**E SC 097S Respect the Environment: Designing New, Bioabsorbable Medical Implants and New Green Energy Storage Devices** (1) Environment is: the surroundings or conditions in which a person, animal, or plant lives or operates. Our task as modern engineers is to make it clean, free of debris and highly effective in providing and maintaining productive advancements focused on limiting amount of 'waste left behind' in two very different fields: the human body and nature. We will be analyzing a new field of bioabsorbable, not-toxic biomedical implants and development of environmentally respectful energy storage devices. Both new bioimplants and new energy sources are expected to disappear at the end of their designed life. We will learn (in the lab!) how to evaluate bioimplants and how to build efficient batteries. The FYS will serve as a good introduction to modern engineering and its spectrum of interconnected fields and show how an engineering problem and its solution have important implications in meeting societal needs.

It is a book that changes lives, like a kid of scripture. HIST 197A **History of Genocide** (3) Raphael Lemkin, in his work *Axis Rule in Occupied Europe* (1944), coined the term "genocide" by combining Greek *genos* and Latin. "Generally speaking, genocide does not necessarily mean the immediate destruction of a nation, except when accomplished by mass killings of all members of a nation. It is intended rather to signify a coordinated plan of different actions aiming at the destruction of essential foundations of the life of national groups, with the aim of annihilating the groups themselves." It is the goal of this course to establish an historical understanding of genocide. We will primarily examine incidents and personal accounts from the record of the nineteenth and twentieth centuries but will also reflect on earlier incidents. In so doing we will not only examine the victims of genocide, but put a face on the perpetrators.

From an institutional perspective, it compares how national level legislation, state intervention, trade union influence, and the respective power of shareholders versus stakeholders all impact on patterns of HRM practices in different countries.

**LARCH 497A Ecology and Field Identification of Central Appalachian Flora** (3) This course is an introduction to the field identification and ecology of herbaceous and woody plants of the central Appalachian region. We will focus on field characteristics of common plants and learn how to identify them to the level of species, if possible. This class is entirely field based and we will be taking field trips each and every week, regardless of the weather. Some trips will be within walking distance, others will require a van. As such, class enrollment is limited to 13 students. There will be weekly quizzes of both common and scientific names. You will also develop a digital plant collection by the end of the semester. As the seasons change, certain plants die back and others come into flower. The end of the semester will likely be an examination of winter characteristics.

Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

**LARCH 497B Advanced Digital Landscape Modeling and Rendering** (3) As digital 3D modeling software has become more powerful and easy to use, it is now possible for the average student or professional to create stunning, photorealistic renderings of complex scenes that were once only possible by enlisting the most sophisticated Hollywood movie studios or professional computer graphics illustrators. As impressive as these computer renderings are, the quest for photographic realism has resulted in the loss of one of the most important qualities of traditional design drawings and renderings, imperfection. It's the "imperfections" (or perhaps subtle variations) in nature and the built environment that helps produce beauty. Perhaps it's the imperfection and ambiguity in traditional rendering techniques that helps make them so appealing and effective for visual communication.

LARCH 499E (IL) **People and Protected Areas** (3) LARCH 499E is a three-credit seminar that aims to introduce students to key issues associated with communities, community design, biodiversity conservation, and the interface of people and conservation in the vicinity of Udzungwa Mountains National Park in south-central Tanzania. The format of the course is reading and discussion, where students read assigned literature and then contribute to discussions led by faculty, both to demonstrate their understanding of the reading assignments and to begin to explore key issues introduced by those readings. Students also write two papers, the first examining the interface of rural land use planning, community design, and biodiversity conservation; and the second focusing on biodiversity conservation in the context of human settlement near Udzungwa Mountains National Park. Student evaluation is based on seminar participation and the two papers.  
Effective: Summer 2014 Ending: Summer 2014

LARCH 499F (IL) **Community Design in the Vicinity of Udzungwa Mountains** (5) LARCH 499F is a five-credit course that focuses on student research projects associated with communities along the eastern boundary of Udzungwa Mountains National Park. We have purposefully maintained a general definition for the course to allow students to design projects that best suit their interests and skills. For example, some students may focus on evaluating existing village configurations and propose new designs that help villagers better meet their daily needs. Other students, in turn, may focus on developing a more marketable park that attracts larger numbers of visitors who stay in or near the park for longer periods of time - generating more income that ultimately will find its way, in part, to local communities.  
Effective: Summer 2014 Ending: Summer 2014

LARCH 499G (IL) **The Contribution of Service-Learning to Students and Community** (1) LARCH 499G is a one-credit course designed to enable students to reflect on what for most will be their first opportunity to visit and work in rural East Africa. It involves the development of daily journals to record reflections on their evolving awareness of Tanzania and the challenges that people and conservation face in this less-developed country. The journals provide a foundation of reflections about one or more issues that interest each - maybe (though not necessarily) something close to the focus of the specific education abroad experience involved (e.g., the relationship between people and protected areas in south-central Tanzania), maybe international development in general, or maybe another topic. The journals also should be important personally: In all likelihood, this six-week period will expose students to places, people, and challenges that they have never seen in person.

PL SC 497C **Religion and War in World Politics** (3) This course examines the relationship between religion and war in world politics in the modern era. Religion has become increasingly important in the relations within and between states; however, it has been an under-studied topic in world politics. This class focuses on the salience of religion in world politics; specifically, it examines the role of religion in warfare (primarily, but not exclusively international warfare). In this course, we will evaluate the extent to which religious motivation(s) of leaders (and followers), religious characteristics of states, and religious justifications generate armed conflicts; and also attempt to determine the extent to which presumable "religious wars" are different from "non-religious" (or "secular") wars. Although the class will examine the topic broadly, particular attention will be paid to more systematic studies and findings regarding these issues.

Finally, we are in the midst of a profound transformation of the news media - largely influenced by the Internet - and understanding the implication of the changing nature of the news provide insight for the future of

American democracy.

In order to develop a broad understanding of the political and economic experience of the region we will spend time analyzing the 3 countries individually. Additionally, we will explore in detail three important themes in Political Science. First, the state of economic development in these countries. Second, the relationship between identity politics and violence. Third, international relations of these countries focusing on terrorism and nuclear policy.  
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

**PL SC 497F Democratization in Asia (3)** This seminar addresses the literature on democracy and democratization and then applies it in Asia. Since 1974, over thirty countries around the world started a transition toward democracy. As a result of these democratic events, comparative scholars have studied these, and earlier transition cases, to understand why some countries become democratic while others do not, and why some new democracies show signs of considering while others collapse. This seminar, then, addresses the recent work in the field of democratization. First, we will review works that define and measure key concepts, such as authoritarianism, democracy, and democratic consolidation. Then, we will consider a range of factors to explain the installation, consolidation, or failure of democracy in specific Asian countries. The goal of this seminar are three-fold.  
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

**ACCTG 201** Introductory Financial Accounting (3) Fundamentals of the collection, recording summarization, and interpretation of accounting data.

**ACCTG 201 Introductory Financial Accounting (3)**

This course is designed as an introductory course providing the first steps to an understanding of the basic principles of accounting from a financial perspective. Because business administration students need to understand the basic principles of financial accounting as fundamental to their field, they need to be grounded in the knowledge of basic concepts, principles, and practices for the recording, summarizing, and interpreting of accounting data. Specifically, acknowledge of accounting for partnerships, corporations, cash flows, certain liabilities and assets, and the analysis of financial statements are presented. Some financial accounting methods, theory and concepts as well as problem analysis in applying concepts to financial statements is also introduced.

**ACCTG 211 Financial and Managerial Accounting for Decision Making (4)** Introduction to the role of accounting numbers in the process of managing a business and in investor decision making.

**ACCTG 211 Financial and Managerial Accounting for Decision Making (4)**

The objective of this course is to introduce students to the discipline of accounting through an introduction to two of accounting's sub-disciplines, financial and managerial accounting. The more specific purpose is to provide students a basic understanding of the role of financial and managerial accounting information in the decisions of capital market participants external to a business enterprise (e.g., stockholders, banks, financial analysts, prospective stockholders), and in the decisions of those who manage business enterprises. Accounting information has an important role in the resource allocation process in our socio-economic system as a whole, as well as in each individual business enterprise. This course provides students an understanding of (1) the nature of the accounting function, and (2) how the information in accounting reports are used by various decision makers in their resource allocation decisions.

In this course students will develop an understanding of (a) the five activity dimensions of accounting (the collection, recording, analysis, interpretation and reporting of information to decision makers for (mainly) their investment decisions), (b) the issues surrounding the five activity dimensions, (c) the environment in which accounting is practiced, and (d) what information is used in a number of specific decision situations, and how such information is used in such decision situations. The analysis, interpretation and decision-making orientation of this course includes a study of the procedural (mechanical and processing) aspects of the recording activity dimension which is an important means to the end --where the end is the analysis and interpretation of the information, and the reports produced by the recording/processing part of accounting. Through this focus on the recording activity dimension, students will obtain an understanding of (a) the nature and quality (strengths and weaknesses) of accounting information, (b) how to proceed in analyzing and interpreting accounting information, and (c) numerous other aspects of financial and managerial accounting.

This course is an important background course for all business majors, as well as for numerous non-business majors.

This course is an important background course for all business majors, as well as for numerous non-business majors. For accounting majors it is a prerequisite for ACCTG 306, 404, and 471.

The course format consists of lectures, outside reading, class discussion, projects and homework assignments.

The semester grade for this course will be determined by a weighted average of performance on mainly exams, quizzes, projects and participation.

**ACCTG 305 Financial Statements and Managerial Decisions (4)**

This course is a one-semester alternative to the traditional two-semester intermediate accounting sequence (ACCTG 371 and 472) intended for the non-accounting major. Students who have passed ACCTG 371 or 472 may not take this course for credit. It is a required course for the Finance major. It will also substitute for ACCTG 371 in meeting the requirements for an Accounting minor, and serve as a business supporting course for students in other School of Business majors. Students will gain a fundamental understanding of the information conveyed in the financial statements and, as a result, develop an appreciation for its usefulness and limitations in decision making. They will also develop the prerequisite knowledge base necessary to conduct financial statement analysis as required in Level I of the Chartered Financial Analyst (CFA) exam. A financial statement user decision-making perspective, rather than the accountant/preparer approach found in the traditional intermediate accounting course, is emphasized. Student success in meeting the learning objectives will be assessed through a combination of exams, homework problems, and assignments. The comprehensive final exam will test the student's comprehension of the relevant material.

**ACCTG 310 Federal Taxation I (3)** Study of income determination concepts for individuals and corporations, impact of taxation on decisions, elementary research techniques, and ethical standards.

ACCTG 310

**ACCTG 310 Principles of Taxation (3)**

This course is directed to the study of concepts relative to: (a) the determination of taxable income and tax liability, (b) the influence of tax considerations on the decisions of taxpayers, and (c) elementary tax research techniques. Primary emphasis is given to concepts that are fundamental to the federal taxation of income with respect to business entities. Also, basic aspects of the taxation of individuals are introduced.

The objectives of this course are to enable students to do the following:

- 1) apply basic tax rules and regulations to compute the taxable income and federal income tax liability for corporate and individual taxpayers,
- 2) incorporate tax costs and tax benefits into calculations of the net present value of cash inflows and outflows from taxable activities,
- 3) recognize tax planning opportunities or problems inherent in common transactions, and
- 4) appreciate the impact of the basis of accounting on both tax and financial reporting.

Typical topics include sources of authority, structure of an income tax, property transactions, choice of entity, distribution of income, selection of jurisdiction, means of financing, and taxation of individuals. Students should be familiar with basic accounting concepts, should understand the nature of financial instruments, and should be able to apply the concept of present value and future value in estimating cash inflows and outflows.

This is a required course for accounting majors and, for many of them, the only tax course that they take. Other students who meet the prerequisite requirements may take this course as an elective. Also, this principles course in taxation is a prerequisite requirement for an advanced course in taxation.

Evaluation is based primarily on periodic examinations. No special facilities are required. However, students have on-line access to tax laws and regulations, tax cases, and administrative guidance. This course is generally offered every semester with enrollments of twenty to thirty students per section.

**ACCTG 311 Accounting Systems and Control (3)** Introduction to accounting procedures to gather, to aggregate, and to report accounting data to managers and to external readers.

**ACCTG 311 Accounting Information Systems (3)**

This course pertains to the study of accounting information systems as an important part of a firm's total information systems. The accounting cycle, as the key process providing financial information to management, is thoroughly reviewed and documented. Emphasis is given to the importance of computer-based accounting information systems in supporting internal controls and improving financial reporting, asset security and efficiency and effectiveness of performance. Course objectives: 1.) to understand the accounting model and specifically, the accounting cycle within a business entity; 2.) to

process business and accounting transactions and complete the accounting cycle within a computer-based accounting information system; 3.) to analyze accounting information and related internal controls within a computer-based accounting information system; 4.) to examine relevant ethical issues; 5.) to gain an appreciation for evolving technology advancements, such as ERP's and e-commerce, and their impact on the accounting cycle and internal controls. This is a prescribed course for majors in Accounting and it serves as a foundation and prerequisite for most 300-level and 400-level accounting courses. Students will be evaluated based on performance on exams, computer-based accounting system project, and periodic homework assignments. Typically, 50% or more of student's grade is based on performance on exams. Course will be taught in either a technology classroom with computers for all students or periodic sessions in the computer lab. [Students will require consistent access to a computer to complete computer-based accounting system project].

**ACCTG 404** Managerial Accounting: Economic Perspective (3) Accounting techniques as planning, control, and motivating devices in business and other organizations; accounting data for decision making and performance evaluation.

**ACCTG 404 Managerial Accounting (3)**

This course emphasizes the use of accounting information for internal purposes as opposed to the external disclosure focus of the financial accounting course. The cost covers the vocabulary and mechanics of cost accounting and the design of management accounting systems for planning and controlling operations, and for motivating personnel. The course integrates accounting with ideas from data analysis, decision analysis, finance, microeconomics, and operations management. The themes stressed throughout the course will be the notion that information is costly; the circumstances that necessitate cost allocation, the idea that different costs and different allocation schemes apply for different purposes; and fundamentals of incentive and compensation plans. Among the topics covered are cost behavior, cost-volume analysis, relevant costs, and the use of cost information for decision making. The course will rely on lectures and

discussion of case studies.

**ACCTG 405** Principles of Taxation I (3) Elements of tax policy and tax-planning concepts for personal and business decision making; with emphasis on taxation of individuals.

### **ACCTG 405 Principles of Taxation (3)**

Introduction to Taxation, is the first course that undergraduate accounting majors take that is devoted entirely to taxation. Although the course is intended for accounting majors, the content is relevant to finance majors seeking elective courses. The objective of the course is to provide students with a basic understanding of the concepts, terminology, and decision-making skills specific to the discipline of taxation that are germane to the professional development of those preparing for a career in accounting. Although the course surveys the many forms of taxation that are found in industrialized societies, and the comparisons thereof, the main focus is on the federal income taxation of individuals. However, coverage is provided regarding the manner in which the taxation of individuals relates to corporate and partnership entities. ACCTG 405 is related to other accounting courses through its coverage of income concepts, and micro-economic principles. The former compares differences in the measurement of financial accounting income with the manner in which income is determined according to the tax laws. The latter emphasizes business decision-making principles that are important in the managerial portion of the accounting program. The course covers topics that illustrate fundamental tax strategies and how such enable taxpayers to achieve business and personal economic objectives. The assessment process in ACCTG 405 incorporates examinations, homework assignments, and individual and group projects. The exams are combinations of objective questions and open-ended problems. Exams are often given in the evening. Course learning aids include a text book, on-line tax research services, spreadsheet software, and a packet of handouts prepared by instructors to keep the classes updated on the many changes in the tax laws that occur each year.

**ACCTG 481 Financial Statement Analysis: Accounting Based Evaluation and Decision Making (3)** An accounting based evaluation and decision making approach to analyzing financial statements by studying business and firm valuation.

**ACCTG 481 Financial Statement Analysis (3)**

The proposed course in financial statement analysis is structured to improve the student's ability to extract and interpret information from actual financial statements and to expose the student to how financial statement information is integrated into equity valuation and credit analysis. The course would not only rely upon textbook-based and lecture-based learning, but also emphasize case-based learning.

The course will consist of two main sections. The first will deal with accounting and business analysis. This part will explore the types of financial information data typically available for publicly traded companies and introduce a model of the economic drivers of company performance. It would incorporate some technical accounting as well as some standards business economics/strategy concepts. Students will be forced to recast financial statements that they believe do not reflect the underlying economic state of the company. Financial reporting issues relating to revenue and expense recognition, leases and consolidations will be discussed.

The other section of the course will deal with firm valuation. Students would be exposed to some standard approaches to equity valuation and the analysis activities underlying these approaches. Aspects of valuation that would be covered in this section of the course are financial ratio analysis, forecasting, pro-forma statements, cost of capital and valuation methods.

The course will rely on lectures and extensive use of case studies.

**ACCTG 483 Forensic Accounting (3)** Study of investigative accounting, consulting and litigation support activities undertaken in forensic accounting engagements.

**ACCTG 483 Forensic Accounting (3)**

ACCTG 483 is the exploration of the broad discipline known as "forensic accounting," which includes a variety of investigative accounting, valuation, damage assessment and litigation support services. Forensic accounting is an evolving discipline which is distinguished from assurance services in that it does not involve reporting on the fairness of financial statements. It generally involves the investigation and analysis of financial data for some specific purpose – obtaining an in-depth understanding of information that enables the forensic accountant to prove, disprove or at least confidently speculate about allegations related to the information and to report those findings objectively.

Forensic accountants are involved in presenting analyses that might be valuable for such things as settling legal disputes, calculating economic damages, valuing intellectual property, determining the extent of damage or loss due to fraud, or tracing elusive assets or revenue sources. A forensic accountant might also participate in pro-active engagements such as the development of systems and procedures to prevent fraud.

The first part of the course deals with the technical and ethical framework of forensic accounting and focuses on the understanding of forensic and investigative accounting including investigation methodology, the nature of fraud, fraud risk factors, financial statement fraud, litigation support and dispute resolution services and development of the skills needed in those professional activities. These skills include the ability to integrate knowledge of accounting, finance, economics, business law and other business disciplines in gathering, analyzing and evaluating evidence and drawing conclusions. The second part of the course focuses on forensic accounting investigation and analysis of financial information in connection with litigation, dispute resolution, estimation of economic damages, or other specific objectives, and the preparation of comprehensive, objective reports of findings and conclusions.

### **ADTED 458 Early Literacy Development (3)**

This is a three-credit, post-baccalaureate course that focuses on young children's language and literacy development. This course examines research related to how children acquire language, reading, and writing skills, as well as how family partnerships between the home and school can further support language and literacy development and children's academic success. This course will cover a wide array of topics related to language and literacy development, including the influence of play and technology, the impact of read-alouds on literacy development, and the role of racial/ethnic and cultural diversity in learning. Students will examine early literacy development through a series of activities and readings.

**ADTED 459 Interactive Literacy: Parents and Children (3)**

Interactive Literacy: Parents and Children is one of five 3-credit courses in the 15-credit Certificate in Family Literacy developed by the Goodling Institute for Research in Family Literacy in the College of Education in partnership with the National Center for Family Literacy (Louisville, KY). It is offered during the summer and fall semesters to about 20 students per class. The course is 15 weeks in length, entirely online, and cohort-based. Study materials are both web- and print-based. Students work in teams for most of their assignments although they are also expected to produce a portfolio of individual application activities. An Associate's Degree or 60 baccalaureate credits at an accredited institution are required to enter the course. Technological requirements, registration, and other support are provided. The courses focuses on the component of family literacy in which the low-literate parents engage in language and literacy development activities with their young children (birth to age 8). During interactive literacy the teachers both model and supervise the literacy interactions. Students learn to use planned and intentional activities that are developmentally appropriate for the children. They also learn how to teach the parent the necessary interaction skills as well as how to debrief the parents afterwards. They also learn how to assess the literacy interactions between parents and their children.

**AERSP 301 Aerospace Structures (3)** Aerospace structural design concepts, flight safety. Stiffness, strength, stability of thin-walled structures under combined loads. Energy methods, finite element analysis.

**AERSP 301 Aerospace Structures (3)**

AERSP 301 covers essential topics in aerospace structures. The objectives of the course are to help students: 1) appreciate the roles that structures and structural materials play in aerospace vehicles; 2) understand general design concepts for aerospace structures: vehicles, components, and materials; 3) develop the analysis tools and skills needed to analyze the performance of aerospace structures; and 4) gain experience identifying, formulating, and solving aerospace structural engineering problems.

AERSP 301 builds on structural mechanics topics covered in PHYS 211, E MCH 011 & 013 (or 210), and E MCH 215 & 216. It prepares students for study of advanced topics such as plates and shells, composites, structural stability, finite element analysis, structural dynamics, and aeroelasticity. It also provides students with the basic background needed to contribute effectively to multidisciplinary trade studies in vehicle design activities.

AERSP 301 begins with an overview of the general features of flight vehicle structures, with emphasis on thin-walled members and advanced materials. Then, the implications of assured safety of flight for structural design are explored, leading to coverage of: load cases, flight envelopes, load factors, factors of safety, kinds of structural failures, and margins of safety. Topics in structural analysis proceed from an initial review of topics in elasticity, structural materials, and beam bending. Then, the deflection and stress responses of thin-walled beams under transverse shear and torsional loading are addressed. More than a third of the course is devoted to energy principles and the development of the finite element method of structural analysis. The course finishes with a treatment of the structural stability of beams and panels, a key topic with respect to the behavior of thin-walled aerospace structures.

**AERSP 305W Aerospace Technology Laboratory (3)** Experiments in measurement systems, aerodynamics, aerospace structures, dynamics and control, and propulsion, technical report writing and presentations.

**AERSP 305W Aerospace Technology Laboratory (3)**

AERSP 305W is a junior-level experimental laboratory course in Aerospace Engineering. The purpose of this course is to expose students to the key principles and methods of experimentation as related to the field of aerospace engineering. Students learn the fundamentals of measurement techniques to determine quantities such as temperature, force, pressure, displacement, velocity, acceleration and strain in various laboratory situations. The course employs weekly "set-up" experiments that provide an opportunity for students to familiarize themselves with modern measurement techniques and gain valuable experience regarding the calibration and use of aerospace engineering research equipment. Students are expected to apply their knowledge of mathematics, science, and engineering in order to complete successfully the experiments encountered in the laboratory. The subsequent interpretation and analysis of the laboratory data requires the use of standard engineering tools and practices. Students work in lab groups to process data and then identify, formulate, and solve engineering questions associated with the experimental results.

Throughout the semester, students communicate their knowledge and understanding of the course material through a series of class assignments, written technical reports, and one final exam. Because writing and revising laboratory reports significantly enhances the understanding and interpretation of the research data, this course is "writing-intensive." As

such, students are expected to improve their writing skills as they gain experience writing abstracts, informal reports and formal reports. Peer review of reports helps students to recognize good writing, and to learn how to provide constructive criticism. The course instructor provides written feedback for revised formal reports, and the quality of writing is a factor in determining final grades.

**AERSP 405** Experimental Methods and Projects (3) Experimental methods involving a variety of aerospace engineering topics; teams of students focus on advanced measurement techniques and project engineering.

**AERSP 405 Experimental Methods and Projects (3)**

This is a senior-level elective laboratory course that builds on AERSP 305W "Aerospace Technology Laboratory." The first part of AERSP 405 addresses the engineering of typical data acquisition systems through a series of lectures and laboratory experiments. Data acquisition and processing are covered as they relate to a broad range of engineering experiments. Several sessions in the laboratory provide students with hands-on experience with data acquisition, followed by computer program exercises to complete the assignments. Initially the lectures are twice a week (75 minutes each). This activity comprises approximately 20 % of the total course.

The major portion of the course introduces students to "real-world" projects in engineering and laboratory research. Students work in teams to identify, formulate, plan and solve engineering problems associated with a design or system, the completion of an experiment, or an extensive computational simulation requiring a team of students. Teams of 2 to 4 students are assigned, following student input on preferences from a list of proposed projects. Students learn, through practice, the methodology of team project engineering. The teams each develop goals for the semester's project, performed following a careful work breakdown analysis with realistic time estimations and scheduling. Many of the projects involve the design and completion of an experiment. As part of the project, students will assemble, analyze and interpret relevant data, and prepare progress and final reports (written and oral). The reports should contain graphs that go with the text to provide the necessary data interpretation. The topics in the projects have application to a variety of research programs currently underway at Penn State. At the initiation of the project activity, lectures on principles of project planning including Gantt chart preparation, work breakdown structures and critical path considerations are presented. Common best practices for the preparation of project proposals, reports, presentations and general record keeping are discussed.

Overall meetings with the course instructor become bi-weekly once the projects are underway. Many of the projects also have knowledgeable graduate student or faculty consultants to assist with project planning and implementation. Project consultants conduct occasional individual review meetings with each team. Much of the project coordination work is undertaken within the regularly scheduled hours for the course. The class meetings include a combination of informal presentations by the students and, occasionally, the instructor on important technical issues. Considerable class time is spent discussing the goals and progress of individual tasks, and each student gives several brief oral presentations.

**AERSP 440 Introduction to Software Engineering for Aerospace Engineers (3)** Software engineering for safety- and mission-critical systems, including requirements, management, processes, designs, programming, validation/ verification, and other aspects of software development.

### **AERSP 440 Introduction to Software Engineering for Aerospace Engineers (3)**

This course is an introduction to software engineering. Software engineering includes all aspects of professional software production, and is especially important for safety-critical and mission-critical software. It includes documentation, management, processes, requirements, design models, computer programs, validation, verification, and other aspects of the development process.

Aerospace systems, including aircraft, spacecraft, onboard avionics, ground-based systems, flight simulators, and air transportation systems, rely heavily on software. Software is a major cost of all aerospace systems. For example, the Boeing 777 has more than 1000 onboard processors and more than 4 million lines of software which is primarily written in Ada. The F/A-22 fighter has more than 2 million lines of software onboard, and much of this is Ada also.

Aerospace systems also demand a level of reliability far beyond that of most other systems, which means the software must be designed using rigorous mission-critical and safety-critical procedures, which makes the software quite unique compared to most other software. The FAA and DOD are both involved in certifying aircraft software, for example, through the DO-178B and DOD-2168 standards.

This course is a required option in Aerospace Engineering (take one of AERSP 440, E E 305, or E E 210). If not taken to satisfy that requirement, it can be used as a technical elective.

**AERSP 460 Aerospace Control Systems (3)** Design and analysis of feedback control systems for aerospace applications; stability, root locus, time- and frequency-domain, state-space methods.

### **AERSP 460 Aerospace Control Systems (3)**

This course is an introduction to the design and analysis of feedback control systems as applied to aerospace systems. The course covers control theory that is commonly used in the aerospace industry and presents practical applications of this theory to aerospace systems. The course does not emphasize rigorous mathematical derivation, but instead emphasizes the application of control theory. It provides a comprehensive overview of classical control theory and single-input/single-output (SISO) design methods. The course also presents an introduction to modern control theory and multi-input/multi-output (MIMO) design methods. Aerospace examples and applications are emphasized throughout the course.

The course builds upon a required junior-level course in system dynamics and controls (AERSP 304), which provides students with basic dynamic system theory and a brief introduction to feedback control. The course also supplements required senior-level courses in either aircraft or spacecraft dynamics (AERSP 413 and 450) which provides background on vehicle dynamics. AERSP 460 provides an additional level of depth in dynamics and control theory, and prepares students for entry-level work or graduate studies involving the design of automatic control systems for aircraft and spacecraft.

**AERSP 470 Advanced Aerospace Structures (3)** Design and analysis of aerospace structures. Plates and sandwich panels; composite materials; structural dynamics; aeroelasticity; damage tolerance.

### **AERSP 470 Advanced Aerospace Structures (3)**

AERSP 470 covers important topics in aerospace structures beyond basic stress and deflection analysis of thin-walled beams. The objectives of the course are to help students: 1) appreciate the roles that structures and structural materials play in aerospace vehicles; 2) understand general design concepts for aerospace structures: vehicles, components, and materials; 3) develop the analysis tools and skills needed to analyze the static and dynamic performance of aerospace structures; and 4) gain experience identifying, formulating, and solving aerospace structural engineering problems.

AERSP 470 builds on structural, dynamics, and aerodynamics topics covered in PHYS 211, E MCH 011 & 013 (or 210), E MCH 215 & 216, AERSP 301, AERSP 306, and AERSP 304. It prepares students for entry-level work or graduate study in the analysis and design of aerospace structures. It also provides students with the strong background needed to contribute effectively to multidisciplinary trade studies in vehicle design activities.

AERSP 417 begins with a review of the general features of flight vehicle structures and aerospace structural design concepts. Then, the deflection and stress responses of flat plates and sandwich panels under lateral and in-plane loading are addressed. About a third of the course is devoted to the behavior of advanced composite panels, and another third to structural dynamics and aeroelasticity. The course finishes with treatments of joining and damage tolerance, both key topics with respect to the design of aerospace structures.

### **AF AM 100 Living While Black: Themes in African American Thought and Experience (3)**

This course introduces some of the major themes that have emerged from the experiences, expressions, and reflections of African-descended peoples in the Americas. Exploring these themes will reveal that black life is a distinctive phenomenon within the context of the larger historical and cultural narrative of the Americas. The course will use texts from major African American intellectuals and artists to uncover the major issues that have shaped black life in the Americas. Some of the themes and writers explored include "identity and authenticity" as illustrated in the works of W.E.B. DuBois and Audre Lorde; "freedom and unfreedom" using the works of Frederick Douglass and Angela Davis; "radicalism

or reform" as expressed in the works of Booker T. Washington, Bayard Rustin, David Walker, and Claudia Jones; "gender and sexuality" as expressed in the work of John Oliver Killens, bell hooks, and Francis Ellen Watkins Harper; "songs in the key of black life" as seen in the work of Ralph Ellison, Farah Jasmine Griffin, Amiri Baraka, and Tricia Rose; "love, the spirit, and the word," in the works of James Cone, Toni Morrison, Nikki Giovanni, and James Baldwin; and "the black planet," as described in the writings of Langston Hughes, Marcus Garvey, and Lorraine Hansberry. These authors represent the key debates in African American life and thought and illustrate the wide range of intellectual, cultural, political, and artistic expression that has defined black life in modern America. This course provides a beginning foundation for understanding the various meanings of the lived experiences of Black people in the Americas in the twentieth century.

This course focuses on the emergence of the Atlantic World Black Diaspora from the 15th through the 19th centuries with the United States as its central focus. We begin with a brief discussion of African societies at the beginning of the Transatlantic Slave trade, discussing the various ethnicities, cultures, societies, and states. We then discuss the emergence of the TST and its consequences for the forging of the modern world and its centrality to the rise of modern capitalism. The forced migration of over 10 million people of African descent resulted in a massive dispersal of various cultures, ideas, religious systems, foods, crops, and ideologies--all of which formed the Black Diaspora. We look at the centrality of these various cultures and ideas to the successful rise of the American colonies, including the skills that Africans brought to the emerging staple crop economies, the knowledge of plants, foods, crops, and healing practices. We look at both the evolution of American slave societies in the North and the South, as well as the rise of Free Black communities. We use documents and readings to understand the multiple contributions of African Americans to science, literature, and music. Of major importance is the formation of slave communities, kinship networks, the rise of an African American religion, and various forms of resistance to slavery that included running away, daily forms of resistance, and actual slave revolts. We also discuss the rise of a special form of "slave politics" that shapes evolving notions of freedom. In addition to discussions of southern and northern slave society, we also look at the role of free blacks in the antebellum reform movements, especially the abolitionist movement. The course concludes with the coming of the Civil War and a discussion of the multiple ways that African Americans played a role in accelerating the road to war and in facilitating their own emancipation.

We begin with a brief discussion of African societies at the beginning of the Transatlantic Slave trade, discussing the various ethnicities, cultures, societies, and states. We then discuss the emergence of the TST and its consequences for the forging of the modern world and its centrality to the rise of modern capitalism. The forced migration of over 10 million people of African descent resulted in a massive dispersal of various cultures, ideas, religious systems, foods, crops, and ideologies--all of which formed the Black Diaspora. We look at the centrality of these various cultures and ideas to the successful rise of the American colonies, including the skills that Africans brought to the emerging staple crop economies, the knowledge of plants, foods, crops, and healing practices. We look at both the evolution of American slave societies in the North and the South, as well as the rise of Free Black communities. We use documents and readings to understand the multiple contributions of African Americans to science, literature, and music. Of major importance is the formation of slave communities, kinship networks, the rise of an African American religion, and various forms of resistance to slavery that included running away, daily forms of resistance, and actual slave revolts. We also discuss the rise of a special form of "slave politics" that shapes evolving notions of freedom. In addition to discussions of southern and northern slave society, we also look at the role of free blacks in the antebellum reform movements, especially the abolitionist movement. The course concludes with the coming of the Civil War and a discussion of the multiple ways that African Americans played a role in accelerating the road to war and in facilitating their own emancipation.

This course covers the Black experience after the 1960s and the post-World War II Civil Rights Movement ended in the late 1960s. It begins with a brief overview of the major events and achievements of the Civil Rights Movement and its waning that followed in the wake of the Vietnam War and the social upheaval of the late 1960s. The course focuses on the Black experience during the rightward shift in American politics, culture, and society in the last one third of the 20th century and the beginning decades of the 21st century. We look at the disintegration of the Democratic Party that grew out of the party's support of the Civil Rights Movement, the War on Poverty, and the Vietnam War. We discuss the recreation of the Republican Party that followed a southern strategy to rebuild the party on the racism and discontent of white people in the southern rim and in white suburbia throughout the nation. The new Republican Party pursued a new state's rights philosophy that fused with a growing libertarianism that rejected a strong federal government and was hostile to any efforts to address social justice issues in American society. We discuss the efforts of the New Right Republicans and the newly formed Democratic Leadership Conference of the Democratic Party to dismantle many of the achievements of the Civil Rights Movement, focusing on welfare reform, new sentencing laws, the privatization of the prison system and public education, all changes that forged a New Jim Crow society. We look at the role of black elected officials in this process, discussing the various differences between black members of the Democratic Leadership Conference, and those of the Progressive Black political groups. There were major political achievements in terms of more black elected officials, the Jesse Jackson Presidential Campaign, and the election of Barack Obama. However, the late 20th and early 21st Centuries were marked by growing class and racial inequality, perhaps made most visible by Hurricane Katrina when the entire world saw the consequences of decades of conservative policies that favored the rich over the poor. We discuss the popular notion of a post-racial and color blind society and the contradictions it embodies. The course ends with a discussion of newly emerging grassroots efforts to address issues such as environmental racism, school inequality and the schoolhouse to jailhouse track, police brutality, and the prison industrial complex. We discuss how African Americans today may build on the struggles and insights from the past to forge a stronger and more just future.

**(BA)** This course meets the Bachelor of Arts degree requirements.

This course contemplates connections between African oral traditions and contemporary trends in Black poetry—including hip-hop and spoken word poetry. The central objective of the course is to examine the degree to which the most contemporary forms of African American poetry continue to function as folk expression; it provides an opportunity for students to examine the oral roots of African American literature in general and contemporary hip-hop and spoken word poetry, in particular. Music, particularly the Blues and Jazz, will be a prominent feature of this class as we try to discover the peculiarities of Black poetry. Students will begin by comparing African and African American folk forms such as proverbs and epic poetry, continue with early African American poets such as Phyllis Wheatley, George Moses Horton, Frances Ellen Watkins Harper, and Paul Laurence Dunbar, and continue through the 20th century with the poetry of the Harlem Renaissance and Black Arts Movement to contemporary Hip-Hop and Spoken Word, including Def Poetry Jam recordings. Background readings will include important essays (such as James Weldon Johnson's "Preface to the Book of Negro Poetry" and Langston Hughes's "The Negro Artist and the Racial Mountain") that reveal the kinds of aesthetic issues African American artists faced in crafting their art in the face of a dominant culture that consistently questioned their capacity for artistic production. Students will listen as Margaret Walker reads her famous poem, "For My People," and they will consider the importance of the Black Arts Movement, its poets and critics to the development of contemporary hip-hop and spoken word poetry. Other course materials will include videotaped interviews and poetry readings. Readings would come from an appropriate anthology and/or a combination of other appropriate texts selected by the instructor.

The Underground Railroad was a movement to secretly rescue slaves and send them to places of freedom in the northern states and territories, and Canada. Students will learn about the origins, leaders, and locales of this multi-racial movement. The course assignments will include scholarly readings, as well as research locating historic materials that shed light on the Underground Railroad. Course text and research materials will include historical studies, as well as newspapers, census materials, church records, and rare books that shed facts on the Underground Railroad. Students will be challenged to weigh stereotypical views about the Underground Railroad in scholarship and public life against the literature, historical documents, and places they discover that were actually associated with local and national Underground Railroad activities.

### **AF AM (HIST) 465 The Post-World War II Civil Rights Movement (3) (US)**

This course focuses on the post-World War II Civil Rights Movement. It begins with a discussion of the "Long Civil Rights Movement," briefly looking at the roots of the movement in the labor movement and social struggles of the Great Depression and World War II. We then turn to the impact of World War II on African Americans, the growing militancy during the war, the struggles over segregation in the military, the growing role of blacks in the labor movement, and the growing link between African Americans and the rising anti-imperial movements that accelerated after the war. We discuss the role of African Americans in the Cold War and the struggles over the role of Communism and Socialism in the emerging Civil Rights Movement. The course is broken down into key topics of the movement years: the rise of localized grassroots movements all over the United States that were led by local people who sought to challenge school segregation, political disfranchisement, poor housing conditions, police brutality, and job discrimination. While legal disfranchisement and segregation existed solely in the southern states, the entire country practiced both and black people suffered the consequences universally. Much time is spent on the more famous southern civil rights movement, with discussions of the Emmett Till Murder of 1955; the Montgomery Bus Boycott and the rise of Martin Luther King, Jr. and the Southern Christian Leadership Conference; and the Little Rock Crisis of 1957. The beginning of the 1960s saw the creation of the Student Non-Violent Coordinating Committee and the emergence of key women leaders in the struggle such as Mrs. Ella Baker, Mrs. Fannie Lou Hamer, Mrs. Rosa Parks, and Mrs. Septima Clark, to name only a few. We discuss key moments in the 1960s, beginning with SNCC and CORE and the Freedom Rides, the SCLC in Birmingham and Albany; the March on Washington, the 1964 Mississippi Freedom Summer and the murders of Chaney, Goodman, Schwerner, and Medgar Evers; the 1965 Selma to Montgomery March, and the final passage of the 1964 Civil Rights Act and the 1965 Voting Rights Act. The emphasis on the southern struggle is on the local, ordinary people who achieved extraordinary things.

We discuss the role of African Americans in the Cold War and the struggles over the role of Communism and Socialism in the emerging Civil Rights Movement. The course is broken down into key topics of the movement years: the rise of localized grassroots movements all over the United States that were led by local people who sought to challenge school segregation, political disfranchisement, poor housing conditions, police brutality, and job discrimination. While legal disfranchisement and segregation existed solely in the southern states, the entire country practiced both and black people suffered the consequences universally. Much time is spent on the more famous southern civil rights movement, with discussions of the Emmett Till Murder of 1955; the Montgomery Bus Boycott and the rise of Martin Luther King, Jr. and the Southern Christian Leadership Conference; and the Little Rock Crisis of 1957. The beginning of the 1960s saw the creation of the Student Non-Violent Coordinating Committee and the emergence of key women leaders in the struggle such as Mrs. Ella Baker, Mrs. Fannie Lou Hamer, Mrs. Rosa Parks, and Mrs. Septima Clark, to name only a few. We discuss key moments in the 1960s, beginning with SNCC and CORE and the Freedom Rides, the SCLC in Birmingham and Albany; the March on Washington, the 1964 Mississippi Freedom Summer and the murders of Chaney, Goodman, Schwerner, and Medgar Evers; the 1965 Selma to Montgomery March, and the final passage of the 1964 Civil Rights Act and the 1965 Voting Rights Act. The emphasis on the southern struggle is on the local, ordinary people who achieved extraordinary things.
