Geosciences (GEOSC)

GEOSC 010 (GN) Geology of the National Parks (3) Introduction to geology, geological change, and environmental hazards, as seen in the National Parks.

GEOSC 010

GEOSC 010 Geology of the National Parks (3)
(GN)

(BA) This course meets the Bachelor of Arts degree requirements.

"Geology of the National Parks" uses the unsurpassed features of national parks to address the key questions of geology and the environment. Each topic is introduced with a virtual field trip to a specially chosen national park (involving pictures of the park, a brief history, other highlights of the park, with supplemental materials and links provided on-line). Key questions about the park (Why has Death Valley been getting wider? Why is much of Mt. St. Helens spread across neighboring states?) then motivate discussion of the topic (here, the spreading or squeezing associated with drifting continents), with special attention to implications for humans (for example, predicting earthquakes and volcanic eruptions associated with these features). A suite of exercises provides the opportunity for analytical experience during walking field trips of local geology, quantitative analysis of geological data, written evaluation of library-based information on national parks, and collaborative on-line assessment of geological hazards. Readings are primarily drawn from an on-line text prepared especially for the course, with links to appropriate national-park sites, but readings also include additional technical literature. There are no prerequisites for the course. It is offered twice yearly at University Park, with enrollment fixed by available classroom space (recently, 300 in the spring and 400 in the fall). The goals of the course are to help students learn how certain common-sense ideas allow science to be such a successful human endeavor, that the Earth efficiently but slowly recycles almost everything, that the Earth's environment has been nearly balanced for very long times, that human-induced changes are among the fastest Earth has ever experienced, and that the National Parks are critical but challenged living laboratories, museums, and repositories of biodiversity. In doing so, the students will see the applications to real-world problems of related fields including physics, chemistry, biology, and mathematics, and will develop a greater appreciation of these other subjects. Students will be challenged to reason from data to generalizations, and from these generalizations back to cases, through in-class discussion, exercises (approximately 1/4 to 1/3 of the total grade), and examinations (primarily objective). Owing to the large enrollment, in-class time will be devoted to virtual field trips, discussion and lecture, but with much effort to encourage participation from the students. Activities out of class will focus on exercises and on the extensive web resources developed in collaboration with the e-Education Institute of the College of Earth and Mineral Sciences.

Geosciences (GEOSC)

GEOSC 021 (GN) Earth and Life: Origin and Evolution (3) Introduction to the origin and evolution of life on Earth from the perspective of geologic time and the fossil record.

GEOSC 021

GEOSC 021 Earth and Life: Origin and Evolution (3)
(GN)

(BA) This course meets the Bachelor of Arts degree requirements.

When and how did the solar system form? When and how did life on Earth originate? How has Earth's environment changed over geologic time? What caused the extinction of the dinosaurs 65 million years ago? Does life occur elsewhere in the universe? These questions are the cornerstones for this course, which traces the history of interaction between Earth's environment and the evolution of the life over 4.5 billion years since the origin of the solar system. The fossil record serves as the primary source of data to study the evolution of life, especially dinosaurs and other extinct vertebrate groups. The causes and consequences of mass extinctions millions of years ago provide a context for understanding the modern biodiversity crisis. This course has four main objectives: (1) to provide a broad overview of chemical, biological, and geological processes responsible for the origin and evolution of the Earth and life; (2) to enable comprehension of geologic time and the history of Earth and life; (3) to understand the nature of evidence and hypothesis testing in an historical science; (4) to develop critical-thinking and expository writing skills. This course introduces and integrates basic knowledge in earth and life sciences. Material is presented in a way that emphasizes observation, synthesis of information, and hypothesis testing. This is a general education course in the natural sciences (GN) and is intended for non-science majors.

Students will be evaluated based on their performance on two midterm exams (50%), a final exam (25%), and homework assignments and quizzes (25%). We will offer the course every year in both the fall and spring semesters.

Geosciences (GEOSC)

GEOSC 040 (GN) The Sea Around Us (3) Introduction to marine sciences and the world ocean, including physical, chemical, biological, and geological aspects of oceanography.

GEOSC 040

GEOSC 040 The Sea Around Us (3)
(GN)

(BA) This course meets the Bachelor of Arts degree requirements.

The Sea Around Us introduces students to the basic workings of the ocean and is offered both Fall and Spring terms at the University Park campus. The course covers the origin of the ocean's rock-walled boundaries, the evolution of its coastlines, the motion of currents, waves and tides and their destructive power, the source and composition of seawater, and the role of the ocean in local and global climate. The majority of the Earth's surface is covered by water and thus it seems likely that the human race will become increasingly dependent on oceanic resources in the future. This course seeks to illuminate how the ocean will respond to increased anthropogenic pressure. Students are shown how such issues can be addressed through detailed understanding of the complex interplay between the physical, chemical and biological properties of the ocean. Lectures focus on fundamental principles of natural sciences as related to the ocean using extensive graphics, video clips and demonstrations. Students break up into small groups for a weekly laboratory practicum featuring team-based experiments, discussion, and simple problem sets aimed at solidifying key concepts and topics.

Geosciences (GEOSC)

GEOSC 109H (GN) Earthquakes and Society (3) Introduction to earthquakes and seismology, and their relationship to society, including monitoring for nuclear weapons and seismic hazards.

GEOSC 109H

GEOSC 109H Earthquakes, Nuclear Explosions, and Society (3)
(GN)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is a general education science course that will provide students with an introduction to earthquakes and nuclear explosions and the science and policy issues linking them. Nuclear explosions, like earthquakes, are seismic events that generate elastic waves that propagate through the earth. As in the case of earthquakes, detection of seismic waves from a nuclear explosion provides the principal means of determining its size and location. In this course, students will learn about earthquakes and nuclear explosions, how these seismic events are monitored, and the role earthquake science (seismology) plays in international treaties designed to limit proliferation of nuclear weapons.

The format for this course will be problem-oriented, with students taking an active role in learning. Student groups will actively research web-based and standard resources to learn about the history of nuclear test ban treaties, the effects of nuclear weapons, earthquakes, basic concepts of seismic wave propagation, hands-on recording of seismic waves, earth structure, plate tectonics, and discriminating between nuclear explosions and earthquakes. Students will engage in activities that will require them to learn the material themselves and be able to teach what they have learned to others in the class through in-class presentations. Part of the course will involve the hands-on operation of a seismic observatory and collection of seismic data from earthquakes and local quarry blasts. Scenarios for evasive testing of nuclear explosions will be examined at the end of the course with emphasis on technical issues and international political ramifications. Students will obtain a background in the history of arms limitation treaties, basic physics, basic geosciences, and have experiences in seismic data collection.

The general format of the course is based on a weekly cycle of student groups performing discovery-based learning with two days of class discussion and/or activities based on that learning. Group investigations will involve cooperative organization and research by small (3-4 students) groups of the class. Specific guidelines and instructions will be given to each group in the form of lists of source materials, source material on the class Web site, links to information Web sites, and interactive Web forms for creating classroom and hard copy reports. Students will be required to engage in the full complement of activities described above. In addition, each student will be required to write a summary of each activity. A grade will be assigned for the group presentation and summaries, and the final course grade will be determined based on the average grade of the individual activities. This course will be offered once a year.

Geosciences (GEOSC)

GEOSC 110H (GN) The Science of Gemstones (3) An exploration of the geological uses of gems and of the physical and chemical properties underlying their brilliance and color.

GEOSC 110H

GEOSC 110H The Science of Gemstones (3)
(GN)

(BA) This course meets the Bachelor of Arts degree requirements.

From Biblical times to the present, gems and precious metals have served as the standard by which empires have measured their worth. Through the ingenious marketing of an international cartel, diamonds have become identified with the oldest and most sacred of human contracts. To what can we attribute the unique allure of pretty minerals? Although we will consider the history and folklore associated with gemstones, this course will focus on the value of gems to scientists. We will see what crystals tell us about the chemical symmetries that govern the atomic architecture of matter, and we will explore the physical attributes that give rise to the brilliance, color, and durability of gems. Finally, we will learn how geologists have used gems to reveal the history and inner structure of the earth.

General Education: GN

Geosciences (GEOSC)

GEOSC 111 (GN) Forensic Geoscience (3) Covers fundamental geoscience concepts such as stratigraphy, mineral and soil identification, seismology, and geochemistry within the context of forensic investigation.

GEOSC 111 Forensic Geoscience (3) (GN)

In this course, we will look at the fundamental principles of geoscience and how they can be applied in the context of criminal or liability investigation. Students will learn how to use a stratigraphic column to determine a sequence of events, either in the geologic record or as physical evidence, for example the layers of mud on the bottom of a car suspected of involvement in criminal activity. We will discuss the many types of physical evidence, focusing in particular on those that involve earth materials (soils, sand, mineral dust) or that can be analyzed using techniques commonly applied to geologic problems (for example, analyzing shards of glass from a hit and run accident using a scanning electron microscope). Basic mineralogy, sedimentology, and petrology will be introduced in the context of trace evidence. Common techniques used by both geoscientists and crime scene investigators, including fluorescence, microscopy, ground-penetrating radar, magnetometry, and seismology will be covered, including hands-on demonstrations when possible. We will learn how isotope geochemistry is used to date natural materials, and how it can be used to determine the geographic origin of rocks, minerals, or sediments. Students will learn how and when it is possible to make a statistically meaningful comparison of naturally variable samples present only in trace amounts. The proper handling of earth materials as trace evidence will be explained. Students will be expected to use the knowledge they have acquired to come up with original solutions to both real and invented crime cases. Finally, students will use the material they have learned in class to write an original mystery story in which geological evidence plays a key role in solving a crime.

Geosciences (GEOSC)

GEOSC 203 Physical Processes in Geology (4) An in-depth examination of various physical processes that operate within and at the surface of the earth.

GEOSC 203 Physical Processes in Geology (4)

Geoscience 203 applies basic principles from physics and mathematics to explore and understand the Earth and the processes that operate within the Earth and at the Earth's surface. The course includes the study of Earth's gravity and magnetic fields, focusing on how they reveal the internal structures and dynamics related to plate tectonics. The basic physics and mathematics of plate motions are also explored in some detail. We will also examine the elastic properties and behaviors of rocks, which form the basis for understanding seismic waves, rock fracture, and fault slip. The next major topic of the class is the flow of heat through the solid Earth system, involving the study of conduction, convection, and advection. The study of heat will provide the basis for understanding the application of simple differential equations with boundary conditions to geological processes; this will also introduce the mathematics of diffusion, which will permeate much of the course. This study of diffusion will enable us to move from steady state conditions to non-steady state conditions that typify most geological settings. We will examine the fluid dynamics relevant to the flow of the mantle and less viscous fluids at the surface such as lava flows and glaciers. The fluid dynamics will also lead us into an exploration of the basic physics of ocean circulation, stream flow, and erosion on land.

Throughout the course, students will learn how to use calculus and very simple computer programming in MATLAB to provide a quantitative framework for understanding the physical processes that shape the Earth. The class involves a weekly lab that involves several field trips to make measurements using a variety of geophysical instruments to solve problems related to gravity, stream flow, and heat flow. Other lab activities involve studies of rock friction and fracture, ocean currents, glacial flow, seismology, and plate motions.

General Education: None

Geosciences (GEOSC)

GEOSC 204 Geobiology (4) An introduction to how biological processes and materials are used to solve geological problems.

GEOSC 204 **GEOSC 204 Geobiology (4)**

What caused the mass extinction 250 million years ago that nearly eliminated life in the oceans? How is the fossil record used to understand geological and evolutionary processes? What role do microbes play in cycling chemical elements today and over geologic time? Can we predict the response of modern ecosystems to future climate change? These questions form the basis for this course in geobiology, which considers how biological processes and materials are used to solve geological problems. This course has four main objectives: (1) to provide a broad overview of the role biological processes and materials play in understanding earth today and in the geological past; (2) to learn about the fossil record and how to extract information from it; (3) to learn field and computational skills used by geobiologists; (4) to develop critical-thinking and expository writing skills. Students will be evaluated based on their performance on essay exams (60%), laboratory exercises (20%), writing assignments (10%), and group discussions (10%). This course is designed to complement GEOSC 202 Physical Processes and GEOSC 203 Chemical Processes. GEOSC 204 will become part of our core curriculum in geosciences. Students taking the B. A. degree in geosciences will be required to take one of the following three courses: GEOSC 202 Physical Processes, GEOSC 203 Chemical Processes, GEOSC 204 Geobiology. In the future, we may require this course as part of the core curriculum for the B. S. degree. We will offer the course every year in the spring semester.

General Education: None

Geosciences (GEOSC)

GEOSC 320 Geology of Climate Change (3) Geologic evidence for climate change and mechanisms of change, especially from the Ice Age through the near future.

GEOSC 320 **GEOSC 320 Geology of Climate Change (3)**

The appropriate human response to global climate change is among the hot-button issues of the modern world. Geologic records provide a critical perspective on climate change, with implications for our behavior. Ice cores, ocean sediments, tree rings, and others reveal that agriculture and industry have arisen during a few thousand years of anomalously stable climate. Natural changes half as large as the entire difference between ice-age and modern conditions have occurred repeatedly in mere years, affecting hemispheric or broader regions. Such climate jumps have been linked to changes in greenhouse gases, but not driven by them. The students in Geology of Climate Change will learn how records of recent climate changes are recovered, read, and dated, how the climate system works and has worked, and the causes of ice-age cycles and faster climate jumps. The students will demonstrate their mastery of this knowledge by assessing its implications for global warming and natural climate changes in the future. Geology of Climate Change will involve lecture/discussion, readings, and individual or small-group projects, with students graded on midterm and final exams, and presentations or papers. The course will serve as an upper-level elective for students in major and minor programs in Geosciences and Earth Science. Enrollment will be limited to 30, with one offering per year.

Geosciences (GEOSC)

GEOSC 402Y (IL) Natural Disasters (3) Case studies of the causes and consequences of natural disasters; analysis of disaster impact in different economic, cultural, and social conditions.

GEOSC 402Y

GEOSC 402Y Natural Disasters (3)
(IL)

Is anywhere safe from natural disasters? Can we hide, or should we learn to live with the hazards around us? This course will explore the causes, effects, and societal response to disasters. By learning from previous disasters, we can develop strategies to avert the disasters or at a minimum mitigate their affects. We will look at a variety of natural hazards and related disasters including flooding, volcanoes, landslides, earthquakes, hurricanes, and tsunami. By the sue of case studies of recent occurences of natural disasters, we will determine how damaging disasters can be, and what we can do to minmimize their impact on society. This course will provide an in-depth, hands-on study of natural hazards, their geography, and their impact on societies worldwide. We will focus on both the physical processes (e.g. underlying geoglogy or geophysics) of selected natural hazards and the humn systems that have developed to minimize the impact of natural disasters.

The course will place emphasis on active learning exercises to investigate processes and responses to natural hazards. We will meet for two periods each week which will include both lecture and group research activities (approximately 30% of time is in lectures, 70% time is in group research activities). Grading will be based on reports for each topic, a disaster diary, and a term report. The term report is an independent project which focuses on a selected city facing significant natural hazards. Cities will be selected from both the developed and developing world to allow comparsions of the impacts of natural disasters under different socio-economic and cultural conditions.

The course is offered once each year with a target enrollment of 25-30 students.

Prerequisites for the course are at least 6 credits in science courses (inluding GN courses).

General Education: None
Diversity: IL
Bachelor of Arts: None
Effective: Summer 2005
Prerequisite: fourth-semester standing

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Geosciences (GEOSC)

GEOSC 405 (SOILS 405) Hydropedology (3) Soil and water interactions across scales, integrated studies of landscape-soil-water relationships, fundamental processes of water flow and chemical transport.

GEOSC 405

GEOSC (SOILS) 405 Hydropedology (3)

Hydropedology is the study of the fluxes, storages, pathways, residence times, and spatio-temporal organization of water in the root and deep vadose zones, and their relations to climate, ecosystem, land use, and contaminant fate. The aim is to characterize integrated physical, chemical, and biological processes of soil-water interactions across scales (including chemicals and energy transported by water flow). This course embraces interdisciplinary and multiscale studies of interactive pedological and hydrological processes in the earth's surface and subsurface environments. The course will address the fundamental issues and practical applications of hydropedology (as a sister discipline of hydrogeology). This course emphasizes *in situ* soils that have distinct characteristics of pedogenic features, structures, layers, and soil-landscape relationships in the real world. Students will gain an in-depth understanding of soil and water interactions across scales from point observations to watershed phenomena, and will gain skills in predicting flow pathways and water fluxes in the landscape. This course promotes active learning, critical thinking, and hands-on skills. Course format will consist of two lectures and one laboratory/field exercise each week. The course will utilize a network of local watersheds with different land uses for demonstrations and class projects. Grading will be based on weekly lab/field exercise (20%), class research project (40%), homework (10%), one midterm exams (15%), and one final exam (15%). Since hydropedology is linked to a wide array of environmental, ecological, geological, agricultural, and natural resource issues of societal importance, SOILS (GEOSC) 405 will support interdisciplinary training of students in Soil Science as well as in other disciplines of the College of Agricultural Sciences, especially Agricultural and Biological Engineering, Agronomy, and Forest Resources. Students in the College of Earth and Mineral Sciences, College of Engineering, Eberly College of Science, and the Intercollege Graduate Degree Program in Ecology also will find this course useful when undertaking research on the vadose zone, the hydrologic cycle, and the earth system. The course will be offered every fall semester with an anticipated enrollment of 20 students per class.

General Education: None

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Geosciences (GEOSC)

GEOSC 410 Marine Biogeochemistry (3) Exploration of the ways in which life influences and is influenced by chemical, physical, and geological processes in the ocean.

GEOSC 410 **GEOSC 410 Marine Biogeochemistry (3)**

This course covers the basics of the chemistry of the ocean, its circulation, the types of organisms that live in the ocean, and the ways in which organisms influence and are influenced by their physicochemical environment. The format includes lectures, hands-on laboratory exercises, and a field trip to an aquatic environment during which students undertake group research projects. The course is offered in alternate years, in the spring. It satisfies one of the course requirements of the Marine Science minor for undergraduates, and the Data Gathering requirement of students in the Geosciences graduate program. Grades are based on class participation, midterm and final examinations, and an oral and/or written report of the research project.

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Geosciences (GEOSC)

GEOSC 420 (BIOL 420) Paleobotany (3) Classification, morphology, phylogeny, and stratigraphic occurrence of fossil plants; practicum includes field trips and study of paleobotanical techniques and specimens.

GEOSC 420

GEOSC (BIOL) 420 Paleobotany (3)

Land plants provide the oxygen, food, and forest structure that make our lives on land possible. They are sensitive indicators of global change in the past as well as today. This course will examine the history of green plants on the dynamic Earth from their beginnings in the Proterozoic oceans to today, with emphasis on central topics such as the colonization of land, the histories and relationships of major plant groups, the evolution of seeds and flowers, the evolution of plant-animal interactions, extinction and diversification, paleoclimates, and the origins of modern biomes such as rainforests and grasslands.

This course is strongly recommended to graduate students and advanced undergraduates with interests in paleobiology and/or plant biology. Specimen observation and field trips will be important course components. Exams, assignments, and class participation will be the primary bases of evaluation.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005
Prerequisite: any 3-credit introductory course in historical geology or plant biology

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Geosciences (GEOSC)

GEOSC 422 Vertebrate Paleontology (3) Course covers scientific thinking and skills in scientific writing, the history of vertebrates, and modern evolutionary theory applied to vertebrates.

Vertebrate Paleontology (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2009

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Geosciences (GEOSC)

GEOSC 424 Paleontology and Fossils (3) Concepts and precedures using fossils to solve problems in systematics, evolution, biostratigraphy, correlation, sedimentation, paleoecology, and global change.

Paleontology and Fossils (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001
Prerequisite: GEOSC 001 orGEOSC 020

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Geosciences (GEOSC)

GEOSC 428 Micropaleontology (4) Biology and ecology of microfaunas and microfloras (e.g., foraminifera, coccolithophores, radiolaria, diatoms, dinoflagellates) and applications in biostratigraphy and paleoenvironmental reconstruction.

GEOSC 428

GEOSC 428 Micropaleontology (4)

Micropaleontology is the study of the fossilized remains of microscopic plants and animals, most of which are single-celled and belong to the Protista. Although nearly invisible, the organisms at the base of the food chain make up most of the biomass in oceans and lakes. Only a few kinds of microplankton and microbenthos groups have shells that readily fossilize, but these can be so abundant that in places they form mountains of pure fossil remains. The abyssal floor of the ocean is made up of layers of microfossil-rich "ooze" that slowly accumulates from microscopic shells settling to the seafloor. Changes in the abundance and types of microfossils in these layers provide a detailed record of the geological past, in response to climate change and biological evolution. In addition, each time a new species of micro-organism evolves, it quickly spreads throughout the oceans, forming a worldwide time marker in the fossil record. Such marker horizons allow geological events in different parts of the world to be related in a global earth history.

The course has four main objectives: (1) to provide a broad overview of the biology and ecology of living microplankton and microbenthos with a focus on foraminifera and radiolaria (predatory, non-vegetative protists), coccolithophores and diatoms (vegetative, photosynthesizing protists), and dinoflagellates (both predatory and photosynthesizing); (2) to learn about the evolutionary record of these groups; (3) to understand their applications in biostratigraphy and paleoenvironmental reconstruction; and (4) identification of microfossil groups in the light microscope and scanning electron microscope. Group projects will be a key element of laboratory sessions. Assessment will be based on mid-term and final exams, a term paper, and a laboratory exercises.

Geosciences (GEOSC)

GEOSC 444 Matlab Applications for Geoscience (2) An introduction to Matlab: m-file development, descriptive statistics, bootstrapping, Fourier transforms, regression, interpolation, least-squares, differentiation, integration, differential equations, signal analysis, graphics.

GEOSC 444 Matlab Application for Geoscience (2)

The goal of this class is that students become familiar with Matlab so that they can conduct scientific research without needing to manipulate spreadsheets or other non-mathematically based software. The course is geared towards, beginning graduate and advanced undergraduate students with little or no previous Matlab experience, and examples are focused on applications in the science and engineering with a focus on the geosciences, including problems from groundwater hydrology, tectonics, geochemistry, rock physics, and climate change. Some basic concepts about vectors and matrices will be helpful, but are not required.

Diversity: None
Bachelor of Arts: None
Effective: Spring 2009
Prerequisite: MATH 110 orMATH 140

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Geosciences (GEOSC)

GEOSC 445 Coastal Geology (4) A field course dealing with the processes operative in the environmental systems of a segment of the mid-Atlantic coast.

Coastal Geology (4)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001
Prerequisite: fifth-semester standing

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Geosciences (GEOSC)

GEOSC 450 Risk Analysis in the Earth Sciences (3) An introduction to concepts and methods of quantitative risk anlaysis with focus on water, climate, and energy related risks.

GEOSC 450 Risk Analysis in the Earth Sciences (3)

Geosc 450 is an introduction to concepts and methods of quantitative risk analysis in the Earth system. Key concepts include probability, impacts, risk, uncertainty, statistical estimation, and decision-making under uncertainty. Important methods to be covered are sensitivity studies, probabilistic prediction, and uncertainty analysis. Examples of risks to be analyzed include: drought, flooding, nuclear waste storage, and anthropogenic climate change. Students will also use simple risk analysis software (provided by the instructor and accessible without prior programming experience) to actively apply these concepts to example problems. The course is designed for advanced undergraduate students with a prior exposure to basic statistics and calculus.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2010
Prerequisite: MATH 140 orMATH 110 Introductory Earth Science or Geoscience class Introductory Statistics class (e.g. STATS 200 or STATS 301 or ENNEC 473) or permission of program

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Geosciences (GEOSC)

GEOSC 451 Natural Resources: Origins, Economics and Environmental Impact (3) Geologic, economic and environmental issues related to exploitation of non-renewable natural resources (metals, minerals, rocks, and fossil fuels).

GEOSC 451

GEOSC 451 Natural Resources: Origins, Economics and Environmental Impact (3)

All the materials needed for health and prosperity in our complex society come from the earth, such as water, iron and other metals to make steel, silica to make glass, limestone to make concrete, potash and phosphate to make fertilizers, and oil, natural gas, coal and uranium to generate heat and electricity. Most of these natural resources are non-renewable, and easily recoverable quantities are limited. The main purpose of this course is to increase understanding and appreciation of geological, economical and environmental aspects of exploitation of mineral and energy resources. Approximately two-thirds of the lectures/discussions will focus on geological, geochemical and biological processes that have governed the concentration and dispersion of economically important elements and natural materials on Earth, including water, heavy metals (aluminum, iron, copper, zinc, lead, etc.), precious metals (gold, silver, platinum, etc.), industrial minerals and rocks (clays, limestone, gypsum, salts, etc.), nuclear-energy sources (uranium and thorium) and fossil fuels (petroleum, natural gas and coal). The remaining one-third of the lectures/discussions will focus on: (i) exploration methods to discover new mineral (and fossil fuel) deposits; (ii) economic aspect of mineral commodities (usages, production statistics, economic of mining and concentration); and (iii) environmental issues related to mining, nuclear waste disposal, and constructions. There will be two half-day field trips to study the nature of sulfide mineralization and acid-water pollution.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2006
Prerequisite: GEOSC 001 orGEOSC 020

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Geosciences (GEOSC)

GEOSC 452 Hydrogeology (3) Hydrologic cycle: occurrence, movement, quality, and quantity of groundwater; solute transport; quantitative hydrogeologic methods; role of water in geologic processes. This course has one or more required field trips for which a fee may be charged to the student.

GEOSC 452

GEOSC 452 Hydrogeology (3)

GEOSC 452 is the study of the relation between geological and hydrological processes in the earth's surface and subsurface environments. The course will address the fundamental issues and practical applications of natural flow systems, emphasizing the occurrence, movement, quality, and quantity of groundwater and its relations to contaminate fate and transport. The primary objective is to provide students with the fundamental knowledge and tools that are necessary to understand the hydrologic cycle. Students will gain an in-depth understanding of fluid flow across scales from point observations to watershed phenomena, and will gain skills in using mathematics to describe water fluxes. The course format consists of two lectures each week, and includes two field trips. Grading is based on weekly homework assignments, exams, and participation on the field trips. Because hydrogeology is linked to a wide array of environmental, ecological, engineering, and natural resource issues of societal importance, GEOSC 452 will support interdisciplinary training of students in the natural sciences and engineering. Students will find this course useful when undertaking research about fluids in geologic processes.

Geosciences (GEOSC)

GEOSC 465 Structural Geology (4) Effects and mechanics of deformation of the earth's crust; practicum includes field trips and studies of maps and structural problems. This course has one or more field trips for which a fee is charged to the student.

Structural Geology (4)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2002
Prerequisite: or concurrent:GEOSC 203, GEOSC 310

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Geosciences (GEOSC)

GEOSC 470W Introduction to Field Geology (3) Field interpretation of geologic features; principles and techniques of geologic mapping; interpretation of geologic maps and diagrams. This course has one or more required field trips for which a fee is charged to the student.

Introduction to Field Geology (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2002
Prerequisite: GEOSC 001 ; fifth-semester standing

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Geosciences (GEOSC)

GEOSC 466 Mechanics of Geological Materials (3) Stress and strain specification; fracture and flow in deformational environments; environmental rock deformation; anisotropy; shear and consolidation of particulate media.

Mechanics of Geological Materials (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001
Prerequisite: GEOSC 465

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Geosciences (GEOSC)

GEOSC 472A Field Geology I (Introduction to Field Methods (3) Introduction to geologic field methods and the 3-D characterization of earth structure and the reconstruction of geologic histories. This course includes travel outside the University for which an additional charge will be made to cover transportation, food, and lodging.

Field Geology I (Introduction to Field Methods (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2005
Prerequisite: GEOSC 310

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Geosciences (GEOSC)

GEOSC 474 (BIOL 474) Astrobiology (3) In depth treatment of principles/concepts of biochemical evolution, the origin/evolution of life; evaluation of distribution of life in the universe.

GEOSC 474 **GEOSC (BIOL) 474 Astrobiology (3)**

Astrobiology is the study of life in the universe. Astrobiology has become a major focus of scientific research in the United States and a topic often discussed in popular science literature. The recent interest in astrobiology has resulted in the formation of an Astrobiology Institute at Penn State University. This advanced undergraduate course in astrobiology will cover many topics in the field including, biochemical evolution, the origin and evolution of life on Earth, microbial diversity, protein evolution, and the distribution of life in the universe. This course is intended to provide students of the natural sciences with the opportunity to prepare for a research career in the rapidly expanding field of astrobiology. The course will also present astrobiology as a cross-disciplinary framework that ties together the diverse courses the students have already taken. The students will learn new concepts while having, to draw on their previous knowledge of chemistry, biology, and the geosciences. In summary, this course has the following objectives: (1) to develop the student's literacy in astrobiology so that they can critically evaluate claims that they encounter well after the course has ended; (2) to present a scientific question that requires the sum of the student's previous education to solve; (3) to provide a deep background to some of the astrobiological concepts that are often only briefly mentioned in other classes or in the media; (4) to develop research and communication skills required for a young scientist through a class term paper and short oral presentation; and (5) to prepare the students for graduate research in astrobiology by giving them a broad background of the field and by demonstrating many of the outstanding problems yet to be solved.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2007
Prerequisite: BIOL 110, CHEM 110

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Geosciences (GEOSC)

GEOSC 472B Field Geology II (Advanced Field Methods) (3) Advanced application of geologic field methods to the 3-D characterization of earth structure and the reconstruction of geologic histories. This course includes travel outside the University for which an additional charge will be made to cover transportation, food, and lodging.

Field Geology II (Advanced Field Methods) (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2005
Prerequisite: GEOSC 310, GEOSC 465 . Prerequisite or concurrent:GEOSC 472A

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Geosciences (GEOSC)

GEOSC 475W (METEO 475W) Global Biogeochemical Cycles (3) The study of earth's major global biogeochemical cycles (carbon, oxygen, nitrogen, phosphorus, and sulfur) in the context of the climate system.

GEOSC 475W **GEOSC (METEO) 475W Global Biogeochemical Cycles (3)**

The main objective of this course is for students to develop intuitive and quantitative understanding of the global cycling of elements, particularly those important for climate and life through and between the atmosphere, the ocean, the lithosphere, and the biosphere. Students will achieve this objective largely through four small research projects in addition to one semester project, using lectures and readings as the conceptual groundwork. The small research projects will be assignments that require the use of a simple modeling tool such as STELLA. As such, a substantial portion of the course takes place in a computer laboratory. As a writing-intensive course, students will be evaluated largely on the scientific content and quality of writing in the small research projects and the semester project. The course is general and requires only one year of calculus and one semester of chemistry; the course should thus be of interest to a variety of science majors, though it is anticipated that the main clientele will be students whose undergraduate majors are Meteorology, Geosciences or Earth Sciences. The course is a requirement of the proposed Climatology option in the Meteorology major. The course will be offered every spring.
General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2007
Prerequisite: MATH 110 andMATH 111 orMATH 140 andMATH 141 andCHEM 110

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Geosciences (GEOSC)

GEOSC 479 Advanced Stratigraphy (3) Modern topics of sequence stratigraphy are addressed, with a heavy emphasis on field and laboratory data analysis and interpretation.

Advanced Stratigraphy (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1999
Prerequisite: GEOSC 439

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Geosciences (GEOSC)

GEOSC 481 Solid Earth and Planetary Geophysics (3) Structure, composition, origin, and evolution of the Earth and Solar System.

GEOSC 481 **GEOSC 481 Solid Earth and Planetary Geophysics (3)**

Solid Earth and Planetary Geophysics has been developed to introduce advanced undergraduates and first-year graduate students in geosciences and planetary sciences to the fundamental concepts and data relevant to the interior structure, composition, and dynamics of the primary bodies in the Solar System. The first half of the course focuses on Earth, the planet for which the most information and most accurate models are available. The data sets, theoretical approaches, and modeling results derived for Earth are then used as a basis or guide for the systematic investigation of the other terrestrial planets, the Giant Planets, and the smaller, icy and rocky members of the Solar System. Data and information that has been acquired recently from ground-based sources, as well as lander, flyby and orbiter missions is incorporated into the discussion and state-of-the-art summary. The course serves as a foundation for students who wish to pursue higher-level studies in solid Earth and planetary science.

Geosciences 481 will be offered in the Spring Semester of each year. Evaluation of student performance will be based on multiple problem sets and a semester research or review project. The latter will be either an individual effort or team-based.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2001
Prerequisite: PHYS 204 orPHYS 214

Geosciences (GEOSC)

GEOSC 488 An Introduction to Seismology (4) An overview of the observations, methods, and frameworks used in seismogram analysis for earthquake and earth-structure investigations (includes laboratory).

GEOSC 488

GEOSC 488 An Introduction to Seismology (4)

This course is an overview of the observations, methods, and frameworks used in seismogram-based investigation of earthquake and earth-structure. The main goals of the course are to prepare students of seismology for further study of earthquakes and earth structure using seismograms; to provide an overview of earthquake seismology for nonseismologists, to introduce undergraduate geophysics students to quantitative geoscience. Topics covered include stress and strain, faulting and tectonics, seismic body and surface wave propagation including ray methods, dispersion, and attenuation. Students perform fundamental seismological analyses using a computer-based, experiential laboratory exercises exploring the signals contained in research-quality data from recent earthquakes recorded on the international global seismic network.

German (GER)

GER 008 Business German (4) Introduction to Business German. Students may receive credit for only one of the following: GER 003 or GER 008.

GER 008 Business German (4)

(BA) This course meets the Bachelor of Arts degree requirements.

In this course students will learn about German businesses and their culture. At the same time, students will continue to review and learn additional grammar points. They will have more writing experience by completing five different writing assignments. All four language skills (listening, speaking, reading and writing) will be further developed in this course.

Students will be evaluated according to class participation, successful completion of in-class presentation, internet exercises, homework assignments, essays, and examinations. This course complements other offerings for German in the business track. It completes the introduction level of German and prepares the student to go on to German 208W, German 308W, and German 408. This course also can be counted towards the BS in German.

This course will be offered once a year during the Fall Semester. In this type of intensive course, enrollment has to be limited to 23 students.

General Education: None
Diversity: None
Bachelor of Arts: Humanities and Second or Beyond 12th Level Foreign Language
Effective: Summer 2000
Prerequisite: GER 001, GER 002

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

German (GER)

GER 012 Intensive Intermediate German (6) Continued skill development of structures and vocabulary; listening, speaking, reading, writing. Taught on an accelerated basis. Students may receive credit for only one of the following: GER 002, 003, 012, or 016.

GER 083S (GH;US;IL) First-Year Seminar in German (3) Germany's cultural past and present.

GER 083S First-Year Seminar in German (3)
(GH;FYS;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is designed to give the student an introductory overview of certain important aspects of German culture and its development during the past 1500 years. The topics selected will give the student an introduction to major periods and representative thinkers that have helped shape the destiny of German-speaking countries and much of Europe as well. As Goethe noted, our views of the past are a mirror in which we dimly see our own reflection. Serious examination of the issues raised in this course also result in learning something about one's self and the world in which s/he live today.

This course can be used to fulfill the General Education or Bachelor of Arts Humanities requirement, the Intercultural/International Competence requirement, and the first-year seminar requirement. A series of short papers will enable students to develop the skills of information gathering and written expression. The course grade will be based on oral participation and on the grade for the papers, which will be evaluated both for content and writing. This course will help to prepare students for a variety of additional courses in the fields of literature and German-speaking area studies. In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them, including the opportunity to develop relationships with faculty and other students who share their academic interests. The course will be offered once per year to an audience of 20 students.

General Education: GH
Diversity: US;IL

German (GER)

GER 100 (GH;IL) German Culture and Civilization (3) Culture and civilization of the German people from the Germanic migrations to the Nazi period. Conducted in English.

GER 100 German Culture and Civilization (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

In German 100, students examine the ethical basis for decision-making of representative thinkers and periods in German history. The course begins by looking at the warrior ethos that pervades early Germanic literature, proceeds to examine successive changes in ethics brought on by Christianization, the Reformation, and the Enlightenment. The course ends by looking at the ethics of power advocated by Nietzsche and the racialist ideology of Nazism. The course will also examine changes in aesthetic values, as represented by the art of Durer and the Expressionists, the literature of the Storm-and-Stress movement and Kafka, the music and theater of Wagnerian opera and the film of the Expressionists and Leni Riefenstahl. Finally, the nettlesome issue of German national identity will be addressed through the perspective of historical developments since the time of Charlemagne.

German l00 is linked closely to German 200. German 100 concentrates on German culture and civilization up to the Nazi period. German 200 concentrates on German culture and civilization since the Nazi period. German/Russian 143 addresses aspects of Nazism in greater depth than does German 100.

The course meets three times per week, including fifty-minute lectures on Monday and Friday and a discussion section on Wednesday. The total enrollment is limited to approximately 180 students and the discussion sections have no more than 27 students each. When taught in the summer, the total enrollment for the class is less than fifty. Assessment is based on three examinations with an essay component, one short paper, and participation in classroom discussions, and attendance.

German 100 may not be applied toward the requirements of a German major or a German minor. It may be used for the General Education humanities requirement, for the General Education Intercultural/International competence requirement, or for a B.A. humanities requirement.

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

German (GER)

GER 143 (GH;IL) (RUS 143) The Culture of Stalinism and Nazism (3) The culture of Stalinist Russia and Nazi Germany in comparative perspective.

GER (RUS) 143 The Culture of Stalinism and Nazism (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The regimes of Stalin and Hitler have decisively shaped the 20th-century historical experience not only in Russia and Germany, but in much of Europe and the world at large. At the same time, there is no consensus about how to classify these systems, whether the term "totalitarian" is appropriate to describe them, and whether Stalinist Russia and Nazi Germany are essentially similar or essentially different historical phenomena.

Espousing a comparative perspective, this course will explore the culture produced by both Stalinist Russia and Nazi Germany. The main focus will be on works of literature, but it will also take into account the visual arts, architecture, music, film, and popular culture. The classics of Stalinist socialist realism and Nazi propaganda, such as Nikolai Ostrovskii's How the Steel Was Tempered or Leni Riefenstahl's Triumph of the Will will be analyzed both as political statements and works of art. The course will also include a reading of authors who attempted to create artistic representations of life in Stalinist and Nazist societies, such as Yevgeny Zamyatin, Alexander Solzhenitsyn, Bertolt Brecht, or George Orwell.

The course will be team-taught by faculty of the Department of Germanic and Slavic Languages and Literatures. Additional faculty from the Departments of Spanish and Italian and Comparative Literature (Japanese) may be invited to lecture about the totalitarian culture in their respective societies, and members from the Department of History may be invited to lecture about the historical context of Stalinisn and Nazism. A knowledge of Russian or German is not required, as class lectures and discussions, as well as all reading assignments, will be in English.

At the end of the course, students will have a summary knowledge of the cultural history of Stalinist Russia and Nazi Germany and of the aesthetic and philosophical issues raised by these cultures. Requirements for the course will include a research paper. The course grade will be based on the average score on the mid-term and final exam (using definitions and essay questions) and the grade for the paper, which will be evaluated both for content and style.

This course will fulfill the General Education and International/Intercultural requirements. It complements courses on the politics and history of totalitarian regimes offered by the departments of Political Science and History, and it will provide a background for students wishing to study Holocaust literature or Soviet Literature. The course will be taught every two years.

German (GER)

GER 157 (GH;US) Pennsylvania Germans: The Culture of the Sectarians (3) Survey of the religious background, beliefs, social life, customs, education, and culture of the Pennsylvania German sectarians, especially the Amish. Conducted in English.

GER 157 Pennsylvania Germans: The Culture of the Sectarians (3)
(GH;US)

(BA) This course meets the Bachelor of Arts degree requirements.

Through lectures, discussions, and films, students will be introduced to the culture, history, religion, language, education, occupations, folklore, music, and literature of the Pennsylvania Germans. Since 1683, people coming from the German-speaking territories of Central Europe settled Pennsylvania to a large degree. Many of these immigrants soon blended into American society but others who had been persecuted in Europe for their convictions and religious beliefs refused to be Americanized and retained their style of life in the New World. The best-known are the Amish who arrived in colonial times and still cling to their traditional language, beliefs and values, their economic basis, and even their clothing after living nearly three centuries in now industrialized America. They live in small, stable, and viable communities an austere life dictated by established beliefs and customs totally opposed to the American dream of progress and innovation, individual happiness and material success. By studying their history and culture and that of other groups, such as the Mennonites, Hutterites, and Moravians, students are offered a unique opportunity to learn more about other truly diverse cultures and are enabled to arrive at a better understanding of their own cultural concepts and values.

In this course, students may either make a 30-minute presentation or write a 10-page paper on a topic pertaining to the curriculum of the course. Given the number of students, only a small number (approximately six) will have the opportunity to make a presentation. Teaching assistants help grade the papers. In addition, students take two one-hour examinations and a final examination.

The course is related to GER 100 and GER 200 by examining the culture of German-speaking peoples. GER 157 differs from those courses, however, by focusing on a German-speaking minority culture found in Pennsylvania and elsewhere in North America.

German 157 may not be applied toward the requirements of a German major or a German minor. It may be used for the General Education humanities requirement, for the General Education Intercultural/International Competence requirement, or for a B.A. humanities requirement.

The course is offered approximately once a year with an enrollment of 150-180 students.

German (GER)

GER 201 (IL) Conversation and Composition (4) Continuation of GER 003; emphasis on reading, writing, and conversational skills; course utilizes short literary selections, a concise novel, videos.

GER 201 Conversation and Composition (4)
IL

Offered in the fall and spring semesters of each academic year, this fourth-semester German language course satisfies International Cultures (IL) requirement and is a required course for the German B.A. degree. For the German B.S. degree and the German minor, students must take either German 201 or German 208. German 201 is designed to help students further develop the four basic language skills (listening, speaking, reading and writing) they have attained in previous language courses with particular emphasis on the advancement of their speaking and writing proficiency in German. Through a task-based approach the course aims to assist students in learning to write and speak German with level-appropriate fluency and accuracy. This course will also provide students with ample opportunity to increase their reading command of German through an authentic literary work and short stories by prominent German-speaking authors. The course language is German and class sessions will consist of communicative activities and practices. The learning of the German language will occur through completion of tasks in which students use the level-specific grammatical structures in different formats and circumstances (e.g. writing and oral projects) while receiving little or no direct lecture on German grammar. The delivery and practice of factual information on grammatical structures are integral to the course and thus instructors will highlight them to the extent to help students achieve the course objectives. The class meets twice in a regular classroom and twice in a computer-lab throughout the semester where students will be exposed to computer-mediated language instruction and work on various computer-based projects. Film viewing and discussions will be incorporated into the course, as deemed necessary by the instructors. Attendance and preparation are mandatory and homework is assigned on a regular basis. The evaluation and grading of students' course performance is based on active class participation, successful completion of a rhetorical portfolio, an orally presented cultural project, four brief interviews, and a semester-end aural-oral test.

General Education: None
Diversity: IL
Bachelor of Arts: Second or Beyond 12th Level Foreign Language
Effective: Fall 2006

German (GER)

GER 208Y (IL) Business German (4) Intermediate Business German.

GER 208Y Business German (4)
(IL)

In this course students will learn more about German businesses and their culture. At the same time, students will continue to review and learn additional grammar points. They will have more writing experience by completing five different writing assignments. All four language skills (listening, speaking, reading and writing) will be further developed in this course.

Students will be evaluated according to class participation, successful completion of in-class presentation, Internet exercises, homework assignments, essays, and examinations. This course complements other offerings for German in the business track. It completes the intermediate level of German and prepares the student to go on to German 308W and German 408. This course also can be counted towards the BS in German.

This course will be offered once a year during the Spring Semester. In this type of intensive course, enrollment has to be limited to 22 students.

German (GER)

GER 301 (IL) Intermediate Conversation and Composition (3) Intensive practice in spoken and written German through readings, discussions, video, and composition.

GER 301 Intermediate Conversation and Composition (3) (IL)

German 301 is a continuation of the composition and conversation emphases of both GER 201 and 208. Fundamental to the course is a thorough grammar review of both basic and advanced grammatical situations. Much of this review is done outside of class. In class, students devote their time primarily to oral work. GER 301 requires students to use German in various ways: group work, individual presentations, discussion of texts, structured partner drills, etc

Student evaluations are based on participation, homework, quizzes, a class room presentation, and essays.

GER 301 is required for all German majors and the German minor and will be offered every semester.

General Education: None
Diversity: IL
Bachelor of Arts: Second or Beyond 12th Level Foreign Language

German (GER)

GER 308Y (IL) German Business Communication (3) Development of German commerce and industry; extensive practice in the major forms of business communications such as business correspondence.

GER 308Y German Business Communication (3)
(IL)

This course provides an introduction to German business and economics. Students will read and respond to a variety of texts about German economic practices and the German business world, as well as texts that introduce and describe more general economic principles. Emphasis is also placed on expanding students' vocabulary and further developing their writing skills in German, especially with regards to economic and business terminology, and writing genres common in business contexts. As this is not intended to be a grammar review course, students are expected to have previously completed or be concurrently enrolled in GER 301 or its equivalent. This course complements other offerings in the German business track and prepares students for the final course in the Business German sequence. This course can also be counted towards either the German minor or the German major. It is offered once a year during the fall semester.

GER 344 (IL) Intermediate German Culture (3) An overview of German culture from the Middle Ages to the present. Conducted in German.

GER 344 Intermediate German Culture (3) (IL)

This course will be a comprehensive overview of major events and figures in German history that have influenced the development of German culture. This will be a foundational course that will enable students to better situate advanced courses in German literature and culture in the broader context of a cultural tradition that stretches from the Germanic migrations to the present. The course will be taught in German at the intermediate level and will be required of all German majors and minors. It will be a prerequisite for culture courses taught in German at the 400-level. Students will be evaluated on the basis of written tests, an oral presentation and essay on a major cultural figure or event, homework, and class participation. The course will be offered every semester. The enrollment for each section will be capped at approximately 22.

GER 401Y (IL) Advanced Composition (3) Intensive practice in writing different text types in German.

GER 401Y Advanced Composition (3) (IL)

GER 401Y is the writing across the curriculum component of the German language sequence. After thorough discussion of various text types, students will read and practice writing in different genres. GER 401Y concentrates on building other language skills as well. We will do so by reading and discussing short German texts from a variety of sources and watching film and television. In addition, we will review aspects of German grammar that present difficulties to many English speakers. Evaluation will be based on five writing assignments, a writing portfolio, quizzes, and class participation.

The course will be offered twice a year with an enrollment of up to twenty students.

GER 401Y is required for all German B.A. and B.S. major options as well as for the German minor.

German (GER)

GER 489 Introduction to German Film History and Theory in Context (3) Introduces films in German since the 1960s and addresses issues relevant to German and European cultures and politics.

GER 489 Introduction to German Film History and Theory in Context (3)

This course focuses on German cinema's development since the 1960s. The course situates the "Young" and then "New German Cinema" within contemporaneous European and U.S. film cultures. Thus the course will address the difference between the European cinematic culture of "*auteurs*" versus the school of "genres" in the U.S.

The preceding traditions of Italian Neo-realism and of the French *nouvelle vague* are also engaged alongside a few Hungarian, Czech and/or Polish films. The students will have the opportunity to consider how these other national cinematic productions impacted the German filmmakers who were involved in the creation of a national German cinema that would critically engage Hollywood on the one hand, and distance itself from the Nazi past on the other.

The course will be structured around questions about the grounds for a national cinema and its cultural and critical relevance both at the time these films were produced and today. Yet, the national question will not be the only focus of this class, in the course of which students will be able to discuss the historical, political and ethical questions raised by the directors selected. In addition, students in this course will learn about the specificity of cinematic language and will be exposed to some film theory. In conclusion, the course provides upper level undergraduate students with a basic knowledge of the most important New German films, with a confrontation with issues specifically relevant to a study of German culture, and with some familiarity with film theory.

The evaluation methods for this course will be based on 1) participation [attendance; reports/worksheets, after each film and in class discussion]: 30%; 2) presentation 20%; 3) take-home mid term essay 20%; and 4) final paper 30%. The course is part of the German Program, in particular of the German Studies curriculum. It teaches students of German culture about German and European contemporary cinema, while situating the cinema within broader historical-political debates concerning Europe. It functions as an excellent complementary course to our GER LIT classes at the 400 level and offers an additional choice to pursue cultural studies to those who are more reticent about reading texts. Enrollment: 25. The course will be offered every other year.

General Education: None

Graphic Design (GD)

GD 001S First-Year Seminar in Graphic Design (1) An orientation to the historical, social, and professional context of design and an exposure to a variety of ethical, philosophical, and topical ideas from the world of design.

First-Year Seminar in Graphic Design (1)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2007
Prerequisite: admission to the AADES program

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Graphic Design (GD)

GD 100 (GA) Introduction to Graphic Design (3) A beginning level graphic design course. Instruction touches on the practice, theories, history and processes of the graphic design industry.

GD 100

GD 100 Introduction to Graphic Design (3)
(GA)

(BA) This course meets the Bachelor of Arts degree requirements.

GD 100 (GA) INTRODUCTION TO GRAPHIC DESIGN (3) is a beginning level graphic design course. Instruction touches on the practice, history, theories, and analysis of the design industry. This course places emphasis on problem solving and observing design, while developing intuition and creativity. Projects focus on the process of defining the parameters of a design problem, observing examples within the design industry, and critically evaluating examples of effective and ineffective design.

The course will help students to:
1. Understand the graphic design industry and the responsibilities of the profession.
2. Develop an appreciation for the practice of design.
3. Begin to develop the ability to define and solve problems.
4. Increase their knowledge of the history of graphic design and typography.
5. Refine their conceptual skills.
6. Learn and understand the vernacular of the industry.

Students will be quizzed on terminology and important facts provided in the readings.

Grading:
1. Grades will be calculated by quizzes, which will be given throughout the semester. Quizzes will be based on topics and material provided online. 60% of the final course grade will be based on quizzes.
2. Participation in online discussion forums is required. Students will be expected to post comments and responses to an online forum. 20% of the final grade will be based on participation within these forums.
3. Students will be expected to research various examples of design in commercial and non-commercial applications, upload examples, comment on designs, and engage in discussions of effective and ineffective use. Emphasis will be placed on writing skills as part of the evaluation 20% of the final grade will be based on project assignments in design evaluation.

General Education: GA
Diversity: None
Bachelor of Arts: None
Effective: Spring 2006

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Graphic Design (GD)

GD 101 Thinking Creatively: Defining Problems, Solving Problems, and Generating Ideas in Graphic Design (2) An introduction to the theory and practice of defining problems, developing solutions, and generating ideas in design.

GD 101

GD 101 Thinking Creatively: Defining Problems, Solving Problems, and Generating Ideas (2)

This course is designed to help students learn to think creatively, define problems, and solve those problems by generating good ideas. The first part of the course, Learning to Think Creatively, will cover basic principles and concepts used in thinking creatively. In the second part of the course, Defining Problems, students will learn how to effectively define problems by establishing and refining goals and objectives based on research. The third part of the course, Solving Problems and Generating Ideas, will engage students in practical project-based learning by creating solutions to design problems through teamwork, brainstorming, and a design sequence that fosters new ideas and tests them through prototyping and analysis.

Students will learn to approach problems in design by developing skills in creative thinking, applying those skills in defining problems, and working in creative teams to solve problems through the generation of new ideas that can be practically applied.

Grading is based on participation (20%), bi-weekly journal reviews (20%), and final projects (60%).

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2007

Concurrent: GD 001S

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Graphic Design (GD)

GD 200 Graphic Design Studio I (3) A beginning graphic design studio course. Instruction focuses on the practical and analytical process of creating graphic designs and their critical evaluation.

GD 200

GD 200 Graphic Design Studio I (3)

This course is a beginning graphic design studio course. Instruction focuses on the practical and analytical process of creating graphic designs and their critical evaluation. Emphasis is on problem solving and technical training while, at the same time, nurturing intuition and creativity.

The course will help students to:
1. Develop skills and techniques applicable to graphic design.
2. Become familiar with appropriate computer hardware and software.
3. Develop the ability to define and solve problems.
4. Develop an understanding of graphic design as a profession.
5. Refine their conceptual skills.
6. Develop the work habits and attitudes of design professionals.

Grading:
1. Work will be evaluated on the relevance and originality of the design idea, the suitability of the design approach in serving the client's needs, the effectiveness of the design in reading its intended audience, and all pertinent functional parameters.
2. Professional attitude and the development of professional work habits will be evaluated. Students are expected to think for themselves, budget their time, meet deadlines, and adhere to production schedules.
3. Attendance is required. In the case of illness or an emergency, students are required to contact the professor just as they would contact an employer. Three unexcused absences will result in the final semester grade being lowered one full letter grade.
4. Neatness, craft and attention to detail will be considered in the final grade.
5. Visual, verbal and written communication skills will also be part of the evaluation.

GD 200 carries the prerequisite of GD 102.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: GD 102

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Graphic Design (GD)

GD 102 Introductory Design Studio (3) A studio course in defining problems, solving problems, and generating ideas.

GD 102

GD 102 Introductory Design Studio (3)

This course is designed to build upon the experience of GD 101 Thinking Creatively: Defining Problems, Solving Problems, and Generating Ideas by engaging students in a studio environment where they must arrive at solutions to two design problems, each requiring approximately seven weeks work. Students will define problems and arrive at creative solutions to those problems by generating ideas based on an applied method involving teamwork, brainstorming, and a design sequence that fosters new ideas and tests them through phototyping and analysis.

This course is designed for students in the AADES pre-graphic design program, although it emphasizes concepts and methodologies applicable to all design fields. Students will learn to approach problems in design by developing skills in creative thinking, applying those skills in defining problems, and working in creative teams to solve problems through the generation of new ideas that can be practically applied.

Grading is based on participation (20%), studio project one (40%), and studio project two (40%).

GD 102 is only available to students enrolled in AADES or by permission of instructor and carries the prerequisite of GD 001S and GD 101.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2007
Prerequisite: GD 001S andGD 101

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Graphic Design (GD)

GD 201 Typography (3) A consideration of the word in relation to visual organization and its application to communication.

GD 201

GD 201 Typography (3)

GD 201 is intended to provide the students with practical, formal, and communicative typographic skills. Instruction focuses on the understanding the practical and analytical application of typography in graphic design and its critical evaluation. Emphasis is on developing strong typographic skills in students. Instruction focuses on problem solving and technical training while, at the same time, nurturing intuition and creativity.

The course will help students to:
1. Develop a well-rounded understanding of typography and its relationship to graphic design.
2. Develop skills and techniques applicable to typography.
3. Become familiar with appropriate hardware and software.
4. Continue to refine their conceptual skills.
5. Foster an appreciation of good typography.
6. Develop the work habits and attitudes of design professionals.

Grading:
1. Work will be evaluated on the relevance of the typography to the design idea, the suitability of the design approach and choice of typography, the effectiveness of the design, and all pertinent functional parameters.
2. Professional attitude and the development of professional work habits will be evaluated. Students are expected to think for themselves, budget their time, meet deadlines, and adhere to production schedules.
3. Attendance is required. In the case of illness or an emergency, students are required to contact the professor just as they would contact an employer. Three unexcused absences will result in the final semester grade being lowered one full letter grade.
4. Neatness, craft and attention to detail will be considered in the final grade.
5. Participation in critiques and quality of the presentation of critical evaluations will part of the evaluation.
6. Visual, verbal and written communication skills will be a part of the evaluation.

The prerequisite for GD 201 is GD 200.

GD 201 will be offered spring semester.

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Fall 2006
Prerequisite: GD 200

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Graphic Design (GD)

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Graphic Design (GD)

GD 300 Design Photography (4) An investigation of graphic photography processes and how print technology affects the final appearance of a photograph.

GD 300

GD 300 Design Photography (4)

GD 300 is an intermediate design and photography course that explores the visual and conceptual relationship between typography and photography as it relates to the communication of information. This course is designed to help students:
1. Use photographic images and typography as they relate to visual communication.
2. Become proficient in the organization and graphic interpretation of information.
3. Learn the role and responsibility of the designer as a communicator.
4. Explore the relationship between the subject matter, designer, client, and design audience.
5. Experiment in graphic design problem solving.
6. Develop the work habits and attitudes of professional designers.

Grading:
1. Work will be evaluated based on the relevance and originality of the idea and the appropriateness of the design approach to the idea, the intended audience, and all pertinent functional parameters.
2. Professional attitude and the development of professional work habits will be evaluated. Students are expected to think for themselves, budget their time, meet deadlines, and adhere to production schedules.
3. Attendance is required. In the case of illness or an emergency, students are required to contact the professor just as they would contact an employer. Three unexcused absences will result in the final semester grade being lowered one full letter grade.
4. Neatness, craft and attention to detail will be considered in the final grade
5. There will be a review at the end of the semester, which will include all work from the class. Each piece will be evaluated for quality and presentation.
6. Visual, verbal and written communication skills will be a part of the evaluation.

GD 201 and successful portfolio review are prerequisites to GD 300

GD 300 will be offered fall semesters.

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Fall 2006
Prerequisite: GD 201 and successful portfolio review

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Graphic Design (GD)

GD 301 Graphic Design Technology I (4) Theoretical and practical aspects of computer application to graphic design.

GD 301

GD 301 Graphic Design Technology I (4)

GD 301 is an advanced graphic design studio class that provides graphic design students with an in-depth study of the intricate relationship between the professional graphic designer and digital technology. Students will be introduced to complex software applications that will assist them throughout the design process. From research and ideation to the creation of comprehensive studies and final designs, students will be given the tools that are critical to the completion of a variety of graphic design projects. Instruction will be supported by lectures presenting the most current trends in digital design, assigned readings, and presentations by professionals in the design/printing fields.

The course will help students to:
1. Gain proficiency in appropriate hardware and software programs.
2. Become familiar with the digital prepress process.
3. Develop an understanding of the graphic designer as a digital communicator.
4. Refine their digital craft.
5. Develop the work habits and attitudes of professional designers.

Grading:
75% of the student's grade will be based on work assignments and 25% on quizzes about assigned readings. Criteria for grading include attendance, comprehension of information presented, quality of research for assignments, technical proficiency, and participation in discussions and critiques.

GD 201 and successful portfolio review are prerequisites to GD 301.

GD 301 will be offered fall semesters.

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Fall 2006
Prerequisite: GD 201 and successful portfolio review

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Graphic Design (GD)

GD 302 Applied Communication (4) Definition and concentrated involvement in problem/audience analysis, with emphasis on understanding symbol and image in evoking audience response.

GD 302

GD 302 Applied Communication (4)

GD 302 involves the definition and concentrated involvement in problem/audience analysis, with emphasis on understanding symbol and image in evoking audience response.

This course is intended to prepare students for professional expectations in the graphic design field. Both individual and group design projects will be assigned with clearly defined parameters and budgetary constraints. Design assignments will be more complex than in previous classes and students will be expected to work faster, handle more complicated information, work in teams, and take greater responsibility in decision-making and creative choices.

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Fall 2006
Prerequisite: GD 300, GD 301

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Graphic Design (GD)

GD 303 Graphic Design Technology II (4) Advanced application of digital technology as a medium of graphic design.

GD 303

GD 303 Graphic Design Technology II (4)

GD 303 explores digital technology as a medium for graphic design. Topics include design expressed over time -- both linear, as in motion graphics, and nonlinear, as in Web design. The objectives for this course are to give graphic design students experience in the complexities of digital visual communication and to provide students with the opportunity to work with software packages that facilitate digital communication. Students will receive instruction regarding the graphic designer's role in complex, collaborative digital communications.

The course will help students to:
1. Gain proficiency in using software programs such as Macromedia Flash and Dreamweaver, Apple iMovie and Final Cut Pro, and Adobe GoLive.
2. Gain proficiency with various hardware devices.
3. Familiarize themselves with advanced digital design processes.
4. Stay abreast of emerging technological applications in contemporary Graphic Design.
5. Develop an understanding of the graphic designer as a digital communicator.
6. Develop refined digital craft.
7. Develop the work habits and attitudes of professional designers.

Grading: 75% of the student's grade will be based on work assignments and 25% on quizzes based on assigned readings. Grading criteria include attendance, comprehension of information presented, quality of research for assignments, technical proficiency, and participation in discussions and critiques.

GD 300 and 301 are the prerequisites to GD 303

GD 303 will be offered spring semesters.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2006
Prerequisite: GD 300, GD 301

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Graphic Design (GD)

GD 304 Practical Communications (3) Practical design experience for students through design/publicity problems from the University and community non-profit organizations.

GD 304

GD 304 Practical Communications (3)

GD 304 is an advanced course that is intended to offer practical design experiences to graphic design students through assignments for various University and not-for-profit community clients. The course explores the essential relationship of the verbal and visual aspects of design to the communication of a message to a specific audience. Each student will meet with clients to develop strategies and advance individual projects from initial client contact to finished work. Students will conduct research, present rough ideas to the client, prepare presentations, and carry the work to production resulting in a finished piece.

When necessary, members of the class will work with writers, photographers, and printers as they would in an actual professional setting.

The course is intended to:
1. Prepare the students for the real working environment they will confront in the professional arena after graduation. The course seeks to simulate as close as possible, the atmosphere of a professional design office.
2. Offer the university and community a source of affordable inventive solutions to their design, publicity, and advertising problems.
3. Thoroughly examine the design process and learn to define the problem clearly, and logically work toward an appropriate solution.
4. Help students to develop the work habits and attitudes of professional designers.
5. Practice and polish presentation and interview skills.
6. Practice positive behavior and conflict avoidance/resolution in the workplace.
7. Foster an appreciation for the appropriate integration of typography into design.
8. Develop the ability to work as a member of a team.
9. Gain a deeper understanding of graphic design aesthetically, critically, and technically.

Grading:
1. Work will be evaluated based on the relevance and originality of the idea and the appropriateness of the design approach to the idea, the intended audience, and all pertinent functional parameters.
2. Professional attitude and the development of professional work habits will be evaluated. Students are expected to think for themselves, budget their time, meet deadlines, and adhere to production schedules.
3. Attendance is required. In the case of illness or an emergency, students are required to contact the professor just as they would contact an employer. Three unexcused absences will result in the final semester grade being lowered one full letter grade.
4. Neatness, craft and attention to detail will be considered in the final grade.
5. There will be a review at the end of the semester, which will include all work from the class. Each piece will be evaluated for quality and presentation.
6. Visual, verbal and written communication skills will be a part of the evaluation.

GD 300 and 301 or concurrent with GD 300 and 301 are prerequisites to GD 304.

GD 304 will be offered fall and/or spring semesters.

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Fall 2006
Prerequisite: Prerequisite or concurrentGD 300, GD 301

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Graphic Design (GD)

GD 310 Studio Apprenticeship (3 per semester/maximum of 6) Direct involvement in the creative process of the artist-teacher in the studio environment.

GD 310

GD 310 Studio Apprenticeship (3 per semester/maximum of 6)

GD 310 is an advanced course that will offer pragmatic design experiences to graphic design students through direct involvement in the creative process of the designer-teacher in the studio environment.

The course is intended to:
1. Prepare the students for the real working environment they will confront in the professional arena after graduation. The course seeks to simulate as close as possible, the atmosphere of a professional design office.
2. Thoroughly examine the design process and learn to clearly define each problem, and logically work toward an appropriate solution.
3. Help students develop the work habits and attitudes of professional designers.
4. Practice positive behavior, and conflict avoidance/resolution in the workplace.
5. Develop the ability to work as a member of a team.
6. Gain a deeper understanding of graphic design aesthetically, critically, and technically.

Grading:
1. Professional attitude and the development of professional work habits will be evaluated. Students are expected to think for themselves, budget their time, meet deadlines, and adhere to production schedules.
2. Attendance is required. In the case of illness or an emergency, students are required to contact the professor just as they would contact an employer. Three unexcused absences will result in the final semester grade being lowered one full letter grade.
3. There will be a review at the end of the semester, which will include all work from the class.
4. Visual and verbal communication skills will be a part of the evaluation.

The prerequisite for GD 310 is junior or senior standing in Graphic Design and the prior approval of the proposed project by instructor.

GD 310 will be offered fall and spring semesters.

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Fall 2006
Prerequisite: Junior or senior standing in Graphic Design. Prior approval of proposed assignment by instructor.

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Graphic Design (GD)

Graphic Design (GD)

GD 400 Time and Sequence (4) Development of visual sequence as replies to graphic design problems.

GD 400

GD 400 Time and Sequence (4)

GD 400 is an in-depth course that explores the essential relation of the verbal and visual elements of design to sequential media, including both traditional and digital media such as film, video, and Power Point. The intrinsic qualities of each medium will be investigated in relation to how each affects the communication of a message to a specific audience.

The course will help students to:
1. Develop an appreciation for time and sequence and how they relate to graphic design problems.
2. Foster an appreciation for the appropriate integration of typography into sequential design.
3. Develop the ability to work as a member of a team in solving sequential design problems.
4. Stay abreast of emerging technological applications in contemporary graphic design.
5. Gain a deeper understanding of time and sequence aesthetically, critically, and technically.
6. Explore the potential of expressing ideas in sequence with still images, film and video.
7. Experiment with new methods of image making that are unique to the technologies involved.
8. Gain practical experience that has direct professional application.
9. Develop the work habits and attitudes of professional designers.

Grading:
1. Work will be evaluated based on the relevance and originality of the idea and the appropriateness of the design approach to the idea, the intended audience, and all pertinent functional parameters.
2. Professional attitude and the development of professional work habits will be evaluated. Students are expected to think for themselves, budget their time, meet deadlines, and adhere to production schedules.
3. Attendance is required. In the case of illness or an emergency, students are required to contact the professor just as they would contact an employer. Three unexcused absences will result in the final semester grade being lowered one full letter grade.
4. Neatness, craft and attention to detail will be considered in the final grade.
5. There will be a review at the end of the semester, which will include all work from the class. Each piece will be evaluated for quality and presentation.
6. Visual, verbal and written communication skills will be a part of the evaluation

GD 400 will be offered fall semester.

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Graphic Design (GD)

GD 402 Senior Problems (4) Development of visual replies to graphic design problems.

GD 402

GD 402 Senior Problems (4)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is an in-depth course that explores the essential relation of the verbal and visual elements of design to advanced graphic design problems. The class is divided into two parts: 1) Each student submits a written proposal for a hypothetical magazine. In the proposal he or she describes the publication's subject, content and editorial point-of-view, along with the intended audience, must be described in the proposal. Additionally, the functional parameters surrounding editorial design and a discussion of similar publications in the marketplace should be touched upon in the paper. The proposal drives the design of the publication. Each student is required to develop an appropriate title for their magazine, design a masthead, two covers, a table of contents, and a minimum of three articles. The minimum length for each article is two spreads (four pages). All sections of the magazine will be bound together with one of the covers for final presentation. Additionally, each student must apply his or her masthead design to letterhead, envelope and business card. 2) Each student prepares for graduation and the beginning of his or her career by putting together their final portfolios, resumes, letters and job search strategies.

The course will help students to:
1. Perform as editorial designers.
2. Prepare for the real working environment they will confront in the professional arena after graduation.
3. Thoroughly examine the design process and learn to clearly define the problem, in order to work logically towards an appropriate solution.
4. Develop the work habits and attitudes of professional designers.
5. Polish visual, verbal and written presentation skills.
6. Practice positive behavior, and conflict avoidance/resolution in the workplace.
7. Prepare designers for realistic working environment expectations.
8. Foster an appreciation of good typography.

Grading:
1. Work will be evaluated based on the relevance and originality of the idea and the appropriateness of the design approach to the idea, the intended audience, and all pertinent functional parameters.
2. Professional attitude and the development of professional work habits will be evaluated. Students are expected to think for themselves, budget their time, meet deadlines, and adhere to production schedules.
3. Attendance is required. In the case of illness or an emergency, students are required to contact the professor just as they would contact an employer. Three unexcused absences will result in the final semester grade being lowered one full letter grade.
4. Neatness, craft and attention to detail will be considered in the final grade.
5. There will be a review at the end of the semester, which will include all work from the class. Each piece will be evaluated for quality and presentation.
6. Visual, verbal and written communication skills will be a part of the evaluation.

GD 400 and 401 are prerequisites to GD 402.

GD 402 will be offered spring semesters.

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Fall 2006
Prerequisite: GD 400, GD 401

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Graphic Design (GD)

GD 401 Package Design (3) Orientation to packaging designs as it relates to the consumer, client, and to societal and environmental concerns.

GD 401

GD 401 Package Design (3)

GD 401 Orientation to packaging design as it relates to the consumer, client, and to social and environmental concerns.

Objectives:
This course will explore the following: creative problem solving through package design, historical and contemporary solutions in package design; the role of the package designer in relation to the consumer, client, printer, photographer, and environment; conceptualization and problem solving techniques. It is designed to encourage student responsibility and professionalism.

Class Format:
Classes will consist of the following: the assignment and discussion of projects, individual and group conferences; classroom critiques of work in progress /completed projects, computer lab work sessions, and professional photography studio sessions.

GD 302 is the prerequisite for GD 401.

GD 401 (3) will be offered fall and spring semesters.

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Fall 2006
Prerequisite: GD 302

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Graphic Design (GD)

GD 403W Graphic Design Seminar (3) A seminar on subjects which relate to the field of graphic design.

GD 403W

GD 403W Graphic Design Seminar (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This is an advanced course covering the history and contemporary theory and criticism of graphic design. Topics include: the invention of writing and alphabets, medieval manuscripts books, the origin of printing and typography, Renaissance graphic design, the Arts and Crafts movement, Victorian and Art Nouveau graphics, modernist influences on graphic design, visual identity and conceptual images, postmodern design, the computer graphics revolution, new media design, ethics and professional practice, and contemporary issues relating to design theory and criticism.

The course is intended to:
1. Provide a firm understanding of the history of graphic design.
2. Develop the capacity to discuss the articulate current issues in graphic design.
3. Promote writing and speaking abilities through class assignments.
4. Help students to develop the work habits and attitudes of professional designers.

Grading:
1. Class projects as well as class participation will be evaluated.
2. Written assignments, including short synopses of readings and additional essays, and the quality of writing will be a part of the grade evaluation.
3. Professional attitude and the development of professional work habits will be evaluated. Students are expected to think for themselves, budget their time, meet deadlines, and adhere to production schedules.
4. Attendance is required. In the case of illnesses or an emergency, students are required to contact the professor just as they would contact an employer. Three unexcused absences will result in the final semester grade being lowered one full letter grade.
5. Visual and verbal as well as written communication skills will be a part of the evaluation.

GD 320 is the prerequisite to GD 403W.

GD 403W will be offered spring semester.

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Fall 2007
Prerequisite: GD 302

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Graphic Design (GD)

GD 494 Research Project (1-12) Supervised student activities on research projects identified on an individual or small-group basis.

Research Project (1-12)

General Education: None

Graphic Design (GD)

GD 404 Book Design (3) Writing, designing, illustrating and production (printing) of a book.

GD 404

GD 404 Book Design (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This is an advanced course that explores the relationship of the written and visual elements in the design of a book. Each student (or student team) will select a topic, create the text and give visual form to an original book, which will have a minimum length of 16 pages. The intrinsic qualities of the book medium such as typography, sequence, imagery, paper, dye-cuts, fold-outs, pop-ups, and binding will be investigated in relation to how each affects the overall communication of the book's meaning to a specific audience.

The course is intended to:
1. Foster an appreciation for good typography.
2. Allow students to investigate the sequential relationships between the visual and verbal aspects of a book and their synergistic interaction in the communication of the books meaning to a particular audience.
3. Introduce the appropriate use of illustrations in book design.
4. Help students develop the work habits and attitudes of professional designers.
5. Help students to examine the design process to learn to define the problem and work logically towards an appropriate solution.
6. Develop the ability to work as a member of a team.
7. Gain a deeper understanding of graphic design aesthetically, critically, and technically.

Grading:
1. Each of the two copies of the book that are submitted at the end of the semester should be identical, with flawless execution and craft.
2. The book will be evaluated on the originality of the idea and the appropriateness of the design approach to the idea, the intended audience and all pertinent functional parameters.
3. Professional attitude and the development of professional work habits will be evaluated. Students are expected to think for themselves, budget their time, meet deadlines, and adhere to production schedules.
4. Visual, verbal and written communication skills will be evaluated.

GD 404 will be offered fall or spring semesters.

Greek (GREEK)

GREEK 102 Intermediate Ancient Greek (4) Intermediate study of classical Greek grammar, syntax, and vocabulary.

GREEK 102 Intermediate Ancient Greek (4)

(BA) This course meets the Bachelor of Arts degree requirements.

GREEK 102 continues from GREEK 101, which is prerequisite for enrollment. After a brief review of key grammar and morphology from the first semester, the course will complete the process of providing students with a sufficient grasp of Greek vocabulary, morphology and syntax to enable them to read unadapted passages from ancient Greek authors (with the aid of a lexicon) by the end of the course. Class sessions will focus on grammar drills, sentences, and similar exercises as homework to supplement class work. As the semester progresses, students will read more and more from Greek authors themselves rather than either Greek composed by the textbook authors or adapted ancient Greek passages, so that when students enter more advanced classes, they will find the transition to reading Greek as smooth as possible.

In tandem with the increasing emphasis on Greek written by ancient Greeks, the course will continue to focus on the cultural milieu of ancient Athens in particular as a background for the texts that the students read. Basics of Greek history, archaeology, and philosophy will be introduced as relevant to the texts that the students read. Students will be evaluated on a combination of written work, including frequent tests and quizzes; homework completion; and course attendance and participation. GREEK 102 will prepare students to continue with courses in Greek at the 400-level. Students may select to use GREEK 102 to fulfill either a 3-credit requirement for a course in Greek or Roman language, literature, civilization, or archaeology or the requirements for 9 credits in courses related to Classics and Ancient Mediterranean Studies within the Common Requirements for the Major. Students desiring to fulfill the B.A. requirements for 12th-credit level foreign language in Greek may do so by successfully completing a 400-level course in Greek. This course will be offered once a year with 24 seats per offering.

General Education: None
Diversity: None
Bachelor of Arts: Humanities and Second or Beyond 12th Level Foreign Language
Effective: Fall 2001
Prerequisite: GREEK 101

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Greek (GREEK)

GREEK 101 Introductory Ancient Greek (4) Fundamentals of classical Greek grammar, syntax, and vocabulary.

GREEK 101 Introductory Ancient Greek (4)

(BA) This course meets the Bachelor of Arts degree requirements.

The aim of GREEK 101 is to introduce students to the fundamentals of ancient Greek as quickly and thoroughly as possible. The Attic dialect is the basis of Classical Greek grammar, because this is the language of the tragedies of Aeschylus, Sophocles, and Euripides; the comedies of Aristophanes; the histories of Thucydides and Xenophon; the orations of Demosthenes; and the works of Plato. This course focuses primarily on the morphology and syntax of ancient Greek. Drills on each grammar presentation, as well as translation of sentences both from English to Greek and from Greek to English, and of brief passages from ancient authors are the basis of the student's homework throughout the semester. By the end of the semester, students will be prepared to read short passages of Greek authors. The course will focus on reading and writing rather than speaking, although students will be expected to read Greek aloud regularly in order to master correct pronunciation. GREEK 101 will prepare students to continue with GREEK 102 and then 400-level Greek courses.

The course goals, in addition to providing students with a firm grounding in Greek grammar and morphology, include giving students an improved understanding of English grammar and of English vocabulary and word origins. Moreover, while the primary focus will be on mastering forms and syntax, students will also be introduced to the basic aspects of classical Greek culture so that they are able to place the selections they read within a wider cultural context. Students may select to use GREEK 101 to fulfill either a 3-credit requirement for a course in Greek or Roman language, literature, and civilization, or archaeology or the requirement for 9 credits in courses related to Classics and Ancient Mediterranean Studies within the Common Requirements for the Major. Students desiring to fulfill the B.A. requirement for 12th-credit level foreign language in Greek may do so by successfully completing a 400-level course in Greek. Students' work in the course will be evaluated on a combination of written work, including frequent tests and quizzes; homework completion; and course attendance and participation. GREEK 101 will be offered once per year with 24 seats per offering.

Greek (GREEK)

GREEK 400 Greek Syntax and Stylistics (3) Classical Greek syntax and stylistics as examined and appreciated through standard exercises in composition and parallel selected prose readings.

GREEK 400 Greek Syntax and Stylistics (3)

(BA) This course meets the Bachelor of Arts degree requirements.

Greek 400 will assist and enable Classical and Ancient Mediterranean Studies language majors and other interested students in acquiring the skills necessary to analyze, compose, and thus appreciate the varying characteristics of ancient Greek prose style. In-depth reading of Greek prose authors will be coupled with regular exercises in Greek prose composition and analysis of syntactical and stylistic features of representative passages. The course begins with grammar review, directed reading, and prose composition exercises of sentence-length passages. By the middle of the term, students will read and compare passages from Greek authors of different periods and styles and compose passages in imitation of these styles, with the goal of a heightened appreciation of the varying styles of Greek prose and the appropriateness of these styles to varying rhetorical purposes. Selected prose authors will be read, including but not limited to Lysias, Demosthenes, Isocrates, Herodotus, Thucydides, Xenophon, Plato, and Aristotle. By the end of the term, students will be able to comprehend, assess, and compose connected passages of Greek prose with increased ease and acumen. Evaluation methods include daily graded homework assignments consisting of composition exercises; evaluation of in-class participation in reading and analysis of prose passages; midterm examination; final examination. The course may be taken by students who have completed at least one year of college-level Greek (Greek 102 or 003 at Penn State or the equivalent), but is ideally suited for students who have taken at least one 400-level Greek course. It functions (along with Latin 400) as one of two "capstone" courses for the Classics and Ancient Mediterranean Studies Option Major, the Classical Languages Option Major, or the Greek Minor. Class size: maximum of 20.

General Education: None
Diversity: None
Bachelor of Arts: Humanities
Effective: Summer 2004
Prerequisite: GREEK 102, GREEK 003 or equivalent

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Greek (GREEK)

GREEK 401 Introductory Reading in Greek Literature (3-6) Analysis of selected passages of ancient Greek literature; attention will be paid to grammatical as well as literary details.

GREEK 401 Introductory Reading in Greek Literature (3)

(BA) This course meets the Bachelor of Arts degree requirements.

GREEK 401 is an ancient Greek literature course in which students will read selections from various genres. Students also will read in English additional selections of the authors they are studying. The overall goal of the course is to increase the ease and fluency of advanced-level students with ancient Greek. Although students will be expected to enter the class with a comfortable level of reading skill as acquired in GREEK 003 or 102 or their equivalent, the course will include grammar and building vocabulary. By the end of the course, it is expected that students will be able to read Greek fluently, and be able to analyze grammatical structures.

Students' work in the course will be evaluated based on class participation, several in-class quizzes and tests, and a final examination. GREEK 401 is one of a series of advanced Greek poetry and prose courses that allow students to gain skill and knowledge about a range of ancient Greek literature. GREEK 401 may be used to fulfill several requirements for the CAMS major including the requirement of courses in Greek or Roman language, literature, or archaeology and a 400-level course in a related area. The course is particularly designed for students who select the Language Option of the major, which requires four courses at the 400-level in Greek or Latin. The course will be offered every other year with 20 seats per offering.

General Education: None
Diversity: None
Bachelor of Arts: Humanities and Second or Beyond 12th Level Foreign Language
Effective: Spring 2002

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Greek (GREEK)

GREEK 425 Greek Historians (3-6) Translation and study of one or more of the ancient Greek historians.

GREEK 425 Greek Historians (3-6)

(BA) This course meets the Bachelor of Arts degree requirements.

GREEK 425 is a reading course in ancient Greek focusing on one or more of the major ancient Greek historians (usually Herodotus, Thucydides, or Xenophon, or Polybius). The course is designed to advance the student's fluency in reading Greek prose, while at the same time enriching their understanding of Greek civilization and history by a thematic choice of historical readings. The course may concentrate on one author or may address a thematic issue with readings from a variety of Greek historians. For example, readings may be selected from Herodotus' accounts of ancient Egypt. Or readings may focus on a comparative study of Thucydides' and Polybius' reasons for writing history. The major portion of class time will be devoted to translating prepared passages. These passages will also be the basis for discussing grammatical forms, as well as stylistic issues in prose writing. The class will also include discussions of historical themes relevant to the readings. Students' work in the course will be evaluated based on class participation, three in-class tests, a final examination, and a term research paper or oral presentation.

GREEK 425 is one of a series of advanced Greek poetry and prose courses that allows students to gain skill and knowledge about a range of ancient Greek literature. This course requires a mastery of basic Greek grammar and vocabulary acquired in GREEK 003, 102, or their equivalent. GREEK 425 may be used to fulfill several requirements for the CAMS major including the requirement of courses in Greek and Roman language, literature, and archaeology, and a 400-level course in a related area. The course is particularly designed for students who select the Language Option of the major, which requires four courses at the 400-level in Greek or Latin.

Greek (GREEK)

GREEK 430 Greek Poetry (3-6) Translation and analysis of selected readings in Greek poetry.

GREEK 430 Greek Poetry (3-6)

(BA) This course meets the Bachelor of Arts degree requirements.

GREEK 430 is an advanced Greek literature course in which students will read 1200-1500 verses of a non-dramatic genre of ancient Greek poetry (in different years the course is offered, this might be epic, lyric, bucolic, or didactic poetry). Students also will read in English the entire output of the author they are studying. The overall goals of the course are as follows: (1) to increase the ease and fluency of advanced-level students with ancient Greek in general and poetic idiom in particular; and (2) to expose students to a limited amount of scholarly literature and give practice in understanding and evaluating a scholarly argument in relation to a primary text with which they are familiar. Students will be expected to enter the class with a comfortable level of reading skill (as acquired in GREEK 003, 102 or their equivalent); the course will not cover grammar, nor will all the assigned readings in Greek be translated in class. Emphasis is on reading a generous amount of poetry in the original Greek and on literary interpretation.

The approach in the classroom will change as the term progresses. Initially, classes will be more lecture-driven in order to explain the background and characteristics of the poetry being read. Translation assignments early in the semester will be relatively short (30-50 verses per class). As students gain in ease and familiarity with the Greek they are reading, assignments will become longer (with a goal of approximately 100 verses per class by the end of the term) and students will assume an increasing proportion of the responsibility for conducting individual class sessions, culminating in student presentations at the end of the semester. GREEK 430 is one of a series of advanced Greek poetry and prose courses that allows students to gain skill and knowledge about a range of ancient Greek literature. GREEK 430 may be used to fulfill several requirements for the Classics and Ancient Mediterranean Studies major including the requirement of courses in Greek or Roman language, literature, or archaeology and a 400-level course in a related area. The course is particularly designed for students who select the Language Option of the major, which requires four courses at the 400-level in Greek or Latin. Students will be evaluated through class participation, quizzes, tests, an oral presentation, and a final exam. The course will be offered once every other year and will offer 20 seats per offering.

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Greek (GREEK)

GREEK 440 Greek Drama (3-6) Translation and study of a selected play.

GREEK 440 Greek Drama (3-6)

(BA) This course meets the Bachelor of Arts degree requirements.

GREEK 440 is an advanced Greek drama course in which students will read 1200-1500 verses of an ancient Greek drama. Students also will read in English additional plays by the author they are studying. The overall goals of the course are as follows: (1) to increase the ease and fluency of advanced-level students with ancient Greek in general and dramatic idiom in particular; and (2) to expose students to a limited amount of scholarly literature and give practice in understanding and evaluating a scholarly argument in relation to a primary text with which they are familiar. Students will be expected to enter the class with a comfortable level of reading skill. The course will not cover grammar, nor will all the assigned readings in Greek be translated in class. Emphasis is on reading an entire play in the original Greek and on literary interpretation.

The approach in the classroom will change as the term progresses. Initially, classes will be more lecture-driven in order to explain the background and characteristics of the poetry being read. Translation assignments early in the semester will be relatively short (30-50 verses per class). As students gain in ease and familiarity with the Greek they are reading, assignments will become longer (with a goal of approximately 75-80 verses per class by the end of the term) and students will assume an increasing proportion of the responsibility for conducting individual class sessions. Students will be evaluated through class participation, quizzes, tests, and a final examination.

GREEK 440 is one of a series of advanced Greek poetry and prose courses that allow students to gain skill and knowledge about a range of ancient Greek literature. This course requires a mastery of basic Greek grammar and vocabulary acquired in GREEK 003, 102, or their equivalent. GREEK 440 may be used to fulfill several requirements for the Classics and Ancient Mediterranean Studies major including the requirement of courses in Greek or Roman language, literature, or archaeology and a 400-level course in a related area. The course is particularly designed for students who select the Language Option of the major, which requires four courses at the 400-level in Greek or Latin. GREEK 440 will be offered once every other year with 20 seats per offering.

Health (HLTH)

HLTH 306 Physical Education, Health, and Safety in Elementary Schools (2) A study of appropriate activities for elementary-age children. Student participation in physical activities is required.

HLTH 306 Physical Education, Health and Safety in the Elementary Schools (3)

This course is designed to prepare elementary classroom teachers to provide age appropriate instruction related to issues of health and safety encountered in the school, home, and community. Understanding and demonstrating a knowledge of foundations, lesson planning, instructional strategies, and assessment is a key component of the program. In addition, the pre-service teachers are prepared to organize and implement physical education activities that may be carried out in the classroom, playground and/or appropriate indoor facilities. The physical education aspects of the program are generally provided as ancillary activities to the program provided under the guidance and direction of a certified Health and Physical Education instructor.

Health Policy and Administration (H P A)

H P A 057 (GHA) Consumer Choices in Health Care (3) Introduction to consumers' role in health-care decisions, including health benefits, physician and hospital choice, and end-of-life choices.

H P A 057 Consumer Choices in Health Care (3)
(GHA)

H P A 057 is designed to provide students with an understanding of the consumer's role in health care decisions. The growth in health care information resources, the expansion of for-profit medical care, the consumer revolution, and increasing cost pressure mean consumers must be aware of the critical issues involved in health care decisions. Consumer knowledge and decision-making affect the cost and quality of health care received. The main goal of this course is to educate students to become knowledgeable health care consumers. H P A 057 (GHA) can be used as a General Education course for all Penn State students. It focuses on all 4 aspects of General Education in Health and Physical Activity and several of the overall General Education criteria. It helps students learn how to gather information about health and health care and synthesize and analyze that information to make good choices that will enable them to achieve and maintain good health, including making healthful lifestyle choices. H P A 057 emphasizes that students must develop consumer skills, attitudes, and habits that will enable them to make the choices expected of consumers in today's health care system. Active learning is a critical component of H P A 057, as students must actively gather information and use it to make decisions. H P A 057 also addresses the issue of intercultural competence, by addressing different cultural views of health and information on how culture influences interactions between patients and others in health care settings. It requires students to write and speak about the choices they make through assignments that demonstrate their understanding of the information resources and the reasoning underlying their choices. Finally, several in-class and out-of-class assignments employ collaborative learning and teamwork as students gather and synthesize information. Students in Health Policy Administration may use H P A 057 for a supporting course in their major. It is also a required course in the Minor in Health Policy and Administration. H P A 057 does require a technology classroom to enable demonstration of consumer health information on the web and students will need some independent laboratory access to complete assignments. H P A 057 will be offered 2-3 times per year at University Park and on several other Penn State campuses with an expected enrollment of 50-200 students per semester.

Health Policy and Administration (H P A)

H P A 301W Health Services Policy Issues (3) Analysis of major issues in health services delivery in hospitals, medical practice, public health, mental health, and health professional education.

H P A 301W Health Services Policy Issues (3)

H P A 301W is a survey course of health services policy issues that emphasizes the skills needed to analyze and communicate knowledge about health services policy. The chief goals of the course are to broaden student understanding of selected current policy issues in health care, to deepen student knowledge of the development of health policy issues, and to develop student skills in the areas of information literacy, communication, and teamwork. Students are evaluated on the basis of an individual policy issue brief, a team policy issue brief, and quizzes.

The course content includes an overview of the key areas in health policy issues: how and why issues emerge; how to trace the historical development of a policy issue; how to analyze the behavior of stakeholders like hospitals, physicians, nurses, insurers, health maintenance organizations, employers, consumers, and others; how to monitor a health policy issue's development. These areas are explored in two ways--by class discussions of current issues in health policy and by writing assignments that focus on writing policy issue briefs. Several modules on information literacy, communication, and teamwork skills that are critical for work in health policy are integrated with the writing assignments.

H P A 301W is a required course in the Health Policy Administration major and serves as one of the Writing Across the Curriculum courses Health Policy Administration students can take. It is also an optional course for the Minor in Health Policy and Administration. H P A 101, PL SC 001, and ECON 002 are prerequisites for H P A 301W, providing foundation knowledge in health care and social sciences. In addition, all H P A 400-level courses with a health policy focus require H P A 301 or H P A 301W as a prerequisite.

H P A 440 (US;IL) (BB H 440) Principles of Epidemiology (3) Theory of epidemiology and significant case studies. Potential application to health care.

H P A (BB H) 440 Principles of Epidemiology (3)
(US;IL)

This course is designed to provide students with a basic understanding of the principles of Epidemiology and to familiarize students with the methods and applications of epidemiology to understanding the bases for heterogeneity of disease and health among populations.

The goals of the course are: 1) recognize and use basic principles, concepts, terminology, and techniques in Epidemiology as applied to the study of infectious disease, chronic diseases, and other health-related problems; 2) examine and understand measures of risk and burden of illness on populations defined in terms of age, race, gender, class, time, and other relevant socio-cultural and demographic factors; 3) be able to interpret and critique epidemiological research reports on the identification of risk factors and casual factors for diseases in populations; 4) assess the health status and burden of diseases and health problems of populations at multiple levels of analysis for the purpose of planning health promotion activities and health care services; 5) have a basic understanding of the epidemiology tools for disease screening and other methods for primary and secondary prevention of disease and health problems; 6) examine the validity and applicability of various health interventions used to improve health status and the barriers for successful interventions; and 7) have a basic understanding of the epidemiology of the major causes of morbidity and mortality in the U.S. and for other selected regions and nations of the world.

This is a required course in the Biobehavioral Health major and an elective course in the Health Policy and Administration major. The course is also appropriate for students intending to advance to post-baccalaureate graduate and professional programs in medicine, public health, health policy and planning, and other health-related careers.

Students will be evaluated based on their performance on a combination of written assignments, a term paper or project, and exams.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1998
Prerequisite: H P A 332

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Health Policy and Administration (H P A)

H P A 445W (ECON 445W) Health Economics (3) Economic analysis of U.S. health care system; planning, organization, and financing; current public policy issues and alternatives.

H P A (ECON) 445W Health Economics (3)

The healthcare sector comprises a set of markets that differ in some significant ways from the textbook model. In the US, this sector performs well in some respects and questionably in others. Notably, there has been sustained improvement over time in life expectancy and other indicators of the effectiveness of health care for most people, but the resources devoted to producing this improvement have been growing considerable faster than GDP. The goal of this course is to examine several broad questions raised by these facts.

The course begins with an overview of evidence on wealth, health expenditure, and life expectancy across countries, and then examines increasing life expectancy and medical expenditures in the US and their causes. Issues in measuring the value of medical expenditures are addressed, and an overview of the industrial organization of health care is provided. A major component of the course covers the economics of health insurance, and the course also examines medical R&D and the pharmaceutical industry as well as issues in the financing of medical care for the elderly.

The course seeks to introduce students to the economic analysis of health care. It is in the area of applied microeconomics, and deals with issues relating to labor markets and public finance, in particular. This writing-intensive course will be one of several 400-level W seminars that the Economics Department is seeking to establish, with the broad objective of exposing our advanced undergraduate students to economic analysis in a seminar setting requiring significant writing by the students.

The course counts toward the major and the minor in economics, as a 400-level course, In addition, it also counts toward a "module" (area of concentration) in human resource and public economics.

Student performance in the course will be evaluated based on three papers. The course will be offered once each year, with an enrollment of 25 students.

Health Policy and Administration (H P A)

H P A 470 Health Care Information Management (3) This course introduces information systems terminology, data structures, software applications, and their management functions in health services organizations.

H P A 470 Health Care Information Management (3)

This course introduces the student to information systems terminology, structures, specific applications, and their relationships to management functions in health services organizations. Health providers and health systems are continuing to make multi-million dollar investments in information systems in order to meet new market and regulatory requirements. All health services managers will play a role in the analysis, design, acquisition, installation, operation and ultimate success of information systems necessary to meet organizational goals and objectives. This course exposes students to the IS/IT applications used to support management functions. Further, applications and management issues unique to industry segments (e.g., long-term care, home care, hospital administration, physician practice management) will also be explored.

The goal of the course is to ensure that students are schooled in the terminology, conceptual models, applications and opportunities and limitations of information systems in health services to the point that they can ask appropriate questions, recognize and state significant issues, and participate in the discussion and analysis of information systems development and application.

The course is one of several elective courses in the Health Policy Administration major that students can complete and is also a required part of the Information Sciences and Technology/Health Policy Administration Minor providing students with an understanding of the basic structures of information systems in health administration; the relationship of these systems to managerial functions such as communications, coordination, control strategic and process planning and decision making, and the important policy and ethical issues associated with privacy, confidentiality, and security in information systems. Since the course represents the capstone of the Information Sciences and Technology/Health Policy Administration minor, it is important for students to have the pre-requisites for the course (H P A 332, IST 210, and IST 220), including an understanding of major issues in the health care system, health care management and information systems.

Student's attainment of educational objectives will be assessed through a variety of evaluation methods. Understanding and appropriate application of terminology, management issues, and ethical/privacy concerns will be assessed through examination. Concept integration will be assessed through case-study analysis and project papers. Data presentation and training communication issues will be assessed through individual application projects and presentations.

A technology classroom with access to the World Wide Web and Penn State servers is required for effective instruction. We will use these facilities to demonstrate software applications, provide technical support for guestspeaker presentations, and facilitate student presentations. The course will be offered once per academic year with an expected enrollment of 20-40 students.

H P A 497D Making the Difference: Raising Awareness of Careers in Health Care (3) This course is designed for HPA students to assist other students interested in a career in health care. Central to this course is a major hands-on learning project that will enable students to explore career paths in the health care sector. After a systematic study of subjecft material for various occupations in the health care sector, the students will identify various health career paths and how each contributes to high quality patient care. While an important aspect of this class is the creation of student awareness, students will have the opportunity to raise the general public awareness of the range of health care careers contributing to client care by creating a public service video. A component of this course will take place off-campus.

HEBR 010 (GH;IL) (J ST 010) Jewish Civilization (3) Life of the Jewish people from Biblical times, emphasizing cultural, religious, and institutional developments.

HEBR (J ST) 010 Jewish Civilization (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Jewish tradition goes back thousands of years, and Jews have resided in many different lands. They have become an integral part of many different cultures, yet have often retained (or been forced to retain) a certain degree of separateness or difference. In this course we will trace continuity and change in Jewish traditions from ancient to modern times, and across different regions. Taking into account inter-cultural contact and historical events -- ranging in place from the Middle East to Muslim Spain to Asia, Africa, Europe, and the Americas, and in time from the ancient world to the medieval era, the Holocaust, and contemporary Israel and the U.S. -- we will explore developments in Jewish history, literature, and culture. The course considers topics such as the attitudes other groups have had toward Jews (and vice-versa), the question of whether Jewish identity is a race, a religion, or an ethnicity, the dilemmas Jews face today, and the ways that Jews in many diverse settings have balanced change and continuity. We will explore the factors that shape Jewish experience in different times and places, the diversities within and among Jewish lifestyles, and the ways in which events and interactions with other peoples have influenced the development of Jewish civilization. Finally, we will consider the dilemmas Jews face today in terms of the preservation of their identity and traditions. The course includes class discussion. Students are evaluated on the basis of essay exams, essay assignments, quizzes, in-class discussion and commentaries, group projects, journals, a final comprehensive exam/essay, web-based activities, and on-line discussion. such means as quizzes, essay examinations, and group projects.

Hebrew (HEBR)

HEBR 151 (CAMS 151, J ST 151) Introductory Biblical Hebrew (3) Fundamentals of Biblical Hebrew grammar, syntax, and vocabulary.

HEBR (CAMS/J ST) 151 Introductory Biblical Hebrew (3)

(BA) This course meets the Bachelor of Arts degree requirements.

The aim of CAMS/J ST/HEBR 151 is to introduce students to the fundamentals of Biblical Hebrew as quickly and thoroughly as possible. Biblical Hebrew is the language in which the Old Testament was written, between the period of approximately 1200-200 B.C.E. This focuses primarily on the morphology and syntax of Biblical Hebrew. Drills on each point of grammar, as well as translation of sentences from Hebrew to English and English to Hebrew, and brief passages taken from the Bible are the basis of the student's homework throughout the semester. By the end of the semester, the students will be prepared to read short, unmodified passages of the Bible. The course will focus primarily on reading and writing, though students will read aloud in class regularly in order to ensure correct pronunciation and understanding. CAMS/J ST/HEBR 151 will prepare students to continue with CAMS/J ST/HEBR 152 and then 400-level courses.

The course goals, in addition to providing the students with a firm grounding in Hebrew grammar and vocabulary, include giving the students a basic understanding of the history of the Biblical text. The primary focus will be on mastering paradigms and syntax, but the students will also be introduced to the Biblical texts themselves, which together from such an important piece of literature.

Hebrew (HEBR)

HEBR 152 (CAMS 152, J ST 152) Intermediate Biblical Hebrew (3) Intermediate study of Biblical Hebrew grammar, syntax, and vocabulary.

HEBR (CAMS/J ST) 152 Intermediate Biblical Hebrew (3)

(BA) This course meets the Bachelor of Arts degree requirements.

CAMS/J ST/HEBR 152 continues from CAMS/J ST/HEBR 151, which is a prerequisite for enrollment. After a brief review of key grammar and morphology from the first semester, the course will complete the process of providing students with a sufficient grasp of Hebrew vocabulary, morphology, and syntax to enable them to read unadapted passages from Biblical Hebrew texts (with the aid of a lexicon) by the end of the course. Class sessions will focus on grammar drills, sentences, and similar exercises as homework to supplement class work. As the semester progresses, students will read more and more from actual Hebrew texts, rather than composed sentences by the textbook author, so that when the students enter more advanced classes, they will find the transition to reading Hebrew as smooth as possible.

In tandem with the increasing emphasis on Hebrew written by ancient Hebrews, the course will continue to focus on the linguistic and cultural background for the texts that the students read. Students will be evaluated on a combination of written work, including frequent quizzes, tests, homework completion, and course attendance and participation. CAMS/J ST/HEBR 152 will prepare students to continue with courses at the 400-level.

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Hebrew (HEBR)

HEBR 401 Advanced Hebrew--Conversation Emphasis (3 per semester, maximum of 6) Development of oral proficiency through discussions focusing on issues in contemporary Jewish culture.

Advanced Hebrew--Conversation Emphasis (3 per semester, maximum of 6)

General Education: None
Diversity: None
Bachelor of Arts: Humanities and Second or Beyond 12th Level Foreign Language
Effective: Summer 1990
Prerequisite: HEBR 110

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Hebrew (HEBR)

HEBR 451 Advanced Biblical Hebrew (3) Translation and analysis of selected readings in Biblical Hebrew texts; attention will be paid to grammatical as well as literary details.

HEBR 451 Advanced Biblical Hebrew (3)

HEBR 451 is a Biblical Hebrew literature course in which students will read selections of various genres and dates from different sections of the Hebrew Bible. The overall goal of this course is to increase the ease and fluency of advanced-level students with Biblical Hebrew. Although students will be expected to enter the class with a comfortable level of reading skill as acquired in HEBR 152 or its equivalent, the course will include grammar and building vocabulary. By the end of the course, it is expected that the students will be able to read a Biblical Hebrew text comfortable and be able to analyze grammatical structures. Students' work in the course will be evaluated on class participation (20%), several in class quizzes (20%), and a mid-term (30%) and final exam (30%). HEBR 451 is part of a series of advanced Hebrew classes that will allow students to gain skill and knowledge about a range of Biblical Hebrew texts. HEBR 451 may be used to fulfill a requirement for the Hebrew minor, as well as for the CAMS major language requirement. The course will be offered every other year, with 20 seats per offering.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: HEBR 152 or equivalent

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Hebrew (HEBR)

HEBR 402 Advanced Hebrew--Reading Emphasis (3 per semester, maximum of 6) Readings in representative works of traditional and modern literature; practice in composition; study of aspects of Jewish culture.

Advanced Hebrew--Reading Emphasis (3 per semester, maximum of 6)

General Education: None
Diversity: None
Bachelor of Arts: Humanities and Second or Beyond 12th Level Foreign Language
Effective: Summer 1990
Prerequisite: HEBR 110

HIST 002S (GH;IL) The Western Heritage II (3) A survey of the Western heritage from the dawn of modern Europe in the seventeenth century to the present.

HIST 002S The Western Heritage II (3)
(GH;FYS;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

History 002 is an introduction to the history of Europe from the reformation to the present. The course focuses on four broad shifts in European history: the emergence of the powerful states of the ancient regime from the century of religious violence following the reformations; the critique of and attack on major assumptions of ancient regimes before, during, and after the French revolution; the social and economic transformation of Europe in the eighteenth and nineteenth centuries; and the formation of mass societies during the nineteenth and twentieth centuries. Although individual versions of the course may vary in emphasis, these changes are recognized as vital to Europe's significance in the modern world. A major teaching goal of the course is the use of historical evidence, in the form of documents, to build interpretations of the past. A book of documents and an additional course packet supply this evidence and serve as the focus of the weekly discussion classes. There are weekly reading quizzes to ensure preparation and to provide questions for the start of discussion. A textbook and lectures supply the overviews and broad themes of the course. The course requirements typically consist of exams, quizzes, and class attendance. (Note that these are the typical, general requirements. Individual instructors may make adjustments that will maintain the intellectual integrity and pedagogic intent of the course.) The course is a basic introduction to modern European history. It is therefore, related to all upper division courses on this subject. It also introduces students to basic cultural and social movements essential to courses in art history and music and to courses in the social sciences. History002 is required for history majors and for others fulfills a humanities requirement in the university's general education/bachelor of arts requirements. HIST 002 is offered twice a year with 50 to 250 seats per offering.

General Education: GH
Diversity: IL
Bachelor of Arts: Humanities
Effective: Summer 2005

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HIST 005 (GH;IL) (CAMS 005) Ancient Mediterranean Civilizations (3) Survey of the history and cultures of anicent Mediterranean civilizations in Mesopotamia, Egypt, Syro-Levant, Anatolia, Greece, and Rome.

HIST (CAMS) 005 Ancient Mediterranean Civilizations (3) (GH;IL)

This course provides an introduction to the history and cultural traditions of the ancient civilizations of the Mediterranean. From the origins of cities and the invention of writing, it surveys the intellectual, artistic, and political traditions that laid the foundations for the later civilizations of Europe and western Asia. Students will acquire a basic historical framework for the ancient Mediterranean from the third millennium BCE through the end of antiquity in the first millennium CE. Within this framework cross-cultural relationships of time and ideas will be established among religious texts, epic literatures, and political and legal traditions. In the part of the world where the division between Asia and the East and Europe and the West was born, the course will examine the development of regional and ethnic identities along with the historical development of concepts of the universal nature of humanity. This course is designed to serve as the foundation course for all majors in the department of Classics and Ancient Mediterranean Studies (CAMS).

General Education: GH

History (HIST)

HIST 010 (GH;IL) World History I (3) Human origins; early civilizations; major political and intellectual developments on all continents; cultural interrelationships to 1500.

HIST 010 Non-Western Civilization (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

History 010 is an introductory survey of ancient history from the emergence of Homo Sapiens to the onset of European exploration (approximately 1500), examining the evolution of the world's various peoples and cultures. The course will focus on the historical processes that led to human diversity, as expressed in varying patterns and systems of government, economics, arts, ideas, belief systems, and social organizations. The course will also treat the growth of agriculture and pastoral nomadism and explore global interactions and linkages, engendered by human migrations, the spread of commerce and disease, wars, and conquests up to 1500. Although the mode of delivery may vary, depending on the semester or session in which a specific section of the course is offered, its campus location, and the instructor's major research specialization, the course will be taught thematically and conceptually. It will include individuals who have played a significant role in influencing the beliefs and institutions of a particular culture, or humanity in general, such as Moses, Confucius, Gautama (the Buddha), Plato, Alexander, Jesus, Muhammad, St. Francis of Assisi, al-Ghazali, Murasaki Shikubu, and Moctezuma. Students will learn about the interrelationships between dominant and nondominant cultures, such as the concepts of Roman imperialism, the tributary relationship between China and its neighbors, the Islamic concept of conquering lands without forcing conversion, the effects of the Mongol conquests, and the beginnings of Portuguese exploration and colonization. The course will make students more aware of the cultural achievements of the ancient Egyptians, Hebrews, Greeks, Romans, Persians, Indians, Chinese, Arabs, Turks, Mayans, and Japanese. Discussion sections (for high-enrollment classes) and essay examinations will promote student facility in written and oral self-expression, analysis, synthesis, comparison and contrast, and cultural empathy. History 010 instructors will, at their discretion, provide opportunities for gathering information from libraries, computerized indexes, and websites. Students will come to understand themselves and their own culture, as well as the background to many other societies and cultures in today's world, through intellectual confrontation with the peoples and cultures of antiquity. Instructors will address issues related to civility, the individual's role within the larger community, and academic honesty.

HIST 011 (GH;IL) World History II (3) Social, economic, and political evolution of societies and cultures from 1500 to the present.

HIST 011 World History II (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

History 011 is an introductory survey of modern history from approximately 1500 to the present, viewing the world and its various peoples and cultures as a whole. This course will focus on the historical processes that have led to modernization, such as exploration, contacts among peoples and cultures, voluntary and forced migrations, the growth of technology and science, industrialization, urbanization, and other trends that have shaped the world since 1500. It will help students to develop facility in speaking and writing about continuity, change, causation, similarities and differences among cultures, universal and particular values, and conceptualization of modernity, through weekly discussion sections, essay examinations, short writing assignments, and selected readings. Its content is intrinsically international and intercultural, addressing overarching themes of ethnicity, race, religion, gender, and especially global perspectives. Approximately one-half of its content

History (HIST)

HIST 020 (GH;US) American Civilization to 1877 (3) An historical survey of the American experience from its colonial beginnings through the Civil War and Reconstruction.

HIST 020 American Civilization to 1877 (3)
(GH;US)

(BA) This course meets the Bachelor of Arts degree requirements.

HIST 020 is designed to introduce students to the main events and themes of American history before 1877. This course is not intended to simply acquaint the student with facts, but to teach them how to analyze those facts so that they can understand why historical events in America unfolded as they did. A larger goal of the course is to teach them how to think "historically" and to perceive the relevance of the past to the present. It is impossible to understand either yourself or your society if you cannot identify the role, which your individual and collective past plays in the construction of your actions and thoughts today. The course provides the student with a basic background in American History prior to 1877. HIST 021 chronologically follows this course by providing the student with a background in American History from 1877 to the present. HIST 020 is a prerequisite for upper-division courses in American History, and is a required course for the History major. The course grade will be determined by an in-class midterm exam, an in-class final exam (each containing essay and short-answer sections), a five-page paper based on the analysis of a primary source, and participation in discussion sections. This course will be offered twice per year with 150 seats per offering.

History (HIST)

HIST 021 (GH;US) American Civilization Since 1877 (3) An historical survey of the American experience from the emergence of urban-industrial society in the late nineteenth century to the present.

HIST 021 American Civilization Since 1877 (3)
(GH;US)

(BA) This course meets the Bachelor of Arts degree requirements.

History 021 is designed as the second half of a two-term survey of American history, covering the period from 1877 to the present. (History 20 covers the period from 1607 to 1877.) The course uses a lecture format; larger versions have weekly discussion sections as well, led by graduate assistants. In terms of historical knowledge, History 021 seeks to introduce students to salient events, developments, and themes of American history since 1877. Chief among the topics covered are Reconstruction, Westward expansion and the decline of the Native American, the industrial revolution, urbanization, immigration, Gilded Age culture and politics, the labor movement, the New South, Populism, imperialism, Progressivism, segregation and African-American response, the women's movement, World War I, politics and culture in the 'Twenties, the Great Depression and New Deal, World War II, post-war prosperity, the Cold War, the Civil Rights movement, the Vietnam War, the disillusionment of the 'Seventies', the Reagan revolution, and America in the post-Cold War era. The social and ideological diversity of the American experience is a prominent theme of History 021. A survey textbook selected by the instructor is used, in conjunction with lectures, to provide a comprehensive overview. The textbook is supplemented by a blend of specialized historical works and primary readings. Students are evaluated on the basis of their performance on papers, exams, quizzes, and class participation and attendance. While History 021 instructors vary in the content and mix of work they assign (and the relative weight they give papers, exams, quizzes, and participation in the course grade), all versions share certain underlying objectives: to expose students to essential events and trends in American history; to develop their capacity to identify and analyze key themes and issues from the past; to give them some experience in the critical assessment of primary sources; and, to sharpen their skills in marshaling data and concepts from readings and lectures, and discussing them cogently both in section meetings and in writing. Increasingly, instructors are integrating multi-media components into their lectures. History 21 is the second half of a two-course survey of American history. History 020 is the first half; the year 1877 marks the dividing point between these two courses. Like History 020, History 021 provides a foundation (and is in fact a prerequisite) for many of the more advanced courses in American history. History 021 is a requirement for the major. Non-majors may use this course to satisfy a general education humanities selection. This course is offered three times a year with 140 seats per offering.

HIST 083S (GH) First-Year Seminar in History (3) Critical approaches to the dimensions and directions in History.

HIST 083S First-Year Seminar in History (3)
(GH;FYS)

(BA) This course meets the Bachelor of Arts degree requirements.

Through readings, discussions, lectures, and research projects, students are expected to master the subject material of the course as well as to acquire basic skills useful to the study of the liberal arts. Students will learn to read books and original documents, discuss them, formulate effective arguments, and write essays and papers. Historical analysis of this type will provide students with techniques for appreciating and judging arguments and presentations in many fields of learning, from scholarly to popular. The topics chosen for these seminars will acquaint students with major figures and developments in important historical areas. By reading and understanding historical documents, students will learn to consider the cultural assumptions of different groups and societies and to appreciate their own values and assumptions by contrast with these. Although the course will focus on a specific topic, the instructor will help the student to see the wider implications of the issues and controversies discussed. Whenever possible, the international and intercultural aspects of the topic will be considered. The course will challenge students to express themselves and to gather information through discussion and writing of papers. It will always challenge students to think about social behavior, the nature of the community, and the value of scholarly endeavor as these relate to the particular topic of the seminar. The course fulfills the first-year seminar requirement as well as one of the humanities requirements in general education or a Bachelor of Arts humanities requirement. The course will be offered twice a year in sections of 20 students.

General Education: GH

History (HIST)

HIST 100 (GH;IL) (CAMS 100) Ancient Greece (3) Greek world from the earliest Aegean cultures to the death of Alexander the Great and the beginnings of Hellenistic civilization.

HIST (CAMS) 100 Ancient Greece (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The course presents a survey of ancient Greek history and culture beginning with the Bronze Age palace-states of Crete and Mycenae, examines the emergence of Greek city-states, notably Athens and Sparta, traces their transformation through conflicts among themselves and with the Persian empire, and describes their eventual eclipse by the kingdom of Macedon. Since this course treats the beginnings of historical writing among the Greeks, students learn to evaluate diverse historical texts and their relationship to legend, myth, and poetry. The nature of historical thought itself is emphasized throughout the course. Also emphasized is the debate between the egalitarian justice of democracy, the sober wisdom of oligarchy, and the overwhelming power of monarchy, as experienced by the Greeks down to the end of the fourth century B.C.E. Evaluation methods include: evaluation by four short objective quizzes, by four short (1-2 page) thematic essays, by participation in four scheduled discussion sections, and by mid-term and final examinations consisting of short answer identifications and an essay, or students may write a term paper in lieu of the final examination. The course will be offered once a year with an enrollment of 90.

History (HIST)

HIST 101 (GH;IL) (CAMS 101) The Roman Republic and Empire (3) History of the Roman Republic and Empire from the origins of Rome to the disintegration of the Empire.

HIST (CAMS) 101 The Roman Republic and Empire (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course fulfills 3 credits of the General Education-Humanities (GH) requirement and is an introduction to the ancient Roman empire: how that empire came into being, how it evolved, how it came to govern much of the Mediterranean and European world, and how that empire declined. Particular stress is placed, through readings and discussion, on the sources of our knowledge of the past and on the social and legal structures employed by a past society to govern an ethically- and religiously-diverse population. This course complements other courses on the ancient Mediterranean world (such as HIST/CAMS 100) and is a prerequisite to more advanced (400-level) courses in ancient Mediterranean history. An example of evaluation includes: three brief quizzes, a take-home mid-term permitting library and Internet use, and a final examination; all examinations require student synthesis and expression of what has been learned through written essays of varying length. Emphases in the course are on student engagement through class discussion of the topics presented in the texts and lectures. This course is offered once a year with 60 seats per offering for HIST and 30 seats per offering for CAMS and requires no special background save for an interest in the topic.

General Education: GH
Diversity: IL
Bachelor of Arts: Humanities
Effective: Spring 2006

History (HIST)

HIST 100S (GH;IL) Ancient Greece (3) Greek world from the earliest Aegean cultures to the death of Alexander the Great and the beginnings of Hellenistic civilization.

HIST 100S Ancient Greece (3)
(GH;FYS;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The course presents a survey of ancient Greek history and culture beginning with the Bronze Age palace-states of Crete and Mycenae, examines the emergence of Greek city-states, notably Athens and Sparta, traces their transformation through conflicts among themselves and with the Persian empire, and describes their eventual eclipse by the kingdom of Macedon. Since this course treats the beginnings of historical writing among the Greeks, students learn to evaluate diverse historical texts and their relationship to legend, myth, and poetry. The nature of historical thought itself is emphasized throughout the course. Also emphasized is the debate between the egalitarian justice of democracy, the sober wisdom of oligarchy, and the overwhelming power of monarchy, as experienced by the Greeks down to the end of the fourth century B.C.E. History (HIST)

HIST 103 (GH;IL) The History of Madness, Mental Illness, and Psychiatry (3) This course will examine the ideas that have shaped European and American perceptions of madness, insanity, and mental illness.

HIST 103 The History of Madness, Mental Illness, and Psychiatry (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course will be an introduction to the modern history of "madness" in the Western world. In particular, we will examine the ideas that have shaped European and American perceptions of madness, insanity, and mental illness; the changing experiences of those afflicted; the development of those professions designed to look after those deemed mad, insane, and mentally ill; and the social and cultural assumptions behind treatments, policies, and public opinions. Our sources will include clinical case studies, memoirs of those living with mental illness, histories of psychiatric practice, and films. An example of the evaluation methods would be 3-4 written, in class exams, a 10-12 page research paper on a subject of choice, and class participation. The chief objectives of the course will be to confront head-on some of our most persistent assumptions about mental health and those with mental illnesses, evaluate how mental illness was understood and treated over the centuries, and become acquainted with the ways in which human biology, culture, society, and politics have reciprocally shaped one another in history.

The course can be effectively linked to several courses offered within the Department of History, including HIST 122 and 123 (History of Science I and II) and HIST 422 (European Thought Since 1870). In addition, it will fulfill requirements for both history majors and minors. The substance of the course emphasizes competence in the interpretive and critical understanding of the values, ideas, and experiences associated with mental disability over history and across cultures also means that it meets requirements for both General Education in the Humanities as well as Intercultural/International Competence. It is hoped that students across the human, social, and natural sciences will enroll in the course.

History (HIST)

HIST 102 (GH;IL) (CAMS 102, J ST 102, RL ST 102) Canaan and Israel in Antiquity (3) Political, social, and intellectual history of the land of Canaan/Israel in the Biblical era: Late Bronze and Iron Ages.

HIST (CAMS/J ST/RL ST) 102 Canaan and Israel in Antiquity (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

From the domestication of animals and the dawn of agriculture to the development and socialization of monotheism, the world of the first civilizations led to that of the Bible and ancient Israel. This course, involving a critical view of Biblical texts in light of other anicent sources, archaeology and historical methods, explains the nature and the evolution of society, religion and thought in the Biblical era. Learn how civilization arose, and how the state appropriated religion and applied it for its purposes. How the science of administration developed and deployed ideological tools to further its own ideas of the West developed. This course is deeply subversive, particularly of religious and academic shibboleths. The only authority in this class is that of the most persuasive reader, and doctrines, whether religious or political, will have to be checked at the door.

An example of evaluation may be: weekly participation in discussion; mid-term and final essay examinations involving a critical evaluation of ancient text's claims in combination with archaeological evidence; a research essay, where the class or section size is lower than 30; an ability to read critically, bringing different classes of evidence to bear on issues arising from the texts, and construct coherent and compelling arguments to a particular thesis. The course provides a Near Eastern counterpart to HIST 100, 402 and a Near Eastern aspect to the Jewish Studies major. It complements RL ST 110, by offering historical exploration of the culture under study in that course. Related courses include ANTH 012, HEBR, 010, ENGL 104, RL ST 004, and RL ST 111. The course helps round out the majors in History and Jewish Studies, particularly in ancient history. It also extends the program in Religious Studies (history of religions), and it contributes to the ancient stream of the prospective program in Jewish Studies and History. The class will be offered once every other year with an enrollment limit of 15-20.

History (HIST)

HIST 107 (GH;IL) (MEDVL 107) Medieval Europe (3) Rise and development of the civilization of medieval Europe from the decline of Rome to 1500.

HIST (MEDVL) 107 Medieval Europe (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

HIST/MEDVL 107 is an introductory course on the history of Europe from the late classical period to the beginning of the sixteenth century. There are three main areas of concentration in this course. First, the development of political, judicial and diplomatic institutions, from the collapse of central Roman authority through the rise of local chiefdoms to the centralized kingdom as ancestor of the modern state. The second theme is the role of Christianity in all its forms--orthodox, heretical, and popular--and its contribution to a distinctly medieval society. The third main theme is the development of society following changes in economic activity, cultural interest and the extended family.

Several forms of learning are used in this course. A textbook gives the student a broad overview of the period and gives a chronological structure to the material. This material provides a background to the instructor's lectures, which not only give factual information, but integrate the various trends, individuals and events. The assigned readings illustrate specific events or individuals; the discussion groups allow the student to explore these texts in a collaborative environment with the instructor and their fellow students. The research paper gives the student the opportunity to investigate a specific topic of interest, while training them in scholarly writing and analysis. Finally, the tests, all essay questions, let students demonstrate their comprehension of the material through problem solving.

The essay exams and discussion groups allow the student actively to address specific problems from the material; the research paper enables the student to gather information from traditional (library archives) and non-traditional (electronic) sources, then to present a conclusion in a comprehensive and coherent argument;

The class discussion promotes collaborate and cooperative learning, as the students expand on, and/or argue against, positions taken on the material by their instructor and fellow students. Internationalism and interculturalism is the essence of this course. The research paper, essays and discussion allow for scholarly development through the investigation of communities in an important era of history.

History (HIST)

HIST 108 (GH;IL) The Crusades: Holy War in the Middle Ages (3) The social and political history of medieval religious warfare in Europe and in the Middle East.

HIST 108 The Crusades: Holy War in the Middle East (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

History 108 is an introductory survey of the so-called holy wars of the High Middle Ages. These wars were fought in theatres from the Baltic to the eastern shores of the Mediterranean, from the Hispanic peninsula to southern France. While the primary emphasis will be given to the expeditions to the Holy Land, two other crusading movements will be studied: the crusades in the Baltic, led by the Teutonic Knights, and the crusades in southern France, against the heretics known as the Albigensians. These conflicts cannot be studied in isolation, and a major topic is the response of Islamic society and non-conformists elements within medieval Europe. How the various elements in the crusading period co-existed, changed or disappeared provides still more material for the student to contemplate.

Students will be evaluated on three essay examinations, regularly scheduled discussions of the assigned readings, the instructor's assessment of the student's ability to read critically, write clearly and knowledgeably, and class participation. History 108 is part of a series of introductory courses to medieval history. It will be accepted but not required for the History Major and Minor. It will be offered once each year with 90 seats per offering.

History (HIST)

HIST 110 (GH;IL) Nature and History (3) A broad introduction to the history of human relationships with nature throughout the world.

HIST 110 Nature and History (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The human relationship with the natural environment-the world of plants, animals, and microbes, of air, water, and land-is an important historical subject. History 110 provides a broad, thematic description and analysis of major global trends and shifts, with an emphasis on contemporary issues and problem solving. The most important goal of the course is to provide students with the historical context necessary to construct a thoughtful appreciation of the environmental dilemmas of our time.

History 110 encourages students to break down the barriers that often divide the humanities and the sciences. This course utilizes environmental science to demonstrate and explain specific human tendencies. Finally, this course-as is any in world history-is structured to at least diminish students' American-centered view of both the past and environmental concerns. Particularly in relation to contemporary environmental issues, we hope History 110 will make clear that many environmental problems are local in neither their construction nor impact.

Ecology has contributed a great deal to historical understanding in terms of specific examples or case studies; however, it has also begun to reconstruct the overall structure of the history that we teach. History 110 seeks to exploit this new paradigm by following a topical organization that is structured around human modes of interaction with the environment. In Unit 1 the course borrows its structure from geography and the natural sciences. Students will be able to consider a wide range of human activity as well as to better comprehend similarities in ideas, ethics and concepts from around the world and throughout history. In Unit 2 the course steps out of chronological limitations to embrace two topics that span human history. By studying such topics, of course, students may see change over time contextualized by a shared concern or resource. Unit 3 is designed to reinforce the global nature of the course and the concerns that we study within it. We will highlight interdependence by including issues that link students' local environment with distant others.

The lectures and discussions will focus on several critical points, including: How has the non-human world shaped the course of human history? What were the environmental impacts of historic changes in the ways humans produced and consumed resources? What ideas shaped the ways different groups of people defined and used specific resources? What role have science and technology played in changing popular attitudes about the human place in the world?

History (HIST)

HIST 113 (IL) Baseball in Comparative History (3) Comparative survey of baseball history from its beginnings to the present.

HIST 113 Baseball in Comparative History (3) (IL)

This course, which fulfills the International Cultures (IL) requirement, provides an introduction to comparative social history. It uses the broad cultural and geographic diffusion of baseball over time to examine the diverse and changing social, economic, and political meanings of this activity in different cultural settings, emphasizing the ways in which a common activity may acquire unique meanings in different cultures. Although North America, Cuba, and Japan demand attention as the most striking examples of baseball's pervasive impact, the course will consider baseball as a global phenomenon, exploring the minimal impact or failure of baseball promotions in many European and African societies, for example. As an introduction, the course will confine itself to English language texts, but it will use a wide range of primary sources, including newspapers and journals, memoirs, correspondence, promotional materials, and photographs to introduce students to basic concepts of historical method and problems of evidence. Students will be encouraged to consider baseball's impact in particular historical contexts as a cultural process, from the manner of its introduction through its adoption to the emergence of distinctive proprietary, even nationalist attitudes and styles of play. Among the many topics required of a survey, the course will return periodically to the question of American influence and US imperial aspirations. But the evidence of baseball games in other countries as sites of resistance or hostility to US power and as expressions of a potent nationalist politics raises questions about baseball's value for many conventional historical models of “empire” as a form of political or economic subordination. Students' assignments will require a combination of reading, writing, and research skills, and the course will introduce through lecture and discussion the variety of materials available at Penn State for the study of this subject.

History (HIST)

HIST 115 (GH;US) (J ST 115, RL ST 115) American Jewish History and Culture (3) Examination of the history, culture, social tensions, and contributions of Jews and Judaism in America.

HIST (J ST/RL ST) 115 American Jewish History and Culture (3)
(GH;US)

Throughout American history, Jewish presence on American soil has compelled Americans to re-think the meaning of religious and ethnic diversity. As one of the earliest non-Christian immigrant populations, American Jews struggled to explain how they could nonetheless fit into American cultural, political and social life. At the same time, many Jews have been concerned with their own survival as a distinctive group, unwilling to cede those practices, behaviors or traits that designate them as a people apart from other Americans. This course is about how these two seemingly contradictory goals—to integrate into America and to remain distinctive from other Americans—shaped the history and experience of Jews in the United States and influenced the way Americans think about diversity and pluralism.

The student of American-Jewish history must be attuned to the multiple ways that Jewishness has been defined: as a race, a religion, a nationality, and an ethnicity. In this course, far from choosing just one of these designations, we will explore Jewish life from many different angles. Topics to be considered include religious reform, immigrant experience, political activism, popular culture, and struggles over community authority. Readings focus on a number of primary texts, including memoirs, novels, films and philosophical essays. Secondary books and articles will also help deepen students' understanding of trends in American-Jewish history and awaken them to diverse interpretations of history. Students will be encouraged to engage actively and critically with the texts by writing short reading responses, longer essays, and participating in classroom discussion and presentations, all of which will serve as the basis for their evaluation.

This course complements offerings in Religious Studies, Jewish Studies and History. It provides a foundation for an already existing upper-level seminar in American Judaism (listed in Jewish Studies and Religious Studies). In addition, the course strengthens the History department's offerings in American history, serving as a basis for students interested in immigration, ethnicity and religious history. Students who are interested in modern Jewish history will also find this course a worthwhile addition to their program of study, since, unlike other courses, it deals primarily with the story of Jewish life in the United States.

History (HIST)

HIST 117 (GH;US;IL) (WMNST 117) Women in Modern History (3) Modernization and women: changing images and roles since mid-eighteenth century in the family, workshop, politics, society; cross-cultural comparisons.

HIST (WMNST) 117 Women in Modern History (3)
(GH;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

History/Women's Studies 117 is an introductory survey of women in the United States and possibly elsewhere, from the seventeenth to the late twentieth century. The course examines women's history from several different perspectives. First, it introduces students to the methods, sources, and questions of the past thirty years of women's history-writing, and asks students how studying women transforms our understanding of history more generally. Second, it offers a survey of the narrative of modern women's history, stressing women's interactions with the larger processes of economic and political change, their relationship to changing ideologies of gender and feminism, and their complex identities not only as women but as members of a particular race, class, ethnic, and religious group. Throughout, students will ask when gender, and when some other aspect of women's lives and identities, is most salient in identifying the restrictions and opportunities they faced. Third, students will assume the perspective of historians themselves, as they examine primary sources and attempt to make analytic and historical judgments about what they say and why they matter to the larger narrative. Through significant essay-writing assignments, students will develop analytical and writing skills in learning to think historically about women. Questions about race, class, ethnicity, and sexual orientation, as well as gender, are intrinsic to this course. Students will be evaluated based on their class participation, papers, and final exam. This course is cross-listed in History and Women's Studies and fulfills requirements for both programs' majors and minors. History/Women's Studies 117 will be accepted, but not required, for the History Major, the Women's Studies Major, and the Women's Studies Minor. This course will be offered once a year with up to 70 seats per offering.

HIST 121 (GH;IL) (J ST 121) History of the Holocaust 1933-1945 (3) Historical analysis of holocaust themes.

HIST (J ST) 121 History of the Holocaust 1933-1945 (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The course will analyze the Holocaust using historical, literary, and philosophical approaches. Various species of evidence will be used and evaluated, including film and literary materials. Emphasis will be placed on discussion, student research projects, problems of ethnicity, race and religion in analyzing the origins of a persecuting mentality and the scapegoating and brutalization of victims, primarily Jews, but also including Gypsies and other groups. The Holocaust is also discussed in the context of global genocidal phenomena. The peculiar structures and dynamics of Jewish ethnic life in Eastern Europe are also treated prominently. Comparative analysis of the relationships between dominant and non-dominant cultures is a major concern of the course. An example of evaluation may include requiring students to complete one major paper on a specific theme covered in the course with a draft of four pages due at the end of six weeks. Students will be required to complete one major paper on a specific theme covered in the course. The course will contribute both to studies in 20th century European and German history, as well as to Jewish Studies. It will form a prominent feature linked to Modern Jewish History HIST/J ST 118 and the History of Anti-Semitism (HIST 302W). The course may be used to count for 3 credits toward the 18 credits required for the History minor and 22 credits required for the Jewish Studies minor. The course will be offered once per year with an enrollment of 20 for HIST and 20 for J ST.

History (HIST)

HIST 122 (GH) (S T S 122) History of Science I (3) A history of science and culture from Stonehenge to the scientific revolution.

HIST (S T S) 122 History of Science I (3)
(GH)

(BA) This course meets the Bachelor of Arts degree requirements.

The purpose of this course is to explore the earliest developments in science, beginning with the prehistoric roots of technology and theories of human origins, followed by an engagement with the achievements of the Mayans, Aztecs, and native North Americans. We then turn to science and technology in the ancient Greek and Egyptian worlds, followed by an analysis of early Chinese and East Indian science, medieval science in Europe, selected African sciences, and the rise of modern science in Scientific Revolution and beyond. The point of the course is to show that science is a world tradition with an ancient history, and that many social, political, cultural, and economic forces can push or pull this peculiar form of knowing in one direction rather than another. There are other history of science courses offered at Penn State, but none treats the history of science in general in relation to its social context and influences. Other history of science courses are more thematic than survey courses. HIST/S T S 123, "History of Science II," treats science from the scientific revolution to the present. Students may take either course alone or out of sequence; the first will not be a prerequisite for the second. The expectation is that students will combine knowledge acquired in this course with knowledge from their required general education courses in science to develop a broader understanding of history and science. HIST/S T S 122 may be used to fulfill a requirement for the History major and the History minor and it is an essential part of the recently proposed science and technology history theme within the Science Technology & Society minor. Nonmajors may use it to fulfill a general education humanities requirement. This course will be offered once a year with 65 seats per offering.

General Education: GH
Diversity: None
Bachelor of Arts: Humanities
Effective: Spring 2005

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

History (HIST)

HIST 123 (GH) (S T S 123) History of Science II (3) A history of science and culture from the scientific revolution to the present.

HIST (S T S) 123 History of Science II (3)
(GH)

(BA) This course meets the Bachelor of Arts degree requirements.

The purpose of this course is to explore the earliest developments in science, beginning with the prehistoric roots of technology and theories of human origins, followed by an engagement with the achievements of the Mayans, Aztecs, and native North Americans. We then turn to science and technology in the ancient Greek Egyptian worlds, followed by an analysis of early Chinese and East Indian science, medieval science in Europe, selected African sciences, and the rise of modern science in the Scientific Revolution and beyond. The point of the course is to show that science is a world tradition with an ancient history, and that many social, political, cultural, and economic forces can push or pull this peculiar form of knowing in one direction rather than another. There are other history of science courses offered at Penn State, but none treats the history of science in general in relation to its social context and influences. Other history of science courses are more thematic than survey courses (e.g., "History of Mathematics" and History of Gender in Science, and Archaeostronomy). HIST 122, "History of Science I," treats science from Stonehenge to the scientific revolution. Students may take either course alone or out of sequence; the first will not be a prerequisite for the second. The expectation is that students will combine knowledge acquired in this course with knowledge from their required general education courses in science to develop a broader understanding of history and science. HIST/S T S 123 may be used to fulfill a requirement for the History major and the History minor and it is an essential part of the recently proposed science and technology history theme within the Science Technology and Society minor. Students will learn historical techniques for the objective evaluation of readings and the formulation of clear and valid responses. Students' grades will be formed from a combination of a midterm and a final. Students are also required to do a paper for the class, the topic being subject to the approval of the instructor. This course will be offered once a year with 65 seats per offering.

History (HIST)

HIST 124 (GH;US;IL) (S T S 124) History of Western Medicine (3) This course explores the history of health, illness, and medicine in western society.

HIST (S T S) 124 History of Western Medicine (3)
(GH;US;IL)

Relying on both primary and secondary sources, the course examines developments in medical thinking and practice, the changing status of medical practitioners, and the experience of patients in order to understand the links between medicine and its social, cultural, intellectual, and political contexts.

This course will also augment offerings in bioethics and medical humanities by providing the historical context of ethical issues and social policies concerning medicine. It will be attractive to students pursuing a health professional career and will provide a historical context to the issues raised in courses such as HD FS 301 "Values and Ethics in Health and Human Development Professions, " BIOL 461 "Contemporary Issues in Science and Medicine," PHIL/S T S 432 "Medical and Health Care Ethics," and ANTH 470H "Our Place in Nature." The course will be one of the Humanities Electives for the Bioethics/Medical Humanities Minor as well as the proposed Disability Studies minor.

Within the Department of History, the course is part of the undergraduate offerings in the history of science and , thus, is directly linked to HIST/S T S 122, HIST/S T S 123, and HIST 103. The course would also support the Science, Technology, and Society Program's undergraduate minor, augmenting courses in science and health and medicine, such as S T S 101, S T S 105, S T S 200, and S T S 432.

History (HIST)

HIST 130 (GH;US) Introduction to the Civil War Era, 1848 through 1877 (3) Survey of causes and consequences of American Civil War, end of Mexican War in 1848 through end of Reconstruction, 1877.

HIST 130 Introduction to the Civil War Era, 1848 through 1877 (3)
(GH; US)

BA - This course meets the Bachelor of Arts degree requirements.

HIST 130 is a general survey of the American Civil War Era that satisfies the Gen Ed GH requirement. Course content features the cause of the war, the conflict itself, and the consequences for the meaning of freedom in the United States. Chronologically, the course spans from 1848 through 1877, or from the Mexican War through Reconstruction. Students will become familiar with American slavery; northern and southern social, cultural, political, and economic composition; the military progress of the war; problems on the home front; the struggle for emancipation; and the creation of a new nation based on free labor. Lectures are supplemented with discussion days in which students react to readings. Grading stresses the use of analytical and writing skills, as well as the ability to think historically and analyze documents critically.

HIST 127 (US) (LTNST 127) Introduction to U.S. Latina/o History (3) This course introduces students to the history of U.S. Latina/os, including Puerto Ricans, Dominicans, Chicanos, Cubans, and Central Americans.

HIST (LTNST) 127 Introduction to U.S. Latina/o History (3) (US)

This course introduces students to the history of U.S. Latina/os, drawing on the multiple experiences of Puerto Ricans, Dominicans, Chicanos/Mexicanos, Cubans, and Central Americans. Course content features the divergent development of U.S. Latina/o cultural and political identities rooted in the Caribbean, Mexico, Central American, and the United States. Students will understand the formation of racial and class hierarchies within U.S. Latina/o communities; the processes of (international) migration; gendered hierarchies and responses to sexism; and the complexities of U.S. Latina/o identity. Lectures are supplemented with discussion days in which students respond to readings under the guidance of a graduate teaching assistant. Grading stresses proficiency in analytical, historical writing.

History (HIST)

HIST 134 (GH;IL) Introduction to the British Isles, 1400-1800 (3) Survey of the history and cultures of the British Isles from 1400 to 1800.

HIST 134 Introduction to the British Isles, 1400-1800 (3)
(GH;IL)

This history course, which fulfills the Humanities requirement in General Education (GH) or the International Cultures (IL) requirement, provides an introduction to the history of the British Isles from the fifteenth to the early nineteenth centuries, focusing on the diversity of English, Welsh, Scots, and Irish cultures and customs, their influence on early forms of nationalism in the British Isles, and their importance in the formation of the modern British nation-state. Using a wide range of primary sources, including the work of prominent British writers, the course introduces basic concepts of historical method, while exploring the process whereby an English empire came to govern these four major “peoples” of the British Isles. Students will be encouraged to consider the dynamism of this process, involving complex interrelationships rather than the simple supremacy of one ethnic group over another. The relationships between English and Scots protestants, the importance of translating the Book of Common Prayer from English to Welsh, the influence of Irish-born families of English descent on the governance of early modern Ireland, were all key elements in the emergence of an empire under the authority of an English dynastic state whose practical control over the territories it claimed to govern often remained quite limited.

History (HIST)

HIST 142 (GS;IL) History of Communism (3) Marxism; Leninism and evolution of the Soviet Union; formation and development of the Communist bloc; impact of Chinese Communism.

HIST 142 History of Communism (3)
(GS;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Communism is one of the most powerful ideologies to have ascended in the modern period of history. Fashioned from Marxist philosophy, communism was embraced in the twentieth century to over one billion people from the former USSR, to China, to South Asia, to Africa, to Latin America, and by some here in the U.S. Unquestionably, the institutionalization of communist regimes has left an indelible mark on world history. This course will explore the writings of Marx and his advocates, notably Engels and Lenin, and strive to understand why the first communist regime emerged in the unlikeliest of places: Russia. Using the Soviet Union as a case study, we will examine how Marxist principles were either applied or transformed in the construction of the first communist society. By examining the history of the Soviet Union, including its spectacular and rapid demise, we will come to a greater understanding of communist principles and of the dynamics of capitalism as well. As a counter-example, we will also focus on the Chinese experience of Communism and contrast the divergent paths to reform that have been implemented there. The goal of the class is twofold: to become familiar with the principles of communism by examining their application primarily in the USSR, Eastern Europe and China, and to come to a greater understanding of the dynamics of a capitalist system. The course grade will be determined by the student's performance on in-class essay exams, a research paper, the comprehensive final exam (essays and short answer), participation in class discussions, and regular attendance. This course serves as a prerequisite to History 430 and History of the Soviet Union, and provides valuable background for such related courses as PL SC 413 and 452 and RUS 100. HIST 142 satisfies three credits of any history for History majors. It is also a prerequisite for several upper level history courses dealing with twentieth century Eastern European or Eurasian history. For all other students, this course fulfills a Social and Behavioral requirement in general education. HIST 142 will be offered once each year with 75 seats per offering.

History (HIST)

HIST 143 (GH;IL) History of Fascism and Nazism (3) The study of right-wing totalitarianism in the twentieth century, with special emphasis on Fascist Italy and Nazi Germany.

HIST 143 History of Fascism and Nazism (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

History 143 is an introductory survey of fascism and Nazism. The course concerns itself with understanding the social context of fascism, its governing assumptions, ideals, and values, how it worked in practice, and its consequences and historical implications. The course centers on the analysis of secondary and primary sources, and textual, video, and audio materials are all used. Lectures tie the various materials together, while weekly discussion sessions provide an opportunity for students to engage the materials directly. Students are evaluated on the basis of exams (which include an essay component), papers, and class attendance and participation. The course contributes not only to the study of the history of authoritarianism, antisemitism, and the history of the holocaust, but also contemporary and modern European history and, of course, German, Italian, and Spanish history. History 143 will be accepted, but not required, for the History Major as well as the History Minor. It may function as a service course for the Departments of Political Science and Sociology. It is recommended that it also serve as a general education course in the Humanities. This course is offered once a year with enrollment of up to 150 per offering with small discussion sections once a week.

History (HIST)

HIST 144 (GH;US;IL) The World at War: 1939-1945 (3) In-depth study of the origins and conduct of World War II. Political and economic aspects as well as military.

HIST 144 The World At War: 1939-1945 (3)
(GH;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course offers a wide-ranging description and analysis of the second world war, combining military history with political, social and cultural approaches. One major goal is to describe how large-scale war serves as a revolutionary social and cultural force in its own right, massively accelerating social change. In the case of the second world war, the course will describe how the conflict did much to create what we think of as the modern world, not only in political terms (the roots of the cold war, the collapse of European imperialism) but also in radically changing attitudes towards such basic matters as gender relations and generational conflict. Also viral were the new scientific advances of the war years, in nuclear energy, radar, aviation, and perhaps most critical of all, the computer. Particularly important to the educational justification for the course is the stress on the construction of historical memory, a theme with implications far beyond the specific instance of World War II. The course will assess and challenge many of the myths surrounding the war, and to show how subsequent accounts of the conflict were shaped by political and cultural needs. For example, the course will stress the critical importance of the Eastern Front throughout the phenomenon understated in the West because of the patriotic Anglo-American emphasis on D-Day. It will also explore the "Resistance Myth", and suggest the moral compromises necessary to survive in occupied societies of Europe and Asia. Throughout, the course will stress the impacts of war on the home front and civilian society. The course will be offered once every two years, with fifty seats on each occasion. Typically, students will be evaluated on essay exams, written book reviews, and research papers, and are expected to participate fully in class discussions of assigned readings. History 144 is an important complement to several existing courses within the History department, including 120, Europe Since 1848; 121, The History of the Holocaust; 142, History of Communism; 143, Fascism and Nazism; and 160, American Naval History. It also provides an excellent foundation for 400-level courses including 420, Recent European History; 447, Recent American History, and 454, American Military History 144 satisfies general credit requirements for the history major or minor. Majors and non-majors would both be able to use the course to satisfy their general education humanities selection.

History (HIST)

HIST 155 (GH;US) American Business History (3) Major developments in the history of business and industry from the colonial period to the present.

HIST 155 American Business History (3)
(GH;US)

(BA) This course meets the Bachelor of Arts degree requirements.

History 155 surveys the development of business and industry within the United States, from the colonial period to the present. It treats the conduct of business as an integral element of American society and culture. Topics to be discussed will include the colonial commitment to commerce and early debates over what kind of commercialism the new national government should encourage; the effects of new technologies like the cotton gin, canals, and railroads in the 1800s and electrical products, cars, and computers in the 1900s; the emergence of modern large-scale industrial production and changes it brought about in business management, in society, and in politics; the changing fortunes and corporate citizenship; changing ideas about what kind of relationships should exist among governments, citizens, and businesses; the importance of world events for American businesses; and the emergence and importance of mass-market consumer products since the First World War.

Materials we will use to cover this comparatively complex set of interrelationships will include textbook, supplementary studies of individuals or particular businesses, and current media coverage of the business world. The course is fast-paced and relies on students self-discipline and analytical skills. Student performance will be evaluated on two essay exams, a class presentation, group discussions, and in-class quizzes, and evaluation will be based on the instructors assessment of the students performance in reading and writing critically and knowledgeably on particular subjects, marshaling evidence in support of coherent arguments, and participating in class discussions and presentations.

History 155 may complement, but does not compete with, courses offered by other departments or programs. It will be useful for students intending to major in business programs, in Labor and Industrial Relations, and/or to participate in the business world, by deepening their historical knowledge of that world, and will complement the Business/Liberal Arts minor. It will complement History 020 and 021 as well as more advance courses in American history. History 155 will be accepted, but is not required, for the history major and minor. It may be used to fulfill either General Education or Bachelor of Arts requirements in the Humanities for those not majoring in History. HIST 155 will be offered once a year with 45 seats per offering.

History (HIST)

HIST 172 (IL) Survey of Japanese Civilization (3) Survey of social, institutional, cultural, and religious developments from ancient times to the present.

HIST 172 Survey of Japanese Civilization (3) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is a survey of Japanese history. Because it is impossible to study all aspects of Japanese history in 15 weeks, the course, while broad, will not be comprehensive. Approximately 50% of the course will be devoted to pre-modern Japan and Buddhism, 25% to early modern Japan, and 25% to modern Japan. The modern segment of the course will focus on the late 19th and early 20th centuries and on the difficult concept of nations and national identity. We will examine the creation of Japan as a nation from the perspective of a series of topics, all of which are linked by the theme of "making Japanese." (The meaning of this theme should become apparent to you as you work through the second half of the course, though it may not make sense at the beginning.) The course assumes no prior background in Japanese or East Asian history. It is aimed at students who have grown up in the United States, but it can be useful and interesting for students of all backgrounds. Although there are no formal prerequisites for the course, true college-level skills in reading, writing, computer literacy, and thinking are assumed of all students. Success in the course also requires a discipline for work and reasonably effective study habits. The course is fast paced and students should expect to spend 1-2 hours of quality study outside of class for each class hour. It is particularly important to begin preparing the essay well in advance, ideally starting the first week of the course. There are three factors that tend to make History 172 more demanding than other introductory courses in history. First, the names of Japanese people, places, and things are, of course, in Japanese. This fact puts an added burden on the memories of the majority of students, since most will be unfamiliar with Japanese. Remembering the key names, therefore, will require additional effort. Second, many aspects of Japanese culture and political organization will be largely or entirely unfamiliar to most students from the United States (and elsewhere), and will therefore require more effort to comprehend. This second factor, i.e., the "foreignness," may also make the course more interesting for some students. Third is a high expectation of mastery. In other words, to do well in this course, you will need to understand its key points and concepts thoroughly. It is not possible to succeed simply by memorizing a list of items and spitting them back on exams. Students will be evaluated on three essay exams, participation in class discussions of assigned readings, and a major book review paper. History 172 is an excellent foundation for History 480 (Medieval Japan) or History 481 (Modern Japan), and is one of the courses that satisfy the prerequisite requirements for 480 and 481. It is also an excellent foundation for the further study of East Asia or for students interested in comparative history. In addition to satisfying GI requirements, History 172 satisfies general credit requirements for the history major and minor, including the "non-western" component of the major. The course also may be used to fulfill requirements for the East Asian Studies major, the Asian Area Studies minor, and the major and minor in Japanese. This course will be offered once a year with 50 seats per offering.

General Education: None

Bachelor of Arts: Humanities
Effective: Summer 2005

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

History (HIST)

HIST 173 (GH;IL) Vietnam in War and Peace (3) Rise of nationalism and communism; origins of conflict; United States involvement; impact on postwar regional and international politics; contemporary Vietnam.

HIST 173 Vietnam in War and Peace (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The small Southeast Asian nation of Vietnam remained an obscure and exotic land, relatively unknown to the rest of the world until the mid-twentieth century when it became the scene of a military and political struggle with important global implications. History 173 examines two interrelated topics: 1) the long history and unique culture of Vietnam and its peoples, extending from prehistory to the present; and 2) Vietnam's constant struggle over several millennia-to secure its independence in the face of continual military, political, social, and economic pressure from outsiders, especially the Chinese, the French, and the Americans. The course includes special focus on the physical geography of Vietnam; the anthropological origins of its people; the evolution of its unique culture, folklore, and legends; its long-term struggle against Chinese military and cultural aggression; its role as a colony in the French global empire; the rise of nationalism and communism in Vietnam; the origins of global conflict in Vietnam in the post-World War II and Cold War world; the conduct of military, political, diplomatic, and economic affairs of France, the United States, North and South Vietnam, and other nations during the wars of 1945-1975; the response of civilian populations and governments to that military conflict; and post- 1 975 Vietnam. Evaluation methods include map-based examinations to familiarize students with the geography of the region and to underscore how geography and history intersect. Examinations include both essay and objective questions that require students to integrate information from lecture and from readings drawn from both primary and secondary sources that examine Vietnam's struggles from different viewpoints. Also required is a research/writing project that explores some specific dimension of the American or Vietnamese homefront experience during 1965-1973, the peak years of the U.S. military effort. This course deepens knowledge about Asian cultures introduced in History 010 and 011 (World History). It supports both the interdisciplinary East Asian studies major and Asian Area Studies minor. This course is accepted for the Military Studies minor. History 173 satisfies both General Education and Bachelor of Arts degree requirements for Humanities.

History (HIST)

HIST 176 (GH;IL) Survey of Indian History (3) Survey of cultural, institutional, and political history from ancient times to the present.

HIST 176 Survey of Indian History (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course surveys the history and civilization of India or South Asia from the earliest times to the modern period. The goal of the course is to enable students to form a comprehensive conception of the various facets of Indian or, South Asian civilization in a historical context. This course is an excellent foundation for the history of modern India and also complements a variety of existing courses on the history of the non-western world. In addition to satisfying the GI requirement, HIST 175 satisfies the general credit requirements for the history major or minor, including the "non-western" component of the major. Non-majors may use this course to satisfy a general education humanities selection. Typically, students will be evaluated on in-class quizzes, written exams, participation in class discussions of assigned readings and critical reviews of books. This course is offered once every year and has an enrollment of 50 students.

History (HIST)

HIST 178 (GH;IL) Latin-American History to 1820 (3) Conquest of the New World, development of colonial institutions, impact on native cultures, and origins of independence movements.

HIST 178 Latin-American History to 1820 (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The "Colonial Latin America" class is a survey of three centuries, from the initial encounter on New World soil of Iberian, African, and native cultures and races, to the birth of independent culturally- and racially-mixed nations. Our emphasis is on the patterns of conquest and cultural encounter, the processes of colonial rule, the nature of interaction between social groups, and on the cultural impact of the colonial experience upon all colonial Latin America's peoples. We study the institutions, cultures, attitudes, and fortunes of Spaniards and Portuguese; African slaves and free blacks; Nahuas and Aztecs, Mayas, and Incas. We discover the roles played in colonial society by a wide variety of peoples, from an African slave on a Brazilian sugar plantation to a Spanish high society woman in Lima to the black and native workers in an Ecuadorian tannery to an Aztec nobleman in Mexico City. The people who lived in colonial Latin America are given a chance to speak for themselves as much as possible; most of the assigned books feature contemporary documents translated from Spanish, Portuguese, and various native languages. Students are evaluated on two sets of essay exams and write a paper, as well as participation in classroom discussion. History 178 is offered most years with 90 seats per offering and is a prequel (but not a prerequisite) to History 179, the "Modern Latin America" class often taught the semester following; both classes are required for the Latin American Studies major, as well as meeting various History major requirements.

History (HIST)

HIST 180 (GH;IL) (CAMS 180) Ancient Warfare (3) Historical survey of the evolution of warfare in the ancient Mediterranean region from prehistoric times to the Later Roman Empire.

HIST (CAMS) 180 Ancient Warfare (3)
(GH;IL)

Warfare has occupied a central place in the civilizations of the Mediterranean from the earliest times. The prehistoric origins of warfare is a hotly debated topic and constitutes the starting point for this course. Most scholars are agreed that military culture grew in step with sociopolitical development over the course of the third millennium BCE. In the following centuries, the Egyptians, and later the Assyrians and Persians, took great strides in developing sophisticated tactical systems, using infantry, chariotry, and cavalry. These matters occupy a little over the first third of the course. Across the Aegean Sea, Bronze Age (Mycenaean) Greece was ruled by elites occupying massively walled citadels, their leaders buried surrounded by their weapons. But how did these warriors fight? Do the epic poems of Homer memorialize Bronze Age combat? In the Archaic Period (700-500 BCE) infantry warfare in Greece was transformed by the appearance of the heavily-armored infantryman (the hoplite), deployed in a tight formation (the phalanx). The processes involved in the appearance of this kind of warfare, its nature, and its affects on Greek society and culture will be the focus of our attention for the second third of the course. On the periphery of the Mediterranean basin stood a variety of warrior cultures (the Scythians, Celts, or Germans). Numerous warrior-dominated polities vied with each other in Archaic Italy, but one of them, sitting on a ford on the river Tiber, ultimately rose to be the greatest military power produced by the ancient Mediterranean world – Rome. The Roman legions first won and then ensured the security of a Mediterranean-wide empire that stood for 700 years and evolved ultimately into world’s first standing army of professional volunteers. The Roman military system holds our attention for the final third of the course. The course defines “warfare” broadly to include both tactical and strategic, as well as cultural and ideological, matters. Even this canvas is too vast to be surveyed in all its richness, so the major themes explored are: (i) what is war, where does it come from, and how did it change as civilization spread?; (ii) in what ways did warfare develop in the periods under study, in terms of strategy, tactics, and weapons technology?; (iii) how do different warfare practices reflect essential facets of the various cultures under consideration?

History (HIST)

HIST 179 (GH;IL) Latin-American History Since 1820 (3) Origin, political growth, international relations, and economic status of the Latin-American republics, with emphasis upon present-day conditions.

HIST 179 Latin-American History since 1820 (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course focuses on Latin America (with limited coverage of the Caribbean) from the early 1800' s through the present. For the colonial period (c.1500-c.1820), it is easy to see why Latin America has a "common history," as most of it was ruled by two quite similar countries, Spain and Portugal. But after the colonial system collapsed, giving rise to over a dozen independent countries by the 1830s, the issue becomes more complicated. What do these dependence upon markets in developed countries for their economic prosperity? How can we explain the continuing similarities between these countries, without losing sight of their diversity? The approach of this course is broadly chronological, but for each period we will focus on one or more countries that illustrate (however imperfectly) the trends of the period. The goal of the course is not to provide an encyclopedic knowledge of Latin America, but rather to provide a framework for understanding how current issues are rooted in past historical processes, and to offer a better sense of how key historical themes are "lived" by ordinary people in Latin American society. A related goal of the course is to acquaint students with the historiography of Latin American: the different approaches that historians have used to understand the region. Students will be evaluated on two sets of essay exams and a paper, as well as participating in classroom discussion. HIST 178 and 179 are both requirements for the Latin American Studies Major and Minor, as well as satisfying general credit requirements for the History Major.

History (HIST)

HIST 181 (GH;IL) Introduction to the Middle East (3) Origins of Islamic civilization; expansion of Islam; the Ottoman Empire; the Middle East since 1918.

HIST 181 Introduction to the Middle East (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course presents a survey of the history of the Middle East from the rise of Islam to the current day. The objectives are to help students develop the vocabulary and historical background to discuss and evaluate contemporary events and debates, stimulate interest in the varied historical experiences and diverse societies and cultures of the region, and provide a foundation for deeper investigation. Students may elect to take one or more of the 400-level sequence on Middle Eastern history, or other specialized courses, upon completion of the course. The first half of the course focuses on the foundations of Islamic government and civilization, the first Islamic empires, and the Ottoman empire. The second half of the course traces the modern history of the Middle East and examines how it has been profoundly shaped by European imperialism and American political, economic, and strategic interests. Students will be evaluated on regular quizzes and essay exams and participate in class discussions of assigned readings and current events. History 181 satisfies general credit requirements for the history major or minor, including the "non-western" component of the major. The course may also be used to fulfill requirements for the Middle East Studies minor. Non-majors may use this course to satisfy a general education humanities selection. HIST 181 will be offered once a year with 50-60 seats per offering.

History (HIST)

HIST 191 (GH;IL) (AAA S 191) Early African History (3) Explores important economic and cultural transformations in the making of early African empires from 1 MBC to 1750.

HIST (AAA S) 191 Early African History (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The course is an introduction to the history of Africa south of the Sahara from the origins of humankind to roughly 1750. Since it is not possible to undertake a systematic survey of the period -- the continent is too vast and our data too sparse -- we will focus on a number of common themes in the cultural and historical development of African societies. We will start with an introduction to African cultures and the problems in studying them, move on to examine the evidence for the early origins of humans on the African continent, the agricultural revolution, and ancient African kingdoms, empires and civilizations (including Egypt). We will then explore three interrelated themes in the history of Africa from the 16th-18th centuries: trade, state formation, and the spread of Islam. Finally, we will turn to an examination of the slave trade and its impact on Africa and the Americas. This is also a course in historical reconstruction and analysis. There are few documentary sources for this period and much of the data we have is fragmentary. The resulting history consists largely of long-term social changes rather than detailed narrative. We must thus learn to reconstruct history from what evidence is available, using general principles of African social, economic, and political organization that we will develop in class. Typically, students will be evaluated on the basis of a map quiz, short papers, exams that have both an identification and essay component, and participation in class discussions and debates. AAA S/HIST 191 provides an excellent foundation for both AAA S/HIST 192 (Modern African History) and History 479 (imperialism and Nationalism in Africa). In addition to satisfying the GI requirement, AAA S/HIST 192 satisfies general credit requirements for the history major or minor, including the "non-western" component of the major. Non-majors may use this course to satisfy a general education humanities selection. The course also may be used to fulfill requirements for the African and African-American Studies major and the African Studies minor.

History (HIST)

HIST 192 (GH;IL) (AAA S 192) Modern African History (3) Impact of the slave trade, expansion of Islam, colonial conquest, social and cultural transformations, resistance, nationalism, and independence.

HIST (AAA S) 192 Modern African History (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course examines the colonial period in Africa from roughly 1750 to the present. Given the vast geographical breadth of the African continent, its diverse peoples and cultures, and the divergent trajectories of colonial rule, this course cannot provide a comprehensive overview of the modern era in Africa. Rather, it considers some of the most significant transformations in modern African history, including the impact of the Atlantic slave trade and the transition to 'legitimate commerce'; the causes and consequences of European imperial conquest from the 1870's; the dynamics of the colonial encounter; the struggles of African peoples for independence in the 1950's and 1960's; and the enduring impact of the colonial experience on contemporary African social, political, and economic realities. The course is designed to familiarize students with the major events and chronology of modern sub-Saharan African history, and to provide an overview of the key themes and theoretical debates which animate contemporary African historiography. Emphasis throughout the course will be on the understanding and application of historical arguments and theories to available information. The course is intended to help students develop analytical skills vital to the discipline of history, which include the ability to collect and analyze evidence and to construct arguments in both oral and written presentations. To this end, students will have the opportunity to practice both identifying and building arguments by writing several focused short papers that deal with the material covered in a week of class lectures and readings. In these papers, as well as in the two essay exams, students will be asked to generate thesis-driven responses to particular historical problems encountered in the course material. The short papers are intended to promote active engagement with the course material and will be used as the basis for in-class discussions and debates. Typically, students are evaluated on a map quiz, several short papers, participating in class discussions of assigned readings, and exams which have both an identification and essay component. The course content of AAA S/HIST 192 is designed to chronologically follow that of AAA S/HIST 191 (Early African History), and provides an excellent foundation for History 479 (Imperialism and Nationalism in Africa), for which it is a prerequisite. In addition to satisfying the GI requirement, AAA S/HIST 192 satisfies general credit requirements for the history major or minor, including the "non-western" component of the major. Non-majors may use this course to satisfy a general education humanities selection. The course also may be used to fulfill requirements for the African and African-American Studies major and the African Studies minor. This course is offered once a year with 50 seats per offering.

HIST 210 (GH;US) (AAA S 210) Between Accommodation and Alienation: African Americans in a Jim Crow Nation, 1896-1932 (3) The course will explore the context and events that shaped African American life over the period 1896-1932.

HIST (RUS) 210 Between Accommodation and Alienation: African Americans in a Jim Crow Nation, 1896-1932 (GH;US)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is designed for students wishing to develop an understanding of race in American society and politics over the course of the 20th century. It will focus in considerable detail upon the influence of the Plessy vs. Ferguson decision (1896) in the shaping of America over the four decades that followed. Of central concern is an exploration of the ways in which African Americans and their leaders responded to the institutionalization of segregation within American life, and the divergent strategies advocated for dealing with 'Jim Crow' as an impediment to the development of African Americans. The course will also explore the impact of the migration of African Americans out of the South into the cities of the North and the impact of that migration upon both the opportunities for African Americans and the American political system.

Students will be evaluated on the basis of a book review (4-5 pages), a short research paper (5-6 pages), a long research paper (10-12 pages), and their participation in class discussion. The written assignments are designed to improve student research and writing skills, and students are encouraged to be active participants in class discussion.

HIST 205 (GH;US) (J ST 205, RL ST 205) American Antisemitism (3) The Phenomenon of antisemitism in American history from Peter Stuyvesant to the present.

HIST (J ST/RL ST) 205 American Antisemitism (3)
(GH;US)

This course explores the phenomenon of antisemitism in American history from the time of Peter Stuyvesant to the present. The significance and role of American antisemitic movements and authors, as well as its role in American society and culture, are examined and compared to those in European history over the same periods. At the same time, the impact of antisemitism on the lives and mentalities of American Jews is discussed. The course focuses on readings taken from original sources and recent historical treatments. The readings include material on colonial texts, Grant's notorious Order, nativists and anti-immigration texts, Gilded Age antisemitism, the Immigration Acts of the 1920's, Henry Ford's antisemitic campaign, Southern antisemitism and the Leo Frank case, the quota system at American universities, employment discrimination, the "Gentlemen's Agreement" system, Black antisemitism, and the New Antisemitism.

History (HIST)

HIST 211 (GH;US;IL) (AAA S 211) The Emergence and Evolution of the Black Diaspora in the Atlantic World (3) The course will explore the history and role of African and African-descent people in Africa, the Americas, and Europe.

HIST (AAA S) 211 The Emergence and Evolution of the Black Diaspora in the Atlantic World (3)
(GH;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course will explore the origins and evolution of communities of African-descent people whose lives have been influenced by the emergence of the Atlantic world since the sixteenth century. As a survey course the material will expose students to the ways in which Africans and their descendants contributed to the making of the Atlantic World and the economy that underpinned the Transatlantic production and trade networks that linked the "Old" and "New" Worlds. The course will provide history majors/minors an opportunity to explore the role of Africa and Africans in the development of the Atlantic economy which linked the Old and New Worlds since the 16th century. It will also expose them to international/transnational history which will allow them to consider history from a perspective that is broader than that of the "nation."

Evaluation will be based upon a book review (4-5 pages - 15% of the final grade); the mid-term (5-6 pages - 25% of the final grade); a research paper (10-12 pages - 40% of the final grade); and participation in class discussions (20% of the final grade).

The course will be of interest to students interested in American, Caribbean, Latin American, and European history. By focusing upon the Black experience in the Atlantic World, it will provide a perspective that transcends the national historiographies of the region. This course is designed to be a core course within the Undergraduate AAA S major, and it will be required for AAA S majors and minors in African Diaspora Studies. For majors/minors in history the course will allow them to consider history from a perspective that is broader than that of a nation. For non-majors and non-minors, it fulfills a General Education or Bachelor of Arts humanities requirement. The course will be offered once per year with 20 seats per offering.

General Education: GH
Diversity: US;IL

History (HIST)

HIST 235 (US;IL) (J ST 235, RL ST 235) The Church and the Jews (3) Examination of the relationship between Western church and the Jews from the First Century to Enlightenment.

HIST 235 The Church and the Jews (3)
(US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course will examine a key aspect of western history - the complex relationship between the Western (Roman Catholic) Church and the Jews, from the first century to the present. We will analyze ideas and policies regarding Jews as expressed in different realms, from theology and canon law to church art and popular preaching. We will also examine how changing conditions led to striking changes in church attitudes and policy, and how church policy was often at odds with popular sentiments about Jews.

The course will be designed to enable students to grasp the fluidity of attitudes over time, and the interplay of economic, social, political, and theological factors; to grasp of essential elements of a key area of conflict in western culture; and to develop their skills in the close reading of primary texts.

Students will be evaluated on the basis of three quizzes and a final exam.

The course would offer a chance for students to develop perspectives previously gained in a number of courses, particularly HIST 001 and 002 (The Western Heritage), RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), HIST 107 (Medieval Europe), HIST 407 (Early Medieval Society), and J ST 010 (Jewish Civilization). It would complement such courses as HIST 108 (The Crusades), HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), HIST 414 (Renaissance and Reformation), J ST 111 (Early Judaism), J ST 110 (Hebrew Bible), RL ST 120 (New Testament), and RL ST l24 (Early and Medieval Christianity).

The course will count for 3 credits toward a) the 22 credits required for the minor in Jewish Studies, b) the 33 credits required for the major in Jewish Studies, c) the 30 credits required for the major in Religious Studies, and d) the 36 credits required for the History major.

HIST 250 (GH;IL) (AAA S 250) Introduction to the Modern Caribbean (3) A survey course which explores the historical evolution and emergence of the modern Caribbean.

HIST (AAA S) 250 Introduction to the Modern Caribbean (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course will explore the evolution of the Caribbean region from the eve of the arrival of Columbus to the 20th century. It will explore the emergence, migration, and evolution of Amerindian societies in the Caribbean islands prior to the arrival of Columbus. It will then explore the European-Amerindian interactions that lead to the disappearance of these indigenous peoples from the region and the consolidation of European colonial empires. The course will then explore the various forms of coercive labor systems that emerged in the region including indentureship, enslavement, transportation of European prisoners and other social outcasts, African slavery, and the establishment of the plantation system that defined the region until the 20th century using both free and unfree labor to maintain its dominance in these island societies until the late 20th century. The course will also cover the issue of slave resistance, the Haitian revolution, the formation of maroon communities, and the role of abolitionist politics as a factor in bringing an end to slavery. It will also look at the re-emergence of indentureship of Asians as a response to the crisis of labor and the growth of peasant agriculture in the 19th century Caribbean. The course will also explore the emergence of nationalist sentiment in the region, especially the way in which the decay of Spanish colonial authority and the rise of American imperial ambitions helped to set the stage for the nationalist awakening that defined the course of the 20th century in the region. This is the course that will complement and expand upon issues raised in AAA S/HIST 211 - The Emergence and Evolution of the Black Diaspora in the Atlantic World. It will also serve as an introduction to the 400-level course on the Caribbean in the 20th century that will be proposed simultaneously. The course will be required for students interested in pursuing the African Diaspora minor. It may be used to fulfill general education and diversity requirements. It can also be used as a course to meet non-Western history requirements in the History major. Evaluation will be based upon a book review, a mid-term, a research paper, and class discussion/participation.

History (HIST)

HIST 409Y (IL) (J ST 409Y, RL ST 407Y) European Anti-Semitism from Antiquity to the Present (3) Surveys the history of anti-Semitism in Europe from antiquity through the Middle Ages to the present.

HIST (J ST) 409Y (RL ST 407Y) European Anti-Semitism from Antiquity to the Present (3) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course analyzes major episodes in the history of anti-Semitism and tries to clarify the motives and dynamics involved. It seeks to understand what these episodes have in common and what is unique in each case--is there a single universal, eternal antisemitism? Or are there rather "anti-Semitisms", each belonging to a unique historical context? Is there a single continuous line of development in anti-Semitism? What is the relationship of a particular anti-Semitism to the national culture in which it originates?

We will be reading the major original texts of anti-Semitism from Roman and ancient writers, through early Christian texts and medieval Christian Blood Libels against the Jews, documents of the Spanish expulsion, Lutheran tracts, Voltaire's essays, German philosophical texts from Kant to Marx, Wagner's racial essays, the Protocols of Zion, and documents of Nazi anti-Semitism by Hitler and Streicher.

The major part of the grade will depend on a short research paper which will be presented in various drafts, so that the final version represents the culmination of discussion and constructive criticism and advice. This course is a parallel course to J ST/HIST 416 (Zionist History) and J ST/HIST 118 (Modern Jewish History). This course will count toward the Religious Studies, Jewish Studies, and History majors and minors in the 400-level category.

General Education: None

History (HIST)

HIST 410 (US;IL) (J ST 410, RL ST 410) Jews in the Medieval World (3) Trends in medieval Jewish society under Islam and Western Christendom.

HIST 410 Jews in the Medieval World (3)
(US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The Jews lived in widely scattered communities under Christian and Islamic rule in the medieval period. This course will examine how Jews adapted the traditions they developed in Palestine and Babylonia in the early centuries C.E. to the new conditions they encountered in Europe and the Mediterranean region from the ninth to the fifteenth centuries. It will focus on the general problem of how traditional societies survive in rapidly changing circumstances, particularly when their members are a minority population. The course will aim at developing students' skills in comparative analysis as they compare the adaptive strategies of Jews in different cultural spheres (the Franco-German region versus Spain, for example). They will also be asked to compare the different polemical stances Jews adopted vis-a-vis Christianity, on the one hand, and Islam, on the other. They will be encouraged to understand the ways in which Jews internalized certain aspects of the majority culture and rejected others. It is hoped that they will come to see how deeply Jewish history was intertwined with medieval Christian and Islamic history, despite inter-religious hostilities and the frequent need for Jews to defend against majority aggression.

Students will be evaluated on the basis of two mid-term exams (the first after the survey of the Muslim world, the second after the examination of the Franco-German region) and a comprehensive final exam.

The course will be linked to most of the courses taught in the field of Jewish Studies, especially J ST 111 (Early Judaism), J ST 114 (Modern Judaism), and J ST 118 (Modem Jewish History from 1492). It will also be linked to offerings in Religious Studies: RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), RL ST 107 (Introduction to Islam), RL ST 124 (Early and Medieval Christianity), and RL ST 165 (Introduction to Islamic Civilization). Further, it would complement HIST 001 and 002 (The Western Heritage), HIST 107 (Medieval Europe), HIST 108 (The Crusades), HIST 407 (Early Medieval Society), HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), and HIST 471W (Classical Islamic Civilization, 600-1258).

The course will count for 3 credits toward: a) the 22 credits required for the minor in Jewish Studies, b) the 33 credits required for the major in Jewish Studies, c) the 30 credits required for the major in Religious Studies, and d) the 36 credits required for the History major. It will be offered once a year with an enrollment of approximately 60 students.

History (HIST)

HIST 424H (J ST 424H, RL ST 424H, PHIL 434H) Monotheism and the Birth of the West (3) The birth of monotheism and its relation to social organization, the idea of individuality, and science.

HIST (J ST/RL ST) 424H (PHIL 434H) Monotheism and the Birth of the West (3)

(BA) This course meets the Bachelor of Arts degree requirements.

Learn about the formation of Western culture while learning to analyze the texts and other evidence about its formation from a critical rather than naive viewpoint. The idea of monotheism probably arose very early, and was even briefly implemented as a state cultic policy in Egypt in the 14th century BCE. Why then did it take another seven centuries to become widespread--appearing in ancient Judah, Babylon and Ionia almost simultaneously? To answer this question, the course focuses on several developments through the medium of primary texts and archaeology: the shift from a state hinterland based in extensive agriculture and household processing to one organized for intensive agriculture and industrial processing the rise of recognizably modern science; the promotion of individuation and an international elite culture in the context of Assyrian and Babylonian imperial ambitions; the development of the historical and archaeological arts in the context of archaizing in order to re-invent local traditions; and the socialization of monotheism and of democracy. Students will be evaluated on their discussion of the textual evidence as well as on reports in class and a final paper. This is the sole honors course treating the birth of the West. It expands on knowledge acquired in courses listed as prerequisites and in ANTH/CAMS 012; CAMS 044; ANTH/CAMS 133; CAMS/PHIL 200; HIST 100; HIST/J ST 102; and PHIL 200 and enriches the student experience in CAMS 400, CAMS 440, CAMS 480; HIST 402; J ST 411; PHIL 437; PHIL 453, and PHIL 461. This course counts toward the major in Jewish Studies, History, and Religious Studies and toward the minor in Jewish Studies and Religious Studies.

History (HIST)

HIST 431 (US;IL) (AAA S 431) Black Liberation and American Foreign Policy (3) This course deals with American foreign policy and Black liberation in Africa since 1945.

HIST 431 Black Liberation and American Foreign Policy (3)
(US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Black Liberation and American Foreign Policy in Africa since 1945 presents an interdisciplinary approach to the study of American foreign policy in Africa. Course readings will consist of both secondary and primary sources to explore the evolution of American policy toward the continent over the last half-century, and the meaning of the American engagement with Africa for American politics and society.

The course will also examine the reasons that Africa has served as a focus of concern among African Americans both prior to, and, over the period 1945 to the present. Of particular concern will be the ways in which American policy has reflected pressures from African Americans as a constituency in foreign policy.

The focus of the course will be student-centered written research and discussion. Students will be required to select topics from the course outline for presentation in class with the instructor serving as the moderator of discussion and guide to relevant research materials. Students will be encouraged to use both primary and secondary sources for their research. Students will be expected to prepare two individual written presentations which will serve as the basis for class discussion (30% of the grade), a book review (10% of the grade), and a research paper of 15 pages (40% of the grade) on a topic drawn from the areas identified in the course outline. The final 20% of the grade will be awarded for participation in class discussion.

HIST 432 (IL) (AAA S 432) Between Nation and Empire: The Caribbean in the 20th Century (3) An exploration of the political evolution of the Caribbean Region over the course of the 20th Century.

HIST (AAA S) 432 Between Nation and Empire: The Caribbean in the 20th Century (3) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course will explore the political evolution of the Caribbean Region over the course of the 20th century. Its focus will be the ways in which imperial rule and the search for national identity have been the parameters that have shaped Caribbean political history over that period. Students will explore, in written assignments and class presentations, the ways in which the region which has historically been a theatre of confrontation among the major powers in the international system continued to serve that role over the course of the 20th century. The costs that have been borne by the people of the region from these conflicts have been enormous and crippling for several societies, especially Haiti, Cuba, Jamaica, and the Dominican Republic. Among those costs have also been the continued dependence of these societies upon human migration, limited economic strategies of transformation, increasing levels of poverty, and the emergence of a wide variety of political systems that reflect different historical experiences, demographic diversity, varying levels of political autonomy, and a remarkable level of cultural similarities. Evaluation will be based upon two class presentations; one research paper and class participation. The course will be required for students pursuing the African Diaspora minor and for those seeking to broaden their diversity requirements. It can be used to meet non-Western history requirements in the History major.

History (HIST)

HIST 451 (US) The Consumer Revolution (3) The origins and impact of American consumer society since 1870.

HIST 451 The Consumer Revolution (3)
(US)

(BA) This course meets the Bachelor of Arts degree requirements.

This lecture course shows how the United States became a nation of consumers from 1870 to the present. It is designed both for the business and communications student as well as the liberal arts major. The origins of department stores, name-brand goods, fast-food chains, modern advertising, and mass entertainment show us how American business and culture was transformed by the consumer revolution. We will explore how the automobile became the leading consumer good of the 20th century and analyze its impact on how Americans shopped. The rise of advertising and its linkage to home-based mass entertainment through the radio and TV will interest us. We will also consider how events like the Great Depression, World War II, the counter-cultural movement of the 1960s, the energy crisis of the 1970s, and the economic deregulation of the 1980s and 90s shaped consumer attitudes and advertising. " The Consumer Revolution" also briefly explains how American consumer culture has been globalized (with companies like Coca Cola, Disney, and Ford).

The course also explores how new consumer goods shaped the experience of childhood, youth, family and home life, and retirement. In particular, we will consider how youth-oriented goods in fashion, foods, and entertainment created a unique youth consumer culture. Also important are the intellectual debates about the meaning and value of consumer society: Is mass consumption the real meaning of American democracy or is it a perversion of it? Are consumer needs unlimited and where does the desire for goods come from? Because consumer society seemed to threaten so many traditional values, we will also analyze movements for restricting consumption. We will consider the origins and impact of Prohibition, dieting and health food crazes, and movements to restrict advertising and sale of goods like cigarettes.

In addition to lectures and visual presentations in class, students will read chapters from major studies of the above topics, some of which will be discussed in class. Grades will be based on performance in discussion and essay exams.

General Education: None

History (HIST)

HIST 463 (US) American Thought to 1865 (3 Introduction to, scholarly commentary on, major documents of American Intellectual history, early colonial period to end of the Civil War.

HIST 463 American Thought to 1865 (3)
(US)

(BA) This course meets the Bachelor of Arts degree requirements.

To offer such a course without some treatment of race, class, and gender diversity would be undesirable indeed, irresponsible. The movements for the abolition of slavery, for women's rights, and for the rights of workers will receive prominent and necessary attention. The history department does not, however, seek to invade the territories of programs and/or departments that are primarily concerned with women and racial or ethnic minorities. This course will cover such material in ways specifically appropriate to the contacts with American-Indian, Asian-American, African-American and Spanish-speaking populations.

This course will focus on documents produced by men and women of various class and ethnic backgrounds who are assumed to have participated actively in the American intellectual tradition. Discussions of the ideas and publications of well-educated individuals will to some extent dominate the content of the proposed course. Thus, for obvious reasons, it must address the historical importance of documents such as Thomas Jefferson's Notes on the State of Virginia, and Harriet Beecher Stowe's Uncle Tom's Cabin. These documents are of unquestionable importance to American intellectual history, but due to constraints of time, it is not always possible to discuss their historical importance as cultural documents in the existing American history courses. A highly literate African-American essayist like Francis Ellen Watkins Harper is also an obvious candidate for inclusion in this course. A less educated person like Anna Murray Douglass, although she was an important and interesting figure, whose life and values merit serious reflection, could hardly have left behind a body of writings. Francis Harper, on the other hand, commented significantly on the ideological movements of her times. The course is admittedly biased in favor of highly literate historical figures, who interacted with the traditions of American thought and writing.

An example of evaluation methods would be: Students will be expected to write a mid-semester and a final examination, and to prepare a written paper outside of class. Graduate students will be expected to draft a potentially publishable article, which may be archival, historiographical, or interpretive.

General Education: None
Diversity: US
Bachelor of Arts: Humanities
Effective: Spring 2006
Prerequisite: any American history course at the college freshman level

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

History (HIST)

HIST 464 (US) American Thought from 1865 (3) Introduction to, scholarly commentary on, major documents of American Intellectual history from end of the Civil War to the present.

HIST 464 American Thought from 1865
(US)

(BA) This course meets the Bachelor of Arts degree requirements.

HIST 464 is intended to fill several needs. First, to introduce advanced undergraduates and beginning graduate students to documents of American thought of the sort collected by David A. Hollinger and Charles Capper in the American Intellectual Tradition (New York: Oxford University Press, 1989). Second, to offer a systematic survey of a standard area of American history that students might wish to approach as a coherent field. Third, to provide students with exposure to the bibliography and the historiography of American intellectual history as an established sub-field of American history. It is intended that either semester of the course may be elected independently of the other.

An example of evaluation methods would be: Students will be expected to write a mid-semester and a final examination, and to prepare a written paper outside of class. Graduate students will be expected to draft a potentially publishable article, which may be archival, historiographical, or interpretive.

General Education: None
Diversity: US
Bachelor of Arts: Humanities
Effective: Spring 2006
Prerequisite: any American history course at the college freshman level

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

History (HIST)

HIST 465 (US) (AAA S 465) Civil Rights and American Politics 1933-1968 (3) The civil rights struggle and its impact upon American politics.

HIST 465 Civil rights and American Politics 1933-1968 (3)
(US)

(BA) This course meets the Bachelor of Arts degree requirements.

Students will be encouraged to explore the period over which the civil rights of African Americans and other Americans of color emerged as permanent features of American political and social life. They will be asked to think systematically about the, transformation of American society over the course of the 20th century from a society based upon the constitutional sanction 'white supremacy' and 'racial segregation' to one in which ethnic pluralism and equality of races have become the principles accorded increasing legitimacy in principle, if not in fact. They will also be encouraged to explore the process of political realignment within the major parties, the Democrats and Republicans, and the ways in which the politics of race have been instrumental in shifting the electoral strategies and ideological debates within and between the parties.

General Education: None
Diversity: US
Bachelor of Arts: Humanities
Effective: Summer 2005
Prerequisite: AAA S 100, HIST 021, HIST 152, PL SC 001 orPL SC 002

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

History (HIST)

HIST 466 (US;IL) (WMNST 466) Lesbian and Gay History (3) Critical exploration of the history of sexuality, focusing especially on the emergence of modern lesbian and gay identities.

HIST (WMNST) 466 Lesbian and Gay History (3)
(US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course will explore the relationships in different cultures and historical periods between the dominant culture and homosexuals, whom the culture deemed, at different times, sinful, deviant, criminal or, more recently, a minority community. Students will confront the very nature of difference, and how it has been played out in European and American history. The course will challenge students to deal with how societies define difference itself; how they isolate or punish deviants; and how the creation of the "homosexual" helped establish not simply difference but "normalcy" in a highly sexualized modern culture. Finally, the course will explore notions of identity itself, focusing on the creation of a modern gay and lesbian identity and its impact on broader questions of gender, community, civil rights, and political discourse in the United States.

An example of evaluation methods would be: course presented in a seminar format with grades based on class participation, brief analytical papers, and a longer research or historiographic paper. This course will fulfill a requirement for 400-level courses in both History and Women's Studies majors.

History (HIST)

HIST 469 (CRIMJ 469) Drugs and Drug Policy in the United States (3) Examines the history and dimensions of drug use and analyzes the impact of drug policy.

HIST (CRIMJ) 469 Drugs and Drug Policy in the United States (3)

For nearly a century, the United States has been waging its version of a hundred years' war on drugs, spending billions of dollars and incarcerating thousands of offenders while failing to significantly reduce the use of illicit drugs. This course examines drug use in a historical context while addressing the changing nature and dimension of drug use, including the pharmacology of drugs, patterns of drug use, and sentencing policies. Because drug control is inextricably linked to social, political, and public policy, the course will provide the student with a foundation for critical thinking and rational decision making relative to the efficacy of the various drug control initiatives. Since drugs seemingly permeate every level of American society and directly or tangentially touch most Americans' lives, issues such as drug testing in the workplace, the use of drug courier profiles, legalized medical marijuana, and needle exchange programs are evaluated. Students will be expected to learn the pharmacology of various drugs, the history of drug use in the United States since the colonial era, the evolution of federal drug agencies, and acquire knowledge about contemporary drug issues. They also will be expected to develop and strengthen their critical thinking skills as they assess the consequences of implementing particular anti-drug policies and their impact on reducing the use of illicit drug use. An example of the evaluation methods would be: students will be evaluated on the basis of three exams and four "think pieces" (requiring students' critical responses to an assigned topic) scheduled throughout the semester. Class attendance also will influence the grade.

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

History (HIST)

HIST 491 (IL) British Civil Wars and Revolutions, 1639-1651 (3) This is an advanced course on the history of the general crisis in the British Isles, from the outbreak of war between England and Scotland in 1639 to the securing of the Commonwealth regime following the desstruction of the last major royalist army in 1651.

HIST 491 British Civil Wars and Revolutions, 1639-1651 (3) (IL)

This course, which satisfies the International Cultures (IL) requirement, is an advanced course on social, political, and cultural aspects of the British civil wars and revolutions during the late 1630s and 1640s, including the transformation of regimes in England, Scotland, and Ireland. It will explore major developments in the history of political culture as well as the experience of civil war in the many different kinds of communities in Britain and Ireland. The course will focus on the English civil war as the decisive arena of conflict but will not neglect important developments in Scotland and Ireland, including the emergence of early national political forms among the Scots covenanters and the Irish confederates. Although traditional political and military approaches to the conflict are not ignored, the course explores in greater detail the many different forms of violence characteristic of these wars--including local feuds, iconoclasm, ethnic violence, and judicial murder--as evidence of efforts to restore or rebuild communities in the midst of general crisis. The course is open to students who have taken one of the following: History 2, History 134, or History 436.

General Education: None
Diversity: IL
Bachelor of Arts: None
Effective: Fall 2009
Prerequisite: HIST 002, HIST 134 orHIST 436

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

History (HIST)

HIST 493 Preceptorship in Teaching (3-6) Supervised experience in research of teaching under the guidance of an approved faclty member.

Preceptorship in Teaching (3-6)

General Education: None
Diversity: None
Bachelor of Arts: Humanities
Effective: Summer 1997
Prerequisite: 3 credits in course-work related to the teaching or research subject

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

History (HIST)

HIST 492 (IL) Witchcraft in Early Modern Europe (3) Survey of the social, economic, political, and religious conditions of accusations and prosecutions of witchcraft in western Europe and north America, from 1500 to 1700.

HIST 492 Witchcraft in Early Modern Europe (3)
(IL)

This course, which satisfies the International Cultures (IL) requirement, is an advanced course in early modern European and, to a lesser extent, early American history, focusing on the problem of witchcraft and open to students who have taken the introduction to modern European history in History 2, Western Civilization from 1500. The course examines the evidence of beliefs and stereotypes, practical uses and remedies, accusations, and trials, as well as the diverse approaches historians and anthropologists have used to understand this evidence. Using a range of primary sources and secondary texts, the course explores the accusations, trials, and executions for this unique crime as expressions of the complex interrelationship between early modern neighborhoods and nascent political states. This wide range of evidence will make witchcraft into a prism, through which students will examine the processes of religious/theological, philosophical, political, and socioeconomic change in western Europe and north America during the sixteenth and seventeenth centuries. The course stresses the interrelationship of materials from history, religion, literature, and the social sciences, challenging students to assess this evidence, to define common themes, and to understand the importance of unique historical conditions.

General Education: None
Diversity: IL
Bachelor of Arts: None
Effective: Fall 2009

Honors (HONOR)

HONOR 201 Developing Critical Thinking for Leadership (1) Discussions on various topics using critical thinking skills to make informed leadership decisions.

HONOR 201 Developing Critical Thinking for Leadership (1)

In this course, first-year members of the Presidential Leadership Academy will learn about and develop critical thinking skills to enable them to evaluate and analyze complex problems leading to the ability to make decisions. Upon completion of this course students are expected to be able to identify, evaluate, and construct inductive and deductive arguments; recognize and assess arguments in various forums of reasoning; distinguish the functions of language and its capacity to express and influence meaning; assess the value and credibility of sources; and understand and evaluate the options, consequences, values, and risks in making decisions. The format will typically include some lecture but will be largely discussion based. The course includes a mandatory field trip to various destinations. The emphasis is upon class participation, preparation, and reflection. Students are required to maintain a journal and analyze issues using the critical thinking skills developed in the course. Grading is based on journals and participation.

General Education: None

Horticulture (HORT)

HORT 101 (GN) Horticultural Science (3) Introduction to horticulture with emphasis on plant domestication, morphology, classification, world food crops, commodities, gardens, propagation, and agrochemicals.

HORT 101 Horticultural Science (3)
(GN)

(BA) This course meets the Bachelor of Arts degree requirements.

The course content of Horticulture 101, as indicated in the complete course outline, deals with the fundamental concepts and specialty areas, which contribute not only to the science and technology involved in horticulture but also to the art. It provides an overview of the role of various specialties of the natural sciences (e.g. plant morphology, physiology, taxonomy, genetics and nutrition, pest management, management and production of crops, landscaping and technology) relevant to a range of plant uses from medicinals and food production to the aesthetic benefits derived from plants. The course begins with the origin and domestication of plants followed by: A. An Overview of horticulture which includes an explanation of the horticulture industry, how to achieve success in horticulture and the relationship between horticulture and the environment; B. Science in horticulture which includes the classification of plants, plant propagation, plant nutrition, environmental factors affecting plant growth and development, plant growth regulators, post harvest physiology and pest management; C. Management and production of horticultural crops which include nursery, floral, turfgrass, vegetable, fruit and nuts; D. Landscaping including designing landscapes, xeroscapes and sitescapes, establishing and maintaining landscapes; and E. Concluding with Technology in horticulture. The course content additionally includes major areas of knowledge based on the fundamentals, universal concepts and achievements in the cluster of scientific disciplines comprising horticulture and provides students with the opportunity to appreciate that the origins, domestication and production of cultivated plants are the essence of human existence.

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Horticulture (HORT)

HORT 150 (GN) Plants in the Human Context (3) An introduction to the many fascinating and vital relationships between plants and human society.

HORT 150 Plants and Human Context (3)
(GN)

The objective of this course is to expose students to the pervasiveness and essentiality of plants in the human experience. Major topics include 1) human civilization as influenced by plants, 2) a history of food from plants, 3) chemicals from plants, 4) non-food plant uses, 5) current issues in plant production, and 6) current botanical issues of global concern. Specific topics range from botanical pharmaceuticals to global warming/use of biofuels, and from culture-specific rotten foods to genetically-modified plants. Students will be exposed to many basic concepts of plant ecology, ecosystem science, emerging technologies, and the criteria used to evaluate sources of scientific information as a natural consequence of studying the range of topics included in the course. Students completing the course will therefore be in an excellent position to intelligently select from the many botanically- and ecologically-oriented majors, minors and options available to them at Penn State. The format of the course consists primarily of lecture/discussions, and includes one team assignment (making a poster) and three individual projects (one page arguments) in addition to a midterm and a final exam. Student evaluations are based on individual exam scores (50%) and on team (20%) and individual (30%) projects.

General Education: GN

Horticulture (HORT)

HORT 201 Applied Arboriculture (2) Overview of methods used to diagnose problems and provide for the long term care of large trees.

HORT 201 Applied Arboriculture (2)

The objective of this course is to provide students with the opportunity to develop an appreciation of the skills required to properly care for large trees. The course provides information that is especially useful to those in the Landscape Management option of the Landscape Contracting major. The course will provide an overview of the methods used to diagnose problems and provide for the long term care of large trees. Areas of emphasis will include accessing the upper parts of large trees; safety when working in and around large trees; and the proper selection, use, and maintenance of the equipment used in the arboriculture profession. The course will be taught each Fall semester and will have an enrollment limit of 18. Students will be evaluated by quizzes, exams, and laboratory assignments.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2004
Prerequisite: Students must be physically capable of safely handling a running chainsaw and pulling their weight up a rope.

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Horticulture (HORT)

HORT 220 CAD Applications in Landscape Contracting (3) Application of computer-aided design software including AutoCAD and LANDCADD to landscape contracting.

CAD Applications in Landscape Contracting (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1998
Prerequisite: HORT 120

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Horticulture (HORT)

HORT 202 Plant Propagation (3) Principles and practices of asexual and sexual plant propagation.

Plant Propagation (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001
Prerequisite: BIOL 027, BIOL 110 orHORT 101

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Horticulture (HORT)

HORT 232 Horticultural Systematics (3) Fundamentals of horticultural crop plant classification and systematics. Examples chosen from fruits and vegetables, exclusive of subtropical and tropical fruit.

Horticultural Systematics (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001
Prerequisite: HORT 101

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Horticulture (HORT)

HORT 238 (TURF 238) Turf and Ornamental Weed Control (3) Students will be introduced to the development of integrated weed management strategies utilizing a variety of cultural and chemical methods.

Turf and Ornamental Weed Control (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2007
Prerequisite: CHEM 110

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Horticulture (HORT)

HORT 250 Landscape Contracting Design/Build Principles (3) Introduction to the processes and principles of residential landscape site development, from initial client contact to implementation.

Landscape Contracting Design/Build Principles (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1998

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Horticulture (HORT)

HORT 269 Residential Landscape Planning (3) Principles and techniques in landscape design; preparation of plans of small properties.

Residential Landscape Planning (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001
Prerequisite: Landscape Contracting majors in the Design/Build Option

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Horticulture (HORT)

HORT 296 Independent Studies (1-18) Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

HORT 299 (IL) Foreign Studies (1-12) Courses offered in foreign countries by individual or group instruction.

Foreign Studies (1-12)

General Education: None
Diversity: IL
Bachelor of Arts: None
Effective: Summer 2005

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Horticulture (HORT)

HORT 315 Environmental Effects on Horticultural Crops (3) Horticultural plants respond to the environmental factors of light, temperature, water, and fertilizer both in controlled and field environments.

Environmental Effects on Horticultural Crops (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1993
Prerequisite: HORT 101, HORT 202

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Horticulture (HORT)

HORT 301 (FOR 301) Principles of Arboriculture (3) Overview of the concepts and methods prescribed for the evaluation and care of large trees in urban settings.

HORT (FOR) 301 Principles of Arboriculture (3)

The objective of the course is to introduce students to the theories and practices related to the care of trees in developed areas. The course provides information that is especially useful to those in the Landscape Management option of the Landscape Contracting major, and the Urban Forestry option of the Forestry major. This course will provide an overview of the concepts and methods prescribed for the evaluation and care of large trees in urban settings. Emphasis will be placed on maintaining the long-term health of large trees. Major topic areas will include methods for characterization of tree health, diagnosing problems in trees, the influence of environmental factors on tree health, and the assessment of hazard trees. Proper pruning techniques and factors to consider when making decisions regarding long-term tree care in urban areas will be discussed. The course will be taught each spring semester. Students will be evaluated by quizzes, exams, and laboratory assignments.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2004
Prerequisite: BIOL 110 andSOILS 101

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Horticulture (HORT)

HORT 352 Flower Arranging (2) Floral design beginning with elements and principles of design. Flower arranging techniques as well as different styles of flower arrangements.

Flower Arranging (2)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Horticulture (HORT)

HORT 368 Landscape Planting Design (4) Basic planting design employing the use of indigenous and ornamental plants as design elements in the man-made environment. Intended for Landscape Contracting majors only.

Landscape Planting Design (4)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001
Prerequisite: HORT 269

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Horticulture (HORT)

HORT 390 Junior Seminar (1) Current issues in horticulture and agriculture.

Junior Seminar (1)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1993
Prerequisite: FIFTH-SEMESTER STANDING

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Horticulture (HORT)

HORT 402W Plant Nutrition (3) Mineral nutrition of higher plants, including nutrient acquisition, transport, metabolism, and practical implications.

HORT 402W Plant Nutrition (3)

The course considers the mineral nutrition of higher plants from physiological, ecological, and agricultural perspectives. The first part of the course considers factors influencing the acquisition of mineral nutrients and their transport in the plant, including nutrient mobility in the soil, root biology, rhizosphere interactions, membrane transport, xylem, and phloem transport. Root symbioses and metabolic assimilation of N and S will also be discussed. The second part of the course gives an overview of mineral metabolism. The final third of the course illustrates the practical dimensions of plant nutrition. The diagnosis of nutritional disorders, nutrition, and yield, foliar fertilization, genetic aspects of plant nutrition, and nutrient cycling will be covered by lecture and laboratory exercises. Laboratory exercises demonstrate lecture topics and permit a "hands-on" involvement with the subject. Emphasis is placed on concepts and integrating principles rather than memorization of technical details.
General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2003
Prerequisite: HORT 315 orBIOL 441, SOILS 101

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Horticulture (HORT)

HORT 407 Plant Breeding (3) The scientific principles and techniques of utilizing genetic variability in improving the heredity of plants for specific purposes.

HORT 407 Plant Breeding (3)

Horticulture 407 is a 3-credit course that is taught every spring semester and is required of horticulture undergraduate students at Penn State. This course also attracts upper-division and graduate students from other departments such as Agronomy, Biology, Forest Resources, Plant Pathology, Biochemistry, and Molecular Biology. The objectives of the course are to 1) develop an understanding of the role of genetics in plant breeding, 2) elucidate the diversity of plant characteristics which are subject to improvement, 3) review conventional and contemporary techniques for the development of new cultivars, and 4) present the opportunity for the student to effectively communicate scientific information in writing and through speaking. Horticulture 407 emphasizes basic principles of plant genetics and breeding and the utilization of molecular biology techniques for crop improvement. It includes two-hours of lecture and a two-hour laboratory-discussion session each week. Major topics of discussion during lecture periods include plant reproduction, genetic variation in plants, review of mitosis and meiosis, Mendelian genetics, linkage, and recombination, qualitative and quantitative traits, population genetics, cytogenetics, theory of selection and response to selection, heritability, review of statistical tools useful in plant genetics and breeding, systems of pollination controls in plants including self-incompatibility and male sterility, breeding methods for self- and cross-fertilized plants, and application of modern technologies, including molecular markers, marker-assisted selection, and genetic transformation, to crop improvement. The laboratory sessions are designed to complement the lectures and provide opportunities for hands-on experience. For example, students practice staining and counting plant chromosomes on microscope slides, self- and cross-pollination of different plant species, linkage mapping and analysis of plants for Mendelian segregation, inoculating plants with fungal pathogens and observing and evaluating plants for disease development, extracting DNA from plant tissue and separating DNA segments on agarose medium using gel electrophoresis, and practicing computer programs for gene mapping and analysis of Quantitative Trait Loci (QTLs). Furthermore, students are mentored to prepare a term paper on a plant breeding/plant genetics subject and to orally present their findings to the class using visual aids.

Student evaluation is based on two mid-term exams (each 100 points), one comprehensive final exam (200 points), 10 weekly homework or laboratory reports (for a total of 100 points), and a term paper (50 points for writing and 50 points for presentation). For the presentation, each student is required to turn in a 3-5 page write-up about a topic of interest.

HORT 430W Landscape Maintenance and Management (3) Principles and practices in the maintenance and management of landscaped areas.

Landscape Maintenance and Management (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001
Prerequisite: HORT 101;HORT 137 orHORT 138

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Horticulture (HORT)

HORT 431 Small Fruit Culture (3) Cultural requirements and production practices of the principal small fruit crops: strawberries, grapes, blueberries, brambles, and cranberries.

Small Fruit Culture (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001
Prerequisite: HORT 101, HORT 315

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Horticulture (HORT)

HORT 432 Deciduous Tree Fruits (3) Science, art, and techniques of regulated cropping; orchard designs and management systems.

Deciduous Tree Fruits (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001
Prerequisite: HORT 101, HORT 315

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Horticulture (HORT)

HORT 433 Vegetable Crops (3) Cultural requirements of important vegetable crops in conjunction with physiological processes and problems related to commercial production.

Vegetable Crops (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001
Prerequisite: HORT 101, HORT 315

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Horticulture (HORT)

HORT 444 Advanced Plant Breeding (4) Exploration of the interrelationships of genetic, cytological, physiological, and environmental factors in plant improvement. An individual research project is required.

Advanced Plant Breeding (4)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: HORT 407

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Horticulture (HORT)

HORT 440W Plant Water Relations (3) Fundamentals of plant water relations including acquisition, transport, conservation, response to drought, measurement of water status, relationship to productivity, interaction with mineral nutrition, and use of equipment.

HORT 440W Plant Water Relations (3)

On a world-wide basis, the greatest limitation to plant productivity is insufficient water. This course covers the fundamentals of plant water relations and is relevant to the study of natural and cultivated plant species. It will help students to appreciate variation among plant species in their strategies relating to water acquisition, storage, and use. The relationships between water and several important plant functions including nutrient uptake, photosynthesis, growth, and reproduction are also covered. Most material is given in lecture format with handouts. Students are also required to read and critique primary literature in this field. Students are evaluated on their performance on seven short exams and three written critiques.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2003
Prerequisite: BIOL 441 orBIOL 446 or permission of department

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Horticulture (HORT)

HORT 445 Plant Ecology (3) Advanced lectures on plant ecology which stress integration of physiological, population-level and community-level phenomena, and ecology in agriculture.

Plant Ecology (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1999
Prerequisite: BIOL 220W, FOR 308 orHORT 315

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Horticulture (HORT)

HORT 450 Greenhouse Management (3) Maintenance and manipulation of the greenhouse production systems including structures, covers, light, temperature, carbon dioxide, water, growing media, fertilizer and greenhouse cost accounting.

Greenhouse Management (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001
Prerequisite: HORT 101, HORT 315

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Horticulture (HORT)

HORT 453 Flower Crop Production and Management (3) Production of greenhouse flower and foliage plants; development of management skills for a greenhouse business.

Flower Crop Production and Management (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001
Prerequisite: HORT 101, HORT 315

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Horticulture (HORT)

HORT 455 Retail Horticulture Business Management (3) The nature, operation, and management of retail horticulture business, emphasizing retail greenhouses, nurseries, and flower shops.

Retail Horticulture Business Management (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001
Prerequisite: HORT 131, HORT 137 orHORT 138 ; 3 credits of marketing

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Horticulture (HORT)

HORT 457 Interior Plantscaping (3) Foliage identification, environmental factors affecting plants, concepts of interior plant design, installation and maintenance.

HORT 457 Interior Plantscaping (3)

Overview of where foliage plants are native will be followed by a discussion of how each environmental factor will affect foliage plant growth as well as how some of the environmental factors can be managed. Those factors will include light, temperature, humidity, growing media, watering, and fertilization. In addition the students will learn to identify 100 plants that are commonly used in interiors. Design principles will be related to interior plants. The process of analyzing the site, creating an interior plant design, installing the plan and maintaining the finished design will be discussed. Then diagnosing plant problems and integrated pest management will be presented as aspects of plant maintenance. Business principles related to the interior plantscaping industry such as management, marketing and selling and personnel management will be discussed. Students will be evaluated based on exams, quizzes and projects. The course will be offered in alternate spring semesters.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 201 Introduction to Management in the Hospitality Industry (3) Introduction to the hospitality industry and hospitality management.

HRIM 201 Introduction to Management in the Hospitality Industry(3)

The objectives of this course are to provide an introduction to the hospitality industry, to management practices within the industry, and to the hospitality major. Students have an opportunity to learn about the functions of management; the major components of the hospitality, travel, and tourism industries; trade associations and publications; growth areas and trends; and the need for creative leadership. Main topics typically include:

Functions of management and functional areas of business segments of the hospitality industry
International business as related to hospitality
Services business
The planning process and strategic planning
Organization design in hospitality
Directing and leading in hospitality
The control process in hospitality
Hospitality, travel, and tourism industries
Hotels and lodging
The restaurant business
Managed services
Leisure and recreation/other hospitality opportunities
Beverage management
Management ethics and social responsibility

This course is an introduction to the field and is required of all hospitality majors. It is a prerequisite for many courses in the major. Students are evaluated based on examinations and exercise and homework assignments.

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 202 Colloquium in Hospitality Management (1 per semester, maximum of 4) Major industry and professional speakers lecture on current issues followed by discussion with students and faculty.

HRIM 202 Colloquium in Hospitality Management (1 per semester/maximum of 4)

This course has two primary objectives. First, students have an opportunity to hear from industry leaders. Second, students can determine their career directions, learn about the requirements for success in the industry, and identify career opportunities. The topics for the course vary from semester to semester depending upon the distinguished speakers who are brought to address the class. However, a common theme is trends in the industry regarding hotels, restaurants, and institutional foodservice. Students also may learn about related career opportunities, such as careers with cruise lines, travel agencies, and the like. This course is required of all hospitality majors and is a prerequisite for other courses. The course is often taken in conjunction with the introductory hospitality management course. Students are evaluated based on attendance and a paper.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 204 Hotel and Restaurant Marketing and Merchandising (3) Merchandising and marketing as a system concerned with motivating consumers to purchase hospitality products and services. This course will not meet the prescribed requirements for the HRIM major in any option.

HRIM 204 Hotel and Restaurant Marketing and Merchandising (3)

Hospitality marketing and one of its major activities, merchandising, is concerned with motivating consumers to purchase industry products and services. The objective of this course is to introduce students to a systems approach to marketing management and its tools for marketing hospitality products and services. This course allows students the opportunity to identify societal trends that have shaped the current hospitality marketplace as well as identify demographic, psychographic, and environmental factors that affect customer needs. Merchandising strategies are discussed as appropriate. Main topics include:
Principles of marketing, marketing orientation, and ethics in the marketing process
Services marketing, product marketing, and hospitality marketing process
Customer wants and customer needs and stages of buying
Marketing research for hospitality services industry (situation analysis, market analysis, and feasibility analysis) primary and secondary market research
Market segmentation, trends that influence services and shape the market
Marketing mix, marketing strategy, product life cycles, and steps in a marketing plan
Product/service mix, product development process, vertical and horizontal integration and partnerships
Applying the marketing mix to people - empowering employees, customer mix, total quality management
Applying the marketing mix to packaging, programming placement and their roles in marketing hospitality services, developing a package, distribution mix in hospitality, nature of packaging and programming
Applying the marketing mix to promotion, advertising public relations, publicity, merchandising, personal selling and sales promotion, promotional mix, elements in the communication process
Planning advertising, sales promotion, merchandising
Planning, publicity and public relations, personal selling
Applying the marketing mix to pricing - setting price, demand

The content of this course is considered fundamental for anyone in hospitality management. This course, or a course similar to it in Marketing is required of all Hotel, Restaurant, and Institutional Management majors. Evaluation methods usually include examination, quizzes, and short writing assignments. Case simulations involving group assignments are also sometimes used. The course is usually offered on the Penn State World Campus on an open enrollment basis and at Penn State Berks on an as-needed basis.

HRIM 228 Hospitality Food Safety (1) Application of HACCP, U.S. Food Code, biosecurity and other federal regulations to hospitality foodservice operations. Students attain certification in foodservice sanitation.

HRIM 228 Hospitality Food Safety (1)

This course will examine the science associated with preparing and serving food that is safe for consumption with regards to biological, chemical, and physical contamination. Emphasis is on federal regulations associated with HACCP, the U.S. Food Code, and other issues associated with safety of the food supply in the U.S. Case studies help students apply food safety principles to hospitality operations. Students will attain certification in foodservice sanitation by taking the examination administered by the National Restaurant Association. Frequent quizzes will help students prepare for this national exam. This course will be taught each semester and successful completion plus achieving the foodservice sanitation certification is required as a prerequisite for HRIM 330.

HRIM 260 Hospitality Supervision Seminar (3) Hospitality management topics are discussed with a major emphasis on operations management. This course will not meet the prescribed requirements for the HR&IM major in any option.

HRIM 260 Hospitality Supervision Seminar (3)

This course is an introduction to human resource management in the hospitality industry. The course examines the fundamentals of supervision that include planning, basic management functions, and customer relations and service. The overall course focus is on building relationships with diverse employees through communication, motivation, supervision and leadership. Additional topics covered include the human resource environment in hospitality operations, employee recruitment, selection, orientation, training, empowerment, performance appraisals and discipline, risk management, and labor organizations.

An introductory supervision course is vital to the success of a hospitality student. It is important to explore this topic in relation to the labor trends in the United States. It is equally important to examine the current demographic and socio-economic conditions that the student faces. Knowing how to access this information in the future will assist the student throughout his/her career.

Emphasis will be placed on the diversity of the student as well as his/her employees and colleagues. Social identity is addressed early in the course. Human relationships and interactions are included throughout the course, as supervisors interact with their employees, colleagues, upper management and customers on a daily basis. Values, traditions, beliefs, and customs shape every human being and students will learn how to be sensitive to those differences through the practical applications in each lesson.

HRIM 270 Hospitality Administration Seminar (4) Components of food service systems are identified and studied as separate problems and as a total system. This course will not meet the prescribed requirements for the HRIM major in any option.

HRIM 270 Hospitality Administration Seminar (4)

The organization of a restaurant facility, from concept to operation, allows a student the opportunity to apply all previously learned course material in the Hotel, Restaurant, and Institutional Management program. The focus of the course urges the student to apply the principles of marketing, menu planning, food cost control, human resource management, financial accounting, layout and design, and purchasing. This course is presented in a seminar format and includes a restaurant design project. Students who have completed this course gain the perspective of designing a restaurant; facility with customers' needs and owners' profits in mind. Main topics include:
Marketing plan, business plan
Financing, leasing
Leasing, tax matters
Menu writing
Menu analysis, function analysis
Kitchen design, layout design conventions
Recruiting and staffing, training, developing
Food purchasing
Bar and beverage purchasing
Beverage and alcohol service
Budgeting and controlling costs

The content of this course is considered fundamental for anyone in hospitality management and, therefore is required of all Hotel, Restaurant, and Institutional Management majors. Evaluation methods usually include examinations, quizzes, projects, and short writing assignments. The course is usually offered every spring semester with ten students at Penn State Berks and on an open enrollment basis on Penn State World Campus.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 271 Introduction to Hospitality Technology (2) Introduction to hospitality technology including computer applications, software, and hospitality information systems and applications.

HRIM 271 Introduction to Hospitality Technology (2)

This is an introductory-level required course in the HRIM curriculum. It is designed to introduce students to the technology used in the hospitality industry and to the concepts of information technology. Course objectives are to demonstrate how managers use technology, and how managers can use information to improve their company's position. The course will initially introduce students to their role of being a manager of information technology. The next topic will be to discuss the basic information technology terminology and database management concepts. To introduce students to basic computing and information technology principles; spreadsheet, presentation software, and web page publishing software will be used. Students will complete exercises using each of the major Office packages. The major section of the course will focus on hospitality-specific systems, such as reservations, point of sale, recipe, menu management, sales and catering, back office accounting, maintenance management, and nutrient analysis. Students will gain experience by either using or viewing demonstrations of these software packages in order to identify the manager's responsibility for information obtained and to analyze the output from these systems. Students will learn how these systems are integrated and how this integration affects the efficiency and effectiveness of the management function. The monitoring and control of the hospitality facility operations relies on an effective property management system. Students will use examples or case studies to discuss the value of successful implementation of information technology. The last topic covered will be the security issues related to the operation of a hospitality information system. The course is taught as a combination of lectures and labs, and is taught in a technology classroom.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 295W Analysis of Field Experience I (3) Capstone class integrating content from throughout the previous curriculum, including directed written analysis of the 500-hour hospitality working experience.

HRIM 295W Analysis of Field Experience I (2)

This course is designed for current and future operators of lodging, commercial, and on-site (institutional) operations. It will provide the opportunity for students to apply their theoretical knowledge from previous course work in the major to the hospitality world-of-work. The various course modules will incorporate writing as a mode to allow students to further explore their understanding of hospitality organization, marketing analysis, human resource practice, food production analysis, physical plant considerations, lodging operations, career development, management practice, and financial statement analysis. Case studies and other applied activities through written interpretation will be used to illustrate human resource practices, career development as well as other topics. This course will provide students with opportunities to develop written skills necessary to communicate effectively as hospitality professionals.

The topics typically include:

- Organization of an hospitality environment
- Demographic trends vs. advertising applications
- Employment laws
- Employee coaching
- Food production planning for productivity and control
- Organization of a physical plant
- Operations and quality control in lodging
- Opportunities for continuing hospitality career development
- Strategic planning in the hospitality industry
- Reviews of financial statements

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 305 Restaurant Management (3) Restaurant food service management systems in the hospitality field; analysis including cost control and quality control techniques.

HRIM 305 Restaurant Management (3)

Providing quality service and products and ultimately making a profit in a restaurant require the foodservice professional to control and analyze costs. The objective of this course is to provide an overview of the food, labor, budget, and finance information required in restaurant management. Main topics typically include:
Framework and function of control in foodservice operations
Steps and processes of using management information systems in controlling food cost and preparation of food
Forecasting and menu pricing techniques in controlling food cost in the preparation and service of food
Problems associated with labor costs and analyzing various techniques and tools used to control labor cost effectively through proper staffing and scheduling
Methods of controlling food and beverage cost through effective purchasing, receiving, storage, issuing, preparation, inventory, and portion control
Techniques of preparation and implementation of effective budgets as control tools
Ratio-analysis for analyzing cost in foodservice operations
Financial statements used to monitor the financial health of a foodservice operation
Capital budgeting and how it is used

This course is required in the Hotel, Restaurant, and Institutional Management program. The introductory course in Hotel, Restaurant, and Institutional Management must have been completed or must be taken concurrently. Evaluation methods usually include examinations, quizzes, reports, and case studies The course is offered every spring semester at Penn State Berks for ten students as well as several other students at Penn State Berks who elect to take the course. It is also offered on an open-enrolhnent basis on Penn State World Campus.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 315 Hospitality Services Management (3) Systems analysis, design, and application of service in hospitality management operations.

HRIM 315 Hospitality Services Management (3)

Service is the cornerstone of the hospitality industry. New managers need to know how to organize employees and resources that will meet the goals of effective organization and delivery of quality service. This course helps students understand management's role in developing and administering a service program. Main topics typically include:
History of service in general, American service
Management's role in service
Theories of motivation (Maslow, Mayo, McGregor, and Likert)
General Systems Theory Model
Contingency Theory
Laws affecting service
French, Russian, American, English, and Chinese service styles
Training food service front-line employees
Rules of etiquette for service of food and wine
Empowerment - managing guest complaints
Operational concerns in delivery of service
Service delivery methods

This course is an elective. Students must first complete the introductory course in Hotel, Restaurant, and Institutional Management or an introductory management course. Evaluation methods usually include examinations, case studies, interviews, self reflections, quizzes, and short writing assignments. This course is offered as an open-enrollment course on Penn State World Campus.

HRIM 319 Hospitality Facilities Management (3) Fundamental principles of facilities planning, facilities management, and maintenance for all segments of the hospitality industry.

HRIM 319 Hospitality Facilities Management (3)

This course has been designed to provide students with information related to hospitality facility design and maintenance. While managers may not have to fix equipment or install heaters, they should understand the complexity of these tasks and respect the position of the architect and hospitality engineer. Main topics typically include:
Principles of facility engineering and maintenance
Costs associated with the life cycle of a hospitality facility
Role of the manager in the planning and maintenance process
Function of the building in service and marketing
Impact of building design on guest service and operation
Evaluation of building and grounds for compliance with the Americans with Disabilities Act of 1990
Role of management in development, planning, and remodeling of food service operations
Flow of resources, as exhibited in blueprints

The course is a required course for all Hotel, Restaurant, and Institutional Management majors. Students must first complete the introductory hospitality course and the hospitality colloquium. Students are evaluated by examinations, written exercises, and a term project. The course is offered fall and spring semesters with an enrollment of about 100 students for each semester.

HRIM 329 Introduction to Food Production and Service (3) Principles of quality food production and service stressing the integration of sanitation, menu planning, cost control, and service.

HRIM 329 Introduction to Food Production and Service (2)

This course provides students with information on the basic principles of effective food production and service management. The primary focus is the integration of sanitation principles with menu planning, and development and maintenance of quality standards and cost control throughout the foodservice cycle. The course is required of HRIM majors, and is part of the foods sequence, providing knowledge prerequisite for HRIM 330 and HRIM 430 in which students prepare and serve food for the public. The change also allows the curriculum to meet and/or exceed the foodservice management and food safety competencies required for the ADA. The RD exam currently has 25% of its content associated with foodservice management principles. The National Restaurant Association's SERVSAFE certification exam is a partial requirement for the course. Students must complete this course and pass the SERVSAFE examination before proceeding to the food production classes.

Students are evaluated based on homework, examinations, and projects.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 330 Food Production and Service Management (2) Food service management laboratory stressing the integration of purchasing, menu planning, and costing in quantity production of quality food.

HRIM 330 Food Production and Service Management (2)

This course is designed as the application of foodservice production and service management stressing the integration of management modules with training in employee positions for the quantity production of quality food. The course draws from the students' theoretical background in accounting, management, nutrition, food production and sanitation, and thus integrates these areas into the daily operation of a campus foodservice facility as a living laboratory. Students, working as a management team, coordinate and manage all aspects of the food service laboratory. Students also experience a number of employee work positions in the laboratory. Main topics typically include:
Critical management decisions in a foodservice operation
Evaluation of manager and employee performance
Interpersonal and time management skills
Procedures to prevent sanitation and safety hazards in a foodservice operation
Food production, service, sanitation, and quality assurance techniques typical to foodservice operations
Technical responsibilities in the development, production and evaluation of a food service system including: sales, recipe production and service, cost control, purchasing, facilities management, personnel management, and financial management
Critical thinking and leadership
Interaction with guests and accurate evaluation of the guests' dining experience

This foodservice practicum is the second course in the foods sequence. Students take this course after the introductory course in food production and service and a Nutrition course in food preparation. Requirements include management reports, performance evaluations, and quizzes. Uniform and attendance policies also are an important component of course requirements. The course is a prerequisite for the advanced food production course. Students are evaluated based on training meals, employee laboratories, management laboratories, a final examination, and performance appraisals. This course is offered fall and spring semesters, with five sections per semester. Maximum enrollment is 100 students per semester. The course usually is offered in the summer as well.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 335 Hospitality Financial Accounting (3) Basic accounting concepts and practices applicable to hospitality organizations.

HRIM 335 Hospitality Financial Accounting (3)

This course is designed to provide students with a basic knowledge of financial accounting principles and techniques. The course emphasizes what accounting information is, why it is important, and how it is used in the hospitality industry. The approach taken in this course is that accounting is the information system that measures business activities, processes that information into reports, and communicates the results to decision-makers. The students are exposed to all the important elements described above: the measurement system, processing of the information and the communication. However, the emphasis in this course is on the use of financial information from the user's perspective. Unless the user is aware of the process that generates the results of the accounting process, the user cannot make informed decisions. Therefore, the students first learn the structure of the double-entry system of accounting and then they learn how to use the information to make informed financial decisions. Main topics typically include:

Introduction to accounting principles, financial statements, the fundamental accounting equation, and accrual accounting
Transactions--journalizing, posting, general journal, general ledger, trial balance
Adjusting entries--deferrals, accruals, inventory adjustments, deprecation, adjusted trial balance
Completing the accounting cycle--closing entries, balance sheet, income statement, statement of owners equity, closing trial balance
Income statement
Balance sheet
Specialized journals, subsidiary ledgers
Cash
Receivables and payables
Inventory
Property--equipment, intangible assets, other assets
Payroll taxes

The content of this course is considered fundamental for anyone in hospitality management and, therefore, is required of all Hotel, Restaurant, and Institutional Management majors. Prior to this course, students are required to have taken college algebra. HRIM 335 is a pre-requisite for Managerial Decision Making in the Hospitality Industry. Evaluation methods usually include examinations, quizzes, problem and paper assignments, and a semester project. The course is usually offered fall and spring semesters with enrollments of about 50 to 60 students per section.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 336 Hospitality Managerial Accounting (3) Collection, processing, and interpretation of accounting data for managerial planning, control, and evaluation in hospitality organizations.

HRIM 336 Hospitality Managerial Accounting (3)

Managerial decision-making using accounting data is an integral part of the function of managers in the hospitality industry. The accounting function of the lodging business generates financial data, and managers need to be able to interpret the data, analyze it and make decisions based on their interpretation and analysis of the data. This course provides the student with the core knowledge needed to understand the kinds of data generated by the financial systems of hospitality operations, prepare budgets, perform variance analysis, and provide control over the financial aspects of the hospitality business. Main topics typically include:
Introduction to managerial decision-making in the hospitality industry
Cost behavior analysis in the hospitality industry
Cost, volume and profit analysis in the hospitality industry
Pricing decisions in the hospitality industry
Preparation of operational budgets in the hospitality industry
Calculation and interpretation of cost and revenue variances in the hospitality industry
Preparation of cash budgets and control over cash in hospitality operations
Preparation of the statement of cash flows in the hospitality industry
Preparation of proforrna financial statements in the hospitality industry

The content of this course is considered fundamental for anyone in hospitality management and, therefore, is required of all Hotel, Restaurant, and Institutional Management majors. Prior to this course, students are required to have taken Financial Accounting in the Hospitality Industry. HRIM 336 is a pre-requisite to Financial Management in Hospitality Operations. Evaluation methods usually include examinations, quizzes, problem and paper assignments, and a semester project. The course is usually offered fall and spring semesters with enrollments of about 50 to 60 students per section.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 350 Hospitality Decision Making and Information Systems (3) Application of decision theory and models to solve qualitative and quantitative problems using Hospitality Information Systems and Computer Applications.

HRIM 350 Hospitality Decision Making and Information Systems (3)

The ability of hospitality managers to use good decision making processes for both everyday decisions (category I) and strategic decisions (category II) has been identified by industry leaders as a key success factor. The objective of this course is to offer the student an opportunity to learn the qualitative (sociological and psychological) factors affecting the decision process and how to apply management science models and computer-based information systems to the functional aspects of management in the hospitality industry. The course focuses on the application of modeling theory to planning and decision-making in the hospitality industry. Main topics typically include:

The decision making process Rational decision making
Values for decision making
Electic approaches to decision making
The psychology of decision making
The sociology of decision making
Strategic decision success
Quantitative analysis
Probability concepts and applications
Fundamentals of decision theory
Decision trees and utility theory
Forecasting - regression, analysis of variance, time series
Project Management, program evaluation and review technique, critical path method
Waiting lines and queuing theory

The content of this course is considered fundamental for anyone in hospitality management and, therefore, is required of all Hotel, Restaurant, and Institutional Management majors. Prior to this course, students are required to have taken a course in the principles of programming with business applications course and a course in elementary statistics. This course is a pre-requisite to financial management and marketing courses in the curriculum. Evaluation methods usually include case study analysis, examinations, quizzes, and short writing assignments. Group assignments are often used in a problem-based learning environment. The course is usually offered fall and spring semesters with enrollments of about 80 to I 00 students divided into two sections.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 337 Food, Beverage, and Labor Cost Control (3) Techniques for analyzing and controlling food, beverage, and labor costs in hospitality organizations.

HRIM 337 Food, Beverage, and Labor Cost Control (3)

This course is designed for current and future foodservice operators/managers who want to learn the financial side of managing a foodservice operation in order to be able to compete in a challenging and tight market. Hospitality managers must be able to recognize and react appropriately to pertinent financial information and trends and to control costs in today's competitive environment. Techniques for analyzing and controlling food, beverage, and labor costs in hospitality organizations are presented through a variety of case studies and applied activities. Main topics typically include:
Elements and analysis of labor costs
Productivity analysis and methods of increasing productivity
Food and beverage cost control procedures, including purchasing, receiving, storage and issuing controls, precosting and menu analysis
Analyzing basic financial reports and recognizing trends requiring action
Internal financial controls such as guest checks, cash registers, cash and automated systems
Using management information systems in cost control procedures

The course is required for students in the school foodservice emphasis of the dietetic food systems management associate degree (DSM) and is available as an elective for other students in the dietetics programs. Students must first complete a basic accounting course. Evaluation methods include quizzes, examinations, project and case study assignments. This course is offered through Penn State's World Campus on an open enrollment basis.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 365 (IL) Organizational Behavior in the Hospitality Industry (3) Study of individual satisfaction and performance in hospitality organizations. Topics include cultural diversity, motivation, communication, group behavior, and leadership.

HRIM 365 Organizational Behavior in the Hospitality Industry (3) (IL)

This course builds on the students' knowledge of the principles of management. The objective of this course is to acquaint students with organizational issues in the hospitality industry. Main topics typically include:
What constitutes an organization: its components and different ways of understanding organizations
What factors influence the behavior of individuals, teams, and groups within organizations
How the behavior of individuals, teams, and groups affects organizational effectiveness and performance
Making the connections between organizational behavior and hospitality organization effectiveness.

The content of this course is fundamental to understanding how people work in organizations and the use of teams and groups in organizational goal achievement. This is a required course for all Hotel, Restaurant, and Institutional Management majors and is a prerequisite for the course in hospitality hiuman resource management. Evaluation methods may include examinations, quizzes, short writing assignments, and case studies. The course is usually offered fall and spring semesters with enrollments of about 120 students.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 380 Hotel Management (3) Introduction to rooms management including front office, housekeeping, security, and engineering. Emphasizes operations, coordination, and communication within and between departments.

HRIM 380 Hotel Management (3)

The purpose of this course is to continue the learning process regarding hotel management and operations that began in the introductory HR&IM course. The course focuses on the responsibilities of hotel department heads. Students develop decision-making skills that are applicable specifically to hotel operations, and generally to all hospitality industry operations. Main topics typically include:
fundamental lodging classifications, including location (e.g. city, resort, highway, airport, suburban), size, service, class, stars, and diamonds
recent trends in lodging supply segmentation, including all-suite, extended-stay, and time-share
major companies and brands in the hotel industry, and what organizations are involved in ownership, management, and/or franchising
The relationship between the hotel front office and other departments in the rooms division, including housekeeping, concierge, reservations, PBX/telecommunications, security/loss prevention, and night audit
the relationship between the hotel rooms division and other divisions, including sales & marketing, food & beverage (in a hotel environment), engineering, human resources, accounting, and convention/conference management/service
fundamental operating statistics related to hotels, including occupancy, ADR, and REVPAR
hotel night audits

The content of this course is considered fundamental for anyone in hospitality management and, therefore, is required of all Hotel, Restaurant, and Institutional Management majors. Evaluation methods usually include examinations, quizzes, and other assignments. The course is usually offered during both the fall and spring semesters with enrollments of about 100 students.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 385 Management Principles in Dietetic Services (3) Application and integration of management principles and leadership skills in dietetic services.

HRIM 385 Management Principles in Dietetic Services (3)

This course is designed to foster the integration of management principles in the profession of dietetics, Emphasis is placed on leadership development, decision making/problem solving, strategic planning, and marketing of dietetic services. Through case studies, the interrelationship of food and nutrition labor and equipment are demonstrated. Students develop a business plan for a food and nutrition services business venture, which will be presented at the end of the semester.

Main topics typically include:
Effective leadership in dietetics services.
Interpretation of financial data with emphasis on identifying and correcting problematic areas in food and nutrition services.
Types of budgets, including operating, capital, and flexible.
Negotiation techniques in different situations.
Strategic planning process, including vision and mission statement writing.
Principles and skills necessary in human resource management and their unique application in food and nutrition services.
Service marketing principles in a variety of food and nutrition settings.
Kitchen equipment layout and design and their relationship to efficient production and service in delivery of nutrition services.

This course is part of the required sequence of foodservice management courses applied nutrition science majors take in the hospitality discipline. Students must first take a food production course and a nutrition course on administration of nutrition services in a health care setting. This course provides management of dietetic services principles addressed in the national registration examination for dietitians.

Students are evaluated based on an examination, case study analyses, and development and presentation of a business plan.

T'his course would be offered initially once per year in the spring semester at the University Park campus. Estimated enrollment would be 40-50 students.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 386 Introduction to the Gaming and Casino Industry (3) Students will learn about those traits of the casino industry which distinguish it from other segments of the hospitality industry.

HRIM 386 Introduction to the Gaming and Casino Industry (3)

The objective of this course is to introduce the advanced standing student to the unique traits of the casino industry. The student will learn that Nevada demonstrated that the potential negative societal impact can be minimized through rigorous, state-sanctioned, state-regulated casino gaming. The review of all American jurisdictions and several international markets with an emphasis on Pennsylvania provides the student with an expanded perspective of career possibilities and the significant economic impact of legalized gaming. The student will learn from casino mathematics how a casino is assured a revenue stream through the house advantage and how game protection is essential to maintaining the house advantage and to the profitability of the operation. Unique marketing activities such as professional events, players' clubs, entertainment, and casino floor promotions are surveyed to demonstrate the market segments casinos attract and to explain the impact of marketing on the image of any particular casino. Technology's significant impact on customer service, cost reduction, and financial controls is discussed. A thorough examination of the social costs and the economic benefits of legalized casino gaming informs the student so that they can understand the public image of casino gaming in general.

General Education: None

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 387 Casino Controls (3) This course is an overview of controls used in casinos including an exploration of complimentary goods (comps) and services and credit.

HRIM 387 Casino Controls (3)

The objective of this course is to introduce the advanced standing student to the unique traits of the casino industry. The student will learn that Nevada demonstrated that the potential negative societal impact can be minimized through rigorous, state-sanctioned, state-regulated casino gaming. The review of all American jurisdictions and several international markets with an emphasis on Pennsylvania provides the student with an expanded perspective of career possibilities and the significant economic impact of legalized gaming. The student will learn from casino mathematics how a casino is assured a revenue stream through the house advantage and how game protection is essential to maintaining the house advantage and to the profitability of the operation. Unique marketing activities such as professional events, players' clubs, entertainment, and casino floor promotions are surveyed to demonstrate the market segments casinos attract and to explain the impact of marketing on the image of any particular casino. Technology's significant impact on customer service, cost reduction, and financial controls is discussed. A thorough examination of the social costs and the economic benefits of legalized casino gaming informs the student so that they can understand the public image of casino gaming in general.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2010
Prerequisite: "C" or better inHRIM 201, HRIM 335 andHRIM 386
Concurrent: HRIM 388

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 388 Gaming Operations Management (3) Students will learn casino mathematics, game protection, floor layout methods, departmental organizational structure, and performance analysis.

HRIM 388 Gaming Operations Management (3)

The primary objective of this course is to introduce the advanced standing student to the management of various games and gaming devices used in a casino. The student learns the impact of the Americans with Disabilities Act on casino design, casino layout, and equipment design. Casino mathematics is explored in greater depth than in the Introduction to the Gaming and Casino Industry (HRIM386). The student is required to calculate odds and expected values in order to fully understand the role the house advantage plays in profitability and to recognize the significance of revenue controls. Each department in the gaming area is reviewed for organizational structure, job titles and descriptions, and performance analysis. The overlap with Casino Controls (HRIM387) is intentional so that the student realizes a major function of any supervisory or management position in the gaming area is control. The student learns and practices the rules of each major game in the casino by playing and dealing. The student must learn the different bets and their payoffs as well as the control techniques needed to prevent theft and cheating. Various methods used by players to manipulate the odds or payoffs are studied so that the student can recognize and prevent them. The performance of the gaming areas is critical to the profitability of a casino. Techniques for analyzing performance of the table games and slots are emphasized due to the relative importance of the revenue in these areas to overall revenues of the casino. In addition, the student must create a staffing chart for the table games department. Security and surveillance are studied in order for the student to discern the difference in roles these two departments play and to understand their importance to the control of revenue and expenses. The student must become familiar with the various pieces of equipment used in each gaming department. The impact of technology on equipment design, game protection, and surveillance activities is studied. The student is taught the selection criteria and maintenance requirements of technology components in order to understand the tradeoffs made when purchasing electronic gaming devices, surveillance cameras and systems, RFID systems, and other components affected by imminent technological advances.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 413 New Product Development for Commercial Foodservice (3) This course introduces students to a new product development process that requires coordination, communication, and integration throughout the organization.

HRIM 413 New Product Development for Commercial Foodservice (3)

New product development is a critical business design process that crosses multiple functional areas in a corporation. In today's globally competitive business environment, new product development is not a strategic option; it is a fundamental prerequisite for a company's survival, organizational renewal, and national economic prosperity. In addition, new product development is not the domain of any one function, but a multidisciplinary process that requires coordination, communication, and integration throughout the organization. This course will operationalize the management link by creating cross-disciplinary teams in which students will learn and apply the skills necessary to design and develop a new product prototype.

This course will present and utilize an integrated approach to new product design, development, and marketing. The course will provide a team experience of formulating, designing, and evaluating a new product concept. Students completing this course will have operational knowledge of and competence with a set of tools and methodologies for product design and development. Students will be able to coordinate multiple interdisciplinary tasks in order to achieve a common objective in an action-oriented business setting.

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 412 Advanced Institutional Food Service Management (4) Advanced principles of food production management and service and their application in institutional food service settings.

HRIM 412 Advanced Institutional Food Service Management (4)

This course gives students an opportunity to gain experience in the wide range of skills and techniques that are normally associated with the duties of a manager in an institutional food service setting. The skills and techniques that are emphasized include duties involved in the planning, execution, and evaluation of special event dinners. Students are expected to develop a special event theme and then plan, produce and evaluate an authentic dining experience. A successful dining experience is contingent upon both guest satisfaction and the achievement of financial goals. Main topics typically include:

Menu planning strategies for diverse markets
Demonstration of technical responsibilities involved in the development, production and evaluation of a wide range of food service systems including: sales, menu planning, recipe development and evaluation, pricing, purchasing, facilities management, personnel management, and financial management
Operational needs and potential problems in a food and beverage facility during production and service
Presentation techniques for institutional service areas
Timely and effective managerial problem identification and decision-making abilities
Interpersonal and teamwork skills both within a management team and with classmates as employees
Interaction with guests and evaluation of guests' dining experiences

The course is an elective class in the Hotel, Restaurant, and Institutional Management major. Students must first complete the introductory food production course. Students are evaluated based on examinations, a term project, and laboratory reports. The course is offered on an as-needed basis.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2004
Prerequisite: HRIM 330

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 415 International Cuisine (3) Cooking and eating practices of cultures around the world, including historical, religious, cultural, geographic, and political influences on each cuisine.

HRIM 415 International Cuisine (3)

The objective of this course is to expose students to managerial and cultural issues of cuisine and how they influence the development of commercial food and beverage operations. The text and lectures lay the foundation for the understanding of culture and cuisine. Main topics typically include:
Understanding how cuisine has developed over time
Variety of foods grown in distant regions and dissemination as adventurers contacted (and often conquered) other people and learned of their cultures
Evolvement of trade that brought exotic foods from distant locales
Geography's role in defining the types of foods and quantities of crops that can be produced around the globe
Critical components of the major world cuisines

The course is an elective for Hotel, Restaurant, and Institutional Management students. Prior to taking this professional elective, students must complete the introductory course in food production and management. The course is normally taken in the students' senior year. Students are evaluated based on examinations. The course is offered on an as-needed basis.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: A grade of "C" or better required forHRIM 201, NUTR 100, NUTR 119

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 430 Advanced Food Production and Service Management (3) Simulation and application of technical, conceptual, interpersonal skills. Emphasis on group dynamics; improvement in managerial skills; management team functions.

HRIM 430 Advanced Food Production and Service Management (3)

This course is designed to give students an opportunity to gain experience in the wide range of skills and techniques that are normally associated with the duties of a hospitality manager. The skills and techniques that will be emphasized include, but are not limited to, duties involved in the planning, execution and evaluation of full-service, theme oriented ala carte dining. Students are expected to form a marketable theme and then develop, produce and evaluate an authentic dining experience. A successful dining experience is contingent upon both guest satisfaction and the achievement of financial goals. Main topics typically include:
Research, describe and produce an authentic restaurant environment from a selected theme
Demonstration of technical responsibilities involved in the development, production and evaluation of a wide range of food service systems including: sales, menu planning, recipe development and evaluation, pricing, purchasing, facilities management, personnel management and financial management
Operational needs and potential problems in a food and beverage operation during production and service
Timely and effective managerial problem identification and decision-making abilities
Interpersonal and teamwork skills both within a management team and with classmates as employees
Interaction with guests and evaluation of guests'dining experiences

The course is a capstone management class in the foods sequence and is required of all Hotel, Restaurant, and Institutional Management majors. Students must first complete the introductory food production course. Evaluation methods include a detailed business plan for a working restaurant created in a management team of approximately eight, quizzes, short written assignments, oral presentations. and subjective performance assessments as a manager and a line employee. The course is usually offered in fall and spring semester and summer session, with approximately 30 students in each section.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: A grade of "C" or better required forHRIM 330

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 435 Financial Management in Hospitality Operations (3) Fiscal techniques in the development, management, and control of hospitality establishments.

HRIM 435 Financial Management in Hospitality Operations (3)

Financial management is an integral part of decision-making in the hospitality industry. The study of hospitality financial management helps to insure that hospitality decision-makers understand the principles of value creation and incorporate them into their decision-making. This course gives students the opportunity to gain knowledge of the fundamental concepts, tools, and applications that represent the core of financial management as applied to decision-making and value creation in the hospitality industry. Main topics typically include:

Introduction to financial decision-making in the hospitality industry
Agency theory and the decision-making process
Value creation and the goal of hospitality financial management
The functioning of financial markets that are relevant to hospitality firms
Principles and methods of value creation in the hospitality industry
Applications of financial statement analysis to hospitality finance
Principles and applications of risk analysis to the value creation process
Principles and applications of the time value of money to the value creation process
Capital expenditure analysis in the hospitality industry
Principles and applications of financing hospitality projects and firms
Other special topics relevant to current hospitality financial issues

The content of this course is considered fundamental for anyone in hospitality management and, therefore, is required of all Hotel, Restaurant, and Institutional Management majors. Prior to this course, students are required to have taken Financial Accounting in the Hospitality Industry, Managerial Accounting in the Hospitality Industry, and three credits of economics. Hospitality Decision-Making is also a pre-requisite for the course but may be taken concurrently. This course is a pre-requisite to Strategic Hospitality Management. Evaluation methods usually include examinations, quizzes, problem and paper assignments, and a semester project. The course is usually offered fall and spring semesters with enrollments of about 45 students per section.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: A grade of "C" or better required forECON 002 orECON 014 andHRIM 336 . Prerequisite or concurrent:HRIM 350

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 436 Hospitality Operational Management (3) Tactical management processes of hospitality operations, with an emphasis on integrating concepts from previous courses into daily managerial systems.

HRIM 436 Hospitality Operational Management (3)

The complexity and uncertainty of the today's business environment makes management decision-making more challenging than ever. Managers' ability to identify and analyze relevant data so as to make sound business decisions has become critical to the success of business. This course introduces statistical and operations research methods appropriate for managers in the hospitality industry to use in making decisions. The primary goal of the class is to enhance students' operational analytical skills and problem solving abilities. Main topics typically include:
Demand and capacity management
Revenue management
Decision modeling
Process analysis and design
Interpretation of analytic results and communication of results to others

This course is an elective in the Hotel, Restaurant, and Institutional Management program. Students must first complete courses in Hotel, Restaurant, and Institutional Management decision making, financial management and marketing. Evaluation methods usually include weekly assignments, examinations, and a small project. The course runs as a combination of lectures and labs. It is taught in the technology classroom, 117 Mateer Bldg. (wireless computer laboratory). The course is usually offered once a year, either in the fall or spring semester with enrollments of 20 to 30 students.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2004
Prerequisite: HRIM 435, HRIM 442

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 437 Hospitality Project Evaluation and Funding (3) Current techniques for project evaluation in the hospitality industry; trends in hospitality project funding.

HRIM 437 Hospitality Project Evaluation and Funding (3)

This is an advanced course in the fmancial evaluation of hospitality projects and the decisions related to their subsequent financing. The selection of value creating projects is integral to the success of hospitality firms. In addition, project financing decisions can have significant impact on the full realization of a project's value creation potential. In order to provide the hospitality managers with state of the art project decision tools, this course examines the theory related to hospitality project selection and financing and applies it to current techniques in the hospitality industry. Main topics typically include:

Basic principles of hospitality project evaluation
Present project evaluation techniques in the commercial hospitality sector
Present project evaluation techniques in the non-commercial hospitality sector
The use of cap rates in hospitality lodging valuation
Issues related to incorporating risk assessment in hospitality project evaluation
Net present value, adjusted present value, and real options in hospitality project evaluation
Other advanced techniques in hospitality project evaluation
Basic issues and theory in hospitality project financing
Trends in commercial and non-commercial hospitality project financing
Potential interactions between hospitality project selection, project financing, and value creation
Other special topics relevant to current and future techniques in hospitality project evaluation and financing

This course is an elective course designed for students who desire to gain an in-depth knowledge of hospitality project selection and financing. The course is appropriate for students seeking to obtain the skills necessary for middle or upper management level positions in hospitality organizations. Prior to this course, students are required to have taken Financial Management in Hospitality Operations or its equivalent. Evaluation methods usually include problem assignments, quizzes, examinations, case analyses, and a project. The course is usually offered once a year with enrollments of about 30 students per section.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2004
Prerequisite: HRIM 435

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 438 Cases in Financial Analysis (3) Financial analysis and decision making is examined through a series of hospitality-oriented cases.

HRIM 438 Cases in Financial Analysis (3)

This is an advanced course in the application of hospitality financial analysis and decisionmaking techniques to real life hospitality operational situations. Decisions of managers in actual and hypothetical situations are critically examined from the perspective of appropriate financial and accounting theory using a case format approach. Discussions include the ramifications of real life complicating factors on theoretical outcomes. Main topics typically include:
An overview of the principles of financial analysis
Financial statement analysis: evaluation of performance from a historical, competitive, and industry perspective; effects of alternative accounting techniques
Alternate forms of operations and their financial and accounting implications: subsidiaries, joint ventures, partnerships, management agreements
Budgeting processes and procedures, including operational budgeting and the behavioral implications and procedures common in not-for-profit institutions
Cost allocation in hospitality organizations: techniques and financial implications
organization of the financial function: alternative designs
Special topics relevant to current trends in hospitality financial analysis

This course is an elective course designed for students who desire to gain an in-depth knowledge of current and future techniques and applications of hospitality financial analysis. The course is appropriate for students seeking to obtain the skills necessary for middle or upper management level positions in hospitality organizations. Prior to this course, students are required to have taken Financial Management in Hospitality Operations or its equivalent. Evaluation methods usually include case analyses, presentations, examinations, and quizzes. The course is usually offered once a year with enrollments of about 30 students per section.

General Education: None

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 442 Hospitality Marketing (3) Marketing management in the hospitality industry, including analyzing the market through market research and developing a marketing plan.

HRIM 442 Hospitality Marketing (3)

Marketing in the hospitality industry is distinctly different than marketing in either the manufacturing or the service industries. The hospitality industry - hotels, restaurants, institutional food service, travel and tourism, is a hybrid that constitutes both products and services. The objective of the course is to give an overview of marketing as applied to the hospitality industry, including but not limited to: unique attributes of service marketing; consumer orientation; understanding consumers and consumer behavior; market segmentation principles; target marketing; product planning; promotion planning; market research; and competitor analysis. Main topics typically include:
The marketing enviroment
Social responsibility and ethics in marketing
Marketing research and information systems
Target markets: segmentation and evaluation
Consumer buying behavior and the purchase decision
Developing and managing products
Branding and packaging
Strategic planning
Integrating marketing communications
Advertising and public relations
Personal selling and sales promotion
Pricing concepts
Setting prices

This course is required of all Hotel, Restaurant, and Institutional Management majors. Prior to this course, students are required to have taken a principles of marketing course and the decision models in the hospitality industry course. This course is a pre-requisite to the strategic hospitality management course. Evaluation methods usually include case study analysis, marketing plan projects, strategic plan projects, examinations, quizzes, and short writing assignments. Group assignments are often used in a problem based learning environment. The course is usually offered fall and spring semesters with enrollments of about 80 to 100 students divided into two sections.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007 Ending: Summer 2010
Prerequisite: A grade of "C" or better required forHRIM 350, MKTG 221

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 443 Sales Planning and Advertising for Hospitality Operations (3) Elements of sales management, advertising, promotion, and public relations as applied to hospitality organizations.

HRIM 443 Sales Planning and Advertising for Hospitality (3)

The hospitality industry is entering an era in which operational and product parity between organizations and their properties is increasingly likely. This is so because of their shared access to technology, design and training devices. Consequently, it becomes evident that increases in sales will be reliant on the competitive advantages that professionals achieve in marketing strategies, sales management, and especially in marketing communications (MARCOM) tactics and execution. This course exposes students to a wide range of hospitality marketing communications issues. Students gather information from electronic media, trade and travel media, and consumer media. Students explore hospitality MARCOM issues through semester-long individual projects. Main topics typically include:
Marketing versus selling strategies
Industry trends that affect advertising and sales especially Internet activities
Types of advertising media
Print advertising principles
Broadcast advertising principles
Foundations of direct marketing
Elementals of public relations
Travel agency relations
Personal sales

This is an elective course. Students must first take the hospitality marketing course in Hotel, Restaurant, and Institutional Management. Student assessment is accomplished through quantitative objective testing and qualitative subjective exams and quizzes. A portion of the total term assessment is weighted by the student's performance in the individual project mentioned above. The course is usually offered spring semester with an enrollment of 40 students.

General Education: None

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 444 Caribbean Hospitality/Tourism Development (3) Evaluation of sustainable hospitality/tourism.

HRIM 444 Caribbean Hospitality/Tourism Development (3)

The course objective is to train future managers in the tourism and hospitality industry how to cope with environmental issues and preservation of ecotourism environments. Ecotourism planning and management may well emerge in the Twenty-First Century as more important than either the communications revolution or biotechnology because of its potential usefulness in guaranteeing a livable environment. Main topics typically include:

General model for sustainable tourism development
Subcomponents of the model
New directions in the ecotourism industry
Social aspects of ecotourism
Economic aspects of ecotourism
Political aspects of ecotourism
Natural planning limitation
Protected ecotourism area planning principles and strategies
New approaches to community-based ecotourism management
Carrying capacity concepts
Non-government organizations role in ecotourism
Public sector/private sector relationships
Future challenges

This course is an elective in the hospitality program. The course meets on a limited basis throughout the semester and includes an eight-day field trip to Jamaica. Students design and conduct on-site surveys that measure tourists' perceptions and attitudes about the ecotourism industry, culture, environmental quality, and government/private sector cooperation. The trip also allows students to experience firsthand the cultural diversity of the Caribbean travel market. Students are evaluated based on homework assignments, participation in discussions with guest speakers, and personal interview procedures that students use to conduct their ecotourism survey, and analysis and interpretation of their survey results. The special facilities involved are those located in Jamaica. The course usually is offered spring semester, with an enrollment of about 20 students.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 455 Convention Management (3) Management principles of hotel convention sales and service.

HRIM 455 Convention Management (3)

This course addresses the increasingly important convention segment of the hospitality industry. The objective is for students to gain an understanding of the operations of a hotel convention services department, how group meetings are marketed and planned, how technology is used to serve the various processes of convention management, and how the convention services department relates to other departments in a hotel. Main topics typically include:
Overview and scope of the meetings market
Marketing and convention services staff
Marketing
The sales process
Negotiations and contracts
Planning the meeting
The service function
Exhibits and trade shows
Convention billing
Post-convention review and evaluation

The course is an elective in the Hotel, Restaurant, and Institutional Management program. Students must first complete the introductory courses in hotel operations and hospitality marketing. Students are evaluated based on examinations and projects. The course is offered on an as-needed basis, with enrollments of about 20 students.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2004

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 466 (US) Human Resource Management in the Hospitality Industry (3) Recruitment, selection, training, performance appraisal, and compensation of hospitality human resources in today's culturally diverse work force.

HRIM 466 Human Resource Management in the Hospitality Industry (3) (US)

This course builds on students' knowledge of organizational behavior and management. The course discusses human resource (HR) issues in the hospitality industry. The course pays special attention to the changing nature of organizations, the challenges that human resource managers face as a result, and the consequences of HR managers' actions to the organization. Topics typically include:

Importance of human resources in the hospitality industry
Processes managers use in recruiting, selecting and training human resources in their organizations
Legal and social issues that impact human resource management in the hospitality industry
Roles and responsibilities of a hospitality industry human resources professional

The content of this course is fundamental to understanding how the human resource function operates in hospitality organizations. This is a required course for all Hotel, Restaurant, and Institutional Management majors. Students must first complete the course in hospitality organization behavior. Evaluation methods may include examinations, quizzes, short writing assignments, and case studies. The course is usually offered fall and spring semesters with enrollments of about 45 students.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 456 Casino Operations Management (3) Historical and current perspective of the gaming industry. Management principles of casino operations, including coordination with traditional hospitality services.

HRIM 456 Casino Operations Management (3)

The primary objective of this course is to provide students with an understanding of how a casino hotel supports the gaming function of domestic and international casinos. A second objective is to provide the student with an opportunity to apply specific subject matter learned in other courses (management, marketing, accounting, human resource management) to business problems and issues in the casino industry. A third objective is to provide information about the gaining industry in general and specifically about career opportunities in the gaming and convention services industries. Main topics typically include:
Introduction to the casino industry-its size, structure, and historical origins
Management issues in a casino hotel as compared with other types of hotels
Roles of hotel managers and food and beverage managers at multiple levels in casino hotels
Model for analyzing casino hotel issues in a rapidly changing industry
Roles of government and regulatory agencies in protecting consumers, the public, communities, and competitors
Differences between social responsible and addictive gambling
Reliable sources of information about the gaming industry

This is an elective course usually taken after a student has completed several courses in the major. Students in other majors are welcome after all Hotel, Restaurant, and Institutional Management majors have scheduled. Student performance is evaluated through examinations and quizzes. This course is offered fall semester with enrollments of 30 to 40 students.

General Education: None
Diversity: None
Bachelor of Arts: None

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 467 Management of Hotel and Restaurant Employee Relations (3) Survey and analysis of managerial strategies for employee relations in hospitality operations.

HRIM 467 Management of Hotel and Restaurant Employee Relations (3)

The objective of this course is to provide students with an understanding of labor relations in the hospitality industry. Students need to know about labor laws as they affect the industry and specifically about collective bargaining. Primary emphasis is given to private-sector labor relations, but some consideration is given to the public sector. Main topics typically include:

Introduction to employee relations in hotels and restaurants
Economic influences on the hotel and restaurant labor market
Labor law as applied to the hospitality industry
Management strategies in collective bargaining
Administration of labor contracts
Management and supervisory strategies in labor disputes

The course is an elective in the hospitality program. Students must first complete the course in hospitality human resources. Students are evaluated based on examinations, a paper, and an in-class bargaining simulation. The course is offered on an as-needed basis, with enrollment of about 20 students.

General Education: None
Diversity: None
Bachelor of Arts: None

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 470 Hospitality Management Information Systems (3) Design, implementation, and analyses of information systems for strategic, tactical, and operational functions of hospitality management.

HRIM 470 Hospitality Management Information Systems (3)

The objectives of this course are to provide students with the opportunity to explore hospitality information systems within the industry, to demonstrate how managers are involved with information systems planning, design, analysis and project management; and to show how information systems can be used at all levels of hospitality management. Hospitality managers interested in information technology should comprehend how information technology supports strategic, tactical, and operations functions. The course is taught from the perspective of what managers need to know to interact with systems analysts and purveyors. Additionally, the course will address how managers can use information. Main topics typically include: Concepts of information systems
Applying information systems to hospitality - enterprise resource planning, customer relationship management
Managerial support systems - geographic information systems, executive information systems
Human element in information systems and business process re-engineering
Project management
Application of information systems to hospitality operations
Managing technology resources - data
Challenges of information system leadership - planning and ethics
Application development
Purchasing applications
Facilitating user computing

The course is a required course for all students in the Hotel, Restaurant, and Institutional Management /Information Sciences and Technology minor and is an elective for other Hotel, Restaurant, and Institutional Management majors. Students are evaluated by examinations, written exercises, and class participation. The course is offered fall semester with an enrollment of about 10 students.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 471 Evaluation of Hospitality Technology (3) This course provides students with an understanding of the variety of information technologies used in the hospitality industry.

HRIM 471 Evaluation of Hospitality Technology (3)

Newly emerging information technology and systems are changing the competitive landscape of the hospitality industry. In order for a hospitality firm to maintain a competitive position in its market, hospitality managers must understand how information technology (IT) and information systems (IS) affect their operations and their competitiveness in the market. The course is designed to familiarize students with the role of information systems as a support and enabling function of hospitality firms. Main topics typically include:

The concept of information systems
Components of hospitality information systems at the corporate and operational levels
Analysis and evaluation of hospitality information systems
Process of selecting information systems
Implementation and maintenance of information systems

This is an elective course for Hotel, Restaurant, and Institutional Management majors and a required course for students pursuing the Information Sciences and Technology minor. Students must first complete the HRIM courses in decision-making and information systems and in hospitality management information systems. Evaluation methods usually include examinations, case write-ups, and a semester project. The course is taught in a team technology classroom.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: A grade of "C" or better required forHRIM 350, HRIM 470

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 482 Hospitality Real Estate (3) The course focuses on commercial real estate concepts related to the hospitality industry.

HRIM 482 Hospitality Real Estate (3)

The purpose of this course is to commence the learning process regarding strategic real estate management in the hospitality industry through a process of discovery. Topics include hospitality property development, ownership, asset management, market analysis, legal issues, financing, investment, and appraisal. The course is oriented towards the responsibilities of hospitality industry corporate staff, developers, and owners.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2008 Ending: Summer 2010
Prerequisite: HRIM 336, HRIM 380

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 480 Advanced Hotel Management (3) Advanced hotel operations, internal control systems, and service philosophy. Integrates management, departmental operations, law, technology applications, marketing and managerial accounting.

HRIM 480 Advanced Hotel Management (3)

HRIM 480 is designed to provide students with an advanced knowledge of hotel operations. The course focuses on the responsibilities of executive committee members and the general manager of a hotel. As such, the topics are varied and include discussions of current events in the hotel industry. Students participate in a hotel management simulation exercise to help develop strategic decision-making skills. Main topics typically include:
Introduction to types of owners in a hotel transaction
Leading hotel companies and their brands
Management companies and franchise agreements
Technology's impact on the hotel business
Hotel operations in an international environment
Linkage between hotel operating decisions and the service quality experience
Management style and problem solving abilities in a team environment
General management perspective on how various operating aspects of a hotel are related to one another
Individual yield management components' affect on the yield management decision

The course is considered to be a senior-level course and is a required course for all Hotel, Restaurant, and Institutional Management majors. The introductory hotel management course and the hospitality managerial accounting course are prerequisites. The course also builds on knowledge gained in a variety of other hospitality and business courses such as marketing and organizational behavior. Students are evaluated by examinations, written summaries of assigned readings, periodic reports for a simulation exercise, peer evaluations, and simulation performance grades. The course is taught in the technology classroom, 117 Mateer Building (wireless computer laboratory). The course is offered fall and spring semesters with enrollments of about 40 students for each sections.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 487 Casino Operations and Societal Impact of Gaming (3) Students will learn the structure, culture, and ethical responsibility toward disordered gambling and other lifestyle issues of modern casinos.

HRIM 487 Casino Operations and Societal Impact on Gaming (3)

The primary objective of this course is to introduce the advanced standing student to the organization structure, the organizational culture, and the ethical responsibility toward disordered gambling and other lifestyle issues of modern casinos. The student will study leaders in the casino industry to gain insight into how they contributed to the growth of their companies and the industry as a whole. Emphasis will be placed on their approach to the ethical issues of their day. The modern day casino is complex and its organizational structure reflects that complexity. The student will study the different structures and reporting relationships of actual casinos to ascertain the factors that impact the level of effectiveness of different organizational charts. The job titles and descriptions of all departments will be examined. The job titles and descriptions of the gaming departments will be studied in greater depth than in Gaming Operations (HRIM388). The lifestyle of customers and employees alike will be examined particularly those issues that impact health and social services. Specific topics include disordered gambling and smoking. Disordered gambling will be studied in greater depth than in Introduction to Casino Management (HRIM386) and will be examined simultaneously with Casino Marketing (HRIM486). The human resources function will be scrutinized as a filtering process for selecting the right employees and for training and reinforcing the organization’s commitment to ethical and responsible behavior. The casino design project will take the student’s ability to design a slot floor layout, a table games floor layout, to create a list of hotel room amenities, to write a positioning statement for a range of restaurants in a hypothetical casino, to develop a list of multiple entertainment venues and so on to a higher level than previous coursework so that the final product demonstrates the student’s knowledge and expertise in casino management.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2010
Prerequisite: "C" or better inHRIM 387, HRIM 388 andHRIM 495
Concurrent: HRIM 486

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 486 Casino Marketing (3) Students will learn marketing techniques for casinos which take into account the external environment, individual consumer choices, and ethical considerations.

HRIM 486 Casino Marketing (3)

The primary objective of this course is to introduce the advanced standing student to the factors affecting the effective marketing of a modern casino. General marketing principles and concepts build the foundation for the study of marketing techniques unique to the casino industry. Consumer behavior and external environments create the context in which all marketing decisions and activities occur. Their study ensures the student has the basics to approach any marketing problem. Before the strategic use of marketing to build brand awareness and to ensure profitability is learned, the impact of social and ethical responsibility is studied including disordered gambling and smoking bans. The need to advertise and promote without exacerbating the incidence of disordered gambling is an increasingly necessary ability required of casinos today. A thorough knowledge of segmentation and positioning are required as well. Extra time is allotted to both social responsibility and segmentation/positioning. Strategic marketing entails identifying the components of a marketing plan, their purpose, and the method of execution. Various concepts such as profit-service chain and revenue management are covered to round out the student’s knowledge of marketing. The course spends time on promotions which are unique to the casino industry including, but not limited to professional boxing matches and other special events, slot and players’ clubs, special entertainment venues, on-floor promotions, and so on. The student learns the importance of location and transportation issues and how they impact the revenue and profitability of a casino. Meetings and conventions generate revenue during off-peak periods and are significant factors in the revenue stream of a casino. The student must demonstrate their mastery of the material by creating a strategic marketing plan for a hypothetical casino.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 489 Seminar in Institutional Food Service Management (3) Contemporary issues in institutional food service management.

HRIM 489 Seminar in Institutional Food Service Management (3)

The objectives of this course are to acquaint students with contemporary issues in institutional food service and to evaluate the impact of specific elements in the external and internal environments on institutional food service. Main topics typically include:
Current status of institutional food service
Branding
Production and distribution systems
Contract food service companies
Strategic analysis of specific segments of institutional food service, including school food service, college food service health care, life care, business and industry, recreational, and corrections

This course is an elective in the Hotel, Restaurant, and Institutional Management curriculum. Evaluation methods usually include examinations, class participation, and a term project. The course is offered on an as-needed basis.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 491 Operational Analysis of Institutional Food Service (3) The development and application of quantitative and qualitative techniques for evaluation of institutional food service.

HRIM 491 Operational Analysis of Institutional Food Service (3)

The objectives of this course are to acquaint students with the variety of analytical techniques useful for evaluating the performance of an institutional food service and to outline strategies for analyzing performance problems in specific cases. This course allows the student to apply decision models to operational problems in institutional food service. Main topics typically include:
Characteristics of services
Forecasting demand for services
Aggregate planning
Scheduling capacity
Quality and productivity
Process control charts
Project management
Queuing

This course is an elective in the Hotel, Restaurant, and Institutional Management curriculum. Evaluation methods usually include examinations, case studies, and a term project. The course is offered on an as-needed basis.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 492 Advanced Professional Seminar in Hotel, Restaurant and Institutional Management (1) Course prepares senior HR&IM students to assume leadership positions in the hospitality industry (Focus on careers, leadership, ethics, lifelong learning).

HRIM 492 Advanced Professional Seminar in Hotel, Restaurant and Institutional Management (1)

The objective of this course is to help students begin their transition from being students to being hospitality managers. With most Hotel, Restaurant, and Institutional Management majors not having yet established careers and having spent most of their lives as students, they need to think systematically about how they will become full-time managers in hospitality. Main topics typically include:
Career planning and lifelong learning
Deciding on employers to pursue
The selection process-getting offers from employers
Evaluating and choosing between offers
Negotiating salary, location, benefits, relocation expenses
Personal budgeting and financial planning
Balancing work and personal life
Time and stress management
Networking and professional associations
Roles and responsibilities of alumni

This course is required of all hospitality majors. The course is taken after most hospitality courses have been completed and concurrent with other courses that are capstones within various tracks of courses, such as the foods-related courses. The course is usually taken in the final semester of study. As a prerequisite for the course, students must have completed 1,000 hours of work experience in the hospitality industry. Evaluation methods may include quizzes, writing assignments, and class participation. The course is usually offered fall and spring semesters, with enrollments dependent upon the size of the graduating class.

Human Development and Family Studies (HD FS)

HD FS 129 (GS) Introduction to Human Development and Family Studies (3) Introduction to psychosocial and family development at all stages of the individual and family life cycle.

HD FS 129 Introduction to Human Development and Family Studies (3)
(GS)

(BA) This course meets the Bachelor of Arts degree requirements.

This course provides a basic introduction to the concepts, theories, and research on human development as it occurs over the life span and in context. Students will be introduced to developmental tasks and challenges unique to each stage of human development from the womb through infancy, early and middle childhood, adolescence, emerging adulthood, middle age and old age. Beginning with the prenatal state and infancy, students will be introduced to the biological, emotional, cognitive, psychosocial, as well as the social, cultural and historical factors that influence growth and development across infancy, childhood, adolescence, adulthood, and advanced adulthood. Students will be introduced to basic concepts, theoretical orientations, and key empirical studies that inform human growth and development. Furthermore, attention is given to the central role of families and family life as a context for development. The formation of intimate relationships, marriage, marital processes, motherhood and fatherhood will be reviewed, as well as problems and challenges that families face such as financial stress, separation and divorce, abuse, and caregiving. Finally how families and family behavior are influenced by their communities, the larger culture, and other social and economic forces will be discussed. Students will be evaluated on the basis of tests, writing assignments, group projects, as well as participation in class discussions and occasional panels. This course will be offered five times a year at University Park, with enrollments in the 200-400 range during the semester and 20-30 in the summer sessions. Enrollments at other locations will vary from 15-200, depending on the campus and the time of the year.

HD FS 229 Infant and Child Development (3)
(GS)

(BA) This course meets the Bachelor of Arts degree requirements.

This course introduces students to the study of children from the prenatal period to (not including) adolescence. Students will become familiar with the most prominent theoretical ideas about child development. The latest research on prenatal development, infancy, early and middle childhood will inform the discussions, and students will become familiar with key studies. The major domains of children's functioning covered include social interactions and emotional development, cognitive changes and acquisition of language, physiological growth in infancy and biological changes that underlie the transition out of childhood into adolescence. A key feature of this course is how processes in these different domains interact to influence children's overall adaptation. Finally, informed by a life course developmental framework, this course will place these developmental processes in context. Students will become familiar with the theoretical and empirical literature that locates children's growth and development in the context of families and family change, peer groups, neighborhoods and communities, and the larger cultural context within which they are embedded. Students will be evaluated across several performance areas which may include tests, writing assignments, group projects, and participation in class discussions and panels. This course will be offered five times a year at University Park and varying amounts at Altoona and the Commonwealth Campuses. Enrollments vary by semester and location: Fall/Spring: 15-50 students at the Commonwealth and Altoona locations; 100-200 at University Park. Summer: 10-20 at the Commonwealth and Altoona locations; 20-30 at University Park.

Human Development and Family Studies (HD FS)

HD FS 230 Overview of Curricular Practices in Early Childhood Care and Education (3) Curricular practices in programs for infants, toddlers and preschoolers. Focus on developmentally appropriate practice, emergent curriculum and home/child care links.

HD FS 230 Overview of Curricular Practices in Early Childhood Care and Education (3)

This course, intended for current or future providers of early childhood care and education, examines curricular practices in programs for young children. It is required for the proposed Early Childhood Care and Education option to the associate degree in Human Development and Family Studies.

The course addresses current practices in early childhood care and education programs for infants, toddlers, and preschoolers. After a brief examination of the history of early childhood care and education, this course focuses on the use of developmentally appropriate activities and strategies to maximize children's positive growth and development. Each of the traditional early childhood curricular areas (involving physical, social, emotional, cognitive development) is considered, as is the importance of the connection between families and early care and education settings. Reading and discussion in each curricular area stresses diversity issues and inclusion of children with special needs in groups with normally developing children. There is an emphasis on applications of the project approach and emergent curriculum as appropriate for use with infants, toddlers and preschoolers.

Students show mastery of the course material through tests over each topic of discussion, reports on outside reading related to current issues in early childhood care and education, individual and small group presentations about a specific curricular issues, and use of a reflective journal.

The course will be offered once each academic year, with an enrollment of 15-25 students.

Human Development and Family Studies (HD FS)

HD FS 231 Guidance in Early Childhood Care and Education (3) Positive guidance methods for infants, toddlers and preschoolers, leading to self-control and social capability. Includes focus on home/childcare links.

HD FS 231 Guidance in Early Childhood Care and Education (3)

This course, intended for current or future providers of early childhood care and education, examines guidance methods for use with young children. It is required for the proposed Early Childhood Care and Education option to the associate degree in Human Development and Family Studies.

The course emphasizes the use of guidance techniques that help children grow in independence, responsibility, self-control, and ability to function as group members. It addresses organization and guidance methods that foster the child's responsibility, independence, positive social interactions and emotional self-control. While the course covers various types of guidance, it emphasizes responding to children with respect and acceptance, using positive discipline. Since guidance is an area in which families and teachers frequently must confer, this course also deals with the use of effective parent-teacher communication skills. It requires weekly experience with young children.

Each student will produce a portfolio demonstrating understanding of guidance techniques and their theoretical backgrounds. In addition, portfolios will demonstrate evidence of competence in analyzing the early childhood care and education environment in terms of its effect on young children's behavior, as well as competence in solving environmental problems that contribute to guidance issues. Portfolios will also demonstrate evidence of competence in communicating with parents and families about guidance issues. Students will reflect, in writing, on their own use of developmentally appropriate guidance techniques in their work with young children.

The course will be offered once each academic year, with an enrollment of 15-25 students.

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Human Development and Family Studies (HD FS)

HD FS 232 Creativity and Play in Early Childhood Care and Education (3) Planning for play, creativity and exploration in programs for infants, toddlers and preschoolers. Includes focus on home/childcare links.

HD FS 232 Creativity and Play in Early Childhood Care and Education (3)

This course, intended for current or future providers of early childhood care and education, examines the development of play and creativity in young children. It is required for the proposed Early Childhood Care and Education option to the associate degree in Human Development and Family Studies.

The course addresses the potential of play, creativity, and exploration in the optimal development of a child. Content includes the development of play, creativity, and aesthetics. The course emphasizes adult-child interaction styles and activities that encourage, enhance and expand play, exploration and creativity in infants, toddlers, and preschoolers throughout the daily care and education routine. There is an emphasis on effective communication with families regarding the benefits of play and open-ended activities. It requires weekly experience with young children.

Each student will develop a portfolio that demonstrates understanding of the development of play, exploration and creativity in the early years, as well as competence in planning for and enhancing that development. The portfolio will also show evidence of competence in communicating with parents and families.

In addition to the portfolio, the student will develop an activity card file containing ideas for developmentally appropriate play and creative activities for infants, toddlers, and preschoolers. Each student will participate in individual and group presentations related to course topics, and will take tests covering reading and other class material.

The course will be offered once each academic year, with an enrollment of 15-25 students.

Human Development and Family Studies (HD FS)

HD FS 233 Emergent Language and Literacy: Development and Practice in Early Childhood Care and Education (3)
Fostering development of language and literacy in infants, toddlers and preschoolers. Includes children's literature and focus on home/childcare links.

HD FS 233 Emergent Language and Literacy: Development and Practice in Early Childhood Care and Education (3)

This course, intended for current or future providers of early childhood care and education, examines the emergence of language and literacy. It is required for the proposed Early Childhood Care and Education option to the associate degree in Human Development and Family Studies.

The course emphasizes why and how to foster continuous development from first sound through recognizable speech; from initial symbol recognition through reading; from making the first mark through writing. Content also includes choosing literature appropriate for use with infants and young children and methods of integrating literature throughout the daily child care and education routine. There is a focus on developing activities centered on language and literature, and an emphasis on effective communication with parents and families. This course requires weekly experience with young children.

Students will produce a portfolio demonstrating understanding of language and literacy development, competence in planning developmentally appropriate language and literacy activities for infants and young children, and competence in evaluating child care settings in terms of support for emergent language and literacy. Portfolios will also demonstrate evidence of competence in choosing and using good literature with young children, and in communicating to parents and families the importance of facilitating early language and literacy.

In addition to the portfolio, students will develop files of language and literacy activities appropriate for use with infants and young children. They will also take tests related to reading and material covered in class.

The course will be offered once each academic year, with an enrollment of 15-25 students.

Human Development and Family Studies (HD FS)

HD FS 234 Mathematics and Science Reasoning: Development and Practice in Early Childhood Care and Education (3)
Fostering development of mathematical reasoning and scientific inquiry in infants, toddlers and preschoolers. Includes project approach and focus on home/childcare links.

HD FS 234 Mathematics and Science Reasoning: Development and Practice in Early Childhood care and Education (3)

This course, intended for current and future providers of early childhood care and education, examines the emergence of mathematics and science reasoning. It is required for the proposed Early Childhood Care and Education option to the associate degree in Human Development and Family Studies.

The course addresses processes involved in mathematical reasoning and scientific inquiry. It emphasizes the development of activities, questioning skills, and observation and documentation techniques that extend infants' and young children's exploration, discovery, and thinking patterns. Content also includes methods of integrating mathematics, science and reasoning activities throughout the daily child care and education routine. Participation in the project approach provides students with an experiential understanding of constructing knowledge. There is also an emphasis on effective communication with parents and families. This course requires weekly experience with young children.

Students will produce a portfolio demonstrating understanding of the development of mathematics and science reasoning in the very early years and competence in planning developmentally appropriate mathematics, science, and logical thinking activities for infants and young children. Portfolios will also demonstrate evidence of competence in communicating to parents and families the importance of exploration and discovery in facilitating young children's mathematics and science knowledge. Students will reflect, in writing, on their own growth in knowledge and competence in facilitating young children's thinking.

In addition to the portfolio, students will develop files of mathematics and science reasoning activities appropriate for use with infants and young children. They will also take tests related to reading and materials covered in class.

The course will be offered once early academic year, with an enrollment of 15-25 students.

HD FS 239 (GS) Adolescent Development (3) Social, behavioral, and biological development and intervention throughout adolescence.

HD FS 239 Adolescent Development (3)
(GS)

(BA) This course meets the Bachelor of Arts degree requirements.

Only in early infancy do minds, bodies, and abilities change as radically as they do during the teenage years. HD FS 239 is an introductory course that explores the developmental processes that shape our lives between puberty and the end of college. Although each life unfolds in its own unique pattern, we will explore the ways biological, psychological, and sociological influences systematically combine to shape its course. This class will help to develop an understanding of the concepts, methods, and research findings central to the study of adolescent development.

General Education: GS

Human Development and Family Studies (HD FS)

HD FS 250 (US) (WMNST 250) Sexual Identity over the Life Span (3) Concepts of affectional and sexual orientation over life span, with emphasis on lesbian and gay male personal, family, and community adaptation.

HD FS (WMNST) 250 Sexual Identity over the Life Span (3) (US)

This course reviews concepts of sexual identity as informed by a human development perspective. Concepts of sexual orientation are discussed in the context of a review of lesbian, gay male, and bisexual lives. Developmental processes of lesbian and gay life are detailed: personal change from the teenage years through adulthood, changes in family and relationship patterns, and impact of communities, laws, and culture. These processes are contrasted to the developmental processes of women and men who identify themselves as heterosexual. The complex effect of gender, race, ethnicity, class status, and historical time on sexual orientation and its expression has generated ongoing controversies in scholarship as well as in public discourse. The course will be an introduction to these controversies as informed by human development research.

Human Development and Family Studies (HD FS)

HD FS 287W (GS;US) Intercultural Community-Building (3) An experiential introduction to negotiating differences in small groups, families, institutions, and communities.

HD FS 287W Intercultural Community -Building (3)
(GS;US)

This course provides students an experiential introduction to how individuals and families both affect and are affected by the various cultural/community contexts in which they develop, including schools, places of work, and youth and community programs. Students will identify and explore their own unique and shared assumptions, and the relationships between those assumptions and life histories and experiences. They will become aware of the dynamics of how communities are formed and function by forming a community themselves, and through involvement in a local community group or agency. Group discussions and written reflections will link their personal experiences to theory and research presented in class and readings on such topics as developing systems theories, cultural communication theories, and decision-making. The goals of the course are to increase students' understanding of the relations between values, power relations, and the various processes of social change, and encourage the development of communication skills and citizenship. Special emphasis will be placed on developing relationships within culturally and ethnically diverse groups. Because it is designated as a writing intensive course, particular attention will be given to the development of written communication skills. Students will be evaluated on the basis on their performance in several areas, which may include examinations and quizzes, several writing assignments, and participation in class discussions and simulations. The course may be delivered at certain Commonwealth College campuses and Altoona College. Depending on location, the course may be offered during the fall, spring and/or summer sessions, with anticipated class enrollments of 12-20 students.

Human Development and Family Studies (HD FS)

HD FS 287X (GS;US) Intercultural Community-Building (3) An experiential introduction to negotiating differences in small groups, families, institutions, and communities.

HD FS 287X Intercultural Community-Building (3)
(GS;US)

Students in HD FS 287X experientially study "individuals and families in their own and other cultures, and ... learn how the family, the workplace, the community, and the larger culture affect and are affected by the individual" (http://www.psu.edu/dept/HDFS/). They explore the origins of their unique and shared assumptions based on their perceptions, which in turn are founded on their particular life experiences-in addition to the students themselves, this represents the greatest resource in the course. The role of the instructor is to create a context within which participants can become aware of the dynamics of how communities are formed and function by forming a community themselves.

This course is student centered and focuses on academic and personal student learning. It utilizes an interdisciplinary orientation and makes extensive use of experiential learning activities as an alternative to lecture. Collaborative learning exercises and dialogue are used as the primary modes of communication, and the course emphasizes the student's responsibility in determining the quality of his or her education while contributing to an organizational climate which values difference.

HD FS 287X is designed to prepare students to integrate the diversity of experience that characterizes higher education and citizenship in their local communities. It supports the experience of negotiating differences and building a community within the one-week intensive classroom experience and during their semester long Community-Diversity Project. This transitional experience, in turn, will be more effectively applied to the small-groups, families, institutions, and communities within which the student will ultimately live and work.

Required reading is done before attending class; 40 hours of class contact time are offered in one week, 8:00 a.m. to 5:00 p.m. (one-hour lunch), M-F, before the start of the semester. Written course work is completed during the semester by e-mail, with the class convening for the final exam. The Community-Diversity Project is completed on site in the local community.

Learning will be evaluated in-class through writing assignments and quizzes. Post-class work during the semester requires recursive writing, and a Community-Diversity Project, with Progress Reports.

This course is not linked to, nor related to any other specific courses by being or requiring a prerequisite.

As a (GS) designated course, the focus of HD FS 287X serves well as a foundation course in all other departments.

HD FS 287X does not require any special facilities or labs. Enrollment is limited to 20 per section.

HD FS 315 (US) Family Development (3) Family functions over the life course; family from a multidisciplinary perspective, emphasizing adaptation and change.

HD FS 315 Family Development (3)
(US)

This course offers an overview of families focusing primarily on contemporary American families. The primary thrust of this course is to step beyond our personal experiences with families and place them within a broader social, historical, cultural and economic context. This class will be multi-disciplinary in its approach to the study of American families. However, we will begin with the historical, demographic and social changes that American families have undergone and try to understand some of the causes and consequences of these changes for the developmental life courses of adults and children in families today. Throughout this course we will be particularly concerned with the diversity of American families stressing differences based on gender, race and ethnicity, and socioeconomic status.

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Human Development and Family Studies (HD FS)

HD FS 315Y (US) Family Development (3) Family functions over the life course; family from a multidisciplinary perspective, emphasizing adaptation and change.

HD FS 315Y Family Development (3)
(US)

This course offers an overview of families focusing primarily on contemporary American families. The primary thrust of this course is to step beyond our personal experiences with families and place them within a broader social, historical, cultural and economic context. This class will be multi-disciplinary in its approach to the study of American families. However, we will begin with the historical, demographic and social changes that American families have undergone and try to understand some of the causes and consequences of these changes for the developmental life courses of adults and children in families today. Throughout this course we will be particularly concerned with the diversity of American families stressing differences based on gender, race and ethnicity, and socioeconomic status.

HD FS 401 Project Planning, Implementation, and Evaluation in the Human Services (3) Exercises and activities related to the design, planning, implementation and management, and evaluation of projects and programs in the human services.

HD FS 401 Project Planning, Implementation, and Evaluation in the Human Services (3)

HD FS 401 is part of a sequence of courses that develop skills and competencies of the human services student. The course emphasizes the further development of communication skills, diversity skills, team-building skills, critical thinking skills, and technology and leadership skills. Intended to be completed prior to the internship experience, the course will initially focus students' efforts on the identification of a field-based human services project or program, and a setting within which it could be carried out. Subsequently, students will design and plan the project or program, examine and propose effective implementation and management procedures, and incorporate state-of-the art evaluation procedures into the design.

Human Development and Family Studies (HD FS)

HD FS 414 Resolving Human Development and Family Problems (3) Strategies for, and roles of professional specialists in, the solution of problems in human development and family functioning.

Resolving Human Development and Family Problems (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1996
Prerequisite: HD FS 312W ; 6 credits in Human Development and Family Studies or psychology

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Human Development and Family Studies (HD FS)

HD FS 416 (US) (SOC 411) Racial and Ethnic Diversity and the American Family (3) This course will explore the nature and determinants of racial and ethnic variation in family processes in the United States.

HD FS 416 (SOC 411) Racial and Ethnic Diversity and the American Family (3)

During the last several decades, the racial and ethnic composition of the U.S. population has changed dramatically. At end of the 20th century, non-Hispanic whites accounted for less than 75 percent of the U.S. population. While blacks remained the largest minority group, there were nearly as many Hispanics as blacks, and the number of Asians was increasing. Population projections indicate that by the middle of the 21st century, Hispanics will make up nearly one-fourth of the U.S. population. Blacks, Asians, and American Indians together will comprise an additional fourth of the population. The last several decades have also brought significant changes in family life in the United States, including declining rates of marriage, a rising age-at-marriage, an increase in cohabitation, and a dramatic rise in the proportion of births outside of marriage. While these trends in family life have been experienced by all racial and ethnic groups, there is substantial variation in family patterns by race and ethnicity. The course will build on other courses in social inequality and the family. The course does not overlap with any existing courses in the Department of Sociology or with courses offered in other relevant departments.

This course will explore the nature and determinants of racial and ethnic variation in family processes in the United States. The student will read articles from major sociological journals and learn to extract major points and issues. He/she will learn to synthesize and critique various arguments on major issues in the field. The student will acquire skills in summarizing and evaluating arguments in essay form. He/she will also develop oral presentation skills. Final grades for the course will be based on class participation, a brief (approximately 5 pages) paper, a group presentation, a midterm examination (essay format) and a final examination (essay format). The course is not required for the Sociology minor or major. However, the course can count as one of the 400-level elective courses in Sociology for the Sociology minor, B.A. or B.S.

Human Development and Family Studies (HD FS)

HD FS 427 (KINES 427) Developmental Sport & Exercise Psychology (3) Developmental changes in the antecedents and consequences of physical activity across the lifespan.

HD FS (KINES) 427 Developmental Sport & Exercise Psychology (3)

Change is constant with physical activity - our reasons for being active change across the lifespan an dour experiences with physical activity change how we view ourselves and those around us. Developmental Sport & Exercise Psychology focuses on developmental changes in the psychosocial antecedents and consequences of physical activity across the lifespan. Specific course objectives include (1) describing theoretical frameworks and methods used to study physical activity-related psychosocial development across the lifespan, (2) describing how self-perceptions develop and influence behavior in movement contexts at different points in life, (3) explaining how contextual factors influence developmental processes associated with physical activity, (4) identifying age-related differences in activity-related antecedents and consequences of physical activity, and (5) developing, reviewing, and critiquing theoretically-grounded interventions to address issues related to developmental processes associated with physical activity across the lifespan. Evaluation will be based on written examinations, submission of a series of reflection papers on reading assignments, a group presentation, and the students' engagement in the class. It extends but does not duplicate existing courses in the Department of Innersole, Human Development & Family Studies, and Psychology.

Human Development and Family Studies (HD FS)

HD FS 440 (SOC 440) Family Policy (3) An in-depth examination of family policy.

HD FS (SOC) 440 Family Policy (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is designed to provide an in-depth examination of family policy. Students will identify and critically analyze major issues, controversies, and policies that affect families. Attention will be devoted to recognizing both intended and unintended consequences of family policies and understanding policy challenges and trade-offs. Students will gain an understanding of how policies are shaped by both facts and myths, as well as our values. Students will examine historical and current trends in family patterns (e.g., divorce, women's labor force participation, nonmarital births) to understand the implications they hold for individuals, families and society. Students will gain an awareness of the social, economic, historical, legal, and political contexts within which family policies exist and are proposed. Although the main focus is on U.S. family policy, some time will be devoted to learning about family policies in other countries. We will learn about several specific family policies in-depth (e.g., welfare), but a final goal is to help students develop a general way of looking at family policy that they can then use to understand any issue of family policy that unfolds throughout their lifetime. This course will foster thoughtful reflection and critical thinking, writing skills, research skills, and skills of synthesis, logic, and argument. Course goals will be accomplished through course readings, writing assignments, lectures, class discussions, debates and group projects. Mastery of course material and student evaluation are assessed in several ways. Students will take a midterm and final exam that cover lectures, class discussions, and assigned readings. Two papers are also required. The first paper is based on an analysis of newspaper articles dealing with family policy issues that students will collect and relate to course materials. The second paper is a literature-based analysis of a family policy in a society outside the United States. Class participation is also essential and its evaluation will be based on a combination of class attendance, contributions to class discussions, participation in group debates and projects, and an oral presentation of the final paper on a non-U.S. family policy.

HD FS 469U (IL) Family Change in the Global Economy (3) Exploration of how family life, quality, and structures in each region of the world are affected by the new global economy.

HD FS 469U Family Change in the Global Economy (3)
(IL)

We know that family life, structure, and practices undergo dramatic change when there are economic and political changes in the society. Economic globalization is unprecedented as a force for social and political change. How is it affecting family life and structures around the world? While we have considerable research on globalization and on family change, there has been little work that connects the two.

This is an exploratory seminar that involves locating those linkages and discovering families in each world region are changing as they meet up with global economic forces. As we explore each world region, we will learn about diverse cultures and how they are affected by global forces. In the Americas, Africa, Asia, the Middle East and Europe this course uncovers new forms of inequality that are emerging from the global economy and having direct effects on women and families. Through it all, we explore how human action, in the family, the community and the society, struggles for quality of life in a global economic context.

HD FS 495B Internship: Advanced Project (3) Implementation of internship projects or scholarly paper. Open to HD FS majors only.

HD FS 495B Internship: Advanced Project (4)

HD FS 495B is taken at the same time as HD FS 495A, and within a year of the pre-internship course (HD FS 490), which helps you with the details of making arrangements for the HD FS internship, HD FS 495B focuses on the academic aspects of the internship experience. This course can be taken during the fall, spring, or summer semester. Currently, HD FS 495B consists of writing three papers; The Organizational Analysis, The Policy Analysis, and The Personal Development Paper. The purpose of the organizational analysis paper is to give the intern an opportunity to learn about his or her internship setting or organization in greater depth than might be possible otherwise. This will necessitate the intern taking an active approach to systematically securing information about the internship organization through the review of relevant documents, conducting formal or informal interviews, and observation. This paper will then be saved at the internship office, without identifying information or grade, to be viewed as a source of information about potential internship sites by future students who are seeking internships.

Human Development and Family Studies (HD FS)

HD FS 495A Internship: Advanced Experience (9) Full-time, one semester experiential training in human service settings. Open to HD FS majors only.

HD FS 495A Internship: Advanced Experience (8)

HD FS 495A represents a full-time, one-semester internship experience. Its focus is experiential learning accompanied by intensive supervision, provided by one-site personnel, as well as University-based mentoring. Taken within a year of the pre-internship course (HD FS 490), which helps the student with the details of making arrangements for their internship, HD FS 495A, taken during the same semester as HD FS 495B, is considered the capstone of the HD FS undergraduate program. The internship can be taken during the fall, spring, or summer semester. It is one full semester spent working as a human service professional in a setting of your choice. Generally interns will work as a full-time professional (35-40 hours a week) for the semester.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2006
Prerequisite: HD FS 490 ; permission of internship coordinator

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Human Development and Family Studies (HD FS)

HD FS 495C Professional Practicum in Human Services (3-8) Guided professional practicum in human services, usually in the form of a project related to a human services issue.

Professional Practicum in Human Services (3-8)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1997
Prerequisite: HD FS 401 orHD FS 490

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Human Development and Family Studies (HD FS)

HD FS 496 Independent Studies (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Independent Studies (1-18)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1990

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Human Development and Family Studies (HD FS)

HD FS 496B Infant Temperament (1-3) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Infant Temperament (1-3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2010 Ending: Fall 2010 Future: Fall 2010

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Human Development and Family Studies (HD FS)

HD FS 497 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Special Topics (1-9)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1990

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Human Development and Family Studies (HD FS)

HD FS 497A Child Abuse Prevention and Intervention (3) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Child Abuse Prevention and Intervention (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2010 Ending: Fall 2010 Future: Fall 2010
Prerequisite: HD FS 229 orHD FS 239 ; andHD FS 312W

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Human Development and Family Studies (HD FS)

HD FS 497B Parenting (3) Course will focus on the determinants of parenting in the diverse cultures within the US.

Parenting (3)

General Education: None
Diverse: None
Bachelor of Arts: None
Effective: Fall 2010 Ending: Fall 2010 Future: Fall 2010

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Human Development and Family Studies (HD FS)

HD FS 497C Peer and Consultation (1-3) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Peer and Consultation (1-3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2010 Ending: Fall 2010 Future: Fall 2010

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Human Development and Family Studies (HD FS)

HD FS 497D Foundations of Marriage (3) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Foundations of Marriage (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2010 Ending: Fall 2010 Future: Fall 2010

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Human Development and Family Studies (HD FS)

HD FS 497E Risk and Resilience over the Life Span (3) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Risk and Resilience over the Life Span (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2010 Ending: Fall 2010 Future: Fall 2010

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Human Development and Family Studies (HD FS)

HD FS 497H Professional Development (1) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Professional Development (1)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2010 Ending: Fall 2010 Future: Fall 2010

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Human Development and Family Studies (HD FS)

HD FS 498 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Special Topics (1-9)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1992

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 100S Discover Industrial Engineering: First-Year Seminar (1) Informational First-year on Industrial Engineering as a career choice and profession; lab exercises; guest speakers; real world problems.

I E 100S Discover Industrial Engineering: First-Year Seminar (1)
(FYS)

The objective of this first-year seminar course is to provide information on industrial engineering as a career choice and as a profession. It is a fact that most first-year students have never heard of Industrial Engineering (I E), or the many varied opportunities that exist within the I E major. This course explores the many aspects of the major and also offers the opportunity to interact with I E faculty and students, something that is an uncommon occurrence during the first year of engineering study.

Class time is used for a variety of activities including: interactive class sessions where students work in teams to analyze and solve applied "real-world" problems in industrial and manufacturing engineering; I E faculty guest speakers addressing career opportunities in a particular area within I E; Lab experiences or demonstrations; Alumni guest speakers or panels; Plant tours (1 per semester); I E student panels on topics such as Co-op.

The class atmosphere is relaxed and there are no examinations. Homework assignments are given throughout the semester on relevant topics.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1999

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 102S Human-Centered Engineering--First-Year Seminar (1) This First-year seminar considers what makes products and processes usable by people, through both design principles and student projects.

I E 102S Human-Centered Engineering (1)
(FYS)

This 1-credit first-year seminar considers what makes both consumer products and industrial processes usable by people. Course objectives include providing the knowledge and skills necessary to critically evaluate products and processes, providing basic understanding of human capabilities and limitations, and practicing communicating findings to others. Usability principles and evaluation methods are covered, along with other tools from both human factors engineering and industrial engineering domains. Software usability principles are covered, in addition to consumer products and industrial processes. Examples are drawn from campus, the community, video, and from a dedicated website containing a large collection of product photos. Student evaluation is based upon a series of individual and group critique/design exercises, analyses, and projects.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2000

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 101S Build Your Own Robot--First-Year Seminar (1) The objective of this first-year seminar course is to provide students hands-on experience with robotics and automation devices.

I E 101S Build Your Own Robot (1)
(FYS)

The focus of this first-year seminar course is to provide students hands-on experience with robotics and automation devices. Throughout the semester students will work in small groups (three to four students per group) to construct table top robots and automated machinery which will be controlled using personal computers in a laboratory. These activities which will be supplemented by videos, plant trips, and the Internet to expose students to industrial application of modern robotics and automation technology. Topics covered in the course will include:
working principles of robots and automated machines
impact of automation in a global economy and
group projects

The intent of this hands-on laboratory experience is to provide students an environment that enhances active learning, teamwork, and contact with faculty. Grading will be based on class participation, assignments, lab reports, and presentations. There will be no exams in this course.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2000

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 103S Management Science and the Modern Engineer--First-Year Seminar (1) This First-year seminar will introduce students to quantitative methods for decision making through a number of hands-on learning exercises.

I E 103S Management Science and the Modern Engineer (1)
(FYS)

The objective of this First-Year Seminar is to introduce freshman students with interest in industrial engineering and other engineering disciplines to the area of quantitative methods for decision making through a number of hands-on learning exercises. Several complex and important problems, and solution techniques will be demonstrated in simple laboratory exercises, like learning linear programming by assembling Tinkertoy pieces, and understanding statistical process control by analyzing the weight of sugar boxes. Students will work in groups, which will enhance the development of interpersonal skills, team learning abilities, and communication skills.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2000

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 105S Manufacturing Science and Technology--First-Year Seminar (1) This First-year seminar will explore some aspects of manufacturing science and technology associated with the manufacturing of electronic products.

**I E 105S Manufacturing Science and Technology (1)
(FYS)**

This First-Year-Seminar course will provide a window on the manufacturing science and technology that have enabled miniaturization of electronic printed circuit cards which drive a host of commercial applications such as computers and cell phones. Students will use industrial grade machines in the Electronic Assembly Laboratory to explore the science and technology behind these manufacturing processes and will then assemble and test their own '10 seconds timer' printed circuit card using through-hole and surface-mount technology.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2000

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 104S Managing the Real (Unpredictable) World--First-Year Seminar (1) Informational First-year seminar on decision making under uncertainty in engineering and everyday life.

I E 104S Managing the Real World (1)
(FYS)

The objective of this first-year seminar course is to provide information on the use of operations research techniques for decision making in all branches of engineering and also day-to-day activities. This course is for students to understand, appreciate, and apply quantitative decision making techniques in their lives by the appropriate use of algebra and probability. The goal is to make students expand their normal way of thinking to include quantitative decision making. This course will be of use to students of all branches of engineering, science and business, providing them with an elementary introduction to probability and its application to decision making.

The lectures will use the aide of visual techniques such as:
Electronic presentations
Computer demonstrations including web-based examples
Video clippings

The class atmosphere is relaxed and there are no examinations. Homework assignments using computers are given throughout the semester on relevant topics for which software will be provided.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2000

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Effective: Summer 2007

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 300 Introduction to Industrial Engineering (1) Introduction to the industrial engineering profession by solving typical problems using various computational hardware and software.

Introduction to Industrial Engineering (1)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: CMPSC 201 orCMPSC 202

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 302 Engineering Economy (3) Principles and methods for analyzing the economic feasibility of technical alternatives leading to a decision or recommendation.

Engineering Economy (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1992
Prerequisite: MATH 141

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 303 Engineering Economic Analysis (2) Economic analysis of engineering alternatives.

Engineering Economic Analysis (2)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 302H Engineering Economy (3) Principles and methods for analyzing the economic feasibility of technical alternatives leading to a decision or recommendation.

Engineering Economy (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2010 Ending: Fall 2010 Future: Fall 2010
Prerequisite: MATH 141

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 305 Product Design, Specification and Measurement (3) Principles of product design and specifications and methods for product verification.

I E 305 Product Design, Specification and Measurement (3)

Product Design, Specification and Measurement is a first level junior course in manufacturing, required for all the baccalaureate students in the Department of Industrial and Manufacturing Engineering. It will be offered in fall and spring semesters. It exposes students to the principles required for designing a product and developing the specifications for its components and the methods for product verification and checking conformance to specifications.

Students taking this course should be familiar with introduction to engineering design and should have graphical communication skills.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2005
Prerequisite: Prerequisite or concurrent:MATSE 259

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 306 Machining Process Design & Analysis (3) Application of Engineering Principles for the Design and Implementation of Economic and Effective Machining Processes.

I E 306 Machining Process Design & Analysis (3)

Machining Process Design & Analysis is an elective course within the Department of Industrial & Manufacturing Engineering that can be used to satisfy the undergraduate, manufacturing process course requirement. It will be offered both fall and spring semesters. Its purpose is to provide students with an in-depth experience into the science, engineering, and thought processes that are used to apply machining processes to economically convert raw materials into finished products. Students will learn how to design, analyze, implement, and troubleshoot machining processes and machining systems. Students taking this course must have previously completed I E 305, and have knowledge of produce specification, metrology, and computer aided design tools.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: I E 305, I E 322

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 307 Rapid Prototyping Processes (3) The study and application of rapid prototyping technologies in design and manufacturing.

I E 307 Rapid Prototyping Processes (3)

Speed to market is an essential element of competitiveness. New manufacturing technologies, driven by CAD, such as Rapid Prototyping (RP), Rapid Tooling (RT), and Reverse Engineering are making it possible for companies to significantly cut design and manufacturing cycles times. This course will explore these new manufacturing technologies, study the basic processes and their role in the design and manufacturing cycle, and provide hands on experience with these processes. Process models, characteristics and capabilities of specific RP processes such as Stereo Lithography Process, Fused Deposition Modeling, Selective Laser Sintering, Electron Beam Melting, and 3-D Printing will be studied. Use of these processes for Rapid Tooling applications for sand casting, investment casting, and injection molding will be studied. The role of CAD and Reverse Engineering in providing the data needed and current technological challenges for RP will be explored. The course will also develop cost models for the processes to help evaluate the production economics. Laboratory experience will be used to provide the hands on experience with the processes, and reverse engineering.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2009
Prerequisite: I E 305

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 310 Principles of Deformation Processing (3) Discussion, laboratory practices, and laboratory experiments covering principles of metal removal and forming, nonmetallic processing, and metrology.

Principles of Deformation Processing (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: I E 305

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 312 Product Design and Manufacturing Processes (3) Theory and principles of manufacturing; effect on design selection and product quality; processes include material removal, casting, joining, plastic molding. Industrial engineering majors may not schedule this course.

Product Design and Manufacturing Processes (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: E MCH 213, E MCH 210H orE MCH 210;E SC 414M orMATSE 259

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 311 Principles of Solidification Processing (3) Discussion, laboratory practices, and laboratory experiments covering principles of metal casting and joining, nondestructive testing, and nonmetallic processing.

Principles of Solidification Processing (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2009
Prerequisite: I E 305

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 322 Probabilistic Models in Industrial Engineering (3) The study and application of probability theory in the solution of engineering problems.

I E 322 Probabilistic Models in Industrial Engineering (3)

Probabilistic Models in Industrial Engineering is a first level junior course required for all the baccalaureate students in the Department of Industrial and Manufacturing Engineering. It will be offered in fall and spring semesters. It exposes students to the probability theory and models and discrete and continuous probability distributions which are necessary for solving real life engineering problems with uncertainty. Reliability modeling, one such problem of interest to the manufacturers and consumers, will be taught in this course. The course will also cover sampling distributions and point and interval estimation of mean, variance and proportion.

Students taking this course should be familiar with elementary algebra, and differential and integral calculus.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2005
Prerequisite: MATH 141

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 322H Probabilistic Models in Industrial Engineering (3) The study and application of probability theory in the solution of engineering problems.

Probabilistic Models in Industrial Engineering (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2010 Ending: Fall 2010 Future: Fall 2010
Prerequisite: MATH 141

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 327 Introduction to Work Design (3) Job analysis, cognitive and physical considerations in design of work, work measurement.

I E 327 Introduction to Work Design (3)

Introduction to Work Design is a first level junior course required for all the baccalaureate students in the Department of Industrial and Manufacturing Engineering. It will be offered in fall and spring semesters. It exposes students to the basic introductory tools required for analyzing and designing both the job and the worksite in a cost-effective manner, as well as measuring the resulting output. These tools include human information processing, basic auditory and visual displays, anthropometry and musculoskeletal principles, cumulative trauma disorders, work measurement and stopwatch time study.

Students taking this course should be familiar with the basic concepts of cost.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2008
Prerequisite: MATH 141, E MCH 011 orE MCH 210

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 323 Statistical Methods in Industrial Engineering (3) The study and application of statistics in the solution of engineering problems.

I E 323 Statistical Methods in Industrial Engineering (3)

Statistical Methods in Industrial Engineering is a second level junior course required for all the baccalaureate students in the Department of Industrial and Manufacturing Engineering. It will be offered in fall and spring semesters. It exposes students to the statistical tools such as estimation, testing of hypotheses, control charts, process capability indexes, gage R & R studies, simple regression and design of experiments, which are necessary for analyzing and solving real life engineering problems using data.

Students taking this course should be familiar with the following topics taught in the first course in probability offered in the department.

Probability concepts, Random variables, Independence, Probability Distributions (both discrete and continuous), Mathematical Expectation, Variation and Binomial and Standard Normal tables.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2006
Prerequisite: I E 322

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 328 Production Engineering (3) Theory and principles for economic design of tooling for production, including process planning and numerical control of machine tools.

Production Engineering (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001
Prerequisite: I E 310

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 330 Information Technology for Industrial Engineering (3) The study and application of computing and information technology to industrial engineering.

I E 330 Information Technology for Industrial Engineering (3)

Information Technology for Industrial Engineering is a first level junior course required for all the baccalaureate students in the Department of Industrial and Manufacturing Engineering. It will be offered in fall and spring semesters. It provides students with Information Technology background required to develop applications in Industrial Engineering. It covers Object-Oriented Programming, Enterprise Information Modeling, Analysis of Data Bases, Data Mining and Internet technologies.

Students taking this course should be familiar with set theory, elementary algebra, and differential and integral calculus.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2009
Prerequisite: MATH 141 andCMPSC 200, CMPSC 201 orCMPSC 202

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 330L Information Technology for Industrial Engineering (3) The study and application of computing and information technology to industrial engineering.

Information Technology for Industrial Engineering (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: MATH 141, CMPSC 201

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 330P Information Technology for Industrial Engineering The study and application of computing and information technology to industrial engineering.

Information Technology for Industrial Engineering

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: MATH 141, CMPSC 201

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 397 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Special Topics (1-9)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2000

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 400 Engineering for Production (3) The selection of the most effective materials and processes and the application of decision theory to product design.

Engineering for Production (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1992
Prerequisite: I E 328, ENGL 202C

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 399 (IL) Foreign Studies--Industrial Engineering (1-12) Courses offered in foreign countries by individual or group instruction.

Foreign Studies--Industrial Engineering (1-12)

General Education: None
Diversity: IL
Bachelor of Arts: None
Effective: Summer 2005

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 402 Advanced Engineering Economy (3) Concepts and techniques of analyses useful in evaluating engineering projects under deterministic and uncertain conditions.

Advanced Engineering Economy (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1995
Prerequisite: I E 302, I E 322, I E 405

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 404 Management Science (3) The science and art of administration in the management, organization, and coordination of human activity in industrial enterprises.

Management Science (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1992
Prerequisite: I E 327

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 405 Linear Programming (3) An introduction to the theory and application of the simplex method in solving the linear programming and dual problem.

Linear Programming (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001
Prerequisite: MATH 220

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 408 Cognitive Work Design (3) Design and evaluation of cognitive work, including the human/computer interface, visual displays, software design, and automated system monitoring, with emphasis on human performance.

I E 408 Cognitive Work Design (3)

Cognitive Work Design is a senior level course offered in the Department of Industrial and Manufacturing Engineering. It is one of two courses which follow I E 327, Introduction to Work Design. This course focuses on the cognitive part of human factors and work design. It will be offered in fall and spring semesters. This course will enable students to design, implement, and evaluate human-computer interfaces according to principles outlined in foundational human-computer interaction readings. Students will be engaged in the active learning of design, programming, and usability concepts by way of building interfaces on the personal computer.

Students taking this course should be familiar with computer programming and introduction to work design.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2006
Prerequisite: I E 327

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 414 Materials Joining Processes and Principles (3) Characteristics of principal processes for arc, resistance, and solid-state welding; brazing, soldering, adhesive bonding. Laboratory projects using various processes.

Materials Joining Processes and Principles (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1995
Prerequisite: I E 311, I E 312 orMETAL 408W

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 419 Work Design - Productivity and Safety (3) Methods improvement, physical work design, productivity, work measurement; principles and practice of safety.

I E 419 Work Design - Productivity and Safety (3)

Work Design - Productivity and Safety is a senior level course offered in the Department of Industrial and Manufacturing Engineering. It is one of two courses which follow I E 327, Introduction to Work Design. This course focuses on the methods improvement physical work design, productivity, work measurement; principles and practice of safety. It will be offered in fall and spring semesters. This course will enable students to perform work measurement: develop an MTM analysis, and carry out a work sampling study.

Students taking this course are expected to understand basic concepts of work design.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2006
Prerequisite: I E 327

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 418 Human/Computer Interface Design (3) Design and evaluation of the human/computer interface, including human performance, visual displays, software design, and automated system monitoring.

I E 418 Human/Computer Interface Design (3)

The objective of this course is to enable students to design, implement, and evaluate human-computer interfaces according to principles outlined in foundational human-computer interaction readings. Students will be engaged in the active learning of design, programming, and usability concepts by way of building interfaces on the personal computer as well as on the Palm computing platform. A major component of the course is the capstone design project for which student teams will communicate with users to design, implement, and assess interfaces to improve existing work processes in an actual work domain (e.g., safety office, power plant).

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: I E 330

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 423 Quality Control and Reliability (3) Application of statistical methods to the control of quality, sampling inspection, and reliability engineering.

Quality Control and Reliability (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1995
Prerequisite: I E 323

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 425 Introduction to Operations Research (3) An introduction to the method and techniques of mathematical decision making, including inventory, replacement, allocation, and waiting line problems.

I E 425 Introduction to Operations Research (3)

Introduction to Operations Research is a senior level course offered in the Department of Industrial and Manufacturing Engineering. It is one of the three courses in operations research offered to the undergraduate students. The field of operations research focuses on the formulation, analysis and implementation of quantitative methods to support effective management decision making. This course will introduce students to several important classes of mathematical models and techniques including network models, dynamic programming, Markov chains, queueing theory, and inventory control. Such models and techniques can provide valuable insights into design and planning problems, and thus facilitate their effective analysis.

Students taking this course should be familiar with probability concepts and linear programming.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2006
Prerequisite: I E 322
Concurrent: I E 405

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 424 Process Quality Engineering (3) Statistical methods for engineering process characterization and improvement. For non-Industrial Engineering majors.

Process Quality Engineering (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1994
Prerequisite: MATH 141, MATH 220

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 426 Industrial Automation (3) Fundamentals, control, and theory for application of pneumatic, hydraulic, electrical, fluidic, transfer, feeding, and numerical control devices to automated equipment.

Industrial Automation (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1992
Prerequisite: I E 328

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 428 Metal Casting (3) Application of engineering principles to the design of castings; casting of ferrous and nonferrous alloys; laboratory and simulation projects.

Metal Casting (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1995
Prerequisite: I E 311, I E 312 orMETAL 408W

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 430 Industrial Project (3) A project is carried out in conjunction with an industrial company and supplemented by tutorials.

Industrial Project (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1992
Prerequisite: I E 302, I E 327, I E 328

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 433 Regression Analysis and Design of Experiments (3) Theory and Application of Regression Analysis and Design of Experiments to build models and optimize process and product parameters.

I E 433 Regression Analysis and Design of Experiments (3)

Regression Analysis and Design of Experiments is an elective course for the baccalaureate students in the Department of Industrial and Manufacturing Engineering. It will be offered in the spring semester. It exposes students to the two important statistical tools which are regression analysis and design of experiments. The specific topics include simple and multiple regression analysis, 2k full and fractional designs and analysis and Taguchi's orthogona arrays.

Students taking this course should be familiar with the following topics taught in the second course in probability and statistics offered in the department.

Properties of point estimators, sampling distributions, testing of hypotheses, and introduction to linear regression and design of experiments.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2005
Prerequisite: I E 323

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 434 Statistical Quality Control (3) Statistical techniques for univariate and multivariate monitoring of independent and autocorrelated processes; foundations of quality control and improvement.

I E 434 Statistical Quality Control (3)

This course is about the use of modern statistical methods for process and product improvement. The goal is to impart a sound understanding of the principles and basis for applying them in a variety of practical situations in manufacturing and service fields. The course will give an overview of the basic statistical methods and then concentrate on some of the more useful recent developments including univariate and multivariate techniques to monitor autocorrelated data, analyzing process capability, and improving process quality in short-run environments. The course objectives are to: (1) understand the assumptions and theoretical foundations of process monitoring; (2) know how to select, set up, and use monitoring charts effectively depending on the system characteristics; and (3) understand the basic business and economic principles of process monitoring.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2007
Prerequisite: I E 323

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 435 Operations Research Models (3) An introduction to basic deterministic and probabilistic models, linear programming, dynamic programming, simulation, Markov chains, queueing.

Operations Research Models (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1993
Prerequisite: 3 credits of elementary probability theory

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 436 Six Sigma Methodology (3) Techniques for structured problem-solving to improve the quality and cost of products and processes.

I E 436 Six Sigma Methodology (3)

Six Sigma is a structured, quantitative approach to improving the quality and cost of products and processes. It provides a framework for quality improvement that builds upon statistical tools to achieve business results. Although statistical techniques are emphasized throughout, the course has a strong engineering and management orientation that will prepare students for synthesizing the material that comprises the Six Sigma body of knowledge. Important aspects of the Six Sigma approach include a strong focus on the customer, proactive management, fact-based decision-making, and interdisciplinary collaborations. The course objectives are: (1) to give students a fundamental understanding of and experience with solving a problem using the structured problem-solving approach of Define-Measure-Analyze-Improve-Control (DMAIC); (2) to provide an opportunity for students to solve or be involved with solving business problems with statistical tools; and (3) to help students build confidence in their business sense and statistical skills.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2010
Prerequisite: I E 323

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 438 Metal Cutting Principles and Practice (3) Principles of metal cutting and introduction to current theories; analysis of metal removal processes; laboratory experiments for metal cutting analysis.

Metal Cutting Principles and Practice (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1995
Prerequisite: I E 310, I E 312 orMETAL 408W

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 450 Manufacturing Systems Engineering (3) Components of automated manufacturing systems (CNC, robots, programmable logic controllers). Design, analysis and operational issues related to improved productivity in modern manufacturing systems.

I E 450 Manufacturing Systems Engineering (3)

The course is focused at providing students with an understanding of modern manufacturing systems and the associated problems in the planning, design, analysis and implementation of such systems. The central theme of the course is on Lean Manufacturing, which encompasses most of the components of modern manufacturing systems including: waste reduction, numerical control, robotics and material handling. These topics are covered to provide a basic understanding of the associated technology. Students also study how this equipment can be integrated into a flexible manufacturing system. The design, control and communication aspects of these systems will be explored. The use of Lean Manufacturing as a means of improving productivity, cell formation, set-up reduction, design, planning and control of cellular manufacturing within the context of JIT manufacturing will be discussed. Given the variety of equipment and software technologies that are covered, laboratory activities focused on numerical control, robotics, cellular layout, system control and waste elimination have become critical. This course will meet three times a week to include two 50-minute lecture periods and a double period laboratory.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: CMPSC 201 andI E 328

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 451 Numerical Control (3) Introduction to numerical control machines, design considerations, components, manual and computer-aided part programming for multiaxis NC machines.

Numerical Control (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: CMPSC 201 orCMPSC 202;I E 328

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 452 Microcomputers--Programming and Industrial Applications (3) Microcomputer principles, capabilities, and limitations; programming and software techniques for real-time industrial engineering application, with integrated laboratory.

Microcomputers--Programming and Industrial Applications (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: CMPSC 201 orCMPSC 202;I E 426

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 454 Applied Decision Analysis (3) Theory and practice of decision analysis applied to engineering problems.

Applied Decision Analysis (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1992
Prerequisite: I E 322

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 453 Simulation Modeling for Decision Support (3) Introduction of concepts of simulation modeling and analysis, with application to manufacturing and production systems.

I E 453 Simulation Modeling for Decision Support (3)

Simulation Modeling for Decision Support is a senior level course offered in the Department of Industrial and Manufacturing Engineering. It is the third course in operations research offered to the undergraduate students. The objective of this course is for students to learn to appropriately apply discrete event simulation modeling for decision support in IE problems through developing skills in model building, simulation output analysis, and communication of technical information and conclusions drawn from data analysis.

Students taking this course should be familiar with computer programming and operations research techniques.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2009
Prerequisite: CMPSC 200, CMPSC 201 orCMPSC 202 andI E 323 andI E 425

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 455 Production Planning and Control (3) Production palnning/control methods from aggregate to detailed levels; includes underlying theories and principles and industrial applications.

Production Planning and Control (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001
Prerequisite: I E 322 . Prerequisite or concurrent:I E 405

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 456 (M E 456) Industrial Robot Applications (3) Introduction to robotics, with emphasis on robot selection, programming, and economic justification for manufacturing applications.

I E (M E) 456 Industrial Robot Applications (3)

This course is a technical elective, and is normally taken by students in their Senior years. In this course, students learn about present and future status of robot applications, and are required to apply fundamental knowledge of physics and mathematics to develop software to analyze and control robots.

The course deals with mechanics and control of robot manipulators and wheeled mobile robots. First, students are taught to analyze 3-D kinematics, statics and dynamics of robot manipulators. Then, control algorithms for robot manipulators are presented. Sensors, actuators and softwares used in industrial robots are discussed. In the end, kinematics and control of wheeled mobile robots are presented. During this course, application of computer, particularly Matlab, is emphasized as much as possible.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2007 Ending: Fall 2010
Prerequisite: MATH 220;MATH 250 orMATH 251;I E 328 orM E 360

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

Concurrent Engineering (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1996
Prerequisite: MATH 141, MATH 220

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 467 Facility Layout and Material Handling (3) Analytical, simulation and computer-aided graphical methods to generate effective layout designs; design and integration of material handling systems and equipment. For Industrial Engineering majors.

I E 467 Facility Layout and Material Handling (3)

Students taking this course will learn concepts and methods used to design an effective facility layout and material handling system. Topics include determination of requirements for people, equipment, and space; generation of alternative layouts based on analysis of material flow or qualitative activity relationships; development of concepts for material transport and storage, and evaluation of alternatives using models. Grading is based on homework and exams. Prerequisites for the course are I E 302 which covers methods for analyzing the economic feasibility of technical alternatives, and I E 327 which covers job analysis and physical considerations in design of work. The course is an elective for Industrial Engineering students in the manufacturing systems engineering and engineering service systems specialization tracks.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2007
Prerequisite: I E 302, I E 327

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 468 Optimization Modeling and Methods (3) Mathematical modeling of linear, integer, and nonlinear programming problems and computational methods for solving these classes of problems.

I E 468 Optimization Modeling and Methods (3)

This course provides an analytic treatment of optimization models in linear, integer, and nonlinear programming. In particular, the course is concerned with the development of mathematical optimization models and computational solution techniques for solving these problems. The mathematical modeling of real-world applications is complemented with the use of modeling software such as LINGO or GAMS (General Algebraic Modeling System), which allows the user to readily develop large-scale mathematical models. The course also considers solution techniques for solving these optimization problems. Students will develop a basic understanding of the solution techniques through actual implementation of simple algorithms, as well as the use of commercial software such as those provided by LINDO, LINGO, and GAMS.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2001
Prerequisite: I E 405, MATH 231

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 469 Global Industrial Engineering Experience (1) Students will learn how to prepare for a short term, professional exchange in a foreign nation. Students will then travel to a designated university within a foreign nation for the purpose of a five day cultural and professional exchange.

I E 469 Global Industrial Engineering Experience (1)

This course will teach industrial engineering students how to prepare for a short term, professional exchange in a foreign nation and how Industrial & Manufacturing Engineering education and practice is carried out in a foreign nation. Students will be required to research and report on one or more industries in a designated foreign nation. Their report will focus on the products and/or services produced by these industries, the processes employed, known use of industrial and manufacturing engineers and/or practice, and their domestic and global standing.

Students will travel to a designated university within that nation for the purpose of a one week cultural exchange. The designated university will have an Industrial Engineering, Production Engineering, and/or Manufacturing Engineering program. Information about the international destination and the dates of travel will be provided on the course syllabus each semester.

During this period, students will:

1. tour the department and engineering laboratories to learn about the education and research facilities at their host university
2. attend engineering classes within the host university to learn about the engineering topic matter as well as how foreign engineering classes are conducted
3. give and receive engineering presentations with their host university students
4. tour the local community to learn about their culture
5. tour local manufacturing industries and interact with local Industrial/Manufacturing engineers to learn about the companies as well as how industrial & manufacturing engineering is specifically practiced

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2009
Prerequisite: 5th semester standing or higher

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 470 Manufacturing System Design and Analysis (3) Contemporary design and analysis methodologies used to organize systems for economic manufacture of products.

I E 470 Manufacturing System Design and Analysis (3)

Manufacturing System Design and Analysis is a senior level course in manufacturing, required for all the baccalaureate students in the Department of Industrial and Manufacturing Engineering. It will be offered in fall and spring semesters. Students will be exposed to the contemporary techniques used to design and analyze manufacturing systems for economic manufacture of products. Students will learn to design manufacturing systems (human and automated) to satisfy differing types of product demand.

Students taking this course should be familiar with introduction to manufacturing and product specifications and introduction to manufacturing process design and analysis.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2005
Prerequisite: I E 310, I E 311, I E 464 or an approved coruse in any manufacturing process

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 477 Computer Control of Manufacturing Machines and Processes (3) Elements of computer control and discrete-time modeling. Design and analysis of digital controls for manufacturing machines and processes.

I E 477 Computer Control of Manufacturing Machines and Processes (3)

Objective of this course is to gain physical insight and hands-on experience with modern control engineering. Lectures and laboratory topics will include modeling and simulation of digital control systems, control computers, interfacing, analog-to-digital converters, digital-to-analog converters, programmable logic controllers, sensors and actuators. Lectures will be devoted to case studies in instrumentation for computer control of manufacturing machines and processes. Course includes a significant group project in which students will design and construct a computer controlled machine or process. This course is a senior undergraduate level technical elective course in the manufacturing system engineering track in the Industrial & Manufacturing Engineering Department. This course is also allowed for graduate credit in the Industrial & Manufacturing Engineering Department.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2009
Prerequisite: MATH 141, CMPSC 200, CMPSC 201 orCMPSC 202 andI E 305

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 478 Retail Services Engineering (3) Introduction to retail services operations, process models, and application of information technologies to enhance productivity and profitability.

I E 478 Retail Services Engineering (3)

Objective of this course is to understand modern retail industry with focus on their operations and information technologies that are used in such systems. The course starts with an overview of the basics of types of retailing, their channels, and economics of their operations. Much of the emphasis in the course is on processes and information technologies used in retail industry such as point of sale systems, barcode, RFID/EPC, global data synchronization, EDI, XML, data warehouse, analytics for decision support and supply chain management. Several case studies will be used to draw out the application of tools and techniques covered in the course. Course includes a group project focused on retail industry. Specific topics will include:
Global retail industry
Multi-channel retailing
Performance and metrics
Pricing
Layout and workforce
Information Systems and SCM
Barcode and RFID
Data warehouse and analytics
Case studies

This course is a senior undergraduate level technical elective course in the IT and Service Engineering track in the Industrial & Manufacturing Engineering Department.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2010
Prerequisite: I E 330

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 479 (EDSGN 479) Human Centered Product Design and Innovation (3) Consumer product design for a global market, incorporating human factors principles and user desires in a multicultural perspective.

I E (EDSGN) 479 Human Centered Product Design and Innovation (3)

This course will focus on consumer product design for a global market, incorporating human factors and ergonomics principles as well as user needs and emotional desires. The students will be led through product design process, various product design strategies, product planning, managing the development process, product evaluation, decision making tools, and market entry. Special emphasis will placed on user centered design, incorporating user characteristics, user needs and emotional desires (including Kansei engineering approaches), survey methodology, and usability testing. To emphasize the multicultural perspectives in today's global product design, interdisciplinary teams from two universities on opposites of the globe will apply these principles on actual industrial product designs for leading consumer product manufacturers.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2010
Prerequisite: I E 408 orI E 419 or equivalent

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 480W Capstone Design Project (3) Industry-based senior capstone design project emphasizing manufacturing systems, service systems, and information systems in an interdisciplinary setting.

I E 480W Capstone Design Project (3)

Students will develop "real world" engineering project experience through an industry-based project. Projects will focus on manufacturing systems, service systems, and/or information systems. Students will work in teams to complete the projects, where the teams will be interdisciplinary and composed of students from within the major with different areas of expertise and students from other majors as needed. Students interested in taking this course should have senior standing and be familiar with basic principles in manufacturing, operations research, and human factors engineering. Students will be evaluated through in-class participation, and a group project that consists of weekly communication with the project sponsor along with three design reviews, interim written reports and a final report, presentation and poster.

This is a Writing-Intensive course in the department and hence students will be given opportunities to practice writing throughout the semester in multiple writing assignments.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2009
Prerequisite: I E 302, I E 327, I E 323, I E 305, I E 330, I E 405

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Engineering (I E)

I E 494H Senior Honors Thesis (1-9) Students must have approval of a thesis adviser before scheduling this course.

Industrial Health and Safety (I H S)

I H S 400 Safety Engineering (3) An examination of the engineering aspects of the safety discipline and it's management in the work environment.

I H S 400 Principles of Industrial Health and Safety (3)

I H S 400 provides a basis on which students can build an understanding of and begin the application of management and engineering principles to the field of safety. It is intended to provide a background in the general engineering (loss prevention) principles as applied to safety in an applied industrial setting. The course will also cover the engineering associated with hazard recognition, evaluation and control, safety related resource allocation issues, economic aspects, legal and regulatory compliance and liability issues, risk assessment and management, program effectiveness measurement and optimization, engineering management in a global environment, safe behavior and the psychology of safety from an engineering perspective, safety engineering consensus standards and standards of competence for safety engineers. The course will cover the forensic aspects of incident investigation and engineering psychology of safety related behavior. The course will stress the importance of safety engineering as part of the design process, the day-to-day operation and the corrective process.

Bachelor of Arts: None
Effective: Fall 2009
Prerequisite: CHEM 110, E MCH 210, MATH 141, PSYCH 100

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Health and Safety (I H S)

I H S 410 Safety Behavior and the Investigation Process (3) This course investigates the relationship between human behavior and safety; includes an overview of human behavior issues in the context of accident/incident investigation techniques.

Safety Behavior and the Investigation Process (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: PSYCH 100

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Industrial Health and Safety (I H S)

I H S 420 Fire Protection Engineering (3) Overview of the behavior of fire, fire hazards, suppression systems, alarms and detection systems, and fire safe design and prevention.

I H S 420 Fire Protection Engineering (3)

This course provides a basic overview of the behavior and dynamics of fire. It includes a review of important chemistry and physics aspects as they relate to fire. Aspects such as heat transfer/thermodynamics, fluid dynamics, the ideal gas laws, etc. will be discussed. Theoretical topics of discussion include flammability limits, mechanisms of heat transfer, flame temperatures and travel speeds, vapor pressures, ignition, the combustion phenomenon, etc. Applied topics include fire hazards related to several types of occupancies and industries, materials of construction, building systems, fire codes, and fire safe design, hydraulics and fire suppression systems (water and non-water), alarms and detection systems, Life Safety Code, etc. The course includes lecture and practical exercises that provides students with the tools needed to analyze the behavior of fire, fire hazards, suppression systems, alarms and detection systems, evacuation systems and building materials. It also includes an introduction to the design process for suppression systems, vent and smoke movement systems, exit and evacuation systems, fire resistant compartmentalization, fire water systems, alarm and detection system layout, building material specification and evacuation capacities.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2009

Industrial Health and Safety (I H S)

I H S 450 Environmental Health and Safety (3) Overview of toxicology, exposure assessment, industrial hygiene, environmental laws, and contemporary issues in environmental health and safety.

I H S 450 Environmental Health and Safety (3)

This is a segment of public health that encompasses assessing, understanding, and controlling the impact of people on the environment and the impacts of the environment on people. This course will provide a broad overview of environmental health and safety topics selected to prepare students for professional health and safety practice, and to introduce students from other disciplines to important concepts that will increase understanding of the numerous and complex interactions we have with our environment. Problems to be examined include treatment and disposal of solid, liquid, and airborne wastes, and the potential toxic effects of hazardous materials from the perspective of individuals, local communities, and governments. An overview of the fundamentals of toxicology, industrial hygiene, and epidemiology will be provided to aid in understanding and interpreting environmental regulations, and the process of recognizing, evaluating, and controlling environmental health and safety hazards. Content will also include coverage of environmental monitoring methods, food safety, drinking water, and pests such as rodents, and insects. Evaluation will be by written examinations, homework assignments, and team projects and presentations focusing on review of topics in the current literature.

General Education: None

Industrial Health and Safety (I H S)

I H S 470 Systems Engineering in Process Safety (3) Quantitative methods of systems analysis, risk analysis and rolerance, as well as accident cost and cost-benefit analysis are covered.

I H S 470 Systems Engineering in Process Safety (3)

This course provides for a basic understanding of the quantitative analysis methods of system safety engineering. The course also provides guidance in planning, implementing and managing an overall system safety engineering program. It includes coverage of such applicable science and engineering principles as risk, human reliability, fault logic, failure modes, incident cost and prediction. The course is presented in an applied format where several different types of industries are discussed such as oil and chemical, pharmaceuticals, defense, aerospace, paper, information technology and manufacturing industries. Regulatory influence on system and process safety is discussed. Quantitative aspects of the course include application of risk analysis, fault tree analysis, hazard and operability analysis, vapor-cloud dispersion modeling, human reliability analysis, failure modes and effects analysis, etc. This course is also intended to provide a background in managing an overall system safety program and its application to several industries, therefore, cost and effectiveness measurement are covered in the material.

Information Sciences And Technology (IST)

IST 110 (GS) Information, People and Technology (3) The use, analysis and design of information systems and technologies to organize, coordinate, and inform human enterprises.

IST 110 Introduction to Information, People and Technology (3)
(GS)

Information, People and Technology presents the high points of an education in the School of Information Sciences and Technology. It opens an intellectual journey through the ideas and challenges that IT professionals face in the world. It will address major questions such as: How can we use technology to organize and integrate human enterprises? How can technology help people and organizations adapt rapidly and creatively? What can we do about information overload?

Three perspectives (or facets) address the core issues: information or the basic science of data encoding, transmission and storage; people or the interactions among technologies, institutions, regulations and users; and technology or the design and operation of basic information technology devices. Students completing the course will be confident users and consumers of information technology. Students will develop research and analytical skills to evaluate specific devices and understand how those devices function in larger socio-technical systems. Students will be able to predict and anticipate the impact of new technologies on human institutions as well as understand the potential impact of institutions on the use and design of information technologies.

The course employs an action-oriented approach. Students learn by doing—formulating and solving problems drawn from professional contexts, detecting and recovering from errors related to technology use, and locating, reading and studying materials that support their analysis and problem-solving. Students will accomplish this by participating in team-based learning. The course provides students with the opportunity to use, modify, and evaluate software to search for, frame, and express ideas with fluency. A variety of mechanisms are used to assess student performance. These evaluation methods typically include exams, quizzes, homework assignments, group projects, and peer and self-assessments.

IST 110 is the introductory course in IST, and, as such, serves as a prerequisite for 200-level (intermediate) IST courses. It is a required course for all majors and minors in IST, and meets requirements for a General Education or Bachelor of Arts Social Science (GS) course.

The course is delivered with significant student interaction with technology. At University Park, it is offered in multiple sections (typically 40-60 students per section), in the Fall and Spring semesters. At other Penn State campuses, it would be offered in class sizes typically ranging between 20-50 students.

General Education: GS

Information Sciences And Technology (IST)

IST 111 Seminar in IST (1) Introduction to academic requirements, career planning & information literacy for students majoring in College of IST.

IST 111 Seminar in IST (1)

IST 111 introduces the student to the academic requirements, career planning and information literacy for the School of Information Sciences and Technology degree programs. Seminar in Information Sciences and Technology is required of all Information Sciences and Technology Associate degree candidates.

Upon completion of the course, the student will have an understanding of the programs and requirements of the School of Information Sciences and Technology and the University, and the career options for which they prepare students. The student will also develop and exercise habits and techniques for continuing self-assessment of learning styles, personality traits, vocational interests, and career plans. The student will learn how to maintain involvement in professional conversations and networks, including local, state, national, international organizations, listservs, etc. Students will have a basic knowledge of professional news literature, and the ability to identify and use reference tools and databases, which provide access to professional knowledge and literature. Finally, the student will have a basic understanding of government plans, policies and actions regarding the information professions including: regulatory agencies of the executive branch, legislative activities, and judicial decisions at local state and national levels. Students will be graded on course attendance, participation, examinations and brief exercises.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2010

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 130 (GA) Emerging Technologies in Popular Culture (3) A survey course that explores emerging technologies used to produce and consume popular cultural artifacts.

IST 130 Emerging Technologies in Popular Culture (3)
(GA)

Popular culture refers to people's capacity to classify, codify, and communicate their experiences symbolically. Popular culture is shaped by the development of new technologies of text, sound and image recording and dissemination. While mass media companies have traditionally served as the primary means by which popular culture is diffused throughout society, emerging technologies enable people to produce and consume their own cultural artifacts as well as redefine mass produced cultural artifacts. As people become more adept in their use of emerging technologies, mass media industries such as film, news, radio and television respond by introducing Internet-based services that deliver both newly designed and repackaged traditional content to consumers. We use four approaches to analyze the intricate relationships between people and industry, emerging technologies and popular culture:
1. Production Analysis: Who owns the media? Who creates new media? What technologies are being used to produce new media? how does new media challenge the historical dominance of mass media?
2. Textual Analysis: how do specific works of popular culture gain their meaning?
3. Audience Analysis: How do different audiences make sense of the same cultural and technological artifacts?
4. Historical Analysis: how do current popular culture perspectives on emerging technologies differ from those of the past? What accounts for these changing perspectives?

Through individual and team-based learning activities, students will analyze and interact with cultural artifacts across popular culture genres. The course content and the assignments are directed at helping students to both create and critique cultural artifacts in ways that demonstrate their understanding of, engagement with, and reflections upon the relationships among people and industry, emerging technology, popular culture.

Assessment is based on students' ability to clearly and convincingly articulate their analysis through classroom discussions, individual activities, and team-based projects. Students will gain hands-on experience with social media such as wikis, virtual worlds, and podcasts. Students will also design and produce short films that demonstrate their ability to integrate and synthesize central themes from the course. Grading will be based on individual and team components.

This is an introductory course in IST, and meets the requirements for a General Education course in Arts (GA).

This course is delivered with significant student and instructor interaction with computers and digital media.

General Education: GA
Diversity: None
Bachelor of Arts: None
Effective: Summer 2009

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 111S Seminar in Information Sciences and Technology (1) Introduction to academic requirements, career planning, and information literacy for students majoring in the College of Information Sciences and Technology.

IST 111S Seminar in IST (1)

IST 111S introduces the student to the academic requirements, career planning and information literacy for the School of Information Sciences and Technology degree programs. Seminar in Information Sciences and Technology is required of all Information Sciences and Technology Associate degree candidates.

Upon completion of the course, the student will have an understanding of the programs and requirements of the School of Information Sciences and Technology and the University, and the career options for which they prepare students. The student will also develop and exercise habits and techniques for continuing self-assessment of learning styles, personality traits, vocational interests, and career plans. The student will learn how to maintain involvement in professional conversations and networks, including local, state, national, international organizations, listservs, etc. Students will have a basic knowledge of professional news literature, and the ability to identify and use reference tools and databases, which provide access to professional knowledge and literature. Finally, the student will have a basic understanding of government plans, policies and actions regarding the information professions including: regulatory agencies of the executive branch, legislative activities, and judicial decisions at local state and national levels. Students will be graded on course attendance, participation, examinations and brief exercises.

Since this is a core requirement, all IST students will be enrolling; it should be offered at least once per year. As enrollment growth warrants, it may require more frequent offering.

Information Sciences And Technology (IST)

IST 210 Organization of Data (4) Introduction to concept of databases including the storage, manipulation, evaluation, and display of data and related issues.

IST 210 Organization of Data (4)

The objective of IST 210 is to provide an introduction to the storage, retrieval, manipulation, analysis and display of information. This course includes an introduction to data structures, physical storage devices and access, database models and database management systems architectures, database analysis and design, query languages, user interface design, database administration and policy and social concerns in data management. Students will learn to use a commercial database management system and group assignments and projects, and other performance indicators. Students will be periodically assessed through examinations, individual and group assignments and projects, and other performance indicators.

This course is required of all Information Science and Technology (IST) undergraduates under both Associate and Baccalaureate degrees. It is a common course requirement and is a prerequisite for all degree options. IST 110 is the prerequisite for this course.

This course also requires student access and use of a robust commercial database management system such as Oracle, DB2, or SQLServer.

The laboratory component of the course provides a gentle introduction to boolean algebra and programming concepts (e.g., variables, arrays, and iterations) that are critical for learning database query languages. Furthermore, it provides hands-on activities and team-oriented problems that enhance the student's learning about database technologies.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2005
Prerequisite: IST 110

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 198 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Special Topics (1-9)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2001

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 211 Advanced Topics in Relational Database Management Systems (3) In depth coverage of: database administration, advanced Structures Query Language inquires, normalization, referential integrity; troubleshooting, tweaking; implementation dependent transactions, embedded SQL, Open Database Connectivity.

IST 211 Advanced Topics in Relational Database (3)

The course aims to develop an in depth understanding and ability to use advanced relational database management systems, specifically to understand and use advanced normalization procedures, advanced referential integrity, and advanced SQL queries in depth. Students will be exposed to the administrative aspects of robust database management systems.

This course will incorporate collaborative and action-learning experiences wherever appropriate. Emphasis will be placed on developing and practicing writing and speaking skills through application of the concepts that define the course.

Students will be evaluated by examination, exercises, quizzes, and a small project from design to implementation (including documentation).

IST 211 is the first advanced IST course for the students pursuing the Data Option in the Information Sciences and Technology Associate Degree program. Successful completion is required prior to enrollment in IST 213, 214. It may be taken simultaneously with IST 212. IST 210 is a prerequisite for IST 211.

Since this is an option requirement, only selected IST students will be enrolling; it should be offered at least once per year in class sizes of 30 or less. As enrollment growth warrants, it may require more frequent offering.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1999
Prerequisite: IST 210

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 212 Object-Oriented Database Systems (3) Introduction to object-oriented database systems.

IST 212 Object-Oriented Database Systems (3)

IST 212 aims to develop students understanding and ability to use object oriented relational database management systems, specifically to understand and use OODBMS architecture and to understand the requirements of ODBBMS database and system administration with regard to security, performance, tuning, and referential integrity. Students will also understand, develop and execute OODBMS data models. Students will learn to troubleshoot, tune, and tweak ODMBS and to understand, develop and execute implementation dependent transactions.

This course will incorporate collaborative and action-learning experiences wherever appropriate. Emphasis will be placed on developing and practicing writing and speaking skills through application of the concepts that define the course.

Students will be graded on course attendance and participation, quizzes and examinations, and a small project from design to implementation (including documentation).

IST 210 is a prerequisite for IST 212. IST 212 is a requirement for students pursuing the Data Option in the Information Sciences and Technology Associate Degree program. IST 212 can be taken simultaneously with IST 211, IST 213 or IST 214.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1999
Prerequisite: IST 210

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 213 Advanced Topics in Data Management (3) Introduction to emerging technologies and special applications of database management systems.

IST 213 Advanced Topics in Data Management (3)

IST 213 aims to develop students understanding and ability to use various specialized database management systems and emerging data technologies. Students will learn to understand and use new concepts in data modeling, in data warehousing and data mining. Students will learn to understand, develop and execute decision support systems, intelligent agents, dynamic web pages to support databases. Students will learn to understand and employ two and three tier client/server architecture to support databases and to keep abreast of emerging technologies in the data management.

The course will incorporate collaborative and action-learning experiences wherever appropriate. Emphasis will be placed on developing and practicing writing and speaking skills through application of the concepts that define the course.

Students will be graded on course attendance and participation, quizzes and examinations, brief exercises, and a small project from design to implementation (including documentation).

IST 210 and IST 211 are prerequisites to IST 213. IST 213 is a requirement for students pursuing the Data Option in the Information Sciences and Technology Associate degree program. IST 213 can be taken simultaneously with IST 212, and/or 214.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1999
Prerequisite: IST 211

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 214 Database Management Project (3) Project course in database management systems.

IST 214 Database Management Project (3)

IST 214 is a capstone course which enables students to synthesize their learning and apply it to a database management project requiring them to gather information on project requirements, assemble a requirements document, estimating project costs, develop the data model, and design the input/output. Students will also be involved in project management, database design, database implementation, systems development (two tier client-server), and the concepts of system maintenance.

IST 214 is the capstone course in the Data Option in the Associate degree in Information Sciences and Technology. IST 210 and 211 are prerequisites to IST 214. IST 214 can be taken simultaneously with IST 212 or 213.

Students will be graded on the project from design to implementation (including documentation).

The majority of campuses offering the Associate degree in IST will have 20-30 students enrolled in the course. The course will be offered one semester each academic year.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1999
Prerequisite: IST 210, IST 211

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 220 Networking and Telecommunications (3) Introduction to digital network topologies; transmission media, signal modulation, digital packet switching and routing, systems integration, communications management, and security.

IST 220 Networking and Telecommunications (3)

The course includes an introduction to: telecommunications history; telecommunications transmission media (conducted and radiated); transmission characteristics (including an introduction to coding and modulation techniques); error characteristics, detection, and correctional; local and wide area networking applications, hardware, and software; the OSI models; industry standards; topologies; protocols; internetworking devices; communications management; security and recovery; information system applications; and the selection of telecommunications and networking systems. Special attention will be paid to evolving Internet Protocol (IP) technologies, e.g., Internet2.

IST 220 is an introduction to digital networking and telecommunications and their applications in information systems. IST 110 is the only prerequisite. It is a required core course for both the two-year and four-year Information Sciences and Technology degrees, and is a critical part of the curriculum. Its objective is to provide the students with a basic understanding of the working of digital networks and the ability to apply this knowledge to specific applications and situations. Evaluation of knowledge objectives will be by examination; and of application (i.e., selection and management) objectives by grading of group and individual projects and case studies.

As a "core course", IST 220 will be offered every semester at University Park, in as many sections as necessary to meet current demand. At other locations where the Associate and Baccalaureate degrees are offered, it will be offered 1-2 times annually depending on demand. Ideally, section size should not exceed 45 students per class.

While the course is about digital technology and how it works, it is not a "hands on" course, or a training course in particular equipment and/or applications. While there will be demonstrations of relevant technologies, the course is not equipment-intensive and will not involve special technology needs beyond the normal access to computing and the Internet.

The course is not duplicative of any other course currently offered. Although there is some overlap with CMPET 401-402, CSE 458, and COMP 421, none of these courses cover exactly the same material, and they operate at a different level of depth and detail. M I S 180 also overlaps somewhat, but it appears that no current course provides the same 200-level mixture of local and wide-area networking and business communications topics.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1999
Prerequisite: IST 110

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 221 Introduction to Telecommunications Systems (3) Telephony, digital telecommunications, private telecommunication systems, transmission media, signaling, switching and networking, and amplitude modulation.

IST 221 Introduction to Telecommunications Systems (3)

IST 221 introduces the students to the basic communications system - the transmitter, the media through which the information is transmitted, and the receiver. As well, it provides students the foundation in analog and digital communications. It also explains to the students the need for specially preparing the information before transmission. It introduces the telecommunications technology highlighted in the core courses and the following courses are built on this, examining the complexities of the components involved. IST 225 is a required core course for the Telecommunications Option in the Associate degree in Information Sciences and Technology (IST).

Upon completion of IST 221, the students will be able to describe the telephone system, how it functions, evaluate digital communications and explain the function of the PBX. The student will also be able to discuss transmission media, their applications and the amplitude modulation technique used in transmission.

Evaluation will be based upon formal written examinations, research papers and homework assignments. The students will also be asked to do oral presentations on chosen topics. Both written papers and oral presentation will be researched through the library, the Internet and other sources. They will be encouraged to use different software technologies, (e.g. Microsoft PowerPoint) for their presentations.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1999
Prerequisite: IST 220

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 222 Voice and Data Communications (3) Noise in communications systems, types of modulation, transmission codes, terminals, interfaces, and the telephone.

IST 222 Voice and Data Communications (3)

IST 222 covers other forms by which information is treated for transmission and the effect of noise on the transmission system. Digital communications is treated at a deeper level by examining the codes in current use that enable transmission. The process of transmission, in both analog and digital forms, is treated at a deeper level and finally, the signals employed in telephone are further examined. IST 222 forms the next step in providing the students with a deeper understanding of telecommunications principles essential for the practitioners in this field. IST 222 is a required core course for the Telecommunications Option in the Associate degree in Information Sciences and Technology.

This course will incorporate collaborative and action-learning experiences wherever appropriate. Emphasis will be placed on developing and practicing writing and speaking skills through application of the concepts that define the course.

Upon completion of this course, the students will be able to recognize the effect of noise on the system and evaluate factors relating to frequency and pulse modulation. The student will be able to discuss and convert transmission codes from one form to another, describe different terminals, use different types of interfaces and describe the telephone network.

Evaluation will be based upon formal written examinations, research papers and homework assignments. The students will also be asked to do oral presentations on chosen topics. Both written papers and oral presentation will be researched through the library, the Internet and other sources. They will be encouraged to use presentation software, (e.g. Microsoft PowerPoint) for their presentations.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1999
Prerequisite: IST 221

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 223 Protocols and Networks (3) The telephone network, modems, protocols, network configurations, Internet and emerging technologies, error correction, fiber optics.

IST 223 Protocols and Networks (3)

The student will leave IST 223 with an understanding of the wireline operation of the telecommunications industry, and how they can become productive players in the industry. IST 223 will extend the student's knowledge of how the system is networked, and the components that converts analog signal to digital and digital signal to analog for transmission. IST 223 then examines the rules governing the oepration of the systems, different types of networks, error detection and correction. The students are then taken through a study of fiber optics. IST 223 is a required core course for the Telecommunications Option in the Associate degree in Information Sciences and Technology (IST).

IST 223 will incorporate collaborative and action-learning experiences whereever appropriate. Emphasis will be placed on developing and practicing writing and speaking skills through application of the concepts that define the course. It forms a component part of the course requirements for the Telecommunication Option in the Associate degree in Information Sciences and Technology.

Evaluation will be based upon formal written examinations, research papers and homework assignments. The students will also be asked to do oral presentations on chosen topics. Both written papers and oral presentations will be researched through the library, the Internet and other sources. They will be encouraged to use presentation software, (i.e. Microsoft PowerPoint) for their presentations.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1999
Prerequisite: IST 220

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 225 PC Hardware Basics (3) Preparation for PC hardware support: Students learn data recovery and how to build, configure, upgrade, troubleshoot, diagnose, and repair PC's.

IST 225 PC Hardware Basics (3)

IST 225 covers materials needed to prepare students to function as PC support technicians in business and industry. In a hands-on laboratory environment, students learn to build, configure, upgrade, troubleshoot, diagnose, and repair PC hardware. Course modules cover all the basic hardware components of the PC - their functions, interactions, installation, configuration, upgrading, repair, and replacement. Detailed coverage of system BIOS, CMOS setup, and the boot process is also included. Preventive maintenance and data recovery procedures are also studied. IST 225 is one of four courses required for the Networking Option in the Associate degree in Information Sciences and Technology (IST).

The IST 225 is designed to help the student to thoroughly understand all the basic hardware and firmware PC components, from PC resources, their function (BIOS and CMOS setup) and interaction, to diagnosing and resolving resource conflicts. The IST student should be able to install, configure, troubleshoot, repair, recover data, correct errors or replace all basic hardware components. The student should also be able to make appropriate hardware recommendations, purchases and upgrade decisions, as well as, determine appropriate preventive maintenance procedures. Finally, the Information Sciences and Technology major will learn how to foster communications, interpersonal, and group interaction skills through appropriate collaborative and active learning projects, laboratory exercises, and related experiences.

Achievement of knowledge objectives will be evaluated by examinations. Ability to perform hands-on support activities will be evaluated by grading appropriate group and individual hands-on laboratory projects, scenarios, and case studies.

The majority of campuses offering the Associate degree in Information Sciences and Technology will have 20-30 students enrolled in the course. The course will be offered one semester each academic year.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1999
Prerequisite: IST 220

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 224 Wireless Systems (3) Wave propagation, transmission lines, antennas and waveguides, microwave radio communications, satellite communications, and cellular telephones.

IST 224 Wireless Systems (3)

Up to this point, the technology the students have dealt with has been wireline. An important component of the telecommunications industry is the wireless technology. The students get into this area starting with transmission lines which explains to them how waves are propagated through a medium with distributed parameters. This leads on to the formation of antennas and propagation by antennas. This forms the basis of radio work (wireless). The students are then ready to examine radio frequency (RF) applications such as microwave radio communications, satellite communications and cellular telephones. The wireless course is an extension to the wireline component of the program, and completes the course requirements for the Telecommunications Option in the Associate degree in Information Sciences and Technology (IST).

This course will incorporate collaborative and action-learning experiences wherever appropriate. Emphasis will be placed on developing and practicing writing and speaking skills through application of the concepts that define the course.

Upon completion of this course, the students will be able to discuss electromagnetic wave propagation, evaluate the different parameters of transmission lines and describe cellular telephone/personal communication of antennas, waveguides functions, relevant parameters, as well as microwave and satellite communications.

Evaluation will be based upon formal written examinations, research papers and homework assignments. The students will also be asked to do oral presentations on chosen topics. Both written papers and oral presentation will be researched through the library, the Internet and other sources. They will be encouraged to use presentation software, (e.g. Microsoft PowerPoint) for their presentations. The majority of campuses offering the Associate degree in Information Sciences and Technology will have 20-30 students enrolled in the course. The course will be offered one semester each academic year.

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 226 Networking Essentials (3) Concepts for peer-to-peer and server-based network:International Organization for Standardization-Open Systems Interconnection (ISO-OSI) reference model, industry standards, troubleshooting, performance monitoring, and optimization.

IST 226 Networking Essentials (3)

IST 226 covers basic networking concepts such as network types, cable types, wireless technologies, and network adapters. It discusses network models, including the ISO-OSI reference model and all industry standard network architectures. Both peer-to-peer and server-based commercial network operating systems are introduced with hands-on laboratory experience provided. Basic network administration issues are introduced. Internetworking/enterprise networking devices and architectures are also covered, as are network troubleshooting, performance monitoring, and optimization. IST 226 is one of four courses required for the Networking Option in the Associate degree of Information Sciences and Technology (IST).

Achievement of knowledge objectives will be evaluated by examinations. Ability to perform hands-on network administration and support activities will be evaluated by grading appropriate group and individual hands-on laboratory projects, scenarios, and case studies.

Upon completion of this course, the students will be able to understand both cabled and wireless media types and be able to select appropriate media. The student will also understand the ISO-OSI and IEEE models and other industry standards, the roles of drivers and protocols and network architectures. The student will have experience with the installation, configuration and administration of basic server-based networking, as well as, an understanding of wide area/enterprise networking, performance monitoring and network troubleshooting. Most important, the student will learn how to foster communications, interpersonal, and group interaction skills through appropriate collaborative and active learning projects, laboratory exercises, and related experiences.

The majoriety of campuses offering the Associate degree in Information Sciences and Technology will have 20-30 students enrolled in the course. The course will be offered one semester each academic year.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1999
Prerequisite: IST 220

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 227 Network Administration (3) Administering peer-to-peer and client/server networks: Planning, installation, server configuration, resource management, remote access, performance monitoring, and optimization.

IST 227 Network Administration (3)

IST 227 covers the essential knowledge and skills required to successfully administer peer-to-peer and client/server networks. Hands-on experience with commercial networking software such as Windows 9x, NetWare, Windowns NT Workstation, and Windows NT Server is an important course component. Topics covered include pre-installation planning, network installation, network software architecture, server configuration, profiles and logon scripts, user account management, policies, resource sharing and security, disk management, remote access, backup and recovery, performance monitoring, and network optimization. IST 227 is one of four courses required for the Networking Option in the Associate degree in Information Sciences and Technology (IST).

Upon completion of this course, the students will be able to understand network software architecture, plan and install peer-to-peer and server-based networks. The IST student will also be able to manage user accounts, profiles, logon scripts, and system policies. The student will have practical experience with disk storage, resources, security, backup and recovery procedures. Finally, the student will be able to manage remote access features, monitor and optimize network performance, and foster communications, interpersonal, and group interaction skills through appropriate collaborative and active learning projects, laboratory exercises, and related experiences.

Achievement of knowledge objectives will be evaluated by exam. Ability to perform hands-on network administration and support activities will be evaluated by grading appropriate group and individual hands-on laboratory projects, scenarios, and case studies.

The majority of campuses offering the Associate degree in Information Sciences and Technology will have 20-30 students enrolled in the course. The course will be offered one semester each academic year.

Information Sciences And Technology (IST)

IST 230 Language, Logic, and Discrete Mathematics (3) Introduction to formal languages, mathematical logic, and discrete mathematics, with applications to information sciences and technology.

IST 230 Language, Logic, and Discrete Mathematics (3)

IST 230 is one of the five introductory core courses for the baccalaureate degree program in Information Sciences and Technology. The purpose of IST 230 is to provide students with an understanding of an array of mathematical concepts and methods which form the foundation of modern information science, in a form that will be relevant and useful for IST students. Exams and assignments will be used to assess that understanding. IST 230 will draw some of its material from several mathematical disciplines: formal language theory, mathematical logic, discrete mathematics. In-depth treatments of each of these subjects are offered elsewhere in the University as advanced mathematics and computer science courses. The difference is that IST 230 will present these concepts in a more elementary way, with much more emphasis on IST applications, and in a more eclectic, web-based format. IST 230 will be structured as a small number of modules. Each module will introduce a group of mathematical concepts and present applications of those concepts to problems of information storage, information retrieval, information management, etc. These include: MODULE 1: SET, RELATIONS, FUNCTIONS, NUMBERS set operations, applications of relations, equivalence relations, function composition, inverse functions, logarithms, exponential function, number systems, applications of number theory. APPLICATIONS: mathematical data types (integers, fractions, real numbers, tuples, function spaces); exponential growth; non-feasible algorithms; public key encryption. MODULE 2: LOGIC AND BOOLEAN ALGEBRA predicates, quantifiers, formulas, interpretations, syllogisms, logical consequence, tableau method, boolean connectives, boolean functions, valuations, truth tables, logic gates. APPLICATIONS: database query languages; specification languages; switching circuits; boolean search expressions. MODULE 3: COMBINATORICS AND PROBABILITY combination, permutation, discrete probability APPLICATIONS: lexicographic ordering; combinatorial explosions; lower bouncs of algorithms; reliability of computer systems MODULE 4: GRAPHS AND TREES directed and undirected graphs, weighted graphs, walks, paths, matrix representations, graph algorithms, spanning trees, rooted and structured trees, combining trees to form new trees, inserting nodes in trees, sorting, searching. APPLICATIONS: flow diagrams; task scheduling; critical paths; network connectivity; finite state machines; parsing; derivation; trees as data structures for storing information. MODULE 5: INDUCTION AND RECURSION induction and recursion on the natural numbers and other structures such as trees. APPLICATIONS: recursive evaluation of mathematical and Boolean expressions; recursive searching and sorting algorithms; asymptotic analysis of algorithms. MODULE 6: GRAMMARS, LANGUAGES AND FINITE STATE MACHINES alphabets, strings, grammars, languages, regular languages, regular expressions, finite state machines, language recognizers. APPLICATIONS: regular expression search; efficient pattern matching using finite-state machines.

Information Sciences And Technology (IST)

IST 228 Advanced Network Administration (3) TCP/IP planning, installation, configuration: IP addressing, subnetting, routing, Dynamic Host Configuration Protocol (DHCP), Windows Internet Naming Service (WINS), address/name resolution, Domain Name System (DNS); database, web, mail server management.

IST 228 Advanced Network Administration (3)

IST 228 covers the essential knowledge and skills required to successfully administer TCP/IP networks and applications servers such as database servers, web servers, and mail servers. Hands-on experience with commerical software such as SQL Server, Exchange Sever, and Internet Information Server is an important course component. Topics covered include TCP/IP planning, installation, and configuration, IP addressing, subnetting, IP routing, DHCP, WINS, address and name resolution protocols, DNS, and management of database, web, and mail servers. IST 228 is one of four courses required for the Networking Option in the Associate degree of Information Science and Technology (IST).

Upon completion of this course, the IST students will be able to plan, install, configure and troubleshoot TCP/IP. The student will also understand IP addressing, subnetting, supernetting, routing and configuration. The student will have practical experience installing and configuring DHCP, WINS, and various protocols. Finally, the IST student will have administrative skills with database, server and web software, as well as, the ability to foster communications, interpersonal, and group interaction skills; through appropriate collaborative and active learning projects, laboratory, exercises, and related experiences.

Achievement of knowledge objectives will be evaluated by exam. Ability to perform hands-on network administration and support activites will be evaluated by grading appropriate group and individual hands-on laboratory projects, scenarios, and case studies.

The majority of campuses offering the Associate degree in Information Sciences and Technology will have 20-30 students enrolled in the course. The course will be offered one semester each academic year.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1999
Prerequisite: IST 226

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 240 Introduction to Computer Languages (3) Introduction to the specification and application of languages and language paradigms that interact with computers.

IST 240 Introduction to Computer Languages (3)

IST 240 is one of two courses added to the three core courses for the associate degree program to form the core courses for the baccalaureate degree program in Information Sciences and Technology. The primary goal of this course is to study the foundations underlying the design, specification and use of a wide variety of language paradigms used to interact with computers. The following details the content of the course: (1) nature of languages; (2) elements of languages; (3) classification of languages; (4) formal descriptions of languages; (5) data and types; (6) names and bindings; (7) control structures; (8) language processors; and (9) study experiences.

Student evaluation may be accomplished by means of assignments, examinations, and possibly a project. This course will most likely involve Web-based course material and will therefore require student access to computers and the Web. Although other existing courses are similar to IST 240 in content, none of those courses fit the objective of this course and of this program.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2002
Prerequisite: CMPSC 101

Information Sciences And Technology (IST)

IST 247 Contemporary Projects in Software Development (3) The analysis, design, coding, testing, and documentation of a software project using state-of-the art languages/tools and concepts.

IST 247 Contemporary Projects in Software Development (3)

The primary focus of the course will be the development (including definiation, design, etc.) and implementation (including supporting documentation) of a contemporary software project. The project should extend concepts and languages/tools learned in previous courses and/or require new knowledge. These new elements should be self or team-taught by the students with the instructor as a facilitator. Active and collaborative learning techniques will be incorporated into all activities. IST 247 is a required course in the Software Development Option of the Associate degree in Information Sciences and Technology (IST).

Upon completion of the course, the students will have experience with all phases of a system development project, ranging from team work and learning new material using collaborative methods to making formal presentations of their projects at different stages.

Students will be graded on course attendance, participation, quizzes, examinations, brief exercises and their project presentation (from design to implementation, including documentation).

IST 247 has prerequisites of CMPBD 205 and either IST 211 or IST 256. It may be taken simultaneously with other IST courses excluding the prerequisites.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: CMPSC 302;IST 211 orIST 256

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 250 New Media and the Web (3) Introduction to how the World Wide Web utilizes emerging technologies. Students acquire conceptual understanding of constructing Web sites.

IST 250 New Media and the Web (3)

This course provides an introduction to how the world wide web utilizes new media technologies. Students will acquire a sound conceptual understanding of how simple to complex web sites are constructed, and how this knowledge can be applied in their professional career. Knowledge gained in this course will dovetail into Information Sciences and Technology Associate degree options.

There are three major course objectives: (1) students will be able to perform a written critical evaluation of any web site, using the criteria listed below for evaluation; (2) students will be able to develop a written and/or electronic comprehensive proposal for the design/redesign of a web site; and (3) students will collaborate in meaningful, deep discussions of the topics listed above with peers, experts, and faculty via interactive technologies, as demonstrated by chat logs or other interaction records.

Students will construct a simple web page that exemplifies the weekly topics. This web page may be built over the course of the initial 10 weeks as new topics are introduced, or the students may construct separate examples for each topic area. In some cases (such as e-commerce) the students may construct a non-functional prototype as opposed to a fully functional site. A quiz on the weekly topic(s) will occur at the end of each week. The quiz will be derived from the assigned readings and chats. This quiz will be on-line and automatically scored. Students will develop a comprehensive proposal for the design/redesign of a web site. Included in the proposal will be: (1) rationale for each decision; and (2) how conceptual criteria covered in segment 1 are applied to the design. IST 250 is part of the core curriculum for the Information Sciences and Technology Associate degree; thus it links to the other core courses in this degree. IST 110 is a prerequisite but may be taken concurrently. In addition, this course is a prerequisite for all courses in the Associate degree Web Administration Option. Generally, enrollment will be 20 students per semester building to 20 students per semester over a 3-4 year ramp-up period of the Information Sciences and Technology program.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1999
Prerequisite: IST 110 or concurrent enrollment

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 255 Fundamentals of Web Administration (3) An introduction to fundamental web administration concepts: Internet, graphic design, Hypertext Markup Language (HTML), security, legal/ethical implications, Internet business.

IST 255 Fundamentals of Web Administration (3)

Students will be required to demonstrate understanding of the course content by building web pages that incorporate and illustrate the facts, concepts, and procedures in the course content, and by identifying given features (such as security flaws) in given web sites. IST 255 is a required course for the Web Administration Option of the Associate degree in Information Sciences and Technology (IST).

Upon completion of the course, students will have knowlede of the fundamental web administration concepts, including information about the Internet, graphic design, basic HTML, security, legal/ethical implications, and buisness on the Internet.

Achievement of knowledge objectives will be evaluated by examination of students projects, including the following: The student will develop a web page(s) according to established guidelines that demonstrates basic knowledge of visual design, including GUI design principles, use of text, graphics, audio, animation and video.

The majority of campuses offering the Associate degree in Information Sciences and Technology will have 20-30 students enrolled in the course. The course will be offered one semester each academic year.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1999
Prerequisite: IST 250

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 256 Programming for the Web (3) An introduction to fundamental Web programming concepts: Advanced Hypertext Markup Language (HTML), Dynamic Hypertext Markup Language (DHTML), extensible Markup Language (XML), Data Warehouses, JavaScript, common Gateway Interface (CGI), and Java.

IST 256 Programming for the Web (3)

The first part of the course consists of introduction of web programming facts and concepts. Students will be required to demonstrate understanding of the course by building web pages via individual and group activities that incorporate and illustrate the facts, concepts, and procedures in the course content. The latter half of the course will involve in-depth programming projects in JavaScript, CGI, and Java, and will incorporate concepts from the first part of the course. IST 256 is required and represents the introductory web programming course for the Web Administration Option of the Associate degree in Information Sciences and Technology (IST).

Upon completion of the course, the IST student will be able to identify basic concepts for programming for the web, including decentralized computing and shared information, client/server/database, e-commerce, design issues, and scalability issues, as demonstrated by miscellaneous tests. The student will also have experience with basic UNIX/NT programming skills, including system programming basics for webmasters, Unix, and NT systems, as demonstrated by completed projects. They will be able to utilize advanced HTML, DHTML concepts, including style sheets, dynamic content, and scripting events, as demonstrated by completed projects. The student will also understand basic concepts for databases/data warehousing/data mining, including information and the organization, database and database management system environments, the relational database model, and object-oriented database model, as demonstrated by miscellaneous tests. They will be able to identify basic concepts about XML, multimedia resources, GUI Programming Environments, such as Visual J++, Symantec Cafe, NetObject's Fusion, and Dreamweaver (or the current equivalent environments. They will be able to utilize current programming technologies to produce functional programming code that enhances web page capabilities.

Students will be graded on course attendance, participation, quizzes, examinations, brief exercises and their project presentation (from design to implementation, including documentation).

The majority of campuses offering the Associate degree in Information Sciences and Technology will have 20-30 students enrolled in the course. The course will be offered one semester each academic year.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1999
Prerequisite: IST 250

Information Sciences And Technology (IST)

IST 257 Advanced Web Administration (3) Web site server installation, access, management, security, performance monitoring and optimization, network services, and troubleshooting.

IST 257 Advanced Web Administration (3)

IST 257 will help the student to acquire advanced web administration skills, including web server installation, access, management, security, performance monitoring and optimization, database strategies, network services, and troubleshooting. IST 257 is a required course for the Web Administration Option in the Associate degree in Information Science and Technology (IST).

Upon completion of the course, the student will be able to demonstrate an understanding of advanced web administration concepts. The IST student will be able to install, manage, create virtual directories, incorporate network services as demonstrated by inclusion of a functional FTP service, e-mail, and news groups within an active web server environment. They will have knowledge of web security features by utilization of user authentication, network-related techniques, certificate-based techniques and be able to monitor and optimize performance on a web server.

Students will be graded on course attendance, participation, quizzes, examinations, brief exercises and their project presentation (from design to implementation, including documentation).

IST 257 does not appear to be offered in any form at this time. IST 255 is a prerequisite for this course. IST 257 is a required course for the Web Administration Option in the Associate degree in Information Sciences and Technology.

The majority of campuses offering the Associate degree in IST will have 20-30 students enrolled in the course. The course will be offered one semester each academic year.

General Education: None
Diversity: None

Information Sciences And Technology (IST)

IST 258 Web Administration Studio (3) Web Administration option capstone course: Students plan and build a fully functioning Web site that meets client needs.

IST 258 Web Administration Studio (3)

State-of-the-art web server/database topics will initially be examined, then the students will divide (3-5 people) into small project groups for the remainder of the course as they design and implement their projects. IST 258 is the capstone course in Web Administration Option in the Associate degree in Information Sciences and Technology. IST 255 and 256 are prerequisites for this cap stone course.

The student will plan, build, and deliver a fully-functioning web site that meets specific client needs. The student will be able to create a dynamic web site by scripting and programming dynamic web pages, creating active content with Active Server Pages, and linking to databases using ASP. The student will also be able to link databases with web servers, install, configure, test and secure a server. The Information Sciences and Technology major will utilize appropriate collaborative and active learning strategies to complete a small group project, from developing a plan for managing, optimizing, and monitoring performance to writing documentation and troubleshooting procedures.

Students will be graded on course attendance, participation, quizzes, examinations, brief exercises and their project presentation (from design to implementation, including documentation).

The majority of campuses offering the Associate degree in Information Sciences and Technology will have 20-30 students enrolled in the course. The course will be offered one semester each academic year.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1999
Prerequisite: IST 255, IST 256

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 260W Introduction to Systems Analysis and Design (3) Introduction to systems analysis and design, stressing the process of requirements acquisition, specification, design, and implementation.

IST 260W Introduction to Systems Analysis and Design (3)

IST 260W is an introductory course to system analysis and design. It covers the process and is intended to be independent of the specific system, whether it be a hardware, software, telecommunication, logistics, or information system. This course can be used as a prerequisite to specific Associate degree system design courses. It can also be used for breadth for those IST students who do not pursue technical emphases. It serves as a writing across the curriculum course for the Information Sciences and Technology Associate degree. The course looks at two design paradigms. A small design project is included in the course.

The objectives of the course include: (1) teaching students the importance of teamwork, project management, and oral and written communication skills; (2) teaching students a systems design strategy that emphasizes customer requirements at all stages of the process; (3) introducing students to the object oriented design process; (4) giving students a full design experience on a small project such as designing an e-Commerce system; and (5) showing students examples of the writing required for systems design and requiring them to write individual and team reports as well as give oral presentations on their designs.

Students will be evaluated by examinations and by grading of their written reports and oral presentations.

System design courses are taught at the upper-division level in Engineering and Business departments. This is a lower-division course that serves as an introduction for Associate degree students to give them a background for project-level courses in their fourth semester. It will serve as a core requirement in the Associate degree program and act as a prerequisite for the design courses that are capstone courses in many of the Associate degree options. The course will be offered one semester each academic year.

Information Sciences And Technology (IST)

IST 271 Integrated Business and Manufacturing Processes (3) History, principles, supply-chain management, enterprise system, resources, automation, process economics, data organization, and metrics development.

IST 271 Integrated Business & Manufacturing Processes (3)

IST 271 presents the history and principles that have guided the growth of the manufacturing industry and the business and enterprise system development into the highly automated MRP/ERP (Manufacturing Resource Planning/Enterprise Resource Planning) systems of today. IST 271 is one of the five technical electives of the Industrial/Manufacturing Technology option of the Associate degree in Information Sciences and Technology (IST). This course will be taken in the second year. Prerequisite: IST 210, IST 295A Concurrent: IST 273.

Upon completion of the course, students will be able to understand the basic language and concepts of the modern manufacturing process and its historical development.

Weekly homework/reading assignments, two midterms and a final will be administered during the semester. Students will work collaboratively on case studies.

The majority of campuses offering the Associate degree in Information Sciences and Technology will have 20-30 students enrolled in the course. The course will be offered one semester each academic year.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1999
Prerequisite: IST 210, IST 295A
Concurrent: IST 273

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 272 Electronic Essentials (3) Introduction to electronics, digital logic, data acquisition, and computer automation.

IST 272 Electronic Essentials (3)

IST 272 is a survey of topics in electronics, digital logic, motors, data acquisition and computer automation. The student will learn basic electronics and digital logic as well as how to use computers to control equipment and recieve data from instruments. Emaphsis will be placed on applications rather than theory. This course is designed to give the student the necessary background to work with engineers in an industrial setting.

IST 272 conveys the basic terminology and concepts of electrical engineering and is required for the Industrial/Manufacturing Technology Option in the Associate Degree in Information Sciences and Technology. Prerequisistes: IST 271, Math 110 Concurrent: CMPSC 101 or CMPBD 204. It is a prerequisite for IST 274.

Upon completion of this course, students will be able to understand electrical specifications of equipment, read a schematic for an electronic device as well as troubleshoot simple circuits. More importantly, the student will learn how to collaborate with one another and faculty to apply learned skills to problems relating to data acquisition and computer automation.

Weekly homework assignments will be given during the first four sections of the course. Two midterm exams will be given one at the end of Module 2 and another at the end of Module 4. Students will construct a computer automated mechanical device. They will develop a proposal for the design and then implement the design and demonstrate its operation.

The majority of campuses offering the Associate degree in Information Sciences and Technology will have 20-30 students enrolled in the course. The course will be offered one semester each academic year.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1999

Concurrent: CMPBD 204 or CMPSC 101

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 273 Mechanical Essentials (3) Introduction to statics, strength of material, and metallurgy.

IST 273 Mechanical Essentials (3)

IST 273 is a survey of topics in statics, strength of material, and metallurgy for non-scientists. The student will learn the concepts of forces, moments and equilibruim. The effect of forces on the material (stress and strain) is covered as well as various relevant properties of materials. Emphasis will be placed on applications rather than theory. This course is designed to give the student the necessary background to work with engineers in an industrial setting. IST 273 is one of five technical electives of the Industrial/Manufacturing Technology Option of the Associate degree in Information Sciences and Technology (IST). This course will be taken in the second year. Prerequisite: Math 110; concurrent IST 271.

Upon completion of the course, students will be able to understand the basic language and concepts of mechanical engineering enabling them to communicate effectively with engineers and the labor force in a manufacturing engineering setting. The student will also refine their collaborative skills as they work with each other and faculty to apply learned skills to problems related to manufacturing engineering.

Weekly homework assignments will be given during the entire course. Two midterm exams will be given. Students will work together in teams to design and construct a mechanical device applying the knowledge acquired in this course.

The majority of campuses offering the Associate degree in Information Sciences and Technology will have 20-30 students enrolled in the course. The course will be offered one semester each academic year.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1999

Information Sciences And Technology (IST)

IST 274 Tools of Manufacturing Processes (3) Examination of industry tools, their applications, and study of applications and tool usage that represents the total business and manufacturing process.

IST 274 Tools of Manufacturing Processes (3)

IST 274 presents industry tools and their application, with detailed study of synergistic applications and tool usage that tie together the total business and manufacturing process. IST 274 is one of the five technical electives of the Industrial/Manufacturing Technology Option of the Associate degree in Information Sciences and Technology. This course will be taken in the second year. Prerequisite: IST 271 & IST 273; concurrent with IST 272.

Upon completion of the course, the student will be able to apply the concepts of the modern manufacturing process, with current industry tools, to affect business and manufacturing process solutions. The student will also build on the other courses in this option (IST 271, IST 272, and IST 273) to provided an integrated tool and business perspective, with an emphasis on practical solutions. Students will incorporate tools, experiences and case studies gained during their internship (IST 295A) of the previous summer. Finally, students will have knowledge of theory, tools and applications to give the student useable ability, while opening the academic door to further study, optimization, and tool development.

Weekly homework/reading assignments, two midterms and one final will be given during the entire semester. Students will work collaboratively on several case studies, based if possible on experiences gained during their internship. A term project will be required of each student.

The majority of campuses offering the Associate degree in Information Sciences and Technology will have 20-30 students enrolled in the course. The course will be offered one semester each academic year.

General Education: None

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 295A Distributed Team Project (1-3) Supervised experience in which student teams work on information system design projects gathered from industry or units within the University.

IST 295A Distributed Team Project (3)

This course offers a web-based distributed project that simulates an internship of a student in a company. Faculty gather information system design projects from industry or units within the university. These projects are announced on the web and students bid to join groups to work on the projects. Each project has a faculty mentor with an additional industrial mentor where appropriate. Student groups are formed by the mentors based on the resumes and skill sets of the students. Students bid on one project at a time until they have been selected to be a member of a project team. Membership in a group may include students from different campuses throughout the Penn State System. The majority of communication within the groups and with the mentors is to be via the internet. This course gives a true experience in information project development. Students will be graded as a team by the faculty mentor on the quality of the project. An individual written report detailing the work accomplished during the course is required from all team members. The grade of the individual report and the team project grade form a basis for student evaluation.

The objectives of the course include: (1) teaching students the importance of teamwork, project management, and oral and written communication skills: and (2) exposing students to the virtual workplace and providing them with meaningful information and technology related tasks.

General Education: None
Diversity: None
Bachelor of Arts: None

Information Sciences And Technology (IST)

IST 295B IST Internship (1-3) Supervised work experience where the student is employed in an information sciences and technology position in industry, government, or academia.

IST 295B IST Internship (1-3)

This course is offered as an internship for a student within a company. Faculty and industry collaborate to specify the duties of the intern. The faculty member responsible for the course then approves the internship. The internship must consist of a minimum of 400 hours of meaningful information and technology related tasks. A written report by the student, detailing the work accomplished during the internship, is required. This report and a report from the intern supervisor form the basis for the grade.

The objectives of the course include: (1) teaching students the importance of teamwork, project management, and oral and written communication skills; and (2) exposing students to the workplace and providing them with meaningful information and technology related tasks.

Effective: Fall 2001

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 301 Information and Organizations (3) Overview of organizational structures and functions. Includes information processing and analytic perspectives of organizations.

IST 301 Information and Organizations (3)

This course provides students the opportunity to learn and experience:
1. Applicable organization and the ways in which IT can alter and enable these activities.
2. A series of analytic techniques that students can use to investigate the effects of new IT on work and organization.
3. Examples and problems set in and drawn from a range of domains including military, medical, high technology, business and government.

This course is designed around a series of ill-structured, contemporary problems that require students to develop responses by applying analytic techniques and theories of work and organization. At the end of the course, students will be able to:
1. Apply theories of work and organization as analytic techniques.
2. Conduct organizational and inter-organizational process analyses.
3. Map information flows among organizational units and actors.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2003
Prerequisite: IST 210, IST 220

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 302 IT Project Management (3) Exploration and application of the basic concepts, methodologies, and tools of project management in the field of information sciences and technology.

IST 302 IT Project Management (3)

This course is designed to introduce and explore the basic concepts and practices of project management and help students understand how to plan and manage IT projects successfully. Throughout the course, students will be asked to utilize course concepts, methodologies, and tools while utilizing technology applications and addressing real-world problems. Students will learn the skills necessary to define project scope, create workable project plans, and manage projects with quality, budget, and schedule in mind. The course is structured around the key phases of project lifecycle, including initiating a project, developing project plans, executing and managing a project, and closing out a project. In addition, students will be taught how to identify and address the change management and political issues associated with project management.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2003
Prerequisite: IST 210, IST 220

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 311 Object-Oriented Design and Software Applications (3) Introduction to object-oriented applications including applications in an Object Oriented Design (OOD) language or OOD languages.

IST 311 Object-Oriented Design and Software Applications (3)

IST 311 will be among the courses making the System Development Option in the Baccalaureate degree in Information Sciences and Technology program and would normally be taken in the 5th or 6th semester. It is the first course in the Option sequence. The course is intended to provide students with background in object-oriented design and programming. Students will learn basic object concepts and develop skills to implement programs utilizing object tools. To prepare for such a work environment, students will learn to work together to design, implement and test projects. IST 311 would normally be taken in the 5th or 6th semester. Prerequisiste(s): CMPSC 102 or CMPSC 101, IST 240.

CSE 120, Intermediate Programming, handles some topics contained in IST 311, but the focus of CSE 120 is not on object-oriented design. Rather a major portion of its content is on top-down programming. CSE 120 includes numerical methods and algorithm analysis, areas not included in IST 311. IST 311 will introduce students to team-based projects, as well as design principles and object concepts. Student performance will be evaluated by means of assignments, examinations, and team-based projects.

Upon completion of the course, students will be able to apply system development principles using an object-oriented language, show how object-oriented techniques increase productivity of complex systems and begin the development of team skills when programming complex systems.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: CMPSC 102 orCMPSC 101;IST 240

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 321 Information Technology and Systems Integration I (3) Introductory course on integration of information technology into different systems, including the planning, development, and implementation of the integration.

IST 321 Information Technology and Systems Integration I (3)

IST 321 focuses on introducing the student to the role of information systems and technologies in achieving a variety of system goals. Emphasis will be placed on the theories and skills required for planning, developing, implementing, and managing the integration of information technology and different systems. IST 321 is required of all Information Sciences and Technology (IST) undergraduates who have chosen the Information Technology Integration Option in their Baccalaureate degree. It is the prerequisiste for IST 421 which is also required for the Option.

Upon completion of the course, the student will be able to recognize information technology integration. They will also understand the "information value chain" within a system, and be able to foster an understanding of the role of IT in system integration.

Students will be periodically assessed through examinations, individual and group assignments and projects, and other performance indicators where appropriate.

IST 311 will be offered every semester at University Park. At every other campus location where the Baccalaureate degree program is offered, the course will be offered 1-2 times annually depending on demand. Student enrollment at University Park will begin at approximately 50-75 in the first year and grow to 200 over a 3-4 year time period. At other locations, enrollment should range from 25-50 annually.

Information Sciences And Technology (IST)

IST 331 Organization and Design of Information Systems: User and System Principles (3) Interdisciplinary survey of topics related to the use and usability of information systems.

IST 331 Organization and Design of Information Systems: User and System Principles (3)

Not too many years ago, people gained information from watching television news or reading the newspaper. Now, nearly half the population of the United States is connected or planning to connect to the Internet. Recent examples include the release of the "Star Report" which generated a record number of "hits" that almost paralyzed the Internet. IST 331 examines these issues, paying special attention to those problems that are directly impacting the performance and future of this rapidly expanding market. The course will expose the "positive and negatives" of the current information system. Next, it will factor in the "human elements" of the equation, and finally, IST 331 will help the Information Sciences and Technology major to understand the enormous responsibility of their work and how they can "make a difference." This course will serve as a required course in the Infon-nation, Society, and Public Policy Option of the proposed major in Information Sciences and Technology. Upon completion of this course, the students will be able to evaluate the current information systems and apply communication principles. They will also recognize problems in design, appreciating the "human factor" as it relates to pedagogy and research. The material in this course lends itself to active learning elements such as writing projects, library and internet research, and collaborative learning. Evaluation will be based on a combination of examinations, written assignments and papers, and collaborative projects. The exact mix of evaluation components will be determined by the individual instructors. The proposed course has some overlap in content with existing courses in Psychology, English, Instructional Systems, Industrial Engineering, and Management Science and Information Systems. Frequency: IST 331will be offered every semester at University Park. At every other campus location where the Baccalaureate degree program is offered, the course will be offered 1-2 times annually depending on demand. Enrollment: Student enrollment at University Park will begin at approximately 50-75 in the first year and grow to 200 over a 3-4 year time period. At other locations, enrollment should range from 25-50 annually.

General Education: None

Information Sciences And Technology (IST)

IST 341 (US;IL) Human Diversity in the Global Information Technology (3) Globalization, human diversity and their impacts on IT products, work, workforce, and the knowledge economy and social inclusion in general.

IST 341 Human Diversity in the Global Information Technology (3) (US;IL)

This course examines the effects of human diversity on the analysis, development and use of information systems and technology. This course explores the meaning and implications of diversity. It takes a comprehensive view of diversity that builds upon the notion of 'diversity' as 'differences.' When applied to demographic characteristics of the IT workforce and IT user base, the term includes such meanings as: race, ethnicity, nationality, gender, sexual orientation, religion, socio-economic status, age and disability. The concept of diversity is also applied beyond demographic attributes to also include the characteristics of individuals that make them unique in the ways that they bring different skills, thoughts, perspectives, ideas and talents to the work place. The concept of diversity in IT work is examined from two different viewpoints: that of the 'minority' person who is interacting with the 'majority' person; and that of the 'majority' person who wants to develop greater awareness regarding successful interaction with 'minority' individuals. This course makes extensive use of problem-based learning, experiential learning, case studies, guest speakers and team work with students in other countries.

General Education: None
Diversity: US;IL
Bachelor of Arts: None
Effective: Spring 2008 Ending: Summer 2010
Prerequisite: IST 110

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 390 Introduction to Professional Development (1) Interdisciplinary course to introduce students to the issues, concepts and skills involved in successfully transitioning into professional life.

IST 390 Introduction to Professional Development (1)

IST 390 focuses on introducing the students to professionalism and professional development in the field of IT. Emphasis will be placed on the theories and skills required for planning, developing, implementing, and managing professional skills. For example, students will attempt to master relationship skills such as client relationship management and interpersonal communication, business skills such as presentation planning and scheduling; leadership skills such as decision making and goal setting; and career management skills such as networking and interviewing. Additional focus will be placed on the various resources and strategies available for pursuing a successful job search. Students will be given opportunities to practice the concepts, theories, and methodologies learned in class by working in teams on real-world case studies (many derived from corporate partners). Students will be periodically assessed through examinations, case studies, individual and group assignments and projects, and other performance indicators where appropriate.

The audience is students who are ready to enter the work force. For those pursuing Baccalaureate Degrees, this would mean a class standing of Junior or Senior. For those pursuing Associate Degrees, this would mean a second year standing.

Information Sciences And Technology (IST)

IST 402 Emerging Issues and Technologies (3 per semester/maximum of 9) Introduction to emerging issues, technology forecasting and analysis; overview of emerging issues and leading technologies in IST and how they impact information systems, users, the IT labor force and society.

IST 402 Emerging Issues and Technologies (3 per semester/maximum of 9)

Information Sciences and Technology (IST) is a rapidly changing discipline. New issues, methods, tools, applications and terminology appear on a continual basis. A key skill is the ability to analyze new issues and assess new technologies within the context of the information age. This course prepares students to understand the difference between potential technological failures and success, fads and revolutionary technology. It also helps students to view emerging issues as an opportunity rather than a threat. Intellectual tools are provided to assist in understanding issues, assessing and forecasting technological changes for feasibility and planning in real world situations. The course provides students with:
a.) A process framework for analyzing new issues and a theoretical framework to study technological and social impacts of such issues.
b.) A process framework for recognizing and understanding new technologies and a theoretical framework to take advantage of such technologies.
c.) Exposure to new issues and technologies.
d.) Hands-on experience in studying recent technological advances in detail.

The course will also provide students with the ability to:
a.) Understand the concept of issue analysis and technology forecasting.
b.) Recognize the important of new issues and technologies in information sciences.
c.) Incorporate these new issues and technologies into an existing information systems framework.
d.) Develop and implement new technology solutions, or discuss policies for addressing emerging issues.
e.) Predict impacts of issues and technology on information management, users, policies, and the environment.

Each time the course is offered; new issues and.or information technology areas will be explored. Examples of issues and technologies addressed include: wireless communications, security and intrusion detection, intelligent agents, web search, languages, intelligent systems, bio-informatics, advanced visualization and human-computer interactions, ubiquitous-pervasive computing, groupware, computer aided cognition, system design by global IT teams, IT outsourcing, and digital divide.

Information Sciences And Technology (IST)

IST 411 Distributed-Object Computing (3) Introduction to distributed-object computing and its use in client/server and real-world computing applications.

IST 411 Distributed-Object Computing (3)

This course presents the fundamental concepts of distributed-object computing with applications to client/server computing which is an important platform for real-world computing systems. The course focuses on tools and techniques used in the design, development and deployment of client/server systems, including traditional architectures and also distrubuted-object technologies. Students will also consider issues of managing client/server systems and the relationships between organizational processes and information-system architectures. IST 411 will be an elective course for the Baccalaureate degree program in Information Sciences and Technology. It is expected that students completing the Systems Development Option may take this course to fulfill requirements for the option.

No other course offers an introduction to distributed objects and client/server applications. CMPBD 450 covers network operations, but not the problem of distributed computing. IST 311 and 414 provide general introductions to software, object-oriented design, and applications, but do not address problems specific to client/server architecture and distributed computing. CSE 513 covers the fundamentals of distributed systems and is far more advanced and theoretical than is necessary for IST.

Upon completion of this course, students will have a broad understanding of the fundamental concepts of distributed objects and distributed-computing architectures, and have the ability to apply these concepts to real-world applications. They will receive a broad examination of the major issues surrounding the design, development, deployment, and maintenance of client/server applications, and have the ability to construct such systems. The student will also have experience with current software standards, languages, software, and implementation technologies relating to client/server applications, and have the ability to use these in real-world applications. Student performance will be evaluated by means of assignments, examinations and optionally, a project or paper.

IST 411 will be offered every semester at University Park. At every other campus location where the Baccalaureate degree program is offered, the course will be offered 1-2 times annually depending on demand. Student enrollment at University Park will begin at approximately 50-75 in the first year and grow to 200 over a 3-4 year time period. At other locations, enrollment should range from 25-50 annually.

General Education: None

Bachelor of Arts: None
Effective: Summer 1999
Prerequisite: IST 311

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 412 The Engineering of Complex Software Systems (3) Introduction to the engineering of complex software systems including software system specification, design and implementation, integration and test, and evolution.

IST 412 The Engineering of Complex Software Systems (3)

IST 412 will provide the students with the skills needed to design, implement, test, and evolve complex software systems. The course will also give students insight into the complexities of managing complex software system projects. It will also give the students an introduction to the responsibilities or complex software system development including software reliability and software safety. IST 412 will be an elective course for the Baccalaureate degree program in Information Sciences and Technology. It is expected that students completing this Option may take this course to fulfill requirements for the option.

Following IST 311, which is required for the Systems Development Option, IST 412 is one of three 400-level courses that may be taken to fulfill the option requirements. The prerequisiste of IST 311 ensures that the student has sufficient background in the use of programming languages.

Student performance will be evaluated by means of written and programming assignments, examinations, and a team-bases complex software system project.

Upon completion of this course, the student will have experience with software systems, designing principles, implementation concepts, testing of a complex software system project and management of a team-based project.

IST 412 will be offered every semester at University Park. At every other campus location where the Baccalaureate degree program is offered, the course will be offered 1-2 times annually depending on demand. Student enrollment at University Park will begin at approximately 50-75 in the first year and grow to 200 over a 3-4 year time period. At other locations, enrollment should range from 25-50 annually.

General Education: None

Information Sciences And Technology (IST)

IST 413 Usability Engineering (3) This course addresses activities in the system development process that ensure usability. It considers the emerging concept of usability, requirements gathering and analysis, activity design, information design, interaction design, documentation design, user testing and usability evaluation.

IST 413 Usability Engineering (3)

The modern system development process includes concurrent engineering of usability - features of a system that make it approachable, learnable, as well as easy and satisfying to use. Topics in the course include the emerging concept of usability, requirements gathering and analysis, the use of scenarios and claims to describe and analyze both current human practices and envisioned practices, activity design, information design, interaction design, documentation design, and user testing, including techniques for formative and summative usability evaluation.

Information Sciences And Technology (IST)

IST 421 Advanced Enterprise Integration: Technologies and Applications (3) Advanced course on the integration of information technology into systems applications.

IST 421 Advanced Enterprise Integration: Technology and Applications (3)

IST 421 expands the knowledge gained in IST 420 on the theories and skills required for planning, developing, implementing, and managing information systems. IST 421 is required of all Information Sciences and Technology (IST) undergraduates who have chosen the Information Technology: Integration and Application Option in their Baccalaureate degree. Upon completion of the course, the student will have expanded knowledge of information technology and systems integration issues across multiple application settings. They will also have a deeper understanding of the specific information technology (both hardware and software) that can serve as the foundation for designing systems within an organization, and have experience that fosters an understanding of the role of IT achieving system performance goals.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2004
Prerequisite: IST 420

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 420 Fundamentals of Systems and Enterprise Integration (3) Introductory course on integration of information technology into different venues, including the planning, development, and implementation of the integration.

IST 420 Fundamentals of Systems and Enterprise Integration (3)

IST 420 focuses on introducing the student to the role of information systems and technologies in achieving a variety of system goals. Emphasis will be placed on the theories and skills required for planning, developing, implementing, and managing the integration of information technology and different systems. IST 420 is required of all Information Sciences and Technology (IST) undergraduates who have chosen the Information Technology Integration Option in their baccalaureate degree. It is the prerequisite for IST 421 which is also required for the Option. Upon completion of the course, the student will be able to recognize information technology integration. They will also understand the "business processes and information value chain" within a system, and be able to foster an understanding of the role of IT in system integration. Students will be periodically assessed through examinations, case studies, individual and group assignments and projects, and other performance indicators where appropriate.

General Education: None

Information Sciences And Technology (IST)

IST 425 (MGMT 425, ENGR 425) New Venture Creation (3) Via problem-based learning, teams define new business ventures to meet current market needs, develop business plans, and present to investors.

IST (MGMT/ENGR) 425 Introduction to Entrepreneurship (3)

The goal of IST (MGMT/ENGR/ENTR) 425 is to better prepare undergraduate students to be business leaders in adaptive, globally-minded, technology-savvy companies. The course is structured so students develop skills that are of high value in any workplace: they develop improved leadership skills, higher self-efficacy, creativity and the ability to deal with ambiguity. On course completion, students will have a working knowledge of traditional and non-traditional ways for identifying a new product or business opportunity, quantifying the potential, understanding the key competitive factors, researching the audience and producing a convincing executive summary for internal or external financing and launch. Students who want to augment the skills and knowledge from their major with the ability to refine a new product/service process in an interdisciplinary team will find IST (MGMT/ENGR/ENTR) 425 a valuable course.

This is a novel problem-based learning (PBL) course, where the learning is student-centered, with faculty acting primarily in the role of facilitators. Active learning happens in this course because students develop ownership in their new business venture concept and are fully responsible for the genesis of the idea. The course leverages the on-line course management system (ANGEL) to define weekly learning objectives, support electronic delivery of assignments, robust video content with entrepreneurs is provided on CD-ROM or via ANGEL, providing additional insights into entrepreneurship. The technology or business segment focus of the class is easily adapted by using different case studies and course mentors.

This will be one of two courses in the new two-course sequence for business students in entrepreneurship. This course will be accepted as a supporting course in the Engineering Entrepreneurship Minor (E-SHIP) and in the Engineering Leadership Development Minor (ELDM). IST (MGMT/ENGR/ENTR) 425 can be used as a technical elective in many of the engineering departments. It will be accepted as a Support of Option course for the Information Sciences and Technology (IST) major.

General Education: None

Information Sciences And Technology (IST)

IST 431 The Information Environment (3) Survey of social environment of information technology themes: Community, sovereignty, privacy, ethics, economics, and knowledge management.

IST 431 The Information Environment (3)

The ways that people communicate and utilize information is being changed dramatically by new information technologies. Information and the technologies that are employed by create, organize, transger, and utilize that information in a networked environment, using such global networks as the internet or internal networks such as intranets, have become a key component of the global economy. This global environment can change the way we interact, communicate, and function on the job and in our daily lives. The new technologies also raise new economic, legal, ethical, and social issues that are of grave importance to society. IST 431 examines the overall context of the new information environment and new technical issues relating to knowledge management in the global networked environment. IST 431 is a required course in the Information, Society and Public Policy Option.

There may be some overlap of material with COMM 405, COMM 483, COMM 485, PHIL 407, PHIL 423, PHIL 433 and PL SC 460m but none of these courses cover the same material, or approach it in the same manner.

Upon completion of this course, the student will gain an appreciation of the differences between "cyberspace" and the "real" world. The student will also understand that the implementation and modern information technologies has significant social and policy implications that demand appropriate policy issues in several different contexts (globa, national, local). The student will also be able to discuss the major themes in information policy studies (e.g., community, privacy, access, economic participation, security) and be able to relate these themes to the applications of particular technologies. They will be able to describe policy frameworks and issues, as well as the ethical and social implications of these choices.

Homework assignments; Socratic dialogue; analysis and write-up of case studies; assessment of group research projects and presentations; participation in on-line discussion groups; two mid-term and one final examination (objective and essay). The precise mix of evaluation components will be determined by individual instructors; a typical weighting might be exams (60%), written assignments and papers (20%), and collaborative projects (20%).

IST 431 will be offered every semester at University Park. At every other campus location where the Baccalaureate degree program is offered, the course will be offered 1-2 times annually depending on demand. Student enrollment at University Park will begin at approximately 50-75 in the first year and grow to 200 over a 3-4 year time period. At other locations, enrollment should range from 25-50 annually.

Information Sciences And Technology (IST)

IST 426 (ENGR 426, MGMT 426) Invention Commercialization (3) Working with Penn State inventions selected by the Intellectual Property Office, student teams define an optimum commercialization path each technology.

IST (MGMT/ENGR) 426 Invention Commercialization (3)

The goal of IST (MGMT/ENGR/ENTR) 426 is to have students understand why invention commercialization is complicated and difficult by participating in the process. For example, the inventor rarely has insights into the markets for his/her invention, is often not interested in the details of commercialization, and can be secretive. In addition, the business and financial communities often do not take the time, or have the resources, to understand new technologies and perform complex due diligence. Thus lack of due diligence often leads to rejection of innovation because existing companies often discount new technologies from outside the company as NIH - "not invented here".

Effective transfer of new invention or innovation to a commercial product requires at least three different functional communities to interface: technical, legal and business. Each uses a different language, comes from different educational and cultural backgrounds, and may have an inherent distrust of the others. These functional barriers are difficult to overcome.

This course teaches how these barriers can be broken down as student teams help bridge the perceived chasm between key players in the invention commercialization process. In these teams, students bring the skills and knowledge from their major to develop an invention commercialization recommendation for the Technology Transfer Office and the inventor. For example, business students focus on finance and market opportunity assessment; engineering and IST students focus on design refinements, prototyping support, and (if appropriate) making technology suggestions to the inventor.

Upon completing the course, the students will have a working knowledge of different university and corporate technology or invention commercialization processes, important intellectual property management tools for inventions (patents, license agreements, option agreements) source of funding to move inventions toward product development, and delivering top quality presentations which outline the recommended commercialization path. Students who enjoy open-ended projects which involve the interplay of business and invention of who wants to work on interdisciplinary teams with the newest inventions will find this course a valuable course. NOTE: Because the inventions/products are based on Penn State faculty intellectual property, students must sign the Penn State Special Intellectual Property Agreement For Students - For Use When Assigning Intellectual Property to The Pennsylvania State University. The form can be viewed at http://guru.psu.edu/policies/RAG13.html

Information Sciences And Technology (IST)

IST 432 Legal and Regulatory Environment of Information Science and Technology (3) Legal environment of information technology, constitutional/political issues, intellectual property, management, e-commerce, privacy, access, computer contracting, cyberspace regulation.

IST 432 Legal and Regulatory Environment of Information Science and Technology (3)

The new information technologies are creating a global economy heavily dependent upon networked information, hardware, software, and electronic commerce, which calls for adaptation of existing legal and business practices. In many cases, the new technologies pose problems that existing laws or legislation are inadequate to cope with; but the complexity of the environment makes new solutions elusive. This course examines the legal, regulatory, and political environment within which intellectual property rights and examination of contracting issues, licensing of information and products, data protection, patents, cyberspace regulation, and implications for personal privacy. It also focuses on where technology is making regulation difficult by challenging previous concepts upon which our legal and regulatory systems depend.

Information Sciences And Technology (IST)

IST 441 Information Retrieval and Organization (3) Introductory course for seniors and graduate students covering the practices, issues, and theoretical foundations of organizing and analyzing information and information content for the purpose of providing access to textual and nontextual information resources. Introduces students to the principles of information storage and retrieval systems and databases.

IST 441 Information Retrieval and Organization (3)

This is an introductory course for Information Sciences and Technology senior and graduate students covering the practices, issues, and theoretical foundations of organizing and analyzing information and information content for the purpose of providing access to textual and non-textual information resources. This course will introduce students to the principles of information storage and retrieval systems and databases. Students will learn how effective information search and retrieval is interrelated with the organization and description of information to be retrieved. Students will also learn to use a set of tools, such as search engines, and procedures for organizing information. They will become familiar with the techniques involved in conducting effective searches of information resources.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2004

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 440W Information Sciences and Technology Integration and Problem Solving (3) Problem-based approach to technology integration by focussing on real-life problems faced by an organization.

IST 440W Information Sciences and Technology Integration and Problem Solving (3)

This course is the undergraduate capstone for Information Sciences and Technology majors in the Baccalaureate degree. It requires students to work collaboratively in teams of 4-6 students, with each team comprised of students from more than one option and, if possible, more than one campus. Each team is given a significant real-world problem or issue in which information technology is part of the solution. Teams will be expected to manage the project effectively and to communicate its results clearly to a variety of audiences within an organization. Major topics include: review of problem-based and case-based learning; overview of project management practices; assessment of organizational and technical issues posed by the scenario; development and testing of work plans and analysis of options; communication within the group; communication within a management environment; and presentation of results to a variety of audiences inside and outside the organization.

IST students need to understand the organizational and social contexts in which technology functions. Indeed, many technology problems are multi-dimensional--they have an economic dimension, a legal dimension, a human resources dimension, and so on. This course will require students to analyze, evaluate, and test alternative solutions and to weigh their advantages and disadvantages for the organization.

Students will be evaluated in three ways: by the effectiveness of their team's solution of the technical or organizational problem; by the quality of the students' written and oral presentations; and by the quality of their project management and internal communication. A substantial written paper will be required of each student and each time; in addition, each team will also construct a Web-site for sharing results. Other technologies will be used as required by the project.

It is expected that membership on teams of students will be drawn from the various options in the Information Sciences and Technology major. At least nine credits (including at least one IST 300-level and one IST 400-level course) in the student's option must be completed before enrollment in IST 440W. This course should be offered every fall and spring semester beginning in the fall semester 2002. It will be taught in sections of 25 and have a total enrollment of approximately 100 per semester.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2002
Prerequisite: ENGL 202C orENGL 202D seventh-semester standing (this course is intended for seniors) and the five common course requirements plus at least three of the required courses in an option

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 442 (IL) Information Technology in an International Context (3) International concepts to improve strategies for the design, dissemination, and use of information technology.

IST 442 Information Technology in an International Context (3) (IL)

IST 442 focuses on the implications of the international context for the design, diffusion and use of information technology. The course will provide students with an understanding of the three crucial IT-related characteristics of the international context: 1. information infrastructure, 2. the economic and policy environment, and 3. social and cultural structures. Students will develop analytic skills that will enable them to predict the implications of the international context for information technology and will apply these skills in a final project that addresses a problem in the areas such as information systems integration, interface design, or management of information technology projects.

General Education: None
Diversity: IL
Bachelor of Arts: None
Effective: Summer 2006
Prerequisite: IST 110

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 443 IT Professional Services Theory and Practice (3) Explores and applies the basic concepts, methodologies, tools, and techniques of consulting and professional service organizations in information sciences and technology.

IST 443 IT Professional Services Theory and Practice (3)

This course is designed to introduce students to basic IT professional services theories and practices, including an examination of the professional services industry. A consulting-oriented systems life cycle framework is used as the outline of the course. The phases of this framework include: problem/system analysis and evaluation, requirements definition, solution design, solution development, solution implementation, and on-going evaluation and maintenance. Students will learn how to identify and define client problems, map workflows, develop recommendations, and prototype solutions. They will be given opportunities to practice the concepts and methodologies they learn by working on real-world problems in teams for corporate clients.

This course is designed around real-world problems and projects involving IT systems development, integration and implementation. In this course, the student will be part of a consulting team that is assigned to work with a real corporate client. The student works with the other team members to define their client's problem, map out appropriate workflows, and make recommendations for a solution. Depending on the project, the recommended solution may be prototyped or fully developed during the course.

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 444 Advanced IT Professional Services (3) Explores advanced IT professional services topics, and the unique application of consulting methods in various industry sectors.

IST 444 Advanced IT Professional Services (3)

This course is designed to allow students to explore in-depth IT professional services issues and strategies. The advanced topics to be covered during the semester include IT strategy consulting, consulting leadership issues, complex and/or strategic consulting methodologies, IT governance consulting, and an in-depth analysis of professional service firm operations and strategies, and the management of multiple, simultaneous projects and initiatives. This course is designed around real-world issues and projects involving problem identification, advanced research methods, IT solution development, integration, and implementation, primarily from a strategic and/or program management perspective. Furthermore, students will explore the culture, operations, and strategies of large, medium and small IT services organizations. The student will understand leadership and managerial issues associated with strategic alignment of IT and business strategies, executive-level stakeholder management, program management, IT strategic planning, and managing the political landscapes of large-scale IT consulting projects.

General Education: None
Diversity: None

Information Sciences And Technology (IST)

IST 446 An Introduction to Building Computer/Video Games (3) An interdisciplinary course that introduces students to process and techniques involved in developing a video or computer game.

IST 446 An Introduction to Building Computer/Video Games (3)

The course is project driven. Students will form teams and collaborate with one another to develop an interactive immersive experience. During the course, students will be exposed to several techniques for building graphical 3D worlds, animating characters, moving the camera and lights in real-time, and building intelligent characters (using state machine-based architectures). They will also learn different techniques of interactive storytelling, such as linear narrative, branching narrative, and adaptive narrative. Furthermore, they will be introduced to several tools that will aid in realizing their own projects and ideas, such as graphic engines (e.g. Wildtangent), and game engines (e.g. Unreal Tournament).

The course is heavily project driven. Students will, in the first half of the course, learn the tools used in the development of interactive 3D environments. They will submit 2 individual assignments using these tools to develop a simple interactive environment. These individual assignments will be graded and critiqued.

In the second half of the course, students will work on a game idea from generation to actual implementation. Students will be grouped in teams of three to develop a project, integrating concepts they learned through the class. They will use one or more of the tools they learned to build this project. Projects will be continuously evaluated and critiqued during game tuning sessions. In addition, projects will be formally evaluated through two prototypes that are critiqued by the class and the instructor. The students will continuously revise their designs and projects through the semester. The final version of the system is due by the end of the semester.

Information Sciences And Technology (IST)

IST 451 Network Security (3) Fundamental issues and concepts of network security, network security technologies and protocols, and emerging technologies in network security.

IST 451 Network Security (3)

Information technology has become a key component to support critical infrastructure services in various sectors of our society. In an effort to share information and streamline operations, organizations are creating complex networked systems and opening their networks to customers, suppliers, and other business partners. Increasing network complexity, greater access, and a growing emphasis on the Internet have made information/network security a major concern for organizations.

IST 451 focuses on network security. The course will provide the students with a comprehensive understanding of the fundamental issues and concepts of network security, and the mainstream network security technologies and protocols that are widely used in the real world. The course will also address emerging technologies in network security.

A major component of the course will be several team-based hands-on attack-defense projects. Each project has two phases: the attack phase and the defense phase. A group may be asked to defend against the attacks enforced by another group. This course will incorporate collaborative and action-learning experiences wherever appropriate. Emphasis will be placed on developing and practicing writing and speaking skills through application of the concepts, theories and technologies that define the course.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2004
Prerequisite: IST 220

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 452 Legal and Regulatory Environment of Privacy and Security (3) Exploration of legal, regulatory, public policy, and ethical issues related to security and privacy for information technology professionals in public institutions, private enterprise, and IT services.

IST 452 Legal and Regulatory Environment of Privacy and Security (3)

Institutional constraints on security historically focused on traditional criminal enforcement and a slow but steady increase in civil remedies through the twentieth century. Professional security protection could satisfy reasonable assurance criteria by managing legal and regulatory risks based on commonly-held understandings of burglary, theft, conversion and widely-understood but related institutional constraints in the protection of physical property. This focus retained effectiveness so long as physical security over tangible property appeared successful, even extending to the maintenance of control over mainframe computers and their peripherals. However, the proliferation of networked computers has made access and storage ubiquitous, vastly increasing the vulnerability of confidential data, private information and critical national security infrastructure. Security and privacy regulation compliance responsibility now falls much more harshly on both organizations and most of their individual personnel. These complex new duties constrain organizations in the data management industry as well as suppliers and users of data and all participants in the information supply chain, including consultants, software suppliers, applications service providers, maintenance, outsourcing and communications providers.

Other factors exacerbate these liability risk management difficulties. Advances in network computer storage and use, the broadening perception of heightened value of information and the pervasive availability of rich data warehousing increase the vulnerability of data management. Risks of information theft and integrity losses as well as the explosion of privacy rights and national security concerns now require pervasive and fuller understanding of liability risk management principles/techniques among all managers and subordinates in the data management industry and in government. Information suppliers, handlers, owners and network service providers are increasingly exposed to civil litigation, regulatory oversight/compliance and criminal prosecution for various information-related wrongs. For example, confidentiality is compulsory for corporate trade secrets, privacy is required for personally identifiable information about individuals and secrecy is mandatory over matters of national security; all of which create complex legal duties that are fundamentally driving the design of information handling processes. This course surveys legal and regulatory constraints on information security and privacy practices.

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Information Sciences And Technology (IST)

IST 454 Computer and Cyber Forensics (3) Fundamental issues and concepts of computer forensics; aspects of computer and cyber crime; methods to uncover, protect, exploit, and document digital evidence; tools, techniques, and procedure to perform computer and cyber crime investigation.

IST 454 Computer and Cyber Forensics (3)

Computer and communication technologies have become the key components to support critical infrastructure services in various sectors of our society. In an effort to share information and streamline operations, organizations are creating complex networked systems and opening their networks to customers, suppliers, and other business partners. Increasing network complexity, greater access, and a growing emphasis on the Internet have made information and network security a major concern for organizations.

IST 454 focuses on computer and cyber forensics. Students will learn different aspects of computer and cyber crime and ways in which to uncover, protect, exploit, and document digital evidence. Students will be exposed to different types of tools (both software and hardware), techniques and procedure, and be able to use them to perform rudimentary forensic investigations.

A major component of the course will be several hands-on exercises and a final team-based project. This course will incorporate collaborative and action-learning experiences wherever appropriate. Emphasis will be placed on developing and practicing writing and speaking skills through application of the concepts, theories and technologies that define the course.

Integrated throughout are perspectives of computer and related legal process, including computer crimes from state and federal law, methods of interaction with law enforcement and prosecutors, admissibility of expert witness testimony and the use of forensic reports in civil, regulatory and internal investigations.

Information Sciences And Technology (IST)

IST 461 Database Management and Administration (3) Introduces advanced topics in database management systems that are fundamental to effective administration of enterprise information systems.

IST 461 Database Management and Administration (3)

The objective of the course is to enable a student to comprehend principles of database management and administration. The students will learn how data are stored (indexing), accessed (query processing), shared (currency and transactions), and controlled (security). Students will be creating and using these features in a database in the laboratory. They can then develop, use, and tune database systems and applications, utilizing advanced database management features. This course assumes basic familiarity with relational model, Entity-Relationship diagram, SQL query language, and normalization (as covered in IST 210). It builds the foundation on more advanced concepts of database systems that are fundamental to a career in database administration.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2006

Information Sciences And Technology (IST)

IST 489H Research Methods for the Information Sciences and Technology (3) Seminar course focused on approaches to studying information and communication technologies and writing theses and other research reports.

IST 489H Research Methods for the Information Sciences and Technology (3)

IST 489H provides students the opportunity to learn and experience:
1) Conceptualizing what are information and communications technologies.
2) Approaches to conducting research on, and reporting results of studies, of ICT.
3) The research process and its academic context.

The course is designed around a series of ill-structured, contemporary, problems that require students to develop responses by applying research approaches to ICT. At the end of the course, students will be able to:
1) Apply different conceptualizations of ICT to common problems.
2) Select and initiate research on ICT.
3) Begin writing research-oriented work such as theses and papers.

Information Systems (INFSY)

INFSY 430 Programming for Business Applications (3) Introduction to the syntax and grammar of COBOL language with emphasis on applications to business data processing.

INFSY 430 Programming for Business Applications (3)

INFSY 430, Programming for Business Applications, is an elective course for information systems majors in the business program. The objective of the course is to introduce students to beginning concepts of syntax and grammar of an introductory programming language used to support business processes. Students in the course will learn how to develop modern computer-based information systems through business applications that help them understand the role of information in business organizations.

Design and development are emphasized with in class labs and homework assignments integrated throughout the course. Collaboration and analytical processes are stressed. The course coverage also includes an introduction to modeling techniques, language development, data integrity, and project administration. The course prerequisites are IST 110 or MIS 204 & MIS 103 or CMPSC 203.

Students learn how to work with business applications and work both individually and in groups on problems related to program development. A suitable software development environment is used.

Instructional Systems (INSYS)

INSYS 100 (GS;IL) World Technologies and Learning (3) This course examines the impact of learning technologies from email to online learning on world cultures from a socio-technical perspective.

INSYS 100 World Technologies and Learning (3)
(GS;IL)

INSYS 100 examines the socio-cultural impacts of learning technologies of various sorts on world cultures. The course will be offered once each year and will examine several international cases of learning technologies such as email, online learning, telecommunications, and wireless computing, as they are used for education and learning and implemented in several world cultures such as the US, UK, India, China, Africa, Europe, and Oceania. The primary objective of the course is to help students understand how learning technologies impact other cultures, and their own, how learning technologies bring dramatic change and how these changes can be predicted, understood, and planned for. The course will be offered in a blended fashion with portions of the course content, and discussions being held online as well as in face-to-face classroom delivery. The course includes a writing component in the form of several short analyses of cases and a final reflective paper. The analyses are to be conducted in cohorts though online discussions with a final product posted for peer review and faculty evaluation. Consideration of the cases in this way calls the students into active engagement with the content in ways that require them to integrate information from a variety of sources, and analyze the trustworthiness of those sources so that they can share with one another informed judgments and predictions for the future of world learning technologies. The course may offer an important introduction to the area of Instructional Systems, but it is otherwise not related to specific programs of study. It contributes to the General Education requirements for undergraduates. Students will be evaluated based on online discussion papers based on the cases of international learning technology use, completed in cohorts and submitted as a group paper, two quizzes based on the first and final portions of the course to determine students’ facility with basic concepts of systems, technological determinism, scenario planning and emerging learning technologies, and a short final paper illustrating the impact of technologies on their own learning experiences and drawing these understandings into broader contexts predicting potential impacts on learning for future generations. Anticipated enrollment is 100.

INSYS 412 Developing Effective Training Presentations (3) The design, development, and presentation of effective training presentations for business and industry.

Developing Effective Training Presentations (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1996
Prerequisite: senior standing

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Instructional Systems (INSYS)

INSYS 413 Designing Instructional Manuals and Text (3) Designing textual materials for information retrieval, performance, and learning using job aids, manuals, programmed instruction, information mapping, etc.

Designing Instructional Manuals and Text (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2001

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Instructional Systems (INSYS)

INSYS 425 Corporate Instructional Systems (3) Provides an overview of the applications and applicability of Instructional Systems Design in business/corporate environment.

Corporate Instructional Systems (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1996
Prerequisite: INSYS 415

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Instructional Systems (INSYS)

INSYS 415 Systematic Instructional Development (3) Preparation in the use of a nine-step model for systematically analyzing instructional problems and developing validated, practical solutions.

Systematic Instructional Development (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1996

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Instructional Systems (INSYS)

INSYS 441 Design, Development, and Evaluation of Internet Resources (3) Design, production, and evaluation of instructional materials for delivery on the Internet.

Design, Development, and Evaluation of Internet Resources (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2001

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Instructional Systems (INSYS)

INSYS 442 Innovative Instructional Applications of Microcomputer Technology (3) Educators experience and develop innovative instructional applications of text-processing, database management, spreadsheet, and telecommunication software in their classrooms.

Innovative Instructional Applications of Microcomputer Technology (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2008
Prerequisite: EDTEC 440

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Instructional Systems (INSYS)

INSYS 443 Educational Applications of Logo (3) Prepares educators to use and to teach the Logo programming language on microcomputers. Students write programs and develop course materials.

Educational Applications of Logo (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2008
Prerequisite: EDTEC 440

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Instructional Systems (INSYS)

INSYS 447 Instructional Design for Multimedia Technologies (3) State of the art multimedia technology hardware such as interactive video, CD-ROM and digitizing audio and video.

Instructional Design for Multimedia Technologies (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2001

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Instructional Systems (INSYS)

INSYS 471 Introduction to Educational System Design (3) Investigates systems theory and how components of educational systems interact; develops insights on current issues and models in Educational System Design.

Introduction to Educational System Design (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1996

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Instructional Systems (INSYS)

Insurance (INS)

INS 427 Optimization for Business Decisions (3) Optimization models quickly and efficiently analyze a large number of scenarios to find the best course of action for business applications.

INS 427 Optimization for Business Decisions (3)

This course introduces you to optimization-a set of useful and practical techniques businesses use to make the most efficient use of limited resources. For example, an investor with a fixed amount of funds to invest can use optimization to design a portfolio that best matches his needs, or a manufacturer with a fixed production capacity can use optimization to find out the most profitable way to use this capacity. Optimization is designed to answer the question "what's best?" and an optimization model is designed to quickly and efficiently analyze a large number of scenarios to find the best course of action. The main goal of this class is to make you an intelligent consumer of optimization techniques, and help you develop insight and understanding for the type of applications where optimization provides value added.

The modern reality of analyzing business problems using quantitative methods is the spreadsheet. Spreadsheets are well-suited for optimization and models built using spreadsheets lend themselves to sensitivity analysis-being able to answer the question "what if?" quickly and effectively. We will do a number of case studies to build problem structuring as well as problem solving skills. case study also provides practice with communicating your analysis.

The tools and skills taught in the course have applications across most of the business school curriculum. Here is an example list of the applications featured in the course:
1) Setting prices dynamically for revenue maximization, known as "revenue management" is an optimization-based technique used by most major airlines, hotel chains, and car rental companies.
2) Optimization is used to select investment strategies over time in order to achieve the desired cash-flow stream.
3) Optimization is used to design supply chains networks-help to decide where to locate production and distribution facilities, and how to efficiently use them to provide the best level of customer service.
4) Optimization is used to design and operate transportation networks in a way that makes the most efficient use of the transportation capacity.
5) Optimization is used extensively in process industries to determine the composition of a wide range of products that range from gasoline to dog food, to baby formula.
6) Optimization can also be used for workforce scheduling in hospitals, restaurants and schools.

General Education: None
Diversity: None

Integrative Arts (INART)

INART 005 (GA) Performing Arts (3) Introduction to music, dance, and theatre. Orientation to the aesthetics, theory, and practice of professional performance.

INART 005 Performing Arts (3)
(GA)

(BA) This course meets the Bachelor of Arts degree requirements.

INART 005 is not an "art appreciation" course in any traditional sense of the term. Rather, it is focused on the act of experience and the encouragement of critical thinking about those experiences. No effort is made to encourage students to "like" or "dislike" the things that they see and hear or to encourage them to accept the view that some experiences are more or less valuable than others. The idea, simply, is to have informed experiences in the performing arts and think about them in a critical context. Although INART 003 is designed for potentially large enrollments, students relate to the instructor on a one-to-one basis through e-mail and interact with other students using an on-line bulletin board. Writing, criticism, and analytical thinking are required. Grading in INART 005 is determined by attendance, participation in discussions, and a mid-semester and final examination. Fifty percent of the semester grade will be determined by the extent and quality of participation in weekly discussions. Thirty percent of the semester grade will be determined by the mid-semester and final examination (15% each). The final 20% of the semester grade will be based on attendance.

General Education: GA

Integrative Arts (INART)

INART 003 (GA) Reception of the Arts (3) This course considers how art uses time, space, and causality to define culture and the human condition.

INART 003 Reception of the Arts (3)
(GA)

(BA) This course meets the Bachelor of Arts degree requirements.

INART 003 approaches the study of the arts from the audience's point of view. It is designed to meet the General Education Arts requirement. The course is offered in the Fall and Spring University Park, with a typical enrollment of 50, and is available to other locations through Campus Course Exchange. There are no prerequisites, and students are assumed to have little or no background in art. As a result of taking the course, students are able to use analogy, the idea of structure, and theories of reception and communication in both art and non-art situations. The course is offered on-line, making it particularly useful for students with family and personal obligations, for older students with job obligations, and for students with handicaps limiting their access to traditional "classroom" courses. Although INART 003 is designed for potentially large enrollments, students relate to the instructor on a one-to-one basis through e-mail and interact with other students using an on-line bulletin board. Writing, criticism, and analytical thinking are required. Evaluation is based on five on-line quizzes, two on-line exams, and participation in on-line discussions. Tests measure students' ability to reason, synthesize materials, and apply ideas about art to other situations. The discussion sessions expand ideas found in art to apply them to everyday life. Writing is required for the course. Students must contribute at least three short essays and post commentary on others' work for 20 points of the final grade. Informal e-mail conversations supplement this requirement. The course's extensive web site includes lessons corresponding to each chapter in the text, a lexicon of difficult terms, links to other web sites, study guides, works of art, and provocative essays about art.

Integrative Arts (INART)

INART 010 (GA) The Popular Arts in America: Mass Media Arts (3) An introduction to the arts of the mass media with emphasis on how film, radio, television, and the print media influence and reflect society.

INART 010 The Popular Arts in America: Mass Media Arts (3)
(GA)

(BA) This course meets the Bachelor of Arts degree requirements.

INART 010 examines the history and form of the popular arts as antecedents for the development of the mass media arts of 21st century America. The primary goal of the course is to help students develop a critical and analytical approach to dealing with contemporary mass media. The course presupposes some familiarity with modern popular media and takes as its content both historical and contemporary examples as sources for analysis. While the class offers facts and data, the central focus of the course in the theory, stylistic elements, and structural workings of media content. The pedagogical goal of this approach is to examine not just what the mass media arts are but also where they come from, how they function, and what effects they have on our culture and society. The key to this goal is understanding the naturalized ideologies imbedded in the structural form of popular culture: how the early expressions of popular culture - the minstrel shows, vaudeville, burlesque, pulp fictions, and the early cinema both shaped cultural attitudes and reflected societal notions of race, gender, and socioeconomic norms. Class meetings consist of lectures and in-class discussions that illustrate modern critical approaches to popular culture and the terminology used in presenting critical arguments and ideological viewpoints on these art forms. Reading assignments will support classroom work by presenting students with a diversity of opinion on popular culture and significant examples of that culture in print media. Further, examples of historically significant popular mass media arts will be shown in class and then discussed in relation to the concepts and critical viewpoints covered in lectures. In addition to regular scheduled classes, students will participate in an on-line Media Journal that requires watching, listening to, and reading examples of contemporary mass media art (television programs, motion pictures, comics, graphic novels, etc.). Every two weeks, students will be required to see, read, or hear an assigned contemporary work of popular mass media art and record their critical responses on the online Media Journal that will be accessible to all other members of the class. Grades will be based on three equally weighted objective examinations that will account for 75% of the semester grade. The remaining 25% of the grade will be determined by participation in the online Media Journal.

INART 015 The Popular Arts in America: Performing Arts (3)
(GA)

(BA) This course meets the Bachelor of Arts degree requirements.

INART 015 examines the Popular performing arts and their place in American popular culture. broken into four units: popular music, popular stage dance, popular theatre, and acts like the circus and stand up comedy. The course will highlight important influences, artists, events, works, and effects such as:

1) Popular Music: This unit will trace the development of the American popular music from the emergence of the popular songwriter in the 1830s to the beginnings of rock and roll. Jazz, country, blues, and mainstream pop will be major genres examined.
2) Popular Stage Dance: This unit will cover the evolution of dance as a popular performance art from percussive dances performed in the minstrel show to rock and roll choreography in music videos.
3) Popular Theatre: This unit examines the founding forms of popular theatre (minstrelsy, vaudeville, and burlesque) and their effect on later arts like motion pictures and television.
4) Popular Variety Arts: This unit deals with those performing arts that fall outside of the broader categories of dance, music, and theatre.

The circus, stand up comedy, and stage magic will be highlighted. There will be three equally weighted objective tests in the course, each covering approximately one-third of the course's content. These examinations account for 75% of the semester grade (25% each). Students in INART 01 5 also participate in the Popular Arts Forum, a semester-long examination of an important contemporary issue in popular culture (cultural imperialism and censorship; sexuality in popular culture; gender, ethnicity, and race in the popular arts; etc.) that requires research, critical thinking, the formation of objective opinions, and discussion. The Popular Arts Forum is conducted online utilizing resources held on the Forum website and World Wide Web. Asynchronous online discussions on the topic will occur three times during the semester. The class will be broken into groups of fifteen students for the purpose of discussion. Participation in the Popular Music Forum will account for 25% of the semester grade. The discussion grade will be determined by the quality of participation and degree of involvement in the discussion.

Integrative Arts (INART)

INART 050 (GN) The Science of Music (3) Waves, physics of sound, hearing, musical scales, musical instruments, and room acoustics.

INART 050 The Science of Music (3)
(GN)

(BA) This course meets the Bachelor of Arts degree requirements.

This course will explore the physical and acoustical bases of sound and music.

The physics will include a study of vibrating systems and simple harmonic motion, wave propagation, reflection and refraction, superposition, resonant frequencies, harmonics, phase, the relationship of speed and velocity, and spectra. The acoustics portion will apply these physical properties to hearing, sound and music, covering the nature of the human auditory system, and correlations of pitch to frequency, loudness to amplitude/power/intensity, timbre to spectra and envelope. NOTE: there need be no specific math prerequisite for the course. Though high school algebra and trigonometry will be recommended, these topics will be integrated with the rest of the course material.

With physical and physiological groundwork laid, the subject matter will move to purely musical areas: the construction of musical scales, the nature of consonance, dissonance, and harmony. Twelve-tone equal temperament, the basis of Western common practice music, is not an absolute, but a decision made to facilitate certain musical choices, and a compromise in terms of optimal consonance. The nature of the different instruments will then be discussed - strings, winds, brass, and voice. Different instruments naturally produce different scale types and different types of spectra. Students will learn to appreciate the inherent differences in different instrument types.

The last portion of the course will return to acoustics, exploring the role that performance spaces play in the propagation and reception of sound. The shape and materials of a room determine its characteristic sound. Students will learn about how sound in large auditoriums is characterized by the balance of direct and reflected sound, the distinction between specular and diffuse reflections, the absorptive properties of different building materials, and the nature of reverberation. Smaller performance spaces are subject to standing waves, flutter echo, and comb filtering. Taking steps to avoid undesirable characteristics is often an easy matter once the nature of these characteristics is understood.

Finally, an overview of perceptual psychological studies of auditory streaming will explore how the auditory system organizes sound on a primitive, unlearned level.

Grading will be based on weekly homework assignments, two midterm exams and a final
exam.

Integrative Arts (INART)

INART 055 (GA) History of Electroacoustic Music (3) A history of electroacoustic music as a consequence of developments in culture and technology from 1880 to present.

INART 055 History of Electroacoustic Music (3)
(GA)

(BA) This course meets the Bachelor of Arts degree requirements.

This course focuses on the interrelationship and parallel development of technology, art and music from the earliest electronic devices to the current ubiquitous computer audio workstation and electronics dance music.

Electronica is a multi-faceted genre that borrows from a number of past innovators. Its artists routinely acknowledge the influence, for example, of *musique concrete*, Karlheinz Stockhausen and the theremin, yet their audiences are often unaware of the roots of the music that occupies much of their recreational time and social energy.

Electroacoustic music developed hand in hand with innovations in communications technology, which in turn influenced the way music was conceived and created. Too often, these correlations are not discussed. Both electrical engineers and musicians use filters, without necessarily realizing that they are both using the same technology for different purposes. FM synthesis revolutionized commercial electronic instruments in the 1980s, yet few people realize that this was the same form of modulation that was the basis of much radio broadcast technology. Many innovators in electronic music started out as inventors or engineers. The creation of electroacoustic music is one of the most fertile cross-disciplinary fields of the twentieth (and now twenty-first) centuries. It has affected the production and reception of music indelibly, and is now a vital component of digital multi-media art, a leading trend of the new century.

The course asks students to be aware of vital technological developments in audio (the evolution from the Edison phonograph to the CD player), electronics (the evolution from the spark gap oscillator to the vacuum tube to the transistor to the microprocessor), cultural movements (from Impressionism and Romanticism to modernism to postmodernism), and to become sensitized to the chief innovators in the field (the differences in the music of Schaffer, Stockhausen, Carlos, Chowning, and others). They are made aware not only of names and terms, but also taught to recognize differences in the different sounds of different composers and styles.

The course has been offered two semesters as a 297 offering. It is designed so that it may eventually be offered completely online. The text is online, and the listening assignments are also posted at the PSU Digital Music Library.

Grading will be based on weekly quizzes that ask for definitions and short answers, four tests that require essays and identification of listening examples, and two papers focused on different compositions/composers.

Integrative Arts (INART)

INART 062 (GA;US;IL) West African and African American Arts: from the 1960s to the present (3) An introduction to West African and African American Arts from the 1960s to the present.

INART 062 West African and African American Arts: From the 1960's to the Present (3) (GA;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course focuses on the interrelationship and parallel development of arts in West Africa and the United States from the 1960s to the present. The cultural ties between the slave trading states of West Africa and the slaves and their descendents of the Americas, though weakened by over three centuries of separation, were never completely erased and the similar experiences of colonial oppression in Africa and slavery in America created expressions in art of remarkable similarity and correspondence. Although this comparable and often equivalent development in artistic expression on both sides of the Atlantic was, by and large, unrecognized and unacknowledged, the emergence of black nationalism in the 1960s reestablished the historic cultural associations between African and African American arts and created a remarkable artistic interchange that continues to the present day. The 1960s was a pivotal period for both African and African American art. The Civil Rights movement in the United States and the collapse of colonial rule in West Africa gave rise to a new sense of black identity for Africans and those of African descent and a new art that embodied and expressed that newfound identity. During the 1960s, the visual, performing, and literary arts of Africa and Black America celebrated their shared cultural heritage and found common use as instruments of political and social change. The sense of shared history and like experience on both continents influenced and informed black art in powerful ways and continues to motivate and inspire artists as they reflect and comment on their geographically separate, though spiritually linked, worlds. This course focuses on works of art drawn from many diverse traditions in both Africa and the United States and sets those works in the context of the social, political, and cultural movements that helped to create them. Examples of African and African American visual, performing, and literary arts will be examined, compared, and contrasted in order to gain insight into those works while serving as a vehicle for gaining a better understanding of the cultures that created them. INART 062 is a wholly online course that will be offered simultaneously by Penn State and Kwame Nkrumah University of Science and Technology in Ghana. This will allow students in Africa and the United States to participate as members of the same class in discussions and joint projects created on the World Wide Web. Grading will be based on participation in weekly online discussions, an objective mid-term and final, and the successful completion of a collaborative online project developed by students in both countries. INART 062 will be offered in the fall and spring semesters each year.

Integrative Arts (INART)

INART 100W (GA) Seminar in Integrative Arts (3) A study of various arts with emphasis on comparison, contrast, and other aspects of interrelation. Topics will change each semester.

INART 100W Seminar in Integrative Arts (3)
(GA)

(BA) This course meets the Bachelor of Arts degree requirements.

INART 100W is a semester-long seminar that explores a theme or topic through selected works of the visual or performing arts. Various arts will be examined with emphasis on comparison, contrast, and other aspects of interrelation. Although topics will change each semester, they will always be bound to broad concerns in the arts that are shared or common. The approach will be strictly interdisciplinary with emphasis on writing, discussion, and the direct experience of art. INART 100w is a General Education Arts offering (GA), a writing intensive course (W), and, for selected topics, will satisfy the Intercultural and International Competence Requirement (GI). At University Park, the course is built around twelve to thirteen motion pictures shown as part of the Palmer Museum of Art's film series, a gallery exhibition at the Palmer, and two or three performances at the Center for the Performing Arts. Students are required to attend all of these events and showings. The film series and the gallery exhibition are free. Tickets for the two events at the Center for the Performing Arts must be purchased. Attendance will constitute 20% of the semester grade. Each week, there will be a required online discussion based on the "Commentaries" associated with the event or exhibition of that week. These "Commentaries" are included with the background information on the events and exhibitions contained in the course web site. Discussions will last for one week and all students are required to participate in all online discussions. Participation in discussions will constitute 30% of the semester grade. INART 100W is a "writing intensive" course and, as a consequence, a major portion of the course is devoted to the acquisition of skills and practice in writing. There are three required papers in the course: one 600 word critical review, one 900-word critical opinion paper, and a final 1500-word critical opinion paper, Grading will be based on the quality of students' critical arguments and the quality of their writing. These three papers will constitute 50% of the semester grade.

Integrative Arts (INART)

INART 110 (GA) The Dramatic Arts in the Mass Media (3) The place of television-radio-film drama in our culture; relationship with other art forms; standards of evaluation.

INART 110 Dramatic Arts in the Mass Media (3)
(GA)

(BA) This course meets the Bachelor of Arts degree requirements.

INART 110 examines the history and development of the dramatic arts of the mass media with a particular focus on television as the strongest exemplar of media practice. The primary goal of the course is to help students develop a critical and analytical approach to dealing with the dramatic arts of the contemporary mass media. The course presupposes some familiarity with modern popular media and takes as its content both historical and contemporary examples as sources for analysis. While the class offers facts and data, the central focus of the course in the theory, stylistic elements, and structural workings of media content. The pedagogical goal of this approach is to examine not just what the mass media arts are but also where they come from, how they function, and what effects they have on our culture and society. The key to this goal is understanding the effects and influence of dramas in the mass media on our society and its beliefs and values. Class meetings consist of lectures and in-class discussions that illustrate modern critical approaches to popular culture and the terminology used in presenting critical arguments and ideological viewpoints on the dramatic arts of the mass media. Reading assignments will support classroom work by presenting students with a diversity of opinion on mass media and the influence of television dramas and comedies. Further, examples of historically significant radio and television dramatic works will be shown in class and then discussed in relation to the concepts and critical viewpoints covered in lectures. In addition to regular scheduled classes, students will participate in an on-line Television Journal that requires watching and critically responding to assigned television programs. Each week, students will be required to watch and critically respond to assigned television programs. Their critical responses will be posted on the online Television Journal and made available to all members of the class. Grades will be based on three equally weighted objective examinations that will account for 75% of the semester grade. The remaining 25% of the grade will be determined by participation in the online Television Journal.

Integrative Arts (INART)

INART 115 (GA) The Popular Arts in America: Popular Music (3) An examination of the roots, development, and significance of popular music in our culture.

INART 115 The Popular Arts in America: Popular Music (3)
(GA)

(BA) This course meets the Bachelor of Arts degree requirements.

INART 115 examines the roots, development, and significance of popular music in our culture. It covers the origin of popular music in the early nineteenth century and introduces the major genres of the art: blues, jazz, country, mainstream pop, and rock and roll. The thrust of the course is sociological and cultural rather than musicological and will trace the music's development in a historical context. The intent of the course is to provide students with a comprehensive overview of popular music, the significance of major artists in its development, and its importance in our social and cultural history. There are three equally weighted objective tests in the course, each covering approximately one-third of the course's content. These examinations account for 75% of the semester grade (25% each). Students in INART 115 also participate in the Popular Music Forum, a semester-long examination of an important contemporary issue in popular music (censorship, copyright infringement and music piracy, music and violence, etc.) that requires research, critical thinking, the formation of objective opinions, and discussion. The Popular Music Forum is conducted online utilizing resources held on the Forum website and World Wide Web. Asynchronous online discussions on the topic will occur three times during the semester. The class will be broken into groups of fifteen students for the purpose of discussion. Participation in the Popular Music Forum will account for 25% of the semester grade. The discussion grade will be determined by the quality of participation and degree of involvement in the discussion.

Integrative Arts (INART)

INART 116 (GA;US) The Popular Arts in America: The History of Rock and Roll-The 1950s (3) This course examines the roots, development, and significance of rock and roll music in its first decade.

INART 116 The Popular Arts in America: The History of Rock and Roll-The 1950s (GA;US)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is composed of eight chronologically arranged units of study that examine the major developments in early rock and roll in an historical context.

Rock and roll music, especially in the 1950s, was the reflection of the dynamic cross-cultural interplay between country, gospel, rhythm and blues, and mainstream pop. Of central importance in early rock and roll was the influence of African American music and culture and the effect that African American music and culture had when brought into the mainstream. Through an examination of the foundation of emergence of rock and roll in our culture, students gain an understanding of the role played by intercultural cross-influences in shaping both our music and our cultural sensibilities.

Both the content of the course and the assignments in the Popular Music Forum are directed at helping students understand, reflect upon, and critically think about the intercultural nature and effect of our musical heritage.

The thrust of the course is sociological and cultural rather than musicological, and the intent of the course is to provide students with a comprehensive overview of the early development of rock and roll and its importance in our social and cultural history.

Each unit of study will be accompanied by key examples of recorded music from the period of the late 1940s through the 1950s. The course includes approximately 100 important recordings for required study.

Grades in INART 116 will be determined by a series of eight objective tests and four assignments in the Popular Music Forum. The Popular Music Forum will examine important issues in popular music and culture concerning or related to rock and roll in the 1950s that require research, critical thinking, the formation of objective opinions, and discussion. The Popular Music Forum is conducted online as a series of asynchronous discussions on Forum topics. The class will be broken into groups of fifteen students for the purpose of discussion.

Grading will be based on a point system. There are 1200 possible points that can be earned during the course - 800 points on exams (2/3 of the final grade) and 400 points on written assignments in the Popular Music Forum (1/3 of the final grade).

Integrative Arts (INART)

INART 200 (GA) The Popular Arts in America: Elvis Presley - The King of Rock and Roll (3) The significance and influence of Elvis Presley as an artist and cultural force focusing on his recordings and major performances.

INART 200 The Popular Arts in America: Elvis Presley - The King of Rock and Roll (3) (GA)

(BA) This course meets the Bachelor of Arts degree requirement.

INART 200 is composed of eight chronologically arranged units of study that trace Elvis Presley's life; accomplishments; the significance of his art; his influence as a performer, recording artist, and motion picture star; and , perhaps most important, his place as a force and symbol of social/cultural change in the second half of the 20th century. Elvis was the principal symbol of change in a time when change was all-important. He was the first of the great rock and roll superstars, a herald of the cultural revolution of the 1960s, and the central figure in the musical revolution that brought rock and roll into the popular mainstream. He was - and is - the King of Rock and Roll and his place and importance in the cultural history of the twentieth century can never be overstated or exaggerated.

The thrust of the course is sociological and cultural rather than musicological and the intent of the course is to provide students with a comprehensive overview of Elvis as an artist, his significance in the development of rock and roll, and his importance in our social and cultural history.

Each unit of study will be accomplished by key examples of recorded music and video records of important performances from television and motion pictures. The course includes approximately 100 important recordings and 15 video performances for required study.

Grades in INART 200 will be determined by a series of eight objective tests and four assignments in the Popular Music Forum. The Popular Music Forum will examine important issues in popular music and culture concerning or related to the life of Elvis Presley that require research, critical thinking, the formation of objective opinions, and discussion. The Popular Music Forum is conducted online as a series of asynchronous discussions on Forum topics. The class will be broken into groups of fifteen students for the purpose of discussion.

Grading will be based on a point system. There are 1200 possible points that can be earned during the course - 800 points on exams (2/3 of the final grade) and 400 points on written assignments in the Popular Music Forum (1/3 of the final grade).

Integrative Arts (INART)

INART 205 (GA) Introducing the Beatles (3) The influence and achievement of the Beatles as artists focusing on their recordings and films as sociocultural artifacts.

INART 205 Introducing the Beatles (3)
(GA)

INART 205 is composed of eight unites of study that trace the lives and work of the Beatles. The course's chronological design is arranged in order to capture the band's artistic trajectory from two-track recording and the relatively primitive Please Please Me album through the sonic heights of Revolver, Sgt. Pepper's Lonely Hearts Club Band, The White Album, and Abbey Road. This course examines the group's wide-ranging sociocultural influence in terms of music, fashion, film, gender, consumerism, and politics. The thrust of the course is interpretive in nature, with the Beatles' songs and albums receiving considerable scrutiny in terms of their composition, production, and attendant musicianship. Developments in recordings and instrument technology are germane to our understanding of the Beatles' evolving aesthetic, as is the bandmates' development as songwriters who eventually eschew issues associated with romance in order to address larger and more prescient subjects such as loneliness, oppression, nostalgia, ethics, and redemption in their music.

Each unit of study will be accompanied by the analysis of key examples from the Beatles' massive recorded corpus. More than 100 songs will receive consideration, as will the group's five forays as feature-film stars.

Grades in INART 205 will be determined by two objective examinations- a midterm and a final. Class participation will be a key ingredient in student performance, as will students' work on two papers. The first of such assignments will involve a shorter paper in which students address a particular aspect of the band's sociocultural emergence during their early years. The longer term paper will be researched, argumentative essay in which students will be assigned to discuss any aspect of the Beatles' career - a particular album (or series of albums), their musical influence, or their cultural impact, among other topics - and construct a mature, expansive thesis about its meaning.

Integrative Arts (INART)

INART 258 (GA) Fundamentals of MIDI and Digital Audio (3) Music Technology (Introduction to how musical information is stored and processed in computer systems.)

INART 258 Fundamentals of Midi and Digital Audio (3)
(GA)

INART 258 will cover the fundamentals of how musical information is stored and transmitted in digital devices. It will be broken into three sections.

The first section will be introductory. Acoustical principles will be covered, such as the nature of sound transmission and measurements of frequency, amplitude, phase, timbre and localization. Computer basics will also be covered, with topics including binary number representation and basic computer operation.

The next section will cover the MIDI transmission protocol that enables musical information to be stored and transmitted compactly. Topics will include the nature of the MIDI data structure, the types of messages that may be passed, and the suitability of MIDI for expressive performance. MIDI software will be discussed, including notation software, editor/librarian software and sequencers. The bulk of the course's project component will involve working with sequencing programs. Students will also be exposed to using MIDI on the web, downloading files and importing them into various applications.

The final section will cover digital audio so that students may understand how instruments capable of understanding MIDI messages are able to translate the instructions into audio signals. Topics will include sampling theory, digital vs. analog recording, filters, signal processing and editing sound files. Projects involving digital audio will also use a sequencing program that is able to combine MIDI and audio data.

The course will have two meetings per week. The first will be a lecture, covering theoretical principles. The second class meeting will be a hands-on lab demonstration. Students will also complete a final project that will be determined in consultation with the instructor, demonstrating the relevance of the course materials to the student's field of study.

Grading will be based on 2-3 short in-class exams, a series of web-based quizzes, a series of non-graded lab assignments, and a series of assignments using the sequencing software that require in-depth mastery of the program. Students will also complete a project in digital audio, typically resulting in a music video created in iMovie. The nature and composition of the final project will be decided through consultation with the instructor. This final assignment typically will demonstrate the relevance of the course contents to the students' major field of study.

Music technologies have generalized the act of making music from the traditional set of skills taught in music conservatories. Students mastering the skills in this course will benefit from an expanded and generalized sense of what music is and how it can be represented and performed.

INART 258B (GA) Fundamentals of Digital Audio (1) A general overview of music technologies current to music educators and performers.

INART 258B Fundamentals of Digital Audio (1)
(GA)

(BA) This course meets the Bachelor of Arts degree requirements.

A general overview of music technologies current to music educators and performers, as defined by their accrediting organization. This course is meant for students who do not intend to pursue further studies in music technology. Students will be exposed to software that is meant for non-specialists, and learn basics of music recording and editing. Students complete a set of lessons, each of which features a hands-on exercise. They gain a set of technical tools that should be of immediate relevance to their careers, including basics of music recording, audio editing, Internet resources, music arranging and score preparation. This course has a significant active learning component, as all assignments are hands-on creative projects. It qualifies as a General Education Arts (GA) and a BA course.

General Education: GA
Diversity: None
Bachelor of Arts: Arts
Effective: Summer 2010

Concurrent: concurrent enrollment in either MUSIC 131 or MUSIC 132

Integrative Arts (INART)

INART 401 Applications in Digital Imaging (4) An advanced digital photography course that explores new methods in the creation and presentation of images using the latest technologies.

INART 401 Applications in Digital Imaging (4)

INART 401 is an in-depth course that explores new methods in the creation and presentation of images using the latest technologies.

The course will help students to:
1. Gain a deeper understanding of the medium of digital imaging aesthetically, critically, and as a technical process.
2. Explore the potential of the medium's ability to express ideas in new ways.
3. Develop an in depth understanding of Adobe Photoshop.
4. Experiment with new methods of image making that is unique to digital technologies.

Grading is based on the quality of work in required creative projects (80%) and participation in formal critique sessions (20%).

INART 401 will be offered fall and spring semesters.

General Education: None

Integrative Arts (INART)

INART 410 (AM ST 410) Early Pennsylvania Decorative Arts and Furniture (3) The study of Pennsylvania and related furniture, pottery, paintings, and decorative arts of the seventeenth, eighteenth, and early nineteenth centuries.

INART (AM ST) 410 Early Pennsylvania Decorative Arts and Furniture (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course explores the aesthetic, cultural, and social significance of the household arts common in Pennsylvania in the seventeenth, eighteenth, and nineteenth centuries. Emphasis is placed on the major periods and styles (Puritan, William and Mary, Queen Anne, Chippendale, and Federal) as represented in furniture, pottery, paintings and decorative arts. Indigenous styles and crafts representative of Pennsylvania arts and crafts will be explored in detail.

The course combines lecture and discussion with seven field trips to historic sites to provide students with the opportunity to view furniture and decorative arts within the setting of period homes.

The course carries no prerequisite.

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Spring 2008

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Integrative Arts (INART)

INART 415 (AM ST 415) Nineteenth Century Pennsylvania Architecture and Restoration (3) Interior and exterior design of early Pennsylvania architecture; understanding and evaluation of and experience in restoration.

INART (AM ST) 415 Nineteenth Century Pennsylvania Architecture and Restoration (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course provides students with hands-on practical experience in the restoration of historic buildings of the nineteenth century. Each semester, students will research, evaluate, identify problems, and develop solutions to restore these structures in an historically correct manner. Students will then practically restore these structures and gain practical experience in the process of restoration.

Major classroom topics will vary in order to meet the specific needs of the project at hand. Topics may include wood technology, structural problems and solutions, vernacular architecture, use of early tools, etc. Students will also take field trips to several restored homes to gain insight into applicable methods and approaches to restoration and gain perspective on costs and outcomes.

INART 410 Early Pennsylvania Decorative Arts and Furniture is the prerequisite for this course.

Integrative Biosc (IBIOS)

IBIOS 450 Molecular and Cellular Toxicology (3) The course provides an in-depth coverage of the processes by which drugs and chemicals interact with biological systems.

IBIOS 450 Molecular and Cellular Toxicology (3)

The molecular toxicology course is designed to provide a mechanistic understanding of how drugs and chemicals result in toxicity. The effects of chemicals at the cellular and molecular level are stressed.

Studies on mechanisms of toxicity influence a wide spectrum of toxicological interests from the basic to more applied. In addition to the significance of these studies in clarifying the pathogenesis of various toxic responses, elucidation of how chemicals work at the cellular and molecular level helps the physiologist or biochemist obtain a better grasp of normal processes. Principles of toxicology are integrated with knowledge of biochemistry, physiology and molecular biology to help the students better understand normal as well as abnormal cell biology.

Interdisciplinary Humanities (I HUM)

I HUM 150 (GH;IL) World Mythologies in the Arts (3) Interdisciplinary, cross cultural, historical, and contemporary study of world mythologies as represented in the visual arts, literature, and film.

I HUM 150 World Mythologies in the Arts (3)
(GH) (IL)

This course is an interdisciplinary, cross-cultural, historical, and contemporary examination of myth as it appears in the visual arts, literature, and film. Each iteration of the course covers myths in the arts of at least several of the following cultures - Greek and Roman, Celtic, Norse, European, Egyptian, Near Eastern, Indian, Chinese, Pacific, African, and Native American. The course is thematic and intercultural, for example in the way myths are told in historical cultures and then retold and transformed in art, literature, and films in later cultures. The course is not a survey of world mythologies, but an interdisciplinary examination of myths in the arts such as painting, film, and literature, with an emphasis on the interpretations and transformative processes applicable to myths as they are (sometimes radically) altered and embodied in art forms that may be far removed in time, place, and meaning from the original contexts of they myths themselves. The films Whale Rider and, particularly, Dead Man, are rich examples of such mythological transformation. In the latter, the ideas of William Blake and Sioux and Inuit mythology are combined in original ways; such a transformed mythological example most likely would not appear in a typical survey of world mythology. The course is intended to familiarize students with the ways that different cultures have interpreted the world in which they live -- how cultures created their own explanations for phenomena they could not understand, and how contemporary culture gives new life to older myths. We will examine such questions as the meanings of myths as represented in the arts, the various purposes of myths in the arts, such as the functions of creation myths and myths of the hero; theories of how myths originate; and ways that myths have been analyzed, interpreted, and adapted in other cultures through the arts. We will consider in what ways myths are reconceived and altered when they appear in later cultures and in different media within the arts. Students learn to compare and contrast myths in the arts, discuss common elements in myths in the arts, and to interpret the meaning of the myths both within the cultural and historical context in which they were created and the ways they are reinterpreted in later cultures in the arts. Students may work individually and in small groups; may be expected to submit portfolios; may be given quizzes and mid-term and final exams; may be expected to write a term paper; may do a special project such as each student creating his/her own myth in literary, visual, or video form; may be asked to present material to the class.

Interdisciplinary Humanities (I HUM)

I HUM 300W Interpretations in the Humanities (3) A study of selected themes, topics, or periods that introduces students to interdisciplinary approaches to knowledge, interpretation, and creative expression.

I HUM 300W Interpretations in the Humanities (3)

This course is designed to familiarize majors in all School of Humanities degree programs with several different approaches to understanding creative and scholarly works in a range of humanities areas; to expose them to the viewpoints of others and encourage dialogue among students; to reinforce the interdisciplinary connections among humanities fields; and to improve students' ability to formulate, express, and defend their own interpretations using the approaches studied. Individual instructors select the particular interpretive methods to be studied, along with appropriate primary works or texts and exemplars of the scholarly or critical methods chosen. Instructors will typically organize their sections around specific themes, periods, or topics, which will thus vary from time to time. Students should take the course at the beginning of their upper- division study in the major, ideally in the first semester of the junior year, and after completion of the general education requirements (lower-division study).

Interdisciplinary Humanities (I HUM)

I HUM 302 Technology and the Humanities (3) An interdisciplinary study of the effects on the individual of scientific and technological change.

I HUM 302 Technology and the Humanities (3)

This interdisciplinary course relates science and technology studies to issues in the humanities and social sciences. It is intended to appeal to students in any major who wish to develop a greater understanding of issues related to technology. The issues addressed will vary but are likely to include some that are historical and others that are contemporary. Sample topics that have been studied in this course include ethical issues related to uses of biomedical technologies; social issues in the development and uses of digital technologies; and the aesthetic significance of electronic reproduction in the creative and performing arts.

Interdisciplinary Humanities (I HUM)

I HUM 312 (GH;IL) The Western Tradition II (3) The Middle Ages and the Renaissance.

I HUM 312 The Western Tradition II (3)
(GH;IL)

This course is appropriate for introducing students to a broad spectrum of materials, methods, and perspectives across the humanities. The course addresses medieval and/or Renaissance culture (primarily European, though interaction with other cultures may be included). It pays attention to architecture, art, drama, literature, philosophy, religion, music, and history. Students are introduced to methods for linking the original works they study (by theme, historical context, and in other ways) and to both discipline-based and interdisciplinary modes of understanding them.

General Education: GH
Diversity: IL

Interdisciplinary Humanities (I HUM)

I HUM 400 Expressions in the Humanities (3) Capstone course for School of Humanities majors: students synthesize and apply approaches to a topic in creative expression and knowledge.

I HUM 400 Expressions in the Humanities (3)

The general goals for this course are (1) to give you a "capstone" experience in which you can bring together the differing disciplines, questions, and material you've encountered in your study within the School of Humanities; (2) to give you some idea of how the various humanities disciplines are related to one another and to their cultural setting at a specific moment in time in regard to a particular issue; (3) to extend your ability to compare works of art in different media or traditions (e.g., painting and literature); and (4) to refine your abilities in viewing, listening, close reading, writing, and discussing works from varied genres and to allow you as seniors to take over some responsibility for your own education by teaching each other parts of the course.

The guiding thread for our exploration will be the questions, "Do we have a "self" or are we multiple selves?" and "What kind of self or selves are we?" Among the subordinate themes we will pursue are the basis for asserting that there is or should be an equality among people; the workings of the social context to ground one's identity and value, but also to restrict its scope; the relation of modern science to the concept of the self and society; the power of the unconscious and the rise of psychoanalytic theory and practice; and critiques of Western assumptions about the individual inherent in Marxism, feminism, and other critical perspectives. We'll pursue these issues through a range of works from Descartes' Meditations, which laid the foundation for modern Western individualism, to Sherry Turtle's Life on the Screen, which argues that interactions on the Internet show how we are multiple social constructions, not a single self.

In addition to learning about the various works we'll study, there are several goals for how you will learn during this course: (1) You'll become comfortable moving back and forth between different kinds of texts (e.g., literature, philosophy, painting, psychology); (2) You'll develop your ability to express your own perceptions in writing; (3) You'll become more skilled at expressing your ideas in dialogue with others by asking good questions, listening carefully, and responding thoughtfully; (4) You'll increase your own mastery of part of the material by investigating it and teaching it to the class; and (5) You'll identify questions that have interested you during your time as a student in the School of Humanities and pose them to other students for discussion.

International Agriculture (INTAG)

INTAG 100 (GS;IL) Introduction to International Agriculture (3) Survey of agriculture and food production in developing countries; focus on small traditional farmers, their methods, and socioeconomic environment. (NOTE: Write for a further listing of courses in and related to International Agriculture.)

INTAG 100 Introduction to International Agriculture (3)
(GS;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The objectives of this course are to acquaint students with: (1) the characteristics, issues and problems concerning small, traditional agriculture in "Third World" countries, and (2) the concepts of agricultural change, to provide frameworks within which to analyze, understand, criticize and think about the issues and problems. Readings and class presentation are intended to expose students to several viewpoints, with examples from several areas of the world. Integral to the course are slide and video presentations and speakers that illustrate the reality of small traditional agriculture and provide views of the people and their culture. A major goal is to challenge students to develop independent thinking about agricultural change and development in order to critically analyze and judge research, writing and policies. This is accomplished through writing assignments, class discussion and in-class activities. The course examines the reasons for the problems and policies relating to agriculture and food in Third World countries, and tries to answer several questions about small traditional agriculture. Specific questions examined are: what is it; why is it the way it is; how and why do these farmers make the decisions they do; and what does this knowledge imply for agricultural growth, sustainability and technological change.

The course is part of the International Agriculture minor, and satisfies two General Education requirements. Evaluation consists of film reports, two short papers and three exams. The course is offered once every academic year.

International Business (I B)

I B 290 International Business Goes to the Movies (1 per semester/maximum of 3) A business elective to expose students to international and global issues through the eyes of film makers around the world.

I B 290 International Business Goes to the Movies (1 per semester/maximum of 3)

I B 290 is an international business elective class which exposes students to international and global issues through the eyes of film makers around the world. Using film as the medium, students can evaluate differing perspectives and arguments on issues affecting business and economics in the global environment. This course is intended for students who are likely to study abroad during their PSU careers. Thus, the course attempts to prepare students for immersion in a variety of cultures, often different from the US. The course objective is to begin a broadening process of students' world views by examining a wide range of issues captured in film around the world.

Typical topics include the rise of globalization and its impact on various countries and societies, a range of cross-cultural issues and controversies inherent in competing cultural differences between peoples of various nations, the impact of American culture on social, political, economic, and legal institutions throughout the world, and the differential role played by economics in various societies and at different stages of economic development across many nation states.

This course employs film as a powerful medium to enable historical and modern understandings of global issues and international perspectives. As students enter the business world and learned professions, it is imperative that their world view include images and understandings found in a host of competing cultures including Eastern and Central Europe, East Asia, The Middle East, Latin America as well as Western Europe, Australia, and North America.

Upon completion of the course, students will be introduced to a wide range of international issues as well as a foundation for approaching cross-cultural disputes inherent in international and global business. In addition, they will obtain an appreciation of international cinema and its wide scope as an art form, as an informational source for business, and as a powerful medium for argument and debate.

International Business (I B)

I B 303 (IL) International Business Operations (3) A survey of the major aspects of international business environment and operations with an emphasis on the cultural dimension.

I B 303 International Business Operations (3)
(IL)

International business is important and necessary because economic isolationism has become impossible. Failure to become a part of the global market assures a nation of declining economic influence and deteriorating standards of living for its citizens. International business therefore presents more opportunities for expansion, growth, and income than does domestic business alone. This course will cover the major aspects of international business environment and operations with emphasis on its impact on the local businesses in your state. In other words, in this course you will learn why international business differs from domestic business, economic theories on international trade, and how managers deal with the uncontrollable forces such as cultural differences of international environment. In this course you will develop a global perspective through studying the impact of other countries and their peoples on society and develop skills that will enable you to interact effectively in an interdependent global community.

International Business (I B)

I B 395A Practicum in International Business (3-5) Professional and guided international business work experience taken as part of an approved education abroad program.

I B 395A Practicum in International Business (3-5)

I B 395A is an international business internship that will be taken as part of an approved education abroad program. It is designed to provide experiential-based learning for junior- and senior-level students through which they will apply both prior knowledge and skills learned in the classroom to on-going operations of firms engaged in international business. And at the same time acquire additional knowledge, skills, attitudes and other competencies that will be relevant for further classroom-based learning.

Students will be expected to be adaptable, to communicate at different levels within the organization and, in addition to their knowledge and skills, to contribute to team outcomes and/or delivery of services. Although the specific nature of the practicum will depend on the company or organization involved, it will be project based. Following are examples of typical projects that might be undertaken: serving as a member of a team designing and/or implementing a new management information system, creating a new in-house personnel handbook, undertaking feasibility studies for new products, and researching and reporting on services to support new customers.

Grades will be determined by the faculty member supervising the practicum and will be based on an evaluation of work performance supplied by the company supervisor and the evaluation of written reports. The faculty supervisor will evaluate: required written reports describing the project(s) undertaken during the course of the practicum, how they were completed, and the skills that were used to complete them; a profile of the organization providing the internship; the student's critical appraisal of the company and his or her experience, including a reflection on cultural differences between work in the U.S. environment and the international work environment; and a research-based paper on a project undertaken during the internship or a related topic.

This course and the approved education abroad program of which it is a part, will satisfy the 15-credit study abroad requirement for students who have elected the international business option.

I B 404 Contemporary Issues in International Business (3) Investigation of issues in international business practice interpreted from the foundations of the social sciences. Topics will be chosen from contemporary issues in global business and economics.

I B 404 Contemporary Issues in International Business (3)

I B 404 enables students to study the most current topics in international and global business from the framework of the social science issues that form the framework for understanding, business decisions. The course provides structured experiences in library research and data gathering, techniques, and builds the habit of reading the international business press daily and analyzing it weekly. The class is typically organized around 3 integrative business topics that represent a spectrum of questions important to business. These include questions about finance and economics in international business, questions about people and organizations in an international environment, and questions about products (development, production, distribution of goods and services) in international business contexts. This is not an introductory course, and as such, the topics chosen should be substantive and nuanced. For example, one topic might be how the structure of franchises must be modified to reflect the property rights in a particular country, and how those property rights laws impact the value of the franchise. The second topic might be how the internationalization of the structure and role of Boards of Directors in multinational firms contribute to globalization, and challenge the cultural norms in those organizations The third topic might be how North American firms have been forced to adjust their product packaging, in response to environmental impact laws in Germany, and how this shifts the locus of the product message from point-of-purchase to alternative media.

International Business (I B)

I B 440 (US;IL) (PL SC 440, AAA S 440) Globalization and Its Implications (3) This course explores the socioeconomic implications of globalization.

I B (AAA S/PL SC) 440 Globalization and Its Implications (3)
(US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course explores the socioeconomic implications of globalization and some fundamental changes that have taken place in the global socioeconomic system. The bipolar configuration of global power has been radically altered, market-state relations have been reformulated, and global systems of production and finance have been reorganized.Given these recent changes in the world's structure, globalization as a socioeconomic force is examined with a special emphasis on its implications on social issues, capital-labor relations, the roles of unions and trans-nationals, unemployment issues, poverty and inequality, gender and ethnicity issues, race relations, and democratization around the world. This course also allows students to explore how different countries, communities, social classes, business firms and even institutions are affected differently by globalization. The implications of globalization on Africana communities is given special attention.

The course is organized into three parts: A) The first part of the course attempts to define globalization and identify its essential characteristics in light of social and economic change. This part attempts to answer questions such as what constitutes globalization, how do we know if glonalization is taking place, and what aspects of it are new. B) The second part of the course attempts to assess the implications of the different aspects of globalization (identified in the first part) on many critical social issues, including capital-labor relations, the roles of unions and transnational corporations, problems of unemployment, poverty and inequality, gender, ethnic, and race relations, and democratization. C) The third part of the course examines the implications of globalization to African communities.

This course exposes students to the economic, social, political, and cultural implications of the unfolding global order. It allows them to explore how different countries, communities, social classes, business firms and even institutions are affected differently by globalization. Evaluation will be based on daily attendance, along with a class presentation of a design of a research paper; an actual research paper, a mid-term exam and a final exam.

International Business (I B)

I B 450 The Business Enviornment of Europe (3) This course provides an overview of the economic, institutional, and regulatory environment in Europe at the EU and national levels.

I B 450 The Business Environment of Europe (3)

This course provides an overview of the business, economic, and regulatory environment in Europe at the European Union (EU) and national levels. The course examines how regional integration, through the EU, has shaped industrial, competition, monetary, and related economic policies, and how Europe's international trade and finance capabilities affect the global economy. As a result, a significant part of the course focuses on the evolution of the EU, its institutional structure, and its impact on business (both European and foreign). The course also compares business-government relations, models of capitalism, and corporate governance in individual European countries, using the United States as a basis of comparison. Particular attention is given to France, Germany, Ireland, and the United Kingdom, and how their business environments differ from each other.

While the primary focus of this seminar will be on these themes, we will use articles from the *Financial Times* and similar publications as the basis of discussion in each class for a range of topics related to Europe. The approach taken in this course is a multidisciplinary one, with the assumption that business executives must understand the political, cultural, institutional, historical, and geographic aspects of Europe if they are to be successful in the business environment of Europe.

Students are expected to be active participants in class discussion. Readings usually will include a textbook, readings packet, and a subscription to the*Financial Times*. Evaluation will be based on a combination of participation and attendance, exams, quizzes, a group project, and essay assignments.

Intl Studies (INTST)

INTST 100 (GS;IL) Introduction to International Studies (3) An introductory multidisciplinary course designed to familiarize students with critical international issues.

INTST 100 Introduction to International Studies (3)
(GS;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This is an interdisciplinary course designed to provide students with an introduction to a range of global issues. The course will emphasize the themes of international interdependence and globalization and their development over time. A key component of this course is cultural diversity and the connecting international and domestic issues, particularly those of race and culture. In both their written and oral work, students will be required to relate international issues to their own fields of study. The disciplines involved are mainly political science and economics, ecology, history, and cultural studies.

General Education: GS
Diversity: IL
Bachelor of Arts: Social and Behavioral Science
Effective: Summer 2005

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Italian (IT)

IT 010 Intensive Elementary Italian (6) Intensive Italian basic reading, writing, listening, and speaking skills stressed. Lab. Equivalent to IT 001 and half of IT 002.

IT 010 Intensive Elementary Italian (6)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is intended for students with no experience of Italian. It provides an intensive language-learning environment in which to complete 6 credits of elementary Italian (equivalent to IT 001 and the first half of IT 002). Students receive an extensive introduction to Italian grammar, speech, and culture. Evaluation methods include a variety of written and oral exercises (presentations, compositions, quizzes, exams, etc.). All work is done in Italian. The course is offered once per year. Enrollment is limited to 18. The course can count toward the completion of the Italian minor. This course prepares students for IT 020, a continuation of elementary and intermediate Italian.

General Education: None
Diversity: None
Bachelor of Arts: Humanities and Foreign Language and Second or Beyond 12th Level Foreign Language

Italian (IT)

IT 020 Intensive Intermediate Italian (6) Continuation of Intensive Elementary Italian, building on grammar and communication skills (reading, writing, listening, and speaking).

IT 020 Intensive Intermediate Italian (6)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is for students who have successfully completed IT 010 Intensive Elementary Italian, and who seek an Intensive learning environment of Italian grammar (all aspects: reading, writing, listening, and speaking). Students learn intermediate Italian in an intensive language-learning environment. Extensive reinforcement of elementary Italian grammar (reading, writing, speaking, listening) and introduction to intermediate Italian grammar, speech, and culture through a variety of written and oral exercises. All work is done in Italian. Homework in the accompanying workbooks is assigned each week. Pronunciation practice in the language lab is also required weekly. There are also supplementary grammatical and cultural activities on the course web page. Equivalent to last half of IT 002 and all of IT 003.

General Education: None
Diversity: None
Bachelor of Arts: Humanities and Foreign Language and Second or Beyond 12th Level Foreign Language
Effective: Summer 2004
Prerequisite: IT 010

Italian (IT)

IT 083S (GH;IL) First-Year Seminar in Italian Literature, Film, and Culture (3) Introduction to the study of Italian literature, film, and culture.

IT 083S First Year Seminar in Italian Literature, Film, and Culture (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The first-year seminar will introduce students to the study of Italian literature, film and culture in their first year at Penn State. Students will read significant texts (in English), view videos (with subtitles), listen to music and explore Italian thought and culture in general. These experiences will help prepare them for additional courses in literature and in Italian, but will also serve as an introduction to things Italian, and as a point of comparison with U.S. culture. In addition to the academic topic and issues this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them including the opportunity to develop relationships with faculty and other students who share their academic interests. This course satisfies both the first-year seminar and a General Education humanities or Bachelor of Arts humanities requirement. We will offer the course once a year with enrollment limit of twenty students.

Italian (IT)

IT 131 (GH;US) Italian American Culture and Civilization (3) Italian-American experience from the late 19th century to present. Socio-political issues seen through cinema and through literary and other readings.

IT 131 Italian American Culture and Civilization (3)
(GH;US)

(BA) This course meets the Bachelor of Arts degree requirements.

Between 1870 and 1920 over five million Italians immigrated to the United States. They were mainly men, and they came primarily to strike it rich. Of those who came, about one-third returned to Italy. Those who remained, often joined by their families, left an indelible mark on the American cultural, political, artistic, educational and social landscape. This course investigates the fascinating story of Italian immigration to the United States, a story that many students' great-grandparents and grandparents actually lived and bequeathed in memory via their personal stories. Our inquiry will be interdisciplinary. We will study historical texts, literature and film, which address the historical and sociological conditions of 19th Century Italy, the odyssey of immigration to and assimilation in the United States, and life in the ethnic neighborhood. We will also explore the Mafia, forms of prejudice, and ways Italians uniquely manifested their social values in labor unions, religion and education. Upon successfully completing this course, students will have a solid grasp of how Italians, in becoming Americans, contributed to the rich fabric of life in the United States.

Evaluation will be done through limited class participation, examinations, and quizzes. There will be eight multiple-choice exams with one essay question, and four quizzes based upon the novel readings. IT 131 will provide an Italian American equivalent to IT 130 (Italian Culture and Civilization). It should fulfill Humanities Breadth and Cultural Diversity requirements. The course will not count toward the minor or major in Italian because it is given in English; nonetheless, it will be complementary in so far as it will give our students a more rounded education concerning Italy and its legacy. IT 131 will be offered once a year with 50 seats per offering.

IT 130 (GH;IL) Italian Culture and Civilization (3) Italian life from antiquity to the present; literature, film, the arts, and contemporary problems in historical perspective.

IT 130 Italian Culture and Civilization (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The course aims to develop critical and analytical skills of undergraduate students. It is an Intercultural/International Competence course dealing thoroughly with ethnicity, religion, and global perspective as it pertains to Italian culture and civilization. The course traces, among other themes, the importance of the Roman Empire, the Catholic Church, the Renaissance, presence and contributions of the Roman Catholic Church, the Italian Renaissance, and Italian immigration, artistic patrimony, and culinary contributions. Historical texts used will emphasize the social history of Italians that portrays the continuous processes of adaptations through the ages. Consideration will be given to the various representative Italians such as Dante, Da Vinci, Machiavelli, St. Francis, St. Clare, Fellini, and Fermi. We will read novels and analyze films that depict aspects of Italian thought and culture from religion to politics.

Italian (IT)

IT 330W Greatest Books of Italian Literature (3) A survey of the greatest books of Italian literature (prose, poetry, drama). Time period varies each semester. In Italian.

IT 330W Greatest Books of Italian Literature (3)

This course is a survey of the greatest books of Italian literature (prose, poetry, drama). Time period varies each semester, and may include early literature (St. Francis, Marco Polo, Dante, Boccaccio, Petrarch, Machiavelli, etc.) or modern authors (Vico, Goldoni, Manzoni, Foscolo, Leopardi, Pirandello, Fo, Calvino, Eco, etc.). Please check with department faculty for current offering. Taught in Italian. Course objectives are to read, discuss, and better understand the enduring relevance of Italy's literary masterpieces, while strengthening linguistic skills in writing (especially), as well as reading, speaking, and listening, through weekly or bi-weekly written reading reactions, critical notebooks, and class discussions/participation. Course is appropriate for students who have successfully completed an intermediate Italian course (such as IT 003 or 020) and counts toward the Italian major (all tracks) and minor. Successful completion of this course may permit further Italian study at the 400-level.

Italian (IT)

IT 422 Topics in the Italian Renaissance (3) Topics vary by year and may include "Theories of Love," "Magic, Witchcraft, Alchemy, and the Emergence of Modern Science," etc.

IT 422 Topics in the Italian Renaissance (3)

(BA) This course meets the Bachelor of Arts degree requirements.

In this course students develop their advanced language skills while pursuing study of Italian Renaissance and/or Humanist topics. Topics in Italian Renaissance literature vary by year and may include "Theories of Love," "Magic, Witchcraft, Alchemy, and the Emergence of Modern Science," etc. Check with faculty for current topic. Course may only be taken once for credit. Course counts toward the Italian major and minor. Course taught in Italian. Evaluation methods include two midterms, short reading response papers, class presentation, and final exam. Prerequisite: any 300-level Italian course.

General Education: None
Diversity: None
Bachelor of Arts: Humanities and Second or Beyond 12th Level Foreign Language
Effective: Fall 2005
Prerequisite: any Italian course at the 300-level

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Italian (IT)

IT 475 Modern Italian Literature and Cinema (3) Focus on silent films, fascism, WWII, Resistance, Neorealism, and reactions against Neorealism.

IT 475 Modern Italian Literature and Cinema (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course will explore the literary, cultural, and historical backdrops behind a variety of films from Fellini's The Road, to one of the greatest spaghetti westerns ever made (Leone's Once Upon a Time in the West), to the Oscar winner for Best Foreign Film (Benigni's Life is Beautiful). Selected 19th and 20th-century prose texts also trace such issues as the individual's role in society and the use of the imagination in the representation of history. This course aims to provide students with the fundamental tools to read texts and watch films critically and intelligently while presenting an overview of some major themes of Italian culture. Students will be evaluated on three in-class exams, paper outline, final paper, and participation in class discussions/activities/debates. IT 475 is the first interdisciplinary course taught in English at the IT 400 level. The course helps satisfy the Italian minor requirement. It is also good for students who have taken IT 130 and want to know more about 20th-century Italian lit/film/culture without having to do course work in Italian. IT 475 may also be of particular interest to students of film and media studies, English or comparative literature, religious studies, and history. This course satisfies the Italian minor or bachelor of arts humanities requirements. IT 475 will be offered once a year with 40 seats per offering.

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Italian (IT)

IT 485 Italian-American Cultural Studies (3) In-depth exploration of Italian-American cultural contributions.

IT 485 Italian-American Cultural Studies (3)

Italian-American Cultural Studies explores the representation of self-representation of Italian-Americans that have been produced over the past century in a variety of aesthetic forms. Through analysis of literary and cinematic works, informed by readings in history and sociology, students will refine their critical reading and writing skills, come to a deeper understanding of important currents in 20th-century American history, gain a more informed appreciation of the contributions of Italian-Americans to the arts, engage critically with concepts such as "identity," "ethnicity," "gender," and "heritage." This course fulfills requirements for the major and minor in Italian, and allows students interested in Italian-American culture to undertake more in-depth and specialized study than is possible in the 100-level General Education survey offered by the department in English. Evaluation methods include participation in class discussion, short analysis papers, and a longer (8-10 page) research paper. The ability to screen VHS and DVD videos is necessary.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005
Prerequisite: any 300-level Italian course

Italian (IT)

IT 480 Italian Women Writers Through the Centuries (3) Analysis of the works of women authors in their historical and literary contexts.

IT 480 Italian Women Writers Through the Centuries (3)

Italian women have been stereotyped as the "mamma" or grandmother who cooks, prays, and idolizes her sons. Such an image does not accommodate the wide variety of experiences, perspectives, and contributions of Italian women throughout history. This seminar will explore the writings of female authors from delimited historical periods (alternating among Renaissance, 19th and 20th Centuries). Depending on time period, genres will include autobiography, poetry, historical novel, drama, film, nonfiction. Throughout the course we will consider the political and social developments in Italy with an emphasis on issues of special relevance to women. As we approach each text, we will examine such questions as: the significance of its form; the author's use of language; the ways in which masculinity and femininity are constructed; intersections with the text's historical moment; the political, philosophical and/or theological questions posed by the text; the ways in which the text inserts or distances itself from the Italian literary canon; and the text's depictions, re-evaluations and uses of history. Through their journal assignments in class discussion, students will be encouraged to reflect upon the implications of course concepts in their own culture and historical moment. Evaluation methods include participation in class discussion, journal entries, short analysis papers, and a longer (8-10 page) research paper. In Italian. Prerequisite: any 300-level Italian course. This course is conducted in Italian and counts for the Italian major and minor. The ability to screen VHS and DVD videos is necessary. Enrollment is limited to 20, and the course will be offered at lease once every four semesters.

Japanese (JAPNS)

JAPNS 120 (GH;IL) Japanese Literature in Its Cultural Context (3) Japanese literature and film from classical through contemporary times, with attention to changing cultural settings. Taught in English.

JAPNS 120 Japanese Literature in its Cultural Context (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is intended to provide an introduction to the literature of Japan from the seventh century to the postmodern era. Prior study of Japan is not required and materials will be available in English. Students will learn about major eras of Japanese literature and culture, such as the age of the Man'yoshu, the age of the Genji monogatari (The Tale of Genji), the age of No and Kyogen, the age of Wit and Learning, the age of Meiji, the age of industrialization, the postwar years, and postmodernity. The readings will include several genres, such as poetry, folktale, short story, and novel, with an emphasis on prose fiction. The course is structured so that students develop a historical/cultural perspective in order to understand the contexts that have inspired the literary works. By examining literature in its cultural contexts, students will investigate such topics as the relation between social institutions and the individual, the traditional patriarchal system, the changing roles of women, westernization, the Emperor system, and postmodern consumer culture, among others.

Students will read literature and related materials from different periods, with occasional presentations of films. Class work includes some lecture but emphasizes guided discussions, group discussions, and students' presentations. This participatory approach is intended to deepen students' appreciation of the texts, to help them understand value systems that may differ from, or else be shared with, those predominant in modern Western cultures, and to assist students in developing both analytical and expressive abilities. Evaluation will be through means such as in-class presentations, two midterms, one analytic paper (3-7 pages), and in-class participation and discussion.

The course is designed to be suitable for all students generally interested in Japan, or interested in various fields of humanistic study, whether or not they have previously studied the culture of Japan. This course is required for the Japanese major. It is designed to count as General Education and as a B.A. "Other Cultures" course. It will be taught once a year with an enrollment of 40-50.

This course will be taught in the active-learning mode, featuring both lecture and discussion, including oral presentations, which provides students abundant opportunity for expressing their opinions. Web-based activities may also be included, depending on the instructor. Specifically:
Writing, speaking, self-expression: Students will write reaction papers and comprehensive essays (e.g. take-home essay exams), which require the analysis and comparison of various literary works.
Opportunity for information gathering, synthesis and analysis in solving problems; A wide range of texts--synchronic and diachronic terms of time and space--will be comparatively analyzed. Students will use the library as well as electronic resources to research texts and authors for their oral presentations and essays.
Application of intercultural/international competence: Students will explore a wide range of texts in Japanese literature and cultures. Students will compare/contrast texts based on cultural and social contexts.

General Education: GH
Diversity: IL
Bachelor of Arts: Other Cultures and Humanities
Effective: Spring 2010

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Japanese (JAPNS)

JAPNS 121 (GH;IL) Japanese Film and New Media (3) Survey of Japanese film and new media in the twentieth century and beyond, with attention to changing cultural settings. Taught in English.

JAPNS 121 Japanese Film and New Media (3)
(GH; IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is intended to provide an introduction to modern and cutting-edge forms of cultural production in Japan from the twentieth century to the present day. Prior study of Japan is not required and materials will be available in English. Students will learn about major technologies and forms of media, including film, manga, anime, and various forms of “new media” (cell-phone novels, blogs, MMOGs, IM, and Web 2.0 for instance). Readings and screenings will cover several artistic modes including formalism, historiography, documentary, period drama, and experimental works. The course, or individual units within the course, will be structured so that students develop an historical perspective, allowing them to understand the cultural contexts that have inspired the creative works under study. By examining Japanese film and new media with attention to changing cultural settings, students will investigate such topics as the relation between social institutions and the individual, the formation and expression of identity, changing gender roles and family structures, the impact of technological and economic trends on social structure, and changing climates of censorship and freedom of expression. In addition, students will learn to think critically about various media's techniques and aesthetics of representation, and will become more engaged, critical spectators of film and related media.

Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. This participatory approach is intended to deepen students' appreciation of the works, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytical and expressive abilities. Through critical reading, group discussion and interpretive writing, students will hone skills for evaluating modes of cultural production and consumption in modern Japan.

The course is designed to be suitable for all students generally interested in Japan, or interested in various fields of humanistic study, whether or not they have previously studied the culture of Japan. This course is required of the Japanese major. It is designed to count as General Education, as a B.A. “Other Cultures” course, and as an IL "International Cultures" course.

(BA) This course meets the Bachelor of Arts degree requirements.

This class is offered exclusively to students who have studied abroad in Japan. Only primary multimedia sources (i.e., not a text book)will serve as course materials. Five classes a week will consist of reading session, multimedia presentation, and high level discussion. Intensive analysis and class discussion of multimedia materials will provide the student the opportunity to develop advanced ability to understand, construct, and express opinions and complex verbal concepts in appropriate contextual forms/modes.

Japanese (JAPNS)

JAPNS 403Y (IL) Practical Written Communication: Japanese for Professional and Academic Purposes I (3) Discussions, presentations, readings, and compositions emphasizing written styles used in newspapers, magazines, business reports, academic writing, and other texts.

JAPNS 403Y Practical Written Communication: Japanese for Professional and Academic Purposes I (3) (IL)

A continuation of Japanese 402, this course includes, as objectives, (1) to improve the students' proficiency in speaking, listening, reading, and writing Japanese, and (2) to acquire abilitites to produce and understand communications that are stylistically appropriate for professional and academic contexts.

The fundamental grammatical structures of the Japanese language, as used in everyday communication, are presented in Japanese 402, the prerequisite course. Japanese 403 goes beyond that everyday "polite standard Japanese" style that is used in newspapers, magazines, business reports, and other written texts. Topics will include dialiectical and stylistic variations, language attitudes, conventions and aspects of practical usage in different written contexts, the addition of approximatley 250 new kanji (Chinese characters) for both recognition and production, and the expansion of vocabulary for practical written communication especially in professional and academic contexts.

Different offerings of Japanese 403 may vary, but courses of this sort are often taught through collections of newspaper articles and other written materials in textbooks. The organization tends to be topical (e.g., the impact of technology on society, the Japanese economy, customs such as New Year's Celebration of Children's Day, etc.) to permit the development of functional clusters of vocabulary and the practice of written conventions approporiate to various contexts. The availability of web-based materials permits easy supplementaiton and updating of published materials.

Evaluation will be through means such as vocabulary quizzes, a midterm and final exam, an in-class presentation, several short writing assignments, and a short essay.

Prerequisite knowledge: Japanese 402 or equivalent. Japanese 403 can be taken as part of the major of Japanese, the minor in Japanese Language, or for other purposes such as preparation for living and working in Japan. Japanese 403 will be offered once a year to 15 students.

Japanese (JAPNS)

JAPNS 452 (IL) Contemporary Japan: Cultures, Lifestyles, Trends (3 per semester/maximum of 6) Survey of aspects of modern Japanese society; includes readings from Japanese newspapers, magazines, and fiction; topics may vary each semester.

JAPNS 452 Contemporary Japan: Cultures, Lifestyles, Trends (3 per semester/maximum of 6) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course orients students to cultural issues and trends in contemporary Japan, and the way that those issues and trends are explored in literature, film, newspapers and magazines. The course examines a selection of Japanese-language materials from an array of genres, modes of representation, and historical settings. Focusing on the postwar era to present (1945-), this course introduces various aspects of contemporary Japanese culture, from literary works of the postwar experience to recent popular culture, including anime (animated movies) and manga (graphic novels). Each work is discussed in terms of its own literary or artistic merit, the social context that produced it, its position within the larger trends of literary development in Japan, and its relevance for the modern reader. This course is designed for (prospective) Japanese major or minor students interested in broadening their knowledge of Japanese culture and society as well as for students who wish to compare other cultures and literatures they have studied with those of Japan.

Japanese (JAPNS)

JAPNS 453 (IL) Japanese Film (3 per semester/maximum of 6) Selected films and directors representing various aspects of Japanese culture and cinema; topics may vary each semester.

JAPNS 453 Japanese Film (3 per semester/maximum of 6) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This class will be a seminar-style study of Japanese culture, texts, and language as seen through the lens of Japanese cinema. The goal is to deepen the students' understanding of diverse aspects of Japanese life, history, and culture while developing language skills. Typical class sessions may involve watching sections of film (with our without English subtitles); working with listening comprehension; engaging with student presentations (in Japanese) on studios, directors, or actors; discussing Japanese film history; and analyzing film stills for aesthetic qualities.

Participants will be required to view and discuss films in Japanese (with or without English subtitles). Viewing's will be accompanied by secondary readings (at least some of which may be in Japanese). We will also be discussing the films and readings in the context of nation, identity, history, sociology and culture. Exercises will range from group discussion, web-based research in Japanese and English, presentations, essays and film analysis. Students must prepare for class by reading the material carefully, taking notes, writing down questions, and being ready to take part in lively conversations. Course discussion will take place primarily or exclusively in Japanese.
This course satisfies the International Cultures requirement.

JAPNS 454 Japanese Literature (3 per semester/maximum of 6)
(IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This class will be a seminar-style study of contemporary Japanese literature. The goal of the course is to help students move from grammar-assisted reading assignments (which may provide vocabulary lists, grammar notes, and cultural notes) to reading ‘raw' materials in Japanese, where students are responsible for knowing how to use the appropriate reference materials so that they can compile vocabulary lists, grammar notes, and cultural notes on their own. Students will be reading selected works from an array of genres such as autobiography, poetry, fiction, drama and essays, with topics and thematic focuses varying from semester to semester.

Typical class sessions may involve reading aloud from a literary work; engaging with student presentations (in Japanese) on authors, genres, thematic elements, and relevant historical or cultural events; discussing Japanese literary history; analyzing short passages for their aesthetic qualities; and working with specific items of grammar or vocabulary. Participants will be required to read and discuss Japanese literature in Japanese. Exercises will range from group discussion, web-based research in Japanese and English, presentations, essays, quizzes and tests. Students must prepare for class by reading the material carefully, taking notes, writing down questions, and being ready to take part in lively conversations. Course discussion will take place primarily or exclusively in Japanese. This course satisfies the International Cultures requirement.

Jewish Studies (J ST)

J ST 004 (GH;US;IL) (CAMS 004, RL ST 004) Jewish and Christian Foundations (3) Introduction to the perspectives, patterns of worship, morality, historical roots, and institutions of the Judaeo-Christian traditions; their relationship to culture.

J ST (CAMS/RL ST) 004 Jewish and Christian Foundations (3)
(GH;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Jewish and Christian Foundations seeks to help students better understand the Bible as the scriptural background for both Judaism and Christianity. Some people believe the Bible is "scripture," self communicated by God to humanity. To others, this text is a compendious collection of poetry, historical writing, law, myth, and mystical writings, which stems from the religious, political, and cultural milieu of the ancient Near East. Some people believe this is a book designed to bring people to belief in the power and reality of the god discussed in these writings. For others, the book is a source of both unity and division among people in the world, and must be treated as ambiguous in nature. Still others see the biblical text as the single most important collection of literature to have shaped the religious, political, and imaginative contours of western civilization. This course focuses on selected portions of the biblical text, representing diverse strands of historical remembrances, interpreted and re-interpreted in light of critical historical events, and serving, first as an oral, and later as a written account of the life, beliefs, and hopes of Jewish and Christian peoples. Readings from both the Hebrew Bible (the Christian "Old Testament") and the Christian scriptures (the "New Testament") will be used. RL ST 004 provides a broad discussion of the origin of both Judaism and Christianity within a historical and geographical framework. The principle teachers, writers, and "founders" are discussed, including Moses, Isaiah, David, Ezra, Jesus, Peter, and Paul. Students are challenged to read and understand these important writings which have interpreted the human condition and which have oriented generations of people towards a transcendent referent associated with love and loyalty. Evaluation methods may include two hour examinations, a final examination, and two short writing assignments. The examinations are not cumulative. Class participation will also be a factor in overall evaluation for the final grade. RL ST 004 may be used to fulfill requirements for the Religious Studies, Classics and Ancient Mediterranean Studies and Jewish Studies major/minor. This course will be offered twice a year with 125-150 seats per offering. Finally, students will be challenged to evaluate and respond to the literature as it touches on human experience experiences which all people share regardless of their personal religious affiliation.

(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Jewish tradition goes back thousands of years, and Jews have resided in many different lands. They have become an integral part of many different cultures, yet have often retained (or been forced to retain) a certain degree of separateness or difference. In this course we will trace continuity and change in Jewish traditions from ancient to modern times, and across different regions. Taking into account inter-cultural contact and historical events -- ranging in place from the Middle East to Muslim Spain to Asia, Africa, Europe, and the Americas, and in time from the ancient world to the medieval era, the Holocaust, and contemporary Israel and the U.S. -- we will explore developments. in Jewish history, literature, and culture. The course considers topics such as the attitudes other groups have had toward Jews (and vice-versa), the question of whether Jewish identity is a race, a religion, or an ethnicity, the dilemmas Jews face today, and the ways that Jews in many diverse settings have balanced change and continuity. We will explore the factors that shape Jewish experience in different times and places, the diversities within and among Jewish lifestyles, and the ways in which events and interactions with other peoples have influenced the development of Jewish civilization. Finally, we will consider the dilemmas Jews face today in terms of the preservation of their identity and traditions. The course includes class discussion. Students are evaluated on the basis of essay exams, essay assignments, quizzes, in-class discussion and commentaries, group projects, journals, a final comprehensive exam/essay, web-based activities, and on-line discussion; such means as quizzes, essay examinations, and group projects.

J ST 012 (GH;IL) (CAMS 012, RL ST 012) Lands of the Bible (3) Textual and archaeological evidence for the lands, cities, and peoples associated with the Hebrew Bible and Christian scriptures.

J ST (CAMS/RL ST) 012 Lands of the Bible (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

CAMS/J ST/RL ST 012 introduces students to the lands, cities, and peoples associated with the Hebrew and Christian scriptures. Using methodologies from historical geography, archaeology, ancient history, epigraphy, and anthropology, students study the Fertile Crescent, from the Nile Valley, through the Levant and its Jordan River valley, to Mesopotamia--the river valleys of the Tigris and Euphrates. Students will study the cities and states of the cultures along these rivers in the Bronze and Iron Ages, including Memphis/Saqqarah, Thebes, Ugarit, Jerusalem, Lachish, Megiddo, Shechem, Samaria, Hazor, Ebla, Babylon, Ur, Petra, Jericho, 'Akko, and others. These are the lands of the Hebrew and Christian scriptures, but also cities that have been revealed through modern study. For example, the texts excavated at Ugarit (Syria) in the 1920's shed light on the relations between ancient Israelites and their Canaanite neighbors in the period of the "Conquest" and the monarchies of the Iron I and Iron II periods. Students will learn that the culture of the ancient Near East is inexorably linked to an understanding of the religious traditions that grew up in the region, including Judaism, Christianity, and Islam. Classes will be a combination of lecture, discussion, and problem-solving, with frequent use of slides and occasional use of artifacts to illustrate the topics at hand. Students are evaluated on three of the following five means: a midterm test, a final essay examination, a five to seven page term paper, a team research oral presentation, a team research poster presentation. Participation in class discussion will also be evaluated. This course fulfills three credits of the General Education or the B.A. humanities requirement. For majors in Classics and Ancient Mediterranean Studies, the course fulfills the requirement of three credits in Near Eastern literature and language, civilization, or archaeology. The course fulfills the three credit requirement for courses in RL ST 001-099 for the Religious Studies major, and the Jewish Studies major's requirements. The course also would fulfill three credits of the six credit requirement for courses in any field that may be below the 400-level for the Religious Studies Minor, three credits of the nine credits required in course work for the Jewish Studies Minor, and three of the 18 credits required for the Classics and Ancient Mediterranean Studies minor. This course will be offered once a year with 50 seats per offering.

J ST 083S First-Year Seminar in Jewish Studies (3)
(GH;FYS;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Through a combination of readings, lectures, discussions, and research projects, students will learn to master the subject material of the course and acquire basic skills important to the study of humanities. Students will learn to read academic books, as well as original documents, to formulate arguments, and to write analytical essays and papers. Analyses of this type will provide students with techniques for formulating, identifying, and judging academic arguments and presentations in many fields of learning other than Jewish Studies. The topics chosen for these seminars will introduce students to some of the major figures, historical, literary, religious, and sociological developments in Jewish Studies. By concentrating on these topics, the students will better understand the cultural assumptions of different groups and societies. Although the course will focus on a specific topic, the instructor will aid the student in seeing the larger implications of the issues and controversies discussed in the class. The international and intercultural aspects of the topic will consistently be considered. The course will require students to express their ideas as well as to gather information through research, discussion, and writing. It will consistently challenge students to consider social behavior, the nature of the community, and the value of scholarly work as these relate to the particular topic of the seminar. The course fulfills the first-year requirement, as well as one of the humanities requirements in general education or a Bachelor of Arts humanities requirement. The first-year seminar will be offered twice per year with an enrollment limit of 20 per section.

General Education: GH
Diversity: IL

J ST (CAMS, RL ST) 070 Prophecy: The Near East Then and Now (3) (GH;IL)

The objective of this course is to introduce students to the prophetic traditions of the ancient Near East and the Bible of the Judeo-Christian traditions. The course will explore the development of prophetic circles in the ancient Near East (incl. Egypt, Syria, Canaan, and Mesopotamia) and then focus on the major prophetic traditions of the Hebrew Bible (to include at least Isaiah, Jeremiah, Ezekiel, Amos, Hosea, Micah, Haggai, Zechariah, and Daniel) and how these traditions were understood in early Judaism and nascent Christianity. Special attention will be paid to the roles of priests, kings, and prophets in ancient Israel to better understand Israelite and Judaean prophetic traditions in ancient Israelite society. The course will then examine the rise of apocalypticism and its modern manifestations in the coalition of conservative Christians and Jews in "Zion" -- the new Jerusalem. Additional emphasis will be placed on the religious and political interactions which manifest themselves in the prophetic movements--then and now--including the rhetoric of ideology and propoganda. Important figures and events illustrate these cultural and political trends, in antiquity, and in the contemporary setting.

J ST (CAMS/RL ST) 090 Archaeology of Jerusalem: Past and Present (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Jerusalem, a holy city for Judaism, Christianity and Islam, is symbolically depicted in art and literature as the physical and spiritual center of the world. Throughout its history, this "city of peace" was a focal point attracting numerous cultures and peoples, the latter sometimes as prophets and more often as conquerors. The reasons for Jerusalem's centrality and significance during the past five millennia as a heavenly and earthly capital are explored in this course.

The course curriculum will survey the religious, political, archaeological and historical record of ancient Jerusalem, beginning with its earliest settlement during the fourth and third millennia BC. Jerusalem's urbanization in the second millennium BC, its role as the capital of biblical Israel and Judah during the First and Second Temple periods, and its transformation as a center of Christianity and later Islam are studied utilizing the testimony of artifacts, architecture, and iconography in relation to the written word. Throughout the ages and continuing into the 21st century, Jerusalem remains a contested city for the three monotheistic faiths. The holy city's impact on the politics of the modern Middle East will be critically examined in light of Jerusalem's history and recent archaeological discoveries and their modern-day interpretation.

Objectives include the critical evaluation of archaeological, historical and literary evidence and its relationship to modern-day political and religious perceptions of Jerusalem. The course will encourage research skills (including library training sessions) and writing and oral communication skills based on an analytical approach to the texts and material culture relevant to Jerusalem.

Student evaluation will be based on active participation (attendance, discussion sessions, group presentations, and individual oral presentations), two short papers, a midterm, and a final exam.

This course will fulfill three credits of the General Education or the B.A. humanities requirement and the GI requirement. For majors in CAMS, the course will fulfill the requirement of three credits in Near Eastern literature and language, civilization, or archaeology; and for those in the CAMS ancient Mediterranean archaeology option it will fulfill the three credits of archaeology course work requirement. The course will fulfill three credits of course work concerned with the ancient period or with the land of Israel.

(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

From the domestication of animals and the dawn of agriculture to the development and socialization of monotheism, the world of the first civilizations led to that of the Bible and ancient Israel. This course, involving a critical view of Biblical texts in light of other anicent sources, archaeology and historical methods, explains the nature and the evolution of society, religion and thought in the Biblical era. Learn how civilization arose, and how the state appropriated religion and applied it for its purposes. How the science of administration developed and deployed ideological tools to further its own ideas of the West developed. This course is deeply subversive, particularly of religious and academic shibboleths. The only authority in this class is that of the most persuasive reader, and doctrines, whether religious or political, will have to be checked at the door.

An example of evaluation may be: weekly participation in discussion; mid-term and final essay examinations involving a critical evaluation of ancient text's claims in combination with archaeological evidence; a research essay, where the class or section size is lower than 30; an ability to read critically, bringing different classes of evidence to bear on issues arising from the texts, and construct coherent and compelling arguments to a particular thesis. The course provides a Near Eastern counterpart to HIST 100, 402 and a Near Eastern aspect to the Jewish Studies major. It complements RL ST 110, by offering historical exploration of the culture under study in that course. Related courses include HEBR, 010, ENGL 104, RL ST 004, RL ST 012, and RL ST 111. The course helps round out the majors in History and Jewish Studies, particularly in ancient history. It also extends the program in Religious Studies (history of religions), and it contributes to the ancient stream of the prospective program in Jewish Studies and History. The class will be offered once every other year with an enrollment limit of 15-20.

Jewish Studies (J ST)

J ST 110 (GH;US;IL) (CAMS 110, RL ST 110) Hebrew Bible: Old Testament (3) Introduction to the history, literature, and religion of ancient Israel.

J ST (CAMS/RL ST) 110 Hebrew Bible: Old Testament (3)
(GH;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The Hebrew Bible is the record of the interaction between the people of ancient Israel and their God. As a religious text, the Bible is inextricably intertwined with the cultures of Israel's neighbors, including the Canaanites, Syrians, Greeks, Assyrians, Babylonians, Arabs, Egyptians, and the peoples of the eastern desert. To study the Hebrew Bible and its development during the first millennium BCE is to study the history, culture, and literature of the entire region. Hebrew Bible introduces students to the literature of ancient Israel, its rituals, the stories which established a people's identity, and which defined their moral behavior. Great figures of the texts, such as Moses, David, Solomon, Bathsheba, Ruth, Jeremiah, Daniel, and Ezra, teach us important lessons about life and how people of faith attempted to relate to one another, to God, and to people outside their ethnic group. Students will read from the text and from a textbook which contains scholarly opinion from a variety of sources. Recent archaeological and epigraphical studies will be incorporated into the course to enhance our work. The ultimate goal will be to assess the meaning of the texts in their ancient Near Eastern environment, and to understand the development of Hebrew religion and the beginnings of Rabbinic Judaism. Students will be evaluated using an hour examination, a 6-8 pp. "hermeneutical essay," a final examination, class attendance and discussion. As an introduction to the scriptures of the Hebrew Bible / Old Testament, RL ST 110 utilizes the methodologies used in the academic study of religion. The course is related or linked to many courses in religious studies which use these same methods or which are related to the history and development of Judaism, Christianity, or Islam. RL ST 110 may be used to fulfill requirements for the Religious Studies major. RL ST 110 may also be used to fulfill the GI or GH requirements in the major or minor in Religious Studies, Classics and Ancient Mediterranean Studies and Jewish Studies. The course will be offered at least once a year, with an enrollment of 120.

Jewish Studies (J ST)

J ST 111 (GH;IL) (CAMS 111, RL ST 111) Early Judaism (3) Religious thought, practices, and parties in the Second Temple period; the emergence of rabbinic Judaism.

J ST (CAMS/RL ST) 111 Early Judaism (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Early Judaism will introduce students to the history of Judaism as reflected in Jewish literature from the period of the Babylonian exile (587/6 BCE) to the closure of the Babylonian Talmud (ca. 600 CE). In this period, ancient Hebrew religion was transformed into a new world religion-Judaism. Students will read selections from the Bible, and from other religious literature, including the Dead Sea Scrolls, the Apocrypha, the Christian Scriptures, the Mishnah, and the Talmudim. By tracing the development of various Jewish "parties," students will appreciate how Classical Judaism evolved, and how the early Church emerged from Jewish roots in the first centuries CE. Early Judaism grew from its roots in the period of Achaemenid domination. Jews were dispersed throughout the eastern Mediterranean, so influences from Persian, Hellenistic, and Roman thought naturally influenced the faith's development. Students in Early Judaism will develop a new appreciation for the basic beliefs and practices of Judaism as well as for the beginnings of the Jesus movement and the development of the early Christian Church. Theological and historical questions concerning the origins of evil, the primacy of prayer, the beginnings of Jewish religious architecture, and the rise of anti-Semitism will be explored. Religion is always linked inextricably to culture. Judaism's transformation in contact with diverse cultures will become evident throughout RL ST / CAMS / J ST 111. The methodologies used in this course will enable students to read and evaluate primary and secondary sources used in the academic study of Judaism. Many other courses in Religious Studies (001, 004, 110, 120, 124), Jewish Studies (010 and 102), and Classics and Ancient Mediterranean Studies, as well as History and Art History are closely related or linked to this course. RL ST 111 may be used to fulfill 3 credits in the Humanities, or to fulfill the GI requirement in the major or minor. The course will be offered once each year, with an enrollment of 65. This course will satisfy 3 credits towards the minor in Jewish Studies or the major in Religious Studies, plus being cross-listed with CAMS, fulfilling part of the requirement for courses in supporting or related areas of all Classics and Ancient Mediterranean Studies majors. The course also provides an excellent addition to other courses, such as CAMS 010, "Mesopotamian Civilization;" CAMS 044, "Ancient Near Eastern Mythology;" CAMS 045 "Classical Mythology;" CAMS 033, "Roman Civilization; and CAMS/RL ST/J ST 012, "Archaeology of the Lands of the Bible."

J ST 114 (GH;US;IL) (RL ST 114) Modern Judaism (3) Trends in Jewish life and thought since the French revolution; Judaism's responses to the challenge of modernity.

J ST (RL ST) 114 Modern Judaism (3)
(GH;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The course explores the opportunities and problems of Jews around the world from the late eighteenth century -- the "age of emancipation" -- to the present time. Commercial, political, and intellectual revolutions in the 1700s, giving rise to modern capitalism, republicanism, and an emphasis on reason, combined to induce political states to grant Jews unprecedented freedom. Emancipation introduced new elements into Jewish life: religious change, personal choice, and internal disagreements. In practical ways, life improved for Jews, as they became more prosperous and assimilated. But freedom also increased the chances for loss of identity, as liberals discarded some rituals as old-fashioned and many individuals chose to give up traditional practices. In addition, anti-Semitism persisted, although it was now, at times, more difficult to detect. Traditional forms of hostility to Jews, such as heresy trials and political expulsions, were replaced by subtle expressions of political and social discrimination. But hatred of Jews did not disappear, despite widespread acceptance in Western culture of political liberalism. The class explores these trends in Europe, the Americas, and Israel. It begins by looking at the fragile freedom of nineteenth-century Jews. In the twentieth century, Jewish experience has often been characterized by open conflict: in the Holocaust, the formation of Israel, contemporary black-Jewish relations in the United States, and Jewish-Muslim relations in the Middle East. The course concludes with these recent struggles. Course readings include personal narratives (reminiscences or letters) and works of fiction (a short story, play, and novel). The class is primarily a discussion class, using writing assignments as the principal method of evaluation. The course requires three graded essays and an ungraded proposal. Students are also asked to keep a journal of commentary on course readings. Class attendance and participation are components of the final grade. The course serves as an introduction to modern Judaism as a religion and culture. It prepares undergraduate students for advanced work in European and American Judaism, as well as Israeli history and culture. These advanced courses are found in the Religious Studies and Jewish Studies programs and in the Departments of History and Comparative Literature. It may be used to complete the major or minor requirements in Religious Studies and Jewish Studies. The class fulfills the humanities requirement for non majors. The course is normally offered once every two years, and the enrollment is 40 students.

Jewish Studies (J ST)

J ST 115 (GH;US) (HIST 115, RL ST 115) American Jewish History and Culture (3) Examination of the history, culture, social tenstions, and contributions of Jews and Judaism in America.

J ST (HIST/RL ST) 115 American Jewish History and Culture (3)
(GH;US)

Throughout American history, Jewish presence on American soil has compelled Americans to re-think the meaning of religious and ethnic diversity. As one of the earliest non-Christian immigrant populations, American Jews struggled to explain how they could nonetheless fit into American cultural, political and social life. At the same time, many Jews have been concerned with their own survival as a distinctive group, unwilling to cede those practices, behaviors or traits that designate them as a people apart from other Americans. This course is about how these two seemingly contradictory goals—to integrate into America and to remain distinctive from other Americans—shaped the history and experience of Jews in the United States and influenced the way Americans think about diversity and pluralism.

The student of American-Jewish history must be attuned to the multiple ways that Jewishness has been defined: as a race, a religion, a nationality, and an ethnicity. In this course, far from choosing just one of these designations, we will explore Jewish life from many different angles. Topics to be considered include religious reform, immigrant experience, political activism, popular culture, and struggles over community authority. Readings focus on a number of primary texts, including memoirs, novels, films and philosophical essays. Secondary books and articles will also help deepen students' understanding of trends in American-Jewish history and awaken them to diverse interpretations of history. Students will be encouraged to engage actively and critically with the texts by writing short reading responses, longer essays, and participating in classroom discussion and presentations, all of which will serve as the basis for their evaluation.

This course complements offerings in Religious Studies, Jewish Studies and History. It provides a foundation for an already existing upper-level seminar in American Judaism (listed in Jewish Studies and Religious Studies). In addition, the course strengthens the History department's offerings in American history, serving as a basis for students interested in immigration, ethnicity and religious history. Students who are interested in modern Jewish history will also find this course a worthwhile addition to their program of study, since, unlike other courses, it deals primarily with the story of Jewish life in the United States.

This course will be offered approximately once a year, and the enrollment will be 40 students, as is typical for other 100-level Jewish history classes.

Jewish Studies (J ST)

J ST 120 (GH) (CAMS 120, RL ST 120) New Testament (3) Introduction to the history, literature, and religion of early Christianity in the Jewish-Hellenistic setting.

J ST (CAMS/RL ST) 120 New Testament (3)
(GH)

(BA) This course meets the Bachelor of Arts degree requirements.

This course introduces the student to the New Testament (NT), the principal religious text of Christians. As such, it is one of the most significant and most studio texts in human history. Written in Greek between approximately 55 C.E. and 110 C-E the New Testament consists of 27 individual books, each written by a separate author (c, authors), that were later assembled into the "New Testament." Because of the growth of Christianity, the NT has influenced every aspect of our world-to name only a few: history, politics, economics, literature, philosophy, ethics, medicine, science, the arts (music, architecture, the visual arts), gender roles, theater and drama, law, psychology, and sociology. After introducing the student to the academic study of religion and the "historical-critical method," our study begins by examining the materials from which the NT's text is reconstructed, and the period in which the NT was authored. This includes exploring other parallel phenomena (such as miraculous hearings, resurrections, and virgin births) in contemporaneous Graeco-Roman religions. After this background is in place, the course turns to an examination of the gospels and their interrelationships, the pictures of Jesus presented (and their relationship to first-century B.C.E. Judaism), variations among Christian understandings of Jesus reflected in the NT and other contemporaneous Christian writings (he was a man, an angel, a lesser divinity), Paul and his life and writings, and the emergence of Christianity from Judaism as a distinct, new, apocalyptic religion. Along the way, we examine the manuscript tradition of the NT, changes that have been made to its text, and different interpretations of certain passages in the NT. We also examine the historical-critical tools scholars use to date and sequence passages in the NT (form, redaction, literary, and historical criticism, for example), for one can correlate the evolution of early Christian theology with the evolution of the NT's text.

(GH;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course traces the development of one of the world's "Big 5" religions from the death of its founder (about the year 30 CE) down to the middle ages. It focuses on significant trends, controversies, personalities, and turning points. These are not just diverse in terms of chronological breadth, but are also spread geographically from the eastern end of the Roman Empire (the border with Persia) to northern Europe. Attention is given to the various manifestations of Christianity (Judaic, Hellenistic, Latin), and the linkage between local patterns (culture, history and predispositions) and how these shaped the sort of Christianity that took root in particular areas. Students typically will be evaluated on four "pop" quizzes, a midterm and a final exam. The course can be used towards a major or minor in Religious Studies, Classics and Ancient Mediterranean Studies, and Jewish Studies and used to fulfill 3 credits in the Humanities for non-majors. This course will be offered once a year with 175 seats per offering.

Jewish Studies (J ST)

J ST 131 (GH;US;IL) (CMLIT 110) Jewish Literature: An International Perspective (3) Literature of the Jewish tradition in various cultures and contexts, such as Europe, Israel, Islamic countries, and the Americas.

J ST 131 (CMLIT 110) Jewish Literature: An International Perspective (3)
(GH;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

CMLIT 110 (J ST 131) will provide an introduction to the multiple worlds of Jewish experience and the different literatures they continue to inspire. Jewish literary creativity has varied widely with the personal and communal experience of writers in many parts of the world, and in many different time periods. Readings usually range from the first Jewish literary text, the Hebrew Bible, to twentieth-century works, including writings about the Holocaust. The course typically includes units such as Jewish writing and culture in Eastern Europe, in the Americas, in Spain during the Middle Ages, and in Israel and the Middle East today. The material may be organized chronologically, thematically, or by regions or languages. Texts that critique or apparently suppress Jewish identity, as well as texts with representations of Jews by writers of other heritages, may be included for comparative purposes. We will include writings by Jewish authors who have written in languages usually associated with Jewish tradition (such as Hebrew and Yiddish) and in other languages (such as Spanish, Arabic, German, English, etc.). Topics discussed in the literature may focus on questions of Jewish identity and continuity, the situation of Jews as a minority people, the immigrant and diasporic experience, representations of the Holocaust, and the establishment of Israeli culture as a mixture of several traditions. We will question generalizations about the meaning of "Jewish" by showing the wide range of characteristics associated with Jewish literary productions, and the great diversity of depictions of Jews and Jewish lifestyles, in different times and places. In addition to our primary focus on literary texts, we may include examples of other cultural productions (film, music, the visual arts, philosophy, etc.). All offerings of the course include writing assignment and discussion in the evaluation methods. The syllabus often includes 2 or 3 midterm exams (with essay questions); a final exam, paper, or project; oral presentations; participation in online discussions. CMLIT 110 (J ST 131) counts towards the Comparative Literature major and the World Literature minor. No prior knowledge of Jewish tradition is required, and General Education students are welcome. This course also fulfills the General Education Humanities requirement, the Bachelor of Arts Humanities requirement, and the United States and International Cultures requirement.

Jewish Studies (J ST)

J ST 132 (GH;US) (ENGL 132) Introduction to Jewish American Literature (3) A historical and thematic survey of Jewish Literature of the United States.

J ST (ENGL) 132 Introduction to Jewish American Literature (3)
(GH) (US)

This course will provide an introduction to Jewish American literature through a historical survey of the tradition's key texts, figures, and themes. the course will focus on the defining aspects of the literature and on what the literature "thinks" about Jewish American culture and identity. But rather than assuming a unity to Jewish-American culture, this course will use Jewish literature to seek ways of articulating and representing both the points of cohesion and the points of divergence that characterize Jewish life in America. the United States has absorbed large numbers of Jewish immigrants hailing from many parts of the world, holding many different ideas about Jewish practice, and affiliating themselves with many different political, social, and cultural traditions. Moreover, Jews have settled and made homes in a wide variety of American communities. This course aims to explore Jewish American culture's marked diversity by offering a literary window onto the major fault-lines running through Jewish American culture: lines demarcated by gender, by political affiliation, by geography, by pre-immigration community by religious practice, by attitude toward world Jewry, by national allegiance, and by minhag (or custom), to name just a few. The class therefore provides an opportunity to consider the constitution, origin, and development of Jewish American's identity and social formations by looking at how that identity and those social formations exist and what they "do" in literature written by and about Jews in America. Materials will consist predominantly of primary texts, including prose fiction and nonfiction, poetry, drama, and film. Course methodology will emphasize the close reading of these texts. Through occasional writing exercises, formal papers, in-class projects, and essay examinations, students will respond to, integrate, compare, and analyze these materials. The course complements offerings in Jewish Studies and English, and it will satisfy the GH and US requirements. Most obviously, the course will offer students of Jewish literature, world literature, and American literature an opportunity for contextualization. It enables students in Jewish Studies to study the rich literature of American Jews, and it adds to courses covering Jewish American history, religion, and culture. The course offers students in English a valuable, sustained introduction to an important U.S. and world sub-culture.

Jewish Studies (J ST)

J ST 134 (GH;IL) (CAMS 134, RL ST 134) Archaeology of Biblical Israel (3) Archaeology of Biblical Israel from 1200 B.C.E. to c. 640 C.E.; relationship between archaeological and textual evidence.

J ST (CAMS/RL ST) 134 Archaeology of Biblical Israel (3)
(GH;IL)

Ancient Israel and the Levant, a region that included present-day Israel, Jordan, Palestine, Lebanon, and southern Syria, traditionally served as the land bridge and crossroads that connected the great empires of Mesopotamia and Egypt. Its strategic geographic location has ensured its significance throughout history. Many different cultures and peoples have influenced and controlled this region resulting in a very multi-cultural past reflecting the history of the entire Ancient Near East. This is the background to the origins of the Israelites at the end of the second millennium B.C.E., the birth of the Hebrew Bible, and the emergence of Judaism, Christianity and Islam. This course will focus on Biblical Israel in the southern Levant from the emergence of Ancient Israel (ca. 1200 BCE) through the Second Temple and Roman periods concluding with the development of the region as the "Holy Land" for Jews, Christians and Moslems. Students will examine the emergence of Israel; the arrival and settlement of the Philistines; state formation and the period of the United and Divided Monarchies; the fall of Israel and Judah to the Assyrians and Babylonians; the return from exile during the Persian period; Hellenism and the influence of the Roman world on Palestine; the reemergence of Judah during the Second Temple period; the destruction of the Second Temple and emergence of Rabbinic Judaism; Palestine and its role as the "Holy Land" to Jews, Christians and Moslems. The course grade will be based on active participation (attendance, discussion sessions, group presentations and individual oral presentations), one midterm exam and one paper. This course fulfills three credits of the General Education or the B.A. humanities requirement and the GI requirement. For majors in Classics and Ancient Mediterranean Studies, the course fulfills the requirement of three credits in Near Eastern literature and language, civilization, or archaeology; and for those in the Classics and Ancient Mediterranean Studies ancient Mediterranean archaeology option it fulfills the three credits of archaeology course work requirement. The course fulfills three of the nine credit requirement for courses in RL ST 100-299 for the Religious Studies major, and Jewish Studies major's requirement for three credits of course work. CAMS/J ST/RL ST 134 GH may be used to fulfill the requirements for 12 credits of course work at any level towards a Classics and Ancient Mediterranean Studies Minor. This course will be offered once a year with 50 seats per offering.

General Education: GH

Jewish Studies (J ST)

J ST 133 (GH) (CAMS 133, RL ST 133) Archaeology of the Levant and Ancient Israel (3) Archaeology of the Levant and Ancient Israel to c. 1000 B.C.E.; relationship between archaeological and textual evidence.

J ST (CAMS/RL ST) 133 Archaeology of the Levant and Ancient Israel (3) (GH)

Ancient Canaan, a region that included present-day Israel, Jordan, Palestine, Lebanon, and southern Syria, traditionally served as the land bridge and crossroads that connected the great empires of Mesopotamia and Egypt of the ancient Near East. Its strategic geographic location has ensured its significance throughout history. In the past as in the present, many different cultures and peoples have influenced and controlled this region resulting in a very multicultural past reflecting the history of the entire Ancient Near East. This is the background to origins of the Israelites at the one of the second millennium B.C.E. and the impact of this history is still evident in modern political events of the region. This course will focus on Canaan in the southern Levant from the origins of agriculture to the emergence of ancient Israel down to ca. 1 000 B.C.E. Students will examine cultural, social and political developments and transitions in Canaan and Israel in antiquity that will include the development and emergence of urban society; pastoral nomadism; the age of internationalism of the Middle Bronze - Late Bronze Ages; religion and oultic practices; Egyptians in Canaan during the 13th and 12th centuries B.C.E.; daily life in Canaan; the arrival and settlement of the Philistines; and the Emergence of Israel. Emphasis will be placed on a critical reading of contemporary historical and Biblical texts and an analysis of the archaeological evidence In order to reconstruct the history, culture, and society of Canaan and ancient Israel. The course grade will be based on active participation (attendance, discussion sessions, group presentations and individual oral presentations), one midterm exam and one paper on a topic that requires a critical examination of both historical texts and archaeological evidence. The course fulfills three credits of the General Education or the B.A. humanities requirement and the GI requirement. For majors in Classics and Ancient Mediterranean Studies, the course fulfills the requirement of three credits in Near Eastern literature and language, civilization, or archaeology; and for those in the Classics and Ancient Mediterranean Studies ancient Mediterranean archaeology option it fulfills the three credits of archaeology course work requirement. The course fulfills three of the nine credit requirement for courses in RL ST 100-299 for the Religious Studies major, and the Jewish Studies major's requirement for three credits of course work. This course will be offered once a year with 50 seats per offering.

Jewish Studies (J ST)

J ST 151 (CAMS 151, HEBR 151) Introductory Biblical Hebrew (3) Fundamentals of Biblical Hebrew grammar, syntax, and vocabulary.

J ST (CAMS/HEBR) 151 Introductory Biblical Hebrew (3)

The aim of CAMS/J ST/HEBR 151 is to introduce students to the fundamentals of Biblical Hebrew as quickly and thoroughly as possible. Biblical Hebrew is the language in which the Old Testament was written, between the period of approximately 1200-200 B.C.E. This focuses primarily on the morphology and syntax of Biblical Hebrew. Drills on each point of grammar, as well as translation of sentences from Hebrew to English and English to Hebrew, and brief passages taken from the Bible are the basis of the student's homework throughout the semester. By the end of the semester, the students will be prepared to read short, unmodified passages of the Bible. The course will focus primarily on reading and writing, though students will read aloud in class regularly in order to ensure correct pronunciation and understanding. CAMS/J ST/HEBR 151 will prepare students to continue with CAMS/J ST/HEBR 152 and then 400-level courses.

The course goals, in addition to providing the students with a firm grounding in Hebrew grammar and vocabulary, include giving the students a basic understanding of the history of the Biblical text. The primary focus will be on mastering paradigms and syntax, but the students will also be introduced to the Biblical texts themselves, which together from such an important piece of literature.

Jewish Studies (J ST)

J ST 152 (HEBR 152, CAMS 152) Intermediate Biblical Hebrew (3) Intermediate study of Biblical Hebrew grammar, syntax, and vocabulary.

J ST (CAMS/HEBR) 152 Intermediate Biblical Hebrew (3)

CAMS/J ST/HEBR 152 continues from CAMS/J ST/HEBR 151, which is a prerequisite for enrollment. After a brief review of key grammar and morphology from the first semester, the course will complete the process of providing students with a sufficient grasp of Hebrew vocabulary, morphology, and syntax to enable them to read unadapted passages from Biblical Hebrew texts (with the aid of a lexicon) by the end of the course. Class sessions will focus on grammar drills, sentences, and similar exercises as homework to supplement class work. As the semester progresses, students will read more and more from actual Hebrew texts, rather than composed sentences by the textbook author, so that when the students enter more advanced classes, they will find the transition to reading Hebrew as smooth as possible.

In tandem with the increasing emphasis on Hebrew written by ancient Hebrews, the course will continue to focus on the linguistic and cultural background for the texts that the students read. Students will be evaluated on a combination of written work, including frequent quizzes, tests, homework completion, and course attendance and participation. CAMS/J ST/HEBR 152 will prepare students to continue with courses at the 400-level.

Jewish Studies (J ST)

J ST 235 (US;IL) (HIST 235, RL ST 235) The Church and the Jews (3) Examination of the relationship between Western church and the Jews from the First Century to Enlightenment.

J ST 235 The Church and the Jews (3)
(US;IL)

This course will examine a key aspect of western history - the complex relationship between the Western (Roman Catholic) Church and the Jews, from the first century to the present. We will analyze ideas and policies regarding Jews as expressed in different realms, from theology and canon law to church art and popular preaching. We will also examine how changing conditions led to striking changes in church attitudes and policy, and how church policy was often at odds with popular sentiments about Jews.

The course will be designed to enable students to grasp the fluidity of attitudes over time, and the interplay of economic, social, political, and theological factors; to grasp of essential elements of a key area of conflict in western culture; and to develop their skills in the close reading of primary texts.

Students will be evaluated on the basis of three quizzes and a final exam.

The course would offer a chance for students to develop perspectives previously gained in a number of courses, particularly HIST 001 and 002 (The Western Heritage), RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), HIST 107 (Medieval Europe), HIST 407 (Early Medieval Society), and J ST 010 (Jewish Civilization). It would complement such courses as HIST 108 (The Crusades), HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), HIST 414 (Renaissance and Reformation), J ST 111 (Early Judaism), J ST 110 (Hebrew Bible), RL ST 120 (New Testament), and RL ST 124 (Early and Medieval Christianity).

The course will count for 3 credits toward: a) the 22 credits required for the minor in Jewish Studies, b) the 33 credits required for the major in Jewish Studies, c) the 30 credits required for the major in Religious Studies, and d) the 36 credits required for the History major.

Jewish Studies (J ST)

J ST 280 (GH;IL) (WMNST 280, RL ST 280) Women and Judaism (3) Explores the Jewish views of women that have influenced the roles of women within both the religion and Western culture.

J ST (WMNST;RL ST) 280 Women and Judaism (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Women and Judaism will introduce students to the roles and views of women as seen in the Jewish tradition. Because Judaism is not monolithic, these views will vary even within time periods and even among rabbis. The goal of this course, therefore, is not for students to leave the class with one idea of what a Jewish woman is or one idea of what issues are at stake for women in Judaism. Rather, the goal is for students to understand the complex relationship women have to this religion. This course will also explore the views of Jewish women and the issues that concern then in contemporary society. Objectives include the following: students will begin to understand the stereotypes that influence how Western society views Jewish women, and as a result, how they have come to view themselves. They will be asked to examine the many important roles that Jewish women have played both in their religion and the society at large. They will be asked to examine how the Jewish tradition both helped and hindered women to play these roles. They will see how Jewish women contributed to the development of their own religion and to the larger culture in which they live. They will develop a deeper appreciation for the complexity of the relationship between women and religion. Topics include images of Jewish women in the Bible and the media, women and Jewish views of sexuality, Jewish ethics, Judaism and feminism, and women and Jewish theology. Students will be evaluated by examination, writing ability (several short papers or one larger paper), and group presentations.

J ST 409Y (IL) (HIST 409Y, RL ST 407Y) European Anti-Semitism from Antiquity to the Present (3) Surveys the history of anti-Semitism in Europe from antiquity through the Middle Ages to the present.

J ST (HIST) 409Y (RL ST 407Y) European Anti-Semitism from Antiquity to the Present (3) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course analyzes major episodes in the history of anti-Semitism and tries to clarify the Motives and dynamics involved. It seeks to understand what these episodes have in common, and what is unique in each case. Is there a single universal, eternal anti-Semitism? Or are there rather anti-Semitisms", each belonging to a unique historical context? Is there a single continuous line of development in anti-Semitism? What is the relationship of a particular anti-Semitism to the national culture in which it originates?

We will be reading the major original texts of anti-Semitism from Roman and ancient writers, through early Christian texts and medieval Christian Blood Libels against the Jews, documents of the Spanish expulsion, Lutheran tracts, Voltaire's essays, German philosophical texts from Kant to Marx, Wagner's racial essays, the Protocols of Zion, and documents of Nazi anti-Semitism by Hitler and Streicher.

The major part of the grade will depend on a short research paper which will be presented in various drafts, so that the final version represents the culmination of discussion and constructive criticism and advice. This course is a parallel course to J ST/HIST 416 (Zionist History) and J ST/HIST 118 (Modern Jewish History). This course will count toward the Religious Studies, Jewish Studies, and History majors and minors in the 400-level category. This course is offered once every other year with 25 seats per offering.

Jewish Studies (J ST)

J ST 410 (US;IL) (HIST 410, RL ST 410) Jews in the Medieval World (3) Trends in medieval Jewish society under Islam and Western Christendom.

J ST 410 Jews in the Medieval World (3)
(US;IL)

The Jews lived in widely scattered communities under Christian and Islamic rule in the medieval period. This course will examine how Jews adapted the traditions they developed in Palestine and Babylonia in the early centuries C.E. to the new conditions they encountered in Europe and the Mediterranean region from the ninth to the fifteenth centuries. It will focus on the general problem of how traditional societies survive in rapidly changing circumstances, particularly when their members are a minority population. The course will aim at developing students' skills in comparative analysis as they compare the adaptive strategies of Jews in different cultural spheres (the Franco-German region versus Spain, for example). They will also be asked to compare the different polemical stances Jews adopted vis-a-vis Christianity, on the one hand, and Islam, on the other. They will be encouraged to understand the ways in which Jews internalized certain aspects of the majority culture and rejected others. It is hoped that they will come to see how deeply Jewish history was intertwined with medieval Christian and Islamic history, despite inter-religious hostilities and the frequent need for Jews to defend against majority aggression.

Students will be evaluated on the basis of two mid-term exams (the first after the survey of the Muslim world, the second after the examination of the Franco-German region) and a comprehensive final exam.

The course will be linked to most of the courses taught in the field of Jewish Studies, especially J ST 111 (Early Judaism), J ST 114 (Modern Judaism), and J ST 118 (Modern Jewish History from 1492). It will also be linked to offerings in Religious Studies: RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), RL ST 107 (Introduction to Islam), RL ST 124 (Early and Medieval Christianity), and RL ST 165 (Introduction to Islamic Civilization). Further, it would complement HIST 001 and 002 (The Western Heritage), HIST 107 (Medieval Europe), HIST 108 (The Crusades), HIST 407 (Early Medieval Society) HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), and HIST 471W (Classical Islamic Civilization, 600-1258).

The course will count for 3 credits toward:
a) the 22 credits required for the minor in Jewish Studies
b) the 33 credits required for the major in Jewish Studies
c) the 30 credits required for the major in Religious Studies
d) the 36 credits required for the History major

It will be offered once a year with an enrollment of approximately 60 students.

Jewish Studies (J ST)

J ST 424H (HIST 424H, PHIL 434H, RL ST 424H) Monotheism and the Birth of the West (3) The birth of monotheism and its relation to social organization, the idea of individuality, and science.

J ST (HIST/RL ST) 424H (PHIL 434H) Monotheism and the Birth of the West (3)

Learn about the formation of Western culture, while learning to analyze the texts and other evidence about its formation from a critical, rather than naive, viewpoint. The idea of monotheism probably arose very early and was even briefly implemented as a state cultic policy in Egypt in the 14th century BCE. Why, then, did it take another seven centuries to become widespread--appearing in ancient Judah, Babylon, and Ionia almost simultaneously? To answer this question, the course focuses on several developments, through the medium of primary texts and archaeology: the shift from a state hinterland based in extensive agriculture and household processing to one organized for intensive agriculture and industrial processing the rise of recognizably modern science; the promotion of individuation and an international elite culture in the context of Assyrian and Babylonian imperial ambitions; the development of the historical and archaeological arts in the context of archaizing in order to reinvent local traditions; and the socialization of monotheism and of democracy. Students will be evaluated on their discussion of the textual evidence as well as on reports in class and a final paper. This is the sole honors course treating the birth of the West. It expands on knowledge acquired in courses listed as prerequisites and in CAMS/J ST/RL ST 012; CAMS 044; ANTH/CAMS 133; CAMS/PHIL 200; HIST 100; HIST/J ST 102; and PHIL 200 and enriches the student experience in CAMS 400, CAMS 440, and CAMS 480; HIST 402; J ST 411; PHIL 437, PHIL 453, and PHIL 461. This course counts toward the major in Jewish Studies, History, and Religious Studies and toward the minor in Jewish Studies and Religious Studies. This course will be offered once every other year with 35 seats per offering.

Jewish Studies (J ST)

J ST 427 (ENGL 427) Topics in Jewish American Literature (3) An in-depth examination of important themes, writers, and/or historical developments in Jewish Literature of the United States.

J ST (ENGL) 427 Topics in Jewish American Literature (3)

This course will provide sustained examination of major themes, texts, and figures in the Jewish American literary tradition. The course will focus on depth rather than breadth in its analysis of the defining aspects of the literature and on what the literature reveals about Jewish American culture and identity. The United States has absorbed large numbers of Jewish immigrants from many parts of the world, holding many different ideas about Jewish practice, and affiliating themselves with many different political, social, and cultural traditions, and moreover Jews have settled and made homes in a wide variety of American communities. Close analysis of literature will therefore provide an opportunity to consider the constitution, origin, and development of Jewish America's wider cultural, political, and social contexts. Materials will consist predominantly of primary texts, including prose fiction and nonfiction, poetry, drama, and film, and the methodology will emphasize the close reading of these texts. Through short writing exercises, in-class projects, essay examinations, and a longer research paper, students will respond to, integrate, compare, and analyze these materials. The course complements offerings in Jewish Studies, English, and Comparative Literature. Most obviously, the course will offer students of Jewish literature, world literature, and American literature an opportunity for contextualization. It enables students in Jewish Studies to study the rich literature of American Jews, and it adds to courses covering Jewish American history, religion, and culture. The course offers students in English and Comparative Literature a valuable, sustained introduction to an important U.S. and world sub-culture and -literature.

Jewish Studies (J ST)

J ST 457 (US;IL) (ANTH 457, SOC 457) Jewish Communities: Identity, Survival, and Transformation in Unexpected Places (3) Examines the global array of smaller Jewish communities that have flourished outside the main urban centers of Jewish settlement.

J ST (ANTH/SOC) 457 Jewish Communities: Identity, Survival, and Transformation in Unexpected Places (3) (US;IL)

This course addresses an understudied aspect of Jewish experience. It aims to expand our understanding of Jewish communities by focusing on those that are, alternatively, small, situated in out-of-the-way places, culturally outside the Jewish urban mainstream, or embedded in a larger society with markedly different values and traditions. These communities often constitute the points-of-contact between Jews and non-Jews, and in so doing sometimes transform Jews, non-Jews, and the relationships among them. Other such communities constitute experiments in Jewish lifeways and provide mainstream Jews with pilot projects for potential social and cultural change. This course will explore the significance of small, little-known, idiosyncratic, and anomalous Jewish communities on Jewish history and culture, and draw on them to instruct students on the social and cultural processes of small or unusual communities generally. The communities studied will be located both in the U.S. and elsewhere in which Jews have lived as a minority community during modern times. The course will look at the founding, growth, and decline of such communities and at their social processes and institutions. It will explore how to understand and analyze such communities, which vary from one part of the world to another. The social world of Jewish communities, large and small, is a core interest of Penn State's Jewish Studies Program. This course will complement the current offerings in Jewish Studies, strengthening the social, cultural, and contemporary perspectives available in the Program. It will provide students with an opportunity to explore individual experience and micro-level processes among Jews, and to study the dynamics of identity and survival. It will complement the current offerings in Sociology and Anthropology by affording an opportunity to focus on community-level social processes and by adding a course on contemporary Jewry. The course will integrate knowledge from a variety of sources and fields, promote intercultural understanding, and meet US and IL requirements. Materials will be interdisciplinary, and will include ethnographies, sociological studies, population studies, histories, and personal narratives. They will include primary texts, creative works, and scholarly analyses. The assignments will be structured to facilitate preliminary experience in independent analysis, library research, or field research. The course will be offered approximately once a year. Enrollment will be limited to 30 students in order to promote active, engaged learning. Evaluations will be based on short papers and outlines that will prepare students for their final, term papers.

Jewish Studies (J ST)

J ST 478 (PHIL 478, RL ST 478) Ethics After the Holocaust (3) Explores the philosophical effects of the Holocaust for thinking about the primary question: Is ethics possible?

J ST (PHIL/RL ST) 478 Ethics After the Holocaust (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is an examination of ethical theories before the Holocaust and how those theories have failed, philosophically and empirically. Course topics will include the history of ethical theory, the nature and problem of evil, goodness and suffering, witnessing and testimony, and the promise of an ethics. This course provides students with philosophical approaches to the issues that emerge out of the events of the Holocaust. The course will help students expand their knowledge of the events of the Holocaust through a philosophical approach that does not merely expose them to what happened, but asks them to think about the implications of what happened: most specifically, how do we understand ethical life, if it cannot stop or confront evil? This course provides students with the philosophical approaches to the issues that emerge out of the events of the Holocaust. It will encourage them to think critically, write effectively and express their thoughts logically. Student evaluation will be based on weekly reaction papers, group presentations, and a final seminar paper. This course covers material in the history of philosophy, contemporary philosophy, and writings pertaining to the Holocaust in various forms (historical, literary documentary, and so forth). It provides links to other major areas in the history of philosophy, postmodernism, ethics, philosophy of religion, and Jewish history. It will be offered every other year.

Jewish Studies (J ST)

J ST 468 (PHIL 468) Modern Jewish Philosophy (3) Explores the major figures in modern Jewish philosophy and their influences on contemporary philosophy.

J ST (PHIL) 468 Modern Jewish Philosophy (3)

The primary objective of this course is to encourage students to have a reflective stance on Jewish thought. Students will learn what comprises Jewish thought and how it is distinguished from theology. They will learn what role religion plays in philosophical thought and what is at stake for a philosophy that emerges from a particular religion. This course will give students perspective on how Judaism links to other philosophical movements, for example, the enlightenment of the modern period. It will enable to think about Judaism from a theoretical perspective, adding a new dimension to what they might study from historical, sociological, or literary viewpoints. Some questions we will consider include: In what ways does it converge/diverge, with the philosophical strains that influence it? In what ways have particular events in history shaped Judaic thinking? Does Judaism, or Judaic thinking, have an essence? If so, what is it? What does Judaism mean for the Jews, and what does it mean for others? And finally, what role does mysticism have in the play between religion and philosophy? Students will be evaluated by written work (short papers and a longer seminar paper) and a class presentation.

Jewish Studies (J ST)

J ST 484 Interdisciplinary Approaches in Jewish Studies (3) An interdisciplinary approach to problems in Jewish Studies, including Art History, Literature, and Sociology.

J ST 484 Interdisciplinary Approaches in Jewish Studies (3)

Jewish Studies is a relatively recent discipline, emerging only since the 1960s, which encompasses a broad series of problems, data, and approaches. This course is designed to introduce advanced students to the background of Jewish Studies as a discipline in 19th and early 20th century scholarship, the various approaches or subdisciplines which characterize Jewish Studies, and a number of key issues which have preoccupied scholars. These include Zionism, the Holocaust, Israel, anti-Semitism, American and diaspora, assimilation and fundamentalisms. Another important issue is whether Jewish Studies should be as part of the academic mainstream, including in emerging areas of scholarship, or whether it should primarily serve the Jewish community.

While it is not the goal to provide complete discussions of these topics, any of which could be or are the topic of semester-long courses, brief reviews of current issues and literature provides student with useful introductions to subjects which they may not have studied previously and to the larger field of Jewish Studies. The course, therefore, addresses issues otherwise partitioned in departments such as sociology, history, art, and literature. Since the course will be team-taught, this will expose advanced students to a variety of different faculty members and approaches outside their particular subdisciplines and will foster greater interaction within the Jewish Studies program. The course serves as a capstone for the Jewish Studies major and minor and as a workshop for interdisciplinary synthesis for advanced students.

Kinesiology (KINES)

KINES 001 (GHA) Introduction to Outdoor Pursuits (1.5-3 per semester, maximum of 12) Introduction to selected outdoor pursuit activities, such as, but not limited to, rock climbing, cross country skiing, backpacking, hiking, orienteering.

KINES 001 Introduction to Outdoor Pursuits (1.5)
(GHA)

Introduction to Outdoor Pursuits is a course that is designed to 'introduce' the student to selected outdoor pursuit activities. The selected activities will depend on the time of the year and availability of resources. The activities could include (but are not limited) to rock climbing, indoor wall climbing, trail day hiking, mountain biking, backpacking, orienteering, kayaking, canoeing, and cross-country skiing. All selected activities will follow the same basic format of skill development and training procedures, history of the activity, available written resources and professional organizations related to the activity, logistical equipment preparation, safety management/risk assessment, and future opportunities to participate in the activity. It is the sole purpose of this course to allow the student to explore different outdoor pursuit activities and then to make a more informed decision as to which activities they might choose to further develop their skill base and competency necessary to partake in the activity at a more advanced level on a lifelong basis. Students will be evaluated by a combination of evaluation techniques. Some examples could include written exams, skill testing and activity management, short writing assignments of topics related to activity, journal keeping and subjective evaluation of performance. This course fulfills the BPA General Education requirement. After completion of the course, students are encouraged to engage in PSOC (Penn State Outing Club) programs, the advanced skills track in the Department of Kinesiology, and other appropriate courses to help with the continued development of 'life skills'.

Kinesiology (KINES)

KINES 004 (GHA) Principles of Fly Tying and Fly Fishing for Trout (1.5) A course designed to enhance student's knowledge, skill, and performance in fly tying and the sport of fly fishing for trout.

KINES 004 Principles of Fly Tying and Fly Fishing for Trout (1.5) (GHA)

Kinesiology 004 is a unique course designed to give PSU students of all experience levels an introduction to the lifetime sport of fly fishing. The purpose of the course is to present the students with the many aspects of fly tying and fishing for trout so that they can enjoy fishing success for the remainder of their active adult lives.

In the course the student will acquire the knowledge, skills, and tactics that they will use to problem solve in the constantly changing natural environment. Instruction /participation will include, but is not limited to, the following topics: conditioning, basic fly tying, tying local patterns, conservation techniques, equipment use/care/selection, fly casting, aquatic entomology, stream hydrology, interpretation of fly fishing opportunities, fly fishing-tactics, basic knots, and field trips to local streams. This is an active lab course where students will participate daily.

There are several unique features surrounding the fly fishing course that should be noted. Because of the geologic location of the University, we are located near many of the premiere fly fishing streams in the eastern United States. These streams have made the university not only a destination for fly fishing minded students but also provides an outstanding opportunity for discovery by other students of a positive, new activity. We use these streams as our labs for the field trips to apply what is learned and enhance the basic understanding of the sport. This is not a new course but a new model of the first accredited university fly tying and fishing course started in the 1930s by Mr. George Harvey. George's early teaching and innovations are so well thought of by the fly fishing community that he is known as the dean of fly fishing and Penn State as Fly Fishing.

Students will be evaluated by a combination of techniques. There will be a written exam, skills testing for casting and fly tying, and subjective evaluation of performance. Students who successfully complete KINES 004 will possess a command of fly fishing knowledge and skills. They will be able to approach every fly fishing situation with critical thinking that will allow them to be confident that they can be successful. Students will find that they have enhanced their quality of life now and for the remainder of their lives.

Effective: Fall 2001

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 006 (GHA) Cycling (1.5) A course designed to give students an understanding of and the ability to establish an exercise program involving riding.

KINES 006 Cycling (1.5)
(GHA)

Kinesiology 006 introduces students to the performance of cycling as a lifelong activity that helps maintain and enhance physical fitness and overall wellness. This course provides the information that the student needs to understand, organize, plan and implement a physical fitness program that features cycling as a primary activity. The centerpiece of this course is a progression of individually-paced rides of varying lengths that are conducted over various terrains. Past activities have included individual time trials, 5 through 25 mile road and trail rides, interval rides, hill rides, and rides to various locations of interest including, Beaver Stadium, the deer research pens, Sunset Park, and various other landmarks around campus and in the community. These activities are complemented by a series of lectures on such topics as the physiology of exercise, cycling safety; goal-setting for personal health; principles and concepts of physical fitness; training methods to address different cycling goals; and nutrition and weight control. Students also participate in team-based projects such as group-designed scavenger hunts and "landmark rides." As a final project, each student is asked to define a measurable fitness goal and design a fitness cycling program to realize that goal. As part of this assignment, students assemble data to indicate that they have achieved their goal, and then identify and analyze the factors that contributed to their success. Students also have the opportunity to monitor their performance throughout the course using a variety of personal assessment inventories and instruments, such as logs and heart rate monitors. When a student completes Kinesiology 006, he or she will be able to identify the components of an effective physical fitness program and explain how cycling contributes to the success of this program; develop realistic fitness goals and design a cycling program to meet these goals; perform a variety of fitness cycling techniques; and understand how cycling promotes psychological well-being. Various evaluation techniques will be used to assess individual progress in Kinesiology 006. These techniques will include (but are not limited to) conventional objective testing, performance on an individual time trial cycling test, personal assessment inventories and assignments, and journaling assignments. There are no special facilities for this course. The Department plans to offer two to four sections each fall and spring semesters with an enrollment of 30 in each section.

Kinesiology (KINES)

KINES 008 (GHA) Competition Casting (1.5) A course designed to enhance student's knowledge, skills, and performance in all forms of casting for sport fishing.

KINES 008 Competition Casting (1.5)
(GHA)

Kinesiology 008 is a unique course designed to give PSU students, of all experience levels, an introduction to the lifetime activity of competitive casting for all types of sport fishing. The purpose of the course is to present the students with the many aspects of casting as it relates to sport fishing. Casting is the key skill in the sport of angling, if you can not cast you can not fish. It is critical to the students enjoyment as an angler. It allows them to be successful fishers for the remainder of their active adult lives.

In the course, the student will acquire the knowledge, skills, and tactics that they will use to problem solve in the constantly changing natural environment. Instruction/participation will include, but is not limited to, the following topics: conditioning, basic bait, fly and spin casting, conservation techniques, equipment use/care/selection, aquatic entomology, stream hydrology, interpretation of fishing opportunities, fly fishing tactics, basic knots, and field trips to local streams. This is an active lab course where students will participate on a daily basis.

Students will be evaluated by a combination of techniques. There will be a written exam, skills testing for casting, and subjective evaluation of performance. Students who successfully complete KINES 008 will possess a functional command of fishing knowledge and skills. They will be able to approach every fishing situation with the critical thinking that will allow them to be confident that they can be successful. Students will find that they have enhanced their quality of life now and for the remainder of their lives.

KINES 008 class is the first level course that is taught in sequence with the fly fishing and fly fishing masters courses in the Kinesiology activity program.

Kinesiology (KINES)

KINES 010 (GHA) Indoor Rock Climbing (1.5) A course designed to provide students with the basic skills, safety, and knowledge of rock climbing.

KINES 010 Indoor Rock Climbing (1.5)
(GHA)

Kinesiology 010 is a course designed to give students a comprehensive introduction to the skills, safety, terminology and equipment used in the sport and recreational activity of rock climbing. This course also provides the knowledge base and experience the student needs to evaluate their continued safe participation in rock climbing. Students will be involved from the onset of the course practicing responsibility, cooperation, and collaborative skills. Group work is an essential component to the success of the student and the course as students work together in teams of climber and belayer (method of securing a climber by the use of a rope). This group connection will also develop communication and trust between climber and belayer. Group work provides the climber with feedback and positive encouragement during the climbs. Observing team member(s) learn and practice constructive encouragement and visual observation in evaluating technique and route choice. Also, immediate instructor and peer assessment will be valuable tools in assisting the climber as they practice to achieve a higher proficiency in climbing techniques. One other vital component to be learned and tested is the proficiency of belaying which instills the important responsibility of safe climbing for all. Each class can begin with a physical preparation for climbing focusing on cardiovascular, strength, and flexibility movements with instruction on proper methods and training procedures. Important information on safety issues and equipment will be presented as a visual demonstration or as an individual assignment. Students have the opportunity to write journals to record goals, share what they have learned in the lessons, and evaluate their progress in the class. Other activities may include internet evaluations of rock climbing web sites and interactive sites. Additional evaluation tools may include objective testing, skill proficiency, and safety knowledge. As a final activity, students can participate in a fun team competition that focuses on group work, problem solving, decision making, and cooperation that challenges the skills practiced in this course. The class will be taught every fall and spring semesters with a suggested enrollment of up to 35 students. An indoor climbing facility or wall will be used.

General Education: GHA
Diversity: None
Bachelor of Arts: None
Effective: Summer 2003

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 010A (GHA) Lead Rock Climbing (1.5) A course designed to provide students with skills, safety, and knowledge of lead rock climbing in a top rope environment.

KINES 010A Lead Rock Climbing (1.5)
(GHA)

Kinesiology 010A is designed to give students a comprehensive introduction to the skills, safety, terminology and equipment used in the sport and recreational activity of lead rock climbing. Lead climbing involves the climber placing protection with which to protect oneself as opposed to top roping (Kinesiology 010). This course will also provide the knowledge base, experience, and awareness the student needs to evaluate their continued safe participation in lead climbing. The course format is identical to Kinesiology 010 in establishing the same class environment of group work, responsibility, cooperation, and collaborative skills. A strong group work ethic is emphasized with safety practices of utmost importance. Students will be introduced to advanced climbing techniques-foot work, hand holds, and body positions and benefit from immediate encouragement and assessment from both instructor and peers. Lead climbing challenges the climber to be more critically aware of making good decisions in clipping, route choice and direction, backstepping if necessary, body positions, equipment use, and safety. This class delves more into issues of kinesthetic awareness of the climber's relationship to the climbing surface and to gravitational forces when climbing. Students will also be introduced to tying rope knots, making belay stations, tying a cold shut, knowledge and practice in mock falling, cleaning a route, crag, slab, and crack climbing, and lead belaying. To insure the student's safety in lead climbing, mock lead climbing scenarios (students will be top roped and belayed) will provide the students with realistic climbing situations. Each class begins with a physical preparation for climbing focusing on cardiovascular, strength, and flexibility movements with instruction on proper methods and training procedures. Important information on safety issues and equipment will be presented as a visual demonstration or as an individual assignment. Students have the opportunity to write journals to record goals, share what they have learned in the lessons, evaluate their progress in the class, and demonstrate the necessary climbing and clipping techniques for a lead climbing pin. Other activities may include internet evaluations of rock climbing web sites and interactive sites. Additional evaluation tools may include objective testing, skill proficiency, and safety knowledge. As a final activity, groups can participate in a group lead climb activity in which each student is challenged to use the skills learned and practiced in this course. Offerings: Every fall and spring semesters with approximately 35 students. An indoor rock climbing facility/wall will be used.

Kinesiology (KINES)

KINES 011 (GHA) Basic Downhill Skiing (1) Students will gain a comprehensive understanding and basic level of proficiency in Downhill Skiing.

KINES 011 Basic Downhill Skiing (1)
(GHA)

Downhill skiing has grown as a recreational physical activity over the past century. The early days of skiing in the United States were typified by a variety of styles and techniques, many of which were brought to this country by European ski instructors. In 1961, the Professional Ski Instructors of America was formed to unify ski instruction across the country and to develop a successful standard for teaching people to ski. As the equipment and the snowmaking capabilities have changed so has PSIA changed and adapted the techniques to successful skiing. Downhill skiing can be performed at any level across all ages. If done properly, downhill skiing will promote comprehensive wellness while developing important life-long motor skills. This course will promote the proper and safe way to enjoy downhill skiing. Ultimately students will learn the benefits of downhill skiing as a lifetime activity for health and wellness.

Students will be evaluated using a standard percentage scale. Evaluation is based on attendance and active participation (25%); demonstration of acquired skills (55%), theoretical knowledge as measured by written exam (20%). Five sections will be offered every Spring Semester with a maximum enrollment of 50 per section.

General Education: GHA
Diversity: None
Bachelor of Arts: None
Effective: Summer 2004

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 012 (GHA) Snowboarding (1) Students will gain a comprehensive understanding and basic level of proficiency in Snowboarding.

KINES 012 Snowboarding (1)
(GHA)

Snowboarding has exploded as a recreational physical activity over the past two decades. The early days of snowboarding in the United States were typified by a variety of styles and techniques. The Professional Ski Instructors of America identified a need to unify snowboard instruction across the country and thus formed AASI, the American Association of Snowboard Instructors, to develop a successful standard for teaching people to snowboard based upon many of the basic principles behind skiing. As the equipment and the snowmaking capabilities have changed so has PSIA/AASI changed and adapted the techniques to successful snowboarding. Snowboarding can be performed at any level across all ages. If done properly, snowboarding will promote comprehensive wellness while developing important life-long motor skills. This course will promote the proper and safe way to enjoy snowboarding. Ultimately students will learn the benefits of snowboarding as a lifetime activity for health and wellness.

Students will be evaluated using a standard percentage scale. Evaluation is based on attendance and active participation (25%); demonstration of acquired skills (55%), theoretical knowledge as measured by written exam (20%). Five sections will be offered every Spring Semester with a maximum enrollment of 50 per section.

Kinesiology (KINES)

KINES 013 (GHA) First Aid, Personal Safety, and CPR (1) A course designed to provide students with the opportunity for Red Cross certification in Community First Aid, Safety, and CPR.

KINES 013 First Aid, Personal Safety, and CPR (1)
(GHA)

Kinesiology 013 provides students with the opportunity for American Red Cross certification in Community First Aid and Safety and Adult, Infant and Child CPR. Students will also be introduced to the AED device. This course can only be taught by an individual who holds a current participation and instructor card in Community First Aid and Safety and Adult, Infant and Child CPR. The main goal of this first aid and CPR course is to provide students with the knowledge and skills necessary to assess an emergency situation, to call for help, to administer mouth to mouth resuscitation or CPR, perform correct choking procedures for conscious and unconscious victims, and to minimize the consequences of injury or sudden illness until advanced emergency medical help arrives. Students will learn to recognize emergencies and make appropriate decisions regarding care. This course teaches the necessary steps in the emergency medical services (EMS) system chain. Students will also receive information on the prevention of injury and illness, with a focus on personal safety. Using healthy lifestyle awareness questionnaires, participants will assess their environment and personal habits to help reduce their risk of injury and illness and risk to others. In accordance by the American Red Cross, this course will provide visual and auditory learning with the use of a required Red Cross manual and videotape. Manikins will be provided for practical skill use. This course also requires the students to work with a partner to practice and demonstrate the skills to each other and then to the instructor for evaluation. Active learning reinforces the information learned from the reading materials and videotape. Peer and instructor feedback are provided before actual demonstration for evaluation of the skills. An objective test for each segment of the course has been prepared by the American Red Cross and a score of 80% or higher is required for Red Cross certification. The tests will be administered by the instructor after the demonstration and passing of the required skills. Frequency of offering: Every fall and spring semesters with an enrollment of up to 12 students per section.

General Education: GHA

Bachelor of Arts: None
Effective: Spring 2005

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 017 (GHA) Ballroom Dance (1.5) A course designed to provide students with basic dance skills and an understanding and appreciation of ballroom dance.

KINES 017 Ballroom Dance (1.5)
(GHA)

Kinesiology 017 introduces students to ballroom dance as a social/recreational or competitive activity, with the goal of leading to an active lifestyle. This course provides the basic skills and information necessary to develop and continue one's interest in ballroom dancing. Dance history and etiquette, cooperation with a partner, and learning the fundamentals of leading/following techniques are stressed from the beginning of the semester. As different dances are introduced (FoxTrot, Waltz, Jitterbug/Swing, Polka, Cha-Cha-Cha, Tango, Viennese Waltz, and/or others), additional figures are added throughout the semester. The accompanying practice affords each student with the opportunity to build confidence by combining skills in a variety of ways, listening to music, and preparing to "perform" during evaluation sessions. Both assessment and evaluation for each student occur throughout the semester. Formal evaluation occurs twice during the semester, at the mid-semester and at the end of the semester. Students dance with a partner of his/her own choice in a group of 3-5 couples. The remainder of the class has the option of practicing or observing. Evaluation may also include a written test (on handouts, class notes, etc.), written critique of a dance concert on campus (e.g. Eisenhower Auditorium concerts), or a paper on the competitive aspects of ballroom dancing, DanceSport. Outside opportunities for dancing are encouraged: Penn State Ballroom Dance Club, Swing Club, etc. Attendance at each class is essential; this is an activity which is dependent upon learning and practicing with a partner. Upon completion on Kinesiology 017, the student will be able to identify music for each of the dances taught, perform basic figures for each dance in combination, know proper leading and following techniques, and work in concert with one or more partners. Frequency of offering: Ten to twelve sections every fall and spring semesters, with an enrollment of 40 students per section.

General Education: GHA
Diversity: None
Bachelor of Arts: None
Effective: Summer 2003

Diversity: None
Bachelor of Arts: None
Effective: Fall 2007

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 019 (GHA) Jazz Dance (1.5) A course designed to teach the basic skills of jazz dance and develop a further appreciation of jazz dance.

KINES 019 Jazz Dance (1.5)
(GHA)

Jazz Dance/Kinesiology 019 introduces students to the art and movement form of jazz dance. This course provides the student with a broad knowledge base of jazz dance history, influential people in the art of jazz dance, dance vocabulary, an experiential study of the jazz style of movement, and posture, balance, and presentation. The course will also encourage students to view and pursue dance as a lifelong activity for the purpose of physical, social, and psychological wellbeing. The student will be introduced and challenged to basic class technique and locomotor movement inherent to the jazz style. The student will experience how to convey their feelings through different elements and styles of jazz while learning about performance qualities and style, dance technique, basics of music/timing/rhythm and choreography, movement memory, movement alignment and presentation, and dance fitness. While learning to appreciate jazz dance as both an art form and a lifestyle activity for total well being, students will be involved in both individual and group movement situations that will encourage and enhance cooperative and collaborative learning skills. Each class will begin with a physical preparation for dance focusing on cardiovascular, strength, and flexibility movements with instruction on proper methods and training procedures. The instructor has the opportunity to provide encouragement and feedback during all movement segments during the class time. Through experiential practice of the jazz movement, the student will be able to identify and/or demonstrate the basic components of dance, correct posture, increased muscular control, spatial levels and floor patterns, and dance as an expressive outlet that is health and life enhancing. Activities to enrich the student's understanding and learning value of jazz movement would include films of dance performances for the students to critique, field trips, evaluating dance internet resources, and creating and participating in a dance performance. The student can be evaluated by a combination of written examinations/quizzes, skill testing, subjective evaluation of skill development, verbal presentation of jazz dance, and a final choreographed project. The student can also be encouraged to keep a journal charting their progress and understanding of jazz dance as an art medium and as a lifelong recreational activity. It is anticipated that two sections of Kines 019 will be offered every fall and spring semesters with a maximum enrollment of 20 students per section. Facilities include a theatre stage and studio space as available and adequate.

Kinesiology (KINES)

KINES 024 (GHA) Introduction to Lifetime Sports (1.5) Students participate in lifetime sports such as archery, bowling, golf, and at least one racquet and/or winter sport.

KINES 024 Introduction to Lifetime Sports (1.5)
(GHA)

Kinesiology 024 is a course divided into three or four units, with each unit designed to give students the opportunity to learn sports that have potential for lifetime participation. These units include (but are not limited) to racquet sports, winter sports, archery, bowling, and golf. Other sports that have lifetime social and wellness values may be offered due to specific location considerations such as facility and faculty expertise.

The Kinesiology 024 format with three or four sports will give students an opportunity to gain a breadth of information and experience that will serve as a "gateway" to learning opportunities in more advanced classes that offer more depth and focus. These units may also stimulate participation in intramural clubs, and recreational play and encourage participation in lifetime activities.

Participating in lifetime sports will help students understand that regular activity has social, emotional, and physical benefits with potential for total well-being and a better quality of life.

General Education: GHA

Kinesiology (KINES)

KINES 025 (GHA) Introduction to Court Sports (1.5) A course designed to introduce students to various court sports such as tennis, racquetball, handball, squash, and/or badminton.

KINES 025 Introduction to Court Sports (1.5) (GHA)

Kinesiology 025 is a course that has been designed to give the Penn State student an introduction to selected lifetime court sports such as but not limited to tennis, racquetball, squash, table tennis, badminton, handball, and platform tennis.

Kinesiology 025 is taught in a modular (two or three for a given semester) format with two to three court sports being chosen for the course content for the semester. Students will know which court sports have been selected by listings in the semester Directory of Classes. The fundamental skills, strategies, etiquette, and rules will be covered for each court sport selected. Successful completion of this court sports course serves as a "gateway" to advanced level courses in court sports, intramural and recreations play and provide the skills and knowledge necessary to participate in a lifetime activity.

In Kinesiology 025 information gathering is done in an applied environment and usually in the context of solving complex movement problems. Information is gathered, solutions formulated and performances delivered and analyzed as different practice and game techniques are employed, different strategies are suggested and as different movement approaches are tested.

The students in Kinesiology 025 will work collaboratively with fellow students and peer tutors in their efforts to master court skills which will serve as a gateway to life long participation in these activities. The holistic approach to teaching activity classes employed in Kinesiology classes requires that students understand and appreciate the cultural traditions and values which are embedded in these movement forms.

Students will be evaluated by a combination of (but not limited to) evaluation techniques. Examples of those techniques are written examinations, skills testing, tournament performance, and subjective evaluation of skill level and game performance.

Kinesiology (KINES)

KINES 026 (GHA) Archery/Indoor & Outdoor (1.5) Course designed to introduce students to Archery/Bowhunting.

KINES 026 Archery/Indoor & Outdoor (1.5) (GHA)

KINES 026 is designed to give the Penn State student an introduction to archery from a historical perspective which includes, but is not limited to, cultural use of the bow and arrow for food, protection, recreation and competition. Emphasis is given to the unique role of the bow in Pennsylvania State History and to its role in Pennsylvania Rural Culture. The use of the longbow, the recurve bow, the compound bow and the crossbow will be covered. In addition, Archery can be an activity that provides a positive outlet for those who are physically challenged. The fundamental skills, strategies, rules and regulations will be covered for Archery. Students are encouraged to develop specific outdoor skills which will enhance their success with a bow. These skills include but are not limited to identifying weather patterns which affect shooting, shooting from different heights and angles, selection of the proper clothing, understanding and respecting the wildlife and game animals native to geographical areas. Emphasis is placed upon ethical harvest techniques consistent with current wildlife biology and respective game commission and wildlife managers. Successful completion of the course will provide a foundation for participation in intramural activities, recreational coeducational activities, and will provide a gateway to lifelong movement. While KINES 026 will focus on the skills, strategies and rules of the sport, the underlying sub-focus of the course is the development of persistence and discipline necessary for success and the resulting self-enhancement that accompanies personal success. The commitment to Archery requires students to develop a focus which is achieved only through rigorous attention to fine motor movement. The improvement of individual skills in Archery is important but the process required for target success can be a foundation for a lifelong recreational opportunity. KINES 026 will focus on the skills strategies and rules of archery. Students will be engaged in a collaborative atmosphere. As they seek to solve complex shooting problems they will be required to cooperate to achieve various team goals. Students are evaluated and graded by a combination of techniques which may include but are not limited to tournament performance, written reports, skill acquisition, logged activities and subjective evaluation of team-building ethics. Dress should be appropriate for the conditions (indoor or outdoor). Equipment for this course will be provided but students will be encouraged to purchase their own personal equipment as "personalized bows" greatly enhance a person's on-target efficiency. Frequency of enrollment: Two to four sections every fall and spring semesters with a maximum of 20 students per section. Facilities: There is an existing range in White Building, however the activity can be taught outdoors.

General Education: GHA

Bachelor of Arts: None
Effective: Summer 2003

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 027 (GHA) Badminton 1 (1.5) The course promotes health, fitness, and enjoyment of the game of badminton.

KINES 027 Badminton I (1.5)
(GHA)

Kinesiology 027 is a course designed to give the student a comprehensive involvement in the game of badminton. The basic fundamentals, rules, and strategies will be taught in a drill/modified game format until the student has developed skills and understanding sufficient to compete successfully. It is through the competition that the socialization, fitness, and enjoyment of the game will be enhanced. Hopefully, the desire to continue badminton as a lifelong activity will result. Successful completion of Badminton I will allow the student to choose an advanced level of this course if he/she desires.

Students can be evaluated by a combination of written examinations/quizzes, skills testing, tournament performance, and subjective evaluation of skill development and game performance.

General Education: GHA
Diversity: None
Bachelor of Arts: None
Effective: Summer 2002

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 027S (GHA) Badminton 1 (1.5) The course promotes health, fitness, and enjoyment of the game of badminton.

Badminton 1 (1.5)

Diversity: None
Bachelor of Arts: None
Effective: Fall 2010 Ending: Fall 2010 Future: Fall 2010

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 028 (GHA) Fencing I (1.5) Kinesiology 028 is designed to give students knowledge of the rules, strategies and skills of the sport of Fencing.

KINES 028 Fencing I (1.5)
(GHA)

Kinesiology 028 is a course designed to give the student a comprehensive involvement in the sport of FENCING. The basic fundamentals, rules, and strategies will be taught in a drill/modified game format until the student has developed skills and understanding sufficient to compete successfully. It is through the competition where the socialization, fitness and enjoyment of the game will be enhanced. Hopefully, the desire to continue Fencing as a lifelong activity will result. Successful completion of Fencing I will allow the student to choose an advanced level of this course if he/she desires.

Students will be evaluated by a combination of written examinations/quizzes, skills testing, attendance. The department plans to offer four sections every fall semester and two sections every spring semester with a maximum of 25 students per section.

General Education: GHA
Diversity: None
Bachelor of Arts: None
Effective: Summer 2004

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 029 (GHA) Golf I (1-1.5) A course designed to give students an understanding of and a proficiency in golf skills, rules, and etiquette.

KINES 029 Golf I (1.0-1.5)
(GHA)

Kinesiology 029 is a course designed to give students the understanding, knowledge and skills to begin an exploration of the game of golf. While the courses main area of emphasis is on golfs' short game (putting, chipping and pitching) students will be educated about full swing fundamentals and proficiencies will be developed in short and mid-irons.

Perhaps the most unique feature of Golf I is the weekly on course practice. Each week during this course, students will get a chance to apply the skills they have learned during the week on an actual golf course. This practice time is in a situation where only the students from the class are on the course. This situation creates an ideal practice area for the student golfer to be come acquainted situational application of golf skills.

Students who enroll in Kinesiology 029 will find, in the game of golf, a unique form of self-expression. The daily "movement problems" that students will encounter offers a new type of information gathering process accompanied by unusual opportunities to synthesis that information into a "golfing personality". The development of motor skills will complement students' oral and written capabilities.

The active lifestyle requires that the participant be able to gather, synthesis and analyze information. Students in Kinesiology 029 will be asked to involve themselves in Web and CD-ROM based assignments to gather, synthesis and analyze valuable information about golf's rules and etiquette, equipment, and travel planning.

Students will be evaluated by a combination of (but not limited to) evaluation techniques. Examples of those techniques are written examinations, skills testing, written papers and subjective evaluation of skill level and game performance.

The student, who successfully completes Kinesiology 029-Golf I will possess a command of basic golf rules, golfs terminology and golf etiquette. These basic fundamentals will ease the transition from golf student to golfer. Students will find that, after completion of Golf I the work done in this course will prepare them for actual participation in the game of golf.

General Education: GHA
Diversity: None
Bachelor of Arts: None
Effective: Summer 1999

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 029A (GHA) Golf II (1.5) A course designed to provide a further understanding of and a more advanced proficiency in golf skills, rules and etiquette.

KINES 029A Golf II (1.5)
(GHA)

KINES 029A is a course designed to give students advanced understanding, knowledge and skills and to continue the development of their game of golf. While the courses main area of emphasis is on golfs' short game (putting, chipping and pitching) the student will be educated about full swing fundamentals and proficiencies will be developed in midirons, long irons, fairway metals, and driver.

Perhaps the most unique feature of Golf II is the on course practice. Each week during this course, students will get a chance to apply the skills they have learned during the week on an actual golf course. This practice time is in a situation where the student will learn how to integrate themselves into normal golf play. This creates an ideal practice area for the student golfer to become acquainted with situational application of golf skills and be a part of the golf atmosphere.

Students will be evaluated by a combination of (but not limited to) evaluation techniques. Examples of those techniques are written examinations, skills testing, and subjective evaluation of skill level and game performance.

The student, who successfully completes Kinesiology 029A-Golf II will be proficient in golf rules, golf terminology and golf etiquette. These advanced fundamentals will ease the transition from golf student to golfer. Students will find that, after completion of Golf II, the work done in this course prepares them for actual participation in the game of golf.

The use of the Penn State golf course is required for this course. Three to five sections will be offered every fall semester with an enrollment of up to 30 students per section.

General Education: GHA

Kinesiology (KINES)

KINES 042 (GHA) Ice Skating--Beginning (1.5) A course of instruction focused on the physical development and knowledge of basic ice skating skills.

KINES 042 Ice Skating--Beginning (1.5)
(GHA)

A course of instruction focused on the development of basic ice skating skills, and the introduction of a new physical fitness activity into the lifestyle of the Penn State student. The course objectives are to develop balance and control while performing the basic skills necessary for the execution of many ice skating maneuvers. Basic ice skating skills are relevant to skaters who have goals of recreational skating, learning to play hockey and/or figure skate. These skills include: forward and backward stroking, forward and backward stops, negotiating circles and curves through the use of forward and backward crossovers, developing edge control through the development of consecutive sustained edges, and changing direction from forward to backward and backward to forward through the use of basic two-and one-foot turns. Skills are acquired through the use of exercises and patterns designed to strengthen the fundamentals of skating and to further develop balance, edge control, and confidence while participating in the activity. These exercises are incorporated into each class period, along with a thorough review of previously learned skills and the introduction of new skills. Every effort is made by the instructor to break each skill down into logical steps so that the student will understand the process of each skill. The instructors are encouraged to allow for individual differences in the pacing of skill development. As the course progresses, the instructor has the option of using partner and small group exercises to balance the individual efforts through peer support and involvement. This course will provide the necessary skill foundation for participation in upper-level courses including advanced/beginner, intermediate and advanced skating, as well as hockey, figure and/or recreational skating activities. In addition to the core component of physical skill development, the student will acquire an enlightened appreciation and understanding of the skill and art of ice sports.

Kinesiology (KINES)

KINES 041 (GHA) Handball (1.5) A course designed to introduce students to a basic instructional course in the fundamentals of 4-wall handball.

KINES 041 Introduction to Handball (1.5)
(GHA)

Kinesiology 041 is a course that has been designed to give students an introduction into the dynamic game of handball. It is a challenging game requiring the participant to be able to hit a ball with either hand during a rally in a 20'x 40' four-walled court. The technique of hitting a ball is similar to the motions used in throwing a baseball. Since both hands are used to execute shots, the development of the non-dominant hand ("off" hand) is a unique challenge. The course is structured to develop the "off" hand through a logical progression of drills and game settings, which help the participant to mirror image the dominant hand's motion.

Handball is also a sport, which develops an individual's eye/hand coordination to the highest level possible. This eye/hand coordination transfers exceptionally well for participants who pursue activities such as racquetball, tennis, squash, badminton, hitting a softball, and fielding a softball.

The tremendous amount of footwork and body movement required to execute a shot in handball develops a fitness level similar to a cross-country skiing workout. Handball is a great lifetime activity.

The fundamental skills, strategies, and rules of handball, along with game play, will be integrated throughout the course. The participant will also apply the rules of the game by being taught how to referee a match between fellow students.

Students will be evaluated by a combination of (but not limited to) evaluation techniques. Examples of those techniques are written examination, skills testing, tournament performance, and subjective evaluation of skill level and game performance.

General Education: GHA
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 042A (GHA) Ice Skating--Advanced Beginning (1.5) A course of instruction focused on the physical development and knowledge of basic ice skating skills.

KINES 042A Ice Skating--Advanced Beginning (1.5) (GHA)

A course of instruction focused on the development of beginning and advanced beginning ice skating skills, and the introduction of a new physical fitness activity into the lifestyle of the Penn State student. The course objectives are to develop balance and control while performing the basic skills necessary for the execution of many ice skating maneuvers. Basic and advanced beginning ice skating skills are relevant to skaters who have goals of recreational skating, learning to play hockey and/or figure skate. These skills include: forward and backward stroking, forward and backward stops, negotiating circles and curves through the use of forward and backward crossovers, developing edge control through the development of consecutive sustained edges and power pull change of edge exercises, and changing direction from forward to backward and backward to forward through the use of one-foot turns. Skills are acquired through the development of exercises and patterns designed to strengthen the fundamentals of skating and to further develop balance, edge control, and confidence while participating in the activity. These exercises are incorporated into each class period, along with a thorough review of previously learned skills and the introduction of new skills. Every effort is made by the instructor to break each skill down into logical steps so that the student will understand the process of each skill. The instructors are encouraged to allow for individual differences in the pacing of skill development. As the course progresses, the instructor has the option of using partner and small group exercises to balance the individual efforts through peer support and involvement. This course will provide the necessary skill foundation for participation in upper-level courses including intermediate and advanced skating, as well as hockey, figure and/or recreational skating activities. In addition to the core component of physical skill development, the student will acquire an enlightened appreciation and understanding of the skill and art of ice sports.

General Education: GHA
Diversity: None
Bachelor of Arts: None
Effective: Summer 2002
Prerequisite: KINES 042 or some experience with the activity

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 042B (GHA) Ice Skating--Intermediate/Advanced (1.5) A course of instruction in basic figure skating: field moves, freestyle, choreography, pairs skating, and ice dance.

KINES 042B Ice Skating--Intermediate/Advanced (1.5) (GHA)

A course of instruction focused on the refinement of basic, intermediate, and advanced ice skating skills. The course objectives are to develop balance, control, and confidence while performing skills relevant to the disciplines of figure skating: freestyle, field moves, ice dance and/or pairs. These skills include: field moves that follow a straight line, diagonal, circular, or continuous pattern. Such exercises and patterns are designed to develop and strengthen the qualities that define figure skating: power, edge control, flow, quickness, and extension. Emphasis is placed on developing both sides (bilateral) of the skater. Students are introduced to basic, intermediate and, when appropriate, advanced freestyle maneuvers including jumps, spins, edge moves, footwork sequences, and connecting steps. Basic ice dance positions and patterns are introduced, and students with a particular interest in this area are given the opportunity to further develop these skills. Introductory pairs skating positions are developed through stroking and crossover patterns. Students with a particular interest in this area are taught pairs edge moves, spins, and basic throw jumps. Students are introduced to the fundamental principles of choreography including pattern, form, development, musical interpretation, style, and expression through the composition of a program incorporating skills developed and refined throughout the course. The student has the option of solo, pair, or group work to balance individual efforts through peer support and involvement. The instructors are encouraged to allow for individual differences in the pace and development of skills. This course will provide the necessary skill foundation for participation in organized figure skating programs (USFSA, ISI) and club programs promoting a healthful physical fitness activity for the Penn State student. In addition to the core component of physical skill development, the student will acquire an enlightened appreciation and understanding of the skill and art of figure skating and ice sports.

General Education: GHA
Diversity: None
Bachelor of Arts: None

Kinesiology (KINES)

KINES 043 (GHA) Power Skating (1.5) A course of instruction in basic power skating specifically designed for ice hockey, applicable to other ice sports.

KINES 043 Power Skating (1.5)
(GHA)

A course of instruction focused on the development and refinement of basic, intermediate, and advanced ice skating skills. Principles of biomechanics and force application are stressed to gain power, strength, flexibility, quickness, and agility. Daily power stroking sessions are conducted to develop physical stamina, endurance, and mental fitness. The course objectives are to improve balance, edge control, and coordination necessary for the successful execution of many ice skating maneuvers. These skills include: forward and backward power strides, forward and backward stops, forward and backward starts, negotiating circles and curves through the use of forward and backward crossovers, developing edge control through the development of consecutive sustained edges and power pull change of edge exercises, changing direction with front to back and back to front turns, stick handling and puck control. Skills are acquired through the development of drills and patterns designed to strengthen the fundamentals of skating and to further develop balance, edge control, and confidence while participating in this activity. These exercises are incorporated into each class period, along with a thorough review of previously learned skills and the introduction of new skills and drills. Every effort is made by the instructor to break each skill down into logical steps so that the student will understand the process of each skill. The instructors are encouraged to allow for individual differences in the pacing of skill development. This course will provide the necessary skill foundation for participation in intramural, club, and adult hockey leagues, as well as recreational skating activities. In addition to the core component of physical skill development, the student will acquire an enlightened appreciation and understanding of the skill of ice sports.

General Education: GHA
Diversity: None
Bachelor of Arts: None
Effective: Summer 2002
Prerequisite: KINES 042 orKINES 042A or equivalent skating experience

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 044 (GHA) Racquetball I (1-1.5) The course promotes health, fitness, and enjoyment of the game of racquetball.

KINES 044 Racquetball I (1-1.5)
(GHA)

Kinesiology 044 is a course designed to give the student a comprehensive involvement in the game of racquetball. The basic fundamentals, rules, and strategies will be taught in a drill/modified game format until the student has developed skills and understanding sufficient to compete successfully. It is through the competition where the socialization, fitness, and enjoyment of the game will be enhanced. Hopefully, the desire to continue racquetball as a lifelong activity will result. Successful completion of Racquetball I will allow the student to choose an advanced level of this course if he/she desires.

Students will be evaluated by a combination of written examinations/quizzes, skills testing, tournament performance, and subjective evaluation of skill development and game performance.

General Education: GHA
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 045 (GHA) NAUI Basic Scuba (1.5) A course to introduce students to the fundamentals of Scuba diving.

KINES 045 NAUI Basic Scuba (1.5)
(GHA)

KINES 045 introduces students to the fundamental academic concepts and practical skills of scuba diving as described by NAUI (National Association of Underwater Instructors) standards. This course addresses academic elements and applied sciences such as: the gas laws, Archimedes' principle, physics (light, sound, heat, aquatic pressure relationships), physiology (arterial gas embolism, miscellaneous barotrauma, decompression illness, hypo and hyperthermia), dive planning, equipment configuration and function, and environmental considerations (salt vs. fresh water, dangerous plants and animals, water temperature and visibility, and altitude). In addition this course introduces practical confined water skills including: basic skin diving skills, fundamental Scuba skills (regulator clearing and retrieval, emergency out-of-air ascents, buoyancy control, rescue techniques, ditch and don of gear, underwater communication, and proper partnership), and equipment preparation and assembly.
General Education: GHA
Diversity: None
Bachelor of Arts: None
Effective: Summer 2002
Prerequisite: meet NAUI standards and/or by permission of the instructor

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 046 (GHA) Squash I (1-1.5) A course designed to give students an appreciation of and proficiency in the skills, rules, and regulations of squash.

KINES 046 Squash I (1-1.5)
(GHA)

Kinesiology 046 is a course designed to provide students with the motor skills and cognitive understanding necessary to successfully compete in the game of squash. Initial emphasis will center around three areas: 1) developing racquet skills and mechanics; 2) acquiring an understanding of the rules and regulations of the game; and, 3) developing appropriate movement skills. Subsequent effort will focus on applying the above to live-game situations. Here, students will learn to recognize, comprehend, and develop on-court strategies, and will learn to employ these tactics in game play.

Students will emerge from this course with beginning-level squash skills and a solid foundation in racquet fundamentals. This will serve as a "connector" to, not only advanced levels of squash, but other forms of racquet play as well. In turn, this will facilitate the discovery and appreciation of the significant lifetime benefits offered by all racquet sports.

Students will be evaluated by (but not limited to) a combination of techniques: written examinations, skills testing, performance standards, and subjective evaluation of skill level.

General Education: GHA
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 047 (GHA) Beginning Swimming (1.5) A course designed to give students skills and knowledge necessary to be safe in shallow and deep water.

KINES 047 Beginning Swimming (1.5)
(GHA)

Kinesiology 047 introduces students who are non-swimmers (or those who are fearful of water) to the performance of swimming skills that can be used as lifelong activities for maintenance of physical health and psychological well-being. Students will learn and practice a progression of swimming-related skills designed to acclimate the non-swimmer to the aquatic environment. An introduction to personal safety and rescue skills provides the students with knowledge necessary for safe behavior in an aquatic setting.

The course provides basic knowledge of physics and hydrodynamic principles that will help the students become more effective and efficient swimmers. Exercises and activities that relate to being in and moving through the water will enable the student to understand and demonstrate various hydrodynamic principles.

Group games and activities designed to improve fitness components of endurance, strength, and flexibility are a key component of the beginning swimmers class. Students will often work in groups to improve their swimming skills.

When a student completes this course, he or she should possess skills necessary to be safe in deep water. The student will have developed enough skill to enter deep water and swim at least the length of the pool unassisted. He/she will be able to understand and demonstrate hydrodynamic principles as they relate to movement in the water.

Various evaluation techniques will be used to assess individual progress in Kinesiology 047. These techniques will include (but are not limited to) objective tests, skills performance tests, and personal assessment inventories and assignments. Students will also keep a written journal of their activities.

General Education: GHA
Diversity: None
Bachelor of Arts: None
Effective: Summer 2002

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 047A (GHA) Advanced Beginner Swimming (1.5) A course designed to give students skills and knowledge necessary to be safe in shallow and deep water.

KINES 047A Advanced Beginning Swimming (1.5)
(GHA)

Kinesiology 047A introduces students who have limited swimming skills and knowledge to the performance of more refined strokes that can be used as lifelong activities for maintenance of physical health and psychological well-being. Students will be introduced to new strokes and techniques including the front crawl, back crawl, elementary backstroke, sidestroke, breaststroke, and butterfly.

Proper breathing techniques will be stressed.

An introduction to personal safety and rescue skills provides the students with knowledge necessary for safe behavior in an aquatic setting. Students will have an opportunity to learn some basic self-help skills. Reaching and throwing assists from dry land will be included.

The course provides basic knowledge of physics and hydrodynamic principles that will help the students become more effective and efficient swimmers. Exercises and activities that relate to being in and moving through the water will enable the student to understand and demonstrate various hydrodynamic principles.

Group games and activities designed to improve fitness components of endurance, strength, and flexibility are a key component of the advanced beginning swimming class. Students will often work in groups to improve their swimming skills. Group games such as water polo and water basketball will help students develop endurance and strength.

When a student completes this course, he or she should possess skills necessary to swim continuously for at least four lengths of the pool without stopping. The student will also be able to understand and demonstrate hydrodynamic principles as they relate to movement in the water. Proper use of the diving board will also be stressed.

Various evaluation techniques will be used to assess individual progress in Kinesiology 047A. These techniques will include (but are not limited to) objective tests, skills performance tests, and personal assessment inventories and assignments. Students will also keep a written journal of their activities.

General Education: GHA
Diversity: None
Bachelor of Arts: None
Effective: Summer 2002
Prerequisite: students should be comfortable in shallow and deep water and be moderately proficient in front crawl elementary backstroke sidestroke and breaststroke

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 047B (GHA) Intermediate Swimming (1.5) A course designed to teach students a variety of swimming strokes and increase their knowledge of fitness using aquatic activities.

KINES 047B Intermediate Swimming (1.5)
(GHA)

Kinesiology 047B introduces students who have attained moderate swimming skills and knowledge to advanced swimming strokes and related swimming activities that can be used throughout one's lifetime for maintenance of physical health and psychological well-being. Students will be introduced to new strokes and techniques including the front crawl, back crawl, elementary backstroke, sidestroke, breaststroke, and butterfly. Students will also be taught the trudgen, trudgen crawl, inverted breaststroke, and overarm sidestroke. Body alignment, coordination, and proper breathing techniques will be stressed. Students will be required to swim longer distances in this class than in Kinesiology 047 or Kinesiology 047A. The course provides the information that the student needs to understand, organize, plan, and implement a physical fitness program that features swimming as the primary activity.

Personal safety and rescue skills as well as swimming rescues using equipment will be part of this class. Students will have an opportunity to learn how to help themselves and others in an aquatic environment. Group games and activities designed to improve fitness components of endurance, strength, and flexibility are a key component of the intermediate swimming class. Students will often work in groups to improve their swimming skills. Group games such as water polo and water basketball will help students develop endurance and strength.

When a student completes Kinesiology 047B, he or she should possess skills necessary to swim continuously for at least five hundred yards (twenty lengths of the pool) without stopping. Proper use of the diving board will also be stressed. The students will be able to perform a forward dive in tuck and/or pike position at the completion of this class. Each student will be able to identify the components of an effective physical fitness program and explain how swimming contributes to the success of this program. Students should be able to develop a swimming program that would help them meet realistic fitness goals.

Various evaluation techniques will be used to assess individual progress in Kinesiology 047B. These techniques will include (but are not limited to) objective tests, skills performance tests, and personal assessment inventories and assignments. Students will also keep a written journal of their activities.

General Education: GHA
Diversity: None
Bachelor of Arts: None
Effective: Summer 2002
Prerequisite: KINES 047A or equivalent skills; students should be safe in deep water and have proficiency in the front crawl elementary backstroke sidestroke and breaststroke

Kinesiology (KINES)

KINES 048 (GHA) Tennis I (1.5) A course designed to give students an appreciation of and proficiency in the skills, rules, and regulations of tennis.

KINES 048 Tennis I (1.5)
(GHA)

Kinesiology 048 is a course designed to introduce students to the basic skills of Tennis. The initial focus will be twofold: stroke development and acquiring an understanding of the rules, regulations, and terminology of the game. Subsequent effort will emphasize the development of movement skills and a progression from hitting to rallying. In turn, students will learn to apply the above to live-game situations (both singles and doubles). Students will emerge from this course with beginning-level tennis skills as well as an appreciation for the requirements of higher-level tennis participation.

Students will be evaluated by (but not limited to) a combination of techniques: written examinations, skills testing, performance standards, and subjective evaluation of skill level.

General Education: GHA
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001

Kinesiology (KINES)

KINES 048A (GHA) Tennis II (1.5) A course designed to give students an appreciation of and proficiency in the skills, rules, and regulations of tennis.

KINES 048A Tennis II (1.5)
(GHA)

Kinesiology 048A is a course designed to introduce students to the basic and advanced skills of Tennis. The initial focus will be twofold: stroke development and acquiring an understanding of the rules, regulations, and terminology of the game. Subsequent effort will emphasize the development of movement skills and a progression from hitting to rallying. In turn, students will learn to apply the above to live-game situations (both singles and doubles).

Students will emerge from this course with advanced tennis skills as well as an appreciation for the requirements of higher-level tennis participation.

Students will be evaluated by (but not limited to) a combination of techniques: written examinations, skills testing, performance standards, and subjective evaluation of skill level.

Clean, safe, well-lit course space is needed to properly deliver this course. It is anticipated that two sections will be offered every fall and spring semesters with an enrollment of 30 students per section.

General Education: GHA
Diversity: None
Bachelor of Arts: None
Effective: Summer 2004
Prerequisite: KINES 048 or for students who demonstrate reasonable consistency in depth and placement of ground strokes and the serve and who have not had instruction at Penn State.

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 054 (GHA) Aikido (1.5) Students will gain a comprehensive understanding and basic level of proficiency in the Japanese Traditional martial art of Aikido.

KINES 054 Aikido (1.5)
(GHA)

Martial arts have been practiced for centuries as a method of integrating mind, body and spiritual well being. While improving physical fitness and emotional health, martial arts have been the cornerstone of unarmed self-defense throughout the ages. Aikido is a relatively new Japanese martial art developed by a man named Morihei Ueshiba. Ueshiba sensei studied a variety of traditional martial arts and developed the style of Aikido in the early 1900's as a combination primarily of Dyto-ryu Jujitsu and a spiritual philosophy of promoting peace and harmony amongst fellow human beings. Aikido training can be performed at any level across all ages. If done properly, Aikido training will promote comprehensive wellness while developing important life-long motor skills. In this course students will explore the historical development and significance of Aikido and other martial arts. Students will learn a wide number of Aikido techniques in addition to improving physical health and fitness. Throughout the course students will learn to apply principles of Aikdio for self-defense and in everyday life. Ultimately students will learn the benefits of Aikido as a lifetime activity for health and wellness. Students will be evaluated using a standard percentage scale. Evaluation is based on attendance and active participation (60%); demonstration of acquired skills (20%), theoretical knowledge as measured by written exam (20%). One to three sections will be offered every fall and spring semesters with an enrollment of up to 24 students per section.

Effective: Summer 2003

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 056 (GHA) Introduction to Martial Arts (1.5) A course designed to give students an introduction to martial arts, and the use of martial arts for lifelong fitness.

KINES 056 Introduction to Martial Arts (1.5)
(GHA)

Martial arts have been practiced for centuries as a method of integrating mind, body, and spiritual well-being. While improving physical fitness and emotional health, martial arts have been the cornerstone of unarmed self-defense throughout the ages. Martial arts training can be performed at any level across all ages. If done properly, martial arts training will promote comprehensive wellness while developing important lifelong motor skills. For many, the emotional and psychological benefits of martial arts training will be as rewarding as the physical improvements experienced.

Kinesiology 056 will introduce the student to the historical development and significance of the martial arts. Students will first learn supportive activities such as meditation and yoga, which will be used to optimally prepare the mind and body, respectively, for martial arts training. Once the students are mentally and physically prepared to begin training, they will begin to learn the traditional martial art Karate. After several weeks of training, the students will then begin to study the relatively newer and more passive martial art Aikido.

Ample time will be devoted to allow students to acquire an appreciation of and basic skill of both Karate and Aikido. In addition, students will learn proper "dojo" etiquette which will allow them to comfortably enter and train in any traditional martial arts dojo.

Throughout the semester, students will improve in physical fitness and learn how martial arts such as Karate and Aikido contribute to improved fitness and overall wellness. The basic principles of organizing, planning, and implementing a physical fitness program will be taught using martial arts training as a method of exercise. The fitness principles learned in class can be applied to any form of activity the student chooses. At the end of the course, the students will be invited to explore their personal health and fitness goals and how martial arts training may be incorporated into their lifelong fitness plan. Although the concept of "self-defense" will not be stressed in this class, some introduction to self-defense will be given, and it is likely that by the end of the course students will feel more physically confident in their ability to avoid and deal with conflict situations.

Various evaluation techniques will be used to assess individual progress in Kinesiology 056. These techniques will include (but are not limited to) conventional objective testing, skill testing, and writing assignments.

Kinesiology (KINES)

KINES 057 (GHA) Personal Defense (1.5) A course designed to give students an understanding of and a proficiency in martial arts and self-defense.

KINES 057 Personal Defense (1.5) (GHA)

The term "martial art" is used in western idiom to describe a wide variety of Asian self defense systems. Some of these combat systems evolved in civil settings as methods for physical development, personal self defense, and sport. Taekwond is perhaps the best example today because of its role in the Olympic Games. This unarmed method evolved in Korea and it can be traced back to the koguryo dynasty, founded 2000 years ago through the study of the ancient Korea and its history.

While improving physical fitness and emotional health, martial arts have been the cornerstone of unarmed self defense throughout the ages. Martial arts training can be performed at any level across all ages. If done properly, martial arts training will promote comprehensive wellness while developing important life-long motor skills. For many, the emotional and psychological benefits of martial arts training will be as rewarding as the physical improvements experienced.

KINES 057 introduces the student to the historical development and significance of the marital arts. Students first learn supportive activities such as relaxation and breathing techniques, which will be used to optimally prepare the mind and body, respectively, for marital arts training. Students start applying mental discipline into the acquired techniques as soon as they learn it and practice it throughout the semester.

Throughout the semester students improve in physical fitness and learn how personal self defense, such as taekwondo and Aikijujitsu, contribute to improved fitness and overall wellness. The basic principles of organizing, planning and implementing a physical fitness program will be taught using martial arts training as a method of exercise. The fitness principles learned in class can be applied to any form of activity the students chooses. At the end of the course the student will be invited to explore their personal health and fitness goals and how martial arts training may be incorporated into their lifelong fitness plan. It is likely that by the end of the course students will feel more physically and mentally confident in their ability to avoid and deal with conflict situations.

Various evaluation techniques will be used in KINES 057. The techniques will include (but are not limited to) conventional objective testing, skill testing, journaling and other writing assignments.

The department plans to offer up to three sections of this course every fall and spring semester with a maximum enrollment of 30 students per section.

General Education: GHA

Bachelor of Arts: None
Effective: Summer 2004

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 059 (GHA) Introduction to Karate (1.5) A course designed to give students an understanding of and a proficiency in Karate.

KINES 059 Introduction to Karate (1.5)
(GHA)

KINES 059 will involve the training in the philosophy, principles and techniques of Karate for self-defense, improvement of overall fitness and to give a greater understanding of the art and themselves. This course will involve physical aspects of Karate including blocking, punching, striking, kicking and body shifting techniques in correct stance and the application of these techniques against an opponent. The course will also introduce the mental aspects of Karate illustrating the ideals of "the way" (including principles such as character, concentration, self control, manners and self discipline) and how they can be applied in everyday life to benefit themselves and society, this will be achieved through meditation and training. There are three primary components of Karate training; fundamentals (basics), sparring and Kata or forms. The basic techniques consist of blocks, punches, strikes, kicks and combinations of these techniques in correct stance or body position. Sparring can take one of three forms; single step, controlled multi-step sparring and free sparing. Only the second form (both controlled and non-contact) is taught in this introductory class. The third component, kata, consists of a series of predefined blocking, striking and kicking techniques performed by an individual and used to simulate defense against multiple opponents. The forms are used to perfect the fundamental techniques to teach balance and timing of techniques so that they then may be applied to sparring. Throughout the semester students will improve in physical fitness and learn how Karate contributes to improved fitness and overall wellness. The basic principles of organizing, planning and implementing a physical fitness program will be taught using martial arts training as a method of exercise. The fitness principles learned in class can be applied to any form of activity the student chooses. At the end of the course the student will be invited to explore, through a term paper, their personal health and fitness goals and how karate training may be incorporated into their lifelong fitness plan. Although some concepts of "self-defense" are discussed in this class it is not given a priority. However, it is likely that by the end of the course students will feel more physically confident in their ability to avoid and deal with conflict situations. Since Karate is one of the most widely practiced martial arts in the world, the students will also be able to continue their training in Shotokan though either the Penn State Club or at any other club around the world. They will also be given the opportunity to sit a formal grading examination (through a world class examiner), which will hold rank within Karate anywhere in the world, thus acknowledging their abilities gained in this course. This formal ranking is completely at the student's discretion and will not be required for credit toward Kinesiology 059. Frequency of enrollment: One to three sections every fall and spring semesters with a maximum of 30 students per section.

Kinesiology (KINES)

KINES 058 (GHA) Judo I (1.5) Kinesiology 058 will help students develop stamina, confidence and discipline, and promote general fitness through the introduction to basic Judo.

KINES 058 Judo I (1.5)
(GHA)

Kinesiology 058 will help students develop stamina, confidence and discipline, teach self-defense, and promote general fitness through the introduction of basic Judo. Developed in Japan in 1882, Judo has quickly spread across the globe and won approval as a modern sport. Judo became the first activity of Asian origin to be accepted as an Olympic event in 1964. Women's Judo was admitted to the Games as a full medal event in 1992. Judo, "the gentle way," is the modern day form of the ancient Japanese Jujitsu. The art is based on the principle of using the opponent's own strength to put him or her off balance, using minimum effort for maximum efficiency. Judo was initially developed by Professor Jigoro Kano, whose techniques were refined to form a combative system that demonstrates the superiority of techniques over mere strength. Although Judo is a martial art, students need not fear physical injury due to enrollment at Kinesiology 058. Judo I covers fundamental falling, throwing and grappling techniques. More dangerous techniques, such as choking and arm locks, are reserved until students have demonstrated satisfactory command of more basic skills. Kinesiology 058 is not simply aimed at introducing students to basic Judo. Judo instruction at Penn State encourages fitness by incorporating a brief session of physical conditioning into each class in an effort to augment the aerobic workout and prevent injuries. Each student is also asked to learn basic terms and some general history of the sport of Judo. Facilities/Class periods - held in the IM Building Combat Room - begin with stretching and generally continue with a series of technique demonstrations, form practices and free workout. Class concludes with conditioning and cool-down exercises. Frequency of enrollment: Two sections every fall and spring semesters with a maximum of 30 students per section.

Kinesiology (KINES)

KINES 061 (GHA) Fitness Theory and Practice (3) Students will learn about the science of fitness/wellness; evaluate their present fitness levels and create a personal fitness plan.

KINES 061 Fitness Theory and Practice (3)
(**GHA)**

Fitness Theory and Practice is a course designed to give the Penn State student a complete understanding of the fundamental principles of physical fitness and the skills necessary to implement a personalized fitness program. This course will provide all the information and skill needed for the student to organize, plan, and implement a complete physical fitness program.

In this course the Penn State student will acquire all the knowledge and critical thinking skills that are essential to the development of a healthful and active lifestyle. Through readings, classroom discussions, personal assessment techniques, video presentation, and World Wide Web based assignments, students will build a foundation of knowledge to guide them in their pursuit of an active and healthy lifestyle.

In addition to the above mentioned knowledge base, students will be guided through laboratory activities designed to: assess personal fitness levels pre-and-post intervention strategies, educate the student about cardiovascular training techniques, flexibility training techniques, muscular strength and endurance training techniques, and implement their own personal fitness program.

Various evaluation techniques will be used to assess student progress in Kinesiology 061. These techniques shall include, but not be limited to, conventional objective testing; group and individual presentations; World Wide Web based assignments and leadership activities; personal assessment inventories; and journaling assignments. Students who have already received credit for Kinesiology 084 or Kinesiology 066 may not enroll in this class because of the duplication of material.

Kinesiology (KINES)

KINES 062 (GHA) Introduction to Cardiovascular Activities (1.5) A course designed to give students an introduction to various types of cardiovascular training.

KINES 062 Introduction to Cardiovascular Activities (1.5)
(GHA)

Kinesiology 062 has been designed to help students become acquainted with and proficient in many types of cardiovascular activities that can be used as part of a lifelong exercise program. Students should expect to participate in a variety of activities such as, but not limited to, walking/jogging, cycling, aquatics, aerobic dance, and cardiovascular exercise machine use. Additionally, students will have an opportunity to learn skills necessary to create safe cardiovascular exercise programs while considering safety and injury prevention.

Kinesiology 062 is taught in a modular format including three to five separate types of cardiovascular exercise being chosen for the course content for the semester. Students will know which courses have been selected by listings in the semester Directory of Classes. Kinesiology 062 will provide a unique balance of training guidelines that can be applied to the various activities one pursues throughout life. Fundamental guidelines for safe exercise, progression, self-monitoring, etiquette, and injury prevention will be introduced throughout the course. Cardiovascular activities serves as a stepping stone to lifetime physical fitness and disease prevention. Self-and group-paced activity will allow for each individual to maximize the benefits of exercise.

Various evaluation techniques will be used to assess progress in Kinesiology 062. These techniques will include, but are not limited to, written examinations, performance assessments, and improvement-based evaluations of cardiovascular endurance and strength.

Kinesiology (KINES)

KINES 063 (GHA) Aerobic Dance (1.5) A course designed to involve students in daily aerobic activity while teaching the fundamentals of overall health and well-being.

KINES 063 Aerobic Dance (1.5)
(GHA)

Kinesiology 063 has been designed to give each Penn State student a basic understanding of the many different aspects of physical fitness while keeping the main focus on aerobic cardiovascular endurance.

In this course, the student will engage in daily participation in the various types of group fitness classes. This practical participation will be supplemented with lectures including, but not limited to, the principles, components, theories, and training techniques of physical fitness.

This course will provide each student with the necessary information and proper means to develop and maintain a healthy active lifestyle and achieve overall well-being.

Various evaluation techniques will be used to assess student's progress in Kinesiology 063. These techniques shall include, but not be limited to, written examinations, group and individual presentations, participation and performance, and homework assignments.

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 067 (GHA) Physical Conditioning (1.5) A course designed to give students an experience with an understanding of vigorous physical training.

KINES 067 Physical Conditioning (1.5)
(GHA)

Kinesiology 067 has been designed to help students build high levels of overall physical conditioning based upon athletic endeavors such as multi-sport and adventure challenges. Students should expect to physically challenge themselves through a variety of activities focusing on aerobic, anaerobic, and resistance training. Additionally, students will have an opportunity to learn skills necessary to create safe, complete conditioning programs while considering safety and injury prevention.

Physical Conditioning will provide a unique balance of training guidelines that can be applied to the various activities one pursues throughout life. Kinesiology 067 serves as a stepping-stone to lifetime fitness, competition in organized athletic events, and personal challenge activities. Students will develop a holistic approach to training for endurance, strength, and integrated activities. Self-paced activity will allow for each individual to maximize the benefits of physical conditioning.

Through working in groups to complete athletic challenges, students in Kinesiology 067 will integrate exercise, teamwork, and problem-solving skills. Success in group activities will hinge on communication between teammates and the team's ability to work in a cohesive fashion while experiencing a movement-based activity. Students may need to rely on group members for strengths in various areas.

Various evaluation techniques will be used to assess progress in Physical Conditioning. These techniques will include, but are not limited to, written examinations, completion of special challenges integrating aerobic, anaerobic, and resistance training (i.e. obstacle course), and improvement-based evaluations of cardiovascular endurance and strength.

Kinesiology (KINES)

KINES 065 (GHA) Jogging (1.5) A course designed to give students an understanding of and the ability to establish an exercise program involving jogging.

KINES 065 Jogging (1.5)
(GHA)

Kinesiology 065 introduces students to the performance of jogging as a lifelong activity that helps maintain and enhance physical fitness and overall wellness. This course provides the information that the student needs to understand, organize, plan and implement a physical fitness program that features jogging as a primary activity. The centerpiece of this course is a progression of individually-paced jogs of varying lengths that are conducted over various terrains. Past activities have included 1.5-mile timed runs, 2 through 6 mile runs, interval runs, hill runs, and runs to various locations of interest. Locations include Beaver Stadium, the deer research pens, Sunset Park, and various other landmarks around campus and in the community. These activities are complemented by a series of classroom lectures on such topics as the physiology of exercise, jogging safety; goal-setting for personal health; principles and concept of physical fitness; training methods to address different jogging goals; and nutrition and weight control. Students also participate in team-based projects such as group-designed scavenger hunts, "landmark jogs," and different team games and events that build group interaction skills. As a final project, each student is asked to define a measurable fitness goal and design a fitness jogging program to realize that goal. As part of this assignment, students assemble data to indicate that they have achieved their goal, and then identify and analyze the factors that contributed to their success. Students also have the opportunity to monitor their performance throughout the course using a variety of personal assessment inventories and instruments, such as logs and heart rate monitors. When a student completes Kinesiology 065, he or she will be able to identify the components of an effective physical fitness program and explain how jogging contributes to the success of this program; develop realistic fitness goals and design a jogging program to meet these goals; perform a variety of fitness jogging techniques; and understand how jogging promotes psychological well-being. Frequency of Enrollment: Ten to twelve sections every fall and spring semesters with a maximum of 30 students per section.

Kinesiology (KINES)

KINES 068 (GHA) Strength Training (1.5) Designed to improve students' muscular strength/endurance, teaches students how to develop an effective personal strength/endurance training program for lifelong fitness.

KINES 068 Strength Training (1.5)
(GHA)

The purpose of this class is to learn the basic principles of strength training, the role of weight lifting in an overall program of health and wellness, and to acquire the necessary skills and experience to develop an individualized program for developing muscular strength and endurance.

Kinesiology 068 will require the student to understand the following specific objectives:
1) Become proficient in the use of various types of equipment used to improve strength and endurance.
2) Learn the essential components of a weight training program and overall fitness program.
3) Conduct specific tests to measure muscular strength and endurance.
4) Assess muscular fitness level by comparing strength testing results to national averages.
5) Improve muscular strength and endurance.

Ample time will be devoted to allow students to acquire proper techinque for a wide variety of strength training exercises and to create a personal training program. Students will have adequate time to train and should significantly improve strength and endurance throughout the semester. At regular intervals, strength and endurance will be assessed. Students will complete summary reports in which they compare their fitness levels to national standards and will chart individual progress throughout the semester. Throughout the semester, it will be emphasized to the student that strength training is one aspect of a personal health and wellness program and that the student must assume personal responsibility to develop and maintain his/her health and fitness level for life. Students will be encouraged to explore their personal health and fitness goals and how strength training may be incorporated into their lifelong fitness plan.

Various evaluation techniques will be used to assess individual progress in Kinesiology 068. These techniques will include (but are not limited to) conventional objective testing, skill and fitness testing, and writing assignments.

Effective: Summer 2002

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 070 (GHA) Swim Conditioning (1.5) A course designed to provide students an understanding of and proficiency in swimming conditioning.

KINES 070 Swim Conditioning (1.5)
(GHA)

The primary objective of Kinesiology 070 is to teach students, in both a theoretical and practical manner, the fitness benefits derived from swimming. These benefits include but are not limited to: flexibility, cardiovascular endurance, muscular strength and endurance, and weight management. Because of its non-weight-bearing nature, attention is also given to the exercise value of swimming for arthritic, injured, and overweight individuals. This course promotes swimming as a lifelong pursuit and at the same time enables a student to design an individualized fitness plan, using swimming as the primary activity.

Instruction includes a mixture of classroom and practical experiences, with an emphasis on in-water activity. Fundamentally, the water activity consists of a daily workout, 40-50 minutes in length. Workout components include: a warm-up, light stretching, a main training set, and a warm-down. The training emphasis varies depending upon the placement of the workout during the semester as well as the fitness goal (group or individual) at that particular time. Workouts conducted early in the semester, for example, focus on technical issues and general aerobic improvement as the workload is gradually increased. Subsequent workouts are geared toward improving aerobic and anaerobic conditioning while maintaining a steady but varied workload. Throughout the semester, swimming is the primary activity, but an exposure to water walking/jogging/running and dry-land training is also provided. Moreover, the importance of implementing training variety, proper technique, and appropriate safety procedures is emphasized throughout the course. Classroom sessions are reserved for understanding training principles, terms, and methods. Individual concerns (i.e. fitness goals, videotaping, training alternatives, and problems) are also addressed in this setting.

Swimming ability varies greatly from one individual to another. Because of this, and because space limitations prevent total individuality, students are taught to devise swimming fitness programs that meet both individual and group goals. These workout programs are expected to utilize competitive and noncompetitive strokes, varying degrees of aerobic and anaerobic training, as well as a balanced combination of swimming, kicking, and pulling efforts (using a variety of training equipment). Educational objectives are completed in a systematic yet flexible manner that affords students the opportunity to simultaneously learn and experiment together while developing individual fitness.

Individual progress may be assessed through any or all of the following measures: objective testing, maintenance of a training log, written assignments, and standardized swimming performances. The amount of each is left to the discretion of the instructor. Evaluation methods other than those already mentioned may certainly be used.

Kinesiology (KINES)

KINES 071 (GHA) Triathlete Training (1.5) A course designed to give students a foundation for skills in cross-training: swimming, cycling, and running.

KINES 071 Triathlete Training (1.5) (GHA)

Kinesiology 071 introduces students to the performance of cross-training as a lifelong activity that maintains and enhances physical health and psychological well-being. This course provides the information that the student needs to understand, organize, plan and implement a cross-training program to compete in a triathlon. The students will determine their strengths and weaknesses in swimming, cycling, and running and design a training regime that will build on their weak areas and capitalize on their strengths. The centerpiece of this course is a series of small group and individual training sessions combining the three various disciplines of swimming, cycling, and running into a single sport of triathlon training. Past activities have included swimming drills and techniques, cycling around the campus and community, running, and learning pacing. In addition, cycling to such places as Whipples Dam and Stone Valley Recreation Area have also been featured. These activities are complemented by a series of classroom lectures on such topics as the physiology for triathletes, weight training and stretching, nutrition and performance. As a final project, each student will participate in a mini triathlon set up by the course instructor. Students also have the opportunity to monitor their performance throughout the course using a variety of personal assessment inventories and instruments, such as logs and heart rate monitors. Following the completion of Kinesiology 071, the student will be able to identify the components of an effective physical fitness program and explain how triathlete training contributes to the success of this program; develop realistic fitness goals and design a cross-training program to meet these goals; perform a variety of fitness techniques; and appreciate how triathlete training promotes physiological and psychological well-being. Various evaluation techniques will be used to assess individual progress in Kinesiology 071. These techniques will include (but are not limited to) conventional objective testing, performance on a nationally-normed fitness test, personal assessment inventories and assignments, and journaling assignments. Frequency of Enrollment: One to two sections every fall and spring semesters with a maximum enrollment of 30 students per section.

Kinesiology (KINES)

KINES 072 (GHA) Fitness Walking (1-1.5) A course designed to give students an understanding of and a proficiency in fitness walking.

KINES 072 Fitness Walking (1-1.5)
(GHA)

Kinesiology 072 introduces students to the performance of fitness walking as a lifelong activity that maintains and enhances physical health and psychological well-being. This course provides the information that the student needs to understand, organize, plan, and implement a physical fitness program that features walking as a primary activity.

The centerpiece of this course is a series of small group and individual walks of varying lengths that are conducted over various terrains. Past activities have included one-mile, four-mile, and eight-mile walks to such locations as the Mushroom Research Center, Beaver Stadium, and various museums, and other landmarks around campus and the community. In addition, hikes to such places as Mt. Nittany and Stone Valley Recreation Area have also been featured. These activities are complemented by a series of classroom lectures on such topics as the philosophy of walking and walking safety; goal-setting for personal health; principles and the concept of physical fitness; the physiology of walking; and nutrition and weight control. Students also participate in team-based projects such as group-designed scavenger hunts and "landmark walks." As a final project, each student is asked to define a measurable fitness goal and design a fitness walking program to realize that goal. As part of this assignment, students assemble data to indicate that they have achieved their goal, and then identify and analyze the factors that contributed to their success. Students also have the opportunity to monitor their performance throughout the course using a variety of personal assessment inventories and instruments, such as logs and heart rate monitors.

When a student completes Kinesiology 072, he or she will be able to identify the components of an effective physical fitness program and explain how walking contributes to the success of this program; develop realistic fitness goals and design a walking program to meet these goals; perform a variety of fitness walking techniques; and understand how walking promotes psychological well-being.

Various evaluation techniques will be used to assess individual progress in Kinesiology 072. These techniques will include, but are not limited to, conventional objective testing, performance on a nationally normed fitness walking test, personal assessment inventories and assignments, and journaling assignments.

Kinesiology (KINES)

KINES 076 (GHA) Introduction to Tai Chi Ch'uan (1.5) A course designed to introduce students to Tai Chi Ch'uan, a traditional Chinese system of personal cultivation and self-defense.

KINES 076 Introduction to Tai Chi Ch’uan (1.5)
(GHA)

This course will introduce students to Tai Chi Ch'uan a health and martial arts system originating from China, and based on more than five thousand years of observation and practice culled from the major Chinese Schools of philosophy and Chinese medical practice. It is seen as a physical embodiment of the supreme Taoist principles. Tai Chi has become very popular in the rest of the world as a means for attaining physical health and vitality and as a formidable defensive martial art. Tai chi has been the focus of research in China and the west and has been found extremely beneficial for balance, arthritis, Parkinson Disease and for general health and well being.
Students will be introduced to the principles of Tai Chi Ch'uan by learning Tai Chi relaxation techniques and warm ups to relax the joints, right body alignment and Qi Gong exercises to promote the flow of chi or life energy through the body and the internal organs. They will learn and become proficient in the performance of the first part of the Tai Chi Yang form, which is the heart of the practice. The students will also explore the martial aspects of Tai Chi Ch'uan through the practice of push hands, a two person play, and through the demonstration and introduction to the Tai Chi Sword. The martial art aspects will enrich the students experience and demonstrate the interaction of the student's chi with his or her environment.

Students are encouraged to practice daily outside of class and to record their practice and observations in a journal. At the end of the course they will be required to perform the Tai chi form and related exercises on their own.

Evaluation is based on participation, class journal and observations, and the final individual performance of the Tai Chi form and related exercises. No special facilities are required for this course. The department plans to offer one section every fall and spring semesters with an anticipated enrollment of 25 students per section.

Kinesiology (KINES)

KINES 077 (GHA) Yoga 1 (1.5) A course designed to give students an understanding of and proficiency in yoga.

KINES 077 Yoga I (1.5)
(GHA)

(BA) This course meets the Bachelor of Arts degree requirements.

Kinesiology 077 introduces students to the performance of yoga as a lifelong activity that maintains and enhances physical health and psychological well-being. This course provides the information that the student needs to understand, organize, plan, and implement a wellness program that features yoga as a primary activity.

The centerpiece of this course is a series of activity classes that introduce students to classical yoga postures that address such needs as stress management, muscular tightness, skeletal alignment, and injury rehabilitation. In addition to posture instruction, each class begins with a period of breathing and meditation practice where students are taught to use various breathing techniques to calm the mind and focus mental energy on specific tasks. These activities are complemented by a series of classroom lectures on such topics as the historical and philosophical foundations of yoga, nutritional practices that enhance the value of a lifelong yoga program, and Eastern-based movement traditions that complement yoga practice. Students also have the opportunity to complete reflective essays on various aspects of yoga philosophy and lead a group-designed yoga class.

When a student completes Kinesiology 077, he or she will be able to identify the components of an effective lifelong wellness program and explain how yoga contributes to the success of this program; perform yoga to develop flexibility, strength, and cardiovascular endurance; select and perform yoga postures that address specific needs (e.g., stress management, muscular tightness); describe the philosophical and historical framework that supports yoga practice; and understand how effective breathing and meditation techniques promote physical and psychological well-being.

Various evaluation techniques will be used to assess students' progress in Kinesiology 077. These techniques can include (but are not limited to) conventional objective testing; skill testing that evaluates the performance of specific yoga postures; reflective essays on aspects of yoga history and philosophy; and performance in a group-designed yoga class.

Kinesiology (KINES)

KINES 077A (GHA) Advanced Yoga (1.5) A course designed to expand on a student's fundamental understanding of and proficiency in yoga.

KINES 077A Advanced Yoga (1.5)
(GHA)

Kinesiology 077A is a course based on a system of ultimate health created in India 5,000 years ago and now practiced by all contemporary societies throughout the world. Students who enter this course are introduced to a deeper and more detailed knowledge and practice of this ancient curriculum. Students will become familiar with the research data that supports that yoga is beneficial to muscular, endocrine, cardiovascular, digestive and skeletal systems of the body. Each class period is devoted to practicing yoga postures with the knowledge of their specific benefits. For instance, when learning the bridge pose students will learn that the bridge increases flexibility in the back and shoulders, strengthens the leg muscles and stimulates thyroid function. Students learn to integrate such knowledge into their personal practice of yoga outside of class. In addition to learning more about the development of a personal practice advanced yoga also provides the students with many opportunities to also practice yoga off of the yoga mat or in their own personal student life. In both written and verbal opportunities students share how yoga and the practice of yoga is "showing up" in their lives. Sanskrit is the Indian language of yoga. There are opportunities in Advanced Yoga to understand and translate the language and to be able to express Sanskrit in relationship to meditation techniques, energy center practices, temperament determination and application of specific yogic activities. When students complete the course they will be able to perform yoga to increase flexibility, strength and cardiovascular endurance. They will have studied and performed breathing techniques, and developed a daily yoga practice. They will also be able to perform new intermediate yoga postures and to perfect the beginning postures learned previous to this classroom experience. They will also have a basic knowledge of the energy systems of the body as described in Indian Ayurvedic medicine. Various evaluation techniques will be used to assess student's progress in Kinesiology 077A. These techniques can include (lesson plan and teaching to support certain postures and posture series, journal writing with verbal and written criteria, and portfolio construction.) There are no special facilities for this course. The Department plans to offer one section each fall and spring semester with a maximum enrollment of 30 students.

KINES 083 (GHA) Exercise for Stress Management (1.5) A course designed to identify the factors that contribute to student stress and develop strategies that will manage these factors. Students who receive credit for KINES 083 will not receive credit for KINES 082.

KINES 083 Exercise for Stress Management (1.5)
(GHA)

Kinesiology 083 is a course designed to give the Penn State student an introductory understanding of the fundamental principles of stress management. This course will provide pertinent information the student needs to understand, organize, plan, and implement a preliminary stress management program.

In this course, the Penn State student will follow a four-part concept of stress management that encourages the student to identify the factors that contribute to their stress and to develop strategies that will allow the student to manage these factors more effectively. In the first part of the course, material is presented that relates to the importance of knowing oneself and then establishing vehicles for placing oneself in relationships, environments, and situations that consistently support that "self." In the second part of the course, the student is introduced to the elements of fitness and the research data available to date that supports the idea of fitness prescriptions to enhance the relaxation response and/or produce relevant changes in hormone levels. In conjunction with this knowledge and application of such knowledge, the students learn nutritional facts that allow them to understand the chemicals that foods possess that can produce a calming or increased energy effect. Combining this knowledge, the students develop a personal program to incorporate these fitness and nutritional goals into their own lives. In the third part of the course, students are introduced to Eastern literature that indicates that a mind needs to be trained in order to provide a calming effect, increased concentration, and efficiency.

Students practice these skills to train their mind and be able to fully depend on their mind to perform more efficiently in time of stress. In the final part of the course, the students are introduced to the most current definitions of spirituality and are able to appreciate how their own spirituality is demonstrated in their lives. The course is taught through a variety of teaching methods which include lecture, workbook activities, and the repeated use of stress techniques demonstrated by the instructor and practiced by the students in class. This learning is supplemented and reinforced by listening to stress management audio tapes. The students reflect on specific stress concepts by writing self-reflection papers that allow them to reflect on how each concept is "showing up" in their own lives at the present time.

KINES 084 Fitness for Life (1.5)
(GHA)

Kinesiology 084 is a course that has been designed to give the Penn State student a complete understanding of the fundamental principles of physical fitness. This course will provide all of the information the student needs to understand, organize, plan and implement a complete physical fitness program.

In this course the Penn State student will acquire the knowledge and critical thinking skills that are essential to the development of a healthful and active lifestyle. Kinesiology 084 will challenge students to be active participants in their learning process. Students will as individuals or as part of a learning team be involved in classroom discussions of various fitness/wellness related topics. Learning teams will delineate key elements of various topics for classroom presentation. Student will participate in student surveys collecting data, interpreting results and formulating theories about those results. Kinesiology 084 will be an ideal forum in which students can explore their social behaviors as they related to the ethical consumption of resources with regard to health and fitness.

Various evaluation techniques will be used to assess student's progress in Kinesiology 084. These techniques shall include but not be limited to conventional objective testing, group and individual presentations; Web based information gathering, personal assessment inventories, and journaling assignments.

Kinesiology (KINES)

KINES 088 (GHA) Varsity Sport Experience (2) A course designed to promote an active and healthful lifestyle through participation in a varsity sport sanctioned by Penn State.

KINES 088 Varsity Sport Experience (2)
(GHA)

Kinesiology 088 introduces students to the rigors of the varsity sport experience. This course provides the information that the student needs to understand, organize, plan and thrive in the competitive environment of a collegiate sport program while integrating themselves into the university community.
The "corner stone" of this course is the varsity sport experience itself. Under the tutelage of some of the best instructors in the nation these student-athletes will learn how to prepare for and engage in physical and psychological contests of the highest order. In addition to engagement with the finest physiological training students are taught to work collaboratively in small and large groups to solve complex movement problems. Critical thinking is stressed as students negotiate the complex real world problem of being a student athlete in a collegiate athletic program. Social behavior, community and scholarly conduct are continually addressed as the student-athletes attempt to integrate themselves into the university and local community.

When a student completes Kinesiology 088, he or she will be able to identify the components of an effective physical training program and explain how that program contributes to lifelong wellness; develop training goals and design programs to meet these goals; perform a variety of physical training techniques; and understand how the acquisition of sport specific skills and knowledge promotes psychological well-being.

Members of the Department of Intercollegiate Athletics evaluate the successful completion of this program.
Sport-appropriate training and performing venues are provided by Penn State. Enrollment will be based upon seasonal varsity sports.

Kinesiology (KINES)

KINES 089 (GHA) Student Wilderness Experience (3) Incoming student wilderness experience. Backpacking and one additional adventure: rock climbing, high ropes course/canoeing. One-day of community service.

KINES 089 Student Wilderness Experience (3)
(GHA)

KINES 089 is a 6-day wilderness experience that is offered to incoming students during the summer before the onset of the fall semester. This course includes four days of backpacking and one day of an additional adventure: rock climbing, high ropes course or canoeing. Through these activities students learn the various skills associated with backpacking and wilderness living. Students are engaged in hours of physical activity as they hike between 6 and 8 miles per day on variable, rolling terrain with 30-401b backpacks upon their backs. Students are placed into small groups of 8-10 students with Penn State students and graduate students who mentor and lead the wilderness experience. Small group discussions focus on life at Penn State, question and answer sessions for students and issues regarding outdoor leadership. KINES 089 emphasizes teamwork, group living skills, and wilderness ethics. Through the first five days of the program these various topics are addressed. Equipment for all activities is provided. Incoming students with all levels of experience may take this course. A community service project is also required. A follow-up classroom session takes place one to two months from the ending point of the program at which time students will turn in their class assignments. KINES 089 is offered in June, July and August prior to the onset of fall classes. Both sections of KINES 089 begin and end at the University Park campus. The course is offered at least twice every year, prior to the beginning of fall semester, with anticipated enrollment of 60 students each section. In 2003, a June and July section will be offered in addition to two weeks in August. Four sessions in total will be offered. KINES 089 will utilize a gymnasium in the Intramural Building for the first day of each session. The course also uses facilities at Stone Valley Recreation area on the last night of the program.

Kinesiology (KINES)

KINES 090 (GHA) Introduction to Team Sports/Indoor (1-1.5) A course designed to introduce students to indoor team sports.

KINES 090 Introduction to Team Sports/Indoor (1-1.5)
(GHA)

Kinesiology 090 is a course that has been designed to give the Penn State student an introduction to a selected indoor team sport such as, but not limited to, basketball, volleyball and/or team handball. The fundamental skills, strategies, and rules will be covered for the selected sport. Successful completion of the course will provide a foundation for participation in intramural activities, recreational activities, and provide a gateway to life long movement.

While Kinesiology 090 will focus on the skills, strategies and rules of a selected team sport, the underlying sub-focus of this course is the development of the social skills required to be a good team member. The commitment to a team sport requires students to encounter a collaborate atmosphere. As the students seek to solve complex movement problems they learn to co-operate to achieve various team goals. The improvement of individual skills is important, however, the successful integration of these individual skills into the team is a valuable life lesson. As the student leaves the university, the lessons learned in this class will prepare him/her for "team " membership in their various areas of professional practice.

Students in Kinesiology 090 will be evaluated by a combination of evaluation techniques which may include, but not be limited to, written reports, skills testing, tournament performance and subject evaluation of "team" work ethics.

Kinesiology (KINES)

KINES 092 (GHA) Adaptive Physical Education (1.5) A course designed to give students with medically defined disabilities an opportunity to maximize their physical potential through individualized programs.

KINES 092 Adaptive Physical Education (1.5)
(GHA)

Kinesiology 092 is a fitness activity class designed for students with medically described disabilities. The class introduces students to a program of organized activities designed to increase their overall fitness level with an emphasis on safety, enjoyment, lifetime activities and sports. Students are challenged to set their own fitness goals and to begin a program of warm up activities, stretching, strength training, and endurance activities. The individualized programs are designed and monitored by the instructor with the guidance and consent of the student's physician and or physical therapist. Students are required to keep a fitness diary or journal and to evaluate their individual progress. Evaluation of normal progress toward their goal is basic but conventional assessment techniques and performance on nationally normed fitness tests are also used. Facilities: Wheel chair accessibility, adaptive physical education room and adaptive equipment are available in Recreation Building. Offering: The Department anticipates offering one to two sections every fall and spring with enrollments up to 20 students in each section.

General Education: GHA
Diversity: None
Bachelor of Arts: None
Effective: Summer 2003

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 093 (GHA) Masters Activity (Sport) (1.5 per semester/maximum of 12) A course that introduces students to movement subcultures by providing the knowledge, habits, and skills for activity across the lifespan.

KINES 093 Masters Activity (Sport) (1 per semester/maximum of 12) (GHA)

The Masters Curriculum provides a unique approach to movement education. Rather than focusing on regimented skill development over a period of a semester or less, KINES 093 requires students to incorporate activity into their weekly schedules for a year or longer. Because this is a self-paced and self-designed curriculum, students must also take responsibility for the kind, quality, and amount of activity they experience. By signing an activity contract with the master teacher each semester and being required to demonstrate progress made through portfolio evaluations, students are further encouraged to take responsibility for developing the habits of active living-not just fulfilling a requirement. The curriculum is designed to bring a higher percentage of students into a movement subcultures higher percentage than can be achieved in the shorter, instructor-directed, and more traditional educational setting. In order to achieve this in-depth experience, students will be required to take two masters courses (1.5 credit each) in the same activity. Sequential enrollment provisions will be needed, with a maximum of 3 credits counting toward General Education requirements. Each student will meet with the master instructor at the start of a semester to review a menu of activity opportunities (see outline above) in a specific movement domain. Students, in consultation with the instructor, will select a cluster of learning experiences to be encountered that semester. Each menu item chosen will be recorded on the contract along with the method or methods by which that item will be documented in the student's portfolio. The agreed upon documentation must be provided before credit is awarded. A completed contract will be signed by both the student and the master teacher. Regular communication between each student and instructor, consistent with the nature of the contract and the activities selected from the menu, will be assured. In addition, students will be required to become connected to a movement subculture by joining an appropriate organization and/or subscribing to relevant publications during that two-semester period of time needed for completing the requirement. When students have finished the 3 credits, they will be encouraged to continue with Masters development either as performers or as peer instructors for less experienced students. This length and intensity of involvement is designed to produce students who become bona fide members of a movement subculture by the time they leave the program. The expectation is that they will embody the habits, values, and attitudes needed for an active, healthy lifestyle.

General Education: GHA
Diversity: None
Bachelor of Arts: None
Effective: Spring 2003
Prerequisite: successful completion of relevant activity course or permission of the instructor

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 096 (GHA) Independent Study in Physical Activity (.5-3 per semester) This course is designed to meet the needs of students to expand Kinesiology experiences beyond the designed course curriculum.

KINES 096 Independent Study in Physical Activity (1-3 per semester) (GHA)

Students enroll in KINES 096 to take advantage of a unique movement experience in which they plan to participate. They enroll in KINES 096 by an application process. Students who feel that they would like to fulfill their Health Science and Physical

Activity (GHA) requirement by pursuing a movement form outside of the normal curricular offerings apply to the department of Kinesiology. Applications will be screened to see that they fulfill the tenants of the GHA requirement.

The topics for this course vary widely from student to student. A student may be working on a personal contract that has been designed to report the progress of experiences from hiking excursions in Nepal to a mountain biking course in Crested Butte, Colorado, to walking a mile in 15 minutes after major knee surgery. Therefore, many common topics are an exception rather than a rule during any given semester. Each student completes a proposal form that requires that they describe their need for this course. They are also asked to describe the experience that they have identified in detail and also a preliminary program and implementation plan for the detailed program. This proposal is then approved or denied by the faculty member facilitating the independent study program. After the proposal has been approved or denied the student will receive a letter notifying them of their status in the course. If they have received an approval letter they are instructed in the letter to meet one-on-one with the class instructor. At the initial meeting, the proposal is discussed and when there is an agreement with the student and instructor concerning the requirements for the student to complete the course successfully a contract is written and signed by both the instructor and the student. Weekly contact, at a minimum, with the instructor is required.

Student evaluation techniques shall include but not be limited to objective testing, individual projects, presentations, journals and subjective evaluation of effort involved in meeting the stated goals and objectives for the course.

There are no special facilities for this course. The department plans to offer this course every fall and spring semesters, with an enrollment of up to 25 students each semester.

Kinesiology (KINES)

KINES 126 The Health Program for the Elementary School Child (1.5) Introduction to the Coordinated School Health Program. Overview of contemporary school-based health education theory, content, methods, and practice.

KINES 126 The Health Program for the Elementary School Child (1.5)

KINES 126 is an introductory course designed to prepare school-and community-based educators to implement health promotion and disease prevention educational programs to elementary-aged audiences. Emphasis of the course is on the coordinated school health program model, theory, content, and teaching methods. Eight specific components of a coordinated school health program serve as the foundation for the course: (1) comprehensive school health education; (2) physical education; (3) school health services; (4) school nutrition services; (5) school counseling, psychological, and social services; (6) healthy school environment; and (7) school-site health promotion for faculty and staff; and family and (8) community involvement in school health. Students will gain experience in health promotion and disease prevention concepts; lesson planning; roles and responsibilities of teachers, staff, administrators, and students; and implementing effectively the health education concepts outlined above. The Department will offer one large section each fall and spring semesters with an anticipated enrollment of 150 students per section. A technology room will be required.

Participation in this course will enable the student to:
a. Analyze the goals, roles, and responsibilities of the classroom teacher concerning the health of the school-aged child.
b. Identify appropriate educational resources related to school health.
c. Describe the components of the coordinated school health program
d. Discuss the important of learning healthy life skills for elementary-aged learners.
e. Organize and submit one modified health-based lesson plan for elementary-aged leaners.
f. Demonstrate competency in accessing health education resources from the World Wide Web.

Methods for Evaluation:
Written examinations 50%
Lesson Planning 30%
In-Class Participation 20%

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2006
Prerequisite: EDPSY 014

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 135 Introduction to Athletic Training (3) Foundation of injury recognition and prevention; ethical, legal, and professional issues for the athletic trainer. A laboratory based course.

KINES 135 Introduction to Athletic Training (3)

Introduction to Athletic Training provides an overview of the field of athletic training exploring the breadth of athletic training terminology, issues, and injuries. After completing the course, the students will be able to describe the roles of the sports medicine team, understand the legal considerations for the athletic trainer as a health care provider, and identify the basics of physical conditioning and nutrition in reference to injury prevention. Students will be able to describe an emergency action plan for injuries, lightning safety, and provide a basic plan for dehydration and fluid replacement. Students will be able to identify basic use of therapeutic modalities and principles of therapeutic exercise programs. Students will gain an understanding of acute vs. chronic injury conditions and be able to describe the related anatomy, etiologies, pathologies, signs and symptoms, and general treatment and management for injuries of the foot, ankle, lower leg, knee, hip/groin, shoulder, elbow, wrist, hand, cervical spine, and head. A weekly taping laboratory is included and students are provided rationale and demonstrations for specific taping techniques for a variety of injuries. Students are also provided an overview of general medical conditions that may occur in the athletic arena. Students are evaluated through three (3) exams, six (6) quizzes, performance in taping lab and practical exam, development of a medical condition fact sheet and class presentation of the medical condition, in-class assignments, class participation, and class attendance. This course is offered every fall and spring semesters with a maximum enrollment of 35.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2006

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 127 The Physical Education Program for the Elementary School Child (1.5) Theoretical and practical overview of developmentally appropriate physical education for children.

KINES 127 The Physical Education Program for the Elementary School Child (1.5)

KINES 127 is an introductory course designed to introduce future classroom teachers to the conceptual framework of developmentally appropriate physical education. The class includes both theoretical and practical guidelines for analysis and implementation of children's physical education. The course focuses on applications of the Pennsylvania standards for elementary educators K-6. The components of KINES 127 include: concepts related to becoming and remaining physically active for a lifetime, physical fitness, motor development, movement and fitness concepts and fundamental motor skills, safety procedures, role and value of play, game and sports in child development. Students will gain experience teaching physical education lessons, as well as observing and participating in physical education experiences. Students will be introduced to multi-cultural dance and games. Students will understand the use of small and large equipment. Evaluation will include written examination, group peer teaching, and participation. The Department will offer 4 sections each Fall and Spring semesters with an anticipated enrollment of 30 students. The Department will offer 1 section per summer semester with an anticipated enrollment of 30 students.

Participation in this course will enable students to:
1. Define and develop a philosophy of elementary physical education.
2. Identify developmental characteristics and stages for children grades K-8.
3. Develop professional teaching techniques.
4. Apply act ivies for physical education, using proper safety procedures.
5. Discuss the importance of nutrition, personal wellness, and lifelong healthy habits.
6. Understand the human body and its systems.
7. Demonstrate competency in accessing physical education activities and resources from the World Wide Web.

Methods for Evaluation:
Writing Examination 50%
Group Peer Teaching and lesson planning 20%
Written Observation of Peer Teaching 10%
Participation 20%

Kinesiology (KINES)

KINES 180 Introduction to Kinesiology (3) The foundation course of the Kinesiology degree, providing an interdisciplinary approach to the study of movement through problem based learning.

KINES 180 Introduction to Kinesiology (3)

Kinesiology 180 is the foundational course of the Kinesiology degree, and aims to stimulate student's interest and value in the scholarly inquiry of human movement. Students will be introduced to the problems, and methods used to solve them, that are the domain of Kinesiology. The relevance of the study of human movement to different areas of professional practice will be emphasized, along with guidance on multiple possible career paths for Kinesiology undergraduate students (e.g. athletic training, ergonomics, fitness and wellness industry, medicine, occupational therapy, physical therapy, and teaching). To begin with, students will be introduced to the Kinesiology sub-disciplines: biomechanics, motor control, physiology, and psychology. Students will gain experience in different methods of inquiry through active learning, including laboratory-based activities that stress practical application of knowledge. During the later part of the course the sub-disciplines will be integrated in an interdisciplinary approach through student collaboration in solving authentic "real world" problems. Evaluation will include laboratory activities, Readiness Assessments Tests, and/or mid-term and final examination will be administered based on instructor discretion. The Department is planning to offer two sections every fall and spring semesters with an anticipated enrollment of 75 students per section. A technology room will be required. A technology room request form is attached.

Kinesiology (KINES)

KINES 201 Cardiorespiratory Training for Health and Performance (3) Exploration of the principles and practical applications of cardiorespiratory training for health and performance enhancement.

KINES 201 Cardiorespiratory Training for Health and Performance (3)

KINES 201 prepares students in understanding the process of developing a cardiorespiratory exercise prescription program. Exercise programming is scripted on an individual basis according to goals, national guidelines, age, interests, available time, and commitment. The benefits of physical activity are becoming increasingly documented. However, physical activity is not without risks. The proper cardiorespiratory exercise prescription is important to the safe participation for a wide range of populations. Students will be able to determine the differences between activity, fitness, and sport performance and be cognizant of the various components and modes of cardiorespiratory activity. Students will understand the different models of cardiorespiratory exercise prescription for health, fitness, and sport performance. Applying this knowledge, students will experience practical applications of cardiorespiratory exercise prescription on various training modalities applied to a wide range of settings. Homework assessments, laboratory activities and/or mid-term and final exams based on the discretion of the course instructor will reflect the pedagogical and practical application of cardiorespiratory exercise prescription concepts.

The Department is planning to offer one section every year with an anticipated enrollment of 25 students per section.

Kinesiology (KINES)

KINES 200 Muscle Training: Physiology, Programs, Techniques (3) Physiological basis of strength training emphasizing mechanisms of muscle contraction and growth, program and facility design, and individual exercise technique.

KINES 200 Muscle Training: Physiology, Programs, Techniques (3)

This course focuses on the concepts and applications of strength exercise science including relevant testing and evaluation of strength protocols. It explores the organization and administration of resistance training and conditioning facilities including the development of resistance training programs. The course also introduces students to exercise techniques. As a result of this course students will be able to work collaborative with others. They should be able to evaluate information for authority, relevance, currency and accuracy. They will understand the biomechanics of strength training, the physiological adaptations to muscle training and the mechanisms of change with varying populations. In addition they should be able to select and organize appropriate muscle testing protocols. They should be able to teach and demonstrate appropriate strength exercises to an individual or group as well as be able to identify and correct errors an individual might make. They should be able to prescribe the proper exercise and exercise sequence to strengthen a specific muscle or muscle group. And they should be able to design and organize a strength training facility. Knowledge and skills will be assessed by written tests, by laboratory work and by a variety of group projects and term papers. This course is linked to other courses in that it is the course in which students gain knowledge and experience in designing and prescribing resistance training exercises for individuals and groups. As such it contributes core content to the curriculum. The course requires a resistance training room with adequate equipment and computers, both available to students at both locations of the College.

Kinesiology (KINES)

KINES 203 Medical Terminology for Allied Health Professionals (3) Comprehensive review of terms related to functions, disorders, diagnosis, and treatment of body systems related to physical activity and movement.

KINES 203 Medical Terminology for Allied Health Professionals (3)

This course is designed for students who wish to enter an allied health field related to physical activity and human movement. This course will help students prepare for careers in physical therapy (PT), occupational therapy (OT), medicine (MD, DO), physician assistant (PA-C), pharmacy (R.Ph), dietary medicine (RD) and emergency care (EMT, EMT-P). Some of the allied health programs listed above requires a 3 credit course in medical terminology prior to admission into graduate school and this course fulfills that requirement.

The goal of this course is to help students develop an understanding of medical terminology related to physical activity and human movement used when dealing with the anatomy and physiology of the systems of the body, disease processes associated with each system, and pharmacology and clinical treatments associated with the pathology of the body systems. Students will appreciate the weights and measures, chemical symbols, diagnoses, procedures, and medical documentation used in allied health fields, especially in sports and human movement medicine.

Kinesiology (KINES)

KINES 231 Athletic Training Clinical Practice I (3) Preparation in basic psychomotor skills required in the clinical practice of athletic training. This is a laboratory fee based course.

KINES 231 Athletic Training Clinical Practice I (2)

This course is designed to introduce students to basic skills required for the clinical practice of athletic training. The course will teach introductory content and skills related to injury and illness prevention and management. Specific topics include preventing environmental injuries and illnesses, taping and wrapping techniques, protective equipment, preparticipation physical examinations, preparing for emergencies in the athletic setting, and concepts of basic athletic injury management. The course will meet for one hour of lecture and two hours of lab each week. Assessments will include written and practical examinations, homework assignments, and demonstration of practical skills specific to the clinical proficiencies required to sit for the NATABOC exam (must be administered by an NATABOC approved clinical instructor per accreditation guidelines).

KINES 232 Athletic Training Clinical Practice II (3) Preparation in advanced psychomotor skills required in the clinical practice of athletic training. This is a laboratory fee based course.

KINES 232 Athletic Training Clinical Practice II (3)

Athletic Training Clinical Practice II provides instruction in supervised practice of the basic skills required in the practice of athletic training. Topics include documentation of medical records, postural screening, assessment and improvement of flexibility, assessment, and improvement of strength, use of functional rehabilitation protocols, use of common therapeutic modalities, and description of the use of medications in sports medicine. Assessments will include written and practical examinations, homework assignments, and demonstration of practical skills specific to the clinical proficiencies required to sit for the NATABOC exam (must be administered by an NATABOC approved clinical instructor per accreditation guidelines). Students will also complete four-10-hour observations with senior athletic training students. This course provides the student with the opportunity to learn and practice clinical athletic training skills before beginning practicum experiences. The course will meet for 2-hours of lecture and 2-hours of lab each week.

General Education: None

Kinesiology (KINES)

KINES 233 Emergency Care in Athletic Training (3) Introduction into emergency medical care with emphasis on management of common emergency situations occuring during athletic participation. This is a laboratory fee based course.

KINES 233 Emergency Care in Athletic Training (3)

This course prepares students pursuing the athletic training option in the Department of Kinesiology with the knowledge and skills to respond to medical emergencies. Basic skills including rescue breathing, cardiopulmonary resuscitation, and first aid management of injury and illness emergencies are developed. These skills are supplemented with content related to blood borne pathogens and OSHA regulations needed for personal safety and effective management of athletic training services, the causes and prevention of sudden cardiac death in athletics, and training in the use of automated external defibrillators. The second part of the course focuses on the secondary survey and evaluation and management of central nervous system, musculoskeletal injuries, and shock. The final part of the course addresses conditions of the thorax, abdomen, and musculoskeletal system, environmental hazards encountered in athletics; and drug and alcohol overdoses and poisoning. The course will include the opportunity for professional certification in first aid and cardiopulmonary resuscitation. The course will meet for 2-hours of lecture and 2-hours of lab each week. Assessments will include written examinations, CPR certification (written and practical), blood borne pathogens certification (written), and demonstration of practical skills specific to the clinical proficiencies required to sit for the NATABOC exam (must be administered by an NATABOC approved clinical instructor per accreditation guidelines).

Kinesiology (KINES)

KINES 260 Research Skills in Kinesiology (3) Development of research skills employed in kinesiology, including experimental design, statistical testing and information technology, through experiential learning.

KINES 260 Research Skills in Kinesiology (3)

KINES 260 prepares students to read, understand and critique scientific research. The epistemological belief that knowledge is static and science discovers truth will be challenged. Rather than research being a product achievable only by professors, research will be presented as a process that students can understand and contribute to. Therefore, this course will develop skills and knowledge in understanding and conducting scientific research through practical experience. Specifically, students will learn to search for articles and be able to evaluate different sources of knowledge. Reading strategies will be employed to develop the ability to read and produce research papers according to standard structure and formatting. Students will gain experience using a range of different measurements of human movement and behavior, and understand general measurement issues. Practical experience with different types of research in kinesiology will occur throughout the semester, aiding students to critique and design research. Students will learn when to employ different statistical tests, be able to analyze data using statistical software, and interpret the results. Experience in other computer software will occur throughout the semester to develop student's word processing, spreadsheet and graphical skills. This knowledge and skills will be integrated throughout the semester and culminate in a research project performed by teams of students. In addition to the research project, evaluation will include homework assignments, laboratory activities, and/or mid-term and final examination based on instructor discretion.

The Department is planning to offer one section every spring semester with an anticipated enrollment of 25 students per section. A technology room will be required.

Kinesiology (KINES)

KINES 261 Educational Gymnastics (1) This course provides an introduction to developmentally appropriate gymnastics for K-12 students.

KINES 261 Educational Gymnastics (1)

This course is designed for physical education teacher candidates as an introduction to educational gymnastics. Educational gymnastics are developmentally appropriate and recognize differences in student abilities and levels of physical fitness. The course introduces students to the educational philosophy of this approach and contrasts it with Olympic gymnastics. After a review of safety and liability issues related to gymnastics, the majority of the course is devoted to learning to teach the content of educational gymnastics organized into the skill themes of traveling, jumping and landing, balancing, transferring weight and rolling. Teacher candidates are taught to develop gymnastics sequences and to guide students in developing their own gymnastics sequences. The course concludes with techniques for developing rubrics to assess student progress in educational gymnastics.

The course will be offered fall and spring semesters with an anticipated enrollment of up to 25 students. Evaluation includes a paper and poster, quizzes, written rubrics for assessment, and participation.

KINES 262 Educational Dance (1) This course provides an introduction to a variety of dance forms typically taught as part of K-12 physical education curricula.

KINES 262 Educational Dance (1)

This course is designed for physical education teacher candidates as an introduction to teaching a variety of dance forms in K-12 settings. The course introduces teacher candidates to the educational philosophy and importance of including dance as part of the K-12 physical education curriculum. Dance is included in both state and national physical education standards. The majority of the course is devoted to learning how to teach a variety of dance forms to K-12 students in interesting and enjoyable ways. The dance forms that teacher candidates are introduced to in this course include creative, folk, ethnic, country, western, square, line, ballroom, break, hip-hop and other contemporary dance forms. Teacher candidates are taught to break dances into small steps to make learning to dance enjoyable. They are also taught how to effectively, and appropriately, include music in their teaching. The course concludes with techniques for developing rubrics to assess K-12 student progress in educational dance.

The course will be offered fall and spring semesters with an anticipated enrollment of up to 25 students. Evaluation includes a poster, quizzes, use of instructional techniques and participation.

Kinesiology (KINES)

KINES 264 Health-Related Physical Fitness (1) Basic skills and methods of teaching, assessing, and prescribing health-related fitness and strength training activities.

KINES 264 Health-Related Physical Fitness (1)

This course will address basic skills and methods for assessing, designing, and teaching health-related fitness education in the K-12 population. It is designed to support existing curriculums and enable pre-service health and physical education teachers to help students meet NASPE's health-related fitness standards. The focus is on designing activities to convey health-related physical fitness knowledge to students in grades K-12. The course includes principles of fitness assessment using assessment software. Participants will learn how to effectively implement a health-related fitness program and assessment techniques into current physical education programs. This student-centered, process-oriented course will challenge students to actively engage in planning and teaching health-related fitness education activities. Students will actively participate in self-learning, self-assessment and peer-assessment. Upon successful completion of the course, students have the opportunity to become a Certified Physical Best Health-Fitness Specialist through the American Alliance for Health, Physical Education, Recreation, and Dance.

Kinesiology (KINES)

KINES 295C Professional Development - Field Experience (1-2 per semester/maximum of 8) Develops the necessary professional skills needed to maximize the benefits obtained from a professional conference.

KINES 295C Professional Development - Field Experience (1-2 per semester/maximum of 8)

This course is designed to provide undergraduate students the opportunities of professional development via lecture format, professional travel to a national conference, and guest round table discussions. Throughout the course, students will have exposure to professional communication with faculty through formats including, but not limited to the following: conference forums, faculty/professional/expert dinner discussions, lectures, training sessions, symposiums, break-out sessions, and a poster forum. The students will enhance skills needed to develop networking and interview skills, communicate information effectively, and build resumes to meet the needs for such endeavors as graduate school, internship acquisition, and/or employment. Other class foundational principles include but are not limited to: attending a professional conference, practicing business etiquette at professional lectures and expositions, exposure to professional networking, learning how to exchange knowledge within the professional realm, and researching professional collaborative work. Students will share the experience and knowledge gained from this professional travel through relevant exercises that may include a formal poster forum within the university setting.

Kinesiology (KINES)

KINES 303 (GHA) Emergency Care - First Aid/Safety/AED (3) Develop skills for First Responder Certification in CPR/AED, First Aid and Safety by American Red Cross or National Safety Council.

KINES 303 Emergency Care - First Aid/Safety/AED (3)
(GHA)

KINES 303 is designed to provide students with the opportunity to acquire and develop the skills and competencies needed for First Responder Certification in CPR/AED, First Aid and Safety from the American Red Cross and/or National Safety Council. Students will understand the role of the Emergency Medical System (EMS) in a complex society and the importance of emergency care in our health care system. KINES 303 will foster the student's critical thinking skills and their ability to assess and evaluate life threatening and disabling injuries and illnesses and to respond with appropriate care and life saving action steps in variety of medical emergencies. Students will develop an understanding of the importance of emergency care, first aid and safety at all levels of society with emphasis on providing and improving the quality of emergency care practices in a wide variety of community organizations, occupations and professions including childcare, education, human services, geriatric care and disaster management. KINES 303 is taught through a variety of teaching methods. Students are prepared for proficiency through readings, classroom discussion, video presentation, practical skills, sudden illness and injury scenarios, group presentations and direct observation of EMS (Ride-Alongs). The course is practice-focused on developing the skills and competencies necessary for emergency scene management, CPR/AED and sudden illness and injury. Various evaluation techniques will be used to assess the students progress in KINES 303. These techniques shall include but not be limited to conventional objective testing, practical skill tests, sudden illness and injury scenarios, group presentation and written observation papers. Students who have already received credit for NURS 203 and/or KINES 233 may not enroll in this course due to duplication of material.

Kinesiology (KINES)

KINES 310 Physical Growth and Motor Development (3) Study of biologically programmed growth processes and environmental influences leading to attained adult form and biomechanical function.

KINES 310 Physical Growth and Motor Development (3)

The unified study of growth and development provides a cornerstone for understanding and integrating several areas of biological and-behavioral phenomena that are central to a full and balanced education in the science of movement. In the biological realm, the course includes a review or overview of genetics at the molecular, cellular and organismic levels. Both nuclear and cytoplasmic gene systems are treated. Nuclear inheritance is discussed in terms of independent expression of individual genetic loci (e.g. human blood groups) and interactions among loci (the phenomena of multifactorial and quantitative traits, which are central to understanding the development of differences in body proportions). Further coverage is provided on organization of genetic loci into chromosomal units. This information provides a basis for treating modes of sex determination (with the human XY stem placed in a comparative context of several alternatives, making it possible to explore different degrees of genotype-environment interaction), as well as developmental syndromes (e.g. Down, Turner, Klinefelter - which influence movement and coordination) arising from variations from normative chromosome numbers. Cytoplasmic inheritance is explained in the particular context of mitochondrial genomes, which are fundamental to energy metabolism, and variations in which have important implications for basic health and athletic performance. In the behavioral domain, physical activity and nutrition are explained and elaborated as key environmental elements that interact with and shape the expression of the genetic systems that are transmitted across generations. Attention also is given to other environmental factors that influence growth, including altitude, climate, and socioeconomic status. It is noted that these factors can be studied in isolation or combination; this multidimensional interpretive framework provides a basis for illustrating and explaining not only gene-environment interactions, but also environment-environment interactions in the course of human development. Growth patterns and variations in different human populations are used as examples in this context. Throughout the course, the emphasis is on gauging and maximizing human potential, in a philosophical framework that emphasizes the importance of physical activity and other individually controllable factors that are known to have a positive influence on health through the course of the human life cycle. Evaluation is based on assignments and examinations. This course is taught every spring semester with a maximum enrollment of 35 students.

Kinesiology (KINES)

KINES 321 Psychology of Movement Behavior (3) Basic concepts and application of psychological knowledge for organized sport, physical activity, and athletic training.

KINES 321 Psychology of Movement Behavior (3)

Psychology of Movement Behavior is designed to introduce students to the basic concepts and applications of psychological knowledge for organized sport, athletic training, and physical activity. The course content is divided into the following four categories. The first section includes an introduction to sport and exercise psychology and sport and exercise participants. The topics covered in this section are the history of sport and exercise psychology, sport and exercise psychology consultants' responsibilities (i.e., research, teaching, and service), and understanding sport and exercise participants' personality traits and motivation for participation. The second section contains topics for understanding of sport and exercise environments including an overview of competition, group dynamics, and the principles of feedback and reinforcement. The third section is dedicated to enhancing sport and exercise performance, and the topics discussed are related to psychological skills training and application (e.g., goal setting, imagery, and relaxation training). The fourth section focuses on enhancing sport and exercise participants' health and well-being. The topics covered in this portion of the class include an understanding addictive behaviors (e.g., exercise dependence, eating disorders, and substance dependence), body image, injury rehabilitation, and exercise initiation, maintenance, and adherence. The general objective of this course is to familiarize the student with the science and practice of sport and exercise psychology from both a theoretical and applied perspective. To achieve this objective, the student will: (a) develop an understanding of how various psychological factors influence athletic performance, physical activity participation, and overall health and well-being; (b) learn the methods used by athletes and exercisers of various skill levels to achieve peak performance; (c) understand the scientific and theoretical background of sport and exercise participation; and (d) comprehend how psychological skills are applied to sport and exercise environments to enhance peak performance and quality of life, and recognize the ethical principles of applying these psychological skills. Students are evaluated on class assignments, class participation and involvement, and examinations. Examinations may include information from lecture notes, reading assignments, and class assignments. The final examination includes cumulative information covered over the course of the semester. One section of this course is offered every fall and spring semesters with an anticipated enrollment of 150 students each semester. A technology room is used for instruction.

Kinesiology (KINES)

KINES 334 Mechanisms and Evaluation of Lower Body Athletic Injuries (3) Etiology of athletic injuries with scientific and practical rationales for evaluation of injuries to the lower extremity and lumbosacral spine.

KINES 334 Mechanisms and Evaluation of Lower Body Athletic Injuries (3)

This course will focus on: 1) the etiology of athletic injuries to the lower extremity and lumbosacral spine, and 2) evaluation techniques for assessing athletic injuries to the lower extremity and lumbosacral spine. The objectives of this course include: understanding the mechanisms of athletic injuries to the lower body; demonstrating proficiency in the objective and subjective assessment procedures of lower body athletic injuries; recognizing orthopedic, neurovascular, and medical emergencies associated with lower body athletic injuries; recognizing the normal and abnormal mechanics of the lumbosacral spine and lower extremity including the walking and running gait cycles; and integration of injury mechanisms into the treatment and rehabilitation plan of care for the injured athlete. This course includes lectures as well as hands-on laboratory sessions.

Assessment is based on student performance on written examinations, practical examinations, and written assignments. This course is required for students completing the athletic training option within the Kinesiology major. It is designed to be taken concurrently with either KINES 395F or 395G. The course is offered every spring semester.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2006

Kinesiology (KINES)

KINES 336 Medical Aspects of Athletic Training (3) Pathology, assessment, and treatment (including pharmacology) of general medical conditions commonly seen in physically active populations.

KINES 336 Medical Aspects of Athletic Training (3)

This course is designed to instruct students in general medicine content and skills related to the clinical practice of athletic training. Specific topics include pathology; pharmacology; physical examination of head, ears, eyes, nose, throat, pulmonary, cardiovascular, gastrointestinal, renal, genitourinary, and dermatological conditions commonly seen in athletes; exertional heat illness; diabetes and exercise; female athlete triad; injuries in athletes with physical disabilities; and psychosocial aspects of patient-provider relationships. Several lectures will be made by physicians who specialize in sports medicine. Lab activities will include the instruction, practice, and assessment of psychomotor skills related to the course content. The course will meet for three hours per week and will include a balance of both lecture and laboratory activities. Student assessment will include written and practical examinations, homework assignments, and demonstration of practical skills specific to the clinical proficiencies required to sit for the NATABOC exam (must be administered by an NATABOC approved clinical instructor per accreditation guidelines).

General Education: None

Kinesiology (KINES)

KINES 335 Mechanisms and Evaluation of Upper Body Athletic Injuries (3) Etiology of athletic injuries with scientific and practical rationales for evaluation of injuries to upper extremity, neck, head, and trunk.

KINES 335 Mechanisms and Evaluation of Upper Body Athletic Injuries (3)

This course will focus on: 1) the etiology of athletic injuries to the upper extremity, head, cervical spine, thorax, and abdomen, and 2) evaluation techniques for assessing athletic injuries to the upper extremity, head, cervical spine, thorax, and abdomen. The objectives of this course include: understanding the mechanisms of athletic injuries to the upper body; demonstrating proficiency in the objective and subjective assessment procedures of upper body athletic injuries; recognizing orthopedic, neurovascular, and medical emergencies associated with upper body athletic injuries; recognizing the normal and abnormal mechanics of the cervical spine and upper extremity including the overhand throwing motion; and integration of injury mechanisms into the treatment and rehabilitation plan of care for the injured athlete. This course includes lectures as well as hands-on laboratory sessions.

Assessment is based on student performance on written examinations, practical examinations, and written assignments. A literature review paper detailing the pathoetiology of a specific athletic injury is required. This course is required for students completing the athletic training option within the Kinesiology major. It is designed to be taken concurrently with either KINES 395F or 395G. The course is offered every fall semester.

Kinesiology (KINES)

KINES 350 Exercise Physiology (3) Structure and function of the human body as applied to health, wellness, exercise, and sports.

KINES 350 Exercise Physiology (3)

A major focus of exercise physiology is to understand the physiological adaptations that occur following both acute and chronic programs of endurance and resistance exercise. A major emphasis is on physiological systems as they relate to exercise and health, including cardiovascular, respiratory, musculoskeletal, neural, metabolic, and environmental aspects. In addition, the mechanisms underlying the preventive and protective effects of exercise on human health and performance are discussed. Students are required to demonstrate upon written examination, a knowledge and understanding of the physiological adaptations resulting from programs of chronic exercise as well as the ability to interpret scientific data as they pertain to exercise physiology. Background knowledge in biology, chemistry, physics, and exercise science represent the knowledge base from which class is built upon and contribute to the mastery of concepts presented during the lecture portion of the class. Exercise physiology is a core course requirement in the Kinesiology major. Evaluation is based on written examination and quizzes as well as written assignments. The course is taught every fall and spring semesters with an enrollment of approximately 100 students. A technology classroom is used for instruction.

Kinesiology (KINES)

KINES 356 Activity and Disease (3) Examination of hypokinetic disease on human wellness involving identification, assessment, research, and exercise design of human activity for disease prevention.

KINES 356 Activity and Disease (3)

Content in this course defines what physical activity, fitness, and lifestyle are. It covers the methodological and measurement assessment of physical activity and disease as well as exploring the relationships between physical activity and specific physical diseases, and between physical activity and various disorders of the mind. After this course students will be able to design and implement an exercise program to prevent or combat the effects of a specific disease on an individual. They will understand and be able to persuasively inform clients to the dangers of a sedentary lifestyle. They will know the strategies necessary to motivate and modify individual behavior so that it results in a more healthy lifestyle. And they will be able to design epidemiological research protocols to study the relationship between a specific disease and activity. Knowledge will be assessed by written evaluations, through the use of case studies in the case of exercise prescription skills, and through presentation of high quality group projects. This course will complement other courses in this curriculum but will be the only course devoted to a thorough investigation of the relationship between inactivity and various disease states. No special facilities are needed for the course which is anticipated to enroll between 15 and 25 students. It will be offered annually.

Material in this course and experience in the lab cover the conceptions and applications of strength exercise science. It also addresses testing and evaluation of strength protocols including selecting appropriate tests, organizing testing procedures, and individual testing protocols and procedures. Students will be introduced to material which overviews the organization and administration of resistance training and conditioning facilities. They will also learn the design principles of resistance training programs as well as exercise techniques. After this course, students will understand the biomechanics of strength training, the physiological adaptation to muscle training, and the mechanisms of change with varying populations. They will be able to select and organize appropriate muscle testing protocol. They will be able to teach and demonstrate appropriate strength training exercises to individuals and groups, including being able to identify and correct errors.

Kinesiology (KINES)

KINES 358 Ergogenic Aids (1) Skills development including research identification and evaluation of work-enhancing methods and devices as related to human performance and wellness.

KINES 358 Ergogenic Aids (1)

In this course students will learn about the research identification and evaluation of work-enhancing methods and devices as they relate to human performance and wellness. The course will overview historical and ethical issues associated with the use of ergogenic aids, as well as the mechanisms that delineate how they affect body systems. Ergogenic aids will be classified as hormonal, pharmacological, psychological, physiological, mechanical and nutritional. In the course students will also look at various restorative and accelerate healing agents. As a consequence of this course students, will be able to identify specific ergogenic aids, their actions, their legality, advantages, disadvantages, and safety concerns. Students will also understand the research issues involved with ergogenic aids, as well as developing a philosophy for dealing with clients who approach them interested in these kinds of enhancements. Student learning will be evaluated by exams, by the preparation of a mock experiment, and by various written assignments. This course will take an in-depth look at an important area reviewed only superficially in other courses. Because of the topic's relevance to work in this field, this course gives students knowledge necessary to function effectively as a professional. No special facilities are needed to teach the course and it will be offered annually to approximately 15-25 students.

General Education: None
Diversity: None

Kinesiology (KINES)

KINES 360 The Neurobiology of Motor Control and Development (3) The neurobiological foundations of human movement, with an emphasis on applications in rehabilitation and athletics.

KINES 360 The Neurobiology of Motor Control and Development (3)

This 3 credit lecture course provides a rigorous presentation of the Neuroscientific foundations for human movement control. This course will introduce students to the cellular basis of neurophysiology, while emphasis will focus on the contributions of both sensory and motor systems to motor control, motor development, and their influence on learning motor skills through the lifespan. The course provides an in-depth presentation of systems neuroscience, with a special emphasis on the spinal, brainstem, and cortical contributions to movement. The course is designed to meet the needs of students in Kinesiology, and such as, discussions include practical considerations for movement training in athletic, and rehabilitation environments. Many of the objectives for this course were developed to meet the guidelines for minimum competencies in motor development, as outlined by the National Association for Sport and Physical Education (NASPE).

Purpose of this course in the current curriculum: The objective of this course is to prepare Kinesiology students, at the Junior level, for senior courses that address control of human movement and motor development. This course forms one of four 300 level core courses that are designed to provide the basic science foundations that underlie the study of human movement, including exercise physiology (KINES 350), Biomechanics (KINES 384), and the Psychology of Movement Behavior (KINES 321). The other foundational discipline that contributes to human movement science is Neuroscience. The current format of the course has essentially evolved over the years to reflect, the neur4ophysiological principles that govern motor control, motor development, and motor learning. However, small revisions are still required to provide enough preparation in this area to optimally prepare for further coursework. This is evidenced by frequent requests by 400 level instructors to cover topics in more detail. In addition, the current course includes content that was redundant with the other courses, especially biomechanics. In addition, the course focuses on the effects of neural maturation processes on motor development throughout the lifespan, as well as, influences of neural organization on motor learning. The last section of the course integrates this material into a consideration of structuring motor training experiences to meet the needs of individuals, with and without motor disorders, at different stages of the lifespan.

BIOL 469 (Neurobiology) and 470 (Functional and Integrative Neuroscience) are offered in the Biology department. However, these courses do not provide a one semester alternative to studying both cellular and systems level neuroscience, and do not focus on motor control, motor development, or motor learning. They are not tailored to the needs of our Kinesiology students, and do not offer any discussion of motor development, motor learning, nor motor training concerns.

Evaluation methods, as detailed in the attached syllabus, will include four exams, and 2 optional papers.

Kinesiology (KINES)

KINES 362 Teaching Individual Activities (1.5) This course introduces teacher candidates to the spectrum of individual activities being taught in the K-12 school setting.

KINES 362 Teaching Individual Activities (1.5)

Teaching Individual Activities introduces the future physical educator to the spectrum of individual activities being taught in the school setting. As a result of taking this course, the students will be able to:
a) Find and use references and resources from the World Wide Web and other sources specific to an individual sport/activity.
b) To create a professional handbook specific to the individual activity in which they choose to become an expert.
c) To organize and conduct an introductory clinic that provides a thorough and enjoyable overview of an individual sport/physical activity that they have chosen.
d) To select, organize, and sequence skills from simple to complex for the individual sport/physical activity that they have chosen.
e) To select and create mini-games or activities that will assist K-12 students with the skills of their chosen individual sport/physical activity.
This course is taken in conjunction with Teaching Group Activities and KINES 366. The students are required to teach two 50-minute clinics of their classmates. The students will demonstrate competency in basic motor skills and physical activities, content knowledge, and disciplinary concepts during their participation in the clinics. Students will teach the clinics using appropriate instructional cues and prompts for basic motor skills and physical activity. The students will identify, select, and implement appropriate learning/practice opportunities based on expected progressions and related to ranges of individual variations and levels of readiness, while teaching their clinics. The students will demonstrate an understanding of group and individual motivation and behavior by creating a safe and positive learning environment. The clinics can be any individual activity that they choose, within established boundaries. Examples of clinics: Canoeing, Fly Fishing, Golf, Tennis, Pilates, Diving, Bowling, and Badminton. Evaluation of the course is based on: Clinic Presentation, Clinic Handbook, Participation, Final Notebook, and Electronic Portfolio. The course is offered Fall and Spring semesters with a maximum enrollment of 25.

Kinesiology (KINES)

KINES 366 The Process of Teaching Physical Education (3) Analysis of pedagogical skills and methods applied to K-12 physical education.

KINES 366 The Process of Teaching Physical Education (3)

The purpose of this course is to introduce teacher candidates to the pedagogical processes used in teaching K-12 physical education. Physical education instruction techniques related to classroom management, creating effective learning environments, analysis of motor skills, providing effective feedback, content development, creating active learning experiences and systematic analysis of effective instruction comprise the foundation of this class. These pedagogical skills will be practiced and analyzed throughout the semester. Specifically, students will be required to demonstrate the ability to use, analyze and critique these techniques in micro-teaching situations with their peers. The primary focus of the class is to develop a repertoire of effective teaching skills based upon research of teacher effectiveness that enables teacher candidates to become reflective physical educators with the ability to deliver, analyze and modify their teaching to provide developmentally appropriate instruction for elementary, middle and high school students. The content of this course also addresses the physical education teaching standards developed by the National Association for Sport and Physical Education (NASPE), the national accrediting body for physical education teacher education programs that works in conjunction with the National Council for Accreditation of Teacher Education (NCATE) to certify physical education teacher education programs throughout the United States.

Assessment of student performance in the course includes:
1. Participation in laboratory experiences (10%)
2. Performance on knowledge tests (35%)
3. The ability to correctly and effectively demonstrate a repertoire of pedagogical skills in simulated teaching situations (35%)
4. Teaching reflections based on class teaching experiences and analyses and observations of teaching (20%)

Kinesiology (KINES)

KINES 384 Biomechanics (3) Basic mechanical knowledge required to understand human movement.

KINES 384 Biomechanics (3)

Biomechanics examines biological phenomena from a mechanical perspective; this class examines predominantly human movement from this perspective. The class aims to introduce students to the mechanical principles that underpin biomechanics, and to the measurement procedures used in biomechanics. Students will examine these principles for a variety of activities including: walking, running, jumping, quiet standing, throwing, striking, and reaching. Laboratory activities emphasize the qualitative and quantitative analysis of human movement. These sessions require students to work effectively in groups to collect data, and then work independently to analyze and interpret their data. Students use Newton's laws, basic algebra and trigonometry in the analysis of their data, and produce reports about these laboratory activities.

The lectures provide the framework for all class activities. They aim to link the student's knowledge of anatomy with mechanics to provide an understanding of how movement is produced in health and disease. The lectures provide information about the history, scope, and impact of biomechanics. Students are introduced to the pertinent kinematic variables required for the analysis of human movement. Newton's laws are used to understand both linear and angular human motion. Approaches for the determination of the inertial properties of human body segments are examines in detail. The theory, methodology, and protocols for image-based motion analysis and force measurement are studied and used by the students. The influences of muscle fiber activation, length, and velocity on the production of force are presented. The concept of energy storage is introduced, and its application in the analysis of human movement examined. Approaches for modeling human movement are established and used to understand the coordination of human movement.

Assessment comprises tests on materials presented in lectures and laboratory sessions, a series of laboratory reports, a series of short quizzes, and a final examination. At the end of the class students have an increased understanding of how biomechanics underpins all aspects of human movement.

Five sections of the course are offered every fall and spring with an enrollment of up to 110 students.

Kinesiology (KINES)

KINES 395A Leadership Practicum for Teachers (1) Supervised experiences in guiding individuals and in leading groups in the motor skill learning process.

KINES 395A Leadership Practicum for Teachers (1)

This is a one credit practicum designed to provide teacher candidates with the opportunity to observe, assist, and teach physical education classes in school settings. Most KINES 395A teacher candidates are in the final semester before starting their student-teaching internship and these experiences are intended to provide additional practical experiences in physical education instruction. This practicum involves a minimum of **10 consecutive weeks** during a University semester.

Teacher candidates will be graded on the quality of their observations of physical educators, their teaching, and their ability to describe and analyze pedagogical skills observed in their practicum.

This course is offered every fall and spring semesters with an anticipated enrollment of 25.

Kinesiology (KINES)

KINES 395G Practicum in Athletic Training (3) Practical experience in the athletic training room and with selected sports activities under direct supervision of the medical staff.

KINES 395G Practicum in Athletic Training (3)

This course is designed to provide students didactic and practical clinical experiences in a variety of practice settings in which certified athletic trainers are commonly employed. This is the second clinical assignment after a student is admitted to the Athletic Training option within the Kinesiology major. Students will complete a minimum of 200-250 clock hours under the supervision of a certified athletic trainer in a variety of clinical settings. These settings include but are not limited to: outpatient sports medicine clinics, interscholastic athletic settings, and intercollegiate athletic settings. The objectives of this course include demonstrating proficiency in: assisting lower level students in developing athletic training skills and mastering level-appropriate competencies; demonstrate proficiency in evaluation and documentation of common athletic injuries; assist in the development and documentation of a plan of care for common athletic injuries; demonstrate proficiency in the development and documentation of clinical progression through a plan of care; participate in the application of therapeutic modalities and therapeutic exercise under the supervision of a certified athletic trainer.

In this practical experience, the student is required to demonstrate an understanding of the classroom experiences completed to date and as required by the program option up to the current semester. This practicum has a prerequisite requirement of KINES 395F and is a prerequisite for the subsequent athletic training practicum, KINES 395I. Assessment is based on student performance written examinations, practical examinations, written assignments, and performance assessments by supervising athletic trainer(s). The course is designed to be taken the second semester following admittance to the athletic training option. It is offered every fall and spring semester with an enrollment of 15-20 students.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2006
Prerequisite: KINES 395F
Concurrent: KINES 336 KINES 435 KINES 436

Kinesiology (KINES)

KINES 395F Practicum in Athletic Training (3) Practical experience in the athletic training room and with selected sports activities under direct supervision of the medical staff.

KINES 395F Practicum in Athletic Training (3)

This course is designed to give students practical experiences in a variety of clinical settings in which certified athletic trainers are commonly employed. Students will accumulate approximately 100-150 clinical hours learning under the supervision of certified athletic trainers in a variety of clinical settings. These settings include but are not limited to: intramural sports, club sports, outpatient sports medicine clinics, high schools, and intercollegiate athletic training rooms. In addition to clinical experiences there is also a didactic portion of this course which emphasizes students gaining proficiency in important clinical skills. There are also weekly written assignments. The objectives of this course include demonstrating proficiency in: the evaluation of a unconscious athlete; the recognition of cerebral concussion and closed head injury; the recognition of acute injury to the cervical spine; the recognition of fractures and dislocations; the assessment of neurovascular function; the recognition, treatment, and prevention of heat illnesses including heat cramps, heat exhaustion, and heat stroke; the use of splints, stretchers and spine boards in the management of injured athletes; the application of taping and wrapping techniques commonly used in the prevention and management of common athletic injuries; and in obtaining a medical history.

Assessment is based on student performance on written examinations, practical examinations, written assignments, and performance in students' clinical rotations. This course is required for students completing the athletic training option within the Kinesiology major. It is a prerequisite for more advanced athletic training practicums (KINES 395G, 395I, 495F) and it should be taken concurrently with KINES 334 or 335. It is designed to be taken the first semester following admittance to the athletic training option. This course is offered every fall and spring semester.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2006

Kinesiology (KINES)

KINES 395I Practicum in Athletic Training (3) Practical experience in the athletic training room and with selected sports activities under direct supervision of the medical staff.

KINES 395I Practicum in Athletic Training (3)

This course is designed to provide students didactic and practical clinical experiences in a variety of practice settings in which certified athletic trainers are commonly employed. This is the third clinical assignment after a student is admitted to the Athletic Training option within the Kinesiology major. Students will complete a minimum of 250-300 clock hours under the supervision of a certified athletic trainer in a variety of clinical settings. These settings include but are not limited to: outpatient sports medicine clinics, interscholastic athletic settings, and intercollegiate athletic settings. The objectives of this course include demonstrating proficiency in: assisting lower level students in developing athletic training skills and mastering level-appropriate competencies; demonstrate proficiency in evaluation and documentation of common athletic injuries; assist in the development and documentation of a plan of care for common athletic injuries; demonstrate proficiency in the development and documentation of clinical progression through a plan of care; participate in the application of therapeutic modalities and therapeutic exercise under the supervision of a certified athletic trainer.

In this practical experience, the student is required to demonstrate an understanding of the classroom experiences completed to date and as required by the program option up to the current semester. This pracitcum has a prerequisite requirement of KINES 395G and is a prerequisite for the subsequent athletic training practicum, KINES 495F. Assessment is based on student performance written examinations, practical examinations, written assignments, and performance assessments by supervising athletic trainer(s). The course is designed to be taken the third semester following admittance to the athletic training option. It is offered every fall and spring semester with an enrollment of 15-20 students.

Kinesiology (KINES)

KINES 400 Adapted Physical Education (3) Basic concepts of planning and conducting physical education programs for children with physical, sensory, and/or intellectual impairments.

KINES 400 Adapted Physical Education (3)

This is an undergraduate level course teaching students the basic concepts of planning and conducting physical education programs for children with physical, sensory, and/or intellectual impairments. This course will help the student to become more aware of the physical needs of children with disabilities and of the possibilities to professionally deal with these needs. The course requires the student to complete a 10-hour practicum, providing the opportunity to work with children with a disability. The practicum will be conducted in cooperation with physical education staff members working with various schools in State College. The children's difficulties may range from emotional problems to severe physical and mental handicaps. Students are free to identify alternative practicum sites (e.g., work with a friend or family member with a disability). The requirements for the practicum may include: select a child who has a physical, sensory, or intellectual disability; write an Individualized Education Program (IEP) using the guidelines presented in the textbook; implement the IEP in a two-on-one teaching situation (two students, one child); keep a log of all the practice sessions; after completing the 10-hour practicum, write a final report based on the IEP, this final report should state the definition of the problem, the etiology, the general characteristics, the teaching techniques specific to the disability, an evaluation of the actual teaching strategies and an evaluation of the outcome of the practice (did it work?); and, present the findings orally (10-15 minute talk).

The student will generally be evaluated by exam, teaching activity, an oral presentation, and a final report.

Kinesiology (KINES)

KINES 421 Exercise Psychology (3) Psychological antecedents and consequences of physical activity behaviors.

KINES 421 Exercise Psychology (3)

Exercise Psychology is designed to introduce students to the psychological antecedents and consequences of exercise behaviors. The antecedents of exercise behaviors are the psychosocial and cognitive factors (e.g., beliefs, attitudes, personality traits) that facilitate and/or inhibit exercise behaviors. The consequences of exercise behavior are the physical, psychosocial, and cognitive outcomes (e.g., self-efficacy, body image, mental health) of exercise participation. The antecedents and consequences of exercise behaviors will be presented within the context of contemporary conceptual and theoretical models in exercise psychology. This course is designed to provide students with an overview and foundation of the important psychosocial phenomena related to these antecedents and consequences of exercise behaviors. Students will have the opportunity to apply their knowledge in selected areas within exercise psychology through class discussions and assignments.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008

Kinesiology (KINES)

KINES 422 Physical Activity Interventions (3) Principles of designing, planning, and implementing theory- and evidence-based physical activity interventions.

KINES 422 Physical Activity Interventions (3)

This course is designed to acquaint undergraduate students with the application of major theories and models used to design and guide the development of contemporary physical activity interventions. Students will be familiarized with empirically-supported principles of behavior change and will gain an understanding of the basic strategies and methods used in designing, planning, implementation, and evaluation of physical activity interventions. The course will cover a variety of approaches to physical activity promotion, ranging from clinical and community-based interventions to population-based approaches, while discussing practical strategies and concrete examples of contemporary, evidence-based physical activity interventions. The goal of the course is for students to demonstrate the ability to formulate well-conceived physical activity interventions across a variety of settings and participant populations and learn how to apply theoretical principles and research findings to intervention development.

Kinesiology (KINES)

KINES 423 Psychology of Sports Injuries (3) Psychological causes and consequences of sports related injuries in athletes.

KINES 423 Psychology of Sports Injuries (3)

Using lectures/whole class discussion formats, this course is intended to provide the students with the basic knowledge regarding psychological causes and consequences of sport-related injuries, including concussions. Specific course objectives include: (1) developing the proficiency in initiating interviews and observations of athletes suffering from sport-related injuries; (2) assessing psychological impact of injury on athletes; (3) developing critical-thinking skills related to the probability of developing of psychological trauma in athletes with injuries; (4) developing specific skills of psychological assessment of injured athletes; (5) stimulating thinking about temporary research questions as related to psychology of injury. Evaluation will be based on active engagement in class discussions and administration of quizzes and written examinations according to course syllabus. This class extends but does not duplicate existing courses in the Departments of Kinesiology and Psychology.

General Education: None

KINES 427 (HD FS 427) Developmental Sport & Exercise Psychology (3) Developmental changes in the antecedents and consequences of physical activity across the lifespan.

KINES (HD FS) 427 Developmental Sport & Exercise Psychology (3)

Change is constant with physical activity - our reasons for being active change across the lifespan an dour experiences with physical activity change how we view ourselves and those around us. Developmental Sport & Exercise Psychology focuses on developmental changes in the psychosocial antecedents and consequences of physical activity across the lifespan. Specific course objectives include (1) describing theoretical frameworks and methods used to study physical activity-related psychosocial development across the lifespan, (2) describing how self-perceptions develop and influence behavior in movement contexts at different points in life, (3) explaining how contextual factors influence developmental processes associated with physical activity, (4) identifying age-related differences in activity-related antecedents and consequences of physical activity, and (5) developing, reviewing, and critiquing theoretically-grounded interventions to address issues related to developmental processes associated with physical activity across the lifespan. Evaluation will be based on written examinations, submission of a series of reflection papers on reading assignments, a group presentation, and the students' engagement in the class. It extends but does not duplicate existing courses in the Department of Innersole, Human Development & Family Studies, and Psychology.

Kinesiology (KINES)

KINES 428 Motivation and Emotion in Movement (3) Theories of motivational and emotional processes and their applications in movement settings.

KINES 428 Motivation and Emotion in Movement (3)

Motivation & Emotion in Movement will focus on the psychological processes underlying human motivation and emotion in movement settings. Special attention will be directed to social manipulations that can enhance motivation and emotion, and the consequences thereof. This course will be valuable for students whose career goals relate to education, personal training, rehabilitation, coaching, or psychology. Specific course objectives include (1) distinguishing between motivation and emotion, (2) understanding psychological mechanisms underlying common motivational and emotional processes in movement settings, (3) identifying existing applications of motivation and emotion theories in movement settings, and (4) developing, reviewing, and critiquing theoretically-grounded interventions to address issues related to motivational and emotional processes in movement contexts. Evaluation will be based on written examinations, submission of a series of reflection papers on reading assignments, a group presentation, and the students' engagement in the class. It extends but does not duplicate existing courses in the Departments of Kinesiology and Psychology.

Kinesiology (KINES)

KINES 429 Psychology of Sport Performance (3) Psychological theories of talent development and performance enhancement in sport.

KINES 429 Psychology of Sport Performance (3)

Psychology of Sport Performance will provide a psychological perspective on the phenomenon of superior motor performance. The course will cover nature of superior performance, talent development processes, sources of performance crises, and self-regulation strategies used by athletes, coaches, and psychologists to enhance performance. This course will be valuable for students whose career goals involve training athletes or other performers involved in socially-evaluative performance domains. Specific objectives include (a) distinguishing the antecedents and consequences of subjective and objective performances, (b) conceptualizing motor performance and performance problems in a psychological context, and (c) matching psychologically-based performance problems with theoretically-based intervention strategies. Evaluation will be based on written examinations, submission of a series of reflection papers on reading assignments, a group presentation, and the students' engagement in the class. It extends but does not duplicate existing courses in the Departments of Kinesiology and Psychology.

Kinesiology (KINES)

KINES 434 Rehabilitation of Injuries to the Lower Extremities (3) Theoretical foundation and laboratory experience in manual therapy techniques and therapeutic exercises for the lower extremities.

KINES 434 Rehabilitation of Injuries to the Lower Extremities (3)

Rehabilitation of Injuries to the Lower Extremities is a 3-credit course offered each fall semester with an enrollment limit of 40 students. The course provides students who have been accepted into the undergraduate athletic training option in the Department of Kinesiology with the theoretical foundation for application of manual therapy techniques and therapeutic exercises in the treatment of musculoskeletal injuries sustained by physically active individuals. Laboratory instruction and guided practice in performing manual therapy techniques and therapeutic exercises will also be provided. At the end of this course students: 1) can identify five components of a comprehensive plan of care for an injured athlete; 2) have a working knowledge of the effects of therapeutic exercise on tissue repair and return to activity; 3) have a working knowledge of the impact of pain on programs and therapeutic exercise; 4) are able to perform selected manual therapy techniques and integrate them into a comprehensive plan of care; 5) understand the psychological response to injury and therapeutic exercise; 6) can develop a plan of rehabilitation utilizing principles of tissue healing, therapeutic exercise and manual therapy; and 7) instruct patients in home programs of therapeutic exercise. This course will focus on the basic principles of therapeutic exercise and rehabilitation of injuries to the lower extremities.

This course will be offered every Fall semester with an anticipated enrollment of 25. Evaluation includes quizzes, rehabilitation plan of care, proficiency notebook, mid-term and final practical exams, and written mid-term and final exams.

General Education: None

Kinesiology (KINES)

KINES 438W Administration and Issues in Athletic Training (3) Theoretical and practical aspects for management of an Athletic Training professional practice and identifying contemporary issues related to the profession.

KINES 438W Administration and Issues in Athletic Training (3)

This course is designed to instruct students in the concepts and skills required for successful administration of an athletic training program and to understand and discuss contemporary professional issues attendant to the Athletic Training profession. General topics to be covered include theoretical basis of management, program management, human resource management, financial resource management, facility design and planning, information management, athletic injury insurance, legal aspects of sports medicine, ethical considerations in sports medicine, preparticipation physical and drug-testing, professional preparation issues, professional practice issues, and clinical practice issues. Experts from the community are brought in to lecture on several of the topics. The course meets for three hours per week and utilizes both lecture and discussion formats. Student assessment includes written examinations, written homework assignments, class participation and debates. This is a writing intensive course. Writing will be used to facilitate critical thinking about course material. Written assignments are based on the technical writing requirements of an athletic training administrator and are graded on both their content and quality.

Kinesiology (KINES)

KINES 436 Therapeutic Modalities in Athletic Training (4) Lecture and laboratory course exploring physiological principles and clinical evidence to the use of therapeutic modalities in athletic training.

KINES 436 Therapeutic Modalities in Athletic Training (4)

Introduction to Therapeutic Modalities is a 4-credit course offered each spring semester with an enrollment limit of 40 students. The course provides students who have been admitted into undergraduate athletic training option in the Department of Kinesiology with the theoretical foundation for the application of contemporary therapeutic modalities in the treatment of musculoskeletal injuries sustained by athletic individuals. At the end of this course students will: 1) have a working knowledge of the inflammatory response to tissue injury, pain perception and the body's analgesic mechanisms; 2) understand the physical principles of thermal, acoustic, electrical, light and mechanical modalities; 3) understand the physiological response to thermal, acoustic, electrical, light and mechanical modalities; 4) be able to search for and appraise clinically relevant trials involving modality application and; 5) apply these understandings and thermal, acoustic, electrical, light and mechanical modalities in the safe and effective manner. Students are evaluated through written examinations, laboratory examinations and submitted written reviews.

Kinesiology (KINES)

KINES 441 (US) (AM ST 441) History of Sport in American Society (3) Background, establishment, and growth of sport in America from colonial times to the present.

KINES (AM ST) 441 History of Sport in American Society (3)

Study of the background, establishment, and growth of sport in America from colonial times to the present, and the role of American sports in American culture and society. The course will examine the ways that sports have operated in the United States as the country has developed into a modern, mass society. Issues of national identity, commercialism, race, ethnicity, class, and gender will be discussed in relation to the popularity of sports. Another set of issues will center on language and media; students will employ methods of analysis such as ethnography and rhetorical criticism that emphasize the multiple layers of meaning inherent in sports culture. The course satisfies the "area" requirement in "society" for American Studies majors. It is offered once every two years and enrolls approximately 30 students.

General Education: None

Kinesiology (KINES)

KINES 446 (IL) History of Sport in the Modern World (3) History of sport in modern world, ca. A.D. 1500 to present; concentrates on role of sport in societies outside United States.

KINES 446 History of Sport in the Modern World (3)
(IL)

The History of Sport in the Modern World introduces students to the connections between sporting practices and the broader cultural, political, intellectual and economic patterns that shape societies during the modern period in world history (ca. A.D. 1500 to the present). The course begins with a foray into the transition from traditional to modern forms of sport and society and covers the development of a wide variety of athletic games and pastimes from the sixteenth through twentieth centuries. Students will encounter a variety of historic conceptions of sport and explore the role of sport in the development of European, North American, Latin American, Asian, African and Pacific cultures. Students will learn how sports have been shaped by and have shaped by multiple factors, including modern ideas, science, class structures, gender roles, constructions of race, urbanization, nationalism, political conflicts, international relations, and economic institutions.

This is a senior-level course that fills an important historical gap in the Kinesiology Department's sequence of offerings on the history of sport. Other courses in the sequence cover ancient sport, sport in American society, and the Olympic Games. While crucial American developments that impact sports in the modern world are incorporated into this course, this class offers students a global focus that concentrates on the role of sport in societies beyond the borders of the United States. This course also relates to the offerings in the philosophy of sport program by exploring the history of ideas about sport in modern thought. Additionally, the course connects to the science-based offerings in Kinesiology by providing students with and introduction to the history of the scientific study of human performance.

The course introduces students to basic readings and knowledge of the history of sport in the modern world. The class provides opportunities to practice the critical reading and thinking techniques that shape the historian's approach to knowledge. This course will be taught once every year with an anticipated enrollment of 50 students. Evaluation methods that test reading and critical thinking skills are employed. No special facilities are required.

General Education: None
Diversity: IL
Bachelor of Arts: None
Effective: Summer 2005

Kinesiology (KINES)

KINES 448 Coping with Life After Sport (1) Psychosocial concerns affecting student-athletes as they enter the transition period following sport disengagement, focusing on coping interventions.

KINES 448 Coping with Life after Sport (1)

KINES 448 is designed for student athletes who have exhausted their eligibility for or will no longer be participating in their respective sport due to injury or other issues. It is also relevant for students in athletic training or those who plan to pursue a career in coaching. The focus of the course is on the identification of issues and stressors affecting the transition and the development of strategies and coping skills to deal with life after sport. This can often be a very emotional and difficult time for student athletes. Discussion is focused on intervention and coping strategies, goal setting, decision making, career planning, and transferable skills. Student athletes will be able to recognize how their athletic experience has helped them to acquire numerous skills and characteristics highly valued in the workplace. Two sections of the course will be offered each semester. Students will be required to submit a weekly reaction paper, do a review of literature, and compile a comprehensive career plan. The class will be highly interactive with regular in-class assignments and projects.
General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2002
Prerequisite: seventh-semester standing or higher; major or minor in Kinesiology or intercollegiate sport participation

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 450 Physiological Limits in Exercise (3) This course examines physiological function during the stress of maximal or prolonged exercise in conjunction with environmental stress.

KINES 450 Physiological Limits in Exercise (3)

This course is intended for students interested in advanced topics in exercise physiology. The material to be covered will be current concepts and observations that have not yet been incorporated into textbooks. Therefore, course readings will consist of recent review articles. In addition, students will read original research articles that draw conflicting conclusions: Students will write summaries of each paper (one typewritten page each) and attempt to reconcile the conflicts (one page, for a total of three pages per assignment). Students will also be called upon to lead in-class debates of the conflicting issues. This course will build on the concepts learned in KINES 150 and KINES 350. It will represent the top-level course in a vertically-integrated program in exercise physiology.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2000

Bachelor of Arts: None
Effective: Spring 1998

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 454 Women's Health and Exercise Across the Lifespan (3) In-depth study of the physiological role of exercise in modulating the health of girls and women during different phases of the lifespan.

KINES 454 Women's Health and Exercise Across the Lifespan (3)

First, the course begins with a review of general principles of research conduct and publication, themes that will be carried throughout all material covered in this class. A review of the historical aspect of women’s health research and a review of the state of knowledge in women’s health in the wake of the contemporary scientific endeavors such as the Women’s Health Initiative will also be explored. Second, students will learn physiology of puberty, menstrual function and bone health and the impact of exercise on these processes. Third, students will learn current concepts of exercise related to the female athlete and clinical implications of alterations in normal physiology. The impact of oral contraceptives on health and exercise performance will be also discussed. Fourth, students will learn menopausal physiology, alterations in clinical status associated with this life stage, and review current research related to the Women’s Health Initiative. Finally, a discussion of the effects of gender differences on health and exercise will be discussed. At each step students will be exposed to relevant research methods issues, and introduced to seminal research papers illustrating the concept being evaluated.

This course is designed for students who wish to develop a richer understanding of the physiological role of exercise in modulating the health of girls and women during different phases of the lifespan. Particular attention will be given to the physiological role of exercise in modulating the health of girls and women during different phases of the lifespan, including but not limited to childhood, adolescence, adulthood and later adulthood.

The course will expose students to the rich research literature in women’s exercise and health across the lifespan. Students will improve their ability to read and summarize original research literature through in depth presentation and discussion of seminal studies. Moreover, students will develop an understanding of how research has informed the state of knowledge on issues covered in this class and students will develop “language understanding” appropriate for interpreting and reading research papers.

General Education: None

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 452 Applied Cardiovascular Physiology (3) In-depth study of cardiovascular regulation during postural, environmental, and exercise stress.

KINES 452 Applied Cardiovascular Physiology (3)

First, the course begins with an intensive review of hemodynamics and basic cardiovascular control mechanisms (neural, hormonal, and local regulation).

Second, students compare and contrast these general principles in six important circulations: splanchnic, renal, cerebral, coronary, cutaneous, and muscle.

Third, they examine the three stresses which affect the circulation: posture (gravity), environment (especially heat) and exercise. For each stress, students identify the regional circulation(s) most affected and how they contribute to an integrated (systemic) cardiovascular response that is unique for each stress.

Finally, combinations of posture, heat, and exercise stress are considered to illustrate competing cardiovascular control mechanisms.

At each step students are introduced to seminal research papers illustrating the concept being studied.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2010
Prerequisite: KINES 350

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 456 Physical Fitness Appraisal (4) The basic components of physical fitness, how it can be measured, and how it can be developed.

Physical Fitness Appraisal (4)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1996
Prerequisite: or concurrent:KINES 350 3 credits in statistics

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 457 Exercise Prescription and Case Studies (3) Principles of exercise prescription; application of fitness appraisal based on current practices using evaluation and discussion of case studies.

KINES 457 Exercise Prescription and Case Studies (3)

The major purpose of this course is to provide those students interested in allied medical careers (e.g., cardiac rehabilitation, hospital testing, wellness centers, corporate fitness centers, physical therapy) with skills and practical knowledge regarding exercise diagnostics and prescription. Particular emphasis is placed on clinical diagnostic procedures, interpretation and terminology and this course directly contributes to the knowledge base expected for future employment in this area. At the conclusion of KINES 457, the students will be able to demonstrate on written examinations and in discussions, a knowledge and understanding of basic exercise prescription principles for apparently healthy, at risk and diseased populations, with special- emphasis on the cardiac patient. Inherent in the course goals is an understanding of the chronic physiological adaptations that occur as a result of programs of endurance and resistance exercise in apparently healthy, at risk and diseased populations.

This course includes lectures as well as hands-on laboratory sessions. Evaluation is based on student performance on written examinations, written and oral case study presentations, and written assignments. This course will be taken after students have completed KINES 456 and will complete the learning scheme involving fitness appraisal and subsequent prescription of exercise programs.

The course is offered fall and spring semesters with an enrollment of 35 students.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2002
Prerequisite: KINES 350, KINES 456

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 460 Movement Disorders (3) Major peripheral and central movement disorders and methods of their treatment.

Movement Disorders (3)

General Education: None
Diversity: None
Bachelor of Arts: None

Kinesiology (KINES)

KINES 459 Laboratory Experience in Physical Fitness Assessment (3) A hands-on experience in a fitness assessment laboratory. Prepares students for certification and employment in the fitness industry.

KINES 459 Laboratory Experience in Physical Fitness Assessment (3)

The purpose of this course is to extend the knowledge gained in KINES 456 Physical Fitness Appraisal. While students are introduced to theory and demonstration of fitness testing in KINES 456, the focus of KINES 459 will be to provide hours of hands-on testing in a fitness assessment laboratory. In addition to becoming skilled in fitness testing, students will gain insight into how to set-up and manage a fitness assessment center. Through weekly lecture and demonstration students will increase theoretical and practical knowledge of testing and developing physical fitness. Students will in addition spend approximately 6 hours per week actually fitness testing other students enrolled in activity based courses in Kinesiology. Following the fitness test, students will learn to interpret results and design appropriate exercise prescriptions.

One section of this course will be offered every fall and spring semester with an enrollment of 12 students.

Students will be evaluated using a standard percentage scale as follows:
A 93%-100%
A- 90%-92%
B+ 87%-89%
B 83%-86%
B- 80%-82%
C+ 75%-79%
C 70%-74%
D 60%-69%
F 0%-59%

Kinesiology (KINES)

KINES 461W Preparation for Research Project (2) Planning and preparation for research project.

KINES 461W Preparation for Research Project (2)

This course prepares students to conduct a research project in KINES 462W. Students will begin by critically examining different research approaches. They will explore the development and assessment of research topics paying special attention to both scientific and philosophical justifications. They will learn how to identify research populations and how a human subjects review protects those involved in research studies. They will identify and critique the various inventories and assessment tools available for the kind of research they propose. Students will complete a research proposal including review of literature and method section, and submit an application to the Institutional Review Board. These goals will be achieved through a series of writing assignments.

Students are expected to demonstrate the following outcomes:
1) Communicating and writing ideas relevant to the field of Kinesiology.
2) Understanding and describing the major issues in the field.
3) Understanding the principles of how to conduct research in wellness, fitness and/or associated practice.
4) Understanding and communicating the methods of scientific discovery.

Students are evaluated on their research proposal (50% of final grade) which is drafted and revised during the semester. Further writing assignments (50%) assess and enhance student's competency in research methods and statistics. The course is offered every fall semester with a total enrollment of 25 each semester.

General Education: None

Kinesiology (KINES)

KINES 462W Research Project (2) Completion of research topic.

KINES 462W Research Project (2)

During this course students will collect and analyze data for a research project. They will trouble shoot any data collection problems and learn how to use computerized programs for statistical analysis of data. They will learn about various presentation modes relevant to the written and oral presentation of research data. Students will prepare and be evaluated on a research paper that reports on their research project. In addition, they will present their work orally in showcase sessions to which fellow students and faculty members are invited. The goal is for students to produce as close as possible to publishable papers. This course is part of a two-course sequence and can only be taken upon successful completion of KINES 461W. It, along with the internship experience, are the culminating experiences in the Exercise Science - Science Emphasis. Facilitates needed will be determined based on the individual research project. This course will be offered only in the spring semester of each year. Enrollment will vary from 1 to 25.

Kinesiology (KINES)

KINES 463 Acquisition of Motor Skills (3) Examination of principles of motor learning; the application of strategic factors such as: practice types, schedules, augmented information, and motivation.

KINES 463 Acquisition of Motor Skills (3)

This course is intended for students interested in the principles of motor learning (learning, retention and transfer) and the application of specific learning strategies such as, practice, feedback, demonstrations, and instructions. Through lectures, discussions, and course readings in addition to writing assignments, the goal is for students to develop a unified conceptual framework for motor learning and its facilitation through intervention strategies.

The evaluation for the final grade will be based upon a synthesis of assessment in three areas: a) Term Project (30% of final grade) - a report on a learning experiment or a synthesis paper on a learning principle or a learning strategy; b) Mid-Term Exam (30% of final grade) - questions requiring short 2-3 sentence answers; and, c) Final Exam (40% of final grade) - requiring essay length answers to selected questions that integrate key issues from all the course material.

This course will build on the concepts outlined in KINES 171 and 360. It will represent the culminating upper level undergraduate course in motor learning. This course will be an elective available to students who have completed the required KINES 360 course. It can be used to fulfill requirements for the Kinesiology major and the Movement Science, Teacher Preparation, and Athletic Training Options.

This course will be available to students outside of the Kinesiology major who may, upon approval, substitute the KINES 360 prerequisite requirement. The course will be offered every spring semester.

Kinesiology (KINES)

KINES 464 Children's Physical Education Curriculum and Practicum (3) Curriculum for elementary school physical education emphasizing the skill theme approach.

KINES 464 Children's Physical Education Curriculum and Practicum (3)

The purpose of this course is to introduce teacher candidates to the skill theme approach and developmentally appropriate physical education for children. Appropriate planning, instruction, and assessment make-up the foundation of this course. These techniques are then applied when they teach small groups of children from a local elementary school. Specifically, students will develop and implement developmentally appropriate lesson plans with children and then analyze and reflect on their teaching effectiveness. A primary focus of the class is using the skill theme approach to guide children to reach appropriate cognitive, affective and motor objectives as stated in state and national standards. Students also develop curricular scope and sequence overviews that are used to guide curriculum and lesson development from grades K-5.

Assessment of student performance in the course includes entrance and exit slips based on assigned readings, class lectures and discussion, and laboratory experiences. Students are also graded on their planning, analysis and reflection of their teaching in elementary schools. There is also a final exam that requires students to translate theory into practice as applied to elementary school physical education.

Assessment:
Entrance and exit slips 15%
Teaching in the schools 40%
Final exams 15%
Project 15%
Laboratories 15%

Kinesiology (KINES)

KINES 466 Assessment and Evaluation in Physical Education and Health Education (2) Explores measurement as an important and distinct component in a variety of physical education and health education contexts.

KINES 466 Assessment and Evaluation in Physical Education and Health Education (2)

This course addresses measurement as an important and distinct component of other processes such as assessment and evaluation in a variety of physical education and health education contexts (i.e. student performance, teacher performance, program outcomes). Teacher candidates will explain the inter-relationships among objectives, learning activities, and measurement strategies. They will design performance-based and standards-based measurement plans and tools that are necessary when assessing, evaluating, researching or making decisions about performances in physical education and health education. These plans will be performance-based, include select response and constructed response measurement instruments; measure what matters most in all learning domains; and demonstrate that instruction and assessment are seamless. These performances can range from constructed-response or non-traditional performance tasks like motor skill performance, fitness assessments, oral presentations, written reports, portfolios, program evaluation, and teaching effectiveness. Teacher candidates will be expected to recognize many and develop a few authentic and traditional measurement techniques/tools (including peer and self-assessments). These techniques and tools will assess student understanding and performance, provide feedback, and communicate student progress. These tools will measure what matters most and be valid and reliable. These tools are to be embedded with instruction and used by self, peer and instructor. When available, these tools will be integrated with technology to enhance the management of data. In this course, teacher candidates will recommend strategies for implementing results of a measurement by identifying implications from findings for future curricula, instructions, and other activities. They will differentiate between formative and summative measurements and describe ways the lesson/unit/curricula can be improved based on measurement results. Teacher candidates will also demonstrate their ability to interpret results and infer implications from the findings. For example, identifying instructional gaps between learning activities and objectives and using learning and performance data to make informed curricular and/or instructional decisions. In doing so, teacher candidates will contrast the results of norm- and criterion-referenced evaluation. This course will complement existing Methods courses (field experiences) in our teacher preparation curriculum by aligning instructional planning and implementation with measurement of these learning experiences. Teacher candidates will be evaluated with quizzes, assessment plans, measurement tool development, data collection and data interpretation. One section of this course will be offered each semester with a projected enrollment of 25 students.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2006
Prerequisite: KINES 362, KINES 364, KINES 366

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 468 Health Instruction in the School--Content and Method (3) Methods, materials, and units of instruction.

KINES 468 Health Instruction in the School-Content and Method (3)

This course is designed to prepare future middle and secondary school health and physical education teacher candidates in teaching health by providing a framework for comprehensive school health education, up-to-date health knowledge in ten areas of health, and designing the classroom as a laboratory in which students develop and practice teaching skills for health.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2006
Prerequisite: KINES 362, KINES 364 andKINES 366

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 469W Curriculum Development in Health and Physical Education (3) The content and process of K-12 school health and physical education curriculum development for public school students.

KINES 469W Curriculum Development in Health and Physical Education (3)

The purpose of this course is to prepare prospective health and physical education teachers to plan and design curricular content that meets the needs of students in grades K-12 and aligns with state and national standards. The philosophical and theoretical basis for curricular decision--making will be explored.

Instructional Objectives:
1. design a physical education curriculum outline for a selected school setting (elem, middle, secondary)
2. design a health education curriculum outline for secondary or middle school health
3. assess a current HPE program and the extent to which the program is consistent with good practices, national standards, and state standards

Relationship of course to other courses:
This is the only course that addresses Health and Physical Education Curriculum Design. Students take this course after or concurrently with three-- methods--intensive courses. This course serves as the capstone course in the Teacher Preparation option. It applies pedagogical content knowledge in health and physical education to curriculum models and design. Students take this course the semester before student teaching.

Projected offering and enrollment: this course is offered every semester and has an enrollment limit of 30

Kinesiology (KINES)

KINES 481W Scientific Basis of Exercise for Older Adults (3) Study of age-associated physical changes and the effects of exercise on the aging process.

Scientific Basis of Exercise for Older Adults (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001
Prerequisite: KINES 350

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 484 Advanced Biomechanics (3) The use of advanced biomechanics to provide an in-depth understanding of the principles which underpin human movement.

Advanced Biomechanics (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1999
Prerequisite: KINES 384

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 483 Motor Patterns of Children (3) Development of motor patterns. Fundamentals of movement, basic motor skills, and adaptation of the body to external forces.

Motor Patterns of Children (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1996
Prerequisite: KINES 202

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 485 Science of Training Athletes (3) Application of scientific data knowledge to analyze sport training.

Science of Training Athletes (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1996
Prerequisite: KINES 350, KINES 384

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 486 Legal Issues in Sport (3) Contemporary legal issues in sport and their implications for sport managers.

Legal Issues in Sport (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1996
Prerequisite: seventh-semester standing

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 488 Mechanics of Locomotion (3) This course examines the forces and motions characteristic of locomotion, with emphasis on walking, the most common human activity.

KINES 488 Mechanics of Locomotion (3)
(GHA)

Walking has been described as the most commonly performed human activity. Diseases or injuries that reduce the ability to walk independently and efficiently are especially likely to adversely affect quality of life. Kinesiology 488 introduces students to the elements of normal walking and how walking motions are affected by changes in age, walking speed, and pathological conditions. Advanced topics covered in this course include other forms of locomotion, including running and cycling, and the use of mathematical models to understand phenomena related to locomotion.

Students enrolled in this course learn the particulars of human locomotion, but in so doing they also gain an understanding of kinematics and kinetic analysis, joint mechanics, and the clinical treatment of movement disorders. Basic principles of mechanics are applied to establish how walking motions result from forces produced by muscles, gravity, and contact with the ground. Students planning to pursue graduate study in movement biomechanics or in clinical areas such as physical therapy are especially likely to benefit from the focus on these areas.

The requirements for Kinesiology 488 include two mid-term tests and a final examination, four laboratory reports, and a literature review. Laboratories (held during regularly scheduled class periods) introduce students to current experimental methods used to measure motions, forces, and muscle activity during locomotion. Completion of several case studies during the semester gives students practical experience with the interpretation of motion analysis data, the factors that influence clinical decisions in the treatment of movement disorders, and ethical considerations in biomechanics research.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2002
Prerequisite: KINES 384 or previous coursework in biomechanics (or mechanics) and musculoskeletal anatomy

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 489 Intramural Athletics (3) Programs of activities, types of competition, scoring, awards, schedules, organization, publicity, and other topics related to intramural athletics in schools and colleges.

Intramural Athletics (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1996
Prerequisite: 4 credits of activities or teaching experience

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 492W Programming for Business and Agencies (3) Fundamentals of program development applied to corporate and private physical fitness businesses.

KINES 492W Programming for Business and Agencies (3)

This course will use an experiential approach to acquire knowledge and skills necessary to assess, plan, implement and evaluate health/wellness/fitness programs within a business/corporate setting. Students will actively participate in a process-oriented, student-centered learning environment that includes cooperative learning, critical thinking, effective communication, assessment, and problem solving. Students will assess, plan, implement and evaluate a health-related program (i.e., wellness fair, career fair, road race, fitness programs). Students will write business letters, operating plans, mini-grants, budgets, flyers, press releases, newspaper articles, surveys, and other written communication projects relevant to the fitness/wellness business. Students will access and evaluate health/wellness resources (i.e., agencies, Internet, media, speakers).

As indicated by the “W”, this is a writing intensive course and will follow university guidelines for such courses. Most of the assignments will involve group-based problem solving. This course is offered Spring Semesters with a maximum enrollment of 35.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2006
Prerequisite: KINES 395B

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 493 Principles and Ethics of Coaching (3) Integration of the practical and theoretical knowledge necessary for effective coaching through classroom and field experiences.

KINES 493 Principles and Ethics of Coaching (3)

The Principle and Ethics of Coaching examines the challenges of today's coaching profession through societal norms and expectations from the past and present. The course begins with a study of the coaching profession covering past and current coaches who have experienced success and failure in the profession. Students learn how the profession has developed as a result of changing values, demands, emphasis and expectations in the athletic world. Students will learn how to work with Title IX, parents, high school and collegiate regulations, season structures and the various roles and responsibilities of today's coach. The course is a senior-level course providing students in Kinesiology with an in depth study of the profession that has historically been associated with careers in Kinesiology. This course relates to other courses in sport ethics, sport philosophy and history of sport as they provide the theoretical background for coaching decisions. In addition, this course demonstrates practical implementation of theories from nutrition as well as activity courses. The course offers students an in depth study of sport and gender specific differences as they relate to the coaching profession. The students observe, question and study current coaches while examining their own backgrounds to develop set of principles to handle today's coaching issues. A coaching experience is an optional opportunity afforded to students while writing skills must be demonstrated by all students through written exams, papers and/or projects. Enrollment is optimal at 20-25 students, however, larger numbers may be accommodated. The course will be taught during Fall and Summer semesters. The emphasis on class discussion and interaction with various athletic coaches introduces students to realities of today's coaching profession and the challenges of the 21" century coach. Video and power point enhance the multi media approach to this course and further enhance the learning environment. Evaluation of the students requires an understanding of assigned readings, class discussion, and the student's ability to demonstrate critical thinking skills.

General Education: None

Bachelor of Arts: None
Effective: Summer 2008
Prerequisite: Approval of honors thesis advisor

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Kinesiology (KINES)

KINES 495A Practicum in Student Teaching (12) Supervised teaching of health and physical education in K-12 public schools with seminars focused on transition from student to professional.

KINES 495A Practicum in Student Teaching (12)

The teacher candidate will be placed in either an elementary or secondary school setting for the first 8 weeks of the student teaching experience, followed by placement in the level not selected first for the last 7 weeks. The teacher candidate will be teaching both health and physical education during each placement. The teacher candidate will be assigned on-site cooperating teachers will be supervised by a university faculty member who makes a minimum of four on-site visits, plus review of teaching via two videotape.

During the 15-week semester, there are four seminars of approximately 5 hours each, during which all teacher candidates meet with the coordinator of the student teaching program to discuss topics related to the multiple roles of teachers in public schools and the transition to becoming a professional teacher. In addition, some time in each seminar is devoted to experience sharing and collaborative problem solving. The following topics are covered during the seminars: legal liability and sexual harassment, electronic portfolios, resume and cover letter writing, health and physical education professionals, preparation for employment, interviewing, best teaching practices and sharing, classroom management, and technology in physical education. In addition, the student teachers are required to complete a variety of assignments including: a professional portfolio, unpaid service activity reflection, daily notebook, videotapes and reflection, and Pennsylvania teaching application and essay.

Kinesiology (KINES)

KINES 495B Field and/or Research Practicum in Kinesiology (6) Participation under supervision in a field or research practicum.

KINES 495B Field and/or Research Practicum in Kinesiology (6)

This course places students in the workplaces or research settings with the expectation that these experiences will allow them the opportunity to apply and integrate content from all their courses in the program. They will be placed at a variety of sites, including but not limited to research laboratories, professional fitness centers, rehabilitation facilities, senior centers, community health and wellness programs, and hospitals. They will learn the day-to-day requirements of being "on the job" or "in the lab," including professional management practices and ethical considerations. Practicum work will be evaluated on an ongoing basis with the student intern, work place supervisor, and faculty member involved in the process. The course will take place off campus as work sites and no special on-campus facilities are required. It will be offered annually as the last course in the major.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2006

Labor, Emplym Relati (LER)

LER 083S (GS) First-Year Seminar in Labor Studies and Employment Relations (3) Critical approaches to the dimensions and direction in Labor and Employment Relations.

LER 083S First-Year Seminar in Labor Studies and Employment Relations (3)
(GS;FYS)

(BA) This course meets the Bachelor of Arts degree requirements.

In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of the community. Students will develop an understanding of the learning tools and resources available to them, including the opportunity to develop relationships with faculty and other students who share their academic interests.

Students will write essay exams, and critique a published study on the relevant topic of their own choices in teams. Class participation is required.

The course will provide students with the opportunity to study Labor and Employment Relations in their first semester at the University. This experience will serve as a preparation for additional courses in Labor and Employment Relations as well as an introduction to college-level study generally. The course fulfills both a first-year seminar and a general education or Bachelor of Arts social/behavioral science requirement. Class periods stress discussion of assigned readings, debates, and collaborative research projects.

General Education: GS
Diversity: None
Bachelor of Arts: Social and Behavioral Science
Effective: Spring 2008

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Labor, Emplym Relati (LER)

LER 100 (GS) Employment Relations (3) Introductory analysis of the employment relationship and of the interrelated interests of managements, workers, unions, and the public.

LER 100 Employment Relations (3)
(GS)

(BA) This course meets the Bachelor of Arts degree requirements.

The purpose of this course is to introduce students to the employment relations process in the U.S. and to the institutions that participate in this process. This will be done by examining the areas: the evolution of labor-management relations in this country, including the history of workers' attempts to organize unions, management's response, and government's role; the institutions that participate in the employment relations process--unions, management, and government; the process of employment relations, including organizing a union, negotiating a contract, and administering that contract; outcomes of collective bargaining, public sector/international employment relations, and current issues/trends in employment relations.

Employment relations is a process studied from a multi-disciplinary perspective. This course will, therefore, draw on a number of social and behavioral science disciplines including economics, history, psychology, political science, and sociology.

This course will also incorporate active and collaborative approaches to learning. Through recitation sections, students will have an opportunity to gain experience in taking responsibility for learning and in working with others in a team situation. Students will be evaluated on the basis of exams, group activities, written assignments, and class participation.

This course is the introductory course in Labor Studies and Employment Relations (LER) curriculum. It will help prepare students for all subsequent courses in the LER B.A. and B.S. majors and serve as a prerequisite for some advanced LER courses. This course is required for the LER B.A. and B.S. majors and the LER minor. It also counts toward the fulfillment of the general education or Bachelor of Arts social/behavioral science requirement.

LER (WMNST) 136 Race, Gender, and Employment (3)
(US)

(BA) This course meets the Bachelor of Arts degree requirements.

To accomplish the goals of the course, students will participate in a variety of in-class and out-of-class exercises designed to expose them to issues of inequality generally, and more specifically, to inequalities relating to employment. Activities are designed to connect real world experiences to class readings and discussion. For example, students may be asked to conduct their own job evaluation in conjunction with a reading on gender bias in job evaluation systems. The course also relies heavily on student participation via the reporting of the results of their activities, and in discussion of assigned readings. A semester-long group project will enable students to focus their interests and become experts in one sub-area. Group projects include a collaboratively written paper as well as a class presentation designed to inform the class about a topic previously not covered through class readings, discussions, or lectures.

LER 201 (GS) Employment Relationship: Law and Policy (3) An examination of basic legal principles underlying the employment relationship and their social, political, and economic bases.

LER 201 Employment Relationship: Law and Policy (3)
(GS)

(BA) This course meets the Bachelor of Arts degree requirements.

LER 201 provides students with an overview of the employment law relationship in the United States.

The course begins with a study of the legal principles which affect the creation, development, and implementation of employment law. Several of the most fundamental employment law principles, such as the Master/Servant relationship and the theory of Agency, are adopted from the English common law. Students review the United States Constitution and the constitutional principles necessary to understand employment laws are examined.

Students will study several federal and state statutes, including Worker's Compensation laws (with an emphasis on the Pennsylvania Worker's Compensation statutes), the Social Security Act, the Fair Labor Standards Act, the National Labor Relations Act, and Equal Employment Opportunity laws. As appropriate, the history, politics, and policies underlying these statutes are discussed. The necessity of understanding not only the legalities of EEO laws but also the societal need to eliminate discrimination results in a thorough study of Title VII of the Civil Rights Act of 1964, the Age Discrimination in Employment Act, the Civil Rights Act of 1991, and the Americans with Disabilities Act. Successful completion of this course equips students with a competency in employment law, transferable to an entry-level human resources or management position.

Students write reviews of various involving different employment laws, including case law and precedents, evidence and interpretation. The course content naturally lends itself to gathering and analyzing information. Students analyze the application of law to various cases, judging the logical consistency between the principle of the law and the case to which it is applied. Library resources are an essential component; on-line resources increasingly are used. The course deals exclusively with laws regulating employment practices and relations among employees in the U.S. workplace. It concentrates on discrimination, equity, due process, social and civil conduct.

LER 312 Research Methods in Labor Studies and Employment Relations (4) Provides an understanding of social science research as employed in the field of Human Resources and Employment Relations.

LER 312 Research Methods in Labor Studies and Employment Relations (4)

(BA) This course meets the Bachelor of Arts degree requirements.

The general objective of this course is to understand the processes and values of social science research. This will be approached in two ways: by deciphering and evaluating research published in employment relations, human resources, and other social science literature, and in designing and completing an empirical research study. Since first-hand knowledge is essential to understanding the intricacies of the research process, students will conduct an empirical research project on a topic of their choice with guidance from the instructor. This course is tailored to meet the specific needs of Labor and employment Relations students through the use of examples and readings closely related to a broad range of employment and work issues. Attention is given to the evaluation of the kinds of studies students may find useful in their future careers, whether it be in human resources management, employment relations management, or graduate or law school.

LER 400 (IL) Comparative Employment Relations Systems (3) Analysis of structure and elements of employment relations systems in developed and developing areas.

LER 400 Comparative Employment Relations Systems (3)
(IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course explores contemporary topics in employment relations in the world. The course examines seven examples of employment relations systems, each carefully chosen to illustrate important variations in employment relations practices. It also provides an overview of economic globalization and its impact on employment relations. Topics include global sweatshops, child labor, the diffusion of human resource practices, and corporate social responsibility. The first country case is Germany, which provides an example of a country with strong national unions and a highly developed system of works councils. The Swedish case exemplifies a long-tradition of centralized bargaining and tripartite relations that is now in transition. The third case, Japan, illustrates some of the initial experiences with team work, just-in-time production, and employee commitment through job security and training. China offers an example of a socialist system in transition that has become an economic powerhouse through massive export processing zones, government controlled unions, and wage competition. Brazil provides an important example of a Latin American country with a state dominated employee relations system. South Africa offers a case of highly politicized employment relations in a country in transition from extreme racial segregation to a democracy. Finally, India represents Asia's other economic powerhouse, with an English speaking workforce that is drawn to the booming call center industry and export-oriented production. The second half of the course looks at broader themes related to the topic of globalization. Sweatshops in Mexico and child labor in India examined alongside the diffusion of high-end human resource practices in Brazil. In this section, student will also study inter-governmental institutions such as the World Trade Organization, and the International Monetary Fund. The final unit of this section examines the topic of Corporate Social Responsibility (CSR), recent attempts by corporations -at times in coordination with labor unions--to establish basic sets of rules or standards for their employees wherever units of the corporation might be located in the world today.

Labor, Emplym Relati (LER)

LER 401 The Law of Labor-Management Relations (3) Development of Anglo-American law regulating collective bargaining, with emphasis on American labor-management relations under Wagner, Taft-Hartley, and other acts.

LER 401 The Law of Labor - Management Relations (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course will examine the evolution of labor law in the United States. The N.L.R.A. itself, and the decisions of the National Labor Relations Board (N.L.R.B) and the courts, will be examined in order to gain an understanding of the current legal framework underpinning our system of labor-management relations. Major issues to be examined include the rights of employees to union representation; the formation of bargaining units; the conduct of organizing campaigns and elections; the duty to bargain; strikes, striker's rights, and lockouts; picketing, boycotts, and related activity; the enforcement of collective bargaining agreements and the duty to arbitrate; union members' rights and responsibilities, the duty of fair representation; and federal-state relationships in labor relations. Also covered in the course will be the legal framework for public sector labor-management relations, with specific attention paid to Pennsylvania Acts 111 and 195. The course will be taught from a liberal arts perspective, meaning that societal factors influencing the law--history, politics, and economics --will be emphasized. Student performance will be evaluated by means of tests, short papers, and such reports as may be required. This course is complementary to others in Labor Law, including LER 434, Collective Bargaining and LER 435 Labor Relations in the Public Sector. The course requires no special facilities or equipment; however, students enrolled are expected to have computer skills sufficient for communication and word processing purposes.

Labor, Emplym Relati (LER)

LER 411 Employment Relations Organizations (3) Organizational factors in the actions of trade unions, other employee organizations, and their consequences for workers and society.

LER 411 Employment Relations Organizations (3)

The two major parties in the labor-management relationship are trade unions and employers. In order to understand this relationship, and the manner in which the parties interact through the organizing, collective bargaining, and grievance processes, it is necessary to have an in-depth understanding of the parties themselves. This course examines the goals, culture, leadership structure, and politics of unions and employer organizations from both a historical and contemporary perspective. Basic organizational theories are employed to gain insight into the parties and case studies are used to see how unions and employers react and adapt to changes in their environments. Students will be expected to complete assigned readings and be prepared to engage in class discussions. Other requirements include exams and a substantial research project.

Labor, Emplym Relati (LER)

LER 404 Trends in Employment Relations (3) Examines contemporary trends and developments in employment relations and collective bargaining.

LER 404 Trends in Employment Relations (3)

This course examines contemporary trends in employment relations and collective bargaining. Among the topics covered are: current structural and procedural conditions encouraging stability or conflict in collective bargaining; new forms of work organization and transformed patterns of employment relations; trends in union membership; legal developments affecting unions and collective bargaining; new issues in collective bargaining; and other contemporary developments in employment relations. Students will read a variety of authors' perspectives on different trends in employment relations.

This seminar is a seminar course requiring active participation by students in class discussions. This course builds on and is complementary with other coursework in Labor and Employment Relations in the areas of employment relations, labor law, collective bargaining and dispute resolution. It also compliments courses in other departments in the area of dispute management and resolution, including the Minor in Dispute Management and Resolution. LER 404 may also be taken as an elective by students in the MS in Human Resources and Employment Relations and compliments coursework in that graduate program.

LER 414W Labor and Employment Relations Theory (3) Content and implications of major and minor theories of Labor and Employment Relations.

LER 414W Labor and Employment Relations Theory (3)

The purpose of this course is to introduce students to the social scientific thought related to studies of work and employment relations. Work constitutes a basic activity in all societies whereby human effort transforms raw materials into objects having accrued value as a result of the human effort. Employment relations constitute formal arrangements between an employer(s) and individuals who engage in specific work activities. Work and employment relations as such vary within and across societies as they are conditioned by population density, technologies, markets and state regulations. The specific focus of this course will be theories and theorists that have significantly impacted the current understandings of the common features of work and employment relations, as well as variations across them.

LER 425 Employee Benefits (3) The examination of employee benefits programs used by employers to meet the welfare needs of employees and their families.

LER 425 Employee Benefits (3)

This course is a comprehensive survey of the programs, principles and trends in planning and administering employee benefit programs for private and public employers. The objectives for this course are to provide students with an understanding of employee benefit programs and their broad implications for the workplace, the role of employee benefits in motivating and retaining employees, and the recent trends in employee benefit offerings and cost containment approaches.

Topics covered include strategic and tactical planning considerations used in implementing and changing benefit programs, discretionary and mandatory benefits, Social Security, health insurance structures, disability and life insurance programs, workers' compensation, retirement programs, executive benefits, paid-time off programs and accommodation and enhancement programs.

This course builds on introductory general foundation courses in human resources and labor relations. It provides students with a working knowledge of employee benefits and its important role in human resources and labor relations careers.

Students must select and write a research paper on a benefits topic of special interest. Course grades will be determined from examinations and the research paper.

LER 435 Labor Relations in the Public Sector (3) Analysis of labor relations problems within different areas of public employment.

LER 435 Labor Relations in the Public Sector (3)

(BA) This course meets the Bachelor of Arts degree requirements.

Upon completing this course, students should be able to identify the legal frameworks that govern collective bargaining between employers and unions in federal, state and local governments. Students should also be able to explain the process of collective bargaining in the government sector and the special circumstances that make public sector bargaining different from private sector bargaining. At course end, students should be able to identify the parties involved in public sector bargaining, including those involved in dispute resolution, and explain their priorities in the labor relations process. Students should come to understand and articulate the reasons why it is important to study and more fully comprehend the public sector labor relations process. Together, we will explore the distinctions between public and private sector employers that impact labor relations in the public sector, in order to better understand those distinctions. Also, we will explore the principal historical differences between negotiations in the public and private sectors, in order that students can better articulate those differences. In addition, we will work to understand the principal arguments for and against the right to strike for public sector employees, as well as other impasse resolution processes. Finally, we will work to identify and discuss the challenges facing public sector labor relations in the near term and in the intermediate terr

LER 434 Collective Bargaining and Contract Administration (3) Theory, practice, and economic impact of collective bargaining, including administration of the collective bargaining agreement.

LER 434 Collective Bargaining and Contract Administration (3)

(BA) This course meets the Bachelor of Arts degree requirements.

Upon completing the course, students should be able to identify and explain the concepts, principles and practical application of various types of negotiations between labor and management, understand the basic legal framework governing collective bargaining in the U.S. and the rights of the parties under the law, explain the typical processes of collective bargaining as practiced in industrial, service and public sectors in the U.S., prepare for negotiations/collective bargaining, and negotiate issues. The course will also help students to develop concrete negotiation skills and provide them with the opportunity to apply those skills, with the benefit of observation and feedback. Lastly, the course will introduce students to the contract administration process utilized by unions and employers. Students will become familiar with grievance procedures and arbitration processes and begin to develop basic skills in resolving disputes over the application and interpretation of labor agreements.

LER 437 Workplace Dispute Resolution (3) Dispute resolution practices and procedures used in the workplace and employment law settings.

LER 437 Workplace Dispute Resolution (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course examines dispute resolution procedures in unionized and nonunion workplaces. The course begins with an examination of grievance procedures in unionized workplaces and the system of labor arbitration. Students will read labor arbitration decisions and learn how to research arbitration issues. The second major theme of the course is an examination of the design and use of nonunion workplace dispute resolution procedures. Students will read descriptions and analyses of examples of nonunion grievance procedures. Finally, the course will look at procedures for resolving employment law disputes and the major public policy debates surrounding mandatory nonunion arbitration procedures. Students will read some of the major legal cases in this area of the law and perspectives both for and against mandatory arbitration. A key objective of the course is to enable students to both understand and think critically about different alternative dispute resolution procedures and their role in employment relations. As part of achieving this objective, the course will include simulated dispute resolution exercises to provide students with experience in using techniques such as arbitration, mediation, and peer review. Additional course requirements include regular class attendance and participation, and paper assignments based on each of three main sections of the course. This course builds on and is complementary with other coursework in Labor and Employment Relations in the areas of employment relations, employment and labor law, and human resource management. It also compliments courses in other departments in the area of dispute management and resolution, including the Minor in Dispute Management and Resolution. LER 437 may also be taken as an elective by students in the MS in Human Resources and Employment Relations and compliments coursework in the graduate program.

LER 445Y (US) (AAA S 445Y, PL SC 445Y) Politics of Affirmative Action (3) Examines history, politics, and economics of the use of special programs to advance racial interests in the U.S.

LER (AAA S/PL SC) 445Y Politics of Affirmative Action (3)
(US)

(BA) This course meets the Bachelor of Arts degree requirements.

The objectives of this course are to introduce students to the relationship between affirmative action and other policies purportedly designed to end racial inequality in the U.S. This course approaches the study of affirmative action in the context of the historic racial discrimination and inequality that Black Americans have faced since the founding of the Nation. The purpose of this course is to help students think about how contemporary and historic affirmative action policies relate to race, concepts racial inequality, the historic and continuing causes for racial inequality, public opinion, American politics and economic thought. The course materials will lead students through scholarly and popular articles, books and video presentations on the topic. It is hoped that students will become familiar with the history of affirmative action from its conception. Students will gain an intimate understanding of affirmative action economic and social outcomes on various racial groups. No prior knowledge is assumed, however a knowledge of civil rights history, quantitative methods, and constitutional law will be useful. The Politics of Affirmative Action satisfies the requirements for major and minor electives for the African American Studies, and major and minor electives for Political Science, and Labor Studies and Industrial Relations. Students are evaluated on the basis of an examination, term paper, class participation and class presentations of papers.

LER 458Y (US) (HIST 458Y) History of Work in America (3) A study of selected problems in the history of work in the United States, especially since 1877.

LER (HIST) 458Y History of Work in America (3)
(US)

(BA) This course meets the Bachelor of Arts degree requirements.

This course will address economic, technological, social, cultural and political aspects of employment and self-employment. Major topics of concern will include methods of producing goods and services, work time and working conditions, the composition of the workforce, the changing functions of managers of labor, the role of the state in shaping labor markets and regulating employment relations, the formation and operation of unions and other representative bodies, and the relation of work to the family and other social institutions. Course requirements include regular attendance and participation, three essay exams and one term paper of a minimum of 10 pages. The essay exams and term papers will serve as instruments for gaining a fuller understanding of the subject matter by directing the students to examine and discuss major substantive problems in the field. In addition, some students will undertake original research in primary sources, thereby learning something of historical research methods. Writing will be treated as a process; besides regular encouragement of students to submit a paper proposal and bibliography, a paper outline, a rough draft, and a final draft. In addition, they are advised that the instructor will read and comment on as many additional drafts as they care to submit.

LER 464 Communication Skills for Leaders in Groups and Organizations (3) Theory-and research-based communication skills for leaders dealing with work-related problems in contemporary groups and organizations.

LER 464 Communication Skills for Leaders in Groups and Organizations (3)

(BA) This course meets the Bachelor of Arts degree requirements.

LER 464 Communication Skills for Leaders in Groups and Organizations is a survey of theory, research, and practice related to the communication processes by which individuals in groups and organizations exercise influence, whether or not they occupy positions of acknowledged leadership, and may be taken as part of an Labor and Industrial Relations major or minor, or as an elective by students in other disciplines. The course is offered once each academic year and has an enrollment limit of 40 students per offering. The course requires no special facilities. It extends to other courses in the major primarily in the areas of Industrial Relations and Human Resources. It is also complementary to courses focusing on groups and organizations in Sociology, Psychology, Management, and Engineering. During the course, students are exposed to a variety of theoretical perspectives on the study of leadership, learn about research illuminating its functions, and become acquainted with communication practices derived from and/or suggested by such theories and research that contribute to the exercise of influence and, thereby, effective group and organizational performance. These terminal outcomes define the objectives of the course. Focus will be on leadership as both role-related behavior and goal-directed behavior, regardless of roles that members of groups and organizations occupy. Requirements for the course include regular attendance, a course paper dealing with research on some aspect of leadership covered in the course, and both a mid-term and final examination (of the essay, open-book variety).

LER 470 Employee Involvement (3) Historical, theoretical, legal, and industrial relations aspects of employee involvement in the United States and other countries.

LER 470 Employee Involvement (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course will introduce you to worker participation innovations in union and nonunion settings. Important questions include: types of programs implemented, who adopts these programs, how the programs work in practice, and the outcomes for employees, employers, and unions. The course is not required for the major or the minor, but it can be used as an option. It does expand on basic materials covered in L I R 100, L I R 101, L I R 414W, and L I R 458W without duplication. The course is taught in a typical classroom environment at least once per academic year, and the evaluation procedures include written examinations and other assignments, plus class participation.

General Education: None
Diversity: None
Bachelor of Arts: Social and Behavioral Science
Effective: Spring 2008
Prerequisite: LER 100

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Labor, Emplym Relati (LER)

LER 465 Collective Decision Making (3) Application of theories of decision making to work-related issues in groups and organizations requiring collective resolution and action.

LER 465 Collective Decision Making (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course presents a broad overview of theories, research, and practices in decision making as related to work-related choice making in groups and organizations and is open to students majoring or minoring in Labor and Industrial Relations, as well as to students who may wish to use the course as an elective. The course is offered once each academic year and has an enrollment limit of 40 students per offering. It requires no special facilities. L I R 465 extends to other courses in the major, primarily in the areas of Industrial Relations and Human Resources. It is also complementary to courses dealing with decision making in groups and organizations in sociology, psychology, and management. Of particular interest are decision making practices, as well as theories that account for them, in single-motive situations (in which participants in the process are pursuing a common goal) and mixed-motive situations (in which two or more of the participants are competitively related, but must cooperate to achieve their objectives). Hence, the course deals both with (1) conventional decision making, as in the case of boards, task forces, problem-solving groups, and quality circles or teams, appropriate to single-motive situations and (2) processes, such as bargaining, negotiation, and dispute management/resolution, appropriate to mixed-motive situations. The course also deals with the influence of organizational culture on decision-making in both types of situations. Upon completing L I R 465, students will have been exposed to a broad array of theoretical perspectives on decision making in groups and organizations, will be familiar with research testing these theories, and be aware of decision making practices suggested by theory and research that are useful in situations requiring collective choice and action. These terminal outcomes of the course reflect the objectives. Requirements for the course include regular attendance, participation in class discussion, a course paper on some aspect of decision making covered in the course, and both a mid-term and final examination (of the open-book, essay variety).

Labor, Emplym Relati (LER)

LER 472 (WMNST 472) Work-Life Practices and Policies (3) Explore the causes and consequences of conflicts between work, family, and other life commitments, and how these may be resolved.

LER 472 Work-Life Practices and Policies (3)

(BA) This course meets the Bachelor of Arts degree requirements.

The interdisciplinary field of work-family and work-life developed as a result of middle-class women's entry into the labor force, a movement that generated conflict between family and paid work commitments. Overall, the course addresses the reasons the field developed, relevant theoretical perspectives regarding the issues, and related problems as well as proposed solutions at both the public and private sector levels. The overarching objectives of the course are to expand students' understanding of conflicts between work and family commitments, and how these might be resolved through private and public sector initiatives. Specifically, the course concerns how individuals, families, and organizations interact to help hinder the achievement of balance between work and life commitments, and relevant effects on those involved. The changing demographics of the family, laws and trends around working time, father and mother time with children, the expanded need for elder care, work-life programs such as flextime, concierge services, paid parental leave, part-time careers, paid time-off banks, and the role of unions, corporations and government legislation are covered. The course attempts to link the likely future needs of students to broader trends in society and how balance could be achieved at the level of individuals, families, other stakeholders in the community, and for society as well. Fields of research relevant to the course include labor studies, women's studies, Industrial/Organizational psychology, the sociology of work and of family, and child development. Students will be evaluated on the basis of class participation, through two in-class examinations, and through a final written or oral project providing a chronology and analysis of an adult's work-family history. The course is offered most fall and spring semesters, and typically 30 students are enrolled.

LER 475H (GEOG 475H) Labor in the Global Economy: U.S. and South African Perspectives (3) This course focuses on how the nature of work is changing in the global economy, and the implications for economic opportunity and inequality in both .

LER (GEOG) 475H Labor in the Global Economy: U.S. and South African Perspectives (3)

This seminar focuses on how the nature of work is changing in the "new economy", and the implications for economic opportunity and inequality in both the United States and South Africa. Sections of the course examine: theoretical approaches to understanding contemporary process of labor restructuring, including globalization, rise of an information economy, and growth in service sector employment; case studies of restructuring processes in different industrial sectors in both the U.S. and South Africa; and innovative labor organizing initiatives at a local, regional and global scale. This course aims to develop a framework for understanding the nature of contemporary processes of economic restructuring and its impact on the world of work. Drawing on research in both a South African and U.S. context, key case studies in the changing nature of work will be examined. This will provide a deeper understanding of how broad macro-level changes in the nature of contemporary capitalism are mediated by a variety of technological, political, and socio-economic factors in particular industries and geographic contexts. Finally, an in-depth look at workers' responses to these changes at different scales (local, regional, global) will help deepen our understanding of the contested nature of workplace restructuring while exploring promising strategies for improving working conditions. This is a reading-intensive course dealing with the theoretical literature on rapid economic restructuring and how this is shaping work and employment. It is run in collaboration with the Sociology of Work Program at the University of Witwatersrand in Johannesburg, South Africa, with video-conference discussions linking the two courses.

General Education: None

Labor, Emplym Relati (LER)

LER 480 Current Issues in Human Resources (3) Examines current issues in the field of human resource management, including innovative work schedules, telecommuting, non-traditional office environments, etc.

LER 480 Current Issues in Human Resources (3)

Students will study the relevant human resources and strategic issues that affect businesses across all industries and how it relates to the strategic planning of the company. The course will provide real life examples and experiences. Students will study and discuss the strategies, innovations, and successes of companies and how these issues and challenges relate to the human resources function today and in the future. Timely books which are being read in companies and presented at seminars will be the required reading. Students will interact with guest speakers who will be executives and hear these experts share their strategies and ideas regarding the issues facing not only their organization, but all organizations today. This course will require students to integrate and apply knowledge from their previous coursework in human resources and labor relations. A student must know and understand the laws that relate to the work place and have a strong knowledge of the principles of management and labor relations. This course will serve as a compliment to Mgmt 100, 341, 441 and LIR 100, 201, 401 and 434. This course is intended for seniors who are in their final two semesters of study and are serious about pursuing a job in human resources and labor relations. Evaluation will be based on participation, exams, essays, and reaction papers.

Landscape Architecture (LARCH)

LARCH 060 (GA) History of Landscape Architecture (3) A survey of the historical development of outdoor space in relationship to allied arts from early beginnings to this century.

LARCH 060 History of Landscape Architecture (3)
(GA)

(BA) This course meets the Bachelor of Arts degree requirements.

LARCH 060 is an introductory survey course of the historical development of designed outdoor space in relationship to the allied arts from early beginnings to present day. Although the profession of architecture was not named until 1858, with the award-winning design of Central Park by Frederick Law Olmsted and Calvert Vaux, the art of design on the land has been practiced since the beginning of time. It is the creation of human environments, inevitably expressing the creator's perception of the relationship between humanity and nature.

As with all art, the design of outdoor spaces reveals a culture's beliefs, values, and aspirations. If one studies design in different cultures and time periods, one can learn a great deal about that society. One can also begin to see history holistically, to detect trends, to relate yesterday to today, and to question the present and future. In the course we explore the outdoor spatial designs of history, with emphasis upon what these designs reveal about cultural attitudes toward nature, humanity and art. While we will address middle and far-eastern landscapes, the course focuses upon western civilizations with the second half focusing on American landscapes.

The objective of this course is to present a concise analysis of the design of outdoor space with special emphasis on American design from 1800 to date. It is hoped that students will gain an increased awareness of landscape architecture as an art, and of their own built environment as a product of cultural values.

Grades are based upon three examinations: two during the course and one during final exam period. Each examination is worth 33 1/3% of your final grade. Each exam will consist mostly of multiple-choice questions some of which may be based on slides; there may also be short answer questions. The specific format will be announced prior to each exam. Both lecture content and reading packet material will be covered on the exams. Computer tutorials are available and designed to aid in your understanding of the reading packet. As well, the lectures are taped and are available for review through the University's Classroom Recording unit. To further aid you in understanding course content, a study guide will be posted every week at the web address.

Landscape Architecture (LARCH)

LARCH 065 (GA;US;IL) Built Environment and Culture (3) Investigates the relationship between socio-cultural practices and the development and organization of contemporary built environments.

LARCH 065 Built Environment and Culture (3)
(GA;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This interdisciplinary course is based on the premise that space is an active structuring element of human experience. Using theoretical orientations from landscape architecture, architecture, urban planning, geography, sociology, and cultural anthropology this course will investigate how social structures are spatially embedded in contemporary built environments. It will do so by examining environments at three scales (house, street, and city) in different parts of the world. It will explore both western and non-western environments with emphasis on environments that students are likely to be unfamiliar with. Within each scale and region it will focus on the spatial experience of different groups based on racial, ethnic, gender, class, and other identities.

This course will equip students with the necessary skills to understand and analyze the relationship between existing social and power structures of society and the organization of specific built environments. It will enable them to compare their experience of environments with those of other groups in society. It will also introduce students to the aesthetics of everyday environments in both national and international contexts. There are no prerequisites for this course. This course will complement LARCH 060 and other courses related to human settlements and urbanization offered by various departments/programs like Architecture, Art History, Geography, History, and Sociology.

Students will be evaluated through low stakes testing (a series of three exams), frequent quizzes, leading of discussion sessions, and a group project. Peer evaluation will also be part of the final grade.

Landscape Architecture (LARCH)

LARCH 112 Introductory Design Studio (3) Provides students with an interdisciplinary introduction to studio work in landscape design.

LARCH 112 Introductory Design Studio (3)

This course provides an introduction to landscape design. Students will create studio work that investigates, from a variety of disciplinary understandings, basic issues and problems in the arts and design disciplines. The course is thematically linked to LARCH 121S: Landscape Architecture Orientation Seminar taken in the preceding semester and will be team-taught to provide an interdisciplinary structure. This course will foster interdisciplinary awareness and provide students with a common language (or several common languages) with which they can communicate with other students in the design disciplines. Ways of learning about design through projects and assignments that incorporate various technologies will be included in the course. The course will integrate a variety of methodologies and approaches rather than teach discipline-specific subject matter.

Landscape Architecture (LARCH)

LARCH 121S Landscape Architecture Orientation Seminar (1) Introductory seminar involving readings on significant issues in landscape architecture. LARCH majors only.

LARCH 121S Landscape Architecture Orientation Seminar (1)

LARCH 121S is a seminar course, the first of many in an entering student's Penn State career. Seminar classes offer the opportunity to read, think, share ideas through informal discussion, and refine personal thoughts reflection. The seminar is a common and useful tool to explore important ideas and develop critical thinking skills. The design and theory sequence begins with the freshman seminar, LARCH 121S, which introduces students to landscape architecture issues.

In this seminar students read and discuss the challenges and opportunities faced by contemporary landscape architects. This is the first of a ten-seminar sequence addressing theory and issues. As an introductory course, LARCH 121S is a "stand-alone" seminar - all those in the professional core of the program are linked to design studios.

To support student explorations, the class undertakes a series of readings of seminal works in landscape architecture and allied field that students carefully consider, question, and discuss. As a major part of student evaluation, they maintain a journal of their evolving ideas about the course content.

Entering landscape architecture majors sometimes have a restricted notion of the wide variety of career directions that face them within the field of landscape architecture. This class proposes that the principal role of the landscape designer and planner is to make "place" - a combination of physical, cultural and compositional cues that imbue built and natural forms with meaning. The goal of this first-year seminar class is for students to understand the type, or types, of place that landscape can be. The course introduces students to concepts of landscape as place, and asks them to ponder, explore, and respond to ideas about various perspectives on landscape "place." This introduces them to the broad range of issues and activities that are addressed in the seemingly simple term, "landscape architecture."

Course Objectives:
a) To become familiar with important issues in contemporary landscape architecture.
b) To exercise and hone skills in critical thinking.
c) To exercise and hone skills in speaking and writing persuasively.
d) To begin to explore roles as future "place makers."

Landscape Architecture (LARCH)

LARCH 151 Introduction to Design Visualization (3) Provides students with an introduction to visualization techniques for landscape architectural design and planning.

LARCH 151 Introduction to Design Visualization (3)

The complexity and scale of most design projects and the collaborative nature of design work necessitate the use of graphic images to develop and communicate design ideas from the very early conceptual stage to the final construction documents. These "design drawings" are an integral part of the problem solving and design process. They require a good eye, a creative imagination and a skilled hand.

Developing skill at design drawing and visualization starts with an understanding of basic concepts of seeing, perception, and principles of communication. It requires becoming familiar with and skilled at using a graphic vocabulary of drawings and symbols that are commonly used in the design disciplines to communicate with one another. And of course, although concepts and theory are important, practice is essential. As Paul Laseau says in Graphic Thinking For Architects And Designers, "The knowledge that drawing and thinking are important to [landscape] architecture is not sufficient. Natural drawing talent is not enough. To sustain the necessary lifetime effort of learning and perfecting graphic thinking, we need to find pleasure in drawing and thinking." The goal of this course is for students to begin developing their visual communication skills using a range of media and to start on a "lifetime effort" of enjoyable and productive graphic thinking and communication. Both concepts and techniques will be stressed.

Students work on exercises that develop facility with basic conventions. The tools and principles introduced in this class feed directly into the more advanced and computer-aided visualization and presentation methods emphasized in the following class, LARCH 251: Design Visualization and Graphics I.

Landscape Architecture (LARCH)

LARCH 211 Design and Theory I: Introduction to Principles of Landscape ArchitecturalDesign (4) An introduction to design theories and principles of landscape architecture. LARCH majors only.

LARCH 211 Design and Theory I: Introduction to Principles of Landscape Architectural Design (4)

LARCH 211 is the first of a four-class sequence of design studios at the core of the professional design program. The design studio is an active learning setting where principles discovered in lecture or seminar classes are subject to experiments in the form of design projects. In this setting, central class setting where solutions to complex problems are synthesized and tested, based on information gathered in earlier and concurrent classes. Whereas, the theory classes and studios of the Arts and Architecture Core Curriculum, A&A 101, 102S, 103, and 104, address broad themes and principles in the arts and design, LARCH 211 is focused on landscape architectural design.

Landscape architectural principles and issues are introduced through design explorations and projects, associated lectures and field trips, and corollary readings and reading discussions - the latter developed through the companion seminar, LARCH 221. As the curriculum progresses, the principles introduced (or expanded upon) become increasingly complex and build upon prior studio content.

The second-year design and theory studio and seminar content is introductory in nature. The fall semester (LARCH 211 and 221) covers basic spatial design concepts such as introduction to precedent, landscape design processes and elements, ordering principles, and is focused on design using the palette of landform, plants and structure. The studio project types are small in scale and relatively abstract. They introduce place-awareness design and focus upon small landscape spaces and the placement of objects in the landscape, both built and natural.

Course Objectives:
a) Achieve working knowledge of the three critical building blocks that will underpin the student's future design experiments: space, experiential function, and intent.
b) Acquire a working knowledge of spatial composition - both the vocabulary and the design impact of compositional elements and principles.
c) Develop an introductory understanding of the space making potential of vegetation, landform, and structure.
d) Gain experience in model building and understanding of its usefulness in spatial design.
e) Develop the student's skills in design criticism.
f) Introduce the iterative process of landscape architectural design, including the importance of independent design decision-making based on a variety of criticism.
g) Experience visual note taking and understand its usefulness in the design process.
h) Develop the habit of self-reflection about the individual's design process.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: LARCH 121S, A&A 101, A&A 102S, A&A 103, A&A 104
Concurrent: LARCH 221

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Landscape Architecture (LARCH)

LARCH 212 Design and Theory II: Introduction to Issues of Place (4) Studio design addressing issues of nature and culture; application of theories, processes, and presentation methods learned in course and concurrent courses. LARCH majors only.

LARCH 212 Design and Theory II: Introduction to Issues of Place (3)

LARCH 212 is second of a four-class sequence of design studios at the core of the professional design program. The course follows LARCH 211 and continues to develop the fundamental concepts and basic skills of landscape architectural design. The particular emphasis of this class is on introduction to site analysis encompassing both natural and cultural elements of place. The studio project types are small to moderate in scale and have basic programs. In many cases, second-year site design projects include community projects (i.e. parks) with real human issues and sites. Group discussions and critiques will be important activities in the studio.

This course will build upon the ides explores in LARCH 211 of composition with the basic design elements (landform, vegetation, structures) of landscape design and the ecology of site from LARCH 241, Via a series of studio projects, charrettes (intensive applied workshops) and field trips, LARCH 212 will engage students with design challenges on real sites in the State College/University Park community. Students will be challenges to develop the comprehensive understanding of site and activities (program) required to become an effective landscape architect. Included in the most important parts of that comprehension are natural, social, historical, and aesthetic site conditions; functions, activities and program requirements; site and community context; and relevant design concepts, theories and examples.

The subsequent challenge for students will be the development of design processes necessary to integrate site and program understandings into unified, successful design.

Course objectives:
- To explore the iterative and self-critical design process essential to all design activities.
- To clearly and effectively communicate design proposals, graphically and verbally.
- To master graphic techniques and composition needed for competent presentation.
- To practice written and oral presentation skills, culminating in public presentation of student designs to audiences including community representations.

General Education: None

Landscape Architecture (LARCH)

LARCH 221 Design Theory Seminar (1) Inquiry-based reading and discussion of design theory literature relevant to the focus and content of LARCH 211.

LARCH 221 Design Theory Seminar (1)

Each of the four design studios that constitute the core of the professional curriculum has a companion seminar that provides the vehicle for structured exploration of the theoretical and philosophical framework within which we design and plan. The seminar is a small group setting where directed readings, independent research and reflection are employed to explore the context of contemporary design.

LARCH 221 is the first of a four-class sequence of design seminars. Whereas the theory classes of the Arts and Architecture Core Curriculum, A&A 101 and 103 addresses broad themes and principles in the arts and design, LARCH 221 is focused on landscape architectural design.

Landscape architectural principles and issues are introduced through studies of design precedents, corollary readings in the sociological, psychological and cultural contexts of design and small-group discussions - the latter frequently related to topics under investigation in the companion studio, LARCH 211. As the curriculum progresses, the issues explored become increasingly complex and build upon prior seminars.

The second-year theory seminar content is introductory in nature. The fall semester (LARCH 221) covers introductory writings addressing the broadset principles of landscape design processes, discussions of fundamental ordering principles, and philosophical positions on the interrelationships of landform, plants and structure. They introduce place-awareness through concepts such as genius loci, ordering principles such as the golden section, and experiential responses to landscape from phenomenological viewpoints.

Course Objectives:
- To become familiar with important issues in contemporary landscape architecture.
- To exercise and hone skills in critical thinking.
- To exercise and hone skills in speaking and writing persuasively.
- To begin to explore the issues that impinge upon and shape "place."

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: LARCH 121S, A&A 101, A&A 102S, A&A 103, A&A 104
Concurrent: LARCH 211

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Landscape Architecture (LARCH)

LARCH 222 Design Theory Seminar (1) Inquiry-based reading and discussion of design theory literature relevant to the focus and content of LARCH 212.

LARCH 222 Design Theory Seminar (1)

LARCH 222 is the companion seminar to the design studio LARCH 212. The seminar is a small group setting where directed readings, independent research and reflection are employed to explore the context of contemporary design. Topics in LARCH 222 reflect the projects being explores in the companion studio but, in general, move beyond exploration of basic design concepts to include an emphasis on both natural and cultural elements of place and provides essential background to the processes and principles of site analysis in as much as those reflect the technological and cultural biases that are brought to design.

Landscape architectural principles and issues relevant to the design topics being pursued in LARCH 212 are introduced through studies of design precedents, corollary readings in the sociological, psychological, and cultural contexts of design and small-group discussions - the latter frequently related to topics under investigation in the companion studio, LARCH 212. As the curriculum progresses, the issues explores become increasingly complex and build upon prior seminars.

The seoncd-year theory seminar content is introductory in nature. The spring semester (LARCH 222) continues to cover introductory writings addressing the broadset principles of landscape design processes, discussions of fundamental ordering principles, and philosophical positions on the interrelationships of landform, plants and structure - increasingly in the context of the design types being explores in LARCH 212. They introduce place-awareness through concepts derived from sociology, social psychology and cultural anthropology.

Course Objectives:
- To increase familiarity with important issues in contemporary landscape architecture.
- To continue to develop skills in critical thinking.
- To continue to build skills in speaking and writing persuasively.
- To bring focused attention to the issues that impact the design of small, private and public spaces.

General Education: None

Landscape Architecture (LARCH)

LARCH 231 Introduction to Design Implementation (3) Introduction of basic principles and tools supporting landform data, site systems, grading, visualization representation and site circulation.

LARCH 231 Introduction to Design Implementation (2)

As an introductory design implementation course, this course provides the foundation for site design in landscape architecture. At the core of the course are four general bodies of knowledge: Geometrics, Landform Manipulation, Site Systems, and Computer Applications for Site Analysis and Design.

Geometrics: In order to perform landform manipulation, students must be able to efficiently acquire and process basic physical information about a site and are required to understand a suite of measurements. This course will first provide an overview of the digital and paper data sources available to landscape architects. Students will develop basic skills in manipulating or processing these data in order to comply with the requirements of site design. The course will also provide the basic measurements and formulae required for students to efficiently and accurately manipulate landforms.

Landform Manipulation: One of the most critical skills landscape architects must acquire as designers is the ability to design landforms to accommodate changes in use and to translate their design ideas into dimensionally precise topographic representations of their designs. This course provides the basic knowledge for students to complete this process. Beginning with a single site element, students are expected to explore the suite of opportunities to place and modify a site to fit a single site element. Increased complexity is added to the suite throughout the remaining portions of the semester, thus enabling students to balance the opportunities and constraints presented by each individual design element and the overall site design.

Site Systems: Building on ecological components of the curriculum, this course provides the first site specific and physical understanding of basic site systems critical to every landscape architect's design. Students will primarily focus on the major site features as related to site drainage, such as soil, topography, and surface geology, but will also be expected to recognize regional context in their designs.

Computer Applications for Site Analysis and Design: A central component underlying the instruction of the course is providing students with a suite of computer tools.

Course objectives:
a) To assist in initial efforts in acquiring and processing site data;
b) To perform calculations such as cut and fill, spot elevations, and slope calculations;
c) To visualize and complete basic manipulation of landforms;
d) To understand the interaction of physical site features on individual sites (e.g., soil and topography); and
e) To communicate their final site designs according to professional standards

General Education: None

Effective: Spring 2009
Prerequisite: LARCH 251

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Landscape Architecture (LARCH)

LARCH 232 Landscape Architectural Design Implementation I (3) Principles of landform design and grading, including the use of landform as a design element, visualization and representation of landforms, methods for integrating site and structure, standards for grading and drainage, and the development of detailed grading plans. LARCH majors only.

LARCH 232 Landscape Architectural Design Implementation I (3)

The purpose of LARCH 232 is to develop within each student the technical ability to effectively steward land and water resources in the context of land development.

For any design to become a reality, the specifics of the design such as the landform—structure relationships, grading and drainage, pedestrian and vehicular circulation, and other site improvements must be resolved. This resolution, which is actually a further refinement of the student’s design, must be technically functional, safe, ecologically responsible, aesthetically pleasing, and true to the design intent. Understanding design implementation standards and technology is an essential part of the design process because it allows students to assure the successful installation of their designs and provides opportunities for them to steward our land, vegetation and water. This knowledge is also critical to future success in professional practice and professional licensure.

Grading/Drainage Systems: Students will develop the technical skills for professional office level determination of grading layouts including slope, cut and fill calculations, and communication of solutions using an array of technological tools. The investigation of drainage systems introduces students to standard calculations for stormwater run-off and management and explores a wide variety of innovative means of stormwater management designed to achieve specific conservation goals.

Layout and Dimensioning / Circulation Systems: This emphasis will involve two components: i) the principles and techniques for horizontal layout and dimensioning of landscape elements from site scale to detail scale, and ii) the principles and techniques for design and layout of circulation systems. Although vehicular circulation is the primary focus, bicycles and pedestrian circulation will also be discussed. The course covers general principles for designing road systems, design principles and standards for the horizontal and vertical alignment of roadways, formulas and techniques for the precise definition and coordination of horizontal and vertical road geometry, and graphic standards and techniques for plan/profile drawings using computer-aided drafting. Studio assignments will include a series of smaller exercises as well as a more comprehensive project.

Landscape Architecture (LARCH)

LARCH 241 Vegetation Ecology and Landscape Design (3) Application of ecological knowledge to landscape design and management; emphasis on the use of plant communities in contemporary design. LARCH or Landscape Contracting Majors only.

LARCH 241 Vegetation Ecology and Landscape Design (3)

Landscape architecture is so thoroughly in and of the environment that ecological concerns permeate every aspect of practice. Students encounter ecological concepts throughout the curriculum, in the context of social and cultural systems and ecologies as well as the more familiar natural system ecology. The curriculum's entry-point to considering ecology as a fundamental shaper of design and planning is LARCH 241, Ecological Principles for Landscape Design, which introduces students to the basic concepts in ecology such that they will be able to apply ecological knowledge in landscape design and management.

The course focuses on basic ecological principles and concepts at all scales, with special emphasis on the small-scale site and the larger, regional-scale landscape. Key concepts explored in the class include: population, community, ecosystem and landscape. Students will learn the characteristics of healthy ecosystems and will begin to cover the adverse impacts that can result from failure to apply sound ecological principles in design and planning. The principles learned in this class provide the foundation for later explorations that include responses to overlying patterns of human land use and development.

The course achieves the above through a variety of learning activities. The core of the class comprises traditional assigned readings and lectures delivered in the classroom (copies of the readings and PowerPoint slides from lectures are available on-line on ANGEL). The class also includes numerous field experiences, both in the immediate campus area and the close-by off-campus locations. The instructor leads several different types of field experiences - some oriented to ecology and restoration, others focused on natural history and site comprehension.

Landscape Architecture (LARCH)

LARCH 251 Design Visualization and Graphics I (3) Advanced visualization principles and techniques; computer=aided design, image processing, color theory and application; visual thinking and problem solving. For Landscape Architecture majors only.

LARCH 251 Design Visualization and Graphics I (2)

The products of landscape architectural design and planning are inherently visual, and our visual sense is most important in assessment and evaluation of the qualities the environment, or future environments, presents to us. Direct illustration of the world is traditionally accomplished through tools and approaches such as hand-sketching and figure drawing, and draws upon understandings of color theory and perspective.

Increasingly, those tools are being supplanted by computer-based tools, especially as the representation of future scenarios becomes a bigger part of community and professional decision-making processes. Technical drawing is increasingly supplemented by visual simulation, modeling, animation and other advanced techniques.

While visual communication is tightly woven into the heart of design and planning studios, LARCH 251 provides students with an introduction to several types of hand drawing and computer-aided drawing and animation techniques. Students work on both basic drafting conventions and more creative graphic-rendering techniques. The tools and principles introduced in this class are used extensively throughout the program. Computer-aided visualization and presentation methods are emphasized, including the fundamentals of 2-D and 3-D illustrative rendition.

Course Objectives:
- Achieve working knowledge of basic illustration principles: line, color, shading, perspective.
- Master the basics of 2-D and 3-D representation in both hand- and computer -media.
- Acquire a working knowledge of spatial composition and its expression through both traditional and computer-based media.
- Develop an introductory understanding of data formats for computer illustration and modeling, and the integration of multiple data types and formats into presentations.
- Gain experience in 3-D computer model building and understanding of its usefulness in spatial design.

Landscape Architecture (LARCH)

LARCH 272 Landscape Architecture Field Trip (1) A week-long class trip to visit recent projects, offices, and outstanding historical developments.

LARCH 272 Landscape Architecture Field Trip (1)

During their first and second years in the landscape architecture program, students are introduced to ways of looking at the landscape that are quite new to them—to look at the visible landscape as representation of its past cultural, political, bio-physical, and geological influences. Through design studios and methods classes, students have been exposed to design approaches addressing aesthetic and experiential goals, and to others that employ engineering strategies for land shaping and management of water resources. They have taken general education classes that focus on soils, history, cultural geography and communications. The second year ends with a field trip that places students in settings where all of these influences are seen at work together and asks them to reflect on that integration of influences. The trip emphasizes the importance of regional context and diversity by traversing a cross-section of physiographic regions of the Mid-Atlantic States—typically from the Maryland shore to the edge of Lake Erie.

LARCH 272 is a one-credit course that serves to immerse students in an understanding of how diverse influences, some planned, others not, coalesce to form the vital changing landscapes of the Mid-Atlantic region. The course comprises a field trip to representative ecosystems across the physiographic regions of New Jersey and Pennsylvania, linking the Mid-Atlantic and Great Lake geographic regions. Through hiking, canoeing and driving, students experience selected physical, biological and spatial conditions in these landscapes in order to compare and contrast their origins, processes, structures and patterns, and potentials for landscape design and planning.

Course Objectives:
- To become familiar with notable regional ecosystems;
- To experience, record and respond to representatives sites;
- To trace the connection between physical and biological processes and plant communities
- To understand these sites as dynamic and beautiful places that are concurrently being nurtured and threatened by humans;
- To relate these experiences to landscape design, planning and management

Landscape Architecture (LARCH)

LARCH 311 Design and Theory III: Site Planning and Design (4) An introduction to site planning, management, and design.

LARCH 311 Design and Theory III: Site Planning and Design (4)

During the third year of this professional curriculum, design and theory references build upon the second-year experiences and expand to both broader (regional) and more detailed (site) investigations. The fall semester design studio and seminar classes (LARCH 311 and 321 respectively) cover regional context as a preamble to large-scale master planning.

LARCH 311 considers the broader landscape and systems within the landscape. There are two very good reasons to learn to work at the broader landscape scale: to make informed planning, design and management recommendations at that level, and to enlighten site-scale design with a regional perspective. Students begin exploring ways to understand and address issues of regional context before focusing on local-scale site design in the spring semester. Projects from the fall include an emphasis on regional analysis, site and program analysis, and site design in the regional context. Studio work involves research and report writing and medium- to large-scale projects where site design and program are directly influenced by regional factors. Topography, geomorphology, land use, transportation, regional ecology, demographics, landscape history, visual analysis, etc., are introduced, all bound into current technological formats using such tools as Geographic Information Systems.

Students explore ides about landscape-scale conservation, linkages and recreational programming - important types of regional-scale work with which landscape architects are involved. They apply knowledge of the landscape in considering public planning, design and management interventions, including exploration of alternatives for landscape conservation and recreation. Students become involved, through community outreach projects, with interactive and real (e.g. sometimes messy) public dialogue that may help build community-wide enthusiasm for a landscape project of regional significance.

Course Objectives:
- To further student understanding of place and landscape experience as an interaction of those features and processes at the human scale.
- To introduce students to basic approaches and techniques for analyzing landscape systems and features as a primary basis for identifying issues and discovering design and planning opportunities.
- To introduce Geographic Information Systems (GIS) as a primary tool in regional analysis and planning, and to integrate GIS into a broadly based approach to managing data, developing concepts and communicating ideas.
- To develop student ability to use landscape and spatial data as the basis from which to draw conclusions and identify opportunities and actions.
- To continue to develop skills in integrated oral, verbal and graphic communication.

General Education: None

Landscape Architecture (LARCH)

LARCH 312 Design and Theory IV: Site and Regional Planning (4) An introduction to large site and regional planning. For landscape architecture majors only.

LARCH 312 Design and Theory IV: Site and Regional Planning (4)

In the spring semester of the third year, LARCH 312 and 322 continue the students' progress in working with regional contextual factors, but with an emphasis on site design at a variety of scales. Project types include a progression from small- through large-scale design with increasingly complex programs, human issues, and ecological parameters. Implementation is strongly integrated into this site-design context. This class constitutes a capstone to the professional core of the curriculum and accomplishes the first comprehensive integration of the student's technical and communication skills, their ecological and socio-cultural knowledge, and their developing skills as designers.

LARCH 312 directly references the understanding of the regional context from the preceding LARCH 311 to take students into community master planning issues. An introduction to those issues and the issues of sprawl and landscape history then allows a transition to community form and housing-type topics. In this class, students gain an understanding of designing communities and everyday human habitat - at several scales, including the interrelationships of natural, cultural and economic factors on the past, present and future development of communities. They develop awareness that even small, individual site design requires an understanding of larger environmental and cultural contexts. To this end, they learn to assess physical and cultural geographies at regional and local scales and their implications for community design at the site scale.

Course Objectives:
- To further develop expertise in the analysis and assessment of the natural, cultural, social and experiential facets of sites and their surroundings.
- To refine understanding of the role of data gathering, research, and analysis in design.
- To explore issues of land use planning and develop an understanding of logical interrelationships among different land uses.
- To develop skills in meshing the attributes of a site with the expectations of a program and the feature of actual buildings.
- To practice and refine site design skills, from functional/technical aspects (building location, circulation, orientation, drainage, grading, planting, materials) to experiential facts (spaces, sequences, view, character).
- To practice and refine skills in place making, drawing upon local context, site, and program to crate a responsive and memorial design.
- To enhance confidence and skill in developing a design vision through independent design decision-making.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: LARCH 311, LARCH 321
Concurrent: LARCH 322

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Landscape Architecture (LARCH)

LARCH 321 Design Theory Seminar (1) Inquiry-based reading and discussion of design theory literature relevant to the focus and content of LARCH 311.

LARCH 321 Design Theory Seminar (1)

LARCH 321 is the companion seminar to the design studio LARCH 311. The seminar is a small group setting where directed readings, independent research and reflection are employed to explore the context of contemporary design.

Topics in LARCH 321 reflect the projects being explored in the companion studio. During the third year, theory references build upon the second-year experiences and expand to broader regional investigations. The fall semester (LARCH 311 and 321) covers regional context as a preamble to large-scale master planning in land-use issues. In the seminar, students read broadly about the genesis of regional context as a construct of cultural, as well as biophysical influences. The concept of "reading" the landscape is fully explored, introducing students to the clues and cues by which the origins of the existing landscape can be discerned.

Themes in the third-year theory seminars become increasingly sophisticated. The regional landscape is the setting for some of our most pressing public debates - landscape restoration vs. agro-industry; landscape as economic resource vs. spiritual renewal; landscape as repository of cultural history vs dynamic reflection of current values. These themes are explored through readings that include the fundamental influences of topography; geology; regional ecology and hydrology; the human overlays of land use; transportation; demographics; and the cultural influences and responses seen in landscape history, cultural and visual analysis, etc., are introduced.

Course Objectives:
- To explore the political and philosophical influences that shape the regional landscape.
- To expose students to important debates on the future of the regional landscape.
- To continue to develop the ability to engage in public debate of these issues.
- To continue to build skills in speaking and writing persuasively.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: LARCH 241, LARCH 212, LARCH 222
Concurrent: LARCH 311

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Landscape Architecture (LARCH)

LARCH 331 (IL) Landscape Architectural Design Implementation III (3) Introduction to landscape construction materials and their use in design; includes principles and techniques for detailed design of site elements. For Landscape Architecture majors only.

LARCH 331 Landscape Architectural Design Implementation III (3)

The landscape architect calls upon a rich array of materials to construct the built elements of landscape—walls, ground surfaces, overhead structures and furniture systems. The functional success and durability of many historical and traditional construction methods is based on a learned appreciation of the qualities and behaviors of materials in use in the landscape. Students develop understanding of the fundamental structural qualities of materials and use that knowledge to devise and illustrate their own design details. The same understanding of material behaviors will be used to investigate the qualities of novel construction materials, and will guide the development of construction details that respond to new constraints and opportunities.

The main focus of 331 will be on materials and construction detailing, with emphasis on techniques appropriate for an array of design situations. Representation of design ideas using computer-aided-drafting is expected in this class.

Lecture topics:
- Material qualities; physical, chemical, structural
- Construction details and specifications
- Control of moisture penetration
- Issues of health, safety and welfare (danger, security, observation)
- Design behavior / people spaces
- Site furniture—selection, layout etc.
- Site layout/staking plan
- Paving—patterns and materials
- Fountains and water features
- ADA and Universal Design
- Trees in Urban Design
- Material selection in the urban environment
- Outdoor lighting
- Public art and sculpture
- Stairs, walls and elevation changes
- Sustainable design and construction
- Site utilities

General Education: None
Diversity: IL
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: LARCH 232

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Landscape Architecture (LARCH)

LARCH 322 Design Theory Seminar (1) Inquiry-based reading and discussion of design theory literature relevant to the focus and content of LARCH 312.

LARCH 322 Design Theory Seminar (1)

LARCH 322 is the companion seminar to the design studio LARCH 312. The seminar is a small group setting where directed readings, independent research and reflection are employed to explore the context of contemporary design.

Topics in LARCH 322 reflect the projects being explored in the companion studio. During the third year, theory references build upon the seond-year experiences and expand to broader regional investigations. The spring semester (LARCH 312 and 322) covers site design issues within a regional context. In the seminar, students gain an understanding of communities and the complex of values that shape them, including the interrelationships of natural, cultural and economic factors on the future development of communities. Habitat management, watershed management, real-estate values, zoning and planning ordinances, individual and community rights are topics of discussions in this seminar.

Students develop awareness that even small, individual site design requires an understanding of larger environmental and cultural contexts, and that success in planning at that large scale depends on implementation of wise planning at the site scale. Readings and discussion are supplemented by research and report writing that address contemporary debates on policy and planning.

LARCH 322 also provides a setting for joining ideas presented in the context of both small-scale and large-scale design to engender in students a comprehensive view of the world of landscape design as an integrated whole where concepts developed at small scale become the framework and guiding principles for larger scale, vice versa.

Course Objectives:
- To explore students' values as they shape the designed landscape.
- To expose students to important debates on the future shape of the inhabited landscape.
- To continue to develop the ability to engage in public debate of these issues.
- To continue to build skills in speaking and writing persuasively.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: LARCH 311, LARCH 321
Concurrent: LARCH 312

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Landscape Architecture (LARCH)

LARCH 332 Landscape Architectural Design Implementation II (3) Introduces the principles and techniques of road alignment, including horizontal curves, vertical curves, and superelevation; principles and techniques of site scale layout and dimensioning. For Landscape Architecture majors only.

LARCH 332 Landscape Architectural Design Implementation II (3)

Plants and planting design are critical elements of the education of a landscape architect. LARCH 322 is designed to develop students' appreciation of plants in the landscape while advancing knowledge and skills in planting design, techniques, and documentation as a distinct-but-integral part of the landscape development and stewardship process. The focus of the course on both plant association and individual species will continue to consider the landscape architect's palette, as well as the realities that sustain life on and around a landscape site. The class constitutes the third part of a sequence of LARCH 241, 341 and 332 that provides a comprehensive introduction to plants in their role within the ecosystem, as naturally occurring and interdependent plant communities, and in this third class as the representation of deliberate design decisions that seek to achieve the integrity of the natural systems that inspire them.

This practical step-by-step studio-format course will enable students to see plants less as simplistic design objects and more as complex living elements that grow, die and regenerate, that are inherently part of larger biophysical and aesthetic landscape systems, and that ultimately contribute to the quality of human life.

Course Objectives:
- Confirmation of planting objectives within the context of the given overall project goals.
- Analysis of the site and its context from the interrelated perspectives of general planting design principles and site-specific planting design objectives.
- Application of the given planting program that reflects project goals and site analysis.
- Research and development of a planting palette and demonstrated implementation of approaches to sustainable plant communities, with emphasis on soil-plant relationships, microclimatic and vegetation management considerations.
- Conceptualization, studio critique, and refinement of a planting design through the application of planting design principles: spatial, visual/sensory, ecological, horticultural, functional, and educational.
- Preparation of a refined and realistic working drawing package using computer-aided- drafting that includes planting plans, installation details, plant establishment notes, and other directions to the contractor.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: LARCH 331

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Landscape Architecture (LARCH)

LARCH 361W Historic Issues in Landscape Architecture (3) A review of design history (precedent studies), an introduction to historic method, history as an informant to design, reading the historic landscape, and issues of preservation and restoration. Landscape Architecture majors only.

LARCH 361W Historic Issues in Landscape Architecture (3)

LARCH 361W, Historical Issues in Landscape Architecture, is a writing-intensive course that enables a more thorough investigation of historic issues as they relate to design. The dual goal of this course is to introduce students to a variety of ways that landscape architects address and use history in their work, and to develop their skills in verbally communicating ideas on this subject through presentations, reports, and proposals.

The course is devoted to a wide range of relevant issues and topics confronting the profession and discipline of landscape architecture in the 21st century. It investigates the modern designed landscape as a distinct mode of cultural production—with its own materials, medium, codes, ethics, and concerns—in the context of landscape architectural theory's interconnection to evolving societal constructions of nature, social issues, environmentalism, and the city. It begins with the emergency of a modern sensibility about landscape in the late 13th century and trade developments through modernism postmodernism, and into post modernism. Information dissemination will be by lectures and student explorations through short papers.

This writing-intensive course provides third-year landscape architecture students a grounding in contemporary theoretical issues that impact landscape architecture, from social to environmental theories, both by landscape architects and by other theoreticians. The goal is to provide students an understanding of contemporary ideas that influence the work of landscape architects.

Course Objectives:
- To expand the student's knowledge of contemporary landscape architectural practice.
- To enable the student to gain a better understanding of the conceptual frameworks within which exemplary work has been and is currently being produced.
- To identify and describe the interactions between social formations, landscape theory, and built work.
- To introduce landscape architectural theory as a practice which occupies the space between the binary opposites of cultural/nature, architecture/landscape, and art/science.
- To illustrate the means by which theory can explain, frame, and situate design work in the past, present, and future.
- To allow the student to refine his or her critical abilities relative to built works and writings in contemporary landscape architecture.

General Education: None

Landscape Architecture (LARCH)

LARCH 341 Plants, People and Place: Plants in Landscape Architectural Design (3) The ecological, historic, and aesthetic values of native and ornamental herbaceous and woody plants and their use in landscape design.

LARCH 341 Plants, People and Place: Plants in Landscape Architectural Design (3)

LARCH 341 is concerned with the key roles of plants and plant communities in the design, planning and management of the land. Students study the ecology and dynamics of native communities including plant geography, plant/soil/water relationships, plant community succession, forest ecosystem dynamics, plant/wildlife relationships, invasive non-native plants, and landscape restoration. Another focus of the course, bearing upon the role of plants in creating place, will be to study the cultural history and human ecology of the use of native and non-native plants. The course will also address the management and protection of sensitive native plant communities, the value of plants in the management of storm-water and the protection of soil resources, and the critical role of plants in sustainable design.

The design suitability of native and non-native ornamental woody and herbaceous plants will be studied through fieldwork, case studies, hand and computer rendering, and digital and photographic resources. Students will study plant taxonomy and the use of identification keys. Using these tools, they will be expected to develop a personal handbook of planting design resources, including an illustrated collection of plant species characteristics, based on their field work experiences, for use in later courses and professional practice. They will record their observations on the cultural values and meaning of plants, as well as their uses in design. This course is part of the preparation for later courses in planting design in the landscape architecture professional curriculum.

Planting design is shaped by the availability and distribution of woody and herbaceous plants and seeds. Students will be provided an overview of the processes of production, installation and management of plants in the landscape, with special reference to regionally native materials, and including visits to nurseries, greenhouses, and seed production farms as well as guest speakers from horticulture and agronomy. Methods of plant and seed installation will be reviewed and field trips to landscapes under construction will be arranged in order to observe those processes directly. The use of mulches, geo-textiles, mycorrhizal inoculation, soil management and amendment, site protection, and arboricultural protection in the establishment and management of contemporary landscapes systems will be studied.

Course Objectives:
a) To develop an understanding of the functional and ecological contribution of native and non-native plants and plant communities to the contemporary landscape.
b) To explore such areas as bioremediation and hydrology
c) To expose students to the therapeutic values of plants and plant communities
d) To investigate the use of vegetation in noise and pollution control

Landscape Architecture (LARCH)

LARCH 382 Professional Practice (3) An investigation of current professional and business practices in the field of landscape architecture. For Landscape Architecture majors only.

LARCH 382 Professional Practice (3)

LARCH 382 has a three-part role. It comprises an introduction to the variety of practice opportunities in landscape architecture, their opportunities and drawbacks; it provides an introduction to critical office management practices; and it assists students in the employment application process through coaching on interview technique and guidance on the preparation of supporting material.

It is the overarching intent of this course to help students understand what it will mean to be a professional practicing in the new millennium and in a constantly changing marketplace of ideas. Topics covered include ethics, public relations, office and project-related practices, personal and professional development, and legal aspects of practice: contracts, specifications, liability insurance. Through active participation in the course, students will come to realize the diversity inherent in the profession.

Course objectives:
- To introduce a range of practice types—small, private practice, large-scale corporate practice, federal and state agencies, not-for-profit organizations, and other non-governmental organizations;
- To discuss relations with other professionals, including the formation of teams and other strategic alliances, and negotiation of professional fees;
- To outline and illustrate the various roles and responsibilities individuals might have both in and outside of an office, including situations of personal vs corporate responsibility; and
- To investigate the inherent values or point of view of principals and others that effect how decisions are made and change occurs.

Landscape Architecture (LARCH)

LARCH 414 Design and Theory V: Advanced Landscape Architectural Design (5 per semester/maximum of 15) Review of landscape architectural theories and issues; supports development of comprehensive design study and/or independent honors (Thesis-Based) design projects. LARCH Majors only.

LARCH 414 Design and Theory V: Advanced Landscape Architectural Design (5-15)

Fourth- and fifth-year design studios are designated "depth" studios. Each studio is aligned with one of the department’s associated research centers or pursues special topical content and continues the development of site-scale planning and design skills for landscape architecture students with larger and more complex sites and programs Students select a topic from the range of options. Students may choose to take a given topic on a maximum of two occasions.

Topics are related to issues that have been introduced in previous studios and are as varied as possible from studio to studio. This allows students to select a topic of interest to explore with great intensity and detail. The studio alternatives offered each year are based on faculty expertise and student interest, and are chosen by the department head’s review of faculty proposals. To date, studio topics have ranged from historic preservation to recreational landscapes, urban ecology to community planning. The type of project is determined on an individual basis, and will be rigorous and require a high level of depth of thought and a sophisticated product.

Project types include regional master planning, large-scale site planning and medium-scale community/housing design. The design issues emphasize urban form, community identity and open-space systems in the United States as a follow-up to urban patterns experienced during the student’s previous study abroad. The project types may include such topics as inner-city locations with mixed-use and complex programs that progress from research and planning to site-scale design. Often, students work with an actual client, such as an urban planning commission or a city economic development entity, etc. Issues of urban form as a setting for significant practice opportunities are emphasized. Locations such as brown fields, urban entertainment districts, waterfronts, housing infill, etc., form the basis for design response in context.

Course Objectives:
- To develop an in-depth understanding of one or another aspect of landscape architecture.
- To be exposed to the rigor and challenges of developing and implementing one’s own design expertise in the context of a specific environmental concern.
- To exercise the design principles, technological tools and communication strategies developed during the course of the specific design studios.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: LARCH 312, LARCH 322

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Landscape Architecture (LARCH)

LARCH 450 Interactive Digital Design: Information Technology for Designers (3) A student centered paperless interactive digital design studio.

LARCH 450 Interactive Digital Design: Information Technology for Designers (3)

The Digital Office is not a new idea. Yet few landscape architects have fully embraced the idea that design computing can replace or at least seriously challenge the drafting table as the workplace in the design studio.

This interactive digital design class will be taught via a "hands on" approach. Talking about design computing may be like talking about riding a bicycle. Until you actually get on the bicycle and try to move through the world on two wheels you do not understand how to ride a bicycle. Likewise the design computing software must be used to be fully understood. It is the act of using the software that actually develops the knowledge and skill base for using the software.

Lectures will introduce new subject areas and provide a venue for multi-media presentations. The goal is to introduce the computer as a powerful design tool in a broad and integrated manner for all the activities of the landscape architect, designer, planner and architect. The course will be flexible to fulfill the needs of the computer newcomer and the computer veteran.

The design computing technology allows a certain customization, so the student can customize his/her own learning experiences within the solid structure of the course. The course may also act as a capstone experience for the digital minor students.

The design computing technology allows a student centered learning/teaching model. The course structure is a series of student selected content streams. Students select a semester long project which will be reviewed three times. Presentations will be digital, generally without paper copy, and archived to CDR or DVD-R. This course aims to develop digital literacy and mastery.

Diversity: None
Bachelor of Arts: None
Effective: Spring 2007

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Landscape Architecture (LARCH)

LARCH 424 Design Theory Seminar (1-3 per semester/maximum of 3) Inquiry-based reading and discussion of design theory literature relevant to the focus and content of the associated design studio course, LARCH 414.

LARCH 424 Design Theory Seminar (1-3)

LARCH 424, Design Theory Seminar, is a companion to the depth studios, LARCH 414. However, unlike the seminars offered during second and third years, LARCH 424 is not tied topically to any particular depth studio. Instead, this seminar provides a vehicle for rigorous and structured exploration of the theoretical and philosophical issues that face landscape architectural designers and planners. The seminar is a small group setting where directed readings, independent research and reflection are employed to explore the context of contemporary design.

These seminars, offered to fourth- and fifth-year students, enable professors and students to take their investigations to greater depth. Seminars are offered by different professors each semester and the content is expected to be somewhat aligned with the faculty member’s research and scholarship or pursues special landscape architectural topical content of the faculty’s choosing. Students select seminars from the range of options offered. This allows students to select a topic of interest to explore with great intensity and detail. Students are required to take up to three seminars to achieve a minimum of three credits.

Topics are related to issues that have been introduced in previous studios and seminars and the department ensures that students have access to the widest range of topics. The seminar alternatives offered each year are based on faculty expertise and student interest, and are chosen by the department head’s review of faculty proposals. Seminar topics related to our research centers include historic preservation, urban ecology, community planning and watershed stewardship. From time to time topics independent of our research centers, such as the impact of technology on design or the impact of public policy on design and planning, will be addressed. The type of seminar outcome is determined by instructors on an individual basis, and will be rigorous and require a high level of depth of thought and a sophisticated product.

Course Objectives:
- To further develop an in-depth understanding of the theoretical or socio-political context for one or another aspect of landscape architecture.
- To challenge students to articulate their own values in the context of a specific environmental concern.
- To examine the means by which designers reconcile their own, their clients’, and society’s values in the pursuit of particular design or planning goals.

Language and Literacy Education (LL ED)

LL ED 412W Teaching Language Arts in Secondary Schools II (3) Exploration of language, literacy, and culture and development of curricular designs for teaching language arts in secondary schools.

LL ED 412W Teaching Language Arts in Secondary Schools II (3)

This three-credit course addresses the theory, practice, and implications of teaching the English language arts at the secondary level. The course is the discipline-specific component of the Secondary Education block taken by majors in Secondary Education prior to student teaching. In this course, students explore issues in language, literacy, and culture and development of curricular designs for teaching language arts in secondary schools. Through in-class and out-of-class activities completed both independently and in collaboration, students read about, talk about, and practice teaching all of the language arts—reading, writing, speaking, listening, and thinking. Activities highlight ways of planning for instruction and ways of assessing student learning as teachers implement those plans. In addition, students will take up the professional issues facing beginning teachers of the English language arts—issues of professionalism and the teaching role, relationships with students, and how teaching can fit into a life. The course builds upon content developed in other courses in the major, including theories of reading, composition, media literacy, and pedagogy. Students engage in a variety of writing tasks both in support of developing course content and as a means of making their work public. This writing includes (but is not limited to) lesson planning, reflective writing on experiences both in the course and in related field experience, and the development of a professional portfolio. During class sessions, informal writing is used for a variety of purposes such as brainstorming, facilitating collaborative work, or framing discussion. Throughout the semester, students draft and receive feedback on a variety of portfolio components, which are revised and incorporated into a final version of the portfolio due at the end of the course. Portfolio contents vary according to instructor, but examples might include statements of educational philosophy, analysis of student writing from field experience, commentary on unit and lesson materials, reflective writing on reading and writing processes, and professional documents such as lesson plans and letters to mentors and potential employers.

Language and Literacy Education (LL ED)

LL ED 465 Fantasy Literature for Children (3) A study of fantasy literature for children looking at a variety of fantasy stories and examining them from different perspectives.

LL ED 465 Fantasy Literature for Children (3)

Fantasy Literature for Children explores a range of fantasy literature including literary fairy tales, toy fantasies, ghosts/horror/suspense, science fiction, reworked fairy tales, low fantasy, and high fantasy. This course will consider different rationalizations for fantasy literature and will examine some of the key stories that illustrate fantasy from different perspectives, such as literary, social, and psychological angles.

This course will look at, first, the beginnings of modern fantasy with the fairy tales of Hans Christian Andersen and Carlo Collodi's classic, Pinocchio. Then the course reading will include ghosts and other supernatural fantasy stories, and "reworked" fairy tales, a current trend in fantasy literature. Despite of some scholarly debates on science fiction, that is, whether it should be categorized into fantasy or not, this course will consider science fiction as being similar enough to fantasy for it to be included. The course will also include a study of fantasy books currently popular with school-age readers.

Fantasy can be divided into two main groups: low fantasy and high fantasy. Several of the stories to be read in the course are perhaps best categorized as low fantasies, not because of what they are, but because they are not high fantasy, which has a mythic quality to it. High fantasy seems to go beyond the particulars of its story to explore the nature of good and of evil. Though high fantasies can be humorous at times, the overall tone is serious. Often characters are on quests and the stakes of success or failure usually involve saving the world from some great evil or preventing the tyranny of some powerful and evil ruler.

Reading the different types of fantasy literature and the literary critiques and analyses of those works, this course will be wrestling with the overall importance of those books in the lives of children by pondering imagination and its role in the lives of children throughout the course.

General Education: None

Language and Literacy Education (LL ED)

LL ED 462 The Art of the Picturebook 3 An in-depth study of picturebooks as art objects providing aesthetic experiences and contributing to our aesthetic development in literacy education.

LL ED 462 The Art of the Picturebook (3)

The Art of the Picturebook explores a wide range of picturebooks with the idea that illustrations are visual art evoking thoughts and feelings. Because picturebooks provide aesthetic experiences and contribute to aesthetic development, they are rich and important sources for literacy education. This course provides opportunities to extend students' repertoire of strategies for making sense of picturebooks, to deepen knowledge about picturebooks and the artists who create them, and to consider ways to help children become more sophisticated readers of picturebooks.

While picturebooks are often emphasized as integral to the literacy development of young children, they can be engaging and desirable for older children as well. Course topics include picturebooks for the very young, as well as picturebooks that could appeal to elementary and middle school children. Whether picturebooks appear relatively simple and straightforward or contain innovatively complex or metafictive design elements, close readings of them with an understanding of terminology offer opportunities to express and discuss reactions and interpretations. The Art of the Picturebook provides students a forum for exploring preferences, ideas, insights, and questions about selected picturebooks, along with curricular and pedagogical considerations. Course readings include interviews with illustrators, selections about creating picture compositions, and scholarly essays presenting theoretical perspectives and ideas about picturebooks as literature and art for children's literacy development.

This course emphasizes that reading and interpreting picturebooks is an active, creative process that is socially, culturally, and historically situated. Authors and illustrators are influenced by culture, so their art reflects values of that culture, consciously or unconsciously. A reader's experience with a picturebook is also influenced by cultural and social contexts in a given moment. Because engaging in aesthetic experiences is an active, creative process, reading picturebooks is, as Jane Doonan (1993), author of Looking at Pictures in Picture Books, asserts, a form of play. The Art of the Picturebook approaches picturebooks as sources of deep play.

The course also provides opportunities to research selected illustrators, both for class discussions and an illustrator study project (e.g., a Wiki page). The culminating illustrator study project involves an in-depth investigation of a key children's book illustrator and a process of sharing works-in-progress with classmates for collaborative editing.

Latin (LATIN)

LATIN 102 Advanced Latin (4) Advanced study of Latin grammar, syntax, and vocabulary.

LATIN 102 Advanced Latin (4)

LATIN 102 continues from LATIN 101, which is a prerequisite for enrollment. Students who have taken at least three years of high school Latin may qualify to enroll in the course if they have performed well on either a Latin A.P. exam (minimum grade of 3) or a placement exam set by the instructor. LATIN 102 pursues the advanced study of the forms of syntax of classical Latin, the literary dialect spoken and written by Romans from the first century BCE to the second century CE. This is the language that the classical Roman authors wrote, poets such as Catullus, Virgil, Horace, Ovid, Lucan, and Seneca and prose writers such as Caesar, Sallust, Cicero, Livy, Petronius, Tacitus, and Suetonius. The purpose of the course is to equip students with the grammatical rules to read and write complex sentences in Latin. The course consists of short weekly presentations of new grammatical and lexical content, vocabulary to be memorized, drills to practice forms and concepts, exercises in reading sentences, homework assignments translating sentences from Latin into English and English into Latin, and regular quizzes and tests to ensure retention and comprehension of material. The goal of the course in the second semester is for students to be able to read longer passages of continuous Latin prose that has not been adapted. The course focuses on reading, translating, and writing rather than speaking, although students will be expected to be able to read Latin aloud with correct pronunciation. LATIN 102 will also continue to introduce students to Roman civilization and prepares students to take a 400-level course in Latin.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2007
Prerequisite: LATIN 101 or evidence of advanced placement through a Latin A.P. exam (minimum grade of 3) or a placement exam set by the instructor

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Latin (LATIN)

LATIN 101 Introductory Latin (4) Introduction to Latin forms, syntax, and vocabulary.

LATIN 101 Introductory Latin (4)

The aim of LATIN 101 is to introduce students to the fundamentals of classical Latin as soon as possible. Classical Latin is the literary dialect spoken and written by Romans from the first century BCE to the second century CE. This is the language that the classical Roman authors wrote, poets such as Catullus, Virgil, Horace, Ovid, Lucan, and Seneca and prose writers such as Caesar, Sallust, Cicero, Livy, Petronius, Tacitus, and Suetonius. The purpose of the course is to teach students the morphology, syntax, and vocabulary of classical Latin and train them to read and translate simple and complex sentences. The course consists of short weekly presentations of new grammatical and lexical content, vocabulary to be memorized, drills to practice forms and concepts, exercises in reading sentences, homework assignments translating sentences from Latin into English and English into Latin, and regular quizzes and tests to ensure retention and comprehension of material. The goal of the course in the first semester is for students to be able to read short passages of continuous prose based on classical Latin models. The course focuses on reading, translating, and writing rather than speaking, although students will be expected to be able to read Latin aloud with correct pronunciation. LATIN 101 prepares students for Latin 102, the second semester of Introductory Latin, which in turn prepares students to take a 400-level course in Latin.

Latin (LATIN)

LATIN 203 Latin Reading and Composition (4) The course reviews Latin grammar, syntax, and vocabulary and introduces students to classical Latin poetry and prose.

LATIN 203 Latin Reading and Composition (4)

This four-credit course is at the intermediate-level and follows LATIN 003 or LATIN 102. It satisfies the 12th-credit foreign language requirement and prepares students to take 400-level Latin courses. The course is concerned with perfecting the knowledge of Latin grammar, which in the Middle Ages was considered to be the mother of the other Liberal Arts. This is accomplished by the review of grammatical rules and by the reading and explanation of Latin authors. The course reviews the forms, syntax, and vocabulary of Latin, and gives students practice exercises that improve translation skills. Equally important, students are introduced to the principles of Latin style by learning how to translate English into Latin. The review of Latin grammar and the introduction to Latin prose composition provide students with the competence to read representative Roman authors in poetry and prose. Rudimentary Latin readings, supported by school commentaries, are intended to familiarize students with famous examples of classical Roman literature while exemplifying the principles of classical Latin style. For the Republican period, students read selections of Caesar's Gallic Wars or a speech by Cicero and selections of Catullus's love poetry. For the Imperial period, one investigates different accounts of the rape of Lucretia by Livy and Ovid, in poetry and prose, respectively. These readings not only show how exemplary authors write in different styles, but how Latin language and literature lay the linguistic and cultural foundations of western civilization. Evaluation methods include assessment of students through in-class oral and written drills, in-class translation of Latin into English and English into Latin, weekly translation assignments, biweekly quizzes, two tests, and a final exam. These methods are intended to promote the learning of Latin vocabulary and grammar, to increase the comprehension of the assigned readings, and to foster an appreciation of the stylistic virtuosity of Rome 's greatest writers.

Latin (LATIN)

LATIN 400 Latin Syntax and Stylistics (3) Latin style and stylistics as examined and appreciated through standard exercises in composition and parallel selected prose readings.

LATIN 400 Latin Syntax and Stylistics (3)

(BA) This course meets the Bachelor of Arts degree requirements.

LATIN 400 will assist and enable majors and other interested students to acquire competence and an appreciation of stylistic excellence in classical Latin through supervised, regular composition assignments and directed readings. Learning to compose Latin prose requires first a mastery of the inflections, grammar, and syntax of the language. LATIN 400 begins with a review that serves as the foundation for the course. By reading and comparing the prose style of selected ancient Latin writers, students learn to appreciate how writing styles differ and how different styles are appropriate for different rhetorical purposes. By completing progressively more difficult and varied writing assignments in Latin, students may gain mastery of Latin style.

General Education: None

LTNST 127 (US) (HIST 127) Introduction to U.S. Latina/o History (3) This course introduces students to the history of U.S. Latina/os, including Puerto Ricans, Dominicans, Chicanos, Cubans, and Central Americans.

LTNST (HIST) 127 Introduction to U.S. Latina/o History (3)
(US)

This course introduces students to the history of U.S. Latina/os, drawing on the multiple experiences of Puerto Ricans, Dominicans, Chicanos/Mexicanos, Cubans, and Central Americans. Course content features the divergent development of U.S. Latina/o cultural and political identities rooted in the Caribbean, Mexico, Central American, and the United States. Students will understand the formation of racial and class hierarchies within U.S. Latina/o communities; the processes of (international) migration; gendered hierarchies and responses to sexism; and the complexities of U.S. Latina/o identity. Lectures are supplemented with discussion days in which students respond to readings under the guidance of a graduate teaching assistant. Grading stresses proficiency in analytical, historical writing.

LTNST 100 (GH;US) Introduction to Latina/s Studies (3) This course provides an interdisciplinary introduction to the study of Latinas/os in the U.S.

LTNST 100 Introduction to Latina/o Studies (3)
(GH;US)

(BA) This course meets the Bachelor of Arts degree requirements.

This course provides an interdisciplinary introduction to the study of Latinas/os in the U.S. It begins with a historical overview of the major events in the U.S. southwest, Mexico, and the Caribbean that led to the creation of Latina/o communities in this country; we explore in this historical context the reasons for migration and the effects on identity of movement between countries and within the U.S. The course then moves to a consideration of the social protest movements of the 1960s, including Chicano and Puerto Rican nationalism, the farmworker movement, and Latina feminism. It then proceeds to present-day issues as they affect the major Latina/o groups in the U.S., attending to both similarities and differences within and between the major groups. The goal is to show that “Latino” is not a monolithic category but that it does unite various populations (Chicano, Dominican, Cuban, Puerto Rican, etc.) for strategic purposes. The class addresses Latina/o participation/incorporation in the economy, the political system and public education, with attention to how public sphere participation is shaped by language, legal status, and connection to countries of origin. The class analyzes how Latina/o families are shaped by these social issues, with particular emphasis to how generation shapes life experiences. Finally, the course considers Latina/o cultural production, analyzing how artists across genres such as literature, film, performance, and music represent their cultures and respond creatively to the issues discussed throughout the semester.

Latina/O Studies (LTNST)

LTNST 300 (US) (WMNST 300) Latina Feminisms (3) This course examines the historical development, theoretical premises, and political, social, and artistic contributions of Latina feminisms in the United States.

LTNST (WMNST) 300 Latina Feminisms (3) (US)

This course examines the historical development, theoretical premises, and political, social, and artistic contributions of Latina feminisms in the United States. It shows the connections to as well as the divergences from Latin American feminism by beginning with an analysis of how the Spanish conquest, the imposition of Catholicism, and subsequent years of colonialism shaped gender and sexual identities. It examines the contemporary effects of these historical issues and inquires into the common concerns of Latin American feminists and Latina feminists. It asks how theories and practices have diverged given different geographies, both between the U.S. and Latin America and within the U.S. The course then moves to the 1960s and 1970s in the U.S., when Chicano and Puerto Rican nationalist movements also gave rise to a feminist consciousness amongst Latinas; the conjuncture of race, ethnicity, gender, and sexuality is considered, with attention to how Latinas critiqued Anglo feminism’s narrow focus on gender. The next unit focuses on family formations, considering social science and feminist discourse on the issues of patriarchy. How have Latina feminists valued yet also rearticulated the traditional family? What critiques have made been against heterosexism? How have lesbians and gays formulated new kinds of families? How does migration shape family relations? The final section of the course explores how Latina artists in different genres have responded to and resisted traditional gendered and sexual roles. Literature, film, performance art, and hip hop are all examined for their diverse representations of sexual desire.

Latina/O Studies (LTNST)

LTNST 315 (GH;US) (SPAN 315) Spanish and Spanish-speakers in the U.S. (3) In this course, we investigate various aspects of the language(s) and language behaviors of U.S. Latinos.

LTNST (SPAN) 315 Spanish and Spanish-speakers in the U.S. (3) (GH;US)

The course is premised on the idea that language is a crucial component in the formation of identity. To understand Latina/o identity formation in the U.S., then, one must analyze what role languages--Spanish and English--have played in identity formation. The class commences with a brief historical assessment of the various U.S. Latino communities, including Mexican-American, Cuban-American, and Puerto Rican communities. Such a historical purview proves significant in the study of the cultural traditions that persist in these communities, chief among these, the Spanish language. In exploring the Spanish language in U.S. Latino communities, we consider several major sets of questions, among them the following: In what ways do the languages of U.S. Latino communities differ from those of monolingual Spanish- (and English-) speaking communities? What factors contribute to the maintenance and loss of Spanish in these communities? How does language contribute to the creation of individual and societal identity? How is language exploited in the representation of other U.S. Latino cultural traditions? We consider these questions across a variety of genres: poetry, prose (autobiography in particular), film, art, television, and music. These texts reveal how social environments determine language use as well as how artists have used language to reshape social environments, through, for example, the development of new language practices such as Spanish-English code switching. The course also connects these cultural practices to debates on Spanish in public life and policy.

LTNST 326 (GH;US) (SPAN 326) Reading the Border/Lands (3) This course examines representations of the U.S.-Mexico border in relation to the actual geographic space.

LTNST (SPAN) 326 Reading the Border/Lands (3)
(GH;US)

This class will center on discussions of the U.S.-Mexico borderlands in cultural theory and practice. “Borderlands” is understood as a transcultural space filled with physical, cultural, economic, political, and mythical elements. The aim is to view how different artists from the Borderlands, both northern Mexican and Chicano, mediate their borderlands reality. That is to say, the goal of the class is to examine the different “imaginative geographies” in the borderlands. We examine a wide-ranging mix of cultural texts that includes prose, poetry, essays, and performance art, as well as film and video art. We explore how writers have historically rethought notions of citizenship, identity, and culture to create more fluid spaces of representation in cultural contact zones. We will in particular, pay close attention to the relationship between national geography and the shaping of regional identities and popular cultures —between the maps that nations draw and the cultural forms that cut across them.

Latina/O Studies (LTNST)

LTNST 403 (US) (CMLIT 403) Varieties of Latina/o Cultural Expression (3) Literary and other forms of cultural expression (film, music, art, and theater) are compared across different Latina/o communities.

LTNST (CMLIT) 403 Varieties of Latina/o Cultural Expression (3)
(US)

(BA) This course meets the Bachelor of Arts degree requirements.

This course provides students with a multi-faceted comparative view of Latina/o literature in relation to other forms of cultural expression. First, the course presents a variety of cultural expressions to students in an effort to teach them the different ways that form affects content. Each text will be studied in its historical context as well, thereby providing students with a sense of Latina/o cultural history. Second, this course compares works from within the same genre, allowing students to recognize the ways that Latina/o culture has worked to build identity, to deconstruct identity, and to challenge cultural stereotypes. Such comparison further facilitates comparison of the ways that different cultural forms have been used by diverse Latina/o communities. Third, this course compares cultural forms, allowing students to see how Latina/o poetry affects music or how Latina/o theater affects novels Fourth, this course will include texts that represent a variety of linguistic and national contexts, including many countries in Latin America, thereby allowing students to see the relationship between history, culture, language, geography, and identity. These are all themes that are at the center of both Latina/o Studies and Comparative Literature. A comparative perspective facilitates appreciation of the vast and varied ways that Latina/o communities have used cultural expression. A particular point of contact between Latina/o Studies and Comparative Literature is the influence of hybridity. A central issue explored in this course concerns the intricate connections between multiple ways of expressing identity, in the arts, literature, music, etc., in diverse circumstances, such as locations where Latina/o cultures may be in the mainstream (such as in Latin America) and in the minority (in the U.S.). Drawing upon approaches offered by comparative literature and theories such as post-structuralism, feminism, and post-colonialism, we will examine the complex process through which Latina/o culture has been defined, disseminated, contested, and commercialized. Of particular interest from a comparative perspective are the ways that Latina/o cultures are created through hybridization, processes of mutual borrowing and differentiation, as well as through transnational processes of migration, urbanization, and cultural contact. The course's objective is to show not only how complex societies consolidate a shared culture but also how diverse Latina/o communities have produced a multiplicity of cultures that have been expressed via a broad range of cultural registers. These communities often span vast geographical areas, not only in the U.S. but across the Americas as people continue to look to their countries of origin for artistic inspiration.

Liberal Arts (L A)

L A 101H (GWS) Honors Rhetoric and Civic Life (4) Within a liberal arts framework and with attention to public discourse--speaking, writing, online communication, and visual presentation--this course instructs students in the arts, practices, and principles of rhetoric.

L A 101H Honors Rhetoric and Civic Life (4)
(GWS)

This course offers students comprehensive training in oral, written, visual, and digital communication for the twenty-first century. It unites these various modes under the flexible art of rhetoric and uses the pedagogies associated with the rhetorical tradition both to strengthen communication skills and to sharpen critical awareness of the challenges and advantages presented by oral, written, visual, and digital modes. Students will read about and discuss rhetorical concepts and situations and put their knowledge immediately to use by analyzing civic rhetoric on campus and in their communities (including their networked communities), by researching current issues, and by developing and presenting arguments in oral, written, visual, and digital form.

The course is designed (although not required) for first-year Schreyer Honors College students and Paterno Fellows aspirants in the College of the Liberal Arts. In other words, it appeals to students with well developed communication abilities who might otherwise take English 30 and/or CAS 100H. It is aimed at developing students' skills in composing and delivering purposeful and effective texts. Whether or not those discourses are delivered verbally or visually (on paper, electronically, or orally), students will draw on established rhetorical canons of invention, arrangement, style, memory (tapping the resources of stored knowledge, such as the library), and delivery. Students will also become fluent in the rhetorical appeals of ethos, logos, and pathos in order to shape texts that are ethical yet purposeful. To meet these goals, students will meet in small classes (of no more than twenty students), where they will receive guided instruction in writing, public speaking, and the use of technology in order to learn the distinctive features of oral, written, visual, and electronic rhetoric. Staff for the course will be experienced full time faculty and advanced doctoral candidates in rhetoric drawn from English and CAS.

This course will satisfy the Gen Ed Writing/Speaking (GWS) requirement for Schreyer Honors College students and aspiring Paterno Liberal Arts Fellows. Because this four-credit course will substitute for the six-credit ENGL 015/030 plus CAS 100 requirement, students who complete LA 101 will need to take an additional two credits somewhere in order to complete graduation requirements.

L A 200 Business and the Liberal Arts (1) Introduction to business careers and concepts for students enrolling in the Business and the Liberal Arts minor.

L A 200 Business and the Liberal Arts (1)

The Business and the Liberal Arts course, designed to introduce students to the possibilities of the Business and the Liberal Arts Minor, is organized around a set of topics and modules. Each module introduces students to specific topics related to the minor and to the business world, with an emphasis on how the Liberal Arts can be used to understand business, and how a liberal arts degree can be used in business careers. While the course will of course be faculty-led, we expect that many modules will be enhanced by the participation of prominent alumni in business careers who hold degrees in the Liberal Arts. Each module will include readings and discussion; when possible, these will be supplemented by these alumni classroom visits.

L A 498H Honors Leadership Mentor (1) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Honors Leadership Mentor (1)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2010 Ending: Fall 2010 Future: Fall 2010

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Library Studies (L ST)

L ST 083S The Twenty-First Century Researcher (1) Students learn to use technology and Libraries resources to access and cite relevant information into academic research projects.

L ST 083S The Twenty-First Century Researcher (1)

This course will equip students with research skills for academic success at Penn State. The class will investigate the Libraries' physical facility and scholarly, academic online resources as a single, holistic learning lab, and engage students by providing hands-on experience in how to conduct research across the disciplines and in all formats. Students will develop and use several cutting-edge communications tools, including blogs, podcasts, and personal portals. By the end of the course, students will be able to create and conduct research projects, and integrate their findings into outstanding papers and presentations in a variety of media.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2009

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Library Studies (L ST)
