns and rates of hunger across different regions, and what are the political implications of these patterns? Why do rich economies around the world increasingly depend on the recruitment of low-wage immigrant workers, both ‘legal’ and ‘illegal’? How do race and gender shape access to services, housing and employment in many large cities? In what ways does drone warfare change the nature of state power in the 21st century? These kinds of questions are ones that animate the work of human geographers. The purpose of this course is to introduce you to the breadth of contemporary human geography. We will explore both the range of topics that geographers study, and some of the key concepts and methods used to study geographic topics. Major themes will investigate how cultural, economic, political, and environmental interactions relate to geographic processes. These general topics will be explored through a detailed examination of case studies in the United States and across the globe.

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)
General Education: Social and Behavioral Sciences (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking

GEOG 230: Geographic Perspectives on Environment, Society and Sustainability

3 Credits

Recommended Preparations: Completion of a basic rhetoric and composition course (ENGL 15; ENGL 30; ENGL 137; CAS 137; ESL 15)
OR completion of College of Earth and Mineral Sciences First-Year Seminar EMSC 100 is recommended. In a rapidly changing world, detailed, up-to-date geographic data are indispensable ingovernance, commerce, security, public health, and many other domains. These data are also needed to support research intended to improve our understanding of social and environmental systems. Making data useful in these domains requires methods and tools that transform data to information and that make that information accessible where and when it is needed. Geographic data specify the locations and characteristics of people, and objects both natural and anthropogenic in nature. Geographic data are produced by several formal methods, including land surveying, aerial photography and photogrammetry, satellite remote sensing and positioning systems, and social surveys such as those conducted by the U.S. Census Bureau. They also are derived through informal methods that rely on the vast and growing array of location-enabled devices including cell phones, smart watches, credit card transaction records, and RFID tags on packages, along with volunteers compiling input to projects such as the Open Street Map. Geographic information systems (GIS) and related technologies are used to turn those data into the information people need to make informed decisions. Maps and related graphics generated on a wide array of devices from cell phones to large touch-screen displays then make the information more accessible and by doing so enable those decisions. Geographic Information Science (GIScience) is concerned with the design, development, and use of geographic information and technologies (also called geospatial technologies) to help institutions and individuals respond to, and ideally to predict, environmental and social change. This course provides a broad, practical foundation of Geographic Information Science methods and technologies
for aspiring Geography majors and students pursuing the Geographic Information Science minor or undergraduate certificate.

GEOG 293: Honors Experiences in International Service Learning

1-3 Credits/Maximum of 3

Classroom instruction with supervised student activity on an honors international community service project. GEOG 293H GEOG 293H Honors Experiences in International Service Learning (1-3) GEOG 293H provides students with activities that integrate academic study with community service in an international context. The aim of service learning is to enrich traditional classroom-based education by getting students into a community, thereby engendering civic responsibility and simultaneously strengthening communities. GEOG 293H has five objectives: (1) to develop understanding of a set of issues in community development; (2) to learn and apply skills associated with those issues; (3) to develop and apply communication skills by speaking, writing, and/or desktop publishing; (4) to gain international experience at the community level; and (5) to reflect on personal and career interests in international development, science, the environment, public policy, or related areas. Thus, students will read, write, and talk about a set of issues of importance to a foreign community and engage in a project in that community. The specific service-learning projects will change each semester, although some projects will be ongoing and offered multiple times. Students can take GEOG 293H in one or more than one semester, to a maximum of four offerings. Depending on the topic of the international service-learning project, GEOG 293H can complement courses in most colleges and their majors. The course is available to all Geography majors as elective credits; it is also available to all Geography Minors for credit toward the minor. Students will be evaluated on three of the five course objectives: (1) understanding of the issues, (2) learning and application of skills, and (3) application of communication skills. Although exact procedures for determining grades will vary with instructor and service-learning project, the basis for grades will include a combination of written work, oral presentations, in-class participation, and outside-class participation.

Prerequisite: sophomore standing

Honors

GEOG 294: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

GEOG 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

GEOG 298: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Social and Behavioral Sciences

GEOG 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Prerequisite: prior approval of program

International Cultures (IL)

GEOG 301: Thinking Geographically

3 Credits

Learning to think geographically. GEOG 301 Thinking Geographically (3) The course explores the process of thinking geographically. As a discipline that draws on elements of four intellectual traditions - the physical sciences, the social sciences, the information sciences, and the humanities - geography offers an extensive palette of approaches to the study of the interactions among people, places, and environments. In addition to those traditions, geography also draws on key themes: setting events and activities into multiple spatial and temporal contexts; setting events and activities into multiple spatial scales from the local to the global; seeing complex, multi-way interactions between human and physical systems; recognizing the interconnectedness between places. In terms of methods, the fundamental building block is the idea of geospatial location and the associated spatially- or geo-referenced data. Data, both quantitative and qualitative in character, is increasingly available in terms of amounts and quality. Students must come to appreciate and be able to use this powerful way of thinking about the world. GEOG 301 assumes a beginning understanding of geography, in terms of basic content knowledge, and builds an understanding of how to think geographically, how to ask geographic questions, how to find geographic answers, how to assess the quality of those answers, and how to present and communicate those answers convincingly and compelling in multiple formats. Students will learn how to think geographically and to appreciate the power, applicability, and limitations of the geographic approach. Each year the course is organized around a significant contemporary problem as a commonly shared case study. Students will work in small groups to analyze the case study, presenting their own portfolio of work for 60% of the course grade and collaborating with group colleagues for a collective presentation for 40% of the grade. Work will be submitted in stages through ANGEL. GEOG 301 is required of all geography majors and will be offered Fall and Spring of each academic year with an annual enrollment of approximately 120 students. Preference will be given first to declared Geography majors, then to Geography minors, before places are offered to students from other programs. Geography 301 is a bridge between the knowledge that comes from the broad-based introductory geography courses and the detailed understanding that comes from the focused, advanced-level geography courses. It enables students to learn about and to practice geographical thinking in real-world contexts.

Prerequisite: GEOG 010, GEOG 020, GEOG 030, Prerequisite or concurrent: GEOG 160

GEOG 308: Research and Qualitative Inquiry in Geography

3 Credits

This course examines the theory and practice of research in geography, with particular emphasis on qualitative inquiry commonly used by human as well as environment-society geographers. Students will explore fundamental debates regarding methods and knowledge claims
that underlie the research process. Students will also gain hands-on experience developing research questions and using secondary scholarly literature and primary data to explore their question(s) in written and oral formats. Particular emphasis will be paid to the ethics and practices associated with qualitative methods, including the approaches taken by geographers in the collection and analysis of interview, observational, and textual data. Course Objectives and Learning Outcomes By the end of this course students will be able to: - Explain and compare models of knowledge underlying distinct methodological approaches in Geography - Describe research design principles commonly used in qualitative research - Evaluate the appropriate use of interview, observational and textual sources of primary data - Employ qualitative data collection methods to collect interview, observational and textual data. - Explain the ethical dimensions of qualitative research and assess strategies to navigate these constraints both practically and ethically - Find and appraise scholarly, peer-reviewed literature in relation to the student’s research topic - Develop a research question, justify it in relation to scholarly literature, and mobilize primary data to provide evidence for your analysis of the question. - Communicate research and analysis in written and oral formats.

GEOG 310: Introduction to Global Climatic Systems

3 Credits

This intermediate-level course in Climatology emphasizes geographic patterns of interannual climate variability (climate variations) and physical processes responsible for those variations (climate dynamics). Interannual climate variations include regional- to large-scale anomalies of temperature, precipitation, cloud cover, etc., that manifest as extreme weather (drought, floods, heat and cold waves, etc.). The physical processes associated with these fluctuations include the following: interactions among climate-system components (atmosphere, biosphere, cryosphere, hydrosphere); external forcing (e.g., solar variations, volcanic activity); and long-distance interactions involving coupled atmospheric-oceanic circulations, or teleconnections (El Niño Southern Oscillation (ENSO), the North Atlantic Oscillation (NAO), the Arctic Oscillation (AO), and the Pacific-North America (PNA) pattern). Climatic teleconnections manifest shifts in the atmospheric pressure ‘centers of action’, storm tracks, long waves, jet stream positions, etc. In addition to the study of these climate patterns and processes, the course examines the role of human activities in climate, particularly ‘global warming’, desertification, deforestation and afforestation, urbanization, irrigation for agriculture, and aviation impacts. In this regard, a key issue that is addressed is the potential role of human activities on the frequency and intensity of teleconnections, such as ENSO, and of severe storms (thunderstorms, tornadoes) and hurricanes; possibly the result of modifications to the oceanic Thermo-Haline Circulation. Students write a term paper, as well as critiques of a number of published articles relating to the above topics in climate dynamics. There is a mid-term (essay) exam but no final exam.

Prerequisite: GEOG 010 or METEO003

Writing Across the Curriculum

GEOG 311: Landscape Ecology

3 Credits

This course examines the ways in which spatial patterns and spatial processes operate in an ecological context. GEOG 311GEOG 311 Landscape Ecology (3) Landscape ecology is an interdisciplinary field that incorporates the tools and theoretical frameworks of geography, ecology and earth sciences. The focus of landscape ecology is on the controls, interactions and outcomes of spatial patterns and spatial processes on ecological dynamics at large spatial scales. Ecological systems are patterned in space by a wide range of interacting physical, biological and human processes. Spatial arrangement and spatial dynamics influence a broad array of ecological processes, such as the flows of energy and nutrients, dispersal and persistence of aquatic and terrestrial organisms, and the spread and impact of natural disturbances. In this course, students will explore the methods, theories, approaches and practical applications of landscape ecology as a framework for understanding landscape dynamics and interactions and how to apply this information for landscape management. Particular emphasis is placed on how humans have modified landscapes and how species,
ecological communities, and ecosystems have responded to these changes.

**Prerequisite:** GEOG 314, BIOL 110, FOR 308 or W F S209 or by permission

GEOG 313: Introduction to Field Geography

3 Credits

Introduction to the methods and techniques for collecting spatial and environmental data for physical geography and ecological studies. GEOG 313 introduces geoscientific methods used to acquire primary data from field locations. Aspects of physical, chemical, biological, and cultural factors are examined. Fieldwork is an important component of research and it involves collecting and analyzing data, handling logistical concerns, developing sampling strategies and techniques, and addressing quality assurance and archiving issues. The course objectives are: to explore methods used to collect, analyze, and interpret field data; to expose students to techniques for sampling physical (geomorphologic, topographic, hydrologic), chemical (water and soil), and biological (flora and fauna) factors; and to explore ways to use field data to interpret geographical and ecological questions and hypotheses. Evaluation involves preparation of written laboratory reports, assignments, and tests. The course is offered every Fall semester with enrollment limited to the number of students supported in a laboratory section.

**Prerequisite:** GEOG 160
Bachelor of Arts: Social and Behavioral Sciences

GEOG 314: Biogeography and Global Ecology

3 Credits

Dynamics of plant and animal distributions on global, regional, and local scales; their causes and consequences.

**Prerequisite:** GEOG 010 or BIOL 110 or equivalent
Bachelor of Arts: Social and Behavioral Sciences
General Education: Natural Sciences (GN)

GEOG 315: Landforms and Geomorphic Systems in the Anthropocene

3 Credits

Geography 315 builds on concepts presented in the introductory physical geography course to explore the subfield of geomorphology from a geographic perspective. It surveys the various processes shaping Earth's surface and the landforms resulting from those processes. The course relates these processes and landforms and their connection to human activity on Earth's surface. By taking this course, students will be able to: 1. recognize basic geomorphic processes and the resulting landforms and landscapes; 2. identify the observations and measurements used to understand geomorphic processes and landforms; 3. explain the implications of human use and livelihood on Earth's landforms and landscapes. For students who are not geography majors, GEOG 315 may satisfy a General Education Natural Science requirement or may be used as a Natural Sciences selection for students pursuing a Bachelor of Arts degree.

**Prerequisites:** GEOG 210 or GEOG 10
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking

GEOG 320: Urban Geography: A Global Perspective

3 Credits

For the first time in human history, urban dwellers came to outnumber rural residents in the year 2000. The influence of cities extends to nearly every point on the globe. Urban areas, however, differ dramatically in their physical structure, economic base, governance patterns and the lived experiences of their residents with diverse work patterns, striking inequalities in living conditions and varied cultural expression. In short, contemporary cities are vibrant and complex phenomenon formed by conflicting social forces and economic processes. This course examines urban settlements and analyzes the processes of urbanization from a global perspective.

**Prerequisite:** GEOG 20 or GEOG 220
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)

GEOG 324: Place, Space and Culture

3 Credits

What is culture? Is it good literature, music, art and food? Or is it a full range of learned human behavior? Culture is in itself a very exciting topic; it invokes diverse imaginaries of life, livelihoods, ways of living, languages, and forms of entertaining, consuming, playing, and eating. In this course, we will delve deep to understand the 'how' and 'why' of culture, that is, how is a particular cultural landscape, a mode of living, produced and why? Most importantly, this course will examine how culture is not a stand-alone concept but rather a phenomenon that intersects with other social processes such as politics and economics. This course aims to survey and explore a range of perspectives on the nature of human integration with the environment and the manifestation of human culture on the landscape. The course will engage philosophical and metaphysical questions in addition to those of landscapes and place. The ultimate objective is for participants to develop a deep and multidimensional understanding of human-environment relations, and the manifestation of human activity on the landscape. Learning Outcomes: Through taking this course, students will be able to: 1. analyze the major themes and debates within cultural geography; 2. interpret representations of landscape, space and place in a variety of textual materials, such as academic readings, films, novels, newspaper articles and art; 3. evaluate the landscape, space and place as an expression of cultural forces.

**Prerequisites:** GEOG 220 or GEOG 20 or GEOG 2N
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)
General Education: Social and Behavioral Sciences
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking
GEOG 326: Geographic Perspectives on Economic Systems

3 Credits

This course builds on concepts presented in the introductory human geography course to explore the subfield of economic geography. It serves as a foundation for courses on economic development, political economy, and other offerings in geography. It will provide a balanced view of contemporary economic processes across the world through a geographical lens, focusing on a wide range of topics including the history of globalization, spatial structures of firms and businesses, international trade, and state interventions. The main objective of this course is to give students access to a geographer’s lens for analyzing, interpreting, and critiquing information related to the economy. By the end of the course, students should be able to evaluate the role of different abstract principles in the creation of the economic landscape and to incorporate important critiques of these abstractions into their understanding of how and why uneven development is produced in economic systems. This course will also develop students’ skills in formulating and presenting written and oral arguments based on their own knowledge in conjunction with various reference materials.

Prerequisite: GEOG 220 or GEOG 20

GEOG 328: War, Peace, and Diplomacy: Understanding Contemporary Geopolitics

3 Credits

This course expands on concepts presented in the introductory human geography course, understanding geopolitics and international relations through an examination of the spatial relationships among political processes and institutions. It explores the problems, promises and paradoxes of international violence and the efforts to address violence through human rights initiatives and international peace movements. Particular emphasis is given to developing an integrative view of how global, national and local scale processes interact to produce patterns of peace and conflict. The course analyzes how individuals, the state and other political actors engage with geography to produce violent or peaceful outcomes. GEOG 328 does not simply explore issues of violence and peace from a ‘top-down’ perspective that focuses on the nation-state and international, state actors. Rather, it focuses on the multiplicity of perspectives and actors that come together to create violent or peaceful conditions. As a result, this course explores violence and the broader movement to address violence through human rights initiatives. We will explore violence and peace in the 20th and 21st centuries, the ways the organization of space and place is linked to violence and peace, and how international efforts to address violence and war are linked through time and space. This course also dissects the definition of human rights, the idea of ‘just war’ and the way peace movements may both sustain and undermine efforts at ending violence. Course Objectives: The overarching goal of this course is to educate us about the legacies of violence and the struggle to construct a more just and peaceful world. At the end of the semester students should be able to: 1) Define and articulate different notions of violence and recognize how the definition of violence is related to diplomatic efforts at addressing human rights violations. 2) Understand the relationship between violence in one area of the world and resulting broader geopolitical power dynamics, especially the human-territorial considerations of violence and peace. Learning Outcomes: At the end of this course students should be able to: 1) Identify and define structural violence. 2) Explain the differences between positive and negative peace. 3) Define human rights, and explain their connection to geopolitics. 4) Explain how truth processes work, and identify their strengths and limitations. 5) Identify how the definition of peace changes at different scales.

Prerequisite: GEOG 220 or GEOG 20

GEOG 330N: Political Ecology

3 Credits

This course introduces students to political ecology as one approach to advanced human-environment studies in geography. Political ecology is an interdisciplinary approach that combines environmental justice, cultural ecology, and other related approaches to undertake an integrated, holistic assessment of the relationships between social and ecological change. In particular, it analyzes the power dynamics at play in social and ecological marginalization and change; the social issues surrounding conservation of protected natural areas and species and conflicts over natural resources; the underlying causes of environmental conflicts; and issues of justice and distribution as they relate to the production and consumption of environmental goods and services. Students will gain familiarity with a wide range of theories and methods central to contemporary human-environment geography, such as Marxist political economy, Foucauldian governmentality, feminist intersectionality, ethnography, and land change science. Students will increase their knowledge of the world in general, and of approaches to the challenges of environmental policy in particular, by learning how these theories and methods have been put to use in the analysis of case studies from many different countries and continents. They will develop their ability to conduct independent research, work collaboratively, and present their thinking verbally and in writing through a variety of exercises and assignments. Upon completing this course, students will be able to: 1. understand key theories in political ecology 2. evaluate contemporary debates in human-environment studies using political ecology thinking 3. apply political ecology theories and concepts to relevant topics 4. use integrated thinking across the natural and social sciences to analyze and produce possible solutions to complex human-environment challenges

Prerequisite: GEOG 230 or GEOG 30

Bachelor of Arts: Natural Sciences
Bachelor of Arts: Social and Behavioral Sciences
General Education: Natural Sciences (GN)
General Education: Social and Behavioral Sciences (GS)
General Education - Integrative: Interdomain
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking

GEOG 332N: Science and policy of global greenhouse gas emissions and management

3 Credits

This interdomain course introduces students to the science and policy of greenhouse gas emissions. The course focuses on emissions from natural sources, energy production and food production. Policy components will introduce students to the fundamentals of environmental policy and examine key policy options for mitigating and managing emissions. Global in scope, the course will also address how emissions and policy options differ in developed and developing countries. Topics will include overviews of the global carbon cycle, agriculture and land use change emissions, history of global energy use
Prerequisite: ENGL 015.
Cross-listed with: ANSC 332N, METEO 332N
General Education: Natural Sciences (GN)
General Education: Social and Behavioral Scien (GS)
General Education - integrative: Interdomain
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Soc Resp and Ethic Reason

GEOG 333: Human Dimensions of Natural Hazards

3 Credits

An introduction to natural hazards, integrating physical and social science perspectives. GEOG 333 Human Dimensions of Natural Hazards (3)(BA) This course meets the Bachelor of Arts degree requirements. Natural hazards - such as earthquakes, tsunami, volcanoes, and floods are not simply forces of nature. Their impacts depend on the interaction between the hazardous events and the characteristics of people, their communities, and the human systems in which they operate. The physical dimensions of natural hazards require knowledge of physical science, and the human dimensions of natural hazards call for knowledge of social science. Nevertheless, understanding natural hazards means not only that students know the physical and social sciences, but also that they know how nature and society work together to increase or decrease potential harm posed by these phenomena. This course introduces students to the topic by surveying the range of natural hazards and by applying important social science perspectives, such as risk, vulnerability, and the true costs of hazards, to each of the hazards. Because the study of natural hazards is interdisciplinary, readings, lectures, and discussions address crucial aspects of both natural and social sciences. GEOG 333 has two goals: (1) to develop understanding of a set of issues related to the human dimensions of natural hazards; (2) to develop and apply communication skills by discussing, writing about, and presenting on natural hazards. The specific content of the course will change with the instructor, but the focus on interactions between the natural and human worlds and on skill-development in writing and speaking will be constant. Students will be evaluated on both the course goals: (1) understanding of the human dimensions of natural hazards; (2) application of communication skills. Although exact procedures for determining grades will vary with instructor, the basis for grades will always include a combination of written exams based on lectures and readings, oral presentations and papers, and in-class discussion and participation.

Prerequisite: junior or senior standing
Bachelor of Arts: Social and Behavioral Sciences

GEOG 361: Cartography—Maps and Map Construction

3 Credits/Maximum of 3

The art and science of creating small-scale maps as a medium for communication and research. GEOG 361 GEOG 361 Cartography - Maps and Map Construction (3)(BA) This course meets the Bachelor of Arts degree requirements. Mapping is crucial to exploring and understanding distributions of geographic phenomena. It is also an important phase of many database-intensive analyses because a map is often the best way to visualize results and show them to others. Emphases in this course will be on designing and producing both thematic and reference maps that use symbols and visual hierarchies which allow the content of the maps to be readily understood. In addition to principles of graphic design, students learn about map projections, generalization, and data classification, with the objective of becoming proficient mapmakers. Hands-on computer work for lab sections will involve working with varied digital data sources using GIS software. Maps are often built from existing data created by government mapping agencies, stored as geographic information systems (GIS) databases, and based on remotely-sensing imagery. The prerequisite for GEOG 361 is the 100-level mapping course covering basic principles of these technologies and data sources. The course is typically offered once a year. Evaluation is based on written exams and mapping projects that students produce to map location information and represent social and environmental data.

Prerequisite: GEOG 160
Bachelor of Arts: Social and Behavioral Sciences

GEOG 362: Image Analysis

3 Credits/Maximum of 3

Introduction to the basic principles of remote sensing, and the analysis of aerial and satellite data. GEOG 362 GEOG 362 Image Analysis (3)(BA) This course meets the Bachelor of Arts degree requirements. Geography 362 is a course designed to introduce students to the field of remote sensing. Modern remote sensing is a multi-disciplinary and many-faceted subject encompassing knowledge from a broad array of areas. Remote sensing has steadily grown in importance since the early 1970s and continues to expand as sensing technology improves, as imagery becomes cheaper, as coverage becomes more widespread and as good software for processing the data become readily available. This course is not meant to be an exhaustive treatment of remote sensing. Rather, it is designed to provide an overview of the field. The field of remote sensing is vast and includes several inter-related themes. Remote Sensing as a science primarily involves the extraction of information contained within energy. The engineering component of remote sensing involves the design and construction of instruments and systems capable of capturing and recording energy from a target. Remote Sensing as a vital tool is expressed in myriad applications, from land cover change analysis to weather forecasting. This course will be administered in two parts - The first seven weeks of the semester will focus on three broad topics (Fundamental Principals of Radiative Transfer and Energy-Matter, Remote Sensing Systems, and Applications). This part of the course will expect student to grasp the major laws describing the energy-matter interactions. Recitations will be devoted to reviewing homework problems designed to solidify understanding of radiation concepts central to the construction of remote sensing imagery. The remainder of the semester will be devoted to image analysis with an emphasis on digital remote sensing, i.e. analyzing data in digital form using computer software. This aspect of the course will have a practical focus on using imagery to analyze land cover and to construct land cover maps, with the expectation that students will become proficient in the handling and processing of remote sensing imagery. Consequently, laboratory work will play a major role in this component of the course.

Prerequisite: GEOG 160
Bachelor of Arts: Social and Behavioral Sciences

GEOG 363: Geographic Information Systems

3 Credits/Maximum of 3

Principles and use of geographic information; emphasis is on data acquisition and techniques for computer-aided analysis.
Prerequisite: GEOG 160
Bachelor of Arts: Social and Behavioral Sciences

GEOG 364: Spatial Analysis
3 Credits/Maximum of 3

Geographic measurement, scaling, and classification; analysis of spatial pattern and structure; geographic covariation and autocorrelation. GEOG 364GEOG 364 Spatial Analysis I (3)(BA) This course meets the Bachelor of Arts degree requirements. Geography 364 is an introduction to spatial analysis that focuses on statistical methods for geographers. You will have an opportunity in this course to: learn how to use statistics in your own work; learn how to use descriptive statistics in everyday life. The statistical methods you will learn to use are simple descriptive statistics that we use to summarize complex data, as well as the associated charts, diagrams and maps. From there, we will move on to look at chance and probability theory, and simple inferential statistics. Throughout the course, we will be concerned with everyday statistics, primarily as it relates to geography. Contemporary media are saturated with statistics, from reports of climatic change, through latest presidential election polls, to batting averages and yards-gained statistics in sports. A lot of the presentation of these statistics is lazy or inaccurate, and often misleading (whether, deliberately or not), and a major theme of this course will be to look at the issues involved. During most lectures we will spend some time working with sample problems, and to discuss practical applications. These activities are meant to build a deeper understanding of the subject matter but it also relies heavily on your active participation. You will often have work to prepare before lectures or other types of lecture homework. Labs will give you experience with statistics functions in Excel before moving onto SPSS as well as other statistical software, and also with mapping statistical data using GIS software.

Prerequisite: STAT 200 and 6 credits in social science
Bachelor of Arts: Social and Behavioral Sciences

GEOG 365: Introduction to GIS Programming
3 Credits

The rate at which geospatial data are being generated exceeds our ability to analyze them. These developments are quickly leading toward a data-rich but knowledge-poor environment. New challenges arise from an unprecedented access to massive amounts of data. Specialized algorithms are needed to address these scientific and computational challenges and provide innovative and effective solutions to analyze these large, often multi-modal, spatio-temporal datasets generated by high-resolution sensors or computational models. Traditional computational frameworks are specialized to serve a single science application, and are not flexible to drive diverse models on changing computational platforms. GEOG 365 addresses this new challenge by introducing specialized algorithms and data structures to analyze and visualize large and rapidly changing Earth science data. The emphasis of this course is on specialized data mining algorithms suitable for spatial data and spatio-temporal data with geoscience and Earth science applications. This course teaches how to automate GIS tasks using scripting languages. Automation can make work easier, faster, and more accurate, and knowledge of a scripting language is a highly desired skill in GIS analysts. This course dedicates time to programming fundamentals so that the skills learned can be applied to languages. Increased ability to adapt to new technologies and programming languages will be the greatest benefit students gain from this course. Course Objectives and Learning Outcomes By the end of this course, students should be able to: Design and implement solutions using scripting languages to automate geoprocessing tasks. Demonstrate an understanding of programming concepts, methods, and approaches such as debugging, error checking, and documentation. Demonstrate an awareness of advanced concepts such as external libraries. Be aware of and able to integrate content, examples, and libraries.

Prerequisite: GEOG 260 or GEOG 160

GEOG 390: Professional Development Seminar in Geography
1-3 Credits/Maximum of 4

This course equips geography students with a toolkit for career development as they explore the discipline, develop professional networks, and move into life beyond Penn State. It will help students develop a deeper understanding of the relationship between careers, research, experiential learning, civic responsibility, transferrable skills, and the discipline of geography. Students will come away with a set of career-related competencies as well as a framework for achieving further professional development. Students will hone a resume, engage in professional networking via LinkedIn and informational interviews, and construct an e-portfolio to showcase their accomplishments.

RECOMMENDED PREPARATIONS: 3 credits in geography

GEOG 397: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

GEOG 397F: Special Topics - InterDomain
3 Credits

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GN/GS GenEd course.

General Education: Natural Sciences (GN)
General Education: Social and Behavioral Scien (GS)
General Education - Integrative: Interdomain

GEOG 398: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

GEOG 398A: **SPECIAL TOPICS**
1-3 Credits

GEOG 399: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Prerequisite: prior approval of program

International Cultures (IL)
GEOG 410: Climatic Change and Variability

3 Credits

This course introduces students to the physical dimensions of climate change and variability over a variety of temporal and spatial scales. The focus is on recent and future global warming, but we will spend some time looking at climate changes of the past, as context for the future. The emphasis is on the physical science behind questions of global and regional climate changes, but we will also pay some attention to shorter-period climate variations/teleconnections and their impacts on human systems (as possible analogs of future climate change). Because scientific discovery and analysis takes place within a particular social context, we will consider the values, ethics and responsibilities of scientists in general, and specifically in the contexts of geoengineering to minimize or reverse global climate changes. Climate change topics include radiative forcing, greenhouse gases and aerosols, scenario development using statistical and dynamical approaches, equilibrium GCMs versus time-dependent models. Important climate variation topics are droughts, floods, heat/cold waves, and the role of teleconnections; notably, the El Nino-Southern Oscillation, North Atlantic Oscillation and Arctic/Antarctic Oscillations. Because most professional research on climate change and variation involves collaborative science teams, this course emphasizes collaboration and participation. Course Objectives

1. Provide students a basic understanding of the climate system and the internal and external forcings that produces climate variability and change over varying time scales.
2. Introduce students to the tools of the trade how statistical and global climate models work and why they are used.
3. Help students to think critically about global climate change projections and their implications for natural and human systems.
4. Improve students’ skills in communicating science concepts for a variety of audiences.

Learning Outcomes As a result of taking the course, students should have an increased understanding of global climate change and its potential impacts on society, including:

1. Understand, and be able to explain to others, the physical basis for future global climate change.
2. Be able to set future changes in the context of past climate change and variability.
3. Understand the influence of national and international organizations in structuring climate change research and possible remedies.
4. Articulate their own values, ethics and world view and recognize how these frame their own understanding and perspectives on climate change issues.

Prerequisite: GEOG 310 or METEO 101 or METEO 201

GEOG 411: Forest Geography

3 Credits

This course studies processes that control spatial and temporal change in forests.

Prerequisite: GEOG 010, GEOG 314; or BIOL 220W

Bachelor of Arts: Social and Behavioral Sciences

GEOG 411W: Forest Geography

3 Credits

This course studies processes that control spatial and temporal change in forests.

Prerequisite: GEOG 010, GEOG 314; or BIOL 220W

Bachelor of Arts: Social and Behavioral Sciences

Writing Across the Curriculum

GEOG 412W: Climatic Change and Variability

3 Credits

Theories and observations of past, present, and future climate change and variability; introduction to techniques used in climatic change research. GEOG 412W Climatic Change and Variability (3)BA This course meets the Bachelor of Arts degree requirements. GEOG 412W introduces students to the physical dimensions of climate change and variation. Climate change topics include radiative forcing, greenhouse gases, scenarios, equilibrium models, and time-dependent models. Important Climate variation topics are teleconnections and the El Nino-Southern Oscillation phenomenon. GEOG 412W would appeal to students with interests in Earth and atmospheric sciences, as well as environmental protection. As a writing-intensive course, GEOG 412W aims to help students improve their ability to communicate scientific information. The course devotes considerable class time to the mechanics of reading, writing, speaking, and especially report production. Students not only write, but also learn to edit and critique writing.Because most professional research on climate change and variation involves collaborative science teams, GEOG 412W focuses on collaboration and participation. Students form teams, conduct research, and compile formal collaborative reports on climate change and variation. Students document their individual contributions by producing portfolios.

Prerequisite: GEOG 110 or METEO003

Bachelor of Arts: Social and Behavioral Sciences

Writing Across the Curriculum

GEOG 414: Principles and Applications in Landscape Ecology

1-3 Credits

Landscape ecology is a rapidly evolving discipline that is poised to address contemporary challenges in sustainability science, land management, and conservation. The focus of landscape ecology is on the controls, interactions and outcomes of spatial patterns and processes on ecological dynamics at multiple spatial scales. Landscape ecology explores how energy and nutrients flow across spatially variable patches, how dispersal and migration of aquatic and terrestrial organisms are affected by spatial networks, and how disturbances propagate across complex terrain. Grounded in related fields of ecology, geography, and spatial analysis, landscape ecology provides additional theoretical tools and approaches to guide applied conservation decision-making in a dynamically changing world. The objective of this course is for students to apply the methods, theories, approaches and practical applications of landscape ecology to inform landscape decision-making. Particular emphasis is placed on how humans modify landscapes and how species, ecological communities, and ecosystems have responded to these changes. These objectives will be met through lecture and discussion of prominent landscape ecology topics (scale, pattern quantification, agents of pattern formation, green infrastructure, and conservation biology), computer laboratory exercises, written papers, and group presentations. By the end of the course students will be able to (1) articulate in written and oral form the concepts of scale and pattern, (2) use landscape pattern metrics, spatial statistics, and models to characterize ecological pattern on landscapes, and explain how ecological patterns develop, and (3) apply knowledge of spatial pattern-process interactions to issues of sustainability, conservation, and landscape management.

Prerequisite: BIOL 110; BIOL 220; GEOG 314; FOR 308; WFS 209; LARCH 241
GEOG 417: Satellite Climatology

3 Credits

A discussion of the application of satellite data to current and planned large-scale climate experiments. GEOG 417 Satellite Climatology (3)(BA) This course meets the Bachelor of Arts degree requirements. Geography 417 presents the theory and practice of satellite remote sensing as applied to the study of climate. Remote sensing refers to the acquisition of information about a target or phenomenon from a distance; climate is the low-frequency signal of weather that involves interactions among Earth’s environmental systems (atmosphere, biosphere, cryosphere, hydrosphere). Combining these two disciplines into Satellite Climatology is logical because the fundamental basis of both remote sensing and climate is radiation transfer through Earth’s atmosphere. The course emphasizes understanding the different techniques used to determine, from space-borne platforms, the atmospheric, oceanic and land surface conditions important to climate and its variations, and the interpretation of these remotely sensed data in the context of ‘climate dynamics’ and ‘synoptic climatology.’ Specific topics include the following: Satellite systems (platforms, sensors, orbits, data processing); Remote sensing clouds and cloud systems, Retrieval of atmospheric temperature, moisture, and precipitation, the Earth-atmosphere radiation and energy budgets, and Land-surface conditions and their modification by humans. In addition, examples of the different satellite-based climatologies, and their advantages and limitations with respect to conventional observations (‘ground truth’), are presented.

Prerequisite: GEOG 362
Bachelor of Arts: Social and Behavioral Sciences

GEOG 420Y: Comparative Urbanism

3 Credits

This course investigates selected urban issues through the lens of comparative urbanism. GEOG 420Y Comparative Urbanism (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. As an upper level urban geography seminar, this course investigates selected urban issues through the lens of comparative urbanism and requires active class participation. Examination of readings from the growing literature on comparative urbanism will introduce students not only to possible ways to design an effective comparative study but also to the varying goals of such work. Other readings, drawn from a wide variety of sources, will target particular issues facing urban areas that may vary from year to year, such as economic restructuring, uneven urban redevelopment, transportation planning, historic preservation, arts districts, the social construction of race and ethnicity, aging in place, and urban poverty. Students in turn will be required to design and carry out a comparative research project focusing on a particular urban issue, highlighting both the similarities and the differences between their selected case study cities and placing them in local, regional, and global contexts. This course is reading and writing intensive and satisfies United States Cultures and International Cultures requirements, as well as the Bachelor of Arts Social and Behavioral Sciences Field.

Prerequisite: GEOG 120, GEOG 160
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)
Writing Across the Curriculum

GEOG 421: Population Geography

3 Credits

This course examines key demographic characteristics of the U.S. population and how they are distributed in space. At the same time, we will look at how individuals come to be part of a population and with what implications. The course will focus on the U.S. with a special emphasis on where people live in U.S. cities. Given this focus we will spend significant time on issues of segregation, gentrification, health disparities, environmental justice, and migration. The class includes a significant lab component and students will have the opportunity to conduct empirical analyses that are common in the fields of planning, epidemiology, social work, and other cognate professional fields. This course meets the social and behavioral components of the BA field. The first goal of this seminar is to prepare students to think critically about the way demography and policy interact to produce outcomes that vary within and across populations and across space. Many of the most critical policy debates of our time hinge on an understanding of subgroups delineated by gender, age, race, and/or immigration status. Students will learn to identify the role of history, economics, and geography in shaping the contexts in which these policy debates now exist and will gain the critical capacity to evaluate changing conditions in the world around them. The second key goal of this course is to train students in some of the basic techniques for analyzing populations. Being able to devise and execute a project that answers basic questions about the distribution of a population is a foundational skill for many careers that geographers might choose to follow, and can be powerful for engagement in the policy process. The emphasis here will be on applying statistical and GIS skills learned elsewhere to the messy world of real-life data. Students will achieve a better understanding of the possibilities and pitfalls of quantitative analysis of demographic information.

Prerequisite: GEOG 020; GEOG 220; SOC 001; R SOC 011 and GEOG 361; GEOG 362; GEOG 363; GEOG 364; SOC 207; CED 404

GEOG 422W: Globalization, Migration, and Displacement

3 Credits

This course explores the economic, political, legal, and socio-cultural dimensions of displacement and migration in the context of globalization. The substantive focus will be transnational low-wage labor migration and refugee flows of the late 20th-early 21st centuries, even as the course situates contemporary processes within histories and geographies of economic modernization, urbanization, and colonialism. At a conceptual level, students will engage key theories of migration from sociology, economics, geography, and demography, and they will closely explore how race and gender shape migrant experiences and policy debates. Topics to be examined include: political and economic drivers of labor migration; the role of race, gender, class, and nationalism in these processes; the historical antecedents to contemporary cross-border labor migration and refugee flows - Analyze the economic, political, legal, and social-cultural dimensions of transnational labor migration. - Explain the causes and consequences of labor migration from sending regions - Discuss the causes and consequences of labor migration to regions of reception - Compare the factors generating refugee flows across distinct regions over the 20th century - Integrate scholarly understandings of migrant experiences and identities with broader structural forces generating
cross-border flows. - Examine distinct politics and policies of refugee protection and resettlement. - Demonstrate how social hierarchies of race, gender, and class shape cross-border labor migration and refugee resettlement. - Apply theories of migration to specific case studies of cross-border mobility. - Develop a research paper that engages course themes and scholarly debates, linking class concepts and debates to a specific case study. - Demonstrate effective visual and oral presentation skills

**Prerequisite:** GEOG 20 or GEOG 220

**RECOMMENDED PREPARATIONS:** Successful completion of an English composition course: ENGL 15; or ENGL 30; or ENGL 137; or CAS 137; or ESL 15

Bachelor of Arts: Social and Behavioral Sciences

Writing Across the Curriculum

**GEOG 423Y:** Historical Geography of North America

3 Credits

Exploration, settlement, and changing patterns of human occupancy from the seventeenth century to the 1930s. GEOG 423Y Historical Geography of North America (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. This is an upper-division, writing-intensive course that presents an overview of current scholarship on the evolving historical geography of the continent. It does this through a set of lectures given by the instructor, through directed readings that will be the basis of class discussion, and centrally through research essays that offer students the opportunity to research, write and argue historical geographies. Research in historical geography is a process of engagement with partial evidence and with secondary material to open windows on aspects of past lives, past economies, and past places. Since an introductory level overview of the historical geographies of the continent is presented in GEOG 122: The American Scene, this class does not offer a comprehensive survey of regions and periods. Rather, it focuses on three themes - staples and the colonial era, local transformations in agricultural and industrial communities in the nineteenth and early twentieth century, and the packaging of memory as a way to expose students to primary evidence and current debates. In the unit on the colonial era, the focus is on a variety of records that illuminate the development of economies based on staples such as fish, fur, tobacco, rice and iron, drawing on evidence from the Lords of Trade and Plantations in London, and from correspondence between merchants and planters, as well as scholarship on the material culture of houses, farms and settlements. For the unit on local change, workshops illustrate how to tease out information from the manuscript census, county atlases and corporate histories; students then pursue similar material for a locale of their own choice and submit drafts of an evolving research essay. A short presentation to the class encourages the effective distillation of visual and data evidence to communicate research findings. On the packaging of memory, the class critically examines how historic sites are presented, and how interpretations have changed in response to shifting academic and popular concerns. Lectures are interspersed with discussions of readings, workshop demonstrations, and by student presentations. Eleven distinct writing exercises are used as the basis of allocating the overall grade.

**Prerequisite:** GEOG 122, 3 additional credits in geography or 6 credits American history

Bachelor of Arts: Social and Behavioral Sciences

United States Cultures (US)

Writing Across the Curriculum

**GEOG 424:** Geography of the Global Economy

3 Credits

Focus on industrial location theory, factors in industrial location, studies of selected industries and problems of industrial development. GEOG 424 Geography of the Global Economy (3) This class will conduct research on firms and industries engaged in the global economy. Students learn to conduct industry and firms analyses in the context of international regulation. Students learn about the competitive conditions, governmental context, and technological challenges facing selected industries.

**Prerequisite:** ECON 102, ECON 104, GEOG 126

Bachelor of Arts: Social and Behavioral Sciences

International Cultures (IL)

United States Cultures (US)

**GEOG 424W:** Geography of the Global Economy

3 Credits

This course examines the actors, processes, and policies relevant to understanding the global economic system. How does the global economy work? How is it changing? What are the pieces and how do they fit together? What can we do to shape outcomes within this system? In the first section of the course we examine these questions in the context of the 2009 World Development Report produced by the World Bank. The report has as its focus ‘Economic Geography’ with a particular focus on the role of cities in development. We will emphasize the differing assumptions made by economists and geographers with regards to processes of economic development and the impact of globalization. In the second portion of the class we will focus on specific industries, firms, and regions in an attempt to put the broader concepts from Part 1 into an applied context. The focus of this section will be on identifying the complexity of the economic system. In Part 3 of the class we draw from the literature on alternative understandings of the global economy and its possibilities and link this literature to broader debates about global capitalism, international economic policy, and social welfare. Bringing together the broad themes from Part 1 and the applied responses and strategies gleaned from Part 2 we will attempt to synthesize both macro and micro-scale understandings of the present economic system.

**Prerequisite:** GEOG 326, GEOG 126, or ECON 102, or ECON 104, or EBF 200

Writing Across the Curriculum

**GEOG 425:** Geography of Race, Class, and Poverty in America

3 Credits

This class examines the spatial interactions of race, class and poverty in the United States. GEOG 425 Geography of Race, Class, and Poverty in America (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. The terms ‘race,’ ‘class,’ and ‘poverty’ are often discussed in the same breath in academic scholarship. Research portrays the interwoven relationships between economic status, economic security, and ethnic heritage. Despite this powerful and abundant literature, few scholars examine the spatial interactions among race, class, and poverty. The class introduces students to a range of literatures on the meaning of race, class, and poverty in the contemporary United States. We will situate these terms in their local spatial context and investigate how location influences perceptions of the meaning of race, class, and poverty. We will blend historical, contemporary, theoretical and
empirical scholarship as we investigate the meaning, understanding and manifestation of race, class and poverty in the U.S. Beginning with history, we will move through the 20th century examining how economic and political cycles have influenced social understanding of these terms. There will be a particular focus on deconstructing the measurement and meaning of the terms and their use in public policy discussions based on perceptual understandings of the terms 'race', 'class', and 'poverty'. We will examine powerful historical and contemporary media images of race, class, and poverty as seen through the lens of place and identity.

Prerequisite: GEOG 126; ECON 102 or ECON 104
Bachelor of Arts: Social and Behavioral Sciences
United States Cultures (US)

GEOG 426W: Gendered Worlds

3 Credits

Gendered Worlds examines how systems of dominance manifest in everyday life. Through an intersectional approach to social differences, such as gender, race, class, ethnicity, age, ability, and sexuality, the course highlights the significance of difference in shaping experiences of space and place in a global context. The course incorporates approaches from cultural, postcolonial, subaltern, queer, gender, and critical race studies, all of which have influenced current debates across the field of geography. Feminist scholars have long been concerned with the spatial politics of cultural difference. As a point of entry to discussions of gender and geography, this course will explore the diverse ways in which geographers have conceptualized, analyzed, and redefined gender as a contested spatial practice that intersects with other facets of identity such as race, class, and sexuality. Using contemporary geographic texts, we will explore the gendered dynamics of geographic research, citizenship, violence, security, nationalism, nature, and globalization.

The purpose of this course is to examine how gender is understood and utilized in the field of geography. This course also aims to enhance students' ability to engage in first-hand critical research, as well as collaborative learning, through a reflective and ongoing process of research and writing over the course of the semester. At the end of the course, the successful student will be able to: 1. Deploy contemporary debates around gender theory, gendered spatial practices, and cultural difference. 2. Critique the cultural and social construction of gender across time and cultures. 3. Analyze representations of gender in social institutions such as the media. 4. Apply theories of gender and cultural difference in the context of critical written analysis.

Prerequisites: (GEOG 220 or GEOG 20 or GEOG 2N or WMNST 100) and (C or higher in ENGL 15 or ENGL 30 or ENGL 137H or CAS 137H or ESL 15). Recommended Preparation: GEOG 324 (preferred) or GEOG 320 or GEOG 326 or GEOG 328
Cross-listed with: WMNST 426W
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)

GEOG 427: Urban Historical Geography

3 Credits

Study of the development and transformation of the historical urban built environment. GEOG 427 Urban Historical Geography (3) (US; IL) (BA) This course meets the Bachelor of Arts degree requirements. Close up, cities can be seen as sets of buildings - some that are single family homes, some that are places of work, and others that are places of cultural celebration. The streetscapes created by these sets of buildings can be decoded as a palimpsest of the past. Likewise, the patterns and names of streets, lanes and alleys between buildings contribute to morphological databases of property parcels and land use that help in the analysis of the historical transformations of urban form. Viewed at a distant scale, cities are also nodes - centers for surrounding regional trading systems, and partners with other places in national and global trading systems - that have evolved over a set of decades or even centuries. This course offers an investigation of such multiple frames on the urban past. Examples will be drawn from the Americas, but many will be from Europe, Africa, and Asia. Imperialism and its associated colonial mercantile practices meant that variants of urbanism were mapped on to other parts of the world where they often created hybrid forms of cities over time. In the industrial era, new relations between cities and the countryside emerged, as new forms of production developed and resources were harnessed from a more global hinterland. Radically different types of cities have emerged in the past two centuries. Geography 427 will survey the global urban past and explore ways of decoding urban morphological complexity through historical cartographic record and extant landscape evidence. The ultimate objective is for students to develop an appreciation for the complexity of urban life and landscapes in times past and to understand some of the ways in which American urban forms adapt or draw distinction from urban forms elsewhere. At the same time, the course aims to enhance student oral and written communication skills. To enhance their oral communication skills, each student will be expected to make two presentations on their research and to participate in class workshops. To enhance their written communication skills, students are required to write two papers that include instructor feedback on interim drafts, to craft three article summaries, and to write short log responses to most lectures.

Prerequisite: 6 credits in geography, humanities, or social sciences
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)

GEOG 428W: Political Geography

3 Credits

This upper-level undergraduate seminar examines theories and concepts of political geography, with special emphasis on the geographic foundations of power in a globalizing world. The course covers the foundational themes of political geography: state formation; citizenship and nationality; geopolitics; borders; sovereignty; colonialism/postcolonialism; environmental politics; political identity and social movements. The course readings include a balance of theory and case study material and include international and domestic examples. As a writing-intensive course, students will write weekly assignments, workshop their essays in peer groups, and focus on the techniques of expository writing on political geographic topics. The objective is to develop effective writing skills for presenting analyses of political geographic processes and basing these analyses on research, evidence, and clear argumentation in a concise essay format. Students will receive regular feedback and evaluation from the instructor and have several opportunities for presenting their work to peers. The final project consists of a larger research and writing project and class presentation. After taking this class students will: 1. understand the various linkages between geography and politics 2. be able to apply a multi-scalar framework to understanding politics 3. contextualize concepts of power and resistance in relation to space and time 4. understand how geographic settings simultaneously enable and constrain political agents and options 5. be able to engage quality news...
media using geographic to gain a broader understanding of what is going on in the world.

**Prerequisite:** (GEOG 220 or GEOG 20 or GEOG 2N) and (C or higher in ENGL 15 or ENGL 30 or ENGL 137H or CAS 137H or ESL 15)

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)

GEOG 429: Geographic Perspectives on Global Urbanization

3 Credits

This course reflects critically on a number of issues related to global urbanization, including the culture and political economy of urban space. GEOG 429 Geographic Perspectives on Global Urbanization (3) (US; IL) (BA) This course meets the Bachelor of Arts degree requirements. One of the major themes in the discipline of geography is the study of the relationships between humans and the natural environment. GEOG 030 introduces students to the multiple ways in which people and the environment are interconnected. From a dynamic systems perspective, we refer to this interconnectedness as ‘coupled-social-ecological systems.’ The course uses a geographic perspective to understand how differently these linkages are shaped in various ecological and cultural settings around the globe. The course follows an interdisciplinary approach, exploring from multiple angles major environmental and societal challenges such as climate change, genetically-modified food, over-consumption, disease, and environmental service provision in the industrialized North and the Global South. It promotes critical thinking regarding key concepts such as carrying capacity, ecological footprints, feedback, stability domains, and resilience. Students are encouraged to examine their role and responsibilities for the sustainability of the social-ecological systems we inhabit and to take action in their own lives to contribute to a more equitable and sustainable environment. The course will provide students with the opportunity to read, learn, and debate about the ways in which humans value, use, affect, and are affected by small-scale and large-scale human-environment interactions. It will provide them with skills for critically analyzing and evaluating the ways in which humans have transformed the environment in different parts of the world. They will also learn how to assess what future pathways are sustainable and ethically sound. One key goal of the course will be to help students increase their sensitivity to the global and international context of human interactions with nature. A recitation section is crucial because it allows students to explore controversial issues such as biotechnology, nature as a commodity, and global warming, and to develop critical positions on such issues.

**Prerequisite:** GEOG 020, GEOG 126, or GEOG 120
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)

GEOG 430: Human Use of Environment

3 Credits

The human use of resources and ecosystems and social causes and consequences of environmental degradation in different parts of the world; development of environmental policy and management strategies. GEOG 430 Human Use of Environment (3)(BA) This course meets the Bachelor of Arts degree requirements. Geography 430 examines the human use of resources and ecosystems, the multiple causes and consequences of environmental degradation, and adaptive institutional and policy arrangements as prerequisites for resilient and sustainable management and development in different parts of the world. The major objective of this course is to help geographers, earth scientists, and other professionals to develop an awareness and appreciation of the multiple perspectives that can be brought to studies of human use of the environment and of the ways in which resource-management decisions are made in human society. This is a capstone course that encourages students to place their individual major and technical skills within the context of multiple approaches to environmental decision making and management in complex and dynamic social-ecological systems. GEOG 430 is designed as a collective/social learning experience. This implies that the professor and students share responsibility for the learning process and take advantage of collective skills, insights, experiences, and efforts of each other. As in system dynamics, this requires both commitment and flexibility and the willingness to explore foreign territory. As part of this philosophy, learning consists not only of information flow from professor to student, but also from student to student and student to professor. The course follows a case study approach to explore real life lessons of adaptive management around the globe. To make this process work, attendance and active participation are imperative. The course is run more like a seminar than a lecture course and integrates lectures, in-class discussions, presentations, and interactive activities. Student performance is evaluated based on active participation in all of the above, individual short assignments, group projects, in-class quizzes and exams, and one major writing assignment, varying by faculty teaching. This course is offered every semester.

**Prerequisite:** GEOG 010 or GEOG 020 or GEOG 030 or GEOG 040 or GEOG 130 or permission of the program
Bachelor of Arts: Social and Behavioral Sciences

GEOG 431: Geography of Water Resources

3 Credits

GEOG 431 is designed for students to understand the natural processes of aquatic ecosystems, management of water resources, and threats to sustaining water quantity and quality, for all types of freshwater surface, groundwater, rivers, lakes, wetlands. This course should appeal to water resource managers, geographers, ecologists, earth scientists, planners, other environmental professionals as well as non-science majors. This course will develop awareness and appreciation of the multiple perspectives about water as a precious resource, commodity, and sometimes hazard. Students in the course will examine water. Course Justification characteristics, sources, classification systems, and aquatic ecosystems. Next, we will examine water resource management, including issues surrounding irrigation; floods and dams; provision of safe potable water; threats to water quantity and quality including human and aquatic ecosystem effects; the water economy including virtual water and water footprints; water laws and policy; institutions for water management at the global, national, regional and local scale; and issues of water conflict, security, and climate change. Course Objectives: - Learn how/why water is distributed unevenly in space and time around the Earth. - Examine ways resource management decisions made in human society are strongly related to the availability, quantity, and quality of water. - Examine water characteristics, sources, classification systems, and aquatic ecosystems. - Examine water resource management, including issues surrounding irrigation; floods and dams; provision of safe potable water; threats to water quantity and quality including human and aquatic ecosystem effects; the water economy including virtual water and water footprints; water laws and policy; institutions for water management at the global, national, regional and local scale; and issues...
of water conflict, security, and climate change. When you successfully complete this course, you will be prepared to: 1) Identify the unique characteristics of freshwater. 2) Describe, with a geographic perspective, how and why freshwater is distributed unevenly in space and time around Earth. 3) Explain the natural processes of aquatic ecosystems. 4) Discuss why conflicts arise over the vital resource of freshwater. 5) Identify challenges facing water management in varied climate types around the world. 6) Compare how humans interact with aquatic ecosystems.

**Prerequisite:** (GEOG 10; or GEOG 210; or GEOG 30; or GEOG 230) ; or 6 credits natural science

Bachelor of Arts: Social and Behavioral Sciences

GEOG 431H: Geography of Water Resources

3 Credits

Perspectives on water as a resource and hazard for human society; water resource issues in environmental and regional planning.

Bachelor of Arts: Social and Behavioral Sciences

Honors

GEOG 432: Energy Policy

3 Credits

Analysis, formulation, implementation, and impacts of energy-related policies, regulations, and initiatives.

**Prerequisite:** E B F200 , EGEE 120 , PL SC490

Cross-listed with: EME 432

GEOG 433: Geographies of Justice

3 Credits

The justice concept has been a topic of interest within various academic and policy realms concerned with the inequities experienced by racial groups, socio-economic class, and ethnicity. The environment justice movement is generally understood to have begun in the early 1980s with a series of events that demonstrated the inequitable distribution of health hazards and risk. While much work in environmental justice has usefully focused on the disproportionate exposure of poor and minority populations to environmental hazards, conceptualizations of justice have expanded in recent years to include systematic and comparative research within urban and rural populations, industrialized and developing contexts, access to and control over resources, as well as unwilling exposure to hazards, processes and institutions of environmental governance. These trends have resulted in greater attention to the social processes that create and perpetuate inequality on the basis of race, gender, income, or other social categories. In exploring the 'fast conceptual transfer' of the environmental justice concept to other settings, Walker and Bulkeley (2006: 655) suggest emerging interest in distribution between nation-states, an expansion of terms to include gender, age and future generations, and intersections with the vulnerability literatures to examine the threat of natural and produced risks. This course engages with the history and future of social and environmental justice. We begin by examining the emergence of the environmental justice movement in the United States and subsequent export of the justice concept to other topics, including sustainable development and climate change, and within other settings, including Sub-Saharan Africa and Latin America. In exploring the diverse ways that justice is being applied at the present time, we will also question the future viability for justice as a conceptual and organizational tool.

**Course Objectives**

This course has four primary objectives: 1) Examine the history of the concept of environmental justice and the environmental justice movement in the United States; 2) Consider multiple definitions of environmental justice such as procedural and distributive justice; 3) Examine the application of the environmental justice concept to other topics, including sustainable development and climate change, and within other settings, including Sub-Saharan Africa and Latin America; and 4) Consider future directions for environmental justice.

GEOG 434: Politics of the Environment

3 Credits

This course explores politics related to the use, transformation, valuation, and representation of the environment. GEOG 434 GEOG 434 Politics of the Environment (3) Scholarship in geography and related disciplines has demonstrated that nature in general and specific environments in particular are unavoidably political. Environmental management can thus never be a purely scientific or technological challenge; it requires critical analysis of cultural, political, and economic contexts, factors, and effects. For instance, effective environmental management requires consideration of how culture shapes how we perceive and value our environments, who wins and who loses in any particular approach to environmental management, and what the relative advantages and disadvantages of competing institutional approaches to environmental management are. This course examines the development of environmental governance, with a primary focus on the United States. It explores how various groups within society conceive of and value the environment, and multiple approaches to environmental governance and protection. It reviews the history of environmental movements and regulation, and contemporary issues and debates in environmental governance, with particular attention to the effects of institutional forms and social movements. In particular, it examines competing arguments for and against governance approaches centered on state action, market mechanisms, and prominent roles for NGOs and social movements. Students will be evaluated based on: 1) their participation in class discussions, based on critical engagement with material from course readings and lectures; 2) their performance on a midterm and a final examination; 3) an individual research project on a topic relevant to the course, to be designed and carried out under the supervision of the course instructor.

**Prerequisite:** 6 credits in social sciences or humanities

GEOG 436: Ecology, Economy, and Society

3 Credits

Analyses of major themes in ecology and economic development, poverty-alleviation, and sustainability. GEOG 436 GEOG 436 Ecology, Economy, and Society (3) For many years, it was believed that there was a direct tradeoff between economic growth and a clean environment. Sustainable development has been proposed as an framework within which these two objectives can be pursued in harmony and actually can reinforce one another. This course focuses on sustainability issues at the broader (macroeconomic) level, as opposed to the operation of individual businesses (microeconomic, or industrial ecology) level. The course will have two main emphases: 1) to evaluate the major conceptual ideas surrounding natural resource management and sustainable development, including equity, poverty, fairness, power, knowledge, and community empowerment; 2) to use empirical case studies to examine the practical, material and policy relevance of these concepts. The first part of the semester will be used to untangle and clarify the ideological and theoretical bases (biases) of broad human-environment discourses.
as they pertain to community empowerment and resource development. The final part of the semester will be used to analyze case studies in order to assess the relevance of existing theoretical framework for resource empowerment and community development in industrialized countries and the Third World, especially Africa.

**Prerequisite:** upper-division standing

GEOG 437W: Energy Geographies and Policy

3 Credits

This course explores the motivations, key concepts, and contemporary challenges of US and international energy policy. The approach of the course is inherently geographical in that we engage the concepts of scale, place, landscape, and materiality to evaluate energy policy issues. The course addresses the following questions: 1) Why and how is energy governed? 2) How does energy policy differ across political scales and energy sectors? 3) Who are the key stakeholders influencing energy policy? 4) How are the costs and benefits of energy policy distributed? 5) How can a geographic perspective advance energy policy making? 6) How well do existing tools and policy frameworks address emerging challenges in energy policy and governance? The course is designed to explore these questions through interactive discussion, drawing on examples from various political levels and in various geographical contexts. A combination of independent writing and presentations will provide students with the expertise to be careful and critical observers of policy developments, and to prepare students for future roles as policy advisors in business and government settings. The course is divided into four parts: 1) overview of US and international energy policy; 2) key concepts and debates in analyzing energy; 3) case studies; and 4) emerging issues and challenges. After successful completion of this course, students will be able to: 1. Analyze the origins, motivations and distributional impacts of U.S. and international energy policies; 2. Apply key concepts from the energy social sciences to contemporary energy debates; 3. Critically assess how geographic perspectives can advance energy policy making.

**Prerequisite:** (GEOG 230 or GEOG 30N or EGEE 101 or EBF 200) and C or higher in an English composition course (ENGL 15; ENGL 30; ENGL 137H; CAS 137H; ESL 15); Recommended Preparation: GEOG 330N or GEOG 332N or ANSC 332N or METEO 332N

Bachelor of Arts: Social and Behavioral Sciences Writing Across the Curriculum

GEOG 438W: Human Dimensions of Global Warming

3 Credits

Human dimensions of climate change: human causes, human consequences, and policy implications of global warming. GEOG 438W - Human Dimensions of Global Warming (3)(BA) This course meets the Bachelor of Arts degree requirements. Geography 438W, the Human Dimensions of Global Warming, covers both the human causes and consequences of what many people view as the most significant problem facing society. Humans cause climate change primarily by emitting heat-trapping greenhouse gases through everyday activities associated with industrialized society (such as energy production and consumption, transportation, and manufacturing) and land transformation (such as agriculture and deforestation). People experience the consequences of climate change directly through reduced resources (such as food, fiber, forests, and fisheries) or increased natural hazards (such as droughts, floods, and intense storms). They also experience the consequences indirectly through such mechanisms as higher prices for food or larger insurance premiums. GEOG 438W does not address the physical science of climate change; instead, it concentrates on social science issues surrounding the topic. GEOG 438W has two goals: (1) to develop understanding of a set of issues related to the human dimensions of climate change; (2) to develop and apply communication skills by discussing and writing about the topic. The specific content of the course will change with the instructor, but the focus on the human causes and consequences of climate change and on skill-development in writing will be constant. Students will be evaluated on both the course goals: (1) understanding of the human dimensions of climate change; (2) application of communication skills. Although exact procedures for determining grades will vary with instructor, the basis for grades will always include a combination of written exams based on lectures and readings, regular written assignments with instructor feedback, and in-class discussion and participation.

**Prerequisite:** EARTH 002, GEOG 010 or METEO 003; GEOG 030

Bachelor of Arts: Social and Behavioral Sciences Writing Across the Curriculum

GEOG 439: Property and the Global Environment

3 Credits

This course reviews theoretical and empirical relationships between multiple legal, economic, and cultural approaches to property, and environmental quality and conflicts. GEOG 439GEOG 439 Property and the Global Environment (3) Property relations are among the most powerful and pervasive institutions in human societies. Fundamental rules governing and legitimating who can do what, and where, they shape and reveal interactions between human societies and physical environments, a concern at the heart of geography. Our own property relations are often all but invisible to us precisely because they are so deeply woven into our perceptions, consciousness, social structures, and everyday experiences of the world. It is thus easy to overlook the fact that we live within highly specific and contingent property arrangements and that changing circumstances are prompting important changes in contemporary property relations. This course explores these issues with a particular focus on their implications for environmental politics and regulation. We will address questions such as: Is the privatization and commodification of nature a recipe for ecological disaster, or the most effective means of preservation? Can we own the weather? What were the historical-geographical circumstances surrounding the development of major modern property forms, and are those forms adequate to the environmental problems we now confront? Are there property relationships outside of the law? How do property relations and conflicts change in response to changing human control over nature, and how can different kinds of property arrangements lead to, or help to solve, environmental and social problems? Readings will review debates over common property; the benefits and dangers of privatization of environmental goods; distinctions between formal and informal property rights; the development of zoning and other regulation of private property; and contemporary debates over intellectual property rights in nature, and relationships among trade, property rights, and environmental quality. The course will be of interest to students interested in environmental policy, land use planning and management, law, the areas of nature-society relations and historical geography, and environmental history. Students will gain a sophisticated understanding of the central underpinnings of much property and environmental regulation, and familiarity with many cutting-edge debates in these domains, both domestically and internationally. Evaluation methods will include examinations and an independent research paper and
presentation by each student. The course will be offered every other year, with enrollment capped at 30 students.

**Prerequisite:** 6 credits in geography, humanities, or social sciences

**GEOG 444: African Resources and Development**

3 Credits

Ecological and cultural factors in the geography of Africa; natural resources and development. GEOG 444 / AFR 444 African Resources and Development (3) (BA) This course meets the Bachelor of Arts degree requirements. This course is designed to analyze the ecological, economic, political and cultural factors, which influence development in sub-Saharan Africa. The traditional system, colonialism, modernization, post-colonial philosophies are four conceptual artifacts used to address some of these issues. Within these broad frameworks, the course focuses on existing debates surrounding key development ideologies and narratives in the region, including, poverty, conservation, population, debt, food security, land reform, foreign intervention and global politics. The topics and texts for the course are chosen carefully to provide general factual material as well as exposure to the major discourses surrounding the region's development. The views of many Americans concerning Africa are often both unitary (Africa is a country) and unidimensional (Africa is a place of conflict, poverty, corruption and crisis). Assuming that a number of students are likely to join the class with this general background, the main objectives of the course will be: (i) to provide a broad geographic and historical tutorial to dispel myths and stereotypes about the region; (ii) to explore the literature, which analyzes the historical, geographic and political factors that underlie the region's present status in the global economy; and (iii) to gain insights into the intellectual and ideological dimensions of the 'raging' debates surrounding issues like environment, conservation, population, corruption, and poverty in the region. By the end of the semester, students should have acquired the skills to accomplish the following goals: *develop a 'mental map' of the broad physiographic, ecological, economic and political zones (blocks) in the region; *be able to discriminate between stereotype and reality on information pertaining to the region; *be able to interpret and analyze the internal (national, regional) dynamics of the region's development; *be able to interpret and analyze the global factors, which influence the environment, economy, and politics of the region; *develop an informed background on the ideological narratives that guide policy in the region, for example, population, sustainable development, post-colonialism, 'empire' (whether, American, European, Indian, Chinese, South African)?

**Prerequisite:** GEOG 010 or GEOG 020 or GEOG 030 or GEOG 123 or GEOG 124 or GEOG 130 or EARTH105 or AFR 105 or AFR 110 Cross-listed with: AFR 444

Bachelor of Arts: Other Cultures

Bachelor of Arts: Social and Behavioral Sciences

GEOG 445: Geography of Human Rights

3 Credits

This course is designed to explore the problems, promises and paradoxes of international violence and the movement to address violence through human rights initiatives. The first half of this course will investigate violence and the broader movement to establish human rights. We will think about violence in the 20th and first part of the 21st Centuries and the way organized mass violence was either similar or different from previous periods through time and space. We will also think about the definition of human rights, the idea of 'just' war and the way human rights may both sustain and undermine efforts at ending violence. The second half of the course will focus on specific examples of human rights initiatives. The overarching goal of this course is to educate us about the legacies of violence and the struggle to construct a more just and peaceful society. By the end of the semester, students will be able to:

1. Define and articulate different definitions of violence and to see how the definition of violence is related to efforts at addressing violence.
2. Understand the interlinkages between violence and injustice in one area of the world and its links to violence and injustice in another area of the world.
3. Understand multiple and sometimes conflicting definitions of human rights and efforts to address human rights violations through human rights initiatives.

**Prerequisite:** GEOG 220 or GEOG 20 or GEOG 2N; RECOMMENDED PREPARATION: (one course from GEOG 320; GEOG 324; GEOG 326; GEOG 328) and (one course from GEOG 308; GEOG 364)

Bachelor of Arts: Social and Behavioral Sciences

International Cultures (IL)

United States Cultures (US)

GEOG 453: Geospatial Applications in Water Resources & Aquatic Ecosystems

3 Credits

This course is designed to expose students to different geospatial analysis applications in water resources. It will emphasize geospatial data acquisition of hydrologic features, spatial analysis, and data representation. Students will learn through projects, lectures and hands-on computer lab exercises to investigate and solve water resource issues. Practical applications will focus on watershed and drainage network delineation, assessment of aquatic ecosystems, and surface generation methods using spatial hydrology models. Students who successfully complete GEOG 453 will be able to manage, analyze, and represent geospatial data by using spatial analysis software and have a vision of hydrological applications used in land use planning and watershed management. Specific objectives include:

1. Review of data sources and structure in hydrology: georeferenced coordinate systems, datum and scale, map projections, and data acquisition and representation.
2. Use digital terrain models to route surface runoff and derive watershed and stream networks.
3. Assess aquatic ecosystems and riparian buffers based on landscape analysis and other sources of hydrologic modeling parameters.
4. Model continuous surfaces from point to raster data structure using interpolation techniques.
5. Practice real-world resource problems in both urban and rural areas by integrating hydrologic calculations and automated geospatial procedures.

**Prerequisite:** GEOG 363 or GEOG 483 or SOILS 450

GEOG 461W: Dynamic Cartographic Representation

3 Credits

Theory and practice of mapping and geo-representation in a dynamic media context. Applications in science, policy, travel, and education. GEOG 461W GEOG 461W Dynamic Cartographic Representation (3) (BA) This course meets the Bachelor of Arts degree requirements. Most maps produced today are electronic, dynamic, and often ephemeral – with millions of maps generated on the web each day. At the same time, computer graphics technologies developed to enable scientific visualization generally, are being adapted and extended for applications with geographic information. The goal of this course is to provide students with both the conceptual understanding and practical experience needed to design effective dynamic representations and
assess their effectiveness. During the term we will explore the potential
and implications of recent advances in cartography, exploratory data
analysis, and information visualization as they relate to the theory and
practice of geographic visualization (geovisualization). A key focus of
the course is on ‘dynamic’ representations of geographically referenced
information. Dynamic representations are those that change as a result
of user actions or data updates. Topics include: animated and interactive
maps, exploratory multivariate spatial data analysis, geovisualization to
support knowledge construction, interactive web maps, navigation aids
for real and virtual worlds, map-enabled decision-support, collaborative
geovisualization, dynamic maps to enable learning, semiotic principles
for design of dynamic maps and related geovisualization tools, and
perceptual/cognitive issues in dynamic geo-representation (including
methods for studying the success of visual displays and interaction
devices). As a writing intensive course, particular attention will be given
to writing for geographic information science (GIScience). This writing
will include laboratory project reports, reviews of published literature, and
a term project.

Prerequisite: GEOG 361 or GEOG 362 or GEOG 363
Bachelor of Arts: Social and Behavioral Sciences
Writing Across the Curriculum

GEOG 462: Advanced Observation of Earth and Its Environment
3 Credits

Recommended Preparations: (GEOG 365 AND GEOG 464 ) OR prior
exposure to R programming language This course will provide the
prerequisite materials to understand and apply techniques of remote
sensing to study Earth and its environment using the R programming
language. Every day numerous satellites from different countries
acquire and transmit multispectral high resolution data of Earth and
its environment. Such data are used for a variety of operational and
research applications, such as weather forecasting, national security,
natural hazards, navigation, land use and land cover, surface temperature,
climate change, urban planning and many others. Massive amounts
of data are received, processed, stored and distributed by several
centers around the world, giving an unprecedented access to global
high resolution information. Such information can give new insights
to study the complementary nature of different parameters of Earth’s
environment. The first part of the course discusses the R programming
language to analyze data, generate maps and plots and general remote
sensing methodologies, products availability and characteristics, data
types and formats. The second part of the course discusses remote
sensing applications for specific tasks including natural hazards, global
change, seasonal and interannual studies. Current research issues will
be illustrated, including examples pertaining to the atmosphere, land
masses, and oceans, and concluding with a survey of some problems
that are at the current frontiers of remote sensing.

Prerequisite: Recommended Preparations: (GEOG 365 and GEOG 464)
or prior exposure to R programming language Prerequisite: GEOG 362
or FOR 455 or METEO 477 or EE 477

GEOG 463: Geospatial Information Management
3 Credits

This course examines geospatial data representations and algorithmic
techniques that apply to spatially-organized data in digital form.

Prerequisite: GEOG 363

Bachelor of Arts: Social and Behavioral Sciences
GEOG 464: Advanced Spatial Analysis
3 Credits

Skills and knowledge for applying quantitative methods to analyze
information with spatial distributions. GEOG 464GEOG 464 Analysis and
GIS (3)(BA) This course meets the Bachelor of Arts degree requirements.
Geography 464 is a course in methods for analyzing spatial data--
methods that can and should be used when the geographic arrangement
of a set of measured observations is thought to be of significance
in explaining the values of those measurements. The methods of
spatial analysis looked at in this course can be distinguished from
conventional statistical analysis techniques, and also from many of
the analysis functions programmed into many GIS packages. In fact
several spatial analysis methods considered in this course the result of
attempts to alter and extend conventional statistical techniques to take
account of locational similarity and distance measurements (which is
why Geography 364 or an equivalent primer in introductory statistical
methods is a prerequisite). This means that the techniques that will
be introduced in the course are often quite complex mathematically
or statistically. Having said this, the overall goal of the course is to
provide sufficient conceptual understanding and practical experience
so that students become competent in selecting and applying methods
appropriate to a variety of frequently-encountered analytical situations.

Prerequisite: GEOG 364
Bachelor of Arts: Social and Behavioral Sciences

GEOG 465: Advanced Geographic Information Systems Modeling
3 Credits

Before taking GEOG 465, students will have learned the fundamentals
and principles of GIS. This course extends such knowledge to modeling
geospatial scenarios. A GIS model simulates real-world phenomena,
including environmental, physical and natural features, as well as social
features such as demographic, transportation and origin-destination
data. We will model raster and vector data types with an emphasis
on multi-criteria GIS operations, using ArcGIS, R and potential other
software packages. Upon completion of the course, successful students
will have achieved the following objectives and learning outcomes:
Students will be able to: a) discuss basic GIS modeling principles; b) find,
use, store, retrieve and evaluate GIS datasets; c) describe capabilities
and limitations of GIS methods and models; e) implement capabilities,
tools and packages in ArcMap GIS and R environments; f) use R for
programming tasks such as looping and branching; g) evaluate an
external software program and create a model using this software;
h) exhibit ability to design and carry out spatial analyses using GIS; i)
communicate the results of geographic analyses to others, both in oral
and in written form; j) analyze spatial data sets in terms of predictability
and uncertainty; and k) calibrate models based on real-world datasets.

Prerequisite: GEOG 363
GEOG 467: Applied Cartographic Design
3 Credits

Project-based map production problems with emphasis on map design
and advanced mapping tools in geographic information systems.
GEOG 467 Applied Cartographic Design (3)(BA) This course meets
the Bachelor of Arts degree requirements. The course objective is
to immerse the student in applied problems of map production and
geographic representation. Topics include advanced software methods for labeling and data editing; advanced symbolization and production of extended map series; conversion between software environments; and representation for multiple media, scales and purposes. The challenge of working with clients for mapping is often included in a project. Evaluation is based primarily on meeting draft deadlines, map project quality, written reports on project decisions, and an exam. The 300-level cartography course is a prerequisite for GEOG 467, and an introductory GIS course also provides useful background skills, though it is not a prerequisite.

**Prerequisite:** GEOG 361
Bachelor of Arts: Social and Behavioral Sciences

GEOG 468: Geographic Information Systems Design and Evaluation

3 Credits

Design and evaluation of Geographic Information Systems and other forms of integrated spatial data systems. GEOG 468/GEOS 468/Geographic Information Systems Design and Evaluation (3)(BA) This course meets the Bachelor of Arts degree requirements. This course teaches GIS design, project management and communication skills and an appreciation of the ethical, legal and social issues surrounding maps, GIS and geographical data. It also introduces some of the newer information-technology aspects of handling geographic information, such as location-based services and sensor webs, that affect how GIS data are accessed and used. The bulk of practical component of the course is taken up with a large group project (four to six persons per group). The project gives students the opportunity to engage in an exercise that spans the entire range of GIS design and implementation: from problem inception to solution testing. Outcomes revolve around the experienced gained by conducting a GIS project from inception to solution, including specification, design, implementation and evaluation, and specifically: 1. Practical experience with technical writing relating to GIS systems lifecycle, including interviewing, fact finding, description of the contents of the various project deliverables and their importance. 2. An appreciation of legal and ethical issues surrounding GIS, maps and geographic including copyright, responsibility and liability and computing law. 3. An understanding of newer technological innovations that will impact the access and use of geographic information, including: data sharing (interoperability), digital libraries and information portals, web services and grid computing. 4. A portfolio of practical systems development work, that documents all stages in the lifecycle of a GIS project.

**Prerequisite:** GEOG 363
Bachelor of Arts: Social and Behavioral Sciences

GEOG 469: Energy Industry Applications of GIS

3 Credits

Roles of geographic information systems in energy siting decisions focusing on electric energy transmission networks. GEOG 469/Energy Industry Applications of GIS (3) Over 2 million miles of oil and gas pipeline and nearly 200,000 miles of electric transmission grid currently traverse the U.S. Geographic information systems (GIS) are used to help maintain these far-flung and extremely expensive energy infrastructures. GIS is also used to help determine optimal routes for pipelines and transmission lines as energy demand and production increase, and as the grid is extended to connect to new energy sources and consumers. GEOG 469 provides students with an in-depth exploration of the complexities of siting decisions. The course introduces a variety of siting challenges that confront the energy industry and its customers and neighbors, but focuses on the siting of electrical transmission lines. The course also provides hands-on experience with a common decision support technology, and considers how the technology may be used to facilitate public participation in siting decisions. Students will undertake a term-length project in which they must propose, research, develop and implement a siting recommendation for an electrical transmission line. They will utilize activities from each lesson to develop primary and alternative routes. Using GIS, students will develop overlays, weights and rankings to determine the most suitable location for a proposed transmission line. Students’ final product will be maps showing proposed routes based on the siting criteria and rankings developed to minimize the impacts associated with the various siting criteria used. To help students develop the critical thinking skills needed in the energy industry, students will learn to critique their peers’ analyses systematically from the perspective of local stakeholders who are most affected by siting decisions. GEOG 469 is designed to help students achieve two of the programmatic educational objectives established for the Energy and Sustainability Policy degree. It fosters energy industry knowledge by illuminating the difficulties intrinsic to facilities siting decisions. And it nurtures analytical skills by familiarizing students with GIS methodology, and by teaching them how to critique GIS analyses systematically.

**Prerequisite:** GEOG 030, EGEE 102, EME 444

GEOG 479: Cyber-Geography in Geospatial Intelligence

3 Credits

Geospatial intelligence analysis of the geographic aspects of cyber data and observables, products for decision making, and impact of change. GEOG 479 Cyber-Geography in Geospatial Intelligence (3) This course examines various geospatial intelligence themes and issues such as the geographies of cyberspace, the geopolitics of cyberwar, techniques that might be employed in such a conflict and how they are related to censorship on the Internet, ideas on regulation and network architecture, the politics of censorship and hacking, the politics of grassroots activism enabled by cyber Internet Communication Technologies (ICT), and the role and use of geospatial intelligence in the cyber domain for disaster response and humanitarian relief. Students will interrogate a range of information systems, the emerging landscape defined by the ‘geographies of the Internet’ and the impacts as they concern the intersection of ICTs and intelligence. The course will be centered on a geospatial intelligence nexus with emphases on technology, information theory, and geopolitics.

**Prerequisite:** GEOG 160, GEOG 482, or permission of program

GEOG 480: Exploring Imagery and Elevation Data in GIS Applications

3 Credits

Using imagery and terrain data in typical application scenarios faced by the geospatial professional.

**Prerequisite:** GEOG 482 or equivalent professional experience

GEOG 481: Topographic Mapping with Lidar

3 Credits

Using airborne topographic lidar to create elevation models for GIS applications.

**Prerequisite:** GEOG 362 or GEOG 480; GEOG 160 or GEOG 482 or equivalent professional experience

Bachelor of Arts: Social and Behavioral Sciences
GEOG 482: Making Maps That Matter With GIS

3 Credits

Despite its widespread use in thousands of organizations worldwide, Geographic Information Systems (GIS) remains for many an obscure set of technologies and professional practices. Even practicing GIS professionals may have limited awareness of the breadth of the field and its impacts in government, industry, and non-governmental and non-profit organizations. The course uses case studies of meaningful applications of GIS to reveal key topics across the spectrum of industry sectors defined by the U.S. Department of Labor in its Geospatial Technology Competency Model (GTCM): Positioning and Data Acquisition, Analysis and Modeling, and Software and Application Development. Topics to be mastered include concepts like positioning frameworks, uncertainty, and geo-enablement, methods and techniques including the GPS positioning, spatial modeling, and geo app development, and relevant ethical, legal, and policy issues such as locational privacy. In addition to topical objectives, the course cultivates competencies associated with lifelong learning, a cornerstone of the GTCM. Students achieve educational objectives by searching, discovering, and evaluating information from a variety of sources, including, but not limited to, the Internet. Those with substantial professional experience are encouraged to share their perspectives. Students develop mastery through class discussions in which they collaboratively prepare to demonstrate individual mastery in tests. They also learn to craft case studies of their own by creating and presenting story-telling web apps using cloud-based GIS technology. They gain self-knowledge by assessing their individual competencies in relation to the GTCM. The awareness, knowledge and technical skills they gain prepare them for success in programs such as Penn State's Postbaccalaureate Certificate Program in Geographic Information Systems (GIS) and Master of GIS graduate degree program, and for professional growth.

Prerequisite: admission to the Master of GIS program or Certificate Program in GIS

GEOG 483: Problem-Solving with GIS

3 Credits

How geographic information systems facilitate data analysis and communication to address common geographic problems. GEOG 483

Prerequisite: GEOG 482
Bachelor of Arts: Social and Behavioral Sciences

GEOG 484: GIS Database Development

3 Credits

Database design, creation, maintenance, and data integration using desktop GIS software. GEOG 484

Prerequisite: GEOG 483
Bachelor of Arts: Social and Behavioral Sciences

GEOG 485: GIS Programming and Software Development

3 Credits

The course focuses on solving geographic problems by modifying and automating generic Geographic Information System (GIS) software through programming. In GEOG 485, students use the Python programming language to write and modify scripts that add functionality to desktop GIS tools and to automate geospatial analysis processes.

No previous programming experience is assumed. Core topics covered in this class include object-oriented programming, component object model technologies, object model diagrams, loops, if-then constructs, and modular code design, and situates these topics in the geospatial workflow through their integration with maps, layers, spatial data tables, and spatial analysis methods. Students who successfully complete the course can automate repetitive GIS tasks, customize GIS interfaces, and share their geospatial software development work with others.

Prerequisite: Permission of instructor or admission to the program Bachelor of Arts: Social and Behavioral Sciences

GEOG 486: Cartography and Visualization

3 Credits

Theory and practice of cartographic design emphasizing effective visual thinking and visual communication with geographic information systems. GEOG 486

Prerequisite: GEOG 484
Bachelor of Arts: Social and Behavioral Sciences

GEOG 487: Environmental Applications of GIS

3 Credits

Real-world applications of GIS and spatial analysis to investigate a variety of current environmental issues. GEOG 487 Environmental Applications of GIS (3)GEOG 487 is an elective course in the Post baccalaureate Certificate Program in GIS and the Master of Geographic Information Systems (MGIS) degree program, both of which are offered exclusively through Penn State's World Campus. GEOG 487 consists of projects, associated readings, quizzes, and discussions related to environmental applications of GIS. Students are exposed to a variety of concepts, tools, data sources and formats, and environmental issues they are likely to encounter in a career involving GIS and environmental management. Like other courses in the GIS Certificate and MGIS programs GEOG 487 is offered in compressed 10-week terms that require a minimum of 8-12 hours of student activity each week. It is offered quarterly (starting in January, April, July, and October). GEOG 487 does not count toward the requirements of the resident B.A., B.S., M.S. or Ph.D. degrees in Geography, except by explicit permission of the student's graduate advisor and the Department of Geography's graduate officer.

Prerequisite: GEOG 484
Bachelor of Arts: Social and Behavioral Sciences

GEOG 489: Advanced Python Programming for GIS

3 Credits

In GEOG 489, you will learn advanced applications of Python for developing and customizing GIS software, designing user interfaces, and solving complex geoprocessing tasks using both proprietary and open source platforms. Students will also learn the use of version control software for code management and techniques for distributing geospatial Python applications to end users. The course consists of readings, applied projects, quizzes, and discussions about advanced GIS and spatial data science programming concepts and techniques, and it culminates with a term project. GEOG 489 is intended for students who already possess basic geospatial programming knowledge and skills via professional experience or completing GEOG 485. The technology
Prerequisite: GEOG 485

GEOG 493: Service Learning
3-12 Credits/Maximum of 12

Classroom instruction with supervised student activity on a group community service project. GEOG 493 GEOG 493 Service Learning (3-12) GEOG 493, Service Learning, provides activities that integrate community service with academic study. The aim of service learning is to enrich traditional classroom-based education by getting students into a community, thereby engendering civic responsibility and simultaneously strengthening communities. GEOG 493 has five objectives: (1) to develop understanding of a set of issues; (2) to learn and apply skills associated with those issues; (3) to learn to interpret science issues for dissemination to the public; (4) to develop and apply communication skills by speaking, writing, and/or desktop publishing; and (5) to reflect on personal and career interests in science, the environment, public policy, or related areas. Thus, students will read, write, and talk about a set of issues of importance to a community and engage in a project in that community. The specific service-learning projects will change each semester, although some projects will be ongoing. In addition, more than one GEOG 493 project will be available to students in most semesters and will have alphabetical designations (e.g., 493A or 493B). Students can take GEOG in more than one semester, to a maximum of 12 credits. Depending on the topic of the service-learning project, GEOG 493 can complement courses in most colleges and their majors. The course is available to all Geography majors as elective credits; it is also available to all Geography Minors for credit toward the minor. It counts for credit as an Advanced Physical/Environmental Geography course in the Physical/Environmental Geography Option, and counts for credit as an Advanced Geography course in the General Geography Option. Students will be evaluated on four of the five course objectives: (1) understanding of the issues, (2) learning and application of skills, (3) interpretation of issues for public dissemination, and (4) application of communication skills. Although exact procedures for determining grades will vary with the instructor and service-learning project, the basis for grades will include a combination of written work, oral presentations, in-class participation, and outside-class participation.

Prerequisite: sophomore standing; 6 credits of social or environmental science

GEOG 494: Research Project in Geography
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Prerequisite: prior approval of program

GEOG 494H: Research Project in Geography
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Prerequisite: prior approval of program

Honors

GEOG 495: Internship
1-13 Credits/Maximum of 13

Supervised off-campus, non-group instruction including individual field experience, practicums, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

Bachelor of Arts: Social and Behavioral Sciences

GEOG 495B: Geography Teaching Internship
1-10 Credits/Maximum of 10

GEOG 495B Geography Teaching Internship (1-10)(BA) This course meets the Bachelor of Arts degree requirements. The Teaching Internship provides undergraduate students with formal, supervised teaching experience. Instructors recruit students who excel in a particular course to serve as teaching interns (TIs) in subsequent offerings of the same course. TIs may assist their peers as tutors or as laboratory assistants.

Bachelor of Arts: Social and Behavioral Sciences

GEOG 495C: Internship Supervision and Mentoring
1 Credits

GEOG 495C Internship Supervision and Mentoring (1)(BA) This course meets the Bachelor of Arts degree requirements. GEOG 495C enables MGIS students who participate at a distance through the University’s World Campus to earn credit through contributions to the Department’s resident programs. Qualified MGIS students will be encouraged to earn one credit (up to a maximum of three) for every semester that they supervise a resident Penn State Geography student in GIS-related internship conducted in the MGIS student’s place of work. Qualifications will be judged by MGIS students’ academic advisors. Advisors will help MGIS students recruit qualified internship candidates. Advisors will also evaluate the quality of supervision on the basis of the documentation provided by both the MGIS student and the student intern he or she supervised. MGIS students unable to provide internships may still contribute by serving as mentors to students enrolled in the resident course EM SC 300: Professional e-Portfolio Development, through the University’s LionLink program.

Bachelor of Arts: Social and Behavioral Sciences

GEOG 495G: Giscience Internship
1-10 Credits/Maximum of 10

GEOG 495G Giscience Internship (1-10)(BA) This course meets the Bachelor of Arts degree requirements. Prospective interns apply directly to faculty members in charge of the Department of Geography’s Geo VISTA Center or Gould Center for Geography Education and Outreach, or to persons in charge of appropriate public or private agency external to the University. Students accepted into the internship...
program are assigned to research or application projects that involve the development, evaluation and/or use of geographic information technologies under the supervision of an experienced faculty member or professional. Per Faculty Senate rules, interns are expected to devote 40 hours of effort for each credit earned.

**Prerequisite:** GEOG 160
Bachelor of Arts: Social and Behavioral Sciences

GEOSC 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Social and Behavioral Sciences

GEOSC 497: Special Topics
1-9 Credits/Maximum of 18
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Social and Behavioral Sciences

GEOSC 498: Special Topics
1-9 Credits/Maximum of 18
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Social and Behavioral Sciences

GEOSC 498A: **SPECIAL TOPICS**
1-3 Credits

Bachelor of Arts: Social and Behavioral Sciences

GEOSC 498B: **SPECIAL TOPICS**
2-3 Credits

Bachelor of Arts: Social and Behavioral Sciences

GEOSC 499: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

**Prerequisite:** prior approval of program
International Cultures (IL)

**Geosciences (GEOSC)**

GEOSC 1: Physical Geology
3 Credits

Earth processes and their effects on the materials, structure, and morphology of the earth's crust. Practicum includes field work, study of rocks, minerals, dynamic models, and topographic maps. (This course includes from one to several field trips for which an additional charge will be made to cover transportation.)

GEOSC 2: Historical Geology
3 Credits

History of the earth and its life; fundamentals of evolution, correlation, and paleogeography; practicum includes field trips, study of geologic maps, geologic problems, and fossils, with emphasis on Appalachian geology. (This course includes from one to several field trips for which an additional charge will be made to cover transportation.)

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

GEOSC 10: Geology of the National Parks
3 Credits

Geology of the National Parks' uses the unsurpassed features of national parks to address the key questions of geology and the environment. Each topic is introduced with a virtual field trip to a specially chosen national park (involving pictures of the park, a brief history, other highlights of the park, with supplemental materials and links provided on-line). Key questions about the park (Why has Death Valley been getting wider? Why is much of Mt. St. Helens spread across neighboring states?) then motivate discussion of the topic (here, the spreading or squeezing associated with drifting continents), with special attention to implications for humans (for example, predicting earthquakes and volcanic eruptions associated with these features). A suite of exercises provides the opportunity for analytical experience. There are no prerequisites for the course; however, students must meet the university's technical requirements for running Canvas. This course is offered online during the fall, spring, and summer sessions. The goals of the course are to help students learn how certain common-sense ideas allow science to be such a successful human endeavor, that the Earth efficiently but slowly recycles almost everything, that the Earth's environment has been nearly balanced for very long times, that human-induced changes are among the fastest Earth has ever experienced, and that the National Parks are critical but challenged living laboratories, museums, and repositories of biodiversity. In doing so, the students will see the applications to real-world problems of related fields including physics, chemistry, biology, and mathematics, and will develop a greater appreciation of these other subjects. Students will be challenged to reason from data to generalizations, and from these generalizations back to cases, through exercises, quizzes, and examinations.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Key Literacies

GEOSC 20: Planet Earth
3 Credits

GEOSC 20 is a 3-credit, introductory level course about the Earth, and since you live on the Earth, you will be affected by the topic we will cover this semester. We will emphasize earth processes and materials that affect the landscape of Earth. You will be learning about fundamental geologic processes and how they impact humans and the environment on regional and global scales. Some of these processes are slow, such as the movements of continents, and change the Earth over a period of...
home experiments, to calculate physical properties of magmas and to
interpret the potential impacts of various volcanic hazards. Sidebars will
delve into the less obvious interactions between humans and volcanoes
from the perspective of mythology, art, and history. Observations and
ideas will be logged in virtual field notebooks.

General Education: Natural Sciences (GN)

GEOSC 40: The Sea Around Us

3 Credits

Introduction to marine sciences and the world ocean, including physical,
chemical, biological, and geological aspects of oceanography. GEOSC 40
The Sea Around Us (3) (GN)(BA) This course meets the Bachelor of Arts
degree requirements. The Sea Around Us introduces students to the
basic workings of the ocean. The course covers the origin of the ocean's
rock-walled boundaries, the evolution of its coastlines, the motion of
currents, waves and tides and their destructive power, the source and
composition of seawater, and the role of the ocean in local and global
climate. The majority of the Earth’s surface is covered by water and thus
it seems likely that the human race will become increasingly dependent
on oceanic resources in the future. This course seeks to illuminate
how the ocean will respond to increased anthropogenic pressure.

Students are shown how such issues can be addressed through detailed
understanding of the complex interplay between the physical, chemical
and biological properties of the ocean. Lectures focus on fundamental
principles of natural sciences as related to the ocean using extensive
graphics, video clips and demonstrations.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Key Literacies

GEOSC 40H: The Sea Around Us

3 Credits

Introduction to marine science, including physical, chemical, biological,
and geological aspects of oceanography; the sea as a multipurpose
natural resource.

General Education: Natural Sciences (GN)
Honors

GEOSC 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively
narrow subject which may be topical or of special interest.

GEOSC 107N: Rocks, Minerals, and the History of Art

3 Credits

This online course investigates select rocks and minerals used in the
production of art between the Prehistoric Era and the Early Modern
period. Topics covered include chemical and physical properties,
ocurrence in nature, the processes by which natural materials are
acquired and worked, their symbolic and monetary value, and specific
works of art in which they are found. Each material (ochre, garnet, lapis
lazuli, rock crystal [quartz], igneous rocks [basalt, diorite and porphyry],
alabaster and marble) is addressed in a 2-week unit. The seven units
are split equally between scientific analysis of the materials and art historical case studies. A final project integrates Geosciences and Art History topics to investigate the use of a chosen natural material in a specific work of art. Each material addressed in the course plays a crucial role in the history of art, and each one was particularly prized for its physical and material properties (color, hardness, etc.). Ochre was the first known pigment, and was in use by early humans for bodily adornment and for drawing and painting in caves and shelters as early as 100,000 years ago for bodily adornment and 40,000 years ago in cave art. Its availability worldwide and in multiple strong colors made it a desirable choice. Lapis lazuli, by contrast, was difficult to obtain, and difficult to refine as a pigment. It was first used to make small sculptures and cylinder seals in the Ancient world, and was prized for its brilliant blue color. The difficulty in grinding and purifying blue pigment from lapis lazuli made it one of the most expensive pigments in the Medieval and Renaissance world—it was worth its weight in silver! Pure blue lapis pigment, when found in a painting, is always a sign of great expense and importance. Rock crystal was valued for its clarity and purity, and its extreme brittleness meant that works made from it were valued for their intricacy and fragility. Nero reportedly destroyed two elaborate crystal goblets in a rage, and in so doing, deprived future generations of masterpieces of the sculptor's art. In the Ancient Near East and Ancient Egypt, rock crystal was frequently used for amulets and other magical objects, while in the Medieval world, its purity was seen as a metaphor for the Virgin Mary. Garnet had a similar symbolic value in the Middle Ages: its red color was related to the blood of Christ, and it was thus used frequently in liturgical vessels. In the Ancient world, the rich red tone of garnets was prized in jewelry and in small-scale relief carvings. Igneous stones like porphyry, basalt and diorite were particularly prized for their extreme hardness and permanence, and thus the Law Code of Hammurabi was inscribed on basalt to ensure its permanence. Other Ancient Near Eastern rulers had images of themselves made from basalt and diorite in order to ensure that those works would survive for centuries. Imperial porphyry, an igneous stone with a rich red-purple color, came from a single remote quarry in the Egyptian mountains. Its use was reserved just for the Imperial family in Rome, and it was used for carved sarcophagi, for columns, for colored veeners on floors and walls, etc., as a sign of Imperial authority. Marble is of course one of the most familiar of all art materials, used frequently for sculpture from the very beginnings of art production. The Greeks and Romans in particular took great pains to obtain different types of marbles with specific colors, veining patterns, etc., for use in both sculpture and architecture. Finally, alabaster is one of the easiest of all stones to work: it is so soft that one can make a mark simply with a fingernail! Its intricate banding and translucency made it a favorite material for thin-walled bowls and vases in the Ancient Near East, Ancient Egypt, and in the Classical world. Later, in Early Christian and Medieval Italy, it was used for windows instead of glass—sun shining through alabaster casts a golden glow into a church interior. By the Late Gothic period, alabaster was being exploited as an easily sculpted material throughout Europe, with major quarries and workshops in England (Nottingham), France, and Northern Spain.

GEOSC 111: Forensic Geoscience
3 Credits
Covers fundamental geoscience concepts such as stratigraphy, mineral and soil identification, seismology, and geochemistry within the context of forensic investigation. GEOSC 111 Forensic Geoscience (3) (GN)In this course, we will look at the fundamental principles of geoscience and how they can be applied in the context of criminal or liability investigation. Students will learn how to use a stratigraphic column to determine a sequence of events, either in the geologic record or as physical evidence, for example the layers of mud on the bottom of a car suspected of involvement in criminal activity. We will discuss the many types of physical evidence, focusing in particular on those that involve earth materials (soils, sand, mineral dust) or that can be analyzed using techniques commonly applied to geologic problems (for example, analyzing shards of glass from a hit and run accident using a scanning electron microscope). Basic mineralogy, sedimentology, and petrology will be introduced in the context of trace evidence. Common techniques used by both geoscientists and crime scene investigators, including fluorescence, microscopy, ground-penetrating radar, magnetometry, and seismology will be covered, including hands-on demonstrations when possible. We will learn how isotope geochemistry is used to date natural materials, and how it can be used to determine the geographic origin of rocks, minerals, or sediments. Students will learn how and when it is possible to make a statistically meaningful comparison of naturally variable samples present only in trace amounts. The proper handling of earth materials as trace evidence will be explained. Students will be expected to use the knowledge they have acquired to come up with original solutions to both real and invented crime cases. Finally, students will use the material they have learned in class to write an original mystery story in which geological evidence plays a key role in solving a crime.

General Education: Natural Sciences (GN)
Prerequisite:

An in-depth examination of various physical processes that operate within and at the surface of the earth. GEOSC 203 Physical Processes in Geology applies basic principles from physics and mathematics to explore and understand the Earth and the processes that operate within the Earth and at the Earth's surface. The course includes the study of Earth's gravity and magnetic fields, focusing on how they reveal the internal structures and dynamics related to plate tectonics. The basic physics and mathematics of plate motions are also explored in some detail. We will also examine the elastic properties and behaviors of rocks, which form the basis for understanding seismic waves, rock fracture, and fault slip. The next major topic of the class is the flow of heat through the solid Earth system, involving the study of conduction, convection, and advection. The study of heat will provide the basis for understanding the application of simple differential equations with boundary conditions to geological processes; this will also introduce the mathematics of diffusion, which will permeate much of the course. This study of diffusion will enable us to move from steady state conditions to non-steady state conditions that typify most geological settings. We will examine the fluid dynamics relevant to the flow of the mantle and less viscous fluids at the surface such as lava flows and glaciers. The fluid dynamics will also lead us into an exploration of the basic physics of ocean circulation, stream flow, and erosion on land. Throughout the course, students will learn how to use calculus and very simple computer programming in MATLAB to provide a quantitative framework for understanding the physical processes that shape the Earth. The class involves a weekly lab that involves several field trips to make measurements using a variety of geophysical instruments to solve problems related to gravity, stream flow, and heat flow. Other lab activities involve studies of rock friction and fracture, ocean currents, glacial flow, seismology, and plate motions.

Prerequisite: GEOSC001 or permission of program. Prerequisite or concurrent: PHYS 211, MATH 140

GEOSC 202: Chemical Processes in Geology

4 Credits

An in-depth examination of the application of chemical principles to geological processes.

Prerequisite: GEOSC001, MATH 140, third-semester standing. Prerequisite or concurrent: CHEM 113

GEOSC 203: Physical Processes in Geology

4 Credits

An in-depth examination of various physical processes that operate within and at the surface of the earth. GEOSC 203 Physical Processes in Geology applies basic principles from physics and mathematics to explore and understand the Earth and the processes that operate within the Earth and at the Earth’s surface. The course includes the study of Earth’s gravity and magnetic fields, focusing on how they reveal the internal structures and dynamics related to plate tectonics. The basic physics and mathematics of plate motions are also explored in some detail. We will also examine the elastic properties and behaviors of rocks, which form the basis for understanding seismic waves, rock fracture, and fault slip. The next major topic of the class is the flow of heat through the solid Earth system, involving the study of conduction, convection, and advection. The study of heat will provide the basis for understanding the application of simple differential equations with boundary conditions to geological processes; this will also introduce the mathematics of diffusion, which will permeate much of the course. This study of diffusion will enable us to move from steady state conditions to non-steady state conditions that typify most geological settings. We will examine the fluid dynamics relevant to the flow of the mantle and less viscous fluids at the surface such as lava flows and glaciers. The fluid dynamics will also lead us into an exploration of the basic physics of ocean circulation, stream flow, and erosion on land. Throughout the course, students will learn how to use calculus and very simple computer programming in MATLAB to provide a quantitative framework for understanding the physical processes that shape the Earth. The class involves a weekly lab that involves several field trips to make measurements using a variety of geophysical instruments to solve problems related to gravity, stream flow, and heat flow. Other lab activities involve studies of rock friction and fracture, ocean currents, glacial flow, seismology, and plate motions.

Prerequisite: GEOSC001 or permission of program. Prerequisite or concurrent: PHYS 211, MATH 140

GEOSC 204: Geobiology

4 Credits

An introduction to how biological processes and materials are used to solve geological problems. GEOSC 204

Prerequisite: BIOL 110, GEOSC001 or GEOSC020

GEOSC 212N: Earthquakes and Human History

3 Credits

A natural disaster is the result of a natural hazard impinging upon human society. In this course we examine seismicity as a geophysical phenomenon and as a natural hazard that interacts with the built environment and the social structures of human societies. Whenever possible, we approach this subject historically. Among other topics, we examine the history of how earthquakes have been understood as well as the impact of earthquakes and seismicity on the history and development of certain societies. Our specific perspectives include: Earthquakes as understood by modern and contemporary earth science Major conceptions of earthquakes in the past Impacts of seismic hazards on the built environment of past societies Impacts of seismic hazards on politics, economic development and social policies of past societies Seismic hazards, earthquake-related technology, and contemporary societies By examining earthquakes in these ways, the study of earthquakes becomes a vehicle for enhancing skills in analytical reasoning. In particular, this course focuses on applications of modern scientific analysis and the approaches commonly employed in historical investigation. Specific skills addressed in this course include, processing and quantifying information, problem solving using evidence and sound reasoning, and expressing ideas with clarity. Immersion in the study of earthquakes affords an opportunity to think more broadly about how people have dealt with natural disasters in the past and to explore the roles that science, technology, and social policy play in defining and addressing natural hazards in contemporary societies and in the future. Class meetings include lectures, discussions, and in-class activities. We analyze scientific observations that have led to increased understanding of earthquakes, earthquake hazards and risk. We also make extensive use of case studies as concrete examples of different types of earthquakes, the historical evolution of ideas about earthquakes, and the range of social impacts of earthquakes. Reading assignments provide essential background for class sessions.

Recommended Preparation: 3RD SEMESTER STANDING

Cross-listed with: HIST 212N
General Education: Humanities (GH)
General Education: Natural Sciences (GN)
General Education - Integrative: Interdomain
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

GEOSC 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
GEOSC 296H: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors
GEOSC 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

GEOSC 297F: Special Topics - InterDomain
3 Credits
Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GN/GS GenEd course.

GEOSC 303: Introduction to Environmental Geology
3 Credits
Origin of earth and earth materials; natural resources, geologic barriers and hazards, and relationships to human use of the environment. (This course includes from one to several field trips for which an additional charge will be made to cover transportation.)

GEOSC 310: Earth History
4 Credits
The principles of stratigraphy and paleontology and their use, in combination with plate tectonics, in reconstructing the earth's history. This course has one or more required field trips for which a fee is charged to the student.

Prerequisite: GEOSC201

GEOSC 310H: Earth History
4 Credits
The principles of stratigraphy and paleontology and their use, in combination with plate tectonics, in reconstructing the earth's history.

Honors
GEOSC 320: Geology of Climate Change
3 Credits
Geologic evidence for climate change and mechanisms of change, especially from the Ice Age through the near future. GEOSC 320

GEOSC 340: Geomorphology
3 Credits
Physical and chemical processes operating at the earth's surface and their resulting landforms. This course has one or more required field trips for which a fee is charged to the student.

Prerequisite: GEOSC201; fifth-semester standing

GEOSC 397: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

GEOSC 402Y: Natural Disasters
3 Credits
Case studies of the causes and consequences of natural disasters; analysis of disaster impact in different economic, cultural, and social conditions. GEOSC 402 Natural Disasters (3) (IL)(WAC) Is anywhere safe from natural disasters? Can we hide, or should we learn to live with the hazards around us? This course will explore the causes, effects, and societal response to disasters. By learning from previous disasters, we can develop strategies to avert the disasters or at a minimum mitigate their affects. We will look at a variety of natural hazards and related disasters including flooding, volcanoes, landslides, earthquakes, hurricanes, and tsunamis. By the sue of case studies of recent occurrences of natural disasters, we will determine how damaging disasters can be, and what we can do to minimize their impact on society. This course will provide an in-depth, hands-on study of natural hazards, their geography, and their impact on societies worldwide. We will focus on both the physical processes (e.g. underlying geology or geophysics) of selected natural hazards and the human systems that have developed to minimize the impact of natural disasters. The course will place emphasis on active learning exercises to investigate processes and responses to natural hazards. We will meet for two periods each week which will include both lecture and group research activities (approximately 30% of time is in lectures, 70% time is in group research activities). Grading will be based on reports for each topic, a disaster diary, and a term report. The term report is an independent project which focuses on a selected city facing significant natural hazards. Cities will be selected from both the developed and developing world to allow comparisons of the impacts of natural disasters under different socio-economic and cultural conditions. The course is offered once each year with a target enrollment of 25-30 students. Prerequisites for the course are at least 6 credits in science courses (including GN courses).

Prerequisite: fourth-semester standing

International Cultures (IL)
Writing Across the Curriculum

GEOSC 405: Hydropedology
3 Credits
Soil and water interactions across scales, integrated studies of landscape-soil-water relationships, fundamental processes of water flow and chemical transport. SOILS (GEOSC) 405 Hydropedology (3) Hydropedology is the study of the fluxes, storages, pathways, residence times, and spatio-temporal organization of water in the root and deep vadose zones, and their relations to climate, ecosystem,
land use, and contaminant fate. The aim is to characterize integrated physical, chemical, and biological processes of soil-water interactions across scales (including chemicals and energy transported by water flow). This course embraces interdisciplinary and multiscale studies of interactive pedological and hydrological processes in the earth’s surface and subsurface environments. The course will address the fundamental issues and practical applications of hydropedology (as a sister discipline of hydrogeology). This course emphasizes situs soils that have distinct characteristics of pedogenic features, structures, layers, and soil-landscape relationships in the real world. Students will gain an in-depth understanding of soil and water interactions across scales from point observations to watershed phenomena, and will gain skills in predicting flow pathways and water fluxes in the landscape. This course promotes active learning, critical thinking, and hands-on skills. Course format will consist of two lectures and one laboratory/field exercise each week. The course will utilize a network of local watersheds with different land uses for demonstrations and class projects. Grading will be based on weekly lab/field exercise (20%), class research project (40%), homework (10%), one midterm exams (15%), and one final exam (15%). Since hydropedology is linked to a wide array of environmental, ecological, geological, agricultural, and natural resource issues of societal importance, SOILS (GEOSC) 405 will support interdisciplinary training of students in Soil Science as well as in other disciplines of the College of Agricultural Sciences, especially Agricultural and Biological Engineering, Agronomy, and Forest Resources. Students in the College of Earth and Mineral Sciences, College of Engineering, Eberly College of Science, and the Intercollege Graduate Degree Program in Ecology also will find this course useful when undertaking research on the vadose zone, the hydrologic cycle, and the earth system.

**Prerequisite:** SOILS101
Cross-listed with: SOILS 405

**GEOSC 409W: Geomicrobiology**

3 Credits

Investigation of modern and ancient microbial interactions with soils, sediments, the atmosphere, minerals, rocks, nutrients, and pollutants.

**Prerequisite:** CHEM 112; GEOSC001, GEOSC020, GEOSC040, EARTH002, BIOL 110 or MICRB201
Writing Across the Curriculum

**GEOSC 410: Marine Biogeochemistry**

3 Credits

Exploration of the ways in which life influences and is influenced by chemical, physical, and geological processes in the ocean. GEOSC 410

**Prerequisite:** CHEM 112; EARTH002 or GEOSC001, GEOSC020, GEOSC040

**GEOSC 412: Water Resources Geochemistry**

3 Credits

Aqueous geochemistry of silica, alumina, carbonate minerals, and selected metals; organic species in water; isotope geochemistry applied to water.

**Prerequisite:** CHEM 110, CHEM 112

**GEOSC 413W: Techniques in Environmental Geochemistry**

3 Credits

This course teaches techniques needed for the collection, chemical analysis, and data analysis of environmental geochemical measurements. This course has one or more required field trips for which a fee is charged to the student.

**Prerequisite:** one of the following: CHEM 402, CHEM 402E, GEOSC202, GEOSC412, SOILS419
Writing Across the Curriculum

**GEOSC 414: Geochemistry**

3 Credits

Element abundance and genesis, application of chemical principles to earth materials, element fractionation in geologic processes.

**Prerequisite:** CHEM 112, GEOSC201

**GEOSC 416: Stable and Radioactive Isotopes in Geosciences: Introduction**

3 Credits

Discussions on theories for natural isotopic and element variations and their applications to the solution of geologic and cosmologic problems.

**Prerequisite:** CHEM 110, CHEM 112, CHEM 111, CHEM 113; GEOSC001 or GEOSC020

**GEOSC 418: Soil Environmental Chemistry**

3 Credits

Introduction to chemical constituents and processes occurring in soils. Topics include mineral weathering, soil solution chemistry and adsorption of solutes. GEOSC 418 (SOILS 419) Soil Environmental Chemistry (3) Upon completion of the course, the students will be able to identify the soil components and properties responsible for the chemical reactivity of soils and will know the fundamental chemical processes that occur in soils. The students will also be able to link theoretical concepts to real life environmental problems. The students will be evaluated on examinations, homework, and class participation. GEOSC 418 (SOILS 419) is offered every Spring semester. Class limit: 25 students.

**Prerequisite:** CHEM 112, SOILS101
Cross-listed with: SOILS 419

**GEOSC 419: The Organic Geochemistry of Natural Waters and Sediments**

3 Credits

Composition, sources, and fates of particulate and dissolved organic matter in natural environments; biogeochemical processes; organic geochemistry of anthropogenic contaminants.

**Prerequisite:** CHEM 110, CHEM 112

**GEOSC 420: Paleobotany**

3 Credits

Classification, morphology, phylogeny, and stratigraphic occurrence of fossil plants; practicum includes field trips and study of paleobotanical
techniques and specimens. GEOSC 420 BIOL (GEOSC) 420 Paleobotany
(3) Land plants provide the oxygen, food, and forest structure that make our lives on land possible. They are sensitive indicators of global change in the past as well as today. This course will examine the history of green plants on the dynamic Earth from their beginnings in the Proterozoic oceans to today, with emphasis on central topics such as the colonization of land, the histories and relationships of major plant groups, the evolution of seeds and flowers, the evolution of plant-animal interactions, extinction and diversification, paleoclimates, and the origins of modern biomes such as rainforests and grasslands. This course is strongly recommended to graduate students and advanced undergraduates with interests in paleobiology and/or plant biology. Specimen observation and field trips will be important course components. Exams, assignments, and class participation will be the primary bases of evaluation.

Prerequisite: any 3 credit introductory course in historical geology or plant biology
Cross-listed with: BIOL 420

GEOSC 422: Vertebrate Paleontology
3 Credits
Course covers scientific thinking and skills in scientific writing, the history of vertebrates, and modern evolutionary theory applied to vertebrates.

Prerequisite: GEOSC001 and BIOL 110

GEOSC 424: Paleontology and Fossils
3 Credits
Concepts and procedures using fossils to solve problems in systematics, evolution, biostratigraphy, correlation, sedimentation, paleoecology, and global change.

Prerequisite: GEOSC001 or GEOSC020

GEOSC 434: Volcanology
3 Credits
Phenomena and products of volcanic eruptions; physical characteristics of lava and pyroclastic material.

Prerequisite: GEOSC201

GEOSC 435: GEOSCHOLARSHIP
3 Credits
The goal of this class is to learn how to function as a geoscientist engaged in the relentless pursuit of knowledge. This course aims to benefit students in professional development, preparation for advanced courses, and senior thesis research and writing. The most important topic is peer-reviewed scientific literature, the currency of science. Recognizing, accessing, databasing, annotating, writing about, summarizing, critically discussing, and correctly citing peer-reviewed papers are the principal activities. There will be regular assigned activities involving much reading, writing, presenting, and discussion. Other topics will include professionalism, gathering data, how to handle specimens and data, publishing, talking to the media, what graduate programs are looking for and how to approach them, and participation in scientific meetings. There will be a major final paper due during exam week (and no exams). This will be a review article written in the style of a top review journal series such as Annual Reviews. For grading, simply, the strongest possible participation, enthusiasm, completeness, and quality of work is expected at all times, and the professor’s perception of this is what the grade will be based on, with a heavy weighting from the term paper. Students will receive comments and other feedback all the way through that will make it clear how they are progressing, and the term paper will receive a formal grade.

Prerequisites: ENGL 15, GEOSC 001, GEOSC 201
General Education: Writing/Speaking (GWS)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

GEOSC 439: Principles of Stratigraphy
3 Credits
An introduction to the description and genesis of sedimentary rock bodies, the determination of their stratal geometries, and their correlation. (This course includes from one to several field trips for which an additional charge will be made to cover transportation.)

Prerequisite: GEOSC201

GEOSC 440: Marine Geology
3 Credits
Chemical and physical processes affecting the topography and sediments of the sea floor.

Prerequisite: fourth-semester standing

GEOSC 444: Matlab Applications for Geoscience
2 Credits
An introduction to Matlab: m-file development, descriptive statistics, bootstrapping, Fourier transforms, regression, interpolation, least-squares, differentiation, integration, differential equations, signal analysis, graphics. GEOSC 444 Matlab Application for Geoscience (2) The goal of this class is that students become familiar with Matlab so that they can conduct scientific research without needing to manipulate spreadsheets or other non-mathematically based software. The course is geared towards, beginning graduate and advanced undergraduate students with little or no previous Matlab experience, and examples are focused on applications in the science and engineering with a focus on the geosciences, including problems from groundwater hydrology, tectonics, geochemistry, rock physics, and climate change. Some basic concepts about vectors and matrices will be helpful, but are not required.

Prerequisite: MATH 110 or MATH 140

GEOSC 450: Risk Analysis in the Earth Sciences
3 Credits
An introduction to concepts and methods of quantitative risk analysis with focus on water, climate, and energy related risks. GEOSC 450 Risk Analysis in the Earth Sciences is an introduction to concepts and methods of quantitative risk analysis in the Earth system. Key concepts include probability, impacts, risk, uncertainty, statistical estimation, and decision-making under uncertainty. Important methods to be covered are sensitivity studies, probabilistic prediction, and uncertainty
Elements of risk analysis. Examples of risks to be analyzed include: drought, flooding, nuclear waste storage, and anthropogenic climate change. Students will also use simple risk analysis software (provided by the instructor and accessible without prior programming experience) to actively apply these concepts to example problems. The course is designed for advanced undergraduate students with a prior exposure to basic statistics and calculus.

**Prerequisite:** MATH 140 or MATH 110, Introductory Earth Science or Geoscience class, Introductory Statistics class (e.g. STATS 200, or STATS 301), or ENNEC 473, or permission of program.

GEOSC 451: Natural Resources: Origins, Economics and Environmental Impact

3 Credits

Geologic, economic and environmental issues related to exploitation of non-renewable natural resources (metals, minerals, rocks, and fossil fuels). GEOSC 451GEOSC 451 Natural Resources: Origins, Economics and Environmental Impact (3) All the materials needed for health and prosperity in our complex society come from the earth, such as water, iron and other metals to make steel, silica to make glass, limestone to make concrete, potash and phosphate to make fertilizers, and oil, natural gas, coal and uranium to generate heat and electricity. Most of these natural resources are non-renewable, and easily recoverable quantities are limited. The main purpose of this course is to increase understanding and appreciation of geological, economical and environmental aspects of exploitation of mineral and energy resources. Approximately two-thirds of the lectures/discussions will focus on geological, geochemical and biological processes that have governed the concentration and dispersion of economically important elements and natural materials on Earth, including water, heavy metals (aluminum, iron, copper, zinc, lead, etc.), precious metals (gold, silver, platinum, etc.), industrial minerals and rocks (clays, limestone, gypsum, salts, etc.), nuclear-energy sources (uranium and thorium) and fossil fuels (petroleum, natural gas and coal). The remaining one-third of the lectures/discussions will focus on: (i) exploration methods to discover new mineral (and fossil fuel) deposits; (ii) economic aspect of mineral commodities (usages, production statistics, economic of mining and concentration); and (iii) environmental issues related to mining, nuclear waste disposal, and constructions. There will be two half-day field trips to study the nature of sulfide mineralization and acid-water pollution.

**Prerequisite:** GEOSC001 or GEOSC020

GEOSC 452: Hydrogeology

3 Credits

Hydrologic cycle: occurrence, movement, quality, and quantity of groundwater; solute transport; quantitative hydrogeologic methods; role of water in geologic processes. This course has one or more required field trips for which a fee may be charged to the student. GEOSC 452GEOSC 452 Hydrogeology (3) GEOSC 452 is the study of the relation between geological and hydrological processes in the earth's surface and subsurface environments. The course will address the fundamental issues and practical applications of natural flow systems, emphasizing the occurrence, movement, quality, and quantity of groundwater and its relations to contaminant fate and transport. The primary objective is to provide students with the fundamental knowledge and tools that are necessary to understand the hydrologic cycle. Students will gain an in-depth understanding of fluid flow across scales from point observations to watershed phenomena, and will gain skills in using mathematics to describe water fluxes. The course format consists of two lectures each week, and includes two field trips. Grading is based on weekly homework assignments, exams, and participation on the field trips. Because hydrogeology is linked to a wide array of environmental, ecological, engineering, and natural resource issues of societal importance, GEOSC 452 will support interdisciplinary training of students in the natural sciences and engineering. Students will find this course useful when undertaking research about fluids in geologic processes.

**Prerequisite:** CHEM 112 ; GEOSC001 , GEOSC020 , or GEOSC071 ; MATH 140 or MATH 110.

GEOSC 454: Geology of Oil and Gas

3 Credits

Properties, origin, migration, and occurrence of oil and gas. This course has one or more required field trips for which a fee is charged to the student.

**Prerequisite:** GEOSC001

GEOSC 460: Principles of Igneous and Metamorphic Petrology

3 Credits/Maximum of 3

Igneous and metasomatism drive planetary evolution. This course is designed to provide an understanding of the formative processes of igneous and metamorphic rocks through application of simple physical and chemical processes. Through a combination of petrographical observations and applied thermodynamics, students will learn how to treat rocks as chemical systems and, in doing so, equip themselves with a skillset that is of tremendous utility in industry and academia.

**Prerequisites:** GEOSC 201

GEOSC 465: Structural Geology

4 Credits

Effects and mechanics of deformation of the earth's crust; practicum includes field trips and studies of maps and structural problems. This course has one or more field trips for which a fee is charged to the student.

**Prerequisite:** or concurrent: GEOSC203 , GEOSC310

GEOSC 470W: Introduction to Field Geology

3 Credits

Field interpretation of geologic features; principles and techniques of geologic mapping; interpretation of geologic maps and diagrams. This course has one or more required field trips for which a fee is charged to the student.

**Prerequisite:** GEOSC001 ; fifth-semester standing

Writing Across the Curriculum

GEOSC 472A: Field Geology I (Introduction to Field Methods)

3 Credits

Introduction to geologic field methods and the 3-D characterization of earth structure and the reconstruction of geologic histories. This course
includes travel outside the University for which an additional charge will be made to cover transportation, food, and lodging.

**Prerequisite:** GEOSC310

GEOSC 472B: Field Geology II (Advanced Field Methods)

3 Credits

Advanced application of geologic field methods to the 3-D characterization of earth structure and the reconstruction of geologic histories. This course includes travel outside the University for which an additional charge will be made to cover transportation, food, and lodging.

**Prerequisite:** GEOSC310, GEOSC465. Prerequisite or concurrent: GEOSC472A

GEOSC 474: Astrobiology

3 Credits

Astrobiology is the study of life in the universe. Astrobiology has become a major focus of scientific research in the United States and a topic often discussed in popular science literature. The recent interest in astrobiology has resulted in the formation of an Astrobiology Institute at Penn State University. This advanced undergraduate course in astrobiology will cover many topics in the field including, biochemical evolution, the origin and evolution of life on Earth, microbial diversity, protein evolution, and the distribution of life in the universe. This course is intended to provide students of the natural sciences with the opportunity to prepare for a research career in the rapidly expanding field of astrobiology. The course will also present astrobiology as a cross-disciplinary framework that ties together the diverse courses the students have already taken. The students will learn new concepts while having, to draw on their previous knowledge of chemistry, biology, and the geosciences. In summary, this course has the following objectives: (1) to develop the student’s literacy in astrobiology so that they can critically evaluate claims that they encounter well after the course has ended; (2) to present a scientific question that requires the sum of the student’s previous education to solve; (3) to provide a deep background to some of the astrobiological concepts that are often only briefly mentioned in other classes or in the media; (4) to develop research and communication skills required for a young scientist through a class term paper and short oral presentation; and (5) to prepare the students for graduate research in astrobiology by giving them a broad background of the field and by demonstrating many of the outstanding problems yet to be solved.

**Enforced Prerequisite at Enrollment:** (BIOL 110 or BIOL 110H) and (CHEM 110 or CHEM 110H)

Cross-listed with: BIOL 474

GEOSC 479: Advanced Stratigraphy

3 Credits

Modern topics of sequence stratigraphy are addressed, with a heavy emphasis on field and laboratory data analysis and interpretation.

**Prerequisite:** GEOSC439

GEOSC 481: Petroleum Seismology

4 Credits

The proposed course will be specially designed for undergraduate students (junior or senior) who are eager to pursuing a career in petroleum energy industry or pursuing a grad school in exploration seismology as well as new graduate students who did not have a petroleum seismology class in their previous studies. This course provides an overview of the physical principles of petroleum seismology with emphasis on exploring and characterizing petroleum reservoirs using seismic methods. The content will include the physical basis of the seismic methods, including wave properties, wave propagation in the Earth, seismic reflections & refractions, data processing, seismic migration, seismic interpretation and well logs, and borehole seismology. Hands-on experience working with field data examples will be provided through computer lab exercises throughout the semester.

**Prerequisite:** GEOSC 203 or GEOSC 454 RECOMMENDED

**PREPARATIONS:** MATH 141

GEOSC 482: Satellite Remote-Sensing For Earth Observation

4 Credits

Comprehensive introduction to theory and methods in remote-sensing, covering optical, thermal and radar methods and their application in geosciences.

GEOSC 483: Environmental Geophysics

3 Credits

This course presents the principles and applications of the variety of techniques geophysicists use to address environmental problems.

**Prerequisite:** PHYS 211, PHYS 212

GEOSC 487: Analysis of Time Series

3 Credits

Nonstatistical approach to data analysis; spectral and correlation analysis; filter theory; signal-to-noise improvement applied to geoscience data.

**Prerequisite:** MATH 140 and MATH 141

GEOSC 488: An Introduction to Seismology

4 Credits

An overview of the observations, methods, and frameworks used in seismogram analysis for earthquake and earth-structure investigations (includes laboratory). GEOSC 488

**Prerequisite:** MATH 140, MATH 141

GEOSC 488H: An Introduction to Seismology

4 Credits

An overview of the observations, methods, and frameworks used in seismogram analysis for earthquake and earth-structure investigations (includes laboratory).

Honors
GEOSC 489: Dynamics of the Earth
4 Credits
Constitution and dynamics of the solid earth; mechanics and consequences of Plate Tectonic processes.

Prerequisite: GEOSC203, GEOSC310, PHYS 211

GEOSC 494M: Thesis Research
1-6 Credits/Maximum of 6
Supervised student activities on research projects identified on an individual, or small group basis.

Prerequisite: seventh-semester standing
Writing Across the Curriculum

GEOSC 494W: Senior Thesis
1-4 Credits/Maximum of 4
Supervised student activities on research projects identified on an individual, or small group basis.

Prerequisite: seventh-semester standing
Writing Across the Curriculum

GEOSC 495: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

GEOSC 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

GEOSC 496H: Independent Studies
1-18 Credits
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

GEOSC 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

GEOSC 499: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)
GER 002
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Foreign/World Lang (12th Unit)
GER 11: Intensive Basic German

6 Credits

Listening, speaking, reading, writing, basic structures and vocabulary of German. Taught on an accelerated basis. Students may receive credit for only one of the following: GER 001, 011, or 015.

Bachelor of Arts: 2nd Foreign/World Language (All)
GER 12: Intensive Intermediate German

6 Credits

Continued skill development of structures and vocabulary; listening, speaking, reading, writing. Taught on an accelerated basis. Students may receive credit for only one of the following: GER 002, 003, 012, or 016.

Prerequisite: GER 011
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Foreign/World Lang (12th Unit)
GER 51: Elementary Intensive German for Graduate Students I

3 Credits

Intensive introduction to German: first half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. GER 051 Elementary Intensive German for Graduate Students (3)This is the first in a series of three courses designed to give students an intensive introduction to German. This is the first half of elementary sequence in reading, writing, speaking, listening, and cultural contexts. Students will learn the German vocabulary and will learn to create simple sentences. Lessons are taught in an authentic cultural context.

Prerequisite: graduate standing
GER 52: Elementary Intensive German for Graduate Students II

3 Credits

Intensive introduction to German: second half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. GER 052 Elementary Intensive German for Graduate Students II (3)This is the second in a series of three courses designed to give students an intensive introduction to German. This is the second half of graduate intensive sequence in elementary reading, writing, speaking, listening, and cultural contexts. Students will learn the German vocabulary. Lessons are taught in an authentic cultural context.

Prerequisite: GER 051 or equivalent, and graduate standing
GER 53: Intermediate Intensive German for Graduate Students

3 Credits

Continued intensive study of German at the intermediate level: reading, writing, speaking, listening, cultural contexts. GER 053 Intermediate Intensive German for Graduate Students (3)This is the third in a series of three courses designed to give students an intermediate intensive knowledge of German. Continued intensive study of German at the intermediate level: reading, writing, speaking, listening, and cultural contexts. Lessons are taught in an authentic cultural context.

Prerequisite: GER 052 or equivalent, and graduate standing
GER 83: First-Year Seminar in German

3 Credits

Germany's cultural past and present. GER 083S First-Year Seminar in German (3) (GH;FYS;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is designed to give the student an introductory overview of certain important aspects of German culture and its development during the past 1500 years. The topics selected will give the student an introduction to major periods and representative thinkers that have helped shape the destiny of German-speaking countries and much of Europe as well. As Goethe noted, our views of the past are a mirror in which we dimly see our own reflection. Serious examination of the issues raised in this course also result in learning something about one's self and the world in which s/he live today.This course can be used to fulfill the General Education or Bachelor of Arts Humanities requirement, the Intercultural/International Competence requirement, and the first-year seminar requirement. A series of short papers will enable students to develop the skills of information gathering and written expression. The course grade will be based on oral participation and on the grade for the papers, which will be evaluated both for content and writing. This course will help to prepare students for a variety of additional courses in the fields of literature and German-speaking area studies. In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them, including the opportunity to develop relationships with faculty and other students who share their academic interests. The course will be offered once per year to an audience of 20 students.

Bachelor of Arts: Humanities International Cultures (IL)
United States Cultures (US)
First-Year Seminar
General Education: Humanities (GH)
GER 99: Foreign Study--German

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Humanities International Cultures (IL)
GER 100: German Culture and Civilization

3 Credits

Culture and civilization of the German people from the Germanic migrations to the Nazi period. Conducted in English. GER 100 German Culture and Civilization (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. In German 100, students examine the ethical basis for decision-making of representative thinkers and periods in German history. The course begins by looking at the warrior ethos that pervades early Germanic literature, proceeds to examine successive
changes in ethics brought on by Christianization, the Reformation, and the Enlightenment. The course ends by looking at the ethics of power advocated by Nietzsche and the racialist ideology of Nazism. The course will also examine changes in aesthetic values, as represented by the art of Durer and the Expressionists, the literature of the Storm-and-Stress movement and Kafka, the music and theater of Wagnerian opera and the film of the Expressionists and Leni Riefenstahl. Finally, the nettlesome issue of German national identity will be addressed through the perspective of historical developments since the time of Charlemagne.

German 100 is linked closely to German 200. German 100 concentrates on German culture and civilization up to the Nazi period. German 200 concentrates on German culture and civilization since the Nazi period. German/Russian 143 addresses aspects of Nazism in greater depth than does German 100. The course meets three times per week, including fifty-minute lectures on Monday and Friday and a discussion section on Wednesday. The total enrollment is limited to approximately 180 students and the discussion sections have no more than 27 students each. When taught in the summer, the total enrollment for the class is less than fifty. Assessment is based on three examinations with an essay component, one short paper, and participation in classroom discussions, and attendance. German 100 may not be applied toward the requirements of a German major or a German minor. It may be used for the General Education humanities requirement, for the General Education Intercultural/International competence requirement, or for a B.A. humanities requirement.

International Cultures (IL)
General Education: Humanities (GH)

GER 128N: The Holocaust in Film and Literature

3 Credits

This class studies how art, literature, film, and other media can help us to gain a perspective on one of the most horrific events in human history, the Holocaust: the genocidal murder of more than six million men, women, and children (mostly Jewish) under the Nazi regime during World War II. We will also examine the theoretical issues involved in any attempt to capture what appears to be beyond our comprehension, in terms of moral outrage and the sheer scale, inhumanity, and bureaucratic efficiency. To this end we will study literary works, such as Primo Levi’s Survival in Auschwitz, films such as Steven Spielberg’s Schindler’s List, Roman Polanski’s The Pianist, and Roberto Benigni’s Life is Beautiful, as well as photographs, poems, artworks, installations, museum architecture, the design of monuments and other artifacts. We will also examine questions of memorialization (Holocaust museums and memorials), national guilt, survivor’s guilt, stigmatization, and the ethics of historical representation.

GER 143: The Culture of Stalinism and Nazism

3 Credits

This course, which is cross-listed between Russian and German, aims to acquaint students with an important and troubling chapter of 20th-century culture. The regimes of Stalin and Hitler have had a decisive impact not only on life in Russia and Germany, but in much of Europe and the world at large. There is no consensus among scholars about how to classify these systems, whether the term 'totalitarian' is appropriate to describe them, and whether Stalinist Russia and Nazi Germany are essentially similar or essentially different historical phenomena. Espousing a comparative perspective, this course explores the culture produced by Stalinist Russia and Nazi Germany, taking into account both the culture of daily life and selected works of 'high culture,' including literature, the visual arts, architecture, music, and film. The ideological underpinnings of both systems will be discussed and compared. The classics of Stalinist Socialist Realism and Nazi propaganda will be analyzed both as political statements and works of art. The course will also include a reading of authors who attempted to create critical representations of life in Stalinist and Nazi societies, such as Lydia Chukovskaya, Varlam Shalamov, Primo Levi, and George Orwell. The course is designed to be suitable for all students generally interested in Russian and/or German culture, or interested in various fields of humanistic study, whether or not they have previously studied the culture of Russia or Germany. A knowledge of Russian or German is not required, as class lectures and discussions as well as all reading assignments will be in English. This course is designed to count as General Education, as a GH 'Humanities,' and as an IL 'International Cultures' course. It meets the BA requirements in the humanities by asking students to demonstrate competence in 20th-century German and Russian history, political philosophy, literature, art and film.

GER 157: Pennsylvania Germans: The Culture of the Sectarians

3 Credits

Survey of the religious background, beliefs, social life, customs, education, and culture of the Pennsylvania German sectarians, especially the Amish. Conducted in English. GER 157 Pennsylvania Germans: The Culture of the Sectarians (3) (GH;US)(BA) This course meets the Bachelor of Arts degree requirements. Through lectures, discussions, and films, students will be introduced to the culture, history, religion, language, education, occupations, folklore, music, and literature of the Pennsylvania Germans. Since 1683, people coming from the German-speaking territories of Central Europe settled Pennsylvania to a large degree. Many of these immigrants soon blended into American society but others who had been persecuted in Europe for their convictions and religious beliefs refused to be Americanized and retained their style of life in the New World. The best-known are the Amish who arrived in colonial times and still cling to their traditional language, beliefs and values, their economic basis, and even their clothing after living nearly three centuries in now industrialized America. They live in small, stable, and viable communities an austere life dictated by established beliefs and customs totally opposed to the American dream of progress and innovation,
individual happiness and material success. By studying their history and culture and that of other groups, such as the Mennonites, Hutterites, and Moravians, students are offered a unique opportunity to learn more about other truly diverse cultures and are enabled to arrive at a better understanding of their own cultural concepts and values. In this course, students may either make a 30-minute presentation or write a 10-page paper on a topic pertaining to the curriculum of the course. Given the number of students, only a small number (approximately six) will have the opportunity to make a presentation. Teaching assistants help grade the papers. In addition, students take two one-hour examinations and a final examination. The course is related to GER 100 and GER 200 by examining the culture of German-speaking peoples. GER 157 differs from those courses, however, by focusing on a German-speaking minority culture found in Pennsylvania and elsewhere in North America. German 157 may not be applied toward the requirements of a German major or a German minor. It may be used for the General Education humanities requirement, for the General Education Intercultural/International Competence requirement, or for a B.A. humanities requirement. The course is offered approximately once a year with an enrollment of 150-180 students.

Bachelor of Arts: Humanities
United States Cultures (US)
General Education: Humanities (GH)

GER 166: Marx, Nietzsche, Freud
3 Credits

This course introduces the thought of three German-language writers (Karl Marx, Friedrich Nietzsche, and Sigmund Freud) who transformed the fields of philosophy, economics, psychology, and have made an immense impact on the fields of history, political science, aesthetics, theology, as well as literature and the arts. We will spend approximately equal time on each thinker, with an emphasis on their most important works as well as on their writings that deal with aesthetics, literature, and the arts. Each thinker will be presented in his respective historical and intellectual context. Students will gain an understanding of how each thinker shaped the course of German intellectual history and history of ideas more broadly. Importance will be placed on identifying each thinker’s distinct method, the targets of their critiques, and the stakes of their interventions. Why was each thinker so revolutionary, and why is their thought still important today? Additional materials may include relevant literary and cinematic works. The course fulfills the General Education requirement in the Humanities (GH), as well as the International Cultures (IL) requirement. All texts and discussion in English.

Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think

GER 175: Germanic Heroic and Medieval Literature in English Translation
3 Credits

Germanic heroic and medieval courtly literature from 800 to 1350 focusing on the prevailing cultural, social, and legal conditions.

Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)

GER 189N: German Film
3 Credits

A survey of German film from its beginnings to the present, with emphasis on historical, political, and cultural contexts. GER 189 German Film (3) (GH; GA; IL) This course is an introduction to German cinema, broadly defined as any representation of moving images made in Germany, Switzerland, or Austria, or by filmmakers from these countries working in exile. The course will be both an historical survey of the developments in German film, as well as a general introduction to film analysis. Neither prior knowledge of German culture and language nor of film history and terminology is required. All materials will be supplied in English. Students will learn about the technology of film production as well as fundamental concepts for film analysis (shots, angles, sound, lighting, etc.). The course will be structured around different political and cultural contexts, providing students with a concrete historical perspective on Germany from the late nineteenth to the early twenty-first centuries. Screenings will cover several artistic modes, including comedy, melodrama, propaganda film, experimental film, period drama, crime drama, horror film, and documentary. Readings will complement screenings with seminal writings by filmmakers and theorists, as well as texts that provide historical perspective and close analysis. By examining German film with attention to changing cultural settings, students will investigate such topics as the relation of memory and history, the representation of war and genocide, the roles of propaganda and censorship, the formation (and deformation) of national identity, the impact of technological and economic changes on culture, and changing gender roles. In addition, students will learn to think critically about the visual medium of film, becoming more engaged and critical spectators in a world saturated with the moving image. Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. The course is designed to be suitable for all students generally interested in German, or interested in various fields of humanistic study, whether or not they have previously studied the culture of Germany. As an inter domain course, GER 189 also counts towards the integrative studies requirement.

GER 190: Twentieth-Century German Literature in English Translation
3 Credits

GER 190, German Twentieth-Century German Literature in Translation (GH; IL; BA) offers an introduction to 20th-century literary texts written in Austria, Germany, and Switzerland, or by authors originally from these countries, with emphasis on cultural, historical, and political contexts. No prior knowledge of German, 20th-century German history, or narrative analysis is required. All texts and discussions are in English. Students will gain a historical perspective of 20th-century German-speaking worlds by analyzing works of award-winning authors and a few filmmakers including but not limited to Arthur Schnitzler, Franz Kafka, Ernst Toller, Bert Brecht, Ruth Klüger, Helma Sanders Brahms, Paul Celan, Max Frisch, and Heinrich Böll. The course draws on diverse genres, such as prose fiction, memoirs, poetry, diaries, short stories, drama, cinematic adaptations of literary works, and film. Short lectures and
presentations contextualize the readings about Vienna 1900, two World Wars, the Interwar Years, the Holocaust, and divided and united Germany. Students will engage in an on-going dialogue about the relationships between literature, history, and society. We will explore how literature captures value and belief systems in distinct cultural, social, and political settings. Class discussions focus on the depiction of the individual in modern society, the role of intellectuals as WWI enthusiasts turned pacifists, censorship, the representation of war and the Holocaust, trauma, memory and gender, post-WWII values in a consumer culture, the student movement of 1968, the power of the mass media in the 1970s turning published opinion into public opinion, terrorism, the fall of the Berlin Wall, and German reunification. In German 190, students will critically think about text and context, explore literature as a powerful seismograph of profound cultural and political changes, examine literary works as manifestations of cultural memory and means of social critique, and appreciate writers as keen observers of the world around them. This course is suitable for all students interested in German Studies or the humanities. The course has a GH (General Humanities) and IL (International Cultures) designation and meets the requirement for a BA in the humanities.

International Cultures (IL)

GER 200N: Contemporary German Culture

3 Credits

How do we make sense of Germany, the country’s history, culture, politics, and economics during the twentieth century? In modern German history, periods of impressive social, political, economic, cultural, and intellectual achievements alternated with times of violence, destruction, two world wars, genocide, and authoritarian structures in politics and society. This course helps students to understand Germany during the 20th century. The main focal points of this course include World War I, the 1918 revolution followed by the short history of the Weimar Republic, the rise of the Nazis and the Third Reich, World War II and the Holocaust, post-war reconstruction, the foundation of two German states in 1949, their development until (re-) unification in 1990, the development of Germany from unification to today, Germany’s current dominant economic position within the EU, and the recent rise of radical right-wing politics in Germany for the first time since 1945. These focal areas will be approached from various perspectives: From historical (and historiographical) vantage points, from sociological and economic perspectives, and through the lenses of cultural productions such as novels, movies, and other works of art.

GER 208Y: Business German

4 Credits

Intermediate Business German. GER 208Y Business German (4) (IL)

In this course students will learn more about German businesses
and their culture. At the same time, students will continue to review and learn additional grammar points. They will have more writing experience by completing five different writing assignments. All four language skills (listening, speaking, reading and writing) will be further developed in this course. Students will be evaluated according to class participation, successful completion of in-class presentation, internet exercises, homework assignments, essays, and examinations. This course complements other offerings for German in the business track. It completes the intermediate level of German and prepares the student to go on to German 308W and German 408. This course also can be counted towards the BS in German. This course will be offered once a year during the Spring Semester. In this type of intensive course, enrollment has to be limited to 22 students.

**Prerequisite:** GER 003 or GER 008
Bachelor of Arts: Humanities
International Cultures (IL)
Writing Across the Curriculum

GER 245: The Vikings

3 Credits

Focus on the history of the Vikings from 800 to 1400 as conveyed to us in mythology, literature, and archaeology. Conducted in English.

Bachelor of Arts: Humanities
General Education: Humanities (GH)

GER 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Humanities

GER 299: Foreign Study–German

3-6 Credits/Maximum of 6

Advanced training in German language skills.

International Cultures (IL)

GER 301: Intermediate Speaking and Listening

3 Credits

Intensive practice in spoken German through readings, discussions and video. GER 301 Intermediate Conversation and Composition (3) (IL) German 301 is a continuation of the composition and conversation emphases of both GER 201 and GER 208. Fundamental to the course is a thorough grammar review of both basic and advanced grammatical situations. Much of this review is done outside of class. In class, students devote their time primarily to oral work. GER 301 requires students to use German in various ways: group work, individual presentations, discussion of texts, structured partner drills, etc. Student evaluations are based on participation, homework, quizzes, a classroom presentation, and essays. GER 301 is required for all German majors and the German minor and will be offered every semester.

**Prerequisite:** GER 201 or GER 208Y
Bachelor of Arts: 2nd Foreign/World Language (All)
International Cultures (IL)

GER 302W: Intermediate Composition and Grammar

3 Credits

Continuation of oral and written practice in German with extensive work in composition. GER 302W Intermediate Conversation and Composition II (3) (BA) This course meets the Bachelor of Arts degree requirements. German 302 is a continuation of the language and composition emphases of both GER 201 and 208. Fundamental to the course is a thorough grammar review of both basic and advanced grammatical situations, with the goal of improving students’ grammatical and stylistic precision in written German discourse. GER 302 requires students to use German in various ways: group work, individual presentations, discussion of texts, structured partner drills, etc.

**Prerequisite:** GER 201 or GER 208Y
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities
Writing Across the Curriculum

GER 308Y: German Business Communication

3 Credits

Development of German commerce and industry; extensive practice in the major forms of business communications such as business correspondence. GER 308Y German Business Communication (3) (IL) This course provides an introduction to German business and economics. Students will read and respond to a variety of texts about German economic practices and the German business world, as well as texts that introduce and describe more general economic principles. Emphasis is also placed on expanding students’ vocabulary and further developing their writing skills in German, especially with regards to economic and business terminology, and writing genres common in business contexts. As this is not intended to be a grammar review course, students are expected to have previously completed or be concurrently enrolled in GER 301 or its equivalent. This course complements other offerings in the German business track and prepares students for the final course in the German Business sequence. This course can also be counted towards either the German minor or the German major. It is offered once a year during the fall semester.

**Prerequisite:** GER 301 or GER 302W
International Cultures (IL)
Writing Across the Curriculum

GER 310: Introduction to the Study of German Literature

3 Credits

History, methods, and the terminology of literary interpretation and analysis in German.

**Prerequisite:** GER 301 or GER 302W
Bachelor of Arts: Humanities
International Cultures (IL)

GER 344: Intermediate German Culture

3 Credits

An overview of German culture from the Middle Ages to the present. Conducted in German. GER 344 Intermediate German Culture (3) (IL) This course will be a comprehensive overview of major events and figures in German history that have influenced the development of German culture. This will be a foundational course that will enable students to better situate advanced courses in German literature and culture in the broader context of a cultural tradition that stretches from the Germanic migrations to the present. The course will be taught in German at the intermediate level and will be required of all German majors and minors. It will be a prerequisite for culture courses taught in German at the 400-level. Students will be evaluated on the basis of written tests, an oral presentation and essay on a major cultural figure or event, homework, and class participation. The course will be offered every semester. The enrollment for each section will be capped at approximately 22.

Prerequisite: GER 301 or GER 302W
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities
International Cultures (IL)

GER 399: Foreign Study--German

3-12 Credits/Maximum of 12
Advanced studies in German language and/or literature.

Prerequisite: GER 201
Bachelor of Arts: Humanities
International Cultures (IL)

GER 401Y: Advanced Composition

3 Credits

Intensive practice in writing different text types in German. GER 401Y Advanced Composition (3) (IL) GER 401Y is the writing across the curriculum component of the German language sequence. After thorough discussion of various text types, students will read and practice writing in different genres. GER 401Y concentrates on building other language skills as well. We will do so by reading and discussing short German texts from a variety of sources and watching film and television. In addition, we will review aspects of German grammar that present difficulties to many English speakers. Evaluation will be based on five writing assignments, a writing portfolio, quizzes, and class participation. The course will be offered twice a year with an enrollment of up to twenty students. GER 401Y is required for all German B.A. and B.S. major options as well as for the German minor.

Prerequisite: GER 301 and GER 302W
International Cultures (IL)

Writing Across the Curriculum

GER 408: Advanced German Business Communications

3 Credits

Study of German business organization, forms of business communications, business terminology; writing of reports and abstracts.

Prerequisite: GER 308Y

International Cultures (IL)

GER 411: The Teaching of German

3 Credits

Theory, methods, techniques, materials, bibliography; use of interactive media; contributions of linguistics or psychology to language learning.

Prerequisite: or concurrent: GER 401Y

GER 412: Contrastive Analysis of Modern German and English

3 Credits

Structural comparison of the German and English grammatical systems: morphology, syntax, phonology.

Prerequisite: or concurrent: GER 401Y
Bachelor of Arts: Humanities
International Cultures (IL)

GER 420: Genre

3-9 Credits/Maximum of 9
Special studies in a particular literary genre in German literature, such as lyrical poetry, drama, or narrative prose.

Prerequisite: GER 310, GER 401Y
Bachelor of Arts: Humanities
International Cultures (IL)

GER 430: History of the German Language

3 Credits

Development of German from its earliest stages, including historical and cultural aspects. GER 430 History of the German Language (3) (IL) This course provides an overview of the history of the German language from its origins to the present. Historical changes and dialectal variation in phonology (sound system), morphology (word structure), syntax (sentence structure), lexicon (vocabulary), and semantics (word meaning) will be examined. Particular emphasis is placed on the impact of cultural and historical changes on the development of German, including its standardization. Students will be evaluated on the basis of homework, classroom participation, tests, and an in-class presentation with a written abstract. No prior knowledge of linguistics is required. The class is conducted in German.

Prerequisite: or concurrent: GER 401Y
Bachelor of Arts: Humanities
International Cultures (IL)

GER 431: History of German Literature and Culture I

3 Credits

Significant works of German literature before the mid-eighteenth century considered in their cultural context.

Prerequisite: GER 310. Prerequisite or concurrent: GER 401Y
Bachelor of Arts: Humanities
International Cultures (IL)
GER 432: History of German Literature and Culture II
3 Credits
Significant works of German literature from the mid-eighteenth century to the present considered in their cultural context.

**Prerequisite:** GER 310 . Prerequisite or concurrent: GER 401Y
Bachelor of Arts: Humanities
International Cultures (IL)

GER 440: Seminar in German Culture
3-6 Credits/Maximum of 6
Seminar devoted to a special topic in the field of German culture and civilization.

**Prerequisite:** or concurrent: GER 401Y
Bachelor of Arts: Humanities
International Cultures (IL)

GER 472: Romanticism
3 Credits
A study of both early and late romanticism, including such writers as Novalis, the Schlegels, E.T.A. Hoffmann, and Heine.

**Prerequisite:** or concurrent: GER 431 or GER 432
Bachelor of Arts: Humanities
International Cultures (IL)

GER 489: Introduction to German Film History and Theory in Context
3 Credits
Introduces films in German since the 1960s and addresses issues relevant to German and European contemporary cinema, while situating the cinema within broader historical-political debates concerning Europe. It functions as an excellent complementary course to our GER LIT classes at the 400 level and offers an additional choice to pursue cultural studies to those who are more reticent about reading texts. Enrollment: 25. The course will be offered every other year.

**Prerequisite:** GER 310 or COMM 250

GER 494: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities
GER 494H: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities Honors
GER 495: Internship
3-9 Credits/Maximum of 9
Supervised off-campus, non-group instruction including individual field experiences, practicums, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor
Bachelor of Arts: Humanities

GER 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Humanities

GER 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Humanities

GER 499: Foreign Study--German
3-12 Credits/Maximum of 12
Advanced studies in German language, literature, and culture.

**Prerequisite:** any 300-level course in German
Bachelor of Arts: Humanities
International Cultures (IL)
Global and International Studies (GLIS)

GLIS 101N: Globalization

3 Credits

This course provides a broad introduction to the topic of global studies. This course meets the Bachelor of Arts degree requirements. This interdisciplinary course explores how people and nations confront the phenomenon of globalization, presenting different perspectives for studying and making sense of the world. Students are exposed to a variety of analytical approaches from the arts, humanities and social sciences to allow them to see how different perspectives portray the world, interpret events, and often shape human actions. The course begins from a humanities perspective, exploring the concept of social identity, in particular understanding how people in different cultures develop a sense of their identity and how this is perpetuated over time through a society’s products, practices, and perspectives (e.g., artifacts, value systems, traditions). The focus then shifts to organizations in society, comparing how they operate with either national or global identities. This leads to an exploration of how information and communication technologies are tools to create both global connectivity, yet can also be a source of division. Globalization is then considered in terms of its impact on the natural environment, populations, and health. Challenges arising in each of these areas are the concern of all global citizens, and are explored in terms of how interdependencies are increasing their impact. The focus of the course progresses to gender, poverty, and human rights, exploring these in tandem with their literary representations, presented in both global and comparative contexts. Economic development models are also used to uncover trends in gender and poverty. The final focus is on global peace and conflict, highlighting how globalization, in bringing people and nations closer together, can also give rise to conflict and division. This course is one of two 100-level courses that are required for the GLIS major. While this course focuses on a general introduction to global studies as a field of study, GLIS 102N complements the topics raised here, exploring many from a range of different perspectives to prepare students for choosing their options through the major.

GLIS 102N: Global Pathways

3 Credits

This course meets the Bachelor of Arts degree requirements. This course introduces students to five pathways to thinking about global issues today. Global Conflict, Health & Environment, Culture & Identity, Wealth & Inequality, and Human Rights. We will spend three weeks focusing on each problem. Students will complete the course with a stronger sense of many of the major global issues of our time, as well as a sense of how those issues can be approached and studied from a variety of humanistic and social scientific perspectives. Students will also learn how aspects of identity, like race, sexuality, or gender, affect and are affected by global forces. Combined with GLIS 101N, this course will help prepare students for lives and careers in which they will interact with these large-scale global issues on a daily basis; it will allow students to understand how various local or national issues are affected by global ones, and to see ways of intervening in the world to address global problems. 1. Global Conflict: Why do people fight? Is violence inherent to human society? How is it possible to dream of an end to war, as creative writers of many cultures have done? 2. Health & Environment: How does climate affect human history? How have societies and individuals interacted with their environments, and how have the relations between human beings and the natural world been represented in literature and the arts? How are health issues depicted in narratives and other media, and how do health crises challenge political or cultural norms? 3. Culture & Identity: How do we come to be who we are? How are we shaped by the circumstances we grow up in? What is culture, and how do we understand cultures other than our own? What happens when people move or change cultures, or when cultures move or change people? 4. Wealth & Inequality: Why are some nations, and some people, rich, and others poor? What structural factors help explain those differences? How does the distribution of wealth factor into what counts as a good society? 5. Human Rights: What are the most fundamental properties of being human? Does everyone in a society have the same rights?

General Education - Integrative: Interdomain
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking

GLIS 310: Language Rights, Policy, and Planning

3 Credits

This course focuses on a general introduction to global studies as a field of study, GLIS 102N complements the topics raised here, exploring many from a range of different perspectives to prepare students for choosing their options through the major.
Cross-listed with: AFR 310, APLNG 310
International Cultures (IL)

GLIS 400Y: Seminar in Global and International Studies

3 Credits/Maximum of 3

Capstone Seminar focusing on critical themes and the development of the senior thesis for Global Studies Majors. This interdisciplinary course will offer a seminar on some current event, issue, or phenomenon that involves a significant proportion of the globe. Topics will vary each year and depend on the faculty member leading the course, but it may include subjects such as the European Union, global economic change, international pop culture, or international response to human rights violations. Students will develop, write, and workshop a global studies research thesis. Both written and oral work will be assigned and graded. Students will discuss material from a variety of academic fields such as political science, economics, sociology, history, anthropology, and cultural studies.

Prerequisite: GLIS 101, GLIS 102
Bachelor of Arts: Other Cultures
International Cultures (IL)

Writing Across the Curriculum

GLIS 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

GLIS 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Graphic Design (GD)

GD 1S: First-Year Seminar in Graphic Design

1 Credits

An orientation to the historical, social, and professional context of design and an exposure to a variety of ethical, philosophical, and topical ideas from the world of design.

Prerequisite: admission to the AADES program
First-Year Seminar

GD 100: Introduction to Graphic Design

3 Credits

A beginning level graphic design course. Instruction touches on the practice, theories, history and processes of the graphic design industry. GD 100 Introduction to Graphic Design (3) (GA) GD 100 (GA)
INTRODUCTION TO GRAPHIC DESIGN (3) is a beginning level graphic design course. Instruction touches on the practice, history, theories, and analysis of the design industry. This course places emphasis on problem solving and observing design, while developing intuition and creativity. Projects focus on the process of defining the parameters of a design problem, observing examples within the design industry, and critically evaluating examples of effective and ineffective design. The course will help students to: 1. Understand the graphic design industry and the responsibilities of the profession. 2. Develop an appreciation for the practice of design. 3. Begin to develop the ability to define and solve problems. 4. Increase their knowledge of the history of graphic design and typography. 5. Refine their conceptual skills. 6. Learn and understand the vernacular of the industry. Students will be quizzed on terminology and important facts provided in the readings.

General Education: Arts (GA)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think

GD 101: Thinking Creatively: Defining Problems, Solving Problems, and Generating Ideas in Graphic Design

3 Credits/Maximum of 3

An introduction to the theory and practice of defining problems, developing solutions, and generating ideas in design. GD 101 GD 101 Thinking Creatively: Defining Problems, Solving Problems, and Generating Ideas (2) This course is designed to help students learn to think creatively, define problems, and solve those problems by generating good ideas. The first part of the course, Learning to Think Creatively, will cover basic principles and concepts used in thinking creatively. In the second part of the course, Defining Problems, students will learn how to effectively define problems by establishing and refining goals and objectives based on research. The third part of the course, Solving Problems and Generating Ideas, will engage students in practical project-based learning by creating solutions to design problems through teamwork, brainstorming, and a design sequence that fosters new ideas and tests them through prototyping and analysis. Students will learn to approach problems in design by developing skills in creative thinking, applying those skills in defining problems, and working in creative teams to solve problems through the generation of new ideas that can be practically applied.

Concurrent: GD 001S

GD 102: Introductory Design Studio

3 Credits

A studio course in defining problems, solving problems, and generating ideas. GH 102 Introductory Design Studio (3) This course is designed to build upon the experience of GD 101 Thinking Creatively: Defining Problems, Solving Problems, and Generating Ideas by engaging students in a studio environment where they must arrive at solutions to two design problems, each requiring approximately seven weeks work. Students will define problems and arrive at creative solutions to those problems by generating ideas based on an applied method involving teamwork, brainstorming, and a design sequence that fosters new ideas and tests them through phototyping and analysis. This course is designed for students in the AADES pre-graphic program, although it emphasizes concepts and methodologies applicable to all design fields. Students will learn to approach problems in design by developing skills in creative thinking, applying those skills in defining problems, and working in creative teams to solve problems through the generation of new ideas that can be practically applied. Grading is based on participation (20%), studio project one (40%), and studio project two (40%). GD 102 is only available to students enrolled in AADES or by permission of instructor and carries the prerequisite of GD 1S and GD 101.
Prerequisite: GD 001S and GD 101

GD 110: User Experience Design: Concepts and Principles

3 Credits/Maximum of 6

Students in this introductory course will study foundational concepts and methodologies in User Experience (UX) design and thinking. User experience (UX) design is the process designers use to create products that provide meaningful and relevant experiences to users and is rooted in the research and discovery of digital audiences, inclusive of enhancing user engagement and loyalty through usability, accessibility, and product satisfaction. GD 110 offers practical instruction focused on visual communications perspective, rather than one focused on programming alone. The process of designing user experiences within digital systems and applications will be explored and analyzed, as well as introductory knowledge in constructing design systems for various based on the needs of users. The course will feature iterative design processes to employ basic management techniques in working with product stakeholders for digital planning practices. GD 110 will provide foundation level instruction for concepts and principles that will be applied more broadly in GD 210.

GD 115N: Visualizing Information

3 Credits

The world is awash with complex, dynamic information. With the development of powerful technologies capturing vast amounts of data, the art of visually representing information in ways that increase understanding of complex data and models will become a critical skill. Effective representations can communicate information in ways that maximize comprehension, analysis, exploration, and understanding of the underlying data. Knowing how to read and interpret visual data is essential to navigating this ocean of information. Those who know how to present data visually employ a powerful communication tool. In this class, you will become an effective reader and creator of visual representations of data. Through critical assessment of examples, interactions with peers, and the generation of your own projects, you will generate visualizations of data and create works using a common visual language to help people analyze and understand the information at hand. Good visualizations not only present a visual interpretation of data, but also do so by improving comprehension, communication, and decision-making. Effectively functional visualizations can offer insights that reveal evidence and truths that may be difficult to otherwise observe. They can often empower readers to explore both the norms that give meaning to the data and the exceptions that convey its complexity or uncertainty. Visualized information can assist in revealing: - Distributions and frequency over time - Changes and trends - Relationships and correlations - Spatial and mapping information Regardless of your major field of study, the ability to effectively visualize information represents a significant and essential skill for effective communication. Whether you are creating representation of your work for your company’s leadership board, a general public audience, or a meeting of your peers, the ability to craft a visual display that offers an accurate and insightful interpretation of data is a key capability in the workplace. No prior experience in design or statistics is required for success in this course.

General Education: Arts (GA)
General Education: Humanities (GH)
General Education - Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GD 200: Graphic Design Studio I

3 Credits

A beginning graphic design studio course. Instruction focuses on the practical and analytical process of creating graphic designs and their critical evaluation. GD 200/GD 201 Graphic Design Studio I (3) This course is a beginning graphic design studio course. Instruction focuses on the practical and analytical process of creating graphic designs and their critical evaluation. Emphasis is on problem solving and technical training while, at the same time, nurturing intuition and creativity. The course will help students to: 1. Develop skills and techniques applicable to graphic design. 2. Become familiar with appropriate computer hardware and software. 3. Develop the ability to define and solve problems. 4. Develop an understanding of graphic design as a profession. 5. Refine their conceptual skills. 6. Develop the work habits and attitudes of design professionals. Grading: 1. Work will be evaluated on the relevance and originality of the design idea, the suitability of the design approach in serving the client’s needs, the effectiveness of the design in reading its intended audience, and all pertinent functional parameters. 2. Professional attitude and the development of professional work habits will be evaluated. Students are expected to think for themselves, budget their time, meet deadlines, and adhere to production schedules. 3. Attendance is required. In the case of illness or an emergency, students are required to contact the professor just as they would contact an employer. Three unexcused absences will result in the final semester grade being lowered one full letter grade. 4. Neatness, craft and attention to detail will be considered in the final grade. 5. Visual, verbal and written communication skills will also be part of the evaluation. GD 200 carries the prerequisite of GD 102.

Prerequisite: GD 102

GD 201: Typography

3 Credits

A consideration of the word in relation to visual organization and its application to communication. GD 201

Prerequisite: GD 200

Bachelor of Arts: Arts

GD 202W: The History of Graphic Design

3 Credits

A survey of graphic design, especially emphasizing influential movements, innovative designers and technological advances relevant to contemporary visual communication. GD 202 The History of Graphic Design (3) The History of Graphic Design course provides an overview of design as a vehicle of visual communication. The primary focus of the coursework is on images and styles of image-making as well as on language as a visual, typographic form. The application of images and typography is the basis of design, and its history ranges from Sumerian clay tablets to 21st century digital tablets. Special emphasis is given to periods of innovation and inspiration, including the late Roman period, the Renaissance, the Industrial Era, the rise of Modernism in Europe and America, and the digital revolution. Graphic design is a discipline which embraces its production and delivery technology; therefore, attention is also focused on the evolution of that technology—from the letterpress and
Prerequisite: GD 001S, GD 100, GD 101; Concurrent: GD 102

Writing Across the Curriculum

GD 203: Advanced Typography

3 Credits/Maximum of 3

Continues students' knowledge of foundational typographic systems and investigates the communicative potential of emerging methodologies on language systems in visual culture. Advanced Typography satisfies institutional and professional demand for future design practitioners to be versed in a robust knowledge of typography, the skillful techniques of organizing visible language. Building upon foundational knowledge gained from Typography GD201, this course excels student syntactic and semantic proficiencies and applies them towards crafting distinctive visual communications for print and digital platforms. Primarily, students will organize complex message systems of text, icons and image matter in the design of artifacts that address contemporary communication paradigms. They will explore the changing notion of the published form and create innovative content delivery solutions, which anticipate unique reader interpretation. Through investigation and analysis students will also determine efficacy of emerging technologies in visual culture such as screens, devices, and open source programming. Coursework manifests in several forms. Typeface design converges social, culture, linguistic, and semiotic systems to form a useable alphanumeric character set. Voluminous publications require students to develop solutions for narrative structure with large quantities of text and image. Environmental applications such as way finding and experience-based installations use visible language to navigate, explain or entertain in public settings. Visual communication in their printed form is the arrangement of poetic and visual content addressing material and physical variables. In digital form this content may also address technology, virtual interactions and sequential time-based media. Students will continue to develop core professional competencies in their mastery of industry tools and techniques for actual and virtual domains. Students should also expect introduction to newly available tools.

Prerequisite: GD 201

GD 210: User Interface Design and Prototyping

3 Credits/Maximum of 6

Students in this course will apply knowledge in User Interface (UI) design and practice designing and prototyping compelling visual interfaces for multiple platforms - from websites to physical spaces to the nuanced interactions in mobile and wearable environments. The relationship of context to concept will be evaluated and applied, with emphasis placed upon designing for desktop and mobile environments through project-based learning and critique. Knowledge acquired in GD 110: User Experience Design: Concepts & Principals will allow students to understand user behavior while applying technical knowledge in learning design systems and standards for desktop and mobile devices. Students will learn user interface design software to increase design capabilities, as well as prototyping software to further interaction design skill sets.

Prerequisite: GD 110

GD 295: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

GD 296: Independent Study

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

GD 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

GD 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

GD 300: Design Photography

4 Credits

An investigation of graphic photography processes and how print technology affects the final appearance of a photograph. GD 300

Prerequisite: GD 201 and successful portfolio review

Bachelor of Arts: Arts

GD 301: Experience Design Process + Methods

4 Credits/Maximum of 4

Experience design process and methods for graphic design majors. GD 301 is an advanced graphic design studio class that provides graphic design students with an in-depth study of the intricate relationship between the professional graphic designer and digital technology. Students will advance their knowledge of design software applications and will be introduced to programing languages that will assist them throughout the design process. From research and ideation to the creation of comprehensive studies and final designs, students will be given the tools that are critical to the completion of a variety of graphic design projects. The course will help students to: 1. Gain proficiency in appropriate hardware, software and programing languages. 2. Apply the students’ existing digital knowledge to design methodology for interfaces, user behavior and experiences. 3. Develop an understanding of the graphic designer as a digital communicator. 4. Refine their digital craft. 5. Develop the work habits and attitudes of professional designers.

Prerequisite: GD 201
GD 302: Applied Communication

4 Credits

Definition and concentrated involvement in problem/audience analysis, with emphasis on understanding symbol and image in evoking audience response. GD 302

Prerequisite: GD 300, GD 301

Bachelor of Arts: Arts

GD 303: Applied Experience Design

4 Credits/Maximum of 4

Interaction design and user experience for graphic design. This class introduces the concepts, technologies, and languages used to design and build modern interactive experiences. GD303 will explore the visual aspects and structural flow of interface design. Through projects, lectures, and workshops students will explore design strategies for web and mobile devices. Students will design screen-based experiences through research and empathy to achieve their user’s end-goals and objectives. Core concepts might include content strategy, personas, sitemaps, user flows, wireframes, information architecture, and usability principles. The objectives for this course are to give graphic design students experience in the complexities of digital visual communication in emerging mediums and to provide students with the opportunity to work with software packages that facilitate digital communication. Students will receive instruction regarding the graphic designer’s role in complex, collaborative digital communications.

GD 304: Practical Communications

3 Credits

Practical design experience for students through design/publicity problems from the University and community non-profit organizations. GD 304

Prerequisite: Prerequisite or concurrent GD 300, GD 301

Bachelor of Arts: Arts

GD 310: Studio Apprenticeship

3-6 Credits/Maximum of 6

Direct involvement in the creative process of the artist-teacher in the studio environment. GD 310

Prerequisite: Junior or senior standing in Graphic Design. Prior approval of proposed assignment by instructor.

Bachelor of Arts: Arts

GD 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

GD 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

GD 400: Time and Sequence

4 Credits

Development of visual sequence as replies to graphic design problems. GD 400

Prerequisite: GD 302

Bachelor of Arts: Arts

GD 401: Package Design

3 Credits

Orientation to packaging designs as it relates to the consumer, client, and to societal and environmental concerns. GD 401

Prerequisite: GD 302

Bachelor of Arts: Arts

GD 402: Senior Problems

4 Credits

Development of visual replies to graphic design problems. GD 402GD 402 Senior Problems (4)(BA) This course meets the Bachelor of Arts degree requirements. This course is an in-depth course that explores the essential relation of the verbal and visual elements of design to advanced graphic design problems. The class is divided into two parts: 1) Each student submits a written proposal for a hypothetical magazine. In the proposal he or she describes the publication’s subject, content and editorial point-of-view, along with the intended audience, must be described in the proposal. Additionally, the functional parameters surrounding editorial design and a discussion of similar publications in the marketplace should be touched upon in the paper. The proposal drives the design of the publication. Each student is required to develop an appropriate title for their magazine, design a masthead, two covers, a table of contents, and a minimum of three articles. The minimum length for each article is two spreads (four pages). All sections of the magazine will be bound together with one of the covers for final presentation. Additionally, each student must apply his or her masthead design to letterhead, envelope and business card. 2) Each student prepares for graduation and the beginning of his or her career by putting together their final portfolios, resumes, letters and job search strategies. The course will help students to: 1. Perform as editorial designers. 2. Prepare for the real working environment they will confront in the professional arena after graduation. 3. Thoroughly examine the design process and learn to clearly define the problem, in order to work logically towards an appropriate solution. 4. Develop the work habits and attitudes of professional designers. 5. Polish visual, verbal and written presentation skills. 6. Practice positive behavior, and conflict avoidance/resolution in the workplace. 7. Prepare designers for realistic working environment expectations. 8. Foster an appreciation of good typography. Grading: 1. Work will be evaluated based on the relevance and originality of the idea and the appropriateness of the design approach to the idea, the intended audience, and all pertinent functional parameters. 2. Professional attitude and the development of professional work habits will be evaluated. Students are expected to think for themselves, budget their time, meet deadlines, and adhere to production schedules. 3. Attendance is required. In the case of illness or an emergency, students are required to contact the professor just as they would contact an employer. Three unexcused absences will result in the final semester grade being lowered one full letter grade. 4. Neatness, craft and attention to detail will be considered in the final grade. 5. There will be a review at the end of the semester,
which will include all work from the class. Each piece will be evaluated for quality and presentation. 6. Visual, verbal and written communication skills will be a part of the evaluation. GD 400 and 401 are prerequisites to GD 402. GD 402 will be offered spring semesters.

**Prerequisite:** GD 400, GD 401
Bachelor of Arts: Arts

**GD 403W: Graphic Design Seminar**

3 Credits

A seminar on subjects which relate to the field of graphic design. GD 403WGD 403W Graphic Design Seminar (3)(BA) This course meets the Bachelor of Arts degree requirements. This is an advanced course covering the history and contemporary theory and criticism of graphic design. Topics include: the invention of writing and alphabets, medieval manuscripts books, the origin of printing and typography, Renaissance graphic design, the Arts and Crafts movement, Victorian and Art Nouveau graphics, modernist influences on graphic design, visual identity and conceptual images, postmodern design, the computer graphics revolution, new media design, ethics and professional practice, and contemporary issues relating to design theory and criticism. The course is intended to: 1. Provide a firm understanding of the history of graphic design. 2. Develop the capacity to discuss the articulate current issues in graphic design. 3. Promote writing and speaking abilities through class assignments. 4. Help students to develop the work habits and attitudes of professional designers. Grading: 1. Class projects as well as class participation will be evaluated. 2. Written assignments, including short synopses of readings and additional essays, and the quality of writing will be a part of the grade evaluation. 3. Professional attitude and the development of professional work habits will be evaluated. Students are expected to think for themselves, budget their time, meet deadlines, and adhere to production schedules. 4. Attendance is required. In the case of illnesses or an emergency, students are required to contact the professor just as they would contact an employer. Three unexcused absences will result in the final semester grade being lowered one full letter grade. 5. Visual and verbal as well as written communication skills will be a part of the evaluation. GD 320 is the prerequisite to GD 403W. GD 403W will be offered spring semester.

**Prerequisite:** GD 302
Bachelor of Arts: Arts

**Writing Across the Curriculum**

**GD 404: Book Design**

3 Credits

Writing, designing, illustrating and production (printing) of a book. GD 404GD 404 Book Design (3)(BA) This course meets the Bachelor of Arts degree requirements. This is an advanced course that explores the relationship of the written and visual elements in the design of a book. Each student (or student team) will select a topic, create the text and give visual form to an original book, which will have a minimum length of 16 pages. The intrinsic qualities of the book medium such as typography, sequence, imagery, paper, dye-cuts, fold-outs, pop-ups, and binding will be investigated in relation to how each affects the overall communication of the book’s meaning to a specific audience. The course is intended to: 1. Foster an appreciation for good typography. 2. Allow students to investigate the sequential relationships between the visual and verbal aspects of a book and their synergistic interaction in the communication of the books meaning to a particular audience. 3. Introduce the appropriate use of illustrations in book design. 4. Help students develop the work habits and attitudes of professional designers. 5. Help students to examine the design process to learn to define the problem and work logically towards an appropriate solution. 6. Develop the ability to work as a member of a team. 7. Gain a deeper understanding of graphic design aesthetically, critically, and technically. Grading: 1. Each of the two copies of the book that are submitted at the end of the semester should be identical, with flawless execution and craft. 2. The book will be evaluated on the originality of the idea and the appropriateness of the design approach to the idea, the intended audience and all pertinent functional parameters. 3. Professional attitude and the development of professional work habits will be evaluated. Students are expected to think for themselves, budget their time, meet deadlines, and adhere to production schedules. 4. Visual, verbal and written communication skills will be evaluated. GD 404 will be offered fall or spring semesters.

**Prerequisite:** GD 302
Bachelor of Arts: Arts

**GD 405: Minor Advanced Studio**

3 Credits/Maximum of 3

This class introduces the concepts, technologies, and languages used to design and build publications, objects, and complex collaborative digital communications. GD 405 provides Graphic Design Minors with an advanced-level design studio, appropriate in rigor, and in keeping with the expectations of the Minor in Graphic Design degree. This will prepare the successful student for the self-guided thesis environment of the Minor in Graphic Design Capstone Course (GD 406). Within this advanced studio course, students will continue to develop core professional competencies in their quest for mastery of industry tools and techniques for actual and virtual domains. It will apply the student’s existing knowledge of design methodology to the completion of project-based studio coursework. Through research, ideation, and the creation of final designs, students will be given continued experiences in printed mediums, be introduced to the design of physical artifacts, and exposed to the complexities of digital visual communication in emerging mediums. These may include complex long-form publications, commercial product packaging, websites, and digital interfaces. Students will develop an understanding of the graphic designer as a professional communicator, and develop the work habits and attitudes found within this design profession.

**Prerequisite:** GD 200, GD 201

**GD 406: Minor Capstone Studio**

3 Credits/Maximum of 3

A structured studio for Minors in Graphic Design culminating into a final self-authored project on a topic that engages each student’s declared major. The Minor Capstone Studio applies each student’s accumulated knowledge of graphic design towards the development of a self-authored project on a topic that engages his or her declared major. Each project will exercise the student’s capacity to synthesize visual form and written components through the application of design methodology, and culminate their findings into a completed, presented thesis. Coursework will also include an introduction to communication theory, contemporary communication paradigms, the changing notion of audience and context, and formal research methodology.

**Prerequisite:** GD 405
GD 494: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

GD 494H: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

Honors

GD 495: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

GD 496: Independent Study
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

GD 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Greek (GREEK)

GREEK 2: Elementary Classical and New Testament Greek
4 Credits
Further instruction in syntax and sentence structure.

Prerequisite: GREEK001
Bachelor of Arts: 2nd Foreign/World Language (All)

GREEK 99: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Humanities
International Cultures (IL)

GREEK 101: Introductory Ancient Greek
4 Credits
GREEK 101 is the first course in a two-semester introduction to ancient Greek, the language of Homer, Sophocles, Plato, and the New Testament. Students will begin to learn the grammar and vocabulary necessary for reading Greek literature of different periods. Unlike a modern language, ancient Greek is not a spoken language. Consequently, the class will be devoted to honing reading skills through drills and the translation of short sentences and passages. Students will also be encouraged to compose ancient Greek sentences and passages as they develop their fluency in the language. By the end of the semester, students will be prepared to continue to GREEK 102.

Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities

GREEK 102: Intermediate Ancient Greek
4 Credits
GREEK 102 continues the work begun in GREEK 101, which is prerequisite for enrollment. Students will continue to learn the grammar and vocabulary necessary for reading ancient Greek literature of different periods. During this course, students will begin to read extended, unadapted passages from Plato, Xenophon, the New Testament and other sources. GREEK 102 will prepare students for GREEK 203.

Prerequisite: GREEK 101
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities

GREEK 199: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

GREEK 203: Greek Reading and Composition
4 Credits
GREEK 203 is the third course in the introductory ancient Greek language sequence. The aim of this course is to help students increase their familiarity with forms and vocabulary, as well as gain confidence in their ability to read, appreciate, and interpret ancient Greek literature. Students will be introduced to advanced grammar and syntax and will read extensive passages of ancient Greek prose. Greek prose composition will also comprise a significant component of this course. Possible authors covered in this course may include but are not limited to: Plato, Xenophon, Herodotus, Attic orators, and Lucian. The prerequisite for this course is GREEK 102 or the permission of the instructor.

Prerequisite: GREEK 102
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities

GREEK 420: Greek Prose Authors
3-12 Credits/Maximum of 12
GREEK 420 is an advanced reading course in ancient Greek, which focuses on the writings of prose authors. The primary aim of the course will be to hone students’ ability to read connected passages of Greek prose by a given author or on a particular theme. In addition, students will read and evaluate secondary scholarship in preparation for a final research project. Possible authors/genres of focus include, but are not limited to: Plato, Xenophon, the Attic orators, Aristotle, Plutarch, Lucian, the Greek Novel, and the New Testament. The prerequisite for this course is GREEK 203 or the permission of the instructor. This course may be repeated.

Prerequisites: GREEK 203 Or permission of instructor
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities
GREEK 425: Greek Historians
3-6 Credits/Maximum of 6

GREEK 425 is a reading course in ancient Greek focusing on one or more of the major ancient Greek historians. The course is designed to advance the student's fluency in reading Greek prose, while at the same time enriching their understanding of Greek civilization and history by a thematic choice of historical readings. The course may concentrate on one author or may address a thematic issue with readings from a variety of Greek historians (usually Herodotus, Thucydides, or Xenophon, or Polybius). The prerequisite for this course is GREEK 203 or the permission of the instructor. This course may be repeated.

Prerequisites: GREEK 203 Or permission of instructor
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities

GREEK 430: Greek Poetry
3-6 Credits/Maximum of 6

GREEK 430 is an advanced reading course in ancient Greek poetry. The primary aim of the course will be to hone students’ ability to read and appreciate Greek poetry. In addition, students will read and evaluate secondary scholarship in preparation for a final research project. Possible poets include but are not limited to: Homer, Hesiod, Sappho & the Lyric poets, Callimachus, and Apollonius Rhodius. The prerequisite for this course is GREEK 203 or the permission of the instruction. This course may be repeated.

Prerequisites: GREEK 203 Or permission of instructor
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities

GREEK 440: Greek Drama
3-6 Credits/Maximum of 6

GREEK 440 is an advanced reading course in ancient Greek Drama (tragedy and comedy). The primary aim of the course will be to hone students' ability to read and appreciate Greek drama. In addition, students will read and evaluate secondary scholarship in preparation for a final research project. Possible poets include: Aeschylus, Sophocles, Euripides, Aristophanes, and Menander. The prerequisite for this course is GREEK 203 or the permission of the instruction. This course may be repeated.

Prerequisites: GREEK 203 Or permission of instructor
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities

Health - CA (HLTH)

HLTH 306: Physical Education, Health, and Safety in Elementary Schools
2 Credits

A study of appropriate activities for elementary-age children. Student participation in physical activities is required. HLTH 306 Physical Education, Health and Safety in the Elementary Schools (3) This course is designed to prepare elementary classroom teachers to provide age appropriate instruction related to issues of health and safety encountered in the school, home, and community. Understanding and demonstrating a knowledge of foundations, lesson planning, instructional strategies, and assessment is a key component of the program. In addition, the pre-service teachers are prepared to organize and implement physical education activities that may be carried out in the classroom, playground and/or appropriate indoor facilities. The physical education aspects of the program are generally provided as ancillary activities to the program provided under the guidance and direction of a certified Health and Physical Education instructor.

Prerequisite: eighth-semester standing in Elementary Education Program
Health and Human Development (HHD)

HHD 100H: Honors Seminar on Longevity, Health, and Human Development
1 Credits

This course aims to provide students with an overview of the impact the growth in human longevity is having on society, viewed through the lens of current research in the fields of health and human development. Students will explore the recent research on growth in the human lifespan and how this is having impacts on individuals, families, employers, governments, and communities. Through readings and discussions with faculty working on research related to aging and longevity, students can see how these issues connect with physical activity, nutrition, communication, health behaviors, health policy, cognition and the effects longer life is having on restaurants, hotels, parks, tourism, health care facilities, schools, and other service industry employers.

Honors

HHD 197: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

HHD 200N: Addiction Science to Society
3 Credits

Addiction is commonly defined as set of compulsive behaviors that cannot be stopped despite negative consequences. The term itself is controversial and defined differently by various disciplines. This has resulted in skewed perceptions of addiction by society as a whole. This course aims to inform students on the biological, psychological, and sociological viewpoints of addiction and how they interact to form an integrated perspective (the biopsychosocial model). By understanding the current knowledge on the biological and psychological bases of addiction, students will be better prepared to make knowledgeable decisions on their own behaviors, understand the behavior of others, and generate informed opinions on the social aspects of addiction. We will begin by comparing and contrasting the different ways addiction has been defined in various fields and exploring the debate on which substances/behaviors are actually considered addictive. Throughout the course, students will broadly explore basic concepts in biology (cells, neural communication, brain anatomy, use of animal models, pharmacology, genetics, epigenetics, and comorbidity), psychology (memory, conditioning, reward, expectancy, bias, and mental health) and sociology (family systems theory, stress theory, developmental theory, feminist theory). These concepts will be practically applied to various questions concerning 1. The status of addiction as a disease. 2. How addiction is or should be treated. 3. The effects of addiction on family and society. 4. Policies concerning the criminalization of drugs and compulsive behaviors. In addition, methods and data from primary research in all three domains of the biopsychosocial model will be analyzed. Several assignments using various forms of communication will serve to illustrate the connections and assess integrated learning.

General Education: Natural Sciences (GN)
General Education: Social and Behavioral Sci en (GS)
HHD 402: Women’s Leadership Initiative: Leadership Concepts and Competencies II

2 Credits

HHD 402 is the second semester of the year-long program for students selected to participate in the Women’s Leadership Initiative (WLI). The course designed to work in concert with WLI activities to support students in their development of the foundational values, knowledge, skills, and confidence to realize their potential as effective, life-long leaders. Through their participation in this course and the spring semester course, students will develop a deeper knowledge of themselves and others, be able to define and critically assess leadership concepts and incorporate these into a personal leadership philosophy, develop leadership skills, and practice leadership skills in various settings. Students will accomplish these objectives through the completion of assessment tools, discussions with leaders from the campus and the community, mentoring by women leaders, and the delivery of course topics pertaining to leadership. Students must apply and be selected to participate in the Women’s Leadership Initiative in order to take this course.

Enforced Prerequisite at Enrollment: HHD 401

HHD 494: Research Project
1-12 Credits/Maximum of 12

Supervised student activities on research projects on an individual or small-group basis.

HHD 495: Internship in Health and Human Development
1-18 Credits

Approved experiential learning related to student career objectives

HHD 496: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

HHD 497: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

HHD 497I: Intergenerational Communication
3 Credits

How can a person grow to become more truly themselves? How do our habits inform our future? This course examines current research on happiness, aging, and well-being alongside the lived experience of older adults. Together students and older adult community members will discuss research as well as compare perceptions and perspectives of the aging experience. We will use an aging lens to explore what it means to grow as a human being, how to become the person we would like to be, and how to help others do the same. Students will partner with older adults for engagement experiences and a collaborative project.

General Education: Humanities (GH)

Health Policy and Administration (HPA)

HPA 57: Consumer Choices in Health Care
3 Credits

HPA 57 is designed to provide students with an understanding of the breadth of decisions related to health and health care in the United States. HPA 57 introduces students to the consumers’ role in health related decisions, including assessing health risks, health benefits, service choices, and end-of-life care. The growth in available health care information resources, the expansion of for-profit medical care, and increasing cost pressure are transforming the role of the health care consumers from passive recipients to active participants in many health care decisions. The main goal of this course is to educate students to become knowledgeable health care consumers and providing them with opportunities to learn how to gather, analyze, and synthesize information about health and health care to make sound health care choices. Students will learn practical information, key terminology and where/how to find reliable, up-to-date information on different sectors of the health care system (e.g. physicians, hospitals, commercial and public health insurance, mental health, long-term care).

General Education: Social and Behavioral Scien (GS)

Health Policy and Administration - Integrative: Interdomain

HHD 499: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

HHD 499H: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Honors

GenEd Learning Objective: Key Literacies

GenEd Learning Objective: Soc Resp and Ethic Reason

HPA 101: Introduction to Health Services Organization
3 Credits

Examination of the social, political, historic, and scientific factors in the development and organization of health services.

HPA 210: Health Care Payment
3 Credits/Maximum of 3

This course covers basic concepts and issues related to health insurance and payment for health care providers. This course covers both public insurance programs and private health insurance products including managed care approaches to the financing and delivery of healthcare services. Within public and private insurance schemes, Students will explore reimbursement and payment methodologies. In doing so,
the course will evaluate multiple dimensions of health care cost and payment, with an emphasis on how payment systems influence provider organization, behavior and performance. Participants will review sources and uses of health care dollars, and examine how these have changed in recent years as well as further changes that are likely as a result of the 2010 health care reform law and associated regulations. Students will examine forms, processes, practices and the roles of health information professionals. Students will discuss concepts in insurance, third-party and prospective payments, and managed care organizations. Finally this course will examine various stakeholder points of view on health care finance; and assess how health care finance can drive changes in health care delivery and can lead to different experiences and outcomes for both providers and patients.

**Enforced Prerequisites at Enrollment:** ECON 102 or HPA 101

HPA 211: Financial Decisions in Health Care Organizations

3 Credits/Maximum of 3

An introduction to financial and economic information to make decisions in health care organizations. Healthcare Finance is at the core of issues surrounding quality healthcare delivery. It involves wisely balancing the need to manage/control costs while simultaneously investing in strategic opportunities. This course will present and allow students to examine the major issues involved in finance, budgeting and strategic planning and the unique applications of these in health care organizations. This course is designed to help you understand the basic concepts of finance and financial management. The objective is to have you become knowledgeable of how health care entities organize and report financial data and use that data to make decisions. The course will focus initially on the conceptual framework of basic accounting techniques such as the preparation of financial reports, annual and capital budgeting, cost accounting and analysis of financial statements. The course builds on these basic concepts to provide students a conceptual and practical knowledge of health care finance, which includes sources of funding, revenue, cost determinants, third party payers, and valuations that have an impact on the health care organization. The course is also designed to provide students with a working knowledge of vocabulary, concepts in financial management and strategy that will help them be prepared to plan, create, implement and monitor strategic initiatives within a health care organization. Finally, successful completion of this course should equip the student with the tools necessary to be able to effectively communicate with the finance professionals in a health care organization regarding financial decisions being made by that organization.

**Enforced Prerequisites at Enrollment:** HPA 210

HPA 295: Field Experience

1-3 Credits/Maximum of 3

Field Experience

HPA 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

HPA 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HPA 301H: Health Services Policy Issues

3 Credits

HPA 301H uses a case study method to examine health services policy issues and emphasizes the skills needed to analyze and communicate knowledge about health services policy. The chief goals of the course are to broaden student understanding of selected current policy issues in health care, to deepen student knowledge of the development of health policy issues, and to develop student skills in the areas of information literacy, communication, and teamwork. Students are evaluated on a combination of individual and team work.

**Enforced Prerequisites at Enrollment:** ECON 102 and HPA 101 and PLSC 1

HPA 301W: Health Services Policy Issues

3 Credits

Analysis of major issues in health services delivery in hospitals, medical practice, public health, mental health, and health professional education. This course provides students with a basic framework for health policy analysis and examines major strands of U.S. health policy. Detailed consideration and discussion are given to the relationship of national policy to the planning, implementation, and funding of health care services, with particular emphasis on low-income and minority populations. This course will cover topics such as the healthcare policy environment in the U.S, government-funded health care through Medicaid and Medicare, and contemporary health care reform initiatives.

**Enforced Prerequisites at Enrollment:** ECON 102 and HPA 101 and PLSC 1

Writing Across the Curriculum

HPA 310: Health Care and Medical Needs

3 Credits

HPA 310 introduces students to the use of medical terminology in the context of the structure of the human body, functions of its systems, and disease. Disease processes include development, progression, diagnosis, treatment, and prevention. We will also highlight technological developments in the health care field that are used to assist in diagnosis, treatment, and prevention of diseases. In the process of learning the language of the medical profession and health care industry, students are expected to develop an appreciation for the complex interactions between individual, social, environmental and community factors in the development, growth, and progression of disease processes. Students are also expected to develop skills in accessing and disseminating reliable and relevant information concerning the disease process. On completion of this course students will have a more in depth understanding of 1. The language and terminology of medicine and the health care field; 2. Technologic developments in clinical, diagnostic and therapeutic areas; 3. Anatomy and physiology of organ systems, and how they relate to disease states; 4. Major chronic illnesses prevalent in the U.S.

**Enforced Prerequisites at Enrollment:** BBH 101 or BISC 4 or BIOL 141 or BIOL 161 Concurrent Courses: HPA 101
HPA 310H: Health Care and Medical Needs

3 Credits

Health care from an individual, family, and community standpoint illustrated with specific diseases and health problems.

Honors

HPA 311: Population Health and Healthcare

3 Credits/Maximum of 3

This course covers fundamental theories, concepts, issues, and strategies related to a population health approach to health and health services

Enforced Prerequisites at Enrollment: HPA 101

HPA 332: Health Systems Management

3 Credits

Health Systems Management provides you with an overview of how health care institutions are organized and governed, the role of the management staff, and the management systems designed for their efficient and effective operation. This course will build student competencies in management. By the end of the semester students will have an appreciation for the complexities in managing a health care organization. They will develop this awareness by both examining their own patterns of behavior and learning about many dynamics common within organizations, using both conceptual information from the text and by analyzing selected cases. Class activities will primarily focus on the application of concepts in a variety of different situations and settings. By the end of this class students will: 1) Understand management as a balance among competing goals in a variety of situations; 2) Display such critical managerial competencies as listening, providing feedback, managing time effectively and managing conflict; 3) Apply organizational behavior theories to situations in health care management; 4) Solve organizational challenges using quality improvement tools; 5) Synthesize financial and economic information to make decisions in health care organizations; and 6) Understand the process of making ethical decisions.

Enforced Concurrent at Enrollment: HPA 211

HPA 332H: Health Systems Management

3 Credits

Introduction to and analysis of managerial roles and practices in health service organizations.

Honors

HPA 390W: Professional Development in Health Policy & Administration

3 Credits

Development of personal understanding and professional skills to prepare students for future employment or study in health policy and administration. H P A 390 Professional Development in Health Policy and Administration (3) The objectives of H P A 390 are to help students understand themselves and the opportunities available in the health care field and professional skills in preparation for their required internship and future profession. In H P A 390 students learn to assess their talents and abilities and how those talents can be best applied in one of the many career settings in health care. They research different types of organizations and opportunities in the health care field. They learn the basic professional skills that are required in the health care world. Students are evaluated on the basis of a personal self-study exercise, completion of a required planning for several professional development exercises, and a team project on a health care organization. Health Policy Administration students take H P A 390 after they have completed the initial overview of the health care system in H P A 101 and while they are taking their core courses in the major, H P A 301, H P A 310, and H P A 332. The course is a prerequisite for H P A 395, the student's professional internship, providing the professional development background that students need to have a high-quality internship experience that furthers their education. H P A 390 is a required course in the curriculum. No students from other departments may take the course without H P A permission.

Enforced Prerequisites at Enrollment: HPA 101

Writing Across the Curriculum

HPA 395: Field Experience in Health Policy and Administration

1-13 Credits/Maximum of 13

Professional field experience providing opportunities to apply skills and knowledge in health care setting.

Enforced Prerequisites at Enrollment: HPA 301W and HPA 310 and HPA 332 and HPA 390W

HPA 401: Comparative Health Systems

3 Credits

Comparative analysis of health services in selected developed and developing countries. H P A 401 Comparative Health Systems (3) (IL) In HPA 401 students will examine health and health services delivery systems as complex and variable entities that reflect individual country's values and beliefs. Health systems influence and are influenced by the various cultures, demographics, geographies, economies, technologies, and political infrastructures of the country. This class will provide students with a tool kit to begin the difficult task of understanding health care outside the U.S. The class will be focusing on the challenges of attempting comparisons before drawing comparative conclusions.

Enforced Prerequisites at Enrollment: HPA 301W

International Cultures (IL)

HPA 401H: Comparative Health Systems

3 Credits

Comparative analysis of health services in selected developed and developing countries.

Honors

HPA 410: Principles of Public Health Administration

3 Credits

This course is an overview of issues pertaining to public health administration and the uses of data analytics in population health. Course content provides the foundational understanding for the organization and function of public health activities within the health care delivery system of the United States. Students are introduced to fundamental concepts, issues, and strategies related to the public
health system in the United States. On successful competition of this course students should be able to discuss and analyze policies and population-based interventions related to public health and utilize scientific knowledge base and public policy skills to approach solutions to public health problems.

**Enforced Prerequisites at Enrollment:** HPA 301W and HPA 311

HPA 420: Principles of Managed Care

3 Credits

Survey of managed health care, including history, typology, current issues, management challenges, and impacts on patients, providers, and special populations. HPA 420 is designed to introduce students to managed health care in the United States, including history, typology, current issues, management challenges, and impacts on patients, providers, and special populations. Participants must have a basic knowledge of the US healthcare system, including key stakeholders, national trends in health delivery, financing, and health policy. Most assignments encourage students to select a focus on the impact of managed care on either the private sector or public sector, allowing them to examine concepts in detail that is relevant to their career path. This course is designed as a seminar and employs team-based learning and other projects to achieve the learning objectives. Students will demonstrate mastery of skills through tests, written assignments, and oral presentations. All students are expected to actively participate in class discussions. Much of the work for this course will be conducted in project teams. All students are expected to participate as full and equal members of their team and are responsible for all research and content developed by the team.

**Enforced Prerequisites at Enrollment:** HPA 301W

HPA 430: Health Care Leadership

3 Credits

The objectives of HPA 430 are: (1) to help students learn about their own strengths and weaknesses as leaders; (2) to give students an opportunity to build their skills in small group leadership; and, (3) to explore the leadership challenges in health care. On successful completion of the course students should be able to do the following: 1) Describe, compare, and contrast several leadership competency models in current use in health care; 2) Understand the four cornerstones of health care leadership: self-awareness, vision, interpersonal relationships, and execution. Explain two to four significant leadership challenges in the current health care system; 3) Identify their leadership strengths and weaknesses and develop a plan for improving their leadership skills and/or explore ways to improve those skills; 4) Understand the leadership skills required for leading small group projects and discussions.

**Enforced Prerequisites at Enrollment:** HPA 301W or HPA 311 or HPA 332

HPA 433: Administration of Hospital and Health Service Systems

3 Credits

Analysis of administrative structures and interorganizational arrangements among hospitals and other health care organizations.

**Enforced Prerequisites at Enrollment:** HPA 332

HPA 435: Safety Net Health Care

3 Credits

This course is designed to provide students with knowledge about what safety net health care is, how it is delivered and financed, and current policy and practice initiatives related to safety net care. A safety net can generally be described as a program that transfers benefits to those who are impoverished. The course will describe how poverty is defined in the United States and other countries. Safety net benefits could be in the form of cash, vouchers, or services. Transferring benefits to the impoverished can help to limit or prevent future economic shock or vulnerability for them. In health care, safety net is a generic term that is often used to describe services that are available to impoverished individuals, some of whom are insured and some are not. The safety net can also be described as a group of clinics, hospitals, and providers that have decided to provide services to impoverished patients. This decision may be based on altruism, but oftentimes an organization or provider must carefully consider the financial implications of providing this care. Given the challenges that public and private organizations face in providing safety net health care, novel approaches have been developed and students will have an opportunity to examine recent innovative approaches. After learning about the components of the safety net students will consider how these components work together within communities. In the last part of the course students will study marginalized groups that are often served in the safety net. Students will think about how they would manage these groups from a clinical, operational, and patient-centered perspective.

**Enforced Prerequisites at Enrollment:** HPA 301W and HPA 311

HPA 440: Principles of Epidemiology

3 Credits

Theory of epidemiology and significant case studies; potential applications to health care. BBH / HPA 440 Principles of Epidemiology

(3) (US;IL)This course is designed to provide students with a basic understanding of the principles of Epidemiology and to familiarize students with the methods and applications of epidemiology to understanding the bases for heterogeneity of disease and health among populations. The goals of the course are: 1) recognize and use basic principles, concepts, terminology, and techniques in Epidemiology as applied to the study of infectious disease, chronic diseases, and other health-related problems; 2) examine and understand measures of risk and burden of illness on populations defined in terms of age, race, gender, class, time, and other relevant socio-cultural and demographic factors; 3) be able to interpret and critique epidemiological research reports on the identification of risk factors and casual factors for diseases in populations; 4) assess the health status and burden of diseases and health problems of populations at multiple levels of analysis for the purpose of planning health promotion activities and health care services; 5) have a basic understanding of the epidemiology tools for disease screening and other methods for primary and secondary prevention of disease and health problems; 6) examine the validity and applicability of various health interventions used to improve health status and the barriers for successful interventions; and 7) have a basic understanding of the epidemiology of the major causes of morbidity and mortality in the U.S. and for other selected regions and nations of the world. This is a required course in the Biobehavioral Health major and an elective course in the Health Policy and Administration major. The course is also appropriate for students intending to advance to post-baccalaureate graduate and professional programs in medicine, public health, health
policy and planning, and other health-related careers. Students will be evaluated based on their performance on a combination of written assignments, a term paper or project, and exams.

**Enforced Prerequisites at Enrollment:** (BBH 101 or BIOL 110 or HPA 310) and (STAT 200 or STAT 250)
Cross-listed with: BBH 440
International Cultures (IL)
United States Cultures (US)

HPA 442: Long-Term Care Management
3 Credits
Management and policy issues for institutional, community, and home settings for chronic care services.

**Enforced Prerequisites at Enrollment:** HPA 332

HPA 443: Nursing Home Administration
3 Credits
This course provides students who are interested in a career in long-term care to gain an operational knowledge of managing skilled nursing facilities. After mastering the concepts of skilled nursing management, the student can step into a position as an administrator, assistant administrator, or trainee administrator, and find a level of comfort in dealing with operational issues and problems encountered in day-to-day management situations in any type of long-term care organization. To accomplish this, the course incorporates numerous theories, models, illustrations, and examples to help the student grasp the complexities of managing a long-term care facility. Upon course completion students will be able to: Discuss the broad range of operational issues related to the field of nursing home administration; Describe the rules and regulations that impact nursing home operations; and Recognize the professional development needs of nursing home administrators.

**Enforced Prerequisites at Enrollment:** HPA 332

HPA 444: Aging Policy in the United States
3 Credits
The United States is an aging nation and in the coming decades the number of elders in the United States is expected to grow dramatically. Policymakers faced with growing concern about containing the cost and scope of government face tough questions: Given the current and changing political climate, what course should policy makers chart to meet the challenges of a societies where large numbers of people are moving into old age and living long lives? How will their decisions affect entitlements for older adults now and in the future? What social, economic, political, and cultural factors will influence policymaking? This course will address the impacts of national age-based and age-related policy and programs such as Social Security, Medicare, Medicaid, and the Older Americans Act. In addition, it will examine the implementation of these programs in state and local settings, where implications are tangible for vulnerable groups such as low-income and frail older people and their families. Policy challenges of issues such as Alzheimer’s, long term services and supports, housing, caregiving, transportation, nutrition, emergency management, and disease prevention will be considered.

**Enforced Prerequisites at Enrollment:** HPA 301W

**HPA 445: Health Economics**
3 Credits
Economic analysis of U.S. health care system; planning, organization, and financing; current public policy issues and alternatives.

**Enforced Prerequisites at Enrollment:** ECON 302 or ECON 315 or ECON 323
Cross-listed with: ECON 445
Bachelor of Arts: Social and Behavioral Sciences

HPA 445W: Health Economics
3 Credits
Economic analysis of U.S. health care system; planning, organization, and financing; current public policy issues and alternatives. ECON (H P A) 445W Health Economics (3)The healthcare sector comprises a set of markets that differ in some significant ways from the textbook model. In the US, this sector performs well in some respects and questionably in others. Notably, there has been sustained improvement over time in life expectancy and other indicators of the effectiveness of health care for most people, but the resources devoted to producing this improvement have been growing considerably faster than GDP. The goal of this course is to examine several broad questions raised by these facts. The course begins with an overview of evidence on wealth, health expenditure, and life expectancy across countries, and then examines increasing life expectancy and medical expenditures in the US and their causes. Issues in measuring the value of medical expenditures are addressed, and an overview of the industrial organization of health care is provided. A major component of the course covers the economics of health insurance, and the course also examines medical R&D and the pharmaceutical industry as well as issues in the financing of medical care for the elderly. The course seeks to introduce students to the economic analysis of health care. It is in the area of applied microeconomics, and deals with issues relating to labor markets and public finance, in particular. This writing-intensive course will be one of several 400-level W seminars that the Economics Department is seeking to establish, with the broad objective of exposing our advanced undergraduate students to economic analysis in a seminar setting requiring significant writing by the students. The course counts toward the major and the minor in economics, as a 400-level course. In addition, it also counts toward a 'module' (area of concentration) in human resource and public economics. Student performance in the course will be evaluated based on three papers.

**Prerequisite:** ECON 302 , ECON 315 , or ECON 323
Cross-listed with: ECON 445W
Writing Across the Curriculum

HPA 447: Financing Health Care
3 Credits
This course is to prepare health care administrators for the responsibilities involved in maintaining a well-managed health care organization. The course covers concepts in managerial accounting and finance that are critical to decision-making. Topics covered include types of budgets; considerations for cash flow, payables and receivables; and considerations in working with various types of revenue streams. These topics include evaluation of capital investment decisions, sources of financing, managerial accounting concepts (including cost behavior, profit analysis, and incremental analysis), reimbursement under various
third-party payer environments, cost allocation and government program reporting.

**Enforced Prerequisites at Enrollment:** HPA 332 and HPA 211

HPA 450: Healthcare Policies and Politics

3 Credits

Survey of health care's political contexts: formulation, implementation, and modification stages of policy process; politics of private interests (associations) at national and state levels.

**Enforced Prerequisites at Enrollment:** HPA 101 and HPA 301W and PLSC 1

HPA 454: Health Care Professional Communication

3 Credits

This course will focus upon the analysis and application of professional communication principles and practices for successful participation in health care organizational and occupational activities. The changing health care industry towards greater coordination and integration of health delivery and the increased emphasis on the active participation of service recipients require that individuals send clear verbal messages, choose effective nonverbal behaviors, listen for desired results, and apply valid critical-thinking and problem-solving processes. Students in this course will be expected to identify, analyze, develop, and evaluate communication skills needed for professional success in interpersonal situations, group interactions, and professional written documents and oral presentations.

**Enforced Prerequisites at Enrollment:** HPA 301W and HPA 332 and HPA 390W

HPA 455: Strategic Planning and Marketing for Health Services

3 Credits

The history, principles, techniques, and methodologies of health services planning and marketing are studied and students learn how to plan for new or changed health services, programs, or facilities. Students will examine the various stakeholders and explore community and healthcare program specific needs assessments, planning and marketing design. They will apply concepts learned and analyze real-life situations found in the market today. This course will build students' competencies in management, with a focus on application of these concepts to healthcare organizations. By the end of the semester students will have a deepened appreciation for the complex balancing of priorities and responsibilities necessary to effectively manage the strategic priorities within healthcare organizations. They will develop this awareness by both examining their own patterns of behavior and learning about common behavioral and structural dynamics within organizations. By the end of the course students will be able to: 1) identify critical features on an organization's environment and examine the implications of each feature on organizational goals and objectives; 2) Recognize and analyze regulatory, demographic, and policy trends to inform planning and assess potential impact on long-range goals; 3) Differentiate service/product specific markets and identify competitors within each market; 4) Propose comprehensive approaches for distribution network development and marketing/communication plan implementation; 5) Design metrics for evaluating goal attainment; 6) Formulate and defend strategic plans, marketing plans, goals and action steps; 7) Demonstrate the conceptual mastery of team dynamics through effective service as team members.

**Enforced Prerequisites at Enrollment:** HPA 395

HPA 460: Human Resource Management in Health Care Organizations

3 Credits

Foundations of human resource management applied to health care organizations, including hospitals, long-term care facilities, and community health organizations.

**Enforced Prerequisites at Enrollment:** HPA 332

HPA 470: Health Care Information Management

3 Credits

This course introduces information systems terminology, data structures, software applications, and their management functions in health services organizations. H P A 470 Health Care Information Management (3) This course introduces the student to information systems terminology, structures, specific applications, and their relationships to management functions in health services organizations. Health providers and health systems are continuing to make multi-million dollar investments in information systems in order to meet new market and regulatory requirements. All health services managers will play a role in the analysis, design, acquisition, installation, operation and ultimate success of information systems necessary to meet organizational goals and objectives. This course exposes students to the IS/IT applications used to support management functions. Further, applications and management issues unique to industry segments (e.g., long-term care, home care, hospital administration, physician practice management) will also be explored. The goal of the course is to ensure that students are schooled in the terminology, conceptual models, applications and opportunities and limitations of information systems in health services to the point that they can ask appropriate questions, recognize and state significant issues, and participate in the discussion and analysis of information systems development and application. The course is one of several elective courses in the Health Policy Administration major that students can complete and is also a required part of the Information Sciences and Technology/Health Policy Administration Minor providing students with an understanding of the basic structures of information systems in health administration; the relationship of these systems to managerial functions such as communications, coordination, control strategic and process planning and decision making, and the important policy and ethical issues associated with privacy, confidentiality, and security in information systems. Since the course represents the capstone of the Information Sciences and Technology/Health Policy Administration minor, it is important for students to have the pre-requisites for the course (H P A 332, IST 210, and IST 220), including an understanding of major issues in the health care system, health care management and information systems. Student's attainment of educational objectives will be assessed through a variety of evaluation methods. Understanding and appropriate application of terminology, management issues, and ethical/privacy concerns will be assessed through examination. Concept integration will be assessed through case-study analysis and project papers. Data presentation and training communication issues will be assessed through individual application projects and presentations. A technology classroom with access to the World Wide Web and Penn State servers is required for effective instruction. We will use these facilities to demonstrate software applications, provide technical support for guestspeaker presentations,
and facilitate student presentations. The course will be offered once per academic year with an expected enrollment of 20-40 students.

**Enforced Prerequisites at Enrollment:** HPA 332 and IST 210 and IST 220

**HPA 475: Health Care Quality**

3 Credits

This course covers the basic principles and techniques of quality management in healthcare: including the definition, measurement, and uses of data for improving the quality of health and health services. The course also covers the organizational responsibilities related to quality assurance. Students will examine methods and tools for managing quality in health facilities, physician practices, and integrated health systems; including developments in quality assurance and improvement, utilization review, risk management, and patient satisfaction. From this examination students will be able to understand how to benchmark quality indicators using accreditation standards. On the successful completion of the course students will be able to: 1) Define the common terminology related to quality and process improvement; 2) Apply the quality management concepts to the modern health care operating environment; 3) Evaluate the effectiveness of a quality/process improvement program; 3) Define accreditation standards and how they drive quality; 4) Be able to use quality tools to improve quality; 5) Discuss the current issues and future trends associated with quality in the health care environment.

**Enforced Prerequisites at Enrollment:** HPA 332

**HPA 490: Physician Practice Management**

3 Credits

Development of skills needed to effectively manage physician practices. Practice management may be defined as the body of knowledge and skills necessary to manage the multiple elements of a specific practice of a physician. These elements include organization, administration, communication, marketing, and patient care. This course provides students an opportunity to develop the knowledge and skills necessary to be successful in the growing field of physician practice management. Topics include management of tasks and responsibilities, supervision and training, practice marketing, service scheduling, accounting processes, benchmarking and receivables, reimbursement and billing related to the physician practice. Upon successful completion of the course, the student will have: 1) A historical knowledge of the origins and evolution of physician practices; 2) An awareness of the legal entities which make up physician practices; 3) A working knowledge of the governance, performance domains, hire processes, revenue cycles, medical record keeping, and common quality measures used in physician practices.

**Enforced Prerequisites at Enrollment:** HPA 332 and HPA 211

**HPA 494: Senior Honors Thesis**

1-6 Credits/Maximum of 6

Independent study related to student’s interests directed by a faculty supervisor and culminating in the production of a thesis.

**Enforced Prerequisites at Enrollment:** approval of honors thesis advisor

**Honors**

**HPA 495: Field Experience**

1-12 Credits/Maximum of 12

**Field Experience**

**HPA 496: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**HPA 496H: Independent Studies**

3 Credits

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**Honors**

**HPA 497: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**HPA 499: Foreign Study**

1-3 Credits/Maximum of 3

Study of health care systems and practices in selected foreign countries.

**Enforced Prerequisites at Enrollment:** Department approval

**Hebrew (HEBR)**

**HEBR 1: Basic Modern Hebrew I**

4 Credits

An introduction to modern Hebrew in its written and spoken forms; oral and aural work stressed.

**Bachelor of Arts: 2nd Foreign/World Language (All)**

**HEBR 2: Basic Modern Hebrew II**

4 Credits

Continued study of grammar; emphasis on improving oral-aural facility, with increased attention to reading and writing.

**Prerequisite:** HEBR 001

**Bachelor of Arts: 2nd Foreign/World Language (All)**

**HEBR 3: Intermediate Modern Hebrew**

4 Credits

Grammar, reading, composition, and oral and aural exercises.

**Prerequisite:** HEBR 002

**Bachelor of Arts: 2nd Foreign/World Lang (12th Unit)**
HEBR 10: Jewish Civilization

3 Credits

This course explores the life of the Jewish people from Biblical times on, emphasizing cultural, religious, and institutional developments. HEBR 10 / HST 10 Jewish Civilization (3) (GH,IL)(BA) This course meets the Bachelor of Arts degree requirements. Jewish tradition goes back thousands of years, and Jews have resided in many different lands. They have become an integral part of many different cultures, yet have often retained (or been forced to retain) a certain degree of separateness or difference. In this course we will trace continuity and change in Jewish traditions from ancient to modern times, and across different regions. Taking into account inter-cultural contact and historical events – ranging in place from the Middle East to Muslim Spain to Asia, Africa, Europe, and the Americas, and in time from the ancient world to the medieval era, the Holocaust, and contemporary Israel and the U.S. – we will explore developments in Jewish history, literature, and culture. The course considers topics such as the attitudes other groups have had toward Jews (and vice-versa), the question of whether Jewish identity is a race, a religion, or an ethnicity, the dilemmas Jews face today, and the ways that Jews in many diverse settings have balanced change and continuity. We will explore the factors that shape Jewish experience in different times and places, the diversities within and among Jewish lifestyles, and the ways in which events and interactions with other peoples have influenced the development of Jewish civilization. Finally, we will consider the dilemmas Jews face today in terms of the preservation of their identity and traditions. The course includes class discussion. Students are evaluated on the basis of, essay exams, quizzes, in-class discussion and commentaries, and group projects.

Bachelor of Arts: Humanities
International Cultures (IL)

HEBR 151: Introductory Biblical Hebrew

3 Credits

Fundamentals of Biblical Hebrew grammar, syntax, and vocabulary. J ST (CAM,HEBR) 151 Introductory Biblical Hebrew (3) The aim of CAMS/J ST/HEBR 151 is to introduce students to the fundamentals of Biblical Hebrew as quickly and thoroughly as possible. Biblical Hebrew is the language in which the Old Testament was written, between the period of approximately 1200-200 B.C.E. This focuses primarily on the morphology and syntax of Biblical Hebrew. Drills on each point of grammar, as well as translation of sentences from Hebrew to English and English to Hebrew, and brief passages taken from the Bible are the basis of the student’s homework throughout the semester. By the end of the semester, the students will be prepared to read short, unmodified passages of the Bible. The course will focus primarily on reading and writing, though students will read aloud in class regularly in order to ensure correct pronunciation and understanding. CAMS/J ST/HEBR 151 will prepare students to continue with CAMS/J ST/HEBR 152 and then 400-level courses. The course goals, in addition to providing the students with a firm grounding in Hebrew grammar and vocabulary, include giving the students a basic understanding of the history of the Biblical text. The primary focus will be on mastering paradigms and syntax, but the students will also be introduced to the Biblical texts themselves, which together from such an important piece of literature.

Cross-listed with: CAMS 151, JST 151

HEBR 152: Intermediate Biblical Hebrew

3 Credits

Intermediate study of Biblical Hebrew grammar, syntax, and vocabulary. CAMS (JST/HEBR) 152 Intermediate Biblical Hebrew (3)(BA) This course meets the Bachelor of Arts degree requirements. CAMS/JST/HEBR 152 continues from CAMS/J ST/HEBR 151, which is a prerequisite for enrollment. After a brief review of key grammar and morphology from the first semester, the course will complete the process of providing students with a sufficient grasp of Hebrew vocabulary, morphology, and syntax to enable them to read unadapted passages from Biblical Hebrew texts (with the aid of a lexicon) by the end of the course. Class sessions will focus on grammar drills, sentences, and similar exercises as homework to supplement class work. As the semester progresses, students will read more and more from actual Hebrew texts, rather than composed sentences by the textbook author, so that when the students enter more advanced classes, they will find the transition to reading Hebrew as smooth as possible. In tandem with the increasing emphasis on Hebrew written by ancient Hebrews, the course will continue to focus on the linguistic and cultural background for the texts that the students read. Students will be evaluated on a combination of written work, including frequent quizzes, tests, homework completion, and course attendance and participation. CAMS/J ST/HEBR 152 will prepare students to continue with courses at the 400-level.

Bachelor of Arts: Humanities

HEBR 451: Advanced Biblical Hebrew
3 Credits

Translation and analysis of selected readings in Biblical Hebrew texts; attention will be paid to grammatical as well as literary details. HEBR 451 is a Biblical Hebrew literature course in which students will read selections of various genres and dates from different sections of the Hebrew Bible. The overall goal of this course is to increase the ease and fluency of which advanced students are able to read all types of Biblical texts. Although students will be expected to enter the class with a comfortable level of reading skill as acquired in HEBR 451 or its equivalent, the course will continue to emphasize grammar and building vocabulary. By the end of the course, it is expected that the students will be able to read any Biblical Hebrew text comfortably and be able to analyze grammatical structures. Students' work in the course will be evaluated on class participation (20%), short in class quizzes (20%), and a mid-term (30%) and final exam (30%). HEBR 451 is part of a series of advanced Hebrew classes that will allow students to gain skill and knowledge about a range of Biblical Hebrew texts. HEBR 451 may be used to fulfill a requirement for the Hebrew minor, as well as for the CAMS major language requirement. The course will be offered every other year, with 20 seats per offering.

Prerequisite: HEBR 451 or equivalent

HEBR 452: Readings in Biblical Hebrew
3 Credits

Translation and analysis of selected readings in Biblical Hebrew texts; attention will be paid to grammatical as well as literary details. HEBR 452 is a Biblical Hebrew literature course which students will read selections of various genres and dates from different sections of the Hebrew Bible. The overall goal of this course is to increase the ease and fluency of which advanced students are able to read all types of Biblical texts. Although students will be expected to enter the class with a comfortable level of reading skill as acquired in HEBR 451 or its equivalent, the course will continue to emphasize grammar and building vocabulary. By the end of the course, it is expected that the students will be able to read any Biblical Hebrew text comfortably and be able to analyze grammatical structures. Students' work in the course will be evaluated on class participation (20%), short in class quizzes (20%), and a mid-term (30%) and final exam (30%). Higher Education (HIED)

HIED 200: Leadership, Communication & Outreach Ambassador
1-3 Credits

The Leadership, Communication & Outreach Ambassador course will provide students an opportunity to have a deeper and more impactful interaction with their department, school, college and university. The students will gain more in-depth knowledge of how their school works and all of the different ways students can interact with the educational community as well as industry. The students will become Penn State Behrend ambassadors to the K-12 community, parents, industry, faculty, fellow students and the community at large. This course will promote leadership within the ambassador program with all of their experiences and interactions within Penn State Behrend and with external audiences. Students will be taught the best way to communicate with different audiences and the messaging used. Outreach will include working with the K-12 leader and help with retention efforts with current students. Students need to meet a minimum GPA requirement and criteria to participate in the course and program.

HIED 302: The Role of the Resident Assistant: Theory and Practice
3 Credits

An analysis of the various roles of the resident assistant, including interpersonal facilitator, disciplinarian, program developer, and activities facilitator.

HIED 303: Leadership Development through Orientation
3 Credits

Assisting new students and their parents and family members at New Student Orientation goes far beyond campus tours and providing directions. Today’s mentors are charged with teaching new students about issues related to the classroom transition from high school to college, mental health, alcohol and drug use and abuse, sexual assault prevention, diversity and inclusion, and more. Beyond the subject matter knowledge required to facilitate these conversations, mentors must have confidence in their ability to speak publicly, think critically, and manage a group of students their age. The foundation of student development and transition theory provided in this course set the stage for both knowledge and skill acquisition in these areas. Once the foundation exists, students will hone their public speaking, critical thinking and multicultural competency skills. Through classroom discussions, personal reflection, and engaging faculty, staff, and advisers throughout the University, this course is designed to assist students in their journey to being a peer mentor. Students will explore their personal strengths, navigate personal bias in regards to the issues mentioned previously, and understand the role all of these play in a successful academic, social and personal transition to Penn State.

HIED 396: Individual Studies
1-9 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

HIED 397: Special Topics
1-9 Credits/Maximum of 12

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

HIED 490: Exploration of Careers in Higher Education
3 Credits

Foundation of graduate study in the field of higher education. HI ED 490 Master’s Professional Seminar (3) This course is an introduction to higher education as a field, and as an orientation to graduate study. Early sessions will provide a brief review of the history of higher education, an introduction to the Carnegie Classification scheme of colleges and universities, and an overview of the structure of public and private higher education. Students will participate in an orientation to the services of the library including internet sources and tools needed to develop research skills. Technical writing skills will be developed through direct instruction, practice writing assignments, and peer review workshops in service of completing a literature review on a topic of the student’s choosing. Students will explore a variety of career options through guest lectures and individual projects in areas of potential interest. A final career exploration portfolio will demonstrate what the student has learned regarding career areas. Professional, interpersonal, and ethical skills will be developed through role playing and interviews with actual higher education practitioners. Written work will include an annotated bibliography, a literature review, and integrative analysis essays. In addition, students will explore various options appropriate for a capstone project for their master’s degree: internships, academic papers, portfolios, etc. Readings will reflect current topics and issues.

HIED 497: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Hindi (HINDI)

HINDI 1: Level One Hindi A
4 Credits

This is an introductory course in Hindi that presents the Devanagari script, elementary grammar and sentence structure.

Bachelor of Arts: Foreign/World Lang (12th Unit)

HINDI 2: Level One Hindi B
4 Credits

This intermediate level course seeks to impart functional literacy in oral and written expression in Hindi to students.

Prerequisite: HINDI001 or equivalent competency
Bachelor of Arts: Foreign/World Lang (12th Unit)

**HINDI 3: Level Two Hindi A**

4 Credits

This is an intermediate level course in Hindi that seeks to improve student's skills in oral and written expression.

**Prerequisite:** HINDI002 or equivalent competency

Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Foreign/World Lang (12th Unit)

**HINDI 110: Intermediate Hindi**

4 Credits/Maximum of 4

Hindi 110 teaches basic intermediate to advanced functional proficiency (ACTFL Standards) in reading, writing, and speaking Hindi.

**Prerequisite:** HINDI003 or equivalent competency

**History (HIST)**

**HIST 1: Western Civilization I**

3 Credits

HIST 1 examines the development of western civilization, beginning with the ancient world of the Mediterranean, Europe, and Mesopotamia, and continuing through Early Modern Europe, which involves the Reformation, the Counter-Reformation, and the early period of the Age of Exploration. The course is intended to introduce aspects of Ancient, Medieval and Early Modern history that has helped to shape the developments of Western Civilization. The examination of written and visual primary sources, as well as secondary sources, allows this course to examine the political, religious, economic, and cultural development of the western world. The variety of sources used in the course aids the students in learning how to understand and interpret history, and encourages the students to develop a critical method by which to evaluate primary and secondary historical sources.

Bachelor of Arts: Humanities
International Cultures (IL)

International Cultures (IL)
First-Year Seminar
General Education: Humanities (GH)
Honors

**HIST 2: Western Civilization II**

3 Credits

This survey examines the history of 'Western' civilization from the period of Early Modern Europe to the present. The development of social, political, and religious movements in Europe and the development of European colonies around the world had far-reaching, global repercussions. Among the broad developments of this complex period are the creation and collapse of several political and economic global empires, the development of modern nation states, revolutions in technology and industry, and the rise of nationalism, liberalism, socialism, and neoconservatism. The variety of sources used in this course will aid students in learning how to understand and interpret history and in encouraging them to develop a critical method by which to evaluate primary and secondary historical sources and to examine the political, religious, economic, and cultural developments of the 'Western' world in the Early Modern and Modern periods.

HIST 3: The American Nation: Historical Perspectives

3 Credits

HIST/AMST 3 allows for faculty and students to work in a small setting in order to explore the history of the United States through a detailed interdisciplinary examination of a particular theme, institution, or person in American history. Faculty can structure their particular theme for this course, allowing for the incorporation of a wide range of materials, out of class field trips, examination of popular culture, primary source documents, and/or seminar-style discussions. For example, in recent years this course has been structured around the themes of ‘Utopianism in America’ and ‘The Life, Times, and Legacies of Abraham Lincoln’. In-depth examinations of such themes in American history offer students the opportunity to work closely with faculty in their area of interest, and to gain an understanding of American historiography and the historical profession.

HIST 5: Ancient Mediterranean Civilizations

3 Credits

Survey of the history and cultures of ancient Mediterranean civilizations in Mesopotamia, Egypt, Syro-Levant, Anatolia, Greece, and Rome. CAMS (HIST) 5 Ancient Mediterranean Civilizations (3) (GH;IL) This course provides an introduction to the history and cultural traditions of the ancient civilizations of the Mediterranean. From the origins of cities and the invention of writing, it surveys the intellectual, artistic, and political traditions that laid the foundations for the later civilizations of Europe and western Asia. Students will acquire a basic historical framework for the ancient Mediterranean from the third millennium BCE through the end of antiquity in the first millennium CE. Within this framework cross-cultural relationships of time and ideas will be established among religious texts, epic literatures, political and legal traditions, and their representations in art and architecture. In the part of the world where the division between Asia and the East and Europe and the West was born, the course will examine the development of regional and ethnic identities along with the historical development of concepts of the universal nature of humanity. This course is designed to serve as the foundation course for all majors in the department of Classics and Ancient Mediterranean Studies (CAMS) and to provide a cultural and historical framework for interpreting the visual productions in art and architecture of these ancient cultures as they are examined in more detail in the linked ARTH 111Z course.

HIST 6N: History and Weather: How Weather Played an Instrumental Role in Great World Events

3 Credits

In HIST 6N / METEO 6N, we'll survey how weather and history are integrated throughout time. Moving from past to present, the course will use case studies to navigate historical moments where weather shaped the outcome. Each case study will have a historical, cultural, and meteorological analysis of the event so students gain a deeper understanding of the national or international event and the integration of science and history. Weather has shaped the outcome of major world events. For example, a weather forecast led to the delay of the Allied invasion of Normandy (DDay), record cold weather in Florida led to the Challenger Space Shuttle explosion, General George Washington used fog to conceal the withdrawal of his troops at the Battle of Long Island, and the list goes on. The case studies range from the Revolutionary War through present day, and this period of history has been selected because there are firsthand accounts of the weather and/or recorded weather data for each event. The meteorological study examines the event's atmospheric conditions. How or why did they occur? How did they affect the event? Therefore, students will learn basic meteorology and climatology. They will also analyze weather maps and scientific data. The historical study provides context for the event. What lead to the event? What happened during the event? What are the event's lasting impacts? To better understand the decisions that leaders faced, students will be asked to assess risk and make decisions based on the same weather
data or information leaders at the time had. Students will also explain the context, cause, and effects of major historical moments in everyday language to an audience of their peers through discussions and/or projects. The cultural study examines each event from a psychological and sociological point of view. What were the mindsets of the people and cultures involved in the event? How does the event connect to or parallel things in today's society? How would a present day culture react? This study will give students a better understanding of cultural differences in the world and how those cultural differences can alter the course of history. Time in the course is equally split between United States and international topics, and there will be frequent discussion of current events.

HIST 10: World History to 1500

3 Credits

World Civilizations to 1500 is an introductory survey of the world’s major civilizations from the rise of the earliest human communities to the age of global expansion in the sixteenth century. The emphasis will be on the distinctive histories and cultural values that shaped major regions and cross-cultural contacts between those regions. Students will learn how ancient to early modern societies adapted their environments, organized their political economies, expressed themselves in art and philosophy. The course provides a historical overview of global changes over time.

HIST 20: American Civilization to 1877

3 Credits

An historical survey of the political, social, and economic development of America from colonial settlement through the Civil War and Reconstruction. This course meets the Bachelor of Arts degree requirements. HIST 20 provides a historical overview of change over time in North America before 1877 with a focus on the diverse experiences of different groups of Americans. Students will receive an overview of the most important historical developments in America History from the colonial period through Reconstruction, including the history of American slavery, the evolution of American political systems, gender roles, and regional differences, changes in immigration, economic development, and the American Civil War and Reconstruction. While 'knowing the facts' is obviously important to historical understanding, this course helps students develop critical thinking skills. These skills include: close and thoughtful reading and analysis of primary and secondary sources; looking for a broader coherence or 'order' to the material; independent analysis and effective articulation (both in writing and in class discussion) of well-reasoned, well-crafted conclusions and interpretations and arguments (conclusions/interpretations / arguments which are supported by specific factual evidence derived from a variety of sources). The three specific course objectives underscore its scholarly dimensions: (1) Students will gain a knowledge and understanding of the diverse histories of the peoples of the United States prior to 1877; (2) Students will gain an understanding and knowledge of the domestic, transnational and global political and economic processes that have shaped the lives, labor, institutions and cultures of the United States before 1877; (3) Students will learn how to 'think historically' by placing documents written in the past in their historical contexts, and to consider the relationship of the past to the present. By the end of the course students will: Demonstrate an understanding of the chronology of American history prior to 1877. Demonstrate an understanding of the diverse experiences of different groups of Americans prior to 1877. Demonstrate an understanding of the economic, social, and political structures that emerged before 1877 and continue to shape the modern United States.

Bachelor of Arts: Humanities
HIST 20Y: American Civilization to 1877
3 Credits
An historical survey of the American experience from its colonial beginnings through the Civil War and Reconstruction.

Bachelor of Arts: Humanities
United States Cultures (US)
General Education: Humanities (GH)
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Integrative Thinking

HIST 21: American Civilization Since 1877
3 Credits
An historical survey of the American experience from the emergence of urban-industrial society in the late nineteenth century to the present. This course meets the Bachelor of Arts degree requirements. HIST 21 seeks to introduce students to salient events, developments, and themes of United State history since 1877, including westward expansion and the decline of the Native American, the industrial revolution, urbanization, immigration, Gilded Age culture and politics, the labor movement, imperialism, Progressivism, segregation and African-American response, the women's movement, World War I, the Great Depression and New Deal, World War II, post-war prosperity, the Cold War, the Civil Rights movement, the Vietnam War, the disillusionment of the 'Seventies', the Reagan revolution, and America in the post-Cold War era. The social and ideological diversity of the American experience is a prominent theme of HIST 21. Students learn how to 'think historically', developing their capacity to identify and analyze key themes and issues from the past, critically assess primary sources, and sharpen their skills in marshaling data and concepts, and expressing them cogently in discussions and in writing.

Bachelor of Arts: Humanities
United States Cultures (US)

HIST 21Y: American Civilization Since 1877
3 Credits
An historical survey of the American experience from the emergence of urban-industrial society in the late nineteenth century to the present.

Bachelor of Arts: Humanities
United States Cultures (US)
General Education: Humanities (GH)
Writing Across the Curriculum

HIST 66: Survey of British History
3 Credits
This course is a survey of British history, which chronicles the origins and development of Great Britain from its Romano-Celtic past to the present. The course focuses on the long history of Britain, emphasizing its various and ever-changing political, cultural, economic, intellectual developments. The course is designed to instruct students on how to identify recurring trends and notable anomalies in how Britain developed and to recognize Britain's unique impact on broad international developments and on individual nations in both the past and present world.

HIST 83: First-Year Seminar in History
3 Credits
Critical approaches to the dimensions and directions in History. HIST 083 First-Year Seminar in History (3) (GH;FYS)(BA) This course meets the Bachelor of Arts degree requirements. Through readings, discussions, lectures, and research projects, students are expected to master the subject material of the course as well as to acquire basic skills useful to the study of the liberal arts. Students will learn to read books and original documents, discuss them, formulate effective arguments, and write essays and papers. Historical analysis of this type will provide students with techniques for appreciating and judging arguments and presentations in many fields of learning, from scholarly to popular. The topics chosen for these seminars will acquaint students with major figures and developments in important historical areas. By reading and understanding historical documents, students will learn to consider the cultural assumptions of different groups and societies and to appreciate their own values and assumptions by contrast with these. Although the course will focus on a specific topic, the instructor will help the student to see the wider implications of the issues and controversies discussed. Whenever possible, the international and intercultural aspects of the topic will be considered. The course will challenge students to express themselves and to gather information through discussion and writing of papers. It will always challenge students to think about social behavior, the nature of the community, and the value of scholarly endeavor as these relate to the particular topic of the seminar. The course fulfills the first-year seminar requirement as well as one of the humanities requirements in general education or a Bachelor of Arts humanities requirement. The course will be offered twice a year in sections of 20 students.

First-Year Seminar
General Education: Humanities (GH)

HIST 100: Ancient Greece
3 Credits
The Greek world from the earliest Aegean cultures to the death of Alexander the Great and the beginnings of Hellenistic civilization.

CAMS 100 / HIST 100 Ancient Greece (3) (GH;IL)(BA) This course meets
the Bachelor of Arts degree requirements. The course presents a survey of ancient Greek history and culture beginning with the Bronze Age palace-states of Crete and Mycenae, examines the emergence of Greek city-states, notably Athens and Sparta, traces their transformation through conflicts among themselves and with the Persian empire, and describes their eventual eclipse by the kingdom of Macedon. Since this course treats the beginnings of historical writing among the Greeks, students learn to evaluate diverse historical texts and their relationship to legend, myth, and poetry. The nature of historical thought itself is emphasized throughout the course. Also emphasized is the debate between the egalitarian Justice of democracy, the sober wisdom of oligarchy, and the overwhelming power of monarchy, as experienced by the Greeks down to the end of the fourth century B.C.E.

HIST 101: The Roman Republic and Empire

3 Credits

History of the Roman Republic and Empire from the origins of Rome to the disintegration of the Empire. CAMS 101 / HIST 101 The Roman Republic and Empire (3) (GH; IL) (BA) This course meets the Bachelor of Arts degree requirements and fulfills 3 credits of the General Education-Humanities (GH) requirement. The course provides an introduction to the ancient Roman empire: how that empire came into being, how it evolved, how it came to govern much of the Mediterranean and European world, and how that empire declined. The course demonstrates the social and legal structures employed by a past society to govern an ethnically and religiously diverse population. The course also introduces students to the sources of our knowledge of the past, and illustrates how these sources are to be critically evaluated. This course complements other courses on the ancient Mediterranean world (such as HIST 100 / CAMS 100) and is a prerequisite to more advanced (400-level) courses in ancient Mediterranean history.

HIST 102: Canaan and Israel in Antiquity

3 Credits

This course is an overview of the ancient history and cultures of Canaan (the Mediterranean Levant of Syria-Palestine) and the emergence of Israel. It involves a critical view of biblical texts (especially the Hebrew Bible, aka Old Testament) in light of other ancient texts, archaeology, and historical methods, in order to explain the nature and the evolution of society, religion, and thought in the prebiblical and biblical era. We will be especially interested in the period from the end of the Late Bronze Age (c. 1200 BCE) to the Persian period (539-332 BCE), and will examine ongoing debates about the Bible and history, as well as the development of Israelite religion from polytheism toward monotheism and a distinctive worldview.

HIST 103: The History of Madness, Mental Illness, and Psychiatry

3 Credits

More than perhaps any other set of human afflictions, the phenomena that have gone under the names of ‘madness,’ ‘insanity,’ ‘lunacy,’ and ‘mental illness’ have historically provoked a wide variety of often contradictory reactions. Those who have been in the throes of ‘madness’ have described experiences ranging from an ecstatic sense of holiness to being beset by undeniable impulses to feelings of unending despair. Observers have sought explanations for the behavior of ‘touched’ and ‘crazy’ individuals by invoking such things as sin, destiny, heredity, moral degeneracy, upbringing, trauma, fatigue, and body chemistry. Those afflicted have been admired, pitied, mocked, hidden from public view, canonized, imprisoned, restrained, operated on, sterilized, hospitalized, killed, counseled, analyzed, and medicated. Why? This course will examine the ideas that have shaped European and American perceptions of madness, insanity, and mental illness. This course will be an introduction to the modern history of ‘madness’ in the Western world. In particular, we will examine the ideas that have shaped European and American perceptions of madness, insanity, and mental illness; the changing experiences of those afflicted; the development of those professions designed to look after those deemed mad, insane, and mentally ill; and the social and cultural assumptions behind treatments, policies, and public opinions.

The history and archaeology of ancient Egypt from the dawn of history to the Greco-Roman period.

Cross-listed with: CAMS 104
Bachelor of Arts: Humanities
General Education: Humanities (GH)

HIST 105: The Byzantine Empire

3 Credits

This course examines the development and history of the Byzantine Empire from the decline of the Roman Empire to the fall of
Darien Garber

HIST 107 / MEDVL 107 examines the history of Europe from c. 300-c. 1400 CE. The many themes of this course include: the development of political, judicial and diplomatic institutions; the role of religion, especially that of Christianity in all its forms - orthodox, heretical, and popular - as a significant element of medieval society; the development of royal houses; and changes in economic and social life of medieval Europe. Within these primary themes, the course addresses many subjects, including the development of both secular and ecclesiastical authority, various efforts to control or wield violence, and the importance of a number of agricultural and economic changes that transformed Europe.

HIST 108: The Crusades: Holy War in the Middle Ages
3 Credits

The social and political history of medieval religious warfare in Europe and in the Middle East. HIST 108 The Crusades: Holy War in the Middle East (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. History 108 is an introductory survey of the so-called holy wars of the High Middle Ages. These wars were fought in theatres from the Baltic to the eastern shores of the Mediterranean, from the Hispanic peninsula to southern France. While the primary emphasis will be given to the expeditions to the Holy Land, two other crusading movements will be studied: the crusades in the Baltic, led by the Teutonic Knights, and the crusades in southern France, against the heretics known as the Albigensians. These conflicts cannot be studied in isolation, and a major topic is the response of Islamic society and non-conformists elements within medieval Europe. How the various elements in the crusading period co-existed, changed or disappeared provides still more material for the student to contemplate. Students will be evaluated on three essay examinations, regularly scheduled discussions of the assigned readings, the instructor's assessment of the student's ability to read critically, write clearly and knowledgeably, and class participation. History 108 is part of a series of introductory courses to medieval history. It will be accepted but not required for the History Major and Minor. It will be offered once each year with 90 seats per offering.

International Cultures (IL)
General Education: Humanities (GH)

HIST 109: Introduction to U.S. Environmental History
3 Credits

This course explores the major themes of U.S. Environmental History, examining changes in the American landscape, the development of ideas about nature in the United States, and the history of U.S. environmental activism. Throughout the course, we will be exploring definitions of nature, environment, and environmental history as we investigate the interactions between Americans and their physical worlds. HIST 109 provides an introduction to environmental history as a field of scholarship that examines changing relationships between human beings and the natural world. Environmental history centers on the examination of various questions about such relationships, including exploring how natural forces shape history, how humankind affects nature, and how those ecological changes then reciprocally influence human life. Major themes of the course include: (1) recognizing that American history has a natural context; (2) that relationships between nature and culture change over time; and (3) that knowledge about nature is socially constructed and historically contingent.

Bachelor of Arts: Humanities
HIST 110: Introduction to Global Environmental History

3 Credits

This course provides a broad introduction to the history of human relationships with nature throughout the world. The human relationship with the natural environment the world of plants, animals, and microbes, of air, water, and land is an important historical subject. History 110 provides a broad, thematic description and analysis of major global trends and shifts, with an emphasis on contemporary issues and problem solving. The most important goal of the course is to provide students with the historical context necessary to construct a thoughtful appreciation of the environmental dilemmas of our time. Ecology has contributed a great deal to historical understanding in terms of specific examples or case studies; however, it has also begun to reconstruct the overall structure of the history that we teach. History 110 seeks to leverage this new paradigm by encouraging students to break down the barriers that often divide the humanities and the sciences. This course utilizes environmental science to demonstrate and explain specific human tendencies. Finally, this course is structured to help students better situate the history of the United States in a more global centered view of both the past and contemporary environmental concerns. Particularly in relation to contemporary environmental issues, History 110 will make clear that many environmental problems are local in neither their construction nor impact. The course will focus on several critical points, including: How has the non-human world shaped the course of human history? What were the environmental impacts of historic changes in the ways humans produced and consumed resources? What ideas shaped the ways different groups of people defined and used specific resources? What role have science and technology played in changing popular attitudes about the human place in the world?

HIST 111: Introduction to U.S. Food History

3 Credits

This course is a historical analysis of agriculture and food production in the United States. It includes examination of the history of food production and consumption patterns, the food industry, food marketing, and the politics and regulation of the American food system. This course explores the food system as a nexus that brings together history, technology, and culture in ways that have significant impacts on human livelihoods and wellbeing. A core theme of the course will be consideration of questions about food ethics and the challenge of improving the sustainability of food systems including the need to maintain or increase improvements in productivity while also addressing social effects and reducing environmental impacts of food production.

HIST 112: Introduction to Public History

3 Credits

Introduction to Public History lays a broad foundation for history-based careers in museums, historic site management, foundations, and government services. Practicing as a historian outside of a classroom opens worlds of very diverse professional opportunities. This course is designed to introduce students to that wide world and equip them to experiment with it. It teaches theories of public history practice, along with basic approaches and perspectives on audience development, collection management, interpretation, and organizational management and finance that all public historians need to know to succeed. The course will consider the past and future of the field. Students should encounter public history practice; there are various ways to make that happen, including meeting practicing public historians through field trips and/or in class, preparing a grant application, and presenting a modest Public History project in class. Public history offers opportunities to students in communication, media, management, finance/accounting, and education, as well as history. This course is the first stage of a public history emphasis or minor (when available) but also stands alone as an introduction to a growing and promising field of work for students drawn to history but seeking professional opportunities beyond graduate work and teaching.

CONCURRENT: HIST 20Y; HIST 21Y; HIST 1; HIST 2
United States Cultures (US)

HIST 113: Baseball in Comparative History

3 Credits

Comparative survey of baseball history from its beginnings to the present. HIST 113 Baseball in Comparative History (3) (IL) This course, which fulfills the International Cultures (IL) requirement, provides an introduction to comparative social history. It uses the broad cultural and geographic diffusion of baseball over time to examine the diverse and changing social, economic, and political meanings of this activity in different cultural settings, emphasizing the ways in which a common activity may acquire unique meanings in different cultures. Although North America, Cuba, and Japan demand attention as the most striking examples of baseball’s pervasive impact, the course will consider baseball as a global phenomenon, exploring the minimal impact or failure of baseball promotions in many European and African societies, for example. As an introduction, the course will confine itself to English language texts, but it will use a wide range of primary sources, including newspapers and journals, memoirs, correspondence, promotional materials, and photographs to introduce students to basic concepts of historical method and problems of evidence. Students will be encouraged to consider baseball’s impact in particular historical contexts as a cultural process, from the manner of its introduction through its adoption to the emergence of distinctive proprietary, even nationalist attitudes and styles of play. Among the many topics required of a survey, the course will return periodically to the question of American influence and US imperial aspirations. But the evidence of baseball games in other countries as sites of resistance or hostility to US power and as expressions of a potent nationalist politics raises questions about baseball’s value for many conventional historical models of ‘empire’ as a form of political or economic subordination. Students’ assignments will require a combination of reading, writing, and research skills, and
the course will introduce through lecture and discussion the variety of materials available at Penn State for the study of this subject.

International Cultures (IL)

HIST 114N: Historical Perspectives on HealthCare Innovations

3 Credits

This course will explore how historical context influenced major innovators in health care. It will pursue the general education objectives of 1) integrative thinking, and 2) social responsibility and ethical reasoning. GH learning criteria will include: 1) knowledge of major cultural current issues and developments through time, 2) competence in critical thinking about topics in the humanities, and 3) familiarity with groups, individuals, ideas, or events that have influenced the experiences and values of different communities. GS learning criteria will include the abilities to: 1) describe the ways in which many different factors may interact to influence behaviors and/or institutions, 2) explain how social science researchers work to better understand and address world problems, and 3) recognize social, cultural, political and/or ethical implications of work in the social and behavioral sciences.

HIST 115: The American Jewish Experience

3 Credits

Chronological and topical survey of the story of Jewish life in America. We will trace the social, religious, cultural, and political developments in the Jewish community from the Colonial Period to the present. Topics to be covered include immigration, acculturation, ethnicity, gender, politics, and communal and religious innovation. While ‘knowing the facts’ is obviously important to historical understanding, this course helps students develop critical thinking skills. These skills include: close and thoughtful reading and analysis of primary and secondary sources; looking for a broader coherence or ‘order’ to the material; independent analysis and effective articulation (both in writing and in class discussion) of well-reasoned, well-crafted conclusions and interpretations and arguments (conclusions/interpretations/arguments which are supported by specific factual evidence derived from a variety of sources). The three specific course objectives underscore its scholarly dimensions: (1) Students will gain a knowledge and understanding of the relationship between the experiences of members of the American Jewish community and United States history as a whole. (2) Students will gain an understanding and knowledge of the political, economic, and social processes that shaped the American Jewish experience. (3) Students will learn how to ‘think historically’ by placing documents written in the past in their historical contexts, and to consider the relationship of the past to the present. By the end of the course students will: Demonstrate an understanding of the chronology of American Jewish history. Demonstrate an understanding of the diverse experiences of different groups of Americans. Demonstrate an understanding of the social, political, and ideological structures that shaped the American Jewish experience and continue to shape the modern United States.

HIST 117: Women in United States History

3 Credits

HIST 117 / WMNST 117 provides students with an overview of the most important historical developments in the history of women in the United States, including women's actual experiences as members of a class, a race, and an ethnic community. The progress women have made as individuals, workers, and citizens as well as the opposition they have faced. While ‘knowing the facts’ is obviously important to historical understanding, this course helps students develop critical thinking skills. These skills include: close and thoughtful reading and analysis of primary and secondary sources; looking for a broader coherence or ‘order’ to the material; independent analysis and effective articulation (both in writing and in class discussion) of well-reasoned, well-crafted conclusions and interpretations and arguments (conclusions/interpretations/arguments which are supported by specific factual evidence derived from a variety of sources). The three specific course objectives underscore its scholarly dimensions: (1) Students will gain a knowledge and understanding of the diverse experiences of different groups of American women. (2) Students will gain an understanding and knowledge of the political, economic, and social processes that shaped the history of women in the United States. (3) Students will learn how to ‘think historically’ by placing documents written in the past in their historical contexts, and to consider the relationship of the past to the present. By the end of the course students will: Demonstrate an understanding of the chronology of United States women’s history. Demonstrate an understanding of the diverse experiences of different groups of American women. Demonstrate an understanding of the social, political, and ideological structures that shaped the history of American women and continue to shape the modern United States.
Modern Jewish history is a complex and fascinating story. Some scholars depicted it as a long period of suffering and isolation that culminated in the Holocaust and only ended with the founding of the state of Israel. In recent decades a more balanced perspective has found wide acceptance. Today scholars highlight Jewish agency and different conditions in the various places Jews settled without downplaying anti-Jewish prejudice and violence. A recurring theme in this course concerns the relationship between individual Jews and Jewish communities, and on a broader level, the perception and treatment of Jews by societies and states. As Jews in Western and Central Europe ‘left the Ghetto’ around 1800 and became citizens of states, they redefined their relationship to Jewish communities in strikingly different ways. Some Jewish women and men emerged as agents of change, others resisted change. We will explore Jewish ‘responses to modernity’, ranging from assimilation, Zionism, and socialism to migration. While many Jews in Western Europe and the United States prospered, the lives of Jews (and their neighbors) in Eastern Europe and the Ottoman Empire were shaped by social and economic crisis (albeit not constantly and not everywhere). For the twentieth century the course will concentrate on three major events that had a dramatic impact on Jews, especially in Europe: the First World War and the collapse of the large multiethnic Empires in Eastern Europe, the Holocaust and the founding of the first modern Jewish state, Israel.

HIST 121: History of the Holocaust 1933-1945
3 Credits

Historical analysis of holocaust themes. HIST (J ST) 121 History of the Holocaust 1933-1945 (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. The course will analyze the Holocaust using historical, literary, and philosophical approaches. Various species of evidence will be used and evaluated, including film and literary materials. Emphasis will be placed on discussion, student research projects, problems of ethnicity, race and religion in analyzing the origins of a persecuting mentality and the scapegoating and brutalization of victims, primarily Jews, but also including Gypsies and other groups. The Holocaust is also discussed in the context of global genocidal phenomena. The peculiar structures and dynamics of Jewish ethnic life in Eastern Europe are also treated prominently. Comparative analysis of the relationships between dominant and non-dominant cultures is a major concern of the course. An example of evaluation may include requiring students to complete one major paper on a specific theme covered in the course with a draft of four pages due at the end of six weeks. Students will be required to complete one major paper on a specific theme covered in the course. The course will contribute both to studies in 20th century European and German history, as well as to Jewish Studies. It will form a prominent feature linked to Modern Jewish History HIST/J ST 118 and the History of Anti-Semitism (HIST 302W). The course may be used to count for 3 credits toward the 18 credits required for the History minor and 22 credits required for the Jewish Studies minor. The course will be offered once per year with an enrollment of 20 for HIST and 20 for J ST.

HIST 122: History of Science I
3 Credits

The main goal of this course is to think through and understand major developments, ideas and issues in natural philosophy. ‘Natural philosophy’ is the premodern term for science. The term ‘science’ began to acquire its modern meanings around 1840. The geographic focus of this course is the Mediterranean region and Europe, but we will also investigate early science in China, the Indian subcontinent, and the Islamic world. The temporal coverage of this course is vast: from about 10,000 years ago to the 19th century. As is common in history courses, it will be essential for us temporarily to set aside modern and contemporary biases and ways of thinking. Our goal is to understand the world as ancient and premodern people did. Issues of religion will constantly make appearances in this course. If you have studied world religions already, that is great, but if not, the books and lectures will provide the essential tools to look up any key term or concept that does not make sense to you, whether with respect to lectures or the books. It is your job to make an active effort to master the material. This course is ideal for anyone pursuing a scientific or technical major, but anyone should benefit from it. We will be exploring some of the most important issues that have shaped our world, key developments in the human capacity for creating knowledge and useful technologies, and, in some cases, innovative solutions to vexing problems. We will also examine some of the ways
that social institutions, belief systems, and paradigms (models) have helped both to organize and to constrain human knowledge. If all goes reasonably well, this course will enhance your knowledge and open your mind to hitherto unfamiliar ways of thinking and approaches to problems.

GenEd Learning Objective: Key Literacies

HIST 123: History of Science II
3 Credits

A history of science and culture from the scientific revolution to the present. HIST 123 examines the intellectual, social, and cultural history of science from the Scientific Revolution to the present. The course covers a range of theoretical and applied disciplines, including engineering and medicine. In addition to major discoveries and new ideas, methods, and tools, the course examines the effects of social conditions on science as well as the impact science has had on society. Scientific developments in the Western world, broadly defined, constitute the organizing framework of the course, but the course also examines science in non-Western cultures.

Bachelor of Arts: Humanities

GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

HIST 124: History of Western Medicine
3 Credits

This course explores the history of health, illness, and medicine in western society from Ancient Egypt through the modern world. Relying on both primary and secondary sources, the course examines major developments in the understanding of health, illness, medical treatment, and medical practice in western society from Ancient Egypt to the present. The course will explore such themes as the changing status of medical practitioners, the experience of patients in different historical settings, artistic depictions of illness and healing, and the increasingly prominent role of medicine in public policy in order to better understand the links between medicine and its social, cultural, intellectual, and political contexts.

HIST 125N: History of Infectious Disease and Epidemiology
3 Credits

Infectious diseases once thought to be nearly eradicated have seen a resurgence in recent years. The majority of the cases arose from people who deliberately chose not to vaccinate their children against these disease. Even in the twenty-first century the nature of disease and how to prevent it is not merely a matter of science, but an issue laden with cultural, political, and religious concerns. This course charts the history of disease both as a subject of scientific inquiry and a cultural and religious phenomenon. We will begin with early Greek and Egyptian attempts to understand disease as a foreign entity attacking the body and end in the twenty-first century with current ideas surrounding the use of antibiotics, vaccines, and emerging threats throughout the world. Along the way we will discuss the impact of significant epidemics - for example, Bubonic Plague, Syphilis, and Influenza - as well as changing scientific thinking of both how to deal with disease and how to understand the natural world. In tandem with the historical background key scientific ideas necessary for studying disease - including current understanding of the microbial world, microscopy techniques, and modern gene theory - will be presented to the students through classroom instruction and virtual laboratories.

HIST 127: Introduction to U.S. Latina/o History
3 Credits

This course introduces students to the history of U.S. Latina/os, including Puerto Ricans, Dominicans, Chicanos, Cubans, and Central Americans. HIST (LTNST) 127 Introduction to U.S. Latina/o History (3) (US)This course introduces students to the history of U.S. Latina/os, drawing on the multiple experiences of Puerto Ricans, Dominicans, Chicanos/ Mexicanos, Cubans, and Central Americans. Course content features the divergent development of U.S. Latina/o cultural and political identities rooted in the Caribbean, Mexico, Central American, and the United States. Students will understand the formation of racial and class hierarchies within U.S. Latina/o communities; the processes of (international) migration; gendered hierarchies and responses to sexism; and the complexities of U.S. Latina/o identity. Lectures are supplemented with discussion days in which students respond to readings under the guidance of a graduate teaching assistant. Grading stresses proficiency in analytical, historical writing.

HIST 128N: Cultural Perspectives on Mathematics
3 Credits

This course will investigate the development of mathematical thought in multiple Afro-Eurasian cultures from the Bronze Age through the early medieval period, including Mesopotamia, Egypt, Greece, India, China, and the Islamic world. Math will be examined as a cultural product, with specific developments contextualized in the generating civilization’s history, socio-political structures, economic systems, artistic and literary movements, and prevailing religious and philosophical ideas. Students will investigate the ways in which specific aspects of a culture influenced the development of specific ideas about, approaches to, and techniques regarding number and mathematical processes. Key themes in this respect will be what social forces encourage the development of practical or theoretical mathematics; how a society determines what is truth; the conception of abstract ideas such as zero and negative, infinite, and irrational numbers; the social status of mathematicians
and their relationship with political and social authorities; and what social forces hinder the development of practical and/or theoretical mathematics. Students will also consider how the availability of certain mathematical knowledge enabled the development of particular social systems, architectural achievements, and more. Key themes in this respect will be the mathematical needs of specific political systems (such as the accounting involved in imperial administration), legal systems (such as fair division of goods), and religious systems (such as the calculation of accurate systems of time). At the same time, students will draw connections across time periods and cultures by examining the interactions between civilizations and how those interactions influenced the development of mathematics as a human endeavor. Key themes in this respect will be understanding what political, economic, and other forces cause cultures to come into contact or seek out contact; and how the exchange of knowledge shapes both the receiving culture and the study of mathematics as a whole. As part of this course, students will study both specific mathematical ideas (e.g., number systems, deductive reasoning, geometric algebra, and the motivating problems that spurred development) and the specific ancient and medieval cultures named above.

HIST 129N: Chocolate Worlds
3 Credits
This course will examine the 'world' of chocolate throughout human history. First cultivated by the ancient peoples of the Americas and then manufactured by Europeans and Pennsylvanians alike, chocolate has played a privileged role as a luxury good. An interdomain course, 'Chocolate Worlds' is interdisciplinary, taught by faculty in the departments of Plant Science, Anthropology, and History. As a team we investigate the how diverse societies have differentially interacted with this crop. Rather than be organized chronologically, this course will be divided into course Units, such as the history of cocoa uses and cultivation, cocoa plant science and farming issues, chocolate making and markets, and the state of the global chocolate industry. The course's lectures and assigned readings work in concert equally directed by scientific inquiry and the queries of the social sciences and humanities. Assignments will address real world questions relating to contemporary cocoa cultivation and production, and its role in international development and social justice. As a class we will take field trips to sites such as local chocolate manufacturing facilities and cocoa research sites and laboratories. The learning objectives of this course include students' broad knowledge of cacao production, its history, and ethical issues surrounding its cultivation in today's global economy. Additionally, students will gain an historical appreciation for the role this crop has played in diverse human societies and a scientific understanding of its genetic structure.

early nineteenth centuries, focusing on the diversity of English, Welsh, Scots, and Irish cultures and customs, their influence on early forms of nationalism in the British Isles, and their importance in the formation of the modern British nation-state. Using a wide range of primary sources, including the work of prominent British writers, the course introduces basic concepts of historical method, while exploring the process whereby an English empire came to govern these four major ‘peoples’ of the British Isles. Students will be encouraged to consider the dynamism of this process, involving complex interrelationships rather than the simple supremacy of one ethnic group over another. The relationships between English and Scots protestants, the importance of translating the Book of Common Prayer from English to Welsh, the influence of Irish-born families of English descent on the governance of early modern Ireland, were all key elements in the emergence of an empire under the authority of an English dynastic state whose practical control over the territories it claimed to govern often remained quite limited.

HIST 140: The History of the Israel-Palestine Conflict (1917-Present)
3 Credits/Maximum of 3

This course covers the origins of the Israeli-Palestinian conflict and how the issues at stake changed over time, up to the present day. The course situates the conflict in the history of the Middle East and the larger context of international relations, including the Cold War and the end of the Cold War. Topics include regional warfare and its significance, efforts at peacemaking, and social, economic, and cultural developments among Israelis and Palestinians.

HIST 141: Medieval and Modern Russia
3 Credits

This course is an introductory survey, including political, social, economic, and cultural development of Kievian, Muscovite, and Imperial Russia. Tracing the history of Russia from the ninth to early twentieth century, this course examines the central role of the people, politics and culture at the crossroads of Europe and Asia. Particular topics include the rise of the Kievan State, the Mongol rule, the rise of Muscovy, Ivan the Terrible, Peter the Great, relations with Western Europe up until the end of imperial Russia under the last tsar of Russia, Nicholas II. It offers a basic knowledge of the cultural, political, economic, artistic and historical background of this vital region of the world.

HIST 142: History of Communism
3 Credits

Marxism; Leninism and evolution of the Soviet Union; formation and development of the Communist bloc; impact of Chinese Communism. HIST 142 History of Communism (3) (GS;IL)(BA) This course meets the Bachelor of Arts degree requirements. Communism is one of the most powerful ideologies to have ascended in the modern period of history. Fashioned from Marxist philosophy, communism was embraced in the twentieth century to over one billion people from the former USSR, to China, to South Asia, to Africa, to Latin America, and by some here in the U.S. Unquestionably, the institutionalization of communist regimes has left an indelible mark on world history. This course will explore the writings of Marx and his advocates, notably Engels and Lenin, and strive to understand why the first communist regime emerged in the unlikeliest of places: Russia. Using the Soviet Union as a case study, we will examine how Marxist principles were either applied or transformed in the construction of the first communist society. By examining the history of the Soviet Union, including its spectacular and rapid demise, we will come to a greater understanding of communist principles and of the dynamics of capitalism as well. As a counter-example, we will also focus on the Chinese experience of Communism and contrast the divergent paths to reform that have been implemented there. The goal of the class is twofold: to become familiar with the principles of communism by examining their application primarily in the USSR, Eastern Europe and China, and to come to a greater understanding of the dynamics of a capitalist system. The course grade will be determined by the student’s performance on in-class essay exams, a research paper, the comprehensive final exam (essays and short answer), participation in class discussions, and regular attendance. This course serves as a prerequisite to History 430 and History of the Soviet Union, and provides valuable background for such related courses as PL SC 413 and 452 and RUS 100. HIST 142 satisfies three credits of any history for History majors. It is also a prerequisite for several upper level history courses dealing with twentieth century Eastern European or Eurasian history. For all other students, this course fulfills a Social and Behavioral requirement in general education. HIST 142 will be offered once each year with 75 seats per offering.

Bachelor of Arts: Other Cultures

General Education: Social and Behavioral Science (GS)

HIST 143: History of Fascism and Nazism
3 Credits

The study of right-wing totalitarianism in the twentieth century, with special emphasis on Fascist Italy and Nazi Germany. HIST 143 History of Fascism and Nazism (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. History 143 is an introductory survey of fascism and Nazism. The course concerns itself with understanding the social context of fascism, its governing assumptions, ideals, and values, how it worked in practice, and its consequences and historical implications. The course centers on the analysis of secondary and primary sources, and textual, video, and audio materials are all used. Lectures tie the various materials together, while weekly discussion sessions provide an opportunity for students to engage the materials directly. Students are evaluated on the basis of exams (which include an essay component), papers, and class attendance and
participation. The course contributes not only to the study of the history of authoritarianism, antisemitism, and the history of the Holocaust, but also contemporary and modern European history and, of course, German, Italian, and Spanish history. History 143 will be accepted, but not required, for the History Major as well as the History Minor. It may function as a service course for the Departments of Political Science and Sociology. It is recommended that it also serve as a general education course in the Humanities. This course is offered once a year with enrollment of up to 150 per offering with small discussion sections once a week.

HIST 144: The World at War: 1939-1945

3 Credits

In-depth study of the origins and conduct of World War II. Political and economic aspects as well as military. HIST 144 The World At War: 1939-1945 (3) (GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course offers a wide-ranging description and analysis of the second world war, combining military history with political, social and cultural approaches. One major goal is to describe how large-scale war serves as a revolutionary social and cultural force in its own right, massively accelerating social change. In the case of the second world war, the course will describe how the conflict did much to create what we think of as the modern world, not only in political terms (the roots of the cold war, the collapse of European imperialism) but also in radically changing attitudes towards such basic matters as gender relations and generational conflict. Also viral were the new scientific advances of the war years, in nuclear energy, radar, aviation, and perhaps most critical of all, the computer. Particularly important to the educational justification for the course is the stress on the construction of historical memory, a theme with implications far beyond the specific instance of World War II. The course will assess and challenge many of the myths surrounding the war, and to show how subsequent accounts of the conflict were shaped by political and cultural needs. For example, the course will stress the critical importance of the Eastern Front throughout the phenomenon understated in the West because of the patriotic Anglo-American emphasis on D-Day. It will also explore the 'Resistance Myth', and suggest the moral compromises necessary to survive in occupied societies of Europe and Asia. Throughout, the course will stress the impacts of war on the home front and civilian society. The course will be offered once every two years, with fifty seats on each occasion. Typically, students will be evaluated on essay exams, written book reviews, and research papers, and are expected to participate fully in class discussions of assigned readings. History 144 is an important complement to several existing courses within the History department, including 120, Europe Since 1848; 121, The History of the Holocaust; 142, History of Communism; 143, Fascism and Nazism; and 160, American Naval History. It also provides an excellent foundation for 400-level courses including 420, Recent European History; 447, Recent American History, and 454, American Military History 144 satisfies general credit requirements for the history major or minor. Majors and non-majors would both be able to use the course to satisfy their general education humanities selection.

Bachelor of Arts: Humanities
International Cultures (IL)

HIST 148: History of Pennsylvania State University

3 Credits

This course examines the complex history of Penn State. The time period covered extends from mid-19th century origins as the Farmers' High School to the highly complex, multi-faceted, modern 'research university' of the early 21st century. The course will study closely: the conduct, leadership, perspectives, and educational visions of notable presidents, administrators, and faculty (such as George Atherton, Edwin Sparks, Ralph Hetzel, Milton Eisenhower, Eric Walker, Jesse Arnelle, Howard Davidson, Della Durant, Seth Williams among many others); various dimensions of student life (including student protest and the demise of loci parentis); race and gender relations; athletics; and the challenges of university life, research, admissions, co-education and achieving diversity in the post-World War II era. The Penn State experience will be examined in the context of larger historical developments in American higher education, student life and attitudes, and the broad political / economic / social and legal environment. Comparisons will be made to other colleges and universities. Using primary and secondary historical sources, this course pursues a distinctly historical angle; particular emphasis will be placed on chronicling and evaluating change over time and thoughtful consideration of a diversity of voices and perspectives.

HIST 150: America in the 1960s: An Introduction

3 Credits

This course offers an introduction to the history of the United States in the 1960s. The dual goals of this course are to instill a particular body of knowledge - in this case, America in the 1960s, and to provide students with tools that will help formulate interpretations of this crucial period in U.S. history. Topics covered will include the leadership of John Kennedy, Lyndon Johnson, and Richard Nixon; the struggle for civil rights for people of color; the emergence of student movements across the country; the steady escalation of US involvement in Vietnam; shifting relations across gender lines, and particularly the rise of the modern feminist movement; and, finally, the growing influence of popular culture, such as music, literature, and film.

HIST 152: African American History

3 Credits

Chronological and topical survey of the history of African Americans from the colonial period to the early twenty-first century. This course covers major themes in African American history including the societies and cultures of Africa, the Middle Passage, the Colonial experience, slavery, abolition, and the quest for freedom, Civil War and emancipation, Reconstruction, Jim Crow, the Great Migration, African American cultural expressions, WWII and the seeds of Civil Rights, the Freedom Movement, Black politics and White backlash. While knowing the facts is obviously important to historical understanding, this course helps students develop critical thinking skills. These skills include: close and thoughtful reading and analysis of primary and secondary sources; looking for a broader coherence or 'order' to the material; independent analysis and effective articulation (both in writing and in class discussion) of well-reasoned, well-crafted conclusions and interpretations and arguments (conclusions/interpretations/arguments which are supported by specific factual evidence derived from a variety of sources). The three specific course objectives underscore its scholarly dimensions: (1) Students will gain a knowledge and understanding of the relationship between the experiences of African Americans and United States history as a whole. (2) Students will gain an understanding and knowledge of the political, economic, and social processes that shaped African American history. (3) Students will learn how to 'think historically' by placing documents written in the past in their historical contexts, and to consider the relationship of the past to the present. By the end of the course students will: Demonstrate an understanding of the chronology of African American history. Demonstrate an understanding of the diverse experiences of different groups of Americans. Demonstrate an understanding of the social, political, and ideological structures that shaped African American history and continue to shape the modern United States.

HIST 155: American Business History

3 Credits

Major developments in the history of business and industry from the colonial period to the present. HIST 155 American Business History (3) (GH;US)(BA) This course meets the Bachelor of Arts degree requirements. History 155 surveys the development of business and industry within the United States, from the colonial period to the present. It treats the conduct of business as an integral element of American society and culture. Topics to be discussed will include the colonial commitment to commerce and early debates over what kind of commercialism the new national government should encourage; the effects of new technologies like the cotton gin, canals, and railroads in the 1800s and electrical products, cars, and computers in the 1900s; the emergence of modern large-scale industrial production and changes it brought about in business management, in society, and in politics; the changing fortunes and corporate citizenship; changing ideas about what kind of relationships should exist among governments, citizens, and businesses; the importance of world events for American businesses; and the emergence and importance of mass-market consumer products since the First World War.Materials we will use to cover this comparatively complex set of interrelationships will include textbook, supplementary studies of individuals or particular businesses, and current media coverage of the business world. The course is fast-paced and relies on students self-discipline and analytical skills. Student performance will be evaluated on two essay exams, a class presentation, group discussions, and in-class quizzes, and evaluation will be based on the instructors assessment of the students performance in reading and writing critically and knowledgeably on particular subjects, marshaling evidence in support of coherent arguments, and participating in class discussions and presentations. History 155 may complement, but does not compete with, courses offered by other departments or programs. It will be useful for students intending to major in business programs, in Labor and Industrial Relations, and/or to participate in the business world, by deepening their historical knowledge of that world, and will complement the Business/Liberal Arts minor. It will complement History 020 and 021 as well as more advance courses in American history. History 155 will be accepted, but is not required, for the history major and minor. It may be used to fulfill either General Education or Bachelor of Arts requirements in the Humanities for those not majoring in History. HIST 155 will be offered once a year with 45 seats per offering.

HIST 158: History of American Immigration

3 Credits

The waves of migration to America and an analysis of the resulting minority groups, their reception, assimilation, and persisting identity.

Bachelor of Arts: Humanities
the religious language of salvation, rapture, and joy to define states of grace. By the twentieth century, happiness became suspect as the term frequently represented a superficial type of enjoyment in needless consumption manipulated through marketing. As happiness came to be twined with wealth and goods, so too did it align increasingly with success in all pursuits. Happiness became a form of winning and a status marker whose overt pursuit was as likely to lead to psychological and social problems as to health. We open with ancient philosophers and modern positive psychologists. The pursuit of happiness reached zenith speed in the history of American literature. From transcendentalists, to pragmatists, self-help, children's fantasy, psychoanalysis, or post-modernism, genres fell out of themselves in the pursuit to merely understand happiness. Novels, poems, memoirs, films, popular psychology, medical literature, memes, and blogs addressed happiness from nearly every conceivable angle to explore strategies such as choosing positive thoughts; stilling thoughts; cultivating enriching interests and habits; influencing our moods and emotions; and optimizing strategies for securing the resources, skill-sets, possessions, and relationships that encourage happiness. Some of these achievements aligned with health and economic benefits and introduced limitations in access or cultural relevance. Bio-behaviorists are exploring correlation vs. causation and ways of assessing social and individual well-being. Bringing modern bio-behavioral methodologies into the chronological narrative creates unprecedented opportunities for integrative study. Experiential elements of wellness fulfill goals of General Health and Wellness, identifying 'wellness as a positive state of well-being, not merely the absence of disease.' Students will learn the most promising research on generating tangible, healthful benefits in individuals and communities and be introduced to sources for further learning, continuing to learn and pursue long-term happiness.

HIST 162N: The Pursuit of Happiness in American Life: Historical Literature and Modern Practice
3 Credits

When Thomas Jefferson elevated one pursuit to stand with life and liberty as inalienable rights, he eschewed others. The Declaration of Independence features the pursuit of happiness rather than that of amusements, consumer goods, status, money, or ease. Happiness carried a history of deeper meanings in philosophy and religion. In 1776, 'happiness' peppered discussions of individualism, rights, civilization, economics, and government, and echoed Ancient Greek dialogues about virtue and civil society. In America, 'happiness' joined
from its roots as a Portuguese colony and its role at the center of slavery and the slave trade in the Americas to its distinctive patterns of independence and nationhood. Brazil’s experience as an independent nation during the nineteenth century (it became the only long-term monarchy in the Americas) offers an interesting point of comparison to the history of republican nationhood elsewhere in North and South America. We will also examine the challenges of state and nation building during the nineteenth and early twentieth century as well as the challenges associated with late industrialization and state-sponsored development.

HIST 166: History of Sexuality

3 Credits

Discusses the ideas, practices, and identities surrounding sexuality over several centuries in a variety of contexts, focusing primarily on the US. HIST (WMNST) 166 History of Sexuality (3) (GH,US)This is a 100-level course on the history of sexuality, spanning several centuries and a wide range of contexts. The study of sexuality offers a particularly good lens for developing students’ analytical ability to think historically about something that is often considered both ‘natural’ and exclusively ‘modern.’ Topics will include the role of religion, medicine, law, and politics in controlling and shaping sexuality; change and controversy over birth control, abortion, and gender roles; the connections between prescriptive literature and lived experience; the origins and meanings and racial violence in the context of ideas about sexuality; the role of marriage in defining sex, race, and respectability; and the experiences and conflicts that have shaped the emergence of modern lesbian and gay identities. By closely and critically examining one aspect of human thought and experience, the course will teach students to evaluate large questions about sources, methods, and analysis that historians face, including: How do we recover stories of ‘private life’ from societies and eras different from our own? How does our own understanding of what sexuality complicate our historical exploration? What are the connections between gender identity and sexual practices? What can we learn about gender and sexuality, repression and resistance, deviance and acceptance, identity and community from studying the lesbian and gay past? How has racism been employed to justify particular reproductive and sexual practices, as well as to limit claims to sexual respectability? To what extent is the study of sexuality inherently a study of gender, sex roles, and feminism? While focused primarily on the United States, the course will offer students opportunities to examine these questions in other contexts, including India, the Middle East, and Latin America. It will be especially attentive throughout to the varieties of sexual practices and identities across different races, classes, ethnicities, and religious groups.

HIST 170: South Asia to 1500

3 Credits

This course will introduce students to major themes in the history of ancient and medieval South Asia, a region that is now made up of the nation-states of Bangladesh, Bhutan, India, the Maldives, Nepal, Pakistan and Sri Lanka. Students will gain a firm understanding of the key political, economic and socio-cultural traditions and practices that shaped the formation of diverse social groups, sectarian and religious communities and political institutions in the region. While developing a chronological perspective on the history of pre-modern South Asia, this course will encourage students to look beyond the modern nation-state boundaries in order to gain a firm understanding of the region’s shared political and cultural past in the period up to 1500. Students will learn to critically read primary sources and secondary literature, to identify historical arguments and take a position in a scholarly conversation in written assignments.

HIST 171: South Asia since 1500
3 Credits
This course will offer students a general introduction to the cultures and societies of the South Asian subcontinent from the early modern to the contemporary through both the colonial and postcolonial periods. Beginning with an introduction to Mughal rule, the course traces the rise of British power, and the various responses to it from collaboration to mutiny before moving on to the development of competing nationalism and anticolonialisms, including secular, socialist, Hindu and Muslim variations culminating with the creation of the postcolonial states of India, Pakistan, Bangladesh, Nepal, Sri Lanka, and Afghanistan. It then follows the continuing trajectories of these countries after independence, from the Nehruvian years to the neoliberal shift, with attention to emerging social movements and issues including caste and gender relations; religious and separatist politics; struggles around land and development; urbanization, and labor migration; leading into the 21st century. It offers a basic knowledge of the cultural, political, economic, artistic and historical background of this vital region of the world.

HIST 173: Vietnam in War and Peace
3 Credits
This course examines the long history and culture of Vietnam with a focus on Vietnam's anti-colonial and independence movements of the 20th century. Among the topics covered are Vietnam under French colonial rule, the rise of nationalism and communism, Vietnam during WWII, and the multi-decade struggle for independence in the fifties, sixties and culminating in the departure of American forces in 1973. Vietnam's recent economic rise and emergence as a commercial power is also covered. It offers a basic knowledge of the cultural, political, economic, artistic and historical background of this vital region of the world.

Honors

HIST 176: Survey of Indian History

3 Credits

Survey of cultural, institutional, and political history from ancient times to the present. HIST 176 Survey of Indian History (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course surveys the history and civilization of India or South Asia from the earliest times to the modern period. The goal of the course is to enable students to form a comprehensive conception of the various facets of Indian or, South Asian civilization in a historical context. This course is an excellent foundation for the history of modern India and also complements a variety of existing courses on the history of the non-western world. In addition to satisfying the GI requirement, HIST 175 satisfies the general credit requirements for the history major or minor, including the ‘non-western’ component of the major. Non-majors may use this course to satisfy a general education humanities selection. Typically, students will be evaluated on in-class quizzes, written exams, participation in class discussions of assigned readings and critical reviews of books. This course is offered once every year and has an enrollment of 50 students.

HIST 177: Rise of Modern Southeast Asia

3 Credits

This course looks at Southeast Asia from the rise of early empires to the present. Beginning with the great empires of Southeast Asia this course surveys the rise of Southeast Asian politics, culture and society before examining the colonial period when the region was dominated by European imperial powers, and concluding with the formation of the modern-day nations of Burma (Myanmar), Cambodia, Laos, Thailand, Indonesia, Malaysia, Singapore, Vietnam, and the Philippines. As part of this discussion, issues of Indianization, colonization, life under Japanese during World War II, and the way in which Cold War politics shaped the region. By the end of the course, students should have a firm understanding of changes in Southeast Asia and be able to assess these historical factors that shaped the current societies.

HIST 178: Latin-American History to 1820

3 Credits

This course examines the history of Latin America from c. 1450 to 1820, a period encompassing Iberia and the New World before and after the conquest; the course is a survey of three centuries, from the initial encounter on New World soil of Iberian, African, and native cultures and races, to the birth of independent culturally- and racially-mixed nations. Historical topics include the conquest of the New World, the development of colonial institutions and their impact on indigenous cultures, the maintenance of slavery and forced labor systems, the development of multi-ethnic communities, and the origins of independence movements. We will also study colonial-era documents produced by or about the people who lived in colonial Latin America (what historians call primary sources), including Spaniards and Portuguese; African slaves and free blacks; Mayas, Nahuas/Aztecs, and Incas; mixed race peoples called castas; wealthy and poor; and women, men, and children. Particular emphases of the course focus on various patterns of conquest and cultural encounters, the processes of colonial rule, the nature of interaction between social groups, and the cultural impact of the colonial experience upon all colonial Latin America's peoples.

HIST 179: Latin-American History Since 1820

3 Credits

This course examines the history of modern Latin America from the period of independence in the early nineteenth century until the present day. Students will learn about the geographic and political development of the region, the development of various economic models, and the widespread extraction of labor focusing on This African slavery and Indigenous exploitation. The course examines significant events and historical trends in local, national, regional and global contexts. The goal of this class is for students to think critically and analytically about important issues and themes in Latin America, and to understand how historical events have shaped this region. We will look mostly chronologically at important historical themes such as social, economic, gender, and racial conditions, as well as politics, focusing on events throughout select Latin American nations and regions. The course will focus on the following periods: the Independence and post-Independence period of the Spanish Americas (1810-1850); the period of Brazilian Empire (1808-1889); the integration of Latin America into the modern world economy (1850-1914); the rise of oligarchic and military governments (1914-86); Latin America and the US in the Cold War (1945-1989); and concludes with the recent rise of the Populist New Left and the Conservative Right backlash and violence that has recently threatened many nations of Latin America. This course fulfills the requirements for Bachelor of Arts: Humanities (BA), International Cultures (IL), General Education: Humanities (GH) and fulfills the requirement for Latin American Studies Major and Minor as well as the general credit requirement for the History Major.

Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
The course also introduces students to some of the art, architecture, and literature of each period. Students will thus gain some depth in each period of history and acquire a broad view of change over time.

HIST 181H: Introduction to the Middle East Honors

3 Credits

The honors course offers a survey of the history of the Middle East from the rise of Islam to the present day. The course introduces students to structures of power, society, and economy in three distinctive periods: 1) the rise of Islam and the caliphal era; 2) the pre-modern Ottoman era; 3) the modern era. The course also introduces students to some of the art, architecture, and literature of each period. Students will acquire a broad view of change over time; the honors course also takes time to go further in depth in discussion and analysis of significant trends and topics in the history through intensive focus on primary sources in discussion and written assignments.

HIST 182: Asian Trade: Economy, Industrialization and Capitalism in Asia

3 Credits

An historical overview of economy, industrialization, globalization and capitalism in Asia from the 16th century to present. ASIA (HIST) 182 Asian Trade: Economy, Industrialization and Capitalism in Asia (3) (GH,IL) (BA) This course meets the Bachelor of Arts degree requirements. Asian economies have experienced spectacular growth in the second half of the 20th century. But this growth is part of a longer story of Asian commerce and trade and its relationship to and integration with (and, in some cases, isolation from) global patterns of exchange. Moreover, these exchanges are best understood alongside the politics, society, and culture—sometimes local, sometimes regional—that shaped trade and business in entrepots, capitals, and hinterlands throughout Asia. This course begins with a historical exploration of the economic development and social change and ends by asking what lies in store for one of the world’s fastest growing economic regions. By offering a historical frame for Asian economic experience, students will gain insight into the strengths and weaknesses of prevailing theories that tend to overstate centralized control, market mechanisms, and cultural determination. Asian economies and markets are quite diverse, consisting of emerging and mature markets, making it difficult to view them through a single lens. As a result this course seeks to introduce students to a variety of conceptual frameworks in these countries. Examinations of the major economic players China, India, and Japan form the backbone of the course, but the precise geographic emphasis will vary with instructor, and may also include discussions of Japan, Korea, Vietnam, Singapore,
Indonesia, Taiwan, and other Asian states. Themes of the course will vary depending on instructor, but may include industrialization, sustainability and the environment, gender and labor, protest and political reform, and consumerism and advertising, among others. The course will also offer a general introduction to economic theories that underpin the concepts of globalization, capitalism, and socialism as they are understood in an Asian context. This course is intended as an introduction to Asia for those with particular interests in Business, Economics, Global Studies, Labor, and/or Government. Through weekly readings, films and class discussion students will be introduced to the development of Asian economies in the global context.

HIST 183: Gender, Family, and Society in East Asia
3 Credits

This course tracks the changes in East Asian gender roles, relationships, and family life from 1800 to the present, placing private life at the center of the history of China, Japan, and Korea. Among the topics covered are the examination of gender and family life in early modern East Asia, considering topics such as marriage customs, the cult of female chastity, birthing practices, male-male sexuality as well as tracing the remarkable shifts in gender and private life in East Asia beginning in the nineteenth century and continuing to the present. The course will likely also cover issues such as women's liberation, changing expectations for courtship, marriage and sex, homosexuality, cross-dressing and androgyny, gender and revolution, and the state's role in regulating sex and procreation.

HIST 184: Society and Culture in the Pacific War
3 Credits

This course examines the origins, nature, and consequences of World War II in the Pacific. Moving beyond the common American focus on the war as a U.S.-Japanese conflict, it will explore the different nations, political movements, ideologies, and empires that clashed across Asia-Pacific from 1931 to 1945. Topics include the culture and society of modern Asia in the periods immediately before, during and after the Pacific War. This course looks at social and historical roots of the war across Asia from the 1890s to the present to better understand the causes of the war and the affect it had on people throughout Asia.

HIST 186: The Silk Roads
3 Credits

Taking cross-cultural communication and connectivity as its central themes, this course explores the central role that the silk roads and Indian Ocean maritime routes have played throughout Eurasian history. The course provides a historical survey of the land and sea routes and networks connecting Europe and Asia, the peoples and cultures that flourished along these routes, and a variety of exchanges that took place by way of these routes. The course develops insight into trends and patterns over a long period of history, from ancient to modern times; the course also focuses on distinctive periods of history when patterns were disrupted and reformed, and when relationships changed among the peoples and states involved in the silk roads and maritime routes.

HIST 187: Global Taiwan
3 Credits/Maximum of 3

This course examines the historical, cultural, and ethnic dimensions of Taiwan over several centuries to the present day. Taiwan's rich history and important economic role in contemporary East Asia clashes with its exclusion from international organizations like the UN and WHO and resultant international isolation. This class will examine the history and culture of Taiwan to better understand how it got here and where it might go. Topics covered will include the Dutch incursions in 'Formosa,' Japanese colonization, years of military dictatorship and cross-strait tensions, rebirth as one of the four 'Asian Tiger' economies, and its current rowdy democracy and warming ties with the People's Republic of China. We will also explore the literature, film, and culture of this multi-ethnic, multi-lingual, and multi-cultural island.

HIST 188: Tibet: People, Places and Spaces
3 Credits

Few places generate as much curiosity, interest, or controversy in the Western mind than Tibet. This course examines Tibet from a variety of perspectives from Tibet's political unification under a single ruler in the seventh century up to Tibet's incorporation into the People's Republic of China in the latter half of the twentieth century. Adopting a Tibet-centered focus, this course examines three core dimensions of Tibet namely its people, its religion and its strong sense of place to allow for a more nuanced and comprehensive understanding of Tibet to emerge. No background or specialized knowledge about Tibet is expected though a willingness to read primary documents on a variety of religious, ethnic and political themes will be quite useful. In this course students can expect to gain an appreciation for how religion, history and politics contribute to contemporary portrayals of Tibet, Tibetans and their society.

Cross-listed with: ASIA 188
HIST 189: Illicit Asia: An Alternative Introduction to Asia

3 Credits

A historical introduction to unlawful, illegitimate and forbidden ideas, goods, people and places in modern Asia. ASIA (HIST) 189 Illicit Asia: An Alternative Introduction to Asia (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course examines patterns of illicit ideas, goods, peoples and places of modern Asia. Traditional introductions to Asia emphasize a history of the powerful, of the center, of the victors. This course seeks to invert the customary narrative by telling the tale of Asia's early modern and modern past from the perspective of those working against the interest of the elite, popular and mainstream. At the same time, traditional introductions to Asia often risk perpetuating stereotypes of a mysterious, sinister Orient. In fact, dominant discourses both cross-culturally (such as Orientalism) and within a given society (such as elite nationalism) have tended to criminalize or pathologize all kinds of countercultures, alternate economies, non-normative sexual practices, and so forth. But attitudes to orthodoxy and legality may depend on one's relationship to the dominant system, and the dominant narrative. This class seeks to reveal those phenomena in a different light, according to their own contextual logic. Often omitted or ignored, understanding why illegal activity occurs, how it occurs and who the relevant actors are can offer an extremely potent introduction to the roles traditional boundaries of political, cultural and societal activity played in the shaping of Modern Asia. Specific content and regional focus will vary according to individual instructor, but the course will be divided into four general sections that focus on forbidden ideas, goods, places and peoples. Topics may unpack heterodox beliefs like secret societies or anarchist movements, trace the production and distribution of illegal goods like opium or counterfeit items; map out notorious places like the Golden Triangle or the internal workings of human traffickers; or examine the practices and scope of criminal elements like pirates or brigands. The objectives of the course are not only to learn about the illicit activities across modern Asia, but are also organized to encourage us to rethink the way we understand standard interpretations of the past and the factors that go into those perceptions. Students will also consider the changing justifications for and definitions of what is legal, normal and orthodox.

HIST 193: Modern Iran

3 Credits

This course covers the history of modern Iran from the late nineteenth century to the present day. The course examines significant events and historical trends with attention to local, regional, and global contexts, and examines causes and consequences of policies, protests, and revolutions from a variety of sources and perspectives. Through class lectures and discussions, and reading and written assignments, students will learn important terms, concepts, contexts, individuals, and events. They will learn to identify and analyze trends and patterns in Iran's history, make meaningful comparisons, locate specific events in meaningful context, and explain their significance. By the end of the course students will be
able to explain current events in terms of Iran’s long history of revolution as well as in terms of the more immediate history of the Islamic republic. Students will be able to discuss how the modern history of Iran is an example of larger historical trends of the twentieth century.

HIST 195: Genocide in Global perspectives: Twentieth Century and beyond
3 Credits

The history and memory of the Holocaust, the Armenian, Cambodian and other forms of genocide are often taught separately in different disciplines. This course will examine them together through the various ways different societies dealt with, experienced and understood these. Using the extensive literature on the history of genocide this course further suggests ways in which these tragic events affected and were entangled by each other’s. Specific content will vary according to individual instructor, but topics may include victim cultures, ethnic cleansing, trauma, human rights, dark tourism, memorials, architecture as well as the general impact of these tragedies on global politics, or the way the memories of the tragedies were entangled with the civil rights and other struggles in American and global history.

HIST 205: American Antisemitism
3 Credits

The Phenomenon of antisemitism in American history from Peter Stuyvesant to the present. HIST (J ST/RL ST) 205 American Antisemitism (3) (GH;US) This course explores the phenomenon of antisemitism in American history from the time of Peter Stuyvesant to the present. The significance and role of American antisemitic movements and authors, as well as its role in American society and culture, are examined and compared to those in European history over the same periods. At the same time, the impact of antisemitism on the lives and mentalities of American Jews is discussed. The course focuses on readings taken from original sources and recent historical treatments. The readings include material on colonial texts, Grant’s notorious Order, nativists and anti-immigration texts, Gilded Age antisemitism, the Immigration Acts of the 1920’s, Henry Ford’s antisemitic campaign, Southern antisemitism and the Leo Frank case, the quota system at American universities, employment discrimination, the ‘Gentlemen’s Agreement’ system, Black antisemitism, and the New Antisemitism.

HIST 210: Freedom's First Generation: African American Life and Work, 1865 to World War II

3 Credits

The course will explore the context and events that shaped African American life over the period 1896-1932. AFAM 210 / HIST 210 Freedom's First Generation: African American Life and Work, 1865 to World War II (3) (GH;US)(BA) This course meets the Bachelor of Arts degree requirements. This course focuses on the emergence of the Atlantic World Black Diaspora from the 15th through the 19th centuries with the United States as its central focus. We begin with a brief discussion of African societies at the beginning of the Transatlantic Slave trade, discussing the various ethnicities, cultures, societies, and states. We then discuss the emergence of the TST and its consequences for the forging of the modern world and its centrality to the rise of modern capitalism. The forced migration of over 10 million people of African descent resulted in a massive dispersal of various cultures, ideas, religious systems, foods, crops, and ideologies—all of which formed the Black Diaspora. We look at the centrality of these various cultures and ideas to the successful rise of the American colonies, including the skills that Africans brought to the emerging staple crop economies, the knowledge of plants, foods, crops, and healing practices. We look at both the evolution of American slave societies in the North and the South, as well as the rise of Free Black communities. We use documents and readings to understand the multiple contributions of African Americans to science, literature, and music. Of major importance is the formation of slave communities, kinship networks, the rise of an African American religion, and various forms of resistance to slavery that included running away, daily forms of resistance, and actual slave revolts. We also discuss the rise of a special form of 'slave politics' that shapes evolving notions of freedom. In addition to discussions of southern and northern slave society, we also look at the role of free blacks in the antebellum reform movements, especially the abolitionist movement. The course concludes with the coming of the Civil War and a discussion of the multiple ways that African Americans played a role in accelerating the road to war and in facilitating their own emancipation.

HIST 212N: Earthquakes and Human History

3 Credits

A natural disaster is the result of a natural hazard impinging upon human society. In this course we examine seismicity as a geophysical phenomenon and as a natural hazard that interacts with the built environment and the social structures of human societies. Whenever possible, we approach this subject historically. Among other topics, we examine the history of how earthquakes have been understood as well as the impact of earthquakes and seismicity on the history and development of certain societies. Our specific perspectives include: Earthquakes as understood by modern and contemporary earth science Major conceptions of earthquakes in the past Impacts of seismic hazards on the built environment of past societies Impacts of seismic hazards on politics, economic development and social policies of past societies Seismic hazards, earthquake-related technology, and contemporary societies By examining earthquakes in these ways, the study of earthquakes becomes a vehicle for enhancing skills in analytical reasoning. In particular, this course focuses on applications of modern scientific analysis and the approaches commonly employed in historical investigation. Specific skills addressed in this course include, processing and quantifying information, problem solving using evidence and sound reasoning, and expressing ideas with clarity. Immersion in the study of earthquakes affords an opportunity to think more broadly about how people have dealt with natural disasters in the past and to explore the roles that science, technology, and social policy play in defining and addressing natural hazards in contemporary societies and in the future. Class meetings include lectures, discussions, and in-class activities. We analyze scientific observations that have led to increased understanding of earthquakes, earthquake hazards, and risk. We also make extensive use of case studies as concrete examples of different types of earthquakes, the historical evolution of ideas about earthquakes, and the range of social impacts of earthquakes. Reading assignments provide essential background for class sessions.

HIST 220: Global Diaspora and Exile

3 Credits

Introduction to and survey of the Jewish and other Diasporas around the world. HIST (JST) 220 The Jewish and Other Diasporas (3) (GH; IL)
The long dominant view that the Jewish experience since antiquity defines Diaspora as a concept has been challenged in recent years. The meaning of the term Diaspora and related terms, especially (ethnic and/or national) identity and (ethnic and/or national) community, is a matter of much debate across disciplines. The longevity and diversity of distinct Jewish communities around the globe make the Jewish case a particularly interesting subject for study. In a wide geographical, chronological and disciplinary comparative sweep, the course will explore the diverse nature of ethno-national and ethno-religious diasporas (and sub-diasporas), their position, their place of origin (‘homeland’) and their new surrounding culture and society. More specifically, the course will analyze how Diaspora communities in Europe, Asia, and the Atlantic world reconstituted their identities as they expanded into new environments and encountered other cultures, from antiquity to the present. Emphasis will be placed on exploration of the intersection of politics and culture in respect to race, nationality, ethnicity, gender and class. A key question guiding the discussions will relate to the usefulness and limitations of the Diaspora concept, especially in regard to the discourse about globalization where the term is often used. The course will begin with an extensive discussion of theoretical texts about the Diaspora phenomenon. This is followed by case studies of several larger Diasporas, ranging from the Jewish, the Greek to the Chinese Diaspora. Several case studies, notably the Muslim Diaspora, the concept of a victim Diaspora, or alternative Diasporas highlight the limitations of the Diaspora concept. The course introduces students to interdisciplinary approaches, placing some emphasis on the use of theoretical texts written by historians, sociologists, political scientists, and anthropologists. The course includes a one-day field trip to the Lower Eastside in New York (visit of the Museum of Chinese in America, walking tour of the Lower Eastside to explore the history of a key American immigrant neighborhood).

in the region including indentureship, enslavement, transportation of European prisoners and other social outcasts, African slavery, and the establishment of the plantation system that defined the region until the 20th century using both free and unfree labor to maintain its dominance in these island societies until the late 20th century. The course will also cover the issue of slave resistance, the Haitian revolution, the formation of maroon communities, and the role of abolitionist politics as a factor in bringing an end to slavery. It will also look at the re-emergence of indentureship of Asians as a response to the crisis of labor and the growth of peasant agriculture in the 19th century Caribbean. The course will also explore the emergence of nationalist sentiment in the region, especially the way in which the decay of Spanish colonial authority and the rise of American imperial ambitions helped to set the stage for the nationalist awakening that defined the course of the 20th century in the region. This is the course that will complement and expand upon issues raised in AFAM 211 / HIST 211 - The Emergence and Evolution of the Black Diaspora in the Atlantic World. It will also serve as an introduction to the 400-level course on the Caribbean in the 20th century that will be proposed simultaneously. The course will be required for students interested in pursuing the African Diaspora minor. It may be used to fulfill general education and diversity requirements. It can also be used as a course to meet non-Western history requirements in the History major. Evaluation will be based upon a book review, a mid-term, a research paper, and class discussion/participation.

HIST 261Y: Ghetto: From Venice to Detroit
3 Credits

This course explores why certain groups have been segregated in cities around the world in the last 500 years. HIST (JST) 261Y Ghetto: From Venice to Detroit (3) (GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course examines the history of segregated and demarcated districts for certain groups of people within cities (and metropolitan regions) in the last five hundred years in different parts of the world. The course identifies factors that led to the establishment of segregated (and often demarcated) districts and their eventual dissolution (or transformation). The course traces the social and political impact of exclusion within the segregated district, the possibilities of making contacts beyond the district, the function of innovation and cultural production emanating from these urban areas, and the conceptual trajectory of the Ghetto concept from Renaissance Venice to post-industrial Detroit. Cities and states have allowed certain groups to settle within their confines for economic benefit but have imposed severe restrictions to safeguard the respective city's and/or the state's cultural, political, and 'racial' integrity. The course will present several representative case studies of segregated and demarcated districts in European, North American, Asian and African cities, highlighting strikingly different trajectories and purposes behind the spatial segregation of people categorized as different and threatening but also as useful. Comparing the case studies will lead to a discussion about the transformation of the Ghetto concept between 1517 and the present. Following a discussion of the Ghetto concept and an overview of urban history since 1500 we will study Jewish Ghettos in early and late Renaissance Italy and Central Europe. For comparison we will discuss the history of Dutch and Portuguese trade colonies in Japan around 1600. The second part of the course will focus on Jewish and other immigrant neighborhoods in late 19th century New York and Chicago. Before moving to the origins of the 20th century 'Black Ghetto' (Chicago, Detroit) four related cases will be discussed: Chinatowns in the United States; residential segregation in colonial cities in South and East Asia, Nazi Ghettos in Poland and the Soviet Union; and townships in South Africa during the Apartheid period. The course introduces students to interdisciplinary approaches, placing some emphasis on the use of theoretical texts written by historians, sociologists, political scientists, and anthropologists.

HIST 266Y: Sex and Violence in Nineteenth-Century America
3 Credits

Historical Overview of Sex and Violence in the Nineteenth-Century United States. HIST (WMNST) 266Y Sex and Violence in Nineteenth-Century America (3) (GH;US)(BA) This course meets the Bachelor of Arts degree requirements. 'Sex and Violence in Nineteenth-Century America' is an introductory course in the social and cultural history of the United States designed to reveal the importance of the past to the present by showing how two basic human activities have changed over time in both ideology and practice. Both sex and violence are incredibly broad topics; this class will not provide a comprehensive overview. Rather we will focus on a few intriguing topics, including courtship, prostitution, the early popular culture of sports, slavery, military violence including the Civil War, exploitative journalism, and sex and violence as metaphor. We will also examine the 'creation' of homosexuality in the nineteenth century, and manner in which masculinity has been historically constructed. The main purposes of the course are to introduce students to some major issues in nineteenth-century social and cultural history, and to acquaint students with 'historical method,' those techniques historians use to research and interpret the past.

HIST 292N: Witches and Witchcraft from the Middle Ages to the Present
3 Credits

This course will explore the social and cultural history of witches and witchcraft from the late Middle ages in Europe and the U.S. to the present. The very nature and broad scope of the topic lends itself to an interdisciplinary approach that combines history, folklore, religious studies, criminology, women's studies, art history, English literature and popular culture. Historically, real individuals were accused of witchcraft and suffered persecution and punishment accordingly. Others proclaimed themselves to be witches and the practice continues to attract adherents today such as in the modern Wiccan movement. However, modern consensus views witches as figments: figures of magical power in folklore, literature, visual art and popular culture. From Shakespeare's Macbeth to the characters in the popular Harry Potter books and films, fictional
witches have haunted European and American culture for centuries. This course will explore the complex interplay of fact and fiction in the history of witches and witchcraft. In other words, how do fictions become powerful enough to inform history? The course will also focus on the historical status of witches as a source of power outside of, and in opposition to, established political, religious and social structures. Since those accused of witchcraft were predominately women, how has witchcraft functioned as a means of empowerment for women as well as a tool for their persecution? And how has the representation of witches influenced attitudes towards women both historically and today? The course will begin with an historical inquiry into the belief in witchcraft during the late Middle Ages in Europe and the social and cultural role witches played in society. We will look at texts such as the Malleus Maleficarum (Hammer of Witches) published in 1486 as a guide for hunting and destroying witches, as well as studies on the more constructive role witchcraft may have offered women and communities. The course will be organized chronologically and move back and forth between history, such as the Salem witch trials, and the representations of that history in art, literature and film. Particular emphasis will be placed on the visual arts, from the engravings of German Renaissance artists such as Albrecht Durer and Hans Baldung Grien, the gothic paintings of Francisco Goya during the Romantic period, to contemporary artist Louise Bourgeois’ monument to those executed as witches in Norway. The course will end with analysis of images of witches in popular culture, movies and television, and with a discussion of the modern representations of the domesticated witch and the femme fatale.

HIST 302W: Undergraduate Seminar
3 Credits
Thematic or topical investigation; emphasis on historical criticism and analysis. HIST 302W Undergraduate Seminar (3)(BA) This course meets the Bachelor of Arts degree requirements. The principal aim of the course is to assist in training History Majors in writing, analysis, and criticism by pursuing the study of one historical topic in detail. The precise contents of the course may vary in accordance with the teaching and research interests of the instructors. The course is not a conventional lecture course. It is, instead, designed in the seminar format with emphasis on discussion, sequential writing assignments, and further developing the core skills of the historian. Several features reflect its writing intensive designation. The course requires a series of writing exercises (with ongoing instructor feedback), attention to relevant methods of research, all leading to the production of a final seminar paper. The final paper should
effectively advance a reasoned argument derived from multiple sources (a portion of which must be primary sources when the historical topic permits).

**Prerequisite:** 4th semester standing

**HIST 402N: Russian Economic History**
3 Credits
Russia is the largest country on earth. It has had a major influence on world events, especially during the Soviet period. The Soviet period represents the greatest economic experiment ever undertaken. Russia has had a vast imperial experience, and its economy has proven capable of producing nuclear weapons and space exploration. Yet, its economy remains dependent on natural resources. Russia is a literary, nuclear and geopolitical superpower but not an economic superpower. This juxtaposition is unique. The aim of the course is to provide a review of Russian economic history together with main concepts explaining the peculiarities of economic and institutional development of the country. The course combines historical narrative with formal economic analyses. We will utilize both an economics and a history perspective. We will explore the development of the Russian economy in the Tsarist period, the abolition of serfdom and Russian industrialization before the Russian Revolution, and we will explore the economic history of the Soviet period. We will also explore the interaction of economic history with social history. The course will conclude by examining the myriad economic and social difficulties encountered in transitioning from a socialist to capitalist economy.

**HIST 403: Alexander the Great and the Hellenistic World**
3 Credits
The career of Alexander, his impact on his own time, and the Hellenistic legacy.

**Prerequisite:** HIST 100
Bachelor of Arts: Humanities
International Cultures (IL)

**HIST 404: Advanced Public History**
3 Credits
Public historians build essential bridges between ordinary citizens and the knowledge and understanding of the past required by any self-governing society. Knowing how time has acted upon a society,
how things came to be the way they are, helps individuals and groups move toward where they want that society to go, what they want it to become. This class will lay the groundwork for what is expected of public historians in the many professional settings available to them, which include museums, art galleries, national parks, historical societies, non-profit organizations, park and recreation commissions, historic homes, battlefields, foundations, corporations, government departments, preservation organizations, archives, libraries, living history organizations, tourism councils, convention and visitors’ bureaus, and universities. This course allows students to experience of some of these roles and places, and more importantly, to develop a lived sense of how they all can fit together in an individual career. The course does this partly in the classroom and partly through direct engagement with doing public history, well-supported by faculty and classmates. The course invites students to meet public historians and to participate in the public history process - mobilizing accurate history to stimulate emotions that then produce citizen engagement. The heart of public history practice involves sharing authority with audiences and confronting the line between entertainment and education. The first several weeks of the course introduce students to specific elements of practice and examples of public history, followed by an extended public history work project that can be actual and/or virtual. After the completion of the project, students gather to reflect on their practice and develop a deeper theoretical understanding of what they have come to know. Together, the three sections of the course create the capacity, and the motivation, to become active public historians either as professionals or as participants in the communities students will encounter in their own lives.

**Prerequisite:** HIST 020 or HIST 021 or HIST 001 or HIST 002

United States Cultures (US)

HIST 405Y: The Roman Empire

HIST 409Y: Antisemitisms

3 Credits

Surveys the history of anti-Semitism from antiquity through the Middle Ages to the present. HIST (JST) 409Y (RLST 407Y) European Anti-Semitism from Antiquity to the Present (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course analyzes major episodes in the history of anti-Semitism and tries to clarify the motives and dynamics involved. It seeks to understand what these episodes have in common and what is unique in each case—is there a single universal, eternal antisemitism? Or are there rather ‘anti-Semitism’ each belonging to a unique historical context? Is there a single continuous line of development in anti-Semitism? What is the relationship of a particular anti-Semitism to the national culture in which it originates? We will be reading the major original texts of anti-Semitism from Roman and ancient writers, through early Christian texts and medieval Christian Blood Libels against the Jews, documents of the Spanish expulsion, Lutheran tracts, Voltaire’s essays, German philosophical texts from Kant to Marx, Wagner’s racial essays, the Protocols of Zion, and documents of Nazi anti-Semitism by Hitler and Streicher. The major part of the grade will depend on a short research paper which will be presented in various drafts, so that the final version represents the culmination of discussion and constructive criticism and advice. This course is a parallel course to JST/HIST 416 (Zionist History) and JST/HIST 118 (Modern Jewish History). This course will count toward the Religious Studies, Jewish Studies, and History majors and minors in the 400-level category.

HIST 410: Jews in the Medieval World

3 Credits

Trends in medieval Jewish society under Islam and Western Christendom. HIST 410HIST 410 Jews in the Medieval World (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. The Jews lived in widely scattered communities under Christian and Islamic rule in the medieval period. This course will examine how Jews adapted the traditions they developed in Palestine and Babylonia in the early centuries C.E. to the new conditions they encountered in Europe and the Mediterranean region from the ninth to the fifteenth centuries. It will focus on the general problem of how traditional societies survive in rapidly changing circumstances, particularly when their members are a minority population. The course will aim at developing students’ skills in comparative analysis as they compare the adaptive strategies of Jews in different cultural spheres (the Franco-German region versus Spain, for example). They will also be asked to compare the different polemical stances Jews adopted vis-a-vis Christianity, on the one hand, and Islam, on the other. They will be encouraged to understand the
ways in which Jews internalized certain aspects of the majority culture and rejected others. It is hoped that they will come to see how deeply Jewish history was intertwined with medieval Christian and Islamic history, despite inter-religious hostilities and the frequent need for Jews to defend against majority aggression. Students will be evaluated on the basis of two mid-term exams (the first after the survey of the Muslim world, the second after the examination of the Franco-German region) and a comprehensive final exam. The course will be linked to most of the courses taught in the field of Jewish Studies, especially J ST 111 (Early Judaism), J ST 114 (Modern Judaism), and J ST 118 (Modern Jewish History from 1492). It will also be linked to offerings in Religious Studies: RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), RL ST 107 (Introduction to Islam), RL ST 124 (Early and Medieval Christianity), and RL ST 165 (Introduction to Islamic Civilization). Further, it would complement HIST 001 and 002 (The Western Heritage), HIST 107 (Medieval Europe), HIST 108 (The Crusades), HIST 407 (Early Medieval Society), HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), and HIST 471W (Classical Islamic Civilization, 600-1258). The course will count for 3 credits toward: a) the 22 credits required for the minor in Jewish Studies, b) the 33 credits required for the major in Jewish Studies, c) the 30 credits required for the major in Religious Studies, and d) the 36 credits required for the History major. It will be offered once a year with an enrollment of approximately 60 students.

HIST 423: Orthodox Christianity: History and Interpretations

3 Credits

Examines Orthodox Christianity from origins to present using critical historical analysis of primary and secondary sources. RLST 423 / HIST 423 Orthodox Christianity: History and Interpretations (3) (GH,IL) (BA) This course meets the Bachelor of Arts degree requirements. This course examines Orthodox Christianity from its origins to the present by focusing on a series of four major problems using critical historical analysis of primary and secondary sources. 1) The course provides students with the means to examine Orthodox self-understanding: Orthodox doctrine of God, its anthropology. 2) The issue of a world religion and the relationship of Orthodoxy to other world religions and secular authorities and other forms of Christianity, especially 'western' Christians. 3) The challenge of alternate world religions—Judiasm, Islam, western Christianity. 4) The challenge of modern Orthodoxy in the context of twentieth and twenty-first century developments and issues.

Prerequisite: HIST 105
Cross-listed with: RLST 423
Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)

HIST 424: Monotheism and the Birth of the West

3 Credits

The birth of monotheism and its relation to social organization, the idea of individuality, and science. HIST (J ST/RL ST) 424H (PHIL 434H) Monotheism and the Birth of the West (3)(BA) This course meets the Bachelor of Arts degree requirements. Learn about the formation of Western culture while learning to analyze the texts and other evidence about its formation from a critical rather than naive viewpoint. The idea of monotheism probably arose very early, and was even briefly implemented as a state cultic policy in Egypt in the 14th century BCE. Why then did it take another seven centuries to become widespread—appearing in ancient Judah, Babylon and Ionia almost simultaneously? To answer this question, the course focuses on several developments through the medium of primary texts and archaeology: the shift from a state hinterland based in extensive agriculture and household processing to one organized for intensive agriculture and industrial processing the rise of recognizably modern science; the promotion of individuation and an international elite culture in the context of Assyrian and Babylonian imperial ambitions; the development of the historical and archaeological arts in the context of archaizing in order to re-invent local traditions; and the socialization of monotheism and of democracy. Students will be evaluated on their discussion of the textual evidence as well as on reports in class and a final paper. This is the sole honors course treating the birth of the West. It expands on knowledge acquired in courses listed as prerequisites and in ANTH/CAMS 012; CAMS 044; ANTH/CAMS 133; CAMS/PHIL 200; HIST 100; HIST/J ST 102; and PHIL 200 and enriches the student experience in CAMS 400, CAMS 440, CAMS 480; HIST 402; J ST 411; PHIL 437; PHIL 453, and PHIL 461. This course counts toward the major in Jewish Studies, History, and Religious Studies and toward the minor in Jewish Studies and Religious Studies.

Prerequisite: CAMS 004, CAMS 110, CAMS 120, or HIST 102
Cross-Listed

Honors

HIST 426: Holocaust

3 Credits

This course is an in-depth study of the history of the Holocaust in Europe that puts special emphasis on primary sources. HIST 426 / JST 426 Holocaust (3) (IL,BA) This course meets the Bachelor of Arts degree requirements. The Holocaust stands out as the most terrible and challenging phenomenon of the 20th Century. Societies and the scholarship struggled for decades to fully grasp how much the Holocaust has questioned widely shared assumptions about modernity and progress. This course pursues the overarching question how the Holocaust could have taken place. Who were the perpetrators, victims and bystanders? How much agency did they have? How was the Holocaust organized? The course will encourage students to critically engage with the Holocaust, and will consider a variety of different kinds of sources and means of representation, including oral testimony, film and fiction, as well as more conventional documentation. After discussing some of the most important studies about the Holocaust and identifying the main historiographical debates, students will look at the origins and the evolution of the 'Final Solution.' The class will touch on the function of the 'Ghettos,' the role of the mobile killing units, the extermination camps, and Jewish resistance. The course will also deal with Jewish responses to the Holocaust, notably with attempts to enable Jews to emigrate to safe countries; with efforts to alert the public to the systematic killing after 1940; and the support especially of American Jews for Jewish survivors and DPs. Apart from discussing the historiography, students will work mostly with primary sources. Students are expected to do extensive reading for this class and prepare oral presentations on their respective paper topic. The research paper for this course will be based largely on primary sources. Apart from discussing the historiography, the sessions will concentrate on the interpretation of primary sources: - documents created by the perpetrators, bystanders, and victims; - files relating to postwar trials of perpetrators; - photographs; - representations of objects relating to the Holocaust; - memoirs by survivors; - interviews with survivors and bystanders.

HIST 431: Black Liberation and American Foreign Policy
3 Credits

This course deals with American foreign policy and Black liberation in Africa since 1945. AFAM 431 / HIST 431 Black Liberation and American Foreign Policy (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. Black Liberation and American Foreign Policy in Africa since 1945 presents an interdisciplinary approach to the study of American foreign policy in Africa. Course readings will consist of both secondary and primary sources to explore the evolution of American policy toward the continent over the last half-century, and the meaning of the American engagement with Africa for American politics and society. The course will also examine the reasons that Africa has served as a focus of concern among African Americans both prior to, and, over the period 1945 to the present. Of particular concern will be the ways in which American policy has reflected pressures from African Americans as a constituency in foreign policy. The focus of the course will be student-centered written research and discussion. Students will be required to select topics from the course outline for presentation in class with the instructor serving as the moderator of discussion and guide to relevant research materials. Students will be encouraged to use both primary and secondary sources for their research. Students will be expected to prepare two individual written presentations which will serve as the basis for class discussion (30% of the grade), a book review (10% of the grade), and a research paper of 15 pages (40% of the grade) on a topic drawn from the areas identified in the course outline. The final 20% of the grade will be awarded for participation in class discussion.

HIST 432: Between Nation and Empire: The Caribbean in the 20th Century
3 Credits

An exploration of the political evolution of the Caribbean Region over the course of the 20th Century. HIST 432 / AFAM 432 Between Nation and Empire: The Caribbean in the 20th Century (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will explore the political evolution of the Caribbean Region over the course of the 20th century. Its focus will be the ways in which imperial rule and the search for national identity have been the parameters that have shaped Caribbean political history over that period. Students will explore, in written assignments and class presentations, the ways in which the region which has historically been a theatre of confrontation among the major powers in the international system continued to serve that role over the course of the 20th century. The costs that have been borne by the people of the region from these conflicts have been enormous and crippling for several societies, especially Haiti, Cuba, Jamaica, and the Dominican Republic. Among those costs have also been the continued dependence of these societies upon human migration, limited economic strategies of transformation, increasing levels of poverty, and the emergence of a wide variety of political systems that reflect different historical experiences, demographic diversity, varying levels of political autonomy, and a remarkable level of cultural similarities. Evaluation will be based upon two class presentations; one research paper and class participation. The course will be required for students pursuing the African Diaspora minor and for those seeking to broaden their diversity requirements. It can be used to meet non-Western history requirements in the History major.

Prerequisite: HIST 250
Cross-listed with: AFAM 432

Bachelor of Arts: Humanities
International Cultures (IL)

HIST 439: Women and the Holocaust
3 Credits
Analysis of women's experience in the Holocaust and exploration of the role of gender in Holocaust Studies. J ST (HIST/WMNST) 439
Women and the Holocaust (3) Most of the early study of the Holocaust focused almost exclusively on the experiences of Jewish men. It was men who wrote the first and most widely read Holocaust memoirs and men who produced the first studies of the Holocaust. The first question motivating this class is thus what we can learn from examining women's experiences. Is it possible that the ghetto, the camp, and the forest look different from women's perspectives? Are there factors we miss when we read primary documents written by only half of the participants in these historical events? Beyond this, however, our exploration will also lead us to look more broadly at gender as a category of analysis. What do we gain by bringing questions of gender to bear on our study of the Holocaust? Are there any ethical concerns that should inform our approach?
Prerequisite: J ST 010 or J ST 121 or HIST 121 or consent of program

Honors

HIST 441: Revolutionary America, 1753-1783
3 Credits
Forces in Great Britain and America causing withdrawal of thirteen colonies from the British Empire and the Revolutionary War.
Prerequisite: HIST 020, 3 additional credits in history
Bachelor of Arts: Humanities
United States Cultures (US)

HIST 442: The Early American Republic, 1783-1850
3 Credits
Confederation and Constitution; the Federalist and Jeffersonian periods; 'the Era of Good Feelings'; 'the Age of Jackson.'
Prerequisite: 3 credits in American history
Bachelor of Arts: Humanities
United States Cultures (US)

HIST 443: Jewish Histories of the Middle East
3 Credits/Maximum of 6
Jews have been part of Middle Eastern societies for thousands of years. They flourished at times and endured hardships at others, but they have been part of every significant social and cultural transformation of the Middle East. In this class, students will discuss the significant contribution of the Jewish community to the development of various Middle Eastern societies throughout the centuries. Students will critically read and analyze primary sources and secondary literature. We will delve into national historiographies of places such as Morocco, Egypt, and Iran—to name a few—and seek to discover a nuanced narrative of Jewish histories of the region. We will also analyze popular culture products, such as documentaries, television, and literature. The course will follow a chronological and thematic order, and will examine Jewish history in conjunction with global and interregional processes in the Middle East and beyond, such as colonialism, imperialism, nationalism, relations with the West, the formation of the modern nation states of the Middle East, and the Israeli-Arab conflict.

Cross-listed with: JST 443
HIST 444: The United States in Civil War and Reconstruction--1850-1877
3 Credits
Causes of the Civil War; conduct of the war, North and South; impact of the war; problems of Reconstruction.
Prerequisite: HIST 130
Bachelor of Arts: Humanities
United States Cultures (US)

HIST 444W: The United States in Civil War and Reconstruction--1850-1877
3 Credits
Causes of the Civil War; conduct of the war, North and South; impact of the war; problems of reconstruction.
Prerequisite: HIST 130 or HIST 020
Bachelor of Arts: Humanities
United States Cultures (US)

HIST 445: The Emergence of Modern America
3 Credits
Economic, social, political history of the United States, 1877-1919, emphasizing growth of industrialism and development as a modern nation.
Prerequisite: HIST 021, 3 additional credits in history, economics, or political science
Bachelor of Arts: Humanities
United States Cultures (US)

HIST 446: America Between the Wars
3 Credits
The Roaring Twenties, the Great Crash, Depression, and New Deal; war debts, reparations, isolationism, and World War II.
Bachelor of Arts: Humanities
United States Cultures (US)

HIST 447: Recent American History
3 Credits/Maximum of 3
Contemporary economic, social, and political aspects of the United States and its role as a world power since 1945. AMST 447 / HIST 447 Recent American History (3)This course covers the history of the United States from the end of World War II to the present. Topics include but are not limited to the Marshall Plan, the Cold War, the Korean War, the rise of television, atomic power, the Eisenhower presidency, the Civil Rights and Women's Movements, the Vietnam War and protests, the space race, Watergate, the Reagan presidency, the two Iraq Wars, the Dot-com revolution, 9-11 and the War on Terror, and the Obama presidency. While addressing major historical movements, the course will also explore the culture of the period - art, literature, music, sports, television, religion, and film. Even though the course covers a relatively short span of years, students will see that American society has undergone dramatic changes in this period as the result of social movements, immigration, wars, political scandal, and technological innovation. The course will close by speculating on the current direction of the United States in light of the serious challenges the nation faces.
Prerequisite: HIST 021, 3 additional credits in history, economics, or political science
Cross-listed with: AMST 447
Bachelor of Arts: Humanities
United States Cultures (US)

HIST 448: America in the 1960s
3 Credits
Social, political, and cultural themes in the United States in the 1960s.
Prerequisite: HIST 021
Bachelor of Arts: Humanities
United States Cultures (US)

HIST 449: Constitutional History of the United States to 1877
3 Credits
Colonial background; framing and adoption of the constitution; development of the court under Marshall and Taney; sectionalism, Civil War, Reconstruction.
Prerequisite: HIST 021 or HIST 020, 3 additional credits in history, economics, or political science
Bachelor of Arts: Humanities
United States Cultures (US)

HIST 450: Constitutional History of the United States Since 1877
3 Credits
Constitutional developments from laissez-faire to the welfare state; imperialism, war, internationalism; the contemporary court, civil liberties, and civil rights.
Prerequisite: HIST 021 or HIST 020, 3 additional credits in history, economics, or political science
Bachelor of Arts: Humanities
United States Cultures (US)

HIST 451: The Consumer Revolution
3 Credits
The origins and impact of American consumer society since 1870. HIST 451/HIST 451 The Consumer Revolution (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. This lecture course shows how the United States became a nation of consumers from 1870 to the present. It is designed both for the business and communications student as well as the liberal arts major. The origins of department stores, name-brand goods, fast-food chains, modern advertising, and mass entertainment show us how American business and culture was transformed by the consumer revolution. We will explore how the automobile became the leading consumer good of the 20th century and analyze its impact on how Americans shopped. The rise of advertising and its linkage to home-based mass entertainment through the radio and TV will interest us. We will also consider how events like the Great Depression, World War II, the counter-cultural movement of the 1960s, the energy crisis of the 1970s, and the economic deregulation of the 1980s and 90s shaped consumer attitudes and advertising. The Consumer Revolution’ also briefly explains how American consumer culture has
been globalized (with companies like Coca Cola, Disney, and Ford). The course also explores how new consumer goods shaped the experience of childhood, youth, family and home life, and retirement. In particular, we will consider how youth-oriented goods in fashion, foods, and entertainment created a unique youth consumer culture. Also important are the intellectual debates about the meaning and value of consumer society: Is mass consumption the real meaning of American democracy or is it a perversion of it? Are consumer needs unlimited and where does the desire for goods come from? Because consumer society seemed to threaten so many traditional values, we will also analyze movements for restricting consumption. We will consider the origins and impact of Prohibition, dieting and health food crazes, and movements to restrict advertising and sale of goods like cigarettes. In addition to lectures and visual presentations in class, students will read chapters from major studies of the above topics, some of which will be discussed in class. Grades will be based on performance in discussion and essay exams.

**Prerequisite:** three credits in history, marketing, or advertising

Bachelor of Arts: Humanities

United States Cultures (US)

HIST 452: History of U.S. Foreign Relations

3 Credits

History of U.S. foreign relations since 1789; emphasis on twentieth century.

**Prerequisite:** HIST 020 or HIST 021

Bachelor of Arts: Humanities

International Cultures (IL)

United States Cultures (US)

HIST 453: American Environmental History

3 Credits

The history of the ways Americans have used and thought about the environment since 1500.

**Prerequisite:** GEOG 030; and HIST 020, HIST 021; or 6 credits in the humanities or social sciences

Bachelor of Arts: Humanities

Bachelor of Arts: Social and Behavioral Sciences

HIST 454: American Military History

3 Credits

Development of U.S. military policy, 1776 to the present, emphasizing the conduct of our wars, interrelationship of civil and military authority.

**Prerequisite:** HIST 020 or HIST 021

Bachelor of Arts: Humanities

United States Cultures (US)

HIST 457: Hiroshima & the Holocaust in History and Memory

3 Credits

The history and memory of the Holocaust and Hiroshima and Nagasaki are often taught separately in different disciplines. This course will examine them together through the various ways different societies remembered, understood and commemorated these. Using the extensive literature on the history of memory, this course further suggests ways in which these memories and histories affected and were entangled by each other. Specific content will vary according to individual instructor, but topics may include victim cultures, cold war nuclear history, trauma, human rights, dark tourism, memorials, architecture as well as the general impact of these tragedies on the fraught politics of memory in East Asia and the Middle East, or the way the memories of the tragedies were entangled with the civil rights and other struggles in American and global history.

**Prerequisite:** HIST 457, JST 474

Cross-listed with: ASIA 457, JST 474

International Cultures (IL)

HIST 458Y: History of Work in America

3 Credits

A study of selected problems in the history of work in the United States, especially since 1877.

**Prerequisite:** HIST 021, HIST 156, or LER 100

Cross-listed with: LER 458Y

International Cultures (IL)

United States Cultures (US)

HIST 465: The Post-World War II Civil Rights Movement

3 Credits

The civil rights struggle and its impact upon American politics.

AFAM 465 / HIST 465 The Post-World War II Civil Rights Movement (3) (US) This course focuses on the post-World War II Civil Rights Movement. It begins with a discussion of the 'Long Civil Rights Movement,' briefly looking at the roots of the movement in the labor movement and
Prerequisite: research or historiographic paper. Grades based on class participation, brief analytical papers, and a longer civil rights, and political discourse in the United States. An example of identity and its impact on broader questions of gender, community, of identity itself, focusing on the creation of a modern gay and lesbian highly sexualized modern culture. Finally, the course will explore notions 'homosexual' helped establish not simply difference but 'normalcy' in a it has been played out in European and American history. The course will challenge students to deal with how societies define difference itself, how they isolate or punish deviants; and how the creation of the 'homosexual' helped establish not simply difference but 'normalcy' in a highly sexualized modern culture. Finally, the course will explore notions of identity itself, focusing on the creation of a modern gay and lesbian identity and its impact on broader questions of gender, community, civil rights, and political discourse in the United States. An example of evaluation methods would be: course presented in a seminar format with grades based on class participation, brief analytical papers, and a longer research or historiographic paper.

Prerequisite: WMNST100, WMNST117 Cross-listed with: WMNST 466
International Cultures (IL)

HIST 466: Lesbian and Gay History
3 Credits

Critical exploration of the history of sexuality, focusing especially on the emergence of modern lesbian and gay identities. WMNST (HIST) 466 Lesbian and Gay History (3) (US;IL) This course will explore the relationships in different cultures and historical periods between the dominant culture and homosexuals, whom the culture deemed, at different times, sinful, deviant, criminal or, more recently, a minority community. Students will confront the very nature of difference, and how it has been played out in European and American history. The course will challenge students to deal with how societies define difference itself; how they isolate or punish deviants; and how the creation of the ‘homosexual’ helped establish not simply difference but ‘normalcy’ in a highly sexualized modern culture. Finally, the course will explore notions of identity itself, focusing on the creation of a modern gay and lesbian identity and its impact on broader questions of gender, community, civil rights, and political discourse in the United States. An example of evaluation methods would be: course presented in a seminar format with grades based on class participation, brief analytical papers, and a longer research or historiographic paper.

HIST 472: The Ottoman Empire

3 Credits

This course examines the history of the Ottoman Empire from its origins to the rise of the Turkish Republic, an historical time period covering approximately 1300 to 1923. Each week, the class will focus on a major turning point or theme using a combination of regional case studies and primary sources. In the process, students will be exposed to ongoing historiographical debates about a variety of events and trends in Ottoman history. Topics covered include war, diplomacy, gender, architecture, science, religion, technology, and slavery. This course focuses on and examines how the Ottoman state evolved in a changing global context.

Prerequisite: 3 credits in HIST
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)

HIST 473: The Contemporary Middle East

3 Credits

Political, economic, and social changes in Turkey, Iran, Israel, and the Arab countries in the twentieth century; Arab-Israeli conflict.

Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)

HIST 474: Early Modern Japan

3 Credits

Japanese history from 1580-1880. ASIA 474 (HIST 474, JAPNS 426) Early Modern Japan (3) Japan’s Tokugawa period can be difficult to grasp. It resembles a modern society in many respects but operated according to a logic of social organization different from that of most modern states. There was a collective sense of national identity, but its characteristics differed significantly from modern forms of Japanese identity. Moreover, modern ideologies have contributed to the characterization of early modern Japan as a rigid society and of the country as a whole having been isolated from the rest of the world. The main purpose of this course is to afford students the opportunity to study early modern Japan in detail and, insofar as possible, on its own terms. Through readings in primary and secondary sources, and through the evaluation of visual images, this seminar-style course will deepen students’ knowledge of Japan and serve as basis for comparative study of other early modern societies. Although the course investigates classic areas of historical study such as institutional development and foreign relations, the emphasis is on social and environmental history. The course encourages students to think about a range of approaches to the past and to think about the ways our contemporary biases influence the ways we understand the past.

Prerequisite: HIST 172, HIST 174, JAPNS120 or JAPNS121
Cross-listed with: ASIA 474, JAPNS 426

HIST 475Y: The Making and Emergence of Modern India

3 Credits

India’s transition to social, economic, and political modernity through the experience of British colonial rule and the nationalist struggle.

ASIA (HIST) 475Y The Making and Emergence of Modern India (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course covers India’s transition to social, economic, and political modernity through the experience of British colonial rule and the nationalist struggle. It begins during the early modern period, when European travelers encountered the flourishing Mughal Empire, and moves into the dynamic moment following, when the East India Company was one of various competing forces, both locally and globally. It then examines the rise of British power, and the various responses to it from collaboration to mutiny; the multiple development of nationalism and anticolonialisms, including secular, socialist, Hindu and Muslim variations; the accompanying social reform visions, including caste abolition and feminism; the turbulent paths toward partition and independence, resulting in the postcolonial states of India, Pakistan, Bangladesh, Nepal, Sri Lanka, and Afghanistan. It then follows the continuing trajectories of these countries after independence, from the Nehruvian years to the neoliberal shift, with attention to emerging social movements and issues including caste and gender relations; religious and separatist politics; struggles around land and development; urbanization, and labor migration. This course raises important questions about the nature of modernity and its relationship to global interconnectedness, the rise of capitalism and colonialism, industry and technology; while emphasizing South Asian social and cultural contributions and responses to these global shifts. By filling in the context of this part of the world to that global story, the course enables students to grapple with some of the major economic and geopolitical trends of the early 21st century.

Prerequisite: HIST 010, HIST 011, HIST 172, HIST 175, HIST 176, HIST 181, or HIST 191
Cross-listed with: ASIA 475Y
Bachelor of Arts: Humanities
International Cultures (IL)
Writing Across the Curriculum
forces of the market economy spread throughout Japanese society. The warrior class, which had been the elite group within society, were rapidly losing influence and prestige to wealthy merchants as the warriors began their rise in influence, with the samurai (=warrior) class entrenched by law as the Tokugawa shoguns. This development was ostensibly the peak of warrior culture. The course ends in approximately the seventeenth century, at a time when civilian high culture in the capital was approaching the height of its development. At the same time, the process of militarization of the countryside was beginning to undermine that approach to civilian culture super-power. Specific content will vary according to individual instructor, but may include the structures of state and society in the early 19th century, the creation of the Meiji state (1868-1912), the successes and costs of the Meiji government's program of rapid modernization and Westernization, imperialist expansion, the road to war and defeat in World War II, the postwar U.S. occupation of Japan (1945-1952), Japan's resurgence as a global power, and some of the major challenges facing the Japanese state and society today. The goals of the class are not only to gain an understanding of the history of another country, but also to develop the skill of building such an understanding through primary and secondary sources, both written and visual. Students in this class will take on the role of historian themselves, thinking critically about assigned texts and making their own interpretations of their meanings. Through readings, discussions, and written work, students will enhance their ability to think critically and to express their ideas clearly in both speech and writing.

Prerequisite: HIST 172 , HIST 174 , or HIST 175
Cross-listed with: ASIA 481
Bachelor of Arts: Humanities
International Cultures (IL)

HIST 482: Confucius and the Great Books of China
3 Credits

This course familiarizes students with the critical texts and intellectual cultures of Warring States and early imperial China. CHNS 418 / ASIA 418 / HIST 482 Confucius and the Great Books of China (3) This course exposes students to the key texts, thinkers, and ideas that form the foundation of the Chinese classics and classical period, providing an integral foundation for the study of Chinese history, culture, or literature. While the emphasis is on the texts and their main themes, the course will encourage historical engagement with the texts by placing them into a context of competing cultural, social, political trends. Readings may be grouped around categories of teachings such as Confucianism, Buddhism, and Daoism, or around thinkers such as 'Confucian ritualists,'
'statesmen,' 'military strategists,' 'rebels,' 'recluses,' and 'spiritual leaders.' Students will learn how each of these types of teachings and thinkers related to each other, as well as how they responded to the emergent, centralized political order of the day. This will help students better understand many of the recurrent intellectual, political, and religious themes that arise in later Chinese history as well.

**Prerequisite:** ASIA 3; ASIA 100; ASIA 175; ASIA 181; HIST 175; CHNS 120; CHNS 121; ENGL 15; RLST 3; RLST 181; 5th Semester standing

HIST 483: Middle China

3 Credits

The social, political, and cultural issues and developments from the 8th to 16th century. ASIA (HIST) 483 Middle China (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This advanced discussion-based course covers the social, political, and cultural issues and developments in Chinese history from roughly the eighth century through the sixteenth century. Specific content will vary according to instructor. Students will gain a strong foundation in Chinese history and culture and experience analyzing historical texts.

**Prerequisite:** HIST 174
Cross-listed with: ASIA 483
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)

HIST 484Y: History of Chinese Thought

3 Credits

A study of the dynamic historical development of Chinese thought with its diverse expressions from antiquity to the present. ASIA (HIST) 484Y History of Chinese Thought (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course examines the historical developments of Chinese thought and its multifarious expressions from ancient times to the eighteenth century. It explores the unique Chinese ways and means of making sense of the world and the human condition by probing China's philosophical and religious traditions. It reveals the conscious life of the Chinese in matters moral, ethical, aesthetic and metaphysical. Moreover, by showing the unity, diversity, continuity and discontinuity in Chinese thought throughout the ages, this course debunks the popular "Orientalist" myth that Chinese culture had been a hermetically sealed and stagnant monolith until the modern era when Western influences became dominant.

**Prerequisite:** HIST 174 or HIST 175
Cross-listed with: ASIA 484Y
Bachelor of Arts: Humanities

Writing Across the Curriculum

HIST 485Y: China's Last Empire: The Qing Dynasty, 1644-1911

3 Credits

China from 1644 founding of Qing dynasty to 1911 fall; Chinese society and institutions, imperialism and China's internal diversity. ASIA (HIST) 485Y China's Last Empire: The Qing Dynasty, 1644-1911 (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine the Qing dynasty, the last imperial dynasty to rule China, from the seventeenth to early twentieth centuries. More than doubling the size of the previous Ming dynasty, the empire also included people such as Tibetans, Muslims and Mongols who had never before considered themselves as "Chinese" but were now Qing subjects. The course will examine how Manchu ruling family, a non-Chinese people, outnumbered by the Chinese by about three hundred and fifty to one managed to conquer and rule China for nearly three hundred years. Tracing the political, social and cultural development of China starting with the foundation and consolidation of the Qing in 1644 and concluding with the collapse of the dynastic system in 1911, this course examines the role of the imperial system, internal rebellions, and the impact of Western colonialism on China. Considerable time will also be focused on China's ethnic, religious and cultural differences in order to allow a deeper understanding of major issues and themes in late imperial Chinese history. Finally, the theme of China's international relations in Asia and the world and China's shifting place in the world will be a prominent thread of the course. Through a blend of primary and secondary sources, students in this class will need to think critically, read broadly and express their ideas clearly regarding the evolving challenges facing China's last empire.

**Prerequisite:** HIST 175 or HIST 300H

HIST 499: Foreign Study--History
1-6 Credits/Maximum of 6
Study in selected foreign countries of various periods and topics in history.

**Prerequisite:** 3 credits in the appropriate introductory history course for the geographic location specified
Bachelor of Arts: Humanities
International Cultures (IL)

**Homeland Security (HLS)**

HLS 401: Introduction to Homeland Security
3 Credits
This course provides foundational knowledge about homeland security, including policy, organization, and legal issues in the American context.
P ADM 401 Introduction to Homeland Security (3) The Introduction to Homeland Security/Defense course provides a baseline of common knowledge for homeland security professionals. The course achieves this goal by focusing on homeland security/defense, the motivation and nature of terrorists, the policies established by governments, pertinent governmental plans to meet homeland security/defense goals, who the key players are across the homeland security/defense spectrum, and the relevant legal issues framing efforts to defend the nation’s security. As an introduction to this broad area of study, this course serves as a basis for specialized study such as bioterrorism defense, critical infrastructure protection, cyber-security, and emergency response management. Understanding key principles will be measured through preparation of a written analysis of key homeland security/defense issues with alternative strategies consistent with current policy and legal constraints.

HLS 404: Homeland Security and Defense in Practice

3 Credits

This course analyzes, evaluates, and critiques homeland security plans in practice. P ADM 404 Homeland Security and Defense in Practice (3) The focus of the course is to apply lessons learned in previous courses to actual organizations. Key material is reviewed, to provide context for the capstone experience that this course provides. Students will apply the Homeland Security framework (the National Response Plan and the National Incident Management System) to case studies, such as FEMA’s response to Hurricane Katrina. The main theme of the course is the need for collaboration (interoperability) across state, local, and national governments as well as with the private sector and other relevant actors. A major portion of the course examines the Commonwealth of Pennsylvania as a state-level case study. The course will culminate with a paper that applies the framework of Homeland Security and Defense to an organization of the student’s choosing.

Prerequisite: PADM 401

HLS 475: Critical Infrastructure Protection

3 Credits

This course provides knowledge about protection of critical infrastructure as an aspect of homeland security. PUBPL 475 Critical Infrastructure Protection (3) Critical Infrastructure Protection provides a definition of critical infrastructure and examines the importance of protecting it in the post-9/11 era. The course focuses on policies and programs designed to prevent catastrophic events and to protect and maintain the nation’s critical infrastructure. It examines such activity through an understanding of the network of organizations at all levels of government and in the private sector responsible for protecting infrastructure. Case examples are provided of catastrophic events to provide an understanding of risks involved in infrastructure protection. Understanding key principles will be measured through preparation of a written analysis of a key homeland security/defense issue with alternative strategies consistent with current policy and legal constraints.

Prerequisite: PLSC 201; HLS 404

HONORS (HONOR)

HONOR 201: Developing Critical Thinking for Leadership

1-3 Credits

Discussions on various topics using critical thinking skills to make informed leadership decisions.

Prerequisite: admission to an honors program belonging to the Penn State Honors Consortium

Honors

HONOR 301: The Role of Knowledge in Society

3 Credits

Honors interdisciplinary study of topics utilizing contributions from science/ engineering, business, public policy, behavioral sciences/ education, and the humanities. HONOR 301H The Role of Knowledge in Society (3) This course is designed as an honors interdisciplinary study course composed of topics utilizing contributions from science/ engineering, business, public policy, behavioral sciences/education, and the humanities.

Prerequisite: admission to an honors program belonging to the Penn State Honors Consortium or approval from the Schreyer Honors College Honors

HONOR 401: Honors Seminar

1-6 Credits/Maximum of 6

In-depth honors-level exploration of a topic or theme that crosses disciplinary boundaries; may be repeated for credit. HONOR 401H Honors Seminar (3 per semester/maximum of 6) Students will accomplish in-depth honors-level exploration of a topic or theme at the 400-level that crosses disciplinary boundaries. This course may be repeated for credit.

Prerequisite: admission to an honors program belonging to the Penn State Honors Consortium or approval from the Schreyer Honors College Honors

HONOR 493: Honors Service Learning

1-3 Credits/Maximum of 3

A supervised honors experience doing service for campus or community welfare and analyzing related issues. HONOR 493H Honors Service Learning (1-3 per semester/maximum of 6) Students will have a supervised honors experience doing service, service learning, and/or public scholarship dedicated to improving campus or community welfare and then analyzing the related issues through structured reflection.

Prerequisite: admission to an honors program belonging to the Penn State Honors Consortium
Honors

HONOR 494M: **SPECIAL TOPICS**
1-2 Credits

HONOR 494M Interdisciplinary Writing and Thesis Formulation (2) This course is a seminar to help students understand various approaches to interdisciplinary analysis. The course helps students learn about writing as an interpretive process. The course helps students with the formulation of their honors thesis projects and proposals.

**Prerequisite:** admission to an honors program belonging to the Penn State Honors Consortium

Honors Writing Across the Curriculum

HONOR 495: Research Studies
1 Credits

A capstone seminar for honors students working on honors theses and projects to work together and learn about their research interests.

HONOR 495H Research Studies (1) A capstone seminar for honors students working on honors theses and projects. Students work together and learn about their research interests.

**Prerequisite:** HONOR 301H and enrollment in an honors program belonging to the Penn State Honors Consortium

Honors

HONOR 496: Honors Thesis
3 Credits

Research, creative activities, and writing necessary for pursuit and completion of an interdisciplinary honors thesis. HONOR 496H Honors Thesis (3) Students will learn research, creative activities, and writing techniques necessary for the pursuit and completion of an interdisciplinary honors thesis or honors research project.

**Prerequisite:** HONOR 301H , senior standing, and enrollment in an honors program belonging to the Penn State Honors Consortium

Honors

HONOR 499: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual of group instruction.

International Cultures (IL) Honors

**Horticulture (HORT)**

HORT 101: Horticultural Science
3 Credits

Introduction to horticulture with an emphasis on plant domestication, morphology, classification, world food crops, commodities, gardens, propagation, and agrochemicals. The course content of HORT 101, as indicated in the complete course outline, deals with the fundamental concepts and specialty areas, which contribute not only to the science and technology involved in horticulture but also to the art. It provides an overview of the role of various specialties of the natural sciences (e.g. plant morphology, physiology, taxonomy, genetics and nutrition, pest management, management and production of crops, landscaping, and technology) relevant to a range of plant uses from medicinals and food production to the aesthetic benefits derived from plants. The course begins with the origin and domestication of plants followed by:

A. An Overview of horticulture which includes an explanation of the horticulture industry, how to achieve success in horticulture and the relationship between horticulture and the environment; B. Science in horticulture which includes the classification of plants, plant propagation, plant nutrition, environmental factors affecting plant growth and development, plant growth regulators, post harvest physiology and pest management; C. Management and production of horticultural crops which include nursery, floral, turfgrass, vegetable, fruit and nuts; D. Landscaping including designing landscapes, xeriscapes and sitescapes, establishing and maintaining landscapes; and E. Concluding with Technology in horticulture. The course content additionally includes major areas of knowledge based on the fundamentals, universal concepts and achievements in the cluster of scientific disciplines comprising horticulture and provides students with the opportunity to appreciate that the origins, domestication and production of cultivated plants are the essence of human existence.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

HORT 120: Computer Applications for Landscape Contracting
2 Credits

Emphasis is placed on the use of commercial software used for landscape planning and estimating. Limited to Landscape Contracting majors only.

HORT 131: Herbaceous Perennial and Annual Identification
3 Credits

Herbaceous and annual plant identification; landscape use of herbaceous perennials and greenhouse and garden annuals.

**Prerequisite:** BIOL 127 , BIOL 110 , or HORT 101

HORT 137: Ornamental Plant Materials
3 Credits

Identification and description under fall conditions; discussion of cultural and aesthetic aspects of trees of value in ornamental planting.

HORT 138: Ornamental Plant Materials
3 Credits

Identification and description under spring conditions; discussion of cultural and aesthetic aspects of shrubs of value in ornamental plantings.

HORT 150N: Plants in the Human Context
3 Credits

Plants have played a dynamic role in shaping our life. In reality, human existence on Earth is made possible by the breath of plants through
photosynthesis. Likewise, our botanical connections and interactions are many: we need plants for food, beverages, medicines, materials, healthy lifestyles, and aesthetics. Plants have also played an important role in where our ancestors settled and where we live today. Some of the important topics discussed in this class will include the role of tea in transforming world cultures, the importance of sugar in the Civil War and the establishment of the Caribbean nations, the effect of the Irish potato famine on Europe and the US, and the use of plants in solving crimes.

General Education: Natural Sciences (GN)
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

HORT 201: Applied Arboriculture
2 Credits

Overview of methods used to diagnose problems and provide for the long term care of large trees. HORT 201 Applied Arboriculture (2) The objective of this course is to provide students with the opportunity to develop an appreciation of the skills required to properly care for large trees. The course provides information that is especially useful to those in the Landscape Management option of the Landscape Contracting major.

The course will provide an overview of the methods used to diagnose problems and provide for the long term care of large trees. Areas of emphasis will include accessing the upper parts of large trees; safety when working in and around large trees; and the proper selection, use, and maintenance of the equipment used in the arboriculture profession. The course will be taught each Fall semester and will have an enrollment limit of 18. Students will be evaluated by quizzes, exams, and laboratory assignments.

**Prerequisite:** Students must be physically capable of safely handling a running chainsaw, and pulling their weight up a rope.

HORT 202: Plant Propagation
3 Credits

Principles and practices of asexual and sexual plant propagation.

**Prerequisite:** BIOL 027, BIOL 110, or HORT 101

HORT 220: CAD Applications in Landscape Contracting
3 Credits

Application of computer-aided design software including AutoCAD and LANDCADD to landscape contracting.

**Prerequisite:** HORT 120

HORT 232: Horticultural Systematics
3 Credits

Fundamentals of horticultural crop plant classification and systematics. Examples chosen from fruits and vegetables, exclusive of subtropical and tropical fruit.

**Prerequisite:** HORT 101

HORT 233: The Science of Winemaking
3 Credits

Introduction to the principles of wine production emphasizing basic wine grape biology, fermentation science, wine chemistry, and wine perception. FDSC 233 / HORT 233 provides an interdisciplinary treatment of the science of grape growing, vinification, and wine consumption. Students will learn how viticultural practices translate to wine chemistry, and how key variables associated with that conversion affect consumer perception. The course will cover topics such as basic grapevine physiology, vineyard management practices, vinification, domestic and international wine styles, and consumer interactions with wine (e.g., sensory evaluation, health aspects of wine). Although the course is considered to be introductory, students must have a basic grounding in university-level chemistry and biology. Course material will be primarily transmitted through lectures, reading assignments to be completed outside of class, and brief practical exercises in the Sensory Evaluation Center (Department of Food Science).

**Prerequisite:** CHEM 110 or BIOL 110

Cross-listed with: FDSC 233

HORT 238: Turf and Ornamental Weed Control
3 Credits

Students will be introduced to the development of integrated weed management strategies utilizing a variety of cultural and chemical methods.

Cross-listed with: TURF 238

HORT 250: Landscape Contracting Design/Build Principles
3 Credits

Introduction to the processes and principles of residential landscape site development, from initial client contact to implementation.

HORT 269: Residential Landscape Planning
3 Credits

Principles and techniques in landscape design; preparation of plans of small properties.

**Prerequisite:** Landscape Contracting majors, in the Design/Build Option

HORT 270: Basic and Advanced Hand and Digital Graphics for Landscape Contracting
1 Credits

Graphics are the language of design and presentation in Landscape Contracting. The ability to develop, document and communicate design ideas is essential for success in any design profession. As a graphics arts course, emphasis will be placed on hands-on studio activities and skill development to explore drafting, graphic, and rendering techniques using a variety of traditional drawing media to develop symbolic and representational graphics essential for the communication of design ideas. Digital rendering and hybrid (tradigital) graphics methods and techniques will also be explored.

**Prerequisite:** Landscape Contracting majors, in the Design/Build Option; COREREQUISITES: HORT 269
HORT 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

HORT 299: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

HORT 301: Principles of Arboriculture
3 Credits
Overview of the concepts and methods prescribed for the evaluation and care of large trees in urban settings. HORT (FOR) 301 Principles of Arboriculture (3) The objective of the course is to introduce students to the theories and practices related to the care of trees in developed areas. The course provides information that is especially useful to those in the Landscape Management option of the Landscape Contracting major, and the Urban Forestry option of the Forestry major. This course will provide an overview of the concepts and methods prescribed for the evaluation and care of large trees in urban settings. Emphasis will be placed on maintaining the long-term health of large trees. Major topic areas will include methods for characterization of tree health, diagnosing problems in trees, the influence of environmental factors on tree health, and the assessment of hazard trees. Proper pruning techniques and factors to consider when making decisions regarding long-term tree care in urban areas will be discussed. The course will be taught each spring semester. Students will be evaluated by quizzes, exams, and laboratory assignments.

Prerequisite: BIOL 110 and SOILS101

HORT 315: Environmental Effects on Horticultural Crops
3 Credits
Horticultural plants respond to the environmental factors of light, temperature, water, and fertilizer both in controlled and field environments.

Prerequisite: HORT 101, HORT 202

HORT 352: Flower Arranging
2 Credits
Floral design beginning with elements and principles of design. Flower arranging techniques as well as different styles of flower arrangements.

HORT 368: Landscape Planting Design
4 Credits
Basic planting design employing the use of indigenous and ornamental plants as design elements in the man-made environment. Intended for Landscape Contracting majors only.

Prerequisite: HORT 269

HORT 402W: Plant Nutrition
3 Credits
Mineral nutrition of higher plants, including nutrient acquisition, transport, metabolism, and practical implications. HORT 402W Plant Nutrition (3) The course considers the mineral nutrition of higher plants from physiological, ecological, and agricultural perspectives. The first part of the course considers factors influencing the acquisition of mineral nutrients and their transport in the plant, including nutrient mobility in the soil, root biology, rhizosphere interactions, membrane transport, xylem, and phloem transport. Root symbioses and metabolic assimilation of N and S will also be discussed. The second part of the course gives an overview of mineral metabolism. The final third of the course illustrates the practical dimensions of plant nutrition. The diagnosis of nutritional disorders, nutrition, and yield, foliar fertilization, genetic aspects of plant nutrition, and nutrient cycling will be covered by lecture and laboratory exercises. Laboratory exercises demonstrate lecture topics and permit a ‘Hands-on’ involvement with the subject. Emphasis is placed on concepts and integrating principles rather than memorization of technical details.

Prerequisite: HORT 315 or BIOL 441, SOILS101
Writing Across the Curriculum

HORT 407: Plant Breeding
3 Credits
The scientific principles and techniques of utilizing genetic variability in improving the heredity of plants for specific purposes. HORT 407 Plant Breeding (3) Horticulture 407 is a 3-credit course that is taught every spring semester and is required of horticulture undergraduate students at Penn State. This course also attracts upper-division and graduate students from other departments such as Agronomy, Biology, Forest Resources, Plant Pathology, Biochemistry, and Molecular Biology. The objectives of the course are to 1) develop an understanding of the role of genetics in plant breeding, 2) elucidate the diversity of plant characteristics which are subject to improvement, 3) review conventional and contemporary techniques for the development of new cultivars, and 4) present the opportunity for the student to effectively communicate scientific information in writing and through speaking. Horticulture 407 emphasizes basic principles of plant genetics and breeding and the utilization of molecular biology techniques for crop improvement. It includes two-hours of lecture and a two-hour laboratory-discussion session each week. Major topics of discussion during lecture periods include plant reproduction, genetic variation in plants, review of mitosis and meiosis, Mendelian genetics, linkage, and recombination, qualitative and quantitative traits, population genetics, cytogenetics, theory of selection and response to selection, heritability, review of statistical tools useful in plant genetics and breeding, systems of pollination controls in plants including self-incompatibility and male sterility, breeding methods for self- and cross-fertilized plants, and application of modern technologies, including molecular markers, marker-assisted selection, and genetic transformation, to crop improvement. The laboratory sessions are designed to complement the lectures and provide opportunities for hands-on experience. For example, students practice staining and counting plant chromosomes on microscope slides, self- and cross-pollination of different plant species, linkage mapping and analysis of plants for Mendelian segregation, inoculating plants with fungal pathogens and observing and evaluating plants for disease development, extracting DNA from plant tissue and separating DNA segments on agarose medium using gel electrophoresis, and practicing computer programs for gene mapping and analysis of Quantitative Trait
Loci (QTLs). Furthermore, students are mentored to prepare a term paper on a plant breeding/plant genetics subject and to orally present their findings to the class using visual aids. Student evaluation is based on two mid-term exams (each 100 points), one comprehensive final exam (200 points), 10 weekly homework or laboratory reports (for a total of 100 points), and a term paper (50 points for writing and 50 points for presentation). For the presentation, each student is required to turn in a 3-5 page write-up about a topic of interest.

HORT 408: Landscape Plant Establishment and Maintenance
4 Credits
The principles and practices involved in the establishment of plants in the landscape, and their subsequent maintenance.

**Prerequisite:** HORT 137 or HORT 138; SOILS101

HORT 410W: Issues in Landscape Contracting
3 Credits
This will be a survey of business management, regulatory, and environmental issues facing the landscape contracting profession. Laboratory.

**Prerequisite:** HORT 408

Writing Across the Curriculum

HORT 412W: Post-Harvest Physiology
3 Credits
Harvesting, handling, storage, and transportation of horticultural crops; primary emphasis on physiological response to pre- and post-harvest environmental factors.

**Prerequisite:** 6 credits in horticulture or other plant sciences

Writing Across the Curriculum

HORT 420: Plant Growth Regulators
3 Credits
Plant growth regulators, their chemical and physical properties; general principles, practices, and applications in regulating plant growth and development.

**Prerequisite:** BIOL 110 or HORT 101

HORT 431: Small Fruit Culture
3 Credits
Cultural requirements and production practices of the principal small fruit crops: strawberries, grapes, blueberries, brambles, and cranberries.

**Prerequisite:** HORT 101, HORT 315

HORT 432: Deciduous Tree Fruits
3 Credits
Science, art, and techniques of regulated cropping; orchard designs and management systems.

**Prerequisite:** HORT 101

HORT 433: Vegetable Crops
3 Credits
Cultural requirements of important vegetable crops in conjunction with physiological processes and problems related to commercial production. This course will provide students with information, techniques and ideas to produce vegetable crops on a commercial scale. Students learn production fundamentals applying to all vegetable crops including fertility management, transplant production, season extension, and pest management during the first part of the semester. This is followed by detailed and specific information for important vegetables on the science of producing high quality crops. Using a participatory approach students learn important techniques to successful production including experimenting on a small scale, designing a drip irrigation system, scouting for pests and developing a pest management strategy. Field trips to successful operations and outlets and the research farm are important elements of the class.

**Prerequisite:** HORT 101

HORT 445: Plant Ecology
3 Credits
Advanced lectures on plant ecology which stress integration of physiological, population-level and community-level phenomena, and ecology in agriculture.

**Prerequisite:** BIOL 220W, FOR 308, or HORT 315

HORT 451: Hydroponics and Aquaponics
3 Credits
The course provides information that is especially useful to those with knowledge of horticultural plants; however a background in plant production is not needed. Major topics discussed include basic concepts in plant and fish biology; nutrient and water use, cycling, and management; pest and pathogen management; and environmental factors as they relate to the design and operation of hydroponics and aquaponics systems. This course includes a weekly laboratory session where students gain practical skills in growing crops in a variety of hydroponics systems and growing crops and fish in an aquaponics system.

**Prerequisites:** HORT 101; AGRO 28; AGECO 121; Recommended Preparation: Students without one of the formal prerequisite courses should have 3 credits of plant science, biology, or a Junior level standing in a science or engineering major.

HORT 453: Flower Crop Production and Management
3 Credits
Production of greenhouse flower and foliage plants; development of management skills for a greenhouse business.

**Prerequisite:** HORT 101, HORT 315

HORT 455: Retail Horticulture Business Management
3 Credits
The nature, operation, and management of retail garden centers, winery tasting rooms, and independent food retailers. Overview of retail marketing principles and practices as they pertaining to horticultural
retail businesses. Lectures, discussions, and projects focus on: selecting and pricing goods and services; how independent retailers effectively use traditional promotion avenues and social media networks to connect with customers; and how to develop a relevant brand, cause marketing effort, and loyalty program. Students will also learn: about retail layout and display strategies; that each consumer segment has different wants, interests, and abilities to obtain goods and services, and about effective employee management.

**Prerequisite:** HORT 101; AG BM 101
Cross-listed with: AGBM 455

HORT 459: Plant Tissue Culture and Biotechnology
3 Credits

The overall goal of this course is to provide a strong overview of the techniques used in plant biotechnology and the applications made possible by those techniques. The lecture topics will be used to introduce the principles of tissue culture and molecular biology, including how they are used to produce transgenic plants. Furthermore, the course will give students a broader and deeper knowledge in the field of Plant Biotechnology and provide a foundation for understanding the field as it changes in the future. Topics include the safety, legal and ethical issues surrounding GMOs and the study of the anti-GMO arguments surrounding each issue. In the laboratory component of the course, students will be introduced to the underlying principles of molecular biology techniques and aseptic culture of plant cells as well as the tissues and organs used to produce transgenic plants. In summary, through this course students will be introduced to many of the most important tools of the biotechnologist.

**Enforced Prerequisite at Enrollment:** BMB 252 or BMB 252H or MICRB 252 or BIOL 230W or BIOL 230M
Cross-listed with: BIOL 459, BIOTC 459

HORT 464: Landscape Construction I
4 Credits

Standards, processes, and computations for site grading, drainage, earthwork, vehicular circulation, parking; detailing, and finishing of landscape construction materials.

**Prerequisite:** HORT 269

HORT 466: Landscape Construction II
5 Credits

Project scheduling methods, plant installation techniques, and field layout principles and practices. Implications of site preparation.

**Prerequisite:** HORT 464

HORT 468: Landscape Estimating and Bidding
2 Credits

Reading and interpreting contract drawings and specifications, quantity take-offs, cost estimating, and bid document preparation.

**Prerequisite:** HORT 466

HORT 490: Senior Seminar
1 Credit

Exploration of the interrelationships of horticulture, science, and society; evaluation of attributes and abilities related to various career opportunities.

**Prerequisite:** HORT 390, seventh-semester standing

HORT 495: Internship
1-13 Credits/Maximum of 13

Supervised off campus experience in a public or commercial horticultural enterprise. Written and oral critique of activity required.

**Prerequisite:** approval of proposed assignment required prior to registration

Full-Time Equivalent Course

HORT 496: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

HORT 497: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HORT 499: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

HORT 499F: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on

International Cultures (IL)

General Education: Natural Sciences (GN)
General Education: Social and Behavioral Scien (GS)
General Education - Integrative: Interdomain
Honors

**Hospitality Management (HM)**

HM 199: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual of group instruction.

International Cultures (IL)
HM 201: Introduction to Management in the Hospitality Industry
3 Credits

Introduction to the hospitality industry and hospitality management. HM 201 Introduction to Management in the Hospitality Industry (3) The objectives of this course are to provide an introduction to the hospitality industry, to management practices within the industry, and to the hospitality major. Students have an opportunity to learn about the functions of management; the major components of the hospitality, travel, and tourism industries; trade associations and publications; growth areas and trends; and the need for creative leadership. Main topics typically include: functions of management and functional areas of business segments of the hospitality industry, international business as related to hospitality, services business, the planning process and strategic planning, organization design in hospitality, directing and leading in hospitality, the control process in hospitality, travel and tourism industries hospitality, hotels and lodging, the restaurant business, managed services, leisure and recreation/other hospitality opportunities, beverage management, and management ethics and social responsibility.

Enforced Concurrent at Enrollment: HM 202

HM 202: Colloquium in Hospitality Management
1 Credits/Maximum of 4

Major industry and professional speakers lecture on current issues followed by discussion with students and faculty. HM 202 Colloquium in Hospitality Management (1) This course has two primary objectives. First, students have an opportunity to hear from industry leaders. Second, students can determine their career directions, learn about the requirements for success in the industry, and identify career opportunities. The topics for the course vary from semester to semester depending upon the expertise of the distinguished speakers who address the class. However, a common theme is to explore trends in the industry regarding hotels, restaurants, and institutional foodservice. Students may learn about related career opportunities, such as careers with cruise lines, travel agencies, and other sectors in the hospitality and tourism industry.

HM 203: Hospitality Professional Development Seminar
1 Credits

The purpose of this course is to provide students with professional development preparation early in the curriculum. This course will help students obtain quality work experience during their college career to best prepare them for post-graduate employment. In particular, this course is designed to prepare students for meeting the major’s work experience requirement. Meaningful work experience serves as a complement to classroom learning and provides the foundation for securing employment upon graduation. This course will help students understand the connection between college work experience and full-time careers and will impart strategies for conducting a successful job search and making the most out of these work opportunities. The class will include lectures, discussions, experiential exercises, guest lectures, and professional development assignments.

Enforced Prerequisite or Concurrent at Enrollment: HM 201

HM 208: Social, Cultural, and Health Influences of Alcohol
1.5 Credits

This course is designed to provide a historical approach to educating students on the development of alcohol and its influence on society. Alcohol is both culturally and economically significant as its usage has been a source of global trade, economic status, and political conflict. Science has proven positive and negative impacts of alcohol, which have shaped marketing, regulation, and consumption patterns. A better understanding of alcohol and its place in our society is not only educational from a historical perspective, but provides students with impactful nutritional and health knowledge regarding alcohol. By the end of this course, each student will feel more comfortable with the topic of alcohol in our society. This course will focus on how we can promote a more responsible educational process involving alcohol consumption, sale, and service. Education on alcohol can provide fundamental information that cannot only significantly improve one’s well-being and quality of life, but also others.

HM 228: Hospitality Food Safety
1 Credits

Application of HACCP, U.S. Food Code, biosecurity and other federal regulations to hospitality foodservice operations. Students attain certification in foodservice sanitation. HM 228 Hospitality Food Safety (1) This course will examine the science associated with preparing and serving food that is safe for consumption with regards to biological, chemical, and physical contamination. Emphasis is on federal regulations associated with HACCP, the U.S. Food Code, and other issues associated with safety of the food supply in the U.S. Case studies help students apply food safety principles to hospitality operations. Students will attain certification in foodservice sanitation by taking the examination administered by the National Restaurant Association.

HM 250: Principles of Quantity Food Production
3 Credits

Principles and methods of quantity food production including preparation techniques, quality control and evaluation, and cost control.

HM 260: Hospitality Supervision Seminar
3 Credits

Hospitality management topics are discussed with a major emphasis on operations management. This course will not meet the prescribed requirements for the HM major in any option. HM 260 Hospitality Supervision Seminar (3) This course is an introduction to human resource management in the hospitality industry. The course examines the fundamentals of supervision that include planning, basic management functions, and customer relations and service. The overall course focus is on building relationships with diverse employees through communication, motivation, supervision and leadership. Additional topics covered include the human resource environment in hospitality operations, employee recruitment, selection, orientation, training, empowerment, performance appraisals and discipline, risk management, and labor
organizations. An introductory supervision course is vital to the success of a hospitality student. It is important to explore this topic in relation to the labor trends in the United States. It is equally important to examine the current demographic and socio-economic conditions that the student faces. Knowing how to access this information in the future will assist the student throughout his/her career. Emphasis will be placed on the diversity of the student as well as his/her employees and colleagues. Social identity is addressed early in the course. Human relationships and interactions are included throughout the course, as supervisors interact with their employees, colleagues, upper management and customers on a daily basis. Values, traditions, beliefs, and customs shape every human being and students will learn how to be sensitive to those differences through the practical applications in each lesson.

**Prerequisite:** HM 201

HM 270: Hospitality Administration Seminar

4 Credits

Components of food service systems are identified and studied as separate problems and as a total system. This course will not meet the prescribed requirements for the HM major in any option. HM 270 Hospitality Administration Seminar (4) The organization of a restaurant facility, from concept to operation, allows a student the opportunity to apply all previously learned course material in the Hospitality Management program. The focus of the course urges the student to apply the principles of marketing, menu planning, food cost control, human resource management, financial accounting, layout and design, and purchasing. This course is presented in a seminar format and includes a restaurant design project. Students who have completed this course gain the perspective of designing a restaurant facility with customers' needs and owners' profits in mind. Main topics include: creating a marketing plan and business plan, financing and leasing, leasing and tax matters, menu writing, menu analysis, function analysis, kitchen design and layout design conventions, recruiting and staffing including training and development, food purchasing, bar and beverage purchasing, beverage and alcohol service, and budgeting and controlling costs. The content of this course is considered fundamental for anyone in hospitality management and, therefore is required of all Hospitality Management majors.

**Enforced Prerequisites at Enrollment:** HM 250, HM 260; or HM 250, MGMT 341

HM 271: Introduction to Hospitality Technology

3 Credits

Introduction to technologies used in the hospitality industry including networks, security, e-commerce, social media, spreadsheets, databases and property management systems. HM 271 Introduction to Hospitality Technology (3) This course is designed to introduce students to the technology used in the hospitality industry and to the concepts of information technology. The objectives are to describe how managers in the hospitality industry use various information technologies to solve problems and make decisions, describe the role of hospitality managers in information system development and management, describe the functions of network and security systems within in hospitality technology systems, explain the role of hospitality information systems, e-commerce, distribution technologies, and social media in strengthening an operation or company's competitive position, and demonstrate competency in the use of spreadsheet, database and property management system software with skills applicable to the hospitality industry.

**Enforced Prerequisite or Concurrent at Enrollment:** HM 201

HM 272: Introduction to Worksheet-Based Analysis and Modeling for Managerial Decision Making

2 Credits

The ability to use and apply MS Excel is a vital competency for SHM graduates to have. Companies expect it for career success and dependency on one's ability to use Excel in solving financial and managerial problems. The advisory board of SHM has identified the students' ability to use and apply MS Excel as a competency required by many hospitality companies. In addition, the use of worksheets and MS Excel is required in such diverse classes as hotel and food service management, marketing, revenue management, finance, real estate, and entrepreneurship. The course involves a lecture on the functionality of the software as well as hands-on, in-class learning exercises illustrating the topics presented in the lecture. Case studies will enable students to explore and analyze a variety of hospitality concepts on a common worksheet platform.

**Enforced Concurrent:** HM 201

HM 290W: Hospitality Managerial Communication

3 Credits

Communication in organizations is essential to creating an open and collaborative environment. The premise of this course focuses on the core fundamentals of creating and delivering clear and concise business messages. Additionally, the course draws on the ability to recognize and understand the differences between communication styles that exist in a global marketplace. Students will be familiarized with types of messages and will apply their knowledge through writing, reviewing, and evaluating written and verbal messages. Particular areas of focus include creating routine business messages, preparing persuasive memos, and delivering bad news messages. Students will also be challenged to create professional reports and presentations, which are essential to influencing and informing key stakeholders. Content in this course will help students become more effective communicators and leaders, regardless of their future profession.

**Enforced Prerequisite at Enrollment:** (ENGL 015 or ENGL 030 or ESL 015) and a grade of C or better required in HM 201

Writing Across the Curriculum

HM 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HM 304: Institutional Food Service Management

3 Credits

Institutional food service management systems in the hospitality field. HM 304 Institutional Food Service Management (3) Institutional and contract food service management is in the growth stage of the hospitality industry life cycle. The objective of this course is to provide an overview of the various segments of institutional food service, including health care, life care, education, business, transportation (i.e., airlines,
cruise ships), correctional and recreational services. Main topics typically include: historical overview of institutional/non-commercial food service management, exploring key markets where institutional food service management exists, key systems used in the fundamental areas of quantity food production, current and future trends effecting institutional food service management, career opportunities in the institutional food service management sector, and managed services and multi-department management. This course is an elective in the Hospitality Management program.

**Enforced Prerequisite at Enrollment:** a grade of C or better required in HM 201

HM 305: Restaurant Management
3 Credits
Restaurant food service management systems in the hospitality field; analysis including cost control and quality control techniques. HM 305 Restaurant Management (3) Providing quality service and products and ultimately making a profit in a restaurant require the foodservice professional to control and analyze costs. The objective of this course is to provide an overview of the food, labor, budget, and finance information required in restaurant management. Main topics typically include: framework and function of control in foodservice operations, steps and processes of using management information systems in controlling food cost and preparation of food; forecasting and menu pricing techniques in controlling food cost in the preparation and service of food; problems associated with labor costs and analyzing various techniques and tools used to control labor cost effectively through proper staffing and scheduling; methods of controlling food and beverage cost through effective purchasing, receiving, storage, issuing, preparation, inventory, and portion control; techniques of preparation and implementation of effective budgets as control tools; ratio-analysis for analyzing cost in foodservice operations; financial statements used to monitor the financial health of a foodservice operation; and capital budgeting and how it is used. This course is required in the Hospitality Management program. The introductory course in Hospitality Management must have been completed or must be taken concurrently.

**Enforced Prerequisite or Concurrent at Enrollment:** HM 201

HM 306: Hospitality in Senior Living
3 Credits
Introduction to senior living and continuing care retirement communities and related hospitality management career opportunities. HM 306 Hospitality in Senior Living (3) This course introduces students to continuing care retirement communities (CCRC’s) and senior living facilities. The course is taught from a hospitality perspective and focuses on how the application of hospitality management can enhance senior communities and their residents. The multidisciplinary content includes a variety of perspectives on designing and delivering services for seniors, including long-term care administration, geriatric nursing, adulthood and aging, therapeutic recreation, and nutrition and foodservice.

HM 311: Introduction to Wines of the World
2 Credits
The course introduces students to viticulture and viniculture and the sensory evaluation of wine. It focuses on the complexities of production, storage, grape-growing, and the intersection of agriculture, commerce, and hospitality businesses. Special emphasis is given to the climates, topographies, and other natural conditions that make some regions more suited to certain wine cultivation than others and how these conditions are replicated around the world. It concentrates on the sensory elements of wine that make it a global economic and culture phenomenon with emphasis on Old World and New World traditions, food pairing, new entries to the marketplace, and trends in the wine business. It covers the important role wine plays in the delivery of dining experiences in both hospitality enterprises such as catering and restaurant venues as well as retail and social experiences. Wine sales makes a substantial contribution to the profitability and marketability of many food service operations. The wine industry is replete with specific and technical vocabulary that when mastered enables students to engage in wine activities knowledgeably and successfully, whether as a consumer or hospitality professional.

**Enforced Prerequisite at Enrollment:** Students must be 21 years of age or older to register for this course. Enrollment by non-HM majors by permission only.

HM 318: Club Management and Operations
2 Credits
Principles and practices of club organizations and management. HM 318 Club Management and Operations (2) This course focuses on the unique management skills that are necessary in the private club industry. A key objective is to demonstrate to students the concept of ‘exceptional service’ that is demanded in this field. The course leads students on a tour of the responsibilities and operations of all departments that would be found in a city or country club. Main topics typically include: club management industry and career opportunities; types of clubs that exist in the industry, including structure, organization, and philosophy; the various departments of a successful club including but not limited to: food and beverage, accounting and cost control, human resources, marketing and promotion, catering and banquets, golf operations, tennis operations, aquatics, and fitness facilities; and management skills required of a club manager: leadership, board relations, general management, service excellence, communications. The course is required in the Professional Golf Management option in the Recreation, Park, and Tourism Management program and is a professional elective for Hospitality Management majors.

**Enforced Prerequisite at Enrollment:** a grade of C or better required in HM 201

HM 319: Hospitality Facilities Management
3 Credits
Fundamental principles of facilities planning, facilities management, and maintenance for all segments of the hospitality industry. HM 319 Hospitality Facilities Management (3) This course has been designed to provide students with information related to hospitality facility design and maintenance. While managers may not have to fix equipment or install heaters, they should understand the complexity of these tasks and respect the position of the architect and hospitality engineer. Main topics typically include: principles of facility engineering and maintenance, costs associated with the life cycle of a hospitality facility; role of the manager in the planning and maintenance process; function of the building in service and marketing, impact of building design on guest service and operation; evaluation of building and grounds for compliance with the Americans with Disabilities Act of 1990; role of management in development, planning, and remodeling of food service operations; and flow of resources as exhibited in blueprints. The course
is a required course for all Hospitality Management majors. Students must first complete the introductory hospitality course and the hospitality colloquium.

**Enforced Prerequisite at Enrollment:** a grade of C or better required in HM 201

**HM 329: Introduction to Food Production and Service**

3 Credits

Why do so many new restaurants fail? What factors drive the costs of foodservice operations and how do you go about controlling those costs? How do you make a foodservice operation profitable and why do many consider it one of the most difficult businesses to manage? How do you 'WOW' the customer and build loyalty? This course will provide students with tools foodservice managers use on a daily basis to make sure they end each year ‘in the black.’ Students develop knowledge and skills needed to be successful in future courses that follow HM 329. This course provides students with information on the basic principles of effective food production and service management. The primary focus is on controlling costs, both food and labor. Course content stresses the integration of menu planning, recipe writing (including HACCP), and development and maintenance of quality standards, with other management tools used throughout the foodservice manufacturing cycle, such as operating ratios, procurement, recipe costing, menu analysis, and budgeting to successfully control costs and manage customer service. Course content is critical to laboratory assignments in HM 330 & HM 430, and advanced topics in NUTR 386.

**Enforced Prerequisite at Enrollment:** NUTR 119 or NUTR 320 or Concurrent Courses at Enrollment: NUTR 119 or NUTR 320

**HM 330: Food Production and Service Management**

3 Credits

This course is designed to apply management principles to foodservice production and service in a lab environment. HM 330 stresses the integration of management principles acquired in prior classes, including planning, organizing, controlling, staffing, and leading. Students will rotate in management and staff positions for the quantity production of quality food. The course draws from the students' theoretical background in accounting, management, nutrition, food production and sanitation. HM 330 integrates this content into the daily operation of a campus foodservice facility as a living laboratory.

**Enforced Prerequisite at Enrollment:** (NUTR 119 or NUTR 320) and a grade of C or better in HM 329

**HM 335: Hospitality Financial Accounting**

3 Credits

Accounting, in many respects, is the language of business and translates business transactions into quantifiable information. The purpose of this course is to provide the tools as to how to use and understand this language for making informed business decisions. Areas of focus include how to analyze and record business transactions, compiling and analyzing three of the four major financial statements, banking procedures and control of cash, various issues related to the payment of employees and the introduction of how to analyze financial statements. Regardless of the functional area in the hospitality industry in which students choose to work, they will be most likely be required to understand how accounting impacts the various financial statements, and how to use financial information to make informed business decisions. Therefore, an understanding of the importance of accounting information to make informed business decisions is vital to students' future success.

**Enforced Prerequisite at Enrollment:** a grade of C or better required in HM 201

**HM 336: Hospitality Managerial Accounting**

3 Credits

The course provides managerial tools for decision-making by focusing on the basic concepts, analyses, uses, and procedures of cost accounting in the hospitality industry. Managerial decision-making using accounting data is an integral part of the function of managers in the hospitality industry. The accounting function of a business generates financial data, and managers need to be able to interpret the data, analyze it and make decisions based on their interpretation and analysis of the data. This course provides the student with the core knowledge needed to understand the kinds of data generated by the financial systems of hospitality operations, prepare budgets, perform variance analysis, and provide control over the financial aspects of the hospitality business.

**Enforced Prerequisites at Enrollment:** (ACCTG 211 or HM 335) and a grade of C or better in HM 271

**HM 344: Social Media Marketing for Hospitality**

3 Credits

This class in social media marketing explores the growing popularity of using digital technologies to reach hospitality guests. The emphasis of the class is on expanding student’s working knowledge on the four zones of social media (community, publishing, entertainment and commerce) within the context of hospitality. Students explore how social media can be employed to build hospitality brands, conduct business, handle guest complaints, drive sales, forge and maintain guest relationships. Although strategies for executing successful social media campaigns is taught, an over emphasis on any one specific social network is not.

**Enforced Prerequisite at Enrollment:** a grade of C or better required in HM 201

**HM 350: Operations Management in Hospitality**

3 Credits

This course introduces students to key operations management decisions within the hospitality industry, and the methodologies and analytical techniques required to make effective data-driven decisions. Areas of focus include demand forecasting, employee scheduling, quality management, process strategy, analysis and design, project management, and principles of revenue management. Students will learn how to develop spreadsheet-based models to forecast demand and schedule employees. They will apply statistical techniques to track quality, and develop spreadsheet-based quality tracking models. Students will apply analytical methods and spreadsheet-based simulation models to assess the performance of service delivery systems. Students will be introduced to the fundamentals of revenue management and how to apply it to different revenue streams in the hospitality environment. The course also introduces students to project management tools that can be applied to manage service operations projects.
Enforced Prerequisites at Enrollment: STAT 200 and a grade of C or better required for HM 271

General Education: Quantification (GQ)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

HM 355: Legal Aspects of the Hospitality Industry
3 Credits

Specialized applications of law to the hospitality industry. HM 355 Legal Aspects of the Hospitality Industry (3) Laws, courts, and more generally the legal system together constitute an integral feature of the environment within which the hospitality industry operates. The objective of this course is to acquaint students with the application of law to hotels, restaurants, and institutional settings. A hospitality manager who understands the law can prevent many legal problems from occurring, including preventing injuries that may lead to lawsuits. Main topics in this course typically include: types of law, judicial structure and trial procedures; conduct of legal research, including use of Web resources; legal duties of innkeepers and guests; negligence and other torts; contract law; civil rights and public accommodations, especially protections from discrimination; guests’ property; regulation and licensing; employment law, especially protections from discrimination; casinos and the law; and food and alcohol service liability.

Enforced Prerequisite or Concurrent at Enrollment: HM 201

HM 365: Organizational Behavior in the Hospitality Industry
3 Credits

The human element is vital to the success of any organization, particularly in the hospitality industry. Toward this end, the purpose of this course is to provide students tools for successfully managing employees to enhance individual and organizational performance. Particular areas of focus will be on understanding employee motivation, individual differences, stress, diversity, group dynamics, and organizational culture and structure. Students will be familiarized with these content areas and will apply them through project-based work, group assignments, experiential activities, and case studies. Regardless of the functional area in which students choose to work, they will be required to work with, manage, and lead other people. Therefore, an understanding of human behavior, its antecedents, and its consequences is vital to students’ future success.

Enforced Prerequisite at Enrollment: a grade of C or better required in HM 201

HM 380: Hotel Management
3 Credits

Students will explore the typical ownership and management structures of various types of hotels. Ownership discussions include the various types of ownership entities from sole proprietorships to real estate investment trusts and large institutional owners. The role of the owner is discussed to enable students to understand how ownership entities effect their role as a hotel manager. Students will learn about the responsibilities of the hotel manager. Starting with the organizational structure of various types of hotels, management discussions include the role of the hotel manager in staffing the hotel; orienting and training associates; building a service-oriented team; and ensuring the safety and security of associates and guests. Students will learn how each of the operating departments of a typical hotel work and how the departments interrelate and work with one another to deliver exceptional guest service. Discussions of the major operating departments in a hotel to include front office, housekeeping and laundry, engineering, sales and marketing, food and beverage and safety and security. Students will be provided tours of the primary operating departments, housekeeping and laundry, food and beverage, maintenance, and front office, to experience and observe operations. Students will have the opportunity to enhance their classroom learnings with observation of functioning operations.

Enforced Prerequisite at Enrollment: a grade of C or better required in HM 201

HM 384: Introduction to Meeting and Event Management
3 Credits

HM 384 Meetings and Events I examines the meeting and event industry, and the skill set of successful Meeting and Event Professionals. The course covers a broad overview of the processes involved in planning and implementing meetings, special events, and conferences by focusing on the basic processes of developing, planning, coordinating, implementing, and evaluating. Meetings & Events management is a viable career option within the hospitality industry. Hotels, restaurants, schools, arenas, convention centers, and retirement communities can all serve as venues for events. Events add value to organizations by creating engaging and memorable experiences for its stakeholders. Effective event managers know how to assess stakeholder objectives and design an event that meets or exceeds those objectives. With actual event case studies, the student will apply best practices in event design, promotion, management, and evaluation.

HM 386: Introduction to the Gaming and Casino Industry
3 Credits

Students will learn about those traits of the casino industry which distinguish it from other segments of the hospitality industry.

Enforced Prerequisite or Concurrent at Enrollment: HM 201

HM 387: Casino Controls
3 Credits

This course is an overview of controls used in casinos including an exploration of complimentary goods (comps) and services and credit.

Enforced Prerequisites at Enrollment: A grade of C or better in: HM 201 and HM 335 and HM 386 Concurrent: HM 388

HM 388: Gaming Operations Management
3 Credits

Students will learn casino mathematics, game protection, floor layout methods, departmental organizational structure, and performance analysis.

Enforced Prerequisite at Enrollment: A grade of C or better in: STAT 200 and HM 201 and HM 386 Concurrent: HM 387
HM 390: Corporate Social Responsibility in Hospitality

3 Credits

This course introduces students to issues of corporate social responsibility. The course is taught from both general business and hospitality perspectives. Specifically, this course addresses the general historical development of CSR along with hospitality cases, fundamental concepts of CSR, different arguments for CSR, major frameworks of CSR, sustainability (environmental) issues, and hospitality cases and applications. The course will provide an opportunity to students for analyze the CSR programs of major hospitality companies by applying the concepts and practices of CSR discussed in the course.

**Enforced Prerequisite at Enrollment:** a grade of C or better in HM 201

HM 395D: Off Campus Internship - PSHS

3 Credits/Maximum of 12

The Off-campus internship course provides experience that will prepare students for management-level employment. This is designed to provide students with real job experience that complements their classroom learning and affords them the opportunity to apply their knowledge in real-world settings. This will be accomplished by participating in rotation as an employee, student supervisor and Manager in Training in the daily operations in their department. The students professional work experience offers knowledge about the hospitality industry, the chance to learn new skills, and a means to assess strengths and areas for development. Students will receive direct hands-on training in a functional area working in the hospitality industry for 15-20 hours per week for 15 weeks during Fall and Spring semesters, and 30-40 hours per week during the summer.

**Enforced Prerequisites at Enrollment:** Approval by course instructor.

HM 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HM 407: The Sustainable Fork: Food Systems Decisions for Away-From-Home Eating

3 Credits

The course will incorporate economic and managerial dimensions to the discussion of food decisions in foodservice away-from-home eating contexts, particularly emphasizing the behavioral aspect of decisions - how individuals (consumers, providers, managers) make choices in the food system, and what might be the consequences of these choices. The course will use evidence from multiple farm-to-fork perspectives to allow students to analyze food systems problems and solutions. It will also require students to engage directly with the local food service system through course projects and tours. The major topics of discussion will be organized under each of the value chain components of the farm-to-fork continuum: production, distribution, purchasing, preparation, and consumption. Specific topics under each of these value chain components will include: nutrition, food safety, food waste, sustainable practices, social justice, consumer utility, economic profits, ethics, government policy, and decision-making. In particular, the course will be motivated by economic theories such as: agency relationship, information asymmetry, transaction cost economics, and behavioral economics topics such as self-rationing, and time discounting.

**Enforced Prerequisites at Enrollment:** A grade of C or better in HM 201 or AGBM 170 or AGBM 170Z Cross-listed with: FDSYS 407

HM 411: Beverage Management and Wine Selection

3 Credits

Management issues in beverage service and products. Students taste wines, brews, and distilled spirits.

**Enforced Prerequisites at Enrollment:** students must be at least 21 years old

HM 413: New Product Development for Commercial Foodservice

3 Credits

This course introduces students to a new product development process that requires coordination, communication, and integration throughout the organization.

**Enforced Prerequisites at Enrollment:** A grade of C or better in HM 329

HM 430: Advanced Food Production and Service Management

3 Credits

Simulation and application of technical, conceptual, interpersonal skills. Emphasis on group dynamics; improvement in managerial skills; management team functions. HM 430 Advanced Food Production and Service Management (3) This course is designed to give students an opportunity to gain experience in the wide range of skills and techniques that are normally associated with the duties of a hospitality manager. The skills and techniques that will be emphasized include, but are not limited to, duties involved in the planning, execution and evaluation of full-service, theme oriented ala carte dining. Students are expected to form a marketable theme and then develop, produce and evaluate an authentic dining experience. A successful dining experience is contingent upon both guest satisfaction and the achievement of financial goals. Main topics typically include: * Research, describe and produce an authentic restaurant environment from a selected theme * Demonstration of technical responsibilities involved in the development, production and evaluation of a wide range of food service systems including: sales, menu planning, recipe development and evaluation, pricing, purchasing, facilities management, personnel management and financial management * Operational needs and potential problems in a food and beverage operation during production and service * Timely and effective managerial problem identification and decision-making abilities * Interpersonal and teamwork skills both within a management team and with classmates as employees * Interaction with guests and evaluation of guests' dining experiences The course is a capstone management class in the foods sequence and is required of all Hospitality Management majors. Students must first complete the introductory food production course.

**Enforced Prerequisite at Enrollment:** A grade of C or better in HM 330
Enforced Prerequisites at Enrollment:

- A grade of C or better in HM 201 and HM 228 and HM 329
- A grade of C or better in HM 365
- A grade of C or better in HM 201

HM 432: Contemporary Issues in Restaurant Management

3 Credits

A focus on special topics and current events in the restaurant industry. HM 432 Contemporary Issues in Restaurant Management (3) The purpose of this course is to focus on contemporary issues and current events in the restaurant and food service management. The course will attempt to keep the students as updated as possible regarding the industry by covering these topics and including a discussion of current events from headline news services and other electronic references.

Students gain knowledge that is applicable specifically to the restaurant and foodservice industry. This course explores the global food and drink market in today’s challenging climate with analysis of trends and conditions expected to influence sales value and volume growth over the next five years. Discussion will include the impact economic shifts have on the restaurant and food service industry and the subsequent influence on consumer purchasing habits and food and drink sales over several years. This course considers food and drink New Product Development (NPD) and other vital branding, marketing, and sales strategies in the context of the following challenges, issues and trends expected to influence restaurants and food service management over the years.

Enforced Prerequisites at Enrollment:

- A grade of C or better in HM 201
- A grade of C or better in HM 365
- A grade of C or better in HM 201

HM 435: Financial Management in Hospitality Operations

3 Credits

HM 435 is an introductory financial management course for the hospitality management major. The course will teach students fundamental knowledge of financial management concepts. This course will introduce a wide range of essential concepts that students can utilize to improve their decision-making and value creation abilities.

The course introduces financial management concepts with a focus on practical application, both in professional and personal lives. Students’ ability to learn these concepts will be tested through group and individual assignments. This course focuses on conceptual and analytical knowledge and skills. Practical knowledge will also be reinforced through in-class discussions, and periodic readings that focus on current issues in finance and hospitality.

Enforced Prerequisites at Enrollment:

- ECON 102 and a grade of C or better in HM 336
- ECON 102 and a grade of C or better in HM 336
- ECON 102 and a grade of C or better in HM 336

HM 442: Hospitality Marketing

3 Credits

Understanding the customer is the key to a successful hospitality business. This course is an overview of the principles of services marketing applied to a specific industry. Particular focus will be in understanding the importance of service quality and customer requirements, aligning service design and standards, delivering and performing service, managing service promises and understanding the impact of marketing strategies on the company’s bottom-line.

Enforced Prerequisite at Enrollment:

- A grade of C or better required in HM 201
- A grade of C or better required in HM 201
- A grade of C or better required in HM 201

HM 443: Sales Planning and Advertising for Hospitality Operations

3 Credits

Elements of sales management, advertising, promotion, and public relations as applied to hospitality organizations. HM 443 Sales Planning and Advertising for Hospitality Operations (3) The hospitality industry is entering an era in which operational and product parity between organizations and their properties is increasingly likely. This is so because of their shared access to technology, design and training devices. Consequently, it becomes evident that increases in sales will be reliant on the competitive advantages that professionals achieve in marketing strategies, sales management, and especially in marketing communications (MARCOM) tactics and execution. This course exposes students to a wide range of hospitality marketing communications issues. Students gather information from electronic media, trade and travel media, and consumer media. Students explore hospitality MARCOM issues through semester-long individual projects. Main topics typically include: * Marketing versus selling strategies * Industry trends that affect advertising and sales especially Internet activities * Types of advertising media * Print advertising principles * Broadcast advertising principles * Foundations of direct marketing * Elementals of public relations * Travel agency relations * Personal sales

This is an elective course. Students must first take the hospitality marketing course in Hospitality Management.

Enforced Prerequisites at Enrollment:

- A grade of C or better in HM 442
- A grade of C or better in HM 442

HM 466: Human Resource Management in the Hospitality Industry

3 Credits

Recruitment, selection, training, performance appraisal, and compensation of hospitality human resources in today’s culturally diverse work force.

Enforced Prerequisites at Enrollment:

- A grade of C or better required in HM 201 and HM 365
- United States Cultures (US)
- A grade of C or better required in HM 201 and HM 365

HM 471: New Trends and System Selection in Hospitality Information Technology

3 Credits

This course introduces the student to new information technology in the hospitality industry and to the system selection process. HM 471 New Trends and System Selection in Hospitality Information Technology (3) The purpose of this course is to focus on new IT trends and system selection in the hospitality industry. New trends are topics that have become important or prevalent in the industry and are generally not covered in other courses. Examples include Software as a Service delivery of property management systems, enterprise restaurant management reporting, Web 2.0, smart phone applications, Radio Frequency Identification (RFID), etc. The course will attempt to keep the students as updated as possible regarding the industry trends by covering these topics and including a discussion of current events from industry partners, headline news services, and other electronic references. Students gain knowledge that is applicable specifically to the hospitality industry.

Enforced Prerequisites at Enrollment:

- A grade of C or better in HM 271
- A grade of C or better in HM 271
HM 480: Advanced Hotel Management

3 Credits

Advanced hotel operations, internal control systems, and service philosophy. Integrates management, departmental operations, law, technology applications, marketing and managerial accounting.

Enforced Prerequisites at Enrollment: HM 380 and a grade of C or better in HM 336

HM 481: Advanced Topics in Hotel Management

3 Credits

This course will focus on advanced topics in hotel management that are of critical importance in a dynamic and ever-changing operating environment. In particular, this course will address the economy, hotel ownership relationships, brand development, other industries in the value chain, product and service trends, and legislative issues. Knowledge of the economy and its relationship to the hotel industry is presented with discussions on stock markets, economic indicators, capital structure, and hotel economic indicators. Hotel ownership relationships are becoming more complicated, which will be addressed with discussions on asset management, owner objectives, management contracts, and franchise agreements. The introduction of new brands is a key component to corporate strategy, and the nature of strategic brand development will be covered. Other industries in the value chain have a significant impact on the hotel industry, and this course will focus on the evolution of alternative booking channels and lodging options. Product and service trends will also be a course focus, including healthy hotel initiatives, environmental initiatives, design trends, amenity trends, and technological advances. In addition, legal issues impacting the hotel industry will be discussed, along with the role of the American Hotel and Lodging Association and its lobbying efforts on specific legislation.

Enforced Prerequisite at Enrollment: HM 380

HM 482: Hospitality Real Estate

3 Credits

Ultimately, hospitality enterprises are location-based businesses requiring the deployment of real estate. To understand this important concept, hospitality students need to understand real estate in a hospitality industry environment. Students in HM 482 complete projects including feasibility studies for proposed hotels where they evaluate the competition, project hotel supply by future year, including evaluating and quantifying future supply additions. Then, students project hotel demand by future year by market segment, including estimating growth and any induced demand, and they calculate fair share by future year for proposed hotels. Students estimate penetration ratios by future year by market segment for proposed hotels, until stabilization, calculate occupancy by future year for proposed hotels, until stabilization, and estimate Average Daily Rate (ADR) by future year for proposed hotels, including estimating inflation. Students develop detailed financial projections by future year for proposed hotels, estimate market value for proposed hotels by applying the Income Approach, Cost Approach, and Sales Comparison Approach, conduct a Reconciliation to conclude a single, final Market Value Estimate, and compare the estimated market value of proposed hotels to the estimated development cost to conclude feasibility.

Enforced Prerequisites at Enrollment: A grade of C or better in HM 201

Concurrent Courses: HM 336

HM 483: Revenue Management

3 Credits

Students learn how to effectively implement revenue management strategies and techniques in the hospitality industry.

Enforced Prerequisites at Enrollment: a grade of C or better in HM 350

HM 484: Hospitality Entrepreneurship and Innovation

3 Credits

This course examines Entrepreneurship, Intrapreneurship and Innovation in the Hospitality Industry. The course provides a foundation of how ideas are generated, implemented, and taken to market. The course examines the characteristics of the entrepreneur and the process from idea generations, building a business model, preparing competitive analysis, completing a feasibility study, reviewing intellectual property, developing a business plan, seeking funding, and presentation to investors. The course is oriented to the student who would like to start a business or explore innovation within an existing organization.

Enforced Prerequisites at Enrollment: ACCTG 211 or HM 335

HM 485: Advanced Meeting and Event Management

3 Credits

Meeting and event planning is an important and viable professional career option within the hospitality industry. Each event contains all the aspects of any business venture: stakeholder analysis, operations plan, marketing plan, and financial plan. Accordingly, the execution of an event requires effective communication, teamwork, motivational, and analytical skills. Therefore, students seeking a career in event management need to possess these fundamental business skills. In this advanced, hands-on course, students will plan and execute an event, building on event management content from HM 384: Introduction to Meeting and Event Planning. Students will be involved in all major aspects of planning and executing events, including contract negotiation, budgeting, risk management, promotion, menu planning, site selection, on-site management, sustainability, inclusivity, volunteer management, and evaluation.

Enforced Prerequisite at Enrollment: HM 380

HM 486: Casino Marketing

3 Credits

The primary objective of this course is to build upon the fundamental understanding of the gaming industry that was introduced in the introductory course. The advanced students will gain an understanding of the various promotional programs currently used by the commercial gaming industry. Students will build this knowledge by working in teams to build competence and present specific programs to their classmates. In addition, students will continue to learn to evaluate marketing programs based on their incremental contributions to profits and thereby understand that some marketing approaches cannot be financially justified. Finally, the students will continue to build competence in the fundamentals of casino mathematics.

Enforced Prerequisite at Enrollment: HM 386
HM 488: Hospitality Asset Management
3 Credits

Asset management is a growing and dynamic discipline in the hospitality industry. Asset managers are integral to the relationships between owners, managers, franchisors, franchisees, and brands. Today’s owners expect asset management to function as the owner’s representative in optimizing the value and protecting the asset. This course introduces students to asset management (AM) and the role of the asset manager in global hospitality operations. The course is taught from a hospitality perspective and focuses on how asset managers usually work with hospitality asset owners and third-party providers to enhance and optimize the value of hospitality assets. The multidisciplinary content includes a variety of perspectives on asset manager helping owners and third-party operators make investment decisions, enhance asset value, review and assess contractual agreements, and be aware of ongoing global and local trends that could eventually affect the value of hospitality assets such as hotels and restaurants.

**Enforced Prerequisites at Enrollment:** ACCTG 211 or HM 335

HM 490: Strategic Hospitality Management
3 Credits

The purpose of this capstone course is to integrate previous course work to enhance students’ analytical and critical thinking skills, managerial decision making skills, and an awareness of emerging trends in the hospitality industry. In particular, this course will integrate content in the areas of hospitality marketing, human resource management, organizational behavior, finance, accounting, and hospitality operations. The course offers a blend of theory and practical application of models of competitive strategy. The central questions that drive the course are: ‘How do hospitality companies make strategic decisions, and how does strategy enhance the effectiveness of hospitality enterprises?’ During the first half of the semester, the course will focus on the model of strategy formulation, from developing company vision and mission and setting objectives, through conducting an environmental scan, SWOT analysis, strategic analysis, and strategic choice. During the second half of the course, the focus will shift to corporate social responsibility, ethics, international strategic decision making, global hospitality management, and emerging trends in the industry.

**Enforced Prerequisites at Enrollment:** HM 442 and a grade of C or better in HM 336 and HM 365

HM 490W: Strategic Hospitality Management
3 Credits

This capstone writing-intensive class integrates content from throughout the previous curriculum, focusing on strategic application to current industry issues. HM 490W Strategic Hospitality Management (3) This capstone course integrates previous courses in the curriculum and introduces students to new strategic management concepts. This course adopts a macro perspective by focusing on the total hospitality enterprise and the external competitive environment in which hospitality firms operate. The goal of the course is to develop students’ analytical skills to formulate, implement, and evaluate business strategies. Using a case-based approach, the course emphasizes critical thinking and evidence-based decision making.

**Enforced Prerequisites at Enrollment:** A grade of C or better in HM 336 and HM 365 and HM 442

HM 492: Advanced Professional Seminar in Hospitality Management
1 Credit

Course prepares senior HM students to assume leadership positions in the hospitality industry. (Focus on careers, leadership, ethics, lifelong learning).

**Enforced Prerequisites at Enrollment:** 1000 hours of work experience in the hotel, restaurant and institutional management industry; Concurrent: HM 430 and HM 466 and HM 490W

HM 494H: Senior Honors Thesis
1-6 Credits/Maximum of 6

Independent study related to a student’s interests directed by a faculty supervisor and culminating in the production of a thesis.

**Enforced Prerequisites at Enrollment:** STAT 200 and a grade of C or better in HM 201 Honors

HM 495A: Penn State Hospitality Services Hotel Internship
3 Credits/Maximum of 3

HM 495A Penn State Hospitality Services Hotel Internship (3) Students will obtain hands-on work experience through employment in one or more departments with Penn State Hospitality Services. Experience may include front desk, housekeeping, maintenance, sales, accounting, food and beverage, culinary, banquets, or reservations. Students will work 15-20 hours per week throughout the semester and attend weekly classroom sessions.

**Enforced Prerequisites at Enrollment:** Employment offer from Penn State Hospitality Services, approval of internship assignment by program, and a minimum overall grade point average of 2.50.

HM 495B Penn State Hospitality Services Executive Internship
3 Credits

HM 495B Penn State Hospitality Services Executive Internship (3) Students will participate in project-based internship under the guidance of a department head with Penn State Hospitality Services. Students will work approximately 15-20 hours per week over the course of a semester. The goal of this internship is to provide students with a variety of work and project experiences to develop their managerial competencies. These assignments will vary from student to student, based on his or her interests and professional development needs.

**Enforced Prerequisites at Enrollment:** Selection by Penn State Hospitality Services department head, approval of internship assignment by instructor, minimum overall grade point average of 2.50, and HM 495A
in terms of the unique human capacities for reflection, resilience and transformation. Second, students will learn about four major domains and related dimensions that characterize flourishing, including the domains of awareness (e.g., focus, emotion, mindfulness), connection to others (e.g., interdependence, compassion, diversity), wisdom (identity, aesthetics, values) and integration of one's values and intentions in everyday living (e.g., courage, performance). Together, in a supportive and highly experiential learning environment, students will be encouraged to envision, articulate and pursue their own unique path to flourishing during their time in college and beyond based on their intellectual and experiential learning in the course. By the end of this course, students are able to: (I) Demonstrate foundational knowledge, including the ability to analyze and describe the relevant concepts and theories in multiple intellectual fields on the nature and cultivation of human flourishing, and the ability to recognize the possibilities, value, and relevance of cultivating personal flourishing in their own lives in relation to flourishing in social relationships, communities, and institutions; (II) Experience deep engagement in terms of being familiar with the basic personal experiences relating to individual qualities of human flourishing in order to make personal sense of them, and master individual practices for assessing and developing them; and (III) Understand real-world applications in terms of acquiring skills, sensibilities, and perspectives relating to individual qualities of human flourishing, which they are able to apply in the diverse contexts of their lives.

Enforced Prerequisites at Enrollment: Employment offer from Penn State Housing and Food Services, approval of internship assignment by instructor, and a minimum overall grade point average of 2.50.

HM 496: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

HM 497: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HM 498: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HM 499: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Human Development and Family Studies (HDFS)

HDFS 108N: Art and Science of Human Flourishing
3 Credits

This course offers students the opportunity to explore human flourishing - defined as a life of deep meaning, fulfillment and service to others. Students will be taught about flourishing through the lens of science, philosophy, and their own experience. Through exposure to diverse scientific theories and research on the skills associated with flourishing, to philosophical and religious writings on human happiness and wellbeing, and to various reflective exercises and contemplative practices (e.g., mindfulness and compassion meditation), students will develop conceptual knowledge, experiential insight, and practical skills related to flourishing. The course begins by introducing a conceptual framework that defines flourishing in terms of foundations, domains and dimensions. First, students will learn about the foundations of flourishing in terms of the unique human capacities for reflection, resilience and
3 Credits

Introduction to psychosocial and family development at all stages of the individual and family life cycle.

Bachelor of Arts: Social and Behavioral Sciences
First-Year Seminar
General Education: Social and Behavioral Scien (GS)

HDFS 175N: Introduction to Youth Development and Arts-based Social Justice

3 Credits

Youth Development and Arts-based Social Justice is an inter-domain course (GA/GS) intended to help students develop a critical understanding of the ways that sociopolitical factors influence youth development. The course will examine youth development as an indicator of broader community development and explore the inter-dependencies between the two by drawing both from the interdisciplinary fields of youth development and arts-based social justice. This course will assess the proposition that goals of social equity at the community, metropolitan, or regional scale cannot be achieved unless disparities in youth development are also addressed. Students will learn to read, interpret, discuss, and integrate information from the arts and social sciences. We will primarily, but not exclusively, focus on youth-led organizing and social justice movements as sites of youth development wherein young people have utilized the arts to mobilize and transform public policy, determine the destiny of their communities and challenge injustice (e.g., mass incarceration, educational inequality, and forced relocation). We will explore key concepts, theories, models, and examples of youth development and youth organizing from the perspectives of youth and adults who are actively engaged in building progressive movements for social justice through the arts. Throughout this exploration, we will pay close attention to issues of identity, culture, community, and politics. Students in this course will be introduced to key ideas and dispositions for working with diverse youth populations through a social justice lens. Students will engage in critical thinking based on their own identities, values, experiences and perspectives while also practicing deliberate and strategic open-mindedness rooted in the awareness of the personal and political limitations. Students will reflect upon their own developmental experiences and the contexts in which these played out in their weekly sketchbook entries and the two papers. The course will consider the mutual impact that arts and social movements have on each other. This will be assessed through classroom dialogue, students’ sketchbooks and the integrative creative action project. The historical and theoretical materials will be contextualized by guest lectures, discussions, and performances involving visiting scholars, artists and activists.

Enforced Prerequisite at Enrollment: Recommended Preparations:
ENGL 15 and CAS 100
General Education: Arts (GA)
General Education: Social and Behavioral Scien (GS)

3 Credits

HDFS 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HDFS 197C: Special Topics - InterDomain

1-9 Credits/Maximum of 9

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GA/GS GenEd course.

General Education: Arts (GA)
General Education: Social and Behavioral Scien (GS)
General Education - Integrative: Interdomain

HDFS 210Z: Ethnicity, Health and Aging

3 Credits

The study of health and aging among persons from diverse race populations is not only the study of how people of different racial groups age, but also the contexts in which these populations function physically, psychologically, and socially. This course will allow students to develop a better understanding of the aging process across racial/ethnic populations and how differences in adult and aging development can be affected by social structures. Furthermore, the course is designed to encourage students to transfer learned material into modifying existing or developing new practical solutions to reduce aging and health disparities. This course will cover multiple areas, such as: (1) Overview of the concepts regarding race, ethnicity, and culture; (2) Aging demographics; (3) Research methods in aging and racially diverse populations; (4) Health Disparities (e.g., physical and mental health); (5) Family, work, and retirement; (6) Aging in neighborhoods; (7) Policy. In-class lectures will be provided to cover the material. Students will be asked to complete assignments, exams, and a final project. HDFS 210Z is a linked course, students may choose to link to either SOC 210Z or SOC 211Z

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

HDFS 216: Personal and Interpersonal Skills

3 Credits

Conceptions of lifespan personal and interpersonal skill enhancement.
HDFS 229: Infant and Child Development

3 Credits

Theory, research, and methods of social/behavioral/biological sciences related to developmental processes and intervention during infancy and childhood. HD FS 229 Infant and Child Development (3) (GS)(BA) This course meets the Bachelor of Arts degree requirements. This course introduces students to the study of children from the prenatal period to (not including) adolescence. Students will become familiar with the most prominent theoretical ideas about child development. The latest research on prenatal development, infancy, early and middle childhood will inform the discussions, and students will become familiar with key studies. The major domains of children's functioning covered include social interactions and emotional development, cognitive changes and acquisition of language, physiological growth in infancy and biological changes that underlie the transition out of childhood into adolescence. A key feature of this course is how processes in these different domains interact to influence children's overall adaptation. Finally, informed by a life course developmental framework, this course will place these developmental processes in context. Students will become familiar with the theoretical and empirical literature that locates children's growth and development in the context of families and family change, peer groups, neighborhoods and communities, and the larger cultural context within which they are embedded. Students will be evaluated across several performance areas which may include tests, writing assignments, group projects, and participation in class discussions and panels. This course will be offered five times a year at University Park and varying amounts at Altoona and the Commonwealth Campuses. Enrollments vary by semester and location: Fall/Spring: 15-50 students at the Commonwealth and Altoona locations; 100-200 at University Park. Summer: 10-20 at the Commonwealth and Altoona locations; 20-30 at University Park.

General Education: Social and Behavioral Scien (GS)
Honors

HDFS 230: Overview of Curricular Practices in Early Childhood Care and Education

3 Credits

Curricular practices in programs for infants, toddlers and preschoolers. Focus on developmentally appropriate practice, emergent curriculum and home/child care links. HD FS 230 Overview of Curricular Practices in Early Childhood Care and Education (3) This course, intended for current or future providers of early childhood care and education, examines curricular practices in programs for young children. It is required for the proposed Early Childhood Care and Education option to the associate degree in Human Development and Family Studies. The course addresses current practices in early childhood care and education programs for infants, toddlers, and preschoolers. After a brief examination of the history of early childhood care and education, this course focuses on the use of developmentally appropriate activities and strategies to maximize children's positive growth and development. Each of the traditional early childhood curricular areas (involving physical, social, emotional, cognitive development) is considered, as is the importance of the connection between families and early care and education settings. Reading and discussion in each curricular area stresses diversity issues and inclusion of children with special needs in groups with normally developing children. There is an emphasis on applications of the project approach and emergent curriculum as appropriate for use with infants, toddlers and preschoolers. Students show mastery of the course material through tests over each topic of discussion, reports on outside reading related to current issues in early childhood care and education, individual and small group presentations about a specific curricular issues, and use of a reflective journal. The course will be offered once each academic year, with an enrollment of 15-25 students.

Enforced Prerequisite at Enrollment: HDFS 229

HDFS 231: Guidance in Early Childhood Care and Education

3 Credits

Positive guidance methods for infants, toddlers and preschoolers, leading to self-control and social capability. Includes focus on home/childcare links. HD FS 231 Guidance in Early Childhood Care and Education (3) This course, intended for current or future providers of early childhood care and education, examines guidance methods for use with young children. It is required for the proposed Early Childhood Care and Education option to the associate degree in Human Development and Family Studies. The course emphasizes the use of guidance techniques that help children grow in independence, responsibility, self-control, and ability to function as group members. It addresses organization and guidance methods that foster the child's responsibility, independence, positive social interactions and emotional self-control. While the course covers various types of guidance, it emphasizes responding to children with respect and acceptance, using positive discipline. Since guidance is an area in which families and teachers frequently must confer, this course also deals with the use of effective parent-teacher communication skills. It requires weekly experience with young children. Each student will produce a portfolio demonstrating understanding of guidance techniques and their theoretical backgrounds. In addition, portfolios will demonstrate evidence of competence in analyzing the early childhood care and education environment in terms of its effect on young children's behavior, as well as competence in solving environmental problems that contribute to guidance issues. Portfolios will also demonstrate evidence of competence in communicating with parents and families about guidance issues. Students will reflect, in writing, on their own use of developmentally appropriate guidance techniques in their work with young children. The course will be offered once each academic year, with an enrollment of 15-25 students.

Enforced Prerequisite at Enrollment: HDFS 229

HDFS 232: Creativity and Play in Early Childhood Care and Education

3 Credits

Planning for play, creativity and exploration in programs for infants, toddlers and preschoolers. Includes focus on home/childcare links. HD FS 232 Creativity and Play in Early Childhood Care and Education (3) This course, intended for current or future providers of early childhood care and education, examines the development of play and creativity in young children. It is required for the proposed Early Childhood Care and Education option to the associate degree in Human Development and Family Studies.
Education option to the associate degree in Human Development and Family Studies. The course addresses the potential of play, creativity, and exploration in the optimal development of a child. Content includes the development of play, creativity, and aesthetics. The course emphasizes adult-child interaction styles and activities that encourage, enhance and expand play, exploration and creativity in infants, toddlers, and preschoolers throughout the daily care and education routine. There is an emphasis on effective communication with families regarding the benefits of play and open-ended activities. It requires weekly experience with young children. Each student will develop a portfolio that demonstrates understanding of the development of play, exploration and creativity in the early years, as well as competence in planning for and enhancing that development. The portfolio will also show evidence of competence in communicating with parents and families. In addition to the portfolio, the student will develop an activity card file containing ideas for developmentally appropriate play and creative activities for infants, toddlers, and preschoolers. Each student will participate in individual and group presentations related to course topics, and will take tests covering reading and other class material. The course will be offered once each academic year, with an enrollment of 15-25 students.

**Enforced Prerequisite at Enrollment:** HDFS 229

HDFS 233: Emergent Language and Literacy: Development and Practice in Early Childhood Care and Educat

3 Credits

Fostering development of language and literacy in infants, toddlers and preschoolers. Includes children’s literature and focus on home/daycare links. HD FS 233 Emergent Language and Literacy: Development and Practice in Early Childhood Care and Education (3) This course, intended for current or future providers of early childhood care and education, examines the emergence of language and literacy. It is required for the proposed Early Childhood Care and Education option to the associate degree in Human Development and Family Studies. The course emphasizes why and how to foster continuous development from first sound through recognizable speech; from initial symbol recognition through reading; from making the first mark through writing. Content also includes choosing literature appropriate for use with infants and young children and methods of integrating literature throughout the daily care and education routine. There is a focus on developing activities centered on language and literature, and an emphasis on effective communication with parents and families. This course requires weekly experience with young children. Students will produce a portfolio demonstrating understanding of the development of mathematics and science reasoning in the very early years and competence in planning developmentally appropriate mathematics, science, and logical thinking activities for infants and young children. Portfolios will also demonstrate evidence of competence in communicating to parents and families the importance of exploration and discovery in facilitating young children’s mathematics and science knowledge. Students will reflect, in writing, on their own growth in knowledge and competence in facilitating young children’s thinking. In addition to the portfolio, students will develop files of mathematics and science reasoning activities appropriate for use with infants and young children. They will also take tests related to reading and materials covered in class. The course will be offered once each academic year, with an enrollment of 15-25 students.

**Enforced Prerequisite at Enrollment:** HDFS 229

HDFS 234: Mathematics and Science Reasoning: Development and Practice in Early Childhood Care and Educat

3 Credits

Fostering development of mathematical reasoning and scientific inquiry in infants, toddlers and preschoolers. Includes project approach and focus on home/daycare links. HD FS 234 Mathematics and Science Reasoning: Development and Practice in Early Childhood Care and Education (3) This course, intended for current and future providers of early childhood care and education, examines the emergence of mathematics and science reasoning. It is required for the proposed Early Childhood Care and Education option to the associate degree in Human Development and Family Studies. The course addresses processes involved in mathematical reasoning and scientific inquiry. It emphasizes the development of activities, questioning skills, and observation and documentation techniques that extend infants’ and young children’s exploration, discovery, and thinking patterns. Content also includes methods of integrating mathematics, science and reasoning activities throughout the daily child care and education routine. Participation in the project approach provides students with an experiential understanding of constructing knowledge. There is also an emphasis on effective communication with parents and families. This course requires weekly experience with young children. Students will produce a portfolio demonstrating understanding of the development of mathematics and science reasoning in the very early years and competence in planning developmentally appropriate mathematics, science, and logical thinking activities for infants and young children. Portfolios will also demonstrate evidence of competence in communicating to parents and families the importance of exploration and discovery in facilitating young children’s mathematics and science knowledge. Students will reflect, in writing, on their own growth in knowledge and competence in facilitating young children’s thinking. In addition to the portfolio, students will develop files of mathematics and science reasoning activities appropriate for use with infants and young children. They will also take tests related to reading and materials covered in class. The course will be offered once each academic year, with an enrollment of 15-25 students.

**Enforced Prerequisite at Enrollment:** HDFS 229

HDFS 239: Adolescent Development

3 Credits

Social, behavioral, and biological development and intervention throughout adolescence. HD FS 239 Adolescent Development (3) (GS) (BA) This course meets the Bachelor of Arts degree requirements. Only in early infancy do minds, bodies, and abilities change as radically as they do during the teenage years. HD FS 239 is an introductory course that explores the developmental processes that shape our lives between puberty and the end of college. Although each life unfolds in its own unique pattern, we will explore the ways biological, psychological, and sociological influences systematically combine to shape its course. This class will help to develop an understanding of the concepts, methods, and research findings central to the study of adolescent development.

Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)
HDFS 249N: Adult Development and Aging

3 Credits

This course provides a basic introduction to concepts, theoretical perspectives, and key empirical studies on adult development and aging. Students will become familiar with key developmental trends and challenges that must be addressed to achieve healthy growth and development throughout adulthood and late life. The course addresses changes in physical health, cognition, and psychosocial functioning (including mental health, social roles and relationships, and transitions in work and retirement); and the implications of these changes for issues such as risk of disability, dementia, caregiving, and end-of-life decisions. For each topic, students will become familiar with major theoretical frameworks, approaches to empirical research, and findings from empirical studies. Key features of this course are its attention to: how biological, cognitive and social changes combine to influence overall adaptation and throughout the aging process; the ways in which adult development and aging occurs in the context of families, social relationships, neighborhoods and communities, and the larger cultural context; and how theories and empirical findings can be applied to promote healthy adult development and aging. Students pursuing the HDFS major option must complete HDFS 129 plus two of the three 200-level developmental courses (HDFS 229, HDFS 239, HDFS 249N). This course may count toward the minor in HDFS. Students who are not pursuing a major in Human Development and Family Studies can apply credits from this course towards the General Education Integrative Studies requirement: as an Inter-domain Course, the course puts approximately equal emphasis on learning objectives for Social and Behavioral Sciences (GS) and for Health & Wellness (GHW) knowledge domains.

GenEd Learning Objective: Key Literacies

HDFS 250: Sexual Identity over the Life Span

3 Credits

Concepts of affectional and sexual orientation over life span, with emphasis on lesbian and gay male personal, family, and community adaptation. HD FS (WMNST) 250 Sexual Identity over the Life Span (3) (US) This course reviews concepts of sexual identity as informed by a human development perspective. Concepts of sexual orientation are discussed in the context of a review of lesbian, gay male, and bisexual lives. Developmental processes of lesbian and gay life are detailed: personal change from the teenage years through adulthood, changes in family and relationship patterns, and impact of communities, laws, and culture. These processes are contrasted to the developmental processes of women and men who identify themselves as heterosexual. The complex effect of gender, race, ethnicity, class status, and historical time on sexual orientation and its expression has generated ongoing controversies in scholarship as well as in public discourse. The course will be an introduction to these controversies as informed by human development research.

Enforced Prerequisite at Enrollment: 3 credits in ANTH or BBH or CAS or COMM or CRIM or CRIMJ or GEOG or HDFS or HIST or PSYCH or SOC or WMNST

HDFS 250H: Sexual Identity Over The Lifespan

3 Credits

CONCEPTS OF AFFECTIONAL AND SEXUAL ORIENTATION OVER LIFESPAN, WITH EMPHASIS ON LESBIAN AND GAY MALE PERSONAL, FAMILY, AND COMMUNITY ADAPTATION.

Cross-Listed
Honors

HDFS 254N: Reading Our Lives: Understanding Diversity and Human Development through Memoirs

3 Credits

Students will explore the way people and their environments interact to influence human development through the integration of memoirs and other personal narratives, humanist themes and methods of inquiry, and social science theory and research. The personal narratives will expose students to the diversity of human experience including differences in gender, race, socioeconomic status, cultural and historical contexts. To frame and inform discussions of each memoir, students will examine relevant social science theories and research. The social science material will include key developmental frameworks such as lifespan development and ecological systems theory, and micro- and macro-level contextual factors influencing development, such as interpersonal relationships, cultural norms, and structural constraints. Students will also examine core humanist themes relevant to each memoir, such as values, cultural relativism vs. universalism, narratives and objective facts, structure and agency. Students will learn to read, interpret, and integrate information from the humanities and social sciences. They will learn to critically reflect on their own experiences, perceptions, and values, while developing an understanding of other people's experiences, perceptions, and values. Students will also learn to engage in compassionate, informed, and knowledge-generating discussions to understand the complexity of human experiences.

United States Cultures (US)

General Education - Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

HDFS 258: Introduction to Child Maltreatment and Advocacy Studies

3 Credits

Introduction to the multidisciplinary field of child maltreatment. CMAS (HD FS) 258 Introduction to Child Maltreatment and Advocacy Studies (3) This course will focus on the identification, investigation, service, advocacy, prosecution, and prevention of child maltreatment as well as the treatment of adverse health outcomes for children who have been maltreated. Specific topics include the causes, correlates, and consequences of child maltreatment, best practices for reporting and investigating an allegation of child maltreatment, evidence-based prevention and intervention programs, the Child Welfare System, and relevant legal issues (e.g., termination of parental rights, children's testimony in court, etc.). By definition, this course will detail issues
related to the abuse and neglect of children. This material can be difficult to hear, view, and discuss. This course is a required course, and a prerequisite for all advanced courses, for a Minor in Child Maltreatment and Advocacy Studies.

Cross-listed with: CMAS 258, SOC 258

HDFS 287W: Intercultural Community-Building

3 Credits

An experiential introduction to negotiating differences in small groups, families, institutions, and communities. HD FS 287W Intercultural Community-Building (3) (GS;US) This course provides students an experiential introduction to how individuals and families both affect and are affected by the various cultural/community contexts in which they develop, including schools, places of work, and youth and community programs. Students will identify and explore their own unique and shared assumptions, and the relationships between those assumptions and life histories and experiences. They will become aware of the dynamics of how communities are formed and function by forming a community themselves, and through involvement in a local community group or agency. Group discussions and written reflections will link their personal experiences to theory and research presented in class and readings on such topics as developing systems theories, cultural communication theories, and decision-making. The goals of the course are to increase students’ understanding of the relations between values, power relations, and the various processes of social change, and encourage the development of communication skills and citizenship. Special emphasis will be placed on developing relationships within culturally and ethnically diverse groups. Because it is designated as a writing intensive course, particular attention will be given to the development of written communication skills. Students will be evaluated on the basis on their performance in several areas, which may include examinations and quizzes, several writing assignments, and participation in class discussions and simulations. The course may be delivered at certain Commonwealth College campuses and Altoona College. Depending on location, the course may be offered during the fall, spring and/or summer sessions, with anticipated class enrollments of 12-20 students.

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HDFS 300: Honors Seminar: Concepts and Issues in Human Development and Family Studies

3 Credits

Introduces core concepts and issues in the study of Human Development and Family Studies.

Enforced Prerequisite at Enrollment: HDFS 129 or permission of human development and family studies honors adviser

Honors

HDFS 301: Values and Ethics in Health and Human Development Professions

3 Credits

Examines bases for choices among values in personal and professional relations in human development processes and supporting services.
HDFS 302A: Leadership and Technology Skills for Human Services Professionals A
3 Credits

Development of skills essential for contemporary human services professionals, including critical thinking, problem solving, electronic communications, and information handling.

**Enforced Prerequisite at Enrollment:** HDFS 129

HDFS 310M: Seminar in Honors--Research Methods
4 Credits

Overview of research and methods issues tailored around development of honors thesis proposals. HDFS 310 Seminar in Honors--Research Methods is designed to cover all of the elements in designing a research project. Through a series of written projects, students study the scientific method, research question development, and tools and techniques for data gathering and analysis. The course covers how to take a theory about human development and family studies and develop testable hypotheses/research questions. Students learn the basic skills needed for managing and understanding data; analyzing data; and presenting data. Then, students use real data to practice data management, data analysis, and reporting on data in both oral and written forms.

**Enforced Prerequisite at Enrollment:** Permission of Human Development and Family Studies honors adviser
Honors
Writing Across the Curriculum

HDFS 311: Human Development and Family Studies Interventions
3 Credits

Survey of individual and family formal and informal intervention efforts; historical and current perspectives and approaches.

**Enforced Prerequisite at Enrollment:** HDFS 129

HDFS 312W: Empirical Inquiry in Human Development
3 Credits

Introduction to the skills involved in critical thinking in general and the methods of empirical inquiry in particular. Open to HD FS majors only.

**Enforced Prerequisite at Enrollment:** A grade of C or better required in EDPSY 101 or STAT 200
Writing Across the Curriculum

HDFS 313: Empirical Inquiry in Human Development for Non-Majors
3 Credits

Introduction to the skills involved in critical thinking in general and the methods of empirical inquiry in particular. HD FS 313 Empirical Inquiry in Human Development for Non-Majors (3) The main purpose of this course is to help students become informed and critical consumers of scientific research. Throughout the course, they will develop the critical thinking skills necessary to understand scientific inquiry in the field of Human Development. This course will serve as an introduction on how the tools of the scientific method can be used to understand human behavior, developmental processes, and modification of those processes. Students are encouraged to develop their critical capacities through a process that involves learning basic components of empirical inquiry, such as study design, measurement approaches, and sampling strategies, and applying their understanding of those components to evaluate the conclusions of research studies. Students will be exposed to quantitative and qualitative approaches as well as information on intervention and applied research. The course will consist of lectures and class exercises.

**Enforced Prerequisite at Enrollment:** A grade of C or better required in EDPSY 101 or STAT 200

HDFS 314: Understanding Human Development and Family Research
1 Credits

Students who complete HDFS 314 will have a broad understanding of the methodological principles and the techniques used to measure human and family behavior. Students will also acquire an understanding of how statistics, reading, and writing research are integrated together for a complete learning experience. By the end of the semester, students will have gained a supplementary understanding of the research process. Students who successfully complete HDFS 314 will have become proficient (1) in the use of standard methodological terminology related to HDFS research. (2) in the use reference managing software (such as Zotero or Mendeley). (3) using software for family data collection (such as Qualtrics, SPSS, or Excel). (4) recording and reporting family data collected from ‘participants. (5) analyzing family data sets through the use of standard statistical analysis.

**Recommended Preparations:** HDFS 312W

HDFS 315: Family Development
3 Credits

Family functions over the life course; family from a multidisciplinary perspective, emphasizing adaptation and change. HDFS 315 Family Development (3) (US) This course offers an overview of families focusing primarily on contemporary American families. The primary thrust of this course is to step beyond our personal experiences with families and place them within a broader social, historical, cultural and economic context. This class will be multi-disciplinary in its approach to the study of American families. However, we will begin with the historical, demographic and social changes that American families have undergone and try to understand some of the causes and consequences of these changes for the developmental life course of adults and children in families today. Throughout this course we will be particularly concerned with the diversity of American families stressing differences based on gender, race and ethnicity, and socioeconomic status.

**Enforced Prerequisite at Enrollment:** HDFS 129 or (3 credits in ANTH or BBH or CAS or COMM or CRIM or CRIMJ or GEOG or HDFS or HIST or PSYCH or SOC or WMNST or BIOL or BISC)
United States Cultures (US)

HDFS 315Y: Family Development
3 Credits

Family functions over the life course; family from a multidisciplinary perspective, emphasizing adaptation and change. HDFS 315Y Family Development (3) (US) This course offers an overview of families focusing primarily on contemporary American families. The primary thrust of this course is to step beyond our personal experiences with families and place them within a broader social, historical, cultural and economic context. This class will be multi-disciplinary in its approach to the study of American families. However, we will begin with the historical,
demographic and social changes that American families have undergone and try to understand some of the causes and consequences of these changes for the developmental life courses of adults and children in families today. Throughout this course we will be particularly concerned with the diversity of American families stressing differences based on gender, race and ethnicity, and socioeconomic status.

**Enforced Prerequisite at Enrollment:** HDFS 129 or (3 credits in ANTH or BBH or CAS or COMM or CRIM or CRIMJ or GEOG or HDFS or HIST or PSYCH or SOC or WMNST or BIOL or BISC) United States Cultures (US) Writing Across the Curriculum

HDFS 330: Observation or Experience with Children, Youth, and Families

1-6 Credits

Directed observations of, or supervised experience with children, youth, and families in group or home settings.

**Enforced Prerequisite at Enrollment:** HDFS 229 or PSYCH 212

HDFS 345: CONTEMPORARY URBAN ISSUES AND SOCIAL JUSTICE FRAMEWORKS

3 Credits/Maximum of 3

The discipline of Human Development and Family Studies has a tradition of culturally sensitive engagement within communities, helping to improve quality of life by applying and disseminating knowledge about development across the lifespan, all in their larger social contexts. Issues of social justice and equity play an integral role in defining the questions that Human Development and Family Studies students ask and the solutions that they pursue, as students must account for diverse needs and values based on age, gender, ethnicity and cultural background. Students preparing to work in the field of Human Development and Family Studies must possess the content, pedagogical and professional knowledge, skills, and dispositions necessary to work in diverse communities. HDFS 345 is an opportunity for students to explore the relationship between contemporary urban issues and family development. Participants will evaluate urban development from a Human Development perspective and with a critical eye to how urban development has accounted for the distinctive needs of different segments of the public. Therefore, HDFS 345 incorporates the knowledge of different Human Development and Family Studies theories and social justice paradigms to help students examine urban themes and build their understanding of social justice and family development as related to these themes. Students will learn how urban planning accounts for differences in society, identify different segments of the urban population differentiated by a few diversity constructs (culture, race, SES, gender, etc) and gain awareness of the varying and distinctive needs and concerns of these groups with respect to living in the urban environment. Students will also explore contemporary issues, like modern policing practices, and find resources to develop solutions to social issues or problems. Discussions of policy and moral philosophy will contribute to students' aptitude to plan an appropriate solution with tangible results. Ultimately, students are expected to leave the course with geographically-informed conceptualizations of social justice and insight into how individuals, families and organizations can work within urban communities as collaborators and partners.

**Recommended Preparations:** HDFS 175N or HDFS 129 or HDFS 239 United States Cultures (US)

---

This course will immerse students in theories, historical contexts, and practices of structural oppressions that influence youth development, and responses to them through youth empowerment, democratic action, and popular education in communities through study, reflection and, most importantly, on-site partnership field placement with an urban youth worker or agency, such as in a school or community organization. Specifically, you will work with various community-based organizations in partnerships set up by the Penn State Faculty that are local exemplars of democratic action with and for youth development, working closely with professionals affiliated with those programs to support their work and learn from them. HDFS 400 is a community engaged and culture of support course. Community engagement, also called service learning, is a form of reciprocal experiential education wherein students learn through the collaborative process of meeting authentic community needs. High quality community engagement also attempts to affect real, material social conditions; to authentically integrate the work done to meet community needs with the curriculum/course through continuous, critical reflexive and reflective inquiry; and to be a system of praxis (theory - practice) where the inquiry then informs the work participants do, participants' self-concepts, and the practices of the community. The field, reading, in class and written work will reflect these principles.

**Enforced Prerequisite at Enrollment:** HDFS 175N Recommended Preparations: HDFS 345 or ENGL 15 or CAS 100 or HDFS 239

HDFS 401: Project Planning, Implementation, and Evaluation in the Human Services

3 Credits

Exercises and activities related to the design, planning, implementation and management, and evaluation of projects and programs in the human services. HD FS 401 Project Planning, Implementation, and Evaluation in the Human Services (3) HD FS 401 is part of a sequence of courses that develop skills and competencies of the human services student. The course emphasizes the further development of communication skills, diversity skills, team-building skills, critical thinking skills, and technology and leadership skills. Intended to be completed prior to the internship experience, the course will initially focus students' efforts on the identification of a field-based human services project or program, and
a setting within which it could be carried out. Subsequently, students will
design and plan the project or program, examine and propose effective
implementation and management procedures, and incorporate state-of-
the-art evaluation procedures into the design.

**Enforced Prerequisite at Enrollment:** HDFS 312W and approval by
internship coordinator. Prerequisite or concurrent: HDFS 411

HDFS 402: Human Services Seminar

4 Credits

Presentations and discussion of contemporary human issues by
students and visiting professionals.

**Enforced Prerequisite at Enrollment:** HDFS 401

HDFS 405: Gender and Social Development

3 Credits

A REVIEW OF GENDER-RELATED PATTERNS OF SOCIAL DEVELOPMENT
OVER THE LIFESPAN, AS INFLUENCED BY BIOLOGICAL, SOCIOLOGICAL,
AND PSYCHOLOGICAL FACTORS.

**Enforced Prerequisite at Enrollment:** HDFS 129 and (HDFS 312W or 6
credits in ANTH or BBH or CAS or COMM or CRIM or CRIMJ or GEOG or
HDFS or HIST or PSYCH or SOC or WMNST or BIOL or BISC)
United States Cultures (US)

HDFS 410: Communities and Families

3 Credits

Family and community interaction, emphasizing strategies for
intervention to solve family-community problems.

**Enforced Prerequisite at Enrollment:** HDFS 312W and (3 credits in ANTH
or BBH or CAS or COMM or CRIM or CRIMJ or GEOG or HDFS or HIST or
PSYCH or SOC or WMNST or BIOL or BISC)

HDFS 411: The Helping Relationship

3 Credits

Theory and research related to interpersonal conditions which facilitate
personal growth; intensive interpersonal competency training.

**Enforced Prerequisite at Enrollment:** (HDFS 311 and HDFS 312W) or [6
credits in HDFS or 6 credits in PSYCH or (3 credits in HDFS and 3 credits in
PSYCH)]

HDFS 412: Adult-Child Relationships

3 Credits

Theories, research, and application of adult behavior for maximizing
adult-child relationships and optimizing child socialization and self-
development.

**Enforced Prerequisite at Enrollment:** (HDFS 229 or PSYCH 212) and
HDFS 311 and HDFS 312W and (HDFS 315 or HDFS 315Y)

HDFS 413: Developmental Problems in Adulthood

3 Credits

Analysis of individual developmental problems from young adulthood
through old age and their prevention and modification.

**Enforced Prerequisite at Enrollment:** (HDFS 129 or HDFS 249) and
HDFS 312W

HDFS 414: Resolving Human Development and Family Problems

3 Credits

Strategies for, and roles of professional specialists in, the solution of
problems in human development and family functioning.

**Enforced Prerequisite at Enrollment:** HDFS 312W and [6 credits in HDFS
or 6 credits in PSYCH or (3 credits in HDFS and 3 credits in PSYCH)]

HDFS 415: Program Development in Family Relationships

3 Credits

Methods for planning, developing, and evaluating human service
programs for families across the life span.

**Enforced Prerequisite at Enrollment:** HDFS 311 and HDFS 312W and
(HDFS 315 or HDFS 315Y)

HDFS 416: Racial and Ethnic Diversity and the American Family

3 Credits

This course will explore the nature and determinants of racial and ethnic
variation in family processes in the United States. HD FS 416 (SOC 411)
Racial and Ethnic Diversity and the American Family (3) During the last
several decades, the racial and ethnic composition of the U.S. population
has changed dramatically. At end of the 20th century, non-Hispanic
whites accounted for less than 75 percent of the U.S. population.
While blacks remained the largest minority group, there were nearly as
many Hispanics as blacks, and the number of Asians was increasing.
Population projections indicate that by the middle of the 21st century,
Hispanics will make up nearly one-fourth of the U.S. population. Blacks,
Asians, and American Indians together will comprise an additional fourth
of the population. The last several decades have also brought significant
changes in family life in the United States, including declining rates of
marriage, a rising age-at-marriage, an increase in cohabitation, and a
dramatic rise in the proportion of births outside of marriage. While these
trends in family life have been experienced by all racial and ethnic groups,
there is substantial variation in family patterns by race and ethnicity. The
course will build on other courses in social inequality and the family. The
course does not overlap with any existing courses in the Department of
Sociology or with courses offered in other relevant departments. This
course will explore the nature and determinants of racial and ethnic
variation in family processes in the United States. The student will read
articles from major sociological journals and learn to extract major
points and issues. He/she will learn to synthesize and critique various
arguments on major issues in the field. The student will acquire skills
in summarizing and evaluating arguments in essay form. He/she will
also develop oral presentation skills. Final grades for the course will be
based on class participation, a brief (approximately 5 pages) paper, a
group presentation, a midterm examination (essay format) and a final
examination (essay format). The course is not required for the Sociology
minor or major. However, the course can count as one of the 400-level elective courses in Sociology for the Sociology minor, B.A. or B.S.

**Enforced Prerequisite at Enrollment:** 3 credits in SOC

Cross-listed with: SOC 411

United States Cultures (US)

**HDFS 417:** Biocultural Studies of Family Organization

3 Credits

Study of variability in family organization with an emphasis on cultural and economic factors influencing household organization and family roles.

**Enforced Prerequisite at Enrollment:** HDFS 129 and HDFS 312W and [(HDFS 315 or HDFS 315Y) or (6 credits in SOC or ANTH)]

International Cultures (IL)

United States Cultures (US)

**HDFS 418:** Family Relationships

3 Credits

Dynamics of family interaction; effects of parenthood, sibling and intergeneration relationships on family solidarity.

**Enforced Prerequisite at Enrollment:** HDFS 312W and (HDFS 315 or HDFS 315Y)

**HDFS 420:** Laboratory in Individual and Family Enhancement

3 Credits

Supervised practice in methods of assessment, intervention, and evaluation to enhance individual and family development.

**Enforced Prerequisite at Enrollment:** HDFS 312W and HDFS 411 and 6 additional credits in HDFS

**HDFS 424:** Family Development in an Economic Context

3 Credits

Economic conditions influencing family functioning; familial effects on the economy; strategies to enhance work-family relations.

**Enforced Prerequisite at Enrollment:** HDFS 312W and (HDFS 315 or HDFS 315Y)

United States Cultures (US)

**HDFS 427:** Developmental Sport & Exercise Psychology

3 Credits

Developmental changes in the antecedents and consequences of physical activity across the lifespan. HD FS (KINES) 427 Developmental Sport & Exercise Psychology (3)Change is constant with physical activity - our reasons for being active change across the lifespan and have developed, reviewed, and criticized theoretically-grounded interventions to address issues related to developmental processes associated with physical activity across the lifespan. Evaluation will be based on written examinations, submission of a series of reflection papers on reading assignments, and the students' engagement in the class. It extends but does not duplicate existing courses in the Department of Innersole, Human Development & Family Studies, and Psychology.

**Enforced Prerequisite at Enrollment:** PSYCH 100 and (KINES 321 or HDFS 129 or PSYCH 212)

Cross-listed with: KINES 427

**HDFS 428:** Infant Development

3 Credits

Conceptual analysis, assessment, and empirical investigation of normal and deviant development, prenatal through first two years of life.

**Enforced Prerequisite at Enrollment:** (HDFS 229 or PSYCH212) and HDFS 312W

**HDFS 429:** Advanced Child Development

3 Credits

Processes of development during childhood from birth to adolescence. Emphasis upon theory, method, and empirical research.

**Enforced Prerequisite at Enrollment:** (HDFS 229 or PSYCH212) and HDFS 312W

**HDFS 430:** Experience in Preschool Groups

1-6 Credits/Maximum of 6

Guided practicum experience in planning and facilitating developmentally appropriate activities for young children. HD FS 430 Experience in Preschool Groups (1-6 per semester/maximum of 6) This course is intended to provide students with guided experience in interacting with young children and in designing and conducting developmentally appropriate activities for children in preschool groups. In addition to working with preschool children in preschool classrooms, students will meet weekly to discuss curriculum and activity planning, guidance techniques and issues relevant to providing quality preschool settings. Time will be set aside in each class period for open discussion of classroom experiences. Visits to campus preschool locations are planned to enhance the selection of appropriate teacher resources for curriculum development.

**Enforced Prerequisite at Enrollment:** (HDFS 229 or PSYCH212) and HDFS 312W and HDFS 330

**HDFS 431:** Family Disorganization: Stress Points in the Contemporary Family

3 Credits

Focuses on divorce, remarriage, incest, family violence as well as problems associated with family formation and parent-child relations.
HDFS 440: Family Policy

Bachelor of Arts: Social and Behavioral Sciences
HDFS 432: Developmental Problems in Childhood and Adolescence

3 Credits

Analysis of problems in individual development from infancy through adolescence; prevention and modification of developmental difficulties.

Enforced Prerequisite at Enrollment: HDFS 229 and (HDFS 239 or PSYCH 212) and HDFS 312W

HDFS 433: Developmental Transition to Adulthood

3 Credits

Conceptual analysis and empirical investigation of interrelationships between developmental processes during the period of pubertal growth.

Enforced Prerequisite at Enrollment: HDFS 239 and HDFS 312W

HDFS 433H: Developmental Transition to Adulthood

3 Credits

Conceptual analysis and empirical investigation of interrelationships between developmental processes during the period of pubertal growth.

Honors

HDFS 434: Perspectives on Aging

3 Credits

An analysis of the demographic, social, and cultural factors affecting the aged population in American society.

Enforced Prerequisite at Enrollment: HDFS 312W and 6 credits in sociology

Cross-listed with: SOC 435
Bachelor of Arts: Social and Behavioral Sciences

HDFS 440: Family Policy

3 Credits

An in-depth examination of family policy. This course meets the Bachelor of Arts degree requirements. This course is designed to provide an in-depth examination of family policy. Students will identify and critically analyze major issues, controversies, and policies that affect families. Attention will be devoted to recognizing both intended and unintended consequences of family policies and understanding policy challenges and trade-offs. Students will gain an understanding of how policies are shaped by both facts and myths, as well as our values. Students will examine historical and current trends in family patterns (e.g., divorce, women's labor force participation, nonmarital births) to understand the implications they hold for individuals, families and society. Students will gain an awareness of the social, economic, historical, legal, and political contexts within which family policies exist and are proposed. Although the main focus is on U.S. family policy, some time will be devoted to learning about family policies in other countries. We will learn about several specific family policies in-depth (e.g., welfare), but a final goal is to help students develop a general way of looking at family policy that they can then use to understand any issue of family policy that unfolds throughout their lifetime. This course will foster thoughtful reflection and critical thinking, writing skills, research skills, and skills of synthesis, logic, and argument. Course goals will be accomplished through course readings, writing assignments, lectures, class discussions, debates and group projects. Mastery of course material and student evaluation are assessed in several ways. Students will take a midterm and final exam that cover lectures, class discussions, and assigned readings. Two papers are also required. The first paper is based on an analysis of newspaper articles dealing with family policy issues that students will collect and relate to course materials. The second paper is a literature-based analysis of a family policy in a society outside the United States. Class participation is also essential and its evaluation will be based on a combination of class attendance, contributions to class discussions, participation in group debates and projects, and an oral presentation of the final paper on a non-U.S. family policy.

Enforced Prerequisite at Enrollment: 3 credits of SOC or HDFS

Cross-listed with: SOC 440
Bachelor of Arts: Social and Behavioral Sciences

HDFS 445: Development Throughout Adulthood

3 Credits

Processes of development and change of behavior from early adulthood through old age, emphasizing theory, method, and empirical research.

Enforced Prerequisite at Enrollment: HDFS 249 and (HDFS 312W or PSYCH 301W) and (PSYCH 200 or STAT 200 or 3 credits in STAT) and (6 credits in HDFS or PSYCH or SOC)

Cross-listed with: PSYCH 416
Bachelor of Arts: Social and Behavioral Sciences

HDFS 446: Programs and Services in Gerontology

3 Credits

Theoretical and historical views of the conceptualization and delivery of programs and services to older persons within a multidisciplinary developmental framework.

Enforced Prerequisite at Enrollment: HDFS 249 or HDFS 445 and HDFS 312W

HDFS 447: Issues in Gerontology

3 Credits

Analysis of major issues in adulthood and aging, with an emphasis on integration of theory and research.

Enforced Prerequisite at Enrollment: HDFS 249 or HDFS 445 and HDFS 312W

HDFS 448: Death and Bereavement

3 Credits

The course takes a social and developmental perspective to illuminate an often hidden, but significant dimension of human development in the context of death-related encounters, attitudes, historical patterns, cultural variations, as well as the complexities of the American death system. In considering death-related patterns in society, it explores notable
examples like 'human-induced death' (e.g., suicides, accidents and homicides), 'socially sanctioned death' (e.g., violence from war, genocide, and terrorism), and the characterization of death in daily discourse, the media, and present day death rituals. Key issues and questions from the field are discussed at both individual and societal levels, which include the meaning of death, facing death across the life-course, the sociocultural context of death, bereavement and grief, the death industry, and ethical and legal issues surrounding death. Examining the variegated meanings in different social institutional spheres, such as ethics, politics, mass media, and family from a social-scientific perspective, the course helps students recognize and appreciate that death and bereavement are deeply embedded into social and cultural structures of society, including how we learn about death, the typical ways in which our attitudes and beliefs are shaped, and how death and bereavement affect children, adolescents, adults, and older adults. It also addresses issues specific to death/dying in careers Human Development and Family Studies prepares for in terms of death education and bereavement counseling.

**Enforced Prerequisite at Enrollment:** (HDFS 229 or HDFS 239 or HDFS 249 or PSYCH 212) and HDFS 301 and (HDFS 312W or PSYCH 301W)

**HDFS 452: Child Maltreatment Prevention, Intervention, and Legal Issues**

3 Credits

Examines causes, correlates, and consequences of child maltreatment, empirically supported prevention/intervention programs, the Child Welfare System and relevant legal issues.

**Enforced Prerequisite at Enrollment:** (HDFS 229 or HDFS 239) and HDFS 312W

**HDFS 453: Family Participation and Involvement in Child Services**

3 Credits

Current and historical perspectives of roles and functions of family members in designing, delivering, and evaluating of child service programs.

**Enforced Prerequisite at Enrollment:** HDFS 229 and HDFS 312W and (HDFS 315 or HDFS 315Y)

**HDFS 454: Development and Administration of Child Service Programs**

3 Credits

Planning, administering, and evaluating child service programs at several administrative levels using methods from relevant disciplines.

**Enforced Prerequisite at Enrollment:** HDFS 312W and HDFS 453 and (CI 295 or HDFS 330)

Cross-listed with: ECE 454

**HDFS 455: Development and Administration of Human Services Programs**

3 Credits

Fundamentals of program development and administration of human service programs in community settings; emphasis given to program content, strategies, and the overall planning process.

**Enforced Prerequisite at Enrollment:** HDFS 311

**HDFS 465: Child Maltreatment: Prevention and Treatment**

3 Credits

Advanced examination in approaches for preventing child maltreatment and treating its consequences. HD FS (CMAS) 465 Child Maltreatment: Prevention and Treatment (3) Child maltreatment, including physical abuse, sexual abuse, emotional abuse, and neglect, is a highly prevalent condition affecting nearly one million children each year in the United States alone. This course will delineate the long-term health consequences affecting those who have experienced child maltreatment with an emphasis on those outcomes exerting the greatest impact on overall public health throughout the lifespan. Importantly, a focus on the etiology of such health consequences in the child maltreatment population will be made in order to understand the causal pathways leading to these health consequences. This focus on etiology will serve as a segue into the remaining sections of this course, specifically the prevention and treatment of child maltreatment and its consequences. Universal and targeted prevention programs, where the focus is to prevent an initial instance of child maltreatment from occurring, will be detailed, as will tertiary prevention programs, where the focus is on preventing a re-occurrence of child maltreatment. Similarly, prevention of adverse health outcomes for those affected by child maltreatment will also be covered. Finally, evidenced-based interventions applied with children who have been maltreated and are currently experiencing clinical levels of impairment (e.g. post-traumatic stress disorder) will be detailed. Identification and rehearsal of treatment components commonly used in prevention and clinical intervention programs will be emphasized. Students successfully completing this course will have direct knowledge of the consequences of child maltreatment and the established methods used in prevention and intervention programs applied with this population.

**Enforced Prerequisite at Enrollment:** CMAS 258 or HDFS 258 or SOC 258

Cross-listed with: CMAS 465

**HDFS 467: Autism: Providing Professional Support for Individuals and Families**

3 Credits

This course emphasizes the professional development for students planning to pursue careers in the field of autism. Topics include the stresses and needs of families and siblings of children with Autism Spectrum Disorders (ASD), vocational and social challenges faced as individuals with ASD age into adolescence and adulthood, and techniques to aid parents in becoming effective advocates for their child's academic, social, and behavioral needs. Although the core symptomatology of ASD and empirically validated interventions are covered as foundational knowledge, these topics are not the focus of this course. Rather, this course identifies the challenges and strengths likely to be encountered in the lives of families and individuals with ASD and provides current best practices to help clients navigate life with ASD.

**Enforced Prerequisite at Enrollment:** (HDFS 229 or HDFS 239) and (HDFS 312W or PSYCH 212)

**HDFS 477: Analysis of Family Problems**

3 Credits

Analysis of families' behavioral, managerial, interpersonal, and financial problems and their interrelationships.
**Enforced Prerequisite at Enrollment:** HDFS 312W and (HDFS 315 or HDFS 315Y) and (3 credits in ANTH or BBH or CAS or COMM or CRIM or CRIMJ or GEOG or HDFS or HIST or PSYCH or SOC or WMNST)

HDFS 490: Introduction to Internship Experience
2 Credits
Planning and preparation for field experience in human service setting. Analysis of human service system and arrangement of site.

**Enforced Prerequisite at Enrollment:** HDFS 312W and approval by internship coordinator. Prerequisite or concurrent: HDFS 411

HDFS 494: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

HDFS 494H: Senior Honors Thesis
1-6 Credits/Maximum of 6
Independent study under the direction of the thesis advisor of topics related to the interests of the student, culminating in presentation of a thesis.

**Enforced Prerequisite at Enrollment:** approval of honors thesis advisor Honors

HDFS 495A: Internship: Advanced Experience
3-9 Credits/Maximum of 9
HD FS 495A Internship: Advanced Experience (8) HD FS 495A represents a full-time, one-semester internship experience. Its focus is experiential learning accompanied by intensive supervision, provided by one-site personnel, as well as University-based mentoring. Taken within a year of the pre-internship course (HD FS 490), which helps the student with the details of making arrangements for their internship, HD FS 495A, taken during the same semester as HD FS 495B, is considered the capstone of the HD FS undergraduate program. The internship can be taken during the fall, spring, or summer semester. It is one full semester spent working as a human service professional in a setting of your choice. Generally, interns will work as a full-time professional (35-40 hours a week) for the semester.

**Enforced Prerequisite at Enrollment:** HDFS 490 and HDFS 301 and HDFS 455, and permission of internship director

HDFS 495B: Internship: Advanced Project
3 Credits
HD FS 495B Internship: Advanced Project (4) HD FS 495B is taken at the same time as HD FS 495A, and within a year of the pre-internship course (HD FS 490), which helps you with the details of making arrangements for the HD FS internship, HD FS 495B focuses on the academic aspects of the internship experience. This course can be taken during the fall, spring, or summer semester. Currently, HD FS 495B consists of writing three papers; The Organizational Analysis, The Policy Analysis, and The Personal Development Paper. The purpose of the organizational analysis paper is to give the intern an opportunity to learn about his or her internship setting or organization in greater depth than might be possible otherwise. This will necessitate the intern taking an active approach to systematically securing information about the internship organization through the review of relevant documents, conducting formal or informal interviews, and observation. This paper will then be saved at the internship office, without identifying information or grade, to be viewed as a source of information about potential internship sites by future students who are seeking internships.

**Enforced Prerequisite at Enrollment:** HDFS 495A

HDFS 495C: Professional Practicum in Human Services
3-8 Credits/Maximum of 8
Guided professional practicum in human services, usually in the form of a project related to a human services issue.

**Enforced Prerequisite at Enrollment:** HDFS 401 or HDFS 490

HDFS 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

HDFS 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HDFS 498: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HDFS 499: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

HDFS 499A: **SPECIAL TOPICS**
3 Credits/Maximum of 12

International Cultures (IL)

HDFS 499B: **SPECIAL TOPICS**
3 Credits/Maximum of 12

International Cultures (IL)

HDFS 499C: **SPECIAL TOPICS**
3 Credits/Maximum of 12

International Cultures (IL)
Human-Centered Design and Development (HCDD)

HCDD 99: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

HCDD 113: Foundations of Human-Centered Design and Development
3 Credits

HCDD 113 provides a rigorous introduction to the theories, models, and tools that inform Human-Centered Design and Development. It lays the groundwork for subsequent courses in the sequence by examining the relationship between physical capabilities, cognitive and social models, and philosophical issues pertinent to human-centered analysis, design and development work. The course is practice-based, which means that it instructs more abstract concepts through practical activities and practice-based inquiry. Students will learn how to apply cognitive models and philosophical concepts to real-world problems. This approach has the dual benefit of (1) highly engaging pedagogy and (2) the production of portfolio-quality deliverables that students will be able to use to secure internships and entry-level positions in industry. Students will gain skills for synthesizing and communicating design implications as well as presenting work in multiple contexts (e.g. live presentations vs. bite-sized portfolio pages). The format of the class will balance project work with tests, quizzes, short essays, and discussions on key topics. It will also include readings and some short lectures.

HCDD 113S: Foundations of Human-Centered Design and Development
FYS
3 Credits

HCDD 113S provides a rigorous introduction to the theories, models, and tools that inform Human-Centered Design and Development. It lays the groundwork for subsequent courses in the sequence by examining the relationship between physical capabilities, cognitive and social models, and philosophical issues pertinent to human-centered analysis, design and development work. The course is practice-based, which means that it instructs more abstract concepts through practical activities and practice-based inquiry. Students will learn how to apply cognitive models and philosophical concepts to real-world problems. This approach has the dual benefit of (1) highly engaging pedagogy and (2) the production of portfolio-quality deliverables that students will be able to use to secure internships and entry-level positions in industry. Students will gain skills for synthesizing and communicating design implications as well as presenting work in multiple contexts (e.g. live presentations vs. bite-sized portfolio pages). The format of the class will balance project work with tests, quizzes, short essays, and discussions on key topics. It will also include readings and some short lectures.

First-Year Seminar

HCDD 199: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

HCDD 264: Design Practice in Human-Centered Design and Development
3 Credits

This course focuses on concepts, methods, techniques, and tools for designing effective technology-enabled experiences. The course will provide students with all the elements for a toolbox they can use to design and create both prototypes and working applications, and some analytic methods they can use to perform basic evaluations. The course will emphasize iterative design and the benefits of employing a cycle of analyze - design - built - evaluate in close cooperation with prospective technology users and other product stakeholders. In addition to more practice-oriented skills and knowledge, the course will provide students with an appreciation for some persistent design challenges including managing design trade-offs, ensuring universal and international access, working with others on co-design, and receiving and delivering design critiques. Students who successfully complete the course will leave equipped to engage with practicing design teams in industry, government, and academia.

Enforced Prerequisite at Enrollment: IST 242 and (HCDD 113 or HCDD 113S)

HCDD 294: Research Project
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

HCDD 296: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

HCDD 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses offered infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HCDD 299: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

HCDD 340: Human-Centered Design for Mobile Computing
3 Credits

The course will provide students with an appreciation for the importance of mobile computing in modern life. It will also provide an introduction to the technical aspects of mobile computing including input modalities, sensors and sensing, wearable and smart home devices, and virtual/ augmented reality. It will provide an introduction to established design concepts as well as explore emerging ideas and new concepts in the domains of mobile computing, and explore some of the most important domains where mobile computing is having a significant impact including health and wellness and computing in the developing world. The latter
part of the course will include an analysis, design, and development project for students to work on individually or in groups.

**Enforced Prerequisite at Enrollment:** HCDD 264 and IST 311

**HCDD 364W: Methods for Studying Users**

3 Credits

This course focuses on concepts, methods, and techniques for studying users and evaluating technology in the context of use. It will provide students with methods and tools they can use to incorporate knowledge of users and their settings into the design and evaluation of interactive systems. These methods will include both qualitative and quantitative techniques, as well as how to combine and sequence multiple techniques to gain a more holistic understanding. Students will learn to select and use appropriate data gathering and analysis methods and how to assemble these into a coherent user research design. The course also provides an overview of the most important statistical analysis methods employed in user research. This is a hands-on, practical course designed for HCDD undergraduate students, and others as an elective.

**Enforced Prerequisite at Enrollment:** HCDD 264 and IST 311

**Writing Across the Curriculum**

HCDD 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

**HCDD 440: Human-Centered Design and Development Capstone Course**

3 Credits

The Human-Centered Design and Development Capstone course develops the research orientation and creative problem solving necessary for successful careers. The capstone develops these skills in the context of a semester long project, the solution to which requires integration of knowledge, skills and analytic techniques taught in the core curriculum. The capstone will also give students a real world experience in which they will need to work in teams and will be coached on ways to translate analytic outcomes into meaningful and actionable information for decision makers. The course is intended for seniors who have successfully completed the core courses. The capstone projects will integrate knowledge gained in technical subjects such as usability engineering, software construction and engineering, and mobile computing as well as general information technology topics such as machine learning, data mining, data integration and visualization, and privacy and security. Students will also hone their presentation and technical writing skills, generating effective reports that not only explain their analytic processes, assumptions underlying the processes and outcomes, but also communicate the limitations of their approach and potential alternate strategies.

**Enforced Prerequisite at Enrollment:** (IST 261 or IST 361) and HCDD 364W. Recommended Preparations: HCDD 340

**HCDD 494: Research Project**

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

**HCDD 496: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

**HCDD 497: Special Topics**

1-9 Credits/Maximum of 9

Formal courses offered infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**HCDD 499: Foreign Studies**

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

**Humanities - CA (HUM)**

**HUM 100N: Foundations in the Humanities: Understanding the Human Experience**

3 Credits

This course is an introduction to great ideas, themes, creations, and values in the arts and humanities, emphasizing the development of students' basic interpretive and close reading skills as applied to historically significant works in the various disciplines. The course introduces students to interpretive skills for analyzing and understanding historically significant works in the visual arts (painting, sculpture, architecture), the performing arts (theater, film, dance, music), history, literature, and philosophy. Students demonstrate their basic understanding of the disciplines encompassed in the course by interpreting key works in the various fields. The course stresses introducing students to these fields, as well as interdisciplinary connections between them, through broadly synthetic interpretations of important works within their cultural settings. The course will develop students' understanding of different historical periods by examining a variety of cultures, traditions, and aesthetic movements. The course promotes critical conversation among students, for example, by providing lectures that introduce and frame topics for discussion (this pedagogical practice is suggested as one possible approach, not as a requirement). The course also stresses the improvement of students' writing and critical thinking skills through such means as essay exams, group work, oral reports, and/or term papers, as deemed appropriate by the instructor.

General Education - Integrative: Interdomain

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies
HUM 150N: World Mythologies in the Arts

3 Credits

This course is an interdisciplinary, cross-cultural, historical, and contemporary examination of myth as it appears in the visual arts, literature, and film. Each iteration of the course covers myths in the arts of at least several of the following cultures-Greek and Roman, Celtic, Norse, European, Egyptian, Near Eastern, Indian, Chinese, Pacific, African, and Native American. The course is thematic and intercultural, for example in the way myths are told in historical cultures and then retold and transformed in art, literature, and films in later cultures. Thus, the course considers in what ways myths are reconceived and altered when they appear in later cultures and in different media within the arts. The course is not a survey of world mythologies, but an interdisciplinary examination of myths and mythic themes and images in the arts (such as painting and film) and literature, with an emphasis on the interpretations and transformative processes applicable to myths as they are (sometimes radically) altered and embodied in art forms that may be far removed in time, place, and meaning from the original contexts of the myths themselves. The course is intended to familiarize students with the ways that different cultures have interpreted the world in which they live-how cultures created their own explanations for phenomena they could not understand, and how contemporary culture gives new life to older myths. The course examines such questions as the meanings of myths as represented in the arts, the various purposes of myths in the arts, such as the functions of creation myths and myths of the hero; theories of how myths originate; and ways that myths have been analyzed, interpreted, and adapted in other cultures through the arts. Students learn to compare and contrast myths in the arts, discuss common elements in myths in the arts, and to interpret the meaning of the myths both within the cultural and historical context in which they were created and the ways they are reinterpreted in later cultures in the arts.

HUM 200N: Explorations in the Humanities: The Quest

3 Credits

The theme of this course, Explorations in the Humanities: The Quest, is a highly flexible one used to investigate a variety of historically significant works in the arts and humanities from different perspectives—moral, social, historical, literary, artistic, and philosophical. The quest is conceived as a theme involving active human inquiry and historical breakthroughs that enlarged understanding of the world in new ways. The major fields within the arts and humanities that are covered in the course include art and art history, history, literature, philosophy, mythology, and the performing arts (theater, film, music). The selected works within the disciplines exemplify the broad theme of the course. This thematic course emphasizes the development of students' interpretative and close reading skills as applied to historically significant works in the fields of the arts and humanities. The course promotes the improvement of students' writing and critical thinking. It is designed so that students investigate, analyze, and interpret topics within the arts and humanities as they develop principles of critical practice and interpretation. The course promotes critical conversation among students, for example, by providing lectures that introduce and frame topics for discussion (this pedagogical practice is suggested as one possible approach, not as a requirement). The course also stresses the improvement of students' writing and critical thinking skills through such means as essay exams, group work, oral reports, and/or term papers, as deemed appropriate by the instructor. The course also emphasizes interdisciplinary connections between these arts and humanities fields, through broadly synthetic interpretations of important works within their cultural settings. Each iteration of the course is designed by the instructor teaching it, within the framework set out here. The specific works from the arts and humanities covered in the course are selected by the instructor, and represent major works within the disciplines specified above, and as reflected in the theme of The Quest.

Prerequisite: HUM 100N

General Education: Humanities (GH)
General Education - Integrative: Interdomain
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Critical Thinking

HUM 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.

HUM 297B: Special Topics - InterDomain

1-9 Credits/Maximum of 9

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GA/GH GenEd course.

HUM 297I: Special Topics - InterDomain

3 Credits/Maximum of 9

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GA/GH GenEd course.

General Education: Arts (GA)
General Education: Humanities (GH)
General Education - Integrative: Interdomain

HUM 300N: Interpretations in the Humanities

3 Credits

Two to four (usually three) different interpretive approaches to understanding creative and/or scholarly works in the arts and humanities, as exemplified by the study of specific works organized by theme, topic, or time period(s). The interpretive approaches chosen will be applied to a variety of arts and humanities content drawn from the arts, including the
visual arts and art history, the performing arts, including theater, film, and music, and the humanities, including literature, history, and philosophy. The core course will develop students’ abilities to employ advanced interpretive strategies appropriate to upper-division study in a range of fields of study within the School of Humanities. Students will learn to interpret and analyze primary texts or creative works using several different methods, will exchange views with one another, and will develop skills in writing and expression through a variety of assignments. The course is designed to be taken at the junior level, because it presupposes a preliminary knowledge of the disciplines, before an interdisciplinary study can be undertaken. It is a writing-intensive course that requires substantial writing and revision. This course is designed to familiarize students with several different approaches to understanding creative and scholarly works in a range of humanities areas; to expose them to the viewpoints of others and encourage dialogue among students; to reinforce the interdisciplinary connections among arts and humanities fields; and to improve students’ abilities to formulate, express, and defend their own interpretations using the approaches studied. Individual instructors select the particular interpretive methods to be studied, along with appropriate primary works or texts and examples of the scholarly or critical methods chosen. Instructors will typically organize their sections around specific themes, periods, or topics, which will vary from time to time. Ideally, students should take the course in the junior year.

**Prerequisite:** ENGL 015, ENGL 202
General Education: Arts (GA)
General Education: Humanities (GH)
General Education - Integrative: Interdomain
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies
Writing Across the Curriculum

**HUM 311N: The Western Tradition I**

3 Credits

The course focuses on the Ancient Greek and Roman worlds. This course is appropriate for introducing students to a broad spectrum of materials, methods, and perspectives across the humanities. The course addresses ancient Greek and Roman culture with attention to architecture, art, drama, literature, philosophy, science, history, and other humanities fields. Students are introduced to methods for linking the original works they study (by theme, historical context, and in other ways) and to both discipline-based and interdisciplinary modes of understanding them. The course requires students to engage in significant critical reading of a variety of texts; to discuss and present their understanding in class; to acquire information through a variety of means, from printed sources to Web materials; to analyze the materials and write about them analytically in a mix of formal and informal ways; and to make and defend critical judgments. The course addresses cultures very different from our own in many ways. The prevalent institutions and practices of ancient Greece and Rome, for instance, included slavery; a subordinate status for almost all women; very different attitudes toward sexuality; and a view of other cultures as inferior. These institutions and beliefs coexisted with extraordinary achievements in the arts, thought, social institutions, and other areas. Students acquire familiarity with social practices and attitudes very different from their own environment. Students must integrate knowledge acquired from works of art, literature, philosophy, and other areas; from scholarly writing on those subjects; from Web sources; and from their peers and the instructor. Students are encouraged to undertake more specialized study to pursue particular humanities interests.

**Prerequisite:** HUM 300W, seventh-semester standing
General Education: Arts (GA)
General Education: Natural Sciences (GN)
General Education - Integrative: Interdomain
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

**HUM 400N: Expressions in the Humanities**

3 Credits

Advanced interdisciplinary study of a particular theme, period, or topic including materials from various arts and humanities disciplines and interdisciplinary works. Students will identify and apply several approaches to interpretation of such works-theoretical perspectives, integrating questions, comparative criticism—and express their understanding in class discussion, formal and informal writing, and creative expression. The course investigates the humanities from different perspectives—moral, social, historical, literary, artistic, and philosophical. The major fields within the arts and humanities that are covered in the course include, from the arts, the visual arts (painting, sculpture, architecture) and the performing arts (theater, film, music), and from the humanities, art history, history, literature, philosophy, and mythology. The selected works within the disciplines exemplify the broad theme of the course. This thematic course emphasizes the development of students’ interpretative and close reading skills as applied to historically significant works in the fields of the arts and humanities. The course promotes the improvement of students’ writing and critical thinking. It is designed so that students investigate, analyze, and interpret topics within the arts and humanities as they develop principles of critical practice and interpretation. The course promotes critical conversation among students, through the framing of topics for discussion. The course also emphasizes interdisciplinary connections between these arts and humanities fields, through broadly synthetic interpretations of important works within their cultural settings. Each iteration of the course is designed by the instructor teaching it, within the framework set out here. The specific works from the humanities covered in the course are selected by the instructor, and represent major works within the disciplines specified above.

**HUM 410: Religion and Culture**

3 Credits

A comparative examination of several world religions in their social and cultural contexts.

International Cultures (IL)
HUM 430: Philosophy and Literature
3 Credits
The study of philosophical viewpoints in literature.
Prerequisite: fifth-semester standing

HUM 453: Texts and Culture
3 Credits
Study of art, literature, film, and other creative genres to illustrate the interrelationships between creative expression and cultural practices.

HUM 460: Thematic Studies
3 Credits/Maximum of 9
Analysis of a group of related ideas in art, music, literature, and/or philosophy. (May be repeated for credit.)

HUM 461: Selected Periods in the Humanities
3 Credits
Interdisciplinary studies dealing with selected periods of world culture. (May be repeated for credit.) I HUM 461 Selected Periods in Humanities (3) (IL) Study of interdisciplinary aspects of a particular chronological period, including works from several disciplines or genres within the humanities. The period chosen may be from any time and any culture (or more than one culture during the same period).
International Cultures (IL)

HUM 491: Seminar in Interdisciplinary Humanities
3 Credits/Maximum of 9
Interdisciplinary studies dealing with selected periods of world culture. (May be repeated for credit.)

HUM 494: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

HUM 495: Internship
1-6 Credits/Maximum of 6
Supervised internship for undergraduate or graduate Humanities majors in state offices, educational institutions, arts agencies, community organizations, or humanities councils.

HUM 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

HUM 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

HUM 499: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

Humanities and Social Sciences (HSS)

Industrial Engineering (IE)

IE 100: Discover Industrial Engineering: First-Year Seminar
1 Credits
Informational First-year on Industrial Engineering as a career choice and profession; lab exercises; guest speakers; real world problems. I E 100S I E 100S Discover Industrial Engineering: First-Year Seminar (1) (FYS)The objective of this first-year seminar course is to provide information on industrial engineering as a career choice and as a profession. It is a fact that most first-year students have never heard of Industrial Engineering (I E), or the many varied opportunities that exist within the I E major. This course explores the many aspects of the major and also offers the
opportunity to interact with IE faculty and students, something that is an uncommon occurrence during the first year of engineering study. Class time is used for a variety of activities including: interactive class sessions where students work in teams to analyze and solve applied ‘real-world’ problems in industrial and manufacturing engineering; IE faculty guest speakers addressing career opportunities in a particular area within IE; Lab experiences or demonstrations; Alumni guest speakers or panels; Plant tours (1 per semester); IE student panels on topics such as Co-op. The class atmosphere is relaxed and there are no examinations. Homework assignments are given throughout the semester on relevant topics.

First-Year Seminar
IE 302: Engineering Economy
3 Credits

Principles and methods for analyzing the economic feasibility of technical alternatives leading to a decision or recommendation.

Prerequisite: MATH 141

IE 305: Product Design, Specification and Measurement
3 Credits

Principles of product design and specifications and methods for product verification. IE 305 Product Design, Specification and Measurement (3)Product Design, Specification and Measurements a first level junior course in manufacturing, required for all the baccalaureate students in the Department of Industrial and Manufacturing Engineering. It exposes students to the principles required for designing a product and developing the specifications for its components and the methods for product verification and checking conformance to specifications. Students taking this course should be familiar with introduction to engineering design and should have graphical communication skills.

Prerequisites: EDSGN 100

IE 306: Machining Process Design & Analysis
3 Credits

Application of Engineering Principles for the Design and Implementation of Economic and Effective Machining Processes. IE 306 Machining Process Design & Analysis (3) Machining Process Design & Analysis is an elective course within the Department of Industrial & Manufacturing Engineering that can be used to satisfy the undergraduate, manufacturing process course requirement. It will be offered both fall and spring semesters. Its purpose is to provide students with an in-depth experience into the science, engineering, and thought processes that are used to apply machining processes to economically convert raw materials into finished products. Students will learn how to design, analyze, implement, and troubleshoot machining processes and machining systems. Students taking this course must have previously completed IE 305, and have knowledge of produce specification, metrology, and computer aided design tools.

Prerequisite: IE 305, IE 322

IE 307: Additive Manufacturing Process and Reverse Engineering
3 Credits

The study and application of rapid prototyping technologies in design and manufacturing. IE 307 Additive Manufacturing Process and Reverse Engineering (3) Speed to market is an essential element of competitiveness. New manufacturing technologies, driven by CAD, such as Additive Manufacturing (AM), Rapid Tooling (RT), and Reverse Engineering are making it possible for companies to significantly cut design and manufacturing cycles times. This course will explore these new manufacturing technologies, study the basic processes and their role in the design and manufacturing cycle, and provide hands on experience with these processes. Students will be able to use process models, characteristics and capabilities of specific AM processes such as Stereo Lithography Process, Fused Deposition Modeling, Selective Laser Sintering, Electron Beam Melting, and 3-D Printing to compare different processes. The students will study the use of these processes for Rapid Tooling applications for sand casting, investment casting, and injection molding. The students will be able to describe the role of CAD and Reverse Engineering in providing the data needed and current technological challenges for AM. The students will be able to develop cost models for the processes to evaluate the production economics. Students will gain hands on experience with the processes and reverse engineering through the laboratory component.

Prerequisite: IE 305

IE 311: Principles of Solidification Processing
3 Credits

Discussion, laboratory practices, and laboratory experiments covering principles of metal casting and joining, nondestructive testing, and nonmetallic processing.

Prerequisite: IE 305

IE 312: Product Design and Manufacturing Processes
3 Credits

Theory and principles of mechanical design specification, verification, and manufacturing. Industrial engineering majors may not schedule this course.

Prerequisite: E MCH213, E MCH210H or E MCH210; Prerequisite or concurrent: E SC 414M or MATSE259

IE 322: Probabilistic Models in Industrial Engineering
3 Credits

The study and application of probability theory in the solution of engineering problems. IE 322 Probabilistic Models in Industrial Engineering (3) Probabilistic Models in Industrial Engineering is a first level junior course required for all the baccalaureate students in the Department of Industrial and Manufacturing Engineering. It will be offered in fall and spring semesters. It exposes students to the probability theory and models and discrete and continuous probability distributions which are necessary for solving real life engineering problems with uncertainty. Reliability modeling, one such problem of interest to the manufacturers and consumers, will be taught in this course. The course will also cover sampling distributions and point and interval estimation.
of mean, variance and proportion. Students taking this course should be familiar with elementary algebra, and differential and integral calculus.

**Prerequisite:** MATH 141

IE 323: Statistical Methods in Industrial Engineering

3 Credits

The study and application of statistics in the solution of engineering problems. IE 323 Statistical Methods in Industrial Engineering (3) Statistical Methods in Industrial Engineering is a second level junior course required for all the baccalaureate students in the Department of Industrial and Manufacturing Engineering. It will be offered in fall and spring semesters. It exposes students to the statistical tools such as estimation, testing of hypotheses, control charts, process capability indexes, gage R & R studies, simple regression and design of experiments, which are necessary for analyzing and solving real life engineering problems using data. Students taking this course should be familiar with the following topics taught in the first course in probability offered in the department: Probability concepts, Random variables, Independence, Probability Distributions (both discrete and continuous), Mathematical Expectation, Variation and Binomial and Standard Normal tables.

**Prerequisite:** IE 322

IE 322: Introduction to Work Design

3 Credits

Job analysis, cognitive and physical considerations in design of work, work measurement. IE 327 Introduction to Work Design (3) Introduction to Work Design is a first level junior course required for all the baccalaureate students in the Department of Industrial and Manufacturing Engineering. It will be offered in fall and spring semesters. It exposes students to the basic introductory tools required for analyzing and designing both the job and the worksite in a cost-effective manner, as well as measuring the resulting output. These tools include human information processing, basic auditory and visual displays, anthropometry and musculoskeletal principles, cumulative trauma disorders, work measurement and stopwatch time study. Students taking this course should be familiar with the basic concepts of cost.

**Prerequisite:** MATH 141 Prerequisite or concurrent: E MCH211 or E MCH210

IE 330: Engineering Analytics

3 Credits

The study and application of Computing, Information Technology and Analytics to Industrial Engineering. IE 330 Engineering Analytics (3) Engineering Analytics is a required course for all baccalaureate students in the Industrial Engineering major. It provides students with a quantitative background in descriptive analytics which deals with data mining, predictive analytics which deals with forecasting, and the use of Big Data in analysis. Examples of analytics will be presented in various industries including manufacturing, healthcare, and distribution. The students will learn to work in settings to make data-informed decisions from large data sets. Students taking this course should be familiar with differential and integral calculus, statistics, and basic computing.

**Prerequisite:** IE 322 and CMPSC200, CMPSC201 or CMPSC202
evaluate human-computer interfaces according to principles outlined in foundational human-computer interaction readings. Students will be engaged in the active learning of design, programming, and usability concepts by way of building interfaces on the personal computer as well as on the Palm computing platform. A major component of the course is the capstone design project for which student teams will communicate with users to design, implement, and assess interfaces to improve existing work processes in an actual work domain (e.g., safety office, power plant).

**Prerequisite:** IE 327 and CMPSC200, CMPSC201 or CMPSC202

IE 419: Work Design - Productivity and Safety

3 Credits

Methods improvement, physical work design, productivity, work measurement; principles and practice of safety. IE 419 Work Design - Productivity and Safety (3) Work Design - Productivity and Safety is a senior level course offered in the Department of Industrial and Manufacturing Engineering. It is one of two courses which follow IE 327, Introduction to Work Design. This course focuses on the methods improvement physical work design, productivity, work measurement; principles and practice of safety. It will be offered in fall and spring semesters. This course will enable students to perform work measurement: develop an MTM analysis, and carry out a work sampling study. Students taking this course are expected to understand basic concepts of work design.

**Prerequisite:** IE 327

IE 424: Process Quality Engineering

3 Credits

Statistical methods for engineering process characterization and improvement. For non-Industrial Engineering majors. IE 424 Process Quality Engineering (3) This course will provide students with probabilistic and statistical methods required to improve the quality of products and processes. It will start with the introduction to quality culture and the key elements of quality improvement. Then the methods for data presentation and interpretation are discussed. Next, the basic probability concepts and commonly used probability distributions are taught followed by statistical concepts, such as sampling distributions, point and interval estimation, and hypotheses testing. The concepts and methods of statistical tools required for process selection and improvement such as process capability indexes and control charts are discussed next. The course ends with the coverage of simple and multiple regression models.

**Prerequisite:** MATH 141 and prerequisite or concurrent: MATH 220 or B E 301; Concurrent: MATH 220 or B E 301

IE 425: Stochastic Models in Operations Research

3 Credits

This course will be an introduction to the modeling of stochastic systems. The student will learn about Poisson processes, Markov Chains, Dynamic Programming, and Queuing systems; both model formulations and solutions strategies. The students will learn several applications of these models in manufacturing and service systems, so that they can synthesize the lecture material. The student will study the topic of inventory theory, including fundamental trade-offs, economic order quantity (EOQ) modeling, and stochastic models. This will be a required course for all undergraduate students pursuing a baccalaureate degree in Industrial Engineering.

**Prerequisites:** MATH 220, IE 322

IE 428: Metal Casting

3 Credits

Application of engineering principles to the design of castings; casting of ferrous and nonferrous alloys; laboratory and simulation projects.

**Prerequisite:** IE 311, IE 312, or METAL408W

IE 433: Regression Analysis and Design of Experiments

3 Credits

Theory and Application of Regression Analysis and Design of Experiments to build models and optimize process and product parameters. IE 433 Regression Analysis and Design of Experiments (3) Regression Analysis and Design of Experiment is an elective course for the baccalaureate students in the Department of Industrial and Manufacturing Engineering. It will be offered in the spring semester. It exposes students to the two important statistical tools which are regression analysis and design of experiments. The specific topics include simple and multiple regression analysis, 2k full and fractional designs and analysis and Taguchi’s orthogonal arrays. Students taking this course should be familiar with the following topics taught in the second course in probability and statistics offered in the department. Properties of point estimators, sampling distributions, testing of hypotheses, and introduction to linear regression and design of experiments.

**Prerequisite:** IE 323

IE 434: Statistical Quality Control

3 Credits

Statistical techniques for univariate and multivariate monitoring of independent and autocorrelated processes; foundations of quality control and improvement. IE 434 Statistical Quality Control (3) This course is about the use of modern statistical methods for process and product improvement. The goal is to impart a sound understanding of the principles and basis for applying them in a variety of practical situations in manufacturing and service fields. The course will give an overview of the basic statistical methods and then concentrate on some of the more useful recent developments including univariate and multivariate techniques to monitor autocorrelated data, analyzing process capability, and improving process quality in short-run environments. The course objectives are to: (1) understand the assumptions and theoretical foundations of process monitoring; (2) know how to select, set up, and use monitoring charts effectively depending on the system characteristics; and (3) understand the basic business and economic principles of process monitoring.

**Prerequisite:** IE 323

IE 436: Six Sigma Methodology

3 Credits

Techniques for structured problem-solving to improve the quality and cost of products and processes. IE 436 Six Sigma Methodology (3) Six Sigma is a structured, quantitative approach to improving the quality
and cost of products and processes. It provides a framework for quality
improvement that builds upon statistical tools to achieve business
results. Although statistical techniques are emphasized throughout, the
course has a strong engineering and management orientation that will
prepare students for synthesizing the material that comprises the Six
Sigma body of knowledge. Important aspects of the Six Sigma approach
include a strong focus on the customer, proactive management, fact-
based decision-making, and interdisciplinary collaborations. The course
objectives are: (1) to give students a fundamental understanding of and
experience with solving a problem using the structured problem-solving
approach of Define-Measure-Analyze-Improve-Control (DMAIC); (2) to
provide an opportunity for students to solve or be involved with solving
business problems with statistical tools; and (3) to help students build
certainty in their business sense and statistical skills.

**Prerequisite:** I E 323

**IE 453: Simulation Modeling for Decision Support**

3 Credits

Introduction of concepts of simulation modeling and analysis, with
application to manufacturing and production systems. I E 453 Simulation
Modeling for Decision Support (3)Simulation Modeling for Decision Support is a senior level course offered in the Department of Industrial
and Manufacturing Engineering. It is the third course in operations
research offered to the undergraduate students. The objective of this
course is for students to learn to appropriately apply discrete event
simulation modeling for decision support in IE problems through
developing skills in model building, simulation output analysis, and
communication of technical information and conclusions drawn from
data analysis. Students taking this course should be familiar with
computer programming and operations research techniques.

**Prerequisite:** CMPSC200 , CMPSC201 or CMPSC202 and I E 323 and I E 425

**IE 454: Applied Decision Analysis**

3 Credits

Theory and practice of decision analysis applied to engineering problems.

**Prerequisite:** I E 322

**IE 456: Industrial Robot Applications**

3 Credits

Introduction to robotics, with emphasis on robot selection, programming,
economic justification for manufacturing applications. I E 456 Industrial Robot Applications (3)This course is a technical elective, and is
normally taken by students in their Senior years. In this course, students
learn about present and future status of robot applications, and are
required to apply fundamental knowledge of physics and mathematics
to develop software to analyze and control robots. The course deals
with mechanics and control of robot manipulators and wheeled mobile
robots. First, students are taught to analyze 3-D kinematics, statics
and dynamics of robot manipulators. Then, control algorithms for robot
manipulators are presented. Sensors, actuators and softwares used in
industrial robots are discussed. In the end, kinematics and control of
wheeled mobile robots are presented. During this course, application of
computer, particularly Matlab, is emphasized as much as possible.

**Prerequisites:** EMCH 212, ME 360; ME 367

IE 460: Service Systems Engineering

3 Credits

Use of quantitative models and methods for analysis, design and control
of service systems. I E 460 Service Systems Engineering (3) This course
focuses on using operations research methods such as mathematical
programming, network analysis and applied probability to solve problems
that arise in service systems. The lecture topics will include measuring
service quality, methods for evaluating service systems, financial
engineering & portfolio optimization, supply chain design & operations,
manpower planning & scheduling, and revenue management. Several
case studies will be used to illustrate applications. Course grades are
based on homework, case studies, mini-project, midterm and final exams.

**Prerequisite:** I E 322 and I E 405

IE 466: Concurrent Engineering

3 Credits

Concurrent engineering methods for product/process development,
capturing customer requirements, insuring manufacturability and serviceability.

**Prerequisite:** MATH 141 , MATH 220

IE 467: Facility Layout and Location

3 Credits/Maximum of 3

Analytical and computational methods for facility layout designs,
material handling systems and equipment, and location. I E 467 Facility
Layout and Material Handling (3) Facilities planning and design is the
process of locating and laying out the of industrial and service facilities
to best support the purpose of the facility while respecting constraints
on resources such as space and budget. The facility planning function
involves strategic, tactical and operational decisions depending on the
nature of the facility. In this course, we address both the layout and
the location of facilities. The layout problem involves a discussion of
the arrangement of departments within a plant, the design of material
handling systems and the design of storage and warehousing systems.
Structural and architectural design questions are NOT addressed in this
course. We shall also consider simplifications to the manufacturing
process that result in a simplification of the layout problem. Finally, we
will investigate a range of facility location problems, including median
and center location problems as well as some advanced variants. One
of the objectives of this course is also to familiarize the student with the
analytical and computer tools that can be used for facility planning and
other production and operations management problems.

**Prerequisite:** I E 322, I E 405

IE 468: Optimization Modeling and Methods

3 Credits

Mathematical modeling of linear, integer, and nonlinear programming
problems and computational methods for solving these classes of
problems. I E 468 Optimization Modeling and Methods (3) This course
provides an analytic treatment of optimization models in linear, integer,
and nonlinear programming. In particular, the course is concerned
with the development of mathematical optimization models and
computational solution techniques for solving these problems. The
mathematical modeling of real-world applications is complemented with
the use of modeling software such as LINGO or GAMs (General Algebraic
Modeling System), which allows the user to readily develop large-scale mathematical models. The course also considers solution techniques for solving these optimization problems. Students will develop a basic understanding of the solution techniques through actual implementation of simple algorithms, as well as the use of commercial software such as those provided by LINDO, LINGO, and GAMS.

**Prerequisite:** IE 405, MATH 231

IE 470: Manufacturing System Design and Analysis

3 Credits

Contemporary design and analysis methodologies used to organize systems for economic manufacture of products. IE 470 Manufacturing System Design and Analysis is a senior level course in manufacturing, required for all the baccalaureate students in the Department of Industrial and Manufacturing Engineering. Students will be exposed to the contemporary techniques used to design and analyze manufacturing systems for economic manufacture of products. Students will learn to design manufacturing systems (human and automated) to satisfy differing types of product demand. Students taking this course should be familiar with introduction to manufacturing and product specifications and introduction to manufacturing process design and analysis.

**Prerequisite:** Prerequisite or concurrent: with manufacturing process elective

IE 478: Retail Services Engineering

3 Credits

Introduction to retail services operations, process models, and application of information technologies to enhance productivity and profitability. IE 478 Retail Services Engineering (3)Objective of this course is to understand modern retail industry with focus on their operations and information technologies that are used in such systems. The course starts with an overview of the basics of types of retailing, their channels, and economics of their operations. Much of the emphasis in the course is on processes and information technologies used in retail industry such as point of sale systems, barcode, RFID/EPC, global data synchronization, EDI, XML, data warehouse, analytics for decision support and supply chain management. Several case studies will be used to draw out the application of tools and techniques covered in the course. Course includes a group project focused on retail industry. Specific topics will include: Global retail industry Multi-channel retailing Performance and metrics Pricing Layout and workforce Information Systems and SCM Barcode and RFID Data warehouse and analytics Case studies This course is a senior undergraduate level technical elective course in the IT and Service Engineering track in the Industrial & Manufacturing Engineering Department.

**Prerequisite:** IE 330

IE 479: Human Centered Product Design and Innovation

3 Credits

Consumer product design for a global market, incorporating human factors principles and user desires in a multicultural perspective. EDSGN (I E) 479 Human Centered Product Design and Innovation (3)This course will focus on consumer product design for a global market, incorporating human factors and ergonomics principles as well as user needs and emotional desires. The students will be led through product design process, various product design strategies, product planning, managing the development process, product evaluation, decision making tools, and market entry. Special emphasis will place on user centered design, incorporating user characteristics, user needs and emotional desires (including Kansei engineering approaches), survey methodology, and usability testing. To emphasize the multicultural perspectives in today’s global product design, interdisciplinary teams from two universities on opposites of the globe will apply these principles on actual industrial product designs for leading consumer product manufacturers.

**Prerequisite:** IE 408 or I E 419 or equivalent

IE 480W: Capstone Design Project

3 Credits

Industry-based senior capstone design project emphasizing manufacturing systems, service systems, and information systems in an interdisciplinary setting. IE 480W Capstone Design Project (3) Students will develop ‘real world’ engineering project experience through an industry-based project. Projects will focus on manufacturing systems, service systems, and/or information systems. Students will work in teams to complete the projects, where the teams will be interdisciplinary and composed of students from within the major with different areas of expertise and students from other majors as needed. Students interested in taking this course should have senior standing and be familiar with basic principles in manufacturing, operations research, and human factors engineering. Students will be evaluated through in-class participation, and a project that consists of weekly communication with the project sponsor along with three design reviews, interim written reports and a final report, presentation and poster. This is a Writing-Intensive course in the department and hence students will be given opportunities to practice writing throughout the semester in multiple writing assignments.

**Prerequisites:** IE 302, IE 305, IE 323, IE 327, IE 405. Prerequisite or Concurrent: IE 330

Writing Across the Curriculum

IE 494: Senior Honors Thesis

1-9 Credits/Maximum of 9

Students must have approval of a thesis adviser before scheduling this course.

Honors

IE 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

IE 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
IE 499: Foreign Studies–Industrial Engineering
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

Industrial Engineering Technology (IET)

IET 101: Manufacturing Materials, Processes, and Laboratory
3 Credits
Mechanical properties of materials; primary processing methods used in manufacturing; ferrous and nonferrous metals; important plastic plus ceramic materials; dimensional verification and measurements; mechanical properties evaluation; laboratory methods; statistical interpretation of data.

IET 215: Production Design
2 Credits
The study of manufacturing processes for the purpose of part creation and/or part feature creation using both current and advanced technologies.
Prerequisite: IET 101 or MET 105

IET 216: Production Design Laboratory
2 Credits
Laboratory methods in production design including conventional and advanced manufacturing processes, computer applications, and automation/robotics.
Prerequisite: or concurrent: IET 215

IET 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

IET 308: Statistical Quality Control
3 Credits
Fundamentals of probability and statistics, introduction to quality control fundamentals, control charts, acceptance sampling.

IET 311: Elements of Metallurgy
3 Credits
Introduction to metallurgical concepts, metallurgical testing, phase diagram studies, heat treating concepts, ferrous and nonferrous systems.
Prerequisite: ET 322

IET 321: Manufacturing Processes
3 Credits
Manufacturing processes for producing metal, plastic, and ceramic items. Primary emphasis is placed on machine tool processes.

IET 333: Engineering Economics for Technologists
2 Credits
Fundamentals of engineering economics; equivalence and rate of return analysis; replacement models; depreciation and tax considerations; and economic decision making for technologists.
Prerequisite: MATH 022 and MATH 026 or MATH 040 or MATH 041

Information Sciences and Technology (IST)

IST 97: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

IST 99: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

IST 110: Information, People and Technology
3 Credits
The use, analysis and design of information systems and technologies to organize, coordinate, and inform human enterprises. IST 110 Introduction to Information, People and Technology (3) (GS) Information, People and Technology presents the high points of an education in the College of Information Sciences and Technology. It opens an intellectual journey through the ideas and challenges that IT professionals face in the world. It will address major questions such as: How can we use technology to organize and integrate human enterprises? How can technology help people and organizations adapt rapidly and creatively? What can we do about information overload? Three perspectives (or facets) address the core issues: information or the basic science of data encoding, transmission and storage; people or the interactions among technologies, institutions, regulations and users; and technology or the design and operation of basic information technology devices. Students completing the course will be confident users and consumers of information technology. Students will develop research and analytical skills to evaluate specific devices and understand how those devices function in larger socio-technical systems. Students will be able to predict and anticipate the impact of new technologies on human institutions as well as understand the potential impact of institutions on the use and design of information technologies. The course employs an action-oriented approach. Students learn by doing - formulating and solving problems drawn from professional contexts, detecting and recovering from errors related to technology use, and locating, reading and studying materials that support their analysis and problem-solving.
Students will accomplish this by participating in team-based learning. The course provides students with the opportunity to use, modify, and evaluate software to search for, frame, and express ideas with fluency. A variety of mechanisms are used to assess student performance. These evaluation methods typically include exams, quizzes, homework assignments, group projects, and peer and self-assessments. IST 110 is the introductory course in IST, and, as such, serves as a prerequisite for 200-level (intermediate) IST courses. It is a required course for all majors and minors in IST, and meets requirements for a General Education or Bachelor of Arts Social Science (GS) course. The course is delivered with significant student interaction with technology. At University Park, it is offered in multiple sections (typically 40-60 students per section), in the Fall and Spring semesters. At other Penn State campuses, it would be offered in class sizes typically ranging between 20-50 students.

General Education: Social and Behavioral Sciences (GS)

IST 111: Seminar in IST

1 Credits

Introduction to academic requirements, career planning & information literacy for students majoring in College of IST. IST 111 Seminar in IST (1) IST 111 introduces the student to the academic requirements, career planning and information literacy for the School of Information Sciences and Technology degree programs. Seminar in Information Sciences and Technology is required of all Information Sciences and Technology Associate degree candidates. Upon completion of the course, the student will have an understanding of the programs and requirements of the School of Information Sciences and Technology and the University, and the career options for which they prepare students. The student will also develop and exercise habits and techniques for continuing self-assessment of learning styles, personality traits, vocational interests, and career plans. The student will learn how to maintain involvement in professional conversations and networks, including local, state, national, international organizations, listservs, etc. Students will have an understanding of the programs and requirements of the School of Information Sciences and Technology degree programs. Seminar in Information Sciences and Technology is required of all Information Sciences and Technology Associate degree candidates. Upon completion of the course, the student will have an understanding of the programs and requirements of the School of Information Sciences and Technology and the University, and the career options for which they prepare students. The student will also develop and exercise habits and techniques for continuing self-assessment of learning styles, personality traits, vocational interests, and career plans. The student will learn how to maintain involvement in professional conversations and networks, including local, state, national, international organizations, listservs, etc.

Students will have a basic knowledge of professional news literature, and the ability to identify and use reference tools and databases, which provide access to professional knowledge and literature. Finally, the student will have a basic understanding of government plans, policies and actions regarding the information professions including: regulatory agencies of the executive branch, legislative activities, and judicial decisions at local state and national levels. Students will be graded on course attendance, participation, examinations and brief exercises. Since this is a core requirement, all IST students will be enrolling; it should be offered at least once per year. As enrollment growth warrants, it may require more frequent offering.

First-Year Seminar

IST 130: Emerging Technologies in Popular Culture

3 Credits

A survey course that explores emerging technologies used to produce and consume popular cultural artifacts. IST 130 Emerging Technologies in Popular Culture (3) (GA) Popular culture refers to people's capacity to classify, codify, and communicate their experiences symbolically. Popular culture is shaped by the development of new technologies of text, sound and image recording and dissemination. While mass media companies have traditionally served as the primary means by which popular culture is diffused throughout society, emerging technologies enable people to produce and consume their own cultural artifacts as well as reframe mass produced cultural artifacts. As people become more adept in their use of emerging technologies, mass media industries such as film, news, radio and television respond by introducing Internet-based services that deliver both newly designed and repackaged traditional content to consumers. We use four approaches to analyze the intricate relationships between people and industry, emerging technologies and popular culture: 1. Production Analysis: Who owns the media? Who creates new media? What technologies are being used to produce new media? How does new media challenge the historical dominance of mass media? 2. Textual Analysis: how do specific works of popular culture gain their meaning? 3. Audience Analysis: How do different audiences make sense of the same cultural and technological artifacts? 4. Historical Analysis: how do current popular culture perspectives on emerging technologies differ from those of the past? What accounts for these changing perspectives? Through individual and team-based learning activities, students will analyze and interact with cultural artifacts across popular culture genres. The course content and the assignments are directed at helping students to both create and critique cultural artifacts in ways that demonstrate their understanding of, engagement with, and reflections upon the relationships among people and industry, emerging technology, popular culture. Assessment is based on students' ability to clearly and convincingly articulate their analysis through classroom discussions, individual activities, and team-based projects. Students will gain hands-on experience with social media such as wikis, virtual worlds, and podcasts. Students will also design and produce short films that demonstrate their ability to integrate and synthesize central themes from the course. Grading will be based on individual and team components. This is an introductory course in IST, and meets the requirements for a General Education course in Arts (GA). This course is delivered with significant student and instructor interaction with computers and digital media.

General Education: Arts (GA)
IST 140: Introduction to Application Development

3 Credits

A first course in concepts and skills for application development. Math 22 is recommended as preparation for IST 140. This is a first course in application development. Applications are computer programs developed to support human activity in enterprise and other social contexts. Examples of applications might include programs to help run a business, manage personal information, or provide entertainment. The emphasis of this course is on learning to translate practical problems through domain analysis into software applications usable in a human or organizational context. It will focus on the knowledge needed to create applications that use high level programming languages, combining original code with existing code libraries and application programming interfaces (APIs). Students in this course will learn application development concepts including problem solving using computer programming; how to recognize the need for different types of data and how to use data of different types to represent an application’s information; application testing and debugging; basic computer organization; and the basics of operating systems. This is a hands-on, practical course designed for students without prior computer programming experience who will use computer languages and tools to develop applications in their later courses and future careers.

Enforced Prerequisite at Enrollment: C or better in Math 21 or placement above the level of Math 21 in the mathematics placement test. Recommended Preparation: Math 22

IST 140H: Introduction to Application Development

3 Credits

A first course in concepts and skills for application development. IST 140 Introduction to Application Development (3) This is a first course in application development. Applications are computer programs developed to support human activity in enterprise and other social contexts. Examples of applications might include programs to help run a business, manage personal information, or provide entertainment. The emphasis of this course is on learning to translate practical problems through domain analysis into software applications usable in a human or organizational context. It will focus on the knowledge needed to create applications that use high level programming languages, combining original code with existing code libraries and application programming interfaces (APIs). Students in this course will learn application development concepts including problem solving using computer programming; how to recognize the need for different types of data and how to use data of different types to represent an application’s information; application testing and debugging; basic computer organization; and the basics of operating systems. This is a hands-on, practical course designed for students without prior computer programming experience who will use computer languages and tools to develop applications in their later courses and future careers.

Honors

IST 170N: What is Information?

3 Credits

What is Information? considers the material and social nature of information in historical and contemporary contexts. How has information been managed and valued? How have information infrastructures served as sites of social and political connection or antagonism? How have ideas about information changed over time and how have they remained the same? The course integrates perspectives from the social sciences and the humanities, and prepares students to think about (and act in) a world in which information (and its linked concepts, like data) play an increasingly important social and political role. The course addresses the history of information as both a concept and as a matter of social practice, and then focuses on three major topics: how information is presented, how information is organized, and how information is put to social and political use. Moving from the earliest periods of human history and their ‘information ages’ (including the birth of writing and the dawn of printing and mass literacy), the course leads students into our contemporary ‘information society’ and the ways in which both the use and manipulation of information shape our lives.

Cross-listed with: CAS 170N
Bachelor of Arts: Humanities
General Education: Humanities (GH)
General Education: Social and Behavioral Sciences
General Education: Social and Behavioral Sciences (GS)
GenEd Learning Objective: Critical and Analytical Thinking
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

IST 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

IST 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

IST 210: Organization of Data

3 Credits

Introduction to concept of databases including the storage, manipulation, evaluation, and display of data and related issues. IST 110 is recommended as preparation for IST 210. IST 210 Organization of Data (3) As the database management software becomes one of the critical components in modern IT applications and systems, a solid understanding of the fundamental knowledge on the design and management of ‘data’ is required for virtually any IT professionals. In a business setting, such IT professionals should be able to talk to the clients to derive right requirements for database applications, ask the right questions about the nature of their entities and in-between relationships in their business scenarios, analyze and develop an effective and robust design to address business constraints, and react to the existing database designs as new needs arise. Modern IT professionals should be able to guide a company in the best use of the diverse database-related technologies and applications toward the ‘Big Data’ era. As such, IST 210 aims to prepare students for obtaining fundamental understanding on the database concepts and practical skills to analyze and implement a well-defined database design. In particular, IST 210 provides an introduction to physical database design, data modeling, relational model, logical database design, SQL query language, and instructors’ choices on database applications and
advanced concepts. Students will learn to use a real-world commercial
or open-source database management system, too. Upon taking IST 210,
students should be able to understand the implications and future
directions of databases and database technologies.

IST 220: Networking and Telecommunications

3 Credits

Introduction to digital network topologies; transmission media, signal
modulation, digital packet switching and routing, systems integration,
communications management, and security. IST 110 is recommended
as preparation for IST 220. The course includes an introduction to:
telemcommunications history; telecommunications transmission media
(conducted and radiated); transmission characteristics (including an
introduction to coding and modulation techniques); error characteristics,
detection, and correctional; local and wide area networking applications,
hardware, and software; the OSI models; industry standards; topologies;
protocols; internetworking devices; communications management;
security and recovery; information system applications; and the selection
of telecommunications and networking systems. Special attention will
be paid to evolving Internet Protocol (IP) technologies, e.g., Internet2.
IST 220 is an introduction to digital networking and telecommunications and
their applications in information systems. It is a required course
for both the two-year and four-year Information Sciences and
Technology degrees, and is a critical part of the curriculum. Its objective
is to provide the students with a basic understanding of the working
of digital networks and the ability to apply this knowledge to specific
applications and situations. Evaluation of knowledge objectives will be
by examination; and of application (i.e., selection and management)
objectives by grading of group and individual projects and case studies.
As a 'core course', IST 220 will be offered every semester at University
Park, in as many sections as necessary to meet current demand. At other
locations where the Associate and Baccalaureate degrees are offered, it
will be offered 1-2 times annually depending on demand. Ideally, section
size should not exceed 45 students per class. While the course is about
digital technology and how it works, it is not a 'hands on' course, or
a training course in particular equipment and/or applications. While
there will be demonstrations of relevant technologies, the course is
not equipment-intensive and will not involve special technology needs
beyond the normal access to computing and the Internet. The course
is not duplicative of any other course currently offered. Although there
is some overlap with CMPET 401-402, CSE 458, and COMP 421, none of
these courses cover exactly the same material, and they operate at a
different level of depth and detail. MIS 180 also overlaps somewhat, but
it appears that no current course provides the same 200-level mixture of
local and wide-area networking and business communications topics.

IST 222H: Community Informatics

3 Credits

This course combines theory and practice to help students develop
a contextualized understanding of community as a conceptual lens
for understanding human history and human experience. This course
examines the history of community, and of interactions between
community and information technology, emphasizing how possibilities
and practices of community have been transformed by information
technology through the last half century, and currently. The course
includes opportunities for students to engage with, and thereby come
to understand and appreciate local community institutions off campus.
Thus, in the tradition of the Chicago School of Sociology, the course
directly utilizes the local community itself as a living laboratory for the
study of community informatics. The objective of the course is to help
students think critically about community and technology in society, and
more specifically, about the how information technology can be used to
shape human participation in and experience of community. The course
is an honors course. It is run as a small class. It is taught by a research
leader in the field of community informatics. The class environment is
dominated by debate and discussion. And the course has challenging
assignments, involving direct interaction with local community groups.

GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

IST 225: PC Hardware Basics

3 Credits

Preparation for PC hardware support: Students learn data recovery and
how to build, configure, upgrade, troubleshoot, diagnose, and repair
PC's. IST 225 PC Hardware Basics (3) IST 225 covers materials needed
to prepare students to function as PC support technicians in business
and industry. In a hands-on laboratory environment, students learn
to build, configure, upgrade, troubleshoot, diagnose, and repair PC
hardware. Course modules cover all the basic hardware components
of the PC - their functions, interactions, installation, configuration,
upgrading, repair, and replacement. Detailed coverage of system
BIOS, CMOS setup, and the boot process is also included. Preventive
maintenance and data recovery procedures are also studied. IST 225 is
one of four courses required for the Networking Option in the Associate
degree in Information Sciences and Technology (IST). The IST 225 is
designed to help the student to thoroughly understand all the basic
hardware and firmware PC components, from PC resources, their
function (BIOS and CMOS setup) and interaction, to diagnosing and
resolving resource conflicts. The IST student should be able to install,
configure, troubleshoot, repair, recover data, correct errors or replace
all basic hardware components. The student should also be able to
make appropriate hardware recommendations, purchases and upgrade
decisions, as well as, determine appropriate preventive maintenance
procedures. Finally, the Information Sciences and Technology major will
learn how to foster communications, interpersonal, and group interaction
skills through appropriate collaborative and active learning projects,
laboratory exercises, and related experiences. Achievement of knowledge
objectives will be evaluated by examinations. Ability to perform hands-
on support activities will be evaluated by grading appropriate group and
individual hands-on laboratory projects, scenarios, and case studies. The
majority of campuses offering the Associate degree in Information
Sciences and Technology will have 20-30 students enrolled in the course.
The course will be offered one semester each academic year.

Enforced Prerequisite at Enrollment: IST 220

IST 226: Networking Essentials

3 Credits

Concepts for peer-to-peer and server-based network.International
Organization for Standardization-Open Systems Interconnection (ISO-
OSI) reference model, industry standards, troubleshooting, performance
monitoring, and optimization. IST 226 Networking Essentials (3) IST 226
covers basic networking concepts such as network types, cable types,
wireless technologies, and network adapters. It discusses network
models, including the ISO-OSI reference model and all industry standard
network architectures. Both peer-to-peer and server-based commercial
network operating systems are introduced with hands-on laboratory
experience provided. Basic network administration issues are introduced.
Internetworking/enterprise networking devices and architectures are
also covered, as are network troubleshooting, performance monitoring,
and optimization. IST 226 is one of four courses required for the
Networking Option in the Associate degree of Information Sciences and
Technology (IST). Achievement of knowledge objectives will be evaluated
by examinations. Ability to perform hands-on network administration
and support activities will be evaluated by grading appropriate group and
individual hands-on laboratory projects, scenarios, and case studies.Upon
completion of this course, the students will be able to understand both
cabled and wireless media types and be able to select appropriate media.
The student will also understand the ISO-OSI and IEEE models and
other industry standards, the roles of drivers and protocols and network
architectures. The student will have experience with the installation,
configuration and administration of basic server-based networking,
as well as, an understanding of wide area/enterprise networking,
performance monitoring and network troubleshooting. Most important,
the student will learn how to foster communications, interpersonal, and
group interaction skills through appropriate collaborative and active
learning projects, laboratory exercises, and related experiences. The
majority of campuses offering the Associate degree in Information
Sciences and Technology will have 20-30 students enrolled in the course.
The course will be offered one semester each academic year.

Enforced Prerequisite at Enrollment: IST 226

IST 227: Network Administration

3 Credits

Administering peer-to-peer and client/server networks: Planning,
installation, server configuration, resource management, remote
access, performance monitoring, and optimization. IST 227 Network
Administration (3) IST 227 covers the essential knowledge and skills
required to successfully administer peer-to-peer and client/server
networks. Hands-on experience with commercial networking software
such as Windows 9x, NetWare, Windows NT Workstation, and Windows
NT Server is an important course component. Topics covered include
pre-installation planning, network installation, network software
architecture, server configuration, profiles and logon scripts, user account
management, policies, resource sharing and security, disk management,
remote access, backup and recovery, performance monitoring, and
network optimization. IST 227 is one of four courses required for the
Networking Option in the Associate degree in Information Sciences and
Technology (IST). Upon completion of this course, the students will be
able to understand network software architecture, plan and install peer-
to-peer and server-based networks. The IST student will also be able
to manage user accounts, profiles, logon scripts, and system policies.
The student will have practical experience with disk storage, resources,
security, backup and recovery procedures. Finally, the student will be
able to manage remote access features, monitor and optimize network
performance, and foster communications, interpersonal, and group
interaction skills through appropriate collaborative and active learning
projects, laboratory exercises, and related experiences. Achievement of
knowledge objectives will be evaluated by exam. Ability to perform hands-
on network administration and support activities will be evaluated by
grading appropriate group and individual hands-on laboratory projects,
scenarios, and case studies. The majority of campuses offering the
Associate degree in Information Sciences and Technology will have 20-30
students enrolled in the course. The course will be offered one semester
each academic year.

Enforced Prerequisite at Enrollment: IST 226

IST 228: Advanced Network Administration

3 Credits

TCP/IP planning, installation, configuration: IP addressing, subnetting,
routing, Dynamic Host Configuration Protocol (DHCP), Windows Internet
Naming Service (WINS), address/name resolution, Domain Name System
(DNS); database, web, mail server management. IST 228 Advanced
Network Administration (3) IST 228 covers the essential knowledge
and skills required to successfully administer TCP/IP networks and
applications servers such as database servers, web servers, and mail
servers. Hands-on experience with commercial software such as SQL
Server, Exchange Sever, and Internet Information Server is an important
course component. Topics covered include TCP/IP planning, installation,
and configuration, IP addressing, subnetting, IP routing, DHCP, WINS,
address and name resolution protocols, DNS, and management of
database, web, and mail servers. IST 228 is one of four courses required
for the Networking Option in the Associate degree of Information Science
and Technology (IST). Upon completion of this course, the IST students
will be able to plan, install, configure and troubleshoot TCP/IP. The
student will also understand IP addressing, subnetting, supernetting,
routing and configuration. The student will have practical experience
installing and configuring DHCP, WINS, and various protocols. Finally,
the IST student will have administrative skills with database, server
and web software, as well as, the ability to foster communications,
interpersonal, and group interaction skills; through appropriate
collaborative and active learning projects, laboratory, exercises, and
related experiences. Achievement of knowledge objectives will be
evaluated by exam. Ability to perform hands-on network administration
and support activities will be evaluated by grading appropriate group and
individual hands-on laboratory projects, scenarios, and case studies. The
majority of campuses offering the Associate degree in Information
Sciences and Technology will have 20-30 students enrolled in the course.
The course will be offered one semester each academic year.

Enforced Prerequisite at Enrollment: IST 226

IST 230: Language, Logic, and Discrete Mathematics

3 Credits

Introduction to formal languages, mathematical logic, and discrete
mathematics, with applications to information sciences and technology.
IST 230 Language, Logic, and Discrete Mathematics (3) IST 230 is one of
the five introductory core courses for the baccalaureate degree program
in Information Sciences and Technology. The purpose of IST 230 is to
provide students with an understanding of an array of mathematical
concepts and methods which form the foundation of modern information
science, in a form that will be relevant and useful for IST students. Exams
and assignments will be used to assess that understanding. IST 230 will
draw some of its material from several mathematical disciplines:
formal language theory, mathematical logic, discrete mathematics. In-
depth treatments of each of these subjects are offered elsewhere in the
University as advanced mathematics and computer science courses.
The difference is that IST 230 will present these concepts in a more
elementary way, with much more emphasis on IST applications, and in
a more eclectic, web-based format. IST 230 will be structured as a small
number of modules. Each module will introduce a group of mathematical
concepts and present applications of those concepts to problems of
IST 240: Introduction to Computer Languages

3 Credits

This introductory course will combine theory and practice to help students develop a rich understanding of the constantly evolving US digital culture. We will survey a variety of information and communication technologies (ICTs), and their modes of production, distribution, and consumption by individuals and institutions including traditional media, business, and government. Specifically, we will examine the impact of social and mobile technologies on how we consume, share, resist, and participate in digital culture. Students will also develop basic technical and media creation skills. The general theme of the course is analyzing contemporary cases to understand the significance of new ICTs in shaping our identities, behaviors, language, imaginations, and society. Students will read texts authored by some of the most formative thinkers examining the impact ICTs on society, and apply these core concepts in our analysis of digital cultures. Students will actively use microblogging, RSS feeds, social networking and other Web 2.0 tools to produce and consume content, interact with peers, and reflect critically on this experience. This course will emphasize awareness of current events and technology trends, as well as critical thinking skills and the ability to frame and explore issues through written, visual and verbal communication. This is an introductory course in IST and COMM, and meets the requirements for a Social and Behavioral Sciences (GS) and Humanities (GH) Course. This course is delivered with significant student and instructor interaction with computers and digital media.

Cross-listed with: COMM 234N

General Education: Humanities (GH)
General Education: Social and Behavioral Scien (GS)
General Education - Integrative: Interdomain
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

IST 235: Gender and the Global Information Technology Sector

3 Credits

Integrates information technology and gender studies. Overview issues and socio-cultural shaping of gender in the IT field.

Cross-listed with: WMNST 235

United States Cultures (US)

IST 237: Digital Entrepreneurship

3 Credits

Introduction to foundational concepts for starting and operating digital businesses, including business models, funding, strategic, operational, structural, and cultural components. IST 237 Digital Entrepreneurship (3) The proliferation of new IT combined with the reach of the Web, Internet, and mobile devices is opening up new possibilities for individuals and companies to leverage IT to create new digital businesses. This course provides a broad overview of the role of entrepreneurial thinking and innovation in advancing IT-focused businesses. Students will examine how these skills can be leveraged to create new IT-driven businesses as well as to create competitive advantage for existing businesses via new IT products and services (i.e., intrapreneurship). This course provides a broad overview of the role of entrepreneurial thinking and innovation in advancing IT-focused businesses and familiarizes students with the processes and tools used to conceptualize and plan new innovative products and/or services that leverage IT as a core component of their business model. Students will be introduced to concepts, tools, and principles of business management including business strategy, finance, marketing, human resources, and leadership within the context of IT business models. This will be a very hands-on active class. Using problem-based learning (PBL) and a ‘flipped’ classroom, students will spend time outside class learning key concepts and time inside class applying them. Students will have the opportunity to work in teams to practice skills related to identifying novel ideas, assessing market opportunities, defining customer segments, identifying key partners, and building IT-based business models. In addition to regular in-class hands-on activities, each student will be expected to contribute to a class blog.

IST 240: Introduction to Computer Languages

3 Credits

Introduction to the specification and application of languages and language paradigms that interact with computers. IST 230 is recommended to be taken before or at the same time as IST 240. IST 240 is one of two courses added to the three core courses for the associate degree program to form the core courses for the baccalaureate degree program in Information Sciences and Technology. The primary goal of this course is to study the foundations underlying the design, specification and use of a wide variety of language paradigms used to interact with computers. The following details the content of the course: (1) nature of languages; (2) elements of languages; (3) classification of languages; (4) formal descriptions of languages; (5) data and types; (6) names and bindings; (7) control structures; (8) language processors; and (9) study experiences. Student evaluation may be accomplished by
means of assignments, examinations, and possibly a project. This course will most likely involve Web-based course material and will therefore require student access to computers and the Web. Although other existing courses are similar to IST 240 in content, none of those courses fit the objective of this course and of this program.

**Enforced Prerequisite at Enrollment:** C or better in CMPSC 101 or IST 140. Recommended Concurrent: IST 230

IST 240H: Introduction to Computer Languages

3 Credits

Introduction to the specification and application of languages and language paradigms that interact with computers.

Honors

IST 242: Intermediate & Object-Oriented Application Development

3 Credits

Intermediate application development including algorithms, data structures, and object-oriented concepts. IST 242 Intermediate & Object-Oriented Application Development (3) This is a second course in application development. It will focus on the intermediate knowledge needed to create applications that use high level programming languages, combining original code with existing code libraries and application programming interfaces (APIs). The perspective will be of application development that takes place within a human and organizational context; in this sense data structures will be construed as representations of organizational entities and information, and algorithms as a reflection of human and organizational processes and activity. Students will also learn about common application architectures and design patterns. This is a hands-on, practical course designed for IST design and development option undergraduate students and others as an elective.

**Enforced Prerequisite at Enrollment:** C or better in IST 140 or CMPSC 121 or IST 240.

IST 250: Introduction to Web Design and Development

3 Credits

Introduction to how the World Wide Web utilizes emerging technologies. Students acquire conceptual and practical understanding of constructing Web sites. IST 110 is recommended to be taken before or at the same time as IST 250. This course provides an introduction to the visual/information design of Web sites and the technologies of the World Wide Web. Students will acquire a sound conceptual understanding of how to design and construct simple to complex web sites, and how this knowledge can be applied in practical ways across all disciplines. Knowledge gained in this course will support the Information Sciences and Technology (IST) Associate degree, as well as other degree options within IST and across the university. Knowledge gained in this course will also support other disciplines within the University, as the Web becomes the predominant publication medium of the 21st Century. There are two major course objectives: (1) students will be able to perform a written critical evaluation of any web site, using the criteria listed below for evaluation; (2) students will be able to develop a written and/or electronic comprehensive proposal for the design or redesign of a web site, based on their understanding of visual and information design.

IST 256: Programming for the Web

3 Credits

IST 256 will provide students with the knowledge and skills to create both basic and more dynamic web-based content pages and applications. The course will first focus on acquiring competencies in core web development languages including HTML, CSS, and JavaScript, then move on to more advanced topics such as information architecture, incorporation of multimedia, and the use of application programming interfaces (APIs) and application development frameworks for the web. The course will follow an active learning pedagogy and incorporate a substantial project component. The first part of the course consists of introduction of web programming concepts, techniques, and tools. Students will demonstrate understanding of the course content by building web pages via individual and group activities. The latter half of the course will involve more in-depth project work both as individuals and in groups.

**Enforced Prerequisite at Enrollment:** IST 250 or IST 242

IST 260W: Introduction to Systems Analysis and Design

3 Credits/Maximum of 3

Introduction to systems analysis and design, stressing the process of requirements acquisition, specification, design, and implementation. IST 260W Introduction to Systems Analysis and Design (3) IST 260W is an introductory course to system analysis and design. It covers the process and is intended to be independent of the specific system, whether it be a hardware, software, telecommunication, logistics, or information system. This course can be used as a prerequisite to specific Associate degree system design courses. It can also be used for breadth for those IST students who do not pursue technical emphases. It serves as a writing across the curriculum course for the Information Sciences and Technology Associate degree. The course looks at two design paradigms. A small design project is included in the course. The objectives of the course include: (1) teaching students the importance of teamwork, project management, and oral and written communication skills; (2) teaching students a systems design strategy that emphasizes customer requirements at all stages of the process; (3) introducing students to the object oriented design process; (4) giving students a full design experience on a small project such as designing an e-Commerce system; and (5) showing students examples of the writing required for systems design and requiring them to write individual and team reports as well as give oral presentations on their designs. Students will be evaluated by examinations and by grading of their written reports and oral presentations. System design courses are taught at the upper-division level in Engineering and Business departments. This is a lower-division course that serves as an introduction for Associate degree students to give them a background for project-level courses in their fourth semester. It will serve as a core requirement in the Associate degree program and act as a prerequisite for the design courses that are capstone courses in many of the Associate degree options. The course will be offered one semester each academic year.

**Enforced Prerequisite at Enrollment:** IST 110, IST 210, IST 220, and ENGL 15

Writing Across the Curriculum
IST 261: Application Development Design Studio I

3 Credits

Introductory design and development studio course for IST and SRA students. IST 261 Application Development Design Studio I (3) This studio course will provide opportunities for students to practice the technical skills acquired in their foundation application design and development courses, specifically, in IST 140 and IST 242. The course will follow the general format of experiential studios in the arts and architecture. It will be primarily problem-based and project oriented. Peer and instructor design critiques will be the major feedback and assessment mechanisms. Students in the IST Software Design Studios will be expected to complete deliverables in each phase of the systems development lifecycle (i.e. problem definition, requirements analysis, design, development, test) regardless of the development paradigm employed (plan-based, agile, etc). A key objective of this design studio will be to introduce students to the challenges faced in different application design and development activities before exposing them to specific techniques to manage these challenges in upper-division courses. Projects may be undertaken by individuals, pairs, or larger groups but each studio participant will be responsible for producing significant individual project deliverables. Project ideas may come from the student or from the instructor; however, projects related to students’ other course deliverables will require the agreement of both instructors. Students will be required to maintain a design and development journal. This journal will be the analog of an engineering notebook or artist’s sketchbook and should contain a running account of the students design and development ideas, explorations, rationale, and other notes. The IST design and development studios are a forum for serious students to engage with the concepts, process, tools, and materials used to envision and build software applications. Both collaboration and individual performance will be emphasized, as will experimentation, risk-taking, and enthusiasm for the process of designing and building working software applications. Students will be expected to improvise and then respond constructively to feedback from instructors and peers.

Enforced Prerequisite at Enrollment: C or better in IST 242

IST 261H: Application Development Design Studio I

3 Credits

Introductory design and development studio course for IST and SRA students.

IST 294: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

IST 295A: Distributed Team Project

1-3 Credits/Maximum of 3

IST 295A Distributed Team Project (3) This course offers a web-based distributed project that simulates an internship of a student in a company. Faculty gather information system design projects from industry or units within the university. These projects are announced on the web and students bid to join groups to work on the projects. Each project has a faculty mentor with an additional industrial mentor where appropriate. Student groups are formed by the mentors based on the resumes and skill sets of the students. Students bid on one project at a time until they have been selected to be a member of a project team. Membership in a group may include students from different campuses throughout the Penn State System. The majority of communication within the groups and with the mentors is to be via the internet. This course gives a true experience in information project development. Students will be graded as a team by the faculty mentor on the quality of the project. An individual written report detailing the work accomplished during the course is required from all team members. The grade of the individual report and the team project grade form a basis for student evaluation. The objectives of the course include: (1) teaching students the importance of teamwork, project management, and oral and written communication skills; and (2) exposing students to the virtual workplace and providing them with meaningful information and technology related tasks.

Enforced Prerequisite at Enrollment: IST 110

IST 295B: IST Internship

1-3 Credits/Maximum of 3

IST 295B IST Internship (1-3) This course is offered as an internship for a student within a company. Faculty and industry collaborate to specify the duties of the intern. The faculty member responsible for the course then approves the internship. The internship must consist of a minimum of 150 hours of meaningful information and technology related tasks. A written report by the student, detailing the work accomplished during the internship, is required. This report and a report from the intern supervisor form the basis for the grade. The objectives of the course include: (1) teaching students the importance of teamwork, project management, and oral and written communication skills; and (2) exposing students to the workplace and providing them with meaningful information and technology related tasks.

Enforced Prerequisite at Enrollment: IST 110

Full-Time Equivalent Course

IST 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

IST 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

IST 298: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

IST 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction. International Cultures (IL)
IST 301: Information and Organizations

3 Credits

Overview of organizational structures and functions. Includes information processing and analytic perspectives of organizations. IST 301 Information and Organizations (3) This course provides students the opportunity to learn and experience: 1. Applicable organization and the ways in which it can alter and enable these activities. 2. A series of analytic techniques that students can use to investigate the effects of new IT on work and organization. 3. Examples and problems set in and drawn from a range of domains including military, medical, high technology, business and government. This course is designed around a series of ill-structured, contemporary problems that require students to develop responses by applying analytic techniques and theories of work and organization. At the end of the course, students will be able to: 1. Apply theories of work and organization as analytic techniques. 2. Conduct organizational and inter-organizational process analyses. 3. Map information flows among organizational units and actors.

Enforced Prerequisite at Enrollment: IST 210 and IST 220

IST 302: IT Project Management

3 Credits

Exploration and application of the basic concepts, methodologies, and tools of project management in the field of information sciences and technology. IST 302 IT Project Management (3) This course is designed to introduce and explore the basic concepts and practices of project management and help students understand how to plan and manage IT projects successfully. Throughout the course, students will be asked to utilize course concepts, methodologies, and tools while utilizing technology applications and addressing real-world problems. Students will learn the skills necessary to define project scope, create workable project plans, and manage projects with quality, budget, and schedule in mind. The course is structured around the key phases of project lifecycle, including initiating a project, developing project plans, executing and managing a project, and closing out a project. In addition, students will be taught how to identify and address the change management and political issues associated with project management.

Enforced Prerequisite at Enrollment: IST 210 and IST 220

IST 310: Digital Media Metrics

3 Credits

Analysis of audience data for traditional and new media to create metrics for advertising, content marketing and audience analysis. COMM (IST) 310 Digital Media Metrics (3) The emergence of a converged marketplace where all media are now digital, including broadcasting, websites and social media, has created enormous new opportunities for advertising, promotions and content distribution. The proliferation of media has made the marketplace much more competitive, but simultaneously the availability of data too has increased significantly making possible the much more precise and segmented distribution of messages and content. For media practitioners in this new environment, a familiarity with audience data, metrics and dimensions is essential. This course is an introduction to the methods for collecting, analyzing and utilizing audience data for traditional and new media. The class will cover the fundamentals of traditional media audience analysis, web metrics, and social media metrics, specifically as they relate to audience measurement, advertising campaign evaluation and content distribution. Students will learn the methods of data collection, analysis and use for traditional broadcast media, and the transformation of these practices in the newly digitized and converged multiplatform, multiscreen environment. The course will also cover the basics of data capture for new media (at an appropriate technical level), and the use of this data for the design of metrics appropriate for various purposes such as monitoring traffic, conversions and revenue generation. The use of metrics in pricing models for advertising, sales generation and content distribution will also be covered. Students will be introduced to data sources for digital media audience analysis, with a special focus on Google Analytics. Students passing this class would be able to pass the Google Analytics Individual Qualification test.

Cross-listed with: COMM 310

IST 311: Object-Oriented Design and Software Applications

3 Credits

Introduction to object-oriented applications including applications in an Object Oriented Design (OOD) language or OOD languages. IST 311 Object-Oriented Design and Software Applications (3) IST 311 is among the courses making up the Application Design & Development option in the Baccalaureate degree in Information Sciences and Technology. This course is normally taken in the 5th or 6th semester. It is the first upper-division course in the option sequence. The course is intended to provide students with a background in object-oriented design and object-oriented application development. Students will learn the fundamentals of object-oriented analysis, design, and modeling. They will apply design concepts and develop the skills necessary to bring an idea through the different phases of the application development lifecycle. The course normally involves students working on teams to design and develop working application prototypes. Upon completion of this course, students will be able to apply object-oriented design principles using object-oriented modeling and programming languages, show how object-oriented principles increase the quality of complex applications, and begin development of the team skills necessary when developing complex systems.

Enforced Prerequisite at Enrollment: C or better in IST 242 or CMPSC 221

IST 331: Foundations of Human-Centered Design

3 Credits

Interdisciplinary survey of topics and methods related to the human-centered design use and usability of information systems. IST 331 Foundations of Human-Centered Design: User and System Principles (3) This course provides a focused introduction to one of the most complicated parts of information systems design: users and the contexts in which they live, work, and play. The course provides a balance between theory and practice, which are tightly intertwined in this area. Students will learn how to use social science theories about human capabilities and group behavior to predict whether an information system will be usable and useful, and they will learn about the opportunities and challenges that are associated with a wide range of emerging technologies. Students will also gain skills in designing and evaluating information systems that meet the needs of a target audience. Because the information technology design space evolves rapidly, much of the technology-related content covered in this course will evolve from year to year; however the focus throughout will be understanding and responding to the needs, capabilities and preferences of the users of interactive information systems. The format of the class may include lectures, readings, in-class or online discussions, projects, or case studies.
Assessment of student performance may include short assignments, quizzes, exams, or in-depth projects.

**Enforced Prerequisite at Enrollment:** C or better in IST 240 or IST 242

IST 331H: Organization and Design of Information Systems: User and System Principles

3 Credits

Interdisciplinary survey of topics related to the use and usability of information systems.

Honors

**IST 337: Technologies for Digital Entrepreneurs**

3 Credits

Introduction to the tools available to IT entrepreneurs considering starting-up or looking to develop new applications. IST 337 Technologies for Digital Entrepreneurs (3) This course introduces the student to the applications, technologies, and tools for entrepreneurs engaging in or considering engaging in a start-up or running a small-to-medium size business. Although there will be some consideration of product concept development and implementation, much of the course will be devoted to the tools and infrastructure need to support a start-up up a small-to-medium size business. These concepts and skills will also support entrepreneurs looking to develop new applications to open new market opportunities. This will be a very hands-on and active class that relies on approaches such as problem-based learning (PBL), 'flipped' classrooms, and learning by doing. Students will spend time outside class learning key concepts and time inside class applying them. Students will have the opportunity to implement applications of the back-end technologies in support of a start-up or small- or medium-sized enterprises.

IST 361: Application Development Design Studio II

3 Credits

Second of two design and development studio courses for IST and SRA students. IST 361 Application Development Design Studio II (3) This studio course will provide opportunities for students to practice technical skills acquired in their previous design and development courses to date, specifically, in IST 140, Introduction to Application Development; IST 242, Intermediate and Object-Oriented Application Development; and IST 311, Object-Oriented Design and Software Applications. The course will follow the general format of experiential studios in the arts and architecture. It will be primarily largely problem-based and project oriented. Peer and instructor design critiques will be the primary feedback and assessment mechanism. Students in the IST Software Design Studios will be expected to complete deliverables in each phase of the systems development lifecycle (i.e. problem definition, requirements analysis, design, development, test) regardless of the development paradigm employed (plan-based, agile, etc). A key objective of this design studio will be to provide application development opportunities where students can apply knowledge and practice techniques gained from their foundation and first upper-division courses. Projects may be undertaken by individuals, pairs, or larger groups but each studio participant will be responsible for producing significant individual project deliverables. Project ideas may come from the student or from the instructor; however, projects related to students' other course deliverables will require the agreement of both instructors. Students will be required to maintain a design and development journal. This journal will be the analog of an engineering notebook or artist's sketchbook and should contain a running account of the students design and development ideas, explorations, rationale, and other notes. The IST design and development studios are a forum for serious students to engage with the concepts, process, tools, and materials used to envision and build software applications. Both collaboration and individual performance will be emphasized, as will experimentation, risk-taking, and enthusiasm for the process of designing and building working software applications. Students will be expected to improve and then respond constructively to feedback from instructors and peers.

**Enforced Prerequisite at Enrollment:** C or better in IST 311

IST 389: Leadership and Technology for Instruction

1-4 Credits

Leadership in college instructional settings; teaching and learning principles; instructional technologies; and best practices in coaching, team facilitation, learning assessment. This course prepares undergraduate students for their role as Learning Assistants (LA's) in the College of IST. In this course, LA's will prepare to assist in instructional environments that encourage students to participate actively in their learning. LA's will be immersed in activities that introduce them to some of the teaching methods aimed at promoting active learning in College of IST classrooms, while being prepared for leadership responsibilities such as coaching, providing feedback, evaluating, monitoring academic integrity, fostering inclusive learning environments, and supporting teams. Students will also learn about information technologies designed for managing courses and increasing student engagement. Outside of class meetings, students will serve as instructional assistants in an assigned course. They will be mentored, supervised, and evaluated on the job by their assigned faculty member.

**Prerequisite:** IST 110; SRA 111. Co-requisite: Employment as a Learning Assistant in the College of IST.

IST 390: Introduction to Professional Development

1 Credits

Interdisciplinary course to introduce students to the issues, concepts and skills involved in successfully transitioning into professional life. IST 390 Introduction to Professional Development (1) IST 390 focuses on introducing the students to professionalism and professional development in the field of IT. Emphasis will be placed on the theories and skills required for planning, developing, implementing, and managing professional skills. For example, students will attempt to master relationship skills such as client relationship management and interpersonal communication, business skills such as presentation planning and scheduling; leadership skills such as decision making and goal setting; and career management skills such as networking and interviewing. Additional focus will be placed on the various resources and strategies available for pursuing a successful job search. Students will be given opportunities to practice the concepts, theories, and methodologies learned in class by working in teams on real-world case studies (many derived from corporate partners). Students will be periodically assessed through examinations, case studies, individual and group assignments and projects, and other performance indicators where appropriate. The audience is students who are ready to enter the work force. For those pursuing Baccalaureate Degrees, this would mean a class standing of Junior or Senior. For those pursuing Associate Degrees, this would mean a second year standing.
IST 397: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

IST 398: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

IST 399: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

IST 402: Emerging Issues and Technologies
3 Credits/Maximum of 9

Introduction to emerging issues, technology forecasting and analysis; overview of emerging issues and leading technologies in IST and how they impact information systems, users, the IT labor force and society. IST 402 Emerging Issues and Technologies (3 per semester/maximum of 9) Information Sciences and Technology (IST) is a rapidly changing discipline. New issues, methods, tools, applications and terminology appear on a continual basis. A key skill is the ability to analyze new issues and assess new technologies within the context of the information age. This course prepares students to understand the difference between potential technological failures and success, fads and revolutionary technology. It also helps students to view emerging issues as an opportunity rather than a threat. Intellectual tools are provided to assist in understanding issues, assessing and forecasting technological changes for feasibility and planning in real world situations. The course provides students with: a.) A process framework for analyzing new issues and a theoretical framework to study technological and social impacts of such issues. b.) A process framework for recognizing and understanding new technologies and a theoretical framework to take advantage of such technologies. c.) Exposure to new issues and technologies. d.) Hands-on experience in studying recent technological advances in detail. The course will also provide students with the ability to: a.) Understand the concept of issue analysis and technology forecasting. b.) Recognize the important of new issues and technologies in information sciences. c.) Incorporate these new issues and technologies into an existing information systems framework. d.) Develop and implement new technology solutions, or discuss policies for addressing emerging issues. e.) Predict impacts of issues and technology on information management, users, policies, and the environment. Each time the course is offered, new issues and/or information technology areas will be explored. Examples of issues and technologies addressed include: wireless communications, security and intrusion detection, intelligent agents, web search, languages, intelligent systems, bio-informatics, advanced visualization and human-computer interactions, ubiquitous-pervasive computing, groupware, computer aided cognition, system design by global IT teams, IT outsourcing, and digital divide.

**Enforced Prerequisite at Enrollment:** IST 210 and IST 220

IST 402H: Emerging Issues and Technologies
3 Credits/Maximum of 9

Introduction to emerging issues, technology forecasting and analysis; overview of emerging issues and leading technologies in IST and how they impact information systems, users, the IT labor force and society.

Honors

IST 411: Distributed-Object Computing
3 Credits/Maximum of 3

Introduction to distributed-object computing and its use in client/server and real-world computing applications. This course presents the fundamental concepts of distributed-object computing, including client/server computing which is an important platform for real-world computing systems. The course focuses on design, development, and deployment of distributed systems. Students will also consider issues of managing distributed systems and the relationships between organizational processes and information-system architectures. IST 411 is an elective course for the Baccalaureate degree program in Information Sciences and Technology. Students completing the Systems Development Option may take this course to fulfill option requirements. Upon completion of this course, students will have a broad understanding of the fundamental concepts of distributed objects and distributed computing architectures, have the ability to apply these concepts to real-world applications, and be able to design, develop, deploy, and maintain distributed applications.

**Enforced Prerequisite at Enrollment:** C or better in IST 311

IST 412: The Engineering of Complex Software Systems
3 Credits/Maximum of 3

Introduction to the engineering of complex software systems including software system specification, design and implementation, integration and test, and evolution. IST 412 The Engineering of Complex Software Systems (3) This course presents the fundamental concepts of the engineering of complex software systems, including iterative and agile development strategies. The course gives students insight into the full software development cycle, including design, implementation, test and quality assurance, deployment, maintenance, and project estimation and management. IST 412 is an elective course for the Baccalaureate degree program in Information Sciences and Technology. Students completing the Systems Development Option may take this course to fulfill option requirements. Upon completion of this course, students will have a broad understanding of the fundamental concepts of complex system software engineering and be able to apply these concepts to managing and developing a complex software project over the full software development cycle.

**Enforced Prerequisite at Enrollment:** C or better in IST 311

IST 413: Usability Engineering

3 Credits

This course addresses activities in the system development process that ensure usability. It considers the emerging concept of usability, requirements gathering and analysis, activity design, information design, interaction design, documentation design, user testing and usability evaluation. IST 413 Usability Engineering (3) The modern system development process includes concurrent engineering of usability -
features of a system that make it approachable, learnable, as well as easy and satisfying to use. Topics in the course include the emerging concept of usability, requirements gathering and analysis, the use of scenarios and claims to describe and analyze both current human practices and envisioned practices, activity design, information design, interaction design, documentation design, and user testing, including techniques for formative and summative usability evaluation.

**Enforced Prerequisite at Enrollment:** C or better in IST 331

IST 420: Fundamentals of Systems and Enterprise Integration

3 Credits

Introductory course on integration of information technology into different venues, including the planning, development, and implementation of the integration. IST 420 Fundamentals of Systems and Enterprise Integration (3) IST 420 focuses on introducing the student to the role of information systems and technologies in achieving a variety of system goals. Emphasis will be placed on the theories and skills required for planning, developing, implementing, and managing the integration of information technology and different systems. IST 420 is required of all Information Sciences and Technology (IST) undergraduates who have chosen the Information Technology Integration Option in their baccalaureate degree. It is the prerequisite for IST 421 which is also required for the Option. Upon completion of the course, the student will be able to recognize information technology integration. They will also understand the 'business processes and information value chain' within a system, and be able to foster an understanding of the role of IT in system integration. Students will be periodically assessed through examinations, case studies, individual and group assignments and projects, and other performance indicators where appropriate.

**Enforced Prerequisite at Enrollment:** C or better in IST 240 or IST 242 and C or better in IST 301 and C or better in IST 302

IST 421: Advanced Enterprise Integration: Technologies and Applications

3 Credits

Advanced course on the integration of information technology into systems applications. IST 421 Advanced Enterprise Integration: Technology and Applications (3) IST 421 expands the knowledge gained in IST 420 on the theories and skills required for planning, developing, implementing, and managing information systems. IST 421 is required of all Information Sciences and Technology (IST) undergraduates who have chosen the Information Technology Integration and Application Option in their Baccalaureate degree. Upon completion of the course, the student will have expanded knowledge of information technology and systems integration issues across multiple application settings. They will also have a deeper understanding of the specific information technology (both hardware and software) that can serve as the foundation for designing systems within an organization, and have experience that fosters an understanding of the role of IT achieving system performance goals.

**Enforced Prerequisite at Enrollment:** C or better in IST 420

IST 422: Enterprise Architecture Foundations

3 Credits

Theoretical foundations and practice of enterprise architecture. IST 422 Enterprise Architecture Foundations (3) Enterprise Architecture is the overall framework and set of strategic objectives for the usage of technology over time across an organization. Enterprise Architecture can also be described as the top-down, strategy-driven, integrating framework that brings together and manages the business model, applications and technology. Its primary goal is to facilitate improvement and deliver business-aligned information systems. This course presents the key components and processes involved in the effective creation and governance of enterprise architectures. Students will acquire knowledge about the key foundational aspects of enterprise architecture, learn what decisions need to be made and how to make them, and be able to explain and justify their recommendations.

**Enforced Prerequisite at Enrollment:** IST 301

IST 423: Enterprise Information Management and Storage Architecture

3 Credits

Provide in-depth study of the concepts, issues, and technologies associated with the complex world of enterprise information and storage architecture. IST 423 Enterprise Information Management and Storage Architecture (3) This course is designed to introduce students to enterprise information storage and management concepts, issues, trends, and technologies. As a junior/senior level course, the focus will center on applying design concepts and associated technologies to real-world problems in the area of enterprise information storage and management. Existing partnerships with leading information management firms will be leveraged to provide real-world exposure to the complex enterprise information storage and management issues facing all organizations today. This course also focuses increasingly on the critical areas of information security and the emerging field of information storage virtualization. The course will mix technical details, applied value, and organizational insights of enterprise information storage and management through the use of labs, case studies, real-life problems, and team projects. This is a unique course that has generated great industry interest.

**Enforced Prerequisite at Enrollment:** IST 301

IST 424: Architectural Modeling of Organizations

3 Credits

Theoretical foundations and practice of enterprise modeling. IST 424 Architectural Modeling of Organizations (3) Enterprise Architecture is the overall framework and set of strategic objectives for the usage of technology over time across an organization. Enterprise Architecture can also be described as the top-down, strategy-driven, integrating framework that brings together and manages the organization model, applications and technology. Its primary goal is to facilitate improvement and deliver organization-aligned information systems. Effective modeling is crucial for successful EA. This course provides an exposure to the foundational concepts and practices of effective enterprise modeling for EA. Students will acquire knowledge about the key foundational knowledge in modeling different layers of the enterprise, learn what decisions need to be made and how to make them, and be able to explain and justify their models and recommendations. This course explores the use and effectiveness of architectural modeling to describe an organization and to integrate and manage IT resources strategically from an enterprise perspective. Hands-on exercises and cases studies are used to illustrate the role and effect of enterprise architecture concepts and methodologies. Emphasis is placed on understanding different architectural approaches, standards, and styles. Students will use enterprise architectural tools to develop descriptive models and understand how to integrate and manage IT within and between organizations. For each general topic area, core readings are used to define standard vocabulary, concepts...
and relations, methods and criteria for evaluation, and implications for enterprise architecture. Students participate in class discussions as well as complete written assignments that focus on solidifying the understanding of the course content. Students also complete a team modeling project that is motivated by, and whose outcomes are discussed with respect to, one or more theoretical frameworks covered in the course.

Enforced Prerequisite at Enrollment: IST 301

IST 425: New Venture Creation

3 Credits

Via problem-based learning, teams define new business ventures to meet current market needs, develop business plans, and present to investors. ENGR 425ENGR (MGMT/IST/ENTR) 425 Introduction to Entrepreneurship (3) The goal of ENGR (MGMT/IST/ENTR) 425 is to better prepare undergraduate students to be business leaders in adaptive, globally-minded, technology-savvy companies. The course is structured so students develop skills that are of high value in any workplace: they develop improved leadership skills, higher self-efficacy, creativity and the ability to deal with ambiguity. On course completion, students will have a working knowledge of traditional and non-traditional ways for identifying a new product or business opportunity, quantifying the potential, understanding the key competitive factors, researching the market opportunity assessment; engineering and IST students focus on design refinements, prototyping support, and (if appropriate) making technology suggestions to the inventor. Upon completing the course, the students will have a working knowledge of different university and corporate technology or invention commercialization processes, important intellectual property management tools for inventions (patents, license agreements, option agreements) source of funding to move inventions toward product development, and delivering top quality presentations which outline the recommended commercialization path. Students who enjoy open-ended projects which involve the interplay of business and invention of who wants to work on interdisciplinary teams with the newest inventions will find this course a valuable course. Effective transfer of new invention or innovation to a commercial product requires at least three different functional communities to interface: technical, legal and business. Each uses a different language, comes from different educational and cultural backgrounds, and may have an inherent distrust of the others. These functional barriers are difficult to overcome. This course teaches how these barriers can be broken down as student teams help bridge the perceived chasm between key players in the invention commercialization process. In these teams, students bring the skills and knowledge from their major to develop an invention commercialization recommendation for the Technology Transfer Office and the inventor. For example, business students focus on finance and market opportunity assessment; engineering and IST students focus on design refinements, prototyping support, and (if appropriate) making technology suggestions to the inventor.

Enforced Prerequisite at Enrollment: (ECON 102 or ECON 104 or ECON 14) and CAS 100

Cross-listed with: ENGR 426, MGMT 426

IST 431: The Information Environment

3 Credits

Survey of social environment of information technology themes: Community, sovereignty, privacy, ethics, economics, and knowledge management. IST 431 The Information Environment (3) The ways that people communicate and utilize information is being changed dramatically by new information technologies. Information and the technologies that are employed by create, organize, transfer, and utilize information in a networked environment, using such global networks as the internet or internal networks such as intranets, have become a key component of the global economy. This global environment can change the way we interact, communicate, and function on the job and in our daily lives. The new technologies also raise new economic, legal, ethical, and social issues that are of grave importance to society. IST 431 examines the overall context of the new information environment and new technical issues relating to knowledge management in the global networked environment. IST 431 is a required course in the Information, Society and Public Policy Option. There may be some overlap of material with COMM 405, COMM 483, COMM 485, PHIL 407, PHIL 423,
PHIL 433 and PL SC 460m but none of these courses cover the same material, or approach it in the same manner. Upon completion of this course, the student will gain an appreciation of the differences between ‘cyberspace’ and the ‘real’ world. The student will also understand that the implementation and modern information technologies has significant social and policy implications that demand appropriate policy issues in several different contexts (global, national, local). The student will also be able to discuss the major themes in information policy studies (e.g., community, privacy, access, economic participation, security) and be able to relate these themes to the applications of particular technologies. They will be able to describe policy frameworks and issues, as well as the ethical and social implications of these choices. Homework assignments; Socratic dialogue; analysis and write-up of case studies; assessment of group research projects and presentations; participation in on-line discussion groups; two mid-term and one final examination (objective and essay). The precise mix of evaluation components will be determined by individual instructors; a typical weighting might be exams (60%), written assignments and papers (20%), and collaborative projects (20%). IST 431 will be offered every semester at University Park. At every other campus location where the Baccalaureate degree program is offered, the course will be offered 1-2 times annually depending on demand. Student enrollment at University Park will begin at approximately 50-75 in the first year and grow to 200 over a 3-4 year time period. At other locations, enrollment should range from 25-50 annually.

**Enforced Prerequisite at Enrollment:** IST 210 and IST 220

**IST 432: Legal and Regulatory Environment of Information Science and Technology**

3 Credits

Legal environment of information technology, constitutional/political issues, intellectual property, management, e-commerce, privacy, access, computer contracting, cyberspace regulation. IST 432 Legal and Regulatory Environment of Information Science and Technology (3) The new information technologies are creating a global economy heavily dependent upon networked information, hardware, software, and electronic commerce, which calls for adaptation of existing legal and business practices. In many cases, the new technologies pose problems that existing laws or legislation are inadequate to cope with; but the complexity of the environment makes new solutions elusive. This course examines the legal, regulatory, and political environment within which intellectual property rights and examination of contracting issues, licensing of information and products, data protection, patents, cyberspace regulation, and implications for personal privacy. It also focuses on where technology is making regulation difficult by challenging previous concepts upon which our legal and regulatory systems depend.

**Enforced Prerequisite at Enrollment:** IST 301 or SRA 231

**IST 437: Digital Design & Innovation**

3 Credits

This course introduces students to design thinking, user-driven innovation and user experience, and business model implementation issues for IT-driven innovation. IST 437 Digital Design & Innovation (3) IT-driven innovation requires a deep understanding of the user, the context of the compute environment, and a systems approach to identifying critical system features. In addition, the IT-driven innovation must meet user needs in a commercially feasible manner. Students taking this class will work in teams to create a design concept and refine it through user analysis and prototyping. To get to a commercially feasible concept, students will analyze the competitive landscape and the ecosystem in which their concept will reside. Each team will express their concepts using the Business Model Canvas - a tool used in both educational and professional settings - to identify the value proposition and potential monetization strategies. Throughout the class, students will be introduced to tools in the IT design space through hands-on problem solving, role playing, and improvisation, among other techniques. A critical part of this course is the in-class coaching that teams will receive from the instructor, as well as guest speakers who can demonstrate the real world challenges of entrepreneurship and innovation. Frequent communication practice using techniques such as idea pitches will help students refine their ability to express their ideas more effectively.

**Enforced Prerequisite at Enrollment:** IST 237

**IST 440W: Information Sciences and Technology Integration and Problem Solving**

3 Credits

Problem-based approach to technology integration by focusing on real-life problems faced by an organization. IST 440W Information Sciences and Technology Integration and Problem Solving (3) This course is the undergraduate capstone for Information Sciences and Technology majors in the Baccalaureate degree. It requires students to work collaboratively in teams of 4-6 students, with each team comprised of students from more than one option and, if possible, more than one campus. Each team is given a significant real-world problem or issue in which information technology is part of the solution. Teams will be expected to manage the project effectively and to communicate its results clearly to a variety of audiences within an organization. Major topics include: review of problem-based and case-based learning; overview of project management practices; assessment of organizational and technical issues posed by the scenario; development and testing of work plans and analysis of options; communication within the group; communication within a management environment; and presentation of results to a variety of audiences inside and outside the organization. IST students need to understand the organizational and social contexts in which technology functions. Indeed, many technology problems are multi-dimensional—they have an economic dimension, a legal dimension, a human resources dimension, and so on. This course will require students to analyze, evaluate, and test alternative solutions and to weigh their advantages and disadvantages for the organization. Students will be evaluated in three ways: by the effectiveness of their team’s solution of the technical or organizational problem; by the quality of the students’ written and oral presentations; and by the quality of their project management and internal communication. A substantial written paper will be required of each student and each time; in addition, each team will also construct a Web-site for sharing results. Other technologies will be used as required by the project. It is expected that membership on teams of students will be drawn from the various options in the Information Sciences and Technology major. At least nine credits (including at least one IST 300-level and one IST 400-level course) in the student’s option must be completed before enrollment in IST 440W. This course should be offered every fall and spring semester beginning in the fall semester 2002. It will be taught in sections of 25 and have a total enrollment of approximately 100 per semester.

**Enforced Prerequisite at Enrollment:** ENGL 202C or ENGL 202D and seventh semester standing (this course is intended for seniors)

Writing Across the Curriculum
IST 441: Information Retrieval and Organization

3 Credits

The practices and foundations of access to textual and nontextual information using the principles of information retrieval and web search. Introductory course for seniors and graduate students covering the practices, issues, and theoretical foundations of organizing and analyzing information and information content for the purpose of providing access to textual and non-textual information resources. Introduces students to the principles of information storage and retrieval systems and databases. IST 441 Information Retrieval and Organization (3) This is an introductory course for Information Sciences and Technology senior and graduate students covering the practices, issues, and theoretical foundations of organizing and analyzing information and information content for the purpose of providing access to textual and non-textual information resources. This course will introduce students to the principles of information storage and retrieval systems and databases. Students will learn how effective information search and retrieval is interrelated with the organization and description of information to be retrieved. Students will also learn to use a set of tools, such as search engines, and procedures for organizing information. They will become familiar with the techniques involved in conducting effective searches of information resources.

Enforced Prerequisite at Enrollment: C or better in IST 210 and (IST 240 or IST 242)

IST 442: Information Technology in an International Context

3 Credits

International concepts to improve strategies for the design, dissemination, and use of information technology. IST 442 Information Technology in an International Context (3) (IL) IST 442 focuses on the implications of the international context for the design, diffusion and use of information technology. The course will provide students with an understanding of the three crucial IT-related characteristics of the international context: 1. information infrastructure, 2. the economic and policy environment, and 3. social and cultural structures. Students will develop analytic skills that will enable them to predict the implications of the international context for information technology and will apply these skills in a final project that addresses a problem in the areas such as information systems integration, interface design, or management of information technology projects.

Enforced Prerequisite at Enrollment: IST 110 International Cultures (IL)

IST 445: Globalization Trends and World Issues

3 Credits

This course covers trends in globalization and their influence on U.S. policy making as well as the role of the U.S. in international issues.

Recommended Preparation: 6 credits of honors course work. Honors

IST 446: An Introduction to Building Computer/Video Games

3 Credits

An interdisciplinary course that introduces students to process and techniques involved in developing a video or computer game. IST 446 An Introduction to Building Computer/Video Games (3) The course is project driven. Students will form teams and collaborate with one another to develop an interactive immersive experience. During the course, students will be exposed to several techniques for building graphical 3D worlds, animating characters, moving the camera and lights in real-time, and building intelligent characters (using state machine-based architectures). They will also learn different techniques of interactive storytelling, such as linear narrative, branching narrative, and adaptive narrative. Furthermore, they will be introduced to several tools that will aid in realizing their own projects and ideas, such as graphic engines (e.g. Wildtangent), and game engines (e.g. Unreal Tournament). The course is heavily project driven. Students will, in the first half of the course, learn the tools used in the development of interactive 3D environments. They will submit 2 individual assignments using these tools to develop a simple interactive environment. These individual assignments will be graded and critiqued. In the second half of the course, students will work on a game idea from generation to actual implementation. Students will be grouped in teams of three to develop a project, integrating concepts they learned through the class. They will use one or more of the tools they learned to build this project. Projects will be continuously evaluated and critiqued during game tuning sessions. In addition, projects will be formally evaluated through two prototypes that are critiqued by the class and the instructor. The students will continuously revise their designs and projects through the semester. The final version of the system is due by the end of the semester.

Enforced Prerequisite at Enrollment: C or better in IST 311 and IST 331

IST 450A: Search Engine Marketing

3 Credits/Maximum of 3

This project-oriented course provides students with the knowledge and skills necessary to conduct a sponsored research and keyword advertising-based marketing campaign. This course offers the students an opportunity to gain knowledge and hands on experience on sponsored search and keyword advertising. In this course, students will gain knowledge and skills to advertise products and services using keyword advertising. Strategies for developing successful advertising campaigns will be discussed, including targeting potential customers based on the geo-location, applying A/B testing to identify the feasible advertising set-up, and organizing keywords with various products and services for effective management. In addition, various tools will be introduced to students for facilitating efficient and effective performance. By participating in a firm-based project, the students will acquire the experience of business consulting for advertising using current web-based techniques.

Enforced Prerequisite at Enrollment: COMM 310 or IST 310
Cross-listed with: COMM 450A

IST 450B: Digital Advertising

3 Credits

This course will explore the digital advertising ‘ecosystem,’ identify key players and trends, and review programmatic media buying. COMM (IST) 450B Digital Advertising (3) Beyond keyword advertising, digital has transformed many industry activities related to buying and delivering advertising. Information technology and big data have revolutionized the way media and content providers interact and negotiate with advertisers, agencies and third parties. This course will explore the digital advertising and media ‘ecosystem,’ identify key players and trends, lay out the basics of digital advertising campaign management, and review performance analysis and evaluation. Students passing this class will be able to
take the Interactive Advertising Bureau Digital Media Sales certification exam. Students can opt to take the exam any point in time, while it’s not required.

**Enforced Prerequisite at Enrollment:** COMM 310 or IST 310

Cross-listed with: COMM 450B

IST 451: Network Security

3 Credits

Fundamental issues and concepts of network security, network security technologies and protocols, and emerging technologies in network security. IST 451 Network Security (3) Information technology has become a key component to support critical infrastructure services in various sectors of our society. In an effort to share information and streamline operations, organizations are creating complex networked systems and opening their networks to customers, suppliers, and other business partners. Increasing network complexity, greater access, and a growing emphasis on the Internet have made information/network security a major concern for organizations. IST 451 focuses on network security. The course will provide the students with a comprehensive understanding of the fundamental issues and concepts of network security, and the mainstream network security technologies and protocols that are widely used in the real world. The course will also address emerging technologies in network security. A major component of the course will be several team-based hands-on attack-defense projects. Each project has two phases: the attack phase and the defense phase. A group may be asked to defend against the attacks enforced by another group. This course will incorporate collaborative and action-learning experiences wherever appropriate. Emphasis will be placed on developing and practicing writing and speaking skills through application of the concepts, theories and technologies that define the course.

**Enforced Prerequisite at Enrollment:** C or better in IST 220 and SRA 221

IST 452: Legal and Regulatory Environment of Privacy and Security

3 Credits

Exploration of legal, regulatory, public policy, and ethical issues related to security and privacy for information technology professionals in public institutions, private enterprise, and IT services. IST 452 Legal and Regulatory Environment of Privacy and Security (3) Institutional constraints on security historically focused on traditional criminal enforcement and a slow but steady increase in civil remedies through the twentieth century. Professional security protection could satisfy reasonable assurance criteria by managing legal and regulatory risks based on commonly-held understandings of burglary, theft, conversion and widely-understood but related institutional constraints in the protection of physical property. This focus retained effectiveness so long as physical security over tangible property appeared successful, even extending to the maintenance of control over mainframe computers and their peripherals. However, the proliferation of networked computers has made access and storage ubiquitous, vastly increasing the vulnerability of confidential data, private information and critical national security infrastructure. Security and privacy regulation compliance responsibility now falls much more harshly on both organizations and most of their individual personnel. These complex new duties constrain organizations in the data management industry as well as suppliers and users of data and all participants in the information supply chain, including consultants, software suppliers, applications service providers, maintenance, outsourcing and communications providers. Other factors exacerbate these liability risk management difficulties. Advances in network computer storage and use, the broadening perception of heightened value of information and the pervasive availability of rich data warehousing increase the vulnerability of data management. Risks of information theft and integrity losses as well as the explosion of privacy rights and national security concerns now require pervasive and fuller understanding of liability risk management principles/techniques among all managers and subordinates in the data management industry and in government. Information suppliers, handlers, owners and network service providers are increasingly exposed to civil litigation, regulatory oversight/compliance and criminal prosecution for various information-related wrongs. For example, confidentiality is compulsory for corporate trade secrets, privacy is required for personally identifiable information about individuals and secrecy is mandatory over matters of national security; all of which create complex legal duties that are fundamentally driving the design of information handling processes. This course surveys legal and regulatory constraints on information security and privacy practices.

**Enforced Prerequisite at Enrollment:** IST 432

IST 453: Legal, Regulatory, Policy Environment of Cyber Forensics

3 Credits

Legal, regulatory and public policy environment of computer and network forensics that constrain investigatory and monitoring activities in computer and network environments. IST 453 Legal, Regulatory, Policy Environment of Cyber Forensics (3) This course covers the major legal, regulatory and policy issues in cyber-forensics including, pre-trial discovery, production of electronic documents (electronic data discovery or EDD), custody, EDD cost balancing, admissibility of electronic evidence, ‘business records’, expert witness roles and qualification, constitutional rights to privacy and confidentiality, privilege, litigation support, forensic service providers, document retention standards, legal constraints on electronic records management, EDD employment policies, key EDD laws, civil, criminal and regulatory procedure and evidence, litigation holds, spoliation, obstruction of justice, interaction with inside and outside service providers and counsel, EDD strategy, audit trails, and multi-disciplinary relations with computer and network forensic experts. Students are exposed to the failure and successes of particular cyber forensic techniques in the dominant legal and regulatory forums.

**Enforced Prerequisite at Enrollment:** IST 110 and sixth semester standing or higher.

IST 454: Computer and Cyber Forensics

3 Credits

Fundamental issues and concepts of computer forensics; aspects of computer and cyber crime; methods to uncover, protect, exploit, and document digital evidence; tools, techniques, and procedure to perform computer and cyber crime investigation. IST 454 Computer and Cyber Forensics (3) Computer and communication technologies have become the key components to support critical infrastructure services in various sectors of our society. In an effort to share information and streamline operations, organizations are creating complex networked systems and opening their networks to customers, suppliers, and other business partners. Increasing network complexity, greater access, and a growing emphasis on the Internet have made information and network security a major concern for organizations. IST 454 focuses on computer and cyber forensics. Students will learn different aspects of computer and cyber crime and ways in which to uncover, protect, exploit, and document digital evidence. Students will be exposed to different types of tools (both software and hardware), techniques and procedure, and be able to use
them to perform rudimentary forensic investigations. A major component of the course will be several hands-on exercises and a final team-based project. This course will incorporate collaborative and action-learning experiences wherever appropriate. Emphasis will be placed on developing and practicing writing and speaking skills through application of the concepts, theories and technologies that define the course. Integrated throughout are perspectives of computer and related legal process, including computer crimes from state and federal law, methods of interaction with law enforcement and prosecutors, admissibility of expert witness testimony and the use of forensic reports in civil, regulatory and internal investigations.

**Enforced Prerequisite at Enrollment:** C or better in IST 220 or SRA 221

IST 456: Information Security Management

3 Credits

Contemporary Security Issues; security management processes, architecture and models; risk analysis and management; security planning, analysis and safeguards; security policies development and administration; contingency planning, incidence handling and response; and security standards and certification processes. IST 456 Information Security Management (3) Communication technologies have become a key component to support critical infrastructure services in various sectors of our society. In an effort to share information and streamline operations, organizations are creating complex networked systems and opening their networks to customers, suppliers, and other business partners. Increasing network complexity, greater access, and a growing emphasis on the Internet have made information systems and network security a major concern for organizations. IST 456 focuses on security and risk management. Students will learn contemporary security issues; security management processes, architecture and models; risk analysis and management; security planning, analysis and safeguards; security policies development and administration; contingency planning, incidence handling and response; and security standards and certification processes. A major component of the course will be several case studies and a final team-based project. This course will incorporate collaborative and action-learning experiences wherever appropriate. Emphasis will be placed on developing and practicing writing and speaking skills through application of the concepts, theories and technologies that define the course.

**Enforced Prerequisite at Enrollment:** C or better in IST 220 or SRA 221

IST 461: Database Management and Administration

3 Credits

Introduces advanced topics in database management systems that are fundamental to effective administration of enterprise information systems. IST 461 Database Management and Administration (3) The objective of the course is to enable a student to comprehend principles of database management and administration. The students will learn how data are stored (indexing), accessed (query processing), shared (currency and transactions), and controlled (security). Students will be creating and using these features in a database in the laboratory. They can then develop, use, and tune database systems and applications, utilizing advanced database management features. This course assumes basic familiarity with relational model, Entity-Relationship diagram, SQL query language, and normalization (as covered in IST 210). It builds the foundation on more advanced concepts of database systems that are fundamental to a career in database administration.

**Enforced Prerequisite at Enrollment:** IST 210 and IST 240

IST 462: Database Modeling and Applications

3 Credits

This course introduces advanced topics in database modeling and applications. IST 462 Database Modeling and Applications (3) The objective of the course is to enable a student to comprehend advanced database modeling and their applications. Students will model requirements using the advanced techniques and implement various applications in different domains. This course assumes basic familiarity with relational model, Entity-Relationship diagram, SQL query language, and normalization (as covered in IST 210). This course will cover more advanced topics in database modeling and database applications.

**Enforced Prerequisite at Enrollment:** IST 210 and IST 240

IST 489: Research Methods for the Information Sciences and Technology

3 Credits

Seminar course focused on approaches to studying information and communication technologies and writing theses and other research reports. IST 489H Research Methods for the Information Sciences and Technology (3) IST 489H provides students the opportunity to learn and experience: 1) Conceptualizing what are information and communications technologies. 2) Approaches to conducting research on, and reporting results of studies, of ICT. 3) The research process and its academic context. The course is designed around a series of ill-structured, contemporary, problems that require students to develop responses by applying research approaches to ICT. At the end of the course, students will be able to: 1) Apply different conceptualizations of ICT to common problems. 2) Select and initiate research on ICT. 3) Begin writing research-oriented work such as theses and papers.

**Enforced Prerequisite at Enrollment:** IST 110 Honors

IST 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

IST 494H: Honors Thesis Research

1-12 Credits/Maximum of 12

This course is the mechanism by which students in the Schreyer Honors College who are conducting research with a faculty member affiliated with the IST undergraduate major will register for thesis credits. The course includes activities related to research, scholarship, and/or writing necessary for the completion of an approved honors thesis.

**Honors**

IST 495: Internship

1-18 Credits/Maximum of 18

Supervised on or off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor
Full-Time Equivalent Course

IST 496: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

IST 497: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

IST 498: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Integrative Arts (INART)

INART 1: The Arts
3 Credits
Develop critical perception, knowledge, and judgments through an examination of the basic concepts common among the arts.

Bachelor of Arts: Arts
General Education: Arts (GA)

INART 1H: The Arts
3 Credits
Develop critical perception, knowledge, and judgments through an examination of the basic concepts common among the arts.

Bachelor of Arts: Arts
General Education: Arts (GA)
Honors

INART 3: Reception of the Arts
3 Credits
This course considers how art uses time, space, and causality to define culture and the human condition. INART 003 Reception of the Arts (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. INART 003 approaches the study of the arts from the audience’s point of view. It is designed to meet the General Education Arts requirement. The course is offered in the Fall and Spring University Park, with a typical enrollment of 50, and is available to other locations through Campus Course Exchange. There are no prerequisites, and students are assumed to have little or no background in art. As a result of taking the course, students are able to use analogy, the idea of structure, and theories of reception and communication in both art and non-art situations. The course is offered on-line, making it particularly useful for students with family and personal obligations, for older students with job obligations, and for students with handicaps limiting their access to traditional ‘classroom’ courses. Although INART 003 is designed for potentially large enrollments, students relate to the instructor on a one-to-one basis through e-mail and interact with other students using an on-line bulletin board. Writing, criticism, and analytical thinking are required. Evaluation is based on five on-line quizzes, two on-line exams, and participation in on-line discussions. Tests measure students’ ability to reason, synthesize materials, and apply ideas about art to other situations. The discussion sessions expand ideas found in art to apply them to everyday life. Writing is required for the course. Students must contribute at least three short essays and post commentary on others’ work for 20 points of the final grade. Informal e-mail conversations supplement this requirement. The course’s extensive web site includes lessons corresponding to each chapter in the text, a lexicon of difficult terms, links to other web sites, study guides, works of art, and provocative essays about art.

Bachelor of Arts: Arts
General Education: Arts (GA)

INART 5: Performing Arts
3 Credits
INART 5 is not an ‘art appreciation’ course in any traditional sense of the term. Rather, it is focused on the act of experience and the encouragement of critical thinking about those experiences. No effort is made to encourage students to ‘like’ or ‘dislike’ the things that they experience or to encourage them to accept the view that some experiences are more or less valuable than others. The idea, simply, is to have informed experiences in the performing arts and think about them in a critical context. To satisfy those ends, the course will provide students with exposure to significant examples of dance, music, and theatre as well as give students a practical and theoretical background to enrich their experience of those performing arts. The course will also help to develop students’ critical thinking as they evaluate their experiences. This is accomplished through student attendance at six performing arts events on campus throughout the semester and the completion of related assignments.

INART 10: The Popular Arts in America: Mass Media Arts
3 Credits
An introduction to the arts of the mass media with emphasis on how film, radio, television, and the print media influence and reflect society. INART 010 The Popular Arts in America: Mass Media Arts (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. INART 10 examines the historical and technological development of media in relationship to popular culture from the invention of the printing press up to present 21st century America. The primary goal of the course is to help students develop a critical and analytical approach to dealing with contemporary mass media. The course presupposes some familiarity with modern popular media and takes as its content both historical and contemporary examples as sources for analysis. While the class offers facts and data, the central focus of the course is the theory, stylistic elements, and structural workings of media content. The pedagogical goal of this approach is to examine not just what the mass media arts are but also where they come from, how they function, and what effects they have on our culture and society. The key to this goal is

Bachelor of Arts: Arts
Participation in the Popular Music Forum will account for 25% of the topic will occur three times during the semester. The class will be website and World Wide Web. Asynchronous online discussions on Arts Forum is conducted online utilizing resources held on the Forum thinking, the formation of objective opinions, and discussion. The Popular examination of an important contemporary issue in popular culture also participate in the Popular Arts Forum, a semester-long account for 75% of the semester grade (25% each). Students in INART broken into four units: popular music, popular stage dance, popular theatre, and acts like the circus and stand up comedy. The course will highlight important influences, artists, events, works, and effects such as: 1) Popular Music: This unit will trace the development of the American popular music from the emergence of the popular songwriter in the 1830s to the beginnings of rock and roll. Jazz, country, blues, and mainstream pop will be major genres examined. 2) Popular Stage Dance: This unit will cover the evolution of dance as a popular performance art from percussive dances performed in the minstrel show to rock and roll choreography in music videos. 3) Popular Theatre: This unit examines the founding forms of popular theatre (minstrelsy, vaudeville, and burlesque) and their effect on later arts like motion pictures and television. 4) Popular Variety Arts: This unit deals with those performing arts that fall outside of the broader categories of dance, music, and theatre. The circus, stand up comedy, and stage magic will be highlighted. There will be three equally weighted objective tests in the course, each covering approximately one-third of the course's content. These examinations account for 75% of the semester grade (25% each). Students in INART 015 also participate in the Popular Arts Forum, a semester-long examination of an important contemporary issue in popular culture (cultural imperialism and censorship; sexuality in popular culture; gender, ethnicity, and race in the popular arts; etc.) that requires research, critical thinking, the formation of objective opinions, and discussion. The Popular Arts Forum is conducted online utilizing resources held on the Forum website and World Wide Web. Asynchronous online discussions on the topic will occur three times during the semester. The class will be broken into groups of fifteen students for the purpose of discussion. Participation in the Popular Music Forum will account for 25% of the semester grade. The discussion grade will be determined by the quality of participation and degree of involvement in the discussion.

The discussion grade will be determined by the quality of participation and degree of involvement in the discussion.

INART 50: The Science of Music

3 Credits
Waves, physics of sound, hearing, musical scales, musical instruments, and room acoustics. INART 050 The Science of Music (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. This course explores the physical and acoustical bases of sound and music. The physics include a study of vibrating systems and simple harmonic motion, wave propagation, reflection and refraction, superposition, resonant frequencies, harmonics, phase, the relationship of speed and velocity, and spectra. The acoustics portion applies these physical properties to hearing, sound and music, covering the nature of the human auditory system, and correlations of pitch to frequency, loudness to amplitude/power/intensity, timbre to spectra and envelope. An overview of perceptual psychological studies of Gestalt organizational principles and auditory streaming explores how the auditory system organizes sound on a primitive, unlearned level. NOTE: there need be no specific math prerequisite for the course. Though high school algebra and trigonometry will be recommended, these topics will be integrated with the rest of the course material. With physical and physiological groundwork laid, the subject matter moves to purely musical areas: the construction of musical scales, the nature of consonance, dissonance, and harmony. Twelve-tone equal temperament, the basis of Western common practice music, is not an absolute, but a decision made to facilitate certain musical choices, and a compromise in terms of optimal consonance. The nature of the different instruments is then discussed - strings, winds, brass, percussion, and voice. Different instruments naturally produce different scale types and different types of spectra. Students will learn to appreciate the inherent differences in different instrument types. The course then returns to acoustics, exploring the role that performance spaces play in the propagation and reception of sound. The shape and materials of a room determine its characteristic sound. Students learn about how sound in large auditoriums is characterized by the balance of direct and reflected sound, the distinction between specular and diffuse reflections, the absorptive properties of different building materials, and the nature of reverberation. Smaller performance spaces are subject to standing waves, flutter echo, and comb filtering. Taking steps to avoid undesirable characteristics is often an easy matter once the nature of these characteristics is understood. The final weeks cover audio technology and the distinctions between analog and digital formats.

**INART 55:** History of Electroacoustic Music

3 Credits

A history of electroacoustic music as a consequence of developments in culture and technology from 1880 to present. INART 55 History of Electroacoustic Music (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. This course focuses on the interrelationship and parallel development of technology, art and music from the earliest electronic devices to the current ubiquitous computer audio workstation and electronics dance music. Electroacoustic music is a multi-faceted genre that borrows from a number of past innovators. Its artists routinely acknowledge the influence, for example, of musique concrete, Karlheinz Stockhausen and the theremin, yet their audiences are often unaware of the roots of the music that occupies much of their recreational time and social energy. Electroacoustic music developed hand in hand with innovations in communications technology, which in turn influenced the way music was conceived and created. Too often, these correlations are not discussed. Both electrical engineers and musicians use filters, without necessarily realizing that they are both using the same technology for different purposes. FM synthesis revolutionized commercial electronic instruments in the 1980s, yet few people realize that this was the same form of modulation that was the basis of much radio broadcast technology. Many innovators in electronic music started out as inventors or engineers. The creation of electroacoustic music is one of the most fertile cross-disciplinary fields of the twentieth (and now twenty-first) centuries. It has affected the production and reception of music indelibly, and is now a vital component of digital multi-media art, a leading trend of the new century. The course asks students to be aware of vital technological developments in audio (the evolution from the Edison phonograph to the CD player), electronics (the evolution from the spark gap oscillator to the vacuum tube to the transistor to the microprocessor), cultural movements (from Impressionism and Romanticism to modernism to postmodernism), and to become sensitized to the chief innovators in the field (the differences in the music of Schaffer, Stockhausen, Carlos, Chowning, and others). They are made aware not only of names and terms, but also taught to recognize differences in the different sounds of different composers and styles. The course has been offered two semesters as a 297 offering. It is designed so that it may eventually be offered completely online. The text is online, and the listening assignments are also posted at the PSU Digital Music Library. Grading will be based on weekly quizzes that ask for definitions and short answers, four tests that require essays and identification of listening examples, and two papers focused on different compositions/composers.

Bachelor of Arts: Arts
General Education: Arts (GA)

**INART 62:** West African and African American Arts: from the 1960s to the present

3 Credits

An introduction to West African and African American Arts from the 1960s to the present. INART 062 West African and African American Arts: From the 1960’s to the Present (3) (GA;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course focuses on the interrelationship and parallel development of arts in West Africa and the United States from the 1960s to the present. The cultural ties between the slave trading states of West Africa and the slaves and their descendents of the Americas, though weakened by over three centuries of separation, were never completely erased and the similar experiences of colonial oppression in Africa and slavery in America created expressions in art of remarkable similarity and correspondence. Although this comparable and often equivalent development in artistic expression on both sides of the Atlantic was, by and large, unrecognized and unacknowledged, the emergence of black nationalism in the 1960s reestablished the historic cultural associations between African and African American arts and created a remarkable artistic interchange that continues to the present day. The 1960s was a pivotal period for both African and African American art. The Civil Rights movement in the United States and the collapse of colonial rule in West Africa gave rise to a new sense of black identity for Africans and those of African descent and a new art that embodied and expressed that newfound identity. During the 1960s, the visual, performing, and literary arts of Africa and Black America celebrated their shared cultural heritage and found common use as instruments of political and social change. The sense of shared history and like experience on both continents influenced and informed black art in powerful ways and continues to motivate and inspire artists as they reflect and comment on their geographically separate, though spiritually linked, worlds. This course focuses on works...
of art drawn from many diverse traditions in both Africa and the United States and sets those works in the context of the social, political, and cultural movements that helped to create them. Examples of African and African American visual, performing, and literary arts will be examined, compared, and contrasted in order to gain insight into those works while serving as a vehicle for gaining a better understanding of the cultures that created them. INART 062 is a wholly online course that will be offered simultaneously by Penn State and Kwame Nkrumah University of Science and Technology in Ghana. This will allow students in Africa and the United States to participate as members of the same class in discussions and joint projects created on the World Wide Web. Grading will be based on participation in weekly online discussions, an objective mid-term and final, and the successful completion of a collaborative online project developed by students in both countries. INART 062 will be offered in the fall and spring semesters each year.

INART 100W: Seminar in Integrative Arts

3 Credits

A study of various arts with emphasis on comparison, contrast, and other aspects of interrelation. Topics will change each semester. INART 100 Seminar in Integrative Arts (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. INART 100 is a semester-long seminar that explores a theme or topic through selected works of the visual or performing arts. Various arts will be examined with emphasis on comparison, contrast, and other aspects of interrelation. Although topics will change each semester, they will always be bound to broad concerns in the arts that are shared or common. The approach will be strictly interdisciplinary with emphasis on discussion and the direct experience of art. INART 100 is a General Education Arts offering (GA) and, for selected topics, will satisfy the Intercultural and International Competence Requirement (GI). At University Park, the course is built around twelve to thirteen motion pictures shown as part of the Palmer Museum of Art’s film series, a gallery exhibition at the Palmer, and two or three performances at the Center for the Performing Arts. Students are required to attend all of these events and showings. The film series and the gallery exhibition are free. Tickets for the two events at the Center for the Performing Arts must be purchased. Attendance will constitute 20% of the semester grade. Each week, there will be a required online discussion based on the “Commentaries” associated with the event or exhibition of that week. These “Commentaries” are included with the background information on the events and exhibitions contained in the course web site. Discussions will last for one week and all students are required to participate in all online discussions. Participation in discussions will constitute 30% of the semester grade. INART 100W is a writing intensive course (W), and, for selected topics, will satisfy the Intercultural and International Competence Requirement (GI). At University Park, the course is built around twelve to thirteen motion pictures shown as part of the Palmer Museum of Art’s film series, a gallery exhibition at the Palmer, and two or three performances at the Center for the Performing Arts. Students are required to attend all of these events and showings. The film series and the gallery exhibition are free. Tickets for the two events at the Center for the Performing Arts must be purchased. Attendance will constitute 20% of the semester grade. These ‘Commentaries’ are included with the background information on the events and exhibitions contained in the course web site. Discussions will last for one week and all students are required to participate in all online discussions. Participation in discussions will constitute 30% of the semester grade. The remaining 30% of the semester grade will be based on a series of objective tests based on the background materials that relate to each film, performance, or gallery exhibition required in the course.

Bachelor of Arts: Arts
General Education: Arts (GA)

INART 110: The Dramatic Arts in the Mass Media

3 Credits

The place of television-radio-film drama in our culture; relationship with other art forms; standards of evaluation. INART 110 Dramatic Arts in the Mass Media (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. INART 110 examines the history and development of the dramatic arts of the mass media with a particular focus on television as the strongest exemplar of media practice. The primary goal of the course is to help students develop a critical and analytical approach to dealing with the dramatic arts of the contemporary mass media. The course presupposes some familiarity with modern popular media and takes as its content both historical and contemporary examples as sources for analysis. While the class offers facts and data, the central focus of the course in the theory, stylistic elements, and structural workings of media content. The pedagogical goal of this approach is to examine not just what the mass media arts are but also where they come from, how they function, and what effects they have on our culture and society. The key
to this goal is understanding the effects and influence of dramas in the mass media on our society and its beliefs and values. Class meetings consist of lectures and in-class discussions that illustrate modern critical approaches to popular culture and the terminology used in presenting critical arguments and ideological viewpoints on the dramatic arts of the mass media. Reading assignments will support classroom work by presenting students with a diversity of opinion on mass media and the influence of television dramas and comedies. Further, examples of historically significant radio and television dramatic works will be shown in class and then discussed in relation to the concepts and critical viewpoints covered in lectures. In addition to regular scheduled classes, students will participate in an on-line Television Journal that requires watching and critically responding to assigned television programs. Each week, students will be required to watch and critically respond to assigned television programs. Their critical responses will be posted on the online Television Journal and made available to all members of the class. Grades will be based on three equally weighted objective examinations that will account for 75% of the semester grade. The remaining 25% of the grade will be determined by participation in the online Television Journal.

Bachelor of Arts: Arts
General Education: Arts (GA)

INART 115: The Popular Arts in America: Popular Music
3 Credits

An examination of the roots, development, and significance of popular music in our culture. INART 115 The Popular Arts in America: Popular Music (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. INART 115 examines the roots, development, and significance of popular music in our culture. It covers the origin of popular music in the early nineteenth century and introduces the major genres of the art: blues, jazz, country, mainstream pop, and rock and roll. The thrust of the course is sociological and cultural rather than musicological and will trace the music's development in a historical context. The intent of the course is to provide students with a comprehensive overview of popular music, the significance of major artists in its development, and its importance in our social and cultural history. There are three equally weighted objective tests in the course, each covering approximately one-third of the course's content. These examinations account for 75% of the semester grade (25% each). Students in INART 115 also participate in the Popular Music Forum, a semester-long examination of an important contemporary issue in popular music (censorship, copyright infringement and music piracy, music and violence, etc.) that requires research, critical thinking, the formation of objective opinions, and discussion. The Popular Music Forum is conducted online utilizing resources held on the Forum website and World Wide Web. Asynchronous online discussions on the topic will occur three times during the semester. The class will be broken into groups of fifteen students for the purpose of discussion. Participation in the Popular Music Forum will account for 25% of the semester grade. The discussion grade will be determined by the quality of participation and degree of involvement in the discussion.

United States Cultures (US)
General Education: Arts (GA)

INART 116: The Popular Arts in America: The History of Rock and Roll - The 1950s
3 Credits

This course examines the roots, development, and significance of rock and roll music in its first decade. INART 116 The Popular Arts in America: The History of Rock and Roll - The 1950s (GA;US)(BA) This course meets the Bachelor of Arts degree requirements. This course is composed of eight chronologically arranged units of study that examine the major developments in early rock and roll in an historical context. Rock and roll music, especially in the 1950s, was the reflection of the dynamic cross-cultural interplay between country, gospel, rhythm and blues, and mainstream pop. Of central importance in early rock and roll was the influence of African American music and culture and the effect that African American music and culture had when brought into the mainstream. Through an examination of the foundation of emergence of rock and roll in our culture, students gain an understanding of the role played by intercultural cross-influences in shaping both our music and our cultural sensibilities. Both the content of the course and the assignments in the Popular Music Forum are directed at helping students understand, reflect upon, and critically think about the intercultural nature and effect of our musical heritage. The thrust of the course is sociological and cultural rather than musicological, and the intent of the course is to provide students with a comprehensive overview of the early development of rock and roll and its importance in our social and cultural history. Each unit of study will be accompanied by key examples of recorded music from the period of the late 1940s through the 1950s. The course includes approximately 100 important recordings for required study. Grades in INART 116 will be determined by a series of eight objective tests and four assignments in the Popular Music Forum. The Popular Music Forum will examine important issues in popular music and culture concerning or related to rock and roll in the 1950s that require research, critical thinking, the formation of objective opinions, and discussion. The Popular Music Forum is conducted online as a series of asynchronous discussions on Forum topics. The class will be broken into groups of fifteen students for the purpose of discussion. Grading will be based on a point system. There are 1200 possible points that can be earned during the course - 800 points on exams (2/3 of the final grade) and 400 points on written assignments in the Popular Music Forum (1/3 of the final grade).

Bachelor of Arts: Arts

INART 125: The Popular Arts in America: The History of Rock and Roll - Punk Rock
3 Credits

An examination of the roots, development, and significance of punk rock in our culture. INART 125 The Popular Arts in America: The History of Rock and Roll - Punk Rock (3) (GA;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. Punk rock was an important and historically significant genre in rock and roll music that initially developed in the United States and Great Britain in the late 1960s and has continued to the present. Through an examination of the now more than thirty-year history of punk rock in our culture and that of Great Britain, students gain an understanding of the role played by punk rock in shaping both our musical and cultural sensibilities and the historical and social movements that influenced and led to the development of
puck rock as a musical genre and lifestyle. This course is composed of eight chronologically arranged units of study that examine the major developments in punk rock in an historical context. In addition to weekly text assignments, students are required to complete four assignments in the Popular Music Forum. The Popular Music Forum will examine important issues in popular music and culture concerning or related to the historical development of punk rock in both countries that require research, critical thinking, the formation of objective opinions, and discussion. The Popular Music Forum is conducted online as a series of asynchronous discussions on Forum topics. The class will be broken into groups of fifteen students for the purpose of discussion. Both the content of the course and the assignments in the Popular Music Forum are directed at helping students understand, reflect upon, and critically examine the music created in the genre and the social and cultural forces that influenced and were influenced by punk rock. The thrust of the course is sociological and cultural rather than musicological, and the intent of the course is to provide students with a comprehensive overview of the development of punk rock its importance in our social and cultural history. Each unit of study will be accompanied by key examples of recorded music. The course will include approximately 200 important recordings for required study.

INART 141N: African American Read-In Engaged Learning Experience
1-3 Credits/Maximum of 6
This course will allow students to study African American literature, culture, history, and arts in connection with an annual public event, the African American Read-In (AARI). The AARI, promoting literacy and appreciation of African American literature, is a national event established in 1990 under the auspices of the National Council of Teachers of English. It has become a regular feature of Black History Month celebrated by community, neighborhood, and church groups as well as schools and institutions of higher education throughout the United States and elsewhere on a given Sunday and Monday in February attracting more than a million participants annually. This course offers students an engaged learning experience in which they produce original intellectual and artistic content to be presented publicly at an AARI event on campus. Students will study texts from a range of historical periods and/or genres, and thus gain a solid introduction to the African American literary tradition. At the same time, the primary organizing principle of the course will be a particular theme that both allows a broad and coherent overview of a significant cultural or historical topic and engages issues of cultural diversity in the United States. The specific theme, thus, will bring the study of African American literature into a broader interdisciplinary context that intersects with African American culture, history, identity, and the struggle for equality. Students will study texts that relate to this annual theme and participate in a relevant field trip (museum, theater, cultural site, library, etc.) to deepen their understanding of the significance and contexts, social, historical, cultural, artistic of these materials and this theme. They will then develop this knowledge through creative and critical engagements into exhibitions, presentations, or performances to communicate their insights about a particular author, text, or topic in in the African American literary tradition. As shapers of the AARI program on their campus, class members will also have a voice in designing and planning the AARI as well as a stake in its overall success. As this course necessarily spans semesters, students who enroll in the Fall course will be expected to enroll in the Spring course in order to present their projects at the AARI in February. Only students who were enrolled in the Fall course will be permitted to enroll in the Spring, as it is the culmination of the same course.

3 Credits
The significance and influence of Elvis Presley as an artist and cultural force focusing on his recordings and major performances. INART 200 The Popular Arts in America: Elvis Presley - The King of Rock and Roll (3) (GA)(BA) This course meets the Bachelor of Arts degree requirement. INART 200 is composed of eight chronologically arranged units of study that trace Elvis Presley’s life; accomplishments; the significance
of his art; his influence as a performer, recording artist, and motion picture star; and, perhaps most important, his place as a force and symbol of social/cultural change in the second half of the 20th century. Elvis was the principal symbol of change in a time when change was all-important. He was the first of the great rock and roll superstars, a herald of the cultural revolution of the 1960s, and the central figure in the musical revolution that brought rock and roll into the popular mainstream. He was - and is - the King of Rock and Roll and his place and importance in the cultural history of the twentieth century can never be overstated or exaggerated. The thrust of the course is sociological and cultural rather than musical and the intent of the course is to provide students with a comprehensive overview of Elvis as an artist, his significance in the development of rock and roll, and his importance in our social and cultural history. Each unit of study will be accomplished by key examples of recorded music and video records of important performances from television and motion pictures. The course includes approximately 100 important recordings and 15 video performances for required study. Grades in INART 200 will be determined by a series of eight objective tests and four assignments in the Popular Music Forum. The Popular Music Forum will examine important issues in popular music and culture concerning or related to the life of Elvis Presley that require research, critical thinking, the formation of objective opinions, and discussion. The Popular Music Forum is conducted online as a series of asynchronous discussions on Forum topics. The class will be broken into groups of fifteen students for the purpose of discussion. Grading will be based on a point system. There are 1200 possible points that can be earned during the course - 800 points on exams (2/3 of the final grade) and 400 points on written assignments in the Popular Music Forum (1/3 of the final grade).

General Education: Arts (GA)

INART 203Q: Medievalism
3 Credits

In English 190Q / INART 203Q students will gain an understanding of medievalism, defined by Leslie J. Workman in 1987 as 'the study of the Middle Ages, the application of medieval models to contemporary needs, and the inspiration of the Middle Ages in all forms of art and thought.' As this definition suggests, understanding medievalism and, thus, the popular works students know, such as Game of Thrones and Lord of the Rings’ benefit from learning something about the Middle Ages and the reach of its re-mediation across various kinds of expression. Therefore, ENGL 190Q / INART 203Q begins by introducing students to medieval works and a few of the forms that characterize it. More particularly, the medieval works to be studied are those containing more than one genre, media, and/or form. For example, students will read and listen to (or sing!) medieval lyrics, read and perform short medieval plays such as Robin Hood, be introduced to manuscripts of the bestiary with its illuminations, historiated letters, and scribal copying. They also will be introduced to Romanesque and Gothic architecture. The first medievalist remediations—works adapted in other media—to be examined will be Book I of Spenser’s Faerie Queene, with the woodcut of the Redcrosse Knight and Dryden/Purcell’s King Arthur, which will introduce students to Early Modern English medievalism and how it reflects prevailing values in new combinations of old and new artistic forms. Still greater emphasis will be placed on the English Medieval Revival of the nineteenth century, including John Ruskin and the PreRaphaelites poetry, paintings, and essays, as well as William Morris’s poetry, painting and Arts and Crafts Movement. Then, as now, medievalism served multiple purposes, including aesthetic, political, and social. To put into practice what students learn and to engage their creativity, one assignment involves hand crafting an art project to be accompanied by an artist statement. In the last part of the course, the focus shifts to contemporary medievalist arts and theory. In keeping with the contemporary direction, another assignment asks students to remediate their handcrafted medievalist work, or to create a new one, using digital resources to engage both their creativity and understanding of key medievalist concepts.

INART 205: Introducing the Beatles
3 Credits

The influence and achievement of the Beatles as artists focusing on their recordings and films as sociocultural artifacts. INART 205: Introducing the Beatles (3) (GA) INART 205 is composed of eight unites of study that trace the lives and work of the Beatles. The course's chronological design is arranged in order to capture the band’s artistic trajectory from two-track recording and the relatively primitive Please Please Me album through the sonic heights of Revolver, Sgt. Pepper’s Lonely Hearts Club Band, The White Album, and Abbey Road. This course examines the group’s wide-ranging sociocultural influence in terms of music, fashion, film, gender, consumerism, and politics. The thrust of the course is interpretive in nature, with the Beatles’ songs and albums receiving considerable scrutiny in terms of their composition, production, and attendant musicianship. Developments in recordings and instrument technology are germane to our understanding of the Beatles’ evolving aesthetic, as is the bandmates’ development as songwriters who eventually eschew issues associated with romance in order to address larger and more prescient subjects such as loneliness, oppression, nostalgia, ethics, and redemption in their music. Each unit of study will be accompanied by the analysis of key examples from the Beatles’ massive recorded corpus. More than 100 songs will receive consideration, as will the group’s five forays as feature-film stars. Grades in INART 205 will be determined by two objective examinations - a midterm and a final. Class participation will be a key ingredient in student performance, as will students’ work on two papers. The first of such assignments will involve a shorter paper in which students address a particular aspect of the band’s sociocultural emergence during their early years. The longer term paper will be researched, argumentative essay in which students will be assigned to discuss any aspect of the Beatles’ career - a particular album (or series of albums), their musical influence, or their cultural impact, among other topics - and construct a mature, expansive thesis about its meaning.

General Education: Arts (GA)

INART 205H: Introducing the Beatles
3 Credits

The influence and achievement of the Beatles as artists focusing on their recordings and films as sociocultural artifacts.

General Education: Arts (GA)
American cultural history through the lens of stand-up comedy covering a span from the mid-19th through the 20th Century. Topics of consideration include the art of the joke and stand-up comedy performance, the evolution of American comedy genres and venues, the significant performers, the impact of technologies such as radio and television, as well as a variety of issues ranging from racism, ethnic, and gender stereotyping to freedom of speech and political and social change.

**Prerequisite:** sophomore standing

**United States Cultures (US)**

**General Education: Arts (GA)**

INART 226N: Critical Approaches to Hip-Hop

3 Credits

This course will examine the politics of hip-hop art and culture. To do so, we will place hip-hop in broad historical context and trace its aesthetic and cultural roots from Africa to Jamaica to 1970s New York City and then forward to 1980s gangsta rap and former President Barack Obama's iPod. We will think through the implications of hip-hop's addiction to Italian-American mobsters, bling, and all-things keepin' it real. We will also search for hip-hop's political foundations in funk records, 1960s community organizing, and poetry of the Harlem Renaissance. All the while, we will analyze the varieties of hip-hop politics by paying close attention to how hip-hoppers vied for authenticity, recognition, and power through cultural practices – b-boyin'/girlin', graffiti art, emceeing, djang, e.g. – at odds with the State, inequality, and injustice. We will also situate hip-hop politics within the ongoing history of American social movements. To avoid over-romanticizing, we will equally examine hip-hop's appetite for conspicuous consumption, misogyny, homophobia, trappin', and criminality. A deep understanding of hip-hop politics, then, requires examining its contradictions as well as the ways race, class, gender, sexuality, and geography shape hip-hop – and therefore American-culture, art, and identity. To get at these and other ideas, we will read, listen, and think broadly about why a full understanding of hip-hop truly matters.

**Recommended Preparations:** AMST 100; AFAM 126; INART 126

3 Credits

An introduction to the theory, design and creation of musical animations. For general students.

**General Education: Arts (GA)**

INART 258A: Fundamentals of Digital Audio

3 Credits

A thorough introduction to digital music production technologies, covering fundamentals of how digital musical information is stored, processed and transmitted. INART 258A Fundamentals of Digital Audio (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements.
A thorough introduction to digital music production technologies, covering the fundamentals of how musical information is stored and transmitted in digital devices. This course is meant for people who are passionate about working with sound, and who are willing to take on new technical and creative challenges in audio production. It is the pre-requisite for many more advanced courses in music technology and audio production. Students complete a series of low-stakes audio exercises on fundamental operations, a series of written responses to questions on the underlying theory of digital audio, and a small number of extended creative projects. The software used is at the level of professional audio production workstations. Students complete the course with a set of vocational skills in computer music and audio.

**Prerequisite:** MUSIC008 or concurrent enrollment in either MUSIC131 or MUSIC132

**Bachelor of Arts: Arts**

**General Education:** Arts (GA)

**GenEd Learning Objective:** Crit and Analytical Think

**GenEd Learning Objective:** Key Literacies

**INART 258B: Fundamentals of Digital Audio**

1 Credits

A general overview of music technologies current to music educators and performers, as defined by their accrediting organization. This course is meant for students who do not intend to pursue further studies in music technology. Students will be exposed to software that is meant for non-specialists, and learn basics of music recording and editing. Students complete a set of lessons, each of which features a hands-on exercise. They gain a set of technical tools that should be of immediate relevance to their careers, including basics of music recording, audio editing, Internet resources, music arranging and score preparation.

**Concurrent:** concurrent enrolment in either MUSIC131 or MUSIC132

**Bachelor of Arts: Arts**

**General Education:** Arts (GA)

**GenEd Learning Objective:** Crit and Analytical Think

**GenEd Learning Objective:** Key Literacies

**INART 295: Internship**

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor

**INART 296: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**INART 297: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**INART 298: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Courses offered in foreign countries by individual or group instruction.

**International Cultures (IL)**

**INART 410: Early Pennsylvania Decorative Arts and Furniture**

3 Credits

The study of Pennsylvania and related furniture, pottery, paintings, and decorative arts of the seventeenth, eighteenth, and early nineteenth centuries. INART (AM ST) 410 Early Pennsylvania Decorative Arts and Furniture (3)(BA) This course meets the Bachelor of Arts degree requirements. This course explores the aesthetic, cultural, and social significance of the household arts common in Pennsylvania in the seventeenth, eighteenth, and nineteenth centuries. Emphasis is placed on the major periods and styles (Puritan, William and Mary, Queen Anne, Chippendale, and Federal) as represented in furniture, pottery, paintings and decorative arts. Indigenous styles and crafts representative of Pennsylvania arts and crafts will be explored in detail. The course combines lecture and discussion with seven field trips to historic sites to provide students with the opportunity to view furniture and decorative arts within the setting of period homes. The course carries no prerequisite.

**Bachelor of Arts: Arts**

**INART 415: Nineteenth Century Pennsylvania Architecture and Restoration**

3 Credits

Interior and exterior design of early Pennsylvania architecture; understanding and evaluation of and experience in restoration. INART (AM ST) 415 Nineteenth Century Pennsylvania Architecture and Restoration (3)(BA) This course meets the Bachelor of Arts degree requirements. This course provides students with hands-on practical experience in the restoration of historic buildings of the nineteenth century. Each semester, students will research, evaluate, identify problems, and develop solutions to restore these structures in an historically correct manner. Students will then practically restore these structures and gain practical experience in the process of restoration. Major classroom topics will vary in order to meet the specific needs of the project at hand. Topics may include wood technology, structural problems and solutions, vernacular architecture, use of early tools, etc. Students will also take field trips to several restored homes to gain insight into applicable methods and approaches to restoration and...
gain perspective on costs and outcomes. INART 410 Early Pennsylvania Decorative Arts and Furniture is the prerequisite for this course.

**Prerequisite:** INART410

Bachelor of Arts: Arts

INART 420W: Portfolio Matters: Integrative Arts Capstone

3 Credits

INART 420W: Portfolio Matters is the writing-intensive capstone course for the Integrative Arts degree. The course is based on the application of integrated learning to complex life and career questions through assignments that include self-reflection exercises, independent research, collaborative teamwork, participation in seminar-based discussions, peer critiques, resume writing, portfolio planning, and individual presentations that may include visual and written elements. The course prepares Integrative Arts majors to be able to evaluate and curate their creative, academic, and work experiences for the development of a strategic plan for a professional portfolio and resume. The course design provides students with the opportunity to use thought and creativity to develop a plan for a portfolio and resume that reflects their creative and intellectual accomplishments and the range of their capabilities. The skills, reflections, shared engagement, and written documentation of the work produced as part of the course will enhance students’ preparation for post-graduate study and career activities. Through this course, students will gain experience in the definition, articulation, and design of life and career goals and how to incorporate them into focused actions. This course provides the opportunity for individual student and program assessment. Although designed specifically for Integrative Arts majors, the course may function as an elective course for students who are intent on pursuing professional goals that involve a synthesis of learning across creative disciplines. Students who enroll in the course should be sixth-semester standing or higher and have completed at least six credits or more of 400-level or equivalent courses in ARCH, ART, A ED, ART H, DANCE, GD, INART, LARCH, MUSIC, PHOTO, THEA, COMM or ENGL.

Writing Across the Curriculum

INART 494: Research Projects

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

INART 494H: Research Projects

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

INART 495: Internship

**Interdisciplinary Science and Business (ISB)**

ISB 207: Integrating Science and Business

1 Credits

This course is designed to bring together second and third year ISB majors to discuss in-depth the Interdisciplinary Science and Business (ISB) major. ISB students are required to select one science module and one business module for the major. The first seven weeks will be used to explore the six different modules. Science modules currently include quantitative, lab sciences, and human health. Business modules currently include accounting and finance; technical sales; and operations and supply chain management. The modules covered may change to reflect changes in offering of the ISB program. Students will then explore how science and business have been integrated in industry by examining case studies. These case studies will be used to show students how business and science can be integrated to solve real world problems. Career opportunities and internships will then be explored by interacting with people whose jobs require integrating science and business and by bringing in employers who hire students with these skills, both as interns and as graduates. Finally, the last two weeks of the course will be spent exploring the future of these types of jobs, including what skills students might be interested in acquiring outside the curriculum and what future skills may be desirable.
**Prerequisites:** 3rd semester standing.

ISB 475W: Strategic Integration of Science & Business

3 Credits

This course will provide a capstone experience for the Interdisciplinary Science and Business BS degree. The tools of strategic management and cross-functional collaboration will be introduced and serve as a background for the design, development, and implementation of a new product or process within an existing corporation. Student teams will be provided with an industry concept and work toward the objectives of a firm sponsoring the product concept. During the course, the evaluation of the product will include the feasibility of the product or process in terms of design, manufacture, and intellectual property. This evaluation will be presented to the firm by student teams. The final deliverable will include a complete written assessment of each of the components of feasibility.

**Prerequisites:** 7th Semester standing; FIN 301; SCM 301; MGMT 301; MKTG 301; ISB 207

Writing Across the Curriculum

ISB 495: Internship

1-18 Credits/Maximum of 18

Supervised field experience related to the student’s major.

**International Agriculture (INTAG)**

INTAG 100: Introduction to International Agriculture

3 Credits

Ag in developing countries; contemporary crucial issues in global agriculture; emphasizing hunger and food security. INTAG 100 Introduction to International Agriculture (3) (GS;IL)(BA) This course meets the Bachelor of Arts degree requirements. This class focuses on agriculture in developing countries and frames this focus with a discussion of contemporary crucial issues facing agriculture on a global scale, emphasizing global hunger and food security. The primary goal of the course is to inform students about international agriculture, challenging them to think critically and independently about agricultural issues and development and to generate global citizens who are more aware and conversant on important contemporary challenges in the global food, agriculture, and natural resource systems. The specific objectives of this course are for students to: 1) Articulate major contemporary challenges related to agrifood systems across economic, social, environmental, and political sectors; 2) Critically assess the benefits and pitfalls of different approaches to addressing global challenges in agrifood systems; 3) Understand and apply current conceptual and theoretical frameworks in agricultural development; and 4) Empower students to make more informed decisions as consumers and global citizens. This class will primarily focus on agriculture in developing countries and frame this focus within a discussion of contemporary crucial issues facing food, agriculture, and natural resources on a global scale. Specific emphasis will be placed on debates concerning global hunger and food security. Several examples from around the world will be included. Class will take a variety of formats, including formal lectures, guest speakers, videos, lab and site visits, student presentations and class discussion time. The course is a foundation course of the International Agriculture minor. Evaluation consists of group presentations, exams, and reading quizzes. The course is offered both fall and spring semesters.

INTAG 460: International Food Production

1 Credits/Maximum of 3

FDSC 460 / INTAG 460 is designed to give food science undergraduate and graduate students an appreciation of how food is produced and processed abroad. Students participate in a number of production facility tours, interact with local food scientists and food technologists, and gain valuable international experience. A major point of emphasis for the course is comparing and contrasting food production norms in the U.S. and the host country or region. The course consists of pre-trip lectures and meetings and culminates in a faculty-guided embedded study tour. Prior to the travel component of the course, students work in small groups to research a specific food product that is of economic and cultural importance to the country or region of interest, then write reports to be presented in-country before a tour of the related product’s production facility. The course integrates and builds upon core concepts in food chemistry and food microbiology; as such, FDSC 460 / INTAG 460 is targeted towards upper-level food science undergraduate students, as well as food science graduate students.

Prerequisites: FDSC 200, Permission of program

International Cultures (IL)

INTAG 470A: Comparing Agricultural and Food Systems in the US and France: Lecture

2.5 Credits

Explore key differences and similarities in the food and agricultural systems of the United States and France. INTAG 470A / AGBM 470A Comparing Agricultural and Food Systems in the US and France: Lecture (2.5) This course is designed to explore key similarities and differences in the food and agricultural systems of the United States and France. It introduces students to a number of overarching food and agricultural topics that pertain to both countries, and students explore and analyze these key issues from both countries perspective. These overarching topics include the structure of agricultural and environmental policies, the use agricultural land for biofuel production, organic agriculture, food safety, attitudes and policies surrounding the use of genetically modified crops, the role of large agribusiness firms, attitudes towards diet and health, and several others important topics. Students conduct background reading on these topics, hear lectures – sometimes from guest presenters – that frame the topics from both the U.S. and France’s perspective, and write reports on specific crops or foods that expose key similarities and differences between the two food systems. Finally, students pick one crop or food for an oral presentation that contains background information on how that crop fits into the two food systems, U.S. and France, and analyzes the key issues that relate to the overarching topics already identified. This course has two components that must be taken in partnership: 470A (FOOD SYS US/FRANCE I) and 470B (FOOD SYS US/FRANCE II). The first is a classroom - based course, and meets regularly during the semester. The second is a two - week component that takes place after the end of the semester. In this second component, after traveling to France, students hear presentations from the French perspective on the overarching topics identified earlier and also explore the topics first hand via field trips to farms, wholesale markets, retail markets, and other places relevant to the French food system. This component is organized by a host university, AgroParisTech. For these two weeks, students live in dorms within the city of Paris. Knowledge of French is not required.

Prerequisite: INTAG100 or 3 credits in social or behavioral sciences

Cross-listed with: AGBM 470A

INTAG 470B: Comparing Agricultural and Food Systems in the United States and France: Travel

0.5 Credits

Explore key differences and similarities in the food and agricultural systems of the United States and France. INTAG 470B / AGBM 470B Comparing Agricultural and Food Systems in the US and France: Travel (0.5) This course is designed to explore key similarities and differences in the food and agricultural systems of the United States and France. It introduces students to a number of overarching food and agricultural topics that pertain to both countries, and students explore and analyze these key issues from both countries perspective. These overarching topics include the structure of agricultural and environmental policies, the use agricultural land for biofuel production, organic agriculture, food safety, attitudes and policies surrounding the use of genetically modified crops, the role of large agribusiness firms, attitudes towards diet and health, and several others important topics. Students conduct background reading on these topics, hear lectures – sometimes from guest presenters – that frame the topics from both the U.S. and France’s perspective, and write reports on specific crops or foods that expose key similarities and differences between the two food systems. Cross-listed with: AGBM 470B

INTAG 490: Senior Seminar in International Agriculture

3 Credits

Seminar discussions on contemporary topics in global agriculture; capstone course for INTAG minor. INTAG 490 Senior Seminar in International Agriculture (3) This course is designed to meet the need for a capstone course within the International Agriculture (INTAG) minor.
The course provides a range of experiential learning techniques including intensive reading and in-class discussion, practical experience through a group trip to the nation's capital, and application of the international experiences encountered through the INTAG program. Included is course content designed to provide a holistic integration of the four main INTAG study areas (Socioeconomic and Communication Systems, Animal and Plant Sciences, Natural Resources and the Environment, and Food, Health, and Nutrition). Students will learn about the current state of international agriculture through recent articles and analyses and respond in-class discussions and through written response papers. The second half of the course involves site visits to major international development organizations in Washington, D.C. (US government, international agricultural research organizations, and various NGOs) and participation in the form of an INTAG senior seminar series open to the public. This seminar series allows students to present and discuss their past (or intended) international agriculture experiences while a student at Penn State, and share with both those in the class and those outside of the class options, opinions about and critical issues in international agriculture. This seminar series will be an important tool in promoting the INTAG minor. The students will then synthesize the knowledge they have obtained both from the course and their international agriculture experiences to complete final reports which outline their understanding of the current state of international agriculture. This course is ultimately designed to facilitate the development of students to be global citizens in the agricultural arena. The course is geared towards students in their junior or senior years. Evaluation consists of class participation (20%), student-led presentation of materials (15%), response papers to readings and D.C. trip (30%); presentation at INTAG seminar series (15%) and the completion of a final paper on their understanding of the current state of international agriculture (20%). The course is offered once every academic year in the Spring semester. The course is a core requirement for the International Agriculture minor. INTAG 100 is a prerequisite.

**Prerequisite:** INTAG100

INTAG 495: Internship in International Agriculture

1-13 Credits

Observation of and participation in the operation and management of a University-approved international agricultural firm or international agricultural development agency.

**Prerequisite:** Prior approval of proposed internship plan

Full-Time Equivalent Course

INTAG 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

IB 290: International Business Goes to the Movies

1 Credits/Maximum of 3

A business elective to expose students to international and global issues through the eyes of film makers around the world. IB 290 International Business Goes to the Movies (1 per semester/maximum of 3) is an international business elective class which exposes students to international and global issues through the eyes of film makers around the world. Using film as the medium, students can evaluate differing perspectives and arguments on issues affecting business and economics in the global environment. This course is intended for students who are likely to study abroad during their PSU careers. Thus, the course attempts to prepare students for immersion in a variety of cultures, often different from the US. The course objective is to begin a broadening process of students’ world views by examining a wide range of issues captured in film around the world. Typical topics include the rise of globalization and its impact on various countries and societies, a range of cross-cultural issues and controversies inherent in competing cultural differences between peoples of various nations, the impact of American culture on social, political, economic, and legal institutions throughout the world, and the differential role played by economics in various societies and at different stages of economic development across many nation states. This course employs film as a powerful medium to enable historical and modern understandings of global issues and international perspectives. As students enter the business world and learned professions, it is imperative that their world view include images and understandings found in a host of competing cultures including Eastern and Central Europe, East Asia, The Middle East, Latin America as well as Western Europe, Australia, and North America. Upon completion of the course, students will be introduced to a wide range of international issues as well as a foundation for approaching cross-cultural disputes inherent in international and global business. In addition, they will obtain an appreciation of international cinema and its wide scope as an art form, as an informational source for business, and as a powerful medium for argument and debate.
IB 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

IB 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore in depth, a comparatively narrow subject interest.

IB 299: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

IB 303: International Business Operations
3 Credits
A survey of the major aspects of international business environment and operations with an emphasis on the cultural dimension. IB 303 International Business Operations (3) (IL) International business is important and necessary because economic isolationism has become impossible. Failure to become a part of the global market assures a nation of declining economic influence and deteriorating standards of living for its citizens. International business therefore presents more opportunities for expansion, growth, and income than does domestic business alone. This course will cover the major aspects of international business environment and operations with emphasis on its impact on the local businesses in your state. In other words, in this course you will learn why international business differs from domestic business, economic theories on international trade, and how managers deal with the uncontrollable forces such as cultural differences of international environment. In this course you will develop a global perspective through studying the impact of other countries and their peoples on society and develop skills that will enable you to interact effectively in an interdependent global community.

Enforced Prerequisite at Enrollment: fifth-semester standing
International Cultures (IL)

IB 397: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore in depth, a comparatively narrow subject which may be topical or of special interest.

IB 399: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

IB 403: International Business and National Policies
3 Credits

Enforced Prerequisite at Enrollment: ACCTG211 and (BA 301 or FIN 301)

IB 404: Contemporary Issues in International Business
3 Credits
Investigation of issues in international business practice interpreted from the foundations of the social sciences. Topics will be chosen from contemporary issues in global business and economics. IB 404 Contemporary Issues in International Business (3) IB 404 enables students to study the most current topics in international and global business from the framework of the social science issues that form the framework for understanding, business decisions. The course provides structured experiences in library research and data gathering, techniques, and builds the habit of reading the international business press daily and analyzing it weekly. The class is typically organized around 3 integrative business topics that represent a spectrum of questions important to business. These include questions about finance and economics in international business, questions about people and organizations in an international environment, and questions about products (development, production, distribution of goods and services) in international business contexts. This is not an introductory course, and as such, the topics chosen should be substantive and nuanced. For example, one topic might be how the structure of franchises must be modified to reflect the property rights in a particular country, and how those property rights laws impact the value of the franchise. The second topic might be how the internationalization of the structure and role of Boards of Directors in multinational firms contribute to globalization, and challenge the cultural norms in those organizations. The third topic might be how North American firms have been forced to adjust their product packaging, in response to environmental impact laws in Germany, and how this shifts the locus of the product message from point-of-purchase to alternative media.
**Enforced Prerequisite at Enrollment:** ACCTG211 and (BA 301 or FIN 301)  
IB 440: Globalization and Its Implications  
3 Credits  
This course explores the socioeconomic implications of globalization.

**Enforced Prerequisite at Enrollment:** AFAM 100 or AFR 110 or PLSC 3 or PLSC 14 or PLSC 200N or PLSC 220  
Cross-listed with: AFR 440, PLSC 440  
Bachelor of Arts: Social and Behavioral Sciences  
International Cultures (IL)  
United States Cultures (US)  
IB 450: The Business Environment of Europe  
3 Credits  
This course provides an overview of the economic, institutional, and regulatory environment in Europe at the EU and national levels. IB 450 provides an overview of the business, economic, and regulatory environment in Europe at the European Union (EU) and national levels. The course examines how regional integration, through the EU, has shaped industrial, competition, monetary, and related economic policies, and how Europe's international trade and finance capabilities affect the global economy. As a result, a significant part of the course focuses on the evolution of the EU, its institutional structure, and its impact on business (both European and foreign). The course also compares business-government relations, models of capitalism, and corporate governance in individual European countries, using the United States as a basis of comparison. Particular attention is given to France, Germany, Ireland, and the United Kingdom, and how their business environments differ from each other. While the primary focus of this seminar will be on these themes, we will use articles from the Financial Times and similar publications as the basis of discussion in each class for a range of topics related to Europe. The approach taken in this course is a multidisciplinary one, with the assumption that business executives must understand the political, cultural, institutional, historical, and geographic aspects of Europe if they are to be successful in the business environment of Europe. Students are expected to be active participants in class discussion. Readings usually include a textbook, readings packet, and a subscription to the Financial Times. Evaluation will be based on a combination of participation and attendance, exams, quizzes, a group project, and essay assignments.

**Enforced Prerequisite at Enrollment:** ACCTG211 and (BA 301 or FIN 301)  
IB 460: International Business in Emerging Nations  
3 Credits  
An overview of international business strategies and economic environments of emerging nations with a specific focus on markets in China, India, and Southeast Asia.

**Enforced Prerequisite at Enrollment:** ACCTG 211 and (BA 301 or FIN 301)  
and Enforced Concurrent: IB 303  
IB 470: International Development in an African Context  
3 Credits  
This course looks at international development from an African perspective and discusses the prospects for African economic growth in the 21st Century. With an understanding of historical events that have shaped the political and social landscape of modern-day Africa, the economic potential of African nations will be discussed in detail. Utilizing success stories, the course introduces economic, business, social, and political issues that confront developing countries in Africa, along with solutions that have been proposed or are in use to address various development challenges. This course will provide students with the opportunity to learn firsthand about international development issues. It will introduce students to definitions of international development terms, data on international development, measures of development and development indices, as well as leading issues in International development. Using an interdisciplinary approach, the course explores some of the key development issues in sub-Saharan Africa, examines empirical findings to better understand Africa and its nations, and reviews the prospects for successful international business in this emerging growth market. Cases studies focus on successful economic growth that have emerged out of Africa and what how these successes are laying the groundwork for future international business opportunities. As such, the various components of the course are designed to promote the student's abilities to: - Describe and analyze social, economic, political elements that influence development in African countries. Students will learn that development problems, while often measured in economic terms, are multi-faceted and interrelated, thereby learn to appreciate that meaningful analysis and problem solving in international development must include different components. - Identify and analyze specific global issues, illustrating the social, economic and political context that may affect their resolution. Students will have the opportunity to experience the different facets of international development and participate, in a limited way, in efforts to address the issues.

**Enforced Prerequisite at Enrollment:** Fifth semester standing or higher required  
IB 480: International Real Estate Markets  
3 Credits  
International perspectives on real estate as property, evaluation of land use regulations, and differences in real estate markets across countries.

**Enforced Prerequisite at Enrollment:** RM 303 or RM 330W  
Cross-listed with: RM 480  
IB 494: Research Project  
1-12 Credits/Maximum of 12  
Supervised student activities on research projects identified on an individual or small-group basis.

**Enforced Prerequisite at Enrollment:** permission of the program  
IB 494H: Honors Research Project  
1-3 Credits/Maximum of 6  
Supervised honors student research projects identified on an individual or small-group basis.
IB 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

IB 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore in depth, a comparatively narrow subject interest.

IB 499: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

International Studies (INTST)

INTST 100: Introduction to International Studies
3 Credits
An introductory multidisciplinary course designed to familiarize students with critical international issues. INTST 100 Introduction to International Studies (3) (GS;IL)(BA) This course meets the Bachelor of Arts degree requirements. This is an interdisciplinary course designed to provide students with an introduction to a range of global issues. The course will emphasize the themes of international interdependence and globalization and their development over time. A key component of this course is cultural diversity and the connecting international and domestic issues, particularly those of race and culture. In both their written and oral work, students will be required to relate international issues to their own fields of study. The disciplines involved are mainly political science and economics, ecology, history, and cultural studies.

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
General Education: Social and Behavioral Sciences (GS)

INTST 400: Seminar in International Studies
3 Credits
An upper-division seminar focusing on one or two critical international issues from an interdisciplinary perspective; individual projects. INTST 400 Seminar in International Studies (3) (IL) This interdisciplinary course will offer a seminar on some current event, issue, or phenomenon that involves a large number of countries. Topics will vary each year and depend on the faculty member leading the course, but it may include subjects such as the European Union, global economic change, international pop culture, or international response to human rights violations. Both written and oral work will be assigned and graded. Students will discuss material from a variety of academic fields such as political science, economics, sociology, history, anthropology, and cultural studies.

Prerequisite: INTST100
International Cultures (IL)

INTST 493: International Studies
3 Credits
Selected topics in International Studies.

Prerequisite: prior participation in an Education Abroad program or international work experience, and enrollment in the International Studies major

INTST 494: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

INTST 494H: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

Honors

INTST 495: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written or oral critique of activity required.

Prerequisite: Approval by International Studies or Global Studies Advisor

Internship (INTSP)

INTSP 295B: Internship in Business & Engineering
1-6 Credits/Maximum of 6
ALT 295B Internship in Business & Engineering (1-6) Individual exploration of practical applications of a field of study through a supervised work experience. Final analytic paper, essays, journals and oral presentation as required by the instructor. Satisfactory employer evaluation required for passing grade. Prior approval of a member of the College faculty required.

Prerequisite: minimum 30 credit hours; minimum 2.0 GPA; prior approval of proposed assignment(s) by instructor

INTSP 295C: Internship in Education, Human Development, & Social Sciences
1-6 Credits/Maximum of 6
ALT 295C Internship in Education, Human Development, & Social Sciences (1-6) Individual exploration of practical applications of a field of study through a supervised work experience. Final analytic paper, essays, journals and oral presentation as required by the instructor. Satisfactory employer evaluation required for passing grade. Prior approval of a member of the College faculty required.

Prerequisite: minimum 30 credit hours; minimum 2.0 GPA; prior approval of proposed assignment(s) by instructor
INTSP 370: Internship Preparation
1 Credits
Planning and preparation for upper-level or capstone internship experience, suited to students' individual academic and career interests. ALT 370 Internship Preparation (1) Planning and preparation for upper-level or capstone internship experience, suited to students' individual academic and career interests. Evaluation methods include two-three page reflective/analytic papers at the end of each segment; preparation and presentation at mock interview. This is an optional preparatory course for upper-division/senior-level internships in degree programs not offering formal internship preparation and will be offered for elective credit.

**Prerequisite:** formal acceptance into a College major; junior standing; minimum 2.0 GPA; completion of core research/skills course(s) for student's degree program

INTSP 495: **SPECIAL TOPICS**
1-6 Credits/Maximum of 6
ALT 495A Internship in Business for non-Business Students (1-6) Individual exploration of the application of a non-business field of study in a business-related setting. Final analytic paper, essays, journals and oral presentation as required by the instructor. Satisfactory employer evaluation required for passing grade. Prior approval of a member of the College faculty required. Intended for non-Business students.

**Italian (IT)**

IT 1: Elementary Italian I
4 Credits
For beginners. Grammar, with reading and writing of simple Italian; oral and aural work stressed.
Bachelor of Arts: 2nd Foreign/World Language (All)

IT 2: Elementary Italian II
4 Credits
Grammar and reading continued; oral and aural phrases progressively increased; composition.

**Prerequisite:** IT 001
Bachelor of Arts: 2nd Foreign/World Language (All)

IT 3: Intermediate Italian
4 Credits
Advanced grammar; oral and written composition; reading of modern authors; Italian life and culture.

**Prerequisite:** IT 002
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Foreign/World Lang (12th Unit)

IT 10: Intensive Elementary Italian
6 Credits
Intensive Italian basic reading, writing, listening, and speaking skills stressed. Lab. Equivalent to IT 001 and half of IT 002. IT 010 Intensive Elementary Italian (6)(BA) This course meets the Bachelor of Arts degree requirements. This course is intended for students with no experience of Italian. It provides an intensive language-learning environment in which to complete 6 credits of elementary Italian (equivalent to IT 001 and the first half of IT 002). Students receive an extensive introduction to Italian grammar, speech, and culture. Evaluation methods include a variety of written and oral exercises (presentations, compositions, quizzes, exams, etc.). All work is done in Italian. The course is offered once per year. Enrollment is limited to 18. The course can count toward the completion of the Italian minor. This course prepares students for IT 020, a continuation of elementary and intermediate Italian.

Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Foreign/World Lang (12th Unit)
Bachelor of Arts: Humanities

IT 20: Intensive Intermediate Italian
6 Credits
Continuation of Intensive Elementary Italian, building on grammar and communication skills (reading, writing, listening, and speaking). IT 020 Intensive Intermediate Italian (6)(BA) This course meets the Bachelor of Arts degree requirements. This course is for students who have successfully completed IT 010 Intensive Elementary Italian, and who seek an Intensive learning environment of Italian grammar (all aspects: reading, writing, listening, and speaking). Students learn intermediate Italian in an intensive language-learning environment. Extensive reinforcement of elementary Italian grammar (reading, writing, speaking, listening) and introduction to intermediate Italian grammar, speech, and culture through a variety of written and oral exercises. All work is done in Italian. Homework in the accompanying workbooks is assigned each week. Pronunciation practice in the language lab is also required weekly. There are also supplementary grammatical and cultural activities on the course web page. Equivalent to last half of IT 002 and all of IT 003.

**Prerequisite:** IT 010
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Foreign/World Lang (12th Unit)
Bachelor of Arts: Humanities

IT 50: Italian Conversation Tutorial
1-3 Credits/Maximum of 3
Roundtable conversation practicum for students concurrently enrolled in IT 001, 002, 003, 010, or 020. May be repeated up to 3 times for credit. IT 050 Italian Conversation Tutorial (1-3)(BA) This course meets the Bachelor of Arts degree requirements. Students supplement their elementary or intermediate language classes (001, 002, 003, 010, 020) with this practicum, which has as its objective to improve pronunciation and oral conversational skills. This course must be taken concurrently with an elementary or intermediate language course and may be repeated up to three times for credit. Evaluation based on student participation (80%) and performance in oral drills and exercises (20%).

**Prerequisite:** Concurrent enrollment in IT 001, IT 002, IT 003, IT 010 or IT 020
Bachelor of Arts: Humanities

IT 51: Elementary Intensive Italian for Graduate Students I

3 Credits

Intensive introduction to Italian: first half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. IT 051 Elementary Intensive Italian for Graduate Students I (3) This is the first in a series of three courses designed to give students an intensive introduction to Italian. This is the first half of elementary sequence in reading, writing, speaking, listening, and cultural contexts. Students will learn the Italian vocabulary and will learn to create simple sentences. Lessons are taught in an authentic cultural context.

Prerequisite: graduate standing

IT 52: Elementary Intensive Italian for Graduate Students II

3 Credits

Intensive introduction to Italian: second half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. IT 052 Elementary Intensive Italian for Graduate Students II (3) This is the second half in a series of three courses designed to give students an intensive introduction to Italian. This is the second half of graduate intensive sequence in elementary reading, writing, speaking, listening, and cultural contexts. Students will learn the Italian vocabulary. Lessons are taught in an authentic cultural context.

Prerequisite: IT 051 or equivalent, and graduate standing

IT 53: Intermediate Intensive Italian for Graduate Students

3 Credits

Continued intensive study of Italian at the intermediate level: reading, writing, speaking, listening, cultural contexts. IT 053 Intermediate Intensive Italian for Graduate Students (3) This is the third in a series of three courses designed to give students an intermediate intensive knowledge of Italian. Continued intensive study of Italian at the intermediate level: reading, writing, speaking, listening, and cultural contexts. Lessons are taught in an authentic cultural context.

Prerequisite: IT 052 or equivalent, and graduate standing

IT 83: First-Year Seminar in Italian Literature, Film, and Culture

3 Credits

Introduction to the study of Italian literature, film, and culture. IT 083S First Year Seminar in Italian Literature, Film, and Culture (3) (GH; IL)(BA) This course meets the Bachelor of Arts degree requirements. The first-year seminar will introduce students to the study of Italian literature, film and culture in their first year at Penn State. Students will read significant texts (in English), view videos (with subtitles), listen to music and explore Italian thought and culture in general. These experiences will help prepare them for additional courses in literature and in Italian, but will also serve as an introduction to things Italian, and as a point of comparison with U.S. culture. In addition to the academic topic and issues this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them including the opportunity to develop relationships with faculty and other students who share their academic interests. This course satisfies both the first-year seminar and a General Education humanities or Bachelor of Arts humanities requirement. We will offer the course once a year with enrollment limit of twenty students.

Bachelor of Arts: Humanities
International Cultures (IL)
First-Year Seminar

IT 99: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Humanities
International Cultures (IL)

IT 130: Italian Culture and Civilization

3 Credits

IT 130, Italian Culture and Civilization, examines Italian life from antiquity to the present. It is designated an International Cultures course, which aims to develop critical and analytical skills of undergraduate students through a global exploration of the historical, cultural, and political aspects of Italian society. Historical material will be studied to facilitate understanding of how Italian unity is imagined across time, and will emphasize the continuous process of fragmentation and negotiation of cultural, national, and political identity through the ages. The course traces, among other topics, the importance of the Roman Empire, the Catholic Church, the Renaissance, Italian Unification, Fascism, and contemporary immigration to Italy. Students will analyze primary texts – literature, visual art, essays and speeches, music, dramatic works, and film – to become familiar with significant aspects of Italian thought and culture. Consideration will be given to the various representative Italians such as Dante Alighieri, Leonardo Da Vinci, Niccolò Machiavelli, Galileo Galilei, and Vittorio De Sica; inclusion of lesser-known figures, such as Igiaba Scego and Amara Lakhous, will provide students with a wider range of voices that will enrich critical engagement with course themes. By the end of the course students will be able to identify and critically analyze diversity within the peninsula, and demonstrate a familiarity with the key moments, people, and products of Italian culture from antiquity to the present. Throughout the semester, students will also be encouraged to develop a critical appreciation of the influence of Italian culture on Western civilization, and demonstrate a more nuanced understanding of the country by recognizing and articulating similarities and differences among the various international cultures that have influenced, and continue to shape Italy.

IT 131: Introduction to Italian American Culture

3 Credits

Between 1870 and 1920 over five million Italians immigrated to the United States. Of those who came, about one-third returned to Italy.
Those who remained, often joined by their families, left an indelible mark on the American cultural, political, artistic, educational and social landscape. This course provides an overview of Italian emigration to America in the 19th and 20th centuries and the conditions within the United States as a destination culture. Through a study of historical, sociological, literary and cinematic texts, students will consider, among other topics: 19th Century Italy, the odyssey of immigration to and assimilation in the United States, and life in the ethnic neighborhood. The course will also look at the Mafia, forms of prejudice, and ways Italians uniquely manifested their social values in labor unions, religion and education in America. Upon successfully completing this course, students will have a solid grasp of how Italians, in becoming Americans, contributed to the rich fabric of life in the United States.

IT 140: Italian Language & Culture for Study Abroad
3 Credits

IT 140 prepares students for study abroad in Italy through contact with language and customs and through the inclusion of pragmatic information and cultural intelligence/sensitivity. IT 140 splits equal classroom time between developing basic language skills and providing important cultural information. Pronunciation, key vocabulary terms and scenario-based instruction form the basis of the language portion. Vocabulary sets include travel (emphasis on public transportation), cuisine (cafe and restaurant settings), navigation (using maps, giving/receiving directions), health (pharmacy and doctor’s office settings) and shopping (open air market and boutique settings). These areas of content naturally overlap with cultural lessons as does learning to use formal and informal registers. Accordingly, cultural lessons deal with these topics as well as geography (including regional variations), history and safety. Italian 140 is both GH and IL. This course does not count for the Italian major or minor.

General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Key Literacies

IT 175: Italian Language and Culture for Embedded Experiences Abroad
3 Credits

IT 175 Italian Language and Culture for Embedded Experiences Abroad, is designed for students who have little or no knowledge of Italy’s language and culture. This course is linguistic and cultural preparation for students participating in an embedded experience in Italy. Properly preparing for study and travel to Italy helps students to maximize the abroad experience. The ability of students to function abroad can be greatly facilitated by an understanding of the local culture and language. Students will be introduced to key Italian social and cultural issues, pragmatic information (for travelers, students, and residents of Italy) as well as essential vocabulary terms, phrases, and pronunciation. The course also explores themes of cultural intelligence/sensitivity and proper behavior abroad. IT 175 is designed to be taught as a co-requisite for any course with an embedded experience in Italy (e.g. BIOL 475N Anatomy in Italy). With this co-requisite, particular emphasis is placed on vocabulary relevant to the embedded experiences in history of science/medicine museums, university settings and religious institutions.

IT 225N: Organized Crime in Film and Society
3 Credits

IT 225N / CRIM 225N, Organized Crime in Film & Society, examines the relationship between criminological and justice theories regarding organized crime and the portrayal of the mafia in popular Italian American film. The course follows two simultaneous threads of inquiry: an examination of historical and theoretical models of organized crime in the United States and the state and federal laws that address them; and an analysis of how such models are depicted in American films and television about the the Italian American community. By the end of the course, students will gain key literacy skills by identifying varied definitions of organized crime and distinguishing between structural models, particularly La Cosa Nostra and network models. Students will also sharpen analytical and critical thinking skills through written and spoken interpretations of films and the scholarly approaches to studying organized crime (e.g. research methods). Throughout the semester students will also be able to apply knowledge of the social scientific aspects of organized crime to guide their observations and analyses of film and Italian American culture, thus refining Integrative Thinking across the humanities and social sciences.

GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

IT 240Q: Artistic Patronage in Europe
3 Credits

This course surveys the institutions and social networks in which European fine arts were created, consumed and critiqued. Beginning
with the medieval period and ranging to the early 20th century, the course will examine the variety of communities where public and private often intersected and which sponsored innovations in the arts. Often indexing social movements and political change, such communities include convents and cathedrals, royal academies and courts, coffee houses, salons, and theaters. Artists, performers, patrons, politicians, journalists, and others collaborated and competed in these spaces. Such communities could embody political and economic power, or foster resistance to it. This approach to the history of the arts in western culture puts the focus less on the individual creative genius of great composers, writers, painters, and sculptors, and more on the social exchanges and institutions that sponsored and received their work. Such an approach brings to light particularly the ways in which women played significant roles in the production and reception of culture: as salon hostesses, patronesses, and divas, women often enabled and enacted cultural production. Some examples of particular units of study might include: the German convent of Hildegard of Bingen (1098-1179), where monophonic chant and allegorical morality plays developed; the Mantuan (Italy) court of Isabella d’Este, the first lady of the world, (1474-1539) where the roots of the madrigal began and where notable painters found support and sponsorship; the French salons of Mme. Geoffrin (1699-1777) and Mme. de Staël (1766-1817); and the student residences in Madrid where avant-garde writers and artists interacted. Each unit will also consider the relationships between the aesthetic norms and values of a period and the economic and political realities of sponsorship. The course will require that students attend at least one musical performance or concert held on campus during the semester and complete a brief writing project based on that experience. This requirement will encourage students to think about their own university as a contemporary space of cultural sponsorship.

IT 301: Pathways to Fluency
3 Credits
For majors, minors, and others with adequate preparation; deepening of grammatical skills, integrated conversation, composition, and reading. IT 301 Pathways to Fluency (3) For majors, minors, and others with adequate preparation, students in this course review grammatical skills through conversation, class debates, reading, and writing assignments based on contemporary cultural materials (web sites, music lyrics, newspaper and magazine articles, etc.) Prerequisite: IT 003. Evaluation methods include class participation, in-class activities (both oral and written), composition, and exams.

Prerequisite: IT 003
Bachelor of Arts: 2nd Foreign/World Language (All)

IT 310: Applied Advanced Conversation
3 Credits
Focus on intensive oral communication practice, designed to provide students pursing upper-level course work in Italian an opportunity to develop advanced intermediate speaking skills. Class time is dedicated to oral practice in small and large group discussions. Prerequisites: IT 3 or IT 20, or permission of program. Course counts toward Italian major and minor.

Prerequisites: IT 3; IT 20

IT 320: Introduction to Italian Culture; Food, Fashion, Family
3 Credits
Focus on the social, historical, and socio-political issues of Italy in the last two centuries. IT 320 Introduction to Italian Culture: Food, Fashion, Family (3)(BA) This course meets the Bachelor of Arts degree requirements. This course focuses on advanced grammar development in the context of social, historical, and sociopolitical issues of Italy in the last two centuries with particular emphasis on contemporary current events. Readings from newspapers, magazines, and the web on Italian geography, regional differences, Italian politics, food, and cultural traditions. Evaluation methods include exams, current events reviews, class debates, and oral presentations. This course is in Italian. It is for
students who have completed IT 003 or equivalent. It will be offered once per year. Enrollment limited to 20.

**Prerequisite:** IT 003
Bachelor of Arts: Humanities

IT 325: Introduction to Italy's Genius

3 Credits

Focus on the art, literature, and philosophy of Italy from the Renaissance to present. In Italian. IT 325 Introduction to Italy’s Genius (3) In this course students develop their advanced grammar and conversational skills through readings and class discussions of a variety of works in the Italian arts (literature, art, philosophy, etc.). Taught in Italian. Evaluation methods include class participation, exams, and writing assignments. Prerequisite: IT 003. Course counts toward the Italian major and minor. Offered once per year. Enrollment limited to 20.

**Prerequisite:** IT 003

IT 330W: Greatest Books of Italian Literature

3 Credits

A survey of the greatest books of Italian literature (prose, poetry, drama). Time period varies each semester. In Italian. IT 330W Greatest Books of Italian Literature (3) This course is a survey of the greatest books of Italian literature (prose, poetry, drama). Time period varies each semester, and may include early literature (St. Francis, Marco Polo, Dante, Boccaccio, Petrarch, Machiavelli, etc.) or modern authors (Vico, Goldoni, Manzoni, Foscolo, Leopardi, Pirandello, Fo, Calvino, Eco, etc.). Please check with department faculty for current offering. Taught in Italian. Course objectives are to read, discuss, and better understand the enduring relevance of Italy's literary masterpieces, while strengthening linguistic skills in writing (especially), as well as reading, speaking, and listening, through weekly or bi-weekly written reading reactions, critical notebooks, and class discussions/participation. Course is appropriate for students who have successfully completed an intermediate Italian course (such as IT 003 or 020) and counts toward the Italian major (all tracks) and minor. Successful completion of this course may permit further Italian study at the 400-level.

**Prerequisite:** IT 003, IT 020, or permission of program
Writing Across the Curriculum

IT 395: Internship

3 Credits

Advanced practicum in Italian explores the technical, artistic, and practical applications of translation between Italian and American cultures. IT 412 Theory and Practice of Translation (3)(BA) This course meets the Bachelor of Arts degree requirements. This course explores the technical, artistic, and practical applications of translation between Italian and American cultures in wide variety of contexts: literature, technical writing, film subtitling, etc. Taught in Italian. Evaluation consists of reading quizzes, short translation assignments, class presentation, longer (roughly 10-page) individual final translation project. Prerequisite: Any 300-level course in Italian.

**Prerequisite:** any 300-level course in Italian
Bachelor of Arts: Humanities

IT 415: Dante

3 Credits

Readings in the Divina Commedia and the related lesser works of Dante Alighieri.

Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities

IT 422: Topics in the Italian Renaissance

3 Credits

Topics vary by year and may include 'Theories of Love,' 'Magic, Witchcraft, Alchemy, and the Emergence of Modern Science,' etc. IT 422 Topics in the Italian Renaissance (3)(BA) This course meets the Bachelor of Arts degree requirements. In this course students develop their advanced language skills while pursuing study of Italian Renaissance and/or Humanist topics. Topics in Italian Renaissance literature vary by year and may include; 'Theories of Love,' 'Magic, Witchcraft, Alchemy, and the Emergence of Modern Science' etc. Check with faculty for current topic. Course may only be taken once for credit. Course counts toward the Italian major and minor. Course taught in Italian. Evaluation methods include two midterms, short reading response papers, class presentation, and final exam. Prerequisite: any 300-level Italian course.

**Prerequisite:** any Italian course at the 300-level
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities

IT 430: Italian Children's Literature

3 Credits

This course, conducted in Italian, examines Italian children's books from the post-unification period (1880s) to the present day.

**Prerequisite:** any 300-level IT course

IT 450: Nineteenth-Century Italian Literature

3 Credits

Italian romanticism, Verismo and neoclassicism, their origin and development in the novel, poetry, and drama.

**Prerequisite:** any 300-level IT course
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities

IT 460: Twentieth-Century Italian Literature
3 Credits

Modern and contemporary Italian prose, drama, and poetry.

Prerequisite: any 300-level IT course
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities

IT 470: Ghosts and Otherworldly Visions in Italy c. 1300-1600
3 Credits

This course explores ghost storytelling and visions of the afterlife in early Italian literature and culture. Motivations for telling ghost stories go far beyond entertaining or inducing fear in an audience. Ghost stories can engage some of the most profound human inquiries, mortality, grief, commemoration, spirituality, ethics, human imagination, and the violations of proper societal behavior. This course will explore such issues in a range of readings (poetry, short stories, diaries, and dialogues), including works by Dante, Boccaccio, Petrarch, Ficino, Machiavelli, and Ariosto. In addition to a foundational survey knowledge and contextualization of some of the greatest works of medieval/ Renaissance Italian literature, successful students of this course will receive a deep understanding of the potentials of authorial power and the rhetorical strategies that storytellers use to convince or manipulate the beliefs and emotions of their readers through close study of the primary texts, active in-class discussions, practice in critical interpretation, and individual experiments in the creative composition of spirit narratives. This 3-credit course is taught in English, and no knowledge of Italian is expected.

Prerequisite: 5TH SEMESTER STANDING

IT 475: Modern Italian Literature and Cinema
3 Credits

Focus on silent films, fascism, WWII, Resistance, Neorealism, and reactions against Neorealism. IT 475 Modern Italian Literature and Cinema (3)(BA) This course meets the Bachelor of Arts degree requirements. This course will explore the literary, cultural, and historical backdrops behind a variety of films from Fellini’s The Road, to one of the greatest spaghetti westerns ever made (Leone’s Once Upon a Time in the West), to the Oscar winner for Best Foreign Film (Benigni’s Life is Beautiful). Selected 19th and 20th-century prose texts also trace such issues as the individual’s role in society and the use of the imagination in the representation of history. This course aims to provide students with the fundamental tools to read texts and watch films critically and intelligently while presenting an overview of some major themes of Italian culture. Students will be evaluated on three in-class exams, paper outline, final paper, and participation in class discussions/activities/debates. IT 475 is the first interdisciplinary course taught in English at the IT 400 level. The course helps satisfy the Italian minor requirement. It is also good for students who have taken IT 130 and want to know more about 20th-century Italian lit/film/culture without having to do course work in Italian. IT 475 may also be of particular interest to students of film and media studies, English or comparative literature, religious studies, and history. This course satisfies the Italian minor or bachelor of arts humanities requirements. IT 475 will be offered once a year with 40 seats per offering.

Bachelor of Arts: Humanities

IT 480: Italian Women Writers Through the Centuries
3 Credits

Analysis of the works of women authors in their historical and literary contexts. IT 480 Italian Women Writers Through the Centuries (3) Italian women have been stereotyped as the 'mamma' or grandmother who cooks, prays, and idolizes her sons. Such an image does not accommodate the wide variety of experiences, perspectives, and contributions of Italian women throughout history. This seminar will explore the writings of female authors from delimited historical periods (alternating among Renaissance, 19th and 20th Centuries). Depending on time period, genres will include autobiography, poetry, historical novel, drama, film, nonfiction. Throughout the course we will consider the political and social developments in Italy with an emphasis on issues of special relevance to women. As we approach each text, we will examine such questions as: the significance of its form; the author’s use of language; the ways in which masculinity and femininity are constructed; intersections with the text’s historical moment; the political, philosophical and/or theological questions posed by the text; the ways in which the text inserts or distances itself from the Italian literary canon; and the text’s depictions, re-evaluations and uses of history. Through their journal assignments in class discussion, students will be encouraged to reflect upon the implications of course concepts in their own culture and historical moment. Evaluation methods include participation in class discussion, journal entries, short analysis papers, and a longer (8-10 page) research paper. In Italian. Prerequisite: any 300-level Italian course. This course is conducted in Italian and counts for the Italian major and minor. The ability to screen VHS and DVD videos is necessary. Enrollment is limited to 20, and the course will be offered at least once every four semesters.

Prerequisite: junior standing or permission of program
Cross-listed with: WMNST 480

IT 485: Italian-American Cultural Studies
3 Credits

In-depth exploration of Italian-American cultural contributions. IT 485 Italian-American Cultural Studies (3) Italian-American Cultural Studies explores the representation of self-representation of Italian-Americans that have been produced over the past century in a variety of aesthetic forms. Through analysis of literary and cinematic works, informed by readings in history and sociology, students will refine their critical reading and writing skills, come to a deeper understanding of important currents in 20th-century American history, gain a more informed appreciation of the contributions of Italian-Americans to the arts, engage critically with concepts such as ‘identity’, ‘ethnicity’, ‘gender’, and ‘heritage’. This course fulfills requirements for the major and minor in Italian, and allows students interested in Italian-American culture to undertake more in-depth and specialized study than is possible in the 100-level General Education survey offered by the department in English. Evaluation methods include participation in class discussion, short analysis papers, and a longer (8-10 page) research paper. The ability to screen VHS and DVD videos is necessary.

Prerequisite: junior standing or permission of program
IT 490: Dante in Translation
3 Credits

The reading of Dante's Divine Comedy and selected minor works.

Prerequisite: junior standing or permission of instructor
Bachelor of Arts: Humanities

IT 494: Research Project
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.
Bachelor of Arts: Humanities

IT 494H: Research Project
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.
Bachelor of Arts: Humanities

IT 496: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
Bachelor of Arts: Humanities

Honors

IT 497: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Humanities

Japanese (JAPNS)

JAPNS 1: Level One Japanese A
4 Credits

Introduction to modern Japanese; development of audio-lingual facility and ability to read and write Japanese without aid of romanization.

Bachelor of Arts: 2nd Foreign/World Language (All)

JAPNS 2: Level One Japanese B
4 Credits

Continuation of elementary Japanese, with emphasis on improving audio-lingual facility and strengthening reading and writing skills in modern Japanese.

Prerequisite: JAPNS001
Bachelor of Arts: 2nd Foreign/World Language (All)

JAPNS 3: Level Two Japanese A
4 Credits

Continued study of modern Japanese at elementary level; extensive audio-lingual practice for conversational fluency; reading/writing original scripts.

Prerequisite: JAPNS002
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Foreign/World Lang (12th Unit)

JAPNS 99: Foreign Study
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

JAPNS 110: Level Two Japanese B
4 Credits

Intermediate Japanese - Continued study of modern Japanese at intermediate level; extensive audio-lingual practice for conversational fluency; reading/writing original scripts. JAPNS 110 Conversation, Reading, and Composition (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. The course offers the instruction of intermediate Japanese where students learn how to communicate and express various ideas using the Japanese language. Each chapter includes new essential vocabulary items, grammar patterns, and kanji which enable us to achieve higher overall communicative fluency in Japanese. By the end of the semester, students are able to construct grammatical structures, such as presuppositions, desire, hypothetical condition, causative, completion, regret, etc. The usage of polite expressions of humble and honorific is introduced. Various aspects of Japanese culture and customs are also discussed throughout the semester. This course fulfills the International Cultures requirement.

Prerequisite: JAPNS003
Bachelor of Arts: 2nd Foreign/World Language (All)
International Cultures (IL)

JAPNS 120: Japanese Literature in Its Cultural Context
3 Credits

Japanese literature and film from classical through contemporary times, with attention to changing cultural settings. Taught in English. This course is intended to provide an introduction to the literature of Japan from the seventh century to the postmodern era. Prior study of Japan is not required and materials will be available in English. Students will learn about major eras of Japanese literature and culture, such as the age of the Man'yoshu, the age of the Genji monogatari (The Tale of Genji), the age of No and Kyogen, the age of Wit and Learning, the age of Meiji, the age of industrialization, the postwar years, and postmodernity. The readings will include several genres, such as poetry, folktale, short story, and novel, with an emphasis on prose fiction. The course is structured so that students develop a historical/cultural perspective in order to understand the contexts that have inspired the literary works. By examining literature in its cultural contexts, students will investigate such topics as the relation between social institutions and the individual, the traditional patriarchal system, the changing roles of women, westernization, the Emperor system, and postmodern
consumer culture, among others. Students will read literature and related materials from different periods, with occasional presentations of films. Class work includes some lecture but emphasizes guided discussions, group discussions, and student presentations. This participatory approach is intended to deepen appreciation of the texts, to help students understand value systems that may differ from, or else be shared with, those predominant in modern Western cultures, and to assist them in developing both analytical and expressive abilities. The course is designed to be suitable for all students generally interested in Japan, or interested in various fields of humanistic study, whether or not they have previously studied the culture of Japan.

JAPNS 121H: Japanese Film and New Media

3 Credits

Survey of Japanese film and new media in the twentieth century and beyond, with attention to changing cultural settings. Taught in English. JAPNS 121 Japanese Film and New Media (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course is intended to provide an introduction to modern and cutting-edge forms of cultural production in Japan from the twentieth century to the present day. Prior study of Japan is not required and materials will be available in English. Students will learn about major technologies and forms of media, including film, manga, anime, and various forms of new media (cell-phone novels, blogs, MMOGs, IM, and Web 2.0 for instance). Readings and screenings will cover several artistic modes including formalism, historiography, documentary, period drama, and experimental works. The course, or individual units within the course, will be structured so that students develop an historical perspective, allowing them to understand the cultural contexts that have inspired the creative works under study. By examining Japanese film and new media with attention to changing cultural settings, students will investigate such topics as the relation between social institutions and the individual, the formation and expression of identity, changing gender roles and family structures, the impact of technological and economic trends on social structure, and changing climates of censorship and freedom of expression. In addition, students will learn to think critically about various media's techniques and aesthetics of representation, and will become more engaged, critical spectators of film and related media. Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. This participatory approach is intended to deepen students' appreciation of the works, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytical and expressive abilities. Through critical reading, group discussion and interpretive writing, students will hone skills for evaluating modes of cultural production and consumption in modern Japan. The course is designed to be suitable for all students generally interested in Japan, or interested in various fields of humanistic study, whether or not they have previously studied the culture of Japan. This course is required of the Japanese major. It is designed to count as General Education, as a B.A. ‘Other Cultures’ course, and as an IL ‘International Cultures’ course.

JAPNS 122: Gods to Godzilla: A Survey of Japanese Culture
3 Credits

This course will examine the formation of Japanese culture through the lens of exchange and adaptation. Seeking to examine our understanding of 'Japan' and 'culture,' the course will explore the interplay between culture and identity, with the Japanese experience providing a viewpoint that differs from the standard Western-centric narrative in important ways. Focusing primarily on cultural studies and history, we will also consider not only how the world influenced Japan, as is the standard narrative, but also, how Japanese culture impacted other cultures, both near and far, as the country emerged from being an obscure Asian island to a cultural superpower at the beginning of the 21st century.

1-8 Credits/Maximum of 8

Small group instruction in spoken and written modern Japanese at the introductory level.

International Cultures (IL)
JAPNS 210: Extensive Reading in Japanese
1.5 Credits/Maximum of 12

This course consists of reading Japanese books without translation or grammar instruction in and outside of class. Students will choose books from a selection provided by the instructor, beginning at a lower level and moving gradually to higher levels under the instructor's supervision. Books may include an audio component. The instructor will select appropriate reading materials and organize them by levels, then constantly monitor students' reading behavior, occasionally giving suggestions and regularly consulting with students. The idea of this class is to learn incidentally, by encountering new words and grammatical patterns that can be understood based on context, and by reinforcing existing knowledge through increased familiarity. The emphasis is on learning the way of reading that allows you to enjoy the content of authentic but carefully selected reading materials. The course will help students develop a habit of reading at a designated time and place. Using language skills acquired in the classroom as a real communication tool will encourage use of Japanese beyond the classroom.

Prerequisite: JAPNS002
Bachelor of Arts: Other Cultures
International Cultures (IL)
JAPNS 295: Internship
1-18 Credits/Maximum of 18

JAPNS 401: Level Three Japanese A
4 Credits
Further acquisition of the four language skills in Japanese—reading, writing, speaking and listening comprehension. JAPNS 401 Advanced Conversation (4) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course aims to enhance students’ abilities in speaking, listening, reading, and writing. The objectives in this course are: 1) to review, reinforce, and expand the basic grammar; 2) to expand knowledge of Kanji, vocabulary, and idioms; 3) to be able to speak not only in single sentences, but in dialogues to perform basic communicative functions; 4) to be able to read and understand simple essays and stories; 5) to be able to write a short composition, and 6) to be able to type Japanese on the computer.

Prerequisite: JAPNS110
Bachelor of Arts: 2nd Foreign/World Language (All)
International Cultures (IL)

JAPNS 402: Level Three Japanese B
4 Credits
Exclusively for study abroad returnees. To further develop Japanese proficiency in speaking, listening, reading, and writing. JAPNS 402 Advanced Reading (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This class is offered exclusively to students who have studied abroad in Japan. Only primary multimedia sources (i.e., not a text book) will serve as course materials. Five classes a week will consist of reading session, multimedia presentation, and high level discussion. Intensive analysis and class discussion of multimedia materials will provide the student the opportunity to develop advanced ability to understand, construct, and express opinions and complex verbal concepts in appropriate contextual forms/modes.

Prerequisite: JAPNS401
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)

JAPNS 403Y: Level Four Japanese A
4 Credits
Continuation of JAPNS 402. Aims to improve students’ proficiency in all four language skills, with a special emphasis on writing. JAPNS 403Y Level Four Japanese A (4) (IL) This is a four credit course designed for those who have completed Level Three Japanese B or the equivalent. The course aims to further develop students’ proficiency in all four language skills, with a special emphasis on writing. Students will study several topics such as Japanese society and Japanese literature for content-based language learning throughout the semester. For each topic variety of media will be used—newspaper articles, essays, short stories, TV programs, movies, etc. The majority of reading and writing assignments will be done outside class, with some guidance from the instructor. That will help students become more independent in studying Japanese. They will use appropriate resources such as dictionaries, reference books, online dictionaries and other online resources depending on their individual needs. Class time will be used mainly for discussions of content, feedback on writing, and presentations by students. All class activities will be conducted in Japanese. Writing exercises include short response papers on topics and summaries of literary pieces or audio visual materials. In the response papers students will reflect more deeply on certain topics, synthesize information from course materials, express their opinions, and support ideas by referring to and citing from source texts. This will help students be prepared for a longer thesis in the next course in the sequence. Discussion on the summaries will cultivate sensitivity toward words and expressions. The course will help students start building their career in Japanese. Students will familiarize themselves with and if they wish study for the Japanese Language Proficiency Test (Level N2). They will also write a resume and formal letters that could be used in job applications and practice formal spoken communication in business settings.

Prerequisite: JAPNS402
International Cultures (IL)  
Writing Across the Curriculum

JAPNS 404: Level Four Japanese B  
4 Credits

Continuation of JAPNS 403Y. Aims to improve students' proficiency in all four language skills through content-based language learning. JAPNS 404 Level Four Japanese B (3)(IL) This is a four credit course designed for those who have completed Level Four Japanese A or the equivalent. The course aims to further develop students' proficiency in all four language skills. Students will study several topics such as Japanese popular culture and issues in contemporary Japan for content-based language learning throughout the semester. For each topic variety of media will be used - newspaper articles, essays, short stories, TV programs, movies, etc. The majority of reading and writing assignments will be done outside class, with some guidance from the instructor. That will help students become more independent in studying Japanese. They will use appropriate resources such as dictionaries, reference books, online dictionaries and other online resources depending on their individual needs.

**Prerequisite:** JAPNS403Y

International Cultures (IL)

JAPNS 410: Japanese Through Manga  
3 Credits

The course aims to expand students' knowledge and application of Japanese language beyond elementary and intermediate textbooks through the use of manga (graphic novels). JAPNS 410 Japanese Through Manga (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is a three credit course designed for those who wish to expand their knowledge in Japanese and application of it beyond typical elementary and intermediate textbooks. The course will use manga, the format of which helps students understand the story line, the setting, and the thoughts and emotions of the main characters. Given quick interactions between manga characters and onomatopoeia that accompany pictures, students will learn natural daily communications of Japanese. Class discussions will also cover relevant customs, manners, cultural values, socio-historical context, and social perspectives along with language use. The exact texts will vary from instructor to instructor, and may include film and new media in addition to a primary focus on manga. The course will serve as a gateway to the further exploration of Japanese authentic texts and audio visual materials. The prerequisite is JAPNS 110. Students who have successfully completed JAPNS 110, JAPNS 401, or JAPNS 402 are encouraged to take the course. Students who have finished JAPNS 403Y or JAPNS 404 may also take the course.

**Prerequisite:** JAPNS110 or equivalent

International Cultures (IL)

JAPNS 426: Early Modern Japan  
3 Credits

Japanese history from 1580-1880. ASIA 474 (HIST 474, JAPNS 426) Early Modern Japan (3) Japan's Tokugawa period can be difficult to grasp. It resembles a modern society in many respects but operated according to a logic of social organization different from that of most modern states. There was a collective sense of national identity, but its characteristics differed significantly from modern forms of Japanese identity. Moreover, modern ideologies have contributed to the characterization of early modern Japan as a rigid society and of the country as a whole having been isolated from the rest of the world. The main purpose of this course is to afford students the opportunity to study early modern Japan in detail and, insofar as possible, on its own terms. Through readings in primary and secondary sources, and through the evaluation of visual images, this seminar-style course will deepen students' knowledge of Japan and serve as basis for comparative study of other early modern societies. Although the course investigates classic areas of historical study such as institutional development and foreign relations, the emphasis is on social and environmental history. The course encourages students to think about a range of approaches to the past and to think about the ways our contemporary biases influence the ways we understand the past.

**Prerequisite:** HIST 172, HIST 174, JAPNS120 or JAPNS121

Cross-listed with: ASIA 474, HIST 474

JAPNS 430: Japan in the World  
3 Credits

Study of Japan's foreign relations and position in the international community from the early 19th century to the present. ASIA (JAPNS) 430 Japan in the World (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine Japan's foreign relations and changing position in the international community, from the rethinking of relations with the Western world in the early nineteenth century to its emergence as a pop culture superpower in the present day. The course will explore the structures of international relations, such as imperialism and international organizations, with the Japanese experience providing a viewpoint that differs from the standard Western-centric narrative in important ways. We will also consider the development of alternative methods of diplomacy, including cultural exchange and economic and technical assistance.

**Prerequisite:** JAPNS 120; JAPNS 121; ASIA 100; ASIA 101; ASIA 102; ASIA 105; ASIA 172; ASIA 175; ASIA 185; HIST 172; HIST 175; HIST 185; 5th Semester standing

Cross-listed with: ASIA 430

Bachelor of Arts: Other Cultures  
International Cultures (IL)

JAPNS 431: Courtly Japan  
3 Credits

Focused study of aristocratic society and culture of Heian period Japan. JAPNS 431 (ASIA 431) Courtly Japan (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. The Heian period of Japanese history saw the apex of a refined court culture. Through readings of primary and secondary sources, this seminar-style course will explore the activities, norms, and structures of courtly society in Japan, from the centralization of imperial power in the 8th century through the court's political marginalization in the late 12th century. We will pay particular attention to religion, the arts, politics and governances, gender, and the gradual rise of samurai power in the shadows of the court. This course is intended to provide an introduction to the political, social, economic, and cultural life of the Heian court of ancient Japan. The goals of the class are not only to gain an understanding of a time and place far removed from our own, but also to develop the skill of building such an understanding through primary and secondary sources, both written and visual. Students in this class will take on the role of historian or literary
critic themselves, thinking critically about assigned texts and making their own interpretations of their meanings. Through reading, discussions, and writing, students will enhance their ability to think critically and to express their ideas clearly in both speech and writing. The course is intended to deepen student’s appreciation of the cultural production of ancient Japan, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytic and expressive abilities. The course is designed to be suitable for all students generally interested in Japan or in various fields of humanistic study.

International Cultures (IL)

JAPNS 432: War and the Warrior in Japan

3 Credits

Survey of the role of warfare and the warrior in Japan, with attention to changing cultural settings. Taught in English. JAPNS 432 (ASIA 432) War and the Warrior in Japan (3) (IL) This course is intended to provide an introduction to the social and historical roles of warfare, and the changing cultural figure of the warrior, in Japan. Some prior study of Japan (JAPNS 120 or JAPNS 121 or HIST 172) is required. All materials will be available in English. Students will learn about subjects like the causes of violence, culturally acceptable ways of resolving conflict, obligations of victor toward vanquished, expectations regarding the memory of the war dead, the ideal of the warrior as a cultural figure, and historical roles that Japanese warriors have played in ages of peace. Readings and screenings will cover several genres, such as film, historiography, history documentary, classical epic, modern novel, and excerpts from Japanese history textbooks (in translation). The course, or individual units within the course, will be structured so that students develop an historical perspective, allowing them to understand the cultural contexts that have generated attitudes toward war and the warrior in Japan. In addition, students will learn to think critically about various media’s techniques and aesthetics of representation, and will become more engaged, critical investigators of literature and related media. Readings and in-class discussion will focus on the image of the warrior as a cultural icon, exploring the many ways in which popular understandings of the warrior have changed over time, for instance, as popularized dramatics began to idealize warriors as moral exemplars in the late medieval period, and then as historical realities made the position of the warrior itself redundant in the early modern era. Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. This participatory approach is intended to deepen students’ appreciation of the works, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytical and expressive abilities. Through critical reading, group discussion and interpretive writing, students will hone skills for evaluating modes of cultural production and consumption in premodern and modern Japan. Evaluation will be through means such as in-class presentations, short writing assignments, midterms or quizzes, one analytic paper (3-7 pages), and in-class/on-line participation and discussion. The course is designed to be suitable for all students generally interested in Japan, or interested in various fields of humanistic study.

Prerequisites: ASIA 4; ASIA 100; ASIA 101; ASIA 102; ASIA 104; ASIA 172; ASIA 174; ASIA 175; ASIA 185; CMLIT 4; HIST 172; HIST 174; HIST 175; HIST 185; JAPNS 120; JAPNS 121; RLST 104; 5th Semester standing

JAPNS 433: Traveling Voices

3 Credits

Transnational Writings of Japan: from Modern to Contemporary Eras . JAPNS 433 (ASIA 433) Traveling Voices (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. Through literary and visual texts from modern to contemporary eras, this seminar-style course will explore a wide range of narrative voices of Japan, created by writers who are physically or figuratively dispersed in many directions within, towards, and away from Japan, and who therefore problematize ‘Japanese-ness’ by dealing with cultural situations (e.g. identities, marginality) in their writings. Some Prior Study of Japan (JAPNS 120, JAPNS 121, or HIST 172) is required. Students will explore the rich cultural diversity in Japan and the Japanese diaspora, and develop a further understanding of historical border crossers between Japan/East Asia and Americas/the West. They will become more aware of the reciprocal and transformative cross-cultural interactions in languages, literature, religions, economics, ideas, or political formations. They will learn how to think critically, in speech and writing, and develop writing analytic skills appropriate to their final paper project. Evaluation will depend on specific instructor practice, but will certainly emphasize guided discussions, some student presentations (alone or/and group), and writing exercises (especially final research project). A sample guideline might look like this: Class Participation/discussion, Response papers, Informal Presentation (pair or group up to three), Mid-term exam, Final paper presentation, Final Project

Prerequisites: ASIA 4; ASIA 100; ASIA 102; ASIA 172; ASIA 175; CMLIT 4; HIST 172; HIST 175; JAPNS 120; JAPNS 121; 5th Semester standing

Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)

JAPNS 434: Beyond Anime

3 Credits

The visual, tactile, and literary arts play key roles in how modern nation-states make sense of themselves and how they make sense of other nations. Japan provides one key example through which to observe the use and function of art to create not only the image and identity of a nation and national culture, but also the image and identity of other national cultures. In recent years, Japanese popular culture has been reborn around the world. A global generation has grown up watching anime and reading manga in Spanish, Chinese, Russian, and English. Beyond Anime is designed to contextualize the recent appropriation and dissemination of Japanese popular culture through the cyclical history of such appropriations through the modern period. In this way, the course will explore the precursors, antecedents, and contexts to our present cultural moment. Through film, photography, posters, matchbook-labels, textiles, industrial design, novels, and myriad other popular media, this seminar-style study of Japanese popular visual culture will help students see Japanese visual arts in terms that are local to Japanese aesthetics and through those that transcend local cultures. Drawing on the long history of illustrated narrative from scrolls to chapbooks, through film and photo essay, this course confronts the exoticist notion that Japan’s arts have always placed a disproportionately heavy emphasis on the visual. Through comparative readings of cultural and visual material from Japan, this course will raise questions of aesthetic, cultural, and national
difference. Specific topics will vary with instructor, but may include: the rendering of three dimensional space through perspective, the use of pictures in the service of narrative versus the use of pictures as narrative, and how notions of negative space promise deep insight and risk crass stereotypes.

**Prerequisite:** ASIA 4; ASIA 100; ASIA 101; ASIA 102; ASIA 104; ASIA 172; ASIA 174; ASIA 175; CMLIT 4; HIST 172; HIST 174; HIST 175; JAPNS 120; JAPNS 121; RLST 104; 5th Semester standing

Bachelor of Arts: Other Cultures

International Cultures (IL)

JAPNS 450: Introduction to Classical Japanese

3 Credits

Basic patterns and structures of Classical Japanese from its development in the 6th century through usage in the 20th century.

**JAPNS 450 Introduction to Classical Japanese (3) (IL)(BA)** This course meets the Bachelor of Arts degree requirements. This course is an introduction to the basic grammar and stylistic idiosyncrasies of classical Japanese (bungo). Students will be guided through an examination of key syntactical structures and will be asked to apply their knowledge in order to read, translate, and discuss various texts from the classical, medieval, and early modern periods. In addition to gaining familiarity with standard reference materials (such as dictionaries of classical Japanese), students will also gain a working knowledge of the styles and themes of major works of pre-modern Japanese literature. Successful completion of this course will give students the fundamental skills necessary to read texts composed prior to the 1900's and to engage in research in the field of pre-modern Japanese studies. With this training and knowledge concerning the development of the Japanese language, students will increase their proficiency in modern Japanese and their overall knowledge of Japanese culture and literature. Prior study of modern Japanese is required (with proficiency equivalent to successful performance in JAPSN 402). The purpose of the course is to make bungo (literary Japanese) accessible to as many students as possible. Classical Japanese first appeared in the 6th and 7th centuries and was used to write a wide variety of texts up until the mid-20th century. Knowledge of it is very useful to anyone interested in studying Japanese history, literature, philosophy, politics, art, or culture. The course offers a systematic introduction to the grammar of Classical Japanese, while also presenting Classical Japanese and Modern Japanese as part of a linguistic and cultural continuum.

**Prerequisite:** JAPNS402 or equivalent

Bachelor of Arts: Foreign/World Lang (12th Unit)

International Cultures (IL)

JAPNS 452: Contemporary Japan: Cultures, Lifestyles, Trends

3 Credits/Maximum of 6

Survey of aspects of modern Japanese society; includes readings from Japanese newspapers, magazines, and fiction; topics may vary each semester. JAPNS 452 Contemporary Japan: Cultures, Lifestyles, Trends (3 per semester/maximum of 6) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course orients students to cultural issues and trends in contemporary Japan, and the way that those issues and trends are explored in literature, film, newspapers and magazines. The course examines a selection of Japanese-language materials from an array of genres, modes of representation, and historical settings. Focusing on the postwar era to present (1945-), this course introduces various aspects of contemporary Japanese culture, from literary works of the postwar experience to recent popular culture, including anime (animated movies) and manga (graphic novels). Each work is discussed in terms of its own literary or artistic merit, the social context that produced it, its position within the larger trends of literary development in Japan, and its relevance for the modern reader. This course is designed for (prospective) Japanese major or minor students interested in broadening their knowledge of Japanese culture and society as well as for students who wish to compare other cultures and literatures they have studied with those of Japan.

**Prerequisite:** JAPNS401

Bachelor of Arts: 2nd Foreign/World Language (All) International Cultures (IL)

JAPNS 453: Japanese Film

3 Credits/Maximum of 6

Selected films and directors representing various aspects of Japanese culture and cinema; topics may vary each semester. JAPNS 453 Japanese Film (3 per semester/maximum of 6) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This class will be a seminar-style study of Japanese culture, texts, and language as seen through the lens of Japanese cinema. The goal is to deepen the students' understanding of diverse aspects of Japanese life, history, and culture while developing language skills. Typical class sessions may involve watching sections of film (with our without English subtitles); working with listening comprehension; engaging with student presentations (in Japanese) on studios, directors, or actors; discussing Japanese film history; and analyzing film stills for aesthetic qualities. Participants will be required to view and discuss films in Japanese (with or without English subtitles). Viewings will be accompanied by secondary readings (at least some of which may be in Japanese). We will also be discussing the films and readings in the context of nation, identity, history, sociology and culture. Exercises will range from group discussion, web-based research in Japanese and English, presentations, essays and film analysis. Students must prepare for class by reading the material carefully; taking notes, writing down questions, and being ready to take part in lively conversations. Course discussion will take place primarily or exclusively in Japanese. This course satisfies the International Cultures requirement.

**Prerequisite:** JAPNS401

Bachelor of Arts: 2nd Foreign/World Language (All) International Cultures (IL)

JAPNS 454: Japanese Literature

3 Credits/Maximum of 6

Selected works from important Japanese texts representing genres such as autobiography, poetry, fiction, and drama; topics may vary each semester. JAPNS 454 Japanese Literature (3 per semester/maximum of 6) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This class will be a seminar-style study of contemporary Japanese literature. The goal of the course is to help students move from grammar-assisted reading assignments (which may provide vocabulary lists, grammar notes, and cultural notes) to reading ‘raw’ materials in Japanese, where students are responsible for knowing how to use the appropriate reference materials so that they can compile vocabulary lists, grammar notes, and cultural notes on their own. Students will be reading selected works from an array of genres such as autobiography, poetry, fiction, drama and essays, with topics and thematic focuses varying from semester to semester. Typical class sessions may involve reading aloud
from a literary work; engaging with student presentations (in Japanese) on authors, genres, thematic elements, and relevant historical or cultural events; discussing Japanese literary history; analyzing short passages for their aesthetic qualities; and working with specific items of grammar or vocabulary. Participants will be required to read and discuss Japanese literature in Japanese. Exercises will range from group discussion, web-based research in Japanese and English, presentations, essays, quizzes and tests. Students must prepare for class by reading the material carefully, taking notes, writing down questions, and being ready to take part in lively conversations. Course discussion will take place primarily or exclusively in Japanese. This course satisfies the International Cultures requirement.

**Prerequisite:** JAPNS401
Bachelor of Arts: 2nd Foreign/World Language (All)
International Cultures (IL)

JAPNS 494: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

JAPNS 494H: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

Honors

JAPNS 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

JAPNS 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

JAPNS 498: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

JAPNS 499: Foreign Study--Advanced Japanese
1-15 Credits/Maximum of 15
Small group instruction in spoken and written modern Japanese at the advanced level.

**Prerequisite:** JAPNS110 or JAPNS299
International Cultures (IL)

---

### Jewish Studies (JST)

#### JST 4: Jewish and Christian Foundations

3 Credits

This course seeks to help students better understand the Bible and appreciate its role as an authoritative collection of sacred texts for Jews and Christians. The Bible is a difficult book, one that is demanding on many levels. In order to read the Bible intelligently, it is important to understand the historical and cultural backgrounds of the biblical writings. This course explores the history and geography of ancient Near Eastern civilizations that shaped the experience of ancient Israel and later, the Greek and Roman imperial contexts that shaped Second Temple Judaism and early Christianity. The focus of the course, however, is on the biblical narrative itself and the particular ways that the story of Israel and its covenant with God was represented in scripture: in tales, poems, hymns, dialogues, and genealogies. A basic goal of the course, then, is to promote intelligent, well-informed reading of the Bible. Also important is the willingness to read the Bible closely and critically, with a view toward larger questions raised by biblical texts: how is God to be known and understood? What is the purpose of human life in the world? What moral obligations ought to structure our common life? Does human history have direction and purpose? What is the good and how do we follow it? The Bible takes up these questions and many more. Though an ancient anthology shaped by the succession of Assyrian, Babylonian, Persian, Hellenistic, and Roman empires, the Bible is not merely a product of its original contexts. Millennia of transmission and interpretation have made it a product of history in a much more extended and dynamic sense. In this course, we will examine larger questions raised by the biblical writers and consider the ways that the Bible has shaped, informed, and guided Jewish and Christian ways of life.

#### JST 10: Jewish Civilization

3 Credits

This course explores the life of the Jewish people from Biblical times on, emphasizing cultural, religious, and institutional developments.

HEBR 10 / HST 10 Jewish Civilization (3) (GH,IL,BA) This course meets the Bachelor of Arts degree requirements. Jewish tradition goes back thousands of years, and Jews have resided in many different lands. They have become an integral part of many different cultures, yet have often retained (or been forced to retain) a certain degree of separateness or difference. In this course we will trace continuity and change in Jewish traditions from ancient to modern times, and across different regions. Taking into account inter-cultural contact and historical events – ranging in place from the Middle East to Muslim Spain to Asia, Africa, Europe, and the Americas, and in time from the ancient world to the medieval era, the Holocaust, and contemporary Israel and the U.S. – we will explore developments in Jewish history, literature, and culture. The course considers topics such as the attitudes other groups have had toward
Jews (and vice-versa), the question of whether Jewish identity is a race, a religion, or an ethnicity, the dilemmas Jews face today, and the ways that Jews in many diverse settings have balanced change and continuity. We will explore the factors that shape Jewish experience in different times and places, the diversities within and among Jewish lifestyles, and the ways in which events and interactions with other peoples have influenced the development of Jewish civilization. Finally, we will consider the dilemmas Jews face today in terms of the preservation of their identity and traditions. The course includes class discussion. Students are evaluated on the basis of essay exams, quizzes, in-class discussion and commentaries, and group projects.

JST 12: Lands of the Bible

3 Credits

Textual and archaeological evidence for the lands, cities, and peoples associated with the Hebrew Bible and Christian scriptures. CAMS (J ST/RL ST) 012 Lands of the Bible (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. CAMS/J ST/RL ST 012 introduces students to the lands, cities, and peoples associated with the Hebrew and Christian scriptures. Using methodologies from historical geography, archaeology, ancient history, epigraphy, and anthropology, students study the Fertile Crescent, from the Nile Valley, through the Levant and its Jordan River valley, to Mesopotamia—the river valleys of the Tigris and Euphrates. Students will study the cities and states of the cultures along these rivers in the Bronze and Iron Ages, including Memphis/Saqqarah, Thebes, Ugarit, Jerusalem, Lachish, Megiddo, Shechem, Samaria, Hazor, Ebla, Babylon, Ur, Petra, Jericho, ʽAkko, and others. These are the lands of the Hebrew and Christian scriptures, but also cities that have been revealed through modern study. For example, the texts excavated at Ugarit (Syria) in the 1920’s shed light on the relations between ancient Israelites and their Canaanite neighbors in the period of the ‘Conquest’ and the monarchies of the Iron I and Iron II periods. Students will learn that the culture of the ancient Near East is inexorably linked to an understanding of the religious traditions that grew up in the region, including Judaism, Christianity, and Islam. Classes will be a combination of lecture, discussion, and problem-solving, with frequent use of slides and occasional use of artifacts to illustrate the topics at hand. Students are evaluated on three of the following five means: a midterm test, a final essay examination, a five to seven page term paper, a team research oral presentation, a team research poster presentation. Participation in class discussion will also be evaluated. This course fulfills three credits of the General Education or the B.A. humanities requirement. For majors in CAMS, the course fulfills the requirement of three credits in Near Eastern literature and language, civilization, or archaeology. The course fulfills the three credit requirement for courses in RL ST 001-099 for the Religious Studies major, and the Jewish Studies major’s requirements. The course also would fulfill three credits of the six credit requirement for courses in any field that may be below the 400-level for the Religious Studies Minor, three credits of the nine credits required in course work for the Jewish Studies Minor, and three of the 18 credits required for the CAMS minor.

JST 70: Prophecy: The Near East Then and Now

3 Credits

Prophecy in the ancient Near East, the ancient Jewish and Christian traditions, and today. CAMS 070 CAMS (J ST, RL ST) 070 Prophecy: The Near East Then and Now (3) (GH;IL) The objective of this course is to introduce students to the prophetic traditions of the ancient Near East and the Bible of the Judeo-Christian traditions. The course will explore the development of prophetic circles in the ancient Near East (incl. Egypt, Syria, Canaan, and Mesopotamia) and then focus on the major prophetic traditions of the Hebrew Bible (to include at least Isaiah, Jeremiah, Ezekiel, Amos, Hosea, Micah, Haggai, Zechariah, and Daniel) and how these traditions were understood in early Judaism and nascent Christianity. Special attention will be paid to the roles of priests, kings, and prophets in ancient Israel to better understand Israelite and Judean prophetic traditions in ancient Israelite society. The course will then examine the rise of apocalypticism and its modern manifestations in the coalition of conservative Christians and Jews in ‘Zion’ – the new Jerusalem. Additional emphasis will be placed on the religious and political interactions which manifest themselves in the prophetic movements – then and now – including the rhetoric of ideology and propaganda. Important figures and events illustrate these cultural and political trends, in antiquity, and in the contemporary setting.

JST 83: First-Year Seminar in Jewish Studies

3 Credits

Critical approaches to the history, sociology, and literature of Jewish Studies. JST 83 First-Year Seminar in Jewish Studies (3) (GH;FYS;IL)(BA) This course meets the Bachelor of Arts degree requirements. Through a combination of readings, lectures, discussions, and research projects, students will learn to master the subject material of the course and acquire basic skills important to the study of humanities. Students will learn to read academic books, as well as original documents, to formulate arguments, and to write analytical essays and papers. Analyses of this type will provide students with techniques for formulating, identifying, and judging academic arguments and presentations in many fields of learning other than Jewish Studies. The topics chosen for these seminars will introduce students to some of the major figures, historical, literary, religious, and sociological developments in Jewish Studies. By
concentrating on these topics, the students will better understand the cultural assumptions of different groups and societies. Although the course will focus on a specific topic, the instructor will aid the student in seeing the larger implications of the issues and controversies discussed in the class. The international and intercultural aspects of the topic will consistently be considered. The course will require students to express their ideas as well as to gather information through research, discussion, and writing. It will consistently challenge students to consider social behavior, the nature of the community, and the value of scholarly work as these relate to the particular topic of the seminar. The course fulfills the first-year requirement, as well as one of the humanities requirements in general education or a Bachelor of Arts humanities requirement. The first-year seminar will be offered twice per year with an enrollment limit of 20 per section.

JST 90: Jerusalem: Past, Present, and Future

3 Credits

Social, cultural, religious, political, and archaeological history of Jerusalem from earliest times (c. 3000 BCE) to present. CAMS 90 / JST 90 / RLST 90 Jerusalem: Past, Present, and Future (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. Jerusalem, a holy city for Judaism, Christianity and Islam, is symbolically depicted in art and literature as the physical and spiritual center of the world. Throughout its history, this ‘city of peace’ was a focal point attracting numerous cultures and peoples, the latter sometimes as prophets and more often as conquerors. The reasons for Jerusalem’s centrality and significance during the past five millennia as a heavenly and earthly capital are explored in this course. The course curriculum will survey the religious, political, archaeological and historical record of ancient Jerusalem, beginning with its earliest settlement during the fourth and third millennia BC. Jerusalem’s urbanization in the second millennium BC, its role as the capital of biblical Israel and Judah during the First and Second Temple periods, and its transformation as a center of Christianity and later Islam are studied utilizing the testimony of artifacts, architecture, and iconography in relation to the written word. Throughout the ages and continuing into the 21st century, Jerusalem remains a contested city for the three monotheistic faiths. The holy city’s impact on the politics of the modern Middle East will be critically examined in light of Jerusalem’s history and recent archaeological discoveries and their modern-day interpretation. Objectives include the critical evaluation of archaeological, historical and literary evidence and its relationship to modern-day political and religious perceptions of Jerusalem. The course will encourage research skills (including library training sessions) and writing and oral communication skills based on an analytical approach to the texts and material culture relevant to Jerusalem. This course will fulfill three credits of the General Education or the B.A. humanities requirement and the GI requirement. For majors in CAMS, the course will fulfill the requirement of three credits in Near Eastern literature and language, civilization, or archaeology; and for those in the CAMS ancient Mediterranean archaeology option it will fulfill the three credits of archaeology course work requirement. The course will fulfill three credits of course work concerned with the ancient period or with the land of Israel.

JST 102: Canaan and Israel in Antiquity

3 Credits

This course is an overview of the ancient history and cultures of Canaan (the Mediterranean Levant of Syria-Palestine) and the emergence of Israel. It involves a critical view of biblical texts (especially the Hebrew Bible, aka Old Testament) in light of other ancient texts, archaeology, and historical methods, in order to explain the nature and the evolution of society, religion, and thought in the prebiblical and biblical era. We will be especially interested in the period from the end of the Late Bronze Age (c. 1200 BCE) to the Persian period (539-332 BCE), and will examine ongoing debates about the Bible and history, as well as the development of Israelite religion from polytheism toward monotheism and a distinctive worldview.

JST 104: The Bible as Literature

3 Credits

Study of the English Bible as a literary and cultural document. ENGL 104 The Bible as Literature (3) (GH) (BA) This course meets the Bachelor of Arts degree requirements. The purpose of this course is to acquaint students with the literature of the Bible. Throughout this course, students will examine the language, thought, images, and structures of the book that has arguably proved the central text of Western literature. Students will also actively explore the ways in which the Bible has shaped the literature of English-speaking cultures. Students will read substantial portions of the Old and New Testaments, learning to read critically and to interpret the Bible as they would any other literary text. They will also learn about the historical construction of the Bible and contemplate the competing versions of existing Biblical texts. Students will be asked to complete at least three writing assignments.

JST 110: Introduction to the Bible: Old Testament

3 Credits

The Old Testament (or, Hebrew Bible) is the record of the interaction between the people of ancient Israel and their God. As a religious text, the Bible is inextricably intertwined with the cultures of Israel's neighbors, including the Canaanites, Syrians, Greeks, Assyrians, Babylonians, Arabs, Egyptians, and the peoples of the eastern desert. To study the Hebrew Bible and its development during the first millennium BCE is to study the history, culture, and literature of the entire region. This course introduces students to the literature of ancient Israel, its rituals, the stories which established a people's identity, and which defined their moral behavior. Great figures of the texts, such as Moses, David, Solomon, Bathsheba, Ruth, Jeremiah, Daniel, and Ezra, teach us important lessons about life and how people of faith attempted to relate to one another, to God, and to people outside their ethnic group. Students will read from the biblical text, as well as from secondary source readings which contains scholarly opinion from a variety of sources. Recent archaeological and epigraphical studies will be incorporated into the course to enhance our work. The ultimate goal will be to assess the meaning of the texts in their ancient Near Eastern environment; to understand the development of Hebrew religion and the beginnings of Rabbinic Judaism; and to understand the connection between biblical studies and other fields of study, such as History, Religious Studies, Archeology, Linguistics, and Comparative Literature.

JST 111: Early Judaism

3 Credits

Early Judaism will introduce students to the history of Judaism as reflected in Jewish literature from the period of the Babylonian exile (587/6 BCE) to the closure of the Babylonian Talmud (ca. 600 CE). This course will analyze the development of Judaism from its emergence out of the ancient Israelite religion through the formative period of rabbinic Judaism. Attention will be given to the diversity of ideas and practices that characterized early Judaism and the influence the larger Persian, Hellenistic, and Roman worlds had on Judaism's development. We will examine selections from the Hebrew Bible, and from other literature, including the Dead Sea Scrolls, the Apocrypha, the New Testament, the Mishnah, and the Talmud.

JST 112: Jesus the Jew

3 Credits

Although Jesus of Nazareth is the object of Christian devotion, he was not a Christian himself, but a pious Jew. What can be known about the historical figure of Jesus the Palestinian Jew? How would his teachings and actions have fit in the context of Judaism of his day, in the Greco-Roman world? What did he mean when he proclaimed the coming kingdom of God? Because almost all of our source material espouses Jesus as the Christ of Christian faith, the first step is to understand the aims and perspectives of these Christian sources, including the canonical Gospels as well as non-canonical Gospels. Through careful examination of these sources in light of critical scholarship and the social and historical context of Judaism in the Greco-Roman world, we will consider how much the historian is able to reconstruct of Jesus using historical method, what the limits of this investigation are, and how relevant the task is. We will consider and evaluate a few of the different scholarly reconstructions of the historical Jesus. Major emphases will include the historical, social, religious, political, and cultural contexts of Jesus, including important precursors; the political, institutional, and cultural history of the teachings and actions of Jesus in their Jewish setting, and how these are reinterpreted by his followers after his death. Attention will be paid to the development of variant Christian traditions about Jesus including Jesus as Messiah, his death as a saving event, the resurrection as exaltation of Jesus as Lord, the memorialization of Jesus in Christian ritual practice, and the cultural and religious impact of Jesus throughout history. In addition to the early Christian sources on Jesus (especially the canonical Gospels, but also other New Testament texts and non-canonical writings), on each topic students will read selections from early Jewish writings in order to illuminate the cultural context. These include the Dead Sea Scrolls, Philo, Josephus, Jewish texts among the so-called Apocrypha and Pseudepigrapha, early rabbinic texts, and epigraphical writings. Relevant archeological evidence and Greco-Roman sources will also be considered. Broader issues of historical, cultural, linguistic, political and geographical context will be covered in lectures and secondary readings.

JST 113: Jewish Myths and Legends

3 Credits

Comparative study of diverse interpretations of stories from the Bible in Judaism and Christianity. CMLIT 113 / JST 113 / CAMS 113 / RLST 113

Myths and Legends of the Jews (3) (GH;IL) The impact of the Bible on Western culture is immense. Beyond its religious importance, the motifs and images from its myths and stories permeate literature and art, providing a basic frame of reference that for much of history could be taken for granted. A degree of familiarity with these motifs so as to be truly fluent is no longer common, and so it requires special effort to discern allusions to biblical traditions. Moreover, these traditions are not static: religious communities continually re-interpret them and appropriate them in very different contexts. Many prominent traditions in Judaism, Christianity, and Islam do not appear explicitly anywhere in the Hebrew Bible, but are the product of imaginative and ingenious interpretation and re-tellings. Why, for example, is Noah an example of a righteous person in Christian tradition, but in rabbinic tradition is more often portrayed as a profane, earthly-minded man who was saved only because he was the least bad of an evil generation? Why is Moses commonly portrayed with horns in medieval art? Underlying such different traditions are centuries of debate and reflection on these texts as sacred scripture, and competing religious communities often authorized their distinctive beliefs and practices by reading them into scripture. The differences are often too subtle to discern apart from careful comparison. This course will explore the boundaries between Scripture and tradition by means of a close examination of the myths and stories in the Hebrew Bible and their subsequent interpretation and re-tellings in Judaism, Christianity, and Islam. Using methods from comparative mythology and folklore, as well as comparative midrash, our procedure will be to compare these traditions closely with the biblical text, asking: What are the main motifs in the mythology of Judaism? Does Judaism have a coherent mythology? How do their myths compare with the myths of their neighbors? Where did these myths come from? How do these traditions relate to the Bible? What was the function of these myths? Why are there competing myths? How is it possible that Judaism affirms belief in only one God, but has myths that include other divine beings? We will also compare with later interpretive traditions (Jewish, Christian, Islamic). Can we trace trajectories of interpretation? Can we discern particular interpretive methods in operation? We will seek to answer: what do these re-workings of the traditions tell us about the development and function of Scripture, and the social circumstances of the communities? Finally, we will seek to detect reflections of these interpretive traditions in literature and art from the medieval to the modern periods. The course is organized around major topics in the Jewish Scriptures: God, creation, heaven and hell, Torah, Sabbath, Abraham and other ancestors, Israel and holy land, exile, and Messiah. Throughout we will consider how sacred stories function to form ethical perspectives and values.

JST 114: Modern Judaism

3 Credits

This course will explore the developments in Judaism since the Enlightenment and the French Revolution. Major changes have come to the world since 1700-changes represented by terms such as the Enlightenment, Emancipation, Industrialization, Nationalism, Urbanization, Immigration, and Egalitarianism/Feminism. These broad social changes led to the break-up of traditional communities and, among other things, reformulations of Jewish Life and Jewish Religion. The effects can be seen in a number of Jewish responses-Assimilation, Hassidism, Self-Defense and Nationalism, Denominationalism, and Egalitarianism/Feminism—which we shall study in this class. In particular, we shall look at Jewish spirituality—its historical and theological development, its many historical and modern manifestations, and how it works.

JST 115: The American Jewish Experience

3 Credits

Chronological and topical survey of the story of Jewish life in America. We will trace the social, religious, cultural, and political developments in the Jewish community from the Colonial Period to the present. Topics to be covered include immigration, acculturation, ethnicity, gender, politics, and communal and religious innovation. While 'knowing the facts' is obviously important to historical understanding, this course helps students develop critical thinking skills. These skills include: close and thoughtful reading and analysis of primary and secondary sources; looking for a broader coherence or 'order' to the material; independent analysis and effective articulation (both in writing and in class discussion) of well-reasoned, well-crafted conclusions and interpretations and arguments (conclusions/interpretations/arguments which are supported by specific factual evidence derived from a variety of sources). The three specific course objectives underscore its scholarly dimensions: (1) Students will gain a knowledge and understanding of the relationship between the experiences of members of the American Jewish community and United States history as a whole. (2) Students will gain an understanding and knowledge of the political, economic, and social processes that shaped the American Jewish experience. (3) Students will learn how to 'think historically' by placing documents written in the past in their historical contexts, and to consider the relationship of the past to the present. By the end of the course students will: Demonstrate an understanding of the chronology of American Jewish history. Demonstrate an understanding of the diverse experiences of different groups of Americans. Demonstrate an understanding of the social, political, and ideological structures that shaped the American Jewish experience and continue to shape the modern United States.

JST 116: Jewish Great Books
3 Credits

Historical and cultural survey of key texts of the Jewish Tradition, from The Bible to the present. CMLIT (J ST) 116 Jewish Great Books (3) (GH; IL) (BA) This course meets the Bachelor of Arts degree requirements. This course will introduce students to the rich and diverse expanse of the Jewish tradition through a survey of that tradition's most important texts. Starting from the Bible, moving up through the contemporary world, and spanning the globe, the course will examine religious, cultural, folkloric, philosophical, national, and literary traditions, and attention will be paid to both breadth emphasizing the vast range and diversity of Jewish thought and writing and depth emphasizing the complexity and subtlety of particular texts in examining the material. Students will learn methods and practices of textual, cultural, and historical criticism as they engage in analysis of Jewish textual traditions, of the relationship between representation and history, and of the productive interchanges between representation, history, and identity.

JST 118: Modern Jewish History
3 Credits

Modern Jewish history is a complex and fascinating story. Some scholars depicted it as a long period of suffering and isolation that culminated in the Holocaust and only ended with the founding of the state of Israel. In recent decades a more balanced perspective has found wide acceptance. Today scholars highlight Jewish agency and different conditions in the various places Jews settled without downplaying anti-Jewish prejudice and violence. A recurring theme in this course concerns the relationship between individual Jews and Jewish communities, and on a broader level, the perception and treatment of Jews by societies and states. As Jews in Western and Central Europe 'left the Ghetto' around 1800 and became citizens of states, they redefined their relationship to Jewish communities in strikingly different ways. Some Jewish women and men emerged as agents of change, others resisted change. We will explore Jewish 'responses to modernity,' ranging from assimilation, Zionism, and socialism to migration. While many Jews in Western Europe and the United States prospered, the lives of Jews (and their neighbors) in Eastern Europe and the Ottoman Empire were shaped by social and economic crisis (albeit not constantly and not everywhere). For the twentieth century the course will concentrate on three major events that had a dramatic impact on Jews, especially in Europe: the First World War and the collapse of the large multiethnic Empires in Eastern Europe, the Holocaust and the founding of the first modern Jewish state, Israel.

JST 120: New Testament
3 Credits

CAMS 120 / JST 120 / RLST 120 New Testament (3) (GH; IL) (BA) This course meets the Bachelor of Arts degree requirements. This course provides an introduction to the collection of early Christian writings that make up the New Testament. It begins with an examination of the first-century context in which these writings took shape—one overshadowed by the Roman empire, influenced by Hellenistic culture, and based, above all, on varieties of Judaism. From there, the course takes up a few guiding questions. How, in this ancient context, did the first Christians understand and portray the figure at the center of their communities, Jesus of Nazareth? What do the New Testament writings reveal about the beliefs and aspirations of these communities as they advanced a movement that would, in time, become among the most consequential in world history? By the end of the course, students will have gained knowledge of the historical context of New Testament writings and an understanding of why the New Testament has been such an important and influential collection of writings.

JST 121: History of the Holocaust 1933-1945
3 Credits

Historical analysis of holocaust themes. HIST (J ST) 121 History of the Holocaust 1933-1945 (3) (GH; IL) (BA) This course meets the Bachelor of Arts degree requirements. The course will analyze the Holocaust using historical, literary, and philosophical approaches. Various species of evidence will be used and evaluated, including film and literary materials. Emphasis will be placed on discussion, student research projects, problems of ethnicity, race and religion in analyzing the origins of a persecuting mentality and the scapegoating and brutalization of victims, primarily Jews, but also including Gypsies and other groups. The Holocaust is also discussed in the context of global genocidal phenomena. The peculiar structures and dynamics of Jewish ethnic life in Eastern Europe are also treated prominently. Comparative analysis of the relationships between dominant and non-dominant cultures is a major concern of the course. An example of evaluation may include requiring students to complete one major paper on a specific theme covered in the course with a draft of four pages due at the end of six weeks. Students will be required to complete one major paper on a specific theme covered in the course. The course will contribute both to studies in 20th century European and German history, as well as to Jewish Studies. It will form a prominent feature linked to Modern Jewish History HIST/J ST 118 and the History of Anti-Semitism (HIST 302W). The course may be used to count for 3 credits toward the 18 credits required for the History minor and 22 credits required for the Jewish Studies minor. The course will be offered once per year with an enrollment of 20 for HIST and 20 for J ST.

Cross-listed with: HIST 121

JST 123: History of God: Origins of Monotheism
3 Credits

This course examines the early history of God; that is, the concept of the divine as a single supreme being. In particular, it focuses on the origins of monotheism and the development of its three major traditions in the Near East: Judaism, Christianity, and Islam, from their respective beginnings to around 1000 C.E. The course will begin with an analysis of the polytheistic religious milieu of the Ancient Near East in the second and first millennia B.C.E., and will consider the question of how, when, and why belief in one God first appeared in ancient Israel. Various modern theories about the origins of Israel's national God (Hebrew Yhwh/Yahweh and Aramaic Yhu/Yah) will be analyzed, with careful attention to the evidence of ancient texts and archaeology. Following a discussion of the nature of the religion(s) of early Israel, the course will then turn to the development of Judaism as the world's first monotheism. It will then examine the subsequent emergence of Christianity in Roman-era Palestine and Islam in Late Antique Arabia, with a brief glance at the Persian religion of Zoroastrianism, which shares some commonalities. Finally, the course will compare and contrast some of the major beliefs, practices, and significant historical trends and movements within the first centuries of the three major monotheisms.
Survival in Auschwitz, films such as Steven Spielberg's Schindler's List, Roman Polanski's The Pianist, and Roberto Benigni's Life is Beautiful, as well as photographs, poems, artworks, installations, museum architecture, the design of monuments and other artifacts. We will also examine questions of memorialization (Holocaust museums and memorials), national guilt, survivor's guilt, stigmatization, and the ethics of historical representation.

JST 131: Jewish Literature: An International Perspective

3 Credits

Literature of the Jewish tradition in various cultures and contexts, such as Europe, Israel, Islamic countries, and the Americas. J ST 131 (CMLIT 110) Jewish Literature: An International Perspective (3) (GH;US;IL) (BA) This course meets the Bachelor of Arts degree requirements. CMLIT 110 (J ST 131) will provide an introduction to the multiple worlds of Jewish experience and the different literatures they continue to inspire. Jewish literary creativity has varied widely with the personal and communal experience of writers in many parts of the world, and in many different time periods. Readings usually range from the first Jewish literary text, the Hebrew Bible, to twentieth-century works, including writings about the Holocaust. The course typically includes units such as Jewish writing and culture in Eastern Europe, in the Americas, in Spain during the Middle Ages, and in Israel and the Middle East today. The material may be organized chronologically, thematically, or by regions or languages. Texts that critique or apparently suppress Jewish identity, as well as texts with representations of Jews by writers of other heritages, may be included for comparative purposes. We will include writings by Jewish authors who have written in languages usually associated with Jewish tradition (such as Hebrew and Yiddish) and in other languages (such as Spanish, Arabic, German, English, etc.). Topics discussed in the literature may focus on questions of Jewish identity and continuity, the situation of Jews as a minority people, the immigrant and diasporic experience, representations of the Holocaust, and the establishment of Israeli culture as a mixture of several traditions. We will question generalizations about the meaning of 'Jewish' by showing the wide range of characteristics associated with Jewish literary productions, and the great diversity of depictions of Jews and Jewish lifestyles, in different times and places. In addition to our primary focus on literary texts, we may include examples of other cultural productions (film, music, the visual arts, philosophy, etc.). All offerings of the course include writing assignment and discussion in the evaluation methods. The syllabus often includes 2 or 3 midterm exams (with essay questions); a final exam, paper, or project; oral presentations; participation in online discussions. CMLIT 110 (J ST 131) counts towards the Comparative Literature major and the World Literature minor. No prior knowledge of Jewish tradition is required, and General Education students are welcome. This course also fulfills the General Education Humanities requirement, the Bachelor of Arts Humanities requirement, and the United States and International Cultures requirement.

JST 132: Jewish American Literature

3 Credits

This course will provide an introduction to Jewish American literature through a historical survey of the tradition's key texts, figures, and themes. The course will focus on the defining aspects of the literature and on what the literature 'thinks' about Jewish American culture and identity. But rather than assuming a unity to Jewish-American culture, this course will use Jewish literature to seek ways of articulating and representing both the points of cohesion and the points of divergence that characterize Jewish life in America. The United States has absorbed large numbers of Jewish immigrants hailing from many parts of the world, holding many different ideas about Jewish practice, and affiliating themselves with many different political, social, and cultural traditions. Moreover, Jews have settled and made homes in a wide variety of American communities. This course aims to explore Jewish American culture's marked diversity by offering a literary window onto the major fault-lines running through Jewish American culture: lines demarcated by gender, by political affiliation, by geography, by pre-immigration community by religious practice, by attitude toward world Jewry, by national allegiance, and by minhag (or custom), to name just a few. The class therefore provides an opportunity to consider the constitution, origin, and development of Jewish American's identity and social formations by looking at how that identity and those social formations exist and what they 'do' in literature written by and about Jews in America. Materials will consist predominantly of primary texts, including prose fiction and nonfiction, poetry, drama, and film. Course methodology will emphasize the close reading of these texts. The course complements offerings in Jewish Studies and English, and it will satisfy the GH and US requirements. Most obviously, the course will offer students of Jewish literature, world literature, and American literature an opportunity for contextualization. It enables students in Jewish Studies to study the rich literature of American Jews, and it adds to courses covering Jewish American history, religion, and culture. The course offers students in English a valuable, sustained introduction to an important U.S. and world sub-culture.

JST 135: Ethics in Jewish Tradition and Thought

3 Credits

This course takes as its starting point the idea that modern ethical frameworks are deeply rooted in the soil of older traditions. By examining the development of Jewish intellectual traditions and their roots in the Bible, it provides students with an opportunity to study ethics in
a philosophically textured, culturally rich, and historically informed way. And by focusing on Jewish engagement with the Bible, the course illuminates other traditions that derive from biblical monotheism: for example, those associated with Christianity, Islam, and the Enlightenment. The first part of the course takes up the idea of tradition and includes a study of biblical texts that serve as the foundation for key moral concepts. Following the traditional division of the scriptures, it examines questions of human identity and responsibility in the Torah, social ethics in the Prophets, and the quest for wisdom in the Writings. The final topic in this unit is the development of ethical tradition among the great sages of Jewish antiquity. The second unit shifts focus to the appropriation of tradition in modern Jewish thought. After reviewing important developments in Jewish thought in the medieval and early modern periods, it turns attention to the ways that some recent figures have addressed perennial concerns in light of commitments and ways of being that are integral to Jewish identity. By reading closely the works of such seminal thinkers as James Kugel, Joseph Soloveitchik, and Abraham Heschel, we will gain a deep acquaintance not only with important vocabulary but also with the ways that traditional words and concepts may be used dynamically to produce fresh ways of looking at questions in moral philosophy.

JST 137: Women and Religion
3 Credits

Jewish and Christian religious views on womanhood; thought and lives of important religious women; and feminist understandings of these. RLST 137 / JST 137 / WMNST 137 Women and Religion (3) (GH;US;IL)

Women and Religion examines the historical and contemporary role of women in society and in religion, how those roles are shaped by religious doctrines around leadership, ritual, language, and the valuation of women's experience and history, and the diversity of women's voices speaking to these issues. An historical inquiry begins with a review of early goddess-based religion and an examination of gender roles promoted in selected creation narratives, including those from Genesis. Additional biblical and non-canonical texts are studied for their various characterizations of woman, the influence of marital status, and her place in the public and private spheres. Historical debates about women consider what roles women played in leadership structures, in religious ceremonies and in the creation of a theological tradition as well as the places women created for themselves outside 'official' institutional churches or the formalities of worship. We study prominent women in biblical history, the early church, the medieval past, and in modern American history. What are their stories and what noteworthy contributions did they make in the history of religion? What do we know of their lives and thought? Furthermore, the course addresses contemporary issues of importance to women and how those issues are resolved from the multiple perspectives within Judaism and Christianity. Such issues may include dating, marriage, family and divorce; spousal and gender relations; reproductive rights; homosexuality; sexual violence toward women; work outside the home; and religious leadership and inclusion. Finally, the course examines women's diverse understandings of the ways of being religious. Women are not a homogeneous group and are responding in a multitude of ways to the decisions they face about staying within or working outside established institutions. We consider their choices, from redefining and recreating new traditions and rituals, both within and outside formal worship settings, to returning to goddess worship and other innovations inspired by the most recent feminist movement. All topics are discussed in light of the different beliefs and understandings across the movements within Judaism and as well as within Roman Catholicism and the many Protestant denominations. In addition, the diversity of scholarly interpretation is emphasized, including that offered by feminist theologians and the breadth of women's experience arising from factors of race, ethnicity, sexual orientation, and class and educational background.

JST 143: History of Fascism and Nazism
3 Credits

The study of right-wing totalitarianism in the twentieth century, with special emphasis on Fascist Italy and Nazi Germany. HIST 143 History of Fascism and Nazism (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. History 143 is an introductory survey of fascism and Nazism. The course concerns itself with understanding the social context of fascism, its governing assumptions, ideals, and values, how it worked in practice, and its consequences and historical implications. The course centers on the analysis of secondary and primary sources, and textual, video, and audio materials are all used. Lectures tie the various materials together, while weekly discussion sessions provide an opportunity for students to engage the materials directly. Students are evaluated on the basis of exams (which include an essay component), papers, and class attendance and participation. The course contributes not only to the study of the history of authoritarianism, antisemitism, and the history of the holocaust, but also contemporary and modern European history and, of course, German, Italian, and Spanish history. History 143 will be accepted, but not required, for the History Major as well as the History Minor. It may function as a
service course for the Departments of Political Science and Sociology. It is recommended that it also serve as a general education course in the Humanities. This course is offered once a year with enrollment of up to 150 per offering with small discussion sections once a week.

JST 147: East European Jewish History
3 Credits

The study of East European Jewish history, fascinating in its own right, is also key to understanding the lived experience of modernity in a complicated and compelling part of the world. This course will thus seek to examine East European Jewry from the inside and from the outside. We will see how a minority community weathered the storms of modernity, while at the same time noting how their experiences reflect on the broader culture and forces around them. We will look to examine the entire East European Jewish landscape, but with particular attention to Russia and Poland. In addition to the textbooks, we will read articles on economics, culture, politics, gender, religion and literature, as well as reading primary documents. Students who complete the readings and written assignments and participate in class should expect to expand their knowledge of the East European Jewish past as well as enhancing their skills as historians.

JST 151: Introductory Biblical Hebrew
3 Credits

Fundamentals of Biblical Hebrew grammar, syntax, and vocabulary. J ST (CAMS/HEBR) 151 Introductory Biblical Hebrew (3) The aim of CAMS/J ST/HEBR 151 is to introduce students to the fundamentals of Biblical Hebrew as quickly and thoroughly as possible. Biblical Hebrew is the language in which the Old Testament was written, between the period of approximately 1200-200 B.C.E. This focuses primarily on the morphology and syntax of Biblical Hebrew. Drills on each point of grammar, as well as translation of sentences from Hebrew to English and English to Hebrew, and brief passages taken from the Bible are the basis of the student’s homework throughout the semester. By the end of the semester, the students will be prepared to read short, unmodified passages of the Bible. The course will focus primarily on reading and writing, though students will read aloud in class regularly in order to ensure correct pronunciation and understanding. CAMS/J ST/HEBR 151 will prepare students to continue with CAMS/J ST/HEBR 152 and then 400-level courses. The course goals, in addition to providing the students with a firm grounding in Hebrew grammar and vocabulary, include giving the students a basic understanding of the history of the Biblical text. The primary focus will be on mastering paradigms and syntax, but the students will also be introduced to the Biblical texts themselves, which together from such an important piece of literature.

JST 152: Intermediate Biblical Hebrew
3 Credits

Intermediate study of Biblical Hebrew grammar, syntax, and vocabulary. CAMS (JST/HEBR) 152 Intermediate Biblical Hebrew (3)(BA) This course meets the Bachelor of Arts degree requirements. CAMS/J ST/HEBR 152 continues from CAMS/J ST/HEBR 151, which is a prerequisite for enrollment. After a brief review of key grammar and morphology from the first semester, the course will complete the process of providing students with a sufficient grasp of Hebrew vocabulary, morphology, and syntax to enable them to read unadapted passages from Biblical Hebrew texts (with the aid of a lexicon) by the end of the course. Class sessions will focus on grammar drills, sentences, and similar exercises as homework to supplement class work. As the semester progresses, students will read more and more from actual Hebrew texts, rather than composed sentences by the textbook author, so that when the students enter more advanced classes, they will find the transition to reading Hebrew as smooth as possible. In tandem with the increasing emphasis on Hebrew written by ancient Hebrews, the course will continue to focus on the linguistic and cultural background for the texts that the students read. Students will be evaluated on a combination of written work, including frequent quizzes, tests, homework completion, and course attendance and participation. CAMS/J ST/HEBR 152 will prepare students to continue with courses at the 400-level.

JST 153: Dead Sea Scrolls
3 Credits

The discovery of the Dead Sea Scrolls was one of the most important archaeological discoveries of the 20th century. This collection of over 900 scrolls found in caves by the Dead Sea includes the oldest manuscripts of the Hebrew Bible (Old Testament) and hundreds of other Jewish writings dating from the 2nd century BCE to the 1st century CE, many of which were previously unknown. In this course we will examine select examples of the Dead Sea Scrolls in order to understand how these writings have revolutionized our understanding of the formation of the Bible, Jewish groups in the Greco-Roman period, and the origins of Christianity and rabbinic Judaism, and why there is so much scholarly debate around them. We will consider such issues as Jewish law, biblical interpretation, messianism, apocalypticism, prayer and rituals. The course will include discussion of the archaeology of the Qumran settlement and caves, scribal practices and the production of scrolls, and scholarly methods in reconstructing and interpreting ancient texts. We will study this one sectarian movement as a microcosm of the issues related to Jewish identity in this critical period that birthed both rabbinic Judaism and Christianity. We will focus on the beliefs and practices by which this movement constructed their particular community identity and worked out their place in the world.

JST 160: Sacrifice in the Ancient World

3 Credits

Sacrifice (from Latin sacer 'holy + facere 'to make') is one of the most prevalent yet troubling aspects of religion. Its destruction and violence is often at odds with other rituals and core understandings within a religion, so why is it done and what good does it do? For the sacrificer, does it represent a gift to the gods, a renunciation, an exchange, a surrogate, or something else? This course will examine some competing definitions and theories of sacrifice, as well as its manifestations in the cultures and religions of the ancient Mediterranean world, especially those of Greece, Rome, Egypt, Mesopotamia, Hatti, Israel, and Phoenicia. A brief look at religious sacrifice elsewhere, such as ancient Mesoamerica and India, will conclude the course.

JST 181: Introduction to the Middle East

3 Credits

The course offers a survey of the history of the Middle East from the rise of Islam to the present day. The course introduces students to structures of power, society, and economy in three distinctive periods: 1) the rise of Islam and the caliphal era; 2) the pre-modern Ottoman era; 3) the modern era. The course also introduces students to some of the art, architecture, and literature of each period. Students will thus gain some depth in each period of history and acquire a broad view of change over time.

JST 186: The Silk Roads

3 Credits

Taking cross-cultural communication and connectivity as its central themes, this course explores the central role that the silk roads and Indian Ocean maritime routes have played throughout Eurasian history. The course provides a historical survey of the land and sea routes and networks connecting Europe and Asia, the peoples and cultures that flourished along these routes, and a variety of exchanges that took place by way of these routes. The course develops insight into trends and patterns over a long period of history, from ancient to modern times; the course also focuses on distinctive periods of history when patterns were disrupted and reformed, and when relationships changed among the peoples and states involved in the silk roads and maritime routes.

JST 193: Modern Iran

3 Credits

This course covers the history of modern Iran from the late nineteenth century to the present day. The course examines significant events and historical trends with attention to local, regional, and global contexts, and examines causes and consequences of policies, protests, and revolutions from a variety of sources and perspectives. Through class lectures and discussions, and reading and written assignments, students will learn important terms, concepts, contexts, individuals, and events. They will learn to identify and analyze trends and patterns in Iran's history, make meaningful comparisons, locate specific events in meaningful context, and explain their significance. By the end of the course students will be able to explain current events in terms of Iran's long history of revolution as well as in terms of the more immediate history of the Islamic republic. Students will be able to discuss how the modern history of Iran is an example of larger historical trends of the twentieth century.

JST 195: Genocide in Global perspectives: Twentieth Century and beyond

3 Credits

The history and memory of the Holocaust, the Armenian, Cambodian and other forms of genocide are often taught separately in different
disciplines. This course will examine them together through the various ways different societies dealt with, experienced and understood these. Using the extensive literature on the history of genocide this course further suggests ways in which these tragic events affected and were entangled by each other’s. Specific content will vary according to individual instructor, but topics may include victim cultures, ethnic cleansing, trauma, human rights, dark tourism, memorials, architecture as well as the general impact of these tragedies on global politics, or the way the memories of the tragedies were entangled with the civil rights and other struggles in American and global history.

JST 205: American Antisemitism

3 Credits

The Phenomenon of antisemitism in American history from Peter Stuyvesant to the present. HIST (J ST/RL ST) 205 American Antisemitism (3) (GH;US) This course explores the phenomenon of antisemitism in American history from the time of Peter Stuyvesant to the present. The significance and role of American antisemitic movements and authors, as well as its role in American society and culture, are examined and compared to those in European history over the same periods. At the same time, the impact of antisemitism on the lives and mentalities of American Jews is discussed. The course focuses on readings taken from original sources and recent historical treatments. The readings include material on colonial texts, Grant’s notorious Order, nativists and anti-immigration texts, Gilded Age antisemitism, the Immigration Acts of the 1920’s, Henry Ford’s antisemitic campaign, Southern antisemitism and the Leo Frank case, the quota system at American universities, employment discrimination, the ‘Gentlemen’s Agreement’ system, Black antisemitism, and the New Antisemitism.

JST 210: Numismatics and the Historian

3 Credits

Numismatics–the scholarly study of coins and medals–is a major tool in the study of Classical history and archaeology. CAMS (J ST) 210 Numismatics and the Historian (3) (GH;IL) WHY STUDY NUMISMATICS?

Numismatics is the scholarly study of coins. Coinage has been used in the ancient world since the 7th century BCE. Eventually, minted money–i.e. coinage–came to supplant money in other forms, replacing barter as the primary means of exchange in economies around the world.

Coinage became a tool of governments to impose taxation upon their subject peoples, and to spread propaganda about governmental goals or issues. Coins are works of art, but they are common, widely circulating ‘works of art’ which also accomplish a daily monetary function to run commerce and the monetary system of an economy. Coins are also historical records, containing valuable information for the historian who is attempting to reconstruct the history of another time or place. For archaeologists, coins sometimes are the only means of providing absolute dates for excavated strata. The interpretation of numismatic evidence, like any other pieces of evidence in the historical puzzle, however, requires special knowledge and expertise. This course is not a course in ‘coin collecting’, although the collector may find the course helpful or interesting. It is an investigation of the development of coined money in the ancient world, with special investigations into (1) how coins were struck and used in Phoenicia of the 5th and 4th centuries BCE; (2) the variety and early uses for coins in the Greek city states of the 6th-4th centuries BCE; (3) the development of Jewish coins in the Holy Land, from Persian times to the period of the 2nd Revolt (early 2nd century CE); and (4) the development of coinage in the Roman economy of the 1st-5th centuries CE. Photographs of coins will enhance class work. With the cooperation of the Palmer Museum, on Penn State’s University Park Campus, the class will have access at several points during the semester to view and work with coins from the Palmer’s collection of ancient Jewish coins. Students will leave the course with a new understanding of what coins are, how they developed, and what they can teach us about ancient history and economics.

JST 220: Global Diaspora and Exile

3 Credits

Introduction to and survey of the Jewish and other Diasporas around the world. HIST (J ST) 220 The Jewish and Other Diasporas (3) (GH;IL)

The long dominant view that the Jewish experience since antiquity defines Diaspora as a concept has been challenged in recent years. The meaning of the term Diaspora and related terms, especially (ethnic and/or national) identity and (ethnic and/or national) community, is a matter of much debate across disciplines. The longevity and diversity of distinct Jewish communities around the globe make the Jewish case a particularly interesting subject for study. In a wide geographical, chronological and disciplinary comparative sweep, the course will explore the diverse nature of ethno-national and ethno-religious diasporas (and sub-diasporas), their position, their place of origin (‘homeland’) and their new surrounding culture and society. More specifically, the course will analyze how Diaspora communities in Europe, Asia, and the Atlantic world reconstituted their identities as they expanded into new environments and encountered other cultures, from antiquity to
the present. Emphasis will be placed on exploration of the intersection of politics and culture in respect to race, nationality, ethnicity, gender and class. A key question guiding the discussions will relate to the usefulness and limitations of the Diaspora concept, especially in regard to the discourse about globalization where the term is often used.

The course will begin with an extensive discussion of theoretical texts about the Diaspora phenomenon. This is followed by case studies of several larger Diasporas, ranging from the Jewish, the Greek to the Chinese Diaspora. Several case studies, notably the Muslim Diaspora, the concept of a victim Diaspora, or alternative Diasporas highlight the limitations of the Diaspora concept. The course introduces students to interdisciplinary approaches, placing some emphasis on the use of theoretical texts written by historians, sociologists, political scientists, and anthropologists. The course includes a one-day field trip to the Lower Eastside in New York (visit of the Museum of Chinese in America, walking tour of the Lower Eastside to explore the history of a key American immigrant neighborhood).

JST 235: The Church and the Jews

3 Credits

Examination of the relationship between Western church and the Jews from the First Century to Enlightenment. HIST 235HIST 235 The Church and the Jews (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine a key aspect of western history - the complex relationship between the Western (Roman Catholic) Church and the Jews, from the first century to the present. We will analyze ideas and policies regarding Jews as expressed in different realms, from theology and canon law to church art and popular preaching. We will also examine how changing conditions led to striking changes in church attitudes and policy, and how church policy was often at odds with popular sentiments about Jews. The course will be designed to enable students to grasp the fluidity of attitudes over time, and the interplay of economic, social, political, and theological factors; to grasp of essential elements of a key area of conflict in western culture; and to develop their skills in the close reading of primary texts. Students will be evaluated on the basis of three quizzes and a final exam. The course would offer a chance for students to develop perspectives previously gained in a number of courses, particularly HIST 001 and 002 (The Western Heritage), RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), HIST 107 (Medieval Europe), HIST 407 (Early Medieval Society), and J ST 010 (Jewish Civilization). It would complement such courses as HIST 108 (The Crusades), HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), HIST 414 (Renaissance and Reformation), J ST 111 (Early Judaism), J ST 110 (Hebrew Bible), RL ST 120 (New Testament), and RL ST 124 (Early and Medieval Christianity). The course will count for 3 credits toward a) the 22 credits required for the minor in Jewish Studies, b) the 33 credits required for the major in Jewish Studies, c) the 30 credits required for the major in Religious Studies, and d) the 36 credits required for the History major.

JST 261Y: Ghetto: From Venice to Detroit

3 Credits

This course explores why certain groups have been segregated in cities around the world in the last 500 years. HIST (J ST) 261Y Ghetto: From Venice to Detroit (3) (GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course examines the history of segregated and demarcated districts for certain groups of people within cities (and metropolitan regions) in the last five hundred years in different parts of the world. The course identifies factors that led to the establishment of segregated (and often demarcated) districts and their eventual dissolution (or transformation). The course traces the social and political impact of exclusion within the segregated district, the possibilities of making contacts beyond the district, the function of innovation and cultural production emanating from these urban areas, and the conceptual trajectory of the Ghetto concept from Renaissance Venice to post-industrial Detroit. Cities and states have allowed certain groups to settle within their confines for economic benefit but have imposed severe restrictions to safeguard the respective city's and/or the state's cultural, political, and 'racial' integrity. The course will present several representative case studies of segregated and demarcated districts in European, North American, Asian and African cities, highlighting strikingly different trajectories and purposes behind the spatial segregation of people categorized as different and threatening but also as useful. Comparing the case studies will lead to a discussion about the transformation of the Ghetto concept between 1517 and the present. Following a discussion of the Ghetto concept and an overview of urban history since 1500 we will study Jewish Ghettos in early and late Renaissance Italy and Central Europe. For comparison we will discuss the history of Dutch and Portuguese trade colonies in Japan around 1600. The second part of the course will focus on Jewish and other immigrant neighborhoods in late 19th century New York and Chicago. Before moving to the origins of the 20th century 'Black Ghetto' (Chicago, Detroit) four related cases will be discussed: Chinatowns in the United States; residential segregation in colonial cities in South and East Asia, Nazi Ghettos in Poland and the Soviet Union; and townships in South Africa during the Apartheid period. The course introduces students to interdisciplinary approaches, placing some emphasis on the use of theoretical texts written by historians, sociologists, political scientists, and anthropologists.

JST 280: Women and Judaism

3 Credits

Explores the Jewish views of women that have influenced the roles of women within both the religion and Western culture. J ST (WMNST;RL ST) 280 Women and Judaism (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. Women and Judaism will introduce students to the roles and views of women as seen in the Jewish tradition. Because Judaism is not monolithic, these views will vary even within time periods and even among rabbis. The goal of this course, therefore, is not for students to leave the class with one idea of what a Jewish woman is or one idea of what issues are at stake for women in Judaism. Rather, the
Students will study agrarian interpretations of the Hebrew Bible as well as extra-biblical sources and archaeological data. The biblical attitudes toward food, eating, and agricultural practices are then traced into the post-biblical period and rabbinic periods. The course then jumps ahead to the present day, to shed light on a number of modern Jewish agricultural and food initiatives concerned with issues such as healthy land use, sustainability, and justice in food production and distribution.

These movements proceed from various interpretations of Jewish law and custom, and illustrate how some modern Jewish attitudes toward food and eating are responsible for reimagining, and in some cases reinvigorating, biblical ideas and practices. At the conclusion of this course, students will be able to identify and understand the historical and theoretical significance of diet and eating practices of ancient Israelites and will understand the development of Jewish food laws and practices in the post-exilic and early rabbinic eras. Students will be able to evaluate the extent to which ancient Jewish thought has influenced modern Jewish attitudes and actions regarding food and social responsibility, and will be able to envision the ways in which Jewish tradition, both ancient and modern, can contribute to current progress and future improvement in our systems of food production, distribution and consumption. While a wide variety of derivative topics will be discussed, this course is particularly appropriate for students pursuing programs of study dealing with the biblical world, the development of early Judaism, Jewish ethics, and/or modern Jewish thought, as well as those studying agriculture and food systems who are interested in how Jewish tradition addresses these universal concerns.

**Prerequisite:** JST 010 or permission of the program

JST 409Y: Antisemitisms

3 Credits

Surveys the history of anti-Semitism from antiquity through the Middle Ages to the present. HIST (J ST) 409Y (RL ST 407Y) European Anti-Semitism from Antiquity to the Present (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course analyzes major episodes in the history of anti-Semitism and tries to clarify the motives and dynamics involved. It seeks to understand what these episodes have in common and what is unique in each case—is there a single universal, eternal antisemitism? Or are there rather 'anti-Semitisms' each belonging to a unique historical context? Is there a single continuous line of development in anti-Semitism? What is the relationship of a particular anti-Semitism to the national culture in which it originates? We will be reading the major original texts of anti-Semitism from Roman and ancient writers, through early Christian texts and medieval Christian Blood Libels against the Jews, documents of the Spanish expulsion, Lutheran tracts, Voltaire's essays, German philosophical texts from Kant to Marx, Wagner's racial essays, the Protocols of Zion, and documents of Nazi anti-Semitism by Hitler and Streicher. The major part of the grade will depend on a short research paper which will be presented in various drafts, so that the final version represents the culmination of discussion and constructive criticism and advice. This course is a parallel course to J ST/HIST 416 (Zionist History) and J ST/HIST 118 (Modern Jewish History). This course will count toward the Religious Studies, Jewish Studies, and History majors and minors in the 400-level category.

International Cultures (IL)

Writing Across the Curriculum
JST 410: Jews in the Medieval World

3 Credits

Trends in medieval Jewish society under Islam and Western Christendom. HIST 410HIST 410 Jews in the Medieval World (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. The Jews lived in widely scattered communities under Christian and Islamic rule in the medieval period. This course will examine how Jews adapted the traditions they developed in Palestine and Babylonia in the early centuries C.E. to the new conditions they encountered in Europe and the Mediterranean region from the ninth to the fifteenth centuries. It will focus on the general problem of how traditional societies survive in rapidly changing circumstances, particularly when their members are a minority population. The course will aim at developing students' skills in comparative analysis as they compare the adaptive strategies of Jews in different cultural spheres (the Franco-German region versus Spain, for example). They will also be asked to compare the different polemical stances Jews adopted vis-à-vis Christianity, on the one hand, and Islam, on the other. They will be encouraged to understand the ways in which Jews internalized certain aspects of the majority culture and rejected others. It is hoped that they will come to see how deeply Jewish history was intertwined with medieval Christian and Islamic history, despite inter-religious hostilities and the frequent need for Jews to defend against majority aggression. Students will be evaluated on the basis of two mid-term exams (the first after the survey of the Muslim world, the second after the examination of the Franco-German region) and a comprehensive final exam. The course will be linked to most of the courses taught in the field of Jewish Studies, especially JST 111 (Early Judaism), JST 114 (Modern Judaism), and JST 118 (Modern Jewish History from 1492). It will also be linked to offerings in Religious Studies: RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), RL ST 107 (Introduction to Islam), RL ST 124 (Early and Medieval Christianity), and RL ST 165 (Introduction to Islamic Civilization). Further, it would complement HIST 001 and 002 (The Western Heritage), HIST 107 (Medieval Europe), HIST 108 (The Crusades), HIST 407 (Early Medieval Society), HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), and HIST 471W (Classical Islamic Civilization, 600-1258). The course will count for 3 credits toward: a) the 22 credits required for the minor in Jewish Studies, b) the 33 credits required for the major in Jewish Studies, c) the 30 credits required for the major in Religious Studies, and d) the 36 credits required for the History major. It will be offered once a year with an enrollment of approximately 60 students.

Bachelor of Arts: Humanities
International Cultures (IL)
United States Cultures (US)
sacred to Jews and Christians written over about 1000 years, in a variety of different genres and historical circumstances. This course allows students the opportunity to study in depth a particular book of the Bible, from either the Hebrew Bible/Old Testament or the New Testament. We will explore the literary, historical and cultural context of the book in question. A literary analysis of the book will include consideration of genre and literary devices, and a close reading of the text. A historical analysis will consider the date of composition, its source materials, comparative traditions in other cultures, and relevant historical and cultural factors relevant to understanding the text. The course will introduce students to various other approaches to interpretation of the Bible in modern scholarship, including feminist and post-colonial critiques. We will also explore the varied interpretations and uses of the book in Judaism, Christianity, and Islam throughout history, and its influences in Western culture, including art and literature. The course will be offered once a year with varying content, and students may repeat it when taught with different content.

Prerequisite: 3 credits in CAMS or J ST or RL ST, recommended CAMS/J ST/RL ST 110 or 120; or ENGL 104. Cross-listed with: CAMS 425W, RLST 425W

Writing Across the Curriculum

JST 426: Holocaust

3 Credits

This course is an in-depth study of the history of the Holocaust in Europe that puts special emphasis on primary sources. HIST 426 / JST 426 Holocaust (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. The Holocaust stands out as the most terrible and challenging phenomenon of the 20th Century. Societies and the scholarship struggled for decades to fully grasp how much the Holocaust has questioned widely shared assumptions about modernity and progress. This course pursues the overarching question how the Holocaust could have taken place. Who were the perpetrators, victims and bystanders? How much agency did they have? How was the Holocaust organized? The course will encourage students to critically engage with the Holocaust, and will consider a variety of different kinds of sources and means of representation, including oral testimony, film and fiction, as well as more conventional documentation. After discussing some of the most important studies about the Holocaust and identifying the main historiographical debates, students will look at the origins and the evolution of the 'Final Solution.' The class will touch on the function of the 'Ghetto,' the role of the mobile killing units, the extermination camps, and Jewish resistance. The course will also deal with Jewish responses to the Holocaust, notably with attempts to enable Jews to emigrate to safe countries; with efforts to alert the public to the systematic killing after 1940; and the support especially of American Jews for Jewish survivors and DPs. Apart from discussing the historiography, students will work mostly with primary sources. Students are expected to do extensive reading for this class and prepare oral presentations on their respective paper topic. The research paper for this course will be based largely on primary sources. Apart from discussing the historiography, the sessions will concentrate on the interpretation of primary sources: 1. documents created by the perpetrators, bystanders, and victims; 2. files relating to postwar trials of perpetrators; 3. photographs; 4. representations of objects relating to the Holocaust; 5. memoirs by survivors; 6. interviews with survivors and bystanders.

International Cultures (IL)

JST 427: Topics in Jewish American Literature

3 Credits/Maximum of 9

An in-depth examination of important themes, writers, and/or historical developments in Jewish Literature of the United States. ENGL (J ST) 427 Topics in Jewish American Literature (3) This course will provide sustained examination of major themes, texts, and figures in the Jewish American literary tradition. The course will focus on depth rather than breadth in its analysis of the defining aspects of the literature and on what the literature reveals about Jewish American culture and identity. The United States has absorbed large numbers of Jewish immigrants from many parts of the world, holding many different ideas about Jewish practice, and affiliaing themselves with many different political, social, and cultural traditions, and moreover Jews have settled and made homes in a wide variety of American communities. Close analysis of literature will therefore provide an opportunity to consider the constitution, origin, and development of Jewish America's wider cultural, political, and social contexts. Materials will consist predominantly of primary texts, including prose fiction and nonfiction, poetry, drama, and film, and the methodology will emphasize the close reading of these texts. The course complements offerings in Jewish Studies, English, and Comparative Literature. Most obviously, the course will offer students of Jewish literature, world literature, and American literature an opportunity for contextualization. It enables students in Jewish Studies to study the rich literature of American Jews, and it adds to courses covering Jewish American history, religion, and culture. The course offers students in English and Comparative Literature a valuable, sustained introduction to an important U.S. and world sub-culture and literature.

Prerequisite: ENGL 015 or ENGL 030

Cross-listed with: ENGL 427

JST 434: Movies, Media, and the Jewish American Experience

3 Credits

Study of Jewish American Film and Popular Culture. COMM (J ST) 434 Movies, Media, and the Jewish American Experience (3) The course examines film and other popular media, including theater, radio, and television, as important sources for understanding the Jewish experience and its impact on and relationship with American culture more generally since the late 19th century. Topics to be considered include US film and popular media as representations of Jewish history, culture, and experience; the role of Jews as prominent directors, producers, actors, and writers in their social-historical context; and the history and function of the representational modes and techniques used in these texts. A major emphasis of the course will be on analyzing film and other media texts as lenses to reflect, refract, and focus on Jewish American identity. By way of analyzing the interrelationships between filmic and other media texts and Jewish American experience, the course will attend to a number of key themes in Jewish cultural history, including Jewish life in late 19th-early 20th century Europe; immigrant life in turn of the century America and questions such as assimilation, preservation of tradition, family life, social mobility, and male/female relations; Jews in show business, organized crime, and sports; American Jews and the Holocaust; American Jews and Israel; Jews in the modern age; generational and denominational differences among Jews; and Jews and anti-Semitism.
Prerequisite: A previous course in Jewish Studies, Film Studies, Media Studies, Art, Music, English, or Comparative Literature. Cross-listed with: COMM 434

JST 439: Women and the Holocaust

3 Credits

Analysis of women's experience in the Holocaust and exploration of the role of gender in Holocaust Studies. J ST (HIST/WMNST) 439 Women and the Holocaust (3) Most of the early study of the Holocaust focused almost exclusively on the experiences of Jewish men. It was men who wrote the first and most widely read Holocaust memoirs and men who produced the first studies of the Holocaust. The first question motivating this class is thus what we can learn from examining women's experiences. Is it possible that the ghetto, the camp, and the forest look different from women's perspectives? Are there factors we miss when we read primary documents written by only half of the participants in these historical events? Beyond this, however, our exploration will also lead us to look more broadly at gender as a category of analysis. What do we gain by bringing questions of gender to bear on our study of the Holocaust? Are there any ethical concerns that should inform our approach?

Prerequisite: J ST 010 or J ST 121 or HIST 121 or consent of program

Cross-listed with: HIST 439, WMNST 439

JST 443: Jewish Histories of the Middle East

3 Credits/Maximum of 6

Jews have been part of Middle Eastern societies for thousands of years. They flourished at times and endured hardships at others, but they have been part of every significant social and cultural transformation of the Middle East. In this class, students will discuss the significant contribution of the Jewish community to the development of various Middle Eastern societies throughout the centuries. Students will critically read and analyze primary sources and secondary literature. We will delve into national historiographies of places such as Morocco, Egypt, and Iran to name a few and seek to discover a nuanced narrative of Jewish histories of the region. We will also analyze popular culture products, such as documentaries, television, and literature. The course will follow a chronological and thematic order, and will examine Jewish history in conjunction with global and interregional processes in the Middle East and beyond, such as colonialism, imperialism, nationalism, relations with the West, the formation of the modern nation states of the Middle East, and the Israeli-Arab conflict.

Cross-listed with: HIST 443

JST 450H: Genocide and Tyranny

3 Credits

This course focuses on the conceptualization and socio-political determinants of genocide and tyrannical regimes, with an emphasis on the Holocaust.

Prerequisite: PL SC003, PL SC007 or PL SC014 or HIST 121

Cross-listed with: PLSC 450H

Honors

JST 457: Jewish Communities: Identity, Survival, and Transformation in Unexpected Places

3 Credits

Examines the global array of smaller Jewish communities that have flourished outside the main urban centers of Jewish settlement. JST 457 / ANTH 457 / SOC 457 Jewish Communities: Identity, Survival, and Transformation in Unexpected Places (3) (US;IL) This course addresses an understudied aspect of Jewish experience. It aims to expand our understanding of Jewish communities by focusing on those that are, alternatively, small, situated in out-of-the-way places, culturally outside the Jewish urban mainstream, or embedded in a larger society with markedly different values and traditions. These communities often constitute the points-of-contact between Jews and non-Jews, and in so doing sometimes transform Jews, non-Jews, and the relationships among them. Other such communities constitute experiments in Jewish lifeways and provide mainstream Jews with pilot projects for potential social and cultural change. This course will explore the significance of small, little-known, idiosyncratic, and anomalous Jewish communities on Jewish history and culture, and draw on them to instruct students on the social and cultural processes of small or unusual communities generally. The communities studied will be located both in the U.S. and elsewhere in which Jews have lived as a minority community during modern times. The course will look at the founding, growth, and decline of such communities and at their social processes and institutions. It will explore how to understand and analyze such communities, which vary from one part of the world to another. The social world of Jewish communities, large and small, is a core interest of Penn State’s Jewish Studies Program. This course will complement the current offerings in Jewish Studies, strengthening the social, cultural, and contemporary perspectives available in the Program. It will provide students with an opportunity to explore individual experience and micro-level processes among Jews, and to study the dynamics of identity and survival. It will complement the current offerings in Sociology and Anthropology by affording an opportunity to focus on community-level social processes and by adding a course on contemporary Jewry. The course will integrate knowledge from a variety of sources and fields, promote intercultural understanding, and meet US and IL requirements. Materials will be interdisciplinary, and will include ethnographies, sociological studies, population studies, histories, and personal narratives. They will include primary texts, creative works, and scholarly analyses. The assignments will be structured to facilitate preliminary experience in independent analysis, library research, or field research. The course will be offered approximately once a year. Enrollment will be limited to 30 students in order to promote active, engaged learning. Evaluations will be based on short papers and outlines that will prepare students for their final, term papers.

Prerequisite: ANTH 001 or ANTH 045, HEBR 010, J ST 010, SOC 001, SOC 005, SOC 007, SOC 015

Cross-listed with: ANTH 457, SOC 457

International Cultures (IL)

United States Cultures (US)

JST 468: Jewish Philosophy

3 Credits

Explores major figures and trends in Jewish philosophy and their influences on other philosophical traditions. J ST (PHIL) 468 Modern Jewish Philosophy (3) The primary objective of this course is to encourage students to have a reflective stance on Jewish thought.
Students will learn what comprises Jewish thought and how it is distinguished from theology. They will learn what role religion plays in philosophical thought and what is at stake for a philosophy that emerges from a particular religion. This course will give students perspective on how Judaism links to other philosophical movements, for example, the enlightenment of the modern period. It will enable to think about Judaism from a theoretical perspective, adding a new dimension to what they might study from historical, sociological, or literary viewpoints. Some questions we will consider include: In what ways does it converge/diverge, with the philosophical strains that influence it? In what ways have particular events in history shaped Judaic thinking? Does Judaism, or Judaic thinking, have an essence? If so, what is it? What does Judaism mean for the Jews, and what does it mean for others? And finally, what role does mysticism have in the play between religion and philosophy? Students will be evaluated by written work (short papers and a longer seminar paper) and a class presentation.

**Prerequisite:** one course in Philosophy and/or Jewish Studies

Cross-Listed

JST 473: The Contemporary Middle East

3 Credits

Political, economic, and social changes in Turkey, Iran, Israel, and the Arab countries in the twentieth century; Arab-Israeli conflict.

Bachelor of Arts: Humanities

Bachelor of Arts: Other Cultures

International Cultures (IL)

JST 474: Hiroshima & the Holocaust in History and Memory

3 Credits

The history and memory of the Holocaust and Hiroshima and Nagasaki are often taught separately in different disciplines. This course will examine them together through the various ways different societies remembered, understood and commemorated these. Using the extensive literature on the history of memory, this course further suggests ways in which these memories and histories affected and were entangled by each other. Specific content will vary according to individual instructor, but topics may include victim cultures, cold war nuclear history, trauma, human rights, dark tourism, memorials, architecture as well as the general impact of these tragedies on the fraught politics of memory in East Asia and the Middle East, or the way the memories of the tragedies were entangled with the civil rights and other struggles in American and global history.

**Prerequisite:** HIST 457, JST 474

Cross-listed with: ASIA 457, HIST 457

International Cultures (IL)

JST 478: Ethics After the Holocaust

3 Credits

This course analyzes the ethical and philosophical consequences of the Holocaust. Primary areas of examination will be (1) the nature of pre-Holocaust ethical theories and how those theories have failed to sufficiently account for the Holocaust, both philosophically and empirically, and (2) possibilities for a post-Holocaust ethics. Course topics will include the history of ethical theory, the nature and problem of evil, goodness and suffering, witnessing and testimony, and the promise of an ethics. In addition, recent approaches to trauma theory and rights discourse will also be introduced, with some emphasis on how post-Holocaust ethics have been utilized in contemporary human rights work. This course provides students with philosophical approaches to the issues that emerge out of the events of the Holocaust. The course will help students expand their knowledge of the events of the Holocaust through a philosophical approach that does not merely expose them to what happened, but asks them to think about the implications of what happened: most specifically, how do we understand ethical life, if it cannot stop or confront evil? The course will encourage students to think critically, write effectively and express their thoughts logically. Student evaluation will be based on both regular writing assignments and in-class work, possibly including presentations and group-work. This course covers material in the history of philosophy, contemporary philosophy, and writings pertaining to the Holocaust in various forms (historical, literary documentary, and so forth). It provides links to other major areas in the history of philosophy, postmodernism, ethics, philosophy of religion, and Jewish history.

**Prerequisite:** One course in either JST or PHIL

Cross-listed with: PHIL 478, RLST 478

Bachelor of Arts: Humanities

JST 480: Greeks and Persians

3 Credits

Development and achievements of the Achaemenid kingdom; relationships between Persians and Greeks.

**Prerequisite:** CAMS 010, CAMS 025, or CAMS 100

Cross-listed with: CAMS 480

Bachelor of Arts: Humanities

JST 494: Research Projects

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

JST 494H: Research Projects

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

JST 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor

JST 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.
selected activities will follow the same basic format of skill development and training procedures, history and philosophical underpinnings of the activity, available written resources and professional organizations related to the activity, logistical equipment preparation, appreciation of environmental impact of partaking in the selected activity, safety management / risk assessment and future opportunities to participate in the activity. It is a purpose of this course to allow the student to explore different outdoor pursuit activities and then to make a more informed decision as to which activities they might choose to further develop their skill base and competency necessary to partake in the activity at a more advanced level on a life-long basis. Through opportunities to develop camaraderie through collaborative work/ teamwork, students practice safe participation in the selected activities with attention to environmental impact. Students will experience a common skill base from which to engage in the activities. After completion of the course, students are encouraged to engage in adventure recreation programs, and other appropriate courses to help with the continued development of life skills. This course fulfills credits toward the GHW General Education requirement. KINES 1Z/RPTM 1Z is linked to ENGL 183Z; the two courses must be taken concurrently.

Enforced Prerequisites at Enrollment: ENGL 183Z
General Education: Health and Wellness (GHW)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Soc Resp and Ethic Reason

KINES 4: Principles of Fly Tying and Fly Fishing for Trout
1.5 Credits

KINES 4 is a unique course designed to give students of all experience levels an introduction to the lifetime sport of fly fishing. The purpose of the course is to present the students with the many aspects of fly tying and fishing for trout, so that they can enjoy outdoor activity for the remainder of their active lives. In KINES 4, students acquire the knowledge, skills and tactics they will use to solve problems in the constantly changing natural environment. Instruction includes, but is not limited to: conditioning, basic fly tying, tying local patterns, appreciation for conservation techniques, equipment use/care/selection, fly casting, aquatic entomology, stream hydrology, fly fishing tactics, basic knots and experiencing local streams. Because of the geologic location, students have access to the premiere fly fishing streams in the eastern United States. These streams are a destination for fly fishing minded individuals and provide an outstanding opportunity for practice of a new healthy activity. In this active course, students apply what is learned to enhance the basic understanding of the sport and to experience the full complement of wellness components. Students will find that they have enhanced their quality of life now and for the remainder of their lives. Appreciating the rich history, this course models that of the first accredited university fly tying and fishing course started in the 1930s by Mr. George Harvey, known as the ‘dean of fly fishing’ at Penn State (’Fly Fishing U’).

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Soc Resp and Ethic Reason
KINES 6: Cycle Conditioning

1.5-3 Credits

KINES 6 introduces students to the performance of cycling as a lifelong activity that helps maintain and enhance physical fitness and overall wellness. This course provides the information that the student needs to understand, organize, plan and implement a physical fitness program that features cycling as a primary activity. The centerpiece of this course is a progression of individually-paced rides of varying lengths that are conducted over various terrains and potentially utilizing both indoor and outdoor training. Cycle conditioning typically includes a longer group trail ride utilizing designated cycling trails such as the Rails to Trails system. Students may experience opportunities to attempt individual time trial, interval training, and indoor, road or trail riding depending on the offering. Additionally, students are exposed to such topics as the physiology of exercise, cycling safety, goal-setting for personal health, principles and concepts of physical fitness, training methods to address different cycling goals, and nutrition and weight control. Students also have the opportunity to monitor their performance throughout the course using a variety of personal assessment inventories and instruments and are encouraged to utilize current technologies such as heart rate monitors and fitness apps. A student who completes KINES 6 will be able to identify the components of an effective physical fitness program and explain how cycling contributes to the success of this program, develop realistic fitness goals and design a cycling program to meet these goals, perform a variety of fitness cycling techniques, and understand how cycling promotes psychological well-being.

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

KINES 10: Techniques in Rock Climbing

1.5 Credits

KINES 10 is a course designed to give students a comprehensive introduction to the skills, safety, terminology and equipment used in the sport and recreational activity of rock climbing. This course also provides the knowledge base and experience the student needs to evaluate their continued safe participation in rock climbing. There is an emphasis on belaying, technical systems, use and selection of equipment, climbing technique, and the metaphorical and psychological aspects of climbing. Students learn and practice proper physical aspects of climbing focusing on foundational training and conditioning through cardiovascular, strength, and flexibility movements. Important information on training practices, safety issues, injury prevention and treatment, and gaining appreciation for conservation and preservation of resources are included in the course. The rock climbing surface provides a conduit to promote lifelong wellness by engaging in the entire body and mind to be physically challenged and mentally stimulated. Rock climbing challenges the participant to take risks, to work with others to solve problems and make informed decisions. Students may be exposed to a wide range of climbing opportunities including indoor and/or outdoor experiences including bouldering and more advanced rock climbing techniques.

Enforced Prerequisite at Enrollment: KINES 10 or with permission of program
General Education: Health and Wellness (GHW)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

KINES 10A: Lead Rock Climbing

1.5 Credits

Kinesiology 10A is designed to give students a comprehensive introduction to the skills, safety, terminology and equipment used in the activity of lead rock climbing. Lead climbing involves the climber placing protection to protect oneself as opposed to top roping (KINES 10). This course also provides the knowledge base and experience the student needs to evaluate their continued safe participation in lead rock climbing including a strong group work ethic and practicing the responsibility, cooperation, and collaborative skills needed for safety in lead rock climbing. In Lead Rock Climbing, students are introduced to advanced climbing techniques such as: footwork, hand holds, and body positions and benefit from immediate encouragement and assessment from the group. Lead climbing challenges the climber to be more critically aware of making good decisions in clipping, route choice and direction, back-stepping if necessary, body positions, equipment use, and safety. This class delves more deeply into issues of kinesthetic awareness of the climber's relationship to the climbing surface and to gravitational forces when climbing. Students learn and practice proper physical aspects of climbing focusing on foundational training and conditioning through cardiovascular, strength, and flexibility movements. Important information on training practices, safety issues, injury prevention and treatment, and understanding the climbing environment are important aspects of the course. The climbing surface provides a conduit to promote lifelong wellness by engaging in the entire body and mind to be physically challenged and mentally stimulated. Rock climbing challenges the participant to take risks, to work with others to solve problems and to make informed decisions. Students may be exposed to a wide range of climbing opportunities including indoor and/or outdoor experiences including bouldering and more advanced rock climbing techniques.
these changes are translated into adapting techniques for successful skiing. Downhill skiing can be performed across all ages and skill levels; in KINES 11, students are grouped appropriately by ability, so all students can be challenged individually on snow. If done properly, downhill skiing will promote comprehensive wellness while developing important life-long motor skills. Ultimately students will learn the benefits of downhill skiing as a lifetime activity for health and wellness.

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

KINES 11A: Intermediate Downhill Skiing

1 Credits

Students will gain a comprehensive understanding and intermediate to advanced level of proficiency in Downhill Skiing. KINES 011A Intermediate Downhill Skiing (1) (GHA) Downhill skiing has grown as a recreational physical activity over the past century. The early days of skiing in the United States were typified by a variety of styles and techniques, many of which were brought to this country by European ski instructors. In 1961, the Professional Ski Instructors of America was formed to unify ski instruction across the country and to develop a successful standard for teaching people to ski. As the equipment and the snowmaking capabilities have changed so has PSIA changed and adapted the techniques to successful skiing. Downhill skiing can be performed at any level across all ages. If done properly, downhill skiing will promote comprehensive wellness while developing important life-long motor skills. This course will promote the proper and safe way to enjoy downhill skiing. Ultimately students will learn the benefits of downhill skiing as a lifetime activity for health and wellness. Students will be evaluated using a standard percentage scale. Evaluation is based on attendance and active participation (25%); demonstration of acquired skills (55%), theoretical knowledge as measured by written exam (20%). Five sections will be offered every Spring Semester with a maximum enrollment of 75 per section.

General Education: Health and Wellness (GHW)

KINES 12: Snowsports: Snowboarding

1.5 Credits

KINES 12 is designed to help students build overall fitness and wellness based in winter snowsports, specifically snowboarding. Students acquire the knowledge and critical thinking skills that are essential to the development and continual evolution of a fitness and wellness plan focused on a healthy and active lifestyle that includes cold weather exercise. Students explore such topics as wellness, training principles, cold weather injury and illness prevention and management, and proper snowboarding mechanics to promote safety and success on snow. Snowboarding is a popular winter recreational physical activity. The early days of snowboarding in the United States were typified by a variety of styles and techniques. As the equipment and snowmaking capabilities continue to change, these changes are translated into adapting techniques for successful snowboarding. Snowboarding can be performed across all ages and skill levels; KINES 12, students are grouped appropriately by ability, so all students can be challenged individually on snow. If done properly, snowboarding will promote comprehensive wellness while developing important life-long motor skills. Ultimately students will learn the benefits of snowboarding as a lifetime activity for health and wellness.

GenEd Learning Objective: Key Literacies

KINES 13: First Aid & Safety, CPR/AED

1.5 Credits

KINES 13 provides students with the knowledge and skills necessary to assess and recognize an emergency situation, call for help, and administer basic first aid & cardiopulmonary resuscitation (CPR) with an automated external defibrillator (AED) while maintaining appropriate personal safety precautions. Students are trained to use specific techniques that are current with the practicing standards of the American Red Cross or American Heart Association organizations. Students receive information on the prevention of injury and illness, with a focus on personal safety. Participants assess their environment and personal habits to help reduce their risk of injury and illness and risk to others.

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Soc Resp and Ethic Reason

KINES 17: Ballroom Dance

1.5 Credits

KINES 17 introduces students to ballroom dance as a social/recreational or competitive activity, with the goal of leading to an active lifestyle. This course provides the basic skills and information necessary to develop and continue one’s appreciation for and interest in ballroom dancing. Dance history and etiquette, cooperation with a partner, and learning the fundamental of leading/following techniques are stressed from the beginning of the semester. As different dances are introduced (i.e. FoxTrot, Waltz, Jitterbug/Swing, Cha-Cha-Cha, Tango, Slasa, etc.), additional terminology and movement patterns are included. Students must combine skills in a variety of ways: timing movement to music, executing dance relevant movements, and interacting with partners. The remainder of the class has the option of practicing or observing. Outside opportunities for dancing are encouraged within Penn State and the local community. This class involves continuous movement for cardiovascular and muscle fitness as well as stretching and strengthening of the muscles to develop and improve posture, balance, coordination and flexibility. Students explore the importance of general fitness and wellness as paths to lifetime activity participation. The weight-bearing, low-impact benefits of Ballroom Dancing allows for maintaining bone density over time. Ballroom Dancing is a lifetime activity and provides an opportunity to encourage physical activity.

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
KINES 20: Modern Dance

1.5 Credits

A course designed to teach the basic skills of modern dance and to develop a further appreciation of modern dance.

General Education: Health and Wellness (GHW)

KINES 24: Lifetime Sports

3 Credits

KINES 24 is divided into three equal units that are designed to give students the opportunity to explore three different sports that have the potential for lifetime participation. This format will give students an opportunity to gain a breadth of information and experience that will serve as a gateway to learning opportunities in more advanced classes that offer more depth and focus. Such sports may include, but are not limited to: racquet sports, winter sports, archery, bowling or golf. Sports that have lifetime social and wellness values may be offered due to specific location considerations such as unique facilities or faculty expertise. This course provides information not only specific to the sports included, but also on how to incorporate those sports into one’s fitness plan throughout life, the potential fitness and wellness benefits of regular participation in the sport, injury prevention, and sportsmanship/etiquette to promote lifelong participation. Participating in lifetime sports will help students understand that regular activity has social, emotional, and physical benefits with potential for total well-being and a better quality of life.

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

KINES 25: Introduction to Court Sports

1.5 Credits

KINES 25 is a course that has been designed to give the Penn State student an introduction to selected lifetime racquet sports such as but not limited to tennis, racquetball, squash, table tennis, badminton, handball, pickleball, and/or other court sports. By the end of the course, each student will possess a basic knowledge of a selection of racquet sports that will allow them to be a knowledgeable spectator or participant over the lifespan. KINES 25 is offered in as a series of modules with two to three racquet sports selected for the course content for the semester. Selections of included sports are noted by section in the schedule of courses. The fundamental skills, strategies, etiquette, and rules will be covered for each racquet sport included in the course. Successful completion of this course serves as a ‘gateway’ to advanced level courses in court sports, intramural and recreational play and provide the skills and knowledge necessary to participate in a lifetime activity. In addition to acquisition of knowledge and skill in a variety of racquet sports, students will examine the level of fitness necessary for successful participation in such sports, the potential fitness benefits of participating in racquet sports on a regular basis, and the social benefits associated with the betterment of one’s well-being and quality of life. Furthermore, students will explore proper training techniques, injury prevention, and fitness habits that may aid their enjoyment of a variety of racquet sports in pursuit of wellness over the lifetime.

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

KINES 26: Archery/Indoor & Outdoor

1.5 Credits

Course designed to introduce students to Archery/Bowhunting. KINES 026 Archery/Indoor & Outdoor (1.5) (GHA) KINES 026 is designed to give the Penn State student an introduction to archery from a historical perspective which includes, but is not limited to, cultural use of the bow and arrow for food, protection, recreation and competition. Emphasis is given to the unique role of the bow in Pennsylvania State History and to its role in Pennsylvania Rural Culture. The use of the longbow, the recurve bow, the compound bow and the crossbow will be covered. In addition, Archery can be an activity that provides a positive outlet for those who are physically challenged. The fundamental skills, strategies, rules and regulations will be covered for Archery. Students are encouraged to develop specific outdoor skills which will enhance their success with a bow. These skills include but are not limited to identifying weather patterns which affect shooting, shooting from different heights and angles, selection of the proper clothing, understanding and respecting the wildlife and game animals native to geographical areas. Emphasis is placed upon ethical harvest techniques consistent with current wildlife biology and respective game commission and wildlife managers. Successful completion of the course will provide a foundation for participation in intramural activities, recreational coeducational activities, and will provide a gateway to lifelong movement. While KINES 026 will focus on the skills, strategies and rules of the sport, the underlying sub-focus of the course is the development of persistence and discipline necessary for success and the resulting self-enhancement that accompanies personal success. The commitment to Archery requires students to develop a focus which is achieved only through rigorous attention to fine motor movement. The improvement of individual skills in Archery is important but the process required for target success can be a foundation for a lifelong recreational opportunity. KINES 026 will focus on the skills strategies and rules of archery. Students will be engaged in a collaborative atmosphere. As they seek to solve complex shooting problems they will be required to cooperate to achieve various team goals. Students are evaluated and graded by a combination of techniques which may include but are not limited to tournament performance, written reports, skill acquisition, logged activities and subjective evaluation of team-building ethics. Dress should be appropriate for the conditions (indoor or outdoor). Equipment for this course will be provided but students will be encouraged to purchase their own personal equipment as ‘personalized bows’ greatly enhance a person's on-target efficiency. Frequency of enrollment: Two to four sections every fall and spring semesters with a maximum of 20 students per section. Facilities: There is an existing range in White Building, however the activity can be taught outdoors.

General Education: Health and Wellness (GHW)

KINES 27: Badminton

1.5 Credits

KINES 27 is a course designed to give the student the understanding, knowledge and skills to begin an exploration of the game of badminton. While the primary focus of this course is shot development and acquiring an understanding of rules, regulations, and terminology, subsequent
effort will emphasize the development of movement skills and a progression from rallying to game play. By the end of the course, each student will possess a basic knowledge of the game of badminton that will allow them to be a knowledgeable spectator or participant in the game of badminton over the lifetime. KINES 27 delivers badminton as a lifetime sport. Students will examine such content as the minimum level of fitness necessary for successful participation in the game of badminton, the potential fitness benefits of participating in badminton on a regular basis, promoting lifetime wellness through activity, and the social benefits associated with the betterment of one’s well-being and quality of life. Perhaps the most unique feature of Badminton is the regular on court practice. Each week during this course, students will have a chance to apply the skills they have learned during the week on an actual badminton court. This situation creates an ideal practice area for the student badminton player to become acquainted with the situational application of badminton skills and to engage in and promote community in badminton.

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

KINES 29: Golf I
1-1.5 Credits

KINES 29 is a beginner’s level course designed to give students the understanding, knowledge and skills to begin an exploration of the game of golf. While the primary focus of this course is the short game, 100 yards and in to the green, students will also develop proficiency in short and mid-range irons. By the end of the course, each student will possess a basic knowledge of the game of golf that will allow them to be a knowledgeable spectator or participant in the game of golf. KINES 29 also explores golf as a lifetime sport. Students will examine the level of fitness necessary for successful participation in the game of golf, the potential fitness and wellness benefits of participating in golf on a regular basis, and the social benefits associated with the betterment of one’s well-being and quality of life. During this course, students will have a chance to apply the skills they have learned during the course through practicing the game on an actual golf course. This opportunity creates an ideal practice area for the student golfer to become acquainted with the situational application of golf skills and the decision-making and problem-solving skills needed to manage the golf course including the various hazards.

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

KINES 29A: Golf II
1.5 Credits

A course designed to provide a further understanding of and a more advanced proficiency in golf skills, rules and etiquette. KINES 029A Golf II (1.5) (GHA) KINES 029A is a course designed to give students advanced understanding, knowledge and skills to continue the development of their game of golf. While the courses main area of emphasis is on golfs’ short game (putting, chipping and pitching) the student will be educated about full swing fundamentals and proficiencies will be developed in midirons, long irons, fairway metals, and driver. Perhaps the most unique feature of Golf II is the on course practice. Each week during this course, students will get a chance to apply the skills they have learned during the week on an actual golf course. This practice time is in a situation where the student will learn how to integrate themselves into normal golf play. This creates an ideal practice area for the student golfer to become acquainted with situational application of golf skills and be a part of the golf atmosphere. Students will be evaluated by a combination of (but not limited) to evaluation techniques. Examples of those techniques are written examinations, skills testing, and subjective evaluation of skill level and game performance. The student, who successfully completes Kinesiology 029A-Golf II will be proficient in golf rules, golf terminology and golf etiquette. These advanced fundamentals will ease the transition from golf student to golfer. Students will find that, after completion of Golf II, the work done in this course prepares them for actual participation in the game of golf. The use of the Penn State golf course is required for this course. Three to five sections will be offered every fall semester with an enrollment of up to 30 students per section.

Enforced Prerequisite at Enrollment: KINES 29 or equivalent
General Education: Health and Wellness (GHW)

KINES 29B: Total Golf
1.5-3 Credits

KINES 29B is a course that provides the information needed to understand, prepare for, and execute the game of golf and includes mandatory participation in travel during Spring Break. Students in this course work to appreciate the history of the game of golf, gain appreciation for etiquette and ethical play, learn and implement USGA Rules of the Game, practice golf-specific physical conditioning and mental strategies, and develop the swing for various conditions. This course is designed for students who have at least played golf. The main focus during active rounds of golf within the course is not the golfer’s score, but the sportsmanship, ethical behavior, and etiquette displayed while demonstrating pace of play. KINES 29B emphasizes golf as a lifetime sport of high integrity. Students will examine the level of fitness necessary for successful participation in the game of golf, the potential social wellness benefits of participating in golf on a regular basis, and potential effect on one’s quality of life. Students apply the knowledge and skills they have learned during the course through playing multiple rounds of golf on a golf course. This opportunity creates an ideal practice area for the student golfer to become acquainted with the situational application of golf skills and the decision-making and problem-solving skills needed to manage the golf course while balancing the mental game, ever important etiquette, and displaying ethical behavior and sportsmanship. During the course, students experience golf and good sportsmanship in a social, yet competitive situation. Students receive group and individual practical instruction in addition to learning theoretical knowledge. For completion of this course, students are required to travel with the class during Spring Break, generally to the Southeastern United States; specific details including location and costs are displayed on the section information on the schedule of courses.

KINES 41: Handball
1.5 Credits
A course designed to introduce students to a basic instructional course in the fundamentals of 4-wall handball. KINES 041 Introduction to Handball (1.5) (GHA) Kinesiology 041 is a course that has been designed to give students an introduction into the dynamic game of handball. It is a challenging game requiring the participant to be able to hit a ball with either hand during a rally in a 20’x 40’ four-walled court. The technique of hitting a ball is similar to the motions used in throwing a baseball. Since both hands are used to execute shots, the development of the nondominant hand (‘off’ hand) is a unique challenge. The course is structured to develop the ‘off’ hand through a logical progression of drills and game situations, which help the participant to mirror image the dominant hand’s motion. Handball is also a sport, which develops an individual’s eye/hand coordination to the highest level possible. This eye/hand coordination transfers exceptionally well for participants who pursue activities such as racquetball, tennis, squash, badminton, hitting a softball, and fielding a softball. The tremendous amount of footwork and body movement required to execute a shot in handball develops a fitness level similar to a cross-country skiing workout. Handball is a great lifetime activity. The fundamental skills, strategies, and rules of handball, along with game play, will be integrated throughout the course. The participant will also apply the rules of the game by being taught how to referee a match between fellow students. Students will be evaluated by a combination of (but not limited to) evaluation techniques. Examples of those techniques are written examination, skills testing, tournament performance, and subjective evaluation of skill level and game performance.

General Education: Health and Wellness (GHW)

KINES 42: Ice Skating
1.5 Credits
KINES 42 is a course focused on the development of basic ice skating skills, and introducing a new physical fitness activity option into the lifestyle of the Penn State student. In the course, students develop balance and control while performing the basic skills necessary for the execution of many ice skating maneuvers for use in recreational skating or in learning to play hockey and/or figure skate. Skills are acquired through the use of exercises and patterns designed to strengthen the fundamentals of skating and to further develop balance, edge control, and confidence while participating in the activity. Such skills are developed and reinforced through off-ice practices to enhance the components of physical fitness, enhance balance, and to promote healthy behaviors in general fitness and wellness. Students may have the opportunity to work as partners and in small groups to balance the individual efforts through peer support and involvement. This course provides the necessary skill foundation for participation in forms of ice skating such as hockey, figure and/or recreational skating activities. In addition to the core component of physical skill development, the student has an opportunity to acquire an enlightened appreciation and understanding of the skill and art of ice sports and enhance general wellness and quality of life.

GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

KINES 44: Racquetball I
1.5 Credits
This course is a beginner’s level course that seeks to give students the understanding, knowledge and skills to begin an exploration of the game of racquetball. While the primary focus of this course is acquiring an understanding of rules, fundamentals, and terminology, subsequent effort will emphasize the development of movement skills and a progression from drills and modified games to full game play. By the end of the course, each student will possess a basic knowledge of the game of racquetball that will allow them to be a knowledgeable spectator or participant in the game of racquetball. KINES 44 also examines racquetball as a lifetime sport. In addition to acquisition of knowledge and skill in tennis, students will examine the level of fitness necessary for successful participation in the game of racquetball, the potential fitness benefits of participating in racquetball on a regular basis, and the social benefits associated with the betterment of one’s well-being and quality of life. Furthermore, students will explore proper training techniques, injury prevention, and fitness habits that may aid their enjoyment of racquetball as a lifetime pursuit of wellness. Perhaps the most unique feature of Racquetball I is the regular on court practice. Routinely, students will have a chance to apply the skills they have learned during the week on regulation racquetball courts. This practice time creates an ideal practice area for the student racquetball player to become acquainted with the situational application of racquetball skills.

KINES 45: NAUI Basic SCUBA
1.5 Credits
KINES 45 introduces students to the fundamental academic concepts and practical skills of SCUBA diving as described by NAUI (National Association of Underwater Instructors) standards. Students explore the importance of fitness and wellness and their personal fitness needed to succeed in SCUBA. Water safety and emergency response skills are emphasized. Students must be able to tread water, swim the front crawl for an extended time, and be able to swim underwater for a length of the pool. This course addresses academic elements and applied sciences such as: the gas laws, Archimedes’ principle, physics (light, sound, heat, aquatic pressure relationships), physiology (arterial gas embolism, miscellaneous barotrauma, decompression illness, hypo and hyperthermia), dive planning, equipment configuration and function, environmental considerations (salt vs. fresh water, dangerous plants and animals, water temperature and visibility, and altitude). In addition, this course introduces practical confined water skills including: basic skin-diving skills, fundamental SCUBA skills (regulator clearing and retrieval, emergency out of air ascents, buoyancy control, rescue techniques, ditch and don of gear, underwater communication, and proper partnership), and equipment preparation and assembly. Students may only earn credit in either KINES 45 or KINES 45A.

Enforced Prerequisite at Enrollment: Meet NAUI standards and/or by permission of the instructor. and Students may only earn credit in either KINES 45 or KINES 45A.
General Education: Health and Wellness (GHW)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
KINES 46: Squash I

1.5 Credits

KINES 46 introduces students to the fundamental academic concepts and practical skills of SCUBA diving as described by PADI (Professional Association of Diving Instructors) standards. Students explore the importance of fitness and wellness and their personal fitness needed to succeed in SCUBA. Water safety and emergency response skills are emphasized. Students must be able to float or tread water without aid for 10 min and either swim 200 meters/yards with no aid or 300 meters/yards with aids (mask, fins, and snorkel). This course addresses academic elements and applied sciences such as: the gas laws, Archimedes’ principle, physics (light, sound, heat, aquatic pressure relationships), physiology (arterial gas embolism, miscellaneous barotrauma, decompression illness, hypo and hyperthermia), dive planning, equipment configuration and function, environmental considerations (salt vs. fresh water, dangerous plants and animals, water temperature and visibility, and altitude). In addition, this course introduces practical confined water skills including: basic skin-diving skills, fundamental SCUBA skills (regulator clearing and retrieval, emergency out of air ascents, buoyancy control, rescue techniques, ditch and don of gear, underwater communication, and proper partnership), and equipment preparation and assembly. Students may only earn credit in either KINES 45 or KINES 45A.

Enforced Prerequisite at Enrollment: Meet PADI standards and/or by permission of the instructor. and Students may only earn credit in either KINES 45 or KINES 45A.

KINES 47A: Beginning Swimming

1.5 Credits

KINES 47A introduces students who are beginning swimmers to the performance of swimming safety and skills that can be used as lifelong activities. Students will learn and practice a progression of swimming related skills designed to acclimate the new or beginning swimmer to the aquatic environment. An introduction to personal safety skills provides the students with knowledge necessary for safe behavior in an aquatic setting. The course provides basic knowledge of hydrodynamic principles that will identify a kinetic awareness at various water depths. KINES 47A may also introduce students to a variety of aquatic fitness activities that include jogging in the water and water aerobics. As swimming and basic aquatic fitness may play a role in lifestyle activity, fitness, and wellness, students learn valuable personal fitness knowledge and principles and how to implement them. Though the importance of water safety and basic survival tactics is paramount to the course, so to is the appreciation of self-care and wellness over the lifespan and possessing the tools to have a rich quality of life.

Enforced Prerequisite at Enrollment: students should be comfortable in shallow and deep water and be moderately proficient in front crawl, elementary backstroke, sidestroke, and breaststroke
General Education: Health and Wellness (GHW)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

KINES 47B: Intermediate Swimming

1.5 Credits

KINES 47B introduces students who have attained moderate swimming skills and knowledge to advanced swimming strokes. Aquatic activities are introduced as they relate to one’s lifetime for maintenance of physical health and psychological well-being. Students learn and practice a progression of swimming skills designed to promote efficiency and fitness in the water. Personal safety skills provides the students with knowledge necessary for safe behavior in an aquatic setting. Students are exposed to a variety of aquatic fitness activities that include walking and jogging in the water, lap swimming, and water aerobics. Students also experience recreational aquatic sports (i.e. water polo, volleyball) to allow them to participate independently outside class. Though the importance of water safety and basic survival tactics is paramount to the course, so too is the appreciation for self-care and wellness over the lifespan and possessing the tools to have a rich quality of life.

Enforced Prerequisite at Enrollment: 47A or Students taking this course must demonstrate the ability to swim in depths of over 4ft successfully or one length of the pool without apprehension or fear.
General Education: Health and Wellness (GHW)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies
KINES 48: Tennis I

1.5 Credits

This is a beginner’s level course that seeks to give students the understanding, knowledge and skills to begin an exploration of the game of tennis. While the primary focus of this course is stroke development and acquiring an understanding of rules, regulations, and terminology, subsequent effort will emphasize the development of movement skills and a progression from hitting to rallying. By the end of the course, each student will possess a basic knowledge of the game of tennis that will allow them to be a knowledgeable spectator or participant in the game of tennis. KINES 48 also examines tennis as a lifetime sport. In addition to acquisition of knowledge and skill in tennis, students will examine the level of fitness necessary for successful participation in the game of tennis, the potential fitness benefits of participating in tennis on a regular basis, and the social benefits associated with the betterment of one’s well-being and quality of life. Furthermore, students will explore proper training techniques, injury prevention, and fitness habits that may aid their enjoyment of tennis as a lifetime pursuit of wellness. Perhaps the most unique feature of Tennis I is the regular on court practice. Routinely, students will have a chance to apply the skills they have learned during the week on regulation tennis courts. This practice time creates an ideal practice area for the student tennis player to become acquainted with the situational application of tennis skills.

KINES 56: Introduction to Martial Arts

1.5 Credits

A course designed to give students an understanding of martial arts, and the use of martial arts for lifelong fitness. KINES 056 introduces to Martial Arts (1.5) (GHA). Martial arts have been practiced for centuries as a method of integrating mind, body, and spiritual well-being. While improving physical fitness and emotional health, martial arts have been the cornerstone of unarmed self-defense throughout the ages. Martial arts training can be performed at any level across all ages. If done properly, martial arts training will promote comprehensive wellness while developing important lifelong motor skills. For many, the emotional and psychological benefits of martial arts training will be as rewarding as the physical improvements experienced. Kinesiology 056 will introduce the student to the historical development and significance of the martial arts. Students will first learn supportive activities such as meditation and yoga, which will be used to optimally prepare the mind and body, respectively, for martial arts training. Once the students are mentally and physically prepared to begin training, they will begin to learn the traditional martial art Karate. After several weeks of training, the students will then begin to study the relatively newer and more passive martial art Aikido. Ample time will be devoted to allow students to acquire an appreciation of and basic skill of both Karate and Aikido. In addition, students will learn proper ‘dojo’ etiquette which will allow them to comfortably enter and train in any traditional martial arts dojo. Throughout the semester, students will improve in physical fitness and learn how martial arts such as Karate and Aikido contribute to improved fitness and overall wellness. The basic principles of organizing, planning, and implementing a physical fitness program will be taught using martial arts training as a method of exercise. The fitness principles learned in class can be applied to any form of activity the student chooses. At the end of the course, the students will be invited to explore their personal health and fitness goals and how martial arts training may be incorporated into their lifelong fitness plan. Although the concept of ‘self-defense’ will not be stressed in this class, some introduction to self-defense will be given, and it is likely that by the end of the course students will feel more physically confident in their ability to avoid and deal with conflict situations. Various evaluation techniques will be used to assess individual progress in Kinesiology 056. These techniques will include (but are not limited to) conventional objective testing, skill testing, and writing assignments.

General Education: Health and Wellness (GHW)
KINES 58: Judo I
1.5 Credits

Kinesiology 058 will help students develop stamina, confidence and discipline, and promote general fitness through the introduction to basic Judo. KINES 058 Judo I (1.5) (GHA) Kinesiology 058 will help students develop stamina, confidence and discipline, teach self-defense, and promote general fitness through the introduction of basic Judo. Developed in Japan in 1882, Judo has quickly spread across the globe and won approval as a modern sport. Judo became the first activity of Asian origin to be accepted as an Olympic event in 1964. Women's Judo was admitted to the Games as a full medal event in 1992. Judo, 'the gentle way,' is the modern day form of the ancient Japanese Jujitsu. The art is based on the principle of using the opponent's own strength to put him or her off balance, using minimum effort for maximum efficiency. Judo was initially developed by Professor Jigoro Kano, whose techniques were refined to form a combative system that demonstrates the superiority of techniques over mere strength. Although Judo is a martial art, students need not fear physical injury due to enrollment at Kinesiology 058. Judo I covers fundamental falling, throwing and grappling techniques. More dangerous techniques, such as choking and arm locks, are reserved until students have demonstrated satisfactory command of more basic skills. Kinesiology 058 is not simply aimed at introducing students to basic Judo. Judo instruction at Penn State encourages fitness by incorporating a brief session of physical conditioning into each class in an effort to augment the aerobic workout and prevent injuries. Each student is also asked to learn basic terms and some general history of the sport of Judo. Facilities/Class periods - held in the IM Building Combat Room - begin with stretching and generally continue with a series of technique demonstrations, form practices and free workout. Class concludes with conditioning and cool-down exercises. Frequency of enrollment: Two sections every fall and spring semesters with a maximum of 30 students per section.

General Education: Health and Wellness (GHW)

KINES 59: Introduction to Karate
1.5 Credits

A course designed to give students an understanding of and a proficiency in Karate. KINES 059 Introduction to Karate (1.5) (GHA) Kinesiology 059 will involve the training in the philosophy, principles and techniques of Karate for self-defense, improvement of overall fitness and to give a greater understanding of the art and themselves. This course will involve physical aspects of Karate including blocking, punching, striking, kicking and body shifting techniques in correct stance and the application of these techniques against an opponent. The course will also introduce the mental aspects of Karate illustrating the ideals of 'the way' (including principles such as character, concentration, self control, manners and self discipline) and how they can be applied in everyday life to benefit themselves and society, this will be achieved through meditation and training. There are three primary components of Karate training; fundamentals (basics), sparring and Kata or forms. The basic techniques consist of blocks, punches, strikes, kicks and combinations of these techniques in correct stance or body position. Sparring can take one of three forms; single step, controlled multi-step sparring and free sparring. Only the second form (both controlled and non-contact) is taught in this introductory class. The third component, kata, consists of a series of predefined blocking, striking and kicking techniques performed by an individual and used to simulate defense against multiple opponents. The forms are used to perfect the fundamental techniques to teach balance and timing of techniques so that they then may be applied to sparring. Throughout the semester students will improve in physical fitness and learn how Karate contributes to improved fitness and overall wellness. The basic principles of organizing, planning and implementing a physical fitness program will be taught using martial arts training as a method of exercise. The fitness principles learned in class can be applied to any form of activity the student chooses. At the end of the course the student will be invited to explore, through a term paper, their personal health and fitness goals and how karate training may be incorporated into their lifelong fitness plan. Although some concepts of 'self-defense' are discussed in this class it is not given a priority. However, it is likely that by the end of the course students will feel more physically confident in their ability to avoid and deal with conflict situations. Since Karate is one of the most widely practiced martial arts in the world, the students will also be able to continue their training in Shotokan through either the Penn State Club or at any other club around the world. They will also be given the opportunity to sit a formal grading examination (through a world class examiner), which will hold rank within Karate anywhere in the world, thus acknowledging their abilities gained in this course. This formal ranking is completely at the student's discretion and will not be required for credit toward Kinesiology 059. Frequency of enrollment: One to three sections every fall and spring semesters with a maximum of 30 students per section.

General Education: Health and Wellness (GHW)

KINES 61: Fitness Theory and Practice
3 Credits

Fitness theory and Practice is a course designed to give the Penn State student a complete understand of the fundamental principles of physical fitness and the skills necessary to implement a personalized fitness program. This course will provide the information and skill needed for the student to organize, plan and implement a complete physical fitness program which can evolve over the lifespan. In this course the Penn State student will acquire the knowledge and critical thinking skills that are essential to the development of a healthful and active lifestyle. Students explore the training principles, health-related components of physical fitness, benefits of these components, and learn to use and apply established fitness guidelines. Students also consider factors which affect their performance in executing a fitness plan such as nutritional concerns, the impact of stress, choice of proper equipment, matching personal goals to proper execution, and personal motivation. In their pursuit of an active and healthy lifestyle, students assess and evaluate their personal health, fitness, and wellness using pre and post intervention strategies, and engage in physical exercise to practice concepts presented in course materials including cardiovascular, flexibility, muscular strength and endurance training techniques.

KINES 62: Introduction to Cardiovascular Activities
1.5 Credits

KINES 62 has been designed to help students become acquainted with
and proficient in many types of cardiovascular activities that can be
used as part of a lifelong exercise program. Students should expect to
participate in a variety of activities such as, but not limited to, walking/
jogging, cycling, aquatics, aerobic dance, and cardiovascular exercise
machine use. Additionally, students will have an opportunity to learn
skills necessary to create safe cardiovascular exercise programs while
considering safety, injury prevention, and the pursuit of lifelong wellness.
KINES 62 is taught in a modular format including three to five separate
types of cardiovascular exercise being chosen for the course content
for the semester. Students will know which courses have been selected
by listings in the semester Schedule of Courses. KINES 62 will provide a
unique balance of training guidelines that can be applied to the various
cardiovascular activities one pursues throughout life. Fundamental
guidelines for safe exercise, progression, self-monitoring, etiquette, and
injury prevention will be introduced and practiced throughout the course.
Cardiovascular Activities serves as a stepping stone to lifetime physical
fitness and disease prevention. Self and group paced activity will allow
for each individual to maximize the benefits of exercise.

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Critical and Analytical Think
GenEd Learning Objective: Key Literacies

KINES 63: Aerobic Dance
1.5 Credits

KINES 63, students engage in participation in various types of group
fitness classes including but not limited to aerobic dance, Zumba,
interval training, cardio circuit training. This active participation is joined
with delivery of information addressing components of cardiovascular
training, including principles, components, theories, and training
strategies of physical fitness. Students learn how to prepare for and
engage in group exercise activities by applying theories of kinesiology
and aerobic exercise in real-world experiences. In addition to active
engagement in group exercise, students experience collaborative work
in small and large groups to solve complex movement problems by
developing their own brand of group exercise training. Critical thinking
is stressed as students negotiate the implementation of cardiovascular
training principles as part of their ADL (activities of daily living). When a
student completes KINES 63, he or she is able to identify the components
of an effective physical training program and explain how that program
contributes to lifelong wellness; develop training goals and design a
wellness program to meet these goals; perform a variety of physical
training techniques; and understand how the acquisition of components
of cardiovascular training skills and knowledge promotes psychological
well-being.

KINES 65: Lifetime Jogging
1.5 Credits

KINES 65 is a beginner's level course that seeks to give students the
understanding, knowledge and skills to establish a fitness program
involving jogging. This course introduces students to the performance of
jogging as a lifelong activity that helps maintain and enhance physical
fitness and overall wellness. It also provides the information that the
students need to understand, organize, plan and implement a physical
fitness program that features jogging as a primary activity. Students
will examine the varying levels of fitness necessary for successful
participation in jogging, the potential fitness benefits of engaging in
jogging on a regular basis, and the social benefits associated with the
betterment of one's well-being and quality of life. The centerpiece of
this course is a progression of individually paced jogs of varying lengths
that are conducted over various terrains. Students will experience
participation in jogging through a variety of training techniques including
interval runs, hill runs, and runs to various locations of interest dependent
on each campus location and the surrounding community. These
activities are complemented by lectures on a variety of jogging and
fitness related topics. Students may also participate in small group-
based activities that build leadership and teamwork skills. Throughout
the course, students will have opportunities to apply the knowledge and
skills they have learned during the course through participation in regular
exercise. This opportunity creates an ideal practice arena for the students
to become acquainted with situational awareness and the ability to make
'on-the-fly' problem solving decisions.

KINES 67: Physical Conditioning
1.5 Credits

KINES 67 has been designed to help students build high levels of overall
physical conditioning based upon a variety of training techniques such
as, but not limited to, high intensity interval training, functional training,
and body weight training. Students should expect to physically challenge
themselves through a variety of activities focusing on aerobic, anaerobic,
and resistance training. Students will acquire the knowledge and critical thinking skills that are essential to the development of a healthful and active lifestyle. Students explore such topics as wellness, training principles, health-related components of physical fitness, benefits of these components, and learn to use and apply established fitness guidelines. Students must also consider nutritional concerns and choice of proper equipment and training tactics to match one's goals. In this course, students will acquire the knowledge and critical thinking skills that are essential to the development of a healthful and active lifestyle. Additionally, students will have an opportunity to learn skills necessary to create safe, complete conditioning programs while considering safety and injury prevention. Physical Conditioning will provide a unique balance of training guidelines that can be applied to the various activities one pursues throughout life. KINES 67 may serve as a stepping stone to lifetime fitness, competition in organized athletic events, and personal challenge activities. Students will develop a holistic approach to training for endurance, strength, and integrated activities. Students should expect to work individually and in groups to complete athletic challenges and integrate exercise, team work, and problem-solving skills.

KINES 68: Resistance Training
1.5 Credits

Resistance Training is a course designed to improve students' muscular strength/endurance and is focused on development and implementation of an effective personal strength/endurance training program for lifelong fitness. Key purposes of this class are to learn the basic principles of resistance training, to learn the role of resistance training in an overall program of health and wellness, and to acquire the necessary skills and experience to develop an individualized program for developing muscular strength and endurance over the lifespan. Students will explore the benefits of incorporating a resistance training program as part of a complete fitness plan and how implementation of such a plan may contribute to such changes as increased weight loss/ control, balance and coordination, and a better overall sense of well-being. Students practice proper technique for a wide variety of training exercises and to create a personal training program. Students will explore resistance training principles through learning basic anatomy, basics in muscular physiology, and understanding the body's adaptations to training and detraining. Attention will be given to safety and injury prevention, performance enhancement though natural means and training, proper training techniques and full fitness and wellness plan creation and implementation, and strategies in progression and motivation. Furthermore, students will learn validated techniques to assess muscular strength and endurance and to compare results to normative data. Students will be encouraged to explore their personal health and fitness goals and how resistance training may be incorporated into their lifelong fitness and wellness plan.

KINES 70: Swim Conditioning
1.5 Credits

KINES 70 addresses, in both a theoretical and practical manner, the fitness benefits derived from swimming. These benefits include but are not limited to: flexibility, cardiovascular endurance, muscular strength and endurance, and weight management. Because of its non-weight bearing nature, attention is also given to the exercise value of swimming for arthritic, injured and overweight individuals. This course promotes swimming as a lifelong pursuit and at the same time, enables a student to design an individualized fitness plan, using swimming as the primary activity. Students taking this course must be proficient in swimming skills with the ability to swim distances in the pool. During the swim conditioning portion, students should expect a warm-up, training session, flexibility portion, and a cool-down phase. Training progresses through the semester and takes into account the fitness goal (group or individual). Throughout the semester, swimming is the primary activity, but an exposure to aquatic walking/jogging/running and dryland training is also provided. Moreover, the importance of implementing training variety, proper technique and appropriate safety procedures is emphasized throughout the course with consideration for altering training to meet current and future health and fitness needs. Students have an opportunity to practice skills and behaviors that enable them to better maintain health across their lifespan, as well as to recognize the importance of social, emotional and physical health and wellness.

Enforced Prerequisite at Enrollment: Intermediate or advanced swimming level or Students taking this course must be proficient in swimming skills with the ability to swim distances in the pool.

KINES 72: Walking for Fitness
1.5 Credits

KINES 72 introduces students to the performance of fitness walking as a lifelong activity that is intended to maintain and enhance physical health, wellness, and psychological well-being. This course provides information the student needs to understand, organize, plan and implement a physical fitness program that features walking as a primary, low-impact activity. Students examine the potential fitness benefits of engaging in walking on a regular basis and the social benefits associated with the betterment of one's well-being and quality of life. This course includes a progression of individually paced routes varying lengths that are conducted over various terrains. Students experience participation in ambulation through a variety of training techniques including intervals, hill training, and walks to various locations of interest dependent on each campus location and the surrounding community. These activities are complemented by teachings on a variety of walking and fitness related topics such as the philosophy of walking and walking safety, goal-setting for personal health, principles and concept of physical fitness, the physiology of walking, assessing exercise, promoting wellness, and nutrition and weight control. Students may also participate in small group-based activities that build leadership and teamwork skills. Throughout the course, students have opportunities to apply the knowledge and skills they have learned during the course through participation in regular exercise. Students also experience techniques used to monitor performance throughout the course.
KINES 76: Introduction to Tai Chi Ch’uan

1.5 Credits

A course designed to introduce students to Tai Chi Ch’uan, a traditional Chinese system of personal cultivation and self-defense. KINES 076 Introduction to Tai Chi Ch’uan (1.5) (GHA) This course will introduce students to Tai Chi Ch’uan a health and martial arts system originating from China, and based on more than five thousand years of observation and practice culled from the major Chinese Schools of philosophy and Chinese medical practice. It is seen as a physical embodiment of the supreme Taoist principles. Tai Chi has become very popular in the rest of the world as a means for attaining physical health and vitality and as a formidable defensive martial art. Tai chi has been the focus of research in China and the west and has been found extremely beneficial for balance, arthritis, Parkinson Disease and for general health and well being. Students will be introduced to the principles of Tai Chi Ch’uan by learning Tai Chi relaxation techniques and warm ups to relax the joints, right body alignment and Qi Gong exercises to promote the flow of chi or life energy through the body and the internal organs. They will learn and become proficient in the performance of the first part of the Tai Chi Yang form, which is the heart of the practice. The students will also explore the martial aspects of Tai Chi Ch’uan through the practice of push hands, a two person play, and through the demonstration and introduction to the Tai Chi Sword. The martial art aspects will enrich the students experience and demonstrate the interaction of the student’s chi with his or her environment. Students are encouraged to practice daily outside of class and to record their practice and observations in a journal. At the end of the course they will be required to perform the Tai chi form and related exercises on their own. Evaluation is based on participation, class journal and observations, and the final individual performance of the Tai Chi form and related exercises. No special facilities are required for this course. The department plans to offer one section every fall and spring semesters with an anticipated enrollment of 25 students per section.

General Education: Health and Wellness (GHW)

KINES 77: Yoga for a Lifetime

1.5 Credits

KINES 77 is a course designed to give students an understanding of and proficiency in yoga. Yoga for the Lifetime introduces students to the performance of yoga as a lifelong activity that maintains and enhances physical health, psychological well-being, and overall wellness. This course provides the information that the student needs to understand, organize, plan, and implement a wellness program that features yoga as a central practice. The centerpiece of this course is an integration of foundations in yoga principles and the physical practice of yoga, introducing students to classical yoga postures that address such needs as stress management, muscular tightness, skeletal alignment, and injury recovery. In addition to posture instruction, students practice breathing techniques and meditation; various breathing techniques are included to calm the mind and focus mental energy on specific tasks. Students explore such topics as the historical and philosophical foundations of yoga, nutritional practices that enhance the value of a lifelong yoga program, and Eastern-based movement traditions that complement yoga practice. Students also have the opportunity to reflect upon various aspects of yoga philosophy and the evolution of their personal practice. Upon completion of KINES 77, the student will be able to identify the components of an effective lifelong wellness program and explain how yoga contributes to the success of this program; perform yoga to develop flexibility, strength, and cardiovascular endurance; select and perform yoga postures that address specific needs (e.g., stress management, muscular tightness); describe the philosophical and historical framework that supports yoga practice; and explain how effective breathing and meditation techniques promote physical and psychological well-being.

GenEd Learning Objective: Key Literacies  
GenEd Learning Objective: Soc Resp and Ethic Reason

KINES 77A: Advanced Yoga Practice

1.5 Credits

Students who enter Advance Yoga Practice (KINES 77A) have experience with yoga but are introduced to a deeper and more detailed knowledge and practice of this ancient philosophy now practiced in all contemporary societies throughout the world. Advanced Yoga is designed to deepen the student's understanding and practice of yoga, including yoga postures (asana), breath-work (pranayama), anatomy, philosophy, meditation, sequencing, and applied personal practice. This course involves basic postures (asanas) building to advanced postures, workshops and partner work, readings and discussions, development of restorative and active home practices, and personal reflection to deepen one's practice and overall wellness throughout one's lifespan. Students become familiar with the research that supports the benefits of yoga to the body's systems while exploring the power of changing the mind. Movement-based sessions focus purposeful practicing of yoga postures with the knowledge of their specific benefits. For instance, when learning the bridge pose students will learn that the bridge increases flexibility in the back and shoulders, strengthens the leg muscles and stimulates thyroid function. Students learn to integrate such knowledge into their personal practice of yoga. In addition to the physical practice, students will explore mindfulness, the eight limbs of yoga, restorative practices, the seven chakras, use of breath, use of bandhas, and chanting during the course. The course emphasizes connecting to the core, proper alignment, anatomy, functional movement, intelligent and interesting sequencing, moving fluidly with the breath, mindfulness, and compassion. There are opportunities in Advanced Yoga Practice to understand Sanskrit, the historical language of yoga, in relationship to meditation techniques, energy center practices, temperament determination and application of specific yogic activities.

Enforced Prerequisite at Enrollment: KINES 77

GenEd Learning Objective: Key Literacies  
GenEd Learning Objective: Soc Resp and Ethic Reason

KINES 81: Wellness Theory

3 Credits

KINES 81 is a course designed to explore the cognitive foundations of wellness. Wellness is dynamic and multidimensional. Each individual possesses a unique potential for wellness that is impacted by biological, environmental and behavioral factors. This course covers the physical
components of wellness as well as the social, emotional, intellectual, and spiritual components. Students explore the health benefits of exercise, diet, and cardiovascular wellness, along with the management of lifestyle change and personal responsibility to achieve wellness across the lifespan. Social, economic, and cultural factors that may influence wellness will be discussed. Assessment activities are integrated to enable and encourage responsible decision making. Emphasis will be placed on helping students understand the impact of lifestyle on acute and chronic disorders. A portion of the course will be devoted to theoretical constructs as they apply to human behavior including the Health Belief Model, Theory of Reasoned Action, Self Efficacy Theory, Transtheoretical Model (Stages of Change), and Planned Behavior. By examining theories of human health behavior over a variety of topics, students will be able to analyze their personal health behavior and gain an understanding of the importance of prevention. Students may participate in collaborative learning activities related to health care ethics, individual rights versus public health and safety issues, and issues related to health information on the internet. Students will explore and differentiate medical based information and marketing based information on the internet. The student who successfully completes KINES 81 will be able to identify the components of a positive healthy lifestyle, understand health risk behavior that delimits wellness, grasp the multidimensional nature of wellness, and comprehend the importance of personal responsibility in maintaining wellness.

GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

KINES 82: Action Methods for Stress Management

3 Credits

In Action Methods for Stress Management, students explore how the mind and body are affected by stress over the lifespan. Through the course students examine the effects of stress on various body systems (i.e. cardiovascular system), learn to identify those factors that typically lead to certain mental and physical stress-related illnesses, study invasive and non-invasive interventions and techniques of stress management, and explore theoretical connections between stress and disease. Students will concentrate their cognitive learning efforts on the most common non-invasive practices that can be implemented to control stress. In the course, students identify factors that lead to stress-related illness and develop an understanding and practice of active methods of stress management, with a focus on relaxation and meditation techniques. Both formal and informal contemplative practices are introduced, with students expected to develop a daily action method, meditation and/or relaxation practice to promote stress management and overall wellness in changing life conditions. Students will have an opportunity to become proficient with action methods such as yoga, meditation, conscious eating, and regular exercise; time spent in mindfulness, stillness, silence, and nature may also be explored.

KINES 83: Exercise for Stress Management

1.5 Credits

KINES 83 is a course designed to give the student an introductory understanding of the fundamental principles of stress management. This course will provide pertinent information the student needs to understand, organize, plan and implement a preliminary stress management program. In this course, the student will follow a progression to manage stress that encourages gaining awareness of the factors that contribute to stress, gives attention to the physical/ emotional/ behavioral symptoms in response to stress, encourages exploration of a variety of stress management techniques, and fosters the development of strategies that can be effective over time. Throughout the course, the student considers many components of wellness. Attention is given to specific strategies in physical wellness such as using physical activity and exercise to promote fitness, healthy eating to combat nutritional stresses, and physical relaxation techniques to explore reduction in muscular tightness, physical signs and symptoms of stress, and elevated mental distraction. The course also includes good practices in addressing emotional wellness through improving awareness and practicing cognitive stress management techniques such as reframing and cognitive restructuring. The student is introduced to the elements of fitness and research data that support inclusion of fitness prescriptions to enhance the relaxation response and/or to produce relevant changes in hormone levels. In conjunction with this knowledge and application of such knowledge, the student learns how nutritional decisions and qualities food possesses can result in calming versus energizing effects. Combining this knowledge, the student develops skills to create a personal program to incorporate these fitness and nutritional goals into their own behaviors. As the course progresses, there is continual emphasis on the importance of awareness and the connectedness of the mind and the body. Common themes through the course are awareness, mindfulness, and acting with intention with a goal of performing more effectively in a time of stress.

KINES 84: Fitness for Life

1.5-3 Credits

Kinesiology 84 is a course that has been designed to give the Penn State student a complete understanding of the fundamental principles of physical fitness. This course will provide the necessary skills and information the student needs to understand, organize, plan and implement a complete physical fitness program. Students are expected to explore wellness, disease progression, assess personal fitness and wellness, and explore variables (such as stress and nutritional practices) which may affect performance in the personal plan. In this course the Penn State student will acquire the knowledge and critical thinking skills that are essential to the development of a healthful and active lifestyle, be able to articulate the interrelationship between fitness and wellness, apply the concepts of physical fitness, develop an appreciation having a physically active lifestyle, and be able to alter a personal plan over the lifespan.

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Crit and Analytical Think
KINES 88: Varsity Sport Experience

1.5-3 Credits

kines 88 introduces students to the rigors of the varsity sport experience. This course provides the information that the student needs to understand, organize, plan and thrive in the competitive environment of a collegiate sport program while integrating themselves into the university community. The intent of the course is to provide an active learning environment including service. The ‘corner stone’ of this course is the varsity sport experience itself. Under the tutelage of some of the best instructors in the nation these student-athletes will learn how to prepare for and engage in physical and psychological contests of the highest order. In addition to engagement with the finest physiological training, students experience collaborative work in small and large groups to solve complex movement problems. Critical thinking is stressed as students negotiate the complex real world problem of being a student athlete in a collegiate athletic program. Social behavior, community and scholarly conduct are continually addressed as the student-athletes attempt to integrate themselves into the university and local community. When a student completes KINES 88, he or she is able to identify the components of an effective physical training program and explain how that program contributes to lifelong wellness; develop training goals and design program to meet these goals; perform a variety of physical training techniques; and understand how the acquisition of sport specific skills and knowledge promotes psychological well-being. Sport-appropriate training and performing venues are provided by the university. All offerings of KINES 88 require completion of the signature assignment including, but not limited to, reflection on one’s own sport participation, discussion of how participation impacted academic performance, and based on at least five principles discussed during the semester.

Enforced Prerequisite at Enrollment: Member of Varsity team sport in season.

KINES 89: Wilderness Experience

3 Credits/Maximum of 3

KINES 89 is a wilderness orientation program that is offered for incoming students to assist in their transition to life at Penn State. This course includes multiple days of backpacking in various locations. Through these activities students learn the various skills associated with backpacking and wilderness living which they can continue to use across the lifespan. Students are placed into small groups of eight to ten students with Penn State students and graduate students who mentor and lead the backpacking experience. Small group discussions are threaded throughout the course and focus on student life at Penn State. This class emphasizes teamwork, group living skills, nutritional strategies, living in the elements, wilderness ethics, and health and wellness by introducing students to the craft of backpacking, an activity that students can continue throughout their lifetime. Through this aspect of the course the aim is to help students develop skills to successfully manage their time and stress in order to better balance the physical, social and academic aspects of their lives. Throughout the class these various topics are addressed. Equipment for all activities is provided. Incoming students with all levels of experience may take this course. Both course travel and engagement in and completion of all other course content are required.

GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Soc Resp and Ethic Reason

KINES 90: Indoor Team Sports

3 Credits

This course is divided into two to three units that are designed to provide students with an introduction to a variety of lifetime indoor team sports. The course may include, but is not limited to, basketball, volleyball, team handball, indoor soccer, or floor hockey. Specific location considerations such as facilities or faculty expertise may allow for other indoor team sports to be made available. This format will give students an opportunity to gain a breadth of information and experience that will serve as a gateway to learning opportunities as a knowledgeable spectator or participant over the lifespan; students may also develop an interest to pursue participation in more advanced intramural and recreational sports activities or opportunities. This course provides information not only on participation in the included sports, but also on how to incorporate those sports into one’s fitness plan throughout life and the potential fitness
benefits of regular participation in the sport. Foundational principles of creating an effective fitness and wellness plan including appreciation for factors impacting performance, safety, and injury prevention are addressed. Participating in team sports will help students understand that regular activity has social, emotional, and physical benefits with potential for total well-being and a better quality of life. While the primary focus of the class is the skills, strategies and rules of a variety of indoor team sports, the underlying sub-focus of the course is the development of the social skills required to be a good team member. The commitment to a team sport requires students to encounter a collaborative atmosphere where they seek to solve complex movement problems and learn to cooperate to achieve various team goals. The improvement of individual skills is important however the successful integration of these individual skills into the team is a valuable life lesson. As the student leaves the university the lessons learned in this class will prepare him/her for 'team membership' in their various areas of professional practice.

KINES 90A: Introduction to Team Sports/Indoor - Volleyball
1.5 Credits/Maximum of 99

KINES 90A focuses specifically and solely on volleyball. It is designed to give students an understanding of the knowledge and skills necessary for successful participation in the game of volleyball. This format will give students more depth and focus on the game of volleyball and the communication skills that good teamwork requires. While the primary focus of the class is the skills, strategies and rules of volleyball, the underlying sub-focus of the course is the development of the social skills required to be a good team member. The commitment to a team sport requires students to encounter a collaborative atmosphere where they seek to solve complex movement problems and learn to cooperate to achieve various team goals. This course provides information not only on volleyball, but also on how to incorporate volleyball into one's fitness plan throughout life and the potential fitness benefits of regular participation in volleyball. Foundational principles of creating an effective fitness and wellness plan including appreciation for factors impacting performance, safety, and injury prevention are addressed. Participating in team sports will help students understand that regular activity has social, emotional, and physical benefits with potential for total well-being and a better quality of life.

KINES 91D: Introduction to Outdoor Team Sports - Ultimate

1.5 Credits

KINES 91D focuses specifically and solely on the lifetime sport of ultimate. It is designed to give students an understanding of the knowledge and skills necessary for successful participation in the game of ultimate. This format gives students more depth and focus on the game of ultimate and the communication skills that good teamwork requires. While the primary focus of the class is the skills, strategies and rules of ultimate frisbee, the underlying sub-focus of the course is the development of the social skills required to be a good team member. The commitment to a team sport requires students to encounter a collaborative atmosphere where they seek to solve complex movement problems and learn to cooperate to achieve various team goals. This course provides information not only on ultimate, but also on how to incorporate ultimate into one’s fitness plan throughout life and the potential fitness benefits of regular participation in ultimate. Foundational principles of creating an effective fitness and wellness plan including appreciation for factors impacting performance, safety, and injury prevention are addressed. Participating in team sports will help students understand that regular activity has social, emotional, and physical benefits with potential for total well-being and a better quality of life.

General Education: Health and Wellness (GHW)
KINES 96: Independent Study in Physical Activity

0.5-3 Credits/Maximum of 99

This course is designed to meet the needs of students to expand Kinesiology experiences beyond the designed course curriculum. KINES 096 Independent Study in Physical Activity (1-3 per semester) (GHA) Students enroll in KINES 096 to take advantage of a unique movement experience in which they plan to participate. They enroll in KINES 096 by an application process. Students who feel that they would like to fulfill their Health Science and Physical Activity (GHA) requirement by pursuing a movement form outside of the normal curricular offerings apply to the department of Kinesiology. Applications will be screened to see that they fulfill the tenants of the GHA requirement. The topics for this course vary widely from student to student. A student may be working on a personal contract that has been designed to report the progress of experiences from hiking excursions in Nepal to a mountain biking course in Crested Butte, Colorado, to walking a mile in 15 minutes after major knee surgery. Therefore, many common topics are an exception rather than a rule during any given semester. Each student completes a proposal form that requires that they describe their need for this course. They are also asked to describe the experience that they have identified in detail and also a preliminary program and implementation plan for the detailed program. This proposal is then approved or denied by the faculty member facilitating the independent study program. After the proposal has been approved or denied the student will receive a letter notifying them of their status in the course. If they have received an approval letter they are instructed in the letter to meet one-on-one with the class instructor. At the initial meeting, the proposal is discussed and when there is an agreement with the student and instructor concerning the requirements for the student to complete the course successfully a contract is written and signed by both the instructor and the student. Weekly contact, at a minimum, with the instructor is required. Student evaluation techniques shall include but not be limited to objective testing, individual projects, presentations, journals and subjective evaluation of effort involved in meeting the stated goals and objectives for the course. There are no special facilities for this course. The department plans to offer this course every fall and spring semesters, with an enrollment of up to 25 students each semester.

General Education: Health and Wellness (GHW)

KINES 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

KINES 100: The Cultural and Behavioral Foundations of Kinesiology

3 Credits

Philosophical, ethical, historical, cultural, psychological, and behavioral foundations of human movement, health, wellness and exercise. KINES 100 The Cultural and Behavioral Foundations of Kinesiology (3) This course introduces and integrates the philosophical, ethical, historical, cultural, and psychological foundations of kinesiology. Kinesiology is a dynamic, multi-disciplinary area devoted to the study of human movement. Kinesiology is unique in that it covers the 'three cultures' of academia: the sciences, the social sciences, and the humanities. This foundational, entry-level survey course introduces students to social scientific and the humanistic approaches to sport, exercise, health, wellness, and physical activity. Topic areas include the psychology of exercise and sport, the history of sport and physical activity, and the philosophy and ethics of sport and physical activity. Throughout the course, applications and integration to human health, physical activity, and to health and fitness professions are provided. The Philosophical & Ethical Foundations of Human Movement This section introduces students to the philosophical and ethical aspects of kinesiology. This includes fundamental question of human movement, explorations of dualism and holism, ethical decision-making in sport, games and play, and an introduction to the ethical obligations of kinesiology and health/wellness professionals. The Cultural Foundations of Human Movement This section introduces students to the historical, cultural, and social dynamics of kinesiology. Building off a philosophical foundation, it includes questions about why and humans move, the effects of historical and cultural influences on sport, physical activity, health, and human movement, as well as the roles that social identities play in these processes. In addition, this course module explores significant cultural considerations for kinesiology and health/wellness professionals. The Psychological Foundations of Human Movement This section introduces students to the psychological dimensions of kinesiology. This includes information about psychological orientations and enhancement in exercise and sport and foundations of health and psychological well-being. This section also addresses principles of behavior change, reinforcement, motivation, intervention, and performance enhancement and emphasizes psychological and health theories to explain physical activity behavior. It also includes information about the importance of sport and exercise psychology for kinesiology and health/wellness professionals.

KINES 101: The Biophysical Foundations of Kinesiology

3 Credits

Biomechanical, physiological, and neurobiological foundations of human movement and exercise, including applications to clinical conditions, rehabilitation, and fitness are presented. KINES 101 The Biophysical Foundations of Kinesiology (3) This course introduces and integrates the physiological, neural, anatomical and biomechanical foundations of kinesiology. Throughout the course, applications to human health, physical activity, and to health and fitness professions are provided. The Physiological Foundations of Human Movement This section introduces students to basic physiological principles that are necessary to understand exercise metabolism, adaptations to training, and changes that occur throughout the lifespan. This section builds important groundwork in exercise physiology to enable the student to understand the fundamental principles of energy metabolism and adjustments to energy metabolism as a result of acute and chronic exercise. Adaptations to chronic exercise training to the aerobic, anaerobic and muscular strength systems are a cornerstone of this section, but emphasis is also expanded to include functional capacity. The final section emphasizes the effects of exercise on chronic diseases, and takes a lifespan approach. The Neural Foundations of Human Movement This section introduces students to basic neural anatomy and physiology that serve as a basis for understanding neural control of movement. This includes the cellular, anatomical and functional organization of the central nervous system, and applications to clinical conditions. Students are introduced to sensorimotor processes, as a foundation for understanding human motor control and motor coordination, and associated dysfunction. Anatomical Foundations of Human Movement This section provides a survey of basic terms for describing human anatomy, including anatomical plains, axes, and directions, as well as an introduction to the major components of the musculoskeletal system. The fundamental structure and function of muscles and bones will be discussed with
reference to their contributions to human movement. Mechanical Foundations of Human MovementThis section introduces the physical principles that underlay the study of biomechanics. Students will learn how to properly describe human movement using terminology for linear and angular motion. Newton’s three laws of motion will be introduced and used for as a basis for discussing the role of forces and torques in starting and stopping motion. This section will include discussions of the biomechanics of walking and the biomechanical causes and effects of movement disorders.

KINES 126: The Health Program for the Elementary School Child

1.5 Credits

Introduction to the Coordinated School Health Program. Overview of contemporary school-based health education theory, content, methods, and practice. KINES 126 The Health Program for the Elementary School Child (1.5) KINES 126 is an introductory course designed to prepare school-and community-based educators to implement health promotion and disease prevention educational programs to elementary-aged audiences. Emphasis of the course is on the coordinated school health program model, theory, content, and teaching methods. Eight specific components of a coordinated school health program serve as the foundation for the course: (1) comprehensive school health education; (2) physical education; (3) school health services; (4) school nutrition services; (5) school counseling, psychological, and social services; (6) healthy school environment; and (7) school-site health promotion for faculty and staff; and family and (8) community involvement in school health. Students will gain experience in health promotion and disease prevention concepts; lesson planning; roles and responsibilities of teachers, staff, administrators, and students; and implementing effectively the health education concepts outlined above. The Department will offer one large section each fall and spring semesters with an anticipated enrollment of 150 students per section. A technology room will be required. Participation in this course will enable the student to: a. Analyze the goals, roles, and responsibilities of the classroom teacher concerning the health of the school-aged child. b. Identify appropriate educational resources related to school health. c. Describe the components of the coordinated school health program. d. Discuss the important of learning healthy life skills for elementary-aged learners. e. Organize and submit one modified health-based lesson plan for elementary-aged learners. f. Demonstrate competency in accessing health education resources from the World Wide Web. Methods for Evaluation: Written examining 50% Lesson Planning 30% In-Class Participation 20%

Enforced Prerequisite at Enrollment: EDPSY 14

KINES 127: The Physical Education Program for the Elementary School Child

1.5 Credits

Theoretical and practical overview of developmentally appropriate physical education for children. KINES 127 The Physical Education Program for the Elementary School Child (1.5) KINES 127 is an introductory course designed to introduce future classroom teachers to the conceptual framework of developmentally appropriate physical education. The class includes both theoretical and practical guidelines for analysis and implementation of children's physical education. The course focuses on applications of the Pennsylvania standards for elementary educators K-6. The components of KINES 127 include: concepts related to becoming and remaining physically active for a lifetime, physical fitness, motor development, movement and fitness concepts and fundamental motor skills, safety procedures, role and value of play, game and sports in child development. Students will gain experience teaching physical education lessons, as well as observing and participating in physical education experiences. Students will be introduced to multi-cultural dance and games. Students will understand the use of small and large equipment. Evaluation will include written examination, group peer teaching, and participation. The Department will offer four sections each Fall and Spring semesters with an anticipated enrollment of 30 students. The Department will offer 1 section per summer semester with an anticipated enrollment of 30 students. Participation in this course will enable students to: 1. Define and develop a philosophy of elementary physical education. 2. Identify developmental characteristics and stages for children grades K-8. 3. Develop professional teaching techniques. 4. Apply activities for physical education, using proper safety procedures. 5. Discuss the importance of nutrition, personal wellness, and lifelong healthy habits. 6. Understand the human body and its systems. 7. Demonstrate competency in accessing physical education activities and resources from the World Wide Web. Methods for Evaluation: Writing Examination 50% Group Peer Teaching and lesson planning 20% Written Observation of Peer Teaching 10% Participation 20%

KINES 135: Introduction to Athletic Training

3 Credits

Introduction to Athletic Training provides an overview of the field of athletic training exploring the breadth of athletic training terminology, issues, and injuries. After completing the course, the students will be able to describe the roles of the sports medicine team, understand the legal considerations for the athletic trainer as a health care provider, and identify the basics of physical conditioning and nutrition in reference to injury prevention. Students will be able to describe an emergency action plan for injuries, and environmental conditions. Students will be able to identify basic use of therapeutic modalities and principles of therapeutic exercise programs. Students will gain an understanding of acute vs. chronic injury conditions and be able to describe the related anatomy, etiologies, pathologies, signs and symptoms, and general treatment and management for injuries of the foot, ankle, lower leg, knee, hip/groin, shoulder, elbow, wrist, hand, cervical spine, and head. Rationale and demonstrations for a variety of taping techniques are included to address upper and lower extremity injuries. Students are also provided an overview of general medical conditions that may occur in the athletic arena.

Cross-listed with: ATHTR 135

KINES 160N: Fitness with Exercise Physiology

3 Credits/Maximum of 3

Biology of Exercise is an integrative exercise physiology course that combines performing physical activity (Kinesiology) and applying biological principles (Biology). This course will explain the benefits, changes, and processes the body exhibits while exercising. Students will gain knowledge and comprehension through both a lecture (or online) setting (approximately half of the class meetings) as well as an activity component (approximately half of the class meetings) in which students will demonstrate their health related components of fitness. This includes, but is not limited to, muscular strength, muscular endurance, flexibility, power, cardiorespiratory endurance, and body composition. In the lecture component, students will describe biological principles including homeostasis, nutrition, the structure and function
of musculoskeletal, cardiovascular, and respiratory systems. At the completion of this course, students will be able to argue for the lifelong significance of exercise including why it is important, benefits related to organ systems, and disease prevention.

Bachelor of Arts: Natural Sciences

GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

KINES 165: Health Education Concepts
3 Credits

Principles of healthy living which are the basis for health instruction in schools and health care settings.

KINES 197: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

KINES 199: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

KINES 200: Muscle Training: Physiology, Programs, Techniques
3 Credits

KINES 200 addresses the physiological basis of strength training emphasizing mechanisms of muscle contraction and growth, program and facility design, and individual exercise technique. This course focuses on the concepts and applications of strength exercise science including relevant testing and evaluation of strength protocols. It explores the organization and administration of resistance training and conditioning facilities including the development of resistance training programs. The course also introduces students to exercise techniques. As a result of this course students will be able to work collaborative with others. They should be able to evaluate information for authority, relevance, currency and accuracy. They will understand the biomechanics of strength training, the physiological adaptations to muscle training and the mechanisms of change with varying populations. In addition they should be able to select and organize appropriate muscle testing protocols. They should be able to teach and demonstrate appropriate strength exercises to an individual or group as well as be able to identify and correct errors an individual might make. They should be able to prescribe the proper exercise and exercise sequence to strengthen a specific muscle or muscle group, and they should be able to design and organize a strength training facility.

Enforced Prerequisite at Enrollment: B I O L 1 4 1 or B I O L 1 6 1 or K I N E S 2 0 2

KINES 201: Cardiorespiratory Training for Health and Performance
3 Credits

Exploration of the principles and practical applications of cardiorespiratory training for health and performance enhancement. KINES 201 Cardiorespiratory Training for Health and Performance (3) KINES 201 prepares students in understanding the process of developing a cardiorespiratory exercise prescription program. Exercise programming is scripted on an individual basis according to goals, national guidelines, age, interests, available time, and commitment. The benefits of physical activity are becoming increasingly documented. However, physical activity is not without risks. The proper cardiorespiratory exercise prescription is important to the safe participation for a wide range of populations. Students will be able to determine the differences between activity, fitness, and sport performance and be cognizant of the various components and modes of cardiorespiratory activity. Students will understand the different models of cardiorespiratory exercise prescription for health, fitness, and sport performance. Applying this knowledge, students will experience practical applications of cardiorespiratory exercise prescription on various training modalities applied to a wide range of settings. Homework assessments, laboratory activities and/or mid-term and final exams based on the discretion of the course instructor will reflect the pedagogical and practical application of cardiorespiratory exercise prescription concepts. The Department is planning to offer one section every year with an anticipated enrollment of 25 students per section.

KINES 202: Functional Human Anatomy
3-4 Credits

This course is designed to provide students a didactic and laboratory experience in functional human anatomy. Upon course completion, students should be able to comprehend and apply standard anatomical nomenclature pertaining to human movement science; comprehend structure and function of the musculoskeletal, neurological, respiratory, cardiovascular, lymphatic, gastrointestinal and endocrine systems pertaining to human movement science; comprehend the classification, structure and function of human anatomical articulations (joints) pertaining to human movement science; and comprehend the classification, structure, and function of human biological tissues (epithelium, connective, muscle and nervous) pertaining to human movement science. In the laboratory portion of the course students will learn to identify bone and capsuloligamentous tissues as well as their respective landmarks pertaining to human movement science; identify origins, insertions, actions and innervations of skeletal muscles pertaining to human movement science; and identify biomechanical characteristics and neuromuscular activity of human anatomy during the execution of active, passive as well as resistive movements. The laboratory portion of this course will use three-dimensional bone models, joint models, ligament models and cadaveric models to apply concepts covered in lecture.

Enforced Prerequisite at Enrollment: 2nd Semester Standing in HHD or KINES major or KINES minor or ATHTR major
Cross-listed with: ATHTR 202
KINES 202H: Functional Human Anatomy

4 Credits

In-depth examination of the, musculoskeletal, nervous, cardiovascular, and respiratory systems, and their relationship to human movement.

Honors

KINES 203: Medical Terminology for Allied Health Professionals

3 Credits

Comprehensive review of terms related to functions, disorders, diagnosis, and treatment of body systems related to physical activity and movement. KINES 203 Medical Terminology for Allied Health Professionals (3) This course is designed for students who wish to enter an allied health field related to physical activity and human movement. This course will help students prepare for careers in physical therapy (PT), occupational therapy (OT), medicine (MD, DO), physician assistant (PA-C), pharmacy (R.Ph), dietary medicine (RD) and emergency care (EMT, EMT-P). Some of the allied health programs listed above requires a 3 credit course in medical terminology prior to admission into graduate school and this course fulfills that requirement. The goal of this course is to help students develop an understanding of medical terminology related to physical activity and human movement used when dealing with the anatomy and physiology of the systems of the body, disease processes associated with each system, and pharmacology and clinical treatments associated with the pathology of the body systems. Students will appreciate the weights and measures, chemical symbols, diagnoses, procedures, and medical documentation used in allied health fields, especially in sports and human movement medicine.

KINES 222N: Science and Politics of the Female Athlete

3 Credits

The purpose of this course is to explore gender differences in sport and politics that emerge from physiology, culture, history, politics, and policy. The engagement of women in sport has unique physiological considerations and ethical dilemmas as well as a rich history of defining moments and important ties to feminism and politics. In this course, students will learn how physiology differences affect female athletic performance and the effects of exercise on the female body, as well as how cultural, historical, and political forces shaped women’s participation in sport. Students will also see how similar historical, cultural, and political forces affect women’s involvement in politics. Combined, students will understand how similar forces shape gender norms and participation two different, yet related, aspects of society. Additionally, students will learn about the push for evidence-based policymaking and apply that knowledge to topics including doping, pregnancy, and gender verification. Students will integrate physiology and policy in a final assignment advocating for evidence-based sport policy. They will also educate their peers through a public education project.

Cross-listed with: PLSC 222N, PUBPL 222N

General Education: Health and Wellness (GHW)
General Education: Social and Behavioral Scien (GS)
General Education: Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Soc Resp and Ethic Reason

KINES 233H: Emergency Care in Athletic Training

3 Credits/Maximum of 3

Introduction into emergency medical care with emphasis on management of common emergency situations occurring during athletic participation. This is a laboratory fee based course.

Honors

KINES 260: Research Skills in Kinesiology

3 Credits

KINES 260 prepares students to read, understand and critique scientific research. The epistemological belief that knowledge is static and science discovers truth will be challenged. Rather than research being a product achievable only by professors, research will be presented as a process that students can understand and contribute to. Therefore, this course will develop skills and knowledge in understanding and conducting scientific research through practical experience. Specifically, students will learn to search for articles and be able to evaluate different sources of knowledge. Reading strategies will be employed to develop the ability to read and produce research papers according to standard structure and formatting. Students will gain experience using a range of different measurements of human movement and behavior, and understand general measurement issues. Practical experience with different types of research in kinesiology will occur throughout the semester, aiding students to critique and design research. Students will learn when to employ different statistical tests, be able to analyze data using statistical software, and interpret the results. Experience in other computer software will occur throughout the semester to develop student’s word processing, spreadsheet and graphical skills. This knowledge and skills will be integrated throughout the semester and culminate in a research project performed by teams of students.

Enforced Prerequisite at Enrollment: KINES 101

KINES 267: Fundamental Movement Skills Instruction

1 Credits

Instruction for performing and delivering developmentally appropriate psychomotor skills, movement patterns, and content to preschool and elementary school-aged children. The course is designed for students interested in understanding how to instruct movement concepts, skill themes, and fundamental movement skills to preschool and elementary school aged-children. An understanding of developmentally appropriate skills and physical activities and an understanding of how to effectively instruct fundamental movement skills to this population of children make-up the foundations of the course. Students will apply content knowledge to instructing, coaching, and executing movement concepts, skill themes, and fundamental movement skills. Students will be able to identify and organize appropriate skills and activities based on the developmental level of preschool and elementary students. Students develop knowledge and skill in designing and implementing movement and rhythmical activities for preschool and elementary students. Emphasis is placed on the ability to analyze and instruct the associated movement skills. A primary focus of the course is to create interesting challenges that motivate children to continue to practice tasks and engage in regular physical activity. The first half of the course will provide an introduction to developmentally appropriate fundamental movement skills, physical activity participation rates of children, and special considerations when instructing and coaching. Students will
examine how the developmental level of the child relates to their level of skill proficiency and the importance of children learning correct skill execution in order to enjoy participation in regular physical activity. The second half of the course will focus on each specific fundamental motor skill. Students will learn the correct form of execution, common errors of execution, verbal cues associated with correct execution, and application of the fundamental motor skill to a developmentally appropriate activity. In this portion of the course, students will have the opportunity to use the knowledge and skills learned in this course by engaging in peer-to-peer instruction sessions.

**Enforced Concurrent at Enrollment**: KINES 295B

KINES 295: Introduction into Careers

1 Credits/Maximum of 1

This course exposes students to self-examination, career pathways, certification prerequisites and internship opportunities within the related field of studies. This course is designed to expose students to specific career pathways, specific certification prerequisites, internship opportunities and professionals in the applied kinesiology fields of study through experimental learning. This course offers, but is not limited to offering, many enriching professional development skill building lectures and assignments, professional interview, and completion of observation hours within a professional setting. Students can choose from a variety of sites, including but not limited to schools, YMCAs, fitness centers, university courses, community or corporate health and wellness programs. Students are required to choose a field that directly relates to their career goals and/or expected professional certifications. Students must complete a minimum of 12 hours of a hands-on experience in that field. The expectation is that students apply and integrate content from other and concurrent courses in the program and further learn appropriate applied skills that are critical to success in the field. This course covers the breadth and depth of discussion pertaining to professional career development within the vast possibilities within the field of applied exercise & health. An important focus of the course are the preparatory fundamentals that foster better student awareness, opportunities and discussion of how to utilize a B.S. degree in Kinesiology for career development and success within the industry. The student's field experience productivity and work will be evaluated on an ongoing basis by the course instructor as well as the field experience supervisor. The course may take place at either on campus facilities or off campus locations.

KINES 295B: Careers/Observations in Kinesiology

1 Credits/Maximum of 1

KINES 295B (1 credit) is a required course for students in the Movement Science Option of the Kinesiology curriculum. It is the first of three practicum courses that exposes students to general and specific career information, an observational experience, research and professionals in Kinesiology related fields of studies. Course Objectives: By the end of the course, students should: 1. Develop a basic understanding of career exploration as a lifelong process. 2. Develop an understanding of the availability of career opportunities that can be achieved with an educational background in Kinesiology. 3. Be exposed to research in the Kinesiology discipline. 4. Be exposed to professionals in the Kinesiology field. 5. Learn about and have the opportunity to practice being a professional.

**Enforced Prerequisite at Enrollment**: 3rd Semester Standing

KINES 295C: Professional Development - Field Experience

1-2 Credits/Maximum of 8

KINES 295C Professional Development - Field Experience (1-2 per semester/maximum of 8) This course is designed to provide undergraduate students the opportunities of professional development via lecture format, professional travel to a national conference, and guest round table discussions. Throughout the course, students will have exposure to professional communication with faculty through formats including, but not limited to the following: conference forums, faculty/professional/expert dinner discussions, lectures, training sessions, symposiums, break-out sessions, and a poster forum. The students will enhance skills needed to develop networking and interview skills, communicate information effectively, and build resumes to meet the needs for such endeavors as graduate school, internship acquisition, and/or employment. Other class foundational principles include but are not limited to: attending a professional conference, practicing business etiquette at professional lectures and expositions, exposure to professional networking, learning how to exchange knowledge within the professional realm, and researching professional collaborative work. Students will share the experience and knowledge gained from this professional travel through relevant exercises that may include a formal poster forum within the university setting.

**Enforced Prerequisite at Enrollment**: completion of three credits in KINES

KINES 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

KINES 296F: **SPECIAL TOPICS**

1-6 Credits/Maximum of 18

KINES 296G: **SPECIAL TOPICS**

1-6 Credits/Maximum of 18

KINES 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

KINES 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

KINES 303: Emergency Care - First Aid/Safety/AED

3 Credits

Develop skills for First Responder Certification in CPR/AED, First Aid and Safety by American Red Cross or National Safety Council. KINES 303 Emergency Care - First Aid/Safety/AED (3) (GHA) KINES 303 is designed to provide students with the opportunity to acquire and develop the skills and competencies needed for First Responder Certification in CPR/AED,
First Aid and Safety from the American Red Cross and/or National Safety Council. Students will understand the role of the Emergency Medical System (EMS) in a complex society and the importance of emergency care in our health care system. KINES 303 will foster the student’s critical thinking skills and their ability to assess and evaluate life threatening and disabling injuries and illnesses and to respond with appropriate care and life saving action steps in variety of medical emergencies. Students will develop an understanding of the importance of emergency care, first aid and safety at all levels of society with emphasis on providing and improving the quality of emergency care practices in a wide variety of community organizations, occupations and professions including childcare, education, human services, geriatric care and disaster management. KINES 303 is taught through a variety of teaching methods. Students are prepared for proficiency through readings, classroom discussion, video presentation, practical skills, sudden illness and injury scenarios, group presentations and direct observation of EMS (Ride-Alongs). The course is practice-focused on developing the skills and competencies necessary for emergency scene management, CPR/AED and sudden illness and injury. Various evaluation techniques will be used to assess the students progress in KINES 303. These techniques shall include but not be limited to conventional objective testing, practical skill tests, sudden illness and injury scenarios, group presentation and written observation papers. Students who have already received credit for NURS 203 and/or KINES 233 may not enroll in this course due to duplication of material.

General Education: Health and Wellness (GHW)

KINES 304: First Aid: Instructors

1 Credits

Competencies leading to certification for teaching American Red Cross Advanced First Aid and Emergency Care and American Heart Association Cardiopulmonary Resuscitation. Laboratory.

Enforced Prerequisites at Enrollment: KINES 303

KINES 321: Psychology of Movement Behavior

3 Credits

Psychology of Movement Behavior is designed to introduce students to the basic concepts and applications of psychological knowledge for organized sport, physical activity, athletic training, and related environments where people are active. The course touches on the history of sport and exercise psychology, sport and exercise psychology consultants’ responsibilities (i.e., research, teaching, and service), and understanding sport and exercise participants’ personality traits and motivation for participation. The course also promotes an understanding of sport and exercise environments through discussion of competition, group dynamics, and the principles of feedback and reinforcement. Performance enhancement is also covered through discussion of topics related to psychological skills training and application (e.g., goal setting, imagery, and relaxation training). Finally, the course focuses on enhancing sport and exercise participants’ health and well-being by promoting an understanding of addictive behaviors (e.g., exercise dependence, eating disorders, and substance dependence), body image, injury rehabilitation, and exercise initiation, maintenance, and adherence. The general objective of this course is to familiarize the student with the science and practice of sport and exercise psychology from both a theoretical and applied perspective. To achieve this objective, the student will: (a) develop an understanding of how various psychological factors influence athletic performance, physical activity participation,
first understand what a person is before they can best determine how to intervene or otherwise provide services to them. Attention is also directed to the subject matter of Kinesiology-namely, skilled movement in general and physical abilities in work, exercise, sport, dance, games, and play more specifically. The nature and values of these different ways of moving are analyzed in terms of their ability to serve as ‘tools’ (means to other ends) and ‘jewels’ (ends in themselves). Issues of motivation, efficacy, safety, and other factors are analyzed in an attempt to determine whether a play-and-enjoyment or a work-and-duty philosophy should be emphasized in various professional settings. Quantity and quality of life are juxtaposed to show their interdependence and the variable roles they play in affecting allied medical, coaching, teaching, fitness, recreation, and other movement-related professions. Finally, the course addresses common ethical problems faced by athletes, as well as physical activity and health professionals.

Enforced Prerequisite at Enrollment: Students must have a grade of C or better in KINES 100

KINES 350: Exercise Physiology

3 Credits

Structure and function of the human body as applied to health, wellness, exercise, and sports. KINES 350 Exercise Physiology (3) Exercise Physiology is a mid- to upper division course that will appeal to students with an interest in human biological adaptation. The course has two primary goals: First, students develop an understanding of the physiological adaptations that occur during and after endurance and resistance exercise. Second, students improve their comprehension of the differences between the acute exercise response and the changes that occur with chronic physical activity (exercise training). A major emphasis is placed on physiological systems as they relate to physical activity, exercise health, and environmental stress; including, but not limited to, cardiovascular, respiratory, musculoskeletal, renal, neural, and metabolic. These systems are considered singly and in combination with regard to both exercise intensity and exercise duration. The depth of inquiry can range from molecular to organismal (whole-body). In addition, the mechanisms underlying the preventive and protective effects of exercise on human health and performance are discussed. The ability to apply concepts and principles of physiology to situations involving exercise, exercise training and decreased physical activity are highlighted, improving students’ abilities to develop and differentiate between paradigms that utilize exercise to improve athletic performance and those that utilize physical activity to promote health. Special topics of applied study may include aging; development; gender; body composition; disease and environmental extremes such as heat, cold, diving and altitude. Students are required to demonstrate via assessment, knowledge and understanding of the acute physiological response to exercise and physiological adaptations to programs of chronic resistance and endurance exercise. Quantitative and analytical skills are emphasized, especially as they pertain to exercise testing and exercise program evaluation. The ability to interpret scientific data as they pertain to exercise physiology is required. Background knowledge in biology, chemistry, physics, and exercise science represent the knowledge base from which the class is built and contributes to the mastery of concepts presented. This course is required for Athletic Training and Kinesiology majors.

Enforced Prerequisite at Enrollment: Students must have a C or better in KINES 101 and [(BIOL 141 and KINES 202) or (BIOL 161 and BIOL 163)] and (CHEM 101 or CHEM 106 or CHEM 110 or CHEM 130)

KINES 356: Activity and Disease

3 Credits

KINES 356 is an examination of hypokinetic disease on human wellness involving identification, assessment, research, and exercise design of human activity for disease prevention. Content in this course defines what physical activity, fitness, and lifestyle are. It covers the methodological and measurement assessment of physical activity and disease as well as exploring the relationships between physical activity and specific physical diseases, and between physical activity and various disorders of the mind. After this course students will be able to design and implement an exercise program to prevent or combat the effects of a specific disease on an individual. They will understand and be able to persuasively inform clients to the dangers of a sedentary lifestyle. They will know the strategies necessary to motivate and modify individual behavior so that it results in a more healthy lifestyle. And they will be able to design epidemiological research protocols to study the relationship between a specific disease and activity. Knowledge will be assessed by written evaluations, through the use of case studies in the case of exercise prescription skills, and through presentation of high quality group projects. This course will complement other courses in this curriculum but will be the only course devoted to a thorough investigation of the relationship between inactivity and various disease states. Material in this course and experience in the lab cover the conceptions and applications of strength exercise science. It also addresses testing and evaluation of strength protocols including selecting appropriate tests, organizing testing procedures, and individual testing protocols and procedures. Students will be introduced to material which overviews the organization and administration of resistance training and conditioning facilities. They will also learn the design principles of resistance training programs as well as exercise techniques. After this course, students will understand the biomechanics of strength training, the physiological adaptation to muscle training, and the mechanisms of change with varying populations. Students will be able to select and organize appropriate muscle testing protocol and will be able to teach and demonstrate appropriate strength training exercises to individuals and groups, including being able to identify and correct errors.

Enforced Prerequisite at Enrollment: BIOL 141 or BIOL 161

KINES 358: Ergogenic Aids

1 Credits

Skills development including research identification and evaluation of work-enhancing methods and devices as related to human performance and wellness. KINES 358 KINES 358 Ergogenic Aids (1)In this course students will learn about the research identification and evaluation of work-enhancing methods and devices as they relate to human performance and wellness. The course will overview historical and ethical issues associated with the use of ergogenic aids, as well as the mechanisms that delineate how they affect body systems. Ergogenic aids will be classified as hormonal, pharmacological, psychological, physiological, mechanical and nutritional. In the course students will also look at various restorative and accelerate healing agents. As a consequence of this course students, will be able to identify specific ergogenic aids, their actions, their legality, advantages, disadvantages, and safety concerns. Students will also understand the research issues involved with ergogenic aids, as well as developing a philosophy for dealing with clients who approach them interested in these kinds of enhancements. Student learning will be evaluated by exams, by the preparation of a mock experiment, and by various written assignments.
This course will take an in-depth look at an important area reviewed only superficially in other courses. Because of the topic's relevance to work in this field, this course gives students knowledge necessary to function effectively as a professional. No special facilities are needed to teach the course and it will be offered annually to approximately 15-25 students.

**Enforced Prerequisite at Enrollment:** BIOL 141 and NUTR 251

**KINES 360: The Neurobiology of Motor Control and Development**

3 Credits

This 3 credit lecture course provides a rigorous presentation of the neuroscientific foundations of human movement control and coordination. This course introduces students to the cellular basis of neurophysiology, while emphasizing the contributions of both sensory and motor systems to motor control, coordination, and development. The course provides an in-depth presentation of systems neuroscience, with a special emphasis on the spinal, brainstem, and cortical contributions to movement. The course introduces the physiology and functional anatomy of the major sensory systems, motor systems, and sensorimotor integration networks, of the spinal cord, brainstem, and hemispheric structures in the central nervous system. These include spinal circuitry underlying reflexes and central pattern generators, basal ganglia organization and functional networks, cerebellar organization and functional networks, primary, secondary, and tertiary cortical areas associated with sensory and motor functions, neural tracts associated with ascending and descending sensory and motor systems, and cortical-subcortical loops. Students are introduced to dysfunction in these systems from both disease and traumatic processes, due to development disabilities such as cerebral palsy, degenerative processes including Parkinson's Disease, vascular disease including stroke, as well as traumatic brain injury. The overall objective of this course is to prepare Kinesiology students with a foundational level preparation in neuroscience, as required for understanding control of human movement, motor coordination, motor development and dysfunctions in these processes. This course forms one of four 300-level core courses that provide the basic science foundations that underlie the study of human movement, including exercise physiology, biomechanics, and the psychology of movement behavior. Neuroscience represents the fourth foundational discipline that contributes to human movement science. This course is presented from a hierarchical perspective, that introduces the cellular basis of neural communication, as well as cortical, brainstem, and spinal systems that underlie sensorimotor functions. It provides a thorough introduction to the central nervous system, focusing on a systems level approach to sensory and motor physiology and its impact on motor control and coordination, as well as both developmental, degenerative, and traumatic disorders in these processes. Considerations of applications of the material to the fields of athletics and rehabilitation medicine are often provided.

**Enforced Prerequisite at Enrollment:** Students must have a grade of C or better in KINES 101 180 and KINES 202 and (BIOL 141 or BIOL 161)

**KINES 360H: Movement Skills**

3 Credits

Examination of the basic mechanisms and variables that govern the coordination and control of movement and the acquisition of skill.

Honors

**KINES 366: The Process of Teaching Physical Education**

3 Credits

Analysis of pedagogical skills and methods applied to K-12 physical education. KINES 366 The Process of Teaching Physical Education (3) The purpose of this course is to introduce teacher candidates to the pedagogical processes used in teaching K-12 physical education. Physical education instruction techniques related to classroom management, creating effective learning environments, analysis of motor skills, providing effective feedback, content development, creating active learning experiences and systematic analysis of effective instruction comprise the foundation of this class. These pedagogical skills will be practiced and analyzed throughout the semester. Specifically, students will be required to demonstrate the ability to use, analyze and critique these techniques in micro-teaching situations with their peers. The primary focus of the class is to develop a repertoire of effective teaching skills based upon research of teacher effectiveness that enables teacher candidates to become reflective physical educators with the ability to deliver, analyze and modify their teaching to provide developmentally appropriate instruction for elementary, middle and high school students. The content of this course also addresses the physical education teaching standards developed by the National Association for Sport and Physical Education (NASPE), the national accrediting body for physical education teacher education programs that works in conjunction with the National Council for Accreditation of Teacher Education (NCATE) to certify physical education teacher education programs through the United States. Assessment of student performance in the course includes: 1. Participation in laboratory experiences (10%) 2. Performance on knowledge tests (35%) 3. The ability to correctly and effectively demonstrate a repertoire of pedagogical skills in simulated teaching situations (35%) 4. Teaching reflections based on class teaching experiences and analyses and observations of teaching (20%)

**Enforced Prerequisite at Enrollment:** Students must have a C or better grade in all of the following: EDPSY 10 and KINES 100 and KINES 101 and KINES 295B and PSYCH 100 Concurrent Courses: KINES 400 and KINES 464 and KINES 468W

**KINES 367: Games and Sports Instruction Across the Lifespan**

1 Credits

How to understand, perform and deliver individual and team games and sports across the lifespan. This course is designed to provide students with the opportunity to research, experience, and reflect upon the content knowledge necessary to successfully instruct and coach a variety of individual and team games and sports across the lifespan. Students will gain experience in at least one activity from each of the four games classification groups (net and wall, invasion, striking and fielding, and target games). Students will develop the knowledge and skills necessary to instruct and coach various lifetime individual and team games and sports. The games and sports chosen for this course (basketball, soccer, golf, softball, and tennis) have been specifically selected for three reasons related to lifespan development and participation. First, they are consistently included in preschool through 12th grade school physical education curriculums. Second, they are popular extra-curricular activities, which are heavily attended by young people and adolescents. Finally, they represent popular adult recreational (pick-up games) and competitive activities (adult leagues) that are often continued over the lifespan. Emphasis is placed on the student's competency in being able to effectively instruct and perform across multiple individual and team games and sports. Students will be expected to practically
demonstrate a range of psychomotor techniques and skills for each given game and sport to a high level. Students will also need to display competence in a range of cognitive, affective and behavioral domain skills. This includes the ability to make appropriate game play decisions, communicate with teammates, understand and adhere to governing body rules/regulations and creating strategies to promote lifelong participation. Students will be assessed on their ability to instruct and coach the associated psychomotor skills, principles of play, and the official rules and regulations operated by each game or sport's governing body in a peer-to-peer instructional setting. Practical activity learning experiences are designed to provide students with a sound knowledge of the concepts associated with skill acquisition including the class/team/client structure and organization, teaching and coaching techniques, and developmentally appropriate activities. Peer to peer instructing and coaching sessions will be used as an instructional strategy.

**Enforced Concurrent at Enrollment:** KINES 267

KINES 368: Individual Fitness and Wellness

2 Credits

How to perform and deliver fitness and wellness concepts and exercises to individuals across the lifespan. The purpose of this course is to teach students how to effectively communicate, motivate, and engage individuals in fitness improvement exercises and activities across the lifespan (children, young adults, adults, and older adults). Understanding client management skills, various fitness environments, and specific individual fitness exercises and activities from the foundation of the course. Initially, students will learn appropriate and effective client management skills and will explore different instructional environments. Throughout the course, students will work on acquiring skills for developing progressions of exercises across the lifespan. The students will become familiar with contemporary fitness practices and exposed to a variety of exercises. Students will learn the associated execution cues and how to demonstrate the exercise. Students will apply content knowledge to instructing individuals how to properly engage in fitness exercises and activities that contribute to one's overall wellness. Students will be able to organize and execute a developmentally appropriate fitness program for a client that targets one or more of the components of fitness including: cardiovascular, muscular strength, agility, power, coordination, and flexibility. The primary objectives of the course are to develop an understanding of how to create an individualized fitness program that is appropriate for the individual and how to interact with the individual to promote engagement in regular exercise and activity and successful achievement of goals. Students will examine how the age and developmental level of the individual relates to ability and individual fitness programming. Students will learn the correct form of exercise execution and progressions of exercises. Content knowledge is integrated with application of skills in fitness exercise and instruction and will be put to use in a learning laboratory setting which students will have the opportunity to engage in hands-on instructional experiences.

**Enforced Prerequisite at Enrollment:** KINES 200 and KINES 201

Concurrent Courses: KINES 267 and KINES 367

KINES 384: Biomechanics

3 Credits

Basic mechanical knowledge required to understand human movement. KINES 384 Biomechanics examines biological phenomena from a mechanical perspective; this course examines predominantly human movement from this perspective. The course aims to introduce students to the mechanical principles that underpin biomechanics, and to the measurement procedures used in biomechanics. Students will examine these principles for a variety of activities including: walking, running, jumping, quiet standing, throwing, striking, and reaching. Laboratory activities emphasize the qualitative and quantitative analysis of human movement. These sessions require students to work effectively in groups to collect data, and then work independently to analyze and interpret their data. Students use Newton's laws, basic algebra and trigonometry in the analysis of their data, and produce reports about these laboratory activities. The lectures provide the framework for all class activities. They aim to link the student's knowledge of anatomy with mechanics to provide an understanding of how movement is produced in both health and disease. The lectures provide information about the history, scope, and impact of biomechanics. Students are introduced to the pertinent kinematic variables required for the analysis of human movement.

Newton's laws are used to understand both linear and angular human motion. Basic principles from aerodynamics are introduced as they may apply to man and the implements he or she may use. The examination of aerodynamic factors is augmented by examining the mechanics of balls spinning, and bouncing. Approaches for the determination of the inertial properties of human body segments are examined in detail, with a view to understanding the strengths and weaknesses of the various approaches. The theory, methodology, and protocols for image-based motion analysis are introduced as common methodology used in biomechanics. The principles behind force measurement are presented, using force plates as the core example. Students are taught the basics of the interpretation of ground reactions forces, using the impulse-momentum relationship. Contractile muscle mechanics are studied to understand the influences of muscle fiber activation, length, and velocity on the production of force are presented. The mechanical properties of tendon are presented (stress-strain relationship), and its role in human movement. Potential and kinetic energy are introduced, along with the concept of energy storage and its application in the analysis of human movement examined. The principles governing modeling are introduced, and approaches for modeling human movement are established and then used to understand the coordination of human movement.

**Enforced Prerequisite at Enrollment:** Students must have a grade of C or better in: KINES 101 and KINES 202 and (PHYS 150 or PHYS 250)

General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

KINES 384H: Biomechanics

3 Credits

Basic mechanical knowledge required to understand human movement.

Honors

KINES 395: Leadership Practicum for Applied Exercise and Health Careers

1 Credits/Maximum of 1

Introduction to hands-on leadership experience within the fields of health, fitness, wellness, and physical activity. This course is designed to provide students with a supervised practicum experience in applied careers in the fields of health, wellness, fitness, and physical activity. Through a combination of classroom-based discussion and workplace opportunities, this course allows each student the opportunity to observe professionals in the fields of health, fitness, wellness, and physical
activity, complete hands-on experiences, and learn skills in professional development. This course also offers, but is not limited to offering, many enriching professional development skill building lectures and assignments. Students can choose from a variety of sites, including but not limited to YMCAs, fitness centers, university courses, community or corporate health and wellness programs. Students are required to choose a field that directly relates to their career goals and/or expected professional certifications. Students must complete a minimum of 40 hours of a hands-on experience in that field. The expectation is that students apply and integrate content from other and concurrent courses in the program and further learn appropriate applied skills that are critical to success in the field. The student's field experience, productivity, and work will be evaluated on an ongoing basis by the course instructor as well as the field experience supervisor. The course may take place at either on-campus facilities or off-campus locations.

**Enforced Prerequisite at Enrollment:** KINES 295

KINES 395A: Ldrshp Prac:Tchrs

1 Credits

This is a one credit practicum designed to provide teacher candidates with the opportunity to observe, assist, and teach physical education classes in school settings. Most KINES 395A teacher candidates are in the final semester before starting their student-teaching internship and these experiences are intended to provide additional practical experiences in physical education instruction. This practicum involves a minimum of 10 consecutive weeks during a University semester. Teacher candidates need to demonstrate the ability to plan lessons, teach lessons, assess student learning, and reflect on their teaching performance during this practicum experience.

**Enforced Prerequisite at Enrollment:** Students must have a C or better in: EDPSY 10 and KINES 100 and KINES 101 and KINES 295B and PSYCH 100 Concurrent Courses: KINES 366 and KINES 400 and KINES 464 and KINES 468W

KINES 395B: Leadership Practicum: KINES

1 Credits

Supervised experience in leading/assisting in tasks associated with fitness testing/prescription in a variety of settings.

**Enforced Prerequisite at Enrollment:** KINES 202

KINES 400: Adapted Physical Education

3 Credits

Basic concepts of planning and conducting physical education programs for children with physical, sensory, and/or intellectual impairments. KINES 400 Adapted Physical Education (3) This is an undergraduate level course teaching students the basic concepts of planning and conducting physical education programs for children with physical, sensory, and/or intellectual impairments. This course will help the student to become more aware of the physical needs of children with disabilities and of the possibilities to professionally deal with these needs. The course requires the student to complete a 10-hour practicum, providing the opportunity to work with children with a disability. The practicum will be conducted in cooperation with physical education staff members working with various schools in State College. The children's difficulties may range from emotional problems to severe physical and mental handicaps. Students are free to identify alternative practicum sites (e.g., work with a friend or family member with a disability). The requirements for the practicum may include: select a child who has a physical, sensory, or intellectual disability; write an Individualized Education Program (IEP) using the guidelines presented in the textbook; implement the IEP in a two-on-one teaching situation (two students, one child); keep a log of all the practice sessions; after completing the 10-hour practicum, write a final report based on the IEP; this final report should state the definition of the problem, the etiology, the general characteristics, the teaching techniques specific to the disability, an evaluation of the actual teaching strategies and an evaluation of the outcome of the practice (did it work?); and, present the findings orally (10-15 minute talk). The student will generally be evaluated by exam, teaching activity, an oral presentation, and a final report.

**Enforced Prerequisite at Enrollment:** KINES 202

KINES 401: Applied Group Fitness Exercise Prescription and Program Design

3 Credits/Maximum of 3

Skills and practical knowledge to design safe and effective exercise classes for a variety of populations to improve health. The primary purpose of this course is to provide students interested in applied exercise and health careers (group fitness instructors, health and physical education teachers, personal trainers, wellness professionals, corporate fitness professionals, physical therapists) with skills and practical knowledge to design as well as instruct safe and effective exercise classes for a variety of populations to improve cardiovascular health, strength, and flexibility. Students will learn how to prepare for a class, which includes participant monitoring as well as evaluation and progresses to developing the skills for both programming as well as leading group exercise classes. Students will gather and apply the current literature regarding the ideal training strategies and practical tips for both healthy adults as well as special populations (e.g. asthma, obesity, youth, pregnancy, older adults). They will also learn how to verbally and physically cue and demonstrate the exercises to a group. Strategies for adherence to assist in behavior modification will be a focus throughout the course. At the conclusion of KINES 401, the students will be able to demonstrate a knowledge and understanding of group fitness class components. Inherent in the course goals is an understanding of the adaptations that occur as a result of programs of cardiorespiratory and muscular exercise in apparently healthy, at-risk, and diseased populations. Content knowledge is integrated with application of skills in fitness exercise, and instruction and will be put to use in a learning
KINES 101: Introduction to Musculoskeletal Injury and Rehabilitation
3 Credits

This course is designed to provide an overview of common musculoskeletal injuries and rehabilitation for pre-allied health and fitness professionals. KINES 411 Introduction to Musculoskeletal Injury and Rehabilitation (3) This course is designed to provide an overview of basic orthopaedic injuries and related musculoskeletal system dysfunctions as well as rehabilitation of those injuries and dysfunctions. Common orthopaedic injuries of all major musculoskeletal structures and tissues are discussed moving up the kinetic chain from the feet up the lower extremities, through the spine and out the upper extremities to the hands. Common injuries such as sprains, strains, fractures, tendinopathies, disc herniations, spinal stenosis, compartment syndromes, neural compression, carpal tunnel syndrome and thoracic outlet syndrome will be discussed. Anatomy and function of each body region will be reviewed prior to the discussion of injuries. Mechanisms of injury, tissue pathology and the tissue healing processes are reviewed. The role of inflammation in the healing of injured tissues will be explored and the variations in healing processes between tissues explained. Common surgical procedures for major injuries like anterior cruciate ligament tears will be presented. A general rehabilitation process is discussed and rehabilitation concepts unique to specific injuries are explored. Basic principles of the major components of a rehabilitation program are explained. These major components include the protection of healing tissue, pain control, swelling resolution, restoration of range of motion, facilitation of volitional control, enhancement of muscular strength and endurance, improvement of neuromuscular control, training of functional movement patterns and return to functional activities. The RICE (Rest, Ice, Compression, Elevation) method of treating pain and limiting swelling will be presented. Manual therapy, stretching and exercise activities used to regain range of motion will be explained. Exercises used to improve muscular strength and endurance will be discussed for each region of the body. Methods of facilitating balance and neuromuscular control will be demonstrated. Finally, the benefits of functional exercise in terms of three-dimensional exercise requiring the use of groups of synergistic muscles in a coordinated manner will be presented. In addition, return to sport programs that gradually reintroduce the patient to the real life stresses placed on their injured body part will be explained. Prioritization of addressing the different components of a rehabilitation plan will be discussed and differences between surgical and non-surgical rehabilitation plans presented. Criteria used to make return to play decisions for injured athletes will also be outlined. Modifications of common exercises to accommodate for injuries and allow continued participation in exercise routines will be presented. This course is appropriate for pre-allied health professionals and fitness professionals with an interest in orthopaedic injuries, musculoskeletal system rehabilitation and the construction of exercise programs that prevent, or accommodate for, musculoskeletal problems.

Enforced Prerequisite at Enrollment: KINES 202

KINES 419: Disability Sport and Recreation
3 Credits

The purpose of this course is to provide students with an understanding of disability sports and recreation. Throughout the course students will explore the process for developing and implementing a disability sports program such as, but not limited to, identifying community need, determining budget and funding sources, assessing resources needed, and gaining experience in teaching a sport or recreation
for individuals with disabilities. While exploring the development of disability sports students will gain an understanding of key historical, sociocultural, and biomedical issues that are unique to individuals with disabilities. Historical issues such as the treatment of individuals with disabilities within society and sport, and the impact that sport has had on acceptance of individuals with disabilities will be examined. Students will also compare and contrast the major international sports organizations as well as United States sport organizations that are specific to individuals with disabilities. Students will gain an understanding of cognitive, mental, and physical disabilities, and the interaction between disability type and other identities such as gender. These concepts will be emphasized with a variety of hands on experience with disability sports and sport equipment. In addition, students will utilize theory based learning to review key concepts of accessible recreation and sport programs for individuals with disabilities in the United States. Students will also gain an understanding of unique characteristics of individuals with disability, and appropriate adaptations for sport and recreational success. By the completion of the course students will be able to identify major resources and concepts for disability sport and recreation related to coaching, sport management, sports medicine, and program development in the United States. Throughout the course an emphasis will be placed on acquiring knowledge of and concern for inclusion of individuals with disabilities through sport.

Enforced Prerequisite at Enrollment: KINES 100 or RHS 100 United States Cultures (US)
General Education: Humanities (GH)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Soc Resp and Ethic Reason
KINES 420: Psychosocial Dimensions of Physical Activity
3 Credits
Discussion of theoretical and empirical findings, structuring a frame of reference for exploring man's involvement in physical activity.

Enforced Prerequisite at Enrollment: KINES 321 or 3 credits in PSYCH or SOC
KINES 421: Exercise Psychology
3 Credits
Psychological antecedents and consequences of physical activity behaviors. KINES 421 Exercise Psychology (3)Exercise Psychology is designed to introduce students to the psychological antecedents and consequences of exercise behaviors. The antecedents of exercise behaviors are the psychosocial and cognitive factors (e.g., beliefs, attitudes, personality traits) that facilitate and/or inhibit exercise behaviors. The consequences of exercise behavior are the physical, psychosocial, and cognitive outcomes (e.g., self-efficacy, body image, mental health) of exercise participation. The antecedents and consequences of exercise behaviors will be presented within the context of contemporary conceptual and theoretical models in exercise psychology. This course is designed to provide students with an overview and foundation of the important psychosocial phenomena related to these antecedents and consequences of exercise behaviors. Students will have the opportunity to apply their knowledge in selected areas within exercise psychology through class discussions and assignments.

Enforced Prerequisite at Enrollment: KINES 321 and PSYCH 100
KINES 422: Physical Activity Interventions
3 Credits
Principles of designing, planning, and implementing theory- and evidence-based physical activity interventions. KINES 422 Physical Activity Interventions (3)This course is designed to acquaint undergraduate students with the application of major theories and models used to design and guide the development of contemporary physical activity interventions. Students will be familiarized with empirically-supported principles of behavior change and will gain an understanding of the basic strategies and methods used in designing, planning, implementation, and evaluation of physical activity interventions. The course will cover a variety of approaches to physical activity promotion, ranging from clinical and community-based interventions to population-based approaches, while discussing practical strategies and concrete examples of contemporary, evidence-based physical activity interventions. The goal of the course is for students to demonstrate the ability to formulate well-conceived physical activity interventions across a variety of settings and participant populations and learn how to apply theoretical principles and research findings to intervention development.

Enforced Prerequisite at Enrollment: KINES 321 and PSYCH 100
KINES 423: Psychology of Sports Injuries
3 Credits
Psychological causes and consequences of sports related injuries in athletes. KINES 423 Psychology of Sports Injuries (3)Using lectures/whole class discussion formats, this course is intended to provide the students with the basic knowledge regarding psychological causes and consequences of sport-related injuries, including concussions. Specific course objectives include: (1) developing the proficiency in initiating interviews and observations of athletes suffering from sport-related injuries; (2) assessing psychological impact of injury on athletes; (3) developing critical-thinking skills related to the probability of developing of psychological trauma in athletes with injuries; (4) developing specific skills of psychological assessment of injured athletes; (5) stimulating thinking about temporary research questions as related to psychology of injury. Evaluation will be based on active engagement in class discussions and administration of quizzes and written examinations according to course syllabus. This class extends but does not duplicate existing courses in the Departments of Kinesiology and Psychology.

Enforced Prerequisite at Enrollment: KINES 321
KINES 424: Women and Sport
3 Credits
An interdisciplinary approach to contemporary issues related to women and sport from historical, physiological, psychological, and sociological perspectives.

Enforced Prerequisite at Enrollment: PSYCH 100 or SOC 1 or WMNST 100 or KINES 100
Cross-listed with: WMNST 424 United States Cultures (US)
KINES 425W: Physical Activity in Diverse Populations
3 Credits
An examination of the social, cultural, political, and environmental influences on health and physical activity promotion among diverse
populations. Includes examination of issues related to race, ethnicity, geography, income status, and other social factors across the lifespan for promoting physical activity through public health strategies.

**Enforced Prerequisite at Enrollment:** KINES 321
United States Cultures (US) Writing Across the Curriculum

KINES 426: Physical Activity and Public Health

3 Credits

Examines the role of physical activity in public health. Includes population level strategies for promoting physical activity in communities. KINES 426 Physical Activity and Public Health (3) An examination of the role of physical activity in public health. The first half of the course will provide an introduction to public health and basic epidemiology, measurement, dose-response relationships, chronic disease prevention. We will examine the historical progression of physical activity as a part of public health, including landmark studies showing the relationships between physical activity and chronic disease morbidity and mortality. Current public health guidelines and national policies related to physical activity will be discussed in detail. Students will debate the scientific foundation for current issues in the field, including fitness vs. fatness as a predictor of health outcomes and comparing behavior vs. objectively measured variables. The role of physical activity in preventing cardiovascular disease, type 2 diabetes, obesity, and cancer, colon and prostate cancer will be discussed. We will focus on large scale epidemiologic studies that highlight prevention. The second half of the class will focus on a social ecological framework for promoting physical activity and will address population level approaches through policy and environmental strategies, following the Centers for Disease Control and Prevention Task Force for Community Preventive Services guidelines.

We will study how features of the built environment can encourage or discourage walking and biking and refer to current research in the field that examines these relationships in different populations (urban/rural, youth/older adults). We will learn about the challenges associated with assessment and measurement at a population level. Policy level approaches to physical activity promotion; including local, state and national; will also be discussed. We will discuss various community level approaches including: point-of-decision prompts, mass media campaigns, enhancing access to physical activity opportunities and other strategies outlined in the guidelines. Lastly, we will examine how physical activity promotion is addressed in other countries through community, policy and environmental strategies in Canada, Australia, Brazil and throughout Europe.

**Enforced Prerequisite at Enrollment:** KINES 321

KINES 427: Developmental Sport & Exercise Psychology

3 Credits

Developmental changes in the antecedents and consequences of physical activity across the lifespan. HD FS (KINES) 427 Developmental Sport & Exercise Psychology (3)Change is constant with physical activity - our reasons for being active change across the lifespan and our experiences with physical activity change how we view ourselves and those around us. Developmental Sport & Exercise Psychology focuses on developmental changes in the psychosocial antecedents and consequences of physical activity across the lifespan. Specific course objectives include (1) describing theoretical frameworks and methods used to study physical activity-related psychosocial development across the lifespan, (2) describing how self-perceptions develop and influence behavior in movement contexts at different points in life, (3) explaining how contextual factors influence developmental processes associated with physical activity, (4) identifying age-related differences in activity-related antecedents and consequences of physical activity, and (5) developing, reviewing, and critiquing theoretically-grounded interventions to address issues related to developmental processes associated with physical activity across the lifespan. Evaluation will be based on written examinations, submission of a series of reflection papers on reading assignments, a group presentation, and the students’ engagement in the class. It extends but does not duplicate existing courses in the Department of Human Development & Family Studies, and Psychology.

**Enforced Prerequisite at Enrollment:** PSYCH 100 and (KINES 321 or HDFS 129 or PSYCH 212)
Cross-listed with: HDFS 427

KINES 428: Motivation and Emotion in Movement

3 Credits

Theories of motivational and emotional processes and their applications in movement settings. KINES 428 Motivation and Emotion in Movement (3) Motivation & Emotion in Movement will focus on the psychological processes underlying human motivation and emotion in movement settings. Special attention will be directed to social manipulations that can enhance motivation and emotion, and the consequences thereof. This course will be valuable for students whose career goals relate to education, personal training, rehabilitation, coaching, or psychology. Specific course objectives include (1) distinguishing between motivation and emotion, (2) understanding psychological mechanisms underlying common motivational and emotional processes in movement settings, (3) identifying existing applications of motivation and emotion theories in movement settings, and (4) developing, reviewing, and critiquing theoretically-grounded interventions to address issues related to motivational and emotional processes in movement contexts. It extends but does not duplicate existing courses in the Departments of Kinesiology and Psychology.

**Enforced Prerequisite at Enrollment:** KINES 321 and PSYCH 100

KINES 429: Psychology of Sport Performance

3 Credits

Psychological theories of talent development and performance enhancement in sport. KINES 429 Psychology of Sport Performance (3) Psychology of Sport Performance will provide a psychological perspective on the phenomenon of superior motor performance. The course will cover nature of superior performance, talent development processes, sources of performance crises, and self-regulation strategies used by athletes, coaches, and psychologists to enhance performance. This course will be valuable for students whose career goals involve training athletes or other performers involved in socially-evaluative performance domains. Specific objectives include (a) distinguishing the antecedents and consequences of subjective and objective performances, (b) conceptualizing motor performance and performance problems in a psychological context, and (c) matching psychologically-based performance problems with theoretically-based intervention strategies. It extends but does not duplicate existing courses in the Departments of Kinesiology and Psychology.

**Enforced Prerequisite at Enrollment:** KINES 321 and PSYCH 100
KINES 430W: Groups in Physical Activity

3 Credits

During involvement in this course, students will be acquainted with how exercisers and athletes interact with the others within small group environments. Notably, athletes and exercisers are commonly structured into tight-knit, interactive, and interdependent groups such as teams, fitness classes, family units, peer groups, neighborhoods, and training groups. These small groups are fundamental to sport and exercise experiences, while also influencing whether or not youth and adults derive value from physical activity. Therefore, identifying and promoting optimal small group environments is a central goal for researchers studying the social psychology of sport. Whereas the construct of group cohesion is the most widely-studied aspect of small groups in this context, rich and emerging lines of research reveal a great deal about group structures (e.g., norms), emergent states (e.g., social identities), and group processes (e.g., teamwork), as well as the outcomes of involvement in groups. This area of research is of general theoretical interest, but is also critical to establish an enhanced practical understanding for fields ranging from coaching to health promotion, education, and psychology. To explore these group processes, the goal of the course entails establishing a foundational understanding of small group dynamics. From this foundation, class members will explore contemporary research and theory about optimizing sport groups (i.e., sport adherence and performance) and physical activity groups (i.e., physical activity maintenance, positive psychosocial perceptions). This exploration will demand that students read and discuss empirical research - demonstrating the capacity to interpret and understand this literature, along with the capacity to critically appraise empirical findings. Students' learning related to group dynamics will be cemented through discussions and activities focused on real-life groups, as well as demonstrations of group processes using group tasks. By the completion of the course, students will have acquired strategies to optimize small group environments and developed skills to communicate group dynamics constructs and theories. Regarding communication, a critical outcome of this writing-intensive course is the capacity to interpret writing from group dynamics experts and communicating these themes through one's own effective writing.

Writing Across the Curriculum

KINES 431: Concussion in Athletics: Brain to Behavior

3 Credits

National organizations have identified mild traumatic brain injury, also known as concussion, as a major health concern for injured athletes at high school, collegiate and professional levels. These injured athletes have focused the research and clinical community's efforts into further understanding the pathophysiological underpinnings of the injury as well as its both short and long term effects. It is the overall intention of this course to elicit current understanding the pathophysiology, including its underlying mechanisms, predicting differential evolution and consequences of concussion. The central focus of this course is that symptoms following the concussion (e.g., headache, dizziness, balance, gait and locomotion, executive and neurocognitive function deficits etc.) may be exacerbated and /or triggered by compromised integrity of cortical, subcortical, and other areas of CNS. Thus, this concept will be discussed and elaborated throughout the course development.

Enforced Prerequisite at Enrollment: KINES 321

KINES 439W: Ethics in Sport and Sport Management

3 Credits

This course is designed to develop skill in discussing and solving moral dilemmas in sport, dance, exercise, games and play. At its core, the course efforts to evaluate the moral status of organized sports and athletics in today's culture and identify strategies for raising its moral and non-moral value. This is a writing intensive course. Therefore, a significant portion of this class involves the development of more sophisticated writing skills.

Enforced Prerequisite at Enrollment: KINES 345 or [3 credits of PHIL and (KINES 100 or COMM 170 or RPTM 120 or HIST 113 or ENGL 234 or AFAM 114 or ASIA 101N or CAMS 142)]

Writing Across the Curriculum

KINES 440: Philosophy and Sport

3 Credits

An examination of human nature from the perspective of our participation in sport.

Enforced Prerequisite at Enrollment: KINES 345 or 3 credits in PHIL

KINES 441: History of Sport in American Society

3 Credits

AMST 441 / KINES 441 History of Sport in American Society study of the background, establishment, and growth of sport in America from colonial times to the present, and the role of American sports in American culture and society. The course will examine the ways that sports have operated in the United States as the country has developed into a modern, mass society. Issues of national identity, commercialism, race, ethnicity, class, and gender will be discussed in relation to the popularity of sports. Another set of issues will center on language and media; students will employ methods of analysis such as ethnography and rhetorical criticism that emphasize the multiple layers of meaning inherent in sports culture.

Enforced Prerequisite at Enrollment: KINES 100 or KINES 341 or COMM 170 or RPTM 120 or HIST 113 or ENGL 234 or AFAM 114 or ASIA 101N or CAMS 142 or 6 credits of AMST or 6 credits of HIST or (3 credits in AMST and CAMS 142)

Cross-listed with: AMST 441

United States Cultures (US)

KINES 442: Sport in Ancient Greece and Rome

3 Credits

An examination of the continuity of sport in Greek and Roman societies. CAMS 442 / KINES 442 Sport in Ancient Greece and Rome (3) (IL) This course examines the continuity of sport in ancient Greek and Roman societies. It investigates the role of athletic festivals in both cultures as well as the value placed on physical activity as part of the educational process. The objectives of the course are to enable students to gain an appreciation for the continuous involvement of the ancient Greeks in the areas of competitive athletics and gymnastics [Kinesiology] as an important part of their value system. Moreover, the course will provide a comparison of Greek and Roman attitudes of athletics and gymnastics. Typical topics include athletics during the Minoan /Mycenaean Bronze Age, Athenian and Spartan philosophies regarding education, the importance of spectator sports in Roman society and their link to politics.
Enforced Prerequisite at Enrollment: KINES 100 or KINES 341 or COMM 170 or RPTM 120 or HIST 113 or ENGL 234 or AFAM 114 or ASIA 101N or CAMS 25 or CAMS 33 or CAMS 100 or CAMS 101 or CAMS 142 or CAMS 180

Cross-listed with: CAMS 442

Bachelor of Arts: Humanities
International Cultures (IL)

KINES 445: Alcohol and Drug Education
3 Credits

Principles of integration and coordination of alcohol and drug education programs for health education and other health related professions.

Enforced Prerequisite at Enrollment: 6 credits in KINES or BBH

KINES 446: History of Sport in the Modern World
3 Credits

History of sport in modern world, ca. A.D. 1500 to present; concentrates on role of sport in societies outside United States. KINES 446 History of Sport in the Modern World (3) (IL) The History of Sport in the Modern World introduces students to the connections between sporting practices and the broader cultural, political, intellectual and economic patterns that shape societies during the modern period in world history (ca. A.D. 1500 to the present). The course begins with a foray into the transition from traditional to modern forms of sport and society and covers the development of a wide variety of athletic games and pastimes from the sixteenth through twentieth centuries. Students will encounter a variety of historic conceptions of sport and explore the role of sport in the development of European, North American, Latin American, Asian, African and Pacific cultures. Students will learn how sports have been shaped by and have shaped by multiple factors, including modern ideas, science, class structures, gender roles, constructions of race, urbanization, nationalism, political conflicts, international relations, and economic institutions. This is a senior-level course that fills an important historical gap in the Kinesiology Department's sequence of offerings on the history of sport. Other courses in the sequence cover ancient sport, sport in American society, and the Olympic Games. While crucial American developments that impact sports in the modern world are incorporated into this course, this class offers students a global focus that concentrates on the role of sport in societies beyond the borders of the United States. This course also relates to the offerings in the philosophy of sport program by exploring the history of ideas about sport in modern thought. Additionally, the course connects to the science-based offerings in Kinesiology by providing students with an introduction to the history of the scientific study of human performance. The course introduces students to basic readings and knowledge of the history of sport in the modern world. The class provides opportunities to practice the critical reading and thinking techniques that shape the historian's approach to knowledge. This course will be taught once every year with an anticipated enrollment of 50 students. Evaluation methods that test reading and critical thinking skills are employed. No special facilities are required.

Enforced Prerequisite at Enrollment: KINES 100 or KINES 341 or COMM 170 or RPTM 120 or HIST 113 or ENGL 234 or AFAM 114 or ASIA 101N or CAMS 142 or 6 credits in HIST

International Cultures (IL)

KINES 447W: Representing Sport in Popular Film
3 Credits

Critical, contextual, and theoretical analyses of sport films focusing on popular narratives of social inequalities.

Enforced Prerequisites at Enrollment: KINES 100

Writing Across the Curriculum

KINES 448: Coping with Life After Sport
1 Credit

Psychosocial concerns affecting student-athletes as they enter the transition period following sport disengagement, focusing on coping interventions. KINES 448 Coping with Life after Sport (1) KINES 448 is designed for student athletes who have exhausted their eligibility for or will no longer be participating in their respective sport due to injury or other issues. It is also relevant for students in athletic training or those who plan to pursue a career in coaching. The focus of the course is on the identification of issues and stressors affecting the transition and the development of strategies and coping skills to deal with life after sport. This can often be a very emotional and difficult time for student athletes. Discussion is focused on intervention and coping strategies, goal setting, decision making, career planning, and transferable skills. Student athletes will be able to recognize how their athletic experience has helped them to acquire numerous skills and characteristics highly valued in the workplace. Two sections of the course will be offered each semester. Students will be required to submit a weekly reaction paper, do a review of literature, and compile a comprehensive career plan. The class will be highly interactive with regular in-class assignments and projects.

Enforced Prerequisite at Enrollment: 7th semester or higher and major in KINES or 7th semester or higher and minor in KINES or 7th semester or higher and intercollegiate sport participation

KINES 452: Applied Cardiovascular Physiology
3 Credits

In-depth study of cardiovascular regulation during postural, environmental, and exercise stress. KINES 452 Applied Cardiovascular Physiology (3) First, the course begins with an intensive review of hemodynamics and basic cardiovascular control mechanisms (neural, hormonal, and local regulation). Second, students compare and contrast these general principles in six important circulations: splanchnic, renal, cerebral, coronary, cutaneous, and muscle. Third, they examine the three stresses which affect the circulation: posture (gravity), environment (especially heat) and exercise. For each stress, students identify the regional circulation(s) most affected and how they contribute to an integrated (systemic) cardiovascular response that is unique for each stress. Finally, combinations of posture, heat, and exercise stress are considered to illustrate competing cardiovascular control mechanisms. At each step students are introduced to seminal research papers illustrating the concept being studied.

Enforced Prerequisite at Enrollment: KINES 350
KINES 453: Environmental Physiology

3 Credits

This course examines physiological function of humans at rest and during prolonged or maximal exercise in conjunction with environmental stress (heat, cold, altitude, hyperbaria).

Enforced Prerequisite at Enrollment: KINES 350

KINES 454: Women's Health and Exercise Across the Lifespan

3 Credits

KINES 454 begins with a review of general principles of research conduct and publication, themes that will be carried throughout all material covered in this class. A review of the historical aspect of women’s health research and a review of the state of knowledge in women’s health in the wake of the contemporary scientific endeavors such as the Women’s Health Initiative will also be explored. Students will learn physiology of puberty, menstrual function and bone health and the impact of exercise on these processes. Students will explore current concepts of exercise related to the female athlete and clinical implications of alterations in normal physiology. The impact of oral contraceptives on health and exercise performance will be also discussed. Students will learn menopausal physiology, alterations in clinical status associated with this life stage, and review current research related to the Women’s Health Initiative. Finally, a discussion of the effects of gender differences on health and exercise will be discussed. This course is designed for students who wish to develop a richer understanding of the physiological role of exercise in modulating the health of girls and women during different phases of the lifespan, including but not limited to childhood, adolescence, adulthood and later adulthood. At each step, students will be exposed to relevant research methods issues and introduced to seminal research papers illustrating the concept being evaluated. Students will improve their ability to read and summarize original research literature through in depth presentation and discussion of seminal studies. Moreover, students will develop an understanding of how research has informed the state of knowledge on issues covered in this class and students will develop ‘language understanding’ appropriate for interpreting and reading research papers.

Enforced Prerequisite at Enrollment: KINES 101

KINES 455: Physiological Basis of Exercise as Medicine

3 Credits

KINES 455 reviews the physiological basis of exercise for enhancing health and protecting against chronic diseases. This course is designed for students interested in developing a deeper understanding of the physiological mechanisms behind exercise as medicine. Course content will consist of a mixture of selected book chapters as well as contemporary review and primary research articles. This course begins with an overview of the current exercise deficiency problem, including the societal, behavioral, and economic changes of the past century which have contributed to the modern day epidemic of chronic inactivity-related disease. After developing an appreciation for the scope of these problems, students will be introduced to the ‘tools’ needed to critically evaluate the association between exercise and/or inactivity on health and the mechanisms by which these associations may occur, including: basic principles of epidemiology, searching/reviewing scientific literature, and experimental design. The remainder of the course will be focused on how exercise/physical activity modifies molecular/tissue-level and integrative physiological function, and describes the extent to which these modifications confer either preventative or therapeutic benefit. Students will also use the ‘tools’ that they learned at the beginning of the semester to demonstrate and share knowledge with others; integration of this information may include a thorough analysis of a chronic condition including the pathophysiology, strength of evidence for exercise is medicine, and physiological actions of exercise in prevention or treatment. Students may also be given the opportunity to translate their knowledge from this course into educational materials (e.g., flyers, pamphlets, screensavers, fitness center displays, social media, etc) for use during ‘Exercise is Medicine’ week.

Enforced Prerequisite at Enrollment: KINES 350

KINES 456: Physical Fitness Appraisal

4 Credits

In KINES 456, students assess the five components of health-related physical fitness through fitness testing measures: body composition, joint flexibility, muscle strength, muscle endurance and cardiorespiratory fitness. The importance of a comprehensive pre-participation health screening, including relevant medical history, physical examination findings, cardiovascular disease risk factor assessment and laboratory testing is emphasized. Several current pre-participation screening instruments are reviewed. The American College of Sports Medicine physical activity guidelines and guidelines for exercise testing and prescription are discussed and grounded in best practices in monitoring signs and symptoms of physical stress leading to test termination. Students explore the role that cardiovascular, pulmonary renal and metabolic disease risk factors and signs and symptoms play in the development of atherosclerosis and the impact each has on fitness appraisal. Modifications and/or alternative assessments for each health-related component of physical fitness are discussed for clinical populations, children and older adults. The required laboratory allows students practical opportunities to assess these components across the lifespan utilizing both field testing and laboratory testing and interpreting results using normative data. The required laboratory experience reinforces the course content and aids in skill acquisition by requiring that all students participate in the testing procedures as both test administrators and subjects. As EKG interpretation is a valuable skill in fitness appraisal, students receive instruction in basics of EKG interpretation to include: determination of mean electrical axis, heart rate and rhythm, EKG waveform norms, and normal and abnormal EKG responses before, during and after exercise testing. Atrial, junctional and ventricular arrhythmias, heart blocks and bundle branch blocks are included in the latter portion of the course. ACSM metabolic calculations for exercise testing and prescription are reviewed and utilized.

Enforced Prerequisite at Enrollment: KINES 350

KINES 457: Exercise Prescription and Case Studies

3 Credits

Principles of exercise prescription; application of fitness appraisal based on current practices using evaluation and discussion of case studies. KINES 457 Exercise Prescription and Case Studies (3) The major purpose of this course is to provide those students interested in allied medical careers (e.g., cardiac rehabilitation, hospital testing, wellness centers, corporate fitness centers, physical therapy) with skills and practical knowledge regarding exercise diagnostics and prescription. Particular emphasis is placed on clinical diagnostic procedures, interpretation and terminology and this course directly
Measurement techniques across the lifespan including older adults and special emphasis will be placed on measurement techniques, fingerstick procedures for blood lipid, blood pressure auscultation, heart rate and fitness testing, and flexibility testing. The effects of exercise, prescription medications and other drugs on hemodynamic consequences of these abnormalities will be discussed. The skills in the teaching laboratory or classroom before providing students with an opportunity to gain knowledge and master assessment skills in the job task analyses for industry certifications. This skill features prominently in the job task analyses for industry certifications. The electrocardiograph is an instrument that measures electrical potentials on the body surface and generates a record of the electrical currents associated with heart muscle activity. The graphic record generated by the electrocardiograph is called an electrocardiogram (EKG or ECG). The EKG provides information about the rhythm and rate of contraction of heart muscle and the strength, timing and direction of electrical signals as they pass through various areas of the heart. Specific abnormalities of rate and rhythm will produce recognizable patterns in the EKG waveforms. This course will begin with cardiac anatomy and cardiac action potential production and conduction. The course material will progress through normal EKG patterns through normal abnormalities in various areas of the heart as well as patterns related to infarction, acute injury and ischemia. The hemodynamic consequences of these abnormalities will be discussed. The effects of exercise, prescription medications and other drugs on the EKG will be explored. Successful completion of this course does not grant the authority to provide a medical diagnosis based upon an EKG interpretation; only a physician can do so.

**Enforced Prerequisite at Enrollment:** KINES 457

KINES 458: Introduction to Electrocardiogram Interpretation

3 Credits

Reading and interpreting electrocardiograms are important skills for an exercise physiologist and many other allied health care practitioners. This skill features prominently in the job task analyses for industry certifications. The electrocardiograph is an instrument that measures electrical potentials on the body surface and generates a record of the electrical currents associated with heart muscle activity. The graphic record generated by the electrocardiograph is called an electrocardiogram (EKG or ECG). The EKG provides information about the rhythm and rate of contraction of heart muscle and the strength, timing and direction of electrical signals as they pass through various areas of the heart. Specific abnormalities of rate and rhythm will produce recognizable patterns in the EKG waveforms. This course will begin with cardiac anatomy and cardiac action potential production and conduction. The course material will progress through normal EKG patterns through normal abnormalities in various areas of the heart as well as patterns related to infarction, acute injury and ischemia. The hemodynamic consequences of these abnormalities will be discussed. The effects of exercise, prescription medications and other drugs on the EKG will be explored. Successful completion of this course does not grant the authority to provide a medical diagnosis based upon an EKG interpretation; only a physician can do so.

**Enforced Prerequisite at Enrollment:** KINES 450 and KINES 456

KINES 458: Introduction to Electrocardiogram Interpretation

3 Credits

Community outreach and engagement are two missions of the Department of Kinesiology. Towards these goals this course provides students with an opportunity to gain knowledge and master assessment skills in the teaching laboratory or classroom before providing opportunities for students to practice these skills in diverse populations across the Commonwealth and in neighboring states. The first several weeks of the course will be spent learning how to perform various fitness and health screenings, including but not limited to: tests on treadmills and stationary cycles, blood pressure auscultation, heart rate measurement techniques, fingerstick procedures for blood lipid, blood glucose and HbA1c assessments, body composition measurements, strength testing and flexibility testing. Special emphasis will be placed on measurement techniques across the lifespan including older adults and children. There are potential fees for this course to support travel; such fees are indicated in the course information in the scheduling system.

**Enforced Prerequisite at Enrollment:** 5th Semester standing and KINES 101

KINES 460: Movement Disorders

3 Credits

Major peripheral and central movement disorders and methods of their treatment.

**Enforced Prerequisite at Enrollment:** KINES 360 and KINES 384

KINES 461W: Preparation for Research Project

2 Credits

Planning and preparation for research project. KINES 461W Preparation for Research Project (2) This course prepares students to conduct a research project in KINES 462W. Students will begin by critically examining different research approaches. They will explore the development and assessment of research topics paying special attention to both scientific and philosophical justifications. They will learn how to identify research populations and how a human subjects review protects those involved in research studies. They will identify and critique the various inventories and assessment tools available for the kind of research they propose. Students will complete a research proposal including review of literature and method section, and submit an application to the Institutional Review Board. These goals will be achieved through a series of writing assignments. Students are expected to demonstrate the following outcomes: 1) Communicating and writing ideas relevant to the field of Kinesiology. 2) Understanding and describing the major issues in the field. 3) Understanding the principles of how to conduct research in wellness, fitness and/or associated practice. 4) Understanding and communicating the methods of scientific discovery. Students are evaluated on their research proposal (50% of final grade) which is drafted and revised during the semester. Further writing assignments (50%) assess and enhance student’s competency in research methods and statistics. The course is offered every fall semester with a total enrollment of 25 each semester.

**Enforced Prerequisite at Enrollment:** KINES 260 and STAT 200 and at least 4 of the following (KINES 321 or KINES 341 or KINES 345 or KINES 350 or KINES 360 or KINES 384)

Writing Across the Curriculum

KINES 462W: Research Project

2 Credits

Completion of research topic. KINES 462W Research Project (2) During this course students will collect and analyze data for a research project. They will trouble shoot any data collection problems and learn how to use computerized programs for statistical analysis of data. They will learn about various presentation modes relevant to the written and oral presentation of research data. Students will prepare and be evaluated on a research paper that reports on their research project. In addition, they will present their work orally in showcase sessions to which fellow students and faculty members are invited. The goal is for students to produce as close as possible to publishable papers. This course is part of a two-course sequence and can only be taken upon successful completion of KINES 461W. It, along with the internship experience, are the culminating experiences in the Exercise Science - Science Emphasis.
Facilitates needed will be determined based on the individual research project. This course will be offered only in the spring semester of each year. Enrollment will vary from 1 to 25.

Enforced Prerequisite at Enrollment: KINES 461W
Writing Across the Curriculum

KINES 463: Acquisition of Motor Skills
3 Credits

Examination of principles of motor learning; the application of strategic factors such as: practice types, schedules, augmented information, and motivation. KINES 463 Acquisition of Motor Skills (3) This course is intended for students interested in the principles of motor learning (learning, retention and transfer) and the application of specific learning strategies such as, practice, feedback, demonstrations, and instructions. Through lectures, discussions, and course readings in addition to writing assignments, the goal is for students to develop a unified conceptual framework for motor learning and its facilitation through intervention strategies. The evaluation for the final grade will be based upon a synthesis of assessment in three areas: a) Term Project (30% of final grade) - a report on a learning experiment or a synthesis paper on a learning principle or a learning strategy; b) Mid-Term Exam (30% of final grade) - questions requiring short 2-3 sentence answers; and, c) Final Exam (40% of final grade) - requiring essay length answers to selected questions that integrate key issues from all the course material. This course will build on the concepts outlined in KINES 171 and 360. It will represent the culminating upper level undergraduate course in motor learning. This course will be an elective available to students who have completed the required KINES 360 course. It can be used to fulfill requirements for the Kinesiology major and the Movement Science, Teacher Preparation, and Athletic Training Options. This course will be available to students outside of the Kinesiology major who may, upon approval, substitute the KINES 360 prerequisite requirement. The course will be offered every spring semester.

Enforced Prerequisite at Enrollment: KINES 360

KINES 464: Physical Education Programming and Practicum
3 Credits

This course is designed to provide students pursuing a health and physical education teacher certification in the Kinesiology degree with the conceptual foundation necessary to develop comprehensive and developmentally appropriate instruction that aligns with the National Association of Sport and Physical Education to students in preschool through twelfth grade (P-12). It will provide students with information on physical education comprehensive programming and contemporary instructional practices. Appropriate planning, instruction, programming and assessment make-up the foundation of this course. Emphasis is placed on the student's ability to create an effective instruction/programming and deliver the content in a preschool through twelfth grade physical education class. The overarching objectives for this course are to develop students' understanding of the different physical education program/curriculum models and applications of the models in a P-12 setting, integration of technology to enhance student learning, and develop advocacy measures for physical education through understanding and communicating the value of quality physical education and its contribution toward student wellness. Students will be able to plan and design program content that targets the psychomotor, cognitive, and affective learning domains and aligns with national standards. Students will design and administer authentic student assessments that align with the cognitive, psychomotor, and affective learning domains. Students will also design curricular scope and sequence overviews that are used to guide comprehensive programming and lesson development from grades P-12.

Enforced Prerequisite at Enrollment: Students must have a grade of C or better in: EDPSY 10 and KINES 100 and KINES 101 and KINES 295B and PSYCH 100 Concurrents: KINES 366 and KINES 395A and KINES 400 and KINES 468W

KINES 465: Neurobiology of Sensorimotor Stroke Rehabilitation
3 Credits

This course is designed to expose students to the recent topics in motor stroke rehabilitation research through literature. KINES 465 Neurobiology of Sensorimotor Stroke Rehabilitation (3) This 3-credit course is designed to expose students to the most recent topics in motor stroke rehabilitation research through reading of current literature. The course addresses the neurobiological foundations of motor deficits in stroke, including contralesional and ipsilesional effects, current research on mechanisms of motor recovery, and the most current research on intervention strategies, such as constraint induced therapy, robot aided rehabilitation, virtual reality therapy, and sensory motor interventions. The purpose of the course is to provide an understanding of the neurophysiological and biomechanical foundations of motor deficits that occur with stroke, and of current treatment approaches. Stroke presents a significant social problem that is emphasized in current statistics reported by the American Heart Association indicating that each year, about 780,000 people in the United States experience a new or recurrent stroke. While stroke can produce deficits in perceptual, cognitive, and motor processes, this course is focused on sensorimotor deficits and associated rehabilitation interventions that tend to be employed by physical and occupational therapists in the rehabilitation environment. Sensory-motor strokes often result in weakness and deficits in voluntary movement of the limbs on the opposite side of the body as the damaged hemisphere (Contralesional). These motor deficits currently receive primary focus in occupational and physical therapy treatment for stroke. However, regardless of improvements in contralesional arm function, most patients also show deficits in coordination of the ipsilesional arm that is on the same side of the body as the damaged hemisphere. For many hemiparetic patients, functional recovery relies heavily on this arm. This class will focus on understanding both ipsilesional and contralesional motor deficits in stroke. Physiological and biomechanical mechanisms of dysfunction will be emphasized. Recovery of function will be addressed through analysis of physiological and biomechanical measures that are used to track changes in neural function. In addition, current research that is focused on developing rehabilitation intervention protocols that systematically address remediation of dysfunction, and facilitation of recovery will be discussed. Students will be guided in reading, critiquing, and presenting primary scientific manuscripts and review articles. Active discussions of presented material are encouraged, and grades are based on presentations, quizzes, and participation in class.

Enforced Prerequisite at Enrollment: KINES 360 and KINES 384

KINES 466: Assessment and Evaluation in Physical Education and Health Education
2 Credits

Explores measurement as an important and distinct component in a variety of physical education and health education contexts. KINES 466
Assessment and Evaluation in Physical Education and Health Education
(2) This course addresses measurement as an important and distinct component of other processes such as assessment and evaluation in a variety of physical education and health education contexts (i.e. student performance, teacher performance, program outcomes). Teacher candidates will explain the inter-relationships among objectives, learning activities, and measurement strategies. They will design performance-based and standards-based measurement plans and tools that are necessary when assessing, evaluating, researching or making decisions about performances in physical education and health education. These plans will be performance-based, include select response and constructed response measurement instruments; measure what matters most in all learning domains; and demonstrate that instruction and assessment are seamless. These performances can range from constructed-response or non-traditional performance tasks like motor skill performance, fitness assessments, oral presentations, written reports, portfolios, program evaluation, and teaching effectiveness. Teacher candidates will be expected to recognize many and develop a few authentic and traditional measurement techniques/tools (including peer and self-assessments). These techniques and tools will assess student understanding and performance, provide feedback, and communicate student progress. These tools will measure what matters most and be valid and reliable. These tools are to be embedded with instruction and used by self, peer and instructor. When available, these tools will be integrated with technology to enhance the management of data. In this course, teacher candidates will recommend strategies for implementing results of a measurement by identifying implications from findings for future curricula, instructions, and other activities. They will differentiate between formative and summative measurements and describe ways the lesson/unit/curricula can be improved based on measurement results. Teacher candidates will also demonstrate their ability to interpret results and infer implications from the findings. For example, identifying instructional gaps between learning activities and objectives and using learning and performance data to make informed curricular and/or instructional decisions. In doing so, teacher candidates will contrast the results of norm- and criterion-referenced evaluation. This course will complement existing Methods courses (field experiences) in our teacher preparation curriculum by aligning instructional planning and implementation with measurement of these learning experiences. Teacher candidates will be evaluated with quizzes, assessment plans, measurement tool development, data collection and data interpretation. One section of this course will be offered each semester with a projected enrollment of 25 students.

**Enforced Prerequisite at Enrollment:** KINES 362 and KINES 364 and KINES 366
KINES 467: The Science of Performance Enhancement

3 Credits

Evidence-based evaluation of performance enhancing substances and methods in sport. KINES 467 The Science of Performance Enhancement (3) Students will describe and evaluate the evidence base for substances and methods used to improve aerobic power, strength, body composition, metabolism and thermoregulation as they relate to exercise and physical activity. Students will study and develop a rating scheme to describe the quality of evidence and recommendation to use ergogenic aids. This rubric will be utilized throughout the course to evaluate recent and proposed techniques to enhance athletic performance. Topics include, but are not limited to:&bull; Blood boosting: Enhancement of oxygen transport;&bull; Androgens, prohormones, and anabolics;&bull; Substrate manipulation to increase strength;&bull; Nutraceuticals to improve athletic performance and recovery. General pacing of these topics may be modified depending on class interest and issues that emerge in the popular press. Consideration will be given to the regulatory and ethical aspects of their use. Students will develop an understanding of the World Anti-Doping Code, administered by the World Anti-Doping Association and its subsidiaries. Prior familiarity with ethics is essential. Science of Performance Enhancement is designed to emphasize team and individual scholarship in multiple domains, with emphasis on quantitative, qualitative and analytical skills.

**Honors**

KINES 468W: Health Instruction in the School–Content and Method

3 Credits/Maximum of 3

Methods, materials, and units of instruction. KINES 468 Health Instruction in the School–Content and Method (3) This writing-intensive course is designed to provide students pursuing a health and physical education teacher certification in the Kinesiology degree with the conceptual foundation necessary to develop health instruction that aligns with the National Health Education Standards to students in preschool through twelfth grade (P-12). It will provide students with information on health education content, theory, and contemporary instructional practices. An understanding of how to effectively plan and sequence age-appropriate health content and deliver the content using multiple instructional strategies make up the foundations of the course. Emphasis is placed on the student’s ability to create an effective lesson plan and delivery the content in a preschool through twelfth grade health education classroom. The overarching objectives for this course are to develop students’ health education planning skills, instructional skills, reflection skills, and writing skills. The overarching objectives for this course are to develop Pre-K-12 teacher candidates’ health education skills in planning, delivery and instruction, and reflective writing. Students will learn these skills by designing comprehensive preschool through twelfth grade health instruction using interactive learning activities that
lead to health literacy and reflecting on their own teaching as well as their peers’ teaching abilities. The purpose of this course is to enhance students’ writing and oral communication skills for success in health education. Given the importance of clear communication in health and wellness instruction, this course will provide students with the skills necessary to effectively communicate with students, parents, school administrators, and the public. The course will begin with the basics of writing a comprehensive health education lesson plan and will progress to developing increasingly complex written communications and oral presentations.

**Enforced Prerequisite at Enrollment:** Students must have a grade of C or better in: EDPSY 10 and KINES 100 and KINES 101 and KINES 295B and PSYCH 100 Concurrent: KINES 366 and KINES 395A and KINES 400 and KINES 464

**Writing Across the Curriculum**

**KINES 471: MOTOR CONTROL**

3 Credits/Maximum of 3

Analysis of the mechanisms underlying the neural control and coordination of voluntary movements. Within this course, the students will get an in-depth knowledge of the mechanisms underlying the neural control and coordination of voluntary movements. The course will include content on the history of movement studies, classical research, and main current theories in the field of motor control. These will include theories based on ideas of motor programming and internal models, control with muscle activation patterns, equilibrium-point control, optimization, dynamic systems, and theory of synergies. The neural control of several everyday motor behaviors will be discussed such as vertical posture, locomotion, reaching, and prehension. Speed-accuracy and speed-difficulty trade-offs and changes in motor control and coordination with practice will be described emphasizing plasticity within the central nervous system. Changes in motor control with healthy aging and fatigue will be discussed. In addition, changes in motor control and coordination will be discussed based on the reviewed theories. The role of specific structures within the central nervous system in motor control will be reviewed with an emphasis on movement disorders associated with dysfunctions of specific structures such as spinal cord injury, stroke, disorders of the basal ganglia and of the cerebellum.

**KINES 481W: Scientific Basis of Exercise for Older Adults**

3 Credits

Study of age-associated physical changes and the effects of exercise on the aging process.

**Enforced Prerequisite at Enrollment:** KINES 350

**Writing Across the Curriculum**

**KINES 483: Motor Patterns of Children**

3 Credits

Development of motor patterns. Fundamentals of movement, basic motor skills, and adaptation of the body to external forces.

**Enforced Prerequisite at Enrollment:** KINES 202

**KINES 484: Advanced Biomechanics**

3 Credits

The use of advanced biomechanics to provide an in-depth understanding of the principles which underpin human movement.

**Enforced Prerequisites at Enrollment:** KINES 384

**KINES 485: Science of Training Athletes**

3 Credits

Application of scientific data knowledge to analyze sport training.

**Enforced Prerequisites at Enrollment:** KINES 350 and KINES 384

**KINES 486: Legal Issues in Sport**

3 Credits

Contemporary legal issues in sport and their implications for sport managers.

**Enforced Prerequisite at Enrollment:** seventh-semester standing

**KINES 488: Mechanics of Locomotion**

3 Credits

This course examines the forces and motions characteristic of locomotion, with emphasis on walking, the most common human activity. Walking has been described as the most commonly performed human activity. Diseases or injuries that reduce the ability to walk independently and efficiently are especially likely to adversely affect quality of life. KINES 488 introduces students to the elements of normal walking and how walking motions are affected by changes in age, walking speed, and pathological conditions. Advanced topics covered in this course include other forms of locomotion, including running and cycling, and the use of mathematical models to understand phenomena related to locomotion. Students enrolled in this course learn the particulars of human locomotion, but in so doing they also gain an understanding of kinematics and kinetic analysis, joint mechanics, and the clinical treatment of movement disorders. Basic principles of mechanics are applied to establish how walking motions result from forces produced by muscles, gravity, and contact with the ground. Students planning to pursue graduate study in movement biomechanics or in clinical areas such as physical therapy are especially likely to benefit from the focus on these areas. Laboratories introduce students to current experimental methods used to measure motions, forces, and muscle activity during locomotion. Completion of several case studies during the semester gives students practical experience with the interpretation of motion analysis data, the factors that influence clinical decisions in the treatment of movement disorders, and ethical considerations in biomechanics research.

**Enforced Prerequisite at Enrollment:** KINES 101 and KINES 202

**KINES 492W: Programming for Business and Agencies**

3 Credits

Fundamentals of program development applied to corporate and private physical fitness businesses. KINES 492W Programming for Business and Agencies (3) This course will use an experiential approach to acquire knowledge and skills necessary to assess, plan, implement and evaluate health/wellness/fitness programs within a business/corporate setting.
Students will actively participate in a process-oriented, student-centered learning environment that includes cooperative learning, critical thinking, effective communication, assessment, and problem solving. Students will assess, plan, implement and evaluate a health-related program (i.e., wellness fair, career fair, road race, fitness programs). Students will write business letters, operating plans, mini-grants, budgets, flyers, press releases, newspaper articles, surveys, and other written communication projects relevant to the fitness/wellness business. Students will access and evaluate health/wellness resources (i.e., agencies, Internet, media, speakers). This is a writing intensive course and will follow university guidelines for such courses. Most of the assignments will involve group-based problem solving. This course is offered Spring Semesters with a maximum enrollment of 35.

**Enforced Prerequisite at Enrollment:** KINES 395B

**Writing Across the Curriculum**

KINES 493: Principles and Ethics of Coaching

3 Credits

The Principle and Ethics of Coaching examines the challenges of today’s coaching profession through societal norms and expectations from the past and present. The course begins with a study of the coaching profession covering past and current coaches who have experienced success and failure in the profession. Students learn how the profession has developed as a result of changing values, demands, emphasis and expectations in the athletic world. Students will learn how to work with Title IX, parents, high school and collegiate regulations, season structures and the various roles and responsibilities of today’s coach. The course is a senior-level course providing students in Kinesiology with an in depth study of the profession that has historically been associated with careers in Kinesiology. This course relates to other courses in sport ethics, sport philosophy and history of sport as they provide the theoretical background for coaching decisions. In addition, this course demonstrates practical implementation of theories from nutrition as well as activity courses. The course offers students an in depth study of sport and gender specific differences as they relate to the coaching profession. The students observe, question and study current coaches while examining their own backgrounds to develop a set of principles to handle today’s coaching issues. The emphasis on class discussion and interaction with various athletic coaches introduces students to realities of today’s coaching profession and the challenges of the 21st century coach. This course fulfills 3 credits in Writing Across the Curriculum. Students may only receive credit for KINES 493 or KINES 493W.

**Enforced Prerequisite at Enrollment:** KINES 100 and Students may only receive credit for KINES 493 or KINES 493W.

**Writing Across the Curriculum**

KINES 494: Senior Honors Thesis

1-6 Credits/Maximum of 6

Independent study directed by a faculty supervisor that culminates in the production of a thesis.

**Enforced Prerequisite at Enrollment:** Approval of honors thesis advisor

KINES 495: "SPECIAL TOPICS"

1-14 Credits/Maximum of 1

KINES 495A: Practicum in Student Teaching

12 Credits

The teacher candidate will be placed in either an elementary or secondary school setting for the first 8 weeks of the student teaching experience, followed by placement in the level not selected first for the last 7 weeks. The teacher candidate will be teaching both health and physical education during each placement. The teacher candidate will be assigned on-site cooperating teachers will be supervised by a university faculty member who makes a minimum of four on-site visits, plus review of teaching via two videotape. During the 15-week semester, there are four seminars of approximately 5 hours each, during which all teacher candidates meet with the coordinator of the student teaching program to discuss topics related to the multiple roles of teachers in public schools and the transition to becoming a professional teacher. In addition, some time in each seminar is devoted to experience sharing and collaborative problem solving. The following topics are covered during the seminars: legal liability and sexual harassment, electronic portfolios, resume and cover letter, writing, health and physical education professionals, preparation for employment, interviewing, best teaching practices and sharing, classroom management, and technology in physical education. In addition, the student teachers are required to complete a variety of assignments including: a professional portfolio, unpaid service activity reflection, daily notebook, videotapes and reflection, and Pennsylvania teaching application and essay.
The course will take place off campus at work sites and no special on-campus facilities are required. It will be offered annually as the last course in the major.

Enforced Prerequisite at Enrollment: KINES 495B

KINES 495B: Field and/or Research Practicum in Kinesiology

6 Credits

This course places students in the workplaces or research settings with the expectation that these experiences will allow them the opportunity to apply and integrate content from all their courses in the program. They will be placed at a variety of sites, including but not limited to research laboratories, professional fitness centers, rehabilitation facilities, senior centers, community health and wellness programs, and hospitals. They will learn the day-to-day requirements of being 'on the job' or 'in the lab,' including professional management practices and ethical considerations. Practicum work will be evaluated on an ongoing basis with the student intern, work place supervisor, and faculty member involved in the process. The course will take place off campus as work sites and no special on-campus facilities are required. It will be offered annually as the last course in the major.

Enforced Prerequisite at Enrollment: KINES 395B and KINES 395 and seventh-semester standing and 9 credits of 400-level KINES courses and 2.00 cumulative GPA

KINES 495C: Exercise Science Practicum

3-6 Credits/Maximum of 6

This course places students in the work place with the expectation that the experience will allow them the opportunity to apply and integrate content from all the courses in the program. They will be placed at professional fitness centers, rehab facilities, senior centers, and wellness centers. They will learn the day-to-day requirements of being 'on the job' such as time management, record keeping, client interactions, feedback delivery, fitness program establishment and implementations, business and management practices as well as ethical considerations. Their field experience will be focused on four in-class days during which students will collectively explore work place issues. Practicum work will be evaluated on an ongoing basis with the student intern, work place supervisor, and faculty member involved in the process. The course will take place off campus as work sites and no special on-campus facilities are required. It will be offered annually as the last course in the major.

Enforced Prerequisite at Enrollment: KINES 100 and KINES 101 and KINES 200 and KINES 202 and fifth semester standing

KINES 495D: Expanded Field and/or Research Practicum in Kinesiology

1-12 Credits/Maximum of 12

KINES 495D Expanded Field and/or Research Practicum in Kinesiology

(1-6) This course, in combination with KINES 495B, places students in the workplaces or research settings with the expectation that these experiences will allow them the opportunity to apply and integrate content from all their courses in the program. They will be placed at a variety of sites, including but not limited to research laboratories, professional fitness centers, rehabilitation facilities, senior centers, community health and wellness programs, and hospitals. They will learn the day-to-day requirements of being 'on the job' or 'in the lab,' including professional management practices and ethical considerations. Practicum work will be evaluated on an ongoing basis with the student intern, work place supervisor, and faculty member involved in the process. The course will take place off campus at work sites and no special on-campus facilities are required. It will be offered annually as the last course in the major.

Enforced Prerequisite at Enrollment: KINES 495B

KINES 495E: Advanced Professional Development in Kinesiology

3 Credits

KINES 495E Advanced Professional Development in Kinesiology

(3) This course is designed to provide undergraduate students the opportunities of fitness professional pre-certification preparation via lecture format, professional travel to acquire hands-on skills at a top caliber training facility, and an expert panel round table discussions. Throughout the course, students will have exposure to professional communication with faculty through formats including, but are not limited to the following: faculty/professional/expert discussions, lectures, training sessions, quizzes and examinations that are designed to prepare students to pass a national certification. Students will enhance skills needed to develop exercise leadership characteristics, communicate information effectively, and build a foundation of exercise testing and prescription guidelines which are safe, effective and motivating to clientele. Other class foundational principles include but are not limited to Exercise Programming; Health Risk Assessment; Serial Testing; Metabolic Calculations; Nutrition and Weight Management and Facility Administration. Students will take practical experience and knowledge gained from this professional course and apply principles into their proposed field of study in a safe and effective manner.

Enforced Prerequisite at Enrollment: KINES 350 Concurrent: KINES 456 and KINES 457

KINES 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

KINES 496F: **SPECIAL TOPICS**

1-6 Credits

KINES 496G: **SPECIAL TOPICS**

1-6 Credits

KINES 496H: Kinesiology Honors Independent Study

1-9 Credits/Maximum of 18

For non-thesis independent study/research by Schreyer Honors College scholars.

Honors

KINES 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.
KINES 498: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

KINES 499: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Korean (KOR)

KOR 1: Level One Korean A
4 Credits
Listening, speaking, reading, writing Korean: an introduction for beginners; basic structures and vocabulary; cultural elements.

Bachelor of Arts: 2nd Foreign/World Language (All)

KOR 2: Level One Korean B
4 Credits
Listening, speaking, reading, writing Korean: introduction; basic structures and vocabulary; cultural elements.

Prerequisite: KOR 001
Bachelor of Arts: 2nd Foreign/World Language (All)

KOR 3: Level Two Korean A
4 Credits
Further development of listening, speaking, reading, writing skills in Korean; cultural elements.

International Cultures (IL)

KOR 110: Level Two Korean B
4 Credits
This is the fourth semester course of sequenced Korean study at Penn State. It is the Advanced-Intermediate course. KOR 110 Level Two Korean B (4) is the second part of intermediate Korean and a continuation of Korean 3 offered at Penn State. Classroom activities will be built around the textbook lessons and all activities will be designed such that students will have multiple opportunities to practice listening, speaking, reading, and writing. Pedagogical materials also include the use of multi-media based authentic language samples from a variety of modalities (spoken, written, and computer mediated) produced for Korean nationals (e.g., tv dramas, movies, magazines, internet sites and blogs, essays, short stories, magazine articles, advertisements). These will supplement the textbook and will provide insights into daily life in Korea, sociocultural values of the Korean people, as well as a broader representation of Korean language, history, literature, and culture. Students will also work within various genres of Korean discourse and literature and learn to recognize and accurately use the particular language styles that are associated with those genres.

Prerequisite: KOR 001, KOR 002, and KOR 003 (or equivalent cumulative knowledge of Korean)

KOR 120: Introduction to Korean Culture
3 Credits
Survey of Korean culture and society in historical contexts; exploration from antiquity to the contemporary period through diverse media. This course is designed as a multi-disciplinary introduction to Korean society. In surveying Korean culture from antiquity to the present, we will examine a wide range of primary sources from the past, including archaeological relics, written records, and works of art; as well as contemporary materials by Korean authors, directors, and other cultural producers, together with scholarly commentaries about these materials. Instruction and all materials will be in English. No preliminary knowledge of Korean history or language is required for taking this course. In the first part of the course that covers the origins of Korean 'tradition,' we will observe the formation and development of social relations, popular beliefs, and systems of thought that have shaped the Korean way of life. Our historical analysis of these texts will also locate their resonances and ramifications in modern Korea, particularly in cultural representations. In the second part of the course, we will discuss Korea's transformation through its encounter with the West, its modern experiences and national struggle under colonial rule, social upheavals after liberation, and the Korean War. Finally, by tracing the enduring impacts of the unresolved past on contemporary society, we will look at Korea today in terms of economic development and crisis, the democracy movement and its limitations, relations with North Korea and with the US, and sociocultural diversification in the age of globalization. By situating these topics within the broader contexts of East Asia and the world, we will seek to gain a richer and more nuanced view of Korea on the global map. The overall goal of this course is to develop students' abilities to engage in cross-cultural understanding. Through a comprehensive study of Korean materials from a variety of genres and media, students will not only learn about and from Korean history and culture, but also enhance their skills in reading closely, thinking critically, and writing effectively. In exploring Korean culture as a space of complex formations and dynamic interactions, students will be trained to question, analyze, and appreciate different modes of cultural production in their specific political and social contexts.

GenEd Learning Objective: Key Literacies
KOR 121: Korean Popular Culture
3 Credits
Survey of contemporary Korean popular culture in various forms, including pop music, film, TV drama, advertising, comics, and literature. What do we mark as 'Korean-style'? Are the images of Korean(ns) changing with the worldwide spread of Korean popular culture known as the Korean Wave (Hallyu)? This course provides critical approaches to cultural flows from South Korea. We will employ theoretical concepts and critical vocabularies from cultural studies to deepen and sharpen our analysis of the cultural representation of Korea in relation to questions such as class, gender, ethnicity, and body politics. Using diverse texts from literature, film, TV dramas, comics, and pop music, we will examine the social codes, cultural values, and economic realities that influence Korean society, including the Korean diasporic population around the world. In directing our attention to various ways in which Korean culture is transmitted and presented in different media, we will also inquire into historical and social issues rooted in the division of Korea, as well as the international dispersion of Koreans since the colonial period. Through intellectual exercises in boundary crossing, we will ultimately develop our ability to explore the cross-cultural production of trans/national identities in the age of globalization. Instruction and all materials will be in English. No preliminary knowledge of Korean history or language is required for taking this course.

KOR 401: Level 3 Korean A
4 Credits
KOR 401 is the first semester of third-year Korean, which is equivalent to Advanced-Intermediate Korean I. KOR 401 Level 3 Korean A (4) (IL) KOR 401 is the first half of the 3rd year Korean (or Advanced-Intermediate Korean I). KOR 401 is designed for the learners who have background in KOR 110 or equivalent. The medium of instruction will be Korean. The students in this course will explore various topics and styles in Korean and further improve their skills of listening, reading, speaking, and writing in Korean to be able to better comprehend Korean culture and society. The objectives in this course are 1) to review, reinforce, and expand the basic grammar, 2) to expand knowledge of vocabulary and idioms, 3) to be able to speak not only in single sentences, but in dialogues to perform basic communicative functions, 4) to be able to read and understand simple essays and stories, and 5) to be able to write short compositions in Korean. As an advanced-intermediate Korean language course, it does not only strive to enable the students to interact successfully in Korean, but it also encourages them to deepen their understanding of Korean culture and society. In addition, it aims to cultivate students’ knowledge and awareness of the similarities and differences between Korean and American culture, by introducing cultural values, tradition, beliefs, and customs of Korea during the course and also promoting discussion on the topics. It is expected that through enhanced Korean language proficiency and cultural knowledge of Korea, students can increase their ability to locate and evaluate information about Korea for their further academic and/or professional needs. The course is designed to be suitable for the students who have successfully completed Korean 110 (or its equivalent, through such means as study abroad). This course is designed to meet the Korean minor requirement and also count as an IL ('International Cultures').

Prerequisite: KOR 110 or equivalent
International Cultures (IL)
KOR 402: Level 3 Korean B
4 Credits
KOR 402 is the second semester of third-year Korean, which is equivalent to Advanced-Intermediate Korean II. KOR 402 Level 3 Korean B (4) (IL) KOR 402 is the second half of the 3rd year Korean (or Advanced-Intermediate Korean II). KOR 402 is designed for the learners who have background in KOR 401 or equivalent. The medium of instruction will be Korean. The students in this course will explore various topics and styles in Korean and further improve their skills of listening, reading, speaking, and writing in Korean to be able to better comprehend Korean culture and society. The objectives in this course are 1) to review, reinforce, and expand the basic grammar, 2) to expand knowledge of vocabulary
KOR 425: Global Korean Cinema

3 Credits

Exploration of Korean cinema from the early twentieth century to the present, with an emphasis on its global/local dynamics. This course offers an introductory overview of Korean cinema. As we trace its history from the colonial period to the current 'Korean wave,' we will also engage with film criticism, the trans/national contexts of film productions, the particular aesthetics of selected auteurs/genres, and local/global receptions of Korean cinema. Our discussion of formal elements and key issues featured in these films; modernity, colonialism, division, nation, class, gender, identity, tradition, ideology, desire, violence, and migration, among others; will be informed by readings of secondary sources and theoretical works, as well as literary materials produced during the same period. Through our analyses, we will seek to contextualize the cinematic texts within moments of major shifts not only in modern Korean history, but also in the transnational film industry and screen culture. In pursuing a broad and detailed perspective of Korean cinema, this course will ultimately enrich, and simultaneously complicate, our understanding of Korea, cinema, and the world. Instruction and all materials will be in English. No preliminary knowledge of Korean history or language is required for taking this course.

Prerequisite: KOR 401 or equivalent

KOR 424: Transnational Korean Literature

3 Credits

Exploration of seminal Korean texts, including poetry, fiction, autobiography, and criticism, from the early twentieth century to the contemporary era. This course provides a comprehensive overview of modern Korean literature within a transnational context. As we learn how to critically analyze seminal Korean texts, we will locate them in the social, political, economic, and cultural conditions under which they were produced and received. In grappling with some of the fundamental issues they raise; including colonialism, migration, national division, war, gender relations, developmentalism, urbanization, democratization, and contemporary consumer culture; we will also seek to situate these writings in the Korean vernacular within the larger context of global modernity. Rather than take Korean literature and global modernity as given or apart from each other, we will attend to their intersections by raising such questions as: How did modern experiences, constructed through the interface with unfamiliar Others, change preexisting ways of writing and reading? How did foreign occupations affect the formation of a national literature? In what ways do Korean writers' representations of the inter/national events and phenomena on and beyond the Korean peninsula at once enrich and complicate empirical investigations into modern histories of Korea, East Asia, and the world? In an increasingly borderless world, can we draw a boundary around what is called 'Korean' literature? In parallel with these questions, we will further discuss why and how to engage in literary practices in the current age of digital reproduction. Instruction and all materials will be in English. No preliminary knowledge of Korean history or language is required for taking this course.

Prerequisite: KOR 120; KOR 121; ASIA 100; ASIA 102; ASIA 83; ASIA 4; CMLIT 4; 5th Semester standing

**Labor and Employment Relations (LER)**

LER 83S: First-Year Seminar in Labor and Human Resources
3 Credits

LER 83S meets the Bachelor of Arts degree requirements. This course provides a general introduction to the field of labor, employment relations, and human resources, as well as a more in-depth examination of an issue or topic related to the field and it does so in a small class environment. It also introduces first-year students to the University as an academic community, to their responsibilities as a member of that community, and to the wide range of opportunities and resources available to them. The course fulfills both a first-year seminar and a general education or Bachelor of Arts social/behavioral science requirement. Class sessions stress discussion of assigned readings, debates, and/or talks by guest lecturers/speakers.

Bachelor of Arts: Social and Behavioral Sciences
First-Year Seminar
General Education: Social and Behavioral Sciences (GS)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think

LER 100: Introduction to Labor and Human Resources
3 Credits

This course will provide students with an opportunity to develop an understanding of the role of work and the employment relationship in their lives from an individual, institutional and global perspective. The course begins with a series of lessons focusing on the meaning of work to each of us. Students will study motivation theories to help them understand the various needs that work can satisfy, from earning a paycheck to serving others. The course then moves to a description of the types of organizations that represent the 'employer', from the 'mom and pop' operation to the for-profit corporate environment. In this context students will be exposed to basic management concepts (e.g., authority; span-of-control) as well as the manner in which bureaucracy affects the nature of the workplace. Students will conclude this section with a study of the employment contract, particularly the manner in which the nature of at-will employment philosophies dominate U.S. labor markets. Part II of the course is a systematic study of several important issues associated with the human resource function and how it affects the individual workers. Students will study such topics of recruitment and selection not only from the perspective of the employer seeking to attract staff who will contribute to organizational efficiency and effectiveness, but also from the point of view of the applicants who seek to pursue positions consistent with their own personal needs and career aspirations. The HR function exists in every organization; however, in some situations students will work under a different set of rules. Part III will focus on the environment associated with labor unions and the various elements defining the relationships among employers, unions and employees. In addition to studying the history of the labor movement, students will develop an understanding of the collective bargaining process and its effect on their employment circumstances. Part IV addresses what has reemerged as a critical element in the relationship between workers and work: the globalization of the economy. Students will learn about the opportunities and threats globalization presents. They will also study the development of global labor standards.

GenEd Learning Objective: Soc Resp and Ethic Reason

LER 136: Race, Gender, and Employment
3 Credits

This course will ask how race and gender affect work in the contemporary United States. We will consider how race and gender shape people's work opportunities, their wages at work, and whether they participate in paid or unpaid labor (or both). We will begin with an overview of work and the changes in the workforce over time; we will move to investigate how workplace structures reproduce gender and race inequalities; will ask how race and gender inequalities are informally maintained through education systems and social networks; will consider differing dimensions of inequality across poverty, immigration, and sexuality; and will consider how studying unpaid labor helps us better understand the formal paid economy.

LER 136W: Race, Gender, and Employment
3 Credits

This course will ask how race and gender affect work in the contemporary United States. We will consider how race and gender shape people's work opportunities, their wages at work, and whether they participate in paid or unpaid labor (or both). We will begin with an overview of work and the changes in the workforce over time; we will move to investigate how workplace structures reproduce gender and race inequalities; will ask how race and gender inequalities are informally maintained through education systems and social networks; will consider differing dimensions of inequality across poverty, immigration, and sexuality; and will consider how studying unpaid labor helps us better understand the formal paid economy. The course emphasizes writing in the form of short assignments and longer papers as a means to develop comprehension of these ideas. This course is a writing intensive course designed to develop formal writing appropriate for a business context. We will use an active
and engaged writing process using the course topics of diversity and employment inequality to strengthen writing skills.

Writing Across the Curriculum

LER 165N: Work and Literature
3 Credits

If you get a job out of college, work eight hours a day, fifty weeks a year, and retire at age 65, at that point you have will spent roughly one third of your adult, waking life at work. And that is just paid work. Add in housework, childcare, and other forms of unpaid labor and the share of your waking hours devoted to work creeps closer to one half. And those calculations may actually underestimate the influence work has over your life. What you do will determine where you live, how you live, and, perhaps, whether you believe you have ultimately done something meaningful with your life. With work playing such an outsized role in a life, you may as well understand it as best you can. Hence this class.

In it, we approach the question of work from the perspective of two disciplines: labor and employment relations and literature. The field of labor and employment relations asks about the social and economic forces-markets, compensation, globalization, immigration, etc.-that shape work. By contrast, the discipline of literature takes a more subjective approach to the question of work. Very broadly speaking, it shows how the forces that shape work play out in individual lives. In short, it shows how individuals feel about the work they do or, in the case of the unemployed, they do not do. Together, the two disciplines provide a global and personal perspective on one of the most important parts of our lives.

Students registering for the course will read representative selections from both domains, engage in course discussions, take exams, and write essays as they explore the variety of ways both labor and employment relations and Literature can prepare them for their work lives and help them understand the place of work in culture and society.

LER 201: Employment Relationship: Law and Policy
3 Credits

Most Americans spend a third of their adult lives at work. This course examines the legal rights and rights and obligations of employers and employees in US workplaces. No previous course in law is necessary. The course begins with an overview of general legal concepts necessary to an understanding of the US legal system. That sets the stage for an examination of the employment contract, a cornerstone of employment law. The main body of the course examines such topics as sexual harassment, drug testing, wage and hour regulation, immigration, health care, pregnancy, family leave, workers' compensation, employee privacy, and unionization. This introduces students to landmark federal and state employment statutes, regulations, and cases. As students learn about workplace rights and obligations, they discuss the public policy issues underlying most debates. Throughout, students are encouraged to argue policy questions from the different perspectives of employers, employees, and the public. Being both 'employee' and 'employer-centric,' the course is designed for the generalist as well as the major in the field. Thus, its content helps to prepare literally any future employee with vital liberal arts and career-related knowledge, while at the same time providing a foundation for students who choose to specialize in human resources or labor relations.

GenEd Learning Objective: Soc Resp and Ethic Reason

LER 202: Understanding Employee Behavior
3 Credits

The course will be offered at an introductory level. It is designed to encourage students to explore individual and group behavior at work. The ability to describe, explain and analyze concepts in this course is critical to appreciating the dynamics that determine organizational outcomes. In this context, students will learn basic tools that will assist them in developing management, supervisory and leadership skills. Because the concepts from this course are the foundation of human resource management and employee relations, it is essential to master them in order to be an effective human resource management or employee relations professional. The conceptual learning in the course will include individual differences, diversity, attitudes, fairness perceptions, motivation, decision making, leadership, teams, negotiation, organizational culture and its role in the external context.

GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Soc Resp and Ethic Reason

LER 304: Labor and Employment Relations Fundamentals
3 Credits

The course surveys the main elements of modern labor and employment relations systems in the U.S. and beyond. The course encourages students to use a framework for evaluating workplace outcomes according to three yardsticks: efficiency; equity; and voice. Focusing primarily on employee voice, the course introduces students to a variety of mechanisms that bring democracy, worker engagement, and worker influence to the workplace. Among these mechanisms are U.S.-style collective bargaining, non-union systems of worker involvement, European works councils, and a new variety of ‘alt-labor’ initiatives from around the world. In its single largest unit, the course focuses on U.S. workplaces, beginning with the historical and legal foundations of the modern U.S. labor relation system. This includes units examining union organizing campaigns, collective bargaining, and dispute resolution systems. Concluding weeks of the course look at issues surrounding the push for workplace flexibility, a comparative labor relations look at other country practices (include European works councils), emerging issues in global supply chains, ‘alt-labor’ institutions and practices, the
role of gender, race, and diversity initiatives at work, and the impact of automation and artificial intelligence on the future of work.

**Prerequisites:** LER 100

**LER 305: Human Resources Fundamentals**

3 Credits

This course will provide students with an opportunity to understand and apply important concepts concerning human resources in the workplace. Students will learn to think of the issues in the class from both the employees' and organizations' perspectives. The course begins with a description and analysis of the role human resource managers play in supporting employees' personal needs as well as an organization's strategic objectives. The discussion traces the changes in that role historically, as well as the contemporary understanding of HR's part in helping stakeholders succeed. Against this backdrop, students will study three critical variables affecting HR's involvement in management: the individual; the organization; and, the law. Each of these foci illustrates variables with which HR managers must contend. The course presents these variables through a variety of lenses: law, psychology, sociology, history and literature. Students will also spend considerable time studying the various functions HR plays in recruiting, selecting, training, evaluation, compensation, labor relations and safety. In these portions of the class, students will learn to understand the functions not only from the organization's, but also from the employees' perspective. The discussion of functional areas will end with application of the concepts studied to the global business environment in which HR increasingly operates. Throughout students will not only learn the mechanics of, for example, the selection process, but how processes support an organization's and individual's pursuit of their unique purposes. Consistent with the liberal arts environment in which LER students enroll, the final project requires students to apply the concepts learned concerning the HR function to their everyday lives, helping students to reflect on the difference HR processes can have on both the organization but equally important on the employee. As a Gen Ed course (GS), the course qualifies as a Bachelor of Arts (B.A.) course consistent with the B.A. Fields category.

**Prerequisites:** LER 100

Bachelor of Arts: Social and Behavioral Sciences

General Education: Social and Behavioral Sci (GS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Soc Resp and Ethic Reason

**LER 312: Employment Relations to Research Methods in Labor and Employment Relations**

3 Credits

The objective of this course is to enhance students’ abilities to use a range of methodologies to evaluate and conduct research in the field of employment relations and human resource management. LER 312 Employment Relations to Research Methods in Labor and Employment Relations (3)(BA) This course meets the Bachelor of Arts degree requirements. The objective of this course is to enhance students’ abilities to use a range of methodologies to evaluate and conduct research in the field of employment relations and human resource management. It covers core concepts such as the scientific method, literature search, the logic of hypothesis formulation and testing, measurement, sampling and data collection methods, and basic statistical analysis. To accomplish these objectives, the course utilizes readings, lectures, class discussions, exercises and assignments, student presentations, and examinations.

Bachelor of Arts: Social and Behavioral Sciences

**LER 400: Comparative Employment Relations Systems**

3 Credits

Analysis of structure and elements of employment relations systems in developed and developing areas. LER 400 LER 400 Comparative Employment Relations Systems (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course explores contemporary topics in employment relations in the world. The course examines seven examples of employment relations systems, each carefully chosen to illustrate important variations in employment relations practices. It also provides an overview of economic globalization and its impact on employment relations. Topics include global sweatshops, child labor, the diffusion of human resource practices, and corporate social responsibility. The first country case is Germany, which provides an example of a country with strong national unions and a highly developed system of works councils. The Swedish case exemplifies a long-tradition of centralized bargaining and tripartite relations that is now in transition. The third case, Japan, illustrates some of the initial experiences with team work, just-in-time production, and employee commitment through job security and training. China offers an example of a socialists in transition that has become an economic powerhouse through massive export processing zones, government controlled unions, and wage competition. Brazil provides an important example of a Latin American country with a state dominated employee relations system. South Africa offers a case of highly politicized employment relations in a country in transition from extreme racial segregation to a democracy. Finally, India represents Asia's other economic powerhouse, with an English speaking workforce that is drawn to the booming call center industry and export-oriented production. The second half of the course looks at broader themes related to the topic of globalization. Sweatshops in Mexico and child labor in India examined alongside the diffusion of human resource practices in Brazil. In this section, student will also study inter-governmental institutions such as the World Trade Organization, and the International Monetary Fund. The final unit of this section examines the topic of Corporate Social Responsibility (CSR), recent attempts by corporations -at times in coordination with labor unions--to establish basic sets of rules or standards for their employees wherever units of the corporation might be located in the world today.

**Prerequisite:** 3 credits in Labor and Employment Relations

Bachelor of Arts: Social and Behavioral Sciences

International Cultures (IL)

**LER 401: The Law of Labor-Management Relations**

3 Credits

Development of Anglo-American law regulating collective bargaining, with emphasis on American labor-management relations under Wagner, Taft-Hartley, and other acts. LER 401 The Law of Labor - Management Relations (3)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine the evolution of labor law in the United States. The N.L.R.A. itself, and the decisions of the National Labor Relations Board (N.L.R.B) and the courts, will be examined in order to gain an understanding of the current legal framework underpinning our system of labor-management relations. Major issues to be examined
include the rights of employees to union representation; the formation of 
bargaining units; the conduct of organizing campaigns and elections; the 
duty to bargain; strikes, striker's rights, and lockouts; picketing, boycotts, 
and related activity; the enforcement of collective bargaining agreements 
and the duty to arbitrate; union members' rights and responsibilities, 
duty of fair representation; and federal-state relationships in labor 
relations. Also covered in the course will be the legal framework for 
public sector labor-management relations, with specific attention paid 
to Pennsylvania Acts 111 and 195. The course will be taught from a 
liberal arts perspective, meaning that societal factors influencing the 
law—history, politics, and economics—which will be emphasized. Student 
performance will be evaluated by means of tests, short papers, and such 
reports as may be required. This course is complementary to others in 
Labor Law, including LER 434, Collective Bargaining and LER 435 Labor 
Relations in the Public Sector. The course requires no special facilities 
or equipment; however, students enrolled are expected to have computer 
skills sufficient for communication and word processing purposes.

Prerequisite: 3 credits in Labor and Employment Relations or Political Science 
Bachelor of Arts: Social and Behavioral Sciences

LER 403: International Human Resource Studies 
3 Credits

Course exploring human resource management from an international 
perspective. LER 403 International Human Resource Studies (3) (IL)(BA) 
This course meets the Bachelor of Arts degree requirements. This course 
on International Human Resource Management expands beyond the 
traditional disciplines of HRM through a broader consideration of the 
impact of national contexts on these areas of organizational practice. 
The first question addressed is whether 'HRM' actually means the same 
thing in different countries, especially given that the term 'HRM' was 
developed from US management practice and scholars. This opens the 
discussion as to how institutions and culture at the national level help 
to shape management practice. As organizations become increasingly 
global, these issues of national culture and institutions can often stand in 
the way of a seamless progression of HRM across national boundaries. 
From a national culture perspective, the course compares how people 
in different countries see themselves and others around them, and how 
expectations, values and beliefs can differ in the workplace. This 
understanding is drawn from frameworks of national culture which 
describe the culture's multiple dimensions. This enables students to 
identify why and how it may be different working with colleagues from 
other cultures, as well as understanding the implications this can have 
for designing appropriate HRM practices. From a national institutions 
perspective, the course compares how institutions such as legislation, 
state intervention, trade union influence, education systems, and the 
respective power of shareholders versus stakeholders can impact on 
patterns of HRM and employee relations practices in different countries. 
For example, comparisons are made between economies with very high 
levels of employment regulation, explaining local employee rights and 
benefits, and those in which firms have more autonomy to choose how 
to manage their employees. From a strategic perspective, the course 
looks at how multinational enterprises are managing this cultural and 
institutional complexity, making strategic choices in international HRM 
to ensure they achieve the ultimate balancing act of thinking global 
but acting local. It considers different strategies firms might take (from 
complete standardization of HRM to complete localization) and how this 
then translates into different roles and activities for the HRM function. 
This section also explores how these firms manage their international 
staff (expatriates), as well as finally exploring ethical issues around 
outsourcing activities to lower-cost countries, and the impact of a more 
globalized workforce on diversity and work-life balance issues.

Prerequisite: LER 100
Bachelor of Arts: Humanities
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)

LER 409: Leadership Development: A Life-Long Learning Perspective 
3 Credits

The course examines the continuing influence of social and 
environmental factors in shaping leadership and leadership development. 
LER (OLEAN) 409 Leadership Development: A Life-Long Learning Perspective (3)(BA) This course meets the Bachelor of Arts degree 
requirements. Current social conditions, such as financial crises, 
ineffective solutions to local, national, and international problems 
corrupt leaders, call for more effective and ethical leadership 
on a broad scale. The positive and moral transformation of social 
institutions requires active participation and leadership of more 
authentic transformational leaders. This course will discuss authentic 
transformational leadership development from a life span developmental 
perspective. More specifically, it will focus on how an individual develops 
his/her leadership skills, potential, and capacity in his/her childhood, 
school, social organizations, colleges, and work organizations. The 
primary purpose of this course is to help students understand how 
family, educational, and other environmental factors have helped and/or 
will help them develop their transformational leadership potential and 
leadership effectiveness, in addition to gaining a better understanding 
of their strengths and weaknesses in respect to personality, individual 
difference, motivation, values, emotions, self-awareness, and identity. The 
fundamental objectives of this course are to help students 1) increase 
self-awareness; 2) to help students to know more about their sense of 
self, including self-identity, self-awareness, self-efficacy, and other types 
of self-concepts; 3) to understand the effect of life span influences in an 
individual's leadership development.

Prerequisite: 6th semester standing 
Cross-Listed 
Bachelor of Arts: Social and Behavioral Sciences

LER 410: Employment Strategies for People with Disabilities 
3 Credits

Develop knowledge, skills, and resources necessary to understand and 
practice effective employment strategies in working with people with 
disabilities. This course is designed for students to develop knowledge, 
skills, and necessary resources to understand and practice effective 
employment strategies in working with people with disabilities, including 
individuals from culturally diverse backgrounds. Students will develop 
skills on networking with employers (e.g., social media, professional 
organizations, interviewing employers, etc.) for building professional 
contacts and networks. Various forms of labor market information will 
be analyzed to identify both challenges and opportunities for people 
with disabilities in different sectors of the labor market (primary and 
secondary). Throughout the course, students will learn about disability 
issues in the workplace (e.g., laws, policy, stigma, accommodations, 
etc.). A strong emphasis will be on understanding how laws and policies 
impact employment for people with disabilities, and students will identify 
legal and illegal practices. Best employer practices will be identified 
regarding mitigating disability impact on both employees (current and 
future) and employers. This course will incorporate Assistive Technology
(AT) applications so students will be able to identify appropriate AT devices to assist people with disabilities in obtaining and retaining employment along with applicable strategies for working with employers in developing employment opportunities in today's changing world of work. Students will understand how disability is a critical component of workforce diversity and strengths people with disabilities bring to the workplace. Students will identify how people with disabilities should prepare for the employment process including training opportunities (formal and informal), resume development, interview preparation, and initiatives to promote increased employment outcomes. Different disability populations (e.g., youth, Veterans, aging workers, etc.) will be discussed including common barriers for employment as well as how to create opportunities in different employer settings.

Cross-listed with: RHS 410

LER 424: Employment Compensation

3 Credits

Development and management of employee compensation systems. LER 424 Employment Compensation (3) Employment Compensation provides an overview of compensation programs, practices, and strategies. This course examines various compensation systems, that serve as an integral component of human resource management operations. Upon completion of this course, students will have a better understanding of compensation program design and development, the criteria used to compensate employees, and challenges that compensation professionals may encounter. Requirements for this course include regular attendance and participation, completion of three case studies, three project assignments, and three examinations which will consist of short answer and multiple choice questions.

Prerequisite: LER 201 and sixth-semester standing
Bachelor of Arts: Social and Behavioral Sciences

LER 425: Employee Benefits

3 Credits

The examination of employee benefits programs used by employers to meet the welfare needs of employees and their families. LER 425 Employee Benefits (3) This course is a comprehensive survey of the programs, principles and trends in planning and administering employee benefit programs for private and public employers. The objectives for this course are to provide students with an understanding of employee benefit programs and their broad implications for the workplace, the role of employee benefits in motivating and retaining employees, and the recent trends in employee benefit offerings and cost containment approaches. Topics covered include strategic and tactical planning considerations used in implementing and changing benefit programs, discretionary and mandatory benefits, Social Security, health insurance structures, disability and life insurance programs, workers’ compensation, retirement programs, executive benefits, paid-time off programs and accommodation and enhancement programs. This course builds on introductory general foundation courses in human resources and labor relations. It provides students with a working knowledge of employee benefits and its important role in human resources and labor relations careers. Students must select and write a research paper on a benefits topic of special interest. Course grades will be determined from examinations and the research paper.

Prerequisite: LER 201 and 6th semester standing

LER 426: Staffing and Training Strategies in Organizations

3 Credits

This course focuses on the theory and practice of human resource staffing and training in organizations. It provides the conceptual framework for understanding the staffing and training function as a factor of production and service. For this we will discuss policies and practices designed to attract, retain, and motivate employees. It explains how staffing and training can be used as a competitive weapon. For this we discuss how human resource policies and practices can be targeted towards achieving business objectives. This should inspire you to think of the connection between employee effectiveness and profitability. The course also provides the government regulations that impact staffing and training practices. The course uses lectures, group discussion, and in-class exercises to impart these concepts.

Prerequisites: LER 100
Bachelor of Arts: Social and Behavioral Sciences

LER 427: Organizational Context for Human Resource Management and Employment Relations Professionals

3 Credits

This course examines human resource management (HRM) and employment relations (ER) from a strategic perspective embedded in a complex and evolving organizational system. To be effective, students must understand how different organizational strategies interface with the entire set of HR/ER practices put in place. This approach also requires an ability to connect business functions, governance, organizational metrics and financial considerations with investments in the broader HR/ER system. The goal of this course is to build business acumen by providing a foundational understanding of the components of a strategic and proactive HR/ER system. Through active learning, this course will encourage the development of analytical skills, personal competencies, and in-depth understanding of how various HRM and ER parts work together to shape organizational success. Students are more effective in their roles when they understand organizational strategic typologies, business functions, and governance structures that can affect the structure and implementation of the HRM/ER functions. Other topics include vertical and horizontal integration of the supply chain, and mergers and acquisitions, both of which are important to the work context. Basic finance and accounting concepts relevant to HRM/ER such as profit and loss statements, balance sheets, and cash flow enable students to understand how managers and leaders make resource decisions. Students gain credibility with other organizational decision makers by better understanding concepts such as earnings per share, return on assets (ROA) and return on investment (ROI). Understanding the time value of money and implications for decisions regarding investments in people enables students to be more effective in decision-making roles. The goal is to provide students with the fundamentals of the business context as relevant to their roles as HRM and ER professionals. The use of metrics and measures to provide feedback to the organization and individual employees will be examined. The criticality of understanding appropriate metrics and the importance of finding or creating valid, reliable, and bias-free metrics is explored. Learning how to create balanced scorecards and associated HRM/ER scorecards can provide actionable insight to all organizational stakeholders. Finally, exposure to conceptual frameworks related to ethics and risk assessment will enable students to apply such frameworks in an organizational context. The goal is to have HRM and ER students develop a deep understanding of perspectives,
practices, and tools that connect HRM and ER policies and practices to an organization's context and strategy.

**Prerequisites:** LER 100 and LER 305

LER 428: Total Rewards

3 Credits

This course requires students to learn the link between company's strategy and compensation, and understand core policies necessary to develop effective compensation systems. The core policies include internal alignment, external competitiveness, and employee contribution. First, theoretical frameworks of human resource management and corporate strategies will be discussed to define the relationship between company's strategy and compensation philosophy. Students then will study how to establish internally consistent and fair pay levels for various jobs using techniques such as job analysis, job evaluation, and competency analysis. The course then will discuss how to collect and analyze salary data and covers 'pay for performance' where students learn the concept of performance management and various incentive practices at the individual, team, and organizational levels. The course will be finalized with the discussion of employee benefits. In this section, students will discuss various benefit options that companies can provide, and various legal issues.

**Prerequisites:** LER 100

LER 434: Advanced Collective Bargaining and Contract Administration

3 Credits

This course examines, at an advanced level, the theory, practice, and impact of the major phases of union organizing, collective bargaining, and contract administration. Upon completion of this course students should be able describe, explain and participate, at an advanced level, in the major phases of labor relations: union organizing campaigns; collective bargaining (including its preparation phases); grievance processing, mediation; and arbitration, as practiced in industries in the U.S. private sector subject to the National Labor Relations Act, as amended, and the Railway Labor Act. Students will also develop concrete negotiation and grievance administration skills and have the opportunity to apply those skills, with the benefit of observations and feedback. Part I of the course reviews the structure of collective bargaining, the determination of bargaining units, and theories of effective labor negotiation. Further foundational study looks at the law applying to the determination, compositions and scope of bargaining units, as well as the law of collective bargaining, grievance handling, and arbitration. The main body of the course introduces students to different schools of effective technique in the negotiation of labor disputes. Part 2 of the course examines the subjects and processes of collective bargaining in detail. In this portion of the course, the course requires small teams of students to conduct out-of-class exercises. The first asks students to resolve a dispute over bargaining unit determination. In this phase of the course, teams of students negotiate a comprehensive new collective bargaining agreement in a hypothetical (simulated) case study. Similarly, students will conduct an exercise in the processing of grievances through a grievance procedure and, in some case, ultimate arbitration. In the latter procedure (arbitration), students will role-play in union representative, management representative, and arbitrator roles, assigned to writing either advocates' briefs or an arbitration award. The course will also include an exercise in the mediation/conciliation of a labor dispute

**Prerequisite:** LER 304

LER 435: Labor Relations in the Public Sector

3 Credits

Analysis of labor relations problems within different areas of public employment. LER 435 LER 435 Labor Relations in the Public Sector (3)(BA) This course meets the Bachelor of Arts degree requirements. Upon completing this course, students should be able to identify the legal frameworks that govern collective bargaining between employers and unions in federal, state and local governments. Students should also be able to explain the process of collective bargaining in the government sector and the special circumstances that make public sector bargaining different from private sector bargaining. At course end, students should be able to identify the parties involved in public sector bargaining, including those involved in dispute resolution, and explain their priorities in the labor relations process. Students should come to understand and articulate the reasons why it is important to study and more fully comprehend the public sector labor relations process. Together, we will explore the distinctions between public and private sector employers that impact labor relations in the public sector, in order to better understand those distinctions. Also, we will explore the principal historical differences between negotiations in the public and private sectors, in order that students can better articulate those differences. In addition, we will work to understand the principal arguments for and against the right to strike for public sector employees, as well as other impasse resolution processes. Finally, we will work to identify and discuss the challenges facing public sector labor relations in the near term and in the intermediate term.

**Prerequisite:** 3 credits in Labor and Employment Relations Bachelor of Arts: Social and Behavioral Sciences

LER 437: Workplace Dispute Resolution

3 Credits

Dispute resolution practices and procedures used in the workplace and employment law settings. LER 437 LER 437 Workplace Dispute Resolution (3)(BA) This course meets the Bachelor of Arts degree requirements. This course examines dispute resolution procedures in unionized and nonunion workplaces. The course begins with an examination of grievance procedures in unionized workplaces and the system of labor arbitration. Students will read labor arbitration decisions and learn how to research arbitration issues. The second major theme of the course is an examination of the design and use of nonunion workplace dispute resolution procedures. Students will read descriptions and analyses of examples of nonunion grievance procedures. Finally, the course will look at procedures for resolving employment law disputes and the major public policy debates surrounding mandatory nonunion arbitration procedures. Students will read some of the major legal cases in this area of the law and perspectives both for and against mandatory arbitration. A key objective of the course is to enable students to both understand and think critically about different alternative dispute resolution procedures and their role in employment relations. As part of achieving this objective, the course will include simulated dispute resolution exercises to provide students with experience in using techniques such as arbitration, mediation, and peer review. Additional course requirements include regular class attendance and participation, and paper assignments based on each of three main sections of the course. This course builds on and is complementary with other coursework in Labor and Employment Relations in the areas of employment relations, employment and labor law, and human resource
management. It also compliments courses in other departments in the area of dispute management and resolution, including the Minor in Dispute Management and Resolution. LER 437 may also be taken as an elective by students in the MS in Human Resources and Employment Relations and compliments coursework in the graduate program.

**Prerequisites:** LER 100 LER 110 or 6th Semester standing
Bachelor of Arts: Social and Behavioral Sciences

LER 444: Workplace Safety and Health: Principles and Practices
3 Credits

The role of employees, unions, employers, and government in dealing with work-related safety and health issues. LER 444 Workplace Safety and Health: Principles and Practices (3)(BA) This course meets the Bachelor of Arts degree requirements. Workplace Safety and Health: Policies and Practices focuses on the roles of employees, unions, employers, and government in addressing work-related safety and health issues. The course will introduce students to the three interrelated fields of workplace safety, workplace health, and environmental protection. Students will be provided with an overview of key issues within these fields and gain an appreciation for their importance within the workplace. Students will also become familiar with the fundamental concepts involved in the management of workplace safety and health issues. LER 444 satisfies requirements within the Labor Studies and Employment Relations major and may be taken as an elective. LER 444 is complementary to other courses dealing with employee relations and legal principles within the workplace.

**Prerequisite:** LER 100 or sixth-semester standing
Bachelor of Arts: Social and Behavioral Sciences

LER 444Y: Politics of Affirmative Action
3 Credits

Examines history, politics, and economics of the use of special programs to advance racial interests in the U.S. PLSC 445Y / AFAM 445Y / LER 445Y Politics of Affirmative Action (3)(US)(BA) This course meets the Bachelor of Arts degree requirements. The objectives of this course are to introduce students to the relationship between affirmative action and other policies purportedly designed to end racial inequality in the U.S. This course approaches the study of affirmative action in the context of the historic racial discrimination and inequality that Black Americans have faced since the founding of the Nation. The purpose of this course is to help students think about how contemporary and historic affirmative action policies relate to race, concepts racial inequality, the historic and continuing causes for racial inequality, public opinion, American politics and economic thought. The course materials will lead students through scholarly and popular articles, books and video presentations on the topic. It is hoped that students will become familiar with the history of affirmative action from its conception. Students will gain an intimate understanding of affirmative action economic and social outcomes on various racial groups. No prior knowledge is assumed, however a knowledge of civil rights history, quantitative methods, and constitutional law will be useful. The Politics of Affirmative Action satisfies the requirements for major and minor electives for the African American Studies, and major and minor electives for Political Science, and Labor Studies and Industrial Relations. Students are evaluated on the basis of an examination, term paper, class participation and class presentations of papers.

**Prerequisite:** AAA S 100 level course and PL SC001 or PL SC007

Cross-listed with: AFAM 445Y, PLSC 445Y
Bachelor of Arts: Social and Behavioral Sciences
United States Cultures (US)
Writing Across the Curriculum

LER 458Y: History of Work in America
3 Credits

A study of selected problems in the history of work in the United States, especially since 1877.

**Prerequisite:** HIST 021 , HIST 156 , or LER 100
Cross-listed with: HIST 458Y
Bachelor of Arts: Social and Behavioral Sciences
United States Cultures (US)
Writing Across the Curriculum

LER 459: Collective Bargaining in Professional Sports
3 Credits

Students will learn how collective bargaining works in professional sports and how it compares to bargaining in other industries.

**Prerequisite:** 4th semester standing and LER 100
LER 460: Ethics in the Workplace
3 Credits

The course will explore ethics from both a normative and behavioral perspective. A key operating assumption of this course is that every employee of an organization has a responsibility to demonstrate ethical leadership. The course will emphasize the importance and applicability of shared mutual accountability. Four interrelated and mutually reinforcing subject areas will be explored in the course at the individual, organizational and transnational levels business ethics, ethics in unionized firms, corporate social responsibility, and sustainability. Students will develop their abilities to articulate their own moral values and to recognize and resolve ethical dilemmas within an organizational setting. Students will analyze situations using ethical theories and learn to advocate for particular management and labor relations approaches, practices and policies based on ethical considerations. While no one view of ethics is identified as ‘best,’ students learn to recognize, evaluate, compare and apply different approaches. Students also will develop their abilities to identify, read, and explain academic literature related to the topic of ethical leadership from a management and employment relations perspective.

**Prerequisites:** 7th Semester standing LER 304, LER 305

LER 464: Communication Skills for Leaders in Groups and Organizations
3 Credits

Theory-and research-based communication skills for leaders dealing with work-related problems in contemporary groups and organizations. LER 464 Communication Skills for Leaders in Groups and Organizations (3)(BA) This course meets the Bachelor of Arts degree requirements. LER 464 Communication Skills for Leaders in Groups and Organizations is a survey of theory, research, and practice related to the communication processes by which individuals in groups and organizations exercise influence, whether or not they occupy positions of acknowledged leadership, and may be taken as part of a Labor and Industrial Relations major or minor, or as an elective by students in other disciplines. The
The course is offered once each academic year and has an enrollment limit of 40 students per offering. The course requires no special facilities. It extends to other courses in the major primarily in the areas of Industrial Relations and Human Resources. It is also complementary to courses focusing on groups and organizations in Sociology, Psychology, Management, and Engineering. During the course, students are exposed to a variety of theoretical perspectives on the study of leadership, learn about research illuminating its functions, and become acquainted with communication practices derived from and/or suggested by such theories and research that contribute to the exercise of influence and, thereby, effective group and organizational performance. These terminal outcomes define the objectives of the course. Focus will be on leadership as both role-related behavior and goal-directed behavior, regardless of roles that members of groups and organizations occupy.

Cross-listed with: OLEAD 464
Bachelor of Arts: Social and Behavioral Sciences

LER 465: Collective Decision Making

3 Credits

Application of theories of decision making to work-related issues in groups and organizations requiring collective resolution and action. LER 465 Collective Decision Making (3)(BA) This course meets the Bachelor of Arts degree requirements. This course presents a broad overview of theories, research, and practices in decision making as related to work-related choice making in groups and organizations and is open to students majoring or minoring in Labor and Industrial Relations, as well as to students who may wish to use the course as an elective. The course is offered once each academic year and has an enrollment limit of 40 students per offering. It requires no special facilities. L I R 465 extends to other courses in the major, primarily in the areas of Industrial Relations and Human Resources. It is also complementary to courses dealing with decision making in groups and organizations in sociology, psychology, and management. Of particular interest are decision making practices, as well as theories that account for them, in single-motive situations (in which participants in the process are pursuing a common goal) and mixed-motive situations (in which two or more of the participants are competitively related, but must cooperate to achieve their objectives). Hence, the course deals both with (1) conventional decision making, as in the case of boards, task forces, problem-solving groups, and quality circles or teams, appropriate to single-motive situations and (2) processes such as bargaining, negotiation, and dispute management/resolution, appropriate to mixed-motive situations. The course also deals with the influence of organizational culture on decision-making in both types of situations. Upon completing L I R 465, students will have been exposed to a broad array of theoretical perspectives on decision making in groups and organizations, will be familiar with research testing these theories, and be aware of decision making practices suggested by theory and research that are useful in situations requiring collective choice and action. These terminal outcomes of the course reflect the objectives.

Cross-listed with: OLEAD 465
Bachelor of Arts: Social and Behavioral Sciences

LER 466: Labor Union Structure, Administration and Governance

3 Credits

This course provides a comprehensive description and analysis of the manner in which the American Labor Movement is structure, administered and governed as it pursues economic, social and political objectives.

Prerequisite: LER 100
Bachelor of Arts: Humanities
United States Cultures (US)

LER 468: American Labor Unions

3 Credits

Students will examine, debate and gain a fundamental understanding of the current state of the American labor movement.

Prerequisite: LER 100

LER 472: Work-Life Practices and Policies

3 Credits

Explore the causes and consequences of conflicts between work, family, and other life commitments, and how these may be resolved. LER 472 Work-Life Practices and Policies (3)(BA) This course meets the Bachelor of Arts degree requirements. The interdisciplinary field of work-family and work-life developed as a result of middle-class women's entry into the labor force, a movement that generated conflict between family and paid work commitments. Overall, the course addresses the reasons the field developed, relevant theoretical perspectives regarding the issues, and related problems as well as proposed solutions at both the public and private sector levels. The overarching objectives of the course are to expand students' understanding of conflicts between work and family commitments, and how these might be resolved through private and public sector initiatives. Specifically, the course concerns how individuals, families, and organizations interact to help hinder the achievement of balance between work and life commitments, and relevant effects on those involved. The changing demographics of the family, laws and trends around working time, father and mother time with children, the expanded need for elder care, work-life programs such as flextime, concierge services, paid parental leave, part-time careers, paid time-off banks, and the role of unions, corporations and government legislation are covered. The course attempts to link the likely future needs of students to broader trends in society and how balance could be achieved at the level of individuals, families, other stakeholders in the community, and for society as well. Fields of research relevant to the course include labor studies, women's studies, Industrial/Organizational psychology, the sociology of work and of family, and child development. Students will be evaluated on the basis of class participation, through two in-class examinations, and through a final written or oral project providing a chronology and analysis of an adult's work-family history. The course is offered most fall and spring semesters, and typically 30 students are enrolled.

Prerequisite: 3 credits of LER
Cross-listed with: WMNST 472
Bachelor of Arts: Social and Behavioral Sciences

LER 475: Labor in the Global Economy: U.S. and South African Perspectives

3 Credits/Maximum of 3

This course focuses on how the nature of work is changing in the global economy, and the implications for economic opportunity and inequality in both. LER (GEOG) 475H Labor in the Global Economy: U.S. and South African Perspectives (3) This seminar focuses on how the nature of work...
is changing in the ‘new economy’ and the implications for economic opportunity and inequality in both the United States and South Africa. Sections of the course examine: theoretical approaches to understanding contemporary process of labor restructuring, including globalization, rise of an information economy, and growth in service sector employment; case studies of restructuring processes in different industrial sectors in both the U.S. and South Africa; and innovative labor organizing initiatives at a local, regional and global scale. This course aims to develop a framework for understanding the nature of contemporary processes of economic restructuring and its impact on the world of work. Drawing on research in both a South African and U.S. context, key case studies in the changing nature of work will be examined. This will provide a deeper understanding of how broad macro-level changes in the nature of contemporary capitalism are mediated by a variety of technological, political, and socio-economic factors in particular industries and geographic contexts. Finally, an in-depth look at workers’ responses to these changes at different scales (local, regional, global) will help deepen our understanding of the contested nature of workplace restructuring while exploring promising strategies for improving working conditions. This is a reading-intensive course dealing with the theoretical literature on rapid economic restructuring and how this is shaping work and employment. It is run in collaboration with the Sociology of Work Program at the University of Witwatersrand in Johannesburg, South Africa, with video-conference discussions linking the two courses.

**Prerequisite:** a minimum of 12 GEOG or LER credits before taking the course (or permission of the program).

**Honors**

LER 480: Current Issues in Human Resources

3 Credits

Identity and race, gender and heritage, centrality and marginality, self and other, as expressed in literary works from around the world. Students will study current trends that are shaping human resources management. These trends include information technology, internationalization, new organizational forms, changing demographics, and competitive landscape. Examples of topics include use of social media in human resource management, virtual work, managing an aging workforce and other areas of the operation of a business. This course will focus on subject matter that will better prepare students for the broader role that human resource managers are being requested to play in terms of contributing to the profitability of their employers. In the investigation of the course material, students will be exposed to real life examples and experiences, interaction with outside human resource professionals and guest speakers that will broaden their understanding of the concepts learned in their previous course work in human resources and labor relations. Some examples of the subject matter that will be addressed in this course are: Human resource and business ethics; Basic introduction of the interrelationship of human resources and business finance and accounting; Human resource metrics; Employment process; Leadership and relationship building; Communication in the workplace; Professional networking; Business etiquette; Human resource culture in business. The course is best designed for senior and graduate students who have serious interest in pursuing employment in human resources and/or labor relations.

**Prerequisite:** 6th semester standing and 6 credits of Labor Studies and Employment Relations

LER 488: Career Development Seminar I

1.5 Credits

This course features an introduction to several useful career development resources, development of a personal profile of your career-related strengths and interests, exploration of career options, creation of a career development plan, and guidance for securing prospective internships and other relevant experiences. LER 488 Career Development Seminar I (1.5) This course is the first of two 1.5-credit seminars designed to help students plan and launch their career in labor, employment relations, or human resources. This seminar features an engaging discovery-oriented approach to career development that includes exploration of the world of work, personal values and preferences, and strategies for finding an optimal match in the world of work. This experiential course immerses students in the process of charting their career path and preparing for success as a professional. This seminar fosters the development of practical career management skills that can be applied throughout the students’ entire career. This seminar, the first in the two-part series, will help students to chart an overall career track as a professional in labor, employment relations, or human resources. This course features an introduction to several useful career development resources, development of a personal profile of career-related strengths and interests, exploration of career options, creation of a career development plan, and guidance for securing prospective internships and other career development experiences.

**Prerequisite:** 4th semester standing

LER 489: Career Development Seminar II

1.5 Credits

This course is the second of two 1.5-credit seminars designed to help LER majors launch their career in labor, employment relations, or human resources. Both seminars guide students through the process of charting their career path and preparing for success as a professional. This seminar focuses on helping students to cultivate their professional brand, plan a job search strategy, market themselves as a professional in the world of work, manage a variety of interview challenges, and strengthen key work habits that are valued by employers and essential to success as a professional. LER 489 Career Development Seminar II (1.5) This course is the second of two 1.5-credit seminars designed to help LER majors launch their career. The first seminar in the series is targeted
toward juniors, while the second is designed for seniors. Both seminars guide students through the process of charting their career path and preparing for success as a professional. This seminar requires students to complete specific career development activities and then complete reflection and application exercises related to those activities. Utilizing a discovery-oriented approach, this course helps students to cultivate their professional brand, plan a job search strategy, market themselves as a professional, manage a variety of interview challenges, and strengthen key work habits that are valued by employers and essential to success as a professional. The course incorporates services offered by Penn State Career Services and the Liberal Arts Career Enrichment Network.

Prerequisite: LER 488

LER 494: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.
Bachelor of Arts: Social and Behavioral Sciences

LER 494H: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.
Bachelor of Arts: Social and Behavioral Sciences Honors

LER 495: Labor Studies Internship
1-12 Credits/Maximum of 12
Supervised practicum in labor relations setting with union, management, or government agency.

Prerequisite: prior approval by department
Bachelor of Arts: Social and Behavioral Sciences

LER 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
Bachelor of Arts: Social and Behavioral Sciences

LER 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
Bachelor of Arts: Social and Behavioral Sciences

LER 499: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
Bachelor of Arts: Social and Behavioral Sciences

International Cultures (IL)

Landscape Architecture (LARCH)

LARCH 60: Cultural History of Designed Places
3 Credits/Maximum of 3
LARCH 60 is an introduction to the development of designed outdoor places from the ancient past to present day. Designed landscapes and urban spaces are expressions of cultural values and environmental influences. Underlying all of the designs is the fundamental human connection to, and manipulation of nature as people create spaces that reflect political views, religion, are entertaining or provide personal inspiration and, most recently, show concerns for the health of the earth. While there is discussion of Middle East and East Asian landscapes, the course focuses upon Western civilizations with roughly the last third focusing on North American landscapes. The act of design and art often reveals a culture’s beliefs, values, and aspirations. As well, the creation of outdoor places uniquely express a relationship between humans and nature. These designs and the many spaces they provide (e.g. plazas, campuses, gardens, cities, parks, memorials, urban systems, our own backyards, etc.) are aesthetic phenomenon that speak richly of cultural values. This is true throughout history as it is today. The stories these landscapes tell go hand-in-hand with cultural histories, but are not always closely examined. Designed landscapes enrich our daily lives enormously, but are not always observed, or understood as intentional acts of design-- in fact they seem effortlessly placed before us. Successful landscape architecture accommodates human and natural functions (as does good building architecture), but the best speak to larger issues: to our minds and spirits. This course addresses the art of understanding the many layers of intent in designed landscapes from the past to present—including those that surround us as we walk through the built environment.

Bachelor of Arts: Arts

United States Cultures (US)
General Education: Arts (GA)
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

LARCH 60H: History of Landscape Architecture
3 Credits
A survey of the historical development of outdoor space in relationship to allied arts from early beginnings to this century.

General Education: Arts (GA) Honors

LARCH 65: Built Environment and Culture: Examining the Modern City
3 Credits
This interdisciplinary course is based on the premise that space is an active structuring element of human experience. Using theoretical orientations from disciplines like Landscape Architecture, Architecture, Urban Planning, Urban Studies, Geography, History, Sociology, Cultural Anthropology among others, this course investigates how social structures are spatially embedded in contemporary built environments,
especially cities. We focus on cities, because we live in a rapidly urbanizing world, and since 2008, more than half the world’s population have been living in urban areas. In this class we examine how social systems impact places, especially the modern city, and also how we as human beings are impacted by and impact cities. Cities are examined in historical context, starting from the mid 19th century. We study industrial, colonial and global cities. We then focus on enduring themes pertaining to the experience of cities by different groups in society based on factors like gender, race, ethnicity, and socio-economic status. A variety of western and non-western cases are used to understand cities in a variety of contexts. This course will complement LARCH 60 and other courses related to human settlements and urbanization offered by various departments/programs like Architecture, Art History, Geography, History, and Sociology. This course meets the Bachelor of Arts degree requirement, and the intercultural requirement (US/IL).

Bachelor of Arts: Arts
International Education: Arts (GA)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Soc Resp and Ethic Reason

LARCH 97: Special Topics
1-9 Credits/Maximum of 9

LARCH 115: Design I: Intro Spatial Composition
3 Credits

Landscape Architecture Studio 1 is the first design studio in the undergraduate Landscape Architecture curriculum. This studio introduces students to foundational concepts and methods in landscape architecture with a primary focus on the principles of spatial composition. Spatial design composition is introduced through lectures and readings and design skill is developed through studio projects that explore the space-making potential of landform, plants and structures in creating human experience in the landscape. Students explore design ideas through sketching in plan, section and perspective and by modeling their ideas in three dimensions. Students are introduced to graphic layout and composition as a means of presenting their design ideas to others.

Corequisite: LARCH 155
LARCH 116: Design II: Spatial Design
3 Credits

Landscape Architecture Studio 2 - the second design studio in the undergraduate Landscape Architecture curriculum - introduces students to small-scale site design. Students are introduced to essential topics in site design: the importance of understanding and responding to site and program, the fundamentals of pedestrian and vehicular circulation, the necessity of designing within a broader social and natural landscape context, and creating refinement in design form. Students are introduced to fundamental concepts through lectures and readings then presented with design projects intended to provide immediate application of those concepts. At the end of each design project, students develop presentation graphics that explain their final designs and supporting information.

Prerequisite: LARCH 115 Corequisites: LARCH 156

LARCH 125: Landscape Architecture Orientation Seminar
1 Credits

Introductory seminar involving readings on significant issues in landscape architecture. LARCH majors only. LARCH 125 Landscape Architecture Orientation Seminar (1) LARCH 125 is a seminar course, the first of many in an entering student’s Penn State career. Seminar classes offer the opportunity to read, think, share ideas through informal discussion, and refine personal thoughts reflection. The seminar is a common and useful tool to explore important ideas and develop critical thinking skills. The design and theory sequence begins with the freshman seminar, LARCH 125, which introduces students to landscape architecture issues. In this seminar students read and discuss the challenges and opportunities faced by contemporary landscape architects. To support student explorations, the class undertakes a series of readings of seminal works in landscape architecture and allied field that students carefully consider, question, and discuss. As a major part of student evaluation, they maintain a journal of their evolving ideas about the course content. Entering landscape architecture majors sometimes have a restricted notion of the wide variety of career directions that face them within the field of landscape architecture. This class proposes that the principal role of the landscape designer and planner is to make ‘place’; - a combination of physical, cultural and compositional cues that imbue built and natural forms with meaning. The goal of this first-year seminar class is for students to understand the type, or types, of place that landscape can be. The course introduces students to concepts of landscape as place, and asks them to ponder, explore, and respond to ideas about various perspectives on landscape ‘place’. This introduces them to the broad range of issues and activities that are addressed in the seemingly simple term, landscape architecture. Course Objectives: a) To become familiar with important issues in contemporary landscape architecture. b) To exercise and hone skills in critical thinking. c) To exercise and hone skills in speaking and writing persuasively. d) To begin to explore roles as future place makers.

First-Year Seminar
LARCH 145: Ecology and Plants I
3 Credits

LARCH 145 introduces students to plants, their ecological context, threats to ecosystems and the various roles that landscape architects play in the design of healthy ecosystems. Plants are central to landscape architecture. On the one hand, plants are one of the primary form-giving components in the landscape architects’ palette. At the same time, plants occupy a central place in the ecosystems with which landscape architects interact on all scales of intervention in the landscape. The course is divided into two parts. The first introduces the concepts of plant communities and ecosystems through lectures while providing an introduction to identifying specific native and ornamental, woody and herbaceous plants through field observation - most within their ecological context. The second part of the course consists of lectures introducing the essential roles that landscape architects play as they interact with ecosystems in the landscape at a variety of scales. Here, students are introduced to ecosystem disturbance, the water cycle, issues related to water in the urban landscape, restoration ecology, ecological restoration, and landscape ecology. Finally, students are presented with a series of
case studies that demonstrate how landscape architects, with allied professionals, work to apply ecological principles in build design projects. Knowledge gained in LARCH 145 will be applied throughout the remainder of the landscape architecture curriculum.

LARCH 155: Skills Lab I: Hand & Digital Graphics

2 Credits

Landscape Architecture Skills Lab 1 is the skills lab that runs concurrently with the first design studio in the undergraduate Landscape Architecture curriculum. This skills lab introduces students to the fundamentals of visual communication in landscape architecture with a primary focus on 2D and 3D raster and vector drawing. Spatial design composition is developed through experiencing a variety of approaches to visual communication. Students explore design ideas through sketching in plan, section and perspective and by modeling their ideas in three dimensions. Students are introduced to skills from hand drawing to digital visualization techniques, as well as board and page layouts and effective implementation of photographs in design communication.

Corequisite: LARCH 115

LARCH 156: Skills Lab II: Hand & Digital Graphics

2 Credits

Landscape Architecture Skills Lab 2 is the skills lab that runs concurrently with the second design studio in the undergraduate Landscape Architecture curriculum. This skills lab will develop students at the intermediate level of visual communication in landscape architecture with a primary focus on 2D and 3D raster and vector drawing. Spatial design composition is developed through experiencing a variety of approaches to visual communication. Students explore design ideas through sketching in plan, section and perspective and by modeling their ideas in three dimensions.

Prerequisites: LARCH 155 Corequisites: LARCH 116

LARCH 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

LARCH 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

LARCH 215: Design III: Site Design

4 Credits

Landscape Architecture Studio 3 - the third design studio in the undergraduate Landscape Architecture curriculum - follows LARCH 116 (Spatial Design) and further explores site design through expanded complexity of site and program. Students are presented with design projects that include more extensive and complex programs and a broader range of site scales, existing conditions and contexts. Projects also expand the extent and complexity of pedestrian and vehicular circulation. These expanded site and program considerations require students to consider a broader range of design responses while building skill in site design. Throughout the semester, students will continue to develop skills in graphic representation and visualization to explore design ideas and develop presentation graphics. Students are expected to draw upon visualization skills developed in the concurrent LARCH 255.

Prerequisite: LARCH 116 Corequisites: LARCH 255

LARCH 216: Design IV: Expanded Use, Scale, and Context

4 Credits

Landscape Architecture Studio 4 - the fourth studio in the undergraduate Landscape Architecture curriculum - follows LARCH 215 and introduces students to the broader perspective of landscapes as expressions of cultural and natural processes. Theories, methods, and tools for effectively studying and analyzing larger scale landscapes will be explored through readings and studio assignments. Students will be presented with landscapes in different geographic contexts and develop skills in conducting landscape research and analysis and using appropriate tools and techniques for effectively exploring alternative land use scenarios. In support of the expanded complexity of working at a larger scale, students are expected to draw upon their knowledge of ecology and ecosystems from previous coursework (LArch 145 and 245). Students will also draw upon precedent studies they may have conducted in landscape architecture history (LArch 060) and previous design studio courses. Students enrolled in LARCH 216 will be concurrently enrolled in the associated skills course (LArch 256) that will develop their knowledge and skills with the tools of landscape planning, specifically geographic information systems (GIS). In addition, students will continue to develop skills in graphic representation and written and oral communication as a means to disseminate their planning and design proposals for review and discussion.

Prerequisite: LARCH 245, LARCH 215 Corequisites: LARCH 256

LARCH 221: Design Theory Seminar

1 Credits

Inquiry-based reading and discussion of design theory literature relevant to the focus and content of LARCH 211. LARCH 221 Design Theory Seminar (1) Each of the four design studios that constitute the core of the professional curriculum has a companion seminar that provides the vehicle for structured exploration of the theoretical and philosophical framework within which we design and plan. The seminar is a small group setting where directed readings, independent research and reflection are employed to explore the context of contemporary design. LARCH 221 is the first of a four-class sequence of design seminars. LARCH 221 is focused on landscape architectural design. Landscape architectural principles and issues are introduced through studies of design precedents, corollary readings in the sociological, psychological and cultural contexts of design and small-group discussions - the latter frequently related to topics under investigation in the companion studio, LARCH 211. As the curriculum progresses, the issues explored become increasingly complex and build upon prior seminars. The second-year theory seminar content is introductory in nature. The fall semester (LARCH 221) covers introductory writings addressing the broadest principles of landscape design processes, discussions of fundamental ordering principles, and philosophical positions on the interrelationships of landform, plants and structure. They introduce place-awareness through concepts such as genius loci, ordering principles such as the golden section, and experiential responses to landscape from phenomenological viewpoints. Course Objectives:- To become familiar with important issues in contemporary landscape architecture.-
To exercise and hone skills in critical thinking. To exercise and hone skills in speaking and writing persuasively. To begin to explore the issues that impinge upon and shape, ‘place.’

**Prerequisite:** LARCH 112; Concurrent: LARCH 211

LARCH 222: Design Theory Seminar

1 Credit

Inquiry-based reading and discussion of design theory literature relevant to the focus and content of LARCH 212. LARCH 222 Design Theory Seminar (1) LARCH 222 is the companion seminar to the design studio LARCH 212. The seminar is a small group setting where directed readings, independent research and reflection are employed to explore the context of contemporary design. Topics in LARCH 222 reflect the projects being explored in the companion studio but, in general, move beyond exploration of basic design concepts to include an emphasis on both natural and cultural elements of place and provides essential background to the processes and principles of site analysis in as much as those reflect the technological and cultural biases that are brought to design. Landscape architectural principles and issues relevant to the design topics being pursued in LARCH 212 are introduced through studies of design precedents, corollary readings in the sociological, psychological, and cultural contexts of design and small-group discussions - the latter frequently related to topics under investigation in the companion studio, LARCH 212. As the curriculum progresses, the issues explored become increasingly complex and build upon prior seminars. The second-year theory seminar content is introductory in nature. The spring semester (LARCH 222) continues to cover introductory writings addressing the broadset principles of landscape design processes, discussions of fundamental ordering principles, and philosophical positions on the interrelationships of landform, plants and structure - increasingly in the context of the design types being explored in LARCH 212. They introduce place-awareness through concepts derived from sociology, social psychology and cultural anthropology.

**Course Objectives:**
- To increase familiarity with important issues in contemporary landscape architecture.
- To continue to develop skills in critical thinking.
- To continue to build skills in speaking and writing persuasively.
- To bring focused attention to the issues that impact the design of small, private and public spaces.

**Prerequisite:** LARCH 211, LARCH 221; Concurrent: LARCH 212

LARCH 235: Design Implementation I: Grading

3 Credits

Introduction of basic principles and tools supporting landform data, site systems, grading, visualization representation and site circulation. LARCH 235 Design Implementation I: Grading (2) As an introductory design implementation course, this course provides the foundation for site design in landscape architecture. At the core of the course are four general bodies of knowledge: Geometrics, Landform Manipulation, Site Systems, and Computer Applications for Site Analysis and Design. Geometrics: In order to perform landform manipulation, students must be able to efficiently acquire and process basic physical information about a site and are required to understand a suite of measurements. This course will first provide an overview of the digital and paper data sources available to landscape architects. Students will develop basic skills in manipulating or processing these data in order to comply with the requirements of site design. The course will also provide the basic measurements and formulae required for students to efficiently and accurately manipulate landforms. Landform Manipulation: One of the most critical skills landscape architects must acquire as designers is the ability to design landforms to accommodate changes in use and to translate their design ideas into dimensionally precise topographic representations of their designs. This course provides the basic knowledge for students to complete this process. Beginning with a single site element, students are expected to explore the suite of opportunities to place and modify a site to fit a single site element. Increased complexity is added to the suite throughout the remaining portions of the semester, thus enabling students to balance the opportunities and constraints presented by each individual design element and the overall site design. Site Systems: Building on ecological components of the curriculum, this course provides the first site specific and physical understanding of basic site systems critical to every landscape architect’s design. Students will primarily focus on the major site features as related to site drainage, such as soil, topography, and surface geology, but will also be expected to recognize regional context in their designs. Computer Applications for Site Analysis and Design: A central component underlying the instruction of the course is providing students with a suite of computer tools. Course objectives: a) To assist in initial efforts in acquiring and processing site data; b) To perform calculations such as cut and fill, spot elevations, and slope calculations; c) To visualize and complete basic manipulation of landforms; d) To understand the interaction of physical site features on individual sites (e.g., soil and topography); and e) To communicate their final site designs according to professional standards.

**Prerequisite:** LARCH 116 Concurrents: LARCH 255

LARCH 236: Design Implementation II: Materials

3 Credits

The landscape architect calls upon a rich array of materials to construct the built elements of landscape: walls, ground surfaces, overhead structures and furniture systems. The functional success and durability of many historical and traditional construction methods is based on a learned appreciation of the qualities and behaviors of materials in use in the landscape. Students develop understanding of the fundamental structural qualities of materials and use that knowledge to devise and illustrate their own design details. The same understanding of material behaviors will be used to investigate the qualities of novel construction materials, and will guide the development of construction details that respond to new constraints and opportunities. The main focus of 236 will be on materials and construction detailing, with emphasis on techniques appropriate for an array of design situations. Representation of design ideas using computer-aided-drafting is expected in this class.

**Prerequisite:** LARCH 235

LARCH 245: Ecology & Plants II

3 Credits

This course applies knowledge gained in LARCH 145 by emphasizing planning and design based upon a systems approach to plants, soil and water. The course consists of lectures, campus walks, guest lectures and one day-long field trip to a public garden. The lectures and campus walks focus upon the identification of native plants in the landscape. Guest lectures cover additional, related topics. Students learn about specific native plants and plant communities as the basis for ecological planting design in reference to the ways these plants adapt to local climate, soil and hydrologic regimes. The use of native plant communities in planting design as practiced in this course also promotes the conservation and restoration of biodiversity and the promotion of human wellbeing. It can
minimize the use of fertilizer, irrigation, and costly maintenance regimes. Students are also introduced to landscapes that have been shaped by the interactions between people and their environment. The use of native plant communities can be part of the preservation and re-creation of important vernacular and historic cultural landscapes. Native plant communities express the identity and beauty of place. A primary goal of the course is to develop students' understanding of the values and uses of native plant communities toward achieving sustainable solutions to the problems of environmental degradation, resource scarcity and global climate change. Course assignments are linked directly to this goal by providing students with experience in designing landscapes where natural processes can function effectively.

**Prerequisite:** LARCH 145

LARCH 246: Ridge & Valley in the Field

1 Credits

LARCH 246 Ridge & Valley Field Study explores the intrinsic links between landform, geophysical and biological processes, vegetation communities, and human manipulation of the landscape through time. It comprises a series of four one-day trips to select locations across our local Ridge & Valley landform region (Appalachian Mountain section), providing the opportunity to examine phenomena at the site level, particularly plants, soils, and landscape contexts. The field experience is immediately preceded by a few skills-building preparatory activities (e.g. workshop(s), test) to establish basic competencies and fore-knowledge. An essential tenet of the course is that layered and interconnected landscape systems learning is something all landscape architects should pursue in their region of practice. Every place possesses a particular relationship between the underlying geology, climate, hydrology, landform, soils, and the plants and animals that inhabit it. Understanding this relationship and learning how to analyze and interpret landscapes is important to all spatial design work as a source of essential information and as a source of design inspiration. The Ridge & Valley region contains an especially clear, distinct and 'readable' relationship between the geophysical and the biological—between the geological underpinnings and the plants and animals that inhabit the surface. This makes the Ridge & Valley an outstanding context to learn how to observe these important, sometimes subtle, relationships. Once students understand what to look for and how to observe a landscape, they can apply this method to any landscape in the world. The conditions change from place to place, but the method is transferable.

**Prerequisite:** LARCH 245

LARCH 255: Skills Lab III: Digital Graphics

2 Credits

Landscape Architecture Skills Lab 3 is the skills lab that runs concurrently with the third design studio in the undergraduate Landscape Architecture curriculum. This skills lab will develop students at the advanced level of visual communication in landscape architecture with a primary focus on 2D and 3D raster and vector drawing. Spatial design composition is developed through experiencing a variety of approaches to visual communication. Students explore design ideas through sketching in plan, section and perspective and by modeling their ideas in three dimensions.

**Prerequisite:** LARCH 151 Corequisites: LARCH 215

LARCH 256: Skills Lab IV: GIS

2 Credits

Landscape Architecture Skills Lab 4 is the skills lab that runs concurrently with the fourth design studio in the undergraduate Landscape Architecture curriculum. This skills lab will introduce geographic information system (GIS) as a primary tool in regional analysis and planning. The students will learn to integrate GIS into a broadly-based approach to managing data, developing concepts, and communicating ideas.

**Prerequisite:** LARCH 255 Corequisites: LARCH 216

LARCH 276: Human Dimensions of Design: History & Theory

3 Credits

The human dimensions of placemaking must consider the types of places people populate. New to civilization, the 21st century has been characterized as the urban century. More people live in urban areas than in rural areas, and this trend is expected to continue especially in Asia and Africa. This course will primarily focus on examining social and cultural issues in landscape architecture and planning. The course will explore rural, urban, and extra-urban sites, the inclusivity and exclusivity of American spaces, and issues of gender and diversity of landscapes. The course will balance lectures, readings, and student presentations. Students will be introduced to methods to identify socio-cultural issues in landscape design, planning, and placemaking.

LARCH 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

LARCH 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

LARCH 315: Design V: Expanded Use, Scale, and Context

4 Credits

Landscape Architecture Design Studio V - the fifth design studio in the undergraduate Landscape Architecture curriculum - follows LARCH 216 and introduces community and spatial design that accommodates civic and public functions while addressing social and environmental imperatives. It also expands on site design and program that creatively reconciles community-based (i.e. residential and/or public space) agendas. In support of focused explorations of community-oriented design, students are expected to draw on their knowledge of regional and landscape systems from LARCH 216, as well as site design in LARCH 215. In designing public spaces that lie at the heart of thriving communities, students are also expected to draw on technical skills in grading, materials, and planting acquired the implementation sequence. Throughout the semester, students will continue to develop skills in graphic representation and visualization to explore design ideas and develop presentation graphics. Students are expected to draw upon visualization skills developed through the skills lab sequence.
Prerequisite: LARCH 216

LARCH 321: Design Theory Seminar

1 Credits

Inquiry-based reading and discussion of design theory literature relevant to the focus and content of LARCH 311. LARCH 321 Design Theory Seminar (1) LARCH 321 is the companion seminar to the design studio LARCH 311. The seminar is a small group setting where directed readings, independent research and reflection are employed to explore the context of contemporary design. Topics in LARCH 321 reflect the projects being explored in the companion studio. During the third year, theory references build upon the second-year experiences and expand to broader regional investigations. The fall semester (LARCH 311 and 321) covers regional context as a preamble to large-scale master planning in land-use issues. In the seminar, students read broadly about the genesis of regional context as a construct of cultural, as well as biophysical influences. The concept of ‘reading’ the landscape is fully explored, introducing students to the clues and cues by which the origins of the existing landscape can be discerned. Themes in the third-year theory seminars become increasingly sophisticated. The regional landscape is the setting for some of our most pressing public debates - landscape restoration vs. agro-industry; landscape as economic resource vs. spiritual renewal; landscape as repository of cultural history vs dynamic reflection of current values. These themes are explored through readings that include the fundamental influences of topography; geology; regional ecology and hydrology; the human overlays of land use; transportation; demographics; and the cultural influences and responses seen in landscape history, cultural and visual analysis, etc., are introduced. Course Objectives: - To explore the political and philosophical influences that shape the regional landscape. - To expose students to important debates on the future of the regional landscape. - To continue to develop the ability to engage in public debate of these issues. - To continue to build skills in speaking and writing persuasively.

Prerequisite: LARCH 241, LARCH 212, LARCH 222; Concurrent: LARCH 311

LARCH 322: Design Theory Seminar

1 Credits

Inquiry-based reading and discussion of design theory literature relevant to the focus and content of LARCH 312. LARCH 322 Design Theory Seminar (1) LARCH 322 is the companion seminar to the design studio LARCH 312. The seminar is a small group setting where directed readings, independent research and reflection are employed to explore the context of contemporary design. Topics in LARCH 322 reflect the projects being explored in the companion studio. During the third year, theory references build upon the second-year experiences and expand to broader regional investigations. The spring semester (LARCH 312 and 322) covers site design issues within a regional context. In the seminar, students gain an understanding of communities and the complex of values that shape them, including the interrelationships of natural, cultural and economic factors on the future development of communities. Habitat management, watershed management, real-estate values, zoning and planning ordinances, individual and community rights are topics of discussions in this seminar. Students develop awareness that even small, individual site design requires an understanding of larger environmental and cultural contexts, and that success in planning at that large scale depends on implementation of wise planning at the site scale. Readings and discussion are supplemented by research and report writing that address contemporary debates on policy and planning. LARCH 322 also provides a setting for joining ideas presented in the context of both small-scale and large-scale design to engender in students a comprehensive view of the world of landscape design as an integrated whole where concepts developed at small scale become the framework and guiding principles for larger scale, vice versa. Course Objectives: - To explore students’ values as they shape the designed landscape. - To expose students to important debates on the future shape of the inhabited landscape. - To continue to develop the ability to engage in public debate of these issues. - To continue to build skills in speaking and writing persuasively.

Prerequisite: LARCH 311, LARCH 321; Concurrent: LARCH 312

LARCH 335: Design Implementation III: Planting Methods

3 Credits

This course is the fourth of four studio courses in the implementation sequence, all of which focus upon the more technical aspects of landscape architectural practice. By means of lectures, studio problems, assigned readings, and computer courseware, LARCH 335 will present the principles and techniques of: Advanced Landform Design and Site Grading - integration of landform and structure through iterative grading design process; water flow and surface drainage. Site Systems and Stewardship - soil, water, and vegetation interactions and ecology; site protection; site systems management; environmental responsibilities and stewardship. Hydrology and Stormwater Management - basic site hydrology; overview of hydrology and stormwater management concepts, infiltration; surface runoff calculations, surface and subsurface drainage systems design. Production of technical drawings using computer-aided-drafting is expected in this class.

Prerequisite: LARCH 335, LARCH 315

LARCH 365W: Contemporary Trends in Landscape Architecture

3 Credits

LARCH 365W, Contemporary Trends, is a writing-intensive course that enables a more thorough investigation of social, environmental and cultural issues as they relate to design. The course is grounded in three basic concepts: RESEARCH, COMMUNICATION, and theoretical CONTEXT within the discipline of landscape architecture, past and present. The course develops the skills of critical thinking and writing as pertains to contemporary issues in landscape architecture, with
an understanding of precedent and evolution of design theory. The goal of this course is to introduce students to a variety of ways that contemporary landscape architects address and use these issues in their work, and to develop their skills in critical thinking, the art of critique, and communicating ideas in both verbal and written methods. The course is devoted to a wide range of relevant issues and topics confronting the profession and discipline of landscape architecture in the 21st century. It investigates the modern designed landscape as a distinct mode of cultural production—with its own materials, medium, codes, ethics, and concerns—in the context of landscape architectural theory’s interconnection to evolving societal constructions of nature, social issues, environmentalism, and the city. It begins with the emergence of a modern sensibility about landscape in the late 19th century and tracks developments through modernism, postmodernism, and beyond. Information dissemination will be by lectures, readings, student research in the form of monographs and critique of built work.

**Prerequisite:** LARCH 60

**Writing Across the Curriculum**

**LARCH 375: Human Dimensions of Design - Applied**

3 Credits

Within the practice of landscape architecture, it is critical for designers to consider and integrate the human dimensions of place. Students will continue to learn to identify human dimensional issues and better understand the context of socio-cultural, sometimes controversial or emotionally charged issues in the landscape. This course will focus upon the practice of solving such issues in a contemporary context. The course will explore a variety of tools and strategies for problem solving in human dimensions of design and will teach the students that there are multiple approaches to understanding and solving complex design problems. The students will integrate theory and apply methods as they work through a series of different problems that allow them to apply design thinking to complicated socio-cultural issues. Through a series of exercises and participatory engagements, students will practice making decisions that affect community change through the perspective of design.

**LARCH 386: Professional Practice**

3 Credits

An investigation of current professional and business practices in the field of landscape architecture. For Landscape Architecture majors only. LARCH 386 Professional Practice (3) LARCH 386 has a three-part role. It comprises an introduction to the variety of practice opportunities in landscape architecture, their opportunities and drawbacks; it provides an introduction to critical office management practices; and it assists students in the employment application process through coaching on interview technique and guidance on the preparation of supporting material. It is the overarching intent of this course to help students understand what it will mean to be a professional practicing a constantly changing marketplace of ideas. Topics covered include ethics, public relations, office and project-related practices, personal and professional development, and legal aspects of practice: contracts, specifications, liability insurance. Through active participation in the course, students will come to realize the diversity inherent in the profession. Course objectives: - To introduce a range of practice types, including: small, private practice, large-scale corporate practice, federal and state agencies, not-for-profit organizations, and other non-governmental organizations; - To discuss relations with other professionals, including the formation of teams and other strategic alliances, and negotiation of professional fees; - To outline and illustrate the various roles and responsibilities individuals might have both in and outside of an office, including situations of personal vs corporate responsibility; and - To investigate the inherent values or point of view of principals and others that effect how decisions are made and change occurs.

**Prerequisite:** LARCH311

**LARCH 400: Introduction to Design and Theory (IUG)**

5 Credits

Introductory landscape architectural design and applied theory for IUG students.

**Prerequisite:** admission to the IUG program; Concurrent: LARCH400A

**LARCH 405N: Bicycling Culture and Urban Design**

3 Credits

KINES 405N, a study abroad course, based in a bicycle friendly European city, provides students with an opportunity to experience the programs, policies, infrastructure (including urban design features) and culture associated with bicycling in what is one of the most bike-friendly cities in the world. Students will have an opportunity to be immersed in the city's bicycle culture, observe bicycle infrastructure and multi-modal transportation solutions, learn from programs and policies that support bicycling and learn about the role of bicycling in sustainable, liveable communities. This course will be taught from a multi-disciplinary perspective to address the complex issues associated with bicycling. Students are expected to apply information and content to other countries and communities.

**Prerequisite:** KINES 100 or LARCH 121 or ( 5th Semester standing and ( 3 credits of CAS or 3 credits of ENGL)

Cross-listed with: KINES 405N

International Cultures (IL)

General Education: Arts (GA)

General Education - Health and Wellness (GHW)

General Education - Integrative: Interdomain

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

**LARCH 414: Design and Theory V: Advanced Landscape Architectural Design**

5-15 Credits/Maximum of 15

Review of landscape architectural theories and issues; supports development of comprehensive design study and/or independent honors (Thesis-Based) design projects. LARCH Majors only. LARCH 414 Design and Theory V. Advanced Landscape Architectural Design (5-15) Fourth- and fifth-year design studios are designated 'depth' studios. Each studio is aligned with one of the department's associated research centers or programs, and students are expected to be immersed in the studio to studio. This allows students to select a topic of interest to explore with great intensity and detail. The studio alternatives offered
each year are based on faculty expertise and student interest, and are chosen by the department head's review of faculty proposals. To date, studio topics have ranged from historic preservation to recreational landscapes, urban ecology to community planning. The type of project is determined on an individual basis, and will be rigorous and require a high level of depth of thought and a sophisticated product. Project types include regional master planning, large-scale site planning and medium-scale community/housing design. The design issues emphasize urban form, community identity and open-space systems in the United States as a follow-up to urban patterns experienced during the student's previous study abroad. The project types may include such topics as inner-city locations with mixed-use and complex programs that progress from research and planning to site-scale design. Often, students work with an actual client, such as an urban planning commission or a city economic development entity, etc. Issues of urban form as a setting for significant practice opportunities are emphasized. Locations such as brown fields, urban entertainment districts, waterfronts, housing infill, etc., form the basis for design response in context. Course Objectives: -To develop an in-depth understanding of one or another aspect of landscape architecture. -To be exposed to the rigor and challenges of developing and implementing one's own design expertise in the context of a specific environmental concern. -To exercise the design principles, technological tools and communication strategies developed during the course of the specific design studies.

Prerequisite: LARCH312, LARCH322

LARCH 424: Design Theory Seminar

3 Credits/Maximum of 9

Inquiry-based reading and discussion of design theory literature relevant to contemporary landscape architecture issues. Topics vary each semester. LARCH 424 Design Theory Seminar (1-3) LARCH 424, Design Theory Seminar, is a companion to the depth studios, LARCH 414. However, unlike the seminars offered during second and third years, LARCH 424 is not tied topically to any particular depth studio. Instead, this seminar provides a vehicle for rigorous and structured exploration of the theoretical and philosophical issues that face landscape architectural designers and planners. The seminar is a small group setting where directed readings, independent research and reflection are employed to explore the context of contemporary design. These seminars, offered to fourth- and fifth-year students, enable professors and students to take their investigations to greater depth. Seminars are offered by different professors each semester and the content is expected to be somewhat aligned with the faculty member's research and scholarship or pursues special landscape architectural topical content of the faculty's choosing. Students select seminars from the range of options offered. This allows students to select a topic of interest to explore with great intensity and detail. Students are required to take up to three seminars to achieve a minimum of three credits. Topics are related to issues that have been introduced in previous studios and seminars and the department ensures that students have access to the widest range of topics. The seminar alternatives offered each year are based on faculty expertise and student interest, and are chosen by the department head's review of faculty proposals. Seminar topics related to our research centers include historic preservation, urban ecology, community planning and watershed stewardship. From time to time topics independent of our research centers, such as the impact of technology on design or the impact of public policy on design and planning, will be addressed. The type of seminar outcome is determined by instructors on an individual basis, and will be rigorous and require a high level of depth of thought and a sophisticated product. Course Objectives: -To further develop an in-depth understanding of the theoretical or socio-political context for one or another aspect of landscape architecture. -To challenge students to articulate their own values in the context of a specific environmental concern. -To examine the means by which designers reconcile their own, their clients', and society's values in the pursuit of particular design or planning goals.

Prerequisite: LARCH312, LARCH322

LARCH 450: Geodesign: Geospatial Technology for Design

3 Credits

Interactive geodesign and digital design studio. LARCH 450 Geodesign: Geospatial Technology for Design (3) This course addresses the role of continually evolving information technologies in landscape architectural research and practice by reference to long legacy of theoretical contributions from the field that have sought to reconcile and benefit from integrating the sciences of society and environment with art, design, and planning. This interactive digital design course is an advanced geodesign methods and principles class that applies digital tools to landscape research, modeling, analysis, and design. This course presents a digital process for analyzing, managing, and ultimately designing landscape systems by allowing students to inventory, analyze and evaluate complex spatial datasets. Students will learn to critically evaluate and implement the interplay between various factors and design alternative futures. Lectures will introduce key geodesign principles and techniques. The goal is to investigate an array of geospatial software as a powerful design tool in a broad and integrated manner for all the activities of the landscape architect, designer, planner and architect. Using a variety of geospatial and digital tools, students will develop a process to study, analyze, and plan landscape systems. They will utilize activities from each lesson to develop primary and alternative strategies for their proposed project. The problem-based approach used by this course will encourage cross-cultural contexts for student projects. Geospatial design computing technology enables many alternate approaches to problem-solving, so that students will customize their own learning experiences within the concrete structure of the course. This course brings advanced geospatial and digital analysis and evaluation into the design process, where concepts and ideas are vetted for suitability against a wide array of physical and social, place-based information. This on-the-fly suitability analysis provides a framework for design, giving landscape architects, architects, land-use planners, and others involved with design the tools to directly leverage geospatial information within their design workflows.

LARCH 494: Research Projects - Honors

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

LARCH 495: Internship

1-13 Credits/Maximum of 13

Supervised off-campus, non-group instruction including individual field experiences, practicums or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor
LARCH 496: Independent Studies  
1-18 Credits/Maximum of 18  
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

LARCH 496H: Independent Studies - Honors  
1-18 Credits/Maximum of 18  
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses. Honors

LARCH 497: Special Topics  
1-9 Credits/Maximum of 9  
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

LARCH 499: Foreign Studies  
1-12 Credits/Maximum of 12  
Courses offered in foreign countries by individual or group instruction. International Cultures (IL)

LARCH 499A: Design Theory Seminar  
1 Credits  
Inquiry-based reading and discussion of design theory literature relevant to the focus and content of the associated design studio course, LARCH 499B. LARCH majors only.  
Prerequisite: LARCH361W; Concurrent: LARCH499B, LARCH499C, LARCH499D  
International Cultures (IL)

LARCH 499B: Design and Theory VI: Contemporary/International Landscape Architectural Design Issues  
5 Credits  
Study of and design for sites, programs, and social groups associated with ongoing contemporary landscape architectural concerns. LARCH majors only.  
Prerequisite: LARCH312, LARCH361W; Concurrent: LARCH499A, LARCH499C, LARCH499D  
International Cultures (IL)

LARCH 499D: Contemporary/International Special Topics  
3 Credits  
Special topics related to, and study in conjunction with 499B. Landscape Architecture majors only.  
Prerequisite: LARCH361W, Concurrent: LARCH499B  
International Cultures (IL)

Language and Literacy Education (LLED)

LLED 5: College Reading Improvement I  
3 Credits  
Improvement of basic reading skills: vocabulary development; literal and interpretive comprehension; application of these skills more efficiently into college work.  
Prerequisite: limited to students whose academic profile sheets indicate help in reading is needed

LLED 10: College Reading Improvement II  
3 Credits  
Development of higher level comprehension, vocabulary, and study skills incorporated into content area reading.  
Prerequisite: LLED005

LLED 215N: Children's Picture Books as Multimodal Texts  
3 Credits  
Children's picture books are often described as fundamental in nurturing the development of young children into engaged readers and fearless writers. Many adults have a special place in their hearts for picture books they loved as children; books they read over and over again, books that spoke to their hearts and minds, and books that helped them figure out the mystery of written language. In this inter-domain course, we will take a close look at children's picture books and explore their magic through integrating humanities and the arts. We will read many, many books of different genres to examine how the written text and illustration work together to compose a work of art that we read, understand, enjoy and connect to. We will explore the criteria by which we judge the literary and artistic quality of picture books and will become acquainted with resources that can help us find exceptional books. We will also consider the significance of children's literature representing diverse perspectives and will work to deconstruct the values and biases implicit in texts written for young children. Much of the course will be organized in a workshop format through which we will learn about the authoring and illustrating techniques and processes used by notable authors and illustrators of modern children's picture books, while also experimenting with the same techniques through drafting and developing our own picture books. Our end goal will be to thoughtfully weave linguistic and visual composition elements to craft original multimodal texts for children.

General Education: Arts (GA)

General Education - Integrative: Interdomain  
GenEd Learning Objective: Crit and Analytical Think  
GenEd Learning Objective: Integrative Thinking  
GenEd Learning Objective: Key Literacies
LLED 235: Chinese Culture in Child Lit

3 Credits

Children’s literature reveals how a culture imagines itself and offers a window into other cultures for young readers. What a child reads and what is read to the child shows the values the child’s nation holds dearly. However, in this rapidly changing world, national culture is fluid, ever changing and mixing with other cultures. Being a global citizen and a potential educator for children requires some level of familiarity with a diverse array of cultures. This course will introduce you to traditional Chinese culture and explore its representations in western children’s literature. The class will first delve into the works of Confucianism, Taoism, and Buddhism adapted for children. You will study the impact of these intellectual schools in Chinese society and develop a broad and coherent understanding of Chinese cultural values. From there, the class will examine western children’s literature, focusing on voices that echo with or differ from Chinese culture. For example, Ursula K Le Guinn, author of the Earthsea fantasy series, claims that her work was inspired by the Taoist ideas of balance and equilibrium. Other western authors may not claim as fans of Chinese thinking, however, their works clearly echo with Chinese values and thus have been received by Chinese parents and children warmly. For instance, Winnie-the-Pooh is a model of a western Taoist, as observed by Benjamin Hoof, the author of The Dao of Pooh, for Pooh’s simplicity and non-action. The spider in Charlotte’s Web exemplifies the Confucian ideal of being faithful to friends. The Little Prince plays the mystery of Buddhist nirvana. Some western ideas may seem strange in traditional China such as the idea of the Savior. However, this idea has now become well-known through Aslan the Lion created by C. S. Lewis in The Lion, the Witch and the Wardrobe. Since the early 20th century, western literature has quietly entered and enriched Chinese culture. By expanding your knowledge of traditional Chinese values, you will develop new perspectives to western children’s literature. In the second half of the semester, you will write and illustrate a picture book embedded with your understanding of Chinese culture. You will design a curriculum appropriate for a preschool or early elementary classroom. Doing so, you learn how to help children appreciate different cultures, enhance their critical thinking through literature, and become aware of the connectedness among humans across the world.

General Education: Humanities (GH)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

LLED 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

LLED 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

LLED 298: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

LLED 400: Teaching Reading in the Elementary School

3 Credits

Introduction to the reading program; acquaintance with materials and techniques; observations of reading instruction; correlation with human growth and development. LLED 400 Teaching Reading in the Elementary School (3) LLED 400 is intended to help teacher candidates become knowledgeable users of theory and about language, literacy and culture; and to think through instructional problems thoroughly, using multiple sources of information to experiment with alternative solutions. Dealing specifically with reading, we recognize that text goes beyond print texts to include multimodal visual, auditory, digital, movement, and artifactual texts. In LLED 400, candidates learn to understand how children develop as readers and users of literacies in and out of school. Candidates learn how to teach in ways that support children’s successful development and uses of multiple kinds of literacy, including reading. Literacy teaching is both an intellectual and practical matter in which teachers work with students in ways that recognize the complexities of language and its social uses, learning and its cultural contexts, and schooling as organizational phenomena. Children enter schools with multiple types of literacy knowledge and cultural experiences. Coming to understand these complexities requires the coordination of both theoretical awareness and applied knowledge. Candidates’ practice is developed as they learn to address the puzzles children present as they construct their knowledge of language, literacy, and literature in various social situations. Developing practical strategies to teach literacy requires a dedication of head, hand, and heart to treat all people with dignity, acknowledging the contributions of all cultural groups and respecting diversity as it honors ideals of social justice. In LLED 400, teacher candidates develop a repertoire of organizational, instructional, and evaluative strategies that are based on research and best professional practices. Candidates work on projects independently and in collaborative groups. Content is presented by the instructor through a combination of lectures, weekly readings and reflections on readings, class discussion, activities and demonstrations, and viewing and analyzing video. Projects include an analysis of children as readers and curriculum planning. A field experience connected to LLED 400 and LLED 401 affords teacher candidates the opportunity to inquire about children’s encounters with literacy in elementary grade classrooms. LLED 400 is part of a block of courses in a PSU teacher education program that is unified by the basic set of principles supporting the development of a broader and more inclusive understanding of texts, children, and communities.

Prerequisites: CI 295A and EDTHP 115 Corequisites: LLED 401, LLED 402, CI 460

LLED 400H: Teaching Reading in the Elementary School

3 Credits

Introduction to the reading program; acquaintance with materials and techniques; observations of reading instruction; correlation with human growth and development.

Honors

LLED 401: Teaching Language arts in Elementary School

3 Credits

Principles, problems, materials, and techniques involved in teaching speaking, listening, writing, and reading in the elementary school. LLED 401 Teaching Language Arts in Elementary School (3) The purpose
Prerequisites: CI 295A or EDTHP 115 Corequisites: LLED 400, LLED 402, CI 460

LLED 402: Teaching Children’s Literature
3 Credits

Survey of children’s literature with an emphasis on the importance of literature in the development of the elementary school curriculum. LLED 402 Teaching Children’s Literature (3)The purpose of LLED 402 is to familiarize teacher candidates with different theories and practices of teaching literature. Candidates are immersed in the study and experiences of literature and strategic models of literature instruction. Understanding that belief systems inadvertently determine the models of literature instruction educators adopt. LLED 402 asks candidates to be mindful of the diverse nature of our communities, and encourages them to strive to create literary communities that respect, value, and encourage multiple modes of expressions. The basic course goals are to help candidates to understand the importance of story in all human lives; to exhibit a wide repertoire of flexible strategies for interpreting literature; to understand socio-cultural influences upon writing and literature; to know and be able to use basic reference tools and selection guides for research; to become familiar with different genres, diverse texts, and styles; to read for sequence and for secrets; to articulate responses to literature across a variety of media; to weave into the exploration of each of these goals a struggle to understand and to accept human difference; and to understand the role that literature plays in the school curriculum. The course presents theories of teaching literature and models of literature instruction that place at the center socio-cultural practices typical of democratic literary communities. This requires knowledge of how literature and texts work in real life and in a variety of social and cultural contexts. Informed by research, standards and current practices, LLED 402 exhibits the power of literature, the complexities of students’ learning and experiences with texts, and the problem solving character of teaching. LLED 402 is part of a block of courses in a PSU teacher education program that is unified by the basic set of principles supporting the development of a broader and more inclusive understanding of texts, children, and communities. 

Prerequisite: CI 295A or CI 295B; EDTHP 115 or EDTHP selection; Concurrent: LL ED400, LL ED401 for CEAEED majors

LLED 411: Teaching Language Arts In Secondary Schools I
3 Credits

Exploration of language, literacy, and culture and development of curricular designs for teaching language arts in secondary schools. LL ED 411 is designed to provide pre-service secondary English and communications teachers with the foundational experiences for inquiry into the relationships between language, literacy, and culture. Participants reflect upon personal experiences with language and school, examine secondary education perspectives in pedagogical and philosophical terms, build supportive relationships with colleagues to develop the best curricular and instructional decisions, explore the social, psychological, political, and economic aspects of language use and literacy practices in a country with diverse cultures, explore the construction of meaning and knowledge by the use of language and other symbolic systems of representing and sharing experience. A strong emphasis is placed upon the teacher as collaborator, risk-taker, and researcher, who tries new ideas, documents the classroom experience that results, and shares reflections with colleagues to help construct the best understanding for teaching language arts in secondary schools. Course work involves extensive reading, the production of artifacts of a variety of types (written, performed, multi-media) such as journals, reviews, viewpoints, and original research, all done by both individuals and small groups to pursue the course objectives.

Prerequisites: 5th Semester standing Recommended Preparation: Entrance to SECED major or graduate certification program

LLED 412W: Teaching Language Arts in Secondary Schools II
3 Credits

Exploration of language, literacy, and culture and development of curricular designs for teaching language arts in secondary schools. LL ED 412W Teaching Language Arts in Secondary Schools II (3)This three-credit course addresses the theory, practice, and implications of teaching the English language arts at the secondary level. The course is the discipline-specific component of the Secondary Education block taken by majors in Secondary Education prior to student teaching. In this course, students explore issues in language, literacy, and culture and development of curricular designs for teaching language arts in secondary schools. Through in-class and out-of-class activities completed both independently and in collaboration, students read about, talk about, and practice teaching all of the language arts-reading, writing, speaking, listening, and thinking. Activities highlight ways of planning for instruction and ways of assessing student learning as teachers implement those plans. In addition, students will take up the professional issues facing beginning teachers of the English language arts-issues of professionalism and the teaching role, relationships with students, and how teaching can fit into a life. The course builds upon content developed in other courses in the major, including theories of reading, composition, media literacy, and pedagogy. Students engage in a variety of writing tasks both in support of developing course content and as a means of making their work public. This writing includes (but is not limited to) lesson planning, reflective writing on experiences both in the course and in related field experience, and the development of a professional portfolio. During class sessions, informal writing is used for a variety of purposes such as brainstorming, facilitating collaborative work, or framing discussion. Throughout the semester, students draft and receive feedback on a variety of portfolio components, which are revised and incorporated into a final version of the portfolio due at the end of the course. Portfolio contents vary according to instructor, but examples
might include statements of educational philosophy, analysis of student writing from field experience, commentary on unit and lesson materials, reflective writing on reading and writing processes, and professional documents such as lesson plans and letters to mentors and potential employers.

**Prerequisite:** LL ED411 or LL ED400; Concurrent: C I 412W

LLED 420: Teaching Adolescent Literature and Literacy

3 Credits

Exploration of adolescent literacy and curricular designs for teaching adolescent literature and literacy in secondary schools. LL ED 420 is designed to provide the personal experiences and inquiry with adolescent literature and literacy patterns essential for pre-service teachers. Participants reflect upon personal experiences with adolescent literature, examine critical education perspectives in pedagogical and philosophical terms, build supportive relationships with colleagues to develop the best curricular and instructional decisions, explore the literary character of adolescent literature, the representation of cultural diversity in the voices of adolescent literature, and the curricular design of experiences with adolescent literature in secondary schools. A strong emphasis is placed upon the teacher as collaborator, risk-taker, and researcher, who tries new ideas, documents the classroom experience that results, and shares reflections with colleagues to help construct a better understanding of using adolescent literature in secondary schools. Course work involves extensive reading, written documents of a variety of types (journals, reviews, reports, original research) done by individuals and small groups to pursue the course objectives.

**Prerequisites:** 5th Semester standing

Recommended Preparation: Entrance for SECED major or graduate level certification pathway.

LLED 421: Teaching Writing in Secondary Schools

3 Credits

This course will provide preparation for teaching writing in the secondary school context. Students completing this course will meet the following objectives: -Understand one's own history as a writer and as a student in relation to the student's current and future practice in the teaching of writing -Articulate principles of a process approach to writing instruction and a workshop learning environment for writing, grounded in research and theory -Know and use strategies for supporting student writers as they work through writing processes -Differentiate writing instruction for students with varying backgrounds and needs -Access, evaluate, and use professional resources for writing instruction in ways that are consistent with principles grounded in research and theory Course content will include an orientation to writing processes, the social contexts of written genres, classroom environments for teaching writing, overcoming barriers to writing in adolescents, conferring and feedback, teaching the conventions of written English, and writing assessment. In addition, students in the course will engage in professional activities appropriate to a teacher of writing at the secondary level. To achieve these aims, students will engage in significant in-class and out-of-class writing activities. They will study examples of teaching practice and student writing from real secondary school classrooms. They will read and apply research on effective writing instruction. They will develop instructional plans and classroom resources for writing instruction. Finally, they will articulate stances for practice as teachers of writing as they begin their professional careers as teachers.

**Prerequisites:** LLED 420; LLED 520

LLED 445: Teaching English in Bilingual/Dialectal Education

3 Credits

Theories, techniques, materials for teaching English speaking, reading, and writing to bilingual and nonnative speakers in elementary and secondary schools.

LLED 450: Content Area Reading

3 Credits

Study of reading skills and materials for specific content areas; diagnostic and instructional procedures for classroom teachers. LLED 450 Content Area Reading (3) LLED 450 is designed to explore the roles of texts and literacies within the daily lives of middle school age students. We will examine both in-school and out-of-school literacy practices related to meaning-making in specific communities of practice.
In doing so, we will work from a broader definition of ‘text’ that includes print, images, sound, hybrid combinations and artifacts from popular culture. In school, we examine how literacies are involved in the learning of content, emphasizing how social practices of thinking in different ways about the world have been organized into school subjects and how teachers can help students to engage productively in those practices. Out of school, we look at the ways in which this age group uses text and other forms of literacy to make sense of and in their lives. Toward that end, we look closely at the media that they use and the types of texts that are produced for and by them. Although we honor the traditional practices of academic disciplines, we recognize how new texts and tasks ford those boundaries in order to pose and address school and everyday problems. The basic goals of this course are to help teacher candidates to use language well and thoughtfully concerning literacy, text, and culture; and to think through instructional problems thoroughly, using multiple sources of information to experiment with alternative solutions. We also expect candidates to understand the roles that culture plays in literacy practices, texts, schooling and assessments of ‘ability’; to learn how people function effectively in groups; and to develop a repertoire of organizational, instructional, and assessment strategies. This course considers how intermediate grades and middle schools are communities of practice that connect disciplines through the use of language and texts to make sense of the world. The communities surrounding schools influence these uses, and this course follows the students’ learning outside the classroom and schools as well as within.

Prerequisite: EDPSY014 or teaching experience

LLED 462: The Art of the Picturebook

3 Credits

An in-depth study of picturebooks as art objects providing aesthetic experiences and contributing to our aesthetic development in literacy education. LL ED 462 The Art of the Picturebook (3) The Art of the Picturebook explores a wide range of picturebooks with the idea that illustrations are visual art evoking thoughts and feelings. Because picturebooks provide aesthetic experiences and contribute to aesthetic development, they are rich and important sources for literacy education. This course provides opportunities to extend students’ repertoire of strategies for making sense of picturebooks, to deepen knowledge about picturebooks and the artists who create them, and to consider ways to help children become more sophisticated readers of picturebooks. While picturebooks are often emphasized as integral to the literacy development of young children, they can be engaging and desirable for older children as well. Course topics include picturebooks for the very young, as well as picturebooks that could appeal to elementary and middle school children. Whether picturebooks appear relatively simple and straightforward or contain innovatively complex or metafictive design elements, close readings of them with an understanding of terminology offer opportunities to express and discuss reactions and interpretations. The Art of the Picturebook provides students a forum for exploring preferences, ideas, insights, and questions about selected picturebooks, along with curricular and pedagogical considerations. Course readings include interviews with illustrators, selections about creating picture compositions, and scholarly essays presenting theoretical perspectives and ideas about picturebooks as literature and art for children’s literacy development. This course emphasizes that reading and interpreting picturebooks is an active, creative process that is socially, culturally, and historically situated. Authors and illustrators are influenced by culture, so their art reflects values of that culture, consciously or unconsciously. A reader’s experience with a picturebook is also influenced by cultural and social contexts in a given moment. Because engaging in aesthetic experiences is an active, creative process, reading picturebooks is, as Jane Doonan (1993), author of Looking at Pictures in Picture Books, asserts, a form of play. The Art of the Picturebook approaches picturebooks as sources of deep play. The course also provides opportunities to research selected illustrators, both for class discussions and an illustrator study project (e.g., a Wiki page). The culminating illustrator study project involves an in-depth investigation of a key children’s book illustrator and a process of sharing works-in-progress with classmates for collaborative editing.

Prerequisite: ENGL 015 and 5th semester standing or higher

LLED 464: Nonfiction Literature for Children and Adolescents

3 Credits

A study of nonfiction literature for children and adolescents with an emphasis on inspiring curiosity and agency. LL ED 464 Nonfiction Literature for Children and Adolescents Nonfiction Literature for Children and Adolescents explores a wide range of nonfiction literature in a variety of subject areas including social studies, math, science, and the arts. This course takes the position that reading nonfiction literature can inspire curiosity and a life-long love of learning, shape inquiry, nourish empathy and compassion, and inform agency. Topics include nonfiction as literature, resources for locating nonfiction literature, nonfiction literature in different subject areas, nonfiction literature as a catalyst for inquiry, creative nonfiction and hybrid texts, biographies and autobiographies, and nonfiction literature for agency. This course also examines techniques of writing nonfiction literature to develop an understanding of strategies that published authors use to create engaging works to inform readers and provide pleasurable reading experiences. This understanding can help adults who work with children and adolescents recognize and identify the qualities that they find desirable for selecting and sharing nonfiction literature with children and youths, whether shared for reading or serving specifically as mentor texts for writing.

Prerequisite: ENGL 015, 5th semester standing or higher

LLED 465: Fantasy Literature for Children

3 Credits

A study of fantasy literature for children looking at a variety of fantasy stories and examining them from different perspectives. LL ED 465 Fantasy Literature for Children (3) Fantasy Literature for Children explores a range of fantasy literature including literary fairy tales, toy fantasies, ghosts/horror/suspense, science fiction, reworked fairy tales, low fantasy, and high fantasy. This course will consider different rationalizations for fantasy literature and will examine some of the key stories that illustrate fantasy from different perspectives, such as literary, social, and psychological angles. This course will look at, first, the beginnings of modern fantasy with the fairy tales of Hans Christian Andersen and Carlo Collodi’s classic, Pinocchio. Then the course reading will include ghosts and other supernatural fantasy stories, and ‘reworked’ fairy tales, a current trend in fantasy literature. Despite of some scholarly debates on science fiction, that is, whether it should be categorized into fantasy or not, this course will consider science fiction as being similar enough to fantasy for it to be included. The course will also include a study of fantasy books currently popular with school-age readers. Fantasy can be divided into two main groups: low fantasy and high fantasy. Several of the stories to be read in the course are perhaps best categorized as low fantasies, not because of what they are, but because they are not high fantasy, which has a mythic quality to it. High fantasy seems to go
beyond the particulars of its story to explore the nature of good and of evil. Though high fantasies can be humorous at times, the overall tone is serious. Often characters are on quests and the stakes of success or failure usually involve saving the world from some great evil or preventing the tyranny of some powerful and evil ruler. Reading the different types of fantasy literature and the literary critiques and analyses of those works, this course will be wrestling with the overall importance of those books in the lives of children by pondering imagination and its role in the lives of children throughout the course.

**Prerequisite:** ENGL 015 and 5th semester standing or higher

**LLED 480: Media Literacy in the Classroom**

3 Credits

Exploration of media languages and literacy in classrooms, learning in an electronic age; issues, ideas, and teaching strategies.

**Concurrent:** LL ED 411, LL ED 420

**LLED 495: School Practicum in Reading**

1-18 Credits/Maximum of 18

Supervised practicum providing field experiences at any grade level, with opportunities to assume various teaching roles.

**Prerequisite:** LL ED400

**LLED 496: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**LLED 496H: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**Languages (Less Commonly Taught) (LANG)**

**LANG 51: Elementary Intensive Less Commonly Taught Language for Graduate Students I**

3 Credits

Intensive introduction to a less commonly taught language: first half of elementary sequence in reading, writing, speaking, listening, cultural contexts.

**Prerequisite:** graduate standing

**LANG 52: Elementary Intensive Less Commonly Taught Language for Graduate Students II**

3 Credits

Intensive introduction to a less commonly taught language: second half of elementary sequence in reading, writing, speaking, listening, cultural contexts.

**Prerequisite:** LANG 051 and graduate standing

**LANG 53: Intermediate Intensive Less Commonly Taught Language for Graduate Students**

3 Credits

Continued intensive study of a less commonly taught language at the intermediate level: reading, writing, speaking, listening, cultural contexts.

**Prerequisite:** LANG 052 or equivalent and graduate standing

**LANG 99: Foreign Studies**

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

**International Cultures (IL)**

**LANG 196: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

**Honors**

**LANG 196A: Elementary Intensive Turkish I**

4 Credits

Intensive introduction to Turkish: first half of elementary sequence in reading, writing, speaking, listening, cultural contexts.

**LANG 196B: Elementary Intensive Turkish II**

4 Credits

Intensive Introduction to Turkish: second half of elementary sequence in reading, writing, speaking, listening, cultural context.
LANG 197: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

LANG 199: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

LANG 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

LANG 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

LANG 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

LANG 499: Foreign Studies
1-12 Credits
Courses offered in foreign countries by individual or group instruction.

Latin (LATIN)

LATIN 1: Elementary Latin
4 Credits
Pronunciation; inflections; simple rules of syntax.
Bachelor of Arts: 2nd Foreign/World Language (All)
LATIN 2: Elementary Latin
4 Credits
Advanced syntax and sentence structure.
**Prerequisite:** LATIN001
Bachelor of Arts: 2nd Foreign/World Language (All)

LATIN 3: Intermediate Latin
4 Credits
Selected readings from representative authors.
**Prerequisite:** LATIN002
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Foreign/World Lang (12th Unit)

LATIN 51: Elementary Intensive Latin for Graduate Students I
3 Credits
Intensive introduction to Latin: first half of graduate intensive sequence in elementary reading, writing, syntax, and cultural contexts. LATIN 051 Elementary Intensive Latin for Graduate Students I (3) This is the first in a series of three courses designed to give students an intensive introduction to Latin. This is the first half of elementary sequence in reading, writing, syntax, and cultural contexts. Students will learn the Latin alphabet, vocabulary, and will learn to create simple sentences. Lessons are taught in an authentic cultural context.
**Prerequisite:** graduate standing

LATIN 52: Elementary Intensive Latin for Graduate Students II
3 Credits
Intensive introduction to Latin: second half of graduate intensive sequence in elementary reading, writing, syntax, and cultural contexts. LATIN 052 Elementary Intensive Latin for Graduate Students II (3) This is the second in a series of three courses designed to give students an intensive introduction to Latin. This is the second half of elementary sequence in reading, writing, syntax, and cultural contexts. Lessons are taught in an authentic cultural context.
**Prerequisite:** LATIN051 and graduate standing

LATIN 53: Intermediate Intensive Latin for Graduate Students
3 Credits
Continued intensive study of Latin at the intermediate level: reading, writing, syntax, and cultural contexts. LATIN 053 Intermediate Intensive Latin for Graduate Students (3) This is the third in a series of three courses designed to give students an intensive intermediate knowledge of Latin. This is an intensive sequence in reading, writing, syntax, and cultural contexts. Lessons are taught in an authentic cultural context.
**Prerequisite:** LATIN052 or equivalent and graduate standing

LATIN 101: Introductory Latin
4 Credits
Introduction to Latin forms, syntax, and vocabulary. LATIN 101 Introductory Latin (4) The aim of LATIN 101 is to introduce students to the fundamentals of classical Latin as soon as possible. Classical Latin is the literary dialect spoken and written by Romans from the first century BCE to the second century CE. This is the language that the classical Roman authors wrote, poets such as Catullus, Virgil, Horace, Ovid, Lucan, and Seneca and prose writers such as Caesar, Sallust, Cicero, Livy, Petronius, Tacitus, and Suetonius. The purpose of the course is to teach students the morphology, syntax, and vocabulary of classical Latin and train them to read and translate simple and complex sentences. The course consists of short weekly presentations of new grammatical and lexical content, vocabulary to be memorized, drills to practice forms and concepts, exercises in reading sentences, homework assignments translating sentences from Latin into English and English into Latin, and regular quizzes and tests to ensure retention and comprehension of material. The goal of the course in the first semester is for students to be able to read short passages of continuous prose based on classical Latin
models. The course focuses on reading, translating, and writing rather than speaking, although students will be expected to be able to read Latin aloud with correct pronunciation. LATIN 101 prepares students for Latin 102, the second semester of Introductory Latin, which in turn prepares students to take a 400-level course in Latin.

LATIN 102: Advanced Latin

4 Credits

Advanced study of Latin grammar, syntax, and vocabulary. LATIN 102 Advanced Latin (4) LATIN 102 continues from LATIN 101, which is a prerequisite for enrollment. Students who have taken at least three years of high school Latin may qualify to enroll in the course if they have performed well on either a Latin A.P. exam (minimum grade of 3) or a placement exam set by the instructor. LATIN 102 pursues the advanced study of the forms of syntax of classical Latin, the literary dialect spoken and written by Romans from the first century BCE to the second century CE. This is the language that the classical Roman authors wrote, poets such as Catullus, Virgil, Horace, Ovid, Lucan, and Seneca and prose writers such as Caesar, Sallust, Cicero, Livy, Petronius, Tacitus, and Suetonius. The purpose of the course is to equip students with the grammatical rules to read and write complex sentences in Latin. The course consists of short weekly presentations of new grammatical and lexical content, vocabulary to be memorized, drills to practice forms and concepts, exercises in reading sentences, homework assignments translating sentences from Latin into English and English into Latin, and regular quizzes and tests to ensure retention and comprehension of material. The goal of the course in the second semester is for students to be able to read longer passages of continuous Latin prose that has not been adapted. The course focuses on reading, translating, and writing rather than speaking, although students will be expected to be able to read Latin aloud with correct pronunciation. LATIN 102 will also continue to introduce students to Roman civilization and prepares students to take a 400-level course in Latin.

Prerequisite: LATIN101 or evidence of advanced placement through a Latin A.P. exam (minimum grade of 3) or a placement exam set by the instructor

LATIN 203: Latin Reading and Composition

4 Credits

The course reviews Latin grammar, syntax, and vocabulary and introduces students to classical Latin poetry and prose. LATIN 203 Latin Reading and Composition (4) This four-credit course is at the intermediate-level and follows LATIN 003 or LATIN 102. It satisfies the 12th-credit foreign language requirement and prepares students to take 400-level Latin courses. The course is concerned with perfecting the knowledge of Latin grammar, which in the Middle Ages was considered to be the mother of the other Liberal Arts. This is accomplished by the review of grammatical rules and by the reading and explanation of Latin authors. The course reviews the forms, syntax, and vocabulary of Latin, and gives students practice exercises that improve translation skills. Equally important, students are introduced to the principles of Latin style by learning how to translate English into Latin. The review of Latin grammar and the introduction to Latin prose composition provide students with the competence to read representative Roman authors in poetry and prose. Rudimentary Latin readings, supported by school commentaries, are intended to familiarize students with famous examples of classical Roman literature while exemplifying the principles of classical Latin style. For the Republican period, students read selections of Caesar’s Gallic Wars or a speech by Cicero and selections of Catullus’s love poetry. For the Imperial period, one investigates different accounts of the rape of Lucretia by Livy and Ovid, in poetry and prose, respectively. These readings not only show how exemplary authors write in different styles, but how Latin language and literature lay the linguistic and cultural foundations of western civilization. Evaluation methods include assessment of students through in-class oral and written drills, in-class translation of Latin into English and English into Latin, weekly translation assignments, biweekly quizzes, two tests, and a final exam. These methods are intended to promote the learning of Latin vocabulary and grammar, to increase the comprehension of the assigned readings, and to foster an appreciation of the stylistic virtuosity of Rome’s greatest writers.

Prerequisite: LATIN102

LATIN 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Humanities

LATIN 402: Republican Literature

3-12 Credits/Maximum of 12

Selected works by Plautus, Lucretius, Catullus, Cicero (content varies).

Prerequisite: LATIN003

Bachelor of Arts: 2nd Foreign/World Language (All)

Bachelor of Arts: Humanities

LATIN 402H: Republican Literature

3-12 Credits/Maximum of 12

Selected works by Plautus, Lucretius, Catullus, Cicero (content varies).

Honors

LATIN 403: Augustan Age Literature

3-12 Credits/Maximum of 12

Selected works by Virgil, Horace, Propertius, Tibullus, Ovid, Livy (content varies).

Prerequisite: LATIN003

Bachelor of Arts: 2nd Foreign/World Language (All)

Bachelor of Arts: Humanities

LATIN 404: Silver Age Literature

3-12 Credits/Maximum of 12

Selected works by Petronius, Seneca, Tacitus, Juvenal, Martial, Pliny the Younger (content varies).

Prerequisite: LATIN003

Bachelor of Arts: 2nd Foreign/World Language (All)

Bachelor of Arts: Humanities
LATIN 450W: History of Latin
3 Credits
History of the Latin language and its speakers, from their origins to the 2nd century C.E.
Prequisite: LING 102; LATIN401, LATIN402, or LATIN403
Bachelor of Arts: Humanities
Writing Across the Curriculum
LATIN 494: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.
Bachelor of Arts: Humanities
LATIN 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
Bachelor of Arts: Humanities
LATIN 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
Bachelor of Arts: Humanities

Latina/o Studies (LTNST)

LTNST 100: Introduction to Latina/o Studies
3 Credits
This course provides an interdisciplinary introduction to the study of Latinas/os in the U.S. LTNST 100 Introduction to Latina/o Studies (3) (GH;US)(BA) This course meets the Bachelor of Arts degree requirements. This course provides an interdisciplinary introduction to the study of Latinas/os in the U.S. It begins with a historical overview of the major events in the U.S. southwest, Mexico, and the Caribbean that led to the creation of Latina/o communities in this country; we explore in this historical context the reasons for migration and the effects on identity of movement between countries and within the U.S. The course then moves to a consideration of the social protest movements of the 1960s, including Chicano and Puerto Rican nationalism, the farmworker movement, and Latina feminism. It then proceeds to present-day issues as they affect the major Latina/o groups in the U.S., attending to both similarities and differences within and between the major groups. The goal is to show that ‘Latina’ is not a monolithic category but that it does unite various populations (Chicano, Dominican, Cuban, Puerto Rican, etc.) for strategic purposes. The class addresses Latina/o participation/incorporation in the economy, the political system and public education, with attention to how public sphere participation is shaped by language, legal status, and connection to countries of origin. The class analyzes how Latina/o families are shaped by these social issues, with particular emphasis to how generation shapes life experiences. Finally, the course considers Latina/o cultural production, analyzing how artists across genres such as literature, film, performance, and music represent their cultures and respond creatively to the issues discussed throughout the semester.
Bachelor of Arts: Humanities
United States Cultures (US)
General Education: Humanities (GH)

LTNST 127: Introduction to U.S. Latina/o History
3 Credits
This course introduces students to the history of U.S. Latina/os, including Puerto Ricans, Dominicans, Chicanos, Cubans, and Central Americans.
HIST (LTNST) 127 Introduction to U.S. Latina/o History (3) (US) This course introduces students to the history of U.S. Latina/os, drawing on the multiple experiences of Puerto Ricans, Dominicans, Chicanos/ Mexicanos, Cubans, and Central Americans. Course content features the divergent development of U.S. Latina/o cultural and political identities rooted in the Caribbean, Mexico, Central American, and the United States. Students will understand the formation of racial and class hierarchies within U.S. Latina/o communities; the processes of (international) migration; gendered hierarchies and responses to sexism; and the complexities of U.S. Latina/o identity. Lectures are supplemented with discussion days in which students respond to readings under the guidance of a graduate teaching assistant. Grading stresses proficiency in analytical, historical writing.

LTNST 197: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

LTNST 226: Latina and Latino Border Theories
3 Credits
English 226 will constitute a wide-ranging examination of contemporary texts (1960-present) central to the construction of contemporary Latino/a culture. ENGL 226 Latina and Latino Border Theories (3) (GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course focuses on contemporary Latina/o cultural production, placing it in historical context and analyzing it through the framework of borders. We make connections between Latina/o groups, showing both similarities and differences. We examine the politics of representation, asking how artistic texts define community and individual identities that are coherent yet also embody the complexity of these identities. The texts cross and claim borders- cultural, sexual, gender, geographical, generational, spiritual, and institutional. We will ask how these art forms work to claim border spaces: How are cultural differences retained without constructing hierarchies of exclusion? What models of identity do these artists propose in response to structures of domination? We'll read novels, short stories, poems, history, and theoretical essays; we will also watch several films. Throughout the course, we will attend to particular histories and cultures of Latina/o groups; it is crucial to both maintain the specificity of each culture (Chicana/o, Puerto Rican, Cuban-American, and Dominican-American) and their connections to each other as Latinas/os in the U.S. Inquiring into these intersections leads one to ask the following: how can
Latinos unite against the assault on immigrants and bilingual education without erasing very important differences among Latina/o populations? How can Latinas unite against ongoing sexism and homophobia within their communities and the U.S. in general? How should we view the marketing category 'Hispanic' and/or 'Latino' and how do artists offer alternative conceptions of group identity?

LTNST 300: Latinx Gender and Sexuality Studies

3 Credits
WMNST/LNST 300 Latinx Gender and Sexuality Studies (3) (GH/US/BA) This course examines the historical development, theoretical premises, and political, social, and artistic contributions of Latinx feminisms in the United States. It shows the connections to as well as the divergences from Latin American feminism by beginning with an analysis of how the Spanish conquest, the imposition of Catholicism, and subsequent years of colonialism shaped gender and sexual identities. It examines the contemporary effects of these historical issues and inquires into the common concerns of Latin American feminists and Latinx feminists. It asks how theories and practices have diverged given different geographies, both between the U.S. and Latin America and within the U.S. The course will examine changes in the 1960s and 1970s in the U.S., when Chicano and Puerto Rican nationalist movements also gave rise to a feminist consciousness amongst Latinas; the conjunction of race, ethnicity, gender, and sexuality is considered, with attention to how Latinas critiqued Anglo feminism’s narrow focus on gender. The course will focus on family formations, considering social science and feminist discourse on the issues of patriarchy. How have Latinx feminists valued yet also rearticulated the traditional family? What critiques have made been against heterosexism? How has the LGBTQ community formulated new kinds of families? How does migration shape family relations? The course will explore how Latinx artists in different genres have responded to and resisted traditional gender and sexual roles. Literature, film, poetry, performance art, and hip hop are all examined for their diverse representations of sexual desire.

LTNST 315N: Spanish and Spanish-speakers in the U.S.

3 Credits
In this course, we investigate various aspects of the language(s) and language behaviors of U.S. Latinos. The course is premised on the idea that language is a crucial component in the formation of identity. To understand Latina/o identity formation in the U.S., then, one must analyze what role languages–Spanish and English–have played in identity formation. The class commences with a brief historical assessment of the various U.S. Latino communities, including Mexican-American, Cuban-American, and Puerto Rican communities. Such a historical purview proves significant in the study of the cultural traditions that persist in these communities, chief among these, the Spanish language. In exploring the Spanish language in U.S. Latino communities, we consider several major sets of questions, among them the following: In what ways do the languages of U.S. Latino communities differ from those of monolingual Spanish- (and English-) speaking communities? What factors contribute to the maintenance and loss of Spanish in these communities? How does language contribute to the creation of individual and societal identity? How is language exploited in the representation of other U.S. Latino cultural traditions? We consider these questions across a variety of genres: poetry, prose (autobiography in particular), film, art, television, and music. These texts reveal how social environments determine language use as well as how artists have used language to reshape social environments, through, for example, the development of new language practices such as Spanish-English code switching. The course also connects these cultural practices to debates on Spanish in public life and policy.

LTNST 403: Latina/o Literature and Culture

3 Credits
Literary and other forms of cultural expression (film, music, art, and theater) are compared across different Latina/o communities. LTNST (CMLIT) 403 Varieties of Latina/o Cultural Expression (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. This course provides students with a multi-faceted comparative view of Latina/o literature in relation to other forms of cultural expression. First, the course presents a variety of cultural expressions to students in an effort to teach them the different ways that form affects content. Each text will be studied in its historical context as well, thereby providing students with a sense of Latina/o cultural history. Second, this course compares works from within the same genre, allowing students to recognize the ways that Latina/o culture has worked to build identity, to deconstruct identity, and to challenge cultural stereotypes. Such comparison further facilitates comparison of the ways that different cultural forms have been used by diverse Latina/o communities. Third, this course compares cultural forms, allowing students to see how Latina/o poetry affects music or how Latina/o theater affects novels Fourth, this course will include texts that represent a variety of linguistic and national contexts, including many countries in Latin America, thereby allowing students to see the relationship between history, culture, language, geography, and identity. These are all themes that are at the center of both Latina/o Studies and Comparative Literature. A comparative perspective facilitates appreciation of the vast and varied ways that Latina/o communities have used cultural expression. A particular point of contact between Latina/o Studies and Comparative Literature is the influence of hybridity. A central issue explored in this course concerns the intricate connections between multiple ways of expressing identity, in the arts, literature, music, etc., in diverse circumstances, such as locations where Latina/o cultures may
be in the mainstream (such as in Latin America) and in the minority (in the U.S.). Drawing upon approaches offered by comparative literature and theories such as post-structuralism, feminism, and post-colonialism, we will examine the complex process through which Latina/o culture has been defined, disseminated, contested, and commercialized. Of particular interest from a comparative perspective are the ways that Latina/o cultures are created through hybridization, processes of mutual borrowing and differentiation, as well as through transnational processes of migration, urbanization, and cultural contact. The course's objective is to show not only how complex societies consolidate a shared culture but also how diverse Latina/o communities have produced a multiplicity of cultures that have been expressed via a broad range of cultural registers. These communities often span vast geographical areas, not only in the U.S. but across the Americas as people continue to look to their countries of origin for artistic inspiration.

Prerequisite: 3 credits in the humanities or in any LTNST course, or 4th-semester proficiency in Spanish
Cross-listed with: CMLIT 403
Bachelor of Arts: Humanities
United States Cultures (US)

LTNST 426: Chicana and Chicano Cultural Production: Literature, Film, Music
3 Credits/Maximum of 3

An in-depth study of Chicana/Chicano literature, film, and music from the inception of the Chicano Movement (1965-1975) to the present. ENGL 426 Chicana and Chicano Cultural Production: Literature, Film, and Music (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. ENGL 426 will constitute an in-depth study of Chicano/a literature, film, and music from the inception of the Chicano movement (1965-1975) to the present. In addition to primary aesthetic texts, students will read historical, political, and theoretical essays designed to situate the Chicano/a cultural texts in historical and political context. The aim of the course is to give students a better understanding of Chicano/a cultural production by situating these works of art against other U.S. artistic traditions and within wider historical and political movements. Authors and artists under consideration in this class will vary, but will likely include Luis Valdez, Tomas Rivera, Estella Portillo Trambley, Oscar Zeta Acosta, Corky Gonzales, Gloria Anzaldua, Norma Alancon, Chez Robichaud, Richard Rodriguez, Dagoberto Gilb, Rolando Hinojosa, Alfredo Vea, Charlie Trujillo, Diego Vasquez Jr., Joe Rodriguez, Tomas Almaguer, Jose Esteban Munoz, Manuel Ramos, Lucha Corpí, Rudolfo Anaya, Michael Nave. This class will prepare students for advanced courses in Latin/a literatures as well as other academic courses that engage in the verbal and written analysis of complex texts. Students will be evaluated by means of essays written in and out of class, essay exams, group projects, term-long journals, and class participation. Students should expect to complete a minimum of three written assignments in the course of the term. The course may be used as ENGL major elective credit or as credit towards the ENGL minor and will be offered once a year with 40 seats per offering.

Prerequisite: 3 credits in English

Bachelor of Arts: Humanities
United States Cultures (US)

LTNST 467: Latin America and the United States
3 Credits

Historical development of policies of the United States with regard to Latin American affairs from colonial times to the present.
Cross-listed with: HIST 467
Bachelor of Arts: Humanities
International Cultures (IL)
United States Cultures (US)

LTNST 470: Youth Cultures in Latin(a/o) America
3 Credits

Young people have been at the center of political and cultural revolutions around the world and throughout history. For example, revolutions, urban movements, ethnic/racial pride, LGBTQ+, feminist movements, music basaars, DJs and rave parties, and ‘barras de futbol’ are only some of the manifestations associated with young people in Latin(a/o) American literature, film, music, and journalism. Nevertheless, the concept of ‘youth’ as an academic category only appeared in the 1960’s. In this course, we will study different manifestations of youth cultures in the Hemispheric Americas, paying special attention to the Latinx communities in the U.S. and Latin America, since the 1960’s and until the contemporary moment. The key question that will guide us is: How does each of these literary, artistic, and media representations of youth enter into dialogue with political events in which young people have been at the center of efforts to bring about political changes in the U.S. Latinx communities and Latin American? Using short fiction, film and documentaries, songs, blogs, and other cultural materials (YouTube clips, images, graffiti, etc.), we will identify and compare different youth cultures in Latinx communities in the U.S. and Latin America in terms of their productions, representations, and effects in the public sphere. We will enrich our analysis of primary materials with theoretical and critical readings that will help us to contextualize the different manifestations in our study.

Prerequisite: SPAN 253W
Cross-listed with: SPAN 470

LTNST 479: U.S. Latina/o Culture en Espanol
3 Credits

This course is conducted in Spanish and will analyze some of the central themes that shape the diverse Latina/o experiences in the United States. Some of the main topics that the course will address include: the politics of labeling; definitions of displacements; the politics of language; imaginary homelands and geographic spaces; and conceptualizations of race, gender, and sexuality. These themes will be seen through the lens of Latina/o literature and film. The main objective of this course is to help students think critically about the conceptual, theoretical, historical, and social issues that inform the Latina/o experience in the United States.

International Cultures (IL)

LDT 100: World Technologies and Learning
3 Credits
LDT 100 World Technologies and Learning (3) (GS;IL) explores the role of technology in learning across international contexts and the impact of these new learning technologies on world cultures. LDT 100 examines the sociocultural impacts of various learning technologies on learning, education, and culture. The course will examine several international cases of learning technologies (both contemporary and historical), as they are used for education and learning and implemented in several world cultures such as the US, UK, India, China, Africa, Europe, and Oceania. The primary objective of the course is to help students understand how learning technologies impact other cultures, and their own; how learning technologies hold the potential to bring change to education and new forms of learning; and how these changes can be predicted, understood, and planned for. The course may offer an important introduction to the area of Learning, Design, and Technology, but it is otherwise not related to specific programs of study. It contributes to the General Education requirements for undergraduates.

International Cultures (IL)
General Education: Social and Behavioral Sciences (GS)

LDT 101: Effective Communication for Educators
3 Credits
Introduction to communication for educators, principles of pedagogical communication including educational communication technologies. LDT 101 Effective Communication for Educators (3) This course introduces future teachers to effective communication specific to educators’ needs. Educators will learn skills for informational lesson planning, persuasive speaking and motivational presentations. This is an introduction to these skills such as lesson planning and effective parent communication, which are then honed in later methods courses. This course will address issues of civic engagement and broad communication for educators focused on educational issues. Included will be the design and presentation of individual communications, email, social media, new media, videos, digital photography, and other forms of emerging educational communications technologies. Assessment includes short quizzes, product review (to include lesson plans, speeches and presentations), online discussion participation, and other activities focused on building the specific skills needed for educators.

Prerequisite: CAS 100

LDT 199: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

LDT 400: Introduction to Instructional Technology for Educators
1-3 Credits/Maximum of 3
Use of microcomputers, video, and other media in education; models use technologies including video, audio, print, computer, and telephone. EDTEC 400 Introduction to Instructional Technology for Educators (1-3) This course introduces classroom teachers to the computer and its educational applications. It is an introductory level course and instruction is based on the premise that participants are novices. Participants first learn how to work in an online environment. They then work in that environment to develop the skills and perspectives needed for the effective application of microcomputers in education, which involves becoming familiar with a wide range of additional educational computing applications and issues. Although it is important for students to develop technology skills, technology must be viewed as more than simply a new subject in the curriculum. Teaching students to use technologies well is a means to a much more important set of ends. Today’s technologies offer teachers and their students a powerful means for addressing learning-related issues, and potentially redefining teaching and learning. The potential of technology is most effectively realized when considered in combination with views about how individuals think and learn. The goal of this course, then, is not for participants to become experts in ‘technology', but to become more experts in using technologies to promote teaching and learning. Upon completion of this course participants will be able to: successfully operate available computer hardware and associated peripherals including (but not limited to) keyboards, mice, and printers; demonstrate competency in using information technologies, including electronic mail, the Internet, and the World Wide Web; demonstrate competency in creating multimedia presentations and instruction; demonstrate competency in using word processing programs, basic graphics packages, and desktop publishing applications; demonstrate skills in creating spreadsheets and/or databases; integrate thoughtful applications of technology to address everyday teaching/learning problems; identify problems for which use of varied technologies offer productive alternatives for teachers, students, parents, and communities. Students will demonstrate competence in these areas by developing three unit projects which will use technology to solve a classroom problem of their choosing. The projects address use of computers as communications tools, including the World Wide Web; information processing tools, such as spreadsheets and databases; and interactive multimedia using presentation software or Web-based
materials. Each project will include a description of the problem, how the selected technology addresses the problem, a lesson plan demonstrating how the technology would be used, and an artifact which demonstrates the EDTEC 400 student’s competency with the technology being used. Students will use Internet tools to share and provide peer reviews of classmates’ projects.

**Prerequisite:** Bachelor’s degree or equivalent; or 5th semester standing; or permission of program

LDT 401: Gaming 2 Learn

3 Credits

Explores role of gaming, video gaming, and simulations in educational contexts including K-12, corporate, informal, non-profit and higher education.

**LDT 415A: Systematic Instructional Development**

3 Credits

Preparation in the use of a nine-step model for systematically analyzing instructional problems and developing validated, practical solutions. LDT 415A Systematic Instructional Development (3) LDT 415A introduces the instructional design process and then focuses on each step of the model using a project-based approach. It prepares instructional designers and trainers in the corporate, higher-education, and non-profit sectors to apply the instructional design process to create instructional materials, or to modify, alter, or re-design existing materials as needed, for example, to suit a particular context or audience.

**Prerequisite:** Bachelor’s degree or equivalent; or 5th semester standing; or permission of program

LDT 415B: Systematic Instructional Development for Teachers

3 Credits

Preparation of teachers to use a systematic model to design learning environments for K-12 classrooms. LDT 415B Systematic Instructional Development for Teachers (3) This course focuses on K-12 teachers who will learn how to use the systematic design process for creation of learning environments. This process includes goal, objective and test item writing; text selections; media selections; implementation plans; and evaluation plans for both formative and summative evaluation. Products are turned in each week for feedback and input into the next weeks’ assignment. Consideration of the ID4T (Instructional Design for Teachers) model use with standards, constructivist, user-design, and learner-based classrooms is included.

**Prerequisite:** 6th semester standing in education or equivalent professional experience

LDT 433: Teaching and Learning Online in K-12 Settings

3 Credits/Maximum of 3

Explores uses of online technologies for K-12 settings including cybercharter and blended settings. In this course, Teaching and Learning Online for K-12 Educators, students will receive an overview of the current status of K-12 Online Education, including criticisms of the movement and how cyber charter schools are impacting the general educational movement. Students will explore the complexities of school choice movement, the place of cyber charters in that movement and the ways that this movement can help and harm general educational progress.

Students will critically examine the cyber charter school money trail so that they may identify various financial implications for the cyber charter movement on public schooling and learn how funding flows from the federal level to states to districts and finally to cyber charters. Students will be guided through the process of transforming their teaching when moving from traditional face-to-face classrooms to online settings.

**Prerequisite:** Bachelor’s degree or equivalent; or 5th semester standing; or permission of program

LDT 440: Educational Technology Integration

3 Credits

Technology integration in educational settings. EDTEC 440 Educational Technology Integration (3) This course introduces educators to broad-based educational computing applications. This course introduces ideas, skills, concepts and strategies for integrating computers into classroom teaching. The focus of the course is on models for integration, but specific applications and how they can be used in the classroom will also be explored. This course is part of a graduate program of study for a Master’s of Education (M.Ed.) in Instructional Systems or an M.Ed. in Educational Technology. Within educational settings, technology is not simply an independent curriculum – i.e., teaching about how to use technology. Rather it is a powerful means for addressing, and potentially redefining, everyday teaching and learning issues. The potential of technology is most effectively realized when considered in combination with views about how individuals think and learn best. The goal of this course, then, is not for you to become an expert in ‘technology’, but to become more of an expert in teaching and learning. Technology can be used as a vehicle to help you to further develop this expertise. This course is divided into five units which are based on the following areas of educational computing: (1) Technology Integration Concepts; (2) Productivity Tools; (3) Communication tools; (4) Interactive multimedia; and (5) emerging technologies. Each of these units is designed not only to provide you with the information you need in order to understand what the technology is about and how it functions, but more importantly to stimulate serious reflection upon how you as a teacher can make use of this resource and how using this resource relates to student learning.

**Prerequisite:** 6th semester standing

LDT 441: Design, Development, and Evaluation of Internet Resources

3 Credits/Maximum of 3

Design, production, and evaluation of instructional materials for delivery on the Internet. This course is designed to provide you with a conceptual and experiential overview of the process of creating stand-alone computer or web-based instruction to facilitate your understanding of the role and potential of Internet technologies as learning systems. This course would be useful to anyone chartered with providing online learning, is appropriate as a foundational overview for multi-media developers, and also would be valuable for supervisors of instructional designers and developers. A main feature of the course is a hands-on lesson project carried out over the entire course where you will identify, design, develop, and then evaluate an online stand-alone lesson (e.g., a learning object). Emphasis will be placed on the following goals: Demonstrate research-based message design principles, including navigation, screen design, and the use of color and visuals. Demonstrate basic skills and competencies related to developing instructional materials to be delivered using Internet/intranet technologies to understand the current requirements and also limitations of these approaches. Describe the role of the instructional designer in Internet-based instruction. Describe
the advantages and limitations of Internet delivery in order to make informed instructional design decisions. Apply an instructional design model during the design and development of Internet-based instructional materials.

LDT 447: Instructional Design for Multimedia Technologies
3 Credits/Maximum of 3
This is an applied skill course about producing and implementing multimedia in instruction and training. By its very nature, instructional multimedia is a collage of media types, and creating this collage requires a thorough understanding of learning strategies, design principles, and technology 'obtainability' (e.g., both using existing media as lesson components as well as developing new learning media objects as needed). Fairly recently, multimedia tools have proliferated on the web and at the same time learners' expectations have also shifted, for example involving the delivery form factor and source, preferred media type, short lesson length, and many others. This course introduces you to the design, development, and delivery of instructional multimedia on modern educational platforms. Specifically, you will create multimedia instructional materials within the context of larger class discussions about Instructional Systems Design, evidenced-based learning strategies, Design Principles, media features, Copyright, Open Educational Resources (OER), Massive Open Online Courses, and the changing landscape of Higher Education.

LDT 449: Video in the Classroom
3 Credits/Maximum of 3
Skills and knowledge needed to direct the use of video technologies in educational settings. EDTEC 449 Video in the Classroom (3) This course introduces video and multimedia production for educators based on the premise that participants are novices. The course is intended for teachers and trainers who would like to acquire fundamental theory and skills in designing and producing video and multimedia to support teaching and learning. It introduces the tools of media production (i.e., video, audio, and lighting) and develops basic skills, including production and editing techniques, storyboarding and project planning. Participants in this course will demonstrate: a basic proficiency in the operation and handling of media production tools, including video and audio editing; an understanding of appropriate media use for classroom use; a basic knowledge of the production processes, including conceptualization, storyboarding, scripting, and project management; and a basic proficiency in producing effective educational videos.

LDT 467: Emerging Web Technologies and Learning
3 Credits
This course examines emerging Web technologies and explores their application to learning and education.
Prerequisite: sixth semester standing

LDT 471: Introduction to Educational System Design
3 Credits/Maximum of 3
Investigates systems theory and how components of educational systems interact; develops insights on current issues and models in Educational System Design. This course focuses on a systems theory view of public school systems. With an eye toward significant changes in the entire system and examining ways that technology (understood broadly) can be utilized as a lever for significant school change, this course asks learners to examine former waves of educational reform, inform their understanding with a firm grasp of systems theory, and apply those ideas to future suggested K-12 changes.
Prerequisite: Bachelor's degree or equivalent; or 5th semester standing; or permission of program

LDT 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

LDT 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Liberal Arts (LA)

LA 83: First Year Seminar in the Liberal Arts
1 Credit
An exploration of a theme through the lens of the humanities, social sciences and diverse cultural perspectives.
Prerequisite: open only to DUS students
First-Year Seminar

LA 101: Honors Rhetoric and Civic Life
4 Credits
Within a liberal arts framework and with attention to public discourse--speaking, writing, online communication, and visual presentation--this course instructs students in the arts, practices, and principles of rhetoric. LA 101H Honors Rhetoric and Civic Life (4) (GWS)This course offers students comprehensive training in oral, written, visual, and digital communication for the twenty-first century. It unites these various modes under the flexible art of rhetoric and uses the pedagogies associated with the rhetorical tradition both to strengthen communication skills and to sharpen critical awareness of the challenges and advantages presented by oral, written, visual, and digital modes. Students will read about and discuss rhetorical concepts and situations and put their knowledge immediately to use by analyzing civic rhetoric on campus and in their communities (including their networked communities), by researching current issues, and by developing and presenting arguments in oral, written, visual, and digital form. The course is designed (although not required) for first-year Schreyer Honors College students and Paterno Fellows aspirants in the College of the Liberal Arts. In other words, it appeals to students with well developed communication abilities who might otherwise take English 30 and/or CAS 100H. It is aimed at developing students' skills in composing and delivering purposeful and effective texts. Whether or not those discourses are delivered verbally or visually (on paper, electronically, or orally), students will draw on established rhetorical canons of invention, arrangement, style, memory (tapping the resources of stored knowledge, such as the library), and delivery. Students will also become fluent in the rhetorical appeals of ethos, logos, and pathos in order to shape texts that are ethical yet purposeful. To meet these goals, students will meet in small classes (of
no more than twenty students), where they will receive directed instruction in writing, public speaking, and the use of technology in order to learn the distinctive features of oral, written, visual, and electronic rhetoric. Staff for the course will be experienced full-time faculty and advanced doctoral candidates in rhetoric drawn from English and CAS. This course will satisfy the Gen Ed Writing/Speaking (GWS) requirement for Schreyer Honors College students and aspiring Paterno Liberal Arts Fellows. Because this four-credit course will substitute for the six-credit ENGL 015/030 plus CAS 100 requirement, students who complete LA 101 will need to take an additional two credits somewhere in order to complete graduation requirements.

General Education: Writing/Speaking (GWS)
Honors

LA 103: Professional Development for the Liberal Arts Student

1 Credits

This course is designed to provide you with the techniques and information necessary to specify and implement post-graduation educational and career plans. This course is designed to assist students in the College of the Liberal Arts with the process of developing and implementing career plans for after graduation. It helps students understand the process of seeking and gaining employment and how to effectively transition from college to the workplace. This course will help students think about how to make their time at Penn State worthwhile and will be exposed to the various opportunities available to them at the College and University level. Students will hear from staff, alumni, and employers about a range of topics including interviewing, hiring practices, professionalism, social media, networking, post-graduate options, and other professional development topics. Students will start and/or continue to solidify their plans for after college and take steps to create a portfolio of work for the job and internship search. Students will use tools to learn more about themselves and explore career options. They will learn about career fields for students graduating with Liberal Arts degrees and hear from employers, staff, and alumni about how to leverage their education, skills, and knowledge to be successful during the job and internship search and during their time in the workforce. Students will develop a multitude of skills from this class, including identifying abilities, interests, and values and understand how to incorporate these into career decision-making. They will be able to utilize various resources such as informational interviewing and networking to research industries and careers, and inform career decision-making. They will make use of targeted searches, and online job postings to identify potential jobs and internships. Students will spend time writing effective position-specific application materials such as resumes and cover letters and learn to implement effective interviewing techniques during phone, individual, panel, and group interviews. For students who are thinking about post-baccalaureate options, the class will help these students identify and search for graduate programs as well as successfully complete the graduate school application process. This course will help students transition successfully into the professional world, using skills and knowledge to conduct future career decision making and job searches.

LA 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

LA 199: Foreign Study–Liberal Arts

1-9 Credits/Maximum of 9

Study in selected foreign countries of the cultural, institutional, and/or social development of the host country.

International Cultures (IL)

LA 201W: experiential learning Portfolio

3 Credits

Students will learn how to assemble a portfolio that reflects their progress, knowledge, and insight into college-level study. LA 201W Experiential Learning Portfolio (3) This course will instruct students in what has become a distinctive model of performance assessment - a learning portfolio. Students will learn to assemble the components required to demonstrate their progress, articulate their knowledge, and gain insight into the qualities of learning that are expected of college-level study. Students will utilize active engagement and questioning of how we know what we know. The course is designed to assist learners in contextualizing what they have learned and provide them with the skills to contextualize what they learn in the future. By the end of the course, students will have developed an experiential learning portfolio.

Writing Across the Curriculum

LA 202: Innovation and Entrepreneurship in the Liberal Arts

3 Credits

Entrepreneurs and liberal arts graduates share a surprisingly broad array of learned traits. Both rely on well-trained habits of critical, analytical, and systems thinking, effective oral and written communication, perspective taking, coalition building, and intercultural competence to understand, challenge, and transform the limits of conventional systems and practices. For entrepreneurs, this training leads to the creation of new and innovative nonprofit and for-profit ventures; for liberal arts professionals, this training is often used to develop, expand, and alter our understanding and appreciation of the ever-shifting contours of the human experience. When integrated deliberately, this course prepares undergraduate students to imagine innovations and create ventures that add value to our understanding, experience, and expression of the liberal arts. Entrepreneurship, which cultivates self-efficacy and personal agency as professional learning behaviors, is perhaps especially salient for the liberal arts, which tend not to be prescriptively careerist. In this way, students who take this course can more intentionally pursue creative career work that extends the value and experience of their undergraduate liberal arts education.

LA 295: Undergraduate Field Experience or Practicum

1-18 Credits/Maximum of 18

Approved experience, related to student career objectives, in agencies external to the University.

LA 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
LA 297: Special Topics
3 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

LA 297I: Special Topics - InterDomain
3 Credits/Maximum of 9

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GH/GS GenEd course.

General Education: Humanities (GH)
General Education: Social and Behavioral Scien (GS)
General Education - Integrative: Interdomain

LA 299: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

LA 395: Internship
1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

LA 397: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

LA 399: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

LA 402: Fundraising Leadership: Building a Strong Base
3 Credits

The course will focus on the fundamentals of fundraising and leadership, including communications, management of events and people, and stewardship.

Prerequisite: 60 undergraduate credits or permission of program

LA 403: Entrepreneurship Mentoring
3 Credits

As mentors, each student will have the opportunity to lead one classroom breakout session of Innovation and Entrepreneurship in the Liberal Arts per week, while the Entrepreneurship Mentoring class as a whole will operate as a production team to co-create and manage logistical, technical, and multimedia support for M & W class lecture sessions. In the breakout sessions, student mentors will apply pedagogical theories and principles to lead classroom discussion based on course readings and talks; incorporate principles of effective just-in-time learning to facilitate, guide, and evaluate challenging student project development and hands-on work; and apply coaching methods to critique student speeches in preparation for collegiate pitch competitions. In lecture sessions, students will be expected to produce, in consultation with the instructor, multimedia slide presentations that will run for 10 minutes leading up to the beginning of each class period; arrange and coordinate logistics and technology for frequent guest speakers; and work with PSU technical staff to set-up and implement classroom technology used to promote interaction, discussion, and feedback (e.g., i-clicker). As mentees, students will be expected to meet weekly for two hours with their instructor to examine a variety of pedagogical and entrepreneurial theories and methods based on outside readings, and apply these concepts and principles to their weekly classroom instruction and mentoring. The instructor will observe one breakout session for each student mentor, and then meet with each student to evaluate the effectiveness of that session. Additionally, students will develop networking skills to identify and build an advising relationship with two thought leaders, innovators, and/or entrepreneurs in the liberal arts over the course of the semester, which they will use to cultivate their intellectual growth as innovative thinkers about profound problems and issues addressed in the liberal arts, and their creative and pragmatic solutions.

LA 404: Careers in Fundraising and Development
3 Credits

This course will guide students through an introduction to the fundraising/advancement profession, including a review of the history and emergence of the profession. The course will also touch on key issues such as professional ethics and the legal environment of the field. Students will learn about the wide array of career paths and sectors in which fundraising and advancement professionals are employed. The course will review current roles within fundraising and advancement and emerging practice areas such as social media fundraising, data analytics, and talent management. Students will acquire specific knowledge and develop some of the skills required to successfully secure entry-level positions such as asking for gifts, drafting newsletter copy, and creating materials to present to a board of trustees. Students will also make connections between life experiences, such as volunteering for a nonprofit organization, and positions in the field. Students should be able to make connections between fundraising and a variety of disciplines from English to psychology to economics. By the end of this course, students will be able to: 1. Describe fundraising as a profession, including a brief history, purpose, laws, ethics, and foundational principles. 2. Describe various positions held by fundraising professionals, including duties and responsibilities, skills and characteristics for success, and various pathways to a career in each position. 3. Practice foundational principles of fundraising as they apply to various fundraising positions. 4. Identify resources for locating fundraising positions and appropriate education and training opportunities. 5. Create professional application materials that reflect the students’ ability to differentiate between various roles in fundraising professions. Students enrolled in this course will need to have acquired skills and knowledge in introductory courses, have a connection to an academic discipline, and be career-oriented. As a result, only upper-level students will be eligible to enroll. If academic departments are willing, the course might be added to the list of electives made available to students majoring in various fields such as English, psychology, or economics. Given the dearth of well-educated
professionals and the growing number of jobs in the field this course
could serve well those students who seek a career in the profession.

**Prerequisite:** ENGL 15, and 6 credits in social and behavioral sciences (GS)

LA 424: Liberal Arts Venture Development

3 Credits

Students who complete this course will be able to create a nonprofit or
for-profit liberal arts venture based on the iterative vetting of an original
idea rooted in careful and rigorous research; examine the impact of
that venture and the resulting services and/or products on themselves,
employees, customers, the environment, and local, national, and/or global
communities; understand how the ecologies of successful nonprofit and
for-profit liberal arts ventures operate; and articulate best practices of
successful liberal arts startups and organizations in relation to founder
roles and relationships, fundraising, public presentation/pitching, market
analysis, product differentiation, financial projecting, sales and marketing
strategies, and scaling. Every other summer, this course will be offered in
San Francisco, where students will be exposed to and work in one of the
most entrepreneurial cities in the world, and meet a number of founders
of non-profit and for-profit organizations whose services and solutions
are tied to Liberal Arts disciplines.

LA 494: Research Project Courses

1-12 Credits

Supervised student activities on research projects identified on an
individual or small-group basis. (No course under L A 294/494 may be
offered without approval of the associate dean of liberal arts. All courses
must have a specific title and letter suffix.)

LA 494H: Research Project Courses

1-12 Credits

Supervised student activities on research projects identified on an
individual or small-group basis. (No course under L A 294/494 may be
offered without approval of the associate dean of liberal arts. All courses
must have a specific title and letter suffix.)

Honors

LA 495: Undergraduate Field Experience or Practicum

1-12 Credits/Maximum of 12

Approved experience, related to student career objectives, in agencies
external to University.

Full-Time Equivalent Course

LA 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on
an individual basis and which fall outside the scope of formal courses.

LA 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively
narrow subject which may be topical or of special interest.

LA 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively
narrow subject that may be topical or of special interest.

LA 499: Foreign Study–Liberal Arts

1-9 Credits/Maximum of 9

Study in selected foreign countries of the cultural, institutional, and/or
social development of the host country.

International Cultures (IL)

Library Studies (LST)

LST 83: The Twenty-First Century Researcher

1 Credits

Students learn to use technology and Libraries resources to access
and cite relevant information into academic research projects. L ST
083S The Twenty-First Century Researcher (1)This course will equip
students with research skills for academic success at Penn State.
The class will investigate the Libraries’ physical facility and scholarly,
academic online resources as a single, holistic learning lab, and engage
students by providing hands-on experience in how to conduct research
across the disciplines and in all formats. Students will develop and use
several cutting-edge communications tools, including blogs, podcasts,
and personal portals. By the end of the course, students will be able
to create and conduct research projects, and integrate their findings into
outstanding papers and presentations in a variety of media.

First-Year Seminar

LST 250: Peer Tutoring in Research

3 Credits

LST 250 is a research-based class that prepares students to critically
think about, use, and produce information. Through a library and
information science lens, this class will explore, study, and interrogate
the research process. During the semester, students will conduct
research, learn about various process for creating, producing, and
finding information, and will have the chance to express their findings
and frustrations with the other students in the class. By the end of the
semester, students will be savvy users of library resources and will have
the skills needed to teach others about the research process. This course
is well suited for students who are interested in taking a deep dive into
the research process, or who have aspirations to do something in the
information science field in the future.
LST 301: Information Research Methods and Systems
1 Credits
Survey of information theories, structures and resources as related to library research methods for social, behavioral sciences and the humanities.

Honors
LST 370: Research Methods for Law and Government Information Resources
3 Credits
Evaluating, retrieving and integrating Federal and Legal Information Resources into scholarly research. LST 370 Research Methods for Law and Government Information Resources (3) This course covers basic legal research and government information skills: (1) the structure and types of federal primary and secondary legal sources; (2) the structure and types of federal government information; and (3) electronic and print databases and indices to locate legal and government information. Students will develop research methods for locating and using judicial, executive, and legislative branch information sources in scholarly and disciplinary research.

Prerequisite: 3 credits in Administration of Justice, Political Science, Communication, History or Sociology

LST 490: Archival Management
1-3 Credits/Maximum of 3
Introduction to the principles and procedures in the management of archives and historical manuscripts.

Cross-listed with: HIST 490
Bachelor of Arts: Humanities

LST 495: Internship
1-9 Credits/Maximum of 9
Directed internship in library studies, archival administration, rare book curation and/or preservation.

Prerequisite: LST 490 or LST 496
LST 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses. Students may not register for these courses without prior written approval of a faculty member in the department in which the courses are listed.

Linguistics (LING)

LING 1: The Study of Language
3 Credits
In this course, we survey essential topics in the study of language with a view toward providing an overview of the approaches, methods, and goals of linguistics. We examine fundamental questions like what are the origins of human language? How does language work? How do human languages differ and how are they alike? How do children learn languages? Why does language change? What is the link between language and culture? Why do people have such strong opinions about others' language use? What is the impact of language loss in human society? We will address these questions and others through readings, problems and discussion. The goal of this course is to provide evidence and analytical methods by which students can critically evaluate their own and other people's views of language. The course also focuses on helping students gain proficiency in the general skill of how to use data (in this case, qualitative language data), to make a well-supported scientific argument.

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

LING 97: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be taught in one year or semester.

Bachelor of Arts: Social and Behavioral Sciences

LING 98: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be taught in one year or semester.

Bachelor of Arts: Social and Behavioral Sciences

LING 100: Foundations of Linguistics
3 Credits
The course consists of a general survey of language and linguistics. A number of topics relating to human knowledge and use of language are systematically and scientifically investigated. The focus of the course is not on any specific language or languages; rather, it is on properties common to all languages and on ways in which languages may differ. The focus is on examination of speakers' knowledge of language and the idea of language as a system of human communication; the course provides students with the tools needed for the recording, investigation, and close analysis of language. Areas of study include phonetics and phonology (the details of sound analysis), morphology (word structure), syntax (sentence structure), and semantics and pragmatics (the deep investigation of meaning). Another part of the course teaches the students about aspects of language in society through topics such as sociolinguistics and/or historical linguistics. This aspect of the course is crucial to students' understanding of how language and culture reflect and affect each other. The course uses examples from English and from non-English languages and cultures in order to investigate these topics, though no previous knowledge of any language other than English is presumed. A knowledge of basic linguistics is, however, generally very helpful in the learning of foreign languages.

Bachelor of Arts: Social and Behavioral Sciences
LING 404: Phonology I

3 Credits

The analysis of the sound systems of human languages; focus on common phonological processes across languages and on phonetics-phonology interface. LING 404 Phonology I (3)(BA) This course meets the Bachelor of Arts degree requirements. This course is about sound patterning in language. In particular, we will learn how human speech sounds are produced and how they function together as a system. We will learn the International Phonetic Alphabet applied to English. We will discuss phonological data from many different languages to seek common phonological processes that occur despite the apparent surface diversity of languages. We will do extensive work on phonological problems in order to master basic phonological analysis.

Bachelor of Arts: Social and Behavioral Sciences

LING 429: Language and Thought

3 Credits

Introduction to Historical Linguistics is designed to teach the theories, methods, and data linguists used to study ancient and modern languages and language families, and the connections that can be traced through language between seemingly diverse peoples and cultures. This course will teach the methodologies used by historical linguists to seek to understand language change, and to reconstruct ancient language forms. These methodologies require students to already have a basic understanding of linguistics, in particular phonetics, phonology, morphology, syntax and semantics, as the course teaches students how to use methodologies within those subfields to investigate historical phenomena. The course will also investigate how linguistic analysis can be used to inform the study of human history. Topics include how languages change and evolve over time; language families, language change due to language contact, and the connection between language, history and archaeology. Students will thus also learn what language can teach us about the history of people groups around the world.

Prerequisite: LING 100
Bachelor of Arts: Humanities

LING 429: Language and Thought

3 Credits

Relations between language and cognition; cognitive implications of normal and impaired language development; cognition and bilingualism. LING (PSYCH 426) 429 Language and Thought (3)(BA) This course meets the Bachelor of Arts degree requirements. Is language a special and uniquely human ability that develops and functions independently of other cognitive processes? Do individuals who speak different languages also have different concepts about the meaning of objects and ideas? Does language development depend on exposure to spoken language? In this course we will examine the relation between language and thought by considering evidence on language and cognition in both children and adults. Topics to be covered include the typical development and use of language as well as language and cognition in individuals whose language and/or cognition is impaired in some form. The latter include individuals with aphasia who have sustained brain damage following stroke or head injury, schizophrenics whose language reflects aspects of their disorder, children diagnosed with Williams Syndrome who appear to have good or even precocious language abilities in the face of severe cognitive impairment, and Alzheimer’s patients in
whom semantic memory has begun to deteriorate. The course will also discuss the acquisition of sign language among deaf individuals and the consequences of bilingualism for children raised with two languages and for adults with proficiency in more than a single language. The purpose of this course is to provide a survey of current scholarship on the relation of language and thought, including a review of recent developments in the primary literature. The necessary background is covered in introductory Psychology and Linguistics courses, which serve as alternative prerequisites. Students will learn about the consequences of typical and impaired development for relations between cognition and language ability. It is distinguished from PSYCH 457, Psychology of Language, by a focus on the implications of language, language development, and language impairment, for cognitive processes. It covers some topics also addressed by current courses in Linguistics and in Communications Sciences and Disorders, but is distinguished from those courses by its focus on perspectives and theories from cognitive psychology. This course may be used toward the 400-level PSY requirements of the PSYBA and PSYBS majors, and toward the PSY minor. Students typically will be assessed on the basis of class participation and discussion (20%), four papers (total 60%), and an in-class presentation based on reading original research literature (20%). The course typically will be offered once each year at the University Park campus with an enrollment limit of 50.

Prerequisite: PSYCH100, LING 001, or LING 100
Cross-listed with: PSYCH 426
Bachelor of Arts: Social and Behavioral Sciences

LING 446: L1 Acquisition

3 Credits

How children learn their first language; psycholinguistic aspects of lexical, syntactic, semantic, and phonological development. LING 446 (PSYCH 427) L1 Acquisition (3) (BA) This course meets the Bachelor of Arts degree requirements. This course focuses on how children learn their first language from the theoretical perspectives of imitation theories, social construction theories, and inattentiveness theories. In addition, the course covers the various stages of language acquisition including phonological (sound system), morphological (word meaning), syntactical (grammar) and semantic (meaning) development from birth to adulthood. Other related subfields covered in the course include the acquisition of Pidgin and Creole languages, bilingual and multilingual acquisition, and language acquisition and linguistic change.

Prerequisite: LING 100; PSYCH 100
Cross-listed with: PSYCH 427
Bachelor of Arts: Social and Behavioral Sciences

LING 447: Bilingualism

3 Credits

Explores the social and psychological aspects of bilingualism; topics include languages in contact, transference, maintenance, and loss. LING 447 Bilingualism (3)(BA) This course meets the Bachelor of Arts degree requirements. This course presents a panoramic view of the major questions, research methods and results in bilingualism research. We will cover the following topics, in addition to those topics that emerge from students’ research: bilingualism in society; political and social results of language contact; effects of social attitudes on bilinguals; how bilingualism affect language: transfer; code-switch, language contact and language change; the bilingual brain, psycholinguistic effects of having two grammars in sentence production, phonological perception and lexical storage; childhood bilingualism; developmental and educational consequences of bilingualism.

Bachelor of Arts: Social and Behavioral Sciences

LING 448: Sociolinguistics

3 Credits

Issues in the study of language in its sociocultural context; analysis of social dialects and speech styles. LING 448 Sociolinguistics (3) (BA) This course meets the Bachelor of Arts degree requirements. This course investigates sociolinguistics variation and linguistic change. We will be concerned with identifying the mechanisms by which changes come about and are transmitted within a linguistic system. The course contrasts traditional studies of change and variation which concentrate on linguistic internal factors to those that are based on sociolinguistic factors. Research from a wide variety of languages and cultures will be examined.

Bachelor of Arts: Social and Behavioral Sciences

LING 449: Semantics I

3 Credits

The study of meaning in human language; methods of analysis; study of sense, reference, compositionality, quantification, presupposition, and sentence-level meaning. LING 449 Semantics I (3)(BA) This course meets the Bachelor of Arts degree requirements. This course examines our best understanding of how humans produce and understand utterances to have particular meanings. This course examines lexical semantics, which is concerned with word meaning, phrasal semantics, which examines phrase meanings and with pragmatics, the study of meaning in contexts. Because meanings cannot always be built up or deduced from the combined meaning of smaller elements, students will attempt to divulge the semantic principles at work in human language through a wide variety of problems and activities.

Bachelor of Arts: Social and Behavioral Sciences

LING 457: Psychology of Language

3 Credits

Overview of psychological research and theory on language processes, including speech perception, word recognition, meaning representation, comprehension, and language acquisition. LING (PSYCH) 457 Psychology of Language (3)(BA) This course meets the Bachelor of Arts degree requirements. How do we process language? Why do we easily adjust to a speaker with a foreign accent? How do you children come to speak the language to which they are exposed? Why is it difficult to learn a second language as an adult? These course focuses on the cognitive processes engaged by language use. Topics to be covered include speech perception, word recognition, representation of word meaning, comprehension of sentences, spoken production of words and sentences, and first and second language acquisition. In addition, the role of language in the study of thought and the role of biological mechanisms in theories of language learning will be discussed, as well as ways in which research on the language of special populations (e.g., deaf signers, dyslexics, aphasics) can inform theories of language processing and representation.

Prerequisite: PSYCH100 or LING 100
Cross-listed with: PSYCH 457
Bachelor of Arts: Social and Behavioral Sciences

LING 493: Field Methods

3 Credits

Primary linguistic investigation of a language different from English; field work with a native speaker; data gathering; linguistic analysis. LING 493 Field Methods (3) (BA) This course meets the Bachelor of Arts degree requirements. In this course, students work directly (in groups) with a native speaker of a foreign language with which no one in the class has any prior familiarity. The students will work to uncover the set of sounds relevant to the language in question by winnowing down possible sound contrasts made in human languages. They will begin to construct a lexicon (vocabulary) built with a phonetic alphabet to discover how words are formed in the language. They will refine their techniques of questioning their research participant based on principles of linguistic field work. Finally, groups will present their findings for discussion and revision.

Bachelor of Arts: Social and Behavioral Sciences

LING 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Social and Behavioral Sciences

LING 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Social and Behavioral Sciences

Honors

LING 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Social and Behavioral Sciences

LING 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be taught in one year or semester.

Bachelor of Arts: Social and Behavioral Sciences

LING 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Social and Behavioral Sciences

International Cultures (IL)

Management (MGMT)

MGMT 1: Business Leadership

3 Credits

The aim of this course is to introduce fundamental concepts of business management and leadership. MGMT 001S MGMT 001S Business Leadership (3) (FYS) MGMT 001S aims to introduce students to the academic discipline of management through the study of leadership and management principles and practices. The course is intended for First Year students enrolled in the Smeal College of Business Administration and other First Year students as recommended by their advisor. The course will cover a variety of concepts pertinent to leadership and management. We will begin by focusing on Leadership Theory and the practical manifestation of leadership in business and society. We will discuss how different leadership styles have appropriate application, and attempt to identify current leadership practices. We will also trace the evolution of management theory in this century, and distinguish between facts and fads in management. The class will then investigate the current business/industrial trend toward 'Teams' and group problem solving, and will participate in experiential team-building exercises. The course format will consist of lectures, outside reading, small-group discussion, class discussion and projects, and experiential exercises. Students will be, required to use multiple University resources, including the libraries, the computer center, class list-serve and e-mail, the internet, and the CDPC. Projects will include investigation of various disciplines within the broad area of business as exemplified by the variety of majors and options in the Smeal College of Business Administration. The term grade for this course will be determined by a weighted average of essay exams, written assignments, and class participation. The weights are as follows: mid-term 35%, writing assignments 15%, participation 15%, and final exam 35%. This course is also intended to fulfill the First Year Seminar requirement for students in the Smeal College of Business Administration. The course will accomplish this goal by conforming to the Criteria for First Year Seminars as spelled out in the Faculty Senate Legislation of 1998.

First-Year Seminar

MGMT 100: Survey of Management

3 Credits

Introduction to organizational factors relevant to management processes, including leadership, motivation, job design, technology, organizational design and environments, systems, change. May not be used to satisfy Penn State Business baccalaureate degree requirements. Not available to students who have taken B A 304 or MGMT 301.

MGMT 100W: Survey of Management

3 Credits

Introduction to organizational factors relevant to management processes, including leadership, motivation, job design, technology, organizational design and environments, systems, change. May not be used to satisfy Penn State Business baccalaureate degree requirements. Not available to students who have taken B A 304 or MGMT 301.

Writing Across the Curriculum
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

MGMT 199: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

MGMT 215: Entrepreneurial Mindset
3 Credits

This course provides the opportunity to learn to think like an entrepreneur in the broader context of social entrepreneurship, intrapreneurship, creative problem solving, opportunity recognition, and innovation.

MGMT 215 Entrepreneurial Mindset (3) An entrepreneurial mindset can be applied to different situations such as social entrepreneurship, intrapreneurship, creative problem solving, opportunity recognition, technology management, innovation and career development, etc. The skills and attributes of an entrepreneurial mindset can be used to expand career options and career paths for students in any major. Students will develop self-efficacy, leadership, recognition of new opportunities, resourcefulness, creativity and comfort with ambiguity. Further, this course will help students develop an appreciation for mistakes and failure as valuable learning opportunities. Through experiential exercises and problem based learning the student will be afforded the opportunity to study, apply and absorb an entrepreneurial mindset as an approach to viewing the world, to recognizing opportunities and to developing novel solutions. After taking this course the student, regardless of a student's major or college, will have a greater understanding of how to apply entrepreneurial thinking to problems and adopt entrepreneurial solutions to those problems to transform them from problems into opportunities.

MGMT 296: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

MGMT 296H: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

MGMT 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MGMT 299: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

MGMT 301: Basic Management Concepts
3 Credits

MGMT 301 exposes undergraduate students to the fundamental principles and basic concepts of management, with emphasis on organizational design, management processes, leadership, motivation, and managing teams and individuals in a global business environment. Understanding these principles and concepts is extremely important for students preparing for and entering the business profession. Managers plan, organize, lead, and control. These functions provide a foundation for MGMT 301 and are included in all course topics and modules. Typical modules include: An Overview of Management; Strategy and Structure; Organizational Behavior; and Group/Organizational Dynamics. The overview of management focuses on the manager's role and function, decision making, ethics, and managerial oversight. Topics covered in a strategy and structure module will include culture, environmental influences, strategy, organizational structure, globalization, and innovation. Organizational Behavior focuses on how decision making is influenced by various stakeholders who have formal and informal authority and control in a business. What motivates individuals and who are leaders in an organization is discussed along with group dynamics. Understanding team processes, conflict, adaptation to change, and various levels of group and one-on-one communication is important and will be covered by reviewing traditional management strategies and structures along with discussions on current and evolving management issues. Students may earn credit towards graduation for only one of the following: BA 304, MGMT 301, MGMT 301H, or MGMT 301W.

Enforced Prerequisite at Enrollment: (ENGL 15 or ENGL 30 or ENGL 137H or ESL 15 or CAS 137H) and (ECON 102 or ECON 104) and (MATH 21 or a higher math or a satisfactory score on the mathematics placement examination)

MGMT 301H: Basic Management Concepts (Honors)
3 Credits

Study of fundamental principles and processes available to the understanding of management. Students will likely spend a major part of their lives working for one or, perhaps, leading one they have started. Although sound technical skills and relevant knowledge are important reasons an organization hires employees, the ability to lead and manage people is critical for future advancement. This course is focused on the social facets of organizations - as opposed to elements such as finance, marketing, operations, etc. A good grasp of how organizations work will help students succeed in their careers. This course provides a forum to critically engage with theories and concepts that attempt to explain organizational practices. It is designed to not only provide students with the basic fundamentals that may be used as tools to become better managers, but also help students question their own assumptions about how people ought to behave and how they actually do behave in organizations. This course, builds on the concepts embedded in a traditional foundation management course by researching the theories these courses are built upon and pointing out the advantages and limitations of these different approaches. The topics covered in this course will provide both the breadth and depth of understanding of various topics including organizational structure, strategy, culture, leadership styles, ethics, and staffing that fall under the domain of Management and Organization. In addition, specific challenges faced by managers in contemporary organizations such as managing teams, globalization, and diversity are also incorporated. These topics are covered using lectures, independent research, case
analyses and experiential exercises that will help you develop in-depth domain knowledge as well as managerial skills. In addition, the course will facilitate the development of research and analytic skills through the inclusion of individual presentations of current topics that represent critical issues in organizations. A team project will further enhance knowledge acquisition of specific issues facing organizations and, since teams are prevalent across most organizational settings, also help develop teamwork skills. Students may earn credit towards graduation for only one of the following; BA 304, MGMT 301, MGMT 301H, or MGMT 301W.

**Enforced Prerequisite at Enrollment:** (ENGL 15 or ENGL 30 or ENGL 137H or ESL 15 or CAS 137H) and (ECON 102 or ECON 104) and (MATH 21 or a higher math or a satisfactory score on the mathematics placement examination)

Honors

**MGMT 301M: Basic Management Concepts**

3 Credits

Examination of fundamental principles and processes applicable to the study of management. May not be used to satisfy Smeal College baccalaureate degree requirements. Not available to students who have taken BA 304.

Honors

**Writing Across the Curriculum**

**MGMT 301W: Basic Management Concepts**

3 Credits

**MGMT 301W, Basic Management Concepts,** is a three credit course offered each semester across Penn State. MGMT 301W exposes undergraduate students to the fundamental principles and basic concepts of management, with emphasis on organizational design, management processes, leadership, motivation, and managing teams and individuals in a global business environment. Understanding these principles and concepts is extremely important for students preparing for and entering the business profession. Managers plan, organize, lead, and control. These functions provide a foundation for MGMT 301W and are included in all course topics and modules. Typical modules include: An Overview of Management; Strategy and Structure; Organizational Behavior; and Group/Organizational Dynamics. The overview of management focuses on the manager’s role and function, decision making, ethics, and managerial oversight. Topics covered in a strategy and structure module will include culture, environmental influences, strategy, organizational structure, globalization, and innovation. Organizational Behavior focuses on how decision making is influenced by various stakeholders who have formal and informal authority and control in a business. What motivates individuals and who are leaders in an organization is discussed along with group dynamics. Understanding team processes, conflict, adaptation to change, and various levels of group and one-on-one communication is important and will be covered by reviewing traditional management strategies and structures along with discussions on current and evolving management issues. Students may earn credit towards graduation for only one of the following; BA 304, MGMT 301, MGMT 301H, or MGMT 301W.

**Enforced Prerequisite at Enrollment:** (ENGL 15 or ENGL 30 or ENGL 137H or ESL 15 or CAS 137H) and (ECON 102 or ECON 104) and (MATH 21 or a higher math or a satisfactory score on the mathematics placement examination)

**Writing Across the Curriculum**

**MGMT 302: Establishing Workforce Diversity and Inclusion**

3 Credits

This course provides students with an understanding of the relevance and importance of diversity within corporate America as well as a review of global business practices. Students will examine marketing, management, and finance topics within the context of issues pertaining to persons of different orientations, gender and ethnic backgrounds. Diversity, Workforce, and Inclusion looks at topics that directly and indirectly impact employment opportunities, day-to-day work practices, and the civil environment in which individuals deal with as they attempt to establish themselves as successful individuals on equal footing with their colleagues. Course participants will be given the opportunity to examine their own biases and questions surrounding the topics of diversity, inclusion, and leadership in a multicultural environment. Current national and global trends in workplace diversity will be covered along with federal mandates that impact employment, education, and civil matters.

**MGMT 321: Leadership and Motivation**

3 Credits

Applies organizational behavior theories, concepts, and skills to leading and motivating individuals and groups.

**Enforced Prerequisite at Enrollment:** BA 304 or MGMT 301

**MGMT 326: Organizational Behavior and Design**

3 Credits

Concepts, theories, and methods of managing people and designing organizations. MGMT 326 Organizational Behavior and Design (3) This introductory course covers the concepts, theories, and methods of managing people and designing organizations. Issues and challenges of managing at different organizational levels (individual, group, project, and total organization) are discussed and illustrated with real-world examples. Students learn about the latest means of designing high-performing organizations, including how to change an organization. This course will serve as a foundation for taking advanced management courses. The primary method of evaluation is an examination after each of the four major parts of the course, but class participation and short papers may also be used for evaluation.

**Enforced Prerequisite at Enrollment:** BA 304 or MGMT 301

**MGMT 331: Management and Organization**

3 Credits

Designing organizations to effectively manage new technologies, structures, and people in changing global contexts.

**Enforced Prerequisite at Enrollment:** BA 304 or MGMT 301

**MGMT 341: Human Resource Management**

3 Credits

Introduction to the strategic planning and implementation of human resource management, including staffing, development, appraisal, and rewards.
Enforced Prerequisite at Enrollment: BA 304 or MGMT 301

MGMT 355: Leadership and Change in Organizations
3 Credits

This course focuses on concerns with understanding yourself as a leader in organizations—especially organizations undergoing change.

Enforced Prerequisite at Enrollment: MGMT 301

MGMT 365: Social Entrepreneurship
3 Credits

Social entrepreneurship exposes students to the power of solving social problems through market-based solutions. Entrepreneurs, in general, create opportunities through resource integration. Therefore, social entrepreneurs create socially beneficial opportunities through the integration of public and private resources. In this course, students will explore the latest regulatory, legal and macroenvironmental policies and issues related to social entrepreneurship. In contrast to existing entrepreneurship courses, social impact is the primary purpose driving firm creation. Profitability, or value capture is not required, but might provide an innovative business model choice. In order to support the creation and growth of important social opportunities, entrepreneurs should consider different business model innovations beyond financial returns alone might produce. After taking this course, students will be alert to legal and regulatory opportunities, be capable of developing relevant marketing innovations and provide measurement and impact analyses prior to and after implementation of their strategies associated with social entrepreneurship. These learning outcomes will benefit traditional entrepreneurs and social entrepreneurs in developing innovative solutions.

Enforced Prerequisite at Enrollment: MGMT 301

MGMT 395: Internship
1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: prior approval of proposed assignment by instructor.

MGMT 397: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MGMT 399: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

MGMT 400: Organization Development
3 Credits

A study of organizational change and methodologies related with change and improvement. Examination of planned change on processes, strategies, people and culture in organizations.

Enforced Prerequisite at Enrollment: MGMT 301

MGMT 401: Contemporary Issues in Management
3 Credits

Advanced treatment of topics of current managerial significance. Issues examined will differ by instructor, section, and semester. Consult departmental office.

Enforced Prerequisite at Enrollment: MGMT 301

MGMT 409: Project Management for Engineers
3 Credits

The course provides a real-time experience to students in engineering and engineering technology in project management with a focus on leadership behavior and decision making.

Enforced Prerequisite at Enrollment: 5th semester standing

MGMT 410: Project Management
3 Credits

MGMT 410 Project Management (3) Project Management has been labeled by Fortune magazine as the number one career choice for the coming decade. Increasingly, organizations are adopting project management techniques and structures within their business framework. Project management offers the twin advantages of allowing organizations to create products and processes efficiently, through optimal use of resources, and rapidly, in order to respond to rapid time-to-market demands. This course would greatly aid business majors, as companies are in great need of a trained cadre of qualified project managers who can allow the business firm to operate to its highest potential. The role of the instructor in this course is to train students in the wide variety of demands and skills for which they must be qualified: the ability to exert leadership in managing project teams, an understanding of people and behavioral skills, and the ability to effectively use computer-based scheduling and tracking software to keep timetables and schedules. The course itself would be set up around semester-long projects, either developed by the instructor, or developed (in collaboration with the instructor) by students involved in business enterprises. As a result, students would have real-time experience in the challenges of creating a unified team, solving problems, tracking their projects, and presenting a final paper and presentation on the process.

Enforced Prerequisite at Enrollment: MGMT 301 and (SCM 301 or SCM 310)

MGMT 415: Project Portfolio Management and Organizations
3 Credits

An advanced course in project management focusing on portfolio planning and control within the context of specific organizational challenges. MGMT 415 Project Portfolio Management and Organizations (3) Project Portfolio Management (PPM) is a strategically-focused
course on the management of projects, programs, and portfolios in organizations. The management of individual projects is a complex, multi-level challenge involving myriad issues of planning, organizing, and controlling all project elements. Project portfolio management addresses a more strategic need; namely, the process of project selection in order to develop a balanced portfolio of projects designed to support organizational initiatives. As a result, this course addresses the critical issues of maximizing value in a portfolio, linking projects to organizational strategy, understanding the critical organization effects of structure, environment, and culture on project success, and creating a coherent PPM framework for the firm. Because the focus is more strategic, the role of the instructor in this course is to go beyond the mechanics of planning and controlling a single project to training students how to think strategically where projects and programs are concerned; to recognize their role in creating a PPM plan for an organization, selecting projects for value, rebalancing a project portfolio, and maintaining this focus within the organization.

**Enforced Prerequisite at Enrollment:** SCM 301 and (MGMT 409 or MGMT 410)

**MGMT 418: Project Planning and Resource Management**

3 Credits

Advanced course in project management focusing on a more in-depth approach to project planning and scheduling and resource management. MGMT 418 Project Planning and Resource Management (3) Project Planning and Resource Management is a more in-depth look at some of the most important aspects of project management; the ability to accurately plan and schedule projects using the latest and most accurate methods. Further, the course addresses resource management within the context of planning, noting the important linkage between these two elements. Accurate planning can be done through a variety of techniques, including CPM, PERT, simulation, linear programming and other optimization methods. Students will learn when each of these methods are most useful, benefits and drawbacks of various planning and resource management techniques, and how to apply these techniques to their projects. In addition, students will learn about different types of project risks, and techniques for analyzing and managing these risks. Because the focus is hand-on and project-based. The role of the instructor in this course is to demonstrate these analytical techniques through classroom exercises and assignments and software packages, including MS Project, simulation, and Analytic Hierarchical Process (AHP).

**Enforced Prerequisite at Enrollment:** SCM 301 and (MGMT 409 or MGMT 410)

**MGMT 420: Negotiation and Conflict Management**

3 Credits

An exploration of the sources of interpersonal conflict and strategies of resolution in the managerial context.

**Enforced Prerequisite at Enrollment:** MGMT 301 or BA 304

**MGMT 424: Interpersonal Relationships in Organizations**

3 Credits

Developing individual skills in interpersonal and group settings and experience-based and conceptual training in relating effectively to other people.

**Enforced Prerequisite at Enrollment:** MGMT 321 or MGMT 326

**MGMT 425: New Venture Creation**

3 Credits

Via problem-based learning, teams define new business ventures to meet current market needs, develop business plans, and present to investors. ENGR 425ENGR (MGMT/IST/ENTR) 425 Introduction to Entrepreneurship (3) The goal of ENGR (MGMT/IST/ENTR) 425 is to better prepare undergraduate students to be business leaders in adaptive, globally-minded, technology-savvy companies. The course is structured so students develop skills that are of high value in any workplace: they develop improved leadership skills, higher self-efficacy, creativity and the ability to deal with ambiguity. On course completion, students will have a working knowledge of traditional and non-traditional ways for identifying a new product or business opportunity, quantifying the potential, understanding the key competitive factors, researching the audience and producing a convincing executive summary for internal or external financing and launch. Students who want to augment the skills and knowledge from their major with the ability to refine a new product/service process in an interdisciplinary team will find ENGR (MGMT/IST/ENTR) 425 a valuable course. This is a novel problem-based learning (PBL) course, where the learning is student-centered, with faculty acting primarily in the role of facilitators. Active learning happens in this course because students develop ownership in their new business venture concept and are fully responsible for the genesis of the idea. The course leverages the on-line course management system (ANGEL) to define weekly learning objectives, support electronic delivery of assignments, robust video content with entrepreneurs is provided on CD-ROM or via ANGEL, providing additional insights into entrepreneurship. The technology or business segment focus of the class is easily adapted by using different case studies and course mentors. This will be one of two courses in the new two-course sequence for business students in entrepreneurship. This course will be accepted as a supporting course in the Engineering Entrepreneurship Minor (E-SHIP) and in the Engineering Leadership Development Minor (ELDM). ENGR (MGMT/IST/ENTR) 425 can be used as a technical elective in many of the engineering departments. It will be accepted as a Support of Option course for the Information Sciences and Technology (IST) major. This course will be offered each Fall and Spring semester with two sections each semester. Class enrollment per section will be set at 60 total.

**Enforced Prerequisite at Enrollment:** (ECON 102 or ECON 104 or ECON 14) and CAS 100

Cross-listed with: ENGR 425, IST 425

**MGMT 426: Invention Commercialization**

3 Credits

Working with Penn State inventions selected by the Intellectual Property Office, student teams define an optimum commercialization path to each technology. ENGR 426ENGR (MGMT/IST/ENTR) 426 Invention Commercialization (3) The goal of ENGR (MGMT/IST/ENTR) 426 is to have students understand why invention commercialization is complicated and difficult by participating in the process. For example, the inventor rarely has insights into the markets for his/her invention, is often not interested in the details of commercialization, and can be secretive. In addition, the business and financial communities often do not take the time, or have the resources, to understand new technologies and perform complex due diligence. Thus lack of due diligence often leads to rejection of innovation because existing companies often discount new technologies from outside the company as NIH - 'not invented here'.

Working with Penn State inventions selected by the Intellectual Property Office, student teams define an optimum commercialization path to each technology. ENGR 426ENGR (MGMT/IST/ENTR) 426 Invention Commercialization (3) The goal of ENGR (MGMT/IST/ENTR) 426 is to have students understand why invention commercialization is complicated and difficult by participating in the process. For example, the inventor rarely has insights into the markets for his/her invention, is often not interested in the details of commercialization, and can be secretive. In addition, the business and financial communities often do not take the time, or have the resources, to understand new technologies and perform complex due diligence. Thus lack of due diligence often leads to rejection of innovation because existing companies often discount new technologies from outside the company as NIH - 'not invented here'.
Effective transfer of new invention or innovation to a commercial product requires at least three different functional communities to interface: technical, legal, and business. Each uses a different language, comes from different educational and cultural backgrounds, and may have an inherent distrust of the others. These functional barriers are difficult to overcome. This course teaches how these barriers can be broken down as student teams help bridge the perceived chasm between key players in the invention commercialization process. In these teams, students bring the skills and knowledge from their major to develop an invention commercialization recommendation for the Technology Transfer Office and the inventor. For example, business students focus on finance and market opportunity assessment; engineering and IST students focus on design refinements, prototyping support, and (if appropriate) making technology suggestions to the inventor. Upon completing the course, the students will have a working knowledge of different university and corporate technology or invention commercialization processes, important intellectual property management tools for inventions (patents, license agreements, option agreements) source of funding to move inventions toward product development, and delivering top quality presentations which outline the recommended commercialization path. Students who enjoy open-ended projects which involve the interplay of business and invention of who wants to work on interdisciplinary teams with the newest inventions will find this course a valuable course.

**Enforced Prerequisite at Enrollment:** (ECON 102 or ECON 104 or ECON 14) and CAS 100
Cross-listed with: ENGR 426, IST 426

MGMT 427: Managing an Entrepreneurial Start-Up Company

3 Credits

Exploration of the tensions and experiences of starting and growing a new company. MGMT 427 Managing an Entrepreneurial Start-Up Company (3) Start-up companies have a high failure rate. Acquiring and balancing limited resources, changing direction quickly, building a coherent team, managing intellectual property, and creating new markets all test a wide range of managerial skills not usually demanded in one person within a larger organization. Whereas a large company has a strong and well-defined structure and ample resources to deal with unexpected challenges, a start-up usually has insufficient resources and/or management experience, yet it must deal on a daily basis with important and often unpredictable forces. Students will be exposed to the tensions and experience through problem-based learning methods that illustrate what it is like to start and grow a new company. The course will provide students with the knowledge and experience to increase their likelihood of success whether as a principal in a small company or an investor representative.

**Enforced Prerequisite at Enrollment:** (ECON 102 or ECON 104 or ECON 014) and CAS 100 and 5th semester standing.

MGMT 427W: Managing an Entrepreneurial Start-up

3 Credits

Start-up companies have a high failure rate. Acquiring and balancing limited resources, changing direction quickly, building a coherent team, developing an organization's culture from scratch, managing intellectual property, and creating new markets all test a wide range of managerial skills not usually demanded in one person within a larger organization. Whereas a large company has a strong and well-defined structure and ample resources to deal with unexpected challenges, a start-up usually has insufficient resources and/or management experience, yet it must deal on a daily basis with important and often unpredictable forces.

Students will be exposed to these tensions and experience through problem-based learning methods that illustrate what it is like to start and grow a new company. The course will provide students with the knowledge and experience to increase their likelihood of success whether as a principal in a small company or an investor representative.

**Enforced Prerequisite at Enrollment:** (ECON 102 or ECON 104 or ECON 014) and CAS 100 and 5th semester standing.

MGMT 430: Project Risk Management

3 Credits

Risk management is indispensable for effective project management. The course provides students with proven theories, tools, and best practices in risk management in order to manage a project to its success. From the course, students will recognize that project risks are not surprises and can be effectively managed by conducting analytics and best practices in risk management planning, risk identification, qualitative and quantitative risk analyses, risk response planning, and risk monitoring and control. The course will also emphasize the applications of these concepts to practices. Case studies will be used to help students develop a practical understanding of the best practices in project risk management.

**Enforced Prerequisite at Enrollment:** SCM 301 and (MGMT 409 or MGMT 410)

MGMT 431: Entrepreneurship and Small Business Management

3 Credits

Entrepreneurship, new ventures, and management of small firms.

**Enforced Prerequisite at Enrollment:** ACCTG 211 and MGMT 301 and MKTG 301
MGMT 432: Small Business Field Study

3 Credits

Supervised field study with a small firm.

**Enforced Prerequisite at Enrollment:** MGMT 431

MGMT 433: Leadership and Team Building

3 Credits

Team-based learning approach to developing conceptual knowledge, skills sets, and personal competencies needed for leading and managing organizations. MGMT 433 Leadership and Team Building (3) To lead effectively and to manage others in contemporary work contexts requires mastery not only of conceptual knowledge, but also of the intra- and inter-personal competencies and skills sets that are vital to successful performance in a work environment. This course emphasizes an experiential-based learning approach that is designed to impart skill sets and competencies in areas such as leadership, teambuilding, negotiating, communicating, valuing diversity, managing conflict, and more. The course thus uses assessment exercises, role playing techniques, group problem solving exercises, and other experiential-based learning techniques in order to provide students with a framework for better understanding their own strengths and weaknesses, to enable them to practice, enhance, and to gain confidence in their competencies in these various areas, as well as to enable students to better appreciate when and how to effectively apply these skill sets and competencies in the workplace.

**Enforced Prerequisite at Enrollment:** MGMT 301

MGMT 440: Advanced Human Resource Management

3 Credits

In depth study of human resource management and personnel administration functions and processes.

**Enforced Prerequisite at Enrollment:** MGMT 341

MGMT 441: Organizational Staffing and Development

3 Credits

This course focuses on the skills and methods managers need to manage staffing and development activities in organizations. MGMT 441 HRM Professional Seminar (Part 1): Staffing and Development (3) The purpose of this course is to give students the skills and knowledge they need to contribute to organizational staffing and development activities. Students will learn technical and organizational aspects of managing recruitment, designing and implementing training programs, and developing career management initiatives. Topics include strategic human resource management, HR planning, the contingency workforce, HR information systems and technologies, job design, recruitment, selection, employment legislation, diversity, training, management development, career planning, and the like. This course is normally taken in the first semester of the senior year. It builds on information introduced in MGMT 341 (Human Resources Management) and moves beyond survey-level material to more specialized knowledge and skill. The course is taken concurrently with MGMT 444 (HRM Practicum, Part Two) and moves beyond survey-level material to more specialized knowledge and skill. The course is normally taken in the second semester of the senior year. It builds on information introduced in MGMT 341 (Human Resources Management) and moves beyond survey-level material to more specialized knowledge and skill. The course is taken concurrently with MGMT 444 (HRM Practicum, Part Two) and is typically taken as a precursor to MGMT 443 (HRM Proseminar, Part Two) and 444 (HRM Practicum, Part Two). These courses together constitute the core of the HRM Option for Management majors.

**Enforced Prerequisite at Enrollment:** MGMT 341

MGMT 443: Performance Management

3 Credits

This course focuses on the skills and methods managers need to enhance the contribution of employees to organizational performance and effectiveness. MGMT 443 HRM Professional Seminar Part Two: Performance Management (3) The purpose of this course is to give students the skills and knowledge they need to enhance the contribution of employees to the performance and effectiveness of the organization. Students will learn technical and organizational aspects of performance planning, goal setting, performance and feedback, compensation and reward systems, incentive systems, high performance work organizational change, and the like. This course is normally taken in the second semester of the senior year. It builds on information introduced in MGMT 441 (HRM Proseminar, Part One) and MGMT 442 (HRM Practicum, Part One). These courses together constitute the core of the HRM Option for Management majors.

**Enforced Prerequisite at Enrollment:** MGMT 341

MGMT 445: Managing a Diverse Workforce

3 Credits

This course focuses on developing knowledge and skills for managing demographic, functional, occupational and identity-based differences within and among organizations. MGMT 445 Managing a Diverse Workforce (3) This course focuses on developing knowledge and skills for managing differences within and among organizations. It provides an in-depth look at the sources of diversity-related conflicts in organizations, constructive approaches for managing these conflicts, and how corporations can leverage diversity for competitive advantage. The overall objective is to provide students with an understanding of the business case for diversity, the legal requirements surrounding the management of diversity in organizations, the structural dimensions of implementing diversity programs, skills for managing diversity in teams, as well as a general sensitivity to the kinds of issues that create conflicts within and between firms. Students will explore legal requirements including: EEOC, affirmative action, and the Americans with Disabilities Act and the implications of these for selection, compensation, promotion and dismissal. Examples of specific steps corporations have taken to address demographic, functional, occupational, and identity-based differences will be provided. Through the use of interactive case studies and experiential exercises, students will be given opportunities to learn about and appreciate their own and others' cultural heritages, reflect on constructive approaches for handling diversity-related conflicts (including those stemming from functional, occupational and identity-based differences as well as demographic ones) and for designing human resource management systems that capitalize on diversity and promotes inclusion.

**Enforced Prerequisite at Enrollment:** (BA 304 or MGMT 301) and MGMT 341

United States Cultures (US)
MGMT 450: Labor Management Relations
3 Credits
Study of the key concepts and processes involved in current American labor/management relations.

Enforced Prerequisite at Enrollment: MGMT 301

MGMT 451W: Business, Ethics, and Society
3 Credits
Advanced examination of social, ethical, legal, economic, equity, environmental, public policy, and political influences on managerial DECISIONS AND STRATEGIES. MGMT 451W Business, Ethics, and Society (3) Focuses on the knowledge, skills, and perspectives that a manager must have in order to deal with the social, legal, ethical, and political demands in society. Ecological, ethical, and public policy dimensions of various managerial decisions are examined.

Enforced Prerequisite at Enrollment: (BA 241 and BA 242) or BA 243 or BA 342
Writing Across the Curriculum

MGMT 453: Creativity and Innovation
3 Credits
Analysis of the process of innovation in organizations and of how creativity and other variables influence the process. MGMT 453 Creativity and Innovation (3) Creativity and Innovation analyzes the process of innovation in modern business organizations and the variables that influence the process. The relationship between creativity and innovation is investigated and individual, organizational and environmental influences on both the creative and innovation processes are examined. Special attention is given to organizational architectures that are conducive to innovation. A major objective of the course is to help students develop the competencies necessary for managing innovative organizations.

Enforced Prerequisite at Enrollment: MGMT 301

MGMT 461: International Management
3 Credits
Examines issues of nations and cultures including motivation, communication, negotiation, leadership, ethics and social responsibility, and women in management.

Enforced Prerequisite at Enrollment: BA 304 or MGMT 301
International Cultures (IL)

MGMT 466: Organizational Learning and Knowledge Management
3 Credits
Examination of the social processes through which organizations continuously develop, acquire, interpret, and apply information and knowledge for performance enhancement and continuous improvement. MGMT 466 Organizational Learning and Knowledge Management (3) The primary focus of this course is to examine critically the social structures and processes through which organizations continuously acquire, develop, organize interpret, distribute and apply information and knowledge for performance enhancement and continuous improvement. Topics such as single-loop learning, double loop learning, and deuterolearning (i.e., learning how to learn) are considered, particularly as they apply to self managed work teams, process-based and network structural design, employee involvement approaches, impact of organizational culture and leadership practices. A second focus of the course is to examine the social processes and structures through which the key outcome of the learning process -- organizational knowledge -- usually expressed in terms of improved core competencies, and intellectual capital, can be leveraged across products, functions, business units, geographical regions, and competitive environments to improve organizational performance and competitive advantage and provide added value for customers. Particular emphasis is placed on knowledge management in support of the organization's competitive strategy, with a focus on the exchange of tacit, person-to-person knowledge that is difficult to codify and store. Additional emphasis is placed on the mechanisms available for organizational members to gain access to needed knowledge.

Enforced Prerequisite at Enrollment: MGMT 301

MGMT 471: Strategic Management
3 Credits
Issues that influence the competitive performance of the firm are identified and examined. MGMT 471 Strategic Management (3) This course focuses on the management of the firm using a strategic perspective. The strategic perspective emphasizes the firm as the unit of analysis (e.g., analyzing how a firm competes in its industry), and it addresses key decisions that have a long-term impact on the structure and performance of the organization (e.g., diversifying into a new business or changing the company's strategy). The course draws heavily on prior business courses in accounting, marketing, finance, and international management. Key topics include industry analysis, competitor analysis, company analysis, corporate-level strategy, business-level strategy, strategy implementation, and firm performance. The course is normally taught using the case methods, but the course may include a computer simulation and/or oral group presentations.

Enforced Prerequisite at Enrollment: MGMT 301 and concurrent BA 411

MGMT 471W: Strategic Management and Business Policy
3 Credits
Study of strategic management and business policy formulation and implementation processes.

Enforced Prerequisite at Enrollment: MGMT 301 and MKTG 301 and FIN 301 and SCM 301
Writing Across the Curriculum

MGMT 475W: Strategic Product Development
3 Credits
Study of an organization, industry, and evaluation of the introduction to a new product. Preparation of proposal for industry product. MGMT 475W Strategic Product Development (3) This course is the first of a two course sequence that will provide a capstone experience for the Interdisciplinary Business and Engineering BS degree. The tools of strategic management and cross-functional collaboration will be introduced and serve as a background for the design, development, and implementation of a new product within an existing corporation. Student teams will be provided with an industry concept and work toward the objectives of a firm sponsoring the product concept. During the first semester, the
evaluation of the product including feasibility of the product, design, manufacture, and intellectual property will be evaluated by student teams and presented to the firm. The final document will include a complete written assessment of each of the components of feasibility.

Enforced Prerequisite at Enrollment: MGMT 301 and FIN 301 and MKTG 301 and (SCM 301 or SCM 310) and 7th semester standing. Recommended Preparation: MECH 211 or MCHT 111. Students should have successfully completed at least 6 credits in engineering.

Writing Across the Curriculum

MGMT 476: Product Realization Capstone

3 Credits

Study of an organization, industry, and evaluation of the introduction of a new product. Preparation of proposal for industry product. MGMT 476 Product Realization Capstone (3) This course is the second of a two course sequence that will provide a capstone experience for the Interdisciplinary Business & Engineering BS degree. The tools of strategic management and cross-functional collaboration will be used to design, develop, and implement a new product within an existing corporation. Student teams will be provided with an industry concept and work toward the objectives of a firm sponsoring the product concept. During the second semester, the evaluation of the product including feasibility of the product, design, manufacture, and intellectual property will be used by student teams and a final presentation and written assessment will be prepared for the firm.

Enforced Prerequisite at Enrollment: MGMT 475W or 8th semester standing

MGMT 480: Business Transformation Consulting

3 Credits

This course provides key issues, concepts, and methodologies associated with business transformation and management consulting. Students will explore the professional services industry, industry best practices, and a variety of client contexts where advisory services are needed. Additionally, students will learn common consulting methods and how to apply them in client organizations. A consulting-oriented solution development lifecycle is used as the organizing framework of the course. The primary phases of this framework include: client qualification/validiation, problem identification, data gathering, requirements definition, project planning, solution design, solution development, solution implementation, and client relationship management. Students will learn to how to identify and define organization problems, highlight pain points, map work flows, explore business models, investigate strategic alignment, develop recommendations, present business cases, and prototype solutions. The course will also enable students to learn how to advise clients and present key points and recommendations in a direct, clear, and compelling manner. Course objectives are to provide students with consultative methods, skills, and tools essential to facilitating organizational change. The course is designed around real-world problems and projects involving organizational assessment, solution development, and implementation planning. In this course, each student will be assigned to a consulting team. Each consulting team will be assigned to work with a corporate client to address a real-world business problem. Students will learn how to work proactively with key stakeholders to identify and understand the choices, risks, and benefits of particular solution alternatives, prepare project proposals, develop a plan to support the needed changes, and assess the effectiveness of business transformation efforts. Depending on the project, the recommended solution may be prototyped or fully developed during the course.

Enforced Prerequisite at Enrollment: MGMT 301

MGMT 483: Compliance and Fairness in Organizations

3 Credits

Compliance with employment laws with respect to managing human resources and fair treatment in employer-employee relationships. MGMT 483 Compliance and Fairness in Organizations (3) This course is intended for undergraduate students who want to learn more about the laws governing the employment practices introduced in the survey course in human resource management. This course will clarify the legal context within which businesses in general, and managers in particular, manage their employees. Students will learn about the legal rights and responsibilities of both employers and employees. Objectives of the course include learning how to comply with workplace laws and regulations, learning how to legally and effectively implement these requirements in an organization, and, as managers of human resources, knowing how to run a safe and fair workplace. To accomplish these objectives, students will evaluate and analyze federal employment laws and regulations, state employment laws (where applicable), and U.S. Supreme Court rulings. The emphasis will be on providing an informed legal context for managerial behavior. Student achievement of these learning objectives will be evaluated using several methods: students will summarize, interpret, and analyze employment law cases, write and develop a portfolio of critical essays of corporate employment practices, research and present (with team members) a project analyzing a current legal challenge to a specific company employment practice, and prepare a comprehensive written examination of material covered in the course.

Enforced Prerequisite at Enrollment: MGMT 341

MGMT 485: Entrepreneurial Opportunity Creation

3 Credits

Entrepreneurial Opportunity Creation is a process for co-creating ideas, markets and products by testing value propositions in actual market conditions. Opportunity co-creation prepares entrepreneurs to manage under conditions of extreme uncertainty. Opportunity creation is an iterative process between internal and external stakeholders focused on mutual value creation and exchange. Upon validation that a meaningful market opportunity exists, organizational resources are designed and deployed to match the learned opportunity. Unlike traditional entrepreneurial approaches, organizational formation is predicated on co-creation activities and is custom designed to fit the specific opportunity. This sequence reduces risk previously caused from efforts to predict the unpredictable, an uncertain future. This course will prepare students to learn how to create their own opportunities through active learning instead of predictive planning techniques rooted in risk analysis. Students will learn to use lean management techniques such as prototype development, sales and entrepreneurial marketing. This specific process or opportunity creation reverses conventional thinking and positions ideas, resources and experiences as outcomes of the process, not inputs.

Enforced Prerequisite at Enrollment: MGMT 453 and MGMT 425
MGMT 486: Entrepreneurial Investment and Resource Acquisition

3 Credits

As resource integrator’s, entrepreneurs must first understand what resources are needed to create a new venture (through Entrepreneurial Opportunity Creation) and then solicit and organize internal and external resources (aka Venture Capital). Although venture capital is often conceptualized as formal investments made by large investment institutions seeking high growth opportunities, a more inclusive definition of venture capital more aptly considers all forms of external resource sharing to provide the creation of value, new ventures and wealth. The entrepreneurial ecosystem offers an expanding number of tools to aid new venture creation. As such, successful entrepreneurs need to be aware of the options and understand their respective strengths and weaknesses. Today’s entrepreneurs can utilize traditional investment tools such as banking, personal debt obligations and venture capital institutions as well as emerging forms of investment tools such as crowdfunding resources, angel investors and accelerators. This course will provide students with the insights into raising venture capital, more broadly defined as any necessary external assets, through business planning, networking, investment pitching and negotiating. This will require students to compile the learning outcomes gained through prerequisite material into a comprehensive business plan including financial projections. Through these activities, students in this course will be prepared to engage with applicable external resources providers and/or investors.

Enforced Prerequisite at Enrollment: MGMT 485

MGMT 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

MGMT 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

MGMT 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: prior approval of proposed assignment by instructor.

Full-Time Equivalent Course

MGMT 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

MGMT 496B: **SPECIAL TOPICS**

1-6 Credits

MGMT 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MGMT 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Management Information Systems (MIS)

MIS 103: Microcomputer Applications in Business

3 Credits

Introduction to current business uses of the microcomputer, including spreadsheets, database management, word processing, and decision-making models.

MIS 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

MIS 204: Introduction to Management Information Systems

3 Credits

Introduction to Management Information Systems provides an overview of the role of information systems in business process design, the current technologies used for obtaining, storing, securing, and communicating information in support of operations and decision-making within a business organization, as well as, the concepts and principles for developing and using popular spreadsheet and database tools. Applications focus on important problems and issues found in business disciplines, including accounting, finance, marketing, supply chain operations, and general management. The evaluation of students will be based on tests, at least one application project, and hands-on exercises.

MIS 204H: Honors Introduction to Management Information Systems

3 Credits

Introduction to the use of information systems in business organizations. MIS 204H Introduction to Management Information Systems Honors (3)This honors section of MIS 204, will provide enhanced, in depth learning for Schreyer Honor students. MIS 204 is an applications-oriented course that provides an overview of (1) the role of information systems in business process design, (2) the current technologies used for obtaining, storing, and communicating information in support of operations and decision-making within a business organizations, and (3) the concepts and principles for programming, developing, and using...
popular spreadsheet and database tools. Applications focus on important problems and issues found in business disciplines, including accounting, finance, marketing, supply chain operations, and general management. The responsibility to understand and recognize opportunities to use information systems belongs to all managers in an organization, not just the information technology managers. As future business managers in diverse functional areas, our students begin their journey to understand the foundations of information systems and how managers are using these systems to increase the competitiveness of their organizations. As an introductory course, students should be able to come into the class without any prior experience. However, even students with experience will hopefully learn something new. Students will develop a general understanding of how a business functions, understand how information and technology is used within a business and develop new student IT skill sets. In summary, we aim to provide an opportunity for all undergraduate business majors to use IT in their current or future jobs in such a way to ensure the success of their organization. In addition, the Schreyer Honor students will also be exposed to business data mining, a highly intelligent application of information technology in a variety of business contexts that often lead to core competitive advantages.

Honors

MIS 250: Introduction to Problem Solving with Spreadsheet Analysis and Information Systems Management

3 Credits

Introduction to Problem Solving with Spreadsheet Analysis and Information Systems Management introduces students to the use of information technologies for business problem solving and decision-making. This course explores the application of spreadsheet engineering concepts and principles of data management, business modeling, and reporting to business problems. Students demonstrate their understanding and mastery of these concepts through their application in examinations, practical lab exercises and assignments. Concepts are contextualized in a broader discussion of information systems management including: data security, ethical issues, social media, distributed (cloud) services, and emerging trends. The structure of this course intends to provide a well-rounded level of competency in the use of spreadsheet software as a tool while exploring problem decomposition and solution planning and construction. Therefore, the focus of the course is on developing problem-solving strategies while gaining insight on the tactical use of spreadsheets.

MIS 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

MIS 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MIS 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

MIS 301: Business Analytics

3 Credits

MIS 301 investigates use of databases, basic data mining tools, social networking software, and advanced level of spreadsheet management for analysis of large amounts of data. Learning methods emphasize active learning in the application of methods and tools to real data and the presentation of the results. Topics may include methods for analyzing not only structured data, but also unstructured data from the web, emails, blogs, social networks, click streams, etc. Finally, techniques for visualizing, presenting and communicating information in a useful way will be presented.

Enforced Prerequisite at Enrollment: (SCM 200 or STAT 200) Concurrent Courses: (MATH 110 or MATH 140) and (MIS 204 or MIS 250)

MIS 307: Algorithmic Concepts

3 Credits/Maximum of 3

Using state-of-art programming language; concepts, program structure and design, documentation, file handling, and elementary data structures are introduced. MIS 307, Algorithmic Concepts, is a required course for information systems majors in the business program. The objective of the course is to present students with the principles of object oriented design and programming using a state-of-the-art programming language such as C++ or Java. Concepts include algorithm development, programming structure, documentation, UML modeling, file management, and elementary data structures such as arrays. This course requires the students to demonstrate their mastery of object oriented design and programming through a series of individual programming assignments. In addition, students are assigned a team project to foster problem solving, communication, and team skills required in the Information Technology work force. MIS 307 will be offered once per semester with multiple sections based on student enrollment and demand.

Enforced Prerequisite at Enrollment: CMPSC 101 or CMPSC 102 or CMPSC 121 or IST 140

MIS 315: Python Programming

3 Credits

Students will learn how to program with Python, which is an interpreted, object-oriented, high-level programming language with dynamic semantics. Students will demonstrate how to easily use this for small, large, online and offline projects. Students will utilize Python for web development, simple scripting and data analysis. Students will describe how Python supports modules and packages, which encourages program modularity and code reuse. Students will develop a project with Python's interactive mode combined with the PyPI (Python Package Index). Students will become proficient with Python, which is the leading language of choice for many data scientists.

Enforced Prerequisite at Enrollment: MIS 204

MIS 336: Database Management Systems

3 Credits

Theory and utilization of database management systems in organizations, including data modeling and applications development.
MIS 345: Introduction to Data Analytics

3 Credits

An introduction to data analytics including data preparation, data visualization, dimension reduction, modeling techniques, and applications in different domain areas.

Enforced Prerequisite at Enrollment: SCM 200 or STAT 200 or equivalent approved course

MIS 387: Website Design and Administration

3 Credits

 Applied, hands-on, interdisciplinary website design/administration course. Acquired concepts, techniques and tools are exercised in individual and team projects. MIS 387 Website Design and Administration (3) This course is designed to teach students how to design, create, deploy, and administer websites. The students will have the opportunity to obtain a solid understanding of some of the tools and techniques, beyond basic HTML, used to publish on the Internet via the World Wide Web. Additionally, the students will learn how to present themselves professionally on the web to a specific target audience. The students’ experiences will not be limited to the design and implementation of a website, but will include the opportunity to work within a team, to understand the benefits of working with client organizations to develop a website, and a web implementation plan.

Enforced Prerequisite at Enrollment: MIS 204

MIS 390: Information Systems Management and Applications

3 Credits

Specification, design and implementation of information systems directed at aiding decision making in organizations. MIS 390 Information System Management and Applications (3) INFSY 390, Information Systems Management & Applications, is a required course for Information Systems and Business students. The course covers topics and concepts in Management Information Systems (MIS) and information technology management. Upon successful completion of this course, students will have a broad knowledge of contemporary issues and applications of MIS in business. In addition to exams, students use hands-on case studies and popular information technology applications in the class room. Students in the course also learn how to develop modern computer-based information systems through a business application project that helps them understand the role of MIS in business organizations. Topics covered in the course include information systems in the enterprise, e-business and e-commerce, telecommunications and networking, database management, knowledge management, decision support systems, business value of information systems, and social and ethical issues of information systems. The course prerequisites are IST 110 or MIS 204 & MIS103 or CMPSC203. INFSY 390 will be offered once per semester with multiple sections based on student enrollment and demand.

Enforced Prerequisite at Enrollment: MIS 204

MIS 391: E-Commerce Strategies

3 Credits

Introduction to the fundamental Principles of Electronic Commerce (E-Commerce) technologies, applications, and management of E-Commerce in modern organizations. MIS 391 Principles of E-Commerce (3) INFSY 391 provides an introduction to the fundamental concepts of e-commerce and serves as a foundation for business undergraduate students to understand e-commerce application and management in modern organizations. The course is designed to appeal to all business undergraduate students. Upon successful completion of this course, the student will have an understanding of the various types of e-commerce utilization and management in organizations throughout the world. INFSY 391 is an elective in the Business program. INFSY 390, Information Systems Management & Applications, is a required course for Information Systems and Business students and is a prerequisite for INFSY 391. In INFSY 391, Business students will continue to explore the inter-relationship between information technology and organizational functions and management. In addition to examinations, students will be assigned to project- and team-based assignments where students will actively examine e-commerce applications as well as management cases and the impact of e-commerce on the modern organization. Student performance will be evaluated using both examinations and team project assignments. INFSY 391 will be offered once per semester with multiple sections based on student enrollment and demand.

Enforced Prerequisite at Enrollment: MIS 390

MIS 404: Introduction to ERP and Business Processes

3 Credits

A problem-based, interdisciplinary course on Enterprise Resource Planning (ERP) concepts and business processes. MIS 404 Introduction to ERP and Business Processes (3) Enterprise Resource Planning (ERP) a group of integrated software modules used to run virtually all business processes in an organization. The course explains and demonstrates how business processes such as sales logistics, production/material management, procurement, and human resources are supported in an ERP software package.

Enforced Prerequisite at Enrollment: MIS 204 or 1st Level Programming Course or with the permission of the program

MIS 405: Supply Chain Information Systems with Oracle

3 Credits

Strategic design and implementation of Oracle supply chain management information systems in an ERP environment. MIS 405 Supply Chain Information Systems with Oracle (3) This course involves extensive discussion and study in the design and understanding of supply chain information systems. The vast majority of business data is generated through the use of supply chain information systems. Successful program managers and business analysts must understand how the data is generated, and how this strategic data is used to integrate various business functions. This course will focus on the implementation and management of supply chain information systems, and will include topics in the following areas: * Inventory Management * Purchasing and Materials Management * Bills of Material and Engineering * Master Scheduling and Material Requirements Planning. This course will include a special focus on Oracle eBusiness suite applications and numerous hands-on exercises that will ensure participants understand
implementation strategies, supply chain information system processes, and data analysis.

**Enforced Prerequisite at Enrollment:** SCM 301 and MIS 204

MIS 406: Customer Information Systems with Oracle

3 Credits

A technology-based exploration of the various Oracle Order Management and Customer Relationship Management tools. MIS 406 Customer Information Systems with Oracle (3) This course provides a detailed explanation of customer relationship and order management within the organizational supply chain. The course demonstrates how Order Management process flows, application functionality, and organizational requirements are utilized to manage and control sales order fulfillment. Additionally, the course will demonstrate how Oracle’s integrated Customer Relationship Management (CRM) solution provides information-driven sales, service, and marketing support to the organization. Extensive use of state-of-the-art Oracle business software technology is employed.

**Enforced Prerequisite at Enrollment:** MIS 405

MIS 407: Enterprise Integration with Oracle

3 Credits

This is a technology course focusing on software development in an Oracle eBusiness ERP Environment. MIS 407 Enterprise Integration with Oracle (3) The Oracle Enterprise Integration course will cover the primary functionality of core business application modules and the flow of data through the major database tables. Students will perform SQL queries of critical Oracle ERP tables. Students will develop PL SQL program units which are the foundation of Oracle business modules. The open interfaces for Oracle Inventory and Oracle Purchasing will be demonstrated via programming sessions.

**Enforced Prerequisite at Enrollment:** MIS 336

MIS 413: Interface Design for Information Systems Applications

3 Credits

The study of interface design emphasizing application and user requirements, development and testing techniques, and information processing issues. MIS 413 MIS 413 Interface Design for Information Systems Applications (3) In order to design an information system, the designer must undertake a thorough task analysis to determine the proper functionality of the system. The designer must give attention to system reliability, security, standardization, portability, integration, and many other issues. While these issues are important, they do not directly address the needs of the system’s users. The system’s interface is the vehicle with which users interact with the system. It is, in essence, the system from the users’ standpoint. A poorly-designed interface will deter people from using the system, while a well-designed interface will encourage system usage.

**Enforced Prerequisite at Enrollment:** MIS 307 and MIS 465

MIS 415: Social Media Management and Analytics

3 Credits

Students gain experience and in-depth analysis of social media management, digital marketing, SEO/M, and analytics of current digital business practices. MIS 415 Social Media Management and Analytics (3) With the rise of social media as a management, marketing and analytics tool, students need to learn how to use these tools to communicate better with customers as well as analyze important data that can help marketers solve digital marketing challenges. In this course, students will learn about the changing nature of digital business practices and will be able to gain experience with social media management, digital marketing, SEO, SEM, and analytics. In-depth analysis will be given on current practices and this course will build a framework from which students can pioneer their own ideas in the growing field of digital marketing. They will also be able to understand current issues in digital marketing and have the tools they need to assess those issues and further strengthen their understanding of this important, emerging field.

MIS 420: Business Process Management

3 Credits

This course introduces students to concepts, approaches, and design principles used to identify, model, assess, and improve business processes. MIS 420 Business Process Management (3) The course builds the foundation for process analysis by focusing on key aspects of business processes, including collaboration, information flow, people, roles and business rules. The main objective is to provide an introduction to various techniques and tools of process analysis and workflow management including process modeling techniques and simulation. The course will utilize cases and examples to strengthen the student's understanding of business processes. At the end of the term students are expected to have the competency required to model and analyze current processes and develop coherent and well thought out improvement plans for redesigning organizational processes.

MIS 430: Systems Analysis

3 Credits

Information analysis and the logical specification of the system.

**Enforced Prerequisite or Concurrent at Enrollment:** MIS 336

MIS 431: Business Data Management

3 Credits

Management of data including large, complex sets to support business analytics, strategy, and operations. MIS 431 Business Data Management (3) Business Data Management will enable students to use various database designs to acquire the information needed to make effective business decisions. Successful students will be able to design, create and implement a relational database in MySQL and be able to write SQL statements to obtain information from a database. In addition, students will investigate the next generation approaches for storing, manipulating, and managing web data in unstructured formats. Students will gain an understanding of the advantages and disadvantages among XML, NoSQL, NewSQL, and Relational databases. After completing this course, students should have the knowledge, skills, and abilities to be able to: * have an understanding of SQL by retrieving data from a database using SQL * design a database system including an ER Model, and implement the design in an enterprise database application such as MySQL * have an understanding of NoSQL databases such as MongoDB and Graph databases, XML native databases, NewSQL databases and the advantages and disadvantages of these databases.

**Enforced Prerequisite at Enrollment:** MIS 301. Concurrent: SCM 301
MIS 432: Business Information System Analysis

3 Credits

The analysis of business information systems and the requirements specifications of redesigned systems. MIS 432 Business Information System Analysis (3) Business Information Systems Analysis introduces concepts underlying computer based information systems development. The course focuses on object-oriented concepts, project management and principles of systems development using standard UML diagram methodologies. The course develops a solid understanding of information systems development through the analysis of current information systems and the requirement specifications of a redesigned system, and also provides significant hands on experience using current technologies. After completing this course, the student should have the knowledge, skills, and abilities to be able to: - define and document an existing information system; - analyze an existing information system and specify the requirements for a replacement system; - use a specific Computer-Aided Software Engineering (CASE) tool to assist in Systems Analysis; - understand alternative approaches to systems development; - understand the purpose, context and commonly expected 'deliverables' of systems analysis and - create a substantial project and prepare a professional report. The evaluation of students will be based on tests, lab work, and homework. This is a prescribed course for the M I S major and a support-of-major course for Smeal students M I S 432 will be offered in the fall and spring semesters in sections ranging from 25 to 40 students.

Enforced Concurrent at Enrollment: MIS 431

MIS 433: Rapid Application Development

3 Credits

This course provides students with a real world, hands on introduction to the current industry of Rapid Application Development (RAD) tools and techniques. RAD includes prototyping and end-user development in order to quickly create information system applications. Mendix is one of the platforms that enables employees to work in smaller cross functional-teams and deliver software at a high rate of speed, and encompasses all the tools and environments needed to build and manage applications and their development. It includes project management, modelers, UI development, public app store online support and a strong collaboration approach using the online community.

Enforced Prerequisite at Enrollment: MIS 204 and MIS 336

MIS 435: Systems Design and Implementation

4 Credits

MIS 435 Systems Design and Implementation (3) Current systems development methods involve a use-case based, and iterative and incremental approach. This is the approach generally used on object-oriented systems development projects and is the approach taught in this course. Design aspects of the course will emphasize design patterns and their application to systems design using the standard software design notation-The Unified Modeling Language. An Agile (light-weight) approach to systems design will be emphasized. Implementation aspects of the course will focus on object-oriented programming using a modern object-oriented programming language.

Enforced Prerequisite at Enrollment: MIS 430 and (CMPSC 122 or CMPSC 302 or MIS 315)

MIS 441: Business Intelligence for Decision Making

3 Credits

Application of Information Technology based methods and tools to analyze business data and support decision making. MIS 441 Business Intelligence for Decision Making (3) Business intelligence encompasses the IT tools for exploring, analyzing, integrating, and reporting business data for fact-based, intelligent decision making. This course primarily investigates methods and tools for exploring and analyzing large amounts of business data also called 'Big Data.' Learning methods emphasize active learning in the application of methods and tools to real data and the presentation of the results. Students will be exposed to a variety of methods for analyzing both structured and unstructured data and they will work with business data sets to understand the value that can be extracted from large data sets. They will also learn how to classify and associate data to discover business rules that can be used to support decision making. The course will also cover methods to analyze social media information and about tools that can facilitate such analysis and discovery. Again they will get a chance to work with data from real social networks to gain an appreciation of how value can be obtained from such networks. Finally, they will learn about techniques for visualizing, presenting and communicating information in a useful way, e.g. through dashboards and with other technologies on various platforms.

Enforced Prerequisite at Enrollment: MIS 431

MIS 445: Business Intelligence

4 Credits

Develops insights and skills related to Business Intelligence, Data Warehousing, Data Mining, Analytics, OLAP, and report generators. MIS 445 Management Reporting Systems (4) This course develops insights and skills required to analyze management reporting systems, propose improvements, create reports, extract and package data using various software tools, and design data warehouses. It prepares students for the position of a Business Intelligence Specialist who can apply insight and technical competence to the challenges of leveraging Reporting, OLAP, Data Mining, Business Intelligence (BI), and Data Warehouse technologies.

Enforced Prerequisite at Enrollment: MIS 336

MIS 446: Information Technology and Business Strategy

3 Credits

Strategic use and management of information technology in digital global economy. MIS 446 Information Technology and Business Strategy (3) This course introduces the basics on the interplay between information technology and business strategies. The course starts with the general topic of strategic use of information technology in business (as enabler, differentiator, and disruptor) using examples from a variety of industries, followed by detailed coverage of the information technology strategy in individual industries including e-logistics, e-tailing, e-marketing, e-finance. The course also covers basics on the business information technology infrastructure and environments (Internet, Web, service-oriented computing, and security and risks). Towards the end, the course discusses the role of information technology in the global economy, business value of the explosively growing digital social networks, and other emerging trends and new technology opportunities. Topics include: - Information technology strategy, IT-business strategy
alignment; IT as enabler, differentiator, and disruptor. - Internet and Web infrastructure; extranet, intranet, hosting strategies; platform independence; eBusiness technology standards; open versus proprietary technologies; interoperability. - Web Services for implementing business applications; software as a service; Services science and services oriented architectures. - Overview of E-Business models, B2B, B2C, (x2y). - E-logistics and supply chain: Analysis of Dell model; Internet auctions, eBay; e-hubs; m-mode, GPS, RFID. - E-tailing: Amazon, eBay, Walmart, recommendation systems, reputation systems. - E-marketing: search engine advertising (Google AdWords/AdSense, Yahoo Search Marketing); database marketing (precision targeting). - E-finance: online brokerage (Schwab, E*Trade), wealth management (e-strategy, technology for churn prediction and customer acquisition/retention), payment technologies (paypal), computational trading strategies. - Collaboration/Community technologies: Blogs, MySpace, Facebook, YouTube, Voice over IP, videoconferencing, RSS, etc.; Impact on business communication and media industry. - Need for security in ecommerce - threats and solutions. - Globalization and IT. Offshoring and outsourcing. - Emerging trends and technology opportunities.

**Enforced Prerequisite at Enrollment:** MIS 301 or MIS 390

MIS 447: Data Warehousing

3 Credits

This course focuses on fundamental principles and applications of data warehousing. Topics covered include data warehouse planning, design, and implementation. MIS 447 Data Warehousing (3) This course focuses on fundamental principles and applications of data warehousing. Issues related to data warehouse planning, design, and implementation are also covered in this course. Through case studies in various business domains, course exercises and projects, students will learn practical dimensional modeling techniques, extract/transformation/load (ETL) logic, ETL design considerations, and report generation. Essentially, students will learn how to align multiple sources of data through data warehousing architectures for deriving valuable business insights through subsequent business intelligence operations. The course begins by reviewing basic database modeling principles, and then introduces dimensional modeling in the context of the various data warehousing architectures (e.g., Kimball, Corporate Information Factory, hybrid architectures). Key concepts related to data warehousing including dimensional table characteristics, fact table characteristics and granularity, types of dimensions, types of fact tables, dimension attribute hierarchies, consolidated fact tables, slowly changing dimension techniques, and multivalued dimensions and weighting factors are covered in the course. Also, key advanced database management techniques such as views, procedures, and triggers will be introduced. Building on these core concepts, the course also covers related concepts including the role of online analytical processing (OLAP) and packaged analytic solutions, enterprise data warehouse business architecture and matrix, data warehousing lifecycle, ETL subsystems and tasks, ETL system planning, ETL design and development process and tasks, and data modeling best practices for big data. Case studies from various business domains and processes are included throughout the course. Examples of these domains include retail sales, order management, procurement, accounting, healthcare, insurance, transportation, and telecommunication. The case studies are used to illustrate the concepts as well as provide a context for hands-on exercises. Through course assignments and group projects, students have an opportunity to gain hands-on experience with data warehouse design, development, and prototype implementation.

**Enforced Prerequisite at Enrollment:** MIS 336 or equivalent approved course

MIS 448: Business Telecommunications

3 Credits

Introduces telecommunication concepts, its evolution, and present applications in business. Discusses the software and hardware components of telecommunication networks.

**Enforced Prerequisite at Enrollment:** MIS 301 and MIS 448 and MIS 465 and 7th semester standing

MIS 450: System Design Project

3 Credits

A project in the design, specification, and programming of a system in an application area. MIS 450 System Design Project (3) MIS 450, Systems Design Project, is a required course for information systems majors in the business program. MIS 450 is the capstone course. The primary objective of this course is for students to develop Information Systems (IS) solutions to real-life problems by following the entire systems development lifecycle (SDLC). The course allows students to demonstrate their mastery of the SDLC methodologies and analytical skills. Students develop a team project to foster problem solving, communication, and team skills. Individual assessment is evaluated through demonstration of the understanding of IS skills (i.e. application development, oral presentations, and written communication). Individuals are required to prepare professional written documents (i.e. definition document, the solution proposal, and the design document). Then students develop a solution prototype matching the criteria outlined in their requirement documents.

**Enforced Prerequisite at Enrollment:** MIS 307 and MIS 448 and MIS 465

MIS 461: Web Technologies

3 Credits

Fundamentals of Web development for e-business and related project management. MIS 461 Web Technologies (3) The objectives of this course are to enable students to fully understand the purpose, structure, and components of technologies utilized for e-business applications; to gain substantial hands-on experience, creating applications for e-business; understand how XML and other technologies are revolutionizing the Web and what it will do for complex real-world applications; to make students aware of research issues that apply to Web development; and to strengthen collaborative skills related to project development and management.

**Enforced Prerequisite at Enrollment:** MIS 307 and MIS 465

MIS 465: DataBase Management

3 Credits

Provides a comparison of techniques, methodology of systems, limitations, and applications of various data base management systems. MIS 465 Database Management (3), is a required course for information systems majors in the business program. The objective of the course is to present database design and development, specifically relational database management systems (RDBMS), along with project work on developing database systems. The course coverage includes conceptual data modeling, relational data model, structured query language (SQL),
data normalization, database integrity, and database administration. Advanced topics such as distributed databases and data warehousing are also discussed briefly. The course prerequisite is IST 140 or CMPSC 101 or CMPSC 121 and MIS 390. This course is centered on a group project involving the design and development of a relational DBMS. Student groups also work on case and homework problems related to database design. A suitable relational database package, like ORACLE, is used by students in the group project. Database design and development involving the creation of tables, queries, forms, and reports are the center piece of the group project. MIS 465 will be offered once per semester with multiple sections based on student enrollment and demand.

Enforced Prerequisite at Enrollment: (IST 140 or CMPSC 101 or CMPSC 121) and MIS 390

MIS 466: Business Programming for the WEB

3 Credits

Advanced programming for WEB-based applications. MIS 466 Business Programming for the Web (3) The objective of this course is to teach students how to create and maintain business applications on the WEB. Students will learn how to use tags, scripting, and a low-level programming language to support business applications. Students will be encouraged to use the above mentioned tools to provide useful and well-designed content to the WEB community. The course assumes knowledge of an object-oriented programming language and some introduction to HTML. A state-of-the-art programming language will be used to facilitate learning for project development. Team skills and problem solving, as an important part of the development process, will be emphasized and integrated into project development activities. To be successful in such a work environment, students need to learn how to work together to design, implement and test projects. Electronic commerce, employee training and development, accounting, and finance applications are typical of application areas that will be emphasized. Specific goals of the course are to: 1) expose students to concepts and principles necessary to provide well-designed and useful content on the WEB 2) teach students how to apply programming in a WEB-based environment 3) show students how these techniques increase productivity of complex systems, and 4) further student development of team skills when programming complex systems. MIS 435 is an elective in the Information Systems program. INFSY 307 or the equivalent, required of all Information System majors. Student performance will be evaluated by means of assignments, examinations, and team-based projects. It is expected that this changed course will be offered two times during each academic year.

Enforced Prerequisite at Enrollment: MIS 307

MIS 479W: Enterprise Information Systems

3 Credits

Management and implementation of enterprise information systems for business integration and supply chain management. MIS 479W Enterprise Information Systems (3) This course examines enterprise-wide information systems architecture for the business setting and examines current commercial systems, with a special focus on SAP R/3 development tools and techniques. Topics include: - The acquisition, installation and operation of Enterprise Information Systems (EIS), formerly referred to as Enterprise Resource Management (ERP) systems. The strategic decisions regarding approaches business organizations select for the acquisition and integration of EIS components and how executive level support for such endeavors is obtained. - The overall management and coordination techniques used in the design, development and implementation of an organization's EIS, including the role that software vendors and other third party’s play in the acquisition and implementation of enterprise systems. - The coordination and control of multi-party relationships. Specific analysis and design techniques are taught, including tools and methodologies for analyzing business processes in preparation for implementation of EIS, as well as database and data warehousing requirements. - The methods of determining data communication network requirements. - The practical implementation concerns are addressed, such as preparing internal organizational units for migration to a new EIS architecture and to the maintenance and operation of EIS including concerns involving security and control. - The managerial and technical issues involved in the developing and testing of applications and user interfaces and customization of commercial packages. - The career planning issues and ways of obtaining training for specialization and advancement in careers involving EIS. This course is writing intensive. As such, student evaluations will consist of, at a minimum: examinations, position papers, case studies (written and oral), and assignments. Both individual and group assignments will be used. The objective is to enhance writing ability relevant to students preparing for careers in business. Group report writing, brief technical writing, technical documentation, end-user documentation, and memo writing will be covered. The major group writing assignments will be required throughout the semester, as well as individual assignments that will be prepared in preparation for the group. Peer assessments and instructor feedback and evaluation will be provided on a regular basis. This is a prescribed course for the MIS major.

Enforced Prerequisite at Enrollment: MIS 432

Writing Across the Curriculum

MIS 481: Business Analytics

3 Credits

Advances in computational technologies, coupled with the massive amounts of data available through business activities as well as the surrounding ecosystems, have created an amazing potential for managers to leverage analytics in order to gain organizational and competitive advantages. This course takes a two-fold approach to address Analytics Methodologies. The first section of the course provides a broad understanding of business analytics and the second section demonstrates the managerial best practices for leveraging the analytics. The course covers concepts such as analytics problem framing, data understanding & preparation, as well as descriptive & predictive modeling. The course incorporates applications and real-world datasets from marketing and other business disciplines for a hands-on learning experience. Best practices derived from cases are also incorporated into the course structure in order to learn the strategies required to implement and manage analytics initiatives in businesses. Students are initially introduced to business analytics through a series of examples, use cases, and applications. Next, descriptive analytics through the use of dashboard and business reporting techniques is presented as a means for business performance management. Following this, the overall predictive analytics process is explained with emphasis on framing the analytics problem from an understanding business context. Additionally, fundamental predictive modeling concepts are covered concurrently with the introduction of exemplary modeling techniques. Students then receive an opportunity to apply these techniques through the use of different problem scenarios and real-world datasets. Related topics including overfitting, and visualizing model performance are covered as well. Students are presented an expected value framework to assist approaching business problems with a decision-analytic perspective. The
course also covers managerial aspects of integrating business analytics within the enterprise by linking business strategy to business analytics initiatives. Approaches to initiate, manage, and sustain analytics initiatives to gain a competitive advantage are discussed with cases. At the end of the course, students are expected to have the competencies required to analyze possible opportunities for leveraging analytics across the boundaries of functional business domains as well as applying key analytic techniques and interpreting results for decision-making.

**Enforced Prerequisite at Enrollment:** MIS 345

MIS 489: Seminar in Information Systems

3 Credits

Covers new trends and concepts in information/processing technology and their applications and impact on computer information systems. MIS 489 Seminar in Information Systems (3) INFSY 489, Seminar in Information Systems, is an elective course for information systems majors in the business program. Information Systems is a rapidly changing discipline and students must be aware of these changes. This course covers new trends and concepts in information/processing technology and their applications and impact on computer information systems. In this course, students are introduced to new methods, tools, applications and terminology. The students develop key skills in the ability to assess new technologies, and the ability to incorporate these technologies into complex information systems. Students learn how to work with business applications in the latest prevalent technology. They work both individually and in groups on problems related to the topic addressed in the seminar. Topics for the seminar can differ with each offering of the course. This course is designed to provide the flexibility to coverage current issues and trend in the Information Technology world. Such topics could be (but not limited to): advanced networking, mobile computing, wireless infrastructure, security, ERP, SAP, and others. The course prerequisites are INFSY 307 & INFSY 445. INFSY 489 will be offered once per semester based on student enrollment and demand. The topics will vary upon it offering.

**Enforced Prerequisite at Enrollment:** MIS 307 and MIS 465

MIS 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

MIS 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

MIS 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Enforced Prerequisite at Enrollment:** prior approval of proposed assignment by instructor

Full-Time Equivalent Course

MIS 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

MIS 496A: **SPECIAL TOPICS**

1-6 Credits

MIS 496B: **SPECIAL TOPICS**

1-6 Credits

MIS 496C: **SPECIAL TOPICS**

1-6 Credits

MIS 496D: **SPECIAL TOPICS**

1-6 Credits

MIS 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**Marketing (MKTG)**

MKTG 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

MKTG 220: Introduction to Selling Techniques

3 Credits

Principles underlying the sales process and practical application of these principles to selling situations. Studies role of selling in total marketing process.

**Enforced Prerequisite at Enrollment:** third-semester standing

MKTG 221: Contemporary American Marketing

3 Credits

Social and economic aspects, movement of goods and services from producers to consumers; analysis of marketing functions, systems, and institutions. May not be used to satisfy Penn State Business baccalaureate degree requirements. Not available to students who have taken B A 303 or MKTG 301.

**Enforced Prerequisite at Enrollment:** 3 credits in ECON
MKTG 221W: Contemporary American Marketing

3 Credits

Social and economic aspects: movement of goods and services from producers to consumers; analysis of marketing functions, systems, and institutions. May not be used to satisfy Penn State Business baccalaureate degree requirements. Not available to students who have taken BA 303 or MKTG 301.

Enforced Prerequisite at Enrollment: 3 credits in ECON Writing Across the Curriculum

MKTG 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

MKTG 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MKTG 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

MKTG 301: Principles of Marketing

3 Credits

Principles of Marketing covers terminology and important concepts related to marketing in the business environment. Domestic and international environments that impact marketing are included, with particular emphasis on the marketing environment, segmentation, positioning and targeting. MKTG 301 course objectives include providing an overview and introduction to marketing; demonstrating the relationship of marketing to other functions and processes in a business organization on an integrated basis; providing real world examples of challenges and issues in marketing. Major themes embedded in MKTG 301 include: 1) domestic and global socioeconomic factors that influence marketing environments; the use of marketing research and information systems to create and guide marketing strategies; how consumers, businesses and organizational customers are segmented and targeted; how products are developed to serve customers, businesses and organizations; unique issues in the marketing of services versus goods; how customers are reached through conventional and technological channels; the sales function, including how sales processes are managed; how marketing communications programs (including advertising, publicity, sales promotion and new media) influence customers; how pricing strategies support corporate objectives, and how consumers respond to pricing; the roles of non-profit and social marketing; corporate social responsibility and sustainability in marketing; and the impact of marketing on society. Students may earn credit towards graduation for only one of the following; BA 303, MKTG 301, MKTG 301H, or MKTG 301W.

Enforced Prerequisite at Enrollment: (ENGL 15 or ENGL 30 or ENGL 137H or ESL 15 or CAS 137H) and (ECON 102 or ECON 104) and (MATH 21 or a higher math or a satisfactory score on the mathematics placement examination)

MKTG 301H: Principles of Marketing (Honors)

3 Credits

Marketing begins and ends with the customer, from determining wants and needs to providing customer satisfaction. This course will emphasize fundamental marketing concepts, such as segmentation, targeting, and positioning, and the 4 P’s (product, price, place, and promotion). In addition, the course will emphasize the use of marketing research to inform managerial decision-making. The overarching goal of this course is to introduce you to a) the role of marketing within business organizations and society, and b) the concepts and activities in marketing that create and deliver value to customers. At the conclusion of this course, students will be able to: 1) explain the fundamental concepts of marketing and the role of marketing in business; 2) apply marketing concepts and analysis tools to managerial decision-making; and, 3) provide real-world examples of challenges and issues in marketing. Major themes embedded in MKTG 301H include: domestic and global socioeconomic factors that influence marketing environments; the use of marketing research and information systems to create and guide marketing strategies; how consumers, businesses and organizational customers are segmented and targeted; how products are developed to serve customers, businesses and organizations; unique issues in the marketing of services versus goods; how customers are reached through conventional and technological channels; the sales function, including how sales processes are managed; how marketing communications programs (including advertising, publicity, sales promotion and new media) influence customers; how pricing strategies support corporate objectives, and how consumers respond to pricing; the roles of non-profit and social marketing; corporate social responsibility and sustainability in marketing; and the impact of marketing on society. Students may earn credit towards graduation for only one of the following; BA 303, MKTG 301, MKTG 301H, or MKTG 301W.

Enforced Prerequisite at Enrollment: (ENGL 15 or ENGL 30 or ENGL 137H or ESL 15 or CAS 137H) and (ECON 102 or ECON 104) and (MATH 21 or a higher math or a satisfactory score on the mathematics placement examination) Honors

MKTG 301W: Principles of Marketing

3 Credits

Principles of Marketing is a three credit course offered each semester across Penn State and covers terminology and important concepts related to marketing in the business environment. Domestic and international environments that impact marketing are included, with particular emphasis on the marketing environment, segmentation, positioning and targeting. MKTG 301W course objectives include providing an overview and introduction to marketing; demonstrating the relationship of marketing to other functions and processes in a business organization on an integrated basis; providing real world examples of challenges and issues related to marketing; and explaining and discussing important concepts and analytical tools in marketing. Major themes embedded in the foundation of MKTG 301W include
domestic and global economic factors influencing current marketing environments; how consumer, business and organizational customers are segmented and targeted; how marketing research and information systems are used to create and guide marketing strategies; how products are developed to serve customers, businesses and organizations; how service products are developed and managed to meet customer needs; how customers are reached through various conventional and technological channels and how these sales management processes are managed; how people in the United States and other nations are influenced by marketing in the non-profit sector; how products and services are marketed to other businesses and organizational customers; how marketing communications programs, which include advertising, publicity, sales promotion and web sites, are designed to reach domestic and international customers; how pricing strategies support corporate objectives in various economic climates; and how marketing programs adapt to shifts towards global markets. Students may earn credit toward graduation for only one of the following: BA 303, MKTG 301, MKTG 301H, or MKTG 301W.

**Enforced Prerequisite at Enrollment:** (ENGL 15 or ENGL 30 or ENGL 137H or ESL 15 or CAS 137H) and (ECON 102 or ECON 104) and (MATH 21 or a higher math or a satisfactory score on the mathematics placement examination)

**Writing Across the Curriculum**

**MKTG 302: Marketing Techniques for Electronic Commerce**

3 Credits

Explores methods to implement/adapt marketing methods to the Internet; builds upon introductory marketing classes to examine what does/doesn't work. MKTG 302 Marketing Techniques for Electronic Commerce (3) This course examines the role of commerce and marketing with special focus on Internet commerce topics including: the commerce value chain, business strategies and business strategies for the global marketplace. Several Internet business models are examined. These include: business-to-business (B2B), business-to-consumer (B2C), consumer-to-consumer (C2C); and government-to-consumer (G2C); and other permutations of these models. Marketing fundamentals include market segmentation and product life cycle, and similar topics are reviewed with the emphasis on Internet implementation. Specific methods for conducting market research using the Internet as well as methods to determine who is the 'average' Internet user are examined. Advertising methods for the Internet vs. the traditional advertising mediums of TV, radio, and print, and methods to measure advertising success on the Internet are discussed. The Internet removes existing roadblocks and adds new roadblocks for businesses, thus requiring different pricing strategies. Distribution channels and methods of supply–chain management are studied. How marketers utilize e-mail, site commissions, cookies, filters, and databases is examined. Security, privacy, and ethical issues, e.g., consumers' rights to privacy and sale of consumer information, are reviewed. Finally, a market plan to migrate business functions to the Internet is developed.

**Enforced Prerequisite at Enrollment:** BA 303 or MKTG 301

**MKTG 310: Public Relations and Marketing**

3 Credits

Examination of the role of public relations in a company's efforts to manufacture and market its products and services.

**Enforced Prerequisite at Enrollment:** BA 303 or MKTG 301

**MKTG 327: Retailing**

3 Credits

Management of marketing institutions in distribution channels from producers to consumers. Emphasis on retail institutions: location, personnel, merchandising, control, promotion.

**Enforced Prerequisite at Enrollment:** BA 303 or MKTG 301

**MKTG 330: Consumer Behavior**

3 Credits

Application of behavioral science concepts to the understanding of buyer behavior as a basis for marketing management decision making.

**Enforced Prerequisite at Enrollment:** BA 303 or MKTG 301

**MKTG 342: Marketing Research**

3 Credits

Research approaches, methods, and applications studied as a formal approach to problem solving for marketing decisions.

**Enforced Prerequisite at Enrollment:** (BA 303 or MKTG 301) and (SCM 200 or STAT 200)

**MKTG 343: Introduction to Marketing Analytics**

3 Credits

Marketing Analytics helps students enhance skills and knowledge required for data-driven marketing decision process. The course introduces students to analytics for pricing, forecasting, different estimation techniques, calculating lifetime values, market segmentation, the impact of social network marketing and measuring the effectiveness of advertising. Through this course, data visualization and communicating data insights will be discussed as well strategic marketing decision making processes.

**Enforced Prerequisite at Enrollment:** MKTG 342

**MKTG 395: Sales Internship**

3 Credits

A sales internship is a structured work experience conducted by an organization in cooperation with a Penn State college or campus. It is a learning experience that encompasses a set of specified tasks related to sales and requires the student to apply knowledge learned in an academic environment to the sales profession. A student may earn three academic credits for the successful completion of the internship. Internships may be completed within Fall, Spring, or Summer academic terms. All Internships require both organizational and faculty sponsors who oversee the student's internship experience. Companies are carefully screened to ensure that sales internships are a positive and beneficial experience. The organizational sponsor oversees the intern's work experience and is responsible for evaluating the student work performance. The faculty sponsor evaluates the intern's academic performance and authorizes the granting of academic credit upon completion of the internship. A sales internship provides students an
important learning experience as they begin their journey into the work force.

**Enforced Prerequisite at Enrollment:** Prior approval of proposed internship by instructor

**MKTG 397: Special Topics**
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**MKTG 399: Foreign Studies**
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

**MKTG 410: Personal Selling**
3 Credits

Principles underlying the selling process and practical application of these principles to selling situations.

**Enforced Prerequisite at Enrollment:** MKTG 301

**MKTG 422: Advertising and Sales Promotion Management**
3 Credits

Perspectives and models of the key decisions involved in managing advertising and sales promotion campaigns.

**Enforced Prerequisite at Enrollment:** MKTG 330 or MKTG 342

**MKTG 422H: Advertising and Sales Promotion Management**
3 Credits

Perspectives and models of the key decisions involved in managing advertising and sales promotion campaigns.

Honors

**MKTG 426: Business Marketing**
3 Credits

Developing marketing strategies and programs. The course emphasizes the special nature of the business and organizational markets.

**Enforced Prerequisite at Enrollment:** MKTG 330 and MKTG 342

**MKTG 428: Advanced Sales Management**
3 Credits

Approaches to planning, organizing, staffing, training, directing, and controlling the sales force in support of marketing objectives.

**Enforced Prerequisite at Enrollment:** MKTG 330 and MKTG 342

**MKTG 437: Advanced Retailing and Merchandise Management**
3 Credits

Analyzing planning and controlling the retail merchandising effort, including procurement, resource selection, vendor relations, product presentation, inventory control.

**Enforced Prerequisite at Enrollment:** MKTG 330 and MKTG 342

**MKTG 440: Services Marketing**
3 Credits

Marketing theory and methods applied to profit and nonprofit service industries such as health care, finance, transportation, tourism, arts and consulting.

**Enforced Prerequisite at Enrollment:** MKTG 330 and MKTG 342

**MKTG 441: Sustainability in Marketing Strategy**
3 Credits

This course examines sustainability in marketing strategy, including real-world applications, green solutions, and using marketing principles to solve social issues. MKTG 441 Sustainability in Marketing Strategy (3) This course will examine the growing trend of sustainability and its implications for marketing in today's world and in the future. It will explore how businesses develop and implement marketing strategies to promote sustainability, and analyze how companies are performing. Businesses are increasingly applying the concepts of sustainability to their decision-making for marketing strategy. Some firms are leaders in the sustainability movement, and are motivated by ethical conviction to do well for society and the environment. Others find themselves forced by pressure from shareholders, customers, governmental regulation, and peers. Given this increased attention to the concepts of sustainability by stakeholders, businesses are also looking for future employees with an understanding of the phenomenon.

**Enforced Prerequisite at Enrollment:** MKTG 301 and MKTG 342

**MKTG 442: Sustainable Behavior of Consumers, Firms, and Societies**
3 Credits

Sustainability is a broad domain concerning the extent to which environmental, economic, and social practices are viable for current and future generations. Consumer awareness of sustainability issues has evolved from an emerging social movement to mainstream values, but increasing sustainable behavior remains a challenge. This course is designed to provide students with the knowledge to enhance sustainable behaviors in firms, among consumers, and in society at large. In doing so, this course will include frameworks for understanding how to influence sustainable practices, consumer response to sustainability, and marketing communication issues as well as real-world examples of sustainable practices and issues, offering both a theoretical and applied approach. The course may also include a project which will entail student teams working on a real-world sustainable behavior problem in collaboration with a business or segment of the university campus when available or other course project addressing a relevant sustainability issue. Students should leave the course with an understanding of sustainability issues in the current marketplace and the knowledge and ability to influence sustainable behaviors. Students will enter their career
with the knowledge and skills to be a sustainable business decision-maker and foster sustainable behavior.

**Enforced Prerequisite at Enrollment:** BA 342 or SUST 200 or CED 152
Cross-listed with: BA 442

MKTG 443: Sports Marketing

3 Credits

This course will focus on how companies develop, execute and measure marketing strategies and tactics to use sports teams, families, leagues and other organizations to market their products and services domestically and internationally to consumers and business partners. The course will examine the marketing strategies employed by sports teams and leagues. MKTG 443 Sports Marketing (3) ‘Sports Marketing’ is designed to explore how various types of businesses and other organizations market products and/or service related to sports as well as how sports are used as marketing platforms for non-sports products. Unique aspects of the sports business will be explored including how strategies and tactics related to marketing in this sector differs from other industries. The purpose of this course is to provide an overview of various aspects of sports marketing. This will include the use of sports as a marketing tool for other products, the marketing of sports products and emerging considerations that are relevant for both marketing through and the marketing of sports. Since sports involves consumers, businesses and other organizations, this course will cover B2C as well as B2B marketing. How product, distribution, pricing and promotional programs are developed particular to this industry will be one of the primary focuses. Relationship marketing, the role of technology, sponsorships, ambush marketing, partnership leveraging, endorsements, venue naming rights, licensing and emerging legal and ethical issues will also be important focuses. A guest speaker series will provide additional professional perspectives on a variety of unique aspects of marketing particular to sports. Reading Sports Business Journal, the most highly regarded source of news by sports industry employees, will further expand this knowledge base as will current news events related to the industry. Students will be provided an opportunity to network with guest speakers and those interested in considering sports among their job search, will also be able to receive internship and career counseling from the instructional team. Students enrolled in this class will also be able to submit resumes and requests to be interviewed for internships with various sports organizations being arranged in cooperation with the Smeal College Corporate and Career Services Office. Students will apply what is being learned in the class to the development of a project related to sports marketing, with the added benefit of having a deliverable which can be used to further the search for jobs and/or internships in the sports business.

**Enforced Prerequisite at Enrollment:** BA 303 or MKTG 301

MKTG 444: Buyer Behavior and Applied Research

3 Credits

Buyer Behavior occupies the center of the customer-company interface. It informs the design of marketing strategy and planning by providing insights about the evolving consumer environment; consumer information processing and decision-making; consumer purchase and product usage patterns and influences; consumer attitude, consumer motivation. To address these diverse issues and concerns, consumer behavior analyses draws from related fields of economics, psychology, sociology, anthropology and other basic disciplines. Similarly, studying consumer behavior requires an extensive and diverse methodological tool kit of both qualitative and quantitative research techniques. Insights about consumers and consumption patterns help marketing professionals design products and marketing programs that resonate with consumers’ thoughts, feelings, interests and motivations.

**Enforced Prerequisite at Enrollment:** MKTG 301 and MKTG 342

MKTG 445: Global Marketing

3 Credits

Role of international marketing in the global environment; political, economic, geographic, historical, cultural conditions; developing and implementing international marketing strategies. MKTG (I B) 445 Global Marketing (3) (IL) MKTG/I B 445 focuses on the wide range of issues, which face enterprises as they develop and execute marketing strategies and tactics, designed to support business activities in markets outside their home country. This course deals directly with these issues as they apply to firms, which concentrate on a few markets closer to home, or on many markets throughout the world, including via the Internet. This course also deals with the important role played by governments in shaping the global marketing environment, including through trade policies, treaties and marketing supports. Students successfully completing this course also gain a greater understanding of the cultural, technological, economic, political and social environments which international businesses and global marketers face as they seek to expand their product and/or service offerings into other nations. Understanding this important part of the challenge facing international businesses and global marketers is achieved through the text, lectures, and student group projects and presentations including some focused on specific countries, including both major trading partners of the United States and select emerging new markets. This course is designed for students who have an interest in these topics and/or who plan to enter fields such as international business or global marketing and/or who expect to work for businesses, which are active internationally. Class discussions and projects are designed to help students explore these topics in greater depth. A series of small group assignments and presentations will further help students apply what is being learned via problem-based learning. This is an interactive class. Therefore, a portion of the grade each student achieves will be based on class attendance and participation. Students are also expected to pay attention to examples of the issues discussed in class that they encounter during the semester in prim broadcast, and online communications. Along with material from lectures and the text, issues discussed in class will be included in the exam.

**Enforced Prerequisite at Enrollment:** BA 303 or MKTG 301

International Cultures (IL)

MKTG 449: Sports Business Market Strategy

3 Credits

This course provides an overview of the business of sports, with an emphasis on marketing and market strategy. Particular topics include business strategy and competitive forces in sports, fan psychology, fan behavior, segmentation, targeting, positioning, sports brands, market research, fan satisfaction, licensing, facilities, technology, ethics, and careers in sports. It will provide practical case-study examples from the sports industry, and challenges students to explore solutions to a variety of business problems in sports. Students will apply concepts and frameworks from assigned readings and class discussions, to think critically about current and ongoing issues in business and marketing in the sports industry, and to present recommendations in a professional
setting. Assignments and group presentations are intended to provide practical, hands-on experience, which students can leverage to enhance their value in the sports industry.

**Enforced Prerequisite at Enrollment:** MKTG 301

MKTG 450W: Marketing Strategy

3 Credits

Market-oriented problems of the firm; identification and selection of market opportunities; formulation of competitive strategies; marketing policies and programs.

**Enforced Prerequisite at Enrollment:** MKTG 330 and MKTG 342

Writing Across the Curriculum

MKTG 472: Strategic Brand Management

3 Credits

Brands are a potentially valuable asset to firms in Business-to-Business (B2B) and Business-to-Consumer (B2C) markets. Strong brands influence purchase and consumption by communicating value and providing differentiation in the marketplace. Effective brand management is therefore critical to maintaining the long-term profitability of products and services. This course investigates how to create profitable brand strategies by building, measuring, and managing brand equity. Theories and practical tools will address the following questions: how does branding influence purchase and consumption? how can firms build brand equity? how should brand equity be measured and managed over time? how should firms manage brands in a brand portfolio? how can firms leverage brand equity? At the conclusion of this course, students will be able to: 1) explain the fundamental concepts of branding and the role of branding in business; 2) apply branding concepts and analysis tools to managerial decision-making; and, 3) provide real-world examples of challenges and issues in branding.

**Enforced Prerequisite at Enrollment:** MKTG 330 and MKTG 342

MKTG 473: Digital Marketing

3 Credits

In recent years, marketing has dramatically shifted from traditional (e.g., commercial, print advertising) to digital using technologies such as the Internet, social media, augmented reality, mobile, Internet of Things, and wearables. This course will introduce students to the changing landscape of marketing through a digital marketing perspective. Major topics covered are digital marketing themes, communication platforms, content marketing, digital advertising, real-time marketing, marketing automation, search engine optimization (SEO) and search engine marketing (SEM), social media, mobile, video, digital technologies, and measurement. This course helps students understand, and evaluate the digital marketing landscape to aid in effective marketing campaigns. Students will learn the fundamentals, frameworks and useful concepts developed specifically for digital platforms. How core marketing and business principles (i.e. segmentation, marketing mix, commerce) are used or have been altered will be discussed. Case studies and examples of successful and failed campaigns will be analyzed. The course utilizes group work assignments to create and present a digital marketing plan of a company, brand or specific product/service. Last, there is a large emphasis on including guest speakers from the industry.

**Enforced Prerequisite at Enrollment:** MKTG 330 and MKTG 342

MKTG 474: Marketing Analytics

3 Credits

In rapidly changing markets characterized by ever more demanding customers served by global competitors, intuitive decision making, even when honed by years of experience, is unlikely to generate superior results. Instead, successful marketers increasingly rely on Marketing Analytics, a systematic approach to applying analytical models to properly organized empirical data, with the goal of extracting true insights about the marketing environment. This course will introduce students to commonly used analytical tools in such areas as segmentation, targeting and positioning, satisfaction management, customer lifetime analysis, customer choice, product and price decisions using conjoint analysis, and text analysis and search analytics. This is a hands-on course based on the Marketing Engineering approach and Excel software, in which students will apply the tools studied to actual business situations and conduct a group project involving primary data collection and analysis. At the conclusion of this course, students will be familiar with some of the more common marketing analytics tools and be able to extract insights from marketing data using model-supported decision making.

**Enforced Prerequisite at Enrollment:** MKTG 330 and MKTG 342

MKTG 475: Innovation and Product Management

3 Credits

This course is an application-oriented interdisciplinary course on new product development concepts, and innovation management. MKTG 475 Innovation and Product Management (3) This course is designed to provide students the opportunity to examine and understand the new product development process. It takes the process from the strategy and ideation stage to the after-market product launch. The course blends the perspectives of marketing, management, and engineering into a single approach to product development. It provides students with an appreciation for the realities of industrial new product development practice. Therefore, case studies and other in-class assignments are designed in a way that students can apply the theoretical/abstract concepts to the real life phenomenon. The new product development projects are assigned to teams in real life, students have the opportunity to complete the case analyses and assignments in teams. Course aims to integrate micro level new product development issues (e.g., firm-level product strategy) to macro level issues (e.g., anti-trust regulations and legislations).

**Enforced Prerequisite at Enrollment:** MKTG 301

MKTG 476: Sales Management

3 Credits

Application of modern management principles to field sales force planning, organization, and administration; selection, training, and compensation plans.

**Enforced Prerequisite at Enrollment:** MKTG 301 and MGMT 301

MKTG 478: Services Marketing Management

3 Credits

Conceptual understanding of services and the analytical tools that are used in solving strategic services marketing problems.
Enforced Prerequisite at Enrollment: MKTG 301

MKTG 480: Intermediate Social Media Marketing
3 Credits

Social Media Marketing tools, techniques, and strategies to build brands and customers. MKTG 480 Intermediate Social Media Marketing (3) In today's business world, marketers must become more creative in the ways in which they present their company on an Internet based platform such as Twitter, Facebook, and LinkedIn in order to present increasingly relevant products and services to a more receptive customer base. The course, Intermediate Social Media Marketing, is designed to provide hands-on experiences with the use of Social Media Marketing tools and techniques while adhering to socially acceptable and ethical standards and protocols. The technology tools and platforms include but not limited to: Facebook, LinkedIn, Twitter, YouTube, Google+, Pinterest, Foursquare, Friendster, Technorati, Blogs, Vlogs, Podcasts, Hootsuite, Radian6, various search engines, and QR codes. These social media tools can be used to find, reach, connect, and automate marketing messages to efficiently and effectively build relationships, stronger brands and loyalty. These technologies may be utilized with or without a fully realized marketing automation structure, allowing ideas to be shared on a global platform. Students will learn and apply the major categories of Social Media tools, the how's and why's of their use, and decide what venues to use to reach the social media marketing objectives of firms, which may include improving the content to increase online presence, brand awareness, fan likings, customer inquiries, and sales. During this course, students will devise a social media marketing plan for a local firm (or firms) that addresses (1) platform, (2) content, and (3) interaction. This course will achieve academic excellence by having students research the latest techniques and practices of social media, mobile, and direct marketing to build a social media marketing plan for a local firm (or firms) to expand its markets. Students will be analyzing a firm's current traditional and social media marketing practices, and short-term and long-term goals for its target markets.

Enforced Prerequisite at Enrollment: MKTG 330 or MKTG 342

MKTG 485: Business-to-Business Marketing
3 Credits

Application of marketing principles to commercial enterprises, industrial firms, government, and other non-profit institutions.

Enforced Prerequisite at Enrollment: MKTG 301

MKTG 494: Research Project
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

MKTG 494H: Research Project
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors
From these conceptual ideas, ceramics and electronic materials and non-metals, and to a fundamental understanding of The Periodic Table. Students are introduced to the intrinsically simple concept of metals and their properties. The fundamental basis of the science of materials, e.g., mechanical, thermal, electronic and photonic are developed directly from a knowledge of the structures discussed in earlier lectures. The concept of materials' design is introduced with respect to the properties of density, melting point and hardness. Young's modulus design's also described. There are as many processing routes as there are materials. Hence, the slate of lectures on processing, investigates prototypical examples of: metals - steel; ceramics - vitreous ceramics; and polymers-polyethylene. Current practices for e.g., the processing of steel and vitreous ceramics are compared with those, which were employed in antiquity. The performance of materials is a constant theme that permeates all the lectures. For example, during the 'firing of clay ceramics', the question 'how does the temperature of firing affect both performance and utility?' is addressed. The great thinkers of the physical sciences are introduced via vignettes that are presented, often at the beginning of class. Giants such as Aristotle and Newton are described, warts and all, in an effort to make science a broader part of the human experience. The professor also uses many examples from his own scientific experiences, and his interaction with some of the more (in) famous of the modern scientists.

Bachelor of Arts: Natural Sciences
International Cultures (IL)
General Education: Natural Sciences (GN)

MATSE 101: Energy and the Environment
3 Credits

Energy utilization and technological development, energy resources, conversion and consequences on the local and global environment, and future energy alternatives. EGEE (MATSC) 101 Energy and the Environment (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Energy is the life-blood of any society. The information and principles learnt in this course will allow the students to make sound judgments in the area of 'personal energy choices'. There is increasing concern about the influence of human activities, particularly energy use, on global climate change. This has an impact on global business aspects. Students in all walks of life need to be exposed to the basic concepts to appreciate the positions of policymakers, scientists, and industry over the interrelationship between greenhouse gas emissions and global climate change. The students will acquire knowledge, which will enable them to critically evaluate any energy-related concerns of the society. This is important for any college graduate for responsible citizenship and stewardship. The main objectives of this course are to: provide basic understanding and appreciation of energy and environmental concepts and interconnectedness; analyze energy consumption patterns; discuss various energy resources that power the modern society; examine the energy conversion processes; explore interrelationships between energy use and industrial progress and environmental consequences; discuss future energy alternatives. Student performance will be evaluated continuously through homework assignments, exams, group activities, class participation and a final examination. Position papers or term papers may be used in lieu of homework assignments in some sections. This course is a stand-alone General Education course. The course is currently offered in four sections every semester (Spring and Fall) with a total target enrollment of approximately 200-250 students per semester.

Cross-listed with: EGEE 101
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
MATSE 101A: Energy and the Environment

3 Credits

Energy utilization and technological development, energy resources, conversion and consequences on the local and global environment, and future energy alternatives. General Education: Natural Sciences (GN)

MATSE 112: Applied Materials Chemistry for Engineers

3 Credits

Chemistry of materials with emphasis on intermolecular forces between atoms, molecules, ions, and dense materials and inorganic and organic physical chemistry. In most majors, this course is not a substitute for CHEM 013 or CHEM 112.

Prerequisite: CHEM 110
General Education: Natural Sciences (GN)

MATSE 201: Introduction to Materials Science

3 Credits

Concepts of relationships between structure and thermal, optical, magnetic, electrical, and mechanical properties of metals, ceramics, glasses, and polymers.

Prerequisites: CHEM 112 or MATSE 112

MATSE 201H: Introduction to Materials Science

3 Credits

Concepts of relationships between structure and thermal, optical, magnetic, electrical, and mechanical properties of metals, ceramics, glasses, and polymers.

Honors

MATSE 202: Introduction to Polymer Materials

3 Credits

The materials science of organic or soft materials with an emphasis on synthetic and natural polymer. MATSE 202 Introduction to Polymer Materials (3) Materials made from many types of natural organic materials, (cotton, wool, hemp, leather, etc.) have been with us throughout recorded history and have played crucial roles in the rise of civilizations and the economies of tribes and nations. Over the course of the last 100 years or so the development of synthetic organic materials, particularly polymers, has transformed the way we live. Modern transportation systems, much of contemporary medicine and the entire electronics and computer industry would not be possible without these materials. In order to understand their nature and provide a basis for a more in-depth understanding of these materials provided by courses with a more specific focus, why they are ubiquitous in modern society, this course will provide students with a basic knowledge of the structure, synthesis and properties and processing of these materials, starting with a review of atomic and molecular structure and proceeding through basic elements of the chemical synthesis, structure, mechanical properties and processing of these materials. Students will discover the commonalities and differences between synthetic polymers, such as polyesters and nylons, and natural or biological polymers, such as cotton and silk. A comparison will also be made between the mechanical properties of ‘hard’, inorganic materials such as metals and ceramics, and ‘soft’, organic materials such as polymers. The primary intended audience is undergraduates in Materials Science and Engineering. This course will provide a necessary overview of organic materials for those students who will focus on inorganic materials in the major and also provide an introduction to organic materials for those students who will specialize in polymers and other organic materials. It is also anticipated that students in other disciplines who want to obtain an overview of the science and engineering of organic materials would want to take this course.

Prerequisite: CHEM 202, MATH 231

MATSE 259: Properties and Processing of Engineering Materials

3 Credits

Relationship of structure and processing variables to the properties and service behavior of metals, polymers, and ceramics.

Prerequisite: E MCH 213 or E MCH 201

MATSE 259H: Properties and Processing of Engineering Materials

3 Credits

Relationship of structure and processing variables to the properties and service behavior of metals, polymers, and ceramics.

Honors
MATSE 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MATSE 400: Crystal Chemistry
3 Credits

Principles of crystal chemistry applied to structures, structural defects and properties of organic, inorganic, intermetallic, and metallic crystals.

Prerequisite: MATSE 201, MATSE 202, MATH 220, MATH 231, MATH 251

MATSE 401: Thermodynamics of Materials
3 Credits

The course starts with the first law of thermodynamics and its applications to the calculations of heat involved in various materials processes such as chemical reactions and phase transformations. Second law of thermodynamics and the concept of entropy are then introduced. The application of maximum work theorem to engine efficiency is briefly discussed. Various thermodynamic potentials are defined to determine the equilibrium of a system under various thermodynamic conditions, with an emphasis on the Gibbs free energy functions at constant temperature and pressure conditions. The relationships among thermodynamic properties are derived using the Maxwell relations. Phase diagrams of single-component systems are constructed from the Gibbs free energy function, and the Clapeyron equation is applied to describe the phase boundaries. Applications of thermodynamics to the determination of chemical equilibrium and to the calculation of the voltages of electrochemical reactions are also discussed. The last part of the course is focused on the solution thermodynamics and its application to binary phase-diagrams.

Prerequisites: MATSE 201 and MATSE 202 and MATH 251

MATSE 401H: Thermodynamics of Materials
3 Credits

Review of equilibrium thermodynamics and applications to metallurgical and material systems.

Honors

MATSE 402: Materials Process Kinetics
3 Credits

A treatment of process kinetics including chemical reaction kinetics and momentum, energy and mass transport.

Prerequisites: MATSE 201 and MATSE 202 and MATH 251

MATSE 403: Biomedical Materials
3 Credits

Describe properties of materials and composites and their in vivo interactions. BME 443 (MATSE 403) Biomedical Materials (3) Metals, polymers, and ceramics, and their composites, which are capable of emulating the functions of hard and soft tissues, are the subjects of this course. The subject matter shall be confined to implanted materials; external appliances, such as casts, braces, etc are not considered. The topical content of this course will be grouped into four areas. A general introduction to selected aspects of physiology will be presented. This will provide the background necessary to appreciate the factors which govern the selection of biomedical materials. Specific emphases will be placed on polymerization of biopolymers (polypeptides and polysaccharides) and the general relationships between conformation and biological function, the biochemistry of blood and blood surface interactions, the formation of teeth and bone and the relationships between microstructure, composition and function, the immune responses to implanted materials, the resorption of bone (osteoporosis) and the development of caries. The perspective placed on these topics will be that of materials science. The selection of ceramics for hard tissue prosthesis will be discussed. Orthopaedic and dental applications for ceramics will be discussed. Specific ceramic materials to be treated include dental porcelain, alumina- and zirconia-based ceramics, and bioglasses and pyrolytic carbons. Various classes of inorganic cements, gypsum, zinc phosphates, zinc carboxylates, silicates, and glassionomer cements will also be considered as ceramics. Hydroxyapatite, Hap-based composites and Hap-metal interactions will be discussed in particular. Relationships among physical properties, mechanical properties, and chemical interactions with biological fluids will be described. Dental and orthopedic applications of metals will be described. The fracture toughness of metals, their electrochemical responses in vivo, and the nature of the interfacial interactions with hard tissues will be treated. Dental amalgams and the noble metals for dental applications will be considered. Metals and alloys, such as Ti, Co-Cr, and vitallium, used in prosthetic applications, will be described and their properties and limitations discussed. The phenomenon of stress shielding and the immune responses associated with the accumulation of metallic and polymeric particulate debris in the vicinity of an implant will be discussed in particular. Polymeric materials are important in a broad range of biomedical applications. Among these are soft tissue prostheses, hemostatic agents, dental restoratives, bone replacement materials, and surgical adhesives. In some applications it is desirable that a polymeric material biodegrade while in others property retention is desirable.

Prerequisite: MATSE201 or CHEM 112 and MATH 230 or MATH 231

MATSE 404: Surfaces and the Biological Response to Materials
3 Credits

Focus is on special properties of surface as an important causative and mediating agent in the biological response to materials.

Prerequisite: CHEM 112 or MATSE112

MATSE 405: Nuclear Materials
3 Credits

Nuclear reactor materials: relationship between changes in material properties and microstructural evolution of nuclear cladding and fuel under irradiation. NUC E (MATSE) 409 Nuclear Materials (3) NUC E/ MATSE 409 provides a background on the types of materials used in nuclear reactors and their response to neutron irradiation. Most of the materials problems encountered in the operation of nuclear power reactors for energy production are discussed here. The objective of the course is to give nuclear engineering students a background in materials, so they understand the limitations put on reactor operations and reactor
design by materials performance. In the first part of the course, we review basic concepts of physical metallurgy, to develop a mechanistic and microstructurally based view of material properties. In the second part of the course, we present the methods to calculate displacement damage to the material produced by exposure to neutron irradiation. The microstructural evolution that results from the reactor exposure (including radiation damage and defect cluster evolution, and changes) is described. The aim is to create a linkage between these changes at the atomistic level and the changes in macroscopic behavior of the material. Special attention is given to property changes that affect fuel performance and operational safety. Both mathematical methods and experimental techniques are emphasized so that theoretical modeling is instructed by experimental data. Students use the TRIM and SPECTER codes to quantitatively evaluate neutron damage, as well as learn simple analytical models that describe microstructural evolution and property changes under irradiation.

**Prerequisite:** PHYS 214

Cross-listed with: NUCE 409

MATSE 410: Phase Relations in Materials Systems

3 Credits

Phase rule; construction and interpretations of equilibrium diagrams; importance of nonequilibrium in materials. MATSE 410 Phase Relations in Materials Systems (3) This course integrates three core components of materials science and engineering: thermodynamics, kinetics, and interface crystallography in understanding processing and development of inorganic materials. It is the key course bridging the fundamentals to practical materials processing. Phase equilibria, phase diagrams, phase transformations and heat treatments are addressed in great details through nucleation, transformation kinetics, crystal interface and diffusion. The complexity of materials is discussed in hierarchy from pure elements, binaries, ternaries to multicomponents.

**Prerequisite:** MATSE201, MATSE401

MATSE 411: Processing of Ceramics

3 Credits

Principles of ceramic processing, including powder preparation and characterization, forming operations, and the basic phenomena underlying these operations. MATSE 411 Processing of Ceramics (3) This course covers the scientific and engineering principles of manufacturing of ceramic products. The course covers powder synthesis and characterization; surface and colloid chemistry; fabrication; and densification by sintering. There is an emphasis on the physical chemistry of particulate systems as relates to the various stages processing. The course is offered every fall semester and is required for BS graduates of the Ceramic Science and Engineering option in Materials Science and Engineering. The course objectives are for the student to (1) become knowledgeable of all steps involved in ceramic manufacture from powder synthesis through final densification by sintering, (2) understand the rationale and compromises for selecting a given processing route, (3) understand and be able to apply the parametric relations for manufacture of a ceramic with a specified microstructure, and (4) understand the physical chemistry fundamentals responsible for the unique properties of fine powders.

**Prerequisite:** MATSE400, MATSE402

MATSE 412: Thermal Properties of Materials

3 Credits

Generation of high temperatures, measurement of temperature, heat transfer and furnace design, thermal stability of ceramic materials, applied thermodynamics. MATSE 412 Thermal Properties of Materials (3) The fundamentals of achieving, measuring, and controlling high temperature for materials processing are addressed. The crystal physics underlying heat capacity, internal energy, phonon and photon conduction, and thermal expansion is used to rationalize the behavior of a wide variety of ceramic and metallic materials in severe thermal environments. Micro- and macroscopic thermal transport, thermal shock and fatigue behavior, and thermochemical durability are addressed insofar as their impact on the design of, and with, high performance materials in thermostructural applications. Case studies on materials selection and design using the fundamentals of inorganic crystal chemistry, physics, thermodynamics, kinetics, elastic, and mechanical properties are widely employed. Students interested in disciplines such as metallurgy, ceramic science, electronic and photonic materials, mechanical engineering, aerospace engineering, industrial engineering, engineering science, and chemical engineering will benefit significantly from this course.

**Prerequisite:** MATSE201 or MATSE259, MATSE401; Concurrent: MATSE401

MATSE 413: Solid-State Materials

3 Credits

The main course objective is to provide sufficient background for the understanding of fundamental phenomena in solid state materials. Mathematical description of periodic arrays and the concept of reciprocal space are introduced, lattice vibrations are discussed. An introduction to quantum mechanics is given and the solution of the stationary Schrödinger Equation for various problems relevant in nanostructured materials is presented. A semi-quantitative approach is taken how the electronic structure of isolated atoms is changed as they bond and form molecules and solids. Emphasis is placed how such bonding influences whether the resulting material will be a metal, an insulator or a semiconductor. The goal is to master the modern framework in solid state materials that describes materials phenomena at an atomic level, such as electronic band structure and electronic transport, the vibrational properties of solid state materials and to prepare the audience for higher level quantum mechanical problems.

**Prerequisites:** MATSE 201 and MATH 220 and (MATH 231 or MATH 230)

MATSE 415: Introduction to Glass Science

3 Credits

Composition, melting, fabrication, properties, and uses of glass; combinations of glass with metals and other materials. MATSE 415 MATSE 415 Introduction to Glass Science (3) This course aims to explain the unique characteristics of the glassy state, and to describe their role in the processing, application, and engineering performance of amorphous materials and glass products. The course teaches fundamental concepts of amorphous structure, and then utilizes them to establish structure-property relations in various glass systems. The viscosity, thermal expansion, chemical durability, strength behavior, and optical properties of silicate-based glasses are emphasized, although the important properties of phosphate, halide, and chalcogenide glasses are not overlooked. Also included are phenomenological descriptions.
of glass formation, liquid-liquid immiscibility, viscous flow, structural relaxation, stress relaxation, and crystallization in glass. Various methods for the synthesis of glass are reviewed (melting, CVD, and sol/gel), along with important manufacturing processes for commercial glass products. Throughout the course, the applications of glass and glass components in electronics, photonics, biomedicine, transportation, and energy are described to rationalize the use of glass (i.e., the materials selection), the specific glass composition, and the associated processing method.

**Prerequisite:** MATSE400, MATSE401, MATSE402, MATSE462

MATSE 417: Electrical and Magnetic Properties

3 Credits

Electrical conductivity, dielectric properties, piezoelectric and ferroelectric phenomena; magnetic properties of ceramics. ESC 417 / MATSE 417 Electrical and Magnetic Properties (3) is designed to provide students with a fundamental understanding of the different responses a material can have to applied electrical or magnetic fields. Important properties are introduced and correlated with knowledge of material chemistry, crystal structure, and microstructure to provide an understanding of the mechanisms responsible for controlling the observed properties, as well as the ways in which properties can be engineered. Electronic and magnetic properties encompass dielectric, ferroelectric, conductor, superconductor, and ferromagnetic materials. Material properties and structures are related to sensors, energy storage and conversion devices, biomedical devices and electronic components in telecommunications.

**Prerequisite:** MATSE400, MATSE413; Concurrent: MATSE402

Cross-listed with: ESC 417

MATSE 419: Computational Materials Science and Engineering

3 Credits

Introduction to computational material science and engineering. Overview of the computational methods for materials, from atomistic to the continuum scale. MATSE 419 Computational Materials Science and Engineering (3) Modeling is a critically important tool in the field of materials. This course is designed to inform students about all areas of materials modeling, and to explore the use of modeling in different research areas. This is a hands-on undergraduate level course, mandatory for all MATSE students, covering current methods for modeling soft and hard matter, at the atomistic, meso and continuum scale levels. It consists of an overview of individual techniques of modeling from atomistic molecular dynamics and Monte Carlo, coarse-grained molecular dynamics, and multiscale modeling, to the continuum (e.g., SAFT, CALPHAD). It also includes a computer laboratory component with hands-on exercises. At the conclusion of the course, students will understand the physical basis and basic procedures of each technique. Students will be able to understand the general literature in modeling and its connection with experimental work, as well as to communicate with experts in the field. From the laboratory practices, they will learn how the individual modeling techniques contribute to knowledge in each area, and to interconnect them with experimental information.

**Prerequisites:** CMPSC 200 and MATSE 201 and MATSE 202 and MATH 220 and (MATH 231 or MATH 230) and MATH 251

MATSE 421: Corrosion Engineering

3 Credits/Maximum of 3

Industrial forms of corrosion and preventive methods, and their description in terms of basic thermodynamic and kinetic considerations. MATSE 421 Corrosion Engineering (3) This 3-credit course is an introduction to the corrosion field and more broadly to the principles of electrochemistry and to the electrode reactions that occur during the undesirable corrosive degradation of metal, and also in various important commercial processes such as electroplating, electroless plating, battery and fuel cell operation, aqueous extraction metallurgy and corrosion prevention techniques. The objectives of this course are to introduce the student to the (1) principles of electrode reactions, (2) nature of commercial corrosion resistant alloys and their compositions, (3) various forms of corrosion and preventative measures, and (4) design of electrochemical laboratory and field procedures for detecting corrosion processes and determining their rates. Thermodynamic and rate data are used to make engineering decisions relative to the occurrence of corrosion, to the effectiveness of the various preventative measures, and to electrochemical design. Corrosion processes and electrode reactions more generally are primarily concerned with the surface properties of materials, but the bulk properties, such as microstructure, grain size, hardness, and composition, are discussed in terms of their impact on materials degradation. In-class closed-book exams and problem sets, and homework that allow student collaboration, are used for evaluation. Computer access to the course is available and includes all lecture material, old exams with answers, home works, and syllabus on the Web. This course is offered every year with typical class size of less than 20 students.

**Prerequisites:** PHYS 212, MATSE 401, MATSE 402

MATSE 422: Thermochemical Processing

3 Credits

Physico-chemical aspects of high temperature extraction and processing of metals and alloys. Design and evaluation of processes and process options. MATSE 422 MATSE 422 Thermochemical Processing (3) An important goal of materials engineering is to efficiently produce metals and alloys of specific composition. Familiar examples include the tonnage production of metals and alloys, the production of ultra high purity electronic materials such as silicon and germanium, and the deposition of thin films for various applications. In this course the students get an understanding of the physical and chemical principles underlying these operations and how these principles are applied in industrial practice. The students get ample opportunities to apply thermodynamics, kinetics, and transport phenomena to understand why the processes currently in use work. Furthermore, they learn how to marshal information for the design of projected new processes and process options. Broadly stated, the topics include solid-state reactions, production of liquid metals, and processing, all carried out at high temperatures. The topics are covered in a set of lecture notes available from the instructor. The lectures are accompanied by about fifteen problems sets in the form of home work and class work so that the students experience first-hand how the principles of thermodynamics and rate processes are applied in solving important problems in thermochemical processing.

**Prerequisite:** MATSE401, MATSE402
MATSE 425: Processing of Metals

3 Credits

Modern methods of shaping metals in liquid and solid states: casting, joining, powder and deformation processing. Design of new technology. MATSE 425 Processing of Metals (3) This course focuses on how metals and alloys may be processed into different shapes and how those processing procedures affect the metallurgical microstructure and properties. Consideration of shape, the alloy composition, and property goals are all factors in selecting an optimum processing 'window'. Such carefully selected processing conditions not only produce the desired component shape in a cost-efficient manner but also ensure acceptable properties and safe in-service performance. This course surveys the following metal processing procedures: (a) solidification processing, (b) heat treatment processing, (c) welding, (d) deformation processing, and (e) powder metallurgy.

Prerequisite: MATSE402, MATSE410

MATSE 426: Aqueous Processing

3 Credits

A study of the chemical and engineering principles pertinent to metal processing in aqueous systems: hydrometallurgical extraction, plating, materials preparation. MATSE (MN PR) 426 Aqueous Processing (3) This 3-credit course deals with the chemical and engineering principles underlying the aqueous processing of metals: metal extraction from primary and secondary sources, electroplating, and metal finishing, powder synthesis, energy storage and conversion, and treatment of recycling of metal-containing toxic wastes.1. Physico-Chemical Principles - Thermodynamic, chemical kinetic and transport factors which control hydrochemical processes (leaching; precipitation; adsorption; solvent extraction; ion exchange; electrowinning, electrorefining and electroplating; membrane processes; energy storage and conversion); graphical representation of homogeneous and solid/solution equilibria; chemical reagents.2. Engineering Principles - Reactor design and staged operations; ideal batch, continuous stirred-tank and plug-flow reactors; fluidized bed reactors; electrochemical reactors; multistage separation processes (solid-liquid, liquid-liquid, and gas-liquid systems).3. Process Synthesis - Design of metal separation (extraction, refining, waste treatment) materials synthesis, metal finishing, and energy storage/conversion processes and system-integration of unit operations, industrial practice. Emphasis on closing circuits to minimize or eliminate waste effluents.

Enforced Prerequisite at Enrollment: EME 301 or MATSE 401
Cross-listed with: MNPR 426

MATSE 427: Microstructure Design of Structural Materials

3 Credits

Phase transformations in ferrous and nonferrous metal alloys and structural ceramics; processing, structure, and property relationships; heat treatment of structural metals; microstructure development.

Prerequisite: MATSE201, MATSE259 or equivalent

MATSE 430: Materials Characterization

3 Credits

Elements of crystallography and the characterization of crystalline and non-crystalline materials using x-ray diffraction, electron microscopic, and other instrumental techniques. MATSE 430 Materials Characterization (3) This course will introduce students to characterization techniques for quantifying microstructure, chemistry and atomic structure of solid state materials. Elastic and inelastic interactions of radiation (e.g. electromagnetic and electrons) with solid state materials are the basis for most characterization techniques. Utilizing these interactions it is possible to obtain structural and chemical information from materials, often at small length scales. In this course, students will be introduced to the most common imaging, diffraction and spectroscopy techniques used for materials characterization. They will develop an understanding of the underlying physics behind the techniques to enable interpretation of the data. The course will be beneficial for any student interested in solid-state materials, as it provides a key component of the processing-structure-properties process.

Prerequisites: MATSE 201 and MATSE 202 and MATH 220 and (MATSE 231 or MATH 230) and MATH 251

MATSE 430H: Materials Characterization

3 Credits

Elements of crystallography and the characterization of crystalline and non-crystalline materials using x-ray diffraction, electron microscopic, and other instrumental techniques.

Honors

MATSE 435: Optical Properties of Materials

3 Credits

Electromagnetic spectrum, interaction of light with materials, color, thin film optical coatings, electro-, integrated and nonlinear optics.

Prerequisite: MATSE400

MATSE 436: Mechanical Properties of Materials

3 Credits

Fundamental relationships between structure and mechanical behavior of materials. MATSE 436 Mechanical Properties of Materials (3) The topics covered in this course are essential to students in the Materials Science and Engineering options, and these are also required for materials engineering courses nationally accredited by the professional societies. The course is taught at the 400 level because it requires the fundamental courses in mathematics and physics to be completed. The course also requires completion of an introductory course in materials science. This new course typically fits into the junior or senior year, when students in the major are understanding how the properties of materials can be changed by controlling the structure of materials. The course has also been designed such that students in other engineering majors can take this course as a technical elective. Some of the information in this course is used in laboratory courses for the major. The course is not required as a prerequisite for other courses.

Prerequisite: (MATSE 201 or MATSE 259) and MATSE 202 and MATH 220 and (MATH 231 or MATH 230) and MATH 251 and PHYS 211
MATSE 440: Nondestructive Evaluation of Flaws
3 Credits
Methods and limitations of nondestructive evaluation of mechanical flaws; optical, acoustical, electromagnetic, x-ray, radiography, thermography, and dye techniques.
Prerequisite: E MCH213, E MCH210H, or E MCH210
Cross-listed with: EMCH 440

MATSE 441: Polymeric Materials I
3 Credits
This 3-credit course focuses on about 50 commercially most important polymers together with the discussion of synthesis routes, industrial production processes, processing methods, physical and chemical properties, and applications. They are classified into 10 families of polymeric materials, which are taught along with introduction of polymeric materials and synthesis of polymers in the beginning of the class.
Prerequisite: (CHEM 202 or CHEM 210) and MATSE 202 and (MATH 231 or MATH 230)

MATSE 443: Introduction to the Materials Science of Polymers
3 Credits
Introduction to the nature and structure of high polymers. Characteristics of polymers and polymer systems. MATSE 443 Introduction to the Materials Science of Polymers (3) This course is an introduction to the field of polymer science and engineering, providing an overview of the synthesis and structure of these materials; the crystalline and glassy states; solution properties and phase behavior; and mechanical and rheological properties.
Prerequisite: CHEM 210, MATH 231

MATSE 445: Thermodynamics, Microstructure, and Characterization of Polymers
3 Credits
The properties of individual polymer chains. Theoretical and experimental techniques pertaining to the characterization of polymeric microstructure. MATSE 445 Thermodynamics, Microstructure, and Characterization of Polymers (3) This course develops fundamental understanding of microstructures and chain conformations of polymers, and addresses theoretical and experimental techniques pertaining to the characterization of polymeric microstructure.
Prerequisite: MATSE202 or MATSE443

MATSE 446: Mechanical and Electrical Properties of Polymers and Composites
3 Credits
The mechanical (viscoelastic) and electric properties of polymers and poly-based composites. MATSE 446 Mechanical and Electrical Properties of Polymers and Composites (3) This course is an introduction to the mechanical and electrical properties of polymers and polymer-based composites: focusing on the importance of molecular structure, rubber elasticity, mechanisms of yielding, viscoelasticity and manifestation thereof, static and ac dielectric properties, and conduction.
Prerequisite: MATSE202 or MATSE443

MATSE 447: Rheology and Processing of Polymers
3 Credits
This course deals with the fluid mechanics, rheology, and processing of polymeric materials.
Prerequisite: MATSE202 or MATSE443

MATSE 448: Polymer Processing Technology
3 Credits
Basic principles of polymer melt processing are reviewed and subsequently applied to the most important industrial processing operations. MATSE 448 (CH E 442) Polymer Processing Technology (3) MATSE 448 involves both lectures and laboratory experiments illustrating the interrelations between structure, processing conditions, and physical properties of industrial polymer products. Students apply engineering fundamentals and principles of polymer melt rheology to analyze industrial processing operations. Unlike typical polymer processing courses offered at most U.S. universities, MATSE 448 covers detailed analyses of individual processing operations, rather than dwelling on underlying polymer science fundamentals that are covered elsewhere in our curriculum. Students learn to optimize processing variables, given a particular set of materials and conditions, establishing how processing conditions impact the physical properties of finished polymer products. We explore the physics governing processing operations including extrusion, mixing, calendering, blow molding, thermoforming fiber spinning compression molding, injection molding, and nanolithography.
Prerequisite: MATSE447 or CH E 302A
Cross-listed with: CHE 442

MATSE 450: Synthesis and Processing of Electronic and Photonic Materials
3 Credits
The materials science of applying thin film coatings, etching, and bulk crystal growth; includes materials transport, accumulation, epitaxy, and defects.
Prerequisite: MATSE201 or E SC 414M, sixth semester standing
Cross-listed with: ESC 450

MATSE 455: Properties and Characterization of Electronic and Photonic Materials
3 Credits
Materials characterization in general; electrical properties of crystals, contacts, films; optical properties of single phase materials, waveguide, and multilayer stacks.
Prerequisite: MATSE201 or E SC 414M, E SC 314
MATSE 460: Introductory Laboratory in Materials
1 Credits

An introduction to comparative physical properties and characteristics of various materials including mechanical, thermal electrical properties and the measurement of said properties. MATSE 460 Introductory Laboratory in Materials (1) This is a lab course whose goal is to provide an integrated approach to materials science and engineering. Any individual lab will consist of a number of elements, initially students will be provided with a presentation summary of the proposed lab. This could be film, video, web delivery, hard copy or live presentation. Presentation time will be limited but should be reviewed before students attempt the hands-on lab. All labs will examine a variety of different materials including metal, ceramics and polymers. Labs will be integrative in the sense that they will include use of spreadsheets, data plotting, and presentation of results as written reports and/or as a 'PowerPoint' presentation. The labs selected have been chosen specifically because they cut across all current basic materials disciplines. These labs are intended to provide students with a broad appreciation of the range and contrast of material structures and properties, in order that students more fully appreciate the breadth of material science and engineering.

Prerequisite: MATSE 201

MATSE 462: General Properties Laboratory in Materials
1 Credits

An introduction to comparative physical properties of various materials including mechanical, thermal electrical properties and the measurement of said properties. MATSE 462 General Properties Laboratory in Materials (1) This is a lab course whose goal is to provide an integrated approach to physical property measurements in materials science and engineering. Any individual lab will consist of a number of elements, initially students will be provided with a presentation summary of the proposed lab. This could be film, video, web delivery, hard copy or live presentation. Presentation time will be limited but should be reviewed before students attempt the hands-on lab. All labs will examine a variety of different materials including metal, ceramics, polymers and composites. Labs will be integrative in the sense that they will include use of spreadsheets, data plotting, and presentation of results as written reports and/or as a 'PowerPoint' presentation. The labs selected have been chosen specifically because they cut across all current basic materials disciplines. These labs are intended to provide students with a broad appreciation of the range and contrast of material properties and the measurement of such properties, in order that students more fully appreciate the breadth of material science and engineering.

Prerequisite: MATSE 460

MATSE 463: Characterization and Processing of Electronic and Photonic Materials Laboratory
1 Credits

Provides experience with key processing methods for EPM materials and advanced characterization methods for EPM materials and simple device structures.

Prerequisite: MATSE400, MATSE430, MATSE450, MATSE455, MATSE460; Concurrent: MATSE450, MATSE455

MATSE 468: Ceramics Laboratory III
1 Credits

Ceramic processing and powder characteristics. MATSE 468 Ceramics Laboratory III (1) This course will demonstrate to students the experimental techniques by which the key powder characteristics and powder processes are determined, how to analyze the data from the measurements, and to reveal the interaction between properties, processing and structure. The course concentrates on the importance of powder characterization, forming techniques, sintering and microstructure characterization in the processing of ceramics.

Prerequisite: MATSE 462 Concurrent Courses: MATSE 411

MATSE 471: Metallurgy Laboratory I
1 Credits

A laboratory integrating experimental aspects of material contained in MATSE 402, 413, and 410, e.g. phase diagram determination, solidification micro-structures, etc. MATSE 471 Metallurgy Laboratory I (1) This course is largely an introduction to basic laboratory characterization techniques (optical microscopy, scanning electron microscopy, image analysis, hardness testing, thermal analysis). However, it also applies those characterization techniques in the context of Design of Experiments. This laboratory class also contains significant drills in technical writing.

Prerequisites: MATSE 462 and MATSE 430 COREQUISITE: MATSE 425

MATSE 473: Polymeric Materials Laboratory--Synthesis
1 Credits

Principles and practices of polymerization, including condensation, free radical (bulk, solution, suspension, emulsion), ionic, and Zeigler-Natta procedures. MATSE 473 Polymeric Materials Laboratory--Synthesis (1) This laboratory course provides students exposure to a variety of synthetic techniques basic to Polymer Science. From the polymerization of styrene to the preparation of urethane foams, students will see the role varied synthetic methods and chemistries play in determining the final form and properties of a given polymer. Students also learn the polymer structure characterization by examining the produced polymers with proper tools and instruments.

Prerequisite: MATSE443

MATSE 475: Particulate Materials Processing
3 Credits

Fundamentals of processing particulate materials including production, characterization, handling, compaction, and sintering of metal, carbide, intermetallic, and composite powders.

Prerequisite: E MCH315, ESC 414M, or MATSE259

MATSE 483: Simulation and Design of Nanostructures
3 Credits

Introduction to computer simulation techniques and their applications at the physical/life sciences interface. E SC (MATSE) 483 Simulation and Design of Nanostructures (3) Students will learn the simulation techniques and the design rules of nanostructures. Basic concepts of
computer modeling will be introduced using quantum and classical approaches. Fundamental physical phenomena encountered in the molecular fields of computational physics, chemistry, and biology will be studied. Applications are drawn from a broad range of fields including soft and condensed matter to build an understanding of nanostructures. The course will assume knowledge and skill developed in the prerequisite courses of PHYS 214 and MATH 230. Students are expected to combine knowledge from other courses with information presented here to develop sophisticated interpretations and understanding of physical and chemical principles of nanostructures and their design rules. Evaluation methods to be used in this course will be two in-class examinations and one final period examination. The course contains a computer code generation and implementation component. Students will use commercial or educational computer codes (e.g., Matlab, Mathematica, AMBER, CHARMM, VASP, etc.) which are available at our high performance computing clusters (http://gears.asist.psu.edu/hpc/). Students will use the computing clusters to perform simulations which are accessible from any classroom or laboratory at Penn State. The principal objectives of the course is to learn the fundamental physics of nanostructures and to design them with computer simulations. This approach starts from classical molecular dynamics that apply on the large scale biological and synthetic assemblies and encompasses quantum mechanics for the molecular and atomic sizes. This course will give a broad scientific picture of simulation techniques in the area of nano-science and technology.

**Prerequisite:** PHYS 214 or ESC 312, MATH 230

**Cross-listed with:** ESC 483

MATSE 484Y: International Internship in Materials: Research Definition and Methodology

**3 Credits**

A course focused on international research, specifically experimentation and documentation, facilitated through the International Internship in Materials Program. MATSE 485W International Internship in Materials: Experimentation and Documentation (3) (IL) The objective of this course is to enrich students’ preparation for careers in materials science and engineering in a global environment. The course is intended as a follow-up to MATSE 484W: International Internship in Materials: Research Definition and Methodology, in which the student will complete the research and documentation on the topic developed in that course. It may be used as a direct substitution for MATSE 494W: Research and Design Senior Project in the degree requirements for Materials Science and Engineering. The course will continue the student’s development of international communication skills and appreciation of cultural and technical issues associated with conducting research in overseas laboratories. Students will complete their research experimentation, data analysis and interpretation under the supervision of a Materials Science and Engineering faculty mentor and a mentor from their host overseas laboratory or University. Students will compile a written thesis encompassing their technical findings, with specific emphasis on the economic, manufacturability, sustainability, environmental, safety/health, social and political issues of relevance to the topic. It is expected that the students will carefully and comprehensively articulate and consider the cultural, social, and scientific differences and similarities they experienced in performing the research in an international venue.

**Prerequisite:** Seventh-semester standing in Materials Science and Engineering, MATSE484Y; satisfactory completion of cultural class from Office of Education Abroad International Cultures (IL)

**Writing Across the Curriculum**

MATSE 492W: Materials Engineering Methodology and Design

**3 Credits**

Designed to familiarize students with the literature and technology developments in the use of, and design with, materials in industrial applications. MATSE 492 Materials Engineering Methodology and Design (3) The objective of this course is to teach students the skills to solve realistic problems related to the use of materials in industrial practice. This will be accomplished by considering alternatives for materials design or selection and proposing the most effective scientific or engineering solutions. The methodology will take into account other forces acting on the design process, such as economic, environmental, sustainability, manufacturability, ethical, health and safety, social and political concerns. Students will develop these design skills by working in teams on projects defined by industry, and will learn to communicate their solutions in verbal and written form. Students will also learn the key features needed in developing a team approach to solving problems. Typically, evaluation is based on written reports, performance in presentations, and instructors’ assessment of the student’s participation in design team activities. At the conclusion of the course, each student will select a design or independent research topic for their capstone senior-year design project.

**Prerequisite:** MATSE201, MATSE202, MATSE436, sixth semester standing in Materials Science and Engineering

**Writing Across the Curriculum**
MATSE 493W: Materials Science and Engineering Multidisciplinary Capstone Design Project

3 Credits

This course focuses on multidisciplinary industry-sponsored and community service-based design projects offered in conjunction with the College of Engineering’s Learning Factory. MATSE 493W Materials Science and Engineering Multidisciplinary Capstone Design Project (3) This course will provide students with the opportunity to learn the design process in the context of an industry-sponsored or community service-based design project that demands they produce a working solution. The design projects in this course will be structured for students from two or more different engineering majors, as defined by the project sponsors in collaboration with the instructor and departmental project coordinators. The project sponsor will provide the technical expertise for the project, a clear definition of all project deliverables that are expected, and the financial support to cover needed materials and supplies and travel costs. Project sponsors will be invited to attend the Project Kickoff at the start of the semester to present their ideas and answer questions from the students as well as the Design Showcase at the end of the semester where teams display their results to the project sponsors and the public. The Center for Engineering Design and Entrepreneurship (CEDE) in Hammond Building and the Bernard M. Gordon Learning Factory will provide the facilities where the design teams can work together to develop the design concept and prototype solutions. Faculty members in the School of EngineeringDesign, Technology, and Professional Programs (SEDTAPP) will administer the course, including reading, evaluating, and grading the final project report, provide lectures on topics including project management, design, product manufacturing, intellectual property, engineering ethics, societal/global/contemporary/professional issues, and related technical topics, and organize invited technical lectures related to industry projects. In accordance with standard Learning Factory procedures, specific multidisciplinary projects will be selected for this course to provide challenging senior-year design experiences for all students, and the Director of the Learning Factory will coordinate the selection of these projects with the course instructor prior to the start of each semester of the course offering. Multidisciplinary teams will be formed based on specific project needs (i.e., expertise from two or more disciplines based on the project scope).

Prerequisite: MATSE492W
Writing Across the Curriculum

MATSE 494M: Research and Design Senior Project

1-3 Credits/Maximum of 3

Continuation of a research problem in materials culminating in a bound thesis describing the work.

Honors
Writing Across the Curriculum

MATSE 494W: Research and Design Senior Project

1-3 Credits/Maximum of 3

MATSE 494W Research and Design Senior Project (2) This course continues the senior thesis research topic addressed by the student in MATSE 493W. This is a capstone research/design project which integrates: a) background literature search with articulation of a research hypothesis, b) design and implementation of an experimental plan to test the hypothesis, and c) conclusions regarding the validity of the hypothesis based on the experimental data obtained in the course of the research. The main characteristic of this course is the performance of the research plan articulated in MATSE 493W, followed by interpretation of the data in the context of the original hypothesis(es). Laboratory research is generally performed in collaboration with faculty and graduate research assistants, using equipment and facilities in a wide range of laboratories throughout campus. Occasionally, the nature of the research may require the student to collaborate with researchers outside of Penn State, perhaps even spending some time in residence at other facilities. The course culminates in the preparation of a bound thesis detailing the relevance and findings of the research. Assessment of the student’s progress is via grading of all components of the thesis (literature review/background, statement of the problem, design of the experimental plan, results and discussion, conclusions, recommendations for future work, and references/appendices), as well as the diligence of the student in performing the experimental research in a professional and timely fashion. The course is offered each semester to allow for differing schedules for students following the conventional MATSE curriculum versus those who have elected to participate in the Cooperative Education program.

Writing Across the Curriculum
MATSE 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

MATSE 496H: Independent Studies

3 Credits

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

MATSE 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Mathematics (MATH)

MATHEMATICS (MATH)

MATH 2: Elementary Geometry With Problem Solving

4 Credits

Geometric congruence, similarity, area, surface area, volume, introductory trigonometry; emphasis on logical reasoning skills and the solution of applied problems. This course may not be used to satisfy the basic minimum requirements for graduation in any baccalaureate degree program.

MATH 3: Basic Skills

3 Credits

Natural numbers; integers; rational numbers; decimals; ratio, proportion; percent; graphs; applications. Students who have passed MATH 001 may not schedule this course for credit. This course may not be used
to satisfy the basic minimum requirements for graduation in any baccalaureate degree program.

**Enforced Prerequisite at Enrollment:** Satisfactory performance on the mathematics placement examination.

MATH 4: Intermediate Algebra

3 Credits

Algebraic expressions; linear, absolute value equations and inequalities; lines; systems of linear equations; integral exponents; polynomials; factoring. This course may not be used to satisfy the basic minimum requirements for graduation in any baccalaureate degree program.

**Enforced Prerequisite at Enrollment:** MATH 3 or satisfactory performance on the mathematics placement examination.

MATH 10: Preparation Skills for Success in Mathematics

1 Credits/Maximum of 4

A foundation course that emphasizes study skills and reviews basic mathematical principles.

**Concurrent:** math 003-201

MATH 21: College Algebra I

3 Credits

Quadratic equations; equations in quadratic form; word problems; graphing; algebraic fractions; negative and rational exponents; radicals.

**Enforced Prerequisite at Enrollment:** MATH 4 or satisfactory performance on the mathematics placement examination.

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

MATH 22: College Algebra II and Analytic Geometry

3 Credits

Relations, functions, graphs; polynomial, rational functions, graphs; word problems; nonlinear inequalities; inverse functions; exponential, logarithmic functions; conic sections; simultaneous equations.

**Enforced Prerequisite at Enrollment:** MATH 21 or satisfactory performance on the mathematics placement examination.

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

MATH 26: Plane Trigonometry

3 Credits

Trigonometric functions; solutions of triangles; trigonometric equations; identities.

**Enforced Prerequisite at Enrollment:** MATH 21 or satisfactory performance on the mathematics placement examination.

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

**Math 26H:** Plane Trigonometry

3 Credits

Trigonometric functions; solutions of triangles; trigonometric equations; identities.

General Education: Quantification (GQ)

Honors

MATH 30: Problem Solving

3 Credits

Concepts in problem solving; reducing new problems to old ones; techniques for attacking problems; building mathematical models.

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

MATH 33: Mathematics for Sustainability

3 Credits

Mathematical analysis of sustainability: measurement, flows, networks, rates of change, uncertainty and risk, applying analysis in decision making; using quantitative evidence to support arguments; examples. MATH 033 Mathematics for Sustainability (3) (GQ) This course is one of several offered by the mathematics department with the goal of helping students from non-technical majors partially satisfy their general education quantification requirement. It is designed to provide an introduction to various mathematical modeling techniques, with an emphasis on examples related to environmental and economic sustainability. The course may be used to fulfill three credits of the GQ requirement for some majors, but it does not serve as a prerequisite for any mathematics courses and should be treated as a terminal course. The course provides students with the mathematical background and quantitative reasoning skills necessary to engage as informed citizens in discussions of sustainability related to climate change, resources, pollution, recycling, economic change, and similar matters of public interest. Students apply these skills through writing projects that require quantitative evidence to support an argument. The mathematical content of the course spans six key areas: ‘measuring’ (representing information by numbers, problems of measurement, units, estimation skills); ‘flowing’ (building and analyzing stock-flow models, calculations using units of energy and power, dynamic equilibria in stock-flow systems, the energy balance of the earth-sun system and the greenhouse effect); ‘connecting’ (networks, the bystander effect, feedbacks in stock-flow models); ‘changing’ (out-of-equilibrium stock-flow systems, exponential models, stability of equilibria in stock-flow systems, sensitivity of equilibria to changes in a parameter, tipping points in stock-flow models); ‘risking’ (probability, expectation, bayesian inference, risk vs uncertainty); ‘deciding’ (discounting, uses and limitations of cost-benefit analysis, introduction to game theory and the tragedy of the commons, market-based mechanisms for pollution abatement, ethical considerations).

**RECOMMENDED PREPARATIONS:** ENGL 15

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Soc Resp and Ethic Reason

MATH 34: The Mathematics of Money
3 Credits
This course will provide students with the mathematical background and qualitative skills needed to make sound financial decisions. This course introduces personal finance topics including simple interest, simple discount, compound interest, annuities, investments, retirement plans, inflation, depreciation, taxes, credit cards, mortgages, and car leasing. Students will learn how to use linear equations, exponential and logarithmic equations, and arithmetic and geometric sequences to solve real world financial problems. Students will answer questions such as, What is the most they can afford to pay for a car? How much do they need to invest in their 401(k) account each month to retire comfortably? What credit card is the best option? In a society where consumers are presented with a vast array of financial products and providers, students are enabled to evaluate options and make informed, strategic decisions. This course may be used by students from non-technical majors to satisfy 3 credits of their General Education Qualification (GQ) requirement. This course does not serve as a prerequisite for any mathematics courses and should be treated as a terminal course.

Enforced Prerequisite at Enrollment: MATH 4 or satisfactory performance on the mathematics placement exam
Bachelor of Arts: Quantification
General Education: Quantification (GQ)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

MATH 35: General View of Mathematics
3 Credits
This course presents a general view of a number of mathematical topics to a non-technical audience, often relating the mathematical topics to a historical context, and providing students with an opportunity to engage with the mathematics at an introductory level. Although some variation in topics covered may take place among different instructors at different campuses, an example of such a course focuses on a number theory theme throughout the course, beginning with the Greeks’ view of integers, the concept of divisors, the calculation of greatest common divisors (which originates with Euclid), the significance of the prime numbers, the infinitude of the set of prime numbers (also known to the ancient Greeks), work on perfect numbers (which continues to be a topic of research today), and the work of Pythagoras and his famous Theorem. The course then transitions to the work of European mathematicians such as Euler and Gauss, including work on sums of two squares (which generalizes the Pythagorean Theorem), and then considering Euler’s phi function, congruences, and applications to cryptography.

Bachelor of Arts: Quantification
General Education: Quantification (GQ)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

MATH 36: Insights Into Mathematics
3 Credits
This course will provide students with the mathematical background and quantitative skills in various mathematical applications in such areas which are related to voting, fair divisions which includes apportionment methods, and the understanding and application of basic graph theory such as Euler and Hamilton circuits. This course may be used by students from non-technical majors to satisfy 3 credits of their General Education Qualification (GQ) requirement. This course does not serve as a prerequisite for any mathematics courses and should be treated as a terminal course.

Prerequisite: one unit of algebra or MATH 004
Bachelor of Arts: Quantification
General Education: Quantification (GQ)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

MATH 37: Finite Mathematics
3 Credits
Finite math includes topics of mathematics which deal with finite sets. Sets and formal logic are modern concepts created by mathematicians in the mid 19th and early 20th centuries to provide a foundation for mathematical reasoning. Sets and formal logic have lead to profound mathematical discoveries and have helped to create the field of computer science in the 20th century. Today, sets and formal logic are taught as core concepts upon which all mathematics can be built. In this course, students learn the elementary mathematics of logic and sets. Logic is the symbolic, algebraic way of representing and analyzing statements and sentences. While students will get just a brief introduction to logic, the mathematics used in logic are found at the heart of computer programming and in designing electrical circuits. Problems of counting various kinds of sets lead to the study of combinatorics, the art of advanced counting. For example, if a room has twenty chairs and twelve people, in how many ways can these people occupy the chairs? And are you accounting for differences in who sits in particular chairs, or does it only matter whether a chair has a body in it? These kinds of counting problems are the basis for probability. In order to calculate the chance of a particular event occurring you must be able to count all the possible outcomes. MATH 37 is intended for students seeking core knowledge in combinatorics, probability and mathematical logic but not requiring further course work in mathematics. Students entering the class will benefit from having some experience with basic algebra and solving word problems. The course may be used to fulfill three credits of the quantification portion of the general education requirement for some majors, but does not serve as a prerequisite for any mathematics courses and should be treated as a terminal course. Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

General Education: Quantification (GQ)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

MATH 38: Elementary Linear Algebra
3 Credits
Many problems we have to solve in day-to-day practice require the simultaneous determination of several different but interrelated unknowns. Although many problems of this form have been studied throughout the long history of mathematics, only in the early 20th century did the systematic approach we now refer to as linear algebra
emerge. Matrices and linear algebra are now accepted as the single most essential tool need for the solution of these problems. In addition, linear algebra provides students their first introduction to the concept of dimension in an abstract setting where things with 4, 5, or even more dimensions are often encountered. In the simplest situations, many of these problems can be represented as \( A \mathbf{x} = \mathbf{b} \), where \( \mathbf{x} \) is our vector of unknowns, \( A \) is a matrix, and \( \mathbf{b} \) is a vector of constants. MATH 38 is intended for students requiring some understanding of the concepts of linear algebra for their major, but not requiring any calculus course work. Students who are also required to take calculus course work should instead take MATH 220 after completion of an appropriate prerequisite.

**Prerequisite:** 2 units of high school mathematics  
Bachelor of Arts: Quantification  
General Education: Quantification (GQ)  
GenEd Learning Objective: Crit and Analytical Think  
GenEd Learning Objective: Key Literacies

**MATH 40:** Algebra, Trigonometry, and Analytic Geometry  
5 Credits  
Concepts of algebra; equations; inequalities; functions; graphs; polynomial and rational functions; exponential and logarithmic functions; trigonometry; analytic geometry; complex numbers.

**Enforced Prerequisite at Enrollment:** Satisfactory performance on the mathematics placement examination.  
Bachelor of Arts: Quantification  
General Education: Quantification (GQ)

**MATH 41:** Trigonometry and Analytic Geometry  
3-4 Credits  
Straight lines; circles; functions and graphs; graphs of polynomial and rational functions; exponential and logarithmic functions; trigonometry; conic sections.

**Enforced Prerequisite at Enrollment:** MATH 21 or satisfactory performance on the mathematics placement examination.  
Bachelor of Arts: Quantification  
General Education: Quantification (GQ)

**MATH 81:** Technical Mathematics I  
3 Credits  
Algebraic expressions, equations, systems of equations, trigonometric functions, graphs, solution of triangles, vectors.

**Prerequisite:** MATH 004 or satisfactory performance on the mathematics placement examination

**MATH 82:** Technical Mathematics II  
3 Credits  
Exponents, radicals, complex numbers, theory of equations, inequalities, half angle and double angle formulas, inverse trigonometric functions, exponential, logarithm, conic sections.

**Enforced Prerequisite at Enrollment:** MATH 81  
Bachelor of Arts: Quantification  
General Education: Quantification (GQ)

**MATH 83:** Technical Calculus  
4 Credits  
Limits, derivatives of algebraic functions, implicit differentiation, related rates, applied extrema problems, curve sketching, integration, numerical integration, applications of integration, integration techniques, differential equations.

**Enforced Prerequisite at Enrollment:** MATH 82  
Bachelor of Arts: Quantification  
General Education: Quantification (GQ)

**MATH 97:** Special Topics  
1-9 Credits/Maximum of 9  
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**MATH 110:** Techniques of Calculus I  
4 Credits  
Business Calculus is a critical component in the education of any business, financial, or economics professional who uses quantitative analysis. This course introduces and develops the mathematical skills required for analyzing change, and the underlying mathematical behaviors that model real-life economics and financial applications. The primary goal of our business calculus courses is to develop the students’ knowledge of calculus techniques, and to use a calculus framework to develop critical thinking and problem solving skills. The concept of a limit of a function/model is central to differential calculus; MATH 110 begins with a study of this concept, its geometric and analytical interpretation, and its use in the definition of the derivative. Differential calculus topics include: derivatives and their applications to rates of change, related rates, optimization, and graphing techniques. Target applications focus mainly on business applications, e.g. supply/demand models, elasticity, logistical growth, and marginal analysis within Cost, Revenue, and Profit models. Integral Calculus begins with the Fundamental Theorem of Calculus, integrating the fields of differential and integral calculus. Antidifferentiation techniques are used in applications focused on finding areas enclosed by functions, consumer and producer surplus, present and future values of income streams, annuities, and perpetuities, and the resolution of initial value problems within a business context. Students may only take one course for credit from MATH 110, 140, 140A, 140B, and 140H.

**Enforced Prerequisite at Enrollment:** MATH 22 or MATH 40 or MATH 41 or satisfactory performance on the mathematics placement examination.
MATH 140: Calculus With Analytic Geometry I

4 Credits

Calculus is an important building block in the education of any professional who uses quantitative analysis. This course introduces and develops the mathematical skills required for analyzing change and creating mathematical models that replicate real-life phenomena. The goals of our calculus courses include to develop the students’ knowledge of calculus techniques and to use the calculus environment to develop critical thinking and problem solving skills. The concept of limit is central to calculus; MATH 140 begins with a study of this concept. Differential calculus topics include derivatives and their applications to rates of change, related rates, linearization, optimization, and graphing techniques. The Fundamental Theorem of Calculus, relating differential and integral calculus begins the study of Integral Calculus. Antidifferentiation and the technique of substitution is used in integration applications of finding areas of plane figures and volumes of solids of revolution. Trigonometric functions are included in every topic. Students may only take one course for credit from MATH 110, 140, 140A, 140B, and 140H.

Enforced Prerequisite at Enrollment: Math 22 and Math 26 or Math 26 and satisfactory performance on the mathematics placement examination or Math 40 or Math 41 or satisfactory performance on the mathematics placement examination.

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MATH 140A: Calculus, Analytic Geometry, Algebra, and Trigonometry

6 Credits

Review of algebra and trigonometry; analytic geometry; functions; limits; derivatives, differentials, applications; integrals, applications. Students may only take one course for credit from MATH 110, 140, 140A, 140B, and 140H.

Enforced Prerequisite at Enrollment: Math 22 and Math 26 or Math 26 and satisfactory performance on the mathematics placement examination or Math 40 or Math 41 or satisfactory performance on the mathematics placement examination.

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MATH 140E: Calculus with Engineering Applications I

4 Credits

Calculus is an important building block in the education of any professional who uses quantitative analysis. This course introduces and develops the mathematical skills required for analyzing change and creating mathematical models that replicate real-life phenomena. The goals of our calculus courses include to develop the students’ knowledge of calculus techniques and to use the calculus environment to develop critical thinking and problem solving skills. The concept of limit is central to calculus; MATH 140E begins with a study of this concept. Differential calculus topics include derivatives and their applications to rates of change, related rates, linearization, optimization, and graphing techniques. The Fundamental Theorem of Calculus, relating differential and integral calculus begins the study of Integral Calculus. Antidifferentiation and the technique of substitution is used in integration applications of finding areas of plane figures and volumes of solids of revolution. Trigonometric functions are included in every topic.

Enforced Prerequisite at Enrollment: Math 22 and Math 26 or Math 26 and satisfactory performance on the mathematics placement examination or Math 40 or Math 41 or satisfactory performance on the mathematics placement examination.
MATH 140G: Calculus with Earth and Mineral Sciences Applications I

4 Credits

This course is the first in a sequence of three calculus courses designed for students in the earth and mineral sciences and related fields. Topics include limits of functions, continuity; the definition of the derivative, various rules for computing derivatives (such as the product rule, quotient rule, and chain rule), implicit differentiation, higher-order derivatives, solving related rate problems, and applications of differentiation such as curve sketching, optimization problems, and Newton's method; the definition of the definite integral, computation of areas, the Fundamental Theorem of Calculus, integration by substitution, and various applications of integration such as computation of areas between two curves, volumes of solids, and work.

**Enforced Prerequisite at Enrollment:** Math 22 and Math 26 or Math 26 and satisfactory performance on the mathematics placement examination or Math 40 or Math 41 or satisfactory performance on the mathematics placement examination.

Bachelor of Arts: Quantification
General Education: Quantification (GQ)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

MATH 140H: Honors Calculus with Analytic Geometry I

4 Credits

Calculus is an important building block in the education of any professional who uses quantitative analysis. This course introduces and develops the mathematical skills required for analyzing change and creating mathematical models that replicate real-life phenomena. The goals of our calculus courses include to develop the students' knowledge of calculus techniques and to use the calculus environment to develop critical thinking and problem solving skills. The concept of limit is central to calculus; MATH 140 begins with a study of this concept. Bachelor of Arts: Quantification
General Education: Quantification (GQ)
Honors
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

MATH 141: Calculus with Analytic Geometry II

4 Credits

MATH 141 is the second course in a two- or three-course calculus sequence for students in science, engineering and related fields. Calculus is an important building block in the education of any professional who uses quantitative analysis. This course further introduces and develops the mathematical skills required for analyzing growth and change and creating mathematical models that replicate real-life phenomena. The goals of our calculus courses include to develop the students' knowledge of calculus techniques and to use the calculus environment to develop critical thinking and problem solving skills. This course covers the following topics: logarithms, exponentials, and inverse trigonometric functions; applications of the definite integral and techniques of integration; sequences and series; power series and Taylor polynomials; parametric equations and polar functions. Students may take only one course for credit from MATH 141, 141B, and 141H.

**Enforced Prerequisite at Enrollment:** MATH 140 or MATH 140A or MATH 140B or MATH 140E or MATH 140G or MATH 140H.

Bachelor of Arts: Quantification
General Education: Quantification (GQ)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

MATH 141B: Calculus and Biology II

4 Credits

Techniques of integration and applications to biology; elementary matrix theory, limits of matrices, Markov chains, applications to biology and the natural sciences; elementary and separable differential equations, linear rst-order differential equations, linear systems of differential equations, the Lotka-Volterra equations. Students may take only one course for credit from MATH 141, 141B, and 141H.

**Enforced Prerequisite at Enrollment:** MATH 140 or MATH 140A or MATH 140B or MATH 140E or MATH 140G or MATH 140H.

Bachelor of Arts: Quantification
General Education: Quantification (GQ)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

MATH 141E: Calculus with Engineering Applications II

4 Credits

MATH 141E is the second course in a two- or three-course calculus sequence for students in science, engineering and related fields. Calculus is an important building block in the education of any professional who uses quantitative analysis. This course further introduces and develops the mathematical skills required for analyzing growth and change and creating mathematical models that replicate real-life phenomena. The goals of our calculus courses include to develop the students' knowledge of calculus techniques and to use the calculus environment to develop critical thinking and problem solving skills. This course covers the following topics: logarithms, exponentials, and inverse trigonometric functions; applications of the definite integral and techniques of integration; sequences and series; power series and Taylor polynomials; parametric equations and polar functions.
Bachelor of Arts: Quantification

Enforced Prerequisite at Enrollment: MATH 140 or MATH 140A or MATH 140B or MATH 140E or MATH 140G or MATH 140H.
Bachelor of Arts: Quantification
General Education: Quantification (GQ)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

MATH 141G: Calculus with Earth and Mineral Sciences Applications II
4 Credits
This course is the second in a sequence of three calculus courses designed for students in the earth and mineral sciences and related fields. Topics include inverse functions of exponential, logarithmic, and trigonometric functions; indeterminate forms and L'Hopital's rule; various techniques of integration, including integration by parts, trigonometric integrals, trigonometric substitution, and partial fractions; improper integration; infinite sequences and series, tests for convergence and divergence of infinite series, including the integral test, comparison tests, ratio test, root test; power series, Taylor and MacLaurin Series.

Enforced Prerequisite at Enrollment: MATH 140 or MATH 140A or MATH 140B or MATH 140E or MATH 140G or MATH 140H.
Bachelor of Arts: Quantification
General Education: Quantification (GQ)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

MATH 141H: Honors Calculus with Analytic Geometry II
4 Credits
MATH 141 is the second course in a two- or three-course calculus sequence for students in science, engineering and related fields. Calculus is an important building block in the education of any professional who uses quantitative analysis. This course further introduces and develops the mathematical skills required for analyzing growth and change and creating mathematical models that replicate real-life phenomena. The goals of our calculus courses include to develop the students' knowledge of calculus techniques and to use the calculus environment to develop critical thinking and problem solving skills. This course covers the following topics: logarithms, exponentials, and inverse trigonometric functions; applications of the definite integral and techniques of integration; sequences and series; power series, Taylor polynomials; parametric equations and polar functions. Students may take only one course for credit from MATH 141, 141B, and 141H.

MATH 197: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Quantification

MATH 199: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Quantification
International Cultures (IL)

MATH 200: Problem Solving in Mathematics
3 Credits
Fundamental concepts of arithmetic and geometry, including problem solving, number systems, and elementary number theory. For elementary and special education teacher certification candidates only. A student who has passed EDMTH 444 may not take MATH 200 for credit.

MATH 200H: Problem Solving in Mathematics (3) (GQ) This is a course in mathematics content for prospective elementary school teachers. Students are assumed to have successfully completed two years of high school algebra and one year of high school geometry. Students are expected to have reasonable arithmetic skills. The content and processes of mathematics are presented in this course to develop mathematical knowledge and skills and to develop positive attitudes toward mathematics. Problem solving is incorporated throughout the topics of number systems, number theory, probability, and geometry, giving future elementary school teachers tools to further explore mathematical content required to convey the usefulness, beauty and power of mathematics to their own students.

Bachelor of Arts: Quantification
General Education: Quantification (GQ)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

MATH 201: Problem Solving in Mathematics II
3 Credits
Mathematical ways of thinking, number sequences, numeracy, symmetry, regular polygons, plane curves, methods of counting, probability and data analysis. For elementary and special education teacher certification candidates only.

General Education: Quantification (GQ)
Honors

MATH 201: Problem Solving in Mathematics II
3 Credits
This course studies the foundations of elementary school mathematics with an emphasis on problem solving. MATH 201 Problem Solving in Mathematics II (3) (GQ) Problem Solving in Mathematics II studies the foundations of elementary school mathematics with an emphasis on problem solving. Mathematical ways of thinking are integrated throughout the study of probability, statistics, graphing, geometric shapes, and measurement. This course is designed for prospective teachers not only to gain the ability to explain the mathematics in elementary school courses, but also to help them comprehend the underlying mathematical concepts. Gaining a deeper understanding will enable them to assist their young students in the classroom since
Mathematics and its applications. MATH 220 will give students the fundamental techniques for working with matrices such as row and column operations, echelon form, and invertibility. The determinant of a matrix is also introduced; it gives a test for invertibility. In the second part of the course the key ideas of eigenvector and eigenvalue are developed. These allow one to analyze a complicated matrix problem into simpler components and appear in many disguises in physical problems. The course also introduces the concept of a vector space, a crucial element in future linear algebra courses. This course is completed by a wide variety of students across the university, including students majoring in engineering programs, the sciences, and mathematics. (In case of many of these students, MATH 220 is a required course in their degree program.)

**Enforced Prerequisite at Enrollment:** MATH 110 or MATH 140 or MATH 140B or MATH 140E or MATH 140G or MATH 140H Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MATH 220H: Honors Matrices

2-3 Credits

Honors course in systems of linear equations; matrix algebra; eigenvalues and eigenvectors; linear systems of differential equations. MATH 220H Honors Matrices (2) (GQ)(BA) This course meets the Bachelor of Arts degree requirements. This course is intended as an introduction to linear algebra with a focus on solving systems for linear equations. Topics include systems of linear equations, row reduction and echelon forms, linear independence, introduction to linear transformations, matrix operations, inverse matrices, dimension and rank, determinants, eigenvalues, eigenvectors, diagonalization, and orthogonality. The typical delivery format for the course is two 50-minute lectures per week, with typical assessment tools including examinations, quizzes, homework, and writing assignments. In contrast to the non-honors version of this course, the honors version is typically more theoretical and will often include more sophisticated problems. Moreover, certain topics are often discussed in more depth and are sometimes expanded to include applications which are not visited in the non-honors version of the course.

**Enforced Prerequisite at Enrollment:** MATH 110 or MATH 140 or MATH 140B or MATH 140E or MATH 140G or MATH 140H Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MATH 230: Calculus and Vector Analysis

4 Credits

Three-dimensional analytic geometry; vectors in space; partial differentiation; double and triple integrals; integral vector calculus. Students who have passed either Math 231 or MATH 232 may not schedule Math 230 or MATH 230H for credit.
Honors course in three-dimensional analytic geometry; vectors in space; partial differentiation; double and triple integrals; integral vector calculus. Students who have passed either MATH 231 or MATH 232 may not schedule MATH 230 or MATH 230H for credit. MATH 230H Honors Calculus and Vector Analysis (4) This course is the third in a sequence of three calculus courses designed for students in engineering, science, and related fields. Topics include vectors in space, dot products, cross products; vector-valued functions, modeling motion, arc length, curvature; functions of several variables, limits, continuity, partial derivatives, directional derivatives, gradient vectors, Lagrange multipliers; double integrals, triple integrals; line integrals, Green’s Theorem, Stokes’ Theorem, the Divergence Theorem. The typical delivery format for the course is four 50-minute lectures per week, with typical assessment tools including examinations, quizzes, homework, and writing assignments. In contrast to the non-honors version of this course, the honors version is typically more theoretical and will often include more sophisticated problems. Moreover, certain topics are often discussed in more depth and are sometimes expanded to include applications which are not visited in the non-honors version of the course.

**Enforced Prerequisite at Enrollment:** MATH 141 or MATH 141B or MATH 141E or MATH 141G or MATH 141H

Bachelor of Arts: Quantification

MATH 230H: Honors Calculus and Vector Analysis

4 Credits

Honors course in analytic geometry in space; partial differentiation and applications. Students who have passed MATH 230 or MATH 230H may not schedule this course.

**Enforced Prerequisite at Enrollment:** MATH 141 or MATH 141B or MATH 141E or MATH 141G or MATH 141H

Bachelor of Arts: Quantification

MATH 231: Calculus of Several Variables

2 Credits

Analytic geometry in space; partial differentiation and applications. Students who have passed MATH 230 or MATH 230H may not schedule this course.

**Enforced Prerequisite at Enrollment:** MATH 141 or MATH 141B or MATH 141E or MATH 141G or MATH 141H

Bachelor of Arts: Quantification

MATH 231H: Honors Calculus of Several Variables

2 Credits

Honors course in analytic geometry in space; partial differentiation and applications. Students who have passed MATH 230 or MATH 230H may not schedule this course. MATH 231H Honors Calculus of Several Variables (2) This course covers a subset of the material found in MATH 230. Topics include vectors in space, dot products, cross products; vector-valued functions, modeling motion, arc length, curvature; functions of several variables, limits, continuity, partial derivatives, directional derivatives, gradient vectors, Lagrange multipliers. The typical delivery format for the course is two 50-minute lectures per week, with typical assessment tools including examinations, quizzes, homework, and writing assignments. In contrast to the non-honors version of this course, the honors version is typically more theoretical and will often include more sophisticated problems. Moreover, certain topics are often discussed in more depth and are sometimes expanded to include applications which are not visited in the non-honors version of the course.

**Enforced Prerequisite at Enrollment:** MATH 141 or MATH 141B or MATH 141E or MATH 141G or MATH 141H

Bachelor of Arts: Quantification

MATH 232: Integral Vector Calculus

2 Credits

Multidimensional analytic geometry, double and triple integrals; integral vector calculus. Students who have passed MATH 230 may not schedule this course for credit.

**Enforced Prerequisite at Enrollment:** MATH 231 or MATH 231H

Bachelor of Arts: Quantification

MATH 250: Ordinary Differential Equations

3 Credits

First- and second-order equations; special functions; Laplace transform solutions; higher order equations. Students who have passed MATH 251 may not schedule this course for credit.

**Enforced Prerequisite at Enrollment:** MATH 141 or MATH 141B or MATH 141E or MATH 141G or MATH 141H

Bachelor of Arts: Quantification

MATH 251: Ordinary and Partial Differential Equations

4 Credits

First- and second-order equations; special functions; Laplace transform solutions; higher order equations; Fourier series; partial differential equations.

**Enforced Prerequisite at Enrollment:** MATH 141 or MATH 141B or MATH 141E or MATH 141G or MATH 141H

Bachelor of Arts: Quantification

MATH 251H: Honors Ordinary and Partial Differential Equations

4 Credits

Honors course in first- and second-order equations; special functions; Laplace transform solutions; higher order equations; Fourier series; partial differential equations. MATH 251H Honors Ordinary and Partial Differential Equations (4) This course serves as an introduction to ordinary and partial differential equations. Topics include various techniques for solving first and second order ordinary differential equations, an introduction to numerical methods, solving systems of two ordinary differential equations, nonlinear differential equations and stability, Laplace transforms, Fourier series, and partial differential equations. The typical delivery format for the course is four 50-minute lectures per week, with typical assessment tools including examinations, quizzes, homework, and writing assignments. In contrast to the non-honors version of this course, the honors version is typically more theoretical and will often include more sophisticated problems. Moreover, certain topics are often discussed in more depth and are sometimes expanded to include applications which are not visited in the non-honors version of the course.
Enforced Prerequisite at Enrollment: MATH 141 or MATH 141B or MATH 141E or MATH 141G or MATH 141H
Bachelor of Arts: Quantification
Honors

MATH 252: Partial Differential Equations
1 Credits
Fourier series; partial differential equations. Students who have passed MATH 251 may not schedule this course for credit. This course serves as the continuation of MATH 250 (Ordinary Differential Equations) and provides an elementary treatment of partial differential equations and Fourier series. Once a student completes both MATH 250 (3 credits) and MATH 252 (1 credit), the student will have completed all of the material in MATH 251 (4 credits). In particular, the student will be able to find solutions to given partial differential equations and will be able to utilize the tools from the field of Fourier series in the process.

MATH 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.
Bachelor of Arts: Quantification

MATH 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
Bachelor of Arts: Quantification

MATH 310: Elementary Combinatorics
3 Credits
Fundamental techniques of enumeration and construction of combinatorial structures, permutations, recurrences, inclusion-exclusion, permanents, 0, 1- matrices, Latin squares, combinatorial designs.

Enforced Prerequisite at Enrollment: MATH 220 or MATH 220H
Bachelor of Arts: Quantification

MATH 310A: Concepts in Combinatorics - Recitation
1 Credits
Recitation for MATH 310H - Concepts in Combinatorics.

Enforced Prerequisite at Enrollment: MATH 220 or Concurrent: MATH 310H
Bachelor of Arts: Quantification

MATH 312: Concepts of Real Analysis
3 Credits
An introduction to rigorous analytic proofs involving properties of real numbers, continuity, differentiation, integration, and infinite sequences and series.

Enforced Prerequisite at Enrollment: MATH 141 or MATH 141B or MATH 141E or MATH 141G or MATH 141H
Bachelor of Arts: Quantification

MATH 312A: Honors Concepts of Real Analysis - Recitation
1 Credits
A recitation component to MATH 312H, practice in problem solving.

Enforced Prerequisite at Enrollment: MATH 140H and MATH 311M or Concurrent: MATH 312H
Bachelor of Arts: Quantification

MATH 312H: Honors Concepts of Real Analysis
3 Credits
Basic methods of mathematical thinking and fundamental structures, primarily in the context of infinite sets, real numbers, and metric spaces.

Enforced Prerequisite at Enrollment: MATH 141 or MATH 141B or MATH 141E or MATH 141G or MATH 141H
Bachelor of Arts: Quantification
Honors

MATH 313A: Concepts of Geometry - Recitation
1 Credits
A recitation component to Math 313H, practice in problem solving.

Enforced Prerequisite at Enrollment: MATH 140H and MATH 311M or Concurrent: MATH 313H
MATH 313H: Concepts of Geometry

3 Credits

Development thorough understanding and technical mastery of foundations of modern geometry. MATH 313H Concepts of Geometry (3) The central aim of this course is to develop thorough understanding and technical mastery of foundations of modern geometry. Basic high school geometry is assumed; axioms are mentioned, but not used to deduce theorems. Approach in development of the Euclidean geometry of the plane and the 3-dimensional space is mostly synthetic with an emphasis on groups of transformations. Linear algebra is invoked to clarify and generalize the results in dimension 2 and 3 to any dimension. It culminates in the last part of the course where six 2-dimensional geometries and their symmetry groups are discussed. This course is a part of a new 'pre-MASS' program (PMASS) aimed at freshman/sophomore level students, which will operate in steady state in the spring semesters. This course is directly linked with a proposed course Math 313R, its 1-credit recitation component. It is highly recommended to all mathematics, physics and natural sciences majors who are graduate school bound, and is a great opportunity for all Schreyer Scholars. The following topics will be covered: Euclidean geometry of the plane (distance, isometries, scalar product of vectors, examples of isometries: rotations, reflections, translations, orientation, symmetries of planar figures, review of basic notions of group theory, cyclic and dihedral groups, classification of isometries of Euclidean plane, discrete groups of isometries and crystallographic restrictions. similarity transformations, selected results from classical Euclidean geometry); Euclidean geometry of the 3-dimensional space and the sphere (distance, isometries, scalar product of vectors, planes and lines in the 3-dimensional space, normal vectors to planes, classification of pairs of lines, isometries with a fixed point: rotations and reflections, orientation, isometries of the sphere, classification of orientation-reversing isometries with a fixed point, finite groups of isometries of the 3-dimensional space, existence of a fixed point; examples: cyclic, dihedral, and groups of symmetries of Platonic solids, classification of isometries without fixed point: translations and screw-motions, intrinsic geometry of the sphere, elliptic plane: a first example of non-Euclidean geometry); Elements of linear algebra and its application to geometry in 2, 3, and n dimension (real and complex vector spaces, linear independence of vectors, basis and dimension, eigenvalues and eigenvectors, diagonalizable matrices, classification of matrices in dimension 2: elliptic, hyperbolic and parabolic matrices, orthogonal matrices and isometries of the n-dimensional space); Six 2-dimensional geometries (Projective geometry, affine geometry, inversions and conformal geometry. Euclidean geometry revisited, geometry of elliptic plane, hyperbolic geometry). The achievement of educational objectives will be assessed through weekly homework, class participation, and midterm and final exams.

Enforced Prerequisite at Enrollment: MATH 140H and MATH 311M or MATH 312H
Honors

MATH 314: PMASS Problem Solving Seminar

1 Credits

Group work on challenging problems, discussions and project presentations. MATH 314 PMASS Problem Solving Seminar (1) A 1-credit Problem Solving Seminar will feature group work on challenging problems which require only elementary techniques for their solution. Each student of the PMASS program will be required to participate in two individual or group projects. Unlike those in MASS Program, the projects will not be necessarily closely related to the courses, although the course instructors will be encouraged to offer topics and supervise the work. Some projects will grow out of the work of the problem solving seminar, and the seminar will be a venue for the students to discuss their research projects. This course is a part of a new 'pre-MASS' program (PMASS) aimed at freshman/sophomore level students, which will operate in steady state in the spring semesters. This course is linked with other PMASS courses, and is highly recommended to all mathematics, physics and natural sciences majors who are graduate school bound, and is a great opportunity for all Schreyer Scholars. Each student of the PMASS program will be required to participate in two individual or group projects. The achievement of educational objectives will be assessed through evaluations of the project presentations.

Honors

MATH 315: Foundations of Mathematics

3 Credits

A consideration of selected topics in the foundations of mathematics, with emphasis on development of basic meaning and concepts.

Enforced Prerequisite at Enrollment: MATH 141
Bachelor of Arts: Quantification

MATH 315H: PMASS Colloquium

1 Credits

Bi-weekly lecture series with multiple invite speakers. MATH 315 PMASS Colloquium (1) This bi-weekly lecture series will feature multiple invited speakers. Unlike MASS colloquia that focus on specific topics, those lectures will be broad in scope and not very technical. We envision that advanced high school students from State College Area High School will attend these lectures that will be properly advertised. This will help to attract talented high school students to undergraduate study of mathematics and related subjects, and will also enhance our existing collaboration with mathematics educators in the area. This course is a part of a new 'pre-MASS' program (PMASS) aimed at freshman/sophomore level students, which will operate in steady state in the spring semesters. This course is highly recommended to all mathematics, physics and natural sciences majors who are graduate school bound, and is a great opportunity for all Schreyer Scholars.

Enforced Prerequisite at Enrollment: MATH 140H and MATH 311M or Concurrent: MATH 312H and MATH 313H and MATH 314H
Honors

MATH 318: Elementary Probability

3 Credits

Combinatorial analysis, axioms of probability, conditional probability and independence, discrete and continuous random variables, expectation, limit theorems, additional topics. Students who have passed either MATH(STAT) 414 or 418 may not schedule this course for credit.

Enforced Prerequisite at Enrollment: MATH 141
Cross-listed with: STAT 318
Bachelor of Arts: Quantification
MATH 319: Applied Statistics in Science

3 Credits

Statistical inference: principles and methods, estimation and testing hypotheses, regression and correlation analysis, analysis of variance, computer analysis. Students who have passed MATH 415 / STAT 415 may not schedule this course for credit.

**Enforced Prerequisite at Enrollment:** MATH 318 or STAT 318 or MATH 414 or STAT 414
Cross-listed with: STAT 319
Bachelor of Arts: Quantification

MATH 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Quantification
International Cultures (IL)

MATH 401: Introduction to Analysis I

3 Credits

Review of calculus, properties of real numbers, infinite series, uniform convergence, power series. Students who have passed Math. 403 may not schedule this course.

**Enforced Prerequisite at Enrollment:** MATH 230 or MATH 231
Bachelor of Arts: Quantification

MATH 403: Classical Analysis I

3 Credits

Topological foundations of classical analysis in the framework of metric spaces. Covered: Metric spaces (topology, convergence, Cauchy sequences and completeness); Maps between metric spaces (continuous maps and homeomorphisms, stronger continuity properties: uniform continuity, Hölder and Lipschitz continuity, contraction mapping principle, points of discontinuity and the Baire Category Theorem); Compact metric spaces (continuity and compactness, connectedness, total boundedness, coverings and Lebesgue number, perfect metric spaces, characterization of Cantor sets, fractals); Function spaces (spaces of continuous maps, uniform continuity and equicontinuity, Arzela-Ascoli Theorem, uniform approximation by polynomials. Stone-Weierstrass Theorem).

**Enforced Prerequisite at Enrollment:** MATH 311M and MATH 312H
Bachelor of Arts: Quantification Honors

MATH 404: Classical Analysis II

3 Credits

Differentiation of functions from Rn to Rm, implicit function theorem, Riemann integration, Fubini's theorem, Fourier analysis.

**Enforced Prerequisite at Enrollment:** MATH 403
Bachelor of Arts: Quantification

MATH 405: Advanced Calculus for Engineers and Scientists I

3 Credits

Vector calculus, linear algebra, ordinary and partial differential equations. Students who have passed MATH 411 or 412 may not take this course for credit.

**Enforced Prerequisite at Enrollment:** (MATH 230 or MATH 231) and (MATH 250 or MATH 251)
Bachelor of Arts: Quantification

MATH 406: Advanced Calculus for Engineers and Scientists II

3 Credits

Complex analytic functions, sequences and series, residues, Fourier and Laplace transforms. Students who have passed MATH 421 may not take this course for credit.

**Enforced Prerequisite at Enrollment:** MATH 405
Bachelor of Arts: Quantification

MATH 410: Complex Analysis for Mathematics and Engineering

3 Credits

Complex analytic functions; Cauchy-Riemann equations; complex contour integrals; Cauchy's integral formula; Taylor and Laurent series; residue theory; applications in engineering. MATH 410 Complex Analysis for Mathematics and Engineering (3) A succinct stand-alone course description (up to 400 words) to be made available to students through the on-line Bulletin and Schedule of Courses. This is a complex analysis course designed for students in mathematics, applied mathematics, engineering, science, and related fields. Topics include complex numbers; analytic functions, complex differentiability, and the Cauchy-Riemann equations; complex exponential, logarithmic, power, and trigonometric functions; complex contour integrals; Cauchy's theorem; Cauchy's integral formula; Taylor and Laurent series; residue theory; and various applications in areas of science and engineering. This course focuses on the definitions, concepts, calculation techniques, supporting theory,
and examples of applications suited to the usage of complex analysis in mathematics, applied mathematics, science, and engineering. Students who have passed MATH 406 or MATH 421 may not take this course for credit.

**Enforced Prerequisite at Enrollment:** MATH 230 or MATH 232

MATH 411: Ordinary Differential Equations

3 Credits

Linear ordinary differential equations; existence and uniqueness questions; series solutions; special functions; eigenvalue problems; Laplace transforms; additional topics and applications.

**Enforced Prerequisite at Enrollment:** (MATH 230 or MATH 231) and (MATH 250 or MATH 251)

Bachelor of Arts: Quantification

MATH 412: Fourier Series and Partial Differential Equations

3 Credits

Orthogonal systems and Fourier series; derivation and classification of partial differential equations; eigenvalue function method and its applications; additional topics. MATH 412 Fourier Series and Partial Differential Equations (3) (BA) This course meets the Bachelor of Arts degree requirements. The purpose of MATH 412 is to introduce students to the origins, theory, and applications of partial differential equations. Several basic physical phenomena are considered - including flows, vibrations, and diffusions - and used to derive the relevant equations. The fundamentals of the mathematical theory of partial differential equations are motivated and developed for the students through the systematic exploration of these classic physical systems and their corresponding equations: the Laplace, wave, and heat equations. In addition to treating the physical origins of the equations, this course focuses on solving evolution equations as initial value problems on unbounded domains (the Cauchy problem), and also on solving partial differential equations on bounded domains (boundary value problems). There is not one but many techniques for solving these equations, and the course presents some aspect of the expansion in orthogonal functions (including Fourier series), eigenvalue theory, functional analysis, and the use of separation of variables, Fourier transforms, and Laplace transforms to solve PDEs by converting them to ordinary differential equations. This course currently serves a cross-section of students at the university with interests or the need for this advanced subject mathematics, including students majoring in the engineering program, meteorology, physics, and mathematics. This typically includes the most advanced physics, engineering, and meteorology students, as well as mathematics majors with interests in applied mathematics.

**Enforced Prerequisite at Enrollment:** MATH 230 and (MATH 250 or MATH 251)

Bachelor of Arts: Quantification

MATH 414: Introduction to Probability Theory

3 Credits

STAT 414 / MATH 414 is an introduction to the theory of probability for students in statistics, mathematics, engineering, computer science, and related fields. The course presents students with calculus-based probability concepts and those concepts can be used to describe the uncertainties present in real applications. Topics include probability spaces, discrete and continuous random variables, transformations, expectations, generating functions, conditional distributions, law of large numbers, central limit theorems. Most students are recommended to sequentially take MATH 230 or MATH 231 prior to STAT414 / MATH 414, although the alignment of the topics in each class permit concurrent enrollment. Students may take only one course from STAT 414 / MATH 414 and STAT 418 / MATH 418.

**Enforced Prerequisite at Enrollment:** MATH 230 or Concurrent: MATH 232 or (MATH 231 and RM 214)

Cross-listed with: STAT 414

MATH 415: Introduction to Mathematical Statistics

3 Credits

A theoretical treatment of statistical inference, including sufficiency, estimation, testing, regression, analysis of variance, and chi-square tests.

**Enforced Prerequisite at Enrollment:** MATH 414 or STAT 414

Cross-listed with: STAT 415

MATH 416: Stochastic Modeling

3 Credits

Review of distribution models, probability generating functions, transforms, convolutions, Markov chains, equilibrium distributions, Poisson process, birth and death processes, estimation.

**Enforced Prerequisite at Enrollment:** (STAT 318 or MATH 318 or MATH 231) and (MATH 230 or Concurrent: MATH 232)

MATH 417: Qualitative Theory of Differential Equations

3 Credits

Linear differential equations, stability of stationary solutions, ordinary bifurcation, exchange of stability, Hopf bifurcation, stability of periodic solutions, applications. MATH 417 Qualitative Theory of Differential Equations (3) (BA) This course meets the Bachelor of Arts degree requirements. The main objective of the course is the qualitative theory of ordinary differential equations such as existence and uniqueness of solutions, dependence on initial data and parameters, and basic stability of solutions for both linear and nonlinear equations. It is designed to introduce students to modern concepts including the bifurcation theory, intermittent (transitional) and chaotic behavior of solutions and dynamical system approach to differential equations. Along the way, a number of applications are discussed and students get familiar with some basic examples illustrating main principles of the theory, such as Lorenz attractor, predator-prey models, etc. The course is completed by students majoring in engineering programs, the sciences, and mathematics.

**Enforced Prerequisite at Enrollment:** MATH 220 and (MATH 250 or MATH 251)

Bachelor of Arts: Quantification

MATH 418: Introduction to Probability and Stochastic Processes for Engineering

3 Credits

Introduction to probability axioms, combinatorics, random variables, limit laws, and stochastic processes. Students may take only one course from MATH414 / STAT 414 and MATH 418 / STAT 418 for credit. STAT 418 /
MATH 418 Introduction to Probability and Stochastic Processing for Engineering (3) This course gives an introduction to probability and random processes. The topics are not covered as deeply as in a semester-long course in probability only or in a semester-long course in stochastic processes only. It is intended as a service course primarily for engineering students, though no engineering background is required or assumed. The topics covered include probability axioms, conditional probability, and combinatorics; discrete random variables; random variables with continuous distributions; jointly distributed random variables and random vectors; sums of random variables and moment generating functions; and stochastic processes, including Poisson, Brownian motion, and Gaussian processes.

Enforced Prerequisite at Enrollment: MATH 230 or MATH 231
Cross-listed with: STAT 418

MATH 418H: Probability
3 Credits
Fundamentals and axioms, combinatorial probability, conditional probability and independence, probability laws, random variables, expectation; Chebyshev’s inequality. Students may take only one course from MATH(STAT) 414 and 418 for credit.

Cross-Listed
Honors

MATH 419: Theoretical Mechanics
3 Credits
Principles of Newtonian, Lagrangian, and Hamiltonian mechanics of particles with applications to vibrations, rotations, orbital motion, and collisions. PHYS 419 / MATH 419 Theoretical Mechanics (3) A second course in classical mechanics, required of all physics majors who typically take it in their 5th or 6th semester. The course includes a review of relevant mathematics, detailed discussions of advanced topics in Newtonian mechanics, introductions to Lagrangian and Hamiltonian dynamics, and applications to such forced oscillations, orbital motion, vibrational motion and normal modes, rigid body motion, and collisions. It is a prerequisite for Physics 461, which is a second semester extension. It is also a valuable background for most 400-level physics courses, especially Physics 410.

Enforced Prerequisite at Enrollment: (MATH 230 or MATH 231) and (MATH 250 or MATH 251) and PHYS 212 and PHYS 213 and PHYS 214
Cross-listed with: PHYS 419

MATH 421: Complex Analysis
3 Credits
Infinite sequences and series; algebra and geometry of complex numbers; analytic functions; integration; power series; residue calculus; conformal mapping, applications.

Enforced Prerequisite at Enrollment: (MATH 230 or MATH 232 or MATH 405) and (MATH 401 or MATH 403)
Bachelor of Arts: Quantification

MATH 422: Wavelets and Fourier Analysis: Theory and Applications
3 Credits
Fundamental mathematical issues of the theory of wavelets for senior undergraduate and graduate students in mathematics, engineering, physics, and computer science.

Bachelor of Arts: Quantification

MATH 425: Introduction to Operations Research
3 Credits
Nature of operations research, problem formulation, model construction, deriving solution from models, allocation problems, general linear allocation problem, inventory problems.

Enforced Prerequisite at Enrollment: MATH 141 and MATH 220
Bachelor of Arts: Quantification

MATH 426: Introduction to Modern Geometry
3 Credits
Plane and space curves; space surfaces; curvature; intrinsic geometry of surfaces; Gauss-Bonnet theorem; covariant differentiation; tensor analysis.

Enforced Prerequisite at Enrollment: MATH 401 or MATH 403
Bachelor of Arts: Quantification

MATH 427: Foundations of Geometry
3 Credits
Euclidean and various non-Euclidean geometries and their development from postulate systems. Students who have passed MATH 427 may not schedule MATH 471.

Enforced Prerequisite at Enrollment: MATH 230 or MATH 231
Bachelor of Arts: Quantification

MATH 428: Geometry for Teachers
1 Credits
Research in mathematics education using ideas from Euclidean and non-Euclidean geometry. Students who have passed MATH 471 may not schedule MATH 427. MATH 428 Geometry for Teachers (1) MATH 428 is designed to introduce students to mathematics education and research in education. The student will present topics in written and verbal classroom reports. Students will be evaluated on research papers and classroom presentations of those papers, classroom technology demonstration of geometry topics, and classroom demonstration of teaching geometry. This course supplements MATH 427 by providing the education component that is required by the state of Pennsylvania for obtaining certification in teaching mathematics. This course is offered only at Penn State Erie, The Behrend College.

Enforced Prerequisite at Enrollment: MATH 311W . Prerequisite or concurrent: MATH 427
Bachelor of Arts: Quantification
MATH 429: Introduction to Topology
3 Credits

**Enforced Prerequisite at Enrollment:** MATH 311W
Bachelor of Arts: Quantification

MATH 430: Linear Algebra and Discrete Models I
3 Credits
Vector spaces, linear transformations, matrices determinants, characteristic values and vectors, systems of linear equations, applications to discrete models.

**Enforced Prerequisite at Enrollment:** MATH 220
Bachelor of Arts: Quantification
MATH 435: Basic Abstract Algebra
3 Credits
Elementary theory of groups, rings, and fields. Students who have passed MATH 435 may not schedule MATH 470.

**Enforced Prerequisite at Enrollment:** MATH 311W or MATH 315
Bachelor of Arts: Quantification
MATH 436: Linear Algebra
3 Credits
Vector spaces and linear transformations, canonical forms of matrices, elementary divisors, invariant factors; applications. Students who have passed MATH 436 may not schedule MATH 441.

**Enforced Prerequisite at Enrollment:** MATH 311W
Bachelor of Arts: Quantification
MATH 436H: Linear Algebra
3 Credits
Vector spaces and linear transformations, canonical forms of matrices, elementary divisors, invariant factors; applications.

Honors
MATH 437: Algebraic Geometry
3 Credits
Study of curves in the plane defined by polynomial equations \( p(x,y) = 0 \). Projective equivalence, singular points, classification of cubics.

MATH 437 Algebraic Geometry (3)(BA)
This course meets the Bachelor of Arts degree requirements. The geometric study of algebraic equations is one of the oldest and deepest parts of mathematics, and it lies at the heart of modern developments in geometry, algebra, number theory and physics. Students completing MATH 437 will understand many new algebraic and geometric ideas by studying examples of curves defined by equations of degrees 2 and 3 in the plane. First come conics (given by equations of degree 2 in two variables). Rigid motions, similarities, and affine transformations give different classifications of them. New ideas then show how to get a conic through any five points and prove Pascal’s theorem about six points on a conic. Special cases suggest extension of the usual plane to the projective plane, with ‘points at infinity,’ homogeneous coordinates, and projective transformations. The main part of the course turns to equations of degree 3 and their singularities, flex points, tangents, and degeneracies. Several new ideas, both algebraic and analytic, are brought in to prove the existence of complex flex points on singular cubics and then real flex points on nonsingular real cubics. There is then a classification on complex projective cubics by a single parameter and finally a full classification of all real projective cubics. As time permits, relations to further topics are sketched: addition of points on a nonsingular cubic, Mordell’s theorem, doubly periodic functions, and Fermat’s last theorem. The course is typically taken by mathematics majors.

**Enforced Prerequisite at Enrollment:** (MATH 230 or MATH 231) and MATH 311W
Bachelor of Arts: Quantification
MATH 441: Matrix Algebra
3 Credits
Determinants, matrices, linear equations, characteristic roots, quadratic forms, vector spaces. Students who have passed Math 436 may not schedule this course.

**Enforced Prerequisite at Enrollment:** MATH 220
Bachelor of Arts: Quantification
MATH 448: Mathematics of Finance
3 Credits
The course provides a foundational knowledge of the mathematics and mathematical models of finance, primarily of option pricing, hedging, and portfolio optimization. The topics include the definition of various financial securities and instruments (e.g. bonds, stocks, forward contracts, and options), the theory of interest, the No-Arbitrage Principle, measures of return and volatility, the Markowitz model of portfolio theory, the Capital Asset Pricing Model, the pricing of forward contracts, option trading strategies, the pricing of options via binomial models and the Black-Scholes model, and principles of hedging.

**Enforced Prerequisite at Enrollment:** MATH 141 and (STAT 200 or STAT 301 or MATH 318 or STAT 318 or STAT 401 or MATH 414 or STAT 414)
MATH 449: Applied Ordinary Differential Equations
3 Credits
Differential and difference equations and their application to biology, chemistry, and physics; techniques in dynamical systems theory. MATH 449 Mathematical Modeling (3) Many phenomena that arise in the natural sciences, such as the motion of pendulum or signal conduction in neurons or oscillations in certain chemical reactions, can be modeled using nonlinear differential equations. This course will develop the mathematical techniques needed to investigate such differential equations. These techniques include the study of equilibria, stability, phase plane analysis, bifurcation analysis and chaos. The course will assume prior knowledge of ordinary differential equations at the MATH 250/251 level; this is the only prerequisite for the course. We will focus on understanding and interpreting the behavior of the solutions to the differential equation models rather than on deriving the model equations themselves. Evaluation will be based on midterm exams, a final exam, graded homework, and graded longer projects which may
involves computer work. The course should be of interest to any science or engineering major and some models will be chosen to reflect the fields of interest of the class. The goal is for the students to be able to apply the techniques learned in the course to mathematical models that they will encounter in other classes or situations. The class will be offered every other year with an expected enrollment of 10-15 students.

**Enforced Prerequisite at Enrollment:** MATH 250 or MATH 251
Bachelor of Arts: Quantification

MATH 450: Mathematical Modeling

3 Credits

Constructing mathematical models of physical phenomena; topics include pendulum motion, polymer fluids, chemical reactions, waves, flight, and chaos. MATH 450 Mathematical Modeling (3) The purpose of the course is to introduce mathematical modeling, i.e., the construction of mathematical structures which capture relevant physical phenomena. The course will systematically explore mathematical ideas and tools used to study the natural world. Particular emphasis will be placed on the process of creating a mathematical model starting from a physical scenario. Typically this process will begin with an experiment either demonstrated in the W. G. Pritchard Lab or performed by the students in class. Once a particular model has been developed, students will use mathematical analysis and experimentation to determine the properties and relevance of the model, and to make predictions. Often the model can be satisfactory; however, many times one also finds new features of the system that are not adequately accounted for in the model, and the process begins again. It is this cycle the course will focus on. For a given phenomenon (e.g., flow of viscous fluid, pendulum motion) several models may be compared and contrasted, and possible simplifications will be discussed. A significant aspect of the course is its laboratory component, in which the students will perform experiments or observe demonstrations. However, the main emphasis will be placed on creating and rigorously analyzing the mathematical aspects of the models. Instead of presenting a finely tuned model for a given phenomenon, this course will try to convey some of the heuristic, intuitive, and mathematical ideas employed in modeling. Examples of physical systems to be considered include: simple and compound pendulum motion, chemical reactions, water waves, and elastic behavior of polymer solutions. The course is open to a wide range of undergraduate as well as graduate students with majors in mathematics, biology, chemistry, engineering, and physics. The course should be accessible to students with some basic knowledge of mathematical analysis and differential equations. Main topics include: modeling with ordinary differential equations; bifurcation theory and stability; traveling waves in epidemics, chemical reactions, free fluid surfaces, and polymer solutions; fluctuations in nature, stochastic differential equations and chaos.

**Enforced Prerequisite at Enrollment:** (MATH 315 and MATH 430) or MATH 405 or MATH 412
Bachelor of Arts: Quantification

MATH 451: Numerical Computations

3 Credits

**ALGORITHMS FOR INTERPOLATION, APPROXIMATION, INTEGRATION, NONLINEAR EQUATIONS, LINEAR SYSTEMS, FAST FOURIER TRANSFORM, AND DIFFERENTIAL EQUATIONS EMPHASIZING COMPUTATIONAL PROPERTIES AND IMPLEMENTATION. STUDENTS MAY TAKE ONLY ONE COURSE FOR CREDIT FROM MATH 451 AND 455.**

**Prerequisite:** 3 credits of programming; MATH 230 or MATH 231
Cross-listed with: CMPSC 451
Bachelor of Arts: Quantification

MATH 455: Introduction to Numerical Analysis I

3 Credits

Floating point computation, numerical rootfinding, interpolation, numerical quadrature, direct methods for linear systems. Students may take only one course for credit from MATH 451 and MATH 455.

**Enforced Prerequisite at Enrollment:** (CMPSC 201 or CMPSC 202 or CMPSC 121 or CMPSC 131) and MATH 220 and (MATH 230 or MATH 231)
Cross-listed with: CMPSC 455
Bachelor of Arts: Quantification

MATH 455H: Introduction To Numerical Analysis I

3 Credits

Floating point computation, numerical rootfinding, interpolation, numerical quadrature, direct methods for linear systems. Students may take only one course for credit from MATH 451 and MATH 455.

**Cross-Listed**

Honors

MATH 456: Introduction to Numerical Analysis II

3 Credits

Polynomial and piecewise polynomial approximation, matrix least squares problems, numerical solution of eigenvalue problems, numerical solution of ordinary differential equations.

**Enforced Prerequisite at Enrollment:** MATH 451
Cross-listed with: CMPSC 456
Bachelor of Arts: Quantification

MATH 457: Introduction to Mathematical Logic

3 Credits

Propositional logic, first-order predicate logic, axioms and rules of inference, structures, models, definability, completeness, compactness. Logic forms the foundation of all mathematical reasoning. To prove a mathematical theorems, one deduces them step by step from basic principles, called axioms, or from other statements previously deduced. Each step of a proof has to be a logically valid rule, such as, for example, the modus ponens: If A holds, and A implies B, then B holds. In Math 457, students will learn how concepts such as axiom, theorem, proof, and truth can be formulated as a mathematical theory, that is, logical reasoning will be studied as a mathematical subject. The simplest kind of logical system is propositional logic. Here, the basic components are whole statements which are either true or false, and which can be combined using logical connectives such AND, OR, or NOT to form new statements. Its simple nature makes propositional logic a good system to introduce many of the basic ideas: syntax and semantics, proof systems, completeness and compactness. However, propositional logic does not capture mathematical reasoning adequately. Therefore, one considers
Bachelor of Arts: Quantification

MATH 465: Number Theory
3 Credits

Elements, divisibility of numbers, congruences, residues, and forms. MATH 465 Number Theory (3) (BA) This course meets the Bachelor of Arts degree requirements. This course serves as an upper-level introduction to the fundamentals of elementary number theory. A major emphasis in the course is placed on the role that the prime numbers play in the study of properties of the integers along with the related topics of divisibility and factorization of integers. Additional topics covered in the course include congruences (and the theorems of Euler and Fermat which are classics in this area), properties of arithmetic functions including those which are multiplicative, and other topics such as Pythagorean triples and representations of numbers as sums of squares. This course is completed by a wide variety of students across the university, especially those majoring in mathematics. (In many of the options in the MTHBS degree, MATH 465 can be used to satisfy one of the major requirements.) The course is also taken quite frequently by non-mathematics majors who wish to use the course to satisfy an upper-level requirement for the mathematics minor.

**Enforced Prerequisite at Enrollment:** MATH 311W

Bachelor of Arts: Quantification

MATH 467H: Factorization and Primality Testing
3 Credits

Prime sieves, factoring, computer numeration systems, congruences, multiplicative functions, primitive roots, cryptography, quadratic residues. Students who have passed MATH 465 may not schedule this course.

**Honors**

MATH 468: Mathematical Coding Theory
3 Credits

Shannon’s theorem, block codes, linear codes, Hamming codes, Hadamard codes, Golay codes, Reed-Muller codes, bounds on codes, cyclic codes.

**Enforced Prerequisite at Enrollment:** MATH 311W

Bachelor of Arts: Quantification

MATH 470: Algebra for Teachers
3 Credits

An introduction to algebraic structures and to the axiomatic approach, including the elements of linear algebra. Designed for teachers and prospective teachers. Students who have passed Math 435 may not schedule this course.

**Enforced Prerequisite at Enrollment:** MATH 311W

Bachelor of Arts: Quantification

MATH 471: Geometry for Teachers
4 Credits

Problem solving oriented introduction to Euclidean and non-Euclidean geometries; construction problems and geometrical transformations via ‘Geometer’s Sketchpad’ software. Intended primarily for those seeking teacher certification in secondary mathematics. Students who have passed MATH 427 may not schedule this course.

**Enforced Prerequisite at Enrollment:** MATH 311W

Bachelor of Arts: Quantification

MATH 475Y: History of Mathematics
3 Credits

A global survey of the history of mathematics as viewed as a human response to cultural, political, economic, and societal pressures. MATH 475W Introduction to the History of Mathematics (3) (DF) The primary goal of this course is to explore where mathematics comes from, how it was labored on, how ideas were preceived, and how theories developed. Development in algebra, geometry, arithmetic and calculus will be discussed. A second goal is to help students understand the important of written communication in mathematics and to provide opportunities for students to improve the quality of their writing. The primary means for accomplishing this goal will be four papers, 4-8 pages in length. These will be written for an audience of mathematically-knowledgeable readers. In addition, each quiz will contain at least one essay question. Students will be evaluated on quizzes, homework, papers, and a final exam. Quizzes will total 250 points, the papers 200 points, and the final exam 150 points. This course is a required course in the Mathematical Science (MA SC) BS curriculum. This course is also available as an elective for students in the Computer Science (COMP) program. No special facilities
Bachelor of Arts: Quantification

MATH 311W

are required for this course. This course will be offered once per year, with an expected enrollment of 25-40 students.

Enforced Prerequisite at Enrollment: MATH 315 or MATH 311W
Bachelor of Arts: Quantification
International Cultures (IL)
United States Cultures (US)
Writing Across the Curriculum

MATH 479: Special and General Relativity

3 Credits

Mathematical description, physical concepts, and experimental tests of special and general relativity. MATH 479 / PHYS 479 Special and General Relativity (3) This course is intended as an elective course (within the undergraduate Physics program) for Physics majors to be taken in their senior year. Intended to be cross-listed with MATH, it can also be used in support of a Mathematics minor and, in some options, within the Math program as a program elective as well. The course significantly expands upon the introduction to Special Relativity (SR) seen in PHYS 237, including discussions of experimental tests of SR and applications to relativistic mechanics. It then introduces students to the mathematical machinery required to understand General Relativity (GR), starting with the description of curved spacetimes and geodesics. It discusses solutions to the Einstein equations and surveys the classic tests which established the validity of General Relativity. It concludes with applications of GR in such areas as black hole physics, the generation and detection of gravitational waves, other topics (such as cosmology, relativistic astrophysics, etc.).

Enforced Prerequisite at Enrollment: PHYS 237 and PHYS 400 and PHYS 419 and (MATH 250 or MATH 251) and (MATH 230 or MATH 231)
Cross-listed with: PHYS 479
Bachelor of Arts: Quantification

MATH 482: Mathematical Methods of Operations Research

3 Credits

Survey of linear and nonlinear programming; mathematics of optimization; queues; simulation.

Enforced Prerequisite at Enrollment: MATH 220 and MATH 230 and STAT 301
Bachelor of Arts: Quantification

MATH 484: Linear Programs and Related Problems

3 Credits

Introduction to theory and applications of linear programming; the simplex algorithm and newer methods of solution; duality theory.

Enforced Prerequisite at Enrollment: MATH 220 and (MATH 230 or MATH 231)
Bachelor of Arts: Quantification

MATH 485: Graph Theory

3 Credits

Introduction to the theory and applications of graphs and directed graphs. Emphasis on the fundamental theorems and their proofs.

Enforced Prerequisite at Enrollment: MATH 311W
MATH 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Quantification

MATH 496A: **SPECIAL TOPICS**
1-6 Credits

Bachelor of Arts: Quantification

MTHED 498: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Honors
MATH 497: Special Topics
1-9 Credits/Maximum of 999
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Quantification

MATH 499: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Quantification

Mathematics Education (MTHED)

MTHED 411: Teaching Secondary Mathematics I
3 Credits
Conditions for learning mathematics; problem solving; subject matter types; curriculum; learning goals; nature and history of mathematics at secondary level MTHED 411 Teaching Secondary Mathematics I (3) This is the first of two secondary mathematics methods courses. In this course, participants look at mathematics teaching and learning from a teacher’s perspective as well as from a student’s perspective. Course participants engage in mathematical problem solving and in the study of the history and nature of mathematics as the foundation for understanding current curriculum and standards. Lesson planning follows from the consideration of different types of mathematical content, including skills and concepts. Looking specifically at the learning of mathematics and questioning to promote higher-level thinking prepares students for student experiences in subsequent semesters. The goals for the course are: - To improve understanding of some of the mathematical concepts which are important in secondary school mathematics. - To improve understanding of the nature of mathematics: what is important, how it is practiced, how mathematical validity is determined. - To improve understanding of the historical development of selected topics from secondary school mathematics. - To develop a vision of good school mathematics. - To see mathematics, mathematics learning, and mathematics teaching as problematic and to develop an inquiry approach to and an ability to reflect on these domains. - To increase understanding of secondary school students’ mathematical thinking and understanding. - To increase ability to specify subject matter involved in a specific mathematics topic and make distinctions among them. - To improve understanding of various teaching strategies and their strengths and weaknesses. - To increase ability to choose among lessons and curriculum materials based on the intended mathematical subject matter and the current understandings of the students. - To increase insight into creating a thriving, supportive mathematics classroom culture. Students are evaluated through written assignments, examinations, classroom performance, presentations, and lesson plans.

Prerequisite: acceptance into Secondary Education/Mathematics Option certification program; C1 295; a grade of C or better in CMPSC101, MATH 140, MATH 141, MATH 220, MATH 230, MATH 311W; Concurrent: MTHED427

MTHED 412W: Teaching Secondary Mathematics II
3 Credits
Assessing learning and instruction; methods of evaluation and grading; long-term planning; accommodating needs of diverse learners; connecting theory and practice. MTHED 412 Teaching Secondary Mathematics II (3) MTHED 412 is an inherently cumulative experience. This course builds upon ideas developed in MTHED 411 and MTHED 427. In particular, students continue to consider types of subject matter, problem solving, lesson planning, technology use, questioning, history and nature of mathematics, and curriculum and standards. MTHED 412 then links understanding of mathematics education with other education courses and with field experiences as well as with understanding of K-16 mathematics. Students focus on lesson and unit development and implementation, assessment and evaluation, classroom management and organization within school communities, and continued professional growth as reflective practitioners. Students are encouraged to draw whenever possible on education psychology, adolescent psychology, educational theory and policy, mathematics, and other bodies of knowledge. In other words, course participants live as teachers with
MTHED 420 is a part of a block of courses in a PSU teacher education program that is unified by a basic set of principles and a field experience component.

Prerequisite: LL ED400, LL ED401, LL ED402; a grade of C or better required in MATH 200; Concurrent: CI 495A or CI 495B; SCIED458, SS ED430W

MTHED 427: Teaching Mathematics in Technology-Intensive Environments

Interaction among pedagogy, content, and technology in mathematics teaching and learning in technology-intensive environments; secondary, early college curricula; laboratory experience. MTHED 427 Teaching Mathematics in Technology-Intensive Environments (3) Students should expect to learn something about each of several common types of mathematics software, new things about secondary school mathematics, and a lot about how to make decisions about how to use technology as an effective mathematics teacher. Students will also use communication software (e.g., word processors, e-mail, PowerPoint) not as objects of our discussion but in simple ways to generate and share products, assignments, and ideas. The course has a significant lab component. Students will be assessed based on written assignments, lesson plans, oral presentations, class participation, and examinations. The course is offered each fall and spring semester with an approximate enrollment of 20 students per semester. Students must enroll concurrently in MTHED 411.

Prerequisite: acceptance into Secondary Education/Mathematics Option certification program; CI 295; a grade of C or better in CMPS101, MATH 140, MATH 141, MATH 220, MATH 230, MATH 311W; Concurrent: MTHED411

MTHED 428: Fundamentals of Middle Grades Mathematics 1

3 Credits

This course develops essential understanding of number and algebra for teaching middle grades mathematics and builds on earlier mathematics courses. MTHED 428 Fundamentals of Middle Grades Mathematics 1 (3) MTHED 428 builds upon experiences in early undergraduate courses to enhance prospective and/or practicing teachers’ mathematical knowledge by supporting them to build deep and connected understandings of rational number, ratio, proportion, variable, expressions, and equations and be able to call upon those understandings in order to interpret grades 4-8 students’ mathematical understandings. In particular, students in this course will learn that rational number arise as an extension of whole numbers and can be represented in many forms and interpreted as ratios, measures, quotients, operators, and part-whole relationships. Students will also build understandings of equivalence and the mathematical concepts and relationships that underlie previously learned computational algorithms. Students will understand that ratios involve coordinating two quantities and multiplicative relationships, and that a proportion is a statement of equality between two ratios. Students will learn how number concepts in prekindergarten-grade 4 connect to algebra topics in grades 4-8. Topics in this area include different views and uses of variable, the nature of and use of algebraic expressions and how expressions and equations differ, multiple strategies for manipulating and representing algebraic expressions and equations, and how expressions and equations can be used to represent real-world situations. Students will also learn what research has documented about how the concepts of rational number, ratio, proportion, variable, expressions, and equations develop in grades 4-8; the challenges that grades 4-8 learners face in learning this content; connections to previously learned mathematical content from grades PreK-3, and how grades 4-8 students’ understandings of the targeted
concepts form essential foundational understandings for mathematical learning in grades 9-12. Students will engage in mathematical reasoning and justification and utilize technological tools appropriate for use in grades 4-8 mathematics.

**Prerequisite:** formal admission to CEAED major or permission of program

**MTHED 429: Fundamentals of Middle Grades Mathematics 2**

3 Credits

This course develops essential understanding of geometry and probability for teaching middle grades mathematics and builds on earlier mathematics courses.

**Prerequisite:** formal admission to CEAED major or permission of program

**MTHED 430: Students’ Mathematical Thinking**

3-6 Credits

Develop abilities in planning, conducting, and interpreting mathematics interviews to gain an understanding of students' thinking processes and current knowledge.

**Prerequisite:** C I 495D, C I 495E, or experience teaching mathematics

**MTHED 431: Data Analysis in Secondary School Mathematics**

3 Credits

Intense development of foundations of data analysis for secondary mathematics as a process using statistical concepts for predictions and inferences. MTHED 431 Data Analysis in Secondary School Mathematics (3) As prospective secondary mathematics teachers, students will develop broad and deep understanding of measures of and representations for center, measures of spread, distribution, and correlation. They will become fluent in using dynamic statistics programs, various physical models, and representations to convey the essence of these statistical concepts to secondary school students. They will compare various statistical methods and measures and make and defend claims both in terms of the discipline and in terms of how these ideas unfold for learners in school mathematics. They will connect these statistical concepts to the broader study of secondary school mathematics. In particular, students will see data analysis as a process. It involves the systematic application of statistical techniques, as well as logical techniques, to summarize, interpret, and compare data. Although the emphasis of the course will be on statistical concepts, one of the main themes of the course will involve understanding the mathematical structure of these statistical concepts. For example, students should be able to answer, from a mathematical perspective, why some data analysis techniques are more useful than other techniques. Intended as an elective for students in Secondary Education/Mathematics Education, the course helps students both to enrich and apply the pedagogical ideas and technology uses from their methods courses and to connect their collegiate mathematics experiences to school curricula. Class activities involve use of physical manipulatives and mathematics technology (e.g., spreadsheets, geometry construction environments, and graphing calculators), as appropriate. Students in this course would be expected to complete weekly assignments and exams to participate in classroom investigations of statistical concepts. Course grades depend on students’ performance on all of these measures.

**Prerequisite:** CMPSC101 or equivalent; at least 18 credits of mathematics at or above the calculus level; acceptance into secondary mathematics certification program or permission of program

**MTHED 432: Mathematical Modeling in Secondary School Mathematics**

3 Credits

Students work from teaching and curricular perspective to explore and apply school and undergraduate mathematics to model real-world phenomena. MTHED 432 Mathematical Modeling in Secondary School Mathematics (3) Given the attention to mathematical modeling and applications in secondary school mathematics, prospective teachers need to be able to recognize situations that allow secondary school students to use relevant mathematics to apply mathematics and to model real-world phenomena as a means to learn about various mathematical topics. This course provides experiences in generating, interpreting, and evaluating geometric, discrete, stochastic, and function models. The course also helps prospective teachers develop an understanding of how mathematical modeling arises in school mathematics and how students learn mathematics through modeling. Intended as an elective for students in Secondary Education/Mathematics Education, the course helps students both to enrich and apply the pedagogical ideas and technology uses from their methods courses and to connect their collegiate mathematics experiences to school curricula. MTHED 432 Mathematical Modeling in Secondary School Mathematics (3) Given the attention to mathematical modeling and applications in secondary school mathematics, prospective teachers need to be able to recognize situations that allow secondary school students to use relevant mathematics to apply mathematics and to model real-world phenomena as a means to learn about various mathematical topics. This course provides experiences in generating, interpreting, and evaluating geometric, discrete, stochastic, and function models. The course also helps prospective teachers develop an understanding of how mathematical modeling arises in school mathematics and how students learn mathematics through modeling. Intended as an elective for students in Secondary Education/Mathematics Education, the course helps students both to enrich and apply the pedagogical ideas and technology uses from their methods courses and to connect their collegiate mathematics experiences to school curricula. Class activities involve use of physical manipulatives and mathematics technology (e.g., spreadsheets, geometry construction environments, and graphing calculators), as appropriate. Students in this course would be expected to complete a major modeling project and paper in addition to weekly assignments, exams, quizzes, and written reflections of classroom participation. Course grades depend on students’ performance on all of these measures.

**Prerequisite:** CMPSC101 or equivalent; at least 18 credits of mathematics at or above the calculus level; acceptance into secondary mathematics certification program or permission of program

**MTHED 433: Function Concept in Secondary School Mathematics**

3 Credits

This course develops the concept of function as an essential topic that underlies and connects school and collegiate mathematics. MTHED 433 Function Concept in Secondary School Mathematics (3) Prospective teachers as students need to understand the concept of function deeply as an essential topic of school and collegiate mathematics. In this course, they develop greater facility in using multiple representations and encounter function ideas as they unfold in multiple areas of mathematics, thus extending their understanding of collegiate mathematics and its connection to school mathematics. The students become conversant in current state and national expectations about functions as a mathematical entity. They plan appropriate instruction to develop secondary school student’s understanding of function. Intended as an elective for students in Secondary Education/Mathematics Education, the course helps students both to enrich and apply the pedagogical ideas and technology uses from their methods courses and to connect their collegiate mathematics experiences to school curricula. In particular, it helps to build prospective teacher’s conceptual understanding of function so that they may draw more strongly on this understanding to engage secondary students in mathematics. Class activities involve use of physical manipulatives and mathematics technology (e.g., spreadsheets, geometry construction environments, and graphing calculators), as appropriate. Students in this course would be expected to complete a major project and paper in addition to weekly assignments, exams,
quizzes, and written reflections of classroom participation. Course grades depend on students' performance on all of these measures.

**Prerequisite:** CMPSC101 or equivalent; at least 18 credits of mathematics at or above the calculus level; acceptance into secondary mathematics certification program or permission of program

**MTHE 460:** Trends and Issues in Science, Technology, Engineering, and Mathematics (STEM) Education

3 Credits/Maximum of 3

Develops understandings of Science, Technology, Engineering, and Mathematics (STEM) education research and practices for PreK-12 teaching and learning

**Prerequisite:** 7th Semester Standing

Cross-listed with: SCIED 460

**MTHE 496:** Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**MTHE 496H:** Independent Studies (Honors)

1 Credits/Maximum of 1

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

**MTHE 497:** Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**MTHE 498:** Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**Mechanical Engineering (ME)**

**ME 97:** Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

**ME 101:** Toy Fundamentals: First-Year Seminar

1 Credits

First-Year Seminar focusing on toy design and manufacture. M E 101S Toy Fundamentals (1)(FYS) Toy Fundamentals is a First-Year Seminar intending to be an introduction to engineering design and prototyping through a product type everyone has used: toys! This five-week class explores the history of toys, marketing, toy design for different ages, and includes toy dissection, design, prototyping and field testing. It will run in the first 5 weeks of the semester.

**First-Year Seminar**

ME 102: Smart Lego Robots & Design

1 Credits

First-Year Seminar focusing on the development of technology exploration kits for middle-school-aged children. M E 102S Toys for Technology Exploration: First-Year Seminar (1) This is a First-Year Seminar that focuses on an important sub-group of toys. ’Learning-by-doing’ is a recognized method for improving student’s learning in grades K-12 (and in college!). As part of 'Toys for Technology Exploration', existing hands-on kits used for science and math education for ages 10-14 will be reviewed. The new standards for science and technology education in Pennsylvania are used to guide new hands-on kit designs, and these designs will be prototyped and field-tested with public school students. Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**First-Year Seminar**

ME 103: HYBRID ELECTRIC VEHICLES

1 Credits

Students in this first-year seminar will be exposed to the design, fabrication, and testing of advanced powertrain vehicles and other cutting-edge automotive technologies. This project-based, group-based course gives students the opportunity to become a member of one of the technical departments within the overall Penn State Advanced Vehicle student team and encourages students to interact with upper-class members of that department. In addition to technical skills, emphasis is placed on soft skills required of today’s professional engineers including: presentation creation, public speaking, and technical writing.

**First-Year Seminar**

ME 109S: Explore Mechanical Engineering Research

1 Credits

Students will discuss the wide breadth of research topics in mechanical engineering and how to prepare for a research position. Throughout the course students will participate in tours of state-of-the-art research labs in the Mechanical and Nuclear Engineering department, interact with undergraduate students currently involved in conducting research in the Mechanical and Nuclear Engineering department, practice writing correspondence and making presentations.

**First-Year Seminar**

ME 190: Special Topics in Mechanical Engineering: First-Year Seminar

1 Credits

A First-Year Seminar focusing on issues related to Mechanical Engineering. M E 190S M E 190S Special Topics in Mechanical Engineering: First-Year Seminar (1) (FYS) In this First-Year Seminar, students will explore the Mechanical Engineering profession by means of treatment of a particular topic in M E. Students will be assigned pertinent readings and the professor will lead discussions on the ethical, professional, and societal aspects of the topic area. The seminar will also
feature group activities and encourage participation in the classroom setting.

First-Year Seminar

ME 201: Introduction to Thermal Science

3 Credits

Application of the basic concepts of thermodynamics, fluid dynamics, and heat transfer to the solution of engineering problems.

Prerequisite: CHEM 110

ME 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

ME 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ME 300: Engineering Thermodynamics I

3 Credits

Basic thermodynamics concepts, properties of pure substances, first and second law analysis of systems and control volumes. M E 300 Engineering Thermodynamics I (3) This course is designed to develop an understanding of thermodynamic concepts and their application for the student by providing an integrative modeling and analysis approach to thermal-fluids systems. The course emphasizes the integration and application of fundamental principles of mass and energy conservation and fundamental ideal gas and non-ideal working fluids concepts to fundamental engineering systems. These systems include basic spark-ignition engines and turbojet engines as well as basic and extended Rankine and refrigeration cycles. Emphasis is on creating engineering models of these systems and indicating how the idealized versions of these systems can be extended to more realistic descriptions. Besides these mass and energy conservation concepts the course introduces the basic concepts of heat transfer and mass flow, providing a foundation in these subjects to be further expanded in later courses. The course aims to develop knowledge and initiate skills for thinking like an engineer.

Prerequisite: CHEM 110; Concurrent: MATH 141

ME 308: Fluid Flow and Heat Transfer Laboratory

1 Credits

Experimental work to enhance understanding of thermodynamics, fluid dynamics, and heat transfer.

Prerequisite: M E 320. Prerequisite or concurrent: M E 410

ME 315: Heat Transfer Laboratory

1 Credits
