This course serves as the laboratory component for PNG 450. Students will apply the concepts and skills gained from lectures and discussions in PNG 450. The aim is for student to become familiar with drilling fluids and with how to quantify the fluid properties analytically. Students will also receive practical experience with drilling equipment, and will practice solving practical well-control problems in the laboratory. Students in this course will gain experience using our state-of-the-art rig floor simulator and drilling fluid and cement laboratory, which are equipped with the advanced facilities currently used in the oil and gas industry.

**P N G 480 Production Process Engineering (3)** Analysis and evaluation of surface production processes, fluid separation, storage, measurement, treating, custody transfer, transmission, disposal, corrosion, and other operations.

**P N G 480 Production Process Engineering (3)**

Surface production engineering involves the extraction of reservoir fluids, their treatment at the surface and movement to a commercial market via a common carrier. It is the primary objective of this course to provide the fundamentals of surface production operations and underlying operational principles and design criteria for equipment utilized in the surface handling of petroleum production fluids. Surface production facilities are described in detail as systems in charge of the separation of the wellstream fluids into three single-phase components (oil, gas, water) and of their transport and processing into marketable products or their disposal in an environmentally acceptable manner. A detailed overview of hydrocarbon fluid behavior, analysis of hydrocarbon and water separation processes, analysis and design of surface transportation systems and flow assurance problems is provided along with a comprehensive look at the engineering aspects involved in surface production operations. Topics include purpose and description of onshore and offshore surface production facilities and the function of the equipment used in these processes, including wellheads and Christmas trees, gathering systems, production manifolds, field processing of crude oil, field processing of natural gas, phase separation of gas, oil and water, water-in-crude oil emulsification, heater-treaters and dehydration of crude oil, natural gas dehydration, stock tank batteries and transportation. Discussion includes oil and gas quality checks, oil and gas metering, typical contractual hydrocarbon sales specifications, and typical specifications for produced waters and other by-products. Hydrocarbon fluid behavior topics include an overview of hydrocarbon thermodynamics, hydrocarbon PVT behavior, thermodynamics of liquid and vapor separation, and fluid behavior prediction models including modern cubic equations of state. In the context of surface facility design, a process simulation or compositional simulation is implemented to predict how the components that make up the well fluids react to changes in pressure and temperature as they are processed through the facility through a succession of phase changes where liquids flash to vapor or vapors condense into liquid. Equipment design topics comprise design of 2-phase and 3-phase vertical and horizontal separators, derivation of design equations, design of crude and condensate stabilization trains, design and operation of glycol dehydrator towers, and flow assurance topics such as hydrate, corrosion, and wax prevention. The ultimate purpose of surface equipment design is to recommend the most suitable and cost-effective equipment type and size that meets the specified service and system condition, contractual obligations, and industrial health and safety and environmental regulations.

**P N G 482** Production Engineering Laboratory (1) Measurement and analyses of the physical and chemical properties of hydrocarbon fluid systems in a production environment.

### **P N G 482 Production Engineering Laboratory (1)**

The task of production engineers is to optimize the extraction, treatment and delivery rate of hydrocarbons. For this optimization to be realistic, quantitative values of some relevant parameters and properties that characterize the system should be known preferably by way of measurements. It is the primary objective of this laboratory course to give the student an understanding of the available measurement techniques; an opportunity to gain hands-on experience in carrying out the experiments as well as operating the apparatus and some practice in the art of technical report writing. The Production Engineering Laboratory has been designed to expose the student to the principles and procedures of production engineering for oil and gas analysis (physicochemical characterization and quality control) and the transport of fluids in pipes and conduits. The main objective is to familiarize students with the basic measurements that must be taken in production monitoring and control, as well as basic production engineering principles. It is also aimed to enhance the error analysis, critical evaluation and technical report writing skills of the student. Major pieces of equipment in this laboratory include: viscosimeters, oxygen bomb calorimeters, gas chromatograph, densitometers, centrifuges, dead weight testers, dew point testers, and a meter run setup. Laboratory experiences include, but are not limited to, the determination of density of clear organic substances and petroleum distillates that can be handled as liquids at test temperatures between 10 and 40 °C using digital density meters, the determination of the API gravity (or specific gravity) of crude oil, petroleum products normally handled as liquids (e.g. stabilized crude oil, stabilized gasoline, naphthane, kerosene, gas oils, lubricating oils, and non-waxy fuel oils) and alcohols using hydrometer and pycnometer methods, the calibration of Bourdon type pressure gauges by means of a dead weight testers and constructing of calibration charts for gauges that are not adjustable, the determination of water and sediment in crude oils by means of the centrifuge procedure, the determination of the heat of combustion of organic substances ranging in volatility including oil samples with volatiles ranging from that of distillates to that of residuals, the measurement of viscosity of crude oil and liquid petroleum products by means of measuring the time for a volume of liquid to flow under gravity through a calibrated glass capillary viscosimeter, the determination of water vapor content of gases by measurement of the dew point temperature and the calculation therefrom of the water vapor content, and the determination of a gas flow rates in pipelines by means of orifice plates and axial full-flow turbine meters.

**P N G 489 Engineering Evaluation of Oil and Gas Properties (3)** Application of present worth and rate-of-return analysis; reserve calculations; decline curve analysis; uncertainty and risk analysis to engineering project design and evaluation.

**P N G 489 Engineering Evaluation of Oil and Gas Properties (3)**

The objective of this course is to introduce to students the application of present worth and rate-of-return analysis to problems peculiar to oil and gas evaluation. The course is divided into four sections: introduction to present worth and rate-of-return analysis; the calculation of oil and gas reserves; the analysis of decline curves; and the application of uncertainty and risk analysis to engineering project design and evaluation. This course is the first course of a four-course sequence (P N G 489, 490, 491, 492) that culminates in a capstone engineering design project and is intended to be taken during the first semester of the junior year. As such the application of these principles elucidated above to engineering design will be emphasized.

This course is a pre-requisite for most of the Petroleum and Natural Gas Engineering Major Courses. It is an elective course for majors such as Environmental Systems Engineering. It will be offered every Fall semester.

**P N G 490 Introduction to Petroleum Engineering Design (1)** Introduction to the concepts of engineering design as applied to petroleum and natural gas projects.

**P N G 490 Introduction to Petroleum Engineering Design (1)**

The objective of this course is to introduce to the students the principles of engineering design as applied to petroleum and natural gas projects. The course focuses on the analysis of physical data with respect to error and use of this data in design. Other topics to be visited include a definition of what is a project deliverable and establishment of timelines for their implementation. The salient points of the course are as follows: (1) This course is the first capstone engineering design course in the sequence of three courses. In this portion of the course students' principal goal is to characterize the reservoir. In this process necessary basic sciences and engineering skills are utilized. (2) In reservoir characterization, students typically collect and analyze the data available in the literature and other related data provided by the operators. (3) In making a preliminary assessment towards field development students consider factors involving economic, environmental, social, ethical, health and safety considerations. (4) In this course, students work in teams. In each team, team members assume responsibilities as petrophysicist, drilling engineer, geologist, geophysicist production engineer, reservoir engineer and implement the necessary technical skill to fulfill their obligations. (5) This project starts from the ground level and ends with a complete field development plan. Within the context of the project (reservoir characterization) students have the opportunity to use the necessary skills to identify and formulate and solve the engineering problems and challenges that are faced. (6) In selecting the lease area the potential impact of project on the social and physical environments is considered and all the ethical responsibilities are studied in depth. (7) During every phase of the project the impact of decisions are considered within the framework of global, economic, environmental and societal context. (8) In this course the main contemporary issue the need for unconventional energy resources is the driving force behind the project. (9) In every phase of the project students are exposed to contemporary methodologies and engineering tools including forecasting, scenario planning and reservoir simulation. Also, whenever applicable the necessary engineering software is also incorporated in the development of the project.

**P N G 491 Reservoir Engineering Design (1)** Application of the concepts of reservoir and drilling engineering to petroleum engineering design projects.

**P N G 491 Reservoir Engineering Design (1)**

Engineering design by definition is the integration of knowledge and skills acquired through experience, reading and formal instruction into a final product, the design. To that end, this course is the second course of a 3-course, 3-semester, sequence that will result in a comprehensive capstone-engineering project. As such, P N G 491 will utilize the knowledge gained from P N G 405, 410, 450 and 489 to the project design initiated in P N G 490. Course materials will include introduction to the simulator, development of the computer model, and the use of history match in design.

The class will be divided into teams and students will be evaluated on the basis of their contribution to the team effort. All reports and presentations will be presented to the class as a product of the team.

**P N G 492** Petroleum Engineering Capstone Design (1) Integration of petroleum and natural gas engineering concepts to project design.

#### **P N G 492 Petroleum Engineering Capstone Design (1)**

Engineering design by definition is the integration of knowledge and skills acquired through experience, reading and formal instruction into a final product, the design. To that end, this course is the third course of a 3-course, 3-semester, sequence that will result in a comprehensive capstone-engineering project. As such, P N G 492 will utilize the knowledge gained from three semesters of formal instruction to the project design initiated in P N G 490 and continued on in P N G 491. Course material will include the application of spreadsheet programming to petroleum and natural gas project design and its use in project economic analysis and risk analysis.

The class will be divided into teams and students will be evaluated on the basis of their contribution to the team effort. All reports and presentations will be presented to the class as a product of the team.

## **Philosophy (PHIL)**

**PHIL 001** (GH) Basic Problems of Philosophy (3) Introduction to central philosophical themes, including the mind/body problem, the existence of God, ethical problems, the nature of reality.

### **PHIL 001 Basic Problems of Philosophy (3) (GH)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course provides a critical introduction to, and overview of, fundamental philosophical problems. It includes an examination of historical and contemporary thought through in-class presentation, readings, discussions, and student writings. In this way, students will gain an understanding of diverse and often competing perspectives on basic human problems. These perspectives have shaped cultures and continue to influence thought and practice around the world today. Students will examine diverse viewpoints that will allow them to understand a wide range of views and challenge them to defend their own positions. This course involves active use of writing, speaking, and group projects. It provides opportunities for gathering information, analyzing problems, and synthesizing diverse perspectives. Finally, PHIL 001 allows students to link theory to their own lives and daily practice.

**PHIL 002** (GH) Philosophy, Politics, and Social Theory (3) Examines relations between political and social organizations, the justification and limits of the state, and issues concerning individuality and community.

### **PHIL 002 Philosophy, Politics, and Social Theory (3) (GH)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course provides an introduction to central political and social theories as well as assumptions which underlie contemporary political and social structures and which shape the contemporary cultural environment. The course will discuss the ideas of central social and political philosophers, the broader historical and cultural context in which they work and worked, and the nature of the relations and influences between the two. Students will develop an appreciation of the nature of political and social values in the context of conflicting political visions as well as the critical skills with which to examine them. They will be graded on a collaborative annotated bibliography project, a collaborative position paper, evaluations of peer papers, and a comprehensive final exam. PHIL 002 satisfies the GH requirement and is geared towards non-Philosophy majors. It may be used to fulfill minor requirements in philosophy. This course is offered once a year with an enrollment of 150 to 200 students.

General Education: GH  
Diversity: None  
Bachelor of Arts: Humanities  
Effective: Fall 2003

**PHIL 003 (GH)** Persons, Moral Values and the Good Life (3) Major ethical positions and assumptions regarding questions of freedom, choice, obligation, and conflicts in contemporary moral conduct, values, and reasoning.

**PHIL 003 Persons, Moral Values and the Good Life (3)  
(GH)**

**(BA)** This course meets the Bachelor of Arts degree requirements.

This course offers students a broad, coherent overview of moral issues, moral reasoning, and, questions concerning a good life. It emphasizes the thought of major, influential figures and their works. The course also allows students to apply to contemporary ethical issues the theories espoused by these figures. Students will compare, contrast, and critically assess competing theories of persons and goodness, their assumptions and background world views, and their implications for practice. Students will be graded on the basis of tests, papers and a comprehensive final exam. PHIL 003 satisfies the GH requirement and is geared towards non-Philosophy majors. It may be used to fulfill minor requirements in philosophy. This course will be offered once a year with an enrollment of 25 to 240 students.

General Education: GH

**PHIL 005 (GH)** Philosophy, Art, and Film (3) Explores relations between images and reality, representation and culture, and beauty and politics through film, artworks, and aesthetic theories.

**PHIL 005 Philosophy, Art, and Film (3)  
(GH)**

**(BA)** This course meets the Bachelor of Arts degree requirements.

PHIL 005 provides a critical introduction to fundamental issues concerning the nature of art in general and film in particular, the nature of aesthetic experience, and the role of art and film in cultural criticism. This course has no prerequisites and assumes no background in philosophy; it would make an excellent introduction to philosophy for students interested in art, film, representation, and creativity. It includes an examination of historical and contemporary thought through films and videos, in-class presentations, readings, discussions, and student writings. These activities will allow students to gain an understanding of diverse, often competing, perspectives on basic human problems and the great influence of film and images in contemporary life. Students will examine diverse viewpoints that will allow them to understand a wide range of views and challenge them to defend their own positions. This course involves active use of writing, speaking, and group projects. It provides opportunities for gathering information, analyzing problems, synthesizing diverse perspectives, and developing one's own thought and the reasons for it by linking theory to practice.

**PHIL 006 (GH;IL)** (CMLIT 006) Philosophy and Literature in Western Culture (3) Explores fundamental issues of human existence through the traditions of western literature and philosophy.

**PHIL (CMLIT) 006 Philosophy and Literature in Western Culture (3)  
(GH;IL)**

**(BA)** This course meets the Bachelor of Arts degree requirements.

This course is designed to introduce students to the various interpretive approaches to literature and philosophy. The class will explore key philosophic themes as these are exhibited in imaginative literature, and in doing so will practice both philosophical interpretation of literature and literary treatment of philosophy. The central themes of this course could include, for example, self-knowledge and self-deception; self-isolation, alienation and community; conflict of moral responsibilities; the use and abuse of language; the meaning of art; the ideal of a "simple life;" normalcy and madness. The class will ask such questions as what counts as literature, what purpose it serves, what is the relationship between literature and ideology, and whether a text can be considered independently from what the author wanted to say in it. Students may be graded by a variety of methods, including exams, papers, and individual and group projects. One example might be a collaborative annotated bibliography project, a collaborative position paper, individual evaluations of position papers, and a comprehensive final exam. This course is a non-major General Education Humanities course. It may be used to fulfill minor requirements in philosophy. This course may be used to fulfill an additional-course requirement in either the minor or the major in Comparative Literature, although it is geared primarily towards non-majors. This course will be offered once a year with an enrollment of 25-200 students depending on location. This course deals with literature and philosophy in the western tradition, and thus helps to complete the range of our other

courses on western literature, such as Comparative Literature 001 and 002 (survey courses of Western Literature to the Renaissance, and Western Literature since the Renaissance), and Comparative Literature 401W and 402W (upper level chronological courses on Western Literature). This course differs from those however, by its strong emphasis on philosophical texts.

**PHIL 007 (GH;IL) Asian Philosophy (3)** Introduction to philosophical, moral, and aesthetic teachings of Asian traditions such as Hinduism, Buddhism (including Zen), Taoism, Confucianism, and Shintoism.

**PHIL 007 Asian Philosophies (3)**  
**(GH;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This class is an introduction to the major intellectual philosophical traditions of Asia: Hinduism, Buddhism and Zen Buddhism, Jainism, Confucianism and Neo-Confucianism, Taoism, and Korean thought. The course introduces students to Asian thought through careful study of major, representative texts and authors of each of these traditions. In addition, the course seeks to identify parallels and differences between Asian thought and Western philosophy, and also seeks to explore the intercultural and interdisciplinary vitality of Asian thought today.

**PHIL 009 (GH;US) Philosophy, Race, and Diversity (3)** Critically examines the significance of race and cultural diversity for, and in, understandings of reality, knowledge, truth, morality, and justice.

**PHIL 009 Philosophy, Race, and Diversity (3)**  
**(GH;US)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course explores the diverse philosophical concepts and problems regarding race. It covers writings dealing specifically with critiques of the dominant theories and definitions of racial identity, thereby providing an introduction to the diversity of ethical and social approaches to questions concerning race. This course is designed to satisfy the criteria for a humanities course with a focus on diversity (General Education Humanities and Diversity Focused). In particular, it is designed to be an offering in the humanities insofar as it: (1) develops a broad, coherent overview of the meaning of cultural diversity itself (including a clarification of the conceptions of culture, race, gender, nationality, and pluralism); (2) stresses the writings of major theorists from both the traditional canon of Western thought and diverse traditions, most

prominently African-America, Latin-American, Asian American, and Native American traditions; (3) helps students develop the skills to interpret and to assess the nature, forms, and place of human values in our multi-cultural world; (4) fosters a deeper appreciation of and more critical attitude toward the ultimate ends of human action; (5) offers ample opportunities to engage in comparative philosophy and, allied with these, numerous challenges to communicate clearly, think logically, and evaluate critically the positions and perspectives being compared; (6) meets fully the stated objectives of general humanities education by providing students with texts occupying a central place in one or more human cultures and, then, by working through these texts in a careful and critical manner (such a process of working through these texts being also one of thinking critically and imaginatively about the questions posed by the texts, moreover one of being invited or even forced to integrate various perspectives). As a diversity focused course, PHIL 009 will carefully treat the philosophical issues of pluralism, universalism, diversity, and community. It will also pay careful attention to the diverse philosophies of different cultural communities. The conflicts between cultural localism and global economics will receive critical attention. In particular, this course will: (1) focus initially on ethnicity and race, then on gender and globalism; (2) encourage students to develop an understanding of the intellectual and ethical backgrounds and assumptions of other traditions and peoples; (3) help students develop a truly global, pluralistic, and multi-cultural viewpoint; and (4) explore the intellectual history of groups identified by ethnicity, race, gender, and religion. Students will be graded on a collaborative annotated bibliography project, a collaborative position paper, individual evaluations of position papers, and a comprehensive final exam. The course is intended as a General Education Humanities and Intercultural/International competency course and as such may serve as an historical overview of race and diversity in philosophy as well as an introduction to critical thinking about topical issues. This course may provide introductory material for courses in anthropology, political science, sociology, philosophy, and so on. More importantly, it may encourage students to think more carefully and critically about the questions raised in this course and their manifestation in social and political life. The course is a non-major General Education Humanities and Intercultural course intended for non-philosophy majors. It may be used to fulfill minor requirements in philosophy. PHIL 009 will be offered once per year with 150-200 seats per offering.

**PHIL 010 (GH)** Critical Thinking (3) Discussion of the validity, soundness, and fallacies of everyday language use and reasoning; informal logic; and manipulative arguments and propaganda.

### **PHIL 010 Critical Thinking (3) (GH)**

**(BA)** This course meets the Bachelor of Arts degree requirements.

This course is designed to bring students to a critical awareness of the function of argumentation in the various forms it takes, both in the academic realm of logic, as well as the everyday world of television, newspapers, and other forms of communication. Students will examine how arguments are constructed and the means that are used to make an argument convincing. They will learn to critically analyze arguments in order to detect careless language use and fallacies. They will also learn various types of arguments. Students will be graded on weekly problem-solving homework assignments and re-writes, collaborative fallacy presentations, a mid-term exam, and a comprehensive final exam. PHIL 010 satisfies the GH requirement and it may be used to fulfill minor requirements in philosophy. This course is offered once a year with an enrollment of 25-50 students.

**PHIL 013 (GH)** Philosophy, Nature, and the Environment (3) Studies competing historical and contemporary conceptions of nature, their philosophical foundations, and their implications for environmental problems and public policy.

**PHIL 013 Philosophy, Nature, and the Environment (3)  
(GH)****(BA) This course meets the Bachelor of Arts degree requirements.**

This course familiarizes students with concepts regarding the central and very old philosophical problem of describing and understanding nature and the place of human beings in it. This philosophical discourse has evolved in the past 25 years into a firm sub-discipline of philosophy itself, usually under the title of "Environmental Philosophy" or "Philosophy of nature." The discipline addresses a complex of crucial problems of contemporary society, politics, and ethics revolving around the relation of human beings and the environment. Students will learn the various and conflicting views on nature and the environment, and they will develop the ability to critically navigate these various positions as well as the assumptions underlying the contemporary environmental debate. Students will be graded on participation, case study analyses, a group presentation and response, and a final paper. PHIL 013 satisfies the GH requirement and is geared towards non-Philosophy majors. It may be used to fulfill minor requirements in philosophy. This course is offered once a year with an enrollment of 50-200 students.

**PHIL 014 (GH;US)** Philosophy of Love and Sex (3) Explores Western theories and attitudes concerning intimacy and examines various ethical issues involving love and sex.

**PHIL 014 Philosophy of Love and Sex (3)  
(GH;US)****(BA) This course meets the Bachelor of Arts degree requirements.**

An examination of theories and attitudes concerning love and sexuality that have been prevalent in the Western world. Course topics will include philosophical and theological conceptions of sex and love and ethical issues related to these topics, including monogamy, same-sex marriage, cultural differences, pornography, and consent. The course will focus on contemporary US beliefs and practices examined through the lens of the different beliefs and practices concerning intimacy within the cultures of the US. The lens of gender, race/ethnicity, and sexual orientation will be ongoing themes of the class and included in all topics. The course has no prerequisites and assumes no background in philosophy. It is an excellent introductory course for students interested in learning the skills of doing philosophy. The course will focus on linked ethical issues that will be investigated through readings, essays, and group projects and are designed to encourage

students to cultivate ethical awareness and inquiry by understanding and investigating diverse viewpoints and developing a richer understanding of their own positions. The course will provide opportunities for gathering information, analyzing arguments, synthesizing diverse viewpoints, and developing a richer understanding of and support for one's own beliefs and practices. Students will be evaluated based on class participation, short essays, examinations, and group presentations. The course will serve as a GH and GI requirement and it may be used to fulfill minor requirements in philosophy. The course will be offered once a year with 25-250 seats per offering.

**PHIL 083S** (GH) First-Year Seminar in Philosophy (3) Critical introduction to philosophical issues in ethics, social and political theory, religion, art, metaphysics, and epistemology.

**PHIL 083S First-Year Seminar in Philosophy (3)**  
(GH;FYS)

**(BA) This course meets the Bachelor of Arts degree requirements.**

First-Year Seminars in Philosophy provide critical introductions to fundamental philosophical issues and problems. Each first-year seminar develops a broad overview of historical and contemporary thought through readings, discussions, and student writings. In this way, students will gain an understanding of important figures, ideas, problems, and theories that have shaped and have continued to influence thought and practice around the world. Students will examine diverse viewpoints that will allow them to understand a wide range of views and challenge them to defend their own positions. First-year seminars involve active use of writing, speaking, and group projects. They provide opportunities for gathering information, analyzing problems, and synthesizing diverse perspectives. Finally, each first year seminar in philosophy allows students to link theory to their own lives.

**PHIL 100** (GH) The Meaning of Human Existence (3) Explores differing views of the significance of human life, the meaning of freedom, and the way to a meaningful life.

**PHIL 100 The Meaning of Human Existence (3)**  
(GH)

**(BA) This course meets the Bachelor of Arts degree requirements.**

The course is primarily for non-Philosophy majors and for students considering a major in Philosophy. It is designed to evoke disciplined reflection on basic philosophical questions which are often raised in an unmethodical and uninformed way. It will attempt to approach philosophical thinking from the perspective of everyday concerns, rather than from the various readings which will be done for the course. The general question of the meaning of human existence will furnish a rubric under which philosophical ideas and evaluations enter into ordinary life. The course will offer the opportunity to look at a variety of ways in which human beings have addressed the issues involved in the question of the meaning of life. The philosophical figures whose works will be examined include de Beauvoir, Freud, Marcel, Marcuse, Jaspers, and Sartre. Students will be graded on participation, comparison/contrast papers, a position paper, a collaborative presentation, and a comprehensive final exam. PHIL100 satisfies the GH requirement and it may be used to fulfill the major and/or minor requirements in philosophy. This course is offered once a year with an enrollment of 35-50 students.

**PHIL 101 (GH)** Pragmatism and American Philosophy (3) An introduction to American thought and its relation to American culture, with a focus on the development of pragmatism.

**PHIL 101 Pragmatism and American Philosophy (3)  
(GH)**

**(BA)** This course meets the Bachelor of Arts degree requirements.

This course, as with other 100-level philosophy department courses, is intended for Liberal Arts majors and others likely to take philosophy courses rather than for philosophy majors. (The analogous course for majors is PHIL 401.) Phil 101 is designed to familiarize students with introductory concepts, problems, and history of the American philosophical tradition. The course will explore basic themes in American thought such as nature, God, experience, democracy, progress and process, truth and meaning, focusing especially on the pragmatist philosophers. The course will examine the ways in which American philosophy develops its unique paths as distinct from the European tradition and what this legacy means today. Students will be expected to critically evaluate the problems raised by these philosophers as well as their influences on American society, politics, and culture. One of the principal goals is to enable students to understand better this rich philosophical tradition - for many students, their own heritage - and its place as both formative of and critical of the contemporary American philosophical, social, moral, religious, and aesthetic landscape. Students will be graded on participation, comparison/contrast papers, a position paper, a collaborative presentation, and a comprehensive final exam. PHIL 101 satisfies the GH requirement and it may be used to fulfill major and/or minor requirements in philosophy. This course will be offered once a year with an enrollment of 35 to 50 students.

**PHIL 107 (GH) (S T S 107)** Introduction to Philosophy of Technology (3) The character of technology; its relation to human values; philosophical assumptions in its development; and how it transforms the world.

**PHIL (S T S) 107 Introduction to Philosophy of Technology (3)  
(GH)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Introduction to the Philosophy of Technology" surveys a number of recent thinkers on the meaning of technology, its role in our and other societies, and critiques of its effects. Through readings of classic works on philosophy of technology as well as investigations of contemporary media reports and representations of technology, the course will engage your thought about what technology "means" to you and the values embedded in it. This course meets the broad general education needs of students from the humanities, social sciences, engineering, agriculture, as well as professional tracks such as business and pre-law. As technology is increasingly fundamental to our modern way of life in all its aspects, this course gets students asking question about why we do what we do with technology and how it affects us, others around us, and the environment. Required readings typically include collections of essays ranging in reading level from popular journalism to mass-market fiction to historical analyses of technological change and in-depth philosophical investigations of the concept of technology. Classroom time will be organized around lecture, regular classroom discussion, and a number of student-led debates. Evaluation will be based upon short writings, a small research paper, a midterm, and a final. The course meets the requirement for General Education in the Humanities (GH). Crosslisted with both S T S and PHIL it complements other S T S courses (notably, S T S 101 and 233) and is a pre-requisite for S T S/ Phil 407. The course is offered biannually and is capped at 40 students.

**PHIL 109 (GH)** Introduction to Aesthetics (3) Examines the nature of art and aesthetic experience, art's relation to beauty and truth, and the nature of creativity.

**PHIL 109 Introduction to Aesthetics (3)  
 (GH)**

**(BA)** This course meets the Bachelor of Arts degree requirements.

This course, as with other 100-level philosophy department courses, is intended for Liberal Arts majors and others likely to take philosophy courses rather than for Philosophy majors. (The analogous course for majors is PHIL 409: Aesthetics). Phil 109 is designed to introduce students to the various problems surrounding the philosophical treatment of the various arts. Aesthetics, or the philosophy of art, is a systematic exploration of aesthetic experience, creativity, various theories of beauty, and principles on which criticism of the arts (including literature) can be based. This is a special field of philosophy which focuses on the arts and the creative process, but which, for some thinkers, involves many links to other aspects of human existence, including the political and various metaphysical questions about being and human being. The objective will be to give students a good grounding in these various problems and to expose them to important perspectives and approaches to these problems and to the question of the place of art (as the arts generally) in human existence. Emphasis will be placed on both historical and perspectival sweep in the course and, as a result, the students should leave the course with an enriched understanding of the nature of the arts, of the creative process itself, and of the place both play in being human. Students will be graded on participation, comparison/contrast papers, a position paper, a collaborative presentation, and a comprehensive final exam. PHIL 109 satisfies the GH requirement and it may be used to fulfill the major and/or minor requirements in Philosophy. This course is offered once a year with an enrollment of 35-50 students.

**PHIL 124 Introduction to Philosophy of Religion (3)  
(GH)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course, as with other 100-level philosophy department courses, is intended for Liberal Arts majors and others likely to take philosophy courses. (The analogous course for majors is PHIL 424: Philosophy of Religion). PHIL 124 is designed to give students a coherent overview of the various dimensions of religion elucidated when religion is examined from a philosophical perspective. Topics explored in class will include religious belief, religious experience and spirituality, arguments for the existence of God, contemporary philosophical problems in their relation to religion, religion and science, as well as religion and the future. The class will also examine the differences between Western, Eastern, and other conceptions of religion and spirituality. Major historical authors and their works will be examined, including Anselm, Aquinas, Confucius, Descartes, Lao Tse, and Peirce. Students will be required to compare and contrast differing perspectives towards religion, as well as to critically evaluate these positions. The class will also be oriented towards making relevant connections between historical and contemporary views and issues. Students will be graded on participation, comparison/contrast papers, a position paper, a collaborative presentation, and a comprehensive final exam. PHIL 124 satisfies the GH requirement and it may be used to fulfill major and/or minor requirements in Philosophy. This course is offered every other year with an enrollment of 35-50 students.

(GH)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course, as with other 100-level philosophy department courses, is intended for Liberal Arts majors and others likely to take philosophy courses rather than for Philosophy majors. (The analogous course for majors is PHIL 425) PHIL 125 will provide a critical survey of key concepts, problems, and figures in the history of epistemology and in contemporary studies in theory of knowledge. The course will develop the student's analytical and critical skills through studying the foundations and justifications of knowledge, knowledge claims, and the very nature of knowledge and belief fundamental to all human endeavor. This class develops a broad, coherent overview of fundamental issues of belief, knowledge, truth, justification, and inquiry. It emphasizes the thought of major, influential figures and their works, such as Plato, Aristotle, Descartes, Spinoza, Locke, Kant, Kierkegaard, Wittgenstein, Peirce, and Heidegger. Students will be graded on quizzes, re-writing and expanding quizzes, a collaborative research project and paper, and a comprehensive final exam. PHIL 125 satisfies the GH requirement and it may be used to fulfill major and/or minor requirements in Philosophy. This course is offered once a year with an enrollment of 35-50 students.

**PHIL 126** (GH) Introduction to Metaphysics (3) Explores the nature of being and reality, the problem of free will and the mind/body problem, identity, and causality.

**PHIL 126 Introduction to Metaphysics (3)  
(GH)****(BA) This course meets the Bachelor of Arts degree requirements.**

This course, as with other 100-level philosophy department courses, is intended for Liberal Arts majors and others likely to take philosophy courses rather than for Philosophy majors. [The analogous course for majors is PHIL 426]. PHIL 126 will provide a critical survey of key concepts, problems, and figures in the history of metaphysics and in contemporary studies in metaphysics and anti-metaphysical views. The course will develop the student's analytical and critical skills through studying the foundations of accepted belief regarding the nature of reality, being, life, mind, and God, and different philosophical arguments regarding the nature of these metaphysical questions. The thought of major, influential figures and their works will be emphasized, such as Plato, Aristotle, Aquinas, Ockham, Descartes, Locke, Kant, Hegel, Kierkegaard, Jams, Husserl, and Merleau-Ponty. Students will be encouraged to articulate their own views in response to diverse metaphysical positions as well as life itself. Students will be graded on quizzes, re-writing and expanding quizzes, a collaborative research project and paper, and a comprehensive final exam. PHIL 126 fulfills the GH requirement and it may be used to fulfill major and/or minor requirements in Philosophy. This course is offered once a year with an enrollment of 35-50 students.

**PHIL 135 (GH;IL) (J ST 135, RL ST 135) Ethics in Jewish Tradition and Thought (3)** Examination of Jewish ethical thought from biblical foundations to the modern period, with attention to contemporary issues in moral philosophy.

**PHIL (J ST/RL ST) 135 Ethics in Jewish Tradition and Thought (3)  
(GH;IL)**

This course takes as its starting point the idea that modern ethical frameworks are deeply rooted in the "soil" of older traditions. By examining the development of Jewish intellectual traditions and their roots in the Bible, it provides students with an opportunity to study ethics in a philosophically textured, culturally rich, and historically informed way. And by focusing on Jewish engagement with the Bible, the course illuminates other traditions that derive from biblical monotheism: for example, those associated with Christianity, Islam, and the Enlightenment. The first part of the course takes up the idea of tradition and includes a study of biblical texts that serve as the foundation for key moral concepts. Following the traditional division of the scriptures, it examines questions of human identity and responsibility in the Torah, social ethics in the Prophets, and the quest for wisdom in the Writings. The final topic in this unit is the development of ethical tradition among the great sages of Jewish antiquity.

The second unit shifts focus to the appropriation of tradition in modern Jewish thought. After reviewing important developments in Jewish thought in the medieval and early modern periods, it turns attention to the ways that some recent figures have addressed perennial concerns in light of commitments and ways of being that are integral to Jewish identity. By reading closely the works of such seminal thinkers as James Kugel, Joseph Soloveitchik, and Abraham Heschel, we will gain a deep acquaintance not only with important vocabulary but also with the ways that traditional words and concepts may be used dynamically to produce fresh ways of looking at questions in moral philosophy. Even when the influence of

Judaism on a particular figure is not openly acknowledged in his work, as in the case of Sigmund Freud, he may be studied profitably, in a way that sheds light on characteristically Jewish ideas. Finally, the course turns in its third and final unit to applied ethics. The central question here is how Jewish tradition informs ethical reflection in a wide range of contemporary fields: specifically, environmental studies, social and sexual ethics, and legal and business ethics.

#### **PHIL (CAMS) 200 Ancient Philosophy (3) (GH)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

PHIL (CAMS) 200 satisfies the GH requirement. As part of the history of philosophy sequence required of undergraduate philosophy majors, this course is designed to present students with a survey of ancient Western Philosophy beginning with the pre-Socratics, continuing with Plato (Socrates), Aristotle, and the post-Aristotelians, and concluding with neo-Platonists and early Christians. Emphasis will be placed on Plato and Aristotle. The class will examine the historical and cultural foundations from which ancient Western philosophy grew, and will explore issues which were focal points of ancient philosophy, such as the nature of reality, change, permanence, truth, form, and matter. Students will critically consider these issues in required comparison/contrast papers, a position paper, a collaborative project, and a comprehensive final exam. Students will also be evaluated on class participation. The course is prerequisite to Philosophy 400-level courses and it will be offered once a year with an enrollment of 35 students. For students studying ancient languages, particularly Greek, this course will offer an important exposure to the interpretation of philosophical text. For Classical and Ancient Mediterranean Studies majors, PHIL/CAMS fulfills the requirement under Supporting Courses for three credits in Greek or Roman literature and language, civilization, or archaeology; and it also fulfills the requirement for six credits for study at any level from an approved list in the general field of Classics and Ancient Mediterranean Studies.

**PHIL 233 (GH) (S T S 233) Ethics and the Design of Technology (3)** Ethics and individual and group decision-making in the design of technology including design projects and specific attention to institutional ethics.

**PHIL (S T S) 233 Ethics and The Design of Technology (3)  
(GH)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Technology has been around nearly as long as humans have been around. Humans have always created artifacts and artificial environments to aid us in our survival and to help fulfill our needs and desires. Moreover, today technology is all pervasive, transforming and conditioning our social and political relations, our cultural understanding of ourselves, and our relationship with other animals and the natural environment. Yet not much thought has been expended upon the meaning of technology, particularly in its moral dimensions. This course takes several steps to correct this deficiency. Because technologies can have far reaching effects well beyond the domain of their immediate application, the role of designers is crucial in deciding whether we take an intelligent or unintelligent approach to technology. All technologies exist to serve one human need or another. Designers make important choices concerning the creation, development, and deployment of many if not most technological innovations. Consequently, the task of the designer is an ethical one. Our goal is twofold: First, we will try to broaden our moral imaginations by taking into account the wider ranging effects that technologies have in order to reveal the moral significance of design choices. Second, we will examine the process of design itself, particularly in the way that the design process is similar to ethical reasoning in general. It is hoped that by accomplishing these two tasks, we will be empowered as designers, customers, citizens, and future employers to make choices that better fulfill the moral task of technological innovation. Two means will be used to achieve our course goals. Much of the time will be spent thinking about and discussing the various impacts that particular technologies have upon the social, cultural, and political lives of human beings and upon the natural environment. To facilitate thoughtful discussion, we will read a number of authors, writing short papers in preparation for critical discussion in class. In this way we will be better prepared to discuss and think about the issues at hand by having had the chance to organize our thoughts in advance. The second means is aimed at putting our ideas into practice by working in teams on several design projects. These design projects will require the integration of readings, discussion, and research and their synthesis to solve a design problem. Student teams will work cooperatively on these projects and make oral progress reports as well as final written and oral reports.

**PHIL 460 (US;IL) (AF AM 460)** African American Philosophy (3) Major works by African American Philosophers, on topics of race, freedom, citizenship, nationhood, law and society.

**PHIL (AAA S) 460 African American Philosophy (3)  
(US;IL)**

African American philosophers and social activists have produced important texts that both take their place in the philosophical canon and revise the canon and indeed how we understand the practice of philosophy. This course surveys twentieth century African American philosophy, from Du Bois's *Souls of Black Folk* and *Dusk of Dawn*, to King's *Why We Can't Wait*, to Davis's *Women, Race and Class*, to Boxill's *Blacks and Social Justice*. The books refer back to both liberal democratic and socialist philosophical treatises, as well as theological and jurisprudential writings, in order to construct new conceptions of race, citizenship, freedom, the rule of law. Moreover, they are all grounded in the concrete, problematic situation of African Americans in twentieth century America, so that they raise with special urgency the question of how philosophical reflection can address social change. In classroom debate, students will rediscover and critically examine how the history of racial strife and reconciliation affects local, national and international civic life. One constant feature of this course is that white students and students of color become aware of differing perspectives that are hard to reconcile; this helps them to re-examine their own social identities and those of their classmates. When the course is team-taught (with one white faculty member and one faculty member of color) the same dynamic occurs between the instructor: watching them reconcile their views in discussion and pedagogy helps the students as well. It is hoped that this course will often or always be team-taught.

**PHOTO 100 (GA)** Introduction to Photography (3) An introduction to the aesthetics, history, and science of photography including practical and critical approaches to the art of photography.

**PHOTO 100 Introduction to Photography (3)  
(GA)**

PHOTO 100 is an introduction to the aesthetics, history, and science of photography including practical and critical approaches to the art of photography for beginning students.

The course will introduce students to photography as an art form and as an important medium in commercial applications, news and journalism, science, and industry. The course will look at photography in a social/historical context and showcase the work of important photographers. The course will examine the impact of technological, economic, and cultural forces on photography and, in turn, the role that it plays in our daily life, culture, and society.

The course will also expose students to the various styles and techniques used in making photographs and give them the opportunity to gain experience and practical know-how in creating their own photographs. Through the process of assembling and critically examining "galleries" of their own work and the work of others, they will be encouraged to develop a more informed critical point of view about photography as an art and important form of human expression.

Grading will be based on three photographic assignments that will account for 50% of the semester grade. In addition, there will be four exams (on photographic history, aesthetics, technical aspects of photography, and image manipulation) that will account for 40% of the semester grade. The remaining 10% of the semester grade will be based on participation in class critiques.

Students will be required to have access to a digital camera and the internet.

PHOTO 100 will be offered in the fall and spring semesters each year.

**PHOTO 200** Photo Studio I (3) A beginning level course that explores the fundamentals of photography.

**PHOTO 200 Photo Studio I (3)**

PHOTO 200 is a beginning level course focused on the aesthetics and practical application of photography. Employing lectures, demonstrations and hands-on photographic assignments, it concentrates on teaching basic photographic techniques. Digital and film camera use, imaging software, basic digital scanning, digital printing methods, and basic darkroom practice are covered. A digital camera and access to a 35mm film camera is required.

Grading is based on the quality of work in required creative projects (70%) and tests/quizzes (30%).

PHOTO 200 will be offered fall and spring semesters.

PHOTO 100 is the prerequisite for PHOTO 200.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2006  
Prerequisite: PHOTO 100

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**PHOTO 201 (ART H 250) A Chronological Survey of Photography (3)** A survey of photography's place and influence in a social, cultural, and historical context.

### **PHOTO 201 A Chronological Survey of Photography (3)**

PHOTO 201 explores the role played by photography over time in providing understanding and insight in a social, cultural, and historical context of the impact of the development of the photographic medium and its effect on social, political, cultural and technological events. Emphasis will be given to understanding the context that surrounds the scientific and aesthetic development of photography. This is a survey of the chronology of events in western culture that transpires from the inception of photography until the year 2000. It includes the influences and outcomes of photographers and those associated with the medium on our culture. Emphasis will be placed on the influence of photography on the world around it, and significant events and individuals in the development of the medium as a vital art form. The structure of the course will consist of research and discussion of events and individuals that characterized years selected for examination. Each week one or two decades of western culture will be highlighted. Although the thrust of research will relate to photographic subject matter, the events studied will span the culture. We will explore the development of art, literature, music, and photography, as well as, historic landmarks, and the events that have shaped present society. Each week a selection of visual material will be presented highlighting selected events, students will read literature from the period of discussion, significant pieces of music will be introduced, and accounts of periodic events will be surveyed.

Each week, a group of students will be assigned to research at least one decade. Each student will gather information about a significant figure or event that occurred in the course of a given period. The student will be expected to prepare a short paper and give a five-minute oral presentation about his/her assigned year, historical figure or event. As each student presents, the chronology of events becomes clear and the multiple threads of history weaves a brilliant tapestry of our culture. For the final presentation the student will prepare a ten-page research paper about a historical figure or event.

Students will be graded on the quality of the weekly oral presentations and the demonstrated level of commitment to research. Another significant part of their grade will be derived from the length of committed scholarship given to the ten-page term paper. Students must exhibit a level of originality, clarity, and insight. The student must demonstrate the capacity for the assimilation of facts and events relative to their subject and demonstrate how their subject relates to other events that occurred around the same time of their event. Toward this end students will be encouraged to work together to illustrate the interconnection of the chronology. Assessments will be rendered as follows: PHOTO 201 will be offered fall and spring semesters.

General Education: None

**PHOTO 300** Photo Studio II (4) An intermediate course that explores advanced processes and applications in digital photography, digital image processing, and photographic inkjet printing.

#### **PHOTO 300 Photo Studio II (4)**

PHOTO 300 is an intermediate course in the aesthetics, processes, and practical applications of digital photography, digital image processing, and photographic inkjet printing.

A digital camera is required.

Students will employ digital photographic applications and techniques to create images and expand their personal photographic vision. The course will help students to:

1. Gain a deeper understanding of the medium of digital photography artistically, critically, and as a technical process.
2. Explore the potential of the medium's ability to express ideas in new ways.
3. Understand advanced digital camera methods.
4. Learn advanced skills in the use and application of Adobe Photoshop.
5. Learn high quality film and object scanning procedures.
6. Learn to make photographic quality color archival inkjet prints and develop critical color awareness.

Grading is based on the quality of work in required creative projects (80%) and presentations / participation in formal critique sessions / tests-quizzes (20%).

The final course grade will be dropped one full grade for each absence or late submission beginning with the second late submission or absence.

The prerequisite for PHOTO 300 is PHOTO 200.

PHOTO 300 will be offered fall and spring semesters.

**PHOTO 400** Digital Photography in the Studio (4) Concepts and technology of the digital photography studio; large format digital cameras, electronic studio lighting and digital printing.

#### **PHOTO 400 Digital Photography in the Studio (4)**

PHOTO 400 is a wholly digital, in-depth course in photography that explores the visual, technical, and creative application of digital photographic technologies in a studio setting.

Students will employ digital photographic applications and techniques to create images and expand their personal photographic vision. The course will help students to:

1. Gain a deeper understanding of the medium of digital photography artistically, critically, and as a technical process.
2. Explore the potential of the medium's ability to express ideas in new ways
3. Master the fundamental studio practices and technologies of digital photography
  - o Professional large format digital view cameras
  - o Professional electronic studio lighting
  - o Adobe Photoshop
  - o Digital printing
  - o DVD-CD-Rom storage

o Presentation and distribution utilizing the World Wide Web

PHOTO 400 follows a workshop/critique format. A collaborative team approach is utilized to enhance students' abilities in working together to solve creative problems. Students will have to think critically, develop strategies to solve problems, and engage in class critiques as a normal expectation of the course.

Grading is based on the quality of work in required creative projects (80%) and participation in formal critique sessions (20%). The final course grade will be dropped one full grade for each absence or late submission beginning with the second late submission or absence.

PHOTO 400 will be offered spring semesters.

General Education: None  
Diversity: None  
Bachelor of Arts: Arts  
Effective: Fall 2006  
Prerequisite: PHOTO 200

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**PHOTO 402** Photographic Narratives (4 per semester/maximum of 8) The development of a photographic project that leads to the creation of a handmade book.

**PHOTO 402 Photographic Narratives (4 per semester/maximum of 8)**

PHOTO 402 is a project course in photography focused on the construction of a handmade book that features a student's photographs as the central content of that book. The course gives the student the opportunity to choose a subject and explore it through photographic means over an extended period of time, in this case, an entire semester. Emphasis is placed on the quality of photography and the organization of those photographs in a book for their display.

Students will be evaluated on their abilities to understand the medium through classroom instruction. Evaluation will also be determined by a student's imaginative capabilities through visualization and through the completion of a series of finished pieces.

The prerequisite to PHOTO 402 is PHOTO 200.

PHOTO 402 will be offered fall and spring semesters.

General Education: None  
Diversity: None  
Bachelor of Arts: Arts  
Effective: Fall 2006  
Prerequisite: PHOTO 200

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**PHOTO 405** Creative Projects in Photography (4 per semester/maximum of 8) Special individual problems related to photographic vision.

**PHOTO 405 Creative Projects in Photography (4 per semester/maximum of 8)**

PHOTO 405 is a project course in photography designed to challenge students and engage them in photographic assignments that expand their personal and individual vision.

Projects may be developed using either digital or photochemical process (or a combination of the two) and may be organized as either group or individual assignments.

PHOTO 405 will be offered fall and spring semesters.

General Education: None  
Diversity: None  
Bachelor of Arts: Arts  
Effective: Fall 2006  
Prerequisite: PHOTO 201PHOTO 300

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**PHOTO 406** Product Photography (2) This advanced level course will explore the practices of photographing products for print and product advertising.

**PHOTO 406 Product Photography (2)**

This advanced level course will introduce the practice of photographing products with a focus on advertising. The development of the photographers' problem solving abilities, when lighting varied surfaces, will be considered. The importance of lighting for scale will be examined along with how or when to contribute to the context of a product by introducing appropriate set propping. Aesthetic and intellectual concepts of rendering of products for specific end uses

will be explored. Theory will be applied and practiced by the student in a studio environment. As a practical course, lectures and studio demonstrations are major elements of the instruction. The lecture time will modify throughout the course to allow each student the flexibility to practice learned skills. Students will be responsible for scheduling individual studio time with the Integrative Arts Photo Services unit.

A digital camera and a laptop computer with a copy of Adobe Photoshop installed are required.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2011  
Prerequisite: PHOTO 200

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**PHOTO 407 Portrait Photography (2)** This advanced level course investigates contemporary portrait photography and traditional and modern styles of photographic lighting.

#### **PHOTO 407 Portrait Photography (2)**

This advanced level course will investigate what portrait photography is and how portrait lighting evolved from the influences of early painting. Throughout the course there will be an ongoing investigation of the successes of historic, contemporary & influential photographers. Styles of photographic lighting will be explored as well as natural and artificial light sources. Why posing is important to portrait photography will be considered as well as how or when to suggest or direct a subject to acquire a pleasing pose will be examined and practiced. Theory will be applied and practiced by the student in environmental and studio locations. Through the study of character and expression, the student Portrait Photographer will introduce their style to portrait making. The course will enable the student to make intellectual and aesthetic choices when choosing appropriate equipment and technique, command the application of skillful lighting, develop sensitivities of interaction in prelude to the direction of the photo session and understand the incorporation of space or environment and it's relationship to the individual subject.

A digital camera and a laptop computer with a copy of Adobe Photoshop installed are required.

**P T 202 Pediatric PT (1)**

This course is an elective course for those Physical Therapists Assistant students interested in further study in pediatric physical therapy. The course will focus on various conditions affecting children, which may include cerebral palsy, spina bifida, and Down syndrome. The students will be given the opportunity to learn about pediatric physical therapy in lecture/discussion sessions and/or laboratory settings.

P T 204

**P T 204 Seminar in Physical Therapy (1)**

The purpose of P T 204 is to provide Physical Therapist Assistant students with an opportunity to explore special topics in physical therapy. The format of the course will be seminar based. The course will consist of a series of presentations led by faculty or outside lecturers and may involve travel to hospitals and clinics. This course will typically be offered in the last semester of classroom instruction, before the students begin their final clinical affiliations. This is an optional PTA course, which may be taken to satisfy the elective requirements of the PTA program.

P T 250

**P T 250 Physical Therapist Assistant--Procedures II (4)**

This course is a comprehensive study of electrical modalities in Physical Therapy. Concepts of nociception and neuromuscular excitation will be discussed and introduced to the student. The course is designed to give the PTA student a working knowledge in the application and theory of electrical modalities and physical properties to enhance the rehabilitation process. These treatment methods will be discussed and practiced in relation to the overall clinical management of patients and their specific disorders. At some campuses, ultraviolet and other physical agents will also be studied and practiced. This course is the second course in Procedures and covers the more advanced modalities and principles.

P T 270

**P T 270 Pathophysiology (3-4/ maximum of 4 credits)**

This course is an introduction to the study of diseases and those conditions most often treated by Physical Therapy methods. Basic signs, symptoms, causes, and processes of disease and conditions will be covered. The course is designed to give the PTA student a working knowledge of the physiology of disease states in order to prepare the student to think and speak intelligently with patients and other health professionals regarding diseases and conditions commonly seen in physical therapy and their diagnoses, progression, and treatments. Areas of study in the course may include, but are not limited to, the history of pathophysiology, diagnostic methods, infection and healing, metaplasia, mental health, genetic and congenital disorders, and disorders of the following systems: cardiovascular, respiratory, musculoskeletal, nervous, integumentary, endocrine, blood and lymphatics.

**P T 270A (IL) Pathophysiology (3-4) Introduction to medical and post-operative conditions and disease states frequently treated by physical therapy interventions in the USA and Africa.**

P T 270A

**P T 270A Pathophysiology**

This course is an introduction to the study of diseases and those conditions most often treated by Physical Therapy methods. Diseases and conditions found in the United States and those found world-wide will be discussed, with special attention given to those endemic to the continent of Africa. Basic signs, symptoms, causes, and processes of disease and conditions will be covered. Influences of culture, society, and geography on health, disease, and medical interventions will be included in class assignments and discussions. The course is designed to give the PTA student a working knowledge of the pathophysiology of disease states in order to prepare the student to think and speak intelligently with patients and other health professionals regarding diseases and conditions commonly seen in physical therapy and their diagnoses, progression, and treatments. Areas of study in the course may include, but are not limited to, the history of pathophysiology, terminology, diagnostic methods, infection and healing, immunology and immunosuppression, neoplasms, including cancerous and benign tumors and conditions, genetic, congenital, and developmental disorders, mental health and disorders of the following systems: cardiovascular, respiratory, musculoskeletal, nervous, integumentary, endocrine, blood and lymphatic. Special attention will be paid to how these conditions relate to physical therapy practice. In addition, students will be introduced to common medical and pharmacological interventions.

**P T 280 Rehabilitation (4-5)** This course provides the theoretical basis and clinical practice skills used in the assessment and intervention for patients with neuromuscular, functional, and cognitive impairments.

**P T 280 Rehabilitation (4)**

Students will learn and develop skills in the rehabilitation treatment of patients with diseases or conditions frequently seen in physical therapy. Students are expected to be able to recognize normal and abnormal gait patterns of patients diagnosed with the diseases/ conditions studied. In the laboratory sessions, students practice mobility skills as they related to the pathologies studied. Students learn to treat patients in the orthopedic, neurological and pediatric populations. To achieve these objectives, students will be involved in lectures, laboratory activities, audiovisual material, and utilization of information from professional literature. Attainment of educational objectives will be determined via written exams and laboratory practical exams. Basic principles utilized in this course have been learned in P T 100. The anatomical and neurological foundations have been presented in BIOL 129 and P T 270. Instruction of patients in and the performance of rehabilitation activities are a foundation in physical therapy.

Prerequisites for this course are a C or better grade in BIOL 141, BIOL 142, P T 150, P T 160, P T 270 and P T 384. This course is a prerequisite for P T 395F and P T 395G. This course is offered once per calendar year and may be offered in two parts over the course of two semesters. Expected enrollment is 20-45 students, with a limit of 15 students in a given lab section.

Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details, check the specific course syllabus.

**P T 384** Applied Kinesiology (4) Study of anatomical structure, body movement. Characteristic muscle action and motion will be analyzed in relation to physical therapy context.

#### **P T 384 Applied Kinesiology (4)**

The focus of P T 384, Applied Kinesiology, is to incorporate anatomical structure of the human body, principles of biomechanics, kinetics, and kinematics with the study of human motion and mobility. Areas of instruction may include but are not limited to: origins, insertions, actions, and innervations of muscles of the upper extremity, lower extremity, head, neck, and trunk; examination and assessment of the muscles of the extremities and axial skeleton; concentric, eccentric, and isometric muscle contractions- closed and open kinetic chains; active and passive insufficiency of muscles, arthro- and osteokinematics; normal gait and posture; manual muscle testing; and the forces involved in moving the human body. To achieve these objectives, students will be involved in lectures, small group discussions, laboratory experiences, and the utilization of information/research from the library and Internet resources. Students will obtain "hands-on" laboratory experiences including surface anatomy and examination and assessment techniques in the Physical Therapy Lab. Evaluation of student performance will be based on a combination of all or some of the following: written examinations, laboratory practical examinations/competencies, in-class and/or on-line quizzes, student projects and presentations, and written assignments. The prerequisite courses for P T 384 are a grade of C or better in BIOL 129, BIOL 141, BIOL 142, and P T 100. Students are expected to enter P T 384 with a basic knowledge of human anatomy and the basic principles of physical therapy. The course should prepare students for any higher-level PT course offered in the PTA curriculum. P T 384 is a prerequisite for P T 150, P T 160, P T 202, P T 203, P T 205, P T 250, P T 260, P T 270, P T 270W, P T 280, P T 280W, P T 395E, P T 395F, P T 395G, and 395W. P T 384 will be offered once per calendar year and expected enrollment is 20-45 PTA students, with maximum of 15 students per lab section.

Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details, check the specific course syllabus.

## **Physics (PHYS)**

**PHYS 001 (GN)** The Science of Physics (3) Historical development and significance of major concepts, with emphasis on the nature of physics and its role in modern life. (For students in non-mathematical fields.)

### **PHYS 001 The Science of Physics (3) (GN)**

**(BA)** This course meets the Bachelor of Arts degree requirements.

Introduction to the basic concepts of physics at a conceptual level for students in non-technical majors. Provides a broad survey of the history, concepts, and applications of physics including topics such as classical mechanics in one- and two-dimensions, Newton's laws of motion, work and energy, momentum, rotational motion, vibration, sound, and waves, heat and the laws of thermodynamics, electricity and magnetism, including simple electrical circuits, and topics in 20th century physics, including relativity and quantum mechanics. Course objectives include the development of an understanding of the scientific method, its application to physics problems of historical interest, as well as to modern applications; providing an appreciation of the historical role played by physics in the development of modern science, its role in important cultural and societal issues, and in understanding the basic laws of nature, as applied to everyday experience, natural phenomena, or applications technologies (old and new); the development of scientific literacy, to help motivate the many connections of physics to other fundamental scientific fields and applications disciplines; providing experience in problem solving and the conceptual understanding of physics, and emphasizing the recurring role of a few important concepts, cutting across many scientific disciplines, such as the fundamental laws of classical mechanics, the basic laws of thermodynamics (including conservation of energy), as well as applications of modern quantum theory.

**PHYS 010 (GN) Physics Behind the Headlines (3)** Select topics in modern physics with emphasis on understanding science related articles in the news (For students in non-mathematical fields.)

**PHYS 010 Physics Behind the Headlines (3)  
(GN)**

Introduction for non-science majors to select topics in the modern physics of quantum mechanics and relativity with the goal of understanding recent technological advances, scientific breakthroughs and social events related to science as they appear in the news. These range from the discovery of the Higgs boson and dark energy to developments in lasers or superconductors. Social events in the news where science played a large role such as the Roswell "UFO" event in 1947 or the Fukushima nuclear crisis in 2011 will also be discussed. Course objectives include the understanding of the scientific method and scientific reporting; learning the conceptual aspects of the structure of matter from atoms to quarks, waves, energy and light; quantum mechanics and its applications to high tech such as computers and lasers; relativity  $E=mc^2$ , nuclear forces, gravity and the Big-Bang theory. Particular emphasis will be put on learning the scientific standards for a hypothesis to be truly established as a working theory and how the simple laws of physics apply broadly to many different systems. This class will emphasize conceptual aspects and there is no mathematics prerequisite.

**PHYS 150 (GN) Technical Physics I (3)** Elementary treatment of topics in mechanics, heat, wave motion, and sound leading toward an understanding of technical applications.

**PHYS 150 Technical Physics I (3)  
(GN)**

PHYS 150, Technical Physics I, provides an algebra-based introduction to mechanics, heat, wave motion, and sound exemplifying scientific method and leading toward an understanding of technical applications. It is the first course in a two-course sequence with PHYS 151 surveying all of physics. It includes topics such as measurement, dimensional analysis, systems of units, describing motion in one dimension, scalars and vectors, describing motion in two and three dimensions, projectile motion, circular motion, particle dynamics via Newton's Laws of Motion, forces, work and energy, momentum, systems of particles, collisions, rotational motion of rigid bodies, torque, moment of inertia, static equilibrium, mechanical advantage, mechanical properties of materials, fluids, vibrations, wave motion, sound, temperature, heat, thermodynamics, and heat transfer.

Students attend two lecture/recitation classes and one two-hour laboratory/activity period per week. Classes emphasize conceptualizing the basic ideas, terminology, and principles of the physical phenomena of nature; their quantitative expression through algebra and trigonometry; their relation to applications in science and technology; and their use in quantitative problem solving. Both computer-based and traditional lab exercises and activities illustrate class material and

scientific method while giving students experience with a variety of measuring tools and the general principles of measurement, including the analysis of error. Students work collaboratively in small groups to plan their measurements, collect and analyze data (often using modern computer hardware and software), make judgments based on their results, and communicate their efforts and conclusions in a written lab/activity report.

The prerequisite for this course is 1 1/2 units of algebra. Prerequisite or Concurrent: MATH 021, 081. It is a prerequisite for PHYS 151 and is a required course for many engineering technology programs. It is offered at least once per academic year at all Penn State locations with engineering technology programs. Class size varies up to about 40 students per lecture section and 21 to 24 students per lab/activity section.

Course evaluation is based on a combination of regular homework assignments and/or quizzes, written lab/activity reports, two or three exams, and a final exam.

**PHYS 211 (GN)** General Physics: Mechanics (4) Calculus-based study of the basic concepts of mechanics: motion, force, Newton's laws, energy, collisions, and rotation.

PHYS 211

**PHYS 211 General Physics: Mechanics (4)  
(GN)**

**(BA)** This course meets the Bachelor of Arts degree requirements.

Calculus-based introduction to classical mechanics, including such topics as: measurement, dimensional analysis, motion in one-dimension, vectors, motion in 2 and 3 dimensions, relative and circular motion, force and dynamics, Newton's Laws, friction, kinetic energy, work, potential energy, energy conservation, systems of particles, center of mass and momentum, elastic and inelastic collisions, rotation (moments of inertia), rolling motion, torque, angular momentum, static equilibrium, gravitational force and Kepler's laws, gravitational potential energy, oscillations, waves (transverse and longitudinal, superposition of waves).

This course is designed to provide students with a working knowledge of the elementary physics principles mentioned above, as well as their applications, and to enhance their conceptual understanding of physical laws. Students attend two lectures, one recitation session, and one two-hour lab/activity period per week. Use of a combination of computer-based and traditional lab exercises is expected and collaborative learning exercises will be used in both lab and recitation settings. The introduction of data acquisition and analysis methods (often making use of modern computer tools) will be stressed in the laboratory/activity period. Course evaluation is based on a combination of regular homework sets and/or quizzes, reports from the lab/activity period, midterm and final exams and other evaluative tools. The course is an important prerequisite for later work in many science and engineering disciplines.

**PHYS 230** Introduction to Relativity (3) Introduction to special and general relativity including space-time diagrams and relativistic kinematics, length contraction, time dilation, equivalence principles, curved space and cosmology.

### **PHYS 230 Introduction to Relativity (3)**

This course is designed for science or engineering students who have successfully completed calculus-based physics courses through electricity and magnetism (PHYS 212), and differential and integral calculus (MATH 140 and 141). Co-requisites of linear algebra (MATH 220) and vector calculus (MATH 230 or 231) are required. This course should provide the student with a mathematical and physical understanding of relativity theory beyond that which one encounters in semi-popular treatments of the subject. The mathematical skills which this course will develop, e.g. tensors and tensor analysis, should be especially useful to students in a wide range of science and engineering fields from computer science to physics and electrical engineering.

General Education: None

**PHYS 237** Introduction to Modern Physics (3) Relativity and quantum theory applied to selected topics in atomic, molecular, solid state, and nuclear physics.

### **PHYS 237 Introduction to Modern Physics (3)**

A broad survey of post-classical physics, taken by physics and other science and engineering students. Required of all physics majors, it is typically taken in the fourth-semester. The course covers much of the modern physics curriculum including topics such as special relativity, the concepts and mathematical formalism of quantum mechanics, both in one- and three-dimensional model systems, and the applications of quantum theory to topics ranging from atomic/molecular, nuclear, particle, and condensed matter physics to astrophysics.

The course is a prerequisite for a junior-senior course in quantum mechanics.

Bachelor of Arts: Natural Sciences

Effective: Spring 2010

Prerequisite: MATH 022MATH 026 ; orMATH 040 ; orMATH 041 or satisfactory performance on the mathematics proficiency examination

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**PHYS 250P** (GN) Introductory Physics I (0) Selected topics in mechanics, heat, and sound.

**PHYS 250P Introductory Physics I (4)  
(GN)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Algebra-based introduction to classical mechanics, including such topics as one- and two-dimensional motion, vectors, relative and circular motion, force and dynamics, Newton's laws of motion, work and kinetic energy, potential energy and

energy conservation, momentum, rotational motion and angular velocity, static equilibrium and properties of materials, static and moving fluids, vibrations, simple harmonic motion, general properties of waves, sound and human hearing, temperature and kinetic theory, heat and calorimetry, and the basic laws of thermodynamics.

This course is designed to provide students with a working knowledge of the elementary physics principles mentioned above, as well as their applications to everyday phenomena and to the life sciences, to enhance their conceptual understanding of physical laws, and to increase their problem solving abilities especially as applied to physical systems. The mathematical prerequisites for this course (and the subsequent PHYS 251) are mathematics at the level of algebra and trigonometry, demonstrated by suitable coursework or demonstration of satisfactory performance on the mathematical proficiency exam. Students attend two lectures, one recitation session, and a two-hour lab/activity per week. Students perform laboratory experiments, discuss their results, and write up their conclusions in weekly lab reports. Course evaluation is based on a combination of homework, quizzes, lab reports, midterm and final exams, and other evaluative tools. The course is a prerequisite for the second semester continuation, PHYS 251.

**PHYS 400** Intermediate Electricity and Magnetism (3-4) Electrostatics and magnetostatics in vacuum; electrical and magnetic properties of matter; electrodynamics, Maxwell's equations, conservation laws, electromagnetic waves and radiation.

#### **PHYS 400 Intermediate Electricity and Magnetism I (3-4)**

A second undergraduate course in electricity and magnetism, required of all physics majors who typically take it in their fifth or sixth semester. The course includes a review of vector calculus, and in-depth discussions of electrostatics, magnetostatics, in vacuum and in matter, time-varying electric and magnetic fields and electrodynamics, leading to Maxwell's equations. Discussions of conservation laws for charge, energy, and momentum, electromagnetic waves (in vacuum and in matter and at boundaries), electromagnetic vector and scalar potentials and fields, and an introduction to radiation are included.

**PHYS 402** Electronics for Scientists (4) Circuit and network theory; active devices; amplifiers; introduction to digital electronics; noise theory.

#### **PHYS 402 Electronics for Scientists (4)**

A junior-senior theory/laboratory course providing a survey of modern electronics from a data acquisition and analysis point of view. One of several possible lab-based courses taken by physics majors in several options to satisfy a lab requirement, typically taken by physics majors in their senior year. This course is very useful for students interested in experimental research work and includes examples such as digital data acquisition, the lab study of various electronic devices, fast Fourier transform methods and other topics.

**PHYS 419 (MATH 419)** Theoretical Mechanics (3) Principles of Newtonian, Lagrangian, and Hamiltonian mechanics of particles with applications to vibrations, rotations, orbital motion, and collisions.

**PHYS (MATH) 419 Theoretical Mechanics (3)**

A second course in classical mechanics, required of all physics majors who typically take it in their 5th or 6th semester. The course includes a review of relevant mathematics, detailed discussions of advanced topics in Newtonian mechanics, introductions to Lagrangian and Hamiltonian dynamics, and applications to such forced oscillations, orbital motion, vibrational motion and normal modes, rigid body motion, and collisions.

It is a prerequisite for Physics 461, which is a second semester extension. It is also a valuable background for most 400-level physics courses, especially Physics 410.

**PHYS 444** Topics in Contemporary Physics (2) Modern research topics and career opportunities in physics; employment, graduate education, and tailoring the physics curriculum to meet career goals.

**PHYS 444 Topics in Contemporary Physics (2)**

A course required of all Physics majors, designed to be taken in the Spring semester of the junior year. Introduces students to modern research areas in physics at Penn State and elsewhere. Provides background on career choices available with an undergraduate physics degree, including employment opportunities, planning for graduate study, and tailoring the physics curriculum to meet career goals. The course structure is typically comprised of talks by Penn State faculty, outside visitors, students panels, and other information speakers, with students writing short and long reports using the class presentations discussions, and research from outside sources (research journals, internet, etc.) as background material.

**PHYS 457** Experimental Physics (1-3) Selected experiments in various fields of physics.

**PHYS 457 Experimental Physics (1-3)**

An intermediate laboratory course, required of all Physics majors and taken by other students, typically in their junior/senior years, this course provides an introduction to modern laboratory techniques and instrumentation used in research labs. Typical 'short' experiments include X-ray diffraction, Compton scattering, velocity of light determination, high-temperature superconductors, Raman scattering, Hall effect, scanning tunneling microscopy (STM), and many others, as well as long experiments. This three-credit course also serves as the writing intensive course at the 400-level for most physics majors. One- and two-credit versions of 457 (without the writing-intensive component) are taken by science and education students outside of physics.

General Education: None

**PHYS 458** Intermediate Optics (4) Geometrical and physical optics: theory of lens systems, aberrations, apertures, interference, diffraction, polarization.

**PHYS 458 Intermediate Optics (4)**

An intermediate optics course which builds on the wave and optics used in the 200-level introductory course, this course (which includes a lab component) focuses on physical and geometrical optics, propagation of light and its interaction with matter, polarization, interference, and diffraction. Optical components such as lenses, mirrors, prisms, fiber optics, spectrometers, and interferometers are discussed and employed. The laboratory component includes a number of 1-2 period experiments designed to illustrate the principles of applied geometrical and physical optics. Longer (5 period) experiments are also included which utilize modern, computer-controlled multi-channel detection systems and are applied to such systems as thin-film optics and the optics of semi-conductors.

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**PHYS 462** Applications of Physics in Medicine (3) Applications of physics in human physiology and in instrumentation for medical diagnosis and treatment.

**PHYS 462 Applications of Physics in Medicine (3)**

This course is a general survey of applications of physics in understanding the physiology of the human body--for example, the function of the eye, ear, and electrical conduction. Physical principles behind diagnostic medical measurement are covered, including imaging modalities: X-ray, nuclear, magnetic resonance, and ultrasound. Treatment applications such as laser surgery and radiation therapy are also covered. The course is appropriate for students intending work in a health profession.

General Education: None

**PHYS 472** Elements of Nuclear Physics and its Applications to Medical Imaging and Treatments (3) Introduction to the theory of nuclei, interactions with fast particles, and applications to medical imaging and radiation oncology.

**PHYS 472 Elements of Nuclear Physics and its Applications to Medical Imaging and Treatments (3)**

Modern physics tools are used now in numerous medical diagnostic methods, for various treatments of tumors, and so on. The class will focus several aspects of modern physics relevant to medical applications: (i) mechanisms of interaction of high energy particles, i.e. photons, electrons, protons, neutrons, and nuclei, with materials and methods of generating beams of such particles, (ii) applications of such beams for obtaining images of the body, (iii) radioactive decays of nuclei and use of the nuclear decays for imaging of dynamical processes in the body, (iv) shell structure of nuclei and applications of nuclear magnetic resonance in imaging. The course will allow students to understand the physics underlying the medical application of modern physics and physics of a wide range of new tools used in medicine, including computer tomography, positron emission tomography, and magnetic resonance imaging, as well as use of photon, proton and nuclear beams for tumor treatments.

**PHYS 479** (MATH 479) Special and General Relativity (3) Mathematical description, physical concepts, and experimental tests of special and general relativity.

**PHYS (MATH) 479 Special and General Relativity (3)**

This course is intended as an elective course (within the undergraduate Physics program) for Physics majors to be taken in their senior year. Intended to be cross-listed with MATH, it can also be used in support of a Mathematics minor and, in some options, within the Math program as a program elective as well. The course significantly expands upon the introduction to Special Relativity (SR) seen in PHYS 237, including discussions of experimental tests of SR and applications to relativistic mechanics. It then introduces students to the mathematical machinery required to understand General Relativity (GR), starting with the description of curved spacetimes and geodesics. It discusses solutions to the Einstein equations and surveys the classic tests which established the validity of General Relativity. It concludes with applications of GR in such areas as black hole physics, the generation and detection of gravitational waves, other topics (such as cosmology, relativistic astrophysics, etc.).

## **Plant (PLANT)**

**PLANT 220** (GN) Gardening for Fun and Profit (3) Fundamentals of designing, planting and maintaining residential landscapes and edible gardens for students with minimal/intermediate horticulture knowledge.

**PLANT 220 Gardening for Fun and Profit (3)**  
(GN)

The objective of PLANT 220 (GN), Gardening for Fun and Profit is to provide students with science-based fundamentals of establishing and maintaining residential landscapes and edible gardens. The course provides information that is especially useful to those with minimal to intermediate knowledge of horticultural plants. A background in gardening or landscaping is not needed. Class topics are presented by guest speakers who are scientists and experts in the topic area. Major topics include proper plant selection, soil preparation for establishing plantings, the basics of seeding, growing transplants and planting, the basics of planting and maintaining trees and shrubs, avoiding common mistakes in the garden and landscape, gardening resources, storage and processing fruits and vegetables for home use and ideas for making profit from gardening activities. This course includes a weekly laboratory session where students gain practical skills needed for developing and maintaining residential landscapes and edible gardens through hands-on activities and field trips.

**PLANT 461** Emerging Issues in Plant Sciences (3) A discussion-based capstone course that elucidates the current and up-and-coming issues in the plant sciences.

### **PLANT 461 Emerging Issues in Plant Sciences (3)**

Emerging Issues in Plant Sciences is a capstone course designed for the Plant Sciences, and is also available to students from other majors. This highly participatory course emphasizes many of the interdisciplinary topics in the plant sciences today, with a focus on balancing plant production with environmental conservation. Topics include: conservation cropping systems and tillage, soil health; transgenic crops; managing landscapes for ecosystem services, climate change, pest and nutrient management alternatives; biofuels; urbanization and regional food systems. It is a team taught course with guest lectures by experts on specific topics and includes student analysis and discussion with the guidance of the instructors. Students will read and write about publications from the peer reviewed literature and research and present about an emerging issue.

## **Plastics Engineering Technology (PL ET)**

**PL ET 050** Computer Applications for Plastics Engineering Technology (2) Programming, spreadsheets for the solution of

technical problems, internet access for background and support information, formatting professional reports, creating presentations.

**PL ET 050 Computer Applications for Plastics Engineering Technology (3)**

This course will acquaint first semester students with a variety of computer software programs that will be used in upper level classes. Extensive hands-on laboratory problems are designed to reinforce the lecture. After completing this course, the students should be able to access plastic related information on the Internet, prepare a formal report complete with footnotes or endnotes, create a computer generated technical presentation, import and export data between different software packages, and program technical spreadsheets for solving engineering problems. Student competency will be assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40 to 50 students.

**PL ET 222 Introduction to Plastics Processing (4)** Introduction to plastic processing methods, materials, tooling, design, and equipment. Safe operation and practices are emphasized.

**PL ET 222 Introduction to Plastics Processing (4)**

This course provides an introduction to plastics processing and is intended to provide broad foundational knowledge of the different types of plastics processing methods, equipment, and materials. The educational objectives are to develop competency in the determination of potential methods for manufacturing various component designs and the determination of cost effectiveness for the possible process alternatives selected. After completing this course, the student should have a basic understanding of a multitude of plastic processing methods and have knowledge of the interrelationship of part and tool design as it impacts manufacturing. The student should also understand materials and material flow phenomena as it affects processing and should understand the processing and troubleshooting techniques typically found in the industry.

**PL ET 227 Plastics Processing & Statistical Methods (4)** Study of advanced issues in plastics processing, such as design of experiments and SPC/SQC will be covered.

**PL ET 227 Plastics Processing & Statistical Methods (4)**

The course is intended to give the students the basic tools needed to identify and troubleshoot plastic processing problems. Injection molding will be the primary focus. The course objectives are: to introduce the student to the root cause of injection molding problems both at the start-up of a new mold and during production runs, to identify when a process has changed and to monitor the effects of attempts to improve the process using statistical process control and other statistical methods, to identify and minimize the sources of process variation; to ascertain the capability of measurement systems, and to gain understanding in the use of designed experiments techniques for developing cause and effect information. During the course, students will build upon knowledge gained in earlier courses in plastics materials and plastics processing.

### **PL ET 232 Introduction to Part and Tool Design (3)**

This is the introductory course for designing plastic parts using CAD solids modeling techniques. This course builds upon fundamental CAD modeling skills developed during earlier courses and initially focuses on the fundamental techniques needed to construct solids models for thin walled plastic parts. Focus then shifts toward using similar solids and surface modeling techniques for designing molds for plastic parts. The course objective is to provide the basic knowledge to construct solid models of plastic parts and related tooling and to lay the foundation for more advanced plastic part and mold design courses.

**PL ET 235** Tool Design & Machining (2) Study of the methods used to create the tooling used in plastics fabrication and the methods of maintaining tooling.

### **PL ET 235 Tool Design & Machining (2)**

This course will provide the students with an understanding of the construction methods and materials used in the creation of plastics tooling. Various methods of mold manufacture are introduced along with the fabrication practices needed to permit successful mold operation. The course concludes with a study of the materials used in mold construction and plastics tooling preventative maintenance practices. The course objective is to provide the knowledge needed to properly design parts for manufacturability. Students will also learn how to set up a system to maintain tooling to reduce catastrophic failures. Through the lab portion of this class, the students will obtain hands-on experience in the actual construction methods. This course uses knowledge gained in earlier plastics materials and processing courses to guide tooling design and fabrication decisions.

**PL ET 304 Plastic Material Properties and Applications (3)** Synthesis, polymerization, and characterization of thermoplastic and thermoset polymeric materials.

### **PL ET 304 Plastic Material Properties and Applications (3)**

This course studies the fabrication of polymers and macromolecules. Current commercial techniques are covered in detail and encompass the reactions and processes currently being used in the plastics industry today. Also covered is the technology for creating different grades of polymers by using various fillers, additives, and blends to create variations within the known polymers. This is supplemented by laboratory exercises that draw together theory and practice.

Polymer synthesis is a key link between the atoms present before they become a part of a polymer molecule and the molded article, the end product of the molding operation. The course objective is to establish a basic knowledge of these processes to enable a deeper understanding of the capabilities of molding, designing, and the performance of polymer articles. Students will be able to start with a handful of carbon atoms, a synthesis procedure, and an injection molding machine, and understand what affects the polymer at each stage, rather than being limited to understanding a given molding process. It will allow students to adapt to industrial needs and the push towards a scientific approach to problem solving, rather than acting as traditional molding machine processors. Students will also be able to correlate the polymerization process to the performance derived in plastics processes and molded articles. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40 to 50 students.

**PL ET 323 Packaging Processes (3)** In-depth studies and laboratory experiments will be conducted on processes such as blow molding, thermoforming, extrusion and other packaging processes.

### **PL ET 323 Packaging Processes (3)**

In this course the student will learn about plastic packaging processes of blow molding, thermoforming, extrusion. Other minor processes will be presented. The course objectives are to develop student proficiencies in identifying the polymer material requirements for each process, in identifying the mold design and construction techniques for each process, and knowing how plastic packaging processes differ from injection molding. The laboratory will include experiments that show the advantages of each process and to develop student competency in running equipment for each process explored. The students shall also develop competency in conducting elementary process troubleshooting for each process. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40 to 50 students.

**PL ET 330 Advanced Tooling & Rheology (4)** Tooling design strategies are developed considering a material's physical and rheological influences on processing and part formation.

### **PL ET 330 Advanced Tooling & Rheology (4)**

This course is intended to allow the student to develop an understanding of the critical relationship between the physical and rheological properties of plastic materials and their influence upon processing and part formation. The course objective is to establish this relationship since it is the basis of establishing tooling design strategies for optimizing part quality, moldability, and productivity. Upon completing the course, the student will have proficiency in the use of injection molding analysis software (Moldflow) and be able to develop strategies for its efficient and effective application. The software is used as a means to accelerate and enhance the students understanding of the injection molding process. Students will learn how software usage can be interwoven with knowledge of polymer melt rheology, shrinkage, warpage, residual stresses and their relationship to tooling to enable proper process and molded part design. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40 to 50 students.

**PL ET 345 Heat Transfer (2)** Fundamentals of heat transfer including conduction, convection, and radiation.

### **PL ET 345 Heat Transfer (2)**

The course is intended to allow the student to develop the ability to conceptually evaluate heat transfer problems, and solve practical problems that might be encountered in the plastics industry including those that relate to energy management in plastic materials or processes. The course objectives are accomplished by establishing the concepts of the three principle mechanisms of heat transfer, solving plastics related problems illustrative of each mechanism, and reinforcing theoretical concepts learned through the use of simulation software and hands-on laboratory experiments. During this course students will build upon the knowledge gained in an earlier course in the thermal and fluid sciences. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40 to 50 students.

**PL ET 350 Design of Plastic Parts (4)** Designing plastic parts utilizing CAD, FEA, and CAE technologies for the design and for structural, dimensional, and process evaluation and optimization.

### **PL ET 350 Design of Plastic Parts (4)**

The educational object of this course is to develop knowledge in the process of designing plastic parts and products. The course focuses on the critical relationship between the part design and the plastic material, tooling and the specific manufacturing methods used to produce the part. Use of CAE technologies are used for enhancing concurrent engineering strategies and evaluating manufacturability of a design. The course develops special design guidelines to accommodate plastic material characteristics and production requirements. The course also addresses issues of assembly and decoration of plastic parts. Upon completing the course students will demonstrate competency in relating how engineering properties of plastic materials and their unique characteristics relate to product design. This includes understanding viscoelasticity and the effects of time, strain, rate, temperature and environment on plastic materials and the product. During this course students will build upon the knowledge gained in previous courses on strength of materials, plastic materials, part and tool design and finite element methods. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40-50 students.

**PL ET 366 Fluid and Thermal Sciences (3)** Fundamentals of thermodynamic principles, fluid statics, and fluid dynamics.

### **PL ET 366 Fluid and Thermal Sciences (3)**

This course is intended to develop the student's ability to conceptually evaluate thermal or fluid problems, and solve practical problems that might be encountered in the plastics industry. The course objectives are: to introduce the fundamentals of thermodynamic behavior by defining pertinent material properties that define an equilibrium state based on temperature and pressure, to study internal energy, enthalpy, and the specific heats of liquids, solids, and gases, including ideal gas behavior and changes in energy level as a result of phase changes, and to introduce mechanical and electrical work leading to applications of the First Law of Thermodynamics. Other objectives are to study fluid static principles involving submerged body behavior by investigating topics of buoyancy and centers of pressure. Fluid dynamics studies explore the Bernoulli and Energy equations, head losses, and calculation of pump requirements from pressure drop and volumetric flow data. Criteria for determining laminar and turbulent flow are established. Viscosity of fluids and fluid rheology topics are also introduced. Students will apply the lessons learned in a subsequent course on heat transfer. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40 to 50 students.

methods such as design of experiments.

### **PL ET 462 Advanced Injection Molding (3)**

This course continues studies in advanced processing and is intended primarily for students with career interests as a process engineer in an injection molding facility. The course objectives are to: establish how to use data collected from a molding process for new machine evaluation, expand knowledge in process monitoring & troubleshooting, perform advanced process modeling, and develop an awareness of computer integrated manufacturing. The student will study new developments in process control and advanced injection molding technologies (such as gas assist, powder injection molding, & microcellular molding). During the course students will build upon knowledge gained in earlier courses in instrumentation and controls, plastics processing, and advanced tooling and rheology. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year as a technical elective with an enrollment of 15 to 20 students.

**PL ET 465 Advanced CAE for Plastics II (3)** Advanced Computer-Aided Engineering techniques for plastic part design.

### **PL ET 465 Advanced CAE for Plastics II (3)**

This course focuses on advanced applications of computer-aided design (CAD), computer-aided engineering (CAE), and finite element analysis (FEA) to plastic product development and plastic processes. The course objectives are to: analyze gas-assist injection molding from a design, simulation, and processing perspective; conduct data exchange techniques that reflect industry trends for moving geometry between native CAD systems, use finite element preprocessors, and analytical software packages; conduct an in-depth cooling analysis using mold cooling software and finite element heat transfer techniques; use CAE in the analysis of shrinkage and warpage; and study design optimization software approaches to maximize strength and minimize material investment. Extensive lab time is allotted for hands-on application of material present in the class, and is tied closely to lecture concepts. During the course students will build upon knowledge gained in earlier courses in plastics part design, heat transfer, and finite element methods. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. **PL ET 481 Plastic Product Development (3)** This course provides students with an in-depth overview of the integrated new product development process.

### **PL ET 481 Plastic Product Development (3)**

Current product development trends have moved toward an integrated and interdisciplinary development process that includes team members from all aspects of the corporation. This course serves as an overview of that integrated product development process. Prior to this course, students will have studied methods and processes for the detailed and structural design requirements for plastic components. In this course, the students will be taught how their detailed design process fits into the remainder of the overall product development process. This will be accomplished by traditional lectures on the process and is underscored by a semester long project in which the students will form teams, invent a product idea, and develop that idea to a prototype state.

Among the topics addressed are:

- Concept development and selection
- Working in a interdisciplinary team environment
- Gathering and organizing customer needs
- Translating customer needs into product specifications
- Product development economics
- Prototyping methods and purpose
- Industrial design
- Intellectual property

**PL ET 483** Plastics in Medical Applications (3) This course focuses on plastics materials and properties and how they meet the unique medical application and device requirements.

**PL ET 483 Plastics in Medical Applications (3)**

This course studies plastics materials in medical applications and devices. The course focuses on the properties that are important to medical devices such as chemical resistance, sterilization and biocompatibility. A broad range of polymers will be reviewed including commodity resins, such as polyolefins, engineering resins such as polycarbonates, acrylics, nylons and advanced polymers including polysulfones, polyetherether ketones and aramids. The synthesis, production and structure property relationships will be studied with particular emphasis on the effect on sterilization, biocompatibility and FDA regulatory requirements. The effect of additives, stabilizers, fillers and blends will also be reviewed.

**PL ET 484** Medical Manufacturing Methods (3) This course provides instruction in the methods and practices used in the manufacturing of plastic devices in the medical industry.

**PL ET 484 Medical Manufacturing Methods (3)**

This course provides instruction in the methods and practices used in the manufacturing of plastic devices in the medical industry. The course includes both manufacturing and regulatory requirements. A large portion of the class will involve a simulated process validation exercise. The concepts will be introduced in lecture, parts will be manufactured and measured in the processing lab, and data analysis will be completed in a computer lab. Injection molding will be emphasized as the major plastic part production method, but other processes will be used as needed. Clean room requirements, sterilization and material handling, and common assembly methods will also be covered.

**PPEM 120** (GN) The Fungal Jungle: A Mycological Safari From Truffles to Slime Molds (3) This course is an introduction to the world of fungi and their impact on humans and the environment around us.

#### **PPEM 120 The Fungal Jungle: A Mycological Safari From Truffles to Slime Molds (3)**

Fungi are a fascinating group of organisms that we encounter in everyday life. Apart from the mushrooms on our pizza or mold in our bathtub, fungi are important plant pathogens that severely interfere with agricultural production, cause diseases in humans and insects, and have a major role in ecosystems. The aim of this course is to introduce students to the world of fungi and review the important functions of fungi in human society, to educate students in basic concepts of fungal biology that are scientifically interesting and important to human society, and to train students to understand both basic and current topics in science. Topics to be covered include the structure and classification of fungi, the ways in which fungi interact with other organisms as pathogens or beneficial partners, the contributions fungi make to ecosystem functioning, and the ways in which humans use fungi and products derived from them. We will discuss examples that students are familiar with and encounter in their everyday life. The course also has an informal lab section that includes several class activities and visits. Class activities are designed to be done in small teams and promote team-work learning, problem solving and critical thinking skills. Students will learn how to isolate, grow and identify fungi, among other activities, culminating in a fungal feast. For example, students will could keep a journal on fungi, take quizzes, and deliver

a presentation of their favorite fungus, among other assignments. This course is intended to be an introductory science course to non-science majors and will provide important general science knowledge as well as specific details about fungal biology.

**PPEM 225 Mushroom Cultivation (3)** Students will learn about commercial production of edible mushrooms and how to cultivate them on both a small and commercial scale.

### **PPEM 225 Mushroom Cultivation (3)**

Pennsylvania's growers account for nearly 2/3 of the US total mushroom production. The production of the button mushroom, *Agaricus bisporus*, is a technically challenging process that requires a thorough understanding of substrate preparation and pasteurization (Phase I and Phase II composting) to be successful. The class will follow an *Agaricus bisporus* crop, at the Mushroom Research Center on campus, for the 11 week cropping cycle, participating in all aspects of button mushroom production. The course will also cover specialty mushroom production (including shiitake, oyster, maitake, enoki), which can be achieved on a small scale with some basic training and understanding of the different nutritional and substrate preparation techniques. Because cultivation of many specialty mushrooms is easier than button mushroom production, we will cultivate shiitake mushrooms both on sawdust logs as well as traditional oak logs. The class will have the opportunity to cultivate at least one other specialty mushroom, such as the oyster or lion's mane, in lab as well. We will schedule one Saturday field trip to visit several commercial mushroom farms in southeast Pennsylvania. Though this trip is not mandatory, it will be a good chance to view all aspects of commercial mushroom farming.

**PPEM 300 (GN) Horticultural Crop Diseases (3)** Diseases of horticultural crops are examined stressing their cause, diagnosis, management and national and international importance.

### **PPEM 300 Horticultural Crop Diseases (3)**

Diseases of horticultural crops are examined stressing their cause, diagnosis, management and understanding the roles they play in national and international trade and bio-security concerns. The biology of plant diseases involving a broad range of biotic and abiotic plant pathogens will be discussed. The objectives are that the student completing the course

will 1) be able to describe the causes of plant diseases in general and horticultural crop diseases in particular; 2) be able to explain the interactions that occur among the plant, the environment, and biotic and abiotic agents during disease development; 3) have the ability to diagnose and explain the management of key diseases of horticultural crops; and 4) be able to describe the economic and social impact that plant diseases have on horticultural crops, including how the world trade of these crops can result in the global spread of pathogens important to other agricultural crops and native plants in the environment. A once-a-week, 2 hour laboratory will stress practical aspects of identifying diseases and plant pathogens and gaining experience in selecting appropriate disease control practices. The course is recommended for majors in horticulture and urban forestry but is appropriate for everyone interested in growing plants for enjoyment or profit or in maintaining the health of horticultural crops. This course provides an introduction to plant pathology in general and can be followed by more in-depth courses in plant-microbe interactions, mycology, nematology, phytobacteriology, air pollution impacts on terrestrial ecology, or forest pathology.

**PPEM 405 Microbe-Plant Interactions: Plant Disease and Biological Control (3)** Survey of microbe-plant interactions causing plant disease, mechanisms of pathogenesis, disease management, and microbial and molecular biological control strategies.

### **PPEM 405 Microbe-Plant Interactions: Plant Disease and Biological Control (3)**

Plant health in both natural and agricultural ecosystems is essential for sustaining human society and all other life forms on Earth. Plant disease epidemics are common and diverse and can have devastating effects on our population and economy by debilitating the ecosystems on which we depend. This course focuses on biological and environmental factors that influence microbe-plant interactions which in turn determine plant health and initiate plant disease epidemics. Developing strategies for maintaining healthy plants in both natural and agricultural ecosystems requires an understanding of pathogen and host biology, as well as the role of the environment in disease epidemiology. Students will learn about the survival and spread of important plant-infecting fungi, bacteria, phytoplasma, and viruses and how mechanisms for microbial pathogenicity are influenced by the environment. The final section of the course will focus on the use of beneficial microorganisms to maintain and improve plant health. Grades will be based on student performance on a wide variety of activities including labs, quizzes, seminar reports, and exams.

**PPEM 412 Turfgrass Disease Management (3)** Introduction to biology of turfgrass pathogens and management of cool- and warm-season turfgrass disease.

### **PPEM 412 Turfgrass Disease Management (3)**

This course will provide an introduction to concepts of disease processes in plants and biology of plant pathogens, principles of turfgrass disease diagnosis based on symptom development, recognition of signs and microscopic structures of the pathogens, environmental and cultural management factors influencing disease development, significance of pathogen life cycle in disease epidemic development, and integrated turfgrass disease management practices for root and foliar disease. Disease of various turf types for golf courses, residential lawns, landscapes, and athletic fields will be discussed. Disease topics will include diseases that commonly occur in winter, disease that develop in spring and persist into summer, and disease that initiate in summer and remain active until late fall in most regions of North America. A number of non-infectious disorders of turf caused by extreme environmental conditions and improper cultural practices will also be discussed.

**PPEM 419 Plant Nematology (2)** The biology of plant pathogenic nematodes, the diseases they cause, and their control.

**PPEM 419 Plant Nematology (2)**

The course provides a comprehensive overview of important plant-parasitic nematodes causing economic damage to food, fiber and ornamental crops. Major topics include: identification, taxonomy, biology, ecology, plant-nematode interactions, symptomatology and nematode management. The laboratory portion of the course provides hands-on experience extracting nematodes from soil and plants and preparing them for microscopic examination. The course will provide students with sufficient background information to make a preliminary nematode disease diagnosis and control recommendations. The course will also present a broad overview of other important nematode groups found in the soil including free-living, predatory and entomopathogenic forms. Throughout the course, students will be introduced to important scientific literature on nematodes.

**PPEM 427 Mycotoxins: Effects of Fungal Toxins on Human and Animal Health (3)** Description and history of mycotoxicoses. Mycotoxin formation, occurrence, control, economic and social impacts, and regulatory issues.

**PPEM 427 Mycotoxins: Effects of Fungal Toxins on Human and Animal Health (3)**

This course will provide a comprehensive overview of the multi-disciplinary subject of mycotoxicology. Mycotoxins are chemicals produced by fungi that are toxic to humans and animals. Students will become familiar with the history and description of mycotoxins and mycotoxicoses, formation of mycotoxins, biology of mycotoxigenic fungi, methods of mycotoxin analysis, fate of mycotoxins in food processing, management and prevention of mycotoxins, regulations, and economic and social impacts. This course is appropriate for students who wish to learn more about fungi beyond the introductory level, as well as for those with interests in animal science and husbandry. The subject of mycotoxicology involves most aspects of the agriculture-food system so students of food science, crop and soil science, entomology and plant pathology will find relevant topics in mycotoxicology. Biology and microbiology students especially those with interests in plant-associated microbes and ecology will also benefit from this course. Course format will be two lectures per week and one period of discussion that will include laboratory activities, field trips, case study discussions, and student presentations.

## **Political Science (PL SC)**

**PL SC 001 (GS)** Introduction to American National Government (3) Introduction to development and nature of American political culture, constitutional/structural arrangements, electoral/policy processes; sources of conflict and consensus.

**PL SC 001 Introduction to American National Government (3) (GS)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course takes a broad look at American national government and American politics. It begins with a discussion of founding principles and documents and concludes by looking at how government uses its power. Readings and discussions cover the governing institutions-Congress, Executive, and Courts-and the institutions that link the American people to these-political parties, interest groups, and the media. Throughout, contemporary political events are placed in the context of theories, concepts, and arguments presented in class. By the end of the course students should have an understanding of how American national government is organized; a sense of what political scientists do, the types of questions they ask and the methods they employ; and the ability to make more informed choices in the political arena.

Class meets for two lectures and one discussion section each week. The recitation is led by a graduate teaching assistant and is used to review lecture material, do exercises based on the lectures and reading, and discuss current events and course materials. Grading is based upon multiple choice (or identifications) and essay exams, short papers (some based on applying course concepts to New York Times articles), and participation in section. The course is a prerequisite for

most upper level American Politics courses. It fulfills a lower level requirement for Political Science majors, and may be used by non-majors to fulfill General Education and Social/Behavioral requirements. It is generally taught every semester.

General Education: GS

**PL SC 003 Introduction to Comparative Politics (3)**  
**(GS)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

In this course, you will be introduced to the major types of governments in existence today. We will examine several democratic nations, and several dictatorships. We will learn how power is exercised in each major type of government and how different governments grant authority and seek the acceptance and legitimacy of their citizens.

In doing so, we will learn about the variety of ways to organize legislatures and executive branches, the difference between presidential and parliamentary systems, and the varying roles played by the courts and other legal institutions. We will also compare the different ways of holding elections and the different functions of political parties.

In addition, students will gain a better understanding of the history and politics of a small number of nations that will serve as examples throughout the semester. The countries used as examples will vary from semester to semester; however, these will usually include a mix of advanced industrial democracies, developing nations, and communist and former communist governments.

Students will take examinations that include multiple choice, short answer essays, and longer essays. Short projects or a major paper supplement exams. Students are also graded on attendance, participation and oral presentations in weekly recitation sections. The course fulfills one of the lower-division requirements for majors in Political Science and International Politics. For non majors this course may be used to fulfill a general education or Bachelor of Arts social/behavioral science requirement. It will be offered once a year with an enrollment limit of 180.

**PL SC 003U** (GS;IL) Introduction to Comparative Politics (3) Introduction to study of comparative government and politics: normative/ empirical theories; government functions in modern societies; representative structures and processes.

**PL SC 003U Introduction to Comparative Politics (3)**  
**(IL)**

This course provides an introduction to comparative politics. The course has three primary objectives: (i) to introduce students to the major questions in comparative politics, (ii) to acquaint them with the field's best answers, and (iii) to give them the tools necessary to think critically about those answers. The course views comparative politics as a subfield of political science, which, like all of science, is about comparison. In the course, students make many comparisons across disparate contexts and attempt to use such comparisons to test claims made about the political world. In doing so, they learn about the similarities and differences among countries, both democratic and authoritarian. They also learn about the conditions under which some claims about the political world apply or do not apply.

The course is organized around a set of questions that comparative scholars have asked repeatedly over the past several decades: What is the state and where did it come from? What is democracy? Why are some countries democracies whereas others are dictatorships? How might we explain transitions to democracy? Does the kind of regime a country has affect

the material well-being of its citizens? Why are ethnic groups politicized in some countries but not in others? Why do some countries have many parties whereas some have only a few? What are the material and normative implications associated with these different types of government? How does the type of democracy in a country affect the survival of that regime? Using the latest research in the field of comparative politics, students examine competing answers to substantively important questions such as these and evaluate the proposed arguments for their logical consistency and empirical accuracy.

In addressing the substantive questions that comprise this course, students are introduced to a variety of methods that have become central to the study of comparative politics. For example, students are exposed to tools such as decision theory, social choice theory, game theory, and statistical analysis. Throughout the semester, students will have homework assignments to better familiarize themselves with the concepts, theories, and methods that they encounter.

There will be three exams to evaluate the extent to which students have learned the requisite material. There will also be a short final paper in which students must pull together the theoretical insights and empirical evidence that they gained throughout the semester.

**PL SC 007 (GS) Contemporary Political Ideologies (3)** Critical analysis of contemporary political ideologies such as liberalism, conservatism, socialism, anarchism, fascism, feminism, and environmentalism.

**PL SC 007 Contemporary Political Ideologies (3)  
(GS)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Liberalism, conservatism, socialism, anarchism, fascism, feminism, and environmentalism are ideologies which have inspired political movements. Understanding their meaning is an essential aspect of the study of contemporary politics. In this course, we examine the basic principles of these ideologies and assess their power to mobilize people for political action. In the process, we also explore the role of ideology in America today, including the responsibility of democratic citizens to understand how ideology shapes their politics. This course serves as a prerequisite for all 400-level political theory courses. This course fulfills one of the lower division requirements for majors in Political Science. It is taken by nearly all Political Science majors. For non-majors this course will be used to fulfill general education social/behavioral science requirement and bachelor of arts social science requirement. Students will take examinations which include short answer and essay questions. They also trace a basic concept, e.g., equality, liberty, democracy, across the political ideologies studied. Their final take-home exam compares contrasting meanings of their chosen concept. Participation and group exercises in discussion sections are also graded. PL SC 117 will be offered twice a year with 90 seats per offering.

**PL SC 010 (GS) Scientific Study of Politics (3)** This course introduces students to both the scientific study of politics and the way that study advances our understanding of political actors, events, processes, and institutions.

**PL SC 010 Scientific Study of Politics (3)  
(GS)**

This course introduces students to both the scientific study of politics, and the way that study advances our understanding of political actors, events, processes, and institutions. It provides information about the elements of scientific reasoning, and introduces systematic approaches to studying politics through the lens of important puzzles and questions about international relations, comparative politics, and American politics. Students learn about relevant data sources, as well as how to interpret data appearing in graphs and tables. The course consists of three parts. The first part of the course offers an overview of the elements of scientific inquiry including causal explanation, empirical verification, theories and hypotheses, and dependent and independent variables. The second part of the course examines dominant approaches to studying politics including experiments, observational methods such as surveys and elite interviewing, formal models, archival research, and computational methods including text analysis. Each approach will be presented using a similar format. Students will be introduced to the approach through a combination of lectures and assigned readings. They will then look at and learn about data sources suited to and consider questions or puzzles that can be addressed by each approach. Careers that make use of the analytic skills associated with each approach also will be discussed. The final part of the course considers the benefits of scientific approaches over less systematic analysis and the challenges inherent in trying to explain complex political behavior, institutions, and events. By the end of the course, students will understand what it means to "do" political science: i.e., to ask questions about political phenomena, form

theories related to those questions, collect data, pick an approach to analyze the data, and draw inferences from the analysis.

(GS)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course has three major goals. First, you should come away from this course with an idea of what the scientific study of Political Science is all about. Second, you should come away from the course knowing some general theories (explanations) for international behavior that you should use when you think about international politics in the future. Third, you will be introduced to a number of important topics in international politics. These include the end of the Cold War, nuclear weapons, international economics, and international development.

Students will take examinations that include short answer and essay questions. Short projects or papers will supplement exams. Students are also graded on attendance, participation and oral presentations in weekly recitation sections. The course fulfills one of the lower-division requirements for majors in political science and international politics. For non-majors this course may be used to fulfill a general education or bachelor of arts social/behavioral science requirement.

It will be offered at least once per academic year with an enrollment limit of 180.

**PL SC 017 (GS) Introduction to Political Theory (3)** Introduction to basic issues in political theory through analysis of selected major political thinkers.

**PL SC 017 Introduction to Political Theory (3)  
(GS)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course examines how the ideas of selected political theorists have been -- and continue to be -- crucial for understanding how best to conduct our political lives. Following an introductory exploration of how political theorists think and write about politics, we will read selected theorists from three historical periods: ancient, modern, and contemporary. Our focus will be how these theorists respond to important questions about politics, including how their answers (and even their questions) change over time. Possible questions include: What are the rights of citizens? What are the purposes of states? When is a regime just? How should we organize authority? How should we participate in politics? What counts as political knowledge? How do knowledge and power interact in politics? Most important, what constitutes a good society and a good life? How can we work toward these? So these questions do not remain abstractions we also consider theoretically informed empirical research. By the end of the course, students have a better understanding of selected political theorists and the normative foundations of contemporary politics. This course serves as a prerequisite for all upper level Political Theory courses. This course fulfills one of the lower division requirements for majors in Political Science. Many Political Science majors and minors take it. For non-majors, this course may be used to fulfill general education requirements or the Bachelor of Arts social--behavioral science requirement. Grading is based on analytical papers and--or journal assignments, essay exams, occasional quizzes, group presentations, and class participation. PL SC 017 is offered once a year with 60 seats per offering.

**PL SC 020 Comparative Politics--Western Europe (3)  
(GS)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

The goal of this class is to learn how to compare democratic processes. Therefore, this course is organized by components of political systems rather than individual countries. We will begin with basic information and an overview of organizing principles of modern democracy. Then we will examine the institutional structures of democracies: legislatures, executives, bureaucracies, and federal structures. We will then cover societal interests and social cleavages and the way in which they are organized to influence government. The third section of the course focuses on elections, political parties, party systems, and government formation. Finally, we will examine the effects the rise of the EU on West European governments and their capacity to represent citizens' interests.

Readings in this class will focus on seven countries: France, Britain, Germany, Italy, and Sweden, Netherlands, and Spain. Working in groups students will choose one additional country to study over the course of the semester. Students will use their detailed knowledge of different political systems, from their own study and the readings in the textbook and the web, to assess the larger arguments about how citizens' interests are represented in democratic systems. Evaluation in this course will be based on class participation, quizzes, group projects, and exams. Evaluation methods will vary with instructors. PL SC 20 satisfies the Comparative Politics component of the International Politics Major and the Comparative Politics distribution requirement for the Political Science major. It is recommended for study abroad in Europe. PL SC 20 is a prerequisite for several PL SC 400- level courses. PL SC 20 will be offered once a year with 35 seats per offering.

**PL SC 022** (GS;IL) Politics of the Developing Areas (3) The impact of colonialism, nationalism, and development policy on the political culture, structure, and transformation of post-colonial regimes.

**PL SC 022 Politics of the Developing Areas (3)  
(GS;IL)**

**BA - This course meets the Bachelor of Arts degree requirements.**

This course will introduce students to the political and economic development of countries in "developing world." Upon gaining an exposure to definitional issues, such as the distinction between the developed and developing world, we'll discuss the theoretical lenses that structure our discussion throughout the semester. The course will then turn to the processes and institutions involved with development assistance, the legacy of colonialism, and state building. By the conclusion of the course students should have a stronger understanding of how political and economic dynamics fuel the nexus between domestic and international institutions and how this affects economic and political development. Evaluation will be primarily through examinations. This course is appropriate for potential majors in Political Science and International Politics seeking to satisfy comparative politics requirements and non-majors satisfying general education requirements.

**PL SC 060** (GS;IL) (ANTH 060, J ST 060, SOC 060) Society and Cultures in Modern Israel (3) An introduction to the society and cultures of the State of Israel from 1948 to the present.

**PL SC (ANTH/J ST/SOC) 060 Society and Cultures in Modern Israel (3)  
(GS;IL)**

This course will review the social, cultural, and political systems in the State of Israel as they have developed and changed since its inception in 1948. The role of immigration, ethnicity, and religion on Israeli society and cultures will be explored along with the non-Israeli cultures that have helped to shape conditions there. The course will look into the diverse social and political institutions of contemporary Israel, examine the borders and geographic features of the region, and discuss who lives there, where they reside, and for which portions of this period. It will examine the wars and tensions between Israel and neighboring Arab states; the status of the Arab/Palestinian minority in Israel; and the growth of Palestinian nationalism. Social conditions in the State of Israel are the result of a unique history. Israelis have absorbed large numbers of immigrants from many parts of the world while engaged in ongoing political and military conflicts. Jewish settlers in Israel/Palestine revitalized a language (Hebrew) and developed unusual collectivistic institutions (e.g., the kibbutz). Israeli nationalism is founded both on secular and religious ideologies. It includes notions of a return from Diaspora and the desire for personal and collective redemption. The study of social processes such as these will provide an opportunity to consider the foundations and functions of nation-states and social systems generally. Materials will include selections from primary texts, official documents, novels, films, and ethnographic materials along with scholarly reviews and essays. Students will be exposed to materials produced from a variety of disciplinary and political perspectives. Through writing assignments, projects, and essay examinations, students will integrate, compare, and analyze these materials. The course complements offerings in Jewish Studies, Sociology, Anthropology, Political Science, and Middle East Studies and will satisfy the IL requirement. It enables those in Jewish Studies to examine the roughly 30% of Jews who reside in Israel, builds upon a current course on Zionism, and provides context for the study of modern Hebrew. It offers an additional international alternative for students in Sociology and Political Studies and a topical area in cultural Anthropology. Students in Middle East Studies will find it worthwhile to study a nation with a significant impact on the region. The course will be offered approximately once a year, and enrollment will be limited to 50 students in order to promote active, engaged learning. Evaluations will be based on papers, a project, short quizzes, and essay examinations.

**PL SC 083S (GS)** First-Year Seminar in Political Science (3) Exploration of current topics of interest in political science, international relations, and/or political theory.

**PL SC 083S First-Year Seminar in Political Science (3)  
(GS;FYS)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Every first-year seminar in Political Science focuses on several of the major questions of the field. Many of these questions concern the constitutional arrangements of governments:

What is it that we want governments to do, and what is the ideal government arrangement? Why does every nation (and every state and city) have somewhat different constitutional provisions for legislation, judicial, military and executive functions of government? What can we learn from careful comparisons of different types of government? What is unique to the American system and what are the consequences of this uniqueness?

Other questions concern power: To what extent do wealthy individuals and wealthy organizations have disproportionate power in society? Is this appropriate or not? What is the impact of governmental attempts to limit the influence of the wealthy?

We are also very much interested in the international system: What types of foreign policies and diplomatic strategies reduce the likelihood of war? What is the role of international organizations (such as the UN or World Bank) and multinational corporations in shaping conflicts between nations?

Finally, we are interested in ordinary citizens: Do citizens know enough to formulate rational opinions on public issues? Why are many citizens apathetic? What motivates citizens to support one candidate over another or to favor particular policies and philosophies?

Each first-year seminar will select a special topic of interest and use that topic to explore a subset of these questions in order to provide a challenging introduction to political science. In the course of doing so, each first-year seminar in political science will also introduce students to specialized materials (such as government documents), library resources, and appropriate electronic media. In addition, each seminar will emphasize the standards of evidence, logic, and critical thinking required to develop effective and persuasive reports and oral presentations. Students will write essay exams and one or more written reports on the relevant topic of their own choices. Class participation is required. The course fulfills both a first-year seminar and a general education or Bachelor of Arts social/behavioral science requirement. The course will be offered three times per year with a maximum of 20 seats per offering.

In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them, including the opportunity to develop relationships with faculty and other students who share their academic interests.

**PL SC 110** (GS;US) Rights in America (3) This course explores the historical and contemporary struggles of particular groups within American society to expand their rights.

### **PL SC 110 Rights in America (3) (GS;US)**

The American political system established in 1787 promised several fundamental things: (1) a social order not based upon aristocracy; (2) the rule of law; and (3) basic unalienable liberty. But some groups were excluded from these. This course explores the historical and contemporary struggles of particular groups within American society to expand their rights. We will explore the efforts of African-Americans, women and other marginalized groups to obtain basic liberty, equal protection and civil rights. As we discuss these groups, political institutions, and American politics we will focus on four overarching questions: (1) what is liberty; (2) why do some groups need to fight for rights; (3) how did the expansion of rights—or "rights creation"—come about; (4) and what is the role of courts in expanding, or not expanding, rights? Our exploration of rights in American will proceed one group at a time (i.e., African-Americans, women). We will look first at the history of how rights developed for each group and then discuss the implications of this more generally for the state of equal protection and discrimination in the country. At the end of the course, issues that "push" equality claims into a new dimension are considered. These include movements for separatism in race and gender; the debate over reverse discrimination; speech codes; native Americans and peyote; giving personhood status to the fetus; polygamy; and animal rights.

**PL SC 111** (GH) Debating the Purpose of Government (3) Students will become acquainted with a variety of political theories and debate their usefulness in considering contemporary political controversies.

### **PL SC 111 Debating the Purpose of Government (3) (GH)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Although governments must always attend to urgent matters that cannot be put off, government attention is, and perhaps should be, directed as well toward matters that are of fundamental importance. However, there is substantial disagreement about what those matters are. In this course, through brief summarizing readings and through lectures, students will encounter the arguments of various political philosophers making the case that one or another purpose is most essential to government. Among the candidates for the status of primary purpose of government will be civic and moral education, the defense of life and property, the dismantling of the economic foundations of inequality, and the institution of justice in accordance with universal moral principles. The compatibility of the various conceptions of the purpose of government with the experiences and aspirations of women will receive special attention.

After a brief exposure to each perspective, teams of two students each will research and debate the pro's and con's of each perspective in light of what it can contribute to our understanding of contemporary political events and controversies (if there are more than twenty- six students enrolled, some time will be taken from lectures to accommodate debates). Each student will take a turn as debater and a turn at researching, composing, and organizing the content of the team's opening statement. Approximately twenty minutes after each debate will be allocated to questions and comments from students who were not part of either team that day. At the midpoint of the course and after its conclusion, there will be essay exams in which students will be required to demonstrate basic familiarity with summaries of the various political theories and apply those theories to contemporary political controversies.

**PL SC 112 (GS)** Ethics in Citizenship, Politics, and Government (3) An examination of choices we make as citizens, elected officials or people who carry out the work of government.

**PL SC 112 Ethics in Citizenship, Politics, and Government (3)**  
**(GS)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

It is often said that politics is a dirty business, meaning that unethical behavior is prevalent in politics. But this is often said with a twinge of disappointment, sometimes with bitterness or anger. We wish that it were not so. One part of an effort to improve the ethical character of politics is to strive for a clear understanding of what ethical political action is. This course endeavors to arrive at that understanding by dividing the question of ethics in politics into three parts, ethical political action for citizens, ethical political action for elected officials, and ethical political action for persons responsible for carrying out the work of government. In democratic republics the political functions of citizens include choices as members of juries, as people subject to laws, and as voters. In the latter role, they decide, among other things, how much to help the less fortunate, and how much weight to assign to universal principles as opposed to love of one's country solely because it is one's own. Additional questions arise when we consider the problems of defining and achieving ethical action for elected officials. One question is whether we can separate private and public lives to the extent that unethical behavior in one's private life is irrelevant to one's ethical obligations as an elected official. Another is whether claims that some choices are more ethical than others can ever be more than a way to mobilize the resentful. Still another is whether the pursuit of power, honor, and wealth by those in public office is a symptom of a sickness that can be cured through inquiry into what a happy life consists of. In the last part of the course, we will examine the ethical questions facing those who carry out the work of government – by building roads, fighting wars, delivering mail, inspecting meat, or any of the tasks that governments do. What sort of pressures might induce government workers to act in ways that are unethical? How can those pressures be seen for what they are and resisted? Each week, we will pose these and related questions as clearly as possible, and then see how to answer them in real-life cases that have confronted citizens, elected politicians, or government workers. In this way, we will strive to attain an understanding that is a necessary, though not sufficient condition of ethical political action.

**PL SC 123 (GS;US;IL)** Ethnic and Racial Politics (3) Political movements among United States ethnic and racial groups; government policies on race and ethnicity; comparison to other culturally diverse countries.

**PL SC 123 Ethnic and Racial Politics (3)**  
**(GS;US;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Despite many historical predictions that ethnic and racial distinctions would decline over time, recent events in the United States and around the world indicate that ethnic and racial identity remain strongly significant in politics. An analysis of the role race and ethnicity play in politics and government is of major relevance not only in the field of political science, but in several other fields, such as anthropology, sociology, economics, history, linguistics, and religious studies.

By studying ethnic and racial politics, students will learn the various methods by which social groups organize to achieve political goals, how and why opposition usually arises to those goals, and what policies governments can pursue to defuse social tensions. Students will also learn the historical and cultural basis of ethnic identities and the resulting political disputes that result when social groups differentiate themselves from other social groups.

Important to the course will be the use of comparative case studies of the United States to ethnic and racial politics in other countries, such as Canada, Indonesia, and South Africa. Examination of relevant political movements and government policies in these countries will help to determine whether the United States can learn from others or whether others can learn from the United States. The course will also include an international component through the comparative case studies as well as discussion of immigration policy and the role of ethnic groups in U.S. foreign policy.

**PL SC 132** (GS;IL) The Politics of International Intolerance (3) Introductory course emphasizing psychological, historical, and political aspects of global intolerance towards minorities.

**PL SC 132 The Politics of International Intolerance (3)**  
**(GS;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

PL SC 132 is an introductory survey concerning the social phenomenon of "intolerance" i. e., attitudes or behaviors that seek to exclude or eliminate groups perceived to be different. Here "difference" encompasses such features as nationality, belief, race, gender, or sexual orientation. Often these aspects of the human condition are the targets of majority discrimination or collective violence.

The course presumes the following assumptions:

- (1) Intolerant attitudes are not just "another point of view" but also an utterly destructive form of behavior inimical to civilized values.
- (2) Few, if any, societies have existed without some forms of intolerance.
- (3) The causes of intolerance are usually multi-causal (economic, political, and psychological) and are understood through social science.
- (4) "Politics" implies both the ideology and organization of intolerant movements and the relation of such movements to public authorities.

Students should expect fairly extensive readings involving primary source material, analyses of intolerant behavior drawn from different disciplines, and comparison of intolerance phenomena from a global perspective. All examinations are in an essay format and may require synthesis of sources to address specific questions. Each student should be prepared to research an example of intolerance through print and electronic sources. A short paper based on the research should emphasize comparison, analysis, and consequences. The finding may be presented to the class for discussion.

**PL SC 135** (GS) (S T S 135) The Politics of the Ecological Crisis (3) The political implications of the increasing scarcity of many of the world's resources.

**PL SC (S T S) 135 The Politics of the Ecological Crisis (3)**  
**(GS)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

"The Politics of Scarcity" examines some "big" questions about the prospects for humans in general and democracy in the

United States in particular. Much of the reading assumes that our civilization faces the twin problems of increasingly serious shortages of resources and a growing ecological crisis that threatens the basis of life. Further, it argues that these "twin crises" feed upon each other, and that together they pose serious short and long run challenges to survival. Some readings attribute these problems to the dominant values that characterize modern Western society. The course does consider some dissents from this perspective, arguments that things will be just fine. However, it concentrates on problems and predictions of trouble. Thus, the class does not claim to present an evenly balanced assessment. Rather, it recognizes that most of what we learn, read, and see supports the status quo and assumes our civilization and energy-dependent way of life will continue. Consequently it makes sense to emphasize the less frequently argued position that we may be headed for disaster.

The class aspires to appeal to students regardless of major or college -- to scientists, engineers, students of the humanities, and even economists and political scientists. It fulfills the University-wide general education requirement in Social Science. Although it discusses the role of politics in general and the role of the American political system in particular in discussing the "twin crises," it mostly grapples with fundamental questions of value that underlie and guide the play of power in our political system and with how the massive changes now taking place globally both affect and are affected by politics.

**PL SC 178** Organized Crime, Law, and Politics (3) This course will address laws, politics, and policies related to organized crime issues.

**PL SC 178 Organized Crime, Law, and Politics (3)**

This course addresses the role and impact of organized crime in US laws, politics, and policies over the past century, with particular attention to modern organized crime groups. The course will look at how organized crime syndicates influenced and often cooperated with some political leaders and law enforcement agencies in the twentieth century, while other political leaders became famous for prosecutions of organized crime figures. Modern legal tools in the fight against organized crime will be discussed, such as RICO and witness protection programs. And the course will look at many examples of modern organized crime groups that originated in Europe, Asia, or Latin America, but which now have an impact on US society, and the policies that attempt to limit the influence of modern organized crime. Included in the examination of modern organized crime will be the connection to modern terrorist activities.

**PL SC 306H Senior Thesis Writing Workshop (1-3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This is a workshop for honors students in their senior year writing their thesis in political science. There are no assigned readings or written assignments outside of those necessary for the completion of your thesis. Participants are expected to make progress on their own thesis and to contribute to the collaborative enterprise of discussing thesis progress and problems while critiquing one another's work. Each participant is expected to make progress on their thesis, to collectively discuss and consider the research process during workshop sessions, and come prepared to offer useful feedback and criticism on other participants' research.

**PL SC 308** Introduction to Political Research (3) Introduction to conceptualization, research design, and measurement in political research.

### **PL SC 308 Introduction to Political Research (3)**

This course introduces students to the research process in political science. The course can be taken by itself or as the first in a two course sequence with PL SC 309. It is intended to give political science majors the skills needed to conduct research in political science, or in related fields such as public policy. The course introduces students to the scientific approach to accumulating knowledge, it examines conceptual and theoretical thinking about politics (e.g. understanding what concepts, variables and hypotheses are), it covers different methods of collecting social science data (interviews, surveys, observation, experiments, analysis of documents, etc.) and it provides an introduction to the interpretation of that data. Ethical issues in research are discussed, and students are also introduced to basic statistical concepts. The course typically includes multiple take home and/or in-class assignments that require students to utilize different data collection methods and practice the generation and interpretation of those data.

**PL SC 309** Quantitative Political Analysis (3) Data analysis and statistical applications in political research, including data processing; inferential statistics; contingency analysis; correlation and regression; multivariate analysis.

### **PL SC 309 Quantitative Political Analysis (3)**

This course introduces students to the basic statistical techniques used to study politics quantitatively. It can be taken by itself or as the second course in a two course sequence with PL SC 308. It is required for all Liberal Arts Fellows. Students in 309 learn about developing questions suited to empirical research; constructing hypotheses; measuring political concepts; and conducting basic univariate and multivariate analyses. The course includes sections on the basic principles of probability, sampling, and statistical inference so that students can understand and implement statistical techniques for describing and explaining political phenomena. There is also extensive coverage of the use and application of various statistical techniques. Exercises both in and out of class will require students to engage with and apply various social science concepts, and to undertake quantitative analyses of political and policy-relevant data.

**PL SC 404** Analyzing Public Policy in the American States (3) This course provides students with the tools to empirically evaluate policy proposals and outcomes in the American states.

### **PL SC 404 Analyzing Public Policy in the American States (3)**

Developing public policies is the proximate goal of any government. In the United States national, state, and local lawmakers steeped in their own traditions, procedures, and political environments establish rules that determine their citizens' quality of life. In the states specifically, laws affect citizens' access to and their ability to afford an education; the quality of the roads they travel on; the wages they earn; whether and to what extent they qualify for subsidized health care; how they cast their ballot in elections; and myriad other aspects of their lives. This course focuses on policymaking in the American states and how those policies can be evaluated using social science methods.

The course begins with a discussion of what makes states distinct from one another – their populations, governmental institutions, and political values. The focus then shifts to how statistical techniques can be used to describe variation in state policy; to develop causal arguments to explain variation; and to assess the efficacy and value of different approaches to the same social problems. Students learn how to measure and gather data relevant to public policy debates, to describe and categorize policy, to model policy outcomes, and to draw conclusions about alternative approaches to solving the policy problems being addressed. Students then apply this knowledge to major policy debates in state government. The course concludes with an exploration of the ethical implications of using data to make policy decisions and with attention to how technical and statistical information can be effectively communicated to professional and nonprofessional audiences. Students are required to have an understanding of introductory statistics (equivalent to the knowledge they would gain from PL SC 309 or STAT 200) prior to taking this course.

PL SC 408

**PL SC 408 Democracy and Its Impacts (3)**

This course examines the impacts of international democracy aid around the globe, and compares the performance of democratic and authoritarian governments in promoting citizens' well-being. Democracy assistance for activities such as conducting elections and strengthening civil society has become a key component of foreign aid provided by longstanding democracies. Its use is based on a widespread belief that democracies perform better than autocracies in a number of policy domains. But whether this belief is warranted is an open question. Does democracy assistance yield results? Have some types of assistance proven to be more or less effective than others? Do democratic governments perform better when it comes to generating economic growth, promoting socioeconomic inequality, and fostering civic peace? This course explores these questions by tracing the expansion of international democracy aid; exploring the different types of assistance that donor countries provide; reviewing empirical research on the impacts in recipient countries; and comparing the performance of democratic and authoritarian regimes in generating public goods. Students taking the course will gain knowledge about democracy assistance and its effects across regime types, and become familiar with major theories and debates about the impact of democratic governance.

**PL SC 410** Strategy and Politics (3) This course examines political behavior using social choice theory and game theory.

**PL SC 410 Strategy and Politics (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Strategic behavior is central to politics. It is common for political outcomes to be determined by the interaction of individuals seeking goals in an environment in which goal attainment is complicated by the choices of other actors. This course introduces various methods for analyzing strategic behavior using social choice and game theories. We will employ these approaches to better understand a wide range of political phenomena in international politics, comparative politics, and American politics, such as war, terrorism, voting, electoral competition, government formation, and democratic transitions. By the end of the course, students will, among other things, have experience using games to analyze a range of political behaviors and institutions. The course assumes no prior knowledge of social choice theory or game theory.

**PL SC 411W** Principles of International Cooperation (3) An exploration of the forces that make conflict, or cooperation, more likely in international relations.

**PL SC 411W Principles of International Cooperation (3)**

This course explores the forces and conditions that make conflict, or cooperation, more likely in international relations. Since international anarchy prevents actors from trusting one another cooperation should be rare or nonexistent. In spite of the logic and prevalence of such arguments, international cooperation does exist. While there is no definitive explanation for the persistence of cooperation in a world without central authority, we will pursue several arguments about how and why it does emerge. These arguments are based upon characteristics of the international system along with concepts developed principally from game theoretic approaches to the study of politics. By the end of the course students should have a basic grasp of game theory in international relations as well as examples of cooperation and conflict around the world. The game theoretic approach will enable students to understand why countries with often common interests and good intentions nevertheless fail to cooperate. Students will be expected to write essays that demonstrate their mastery of these theoretical constructs and ability to apply them to real world situations about which they have done independent research.

Political Science 411W fulfills the related course requirements for the revised International Politics Major and International Relations and 400 level course requirement for the Political Science major.

**PL SC 412 International Political Economy (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course is an introduction to the scientific study of international political economy (IPE), an interdisciplinary field related to international politics and international economics. Some exemplary issues IPE addresses include the collective action problem among nation states, the management and openness of international economy, the determinants of foreign economic policies, and the causes and consequences of economic globalization. IPE examines the interaction between politics and economics at the international level as well as between the international and domestic levels, involving various political and economic actors (governments, MNSs, interest groups, as well as individuals). The course aims to develop the analytical skills of students in explaining theoretically international political and economic events.

**PL SC (WMNST) 428 Gender and Politics (3)  
(US;IL)**

**(BA)** This course meets the Bachelor of Arts degree requirements.

This course is designed as an overview to the field of women and politics. It examines the role that women play in politics in the United States and around the world. Students will begin by examining how women are socialized differently from men and how that socialization effects women's political attitudes and participation. Then students will focus on women in different political offices and how their behavior compares to that of their male counterparts. Students will then analyze the women's movement in the United States. Finally, students will turn to different theories of the ideal position of women and men in politics and use those theories to explore the issue of pornography. Students will be evaluated on a final exam, short essays ( 4 3-5 page essays), class participation, and a research paper (15 pages). This is an advanced course with 6 credits prerequisite in Women's Studies or Political Science. This course fulfills the American Politics and Comparative Politics distribution as well as the advanced course requirement for the Political Science major. It is an elective for a Women's Studies major. It also fulfills an International/Intercultural competency requirement. This course will be offered once a year with 35 seats per offering.

**PL SC 429 Analysis of Electoral Politics (3)** The new politics, its technology, and the strategic perspectives that underlie it.

### **PL SC 429 Analysis of Electoral Politics (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course engages students in the empirical study of electoral politics in the United States. Elections in the U.S. are about voters, candidates and the rules that determine what these actors do to structure the course of the election and that lead to the final outcome. In empirical political science, analysis involves the systematic examination and evaluation of relevant data to solve a problem or answer a question. In this course, then, students use data about voters to systematically analyze their actions and decisions in U.S. presidential elections, with an emphasis on understanding why they make the choices they do to produce the resulting election outcomes. Throughout the course, students will draw on a range of publicly available data and use statistical analyses to investigate the "cost" of voting; evaluate competing theories of voter choice; examine how candidate evaluations, candidates' issue stances and retrospective evaluations of candidates influence voter choice; assess how vote choice is shaped by an individual's partisan identification; and evaluate how social demographic trends shape election outcomes. At the conclusion of the course, students will have the substantive knowledge and analytic skills to evaluate the assertions and conclusions of politicians, pundits, and political scientists as they contemplate campaigns and election outcomes. Students are required to have an understanding of introductory statistics (equivalent to the knowledge they would gain from PL SC 309 or STAT 200) prior to taking this course.

### **PL SC 430W Selected Works in the History of Political Theory (3)**

The course will examine the tradition of "liberal" political philosophy, focusing principally on the social contract tradition in Western political philosophy. We will examine the work of the "classic" social contract theorists -Hobbes, Locke, Rousseau, and Kant - and discuss some more recent variants. We will then consider broad contemporary critiques of this tradition. In particular, we will consider charges of exclusion, parochialism, and biased conceptions of the self allegedly manifested in liberal theories, especially as those charges that center on considerations of race and gender.

**PL SC 433** Political Foundations of the Early American Republic (3) The course introduces students to the major political and philosophical movements that influenced the founders of the early American republic.

**PL SC 433 Political Foundations of the Early American Republic (3)**

The course introduces students to the major political and philosophical movements that influenced the founders of the early American republic. The first section of the course, set in the ancient world, will examine the earliest experiments in democratic government in both Greece and the Roman Republic. In addition to studying the structure and traditions of ancient governments, students will consider competing theories for why these early democratic experiments ultimately failed. The second section of the course traces the gradual evolution of representative democracy in Britain from the signing of Magna Carta to the quiet subjugation of the monarchy in the 19th Century. Recognizing that the theoretical structures of political power remain somewhat fixed in this period, students will consider how legal precedent can gradually transform seemingly static political institutions. The third section of the course examines American efforts to establish stable representative institutions in the aftermath of the Revolutionary War. Looking back at both ancient and modern constitutional traditions, students will examine how prior democratic experiments heavily influenced the deliberations of the founders both at the Constitutional Convention and in the establishment of the new federal republic.

**PL SC 434 (IL) (AFR 434)** War and Development in Africa (3) This course will examine the relationship between war and development in sub-Saharan Africa in the post colonial era.

**PL SC (AAA S) 434 War and Development in Africa (3)  
(IL)**

This course will examine the relationship between development and war in sub-Saharan Africa in the modern era. Specifically, it will analyze the extent to which the processes of state building, nation building, and international intervention have contributed to the incidence of both civil war and international conflict in Africa. We will begin with a review of several theoretical arguments on the causes of warfare in Africa and then turn to a discussion of theses on African political development. This course complements present offerings in international relations and comparative politics in the PL SC department and can serve as an advanced undergraduate offering in the African Studies concentration in AAAS. The course directly complements our present offerings in international conflict given that we don't have a regularly offered course that focuses on conflict in a specific region. In addition, it will augment our comparative politics offerings with an examination of prominent issues in comparative politics such as political development, democracy, and

modernization. The course will fulfill the IL requirement and encourage students understanding of the historical background as well as the political, economic, and cultural factors that influence African politics. African conflicts are often viewed as "ethnic conflicts" and in this class students have an opportunity to assess the extent to which ethnic, linguistic, or religious factors influence the likelihood of conflict and contribute to development in African states. Students will also be required to write essays evaluating the contribution of a range of theoretical arguments on Africa's conflicts in order to assess the degree to which cultural more than political or economic factors contribute to their onset. Students will then have the opportunity to conduct more extensive research on a specific African case to develop their analyses further. These exercises will often require that students reevaluate their beliefs about social identities such as race (e.g. in Rwanda the difference between Tutsi and Hutu is often viewed as a "racial" difference between black Africans, which is at odds with most Western conceptions of race). They also require students to challenge stereotypes regarding the subordination of African values in conflicts to a simple concern with "tribe". Students will gain a broader knowledge and appreciation of the different values, traditions, and cultures evident in Africa and understand how these can both exacerbate and mitigate conflict. Evaluation in the course will consist largely of examination of the students' brief expository essays and larger case studies for which students will be encouraged to conduct original research. The course should be offered biannually with a class limit of about 40 students.

**PL SC 436** Civil Wars (3) This course examines factors influencing the onset, duration, severity, termination, recurrence, and consequences of civil wars around the world.

### **PL SC 436 Civil Wars (3)**

This course provides a broad exploration of the causes, characteristics, and consequences of civil wars. In particular, it investigates what makes civil wars more likely to occur, what influences how long they last, how severe they are, and how likely they are to recur, while also considering their consequences for the states that experience them. It considers the scholarly research on this topic over the past decade or more, and builds an awareness both for what are the known regularities as well as what are the continuing uncertainties about the place of civil war in the contemporary international system. It does this specifically within the context of scientific research about civil wars, and thus also advances student knowledge about how social scientists learn what they know about how the world works. Building on this perspective, and after absorbing the lessons to be learned from the literature, students will gain even greater appreciation for the quality of knowledge about civil wars by conducting their own detailed analysis of a civil war (each student will study one civil war of their choosing) asking how well the civil war they study fits patterns identified by the literature. This course complements, without duplicating, existing political science courses about militarized political conflict, and qualifies as one course majors can take to satisfy their 400-level course hours requirement. In addition to political science majors, it should be of interest to international politics majors, students in other social science majors, and perhaps Masters students in the School of International Affairs as well.

### **PL SC (AAA S/I B) 440 Globalization and Its Implications (3) (US;IL)**

#### **(BA) This course meets the Bachelor of Arts degree requirements.**

This course explores the socioeconomic implications of globalization and some fundamental changes that have taken place in the global socioeconomic system. The bipolar configuration of global power has been radically altered, market-state relations have been reformulated, and global systems of production and finance have been reorganized. Given these recent changes in the world's structure, globalization as a socioeconomic force is examined with a special emphasis on its implications on social issues, capital-labor relations, the roles of unions and trans-nationals, unemployment issues, poverty and inequality, gender and ethnicity issues, race relations, and democratization around the world. This course also allows students to explore how different countries, communities, social classes, business firms and even institutions are affected differently by globalization. The implications of globalization on African communities is given special attention.

The course is organized into three parts: A) The first part of the course attempts to define globalization and identify its essential characteristics in light of social and economic change. This part attempts to answer questions such as what constitutes globalization, how do we know if globalization is taking place, and what aspects of it are new. B) The second part of the course attempts to assess the implications of the different aspects of globalization (identified in the first part) on many critical social issues, including capital-labor relations, the roles of unions and transnational corporations, problems of unemployment, poverty and inequality, gender, ethnic, and race relations, and democratization. C) The third part of the course examines the implications of globalization to African communities.

This course exposes students to the economic, social, political, and cultural implications of the unfolding global order. It allows them to explore how different countries, communities, social classes, business firms and even institutions are affected differently by globalization. Evaluation will be based on daily attendance, along with a class presentation of a design of a research paper; an actual research paper, a mid-term exam and a final exam.

### **PL SC (AAA S) 443 Ethnic Conflict in Africa (3) (IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Ethnic conflict is presently a pervasive worldwide phenomenon. Ethnic groups in various regions of the world contest the terms of their incorporation into the 'nation' state and the world order. Such contests have often erupted into violent conflicts crossing national borders. The objectives of this course are to examine the problems of state building, the evolving nature of the state, and ethnic conflicts in the African context. The course explores the factors that contribute to violent ethnic conflicts and the factors that mitigate such conflicts. The course largely evolves around the following two general questions. What are the most important internal and external factors that cause ethnic conflicts? The second is what political systems and arrangements tend to mitigate or resolve ethnic conflicts? In an effort to deal with these two general questions the course examines a number of case studies from different parts of Africa. The course is organized into three parts. The first part surveys general theories on the causes of ethnic conflicts and how democracy relates to ethnic conflict. The second part examines several case studies from Africa and attempt to construct a general hypothesis on the major causes of ethnic conflicts and how democratization or lack of it impacts the conflicts. The third part examines measures that may contribute in the resolution of ethnic conflicts and enhance the process of state building in Africa. Students in groups of two or three will choose a case and give a class presentation on the most important issues involved in a given conflict.

This course compliments other courses that deal with African politics, politics of developing areas, and social movements. It also supplements courses in African and African American Studies, Sociology, and Political Science that deal with issues of ethnic and race relations, as well as issues of nation building (state building).

This course exposes students to the various internal and external factors that precipitate ethnic conflicts in Africa and the economic, social, and political implications of these conflicts. It allows students to explore how different states attempt to address the problem. Evaluation will be based on attendance (5%), a class presentation of a design of a research paper (10%), a research paper (35%), a mid-term exam (25%) and a final exam (25%). This course will be offered once a year.

**PL SC (AAA S /LER) 445Y Politics of Affirmative Action (3)  
(US)****(BA) This course meets the Bachelor of Arts degree requirements.**

The objectives of this course are to introduce students to the relationship between affirmative action and other policies purportedly designed to end racial inequality in the U.S. This course approaches the study of affirmative action in the context of the historic racial discrimination and inequality that Black Americans have faced since the founding of the Nation. The purpose of this course is to help students think about how contemporary and historic affirmative action policies relate to race, concepts racial inequality, the historic and continuing causes for racial inequality, public opinion, American politics and economic thought. The course materials will lead students through scholarly and popular articles, books and video presentations on the topic. It is hoped that students will become familiar with the history of affirmative action from its conception. Students will gain an intimate understanding of affirmative action economic and social outcomes on various racial groups. No prior knowledge is assumed, however a knowledge of civil rights history, quantitative methods, and constitutional law will be useful. The Politics of Affirmative Action satisfies the requirements for major and minor electives for the African American Studies, and major and minor electives for Political Science, and Labor Studies and Industrial Relations. Students are evaluated on the basis of an examination, term paper, class participation and class presentations of papers.

**PL SC 446 Business and Government Relations (3)** An examination of the interaction between business and government across different types of political systems.

**PL SC 446 Business and Government Relations (3)**

This course examines the interaction between business and government across different types of political systems. Intellectual approaches from various disciplines will be used to understand different dimensions of business and government interactions. Models of interaction to be covered in the course include pluralism, corporatism, business as capital, business as firm models, sectoral models, network models, and clientalism. Particular attention will be given to the interactions of business and government during the policy process, from formation to implementation. Case studies from developed and developing countries, and examples of specific policy proposals will be utilized to help students analyze business interactions with government, and political interactions with business. Specifically, students will analyze variation in the structure of business-government relations across countries' different political systems, economic systems, and development levels. Through this course, students will be able to construct an appropriate framework to evaluate the business and political implications of adopting different business-government models, and construct analytical frameworks to understand the policy implications of adopting different models for the same policy.

**PL SC 447 Analysis of Public Opinion and Political Attitudes (3)** This course engages students in the empirical study of public opinion.

**PL SC 447 Analysis of Public Opinion and Political Attitudes (3)**

The essence of democracy is popular sovereignty. The "voice of the people" must be freely expressed and send a clear message to elected officials. In turn, those officials must be responsive to citizens. This class focuses on the "voice of the people", with particular attention to several analytic questions: How do we measure public opinion? Do public opinion polls and other methods provide an accurate measure of public sentiment? How can we know if public opinion has changed? How can we utilize public opinion data to assess political polarization, civic competence, and levels of the public's trust in government? In this course, students will learn how to answer questions like these using the same data reported by the press, utilized by government officials, and examined by political scientists to assess the success of democracy in the United States and throughout the world.

The course is organized around a series of contemporary policy topics (such as foreign policy, welfare or education) integrated with specific analytic techniques. By the end of the semester, students will be familiar with public opinion on many contemporary policy debates and they will learn a series of data analytic skills that can be applied to any topic. Students are required to have an understanding of introductory statistics (equivalent to the knowledge they would gain from PL SC 309 or STAT 200) prior to taking this course.

**PL SC 450H (J ST 450H) Genocide and Tyranny (3)** This course focuses on the conceptualization and socio-political determinants of genocide and tyrannical regimes, with an emphasis on the Holocaust.

### **PL SC (J ST) 450H Genocide and Tyranny (3)**

This course focuses on the etiology of mass killing, with an emphasis on the socio-political determinants and consequences of massacres, ethnic cleansings, and other crimes against humanity. It is designed to help students understand genocide as a phenomenon of political violence and to explore the epistemological issues associated with the study of genocide. Students will learn to use the study of specific events (such as the Holocaust) to understand broader concepts and phenomena (in this case: genocide) as well as to develop analytical and communication skills through active discussion in class sessions.

The course is divided roughly into three parts: The objective of the introductory part of the course is to situate genocide as an act of political violence, and to create a working definition of the concept for the topics covered in subsequent weeks. In the second part various aspects of the Holocaust will be examined. Starting with a history of the Holocaust, we will cover philosophical, political, and military explanations for it. Some of the questions we will discuss in this part of the course include: (a) How does the Holocaust fit into the typologies of genocide? (b) Can extreme genocide that can be studied in a comparative context with the Holocaust? Does the "uniqueness" of the Holocaust influence the manner in which we study it? (c) Were the determinants of the Holocaust rooted in larger social and political factors? (d) Which contemporary political factors were associated with the Holocaust? During the last part of the course, we will discuss three other instances of genocidal violence: Armenia, Yugoslavia, and Rwanda. These events will be discussed using the same theoretical and analytical approaches as in the previous weeks. The concluding sessions will also focus on the questions of why it is important to study genocide, what lessons can be learned from understanding such events, and whether studying genocide is relevant to the current international system. Course topics will be discussed in light of assigned readings and films.

This course fulfills the distribution requirement for international relations, as well as the advanced and related course requirements for Political Science majors. The course fulfills the supporting course requirement for International Politics and Jewish Studies majors.

**(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

In this course, we will discuss the current democratization trend in Africa by focusing on the experiences of African countries.

The course is divided into three sections. Part One considers a range of factors that affect politics in Africa. We will discuss in depth the following factors: colonialism, nationalism, the relationship between state and society, ruler-ship, the military, political parties, and economic development. Then, we will consider the experiences of our four cases, to gain a historical background. In part two, we will focus on democratic transitions. We will discuss the factors that enable transitions to occur, as well as the process that transitions follow. Then, we will consider four transitions: two that resulted in the installation of a democratic government (Nigeria in 1979, Sudan in 1986) and two that ended in continued authoritarianism (Angola in 1992, Kenya in 1978). Part three considers the prospects of democracy. We will discuss the probability of a democratic transition occurring in the near future.

The goals of this class are four fold. First, students will gain detailed knowledge about four African countries. Second, we will learn how to compare countries. Third, students will have a better understanding of the democratization process in general, and will be able to explain or predict democratization beyond the four cases discussed in this class. Finally, the experiences of these four countries offer a deeper understanding of what democracy is and provide students with greater flexibility to fulfill requirements in either the African and African American Studies major or the Political Science/International Politics major. PL SC 454 will be offered once per year with 35-50 seats per offering.

**PL SC (AAA S) 464 Globalization, Extractive Industries, and Conflicts in Africa (3)  
(IL)**

Globalization has brought increased investments in extractive industries in many African countries. Investments in extractive industries are also likely to continue to increase rather rapidly, given the rising intensity in the competition for African resources, brought about by growing involvement of countries, such as China and India. The terms African countries obtain from corporations for mineral rights have been generally unfavorable. The unfolding competition for African resources brought about by investments from China and India may, however, help African governments to renegotiate the terms of mining concessions corporations to obtain better deals for their resources. Despite the rather poor terms African governments currently have, investments in extractive industries have stimulated economic growth in several countries. Some African countries, including Equatorial Guinea, Botswana, Gabon, Angola, Cameroon, and the Sudan, are experiencing what might be regarded as resource-based economic boom.

Such growth has, however, intensified compulsory acquisition of communal lands by African governments for concessions to extractive industries exposing large numbers of rural communities to evictions from the land they traditionally owned. The expropriations, which purportedly take place for public and development purposes, have led to serious socioeconomic problems, including unemployment and poverty of those evicted from their land, disintegration of traditional institutions of governance, civil wars, communal conflicts, human rights violations, high levels of corruption, and alarming rates of environmental degradation. The conflicts have ravaged many African counties and are likely to continue to occur until mechanisms that allow rural communities to become partners of the transformation are developed. This course examines the socioeconomic and environmental problems associated with land expropriations and extractive industries.

**PL SC 465Y (IL) (ASIA 465Y) Democratization in Asia (3)** A course which identifies components of democracy, such as definitions, measures, datasets, and the democratization process.

**PL SC (ASIA) 465Y Democratization in Asia (3)  
(IL)**

This class is an upper-level seminar on democratization in Asia. How do countries move from having an authoritarian regime to a democratic government? Why are some democratic governments stable while others are not? In this class, we will focus on democratization theory and how it applies to countries in Asia. This course is organized into two parts. In the first part of the course, we will discuss democracy and democratization theory. We will cover such components as: definitions, measures, datasets, and the different stages of the democratization process. In the second part of the course, we will apply these concepts and measures to specific Asian countries. Course topics will be explored through readings from textbooks, articles, datasets, and media sources. By the end of the course, students will have a deep knowledge about a wide range of Asian countries. Students will develop the skills to compare countries, will understand the democratization process within Asia, and will be able to generalize from their knowledge to evaluate democratization events around the world. Finally, students will gain a deeper understanding of what is democracy and how easy or difficult it is to install and maintain. This course fulfills the distribution requirement for comparative politics, as well as the advanced and related course requirements for Political Science majors. In addition, the course fulfills the supporting course requirement for International Politics majors and the related areas requirement for Asian Studies majors. Finally, the course fulfills the requirements for writing across the curriculum and other cultures.

**PL SC 466 Political Psychology (3)** An interdisciplinary investigation of the major topics and debates characterizing the subfield of political psychology.

**PL SC 466 Political Psychology (3)**

This course offers an interdisciplinary investigation of the major topics and debates characterizing the subfield of political psychology. It draws on research being done in a variety of disciplines and disciplinary subfields including social, developmental and clinical psychology; the cognitive neurosciences; biological anthropology; genetics; evolution; and behavioral economics to examine political behavior. Specifically, the course will examine the thinking and actions of both political elites and the mass public, and consider the reasoning processes they employ in order to make sense of the political world. Topics to be covered include how emotions (e.g., fear, lust) shape human reasoning; how preferences develop; how differences in cognition, emotion and personality inform political judgment and shape political leadership; how prejudices develop and affect war and other conflicts; how political and social identities develop and how they affect individuals' political judgments and decisions; how neurobiological influences operate in conjunction with social and cultural factors to affect how individuals process information; and how genetics and hormones affect individuals political development and behavior. Through these and other topics covered in the course, students will develop an understanding of how political elites and ordinary citizens process information, develop preferences and make decisions, and why, as a consequence, they act as they do.

This course fulfills the distribution requirement for American politics and comparative politics, as well as the advanced and related course requirements for Political Science majors. The course also fulfills the supporting course requirement for International Politics majors.

**PL SC 469** (IL) (ASIA 469) Government and Politics of South Asia (3) This course offers an overview of the politics of modern South Asia with specific focus on Afghanistan, India and Pakistan.

### **PL SC (ASIA) 469 Government and Politics of South Asia (3) (IL)**

This course provides an overview of the politics of modern South Asia with particular attention to the experiences of Afghanistan, India and Pakistan. It examines theories of political and economic development and ethnic politics, the impact of the British colonial experience on South Asia, the rise of nationalism, and the emergence of independent nation states in the region. Three important themes are explored throughout the course: (1) the state of economic development in the three countries; (2) the relationship between identity politics and violence; and (3 ) the international relations of these countries, with particular attention to terrorism and nuclear policy. Course topics will be explored through readings from textbooks and assigned articles, articles from current news sources and, documentary films from the three countries. By the end of the course, students will have knowledge of the politics of Afghanistan, India and Pakistan and the political factors that have shaped their development over the past century. Students will acquire the tools necessary to evaluate critically the impact of war, the legacy of colonialism, and the challenge in building durable democratic institutions. This course fulfills the distribution requirement for comparative politics, as well as the advanced and related course requirements for Political Science majors. The course also fulfills the supporting course requirement for International Politics majors and the related areas requirement for Asian Studies majors.

**PL SC 476** Empirical Legal Studies (3) This course engages students in the empirical study of law and the courts.

**PL SC 476 Empirical Legal Studies (3)**

The tools of social science affect both how scholars understand the workings of the judicial system and how lawyers practice law. This course engages students in the empirical study of law and the courts. It provides them with the substantive knowledge, and statistical and analytic skills they need to understand both (1) how social scientists use empirical evidence to make inferences about laws, judges, and legal institutions and (2) how statistical methods are used in legal practice. Through the course, students will undertake statistical analyses and learn how to present these analyses to nontechnical audiences, such as jurors, employers, and the general public. The course begins with an overview of the social scientific study of law and the courts, and then investigates a series of topics, including how social science and empirical evidence are used to make legal claims and establish legal standards, to provide a context for judicial decisions, and to litigate cases.

**PL SC 481** Global Political Economy (3) This course examines states, markets, power, production, and the relations between the various transnational agents who act in these areas. Students may not receive credit for PL SC 481 and PL SC 412.

**PL SC 481 Global Political Economy (3)**

Changes in the international system in the 1970s led to increased interest on the part of students of international relations in the political economic processes underlying change. Important debates among scholars in both mainstream theoretical traditions and in critical theory gave rise to International Political Economy as an increasingly visible sub-field in International Relations. This seminar tracks the historical relations between the development of capitalism as an economic system and the emergence and transformation of global politics, using concepts developed in the study of political economy. Seminar discussion, examinations, and a short research paper will be used to evaluate students' learning.

**PL SC 486 (IL) (HIST 489, ASIA 489) International Culture in East Asia (3)** Study of the role of culture in East Asian regional and East-West international relations.

**PL SC 486 (ASIA 489/HIST 489) International Culture in East Asia (3) (IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course will examine the place of culture in international history through a comparative look at the role of cultural circulation and exchange in relations among China, Korea, and Japan (and between East Asia and the West) from the propagation of Buddhism in the first century A.D. to present-day circulation of popular music, movies, and comics. We will explore the international politics of culture and the politics of international culture, considering questions of what constitutes culture, whether it is ever entirely separate from politics, and how that separation has evolved over time. These larger themes of the course will be tackled by following the historical movement of concrete objects and people throughout the region. This is a course in international history; historical events, problems, and issues will be at the center of our weekly discussions. But it also seeks to explore aspects of international relations.

This course is intended to examine the role of cultural exchange in international relations. The goals of the class are not only to gain an understanding of the uses and impact of culture in international relations, but also to develop the skill of building such an understanding through primary and secondary sources, both written and visual. Students in this class will take on the role of historian themselves, thinking critically about assigned texts and making their own interpretations of their meanings. Through readings, discussions, presentations, and the final project, students will enhance their ability to think critically and to express their ideas clearly in both speech and writing.

Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. This participatory approach is intended to deepen student's appreciation of the assigned readings, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytic and expressive abilities. Evaluation will emphasize student performance on a day-to-day basis and as expressed in a final research project. A possible break down would be as follows:

This course is designed to respond to strong student interest in East Asian international history. This course will

complement and extend popular survey and upper-level courses such as HIST 172/174/175/480/481/483/484/485/486.

**PL SC 487 International Law and Organizations (3)** Major topics and issues of international law with special attention to institutional arrangements (international organizations) through which that law operates.

### **PL SC 487 International Law and Organizations (3)**

The course is useful in two distinct ways. First, it aids in the understanding of how countries conduct their relations with one another. Second, studying international law-- it is a distinct system of law-- helps students to assess whether they might be suited for law school.

The course introduces international law and international governmental organizations (the two are closely linked) and their role in the management of peaceful relations among countries as well as during international conflict. Both the contributions and limitations of international law will be analyzed. International law is viewed both as a body of norms countries feel an obligation to follow and as a means of communication among countries.

Major topics covered include sources of international law, human rights law, environmental law, economic law, law of the sea, and the use of force. There are several hundred major intergovernmental organizations. Several of the most prominent will be discussed including the UN, the WTO, the European Union, the International Labor Organization, and the International Court of Justice.

Examinations are principally of the essay variety although a command of factual information is essential to success in the course. Students also prepare critiques of important international legal cases (many of which have been decided by national courts) and of treaties (the principal modern manifestation of international law).

**PL SC 488 Comparative Public Policy (3)** Comparative methodology and public policy implementation in postindustrial societies; selected case studies of policy output.

### **PL SC 488 Comparative Public Policy (3)**

Comparative Public Policy is an upper level political science course that includes components of comparative politics, public administration, and descriptive economics. The course presumes that developed industrial democracies confront common challenges in meeting human needs and that policy comparison is worthwhile despite distinctive societies and political cultures. For example, government involvement in the provision of health care varies widely from Britain's National Health Service to the largely private approach of the United States. Nevertheless all health care systems confront rising technology costs, an ageing population, and rising performance expectations. A primary purpose of the course is to consider the origin and development of individual country programs while assessing the common challenges. Cross national comparison becomes relevant to the course by including some available data on costs, implementation and outcomes. Because the course includes about six distinct areas, e.g., education, taxation, urban planning income support, and overall macroeconomic policy, the course will depict profiles of policymaking in Europe, North America and Japan. Ideally comparison should help students to evaluate the effectiveness of policy choices of a particular country and government.

A second objective of the course will be to examine the national approaches to the relationship between the state and private economic activity. Not only does government expenditure amount to nearly half of some country's total output, government choices create distinctive legal environments for business activity. Antitrust, health, wage, and consumer regulation offer an excellent point of comparing different incentives for economic activity in the United States and Europe. Apart from policy choices mentioned in the first paragraph, the regulation of economic activity has cumulative results for employment and the distribution of income. This portion of the course is intended to be somewhat more elementary than the first because of the probability that students will be less familiar with its content. The primary objective will be to help students understand the variations among market economies and reasons for their description as "neo-liberal," "social market," or "corporatist."

Finally, the course will examine some current ideas about recent changes in the global economy and their consequences for national policy. Clearly "globalization" has become a matter of political concern owing to its consequences for the creation of wealth, employment, growth and distribution. While the course cannot devote detailed or exclusive to the European Union, Europe's response to rapid movements in short term capital and investment presents an interesting point

of comparison with the United States and Japan. The course should enable students to understand the meaning and criticism of "globalization" as a factor in shaping some national policies.

**PL SC 489 Public Administration (3)** A survey of the major approaches to the management of most governmental agencies.

### **PL SC 489 Public Administration (3)**

Government Management is a three-credit Political Science course that teaches the role and function of bureaucracy. Although some investigation is made about state and local government functions, the primary focus of the course is on the federal bureaucracy. In particular, the course illustrates how the interrelationship between the three branches of government exists using the various federal agencies as functionaries.

The course first examines the basic functions of bureaucratic agencies in the modern world; primarily their distributive, re-distributive and regulatory activities. In addition to these functions, the various external and internal political forces that form the mission of the agencies are examined. Next the internal function of a bureaucracy is examined by highlighting the various roles of the people who comprise a typical large agency. The roles of the political appointee, the career professional, the general civil servant and the union laborer are examined, with the GS system of the federal government used as a guide to show the hierarchy that exists in a large agency.

By highlighting both the functions of a typical agency and examining its role in the larger government structure, and by looking inside the bureaucracy to see the various short and long term roles of the people who comprise those agencies, the student appreciates how large bureaucracies are at the same time always changing, and always staying the same.

## Psychology (PSYCH)

**PSYCH 083S** (GS) First-Year Seminar in Psychology (3) Scientific, societal, and individual implications of contemporary psychological theory.

**PSYCH 083S First-Year Seminar in Psychology (3)**  
(GS;FYS)

**(BA) This course meets the Bachelor of Arts degree requirements.**

Modern science provides perspectives on human beings that may conflict with our intuitive and conventional views of ourselves as individuals capable of free choice and responsibility. These perspectives raise important questions for how we understand ourselves and others: Does brain chemistry govern our moods and motivations? Do our genes determine our abilities? Is the human mind just a kind of computing machine? Views based on the biology of behavior and on the computer metaphor for the mind can be found both in a wide range of academic disciplines, including psychology, anthropology, sociology, biology, neuroscience, medicine, and computer science. Perhaps more important, these perspectives are apparent in the news media, entertainment, and other aspects of popular culture. Biological and technological views of what it means to be human are thus shaping our common-sense understanding of our selves and others.

The goal of this course is to help students to understand the basis of these contemporary scientific views of human beings, and to think critically about the ways in which these views shape human experience. We will read three scholarly but accessible paperbacks (listed below), two that present biological and technological perspectives, and one that provides a critical counterpoint. We will also consider selections from popular media, including news stories, movies, and fiction, to examine the appearance of these perspectives in our contemporary culture. On a more pragmatic level, we will consider ways in which scientific perspectives can help students understand their own learning processes, leading to more effective academic skills.

The class format will be open discussion, and students will be expected to come to class prepared to discuss the assigned readings. Evaluation will be based on 10 short writing assignments, a term paper or take-home final, an in-class presentation, and class participation. Writing assignments will generally require that students apply concepts discussed in class to particular topics, or that they use library and Web resources to find relevant material. In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them including the opportunity to develop relationships with faculty and other students who share their academic interests. This course fulfills the first-year seminar

requirement as well as a general education or Bachelor of Arts social/behavioral science requirement.

**PSYCH 100** (GS) Introductory Psychology (3) Introduction to general psychology; principles of human behavior and their applications.

#### **PSYCH 100 Psychology (3) (GS)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Psychology is a scholarly discipline, a scientific field, and a professional activity. Its overall focus is the scientific study of behavior and experience, and of associated mental and physiological processes. As a scholarly discipline, psychology represents a major field of study in academic settings, with an emphasis on theories and principles of behavior and experience. As a science, psychology is a domain of research in which investigators analytically and systematically study behavior and experience to develop theories and principles and to understand their application to real-world situations. As a profession, psychology involves the practical application of knowledge, skills, and techniques for enhancing well-being and quality of life, as well as solving or preventing individual and social problems. This course provides an overview of the field of psychology, including research, theory, and application. Specific topics include the biological bases of behavior, sensation and perception, learning, cognition, motivation and emotion, development, social cognition and social influence, personality and individual differences, and mental disorders and therapy. Content is presented through a combination of lectures, readings, and demonstrations. Evaluation is primarily on the basis of objective exams given in class. A major goal of the course is to show how questions within these areas are addressed through empirical research. The course introduces students to theories, research, and procedures used in psychological research and practice. It also promotes thinking about how students can apply this knowledge to enhance their lives. After taking this course students should be able to make more informed decisions about participating in future psychology courses and have a better understanding of psychology as a science and of human behavior. This course serves as a prerequisite for most upper-level psychology courses. It introduces basic concepts covered in more depth in those courses. PSYCH 100 is required for the Psychology majors and minor. PSYCH 100 is offered three times per year. Five to six sections/semester are offered at University Park with 330-370 students per section; other locations and delivery channels may offer smaller sections.

General Education: GS

**PSYCH 105** Psychology as a Science and Profession (3) Overview of history and methods of psychology as a science and

profession; applications and ethical issues in psychology.

**PSYCH 105 Psychology as a Science and Profession (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

The purpose of this course is to introduce Psychology majors and prospective majors to basic principles of research and practice in scientific psychology. The course provides a survey of the subfields of psychology, their history, and their current importance in both academic and applied settings. The focus is on common principles and issues important across these subfields. Students will learn how psychological research is conducted, survey applications of psychological research, consider ethical issues in psychological research and practice, and learn about careers in a variety of subfields in psychology. Students will be evaluated on the basis of multiple-choice exams (75%), in-class activities (10%), and short writing assignments (15%). The course will be required for the Psychology B.A. and Psychology B.S. (all options) majors, but will not be a prerequisite for any other course. The course will be offered each fall and spring semester in large sections of 300-350 students.

General Education: None

**PSYCH 200 (GQ) Elementary Statistics in Psychology (4)** Frequency distributions and graphs; measures of central tendency and variability; normal probability curve; elementary sampling and reliability; correlations; simple regression equations.

**PSYCH 200 Elementary Statistics in Psychology (4)  
(GQ)**

Psychological science is based upon empirical research. Questions about behavior and experience are answered by gathering and analyzing data. In upper-level classes students will be expected to read and understand this research, and many will be expected to design sensible investigations of their own. At the core of these skill sets is the ability to understand and perform statistical analyses, and the ability to evaluate the match between statistical analysis and experimental procedures. This course provides an introduction to descriptive and inferential statistics commonly used in psychology, and introduces hypothesis testing as a method of scientific investigation. In addition, it explores the ways in which the assumptions of statistical tests place constraints on experimental design and, conversely, how the design of experiments can dictate the statistical test appropriate for data analysis. Specific topics include probability theory, measures of variability and central tendency, normal curves, the relation between samples and populations, correlations, and simple regression. Classes may also cover z-tests, t-tests, ANOVA, or other techniques commonly used in psychology. Content is presented through a combination of lectures, readings, and demonstrations. Evaluation is primarily on the basis of objective exams given in class. The course introduces students to quantitative procedures used in psychological research and practice. It also promotes thinking about how students can apply this knowledge to answer self-generated questions. With PSYCH 301W (Basic Research Methods in Psychology) the course provides an excellent two-course sequence to prepare students for upper level courses. After taking this course students should be able to make more informed decisions about majoring in psychology. This course serves as a prerequisite for PSYCH 301W, which itself prerequisite for many some upper-level psychology courses. PSYCH 200 or Stat 200 is required for the Psychology majors and minor.

General Education: GQ

**PSYCH 212 (GS)** Introduction to Developmental Psychology (3) Developmental principles; physical growth; linguistic, intellectual, emotional, and social development from infancy to maturity.

**PSYCH 212 Introduction to Developmental Psychology (3)  
(GS)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Developmental psychology involves the scientific study of the social, emotional, and intellectual changes that enable progression from infancy to adulthood. As part of a scholarly discipline, scientific field, and professional activity, the overall focus of developmental psychology is the scientific study of age-related changes in emotions, cognitions, language, personality and social relations and the relationships of these changes to familial, peer, and cultural experiences, biological development, and personal efforts to make sense of the social and object worlds. As an important area of psychological science, developmental psychology is a domain of research in which investigators analytically and systematically study behavior and experience to develop theories and principles and to understand their application to real-world situations. As part of a profession, developmental psychology involves the practical application of knowledge, skills, and techniques for enhancing the well-being and quality of life of children, adolescents, and their families, as well as the development of age-relevant solutions to and strategies for the prevention of individual and social problems.

This course provides an overview of the field of developmental psychology, including its history, research methodologies, theories, and applications. Specific topics include the biological bases of development, parent-infant attachment, the development of sensation and perception, cognition and linguistic development, emotional development, moral development, stereotype development, childhood and adolescent psychopathology and its development. Content is presented through a combination of lectures, readings, activities, and demonstrations. Evaluation is primarily on the basis of objective exams given in class.

A major goal of the course is to show how questions within these areas are addressed through empirical research. The course introduces students to theories, research, and procedures used in psychological research and practice. It also promotes thinking about how students can apply this knowledge to enhance their lives. After taking this course students should be able to make more informed decisions about participating in future psychology courses and have a better understanding of human development, psychology as a science, and the importance of developmental psychology to the construction and improvement educational programs and clinical practice. PSYCH 212 may be applied to the requirements of the Psychology BA and Psychology BS majors and of the Psychology minor. The course meets the Social/Behavioral Sciences requirement. This course will be offered three times a year at University Park 330-350. Other locations and delivery channels may offer smaller sections.

**PSYCH 231 (GS;US)** Introduction to the Psychology of Gender (3) Psychological study of gender in historical and contemporary perspective. Role of gender in development, self-concept, social relations, and mental health.

**PSYCH 231 Introduction to the Psychology of Gender (3)  
(GS;US)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

After a beginning period of domination by men, the rise of feminism in the 1960s and 1970s in the US gave impetus to the study of women and gender. Through both traditional and feminist research methods, psychologists have sought to clarify what is general among and between women and men, and what may be individualized to specific persons or groups. Conceptions of gender are also examined cross-culturally. Emphasis of study is upon those experiences that are specifically related to gender, such as stereotypes and expectations of femininity, violence against women, economic and work-related constraints, and pregnancy and childbirth. There will be two major evaluation methods used. One will be tests that will assess students' knowledge and understanding of the major concepts, theories, and research findings. The other will be assignments that will provide the opportunity for students to apply, research, analyze, and discuss key areas of the course. Psychology 231 is intended as a basic introduction to the psychology of gender. For PSYBA and PSYBS majors, PSYCH 231 is part of the History/Philosophy/Religion/Diversity group that can be used to meet the requirement of additional courses in four different groups. PSYCH 231 can be used for the Psychology minor. Non-majors may use it to fulfill a general education social/behavioral science and international/intercultural competency selection. This course will be offered once a year with 60 seats per offering.

General Education: GS  
Diversity: US  
Bachelor of Arts: Social and Behavioral Science  
Effective: Spring 2007  
Prerequisite: PSYCH 100

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**PSYCH 232 (GS;US;IL)** Cross-Cultural Psychology (3) This course examines how ethnic and cultural background influences patterns of human thought and behavior.

**PSYCH 232 Cross-Cultural Psychology (3)  
(GS;US;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Cross-cultural psychology investigates the influence of sociocultural factors on human thought and behavior. It will revisit the topics covered in introductory psychology in order to investigate the degree to which the major findings in each subdiscipline are culturally universal and/or culturally specific. The course will reflect the interdisciplinary nature of cross-cultural psychology by examining issues that link psychology to other fields such as anthropology, sociology, economics, and political science. One goal of the course will be to develop an understanding of the problems involved in the design and interpretation of studies comparing ethnic or racial groups, both within and across national boundaries. Students will learn to identify how subtle forms of ethnocentric bias influence both the research questions asked and the conclusions that are reached and will learn ways to identify and avoid such bias. Students will learn to analyze and integrate knowledge from a variety of sources including films, readings, scientific literature and the popular media. Course projects will require them to interact in a respectful and sensitive manner with people of other cultures in person and via the Internet. Students will learn to critically examine their own beliefs as well as the information that they encounter about culture and ethnicity inside and outside of the classroom. They will enhance their oral and written communication skills during class discussions, small group and collaborative exercises and presentations. Topics are covered that have a significant body of cross-cultural research and are directly relevant to students' lives, including issues such as: child-rearing practices around the world, culture-fair intelligence testing, aggression and ethnic conflict, and cultural influences on therapeutic success. By studying psychology from a cross-cultural perspective, students should become more aware of the diversity of the international community and develop an increased understanding and tolerance of attitudes and viewpoints different from their own. Evaluation is conducted using integrative essay exams, completion of readings quizzes, and papers and presentations of case studies and learning activities. The course fulfills general education requirements in the social and behavioral sciences and requirements for intercultural/international competence.

General Education: GS  
Diversity: US;IL  
Bachelor of Arts: Other Cultures and Social and Behavioral Sciences  
Effective: Spring 2007  
Prerequisite: PSYCH 100

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**PSYCH 238 (GS)** Introduction to Personality Psychology (3) Past and recent conceptualizations of key issues and root ideas of personality psychology.

**PSYCH 238 Introduction to Personality Psychology (3)  
(GS)****(BA) This course meets the Bachelor of Arts degree requirements.**

Personality psychology involves examining theories of human nature and evaluating them in an empirical fashion. Personality psychology begins with the observation that each person is (to paraphrase Harvard psychologists Kluckhohn and Murray) in certain respects (a) like all other persons, (b) like some other persons, and (c) like no other person. In other words, personality psychology concerns itself with the study of (a) universal aspects of human nature, (b) psychological traits and types, and (c) individual uniqueness. Principal goals of the discipline include constructing descriptive taxonomies of personality, inquiring into the evolutionary and developmental origins of human universals and individual differences, and assessing the impact of personality on the life course.

This course aims to cultivate in students a breadth of understanding through an analysis of some of the major intellectual statements concerning human nature, viz., psychoanalysis, humanism, existentialism, symbolic interactionism, and Darwinism. Questions considered within the course include: How can we determine what might be a part of fundamental human nature? What are the relative contributions of conscious rationality and unconscious irrationality to human behavior? Can human behavior be explained by a finite set of motives? Do explanations in psychology differ in kind from explanations in the natural sciences? Can personality be quantified? How does one distinguish between sincerity, dissembling, and self-deception?

Short-answer examinations and class participation are used to evaluate the degree to which students have successfully comprehended course material. Students should understand why it is difficult for a theorist to create a view of human nature that transcends the theorist's own personality and cultural/historical context, and how empirical research can help overcome these obstacles. Students are to learn how to identify and evaluate the assumptions (either implicit or explicit) about human nature and individual differences that underlie any social or behavioral science. By the end of the course, students should be able to describe the basic tenets of the major theories, to be able to compare and contrast the theories, and to be able to evaluate the strengths and weaknesses of each theory. A good understanding of the course material will prepare students for advanced study in personality theory and measurement, as well providing a useful context for courses in abnormal, clinical, developmental, health, historical/philosophical, industrial/organizational, and social psychology, as well as for courses in other social sciences, certain humanities, and some applied fields such as business which at least tacitly presuppose some view of personality.

Students are evaluated on examinations that include a mixture of short answer and objective questions. Individual instructors may supplement such examinations with other forms of evaluation as appropriate to section size and setting, such as in-class exercises and term papers. PSYCH 238 is an Additional Course in the PSYBA and PSYBS majors and may count toward the Psychology Minor. It may be used to fulfill the Social and Behavioral Sciences requirement. This course will be offered once a year with 25-40 seats per offering at several non-UP locations.

General Education: GS

Diversity: None

**PSYCH 243 (GS) Introduction to Well-being and Positive Psychology (3)** Applying psychological knowledge to develop and maintain effective personal adjustment and well-being and positive social relations.

**PSYCH 243 Introduction to Well-being and Positive Psychology(3)  
(GS)****(BA) This course meets the Bachelor of Arts degree requirements.**

The psychology of personal well-being and adjustment involves the application of the empirically derived principles of psychology to the problems of everyday behavior. As part of a scholarly discipline, scientific field, and professional activity, the overall focus of the course is the study of the psychological process of adapting to, coping with, and managing the problems, challenges, and demands of modern life. As an important area of psychological science, well-being and adjustment is an area of research in which investigators develop and systematically test theories about adjustment. As part of a profession, it involves the application of this empirically gained knowledge to enable people to respond to environmental pressures, both physical and psychological, and to cope with stress.

This course provides an overview of the field of adjustment, including topics such as the way in which personality affects people's pattern of adjustment, the effect of stress on adjustment, the use of coping strategies to deal with stress, the adjustments people make in their social relationships (including how individuals view others, communication, behavior in groups, and intimate relationships, the development of gender roles, the emergence of sexuality, the phases of adult development, transitions in the world of work, and the way in which adjustment influences a person's psychological and physical wellness.

Content is presented through a combination of lectures, readings, active learning activities, and demonstrations. Assessment is based on objective and essay exams taken in class, and on instructional and collaborative writing assignments (which include library and internet research, and a personal journal). Discussion and questions are encouraged in all sections. Along with personal contact, students have the opportunity to communicate with faculty members via e-mail.

After taking this course students should be able to make more informed decisions about participating in future psychology courses and have a better understanding of adjustment psychology as a science, and the importance of

adjustment in their own lives.

Students will be evaluated on a combination of examinations, research projects and writing assignments. PSYCH 243 may be applied to the requirements of the Psychology BS and Psychology BA options and to the requirements of the Psychology minor. This course currently meets a General Education requirement in the Social and Behavioral Sciences. It is being offered once a year with 25 seats per offering at several campuses.

General Education: GS

Diversity: None

Bachelor of Arts: Social and Behavioral Science

Effective: Spring 2007

Prerequisite: PSYCH 100

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**PSYCH 244** (GS) Introduction to the Psychology of Human Factors Engineering (3) Introductory course in engineering/human factors psychology, emphasizing the application of core psychological principles and research to designing products and systems.

### **PSYCH 244 Introduction to the Psychology of Human Factors Engineering (3)**

Human Factors Psychology is an area of psychology where the overall focus is the scientific study of human behavior and how it can be applied to the use, design and development of products and systems. Students will learn basic principles of how people process information, perceive and interact with the world in various circumstances. They will learn how psychologists conduct research on human thought and behavior in an effort to measure peoples' perceptions, attitudes, and behaviors. These basic principles will be illustrated and explored with a series of hands-on activities that relate the material to everyday life.

Topics to be covered include: research design and methods, sensation and perception, memory and language, and social psychology. Psychological principles from these areas will be used to discuss ways to improve the safety of tools and systems, reduce human error and increase user satisfaction. Students will also gain a better understanding of the influence of stress and workload on human performance. A major topic will be ways to develop reliable and valid evaluation techniques for assessing performance, safety and ease of use of systems. In order to design effective systems, individual differences in age, gender and culture must be taken into account. People in different regions of the world have cultural differences that influence the way they perceive the world and process information. These individual differences will be addressed throughout the semester. Topics are presented through a combination of lectures, readings, demonstrations, and in-class activities. Active learning elements such as library/internet research, writing activities, and collaborate learning experiences will be applied. Evaluation is on the basis of content-based quizzes, objective exams, brief written reports of hands-on exercises, and collaborative assignments.

A major goal of the course is to show how questions relating to proper use and design of tools, computers and other systems are addressed through empirical research. The course introduces students to theories, research, and procedures used in psychological research and practice. It also promotes students to think critically about how they can apply this knowledge to enhance their lives. After taking this course students should have more sophisticated knowledge of the relationship between the brain, our thought processes and behavior. They should be able to make more informed decisions about what makes a usable product as well gain a better appreciation of the science and profession of human factors psychology.

**PSYCH 256** (GS) Introduction to Cognitive Psychology (3) Introduction to study of such higher mental processes as thinking and reasoning, imagery, concept formation, problem solving, and skilled performance.

### **PSYCH 256 Introduction to Cognitive Psychology (3) (GS)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course is an introduction to cognition, an area of psychology that investigates the ways in which we acquire, store, create and use knowledge. Cognition includes a wide range of mental processes that are used every day in almost all human activities. These include attention, perception, memory, imagery, language, problem solving, creativity, and reasoning.

Cognition refers to a theoretical approach in psychology that emphasizes the role of people's knowledge, reasoning, and expectations and this approach has had a broad influence on all areas of psychology. It also involves developing sophisticated methodologies to study processes that are not always observable. Cognitive research can be applied in order to improve mental functioning, e.g., developing programs for improving memory or cognitive rehabilitation for brain injury. It can also be used to address serious societal issues and problems such as understanding how people develop and use stereotypes. Cognitive psychology has applications to many fields including medicine, the legal system, education, and understanding mental disorders. In addition, cognitive psychology is part of the active interdisciplinary field of cognitive science that also includes disciplines such as philosophy, neuroscience and artificial intelligence.

This course provides an overview of the field of cognitive psychology, including its research, theory, and application. Content is presented through a combination of lectures, readings, activities, and demonstrations. A major goal of the course is to show how the major questions in cognition are addressed through empirical research. It also promotes critical thinking and encourages students to apply this knowledge to enhance their lives.

This course is a basic 200-level course for the psychology majors (PSYBA, PSHBA, PSHBS, APSCC, APSYC) at several campuses. It fulfills category c. cognitive/learning and psycholinguistics at University Park and category 3. cognitive/experimental at Penn State Erie, Category b. developmental, cognitive, learning at Berks Lehigh Valley college and the Commonwealth College. It may be used to satisfy the Social Behavioral Sciences requirements. In large sections evaluation will be primarily based on objective, multiple-choice examinations. Individual instructors may supplement such examinations with other forms of evaluation as appropriate to section size and setting. In smaller sections the course evaluation may be supplemented with essay exams, laboratory projects and student presentations. This course will be offered twice a year with 100 to 125 seats per offering at University Park and once a year with smaller sections at other locations.

**PSYCH 260 (BB H 203) Neurological Bases of Human Behavior (3)** An introduction to biopsychology, emphasizing the structure and function of the human brain.

**PSYCH (BB H 203) 260 Neurological Bases of Human Behavior (3)**

The nervous system provides the biological underpinning of behavior, and several scientific fields are concerned with the relationship between the nervous system and behavior. The goal of this course is to introduce the principle methods, findings, and theories of these scientific fields. Topics include (a) the anatomy and physiology of the nervous system, (b) how the nervous system gives rise to perception, action, language, memory, emotion and reproductive behavior, and (c) how drugs and mental illnesses affect the nervous system and alter normal perceptual, cognitive, and emotional behavior. The course prepares students for a number of more advanced courses in Psychology and Biobehavioral Health that address specialized topics in neuroscience, and may satisfy a requirement of these majors. Evaluation is based on objective exams. The course is offered each fall and spring semester.

**PSYCH 260A (GS) Neurological Bases of Human Behavior (3)** An introduction to biopsychology, emphasizing the structure and function of the human brain. Students may take only one course for credit from PSY 203 and PSY 203A.

**PSYCH 260A Neurological Bases of Human Behavior (3)  
(GS)****(BA) This course meets the Bachelor of Arts degree requirements.**

Biological Psychology is an area of psychology where the overall focus is the scientific study of behavior and experience, and underlying associated neurological and physiological processes. This course provides an overview of the biological bases of behavior and includes a presentation of the research, theory, and application of this knowledge. Specific topics include the basic anatomy and physiology of the central and peripheral nervous system, neural transmission and the function of various neurotransmitters. The majority of the course will focus on how these basic processes contribute to

the processing of information from the senses, simple and complex learning, and cognitive processes such as memory, and language. Topics will include brain development, developmental and acquired neuropsychological disorders and therapeutic techniques. Content is presented through a combination of lectures, readings, demonstrations, and in-class activities. Evaluation is primarily on the basis of objective exams given in class, and brief written reports.

A major goal of the course is to show how questions relating brain and neural function to behavior are addressed through empirical research. The course introduces students to theories, research, and procedures used in psychological research and practice. It also promotes thinking about how students can apply this knowledge to enhance their lives. After taking this course students should have a more sophisticated knowledge of the relationship between brain and behavior. They should be able to make more informed decisions about participating in future psychology courses and gain a better appreciation of the science and profession of psychology

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**PSYCH 268** Animal Minds (3) This course considers the cognitive and communicative abilities of animals, especially primates, as compared with humans.

### **PSYCH 268 Animal Minds (3)**

This course covers select topics in animal cognition and communication. This course will focus mostly on the behavioral level. It will focus on observations and controlled behavioral experiments rather than on neurophysiological experiments (though it will cover some mechanisms that are implicated through behavioral research). One of the main goals of this course is to discuss how we can scientifically approach the study of animal minds. One of the recurring themes of the course will be methodological: how can we pose a question to a being that does not have language? Another goal of the course is to teach critical thinking about experiments in this field. It will discuss how to run a well-controlled experiment and closely examine the claims that are made by each experimenter. Through a class project, students will gain some experience trying to observe behavior and designing experiments.

This course addresses an active research area in psychology, of broad interest to students in Psychology and other disciplines. Because of this broad appeal, no background in psychology is assumed, and no prerequisite is required. The course will fulfill a 200-level requirement for students in the PSY majors and minors. Students typically will be evaluated by two midterm exams (25% each), a final exam (35%), and a research project (15%). The course will typically be offered once each academic year with an enrollment limit of 50.

**PSYCH 269** Evolutionary Psychology (3) Survey of evolutionary perspectives in current psychological research.

### **PSYCH 269 Evolutionary Psychology (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course demonstrates how knowledge and principles from evolutionary biology are used to conduct research on the design of the human mind. The course explains how evolutionary psychologists identify adaptive problems faced by our ancestors and test hypotheses about psychological mechanisms designed by natural selection to solve these adaptive problems. The psychological mechanisms discussed are involved in phenomena such as perception and the control of activity, learning and cognition, mate selection and courting, development and parenting, altruism, aggression, and social structure. Evolutionary psychology is thus not a topic area such as perception, learning, or motivation, but rather a way of thinking that can be applied to any topic within psychology. The course, therefore, shows how evolutionary psychology is (1) changing how scientists approach old topics, (2) opening up new areas of research, and (3) beginning to provide a

unifying framework for integrating the various subdisciplines of psychology. Students will learn to understand and evaluate evolutionary hypotheses about a range of topics in psychology and related social sciences. Evaluation will be based on a combination of methods, including for example traditional exams, written homework, papers, and participation in class and group discussions. The course is offered as a perspective that can be used to think about the subject matter in any particular content course in psychology. Students may choose this course to fulfill a requirement in the major.

**PSYCH 270** Introduction to Abnormal Psychology (3) Overview of assessment, causes, and treatments of psychological disorders.

### **PSYCH 270 Introduction to Abnormal Psychology (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course focuses on some of the topics and questions people most commonly ask about psychology: What are the different psychological disorders, and what are they like? How do clinicians diagnose someone with a disorder? What do therapists actually do in therapy? Course objectives include: (a) examine historical and current conceptions of normal and abnormal behavior; (b) survey the origins, symptoms, and characteristics of several adult psychological disorders; and (c) introduce the main treatment approaches for psychological disorders. The course is designed to be accessible to both Psychology majors and others. Psychology B.A. and Psychology B.S. majors may use the course toward the 200-level breadth requirement of the major. Students will be assessed primarily with objective exams.

**PSYCH 370** (US) Psychology of the Differently-Abled (3) This course familiarizes students with the needs and abilities of people with varying physical challenges through academic and experimental exercises.

**PSYCH 370 Psychology of Differently-Abled (3)  
(US)**

In 1991 President Bush signed the Americans with Disabilities Act (ADA) which recognized that the hundreds of thousands of Americans living with disabling conditions form a class which should receive protection under the law. Many people look at the ADA as civil rights legislation which is intended to offer disabled Americans the same legal rights to access as the Civil Rights legislation of the 60s offered to Americans of color.

While discrimination in the workplace, in housing, and in other areas based on race is no longer openly practiced, people with different physical abilities are still fighting an uphill battle. Often the barriers they face are due to ignorance of their needs. The intent of this course is to increase awareness and sensitivity to the needs of people who are different in the physical dimension. Additionally, policy and economic implications will be studied.

The content will include multiple modalities, such as mobility and visual differences. The focus will be positive, emphasizing how differences in one area are overshadowed by similarities in most areas. Language in the course will focus on the positive as well, hence Psychology of the "Differently-Abled" rather than "Disabled". Accomplishments of people such as FDR and Mozart will be discussed in the context of significant contributions made by people who were physically different. Finally direct experience with people will be obtained through a community service component of the course.

The objectives of this course are to first familiarize students with the causes and consequences of different physical challenges. The long term objective is to increase sensitivity to the needs of people who are different from most of us in some ways, but very similar to us in most ways. Research has shown that familiarity is a critical tool in raising comfort levels and decreasing discriminatory and hurtful acts.

**Evaluation Methods:**

Examinations 40%, mid-term and final

Community Service 30%, this will be assigned through the same form Internship supervisors use to evaluate students for PSYCH 395

Research Paper 25%

Oral Presentation 5%, 15 minute presentation to class regarding their community service experience

This course will draw on materials covered in General Psychology. No other course preparation will be needed. The course is an Intercultural and International Competence (GI) course, focusing on intercultural aspects only.

**PSYCH 408** Program Evaluation (3) Examination of the theories and practice of program evaluation; emphasis on applied work utilizing a wide range of evaluation approaches.

**PSYCH 408 Program Evaluation (3)**

This course will introduce the student to the basic procedures and design methodologies of program evaluation. The student will learn about the purposes of evaluation, types, applications, and ethical issues involved in evaluation. A history of programmatic theory design will be reviewed with the purpose of clarifying the linkages between goals, objectives, and the hypothesized relationships between specific programmatic elements and desired outcomes. The student will be challenged to identify and understand the normative assumptions specific to organizations about their basic program design, implementation, and assessment processes.

Students will be evaluated by a combination of the following: evaluation proposal, short written assignments, exams, oral presentation, and attendance. The prerequisites for this course include satisfactory completion of PSYCH 100, SOC 001, PSYCH 200, STAT 200, and PSY 201. This course presupposes critical thinking skills and basic competencies in statistics and research methods.

For the Psychology major (PSHBS or PSHBA) at Penn State Erie, this course is important for students who will be entering graduate school or going into practice in the areas including, but not limited to: community psychology, social psychology, industrial-organizational psychology, sports psychology, or the general social services field. This course can count towards: a) the advanced course requirement, b) the special interest course requirement, or c) elective credit. Psychology minors at Penn State Erie can apply this course toward the 15 credits in psychology beyond the PSYCH 100 requirement. Students in other majors should consult with their academic advisers to determine how this course fits into their program of study.

This course will be offered once annually (fall semester).

**PSYCH 410 Child Development (3)** Study of the psychology of the growing person from conception through adolescence, focusing more on periods up to middle childhood.

### **PSYCH 410 Child Development (3)**

PSYCH 410 Child Development is intended for undergraduate students majoring in psychology, education and related disciplines. The purpose of this course is to introduce students to the theories and the influences on child development from conception through adolescence. Students will be introduced to research concerns in developmental psychology, including descriptions of research designs and ethical considerations in research with children and adolescents. Course content will include an in depth review of prevailing theories and influences on development from conception through adolescence. Application of the principles and influences will be applied to the physical, cognitive, and social development of children.

Requirements for the course will include objective examinations, as well as written assignments. Written assignments will involve comparisons and critiques of major developmental theories. Examples of such assignments include descriptions of the key points of a major developmental theory or process of child development, detailed description of an observation of a child and how the child's behavior relates to a major developmental theory, descriptions of how application of developmental theory apply to the student's chosen major or occupation, or comparisons and critiques of developmental theory.

**PSYCH 419** Psychology and a Sustainable World (3) Students study relationships between humans and the natural world and psychological factors contributing to environmental problems and sustainable solutions.

**PSYCH 419 Psychology and a Sustainable World (3)**

This course examines psychological dimensions of humans' connection to the natural world, causes of human contributions to environmental problems, and psychological approaches for encouraging sustainable behavior. The course draws on the new field of conservation psychology and responds to the University's commitment to becoming a leader in sustainability education. This course is designed for upper-level undergraduate students to satisfy requirements for Psychology degree programs, the Psychology minor, and the Sustainability Leadership minor. Major topics covered include psychological foundations of environmental problems (psychological understanding of unsustainable behavior, psychological perspectives on ethical dimensions of environmental problems, people's place in nature, psychological approaches to promoting sustainable behavior), and the application of psychological principles to specific environmental topics (consumerism and sustainable lifestyles, population overshoot, climate change, land use, water use, energy use, food production and consumption, pollution and waste). Students will be able to apply concepts, theories, and findings to change cognition, motivation, and behavior, with the goal of reducing negative human impacts on the environment. They will be able to write and communicate about their work in the form of a final paper and a class presentation that conform to the standards of psychological research. Assessment methods include weekly journal assignments that document students' application of lecture and reading material to their experiences with nature, their observations about their own negative impacts on the environment, and their actions to reduce negative impacts on the environment. In addition, students will develop a conservation intervention program that targets a specific problem on campus or in a community, for which students review relevant literature, design an intervention program, give a presentation of the program, and submit a final paper on the program.

**PSYCH 422** Human Sexuality (3) Psychological influences on human sexual behavior such as love, sexual orientation, gender, intercourse, contraception, sexually transmitted diseases, dysfunctions, and paraphilias.

### **PSYCH 422 Human Sexuality (3)**

PSYCH 422, Human Sexuality, is intended to examine the influence of psychological factors on human sexual behavior. Information on male & female anatomy, on the roles/influences of hormones, and on conception/pregnancy will be covered as well as information on gender, sexual orientation, communication, love, sexual harassment, paraphilias, sexually explicit material, and sexual dysfunction.

Evaluation will be by means of exams (60% of grade), papers (15% of grade), small group projects (10% of grade), and a poster presentation (15% of grade). The prerequisite for this course is satisfactory completion of PSYCH 100. As the course presupposes critical thinking skills and an awareness of research methods in psychology, it is an advanced undergraduate level course requiring junior/senior level standing.

For the Psychology major (PSHBS or PSHBA) at Penn State Erie, this course can count either toward (a) the diversity basic course requirement, (b) the advanced course requirement, (c) the special interest course requirement, or (d) elective credit. Psychology minors at Penn State Erie can apply this course toward the 15 credits in psychology beyond PSYCH 100 requirement. Students in other majors should consult with their academic advisors to determine how this course fits into their program of study.

No special facilities are required for this course, though students will need to prepare a poster for presentation.

This course is expected to be offered at least once every four semesters.

**PSYCH 426 (LING 429)** Language and Thought (3) Relations between language and cognition; cognitive implications of normal and impaired language development; cognition and bilingualism.

### **PSYCH (LING 429) 426 Language and Thought (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Is language a special and uniquely human ability that develops and functions independently of other cognitive processes? Do individuals who speak different languages also have different concepts about the meaning of objects and ideas? Does language development depend on exposure to spoken language? In this course we will examine the relation between language and thought by considering evidence on language and cognition in both children and adults. Topics to be covered include the typical development and use of language as well as language and cognition in individuals whose language and/or cognition is impaired in some form. The latter include individuals with aphasia who have sustained brain damage following stroke or head injury, schizophrenics whose language reflects aspects of their disorder, children diagnosed with Williams Syndrome who appear to have good or even precocious language abilities in the face of severe cognitive impairment, and Alzheimer's patients in whom semantic memory has begun to deteriorate. The course will also discuss the acquisition of sign language among deaf individuals and the consequences of bilingualism for children raised with two languages and for adults with proficiency in more than a single language.

The purpose of this course is to provide a survey of current scholarship on the relation of language and thought, including a review of recent developments in the primary literature. The necessary background is covered in introductory Psychology and Linguistics courses, which serve as alternative prerequisites. Students will learn about the consequences of typical and impaired development for relations between cognition and language ability. It is distinguished from PSYCH 457, Psychology of Language, by a focus on the implications of language, language development, and language impairment, for cognitive processes. It covers some topics also addressed by current courses in Linguistics and in Communications Sciences and Disorders, but is distinguished from those courses by its focus on perspectives and theories from cognitive psychology. This course may be used toward the 400-level PSY requirements of the PSYBA and PSYBS majors, and toward the PSY minor. Students typically will be assessed on the basis of class participation and discussion (20%), four papers (total 60%), and an in-class presentation based on reading original research literature (20%). The course typically will be offered once each year at the University Park campus with an enrollment limit of 50.

**PSYCH 427 (LING 446)** L1 Acquisition (3) How children learn their first language; psycholinguistic aspects of lexical, syntactic, semantic, and phonological development.

### **PSYCH 427 (LING 446) L1 Acquisition (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course focuses on how children learn their first language from the theoretical perspectives of imitation theories, social construction theories, and innateness theories. In addition, the course covers the various stages of language acquisition including phonological (sound system), morphological (word meaning), syntactical (grammar) and semantic (meaning) development from birth to adulthood. Other related subfields covered in the course include the acquisition of Pidgin and Creole languages, bilingual and multilingual acquisition, and language acquisition and linguistic change.

Bachelor of Arts: Social and Behavioral Science

Effective: Spring 2007

Prerequisite: PSYCH 100 6 additional credits of PSYCH

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**PSYCH 434 (GAME 434) Psychology of Gaming (3)** Upper level course examining the core psychological principles as they apply to topic of games.

**PSYCH (GAME) 434 Psychology of Gaming (3)**

This course looks at how the field of psychology can be applied to understand and improve the world of games. This requires the application of theories and research based in experimental, cognitive and several other disciplines within psychology, including but not limited to cognitive, social, motivation & emotion, and experimental psychology. By applying different theories within these disciplines we can start to understand how humans interact with games and in turn how games have evolved as a result. This course addresses an active research area in psychology, of broad interest to students in Psychology and other disciplines. The course will fulfill a 400-level requirement for students in the PSYCH majors and minors as well as those in the GAME minor. Students typically will be evaluated by exams, research project, in-class activities, homework, and article discussions.

**PSYCH 445 Forensic Psychology (3)** Relations between psychological theory and research and the law, legal processes, and social policy.

**PSYCH 445 Forensic Psychology (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course focuses on the interplay between psychological theory and research and the law, legal processes, and social policy. Students will be exposed to the dilemmas faced in the law and how overlap with the knowledge base and expertise of psychologists. Students will learn about the roles psychologists might play in the court system and the history of their involvement. This will include roles of consultant, policy evaluator, expert witness, assessor, and advocate. Legal issues that emerge in psychological practice will also be covered (e.g., limits to confidentiality, duty to warn, consent issues). Students will gain an understanding of the basic theories of the law and how psychological theories may intersect with these. The emphasis of discussion will be on those affecting children, youth and families. These will include topics such as divorce, child maltreatment, juvenile delinquency, domestic violence, and social welfare. Other topics of the law will also be highlighted (insanity plea, civil commitment). Particular attention will be paid to issues dealing with race, ethnicity, and social class and law and social policy.

This course expands the PSY curriculum at the 400-level to include a popular and socially significant topic, and will fulfill a 400-level PSY requirement for Psychology majors and minors. It addresses in detail legal and social policy implications of topics covered in other psychology courses. Significant background in psychology is assumed; thus PSYCH 270

(Introduction to Abnormal Psychology) is a prerequisite. Students typically will be assessed on the basis of three exams (20% each), a paper (30%), and class participation (10%).

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**PSYCH 451** Psychology of Action (3) Basic and applied science of action, from psychological, computational, and physiological perspectives.

### **PSYCH 451 Psychology of Action (3)**

In all walks of life, people must adaptively control their physical movements. Whether in industrial settings, on the highway, in the kitchen, in the studio, in the concert hall, or on the football field, skillful physical action is essential. This course will focus on the means by which skilled physical behaviors are learned, planned, and controlled. The course will focus on a broad range of basic behaviors (e.g., reaching, walking, looking, speaking, and typewriting) as analyzed from several perspectives (physiologically, psycho-logically, and computationally). Basic science as well as practical applications will be emphasized, as will links between movement control and other, related topics such as perception, cognitive development, and robotics.

This course addresses topics in an active research area in cognitive psychology. It assumes some prior knowledge of cognitive psychology, requiring PSYCH 100 and PSYCH 256 as a prerequisite. The course will cover some topics addressed in several Kinesiology courses, but does so from the perspective of cognitive psychology. It will fulfill a 400-level PSY requirement for Psychology majors and minors. Students typically will be assessed on the basis of midterm (25%) and final (35%) exams, brief writing assignments and in-class activities (15%) and research papers or projects (25%). The course will normally be offered once each academic year.

**PSYCH 457 (LING 457) Psychology of Language (3)** Overview of psychological research and theory on language processes, including speech perception, word recognition, meaning representation, comprehension, and language acquisition.

### **PSYCH (LING) 457 Psychology of Language (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

How do we process language? Why do we easily adjust to a speaker with a foreign accent? How do young children come to speak the language to which they are exposed? Why is it difficult to learn a second language as an adult? This course focuses on the cognitive processes engaged by language use. Topics to be covered include speech perception, word recognition, representation of word meaning, comprehension of sentences, spoken production of words and sentences, and first and second language acquisition. In addition, the role of language in the study of thought and the role of biological mechanisms in theories of language learning will be discussed, as well as ways in which research on the language of special populations (e.g., deaf signers, dyslexics, aphasics) can inform theories of language processing and representation.

## **Public Administration (P ADM)**

**P ADM 401** (HLS 401) Introduction to Homeland Security (3) This course provides foundational knowledge about homeland security, including policy, organization, and legal issues in the American context.

#### **P ADM 401 Introduction to Homeland Security (3)**

The Introduction to Homeland Security/Defense course provides a baseline of common knowledge for homeland security

professionals. The course achieves this goal by focusing on homeland security/defense, the motivation and nature of terrorists, the policies established by governments, pertinent governmental plans to meet homeland security/defense goals, who the key players are across the homeland security/defense spectrum, and the relevant legal issues framing efforts to defend the nation's security. As an introduction to this broad area of study, this course serves as a basis for specialized study such as bioterrorism defense, critical infrastructure protection, cyber-security, and emergency response management. Understanding key principles will be measured through preparation of a written analysis of key homeland security/defense issues with alternative strategies consistent with current policy and legal constraints.

As an introduction to this broad area of study, this course serves as a basis for specialized study such as bioterrorism defense, critical infrastructure protection, cyber-security, and emergency response management. Understanding key principles will be measured through preparation of a written analysis of key homeland security/defense issues with alternative strategies consistent with current policy and legal constraints.

**P ADM 404 (HLS 404) Homeland Security and Defense in Practice (3)** This course analyzes, evaluates, and critiques homeland security plans in practice.

### **P ADM 404 Homeland Security and Defense in Practice (3)**

The focus of the course is to apply lessons learned in previous courses to actual organizations. Key material is reviewed, to provide context for the capstone experience that this course provides. Students will apply the Homeland Security framework (the National Response Plan and the National Incident Management System) to case studies, such as FEMA's response to Hurricane Katrina. The main theme of the course is the need for collaboration (interoperability) across state, local, and national governments as well as with the private sector and other relevant actors. A major portion of the course examines the Commonwealth of Pennsylvania as a state-level case study. The course will culminate with a paper that applies the framework of Homeland Security and Defense to an organization of the student's choosing.

## **Public Policy (PUBPL)**

**PUBPL 201** Introduction to Homeland Security (3) An introduction to homeland security, and defense, with a focus on policy, legal issues, organization, and administration.

### **PUBPL 201 Introduction to Homeland Security (3)**

Introduction to Homeland Security provides a baseline of common knowledge for understanding the nature of homeland security. The course achieves this goal by focusing on homeland security, the motivation and nature of terrorists, the policies established by governments, pertinent governmental plans to meet homeland security goals, who the key players are in homeland security, and the relevant legal issues framing efforts to defend the nation's security. As an introduction to the broad area of study, this course serves as a basis for specialized study such as critical infrastructure protection, emergency response management (including natural disasters), border security, security administration, national security, and terrorism. Understanding key principles of homeland security will be expected from students who complete this course.

**PUBPL 304W Public Policy Analysis (3)** The use of analytic models for describing and explaining the forces shaping policy and the consequence of policy decisions.

### **PUBPL 304W Public Policy Analysis (3)**

This course provides an overview of the policy process and an examination of specific policy areas in the American political system. We will focus on what constitutes public policy and basic aspects of the policy process, including agenda setting, implementation, and policy evaluation. The course covers important contemporary policies such as health care, education, energy, welfare reform, and defense. It also will provide us with an opportunity to consider the utility of policy studies, and the various ways knowledge about particular issues is put to use by academics, partisan political figures, journalists, policy advocates, and policy makers.

**PUBPL 306 Introduction to Crisis and Emergency Management (3)** An introduction to emergency management in mitigating, preparing for, responding to and recovering from hazards.

### **PUBPL 306 Introduction to Crisis and Emergency Management (3)**

The course offers an overview of the field of emergency management in dealing with routine emergencies, crises or disasters, and mega disasters. Specific topics emphasized include: the roles and interactions of the public, nonprofit, and private sectors in emergency management; the legal and organizational structure of the national emergency management system; and the problems and policy issues associated with emergency management. This is done by examining the four phases of emergency management: mitigation, preparedness, response and recovery as they relate to resilience, the attempt to; and an overview, including case studies, of various human-made and, technological disasters as well as disasters related to natural hazards. Emergency management as conducted within the U.S. integrated emergency management system (IEMS) by local state and national emergency management agencies, not terrorist incidents, is the course focus rather than the emerging field of homeland security and terrorist events.

**PUBPL 325 (AMSTD 325) American Political Culture (3)** Study of political culture in the United States.

### **PUBPL (AM ST) 325 American Political Culture (3)**

Examination of American political culture, including political history, party structure, campaign practices, elections analysis, voter behavior, and political ideology. The course satisfies the "area" requirement in society for undergraduate

majors in American Studies, and is open to all majors. Students analyze social and cultural influences on the American political process. Issues of regional, ethnic, rural, urban, and gender traditions on campaigns are considered. Distinctive characteristics of American politics such as the two-party system, populism, and coalition building are discussed. Evaluation methods include examinations and essays. The course is offered once during the academic year and typically closes at 30 students.

**PUBPL 415 (CRIMJ 415) Drug Control Policy in Comparative Perspective (3)** Examines the history of drug control policy in the United States; comparisons and contrasts with other countries' experiences.

**PUBPL (CRIMJ) 415 Drug Control Policy in Comparative Perspective (3)**

This course focuses on the history of drug control policy in the United States and the internationalization of drug prohibition. We also examine the experience of other countries with drug use, abuse and control, including alternative regulatory policies in Western Europe. This class is both historical and comparative in orientation: in tracing the roots of drug prohibition, and examining the experience of other countries, we seek to enrich our understanding of American style drug control and the feasibility of alternative approaches.

**PUBPL 475 Critical Infrastructure Protection (3)** This course provides knowledge about protection of critical infrastructure as an aspect of homeland security.

**PUBPL 475 Critical Infrastructure Protection (3)**

Critical Infrastructure Protection provides a definition of critical infrastructure and examines the importance of protecting it in the post-9/11 era. The course focuses on policies and programs designed to prevent catastrophic events and to protect and maintain the nation's critical infrastructure. It examines such activity through an understanding of the network of organizations at all levels of government and in the private sector responsible for protecting infrastructure. Case examples are provided of catastrophic events to provide an understanding of risks involved in infrastructure protection. Understanding key principles will be measured through preparation of a written analysis of a key homeland security/defense issue with alternative strategies consistent with current policy and legal constraints.

**Q C 460** Introduction to Six Sigma (3) Introduction to Six Sigma philosophy with case studies of the Define-Measure-Analyze-Improve-Control (DMAIC) Process and an emphasis on selection and application of statistical tools.

**Q C 460 Introduction to Six Sigma (3)**

Students are first introduced to the Six Sigma philosophy which is a structured, quantitative approach to improving the quality of products and processes. Students are then introduced to the DMAIC (Define-Measure-Analyze-Improve-Control) Process and how it fits into the framework of the Six Sigma philosophy. Although all steps of the DMAIC process are investigated, the course has a strong emphasis on the "Analyze" step. The purpose of the Analyze step is to explore and understand tentative relationships between and among product and process variables and to develop insight into potential improvements. The course will show how the DMAIC Process is used to achieve business results through the Six Sigma philosophy of a strong focus on fact-based decision-making. The course is suited for engineering and engineering technology students entering the workforce as they are often uniquely placed in crucial roles linking product design and manufacturing within their hiring organization.

**RADSC 210W Radiographic Pathology (3)** Writing intensive study of theories of disease causation and the pathophysiologic disorders compromising health systems with emphasis on radiographic presentation.

**RADSC 210W Radiographic Pathology (3)**

A writing-intensive study of the basic fundamentals of pathology (disease process) with emphasis placed on radiographic presentation. Material covered includes the basic concepts of disease and terms related to pathology, systemic classifications of disease including etiology, examples, complications and prognosis, radiographic procedures and presentation, and the health process. Writing requirements include two short papers and a longer sequenced paper. All papers will receive instructor feedback and subsequent submission of a final revised paper. An informal writing assignment with peer review is also required. The writing process evolves throughout the course as the student applies knowledge learned to current assignments. This course is a requirement of the radiography (radiologic technology) curriculum and could be utilized as an option for students interested in a visual study of disease process such as health science and biology majors or for students in need of a writing-intensive course. As is consistent with the core courses in the Radiography program, a passing grade for enrolled radiography students is 75%.

## Recreation, Park and Tourism Management (RPTM)

**RPTM 100S** Introduction to Golf Management (2) First year seminar for students enrolled in the Professional Golf Management option of RPTM.

### **RPTM 100S Introduction to Golf Management (2)**

This course is designed to provide 1st year students enrolled in RPTM - Professional Golf Management Option, an introduction to the University, to their major / option, and to the Professional Golfers' Association of America. The course objectives are to introduce students to active learning as a way to make the transition to a more demanding academic environment. Students in the class will participate in collaborative group projects, which should also provide opportunities for them to establish relationships with faculty and peers. Students will investigate career opportunities within their field, as well as develop cover letters, resumes and reference sheets that will be necessary in obtaining internships for the summer session following their first year. Course content will also include information to help students become better students, by introducing them to available resources at the University, as well as develop skills in areas such as time management, study skills, note-taking etc. In addition, information will be introduced to help students become responsible members of the University community.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2014

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 101** Introduction to Recreation Services (2) Introduction to discipline and exploration of professional career models/ paths, historical development of profession, expectations and opportunities in recreation services.

### **RPTM 101 Introduction to Recreation Services (2)**

The primary objective of this course is to provide students with an understanding of the historical and contemporary perspectives of the recreation and park profession. In addition, the course will provide an exploration of careers in leisure, recreation and parks, or related services with emphasis on the various leisure delivery systems.

Main topics typically include:

- \* Understanding of the roles and significance of leisure and recreation in past and present societies.
- \* Awareness of the factors contributing to the emergence of specific movements, delivery systems, and agencies within the recreation and parks movement.
- \* Knowledge of the specific roles assumed by public, private, nonprofit, community and commercial agencies in providing resources and contributing to contemporary participation patterns and lifestyles.
- \* Awareness of professional career models, expectations, and opportunities.
- \* An understanding of issues and trends currently affecting the direction of leisure services.

This is a required course for the Recreation, Park and Tourism Management major, usually taken during the freshman or sophomore year. Students in other majors who are exploring Recreation, Park and Tourism Management are encouraged to enroll.

General Education: None

**RPTM 120** (GS;US;IL) Leisure and Human Behavior (3) Leisure from historical and contemporary perspectives, including forces shaping leisure behavior, and relationships among leisure, the environment, and social institutions.

### **RPTM 120 Leisure and Human Behavior (3) (GS;US;IL)**

Leisure and Human Development introduces leisure from historical and contemporary perspective including forces shaping leisure behavior, and relationships among leisure, the environment, and social institutions. Special attention is given to the role of leisure in individual health and wellness. Main topics include: the role of leisure in past and present societies; the ways in which leisure, recreation, and play relate to personal health and wellness, the economy, personal identity, work, religion, sexuality, race, class, socio-economic status, time use patterns, and education; leisure's contribution to human development throughout the life course; the role of leisure in one's life, specialization in leisure activities, leisure careers, serious forms of leisure, and leisure and addiction; and trends in the world economy and culture, technology, urbanization and suburbanization, governance, and demography and how they may influence leisure

behavior.

Student performance is evaluated through exams and concept maps undertaken in class. Students also examine their own leisure by constructing a one-week time diary. The diary involves providing a detailed account of time allocated to work, personal maintenance, and "free time." Students analyze their data, calculate statistics about their time use, and write a reflexive essay that connects their findings to class concepts. The time diary also includes wearing a pedometer for one week to gauge physical activity.

**RPTM 210 Introduction to Commercial Recreation and Tourism (2)** Historical and contemporary perspectives of the field of commercial recreation and tourism.

#### **RPTM 210 Introduction to Commercial Recreation and Tourism (2)**

The primary objective of this course is to introduce students to, and provide core competencies in, the fundamentals and principles of commercial recreation and tourism as fields of service including; the delivery of goods, services, amenities, facilities, entrepreneurship, and trends in commercial recreation and tourism. A second objective is to provide students with an overview of career possibilities in the fields of commercial recreation and tourism.

Main topics typically include:

- \* The history of recreation and tourism and how these sectors fit in the broad spectrum of leisure delivery systems
- \* The role and inter-relationship between private, nonprofit, and public resources in commercial recreation
- \* Management principles in organization, planning, marketing, promotion, finance, public relations, human resource practices, and decision making in commercial recreation and tourism
- \* Current needs, problems and issues associated with the commercial recreation and tourism sectors
- \* Career opportunities in commercial recreation and tourism.

This is a required course for the RPTM major in the Commercial and Community Recreation Management option. Students in other majors are welcome after all RPTM majors have scheduled.

Bachelor of Arts: None

Effective: Spring 2005

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 230** Teambuilding Facilitation (3) Learn leadership and teambuilding skills to facilitate group dynamics and adventure, team activities.

### **RPTM 230 Teambuilding Facilitation (3)**

Through hands-on experience, discussion, and observation students will develop a sound background to the basics of teambuilding. This course will focus on the philosophy of team activities and experiential education, and the skills required to lead and facilitate teambuilding events. In addition to learning skills, the students will be asked to apply their knowledge of teambuilding to lead actual activities for their peers. Finally, students will be exposed to information about career opportunities in the field of teambuilding and adventure education.

Main topics include:

- \* An introduction to teambuilding philosophy and its relation to the outdoor education field. General concepts to be covered include: challenge by choice, full value contracts, the experiential learning cycle and the adventure wave.
- \* Activity understanding to include icebreakers, problem solving activities and trust events
- \* Programming and activity sequencing
- \* Leadership skills and the role of the facilitator
- \* Stages of group development
- \* Debriefing activities, transfer of learning and metaphoric transfer
- \* Activity safety: emotional and physical
- \* Risk Management and the elements of good judgment
- \* Group assessment and program creation
- \* Program evaluation

This course is one of the selections for RPTM majors in the adventure-based programming emphasis of the Outdoor Recreation Option. Students in other majors are welcome after RPTM majors have scheduled.

**RPTM 236** Leadership and Group Dynamics in Recreation Services (3) Supervision in recreation services, including theories, strategies, group dynamics, applied leadership and decision-making skills.

### **RPTM 236 Leadership and Group Dynamics in Recreation Services (3)**

The primary objectives of RPTM 236 are for students to examine both leadership and group dynamics as a function of leisure and recreation services. Students in RPTM 236 will be given a variety of leadership opportunities, both in and out of class, to begin to develop leadership skills as well as observe others in recreation leadership positions. Information on leadership theory and group dynamics (group development, roles in groups, group decision making) will be provided through group exercises and hands on experiences.

Main topics include:

- \* Leadership theory
- \* Approaches to leadership; leadership styles
- \* Definition of group including characteristics and effective group management
- \* Group decision making and problem solving
- \* Recreation leadership skills including behavior management, interpersonal skills and motivation
- \* Teaching as a leadership skill; learning theory
- \* Communication as a leadership skill
- \* Teambuilding

RPTM 236 is a required course for RPTM majors. Students in other majors are welcome. It is strongly suggested that RPTM 236 be taken prior to, not concurrent with RPTM 356.

**RPTM 295A** Introduction to Golf Management (1-4) Introduction to various phases of golf operations in public, private, municipal, or military settings.

**RPTM 295A Introduction to Golf Management (1)**

The primary objective of this course is to complete a 40-hour per week internship at an approved golf property. While on internship the student will complete assignments involving the United States Golf Association's rules of golf. The student will also complete a variety of assignments associated with tournament operations and the teaching of the game of golf to both adults and juniors. Another primary objective involves golfer development programs.

Main topics include:

- \* Rules of Golf: officiating, rules clinic, newsletters, tips, and course clinic
- \* Tournament Operations: budgeting, staffing, publicity, course preparation, health and safety issues, tournament operations software, and evaluation
- \* Introduction to Teaching Golf: research teaching styles, lesson observation, and conducting a series of lessons
- \* Development of Golfer Programs: program design, planning, budgeting, scheduling, problem solving, and program evaluation

This is a required course for all students in the Golf Management Option that are majoring in Recreation, Park and Tourism Management. The internship is not open to students of other majors.

**RPTM 300Y** (IL) Tourism and Leisure Behavior (3) Examination of the impact of recreational sociocultural, governmental, economic, and physical environment on the leisure traveler within the tourism industry.

**RPTM 300Y Tourism and Leisure Behavior (3)  
(IL)**

The objective of this course is to help students understand the tourism concept from a national and international perspective. The students will debate the motivations that lead people to engage in tourism and in hosting tourists. They will also examine the social, economic and ecological impacts that tourism development can bring to host communities and to tourists. The students will finally apply all the learned materials to conceptualize sustainable development strategies that aim at improving the quality of life of host communities, provide quality experiences to visitors, and protect the existing cultural and ecological resources of the destination.

Main topics typically include:

- \* History - How people engage in tourism throughout all periods of history and the influence of major historic events on modern tourism
- \* Socio-cultural impacts - How host cultures are transformed through tourism
- \* Economic impacts - Revenues and costs to host economies due to tourism
- \* Ecological impacts - Ways in which tourism helps and hurts the environment
- \* International terrorism and peace - Why tourism is called the peace industry and how it is affected by terrorism and political instability
- \* Sex tourism - Why tourism can alleviate or aggravate the exploitation of vulnerable segments of society
- \* Tourism planning and policy - How to plan and manage tourism in ways that it produces sustainable benefits to the host community

This is a required course for RPTM majors in the Community and Commercial Recreation option. Students in other majors are welcome.

**RPTM 320** Recreation Resource Planning and Management (3) Relationship between leisure behavior and natural environment. Exploration of natural resources which enhance leisure.

**RPTM 320 Recreation Resource Planning and Management (3)**

This course is an introduction to managing the recreational use of U.S. lands, waters, and wildlife. Course objectives include providing students with an awareness of the scope of outdoor recreation resources and major outdoor activities; knowledge about outdoor recreation resource agencies, their mandates, and their resources; an understanding of key outdoor recreation issues and impacts and their relationships to activity type and visitor behavior; knowledge about appropriate management tools for addressing impacts; and an understanding of the contribution of planning to effective recreation resource management.

Main topics typically include:

- \* Introduction to the scope of outdoor recreation in the U.S., key characteristics of major user groups, visitor motivations and benefits, and phases of the recreation experience
- \* The recreation resource base
- \* Federal, state, local, and private recreation resource providers
- \* Ecological impacts of outdoor recreation
- \* Conflict, crowding, and equal access in outdoor recreation
- \* Recreation carrying capacity, direct and indirect management techniques, and concentrating versus dispersing visitor use
- \* Facilities and design of recreation sites
- \* Visitor use limits, permits, and fees
- \* Information, education, and programs for visitors
- \* Visitor use monitoring

\* Planning frameworks for outdoor recreation

This is a required course for RPTM majors in the Outdoor Recreation Option. The course is open to students in all majors.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2005

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 325** Principles of Environmental Interpretation (3) Introduction, history, practice, and principles of contemporary interpretive activities common to natural and cultural history program sites.

### **RPTM 325 Principles of Environmental Interpretation (3)**

The primary objective of this course is to provide students with an overview of the field of environmental interpretation with special emphasis in understanding and applying the principles inherent in effective programs and presentations. The second objective is to provide information about career opportunities in the interpretive profession. The third objective is to provide students with a variety of service learning opportunities to help them refine their career aspirations.

Main topics typically include:

- \* Becoming aware of the history, professional resources and best practices in the field of environmental interpretation.
- \* Creating and using effective interpretive materials including exhibits and visual aids in non-formal programs.
- \* Demonstrating sound interpretive methods and techniques by conducting short presentations.
- \* Gaining an awareness of the operation of a visitor center and the experience of using live animals in interpretive programming.
- \* Demonstrating a competency in program development by participating in the planning, presenting and evaluation of the Children's Halloween Trail at Shaver's Creek Environment Center.

This course is one of the selections for RPTM majors in the Environmental Interpretation emphasis and the Adventure-based Programming emphasis of the Outdoor Recreation Option. Students in other majors are welcome. This course is a pre-requisite for RPTM 326, 327, 425, and 430.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2005

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 326** Natural History Interpretation (3) Methods, techniques, resources to acquire knowledge of natural history. Field identification, projects of an applied nature, and seasonal application.

### **RPTM 326 Natural History Interpretation (3)**

The primary objective of this course is to give students the basic skills and resources to research and interpret the natural history of a given park or natural area. Building on the prerequisite course (RPTM 325: Principles of Environmental Interpretation), students continue to apply and practice principles that help create effective outdoor programming. The second objective is to provide students with a variety of service learning opportunities to help them refine their career aspirations.

Main topics typically include:

- \* Learning the skills and available resources to identify common fauna and flora found in Central PA including birds, mammals, amphibians, trees and wildflowers
- \* Imparting a basic understanding of the ecology of the Eastern Forest landscape and the ability to interpret that understanding to a general audience.
- \* Writing a short natural history interpretive article for a general audience.
- \* Demonstrating sound interpretive methods and techniques by conducting short presentations.
- \* Gaining an awareness of the operation of a visitor center and the experience of using live birds of prey in interpretive programming.
- \* Demonstrating a competency in program development by planning, researching, and presenting a natural history program in an outdoor setting to their peers.

This course is one of the selections for RPTM majors in the Environmental Interpretation emphasis of the Outdoor Recreation Option. Students in other majors are welcome providing they have met the pre-requisite (RPTM 325).

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2005

Prerequisite: RPTM 325

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 327 Cultural History Interpretation (3)** Methods, skills, and techniques necessary for the programming of historical sites and areas.

### **RPTM 327 Cultural History Interpretation (3)**

The purpose of this course is to provide students with an understanding of the cultural resources within central Pennsylvania and to learn how to effectively interpret these resources through interactive programs and experiences. Building on the prerequisite course (RPTM 325: Principles of Environmental Interpretation), students continue to apply and practice principles that help create effective outdoor programming.

Main topics typically include:

- \* Demonstrating sound interpretive methods and techniques by conducting short presentations
- \* Demonstrating a competency in program development by planning, researching, and presenting two different 1st Person Interpretation -living history programs in an outdoor setting to the general public and to school groups.
- \* Participation, planning and presenting a Maple Sugaring Lesson at the community attended Maple Harvest Festival.
- \* Engaging in research and writing of a Historical Character Paper. Learning how and where to conduct cultural history research in any community by utilizing historical societies, historical sites, libraries, and personal interviews.
- \* Observation of professional cultural history interpreters.

This course is one of three selections for RPTM majors in the environmental interpretation emphasis of the Outdoor Recreation Option. It is included as part of the "Discovery Semester" block of courses taught by faculty at the Shaver's Creek Environmental Center.

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Spring 2005

Prerequisite: RPTM 325

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 330 Adventure-Based Program Leadership (3)** Both theoretical and experiential components are included as the role of the leader in outdoor adventure programs is examined.

### **RPTM 330 Adventure-Based Program Leadership (3)**

Both theoretical and experiential components are included as the role of the leader in adventure-based programs is examined. This course will focus on the philosophy, ethics, and current practices in the area of adventure-based programming. Focus of instruction will be upon program design, developing skills for facilitating personal growth and providing leadership for outdoor pursuits including rock climbing, canoeing, teambuilding, hiking and backpacking.

Main topics to be covered:

- \* Leadership aspects of teambuilding: spotting, the purpose of teambuilding initiatives, debriefing
- \* Leadership aspects of rock climbing: belaying, safety, climbing skills, a look at top rope set up
- \* Leadership aspects of whitewater canoeing: preparation, reading the river, rope rescues, righting a capsized canoe, paddling skills
- \* Leadership aspects of backpacking: leave no trace environmental ethics, how to pack and prepare, 2-night backpacking trip to Black Moshannon State Park, planning a trip, reading a topographic map, acquiring a permit

RPTM 330 is one of the selections for RPTM majors in the adventure-based programming emphasis of the Outdoor Recreation Option. The course is open to students from all majors.

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Spring 2005

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 334 Non-profit Recreation Agency Operations (3)** Recreation agencies in voluntary and semiprivate sectors will be investigated through membership strategies, fund raising, volunteer management, etc. case studies.

### **RPTM 334 Non-Profit Recreation Agency Operations (3)**

The primary objective of this course is to expose students to the operational practices and missions of nonprofit recreation and tourism organizations. In particular, this course will allow students to investigate voluntary and semi-private sectors through membership strategies, fundraising and development roles, and volunteer management.

Primary topics taught in this course will typically include the following:

- \* The role of non-profit organizations in providing park, recreation and tourism opportunities

- \* Missions, governance procedures, and societal roles associated with non-profit organizations
- \* Program support functions and non-profit fundraising strategies
- \* Skills and roles of professional staff in non-profit organizations

This course is a requirement for RPTM majors in the park management emphasis of the Outdoor Recreation Option. This is also a supporting course (i.e., department list) for RPTM majors in the Commercial and Community Recreation Management Option. Students in other majors are welcome after all RPTM majors have been scheduled.

General Education: None  
 Diversity: None  
 Bachelor of Arts: None  
 Effective: Spring 2005  
 Prerequisite: or concurrent: RPTM 356

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 356** Programming in Recreation Services (3) Translating agency philosophy and policy into understanding of organization, management, implementation, and evaluation of programming in recreation services.

### **RPTM 356 Programming in Recreation Services (3)**

This course is designed to provide students with information and practical experience required to successfully design, promote, implement, and evaluate programs and special events in community, campus, or commercial contexts. There are several course objectives, including: (a) increasing students' knowledge of key concepts in program planning and an understanding how they impact programming decisions; (b) increasing students' knowledge of decision factors involved in analyzing and designing a recreation program or special event; and (c) increasing students' skills associated with key management functions required to implement a recreational program or special event. Students are required to work in teams to design, promote, implement and evaluate a special event that will benefit participants and the sponsoring agency.

Main Topics Typically Included in the Course:

- \* Programming concepts, including programmer, program contexts, benefits-based programming, programming approaches, comprehensive programming cycle, and program formats
- \* Management structures, including organization of teams into committee structures with clear roles, responsibilities, and reporting structure
- \* Program design, including program concept, program purpose, goals and objectives, and development of themed events
- \* Situation analysis, including analysis of internal and external factors/ resources, potential participants' needs and interests, and program-related research
- \* Budget development and sponsorship, including direct fixed and variable costs associated with event, differential pricing, and sponsorship
- \* Promotion, including purposes for promotion, types of promotional tools, and development of a promotional plan
- \* Event logistics, including development of a schedule of events, equipment and supplies, volunteers and staffing, registration, site layout, and event logistics
- \* Risk management, including safety check, policies and procedures, staff/volunteer orientation, and overall risk management plan.
- \* Program evaluation, including summative and formative, process and outcome evaluation

This is a required course for majors in Recreation, Park, and Tourism Management. Students from other majors may enroll in this course, providing they have met the pre-requisites.

General Education: None  
 Diversity: None  
 Bachelor of Arts: None  
 Effective: Spring 2005  
 Prerequisite: or concurrent: RPTM 101 RPTM 236 ; fifth-semester standing

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 360** Golf Operations Management (3) The course will focus on business planning, budgeting, inventory management, and financial controls within golf operations.

### **RPTM 360 Golf Operations Management (3)**

The primary purpose of this course is to prepare a student in the fundamentals of retail management pertaining to effectively operating a golf shop. Although successful retail management of a golf shop requires many different considerations, this course specifically emphasizes the planning and controlling of both the operational and merchandising effort. The first objective is to teach the student about the planning process that is necessary to effectively manage a retail business. The second objective is to provide a student with an understanding of the practices and procedures in operating a golf shop. The third objective is to teach the student effective merchandising and pricing techniques.

Main topics typically include:

- \* Types of plans that are needed in order to operate a retail business effectively.

- \* Developing strategic plans and business plans.
- \* Effective merchandising techniques for purchasing, pricing and selling.
- \* Planning techniques concerning both the purchasing and selling process.
- \* Quantitative open-to-buy planning as well as effective assortment planning procedures.
- \* Vendor selection and relations as well as negotiable terms of sale.
- \* Techniques regarding pricing, merchandise presentation and promotion.

This is a required course for RPTM majors in the Golf Management Option. It is usually scheduled during the student's sixth semester. Students from other majors may enroll after RPTM majors have registered.

General Education: None  
 Diversity: None  
 Bachelor of Arts: None  
 Effective: Spring 2005  
 Prerequisite: MGMT 100

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 370** Introduction to Arena Management (3) Introduction to arena and facilities management including operations, budgeting, marketing and staffing. Course is taught on site at a sports/ entertainment arena (ex: the Bryce Jordan Center).

#### **RPTM 370 Introduction to Arena Management (3)**

Introduction to Arena Management introduces students to the complex skills and duties required to manage a sports/entertainment arena. The course is taught on-site at the Bryce Jordan Center at University Park. Main topics include: facility design and facility law; event planning and production; history of the touring industry; entertainment and sports booking; ticketing; marketing and public relations; crowd management, safety and implications of the Americans with Disabilities Act; technology and ticketing systems; professional and collegiate sports management; and partner agencies i.e. food and beverage. Student performance is evaluated through exams and special projects, including a formal small group presentation. Students are provided with exposure to a variety of experiential learning opportunities in service departments throughout the arena. Assignments are targeted to current events in the arena management industry.

General Education: None  
 Diversity: None  
 Bachelor of Arts: None  
 Effective: Summer 2012  
 Prerequisite: RPTM 120

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 394** Orientation to Internship (1) Plan and prepare for internship in Recreation Services. Analyze career opportunities, internship process, and associated requirements. For RPTM majors only.

#### **RPTM 394 Orientation to Internship (1)**

The primary objective of this course is to assist students with planning and preparing for their professional Practicum experience. The supporting objectives are: to provide awareness of the role and significance of the Practicum experience, including its relationship with professional practice; assist students in their understanding of the placement process, including prerequisites for placement; provide students with a working knowledge of their requirements while on Practicum, including contractual arrangements, on-site professional conduct, written assignments, evaluation procedures and evaluation criteria; and to provide the students with knowledge of post-practicum concerns, including resources for professional employment and professional certifications.

Main topics typically include:

- Introduction to the practicum experience and pre-requisite requirements
- Personal and professional needs assessments and the importance of determining deficit skill and competency areas as related to the student's intended career.
- Development of career and practicum goals and their relative importance to practicum site research and selection.
- Preparation of a professional cover letter and resume.
- Searching for and selecting possible practicum sites
- Professional approaches to contacting, communicating and following-up with prospective practicum agencies.
- Interviewing skills, including various interview formats, commonly asked questions, appropriate body language, and professionalism.
- Practicum requirements, including assignments, communication with the university and agency supervisor, and academic and performance evaluation.
- Post-practicum concerns, including graduation, employment, and professional certifications.

This course is required of RPTM majors (except Golf Management Option), and is usually taken two semesters prior to the semester that a student plans to participate in RPTM 495A (Internship in Recreation Services). The course is not open to students from other majors.

Students are evaluated by performance on written assignments and quizzes.

This course is offered both spring and fall semesters with typical enrollments of 70-90 in the fall and 50-70 in the spring.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2005  
Prerequisite: fifth-semester standing

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 395B** Participation in Golf Management (1-4) Practical individual involvement in selected golf operations in public, private, municipal, or military settings.

#### **RPTM 395B Participation in Golf Management (1-4)**

The primary objective of this course is to complete a 40-hour per week internship at an approved golf property. While on internship the student will complete assignments involving: turfgrass management, analysis of the golf swing, and pre-work in merchandising and inventory management.

Main topics include:

- \* Turfgrass Management: routine and non-routine maintenance, practices, traffic management, environmental issues, pest control, communications with superintendent.
- \* Analysis of the Golf Swing: video lessons, business plan for teaching, clubfitting systems.
- \* Merchandising and Inventory Management (pre-work): explore OTB practices, compare product lines, profile vendors, pricing methods, and evaluation of merchandise displays

This is a required course for RPTM majors in the Golf Management Option. The internship is not open to students in other majors.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2005  
Prerequisite: RPTM 295A ; 2.00 cumulative grade point average

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 397** Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

#### **Special Topics (1-9)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2005

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 399** (IL) Foreign Studies (1-12 per semester/maximum of 12) Foreign Studies in RPTM.

#### **Foreign Studies (1-12 per semester/maximum of 12)**

General Education: None  
Diversity: IL  
Bachelor of Arts: None  
Effective: Summer 2012  
Prerequisite: RPTM 199

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 410** Marketing of Recreation Services (3) Theoretical/practical application of marketing/advertising strategies in the development/delivery of recreation services.

#### **RPTM 410 Marketing of Recreation Services (3)**

The primary objective of this course is to provide students with an overview of marketing in general and recreation/tourism marketing in particular. Supplemental objectives are to (a) provide students with a review of different marketing theories and practices and (b) help students apply marketing principles to practical recreation/tourism situations.

Main topics typically include:

- \* Introduction to marketing and its evolution
- \* Parameters of the recreation/tourism experience and how this affects marketing practices
- \* Defining and segmenting the consumer market
- \* The marketing mix
- \* Conducting marketing research in an effort to develop effective marketing strategy
- \* Service quality and its impact on marketing strategy
- \* Customer loyalty and its impact on marketing strategy
- \* Recognizing and responding to the changing needs of consumer markets

This is a required course for RPTM majors, generally taken after completion of the introductory courses in the major. Students in other majors, including those pursuing the Liberal Arts Business minor, are welcome after RPTM majors have scheduled.

General Education: None  
 Diversity: None  
 Bachelor of Arts: None  
 Effective: Spring 2005  
 Prerequisite: fifth-semester standing or above

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 415 Commercial Recreation Management (3)** Planning, developing, and managing profit-oriented recreation opportunities.

### **RPTM 415 Commercial Recreation Management (3)**

Building upon subject matter presented in many of the core RPTM courses, the primary objective of this course is to provide students with an understanding of strategic management processes and how they apply to recreation/tourism businesses. A second objective is to develop students' decision-making and analytical abilities.

Main topics typically include:

- \* An overview of the strategic management process
- \* Having the mindset of an entrepreneur/intrapreneur
- \* The "ins and outs" of conducting feasibility studies
- \* The pros and cons of different forms of business
- \* Generating and setting short- and long-term goals and objectives for recreation/tourism businesses
- \* Capitalizing, financing and budgeting for recreation/tourism businesses
- \* Planning, organizing, managing and controlling recreation/tourism businesses
- \* Regulations, taxation and licensure of recreation/tourism businesses
- \* Recognizing the importance of developing and maintaining relationships with various constituencies
- \* Options for strategic growth

This course is required of RPTM majors in the Commercial and Community Recreation Management option. Students take this course after or concurrent with RPTM 410. Students in other majors who have met the pre-requisites, including those pursuing the Liberal Arts Business minor, are welcome after RPTM majors have scheduled.

General Education: None  
 Diversity: None  
 Bachelor of Arts: None  
 Effective: Spring 2005  
 Prerequisite: RPTM 210 and RPTM 410

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 425 Principles of Interpretive Materials (3)** Principles, practices, application of non-personal interpretive activities common to natural/cultural history, including exhibits, audio-visual and illustrative materials.

### **RPTM 425 Principles of Interpretive Materials (3)**

The primary objective of this course is for students to follow the exhibit creation process from conceptualization through construction to completion. Along the way, students will present their works-in-progress to fellow students and instructors for modification and improvement. Their final products will be used in a practical environment in the exhibit room at Shaver's Creek Environmental Center and at various educational functions around the state - PA State Farm Show, Central PA Festival of the Arts, Penn State's Ag Progress Days, etc.

Main topics to be covered:

- \* Topics vs. Themes: narrowing the unifying concepts in exhibit design
- \* Flow in an exhibit and museum space: how to guide logical progression of thought in both an exhibit and exhibition area
- \* Color Schemes
- \* Computer aided design techniques
- \* Woodworking skills

This course is one of the selections for RPTM majors in the environmental interpretation emphasis of the Outdoor Recreation option. Students from other majors may enroll in this course if they have met the pre-requisite (RPTM 325).

General Education: None  
 Diversity: None  
 Bachelor of Arts: None  
 Effective: Spring 2005  
 Prerequisite: RPTM 325

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 430 Environmental Education Methods and Materials (3)** Methods and materials for developing, implementing, and evaluating environmental education programs within formal and non-formal educational settings.

### **RPTM (AEE) 430 Environmental Education Methods and Materials (3)**

The primary objective of this course is to provide students with an introduction to Environmental Education (EE) methods (pedagogy) and materials for both formal and non-formal settings. A second objective is to provide the student with an opportunity to apply specific methods and materials to practical situations at Shaver's Creek Environmental Center. These opportunities include Outdoor School, School Day Programs, Maple Harvest Festival, and Scout Programs. A third objective is to provide information about gaining access to EE materials through web-based, written, and personal contacts.

Main topics typically include:

- \* Introduction to the history, definition, and philosophy of Environmental Education (EE)
- \* Differences between formal and non-formal EE settings
- \* PDE Environment & Ecology Standards
- \* Models of EE pedagogy
- \* Place-based-education labs covering: The Land, Water Resources, Fauna, and Flora
- \* "Keystone Aquatic Resource Education" teacher resource workshop (or other national curricula- i.e. P WILD, PLT, Project WET, etc.)
- \* EE Resources available at SCEC, the web, and other EE centers

This course is one of the selections for RPTM majors in the environmental interpretation emphasis and adventure-based programming emphasis within the Outdoor Recreation option. Students from other majors may enroll in this course if they have met the pre-requisite (RPTM 325).

General Education: None  
 Diversity: None  
 Bachelor of Arts: None  
 Effective: Summer 2011  
 Prerequisite: AEE 100 or RPTM 325

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 433W Program Evaluation and Research in Recreation Services (3)** Systematic, structured problem-solving process for decision making in recreation and parks. Research techniques/evaluation procedures; quantitative, qualitative methodologies; deductive, inductive reasoning.

### **RPTM 433W Program Evaluation and Research Services (3)**

The goal of this course is to provide students with the background necessary to understand and evaluate research reports and to conduct research projects of moderate complexity in the field of recreation, parks, and tourism management. The research focus of the class is on evaluation and assessment. Class topics include introductions to the philosophy of science, including the nature of theories, hypotheses, concepts and constructs, to measurement theory, to applied sampling techniques, and to methods of scale construction. Both quantitative and qualitative research methods are addressed. In-class activities include the conceptualization and execution of an applied evaluation project. This project involves practice in interviewing, in-class focus groups, survey questionnaire development, data collection, and data analysis. The course will provide students with a conceptual map of how research is conducted, the resources available to them, the vocabulary of research, and guidance in writing a research report.

Additionally, this is a Writing Across the Curriculum class. Students will prepare several short writing projects, some based on interviews or observational studies that they have conducted, as well as a final report based on the evaluation research conducted by the entire class.

The course material is divided into units of study with topical areas within each unit sequentially presented to parallel the research process itself. Students are expected to have read assigned materials and to attend class prepared to discuss them. Classes involve lectures, discussions, and in-class activities such as focus groups, survey questionnaire development and presentations of research results.

This class is required of all undergraduate majors in Recreation, Park and Tourism Management. RPTM 356 and a 3-credit course in statistics are prerequisites for this course. Students from other majors are welcome in this course, providing they have met the pre-requisites.

General Education: None  
 Diversity: None

Bachelor of Arts: None  
 Effective: Spring 2005  
 Prerequisite: RPTM 356 3 credits in statistics

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 435 Recreation Facilities Planning and Management (3)** Planning and management of selected facilities with emphasis upon maintenance, activity, and support provisions.

### **RPTM 435 Recreation Facilities Planning and Management (3)**

The purpose of this course is to introduce students to planning, design, and maintenance practices at recreation and park facilities. This course will emphasize the activity and support provisions of recreation facilities and will identify standards of design and maintenance. Compliance with accepted risk management practices and the Americans with Disabilities Act (ADA) will also be stressed in this course.

Specific topics covered in this course include:

- \* Maintenance management practices and risk management procedures
- \* Monitoring and reporting recreation and park facility use
- \* General planning considerations of selected recreation facilities, parks and tourism attractions
- \* Special materials and apparatus required for specific park and recreation facilities
- \* Support facilities necessary to complement developments that offer these activities (e.g., vehicular circulation and parking, lighting, emergency provisions, etc.)

This is a required course for RPTM majors in the park management emphasis within the Outdoor Recreation Option. The course is also on the department list of the Commercial and Community Recreation Option. Students in other majors are welcome providing there are seats available after RPTM majors have been scheduled.

General Education: None  
 Diversity: None  
 Bachelor of Arts: None  
 Effective: Spring 2005  
 Prerequisite: fifth-semester standing or above

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 440 Adventure-based Programming and Administration (3)** Utilization of wilderness/backcountry environments and participant challenge; history, models, theories; survey of organizations; program design, administration; and issues.

### **RPTM 440 Adventure-Based Programming and Administration (3)**

The first objective of this course is to promote awareness of the history and evolution of adventure-based programming and to look at how this process has impacted the state of programming today. Secondly, through experiential, in-classroom activities students are expected to apply their knowledge of the various outdoor topics and theories examined in class throughout the semester. Third, students learn about the hiring and interview process as they create resumes and explore the currently listed jobs in the field. Fourth, various topics related to current issues in the field are debated, discussed and considered while looking at the future of adventure-based programming.

Main topics to be covered:

- \* History of Experiential Education/Adventure-based Programming
- \* Risk Management in relation to outdoor programming: looking at accidents, forms, and client screening
- \* Hiring/interviewing/looking at resumes
- \* Programming for various audiences: youth at risk, elderly, people with disabilities, women, college student orientation programs, and experiential education in the classroom
- \* Staff training: topics/skills to be covered, leader problems, and burnout
- \* Current Issues: controversial issues, what is in the news, media, gender roles/stereotypes

RPTM 440 is a selection for RPTM majors in the adventure-based programming emphasis of the Outdoor Recreation option. The pre-requisite for this course is RPTM 330 or RPTM 356.

General Education: None  
 Diversity: None  
 Bachelor of Arts: None  
 Effective: Spring 2005  
 Prerequisite: or concurrent: RPTM 330 or RPTM 356

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 460 Political and Legal Aspects of Recreation Services (3)** Role of local, state, federal government in provision of recreation services. Legislative and judicial systems.

### **RPTM 460 Political and Legal Aspects of Recreation Services (3)**

The primary objective of this course is to examine the governmental systems that influence the delivery of recreational services. The formal structure of government is considered along with the day-to-day political processes that determine

public policy. All three levels of government-federal, state, and local--are studied. Particular attention is given to the judicial systems of these governments. The course also gives considerable attention to tort liability by examining case law as it relates to recreation facilities and services. The course also explores federal and state laws pertaining to employer/employee relations and administrative responsibilities. An additional objective is to investigate land use planning as it impacts recreation services.

Main topics include:

- \* The Court Systems, legislative branches
- \* Planning: historical perspective, land use, zoning, mandatory dedication, easements, building codes
- \* Liability: elements of negligence, situations giving rise to law suit, product liability, defenses & risk management, review
- \* Personnel laws; Federal laws, State Human Relations Acts, Civil Service, Hatch Act, FLSA, finance, garnishment & bankruptcy
- \* Public Relations Law: copyright, photography, lotteries, libel, slander, privacy
- \* Administrative Law: purchasing, entrepreneurship, Federal Tax laws

This is a required course for all students majoring in Recreation, Park and Tourism Management. It is open to students of other majors, providing they have met the pre-requisite.

General Education: None

Diversity: None

Bachelor of Arts: None

Prerequisite: RPTM 101

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 470 Recreation and Park Management (3)** Management of recreation and park services in public/non-profit settings; planning, budgeting fiscal development, resources allocation, decision- , making, computer applications.

### **RPTM 470 Recreation and Park Management (3)**

The primary objective of this course is to provide advanced standing RPTM students with an understanding of management and administration procedures that are essential to operating and managing park facilities and recreation programs. Secondly, students will be given an opportunity to be exposed to park and recreation governance processes and will be asked to synthesize the roles that key stakeholders play in the management of public-sector park and recreation organizations.

Key topics covered in this course include:

- \* A historical account of park and recreation operating environment as well as trends in park support and positioning of the field
- \* Inter-organizational partnerships and collaborations in the park and recreation field
- \* Financing, budgeting and fiscal control processes
- \* Human resource management principles and policies
- \* Creating effective working relationships with community stakeholders and park and recreation board members
- \* Comprehensive recreation, park and open space planning

This course is required for RPTM majors in the park management emphasis within the Outdoor Recreation Option. Students in other majors are welcome providing there are seats available after RPTM majors have been scheduled.

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Spring 2005

Prerequisite: RPTM 320

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 480 Senior Management Seminar (1)** Current management issues will be examined relative to professional management strategies, ethics, and leadership in leisure services.

### **RPTM 480 Senior Management Seminar (1)**

This course is a seminar about current issues in outdoor recreation management. The course objective is to provide students with an opportunity to read about and discuss issues including outdoor recreation management goals and techniques, liability and risk management, leadership, ethics, the place of outdoor recreation in multiple-use management of natural resources, public participation in resource management, and career opportunities.

Topics for the semester are typically selected by the instructor in consultation with students. Examples that have been selected in the past include:

- \* Managing potential conflict between motorized and non-motorized recreation
- \* Leadership and risk management in outdoor adventure activities
- \* Commercial recreation on public lands and waters
- \* Politics, policy, and public involvement in managing public lands and waters;
- \* Recreation and the management of wildlife, timber, minerals, water, and grazing
- \* Career opportunities in teambuilding and leadership development

- \* Concession operations in public parks and forests
- \* Planning and developing a new National Monument
- \* Public employment and civil service requirements.

This is a required course for RPTM majors in the Outdoor Recreation Option. Students are required to have sixth semester standing or higher and have completed RPTM 320. The course is not open to students from other majors.

General Education: None  
 Diversity: None  
 Bachelor of Arts: None  
 Effective: Spring 2005  
 Prerequisite: sixth-semester standing in RPTM

 Bachelor of Arts: None  
 Effective: Summer 2011

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 495A** Internship in Recreation Services (12) Meet educational objectives through participation in organized practical experience; direct observation and professional supervision in full-time work experience.

**RPTM 495A Internship in Recreation Services (12)**

The primary objective of this course is to provide students with an opportunity to meet their educational objectives through participation in well-planned and organized practical experience. Secondary objectives include individualizing the practical experience based upon the student's intended professional career; structuring the experience to facilitate increases in professional skills and competencies as related to the student's professional goals; providing the student with professional supervision and mentoring; and offering the student a diversity of professional responsibilities, including direct leadership and administrative opportunities, in order to prepare the student for successful career entry.

Main topics typically include:

- \* Orientation to the Internship Agency
- \* Development of individualized practicum goals/educational objectives
- \* Critical analysis of professional issues and events
- \* Comparison and contrast of complementary and competing agencies/organizations
- \* In-depth study of the student's practicum agency
- \* Development and implementation of a "special project"

This is a required course for RPTM majors (except Golf Management option) usually taken after a student has completed the majority of the courses in the major. Students must complete RPTM 394 (Orientation to Internship) prior to enrollment. The course is not open to students from other majors.

General Education: None  
 Diversity: None  
 Bachelor of Arts: None  
 Effective: Spring 2005  
 Prerequisite: RPTM 394 ; seventh-semester standing; 300 hours practical experience; and a 2.0 grade-point average; current and valid certification in advanced first aid and cardiopulmonary resuscitation

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 495B** Internship in Golf Management (1-4) Observation and participation under supervision in golf operations in public, private, municipal, or military settings.

**RPTM 495B Internship in Golf Management (1-4)**

The primary objectives of this course are to complete a 40-hour per week internship at an approved golf property. While on internship the student will complete assignments involving philosophy and swing concepts of teaching, and supervising and delegating.

Main topics include:

- \* Philosophy and Swing Concepts of Teaching: group lessons, teaching evaluation, lesson plan, lesson series with disability populations, physical training.

\* Supervising and Delegating: performance problems, joint problem solving, motivating assignments, and delegation.

This is a required course for all RPTM majors in the Golf Management Option. The internship is not open to students of other majors.

General Education: None

Diversity: None

Effective: Spring 2005

Prerequisite: RPTM 395B ; 2.00 cumulative grade point average; current and valid certification in advanced first aid and cardiopulmonary resuscitation

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RPTM 495C** Internship in Golf Management (1-4) Observation and participation under supervision in golf operations in public, private, municipal, or military settings.

#### **RPTM 495C Internship in Golf Management (1-4)**

The primary objective of this course is to complete a 40-hour per week internship at an approved golf property. While on internship the student will complete assignments involving merchandising and inventory management, food and beverage control, and portfolio development.

Main topics include:

\* Merchandising and Inventory Management: creating an open-to-buy plan, pricing, sales, inventory, displaying

\* Food and Beverage Control: customer survey, labor pro forma, costing, storage, and regulations

\* Port Folio Development: industry problem statement and presentation

This is a required course for RPTM majors in the Golf Management Option. The internship is not open to students of other majors.

## **Religious Studies (RL ST)**

**RL ST 001** (GH;US;IL) Introduction to World Religions (3) An historical and comparative survey of the principal beliefs and practices of the world's major religions.

**RL ST 001** Introduction to World Religions (3)  
 (GH;US;IL)

**(BA) This course meets the Bachelor of Arts degree requirements.**

The academic study of religion is distinct from instruction in a religion, in that one seeks simply to learn about a religion, its history, texts, major personages, and belief claims. Because religions are always deeply intertwined with the entire cultural history of a region (linked with everything from weather and topography to political, social and economic history), studying a religion always means placing it in its larger cultural context. World Religions (RL ST 001) is an introduction to the religions of the world, past and present. After an introduction to the academic study of religion and various aspects of the field (methods, history, problems), the course begins a more--or--less chronological progression from the ancient world to our contemporary times. Each religion (e.g.: Ancient Near Eastern; Greek and Roman; Hinduism; Buddhism; Judaism; Christianity; Islam; NRMs ["New Religious Movements"]) is placed in its historical, social, and cultural context. The questions that arise in the course of such study are profound (e.g.: how have various religions answered the major questions of life: the question of the meaning of life; the question of evil; the question of how one defines "moral" behavior; the question of how one deals with others who may have a different religion or different morality; etc.), and can be of great help in critically examining one's own views and presuppositions about such matters. The student should leave the course with a good grasp of the variety of answers given by human beings to these "religious" questions over the centuries; how religions are linked to their cultures; how religions change and transform themselves; and how religions function within a culture, including our own. This should provide the student an excellent framework within which to reflect on his or her own religious experience, and prepare the student for mature, sophisticated interaction with the topic of religion later in life. An example of evaluation may be: Evaluation based on discussion, quizzes, mid-term and final exam. As an introduction to religion--and world religions in particular--RL ST 001 offers a brief overview of all the world's major religions, most of which are the subject of focused courses at the 100--level and above. Because RL ST 001 also contains modules relevant to the methodologies used in the academic study of religion, it is also related (or linked) to all other courses in religious studies, which use these same methods. RL ST 001 may be used to fulfill 3 credits in the Humanities. RL ST 001 also may be used to fulfill a US;IL requirement in the major or minor.

**RL ST 003** (GH;US;IL) (ASIA 003) Introduction to the Religions of the East (3) Religious experience, thought, patterns of worship, morals, and institutions in relation to culture in Eastern religions.

**RL ST (ASIA) 003 Introduction to the Religions of the East (3)**  
**(GH;US;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course will explore the foundations, development, and diversity of religious traditions in Asia, focusing mostly on Hinduism, Buddhism, Confucianism, Daoism, and Shinto. It is organized according to two sections: Foundations and Developments. The Foundations section provides an introduction to the worldviews and practices of Eastern teachings. We will also discuss the structure of society, the social expectations on individuals based on gender and class, and rituals, which expose us to rich mythologies or intricate ceremonies. The second section, Developments, traces the evolution of religious doctrine and practice through history. Here, we learn to distinguish among large and small-scale movements and schools, and to familiarize ourselves with the geographical scope of each religion in South, Southeast, and East Asia. An abiding emphasis in this course will be on how to read and interpret the varied scriptures and primary texts of these religions.

General Education: GH  
 Diversity: US;IL  
 Bachelor of Arts: Other Cultures and Humanities

**RL ST 004** (GH;US;IL) (CAMS 004, J ST 004) Jewish and Christian Foundations (3) Introduction to the perspectives, patterns of worship, morality, historical roots, and institutions of the Judaeo-Christian traditions; their relationships to culture.

**RL ST (CAMS/J ST) 004 Jewish and Christian Foundations (3)**  
**(GH;US;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Jewish and Christian Foundations seeks to help students better understand the Bible as the scriptural background for both Judaism and Christianity. Some people believe the Bible is "scripture," self communicated by God to humanity. To others, this text is a compendious collection of poetry, historical writing, law, myth, and mystical writings, which stems from the religious, political, and cultural milieu of the ancient Near East. Some people believe this is a book designed to bring people to belief in the power and reality of the god discussed in these writings. For others, the book is a source of both unity and division among people in the world, and must be treated as ambiguous in nature. Still others see the biblical text as the single most important collection of literature to have shaped the religious, political, and imaginative contours of western civilization. This course focuses on selected portions of the biblical text, representing diverse strands of historical remembrances, interpreted and re-interpreted in light of critical historical events, and serving, first as an oral, and later as a written account of the life, beliefs, and hopes of Jewish and Christian peoples. Readings from both the Hebrew Bible (the Christian "Old Testament") and the Christian scriptures (the "New Testament") will be used. RLST/CAMS/J ST 004 provides a broad discussion of the origin of both Judaism and Christianity within a historical and geographical framework. The principle teachers, writers, and "founders" are discussed, including Moses, Isaiah, David, Ezra, Jesus, Peter, and Paul. Students are challenged to read and understand these important writings which have interpreted the human condition and which have oriented generations of people towards a transcendent referent associated with love and loyalty. Evaluation methods may include two hour examinations, a final examination, and two short writing assignments. The examinations are not cumulative. Class participation will also be a factor in overall evaluation for the final grade. RL ST/CAMS/J ST 004 may be used to fulfill requirements for the Religious Studies, Classics and Ancient Mediterranean Studies and Jewish Studies major/minor. Finally, students will be challenged to evaluate and respond to the literature as it touches on human experience experiences which all people share regardless of their personal religious affiliation.

**RL ST 012** (GH;IL) (CAMS 012, J ST 012) Lands of the Bible (3) Textual and archaeological evidence for the lands, cities, and peoples associated with the Hebrew Bible and Christian scriptures.

**RL ST (CAMS/J ST) 012 Lands of the Bible (3)**  
(GH;IL)

**(BA) This course meets the Bachelor of Arts degree requirements.**

CAMS/J ST/RL ST 012 introduces students to the lands, cities, and peoples associated with the Hebrew and Christian scriptures. Using methodologies from historical geography, archaeology, ancient history, epigraphy, and anthropology, students study the Fertile Crescent, from the Nile Valley, through the Levant and its Jordan River valley, to Mesopotamia--the river valleys of the Tigris and Euphrates. Students will study the cities and states of the cultures along these rivers in the Bronze and Iron Ages, including Memphis/Saqqarah, Thebes, Ugarit, Jerusalem, Lachish, Megiddo, Shechem, Samaria, Hazor, Ebla, Babylon, Ur, Petra, Jericho, 'Akko, and others. These are the lands of the Hebrew and Christian scriptures, but also cities that have been revealed through modern study. For example, the texts excavated at Ugarit (Syria) in the 1920's shed light on the relations between ancient Israelites and their Canaanite neighbors in the period of the "Conquest" and the monarchies of the Iron I and Iron II periods. Students will learn that the culture of the ancient Near East is inexorably linked to an understanding of the religious traditions that grew up in the region, including Judaism, Christianity, and Islam. Classes will be a combination of lecture, discussion, and problem-solving, with frequent use of slides and occasional use of artifacts to illustrate the topics at hand. Students are evaluated on three of the following five means: a midterm test, a final essay examination, a five to seven page term paper, a team research oral presentation, a team research poster presentation. Participation in class discussion will also be evaluated. This course fulfills three credits of the General Education or the B.A. humanities requirement. For majors in Classics and Ancient Mediterranean Studies, the course fulfills the requirement of three credits in Near Eastern literature and language, civilization, or archaeology. The course fulfills the three credit requirement for courses in RL ST 001-099 for the Religious Studies major, and the Jewish Studies major's requirements. The course also would fulfill three credits of the six credit requirement for courses in any field that may be below the 400-level for the Religious Studies Minor, three credits of the nine credits required in course work for the Jewish Studies Minor, and three of the 18 credits required for the Classics and Ancient Mediterranean Studies minor.

**RL ST 044** (GH;IL) (CAMS 044) Ancient Near Eastern and Egyptian Mythology (3) Survey of major ancient Mediterranean myths, gods, and goddesses in their cultural contexts; influence on later cultures.

**RL ST (CAMS) 044 Ancient Near Eastern and Egyptian Mythology (3)**  
(GH;IL)

**(BA) This course meets the Bachelor of Arts degree requirements.**

RL ST/CAMS 044 introduces students to a selection of major ancient Mediterranean and Egyptian myths, gods, and goddesses. Ancient Canaan, Mesopotamia, and Egypt (geographically approximating the contemporary Middle East) were primary locations for the development -- beginning already in the fourth millennium B.C.E. -- of highly complex urban civilizations, many of which persisted until the turn of the Era. These ancient societies were responsible both for notable technological achievements, such as writing, sophisticated irrigation systems, and the wheel, and for notable cultural achievements, such as impressive legal codes, highly developed astronomical research, and complex religious systems. This course will acquaint students with some major religious writings stemming from these fascinating old world cultures. The class discusses in some detail a limited range of stories about the divine realm, creation, the flood, kingship, life and death, and sexuality. The course pursues such comparisons by studying myths against the background of the different cultures that produced them. Because a number of these religious myths are historically related, the course will also critically compare the similarities and the differences between them. To underscore how important historical and geographic settings are to understanding these stories, the course uses different techniques of instruction such as small group discussions, slides, lectures, and films. Three of the world's major religions -- Judaism, Christianity, and Islam -- trace their roots to the religions of the ancient Near East and Egypt. Hence, some attention will be paid to the similarities and differences between the views expressed in these myths and the views developed in classical Judaism, Christianity, and Islam. By grappling with issues such as divine character, self-identity, and female/male relationships in the ancient Mediterranean world, students will be better acquainted with how classical Judaism, Christianity, and Islam innovate beyond the religious heritage to which they are indebted.

**RL ST 070** (GH;IL) (CAMS 070, J ST 070) Prophecy: The Near East Then and Now (3) Prophecy in the ancient Near East, the ancient Jewish and Christian traditions, and today.

**RL ST (CAMS, J ST) 070 Prophecy: The Near East Then and Now (3)**  
**(GH;IL)**

The objective of this course is to introduce students to the prophetic traditions of the ancient Near East and the Bible of the Judeo-Christian traditions. The course will explore the development of prophetic circles in the ancient Near East (incl. Egypt, Syria, Canaan, and Mesopotamia) and then focus on the major prophetic traditions of the Hebrew Bible (to include at least Isaiah, Jeremiah, Ezekiel, Amos, Hosea, Micah, Haggai, Zechariah, and Daniel) and how these traditions were understood in early Judaism and nascent Christianity. Special attention will be paid to the roles of priests, kings, and prophets in ancient Israel to better understand Israelite and Judaeon prophetic traditions in ancient Israelite society. The course will then examine the rise of apocalypticism and its modern manifestations in the coalition of conservative Christians and Jews in "Zion" -- the new Jerusalem. Additional emphasis will be placed on the religious and political interactions which manifest themselves in the prophetic movements--then and now--including the rhetoric of ideology and propaganda. Important figures and events illustrate these cultural and political trends, in antiquity, and in the contemporary setting.

**RL ST 083S First-Year Seminar in Religious Studies (3)**  
**(GH;FYS)**

**(BA)** This course meets the Bachelor of Arts degree requirements.

Students will be expected to master material relative to the introductory study of a major world religion or aspect thereof, as well as to acquire basic skills useful to the study of the liberal arts. Students will learn to read books and original documents, discuss them, formulate effective arguments, and write essays and papers. The course will challenge students to express themselves and to gather information through discussion and writing of papers about major world religion(s) or aspect(s) of world religion(s). It will challenge students to think about social behavior, the nature of community, and the value of scholarly endeavor as these relate to the particular topic of the seminar. Frequently, the course will deal with intercultural and international topics, though some of the variable topics may not readily lend themselves to such analysis. Through readings, discussions, lectures, and research projects, students will become acquainted with major figures and developments in a major world religion, as well as to acquire basic skills useful to the study of the liberal arts. Students will learn to read books and original documents, discuss them, formulate effective arguments, and write essays and papers. Analysis of this type will provide students with techniques for appreciating and judging arguments and presentations in many fields of learning distinct from religion, from scholarly to popular. By reading and understanding religious texts and the arguments based on them, students will learn to consider the cultural assumptions of different groups and societies and will come to discern and, perhaps, gain deeper insight into their own values and assumptions by contrast with these. Although the course will focus on a specific topic, the instructor will help the student to see the wider implications of the issues and controversies discussed. Whenever possible, the international and intercultural aspects of the topic will be considered. The course fulfills the first-year requirement as well as one of the humanities requirements in general education or a Bachelor of Arts humanities requirement.

**RL ST 090 (GH;IL)** (CAMS 090, J ST 090) Jerusalem: Past, Present, and Future (3) Social, cultural, religious, political, and archaeological history of Jerusalem from earliest times (c. 3000 BCE) to the present.

**RL ST (J ST/CAMS) 090 Jerusalem: Past, Present, and Future (3)**  
**(GH;IL)**

**(BA)** This course meets the Bachelor of Arts degree requirements.

Jerusalem, a holy city for Judaism, Christianity and Islam, is symbolically depicted in art and literature as the physical and spiritual center of the world. Throughout its history, this "city of peace" was a focal point attracting numerous cultures and peoples, the latter sometimes as prophets and more often as conquerors. The reasons for Jerusalem's centrality and significance during the past five millennia as a heavenly and earthly capital are explored in this course.

The course curriculum will survey the religious, political, archaeological and historical record of ancient Jerusalem, beginning with its earliest settlement during the fourth and third millennia BC. Jerusalem's urbanization in the second

millennium BC, its role as the capital of biblical Israel and Judah during the First and Second Temple periods, and its transformation as a center of Christianity and later Islam are studied utilizing the testimony of artifacts, architecture, and iconography in relation to the written word. Throughout the ages and continuing into the 21st century, Jerusalem remains a contested city for the three monotheistic faiths. The holy city's impact on the politics of the modern Middle East will be critically examined in light of Jerusalem's history and recent archaeological discoveries and their modern-day interpretation.

Objectives include the critical evaluation of archaeological, historical and literary evidence and its relationship to modern-day political and religious perceptions of Jerusalem. The course will encourage research skills (including library training sessions) and writing and oral communication skills based on an analytical approach to the texts and material culture relevant to Jerusalem.

This course will fulfill three credits of the General Education or the B.A. humanities requirement and the GI requirement. For majors in CAMS, the course will fulfill the requirement of three credits in Near Eastern literature and language, civilization, or archaeology; and for those in the CAMS ancient Mediterranean archaeology option it will fulfill the three credits of archaeology course work requirement. The course will fulfill three credits of course work concerned with the ancient period or with the land of Israel.

**(BA) This course meets the Bachelor of Arts degree requirements.**

From the domestication of animals and the dawn of agriculture to the development and socialization of monotheism, the world of the first civilizations led to that of the Bible and ancient Israel. This course, involving a critical view of Biblical texts in light of other ancient sources, archaeology and historical methods, explains the nature and the evolution of society, religion and thought in the Biblical era. Learn how civilization arose, and how the state appropriated religion and applied it for its purposes. How the science of administration developed and deployed ideological tools to further its own ideas of the West developed. This course is deeply subversive, particularly of religious and academic shibboleths. The only authority in this class is that of the most persuasive reader, and doctrines, whether religious or political, will have to be checked at the door.

An example of evaluation may be: weekly participation in discussion; mid-term and final essay examinations involving a critical evaluation of ancient text's claims in combination with archaeological evidence; a research essay, where the class or section size is lower than 30; an ability to read critically, bringing different classes of evidence to bear on issues arising from the texts, and construct coherent and compelling arguments to a particular thesis. The course provides a Near Eastern counterpart to HIST 100, 402 and a Near Eastern aspect to the Jewish Studies major. It complements RL ST 110, by offering historical exploration of the culture under study in that course. Related courses include ANTH 012, HEBR, 010, ENGL 104, RL ST 004, and RL ST 111. The course helps round out the majors in History and Jewish Studies, particularly in ancient history. It also extends the program in Religious Studies (history of religions), and it contributes to the ancient stream of the prospective program in Jewish Studies and History.

(GH;US;IL)

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course provides a historical overview of the development of ideas that provide the foundation of the south Asian religious culture. The course begins with a discussion of the Vedic ritual tradition, tracing the emergence of the idea of civic responsibility or Dharma. It then proceeds to analyze how the Vedic ritual tradition may have given rise to the philosophical concepts like that of Karma or (individual action and its underlying motives), Samsara (the cyclical view of life), and the Atman (nature of the individual) during the Upanishadic/Vedantic era. The first half of the course concludes with selected readings from the Bhagavadgita, and the Mahabharata. The readings will all be in English. Class discussions focus on how the classical Hindu worldview may have emerged from the philosophical foundation of the Upanishads, and later built the groundwork for the Hindu devotional Bhakti tradition. The second half of the course focuses on the various regional or little traditions from the middle ages analyzing how the local religious cultures (both in the Hindi and non-Hindi speaking areas) may have played out against the great classical Brahmanic tradition. The course concludes with a discussion of how Hinduism has been historically influenced by other religious cultures (both indigenous and foreign) like Buddhism, Jainism, Islam, and Christianity.

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course is a general survey of the historical development, basic doctrines, and practices of Hinayana, Mahayana, and Vajrayana Buddhism. The course is structured around the "Three Jewels" of Buddhism: Buddha, Dharma, and Sangha. That is to say, we will learn about the Buddha as a historical figure and spirit; we will come to understand the basic elements of his doctrinal teachings; and we will examine the community of followers who have practiced his teachings. Special attention will be paid to the various "geographies" of Buddhism as expressed through different cultures in ancient India, Southeast Asia, and East Asia. At the conclusion of the course, we will encounter Buddhism as a relatively new cultural force in America. The course revolves around the discussion of key issues in the philosophy, ethics, and theology of various forms of Buddhism.

**(BA) This course meets the Bachelor of Arts degree requirements.**

The academic study of religion is distinct from instruction in a religion in so far as one seeks simply to learn about religion, or religions, by considering the history, texts, major figures, and belief systems of one or more traditions. Because religions are always deeply intertwined with the entire cultural history of a region, studying a religion has always involved placing it in a larger cultural context. Buddhism in the Western World (RL ST 105) provides an intense concentration on a particular topic from the Buddhist religious tradition, focusing on historical, comparative, and phenomenological concerns. The course concentrates on the major figures involved, integrated with significant issues and religious practices in the development of the aspect of the Buddhist religious tradition under investigation. In many cases,

across the face of Indian, Chinese, and Japanese Buddhism, gender, racial, and ethnic issues play critical roles in the development of the tradition studied, and these are explored in depth. Finally, the course examines the symbols, myths, and rituals of culture or cultures involved, which are radically different than our own, providing for each student the opportunity to compare, consider, and assess a wide variety of expressions of religiosity. Evaluation is research paper. Buddhist in the based on discussion, written assignments, and a major Western World, RL ST 105, offers a special focus on a particular aspect of one of the major religious traditions of the world. Because general approaches and methodologies in the academic study of religion are employed throughout the course, RL ST 105 is linked to all other courses in religious studies. RL ST 105 may be used to fulfill 3 credits in the Humanities, and may also be used to fulfill a US;IL requirement in the major or minor.

**RL ST 110** (GH;US;IL) (CAMS 110, J ST 110) **Hebrew Bible: Old Testament** (3) Introduction to the history, literature, and religion of ancient Israel.

### **RL ST (CAMS/J ST) 110 Hebrew Bible: Old Testament (3)** **(GH;US;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

The Hebrew Bible is the record of the interaction between the people of ancient Israel and their God. As a religious text, the Bible is inextricably intertwined with the cultures of Israel's neighbors, including the Canaanites, Syrians, Greeks, Assyrians, Babylonians, Arabs, Egyptians, and the peoples of the eastern desert. To study the Hebrew Bible and its development during the first millennium BCE is to study the history, culture, and literature of the entire region. Hebrew Bible introduces students to the literature of ancient Israel, its rituals, the stories which established a people's identity, and which defined their moral behavior. Great figures of the texts, such as Moses, David, Solomon, Bathsheba, Ruth, Jeremiah, Daniel, and Ezra, teach us important lessons about life and how people of faith attempted to relate to one another, to God, and to people outside their ethnic group. Students will read from the text and from a textbook which contains scholarly opinion from a variety of sources. Recent archaeological and epigraphical studies will be incorporated into the course to enhance our work. The ultimate goal will be to assess the meaning of the texts in their ancient Near Eastern environment, and to understand the development of Hebrew religion and the beginnings of Rabbinic Judaism. Students will be evaluated using an hour examination, a 6-8 pp. "hermeneutical essay," a final examination, class attendance and discussion. As an introduction to the scriptures of the Hebrew Bible / Old Testament, RL ST/CAMS/J ST 110 utilizes the methodologies used in the academic study of religion. The course is related or linked to many courses in religious studies which use these same methods or which are related to the history and development of Judaism, Christianity, or Islam. RL ST/CAMS/J ST 110 may be used to fulfill requirements for the Religious Studies major. RL ST/CAMS/J ST 110 may also be used to fulfill the GI or GH requirements in the major or minor in Religious Studies, Classics and Ancient Mediterranean Studies and Jewish Studies.

**RL ST 111 (GH;IL) (CAMS 111, J ST 111)** Early Judaism (3) Religious thought, practices, and parties in the Second Temple period; the emergence of rabbinic Judaism.

**RL ST (CAMS/J ST) 111 Early Judaism (3)**  
(GH;IL)

**(BA) This course meets the Bachelor of Arts degree requirements.**

Early Judaism will introduce students to the history of Judaism as reflected in Jewish literature from the period of the Babylonian exile (587/6 BCE) to the closure of the Babylonian Talmud (ca. 600 CE). In this period, ancient Hebrew religion was transformed into a new world religion-Judaism. Students will read selections from the Bible, and from other religious literature, including the Dead Sea Scrolls, the Apocrypha, the Christian Scriptures, the Mishnah, and the Talmudim. By tracing the development of various Jewish "parties," students will appreciate how Classical Judaism evolved, and how the early Church emerged from Jewish roots in the first centuries CE. Early Judaism grew from its roots in the period of Achaemenid domination. Jews were dispersed throughout the eastern Mediterranean, so influences from Persian, Hellenistic, and Roman thought naturally influenced the faith's development. Students in Early Judaism will develop a new appreciation for the basic beliefs and practices of Judaism as well as for the beginnings of the Jesus movement and the development of the early Christian Church. Theological and historical questions concerning the origins of evil, the primacy of prayer, the beginnings of Jewish religious architecture, and the rise of anti-Semitism will be explored. Religion is always linked inextricably to culture. Judaism's transformation in contact with diverse cultures will become evident throughout RL ST/CAMS/J ST 111. The methodologies used in this course will enable students to read and evaluate primary and secondary sources used in the academic study of Judaism. Many other courses in Religious Studies (001, 004, 110, 120, 124), Jewish Studies (010 and 102), and Classics and Ancient Mediterranean Studies, as well as History and Art History are closely related or linked to this course. RL ST/CAMS/J ST 111 may be used to fulfill 3 credits in the Humanities, or to fulfill the GI requirement in the major or minor. The course will be offered once each year, with an enrollment of 65. This course will satisfy 3 credits towards the minor in Jewish Studies or the major in Religious Studies, plus being cross-listed with CAMS, fulfilling part of the requirement for courses in supporting or related areas of all Classics and Ancient Mediterranean Studies majors. The course also provides an excellent addition to other courses, such as CAMS 010, "Mesopotamian Civilization;" CAMS 044, "Ancient Near Eastern Mythology;" CAMS 045 "Classical Mythology;" CAMS 033, "Roman Civilization;" and CAMS/RL ST/ JST 012, "Lands of the Bible."

**RL ST (J ST/C LIT/CAMS) 113 Myths and Legends of the Jews (3)**  
(GH;IL)

The impact of the Bible on Western Culture is immense. Beyond its religious importance, the motifs and images from its myths and stories permeate literature and art, providing a basic frame of reference that for much of history could be taken for granted. A degree of familiarity with these motifs so as to be truly fluent is no longer common, and so it requires special effort to discern allusions to biblical traditions. Moreover, these traditions are not static: religious communities continually re-interpret them and appropriate them in very different contexts. Many prominent traditions in Judaism, Christianity, and Islam do not appear explicitly anywhere in the Hebrew Bible, but are the product of imaginative and ingenious interpretation and re-tellings. Why, for example, is Noah an example of a righteous person in Christian tradition, but in rabbinic tradition is more often portrayed as a profane, earthly-minded man who was saved only because he was the least bad of an evil generation? Why is Moses commonly portrayed with horns in medieval art? Underlying such different traditions are centuries of debate and reflection on these texts as sacred scripture, and competing religious communities often authorized their distinctive beliefs and practices by reading them into scripture. The differences are often too subtle to discern apart from careful comparison.

This course will explore the boundaries between Scripture and tradition by means of a close examination of the myths and stories in the Hebrew Bible and their subsequent interpretation and re-tellings in Judaism, Christianity, and Islam. Our procedure will be to compare these traditions closely with the biblical text, asking: What is different? What concerns motivated the changes? Is it possible to discern patterns of change, or "agendas" of the author? We will also compare with later interpretive traditions (Jewish, Christian, Islamic). Can we trace trajectories of interpretation? Can we discern particular interpretive methods in operation? We will seek to answer: what do these re-workings of the traditions tell us about the development and function of Scripture, and the social circumstances of the communities? Finally, we will seek to detect reflections of these interpretive traditions in literature and art from the medieval to the modern periods.

**(BA) This course meets the Bachelor of Arts degree requirements.**

The course explores the opportunities and problems of Jews around the world from the late eighteenth century -- the "age of emancipation" -- to the present time. Commercial, political, and intellectual revolutions in the 1700s, giving rise to modern capitalism, republicanism, and an emphasis on reason, combined to induce political states to grant Jews unprecedented freedom. Emancipation introduced new elements into Jewish life: religious change, personal choice, and internal disagreements. In practical ways, life improved for Jews, as they became more prosperous and assimilated. But freedom also increased the chances for loss of identity, as liberals discarded some rituals as old-fashioned and many individuals chose to give up traditional practices. In addition, anti-Semitism persisted, although it was now, at times, more difficult to detect. Traditional forms of hostility to Jews, such as heresy trials and political expulsions, were replaced by subtle expressions of political and social discrimination. But hatred of Jews did not disappear, despite widespread acceptance in Western culture of political liberalism. The class explores these trends in Europe, the Americas, and Israel. It begins by looking at the fragile freedom of nineteenth-century Jews. In the twentieth century, Jewish experience has often been characterized by open conflict: in the Holocaust, the formation of Israel, contemporary black-Jewish relations in the United States, and Jewish-Muslim relations in the Middle East. The course concludes with these recent struggles. Course readings include personal narratives (reminiscences or letters) and works of fiction (a short story, play, and novel). The class is primarily a discussion class, using writing assignments as the principal method of evaluation. The course requires three graded essays and an ungraded proposal. Students are also asked to keep a journal of commentary on course readings. Class attendance and participation are components of the final grade. The course serves as an introduction to modern Judaism as a religion and culture. It prepares undergraduate students for advanced work in European and American Judaism, as well as Israeli history and culture. These advanced courses are found in the Religious Studies and Jewish Studies programs and in the Departments of History and Comparative Literature. It may be used to complete the major or minor requirements in Religious Studies and Jewish Studies. The class fulfills the humanities requirement for non majors.

**RL ST 115 (GH;US) (HIST 115, J ST 115)** The American Jewish Experience (3) Examination of the history, culture, social tensions, and contributions of Jews and Judaism in America.

**RL ST (HIST/J ST) 115 American Jewish History and Culture (3)  
 (GH;US)**

Throughout American history, Jewish presence on American soil has compelled Americans to re-think the meaning of religious and ethnic diversity. As one of the earliest non-Christian immigrant populations, American Jews struggled to explain how they could nonetheless fit into American cultural, political and social life. At the same time, many Jews have been concerned with their own survival as a distinctive group, unwilling to cede those practices, behaviors or traits that designate them as a people apart from other Americans. This course is about how these two seemingly contradictory goals—to integrate into America and to remain distinctive from other Americans—shaped the history and experience of Jews in the United States and influenced the way Americans think about diversity and pluralism.

The student of American-Jewish history must be attuned to the multiple ways that Jewishness has been defined: as a race, a religion, a nationality, and an ethnicity. In this course, far from choosing just one of these designations, we will explore Jewish life from many different angles. Topics to be considered include religious reform, immigrant experience, political activism, popular culture, and struggles over community authority. Readings focus on a number of primary texts, including memoirs, novels, films and philosophical essays. Secondary books and articles will also help deepen students' understanding of trends in American-Jewish history and awaken them to diverse interpretations of history. Students will be encouraged to engage actively and critically with the texts by writing short reading responses, longer essays, and participating in classroom discussion and presentations, all of which will serve as the basis for their evaluation.

This course complements offerings in Religious Studies, Jewish Studies and History. It provides a foundation for an already existing upper-level seminar in American Judaism (listed in Jewish Studies and Religious Studies). In addition, the course strengthens the History department's offerings in American history, serving as a basis for students interested in immigration, ethnicity and religious history. Students who are interested in modern Jewish history will also find this course a worthwhile addition to their program of study, since, unlike other courses, it deals primarily with the story of Jewish life in the United States.

**RL ST 116 (GH;IL) Muslims in America (3)** This course is a study of Muslims from multiple racial, cultural, and national perspectives; it explores what it means to be a Muslim in America.

**RL ST 116 Muslims in America (3)  
 (GH;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course is a study of Muslims in the United States. It examines the multiple racial, cultural, and national groups that comprise this diverse community; we will question what it means to be a Muslim in America. It traces the trajectory of this seventh century faith as a transplanted faith in the New World. The course interrogates Islam in America starting with the historical record of the surviving Muslims that came to the shores of the Americas as African slaves and their enduring efforts to remain Muslims. Next, we examine African American Islam in its myriad formations. The influx of immigrants in the 1960s from the Arab Muslim world, Africa and Asia, including Central Asia became the second historical chronicle of Islam in America. This inquiry examines the narratives of each wave of Islam as a cultural and religious force in the development of Muslim identity in America. The course will examine how Muslim populations during each of these divergent waves confronted American pluralism, diversity and democracy. The course examines the transformation of the Islamic tradition from its origins in the Arabian peninsula to the shores of North America, including questions of authority, the growing salience of American Muslim women's conception of gender jihad, the struggle of Muslim trans gender community to gain acceptance, institution building, and the efforts to develop an American Muslim identity. The course will also examine the musical genre of rap music with special reference to the second generation of Muslim. We will also examine the role of Islam in American prisons. The course will examine how the Islamic tradition has been adapted to the American cultural milieu and how Muslim culture is also influencing America. The course will examine how Islam and Muslim populations have been conceptualized in America before and after 9/11.

**RL ST 120 (GH)** (CAMS 120, J ST 120) New Testament (3) Introduction to the history, literature, and religion of early Christianity in its Jewish-Hellenistic setting.

**RL ST (CAMS/J ST) 120 New Testament (3)**  
**(GH)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course introduces the student to the New Testament (NT), the principal religious text of Christians. As such, it is one of the most significant and most studied texts in human history. Written in Greek between approximately 55 C.E. and 110 C. E. the New Testament consists of 27 individual books, each written by a separate author (s, authors), that were later assembled into the "New Testament." Because of the growth of Christianity, the NT has influenced every aspect of our world-to name only a few: history, politics, economics, literature, philosophy, ethics, medicine, science, the arts (music, architecture, the visual arts), gender roles, theater and drama, law, psychology, and sociology. After introducing the student to the academic study of religion and the "historical-critical method," our study begins by examining the materials from which the NT's text is reconstructed, and the period in which the NT was authored. This includes exploring other parallel phenomena (such as miraculous hearings, resurrections, and virgin births) in contemporaneous Graeco-Roman religions. After this background is in place, the course turns to an examination of the gospels and their interrelationships, the pictures of Jesus presented (and their relationship to first-century B.C.E. Judaism), variations among Christian understandings of Jesus reflected in the NT and other contemporaneous Christian writings (he was a man, an angel, a lesser divinity), Paul and his life and writings, and the emergence of Christianity from Judaism as a distinct, new, apocalyptic religion. Along the way, we examine the manuscript tradition of the NT, changes that have been made to its text, and different interpretations of certain passages in the NT. We also examine the historical-critical tools scholars use to date and sequence passages in the NT (form, redaction, literary, and historical criticism, for example), for one can correlate the evolution of early Christian theology with the evolution of the NT's text.

**RL ST (J ST/CAMS) 123 Ancient Monotheisms: Judaism, Christianity, Islam (3)**  
**(GH;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course examines the origins and early development of the three major monotheistic religions: Judaism, Christianity, and Islam. These three related religious traditions originate in the Near East and all center around a belief in the existence of one single god (monotheism).

The aim of the course is to describe and compare core events, major beliefs, practices, and significant historical trends in each monotheistic tradition from their respective beginnings to around 750 C.E. The course begins with the origins of Judaism, the first religion in the Near East to be monotheistic. It then examines how Christianity branched out of Judaism in ancient Palestine, as well as how Islam emerged in Arabia in the 7th century C.E. within a historical context rich in Jewish and Christian influences.

All three religions share basic beliefs about the nature of deity, the role of the written word in revelation, and prophets as messengers. Equal emphasis will be placed on these commonalities and on the major tenets and practices that differentiate these three religions.

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course traces the development of one of the world's "Big 5" religions from the death of its founder (about the year 30 C. E.) down to the middle ages. It focuses on significant trends, controversies, personalities, and turning points. These are not just diverse in terms of chronological breadth, but are also spread geographically from the eastern end of the Roman Empire (the border with Persia) to northern Europe. Attention is given to the various manifestations of Christianity (Judaic, Hellenistic, Latin), and the linkage between local patterns (culture, history and predispositions) and how these shaped the sort of Christianity that took root in particular areas. Students typically will be evaluated on four "pop" quizzes, a midterm and a final exam. The course can be used towards a major or minor in Religious Studies, Classics and Ancient Mediterranean Studies, and Jewish Studies and used to fulfill 3 credits in the Humanities for non-majors.

(GH)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

The course, as other 100-level Religious Studies Program and Philosophy courses, is intended for Liberal Arts majors and others likely to take Religious Studies and Philosophy courses rather than for Religious Studies majors. This course will provide a critical survey of key concepts, problems, and figures in the short history of bioethics and in contemporary studies and possible future directions. The course will develop the student's analytical and critical skills through study of different views on the nature of life and what experimentation with life-forms morally entails. The course will examine the increasingly techno-scientific definition of the nature of life and the human condition and evaluate such arguments and positions of practice in regard to opposing views of life as inherently sacred. It will investigate the extent and breadth of moral arguments in regard to differing life forms and consider the rights of humans and non-human animals. Students will be graded on participation, case study analyses, a group presentation, and a final paper. PHIL 132/RL ST 131 satisfies the GH requirement and it may be used to fulfill major and/or minor requirements in Philosophy and Religious Studies.

(GH;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Ancient Israel and the Levant, a region that included present-day Israel, Jordan, Palestine, Lebanon, and southern Syria, traditionally served as the land bridge and crossroads that connected the great empires of Mesopotamia and Egypt. Its strategic geographic location has ensured its significance throughout history. Many different cultures and peoples have influenced and controlled this region resulting in a very multi-cultural past reflecting the history of the entire Ancient Near East. This is the background to the origins of the Israelites at the end of the second millennium B.C.E., the birth of the Hebrew Bible, and the emergence of Judaism, Christianity and Islam. This course will focus on Biblical Israel in the southern Levant from the emergence of Ancient Israel (ca. 1200 BCE) through the Second Temple and Roman periods concluding with the development of the region as the "Holy Land" for Jews, Christians and Moslems. Students will examine the emergence of Israel; the arrival and settlement of the Philistines; state formation and the period of the United and Divided Monarchies; the fall of Israel and Judah to the Assyrians and Babylonians; the return from exile during the Persian period; Hellenism and the influence of the Roman world on Palestine; the reemergence of Judah during the Second Temple period; the destruction of the Second Temple and emergence of Rabbinic Judaism; Palestine and its role as the "Holy Land" to Jews, Christians and Moslems. The course grade will be based on active participation (attendance, discussion sessions, group presentations and individual oral presentations), one midterm exam and one paper. This course fulfills three credits of the General Education or the B.A. humanities requirement and the GI requirement. For majors in Classics and Ancient Mediterranean Studies, the course fulfills the requirement of three credits in Near Eastern literature and language, civilization, or archaeology; and for those in the Classics and Ancient Mediterranean Studies ancient Mediterranean archaeology option it fulfills the three credits of archaeology course work requirement. The course fulfills three of the nine credit requirement for courses in RL ST 100-299 for the Religious Studies major, and Jewish Studies major's requirement for three credits of course work. CAMS/J ST/RL ST 134 GH may be used to fulfill the requirements for 12 credits of course work at any level towards a Classics and Ancient Mediterranean Studies minor.

**RL ST 135 (GH;IL) (J ST 135, PHIL 135) Ethics in Jewish Tradition and Thought (3)** Examination of Jewish ethical thought from biblical foundations to the modern period, with attention to contemporary issues in moral philosophy.

**RL ST (J ST/PHIL) 135 Ethics in Jewish Tradition and Thought (3)  
(GH;IL)**

This course takes as its starting point the idea that modern ethical frameworks are deeply rooted in the "soil" of older traditions. By examining the development of Jewish intellectual traditions and their roots in the Bible, it provides students with an opportunity to study ethics in a philosophically textured, culturally rich, and historically informed way. And by focusing on Jewish engagement with the Bible, the course illuminates other traditions that derive from biblical monotheism: for example, those associated with Christianity, Islam, and the Enlightenment. The first part of the course takes up the idea of tradition and includes a study of biblical texts that serve as the foundation for key moral concepts. Following the traditional division of the scriptures, it examines questions of human identity and responsibility in the Torah, social ethics in the Prophets, and the quest for wisdom in the Writings. The final topic in this unit is the development of ethical tradition among the great sages of Jewish antiquity.

The second unit shifts focus to the appropriation of tradition in modern Jewish thought. After reviewing important developments in Jewish thought in the medieval and early modern periods, it turns attention to the ways that some recent figures have addressed perennial concerns in light of commitments and ways of being that are integral to Jewish identity. By reading closely the works of such seminal thinkers as James Kugel, Joseph Soloveitchik, and Abraham Heschel, we will gain a deep acquaintance not only with important vocabulary but also with the ways that traditional words and concepts may be used dynamically to produce fresh ways of looking at questions in moral philosophy. Even when the influence of Judaism on a particular figure is not openly acknowledged in his work, as in the case of Sigmund Freud, he may be studied profitably, in a way that sheds light on characteristically Jewish ideas. Finally, the course turns in its third and final unit to applied ethics. The central question here is how Jewish tradition informs ethical reflection in a wide range of contemporary fields: specifically, environmental studies, social and sexual ethics, and legal and business ethics.

**RL ST 137 (GH;US;IL) (WMNST 137, J ST 137) Women and Religion (3)** Jewish and Christian religious views on womanhood; thought and lives of important religious women; and feminist understandings of these.

**RL ST (J ST/WMNST) 137 Women and Religion (3)  
(GH;US;IL)**

Women and Religion examines the historical and contemporary role of women in society and in religion, how those roles are shaped by religious doctrines around leadership, ritual, language, and the valuation of women's experience and

history, and the diversity of women's voices speaking to these issues.

An historical inquiry begins with a review of early goddess-based religion and an examination of gender roles promoted in selected creation narratives, including those from Genesis. Additional biblical and non-canonical texts are studied for their various characterizations of woman, the influence of marital status, and her place in the public and private spheres. Historical debates about women consider what roles women played in leadership structures, in religious ceremonies and in the creation of a theological tradition as well as the places women created for themselves outside "official" institutional churches or the formalities of worship.

We study prominent women in biblical history, the early church, the medieval past, and in modern American history. What are their stories and what noteworthy contributions did they make in the history of religion? What do we know of their lives and thought?

Furthermore, the course addresses contemporary issues of importance to women and how those issues are resolved from the multiple perspectives within Judaism and Christianity. Such issues may include dating, marriage, family and divorce; spousal and gender relations; reproductive rights; homosexuality; sexual violence toward women; work outside the home; and religious leadership and inclusion.

Finally, the course examines women's diverse understandings of the ways of being religious. Women are not a homogeneous group and are responding in a multitude of ways to the decisions they face about staying within or working outside established institutions. We consider their choices, from redefining and recreating new traditions and rituals, both within and outside formal worship settings, to returning to goddess worship and other innovations inspired by the most recent feminist movement.

All topics are discussed in light of the different beliefs and understandings across the movements within Judaism as well as within Roman Catholicism and the many Protestant denominations. In addition, the diversity of scholarly interpretation is emphasized, including that offered by feminist theologians and the breadth of women's experience arising from factors of race, ethnicity, sexual orientation, and class and educational background.

**RL ST(AF AM) 145 African American Religions and Spirituality (3)**  
(GH;US;IL)

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course is an introduction to African American religion in the U.S. We will investigate the history and significance of the religious dimension of African American life and culture. We will also examine the demographics of race and religious experience. African Americans (I also use the term Black American) have many different religious backgrounds including Protestant, Catholic, Moslem, and others, which are examined in this course. However, since well over 90% of Blacks who have a religious experience and organization are Christian, the history of the Black Christian church and Blacks in the Christian churches in the United States will occupy most of our study. This course will also examine the theological backgrounds of the Black church from the basic Christian documents in the New Testament, to the most widely known Black theologians and the development of "black liberation theology," one of Christian theology's most important contributions. The theology of Martin Luther King, Jr., will be of particular concern.

**RL ST (AAA S) 147 The Life and Thought of Malcolm X (3)**  
(GH;US)

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course will examine in-depth the life, speeches, and thoughts of Malcolm X/El Hajj Malik El Shabazz. While the "Autobiography" will be a major source, we will also use other sources to develop an understanding of the philosophy and thought of Malcolm X. We will explore the social, economic, political, cultural, religious, moral, and spiritual context of America in general and of African Americans in particular. We will examine Malcolm X's influence on the period in which he lived and since his assassination. We will compare and contrast his view on issues of race, culture, politics, education, crime, human rights, civil rights, morality, and economics with those of other African American leaders and with the prevailing views of most Americans on those subjects. We will devote a large portion of the course to the examination of the social movements that impacted on Malcolm and those that he influenced. The speeches of Malcolm X and the writings about Malcolm X are instructive and will be utilized along with other documents. Videotapes and audiotapes will also be employed as instructional materials. Students are expected to be ACTIVE participants in the learning/teaching experience. Students are required to participate in class discussions centered on the readings and related topics. There will be a written mid-term examination and a written final examination. Students are expected to complete an individual research project related to the course and write a paper on that research as well as to participate in a collaborative group project of their choosing on a subject related to the class. This course will count in the supporting courses category of the major and minors in African/African American studies. It also will fulfill credits in the Religious Studies Program. It may also be used to fill GH and US requirements.

**RL ST 160** (GH;IL) (CAMS 160, J ST 160) Sacrifice in Ancient Religions (3) Examines theories of sacrifice and its manifestations in especially the religions of the ancient Mediterranean world and the Near East.

**RL ST (CAMS/J ST) 160 Sacrifice in Ancient Religions (3)**  
(GH;IL)

**(BA) This course meets the Bachelor of Arts degree requirements.**

Sacrifice (from Latin sacer "holy" + facere "to make") is one of the most prominent and troubling aspects of religion, in that it involves making an offering or slaughtering an animal to a deity. Its destruction and violence is often at odds with other rituals and core understandings within a religion, so why is it done and what good does it bring? This course will first examine some competing definitions and theories of sacrifice, and then turn to its manifestations in the ancient societies and religions of Greece, Rome, Egypt, Mesopotamia, Israel/Palestine (along with its neighbors Hatti and Phoenicia), as well as some examples from outside the Mediterranean world and the Near East, such as Mesoamerica or Vedic religion.

(IL)

**(BA) This course meets the Bachelor of Arts degree requirements.**

This is an introductory survey of the historical, philosophical, and cultural dimensions of the major religious traditions in China and Japan. The course delineates and highlights the organic view of the universe and the hierarchical ordering of society in East Asia. It traces the evolution of the major traditions—Confucianism, Daoism, Buddhism in China, as well as Shinto, Buddhism and Confucianism in Japan—by examining their ideas of humanity and nature, morality and society, and metaphysics and ethics. It also reveals the interaction and interrelation between ideology, politics and society, and their impact on the development of the major religious traditions in history. A major focus is the relation between the “little tradition”—the popular and folk practices and beliefs of esoteric Daoism, devotional Buddhism, and fertility-cult Shinto—and the “great tradition”—the elite and literate doctrines and precepts of Confucianism, philosophical Daoism, and monastic Buddhism. The course also devotes some attention to the influence of religion on various facets of culture, such as medicine, science, literature, art and food.

**RL ST 190** (GH;IL) (J ST 190, HIST 190) Religion and Conflict (3) Critical examination of the role religion has played in human conflict.

**RL ST (J ST/HIST) 190 Religion and Conflict (3)**  
**(GH;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

The role of religion in human conflict has long been debated. Is religion inherently divisive, or has it been manipulated for divisive ends? Is religion a source of conflict, of peace, or of both? Why do religious adherents often claim their scriptures teach harmony and compassion, yet still find religious justification for opposition, aggression, and even war in those very scriptures? Why is it that sometimes it is members of the same religion, but different sects or denominations, who are the most confrontational to each other?

This course introduces students to a critical examination of the negative, positive, or ambiguous roles religion has played in conflict and conflict resolution. After analyzing various theories about the relationship between religion and conflict, we will look at the possible foundations for religious conflict, such as perceptions of religious difference or constructs of identity in society, the scapegoating of the religious Other, and issues of religious conflict brought on by colonialism in the past and by increased globalization in the present. We will also explore the approaches that some religious traditions have had to conflict resolution. Finally, we will examine specific cases of religious conflict in antiquity as well as the modern world from across the globe in order to discern patterns, detect commonalities and differences, and ultimately to better understand the complicated world in which we live.

**RL ST 235** (US;IL) (HIST 235, J ST 235) The Church and the Jews (3) Examination of the relationship between Western church and the Jews from the First Century to Enlightenment.

**RL ST 235 The Church and the Jews (3)**  
**(US;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course will examine a key aspect of western history - the complex relationship between the Western (Roman Catholic) Church and the Jews, from the first century to the present. We will analyze ideas and policies regarding Jews as expressed in different realms, from theology and canon law to church art and popular preaching. We will also examine how changing conditions led to striking changes in church attitudes and policy, and how church policy was often at odds with popular sentiments about Jews.

The course will be designed to enable students to grasp the fluidity of attitudes over time, and the interplay of economic, social, political, and theological factors; to grasp of essential elements of a key area of conflict in western culture; and to develop their skills in the close reading of primary texts

Students will be evaluated on the basis of three quizzes and a final exam. The course would offer a chance for students to develop perspectives previously gained in a number of courses, particularly HIST 001 and 002 (The Western Heritage), RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), HIST 107 (Medieval Europe), HIST 407 (Early Medieval Society), and J ST 010 (Jewish Civilization). It would complement such courses as HIST 108 (The Crusades), HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), HIST 414 (Renaissance and Reformation), J ST 111 (Early Judaism), J ST 110 (Hebrew Bible), RL ST 120 (New Testament), and RL ST 124 (Early and Medieval Christianity).

The course will count for 3 credits toward: a) the 22 credits required for the minor in Jewish Studies, b) the 33 credits required for the major in Jewish Studies, c) the 30 credits required for the major in Religious Studies, and d) the 36 credits required for the History major.

**RL ST 280** (GH;IL) (WMNST 280, J ST 280) **WOMEN AND JUDAISM** (3) Explores the Jewish views of women that have influenced the roles of women within both the religion and Western culture.

**RL ST (J ST;WMNST) 280 Women and Judaism (3)**  
**(GH;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Women and Judaism will introduce students to the roles and views of women as seen in the Jewish tradition. Because Judaism is not monolithic, these views will vary even within time periods and even among rabbis. The goal of this course, therefore, is not for students to leave the class with one idea of what a Jewish woman is or one idea of what issues are at stake for women in Judaism. Rather, the goal is for students to understand the complex relationship women have to this religion. This course will also explore the views of Jewish women and the issues that concern them in contemporary society. Objectives include the following: students will begin to understand the stereotypes that influence how Western society views Jewish women, and as a result, how they have come to view themselves. They will be asked to examine the many important roles that Jewish women have played both in their religion and the society at large. They will be asked to examine how the Jewish tradition both helped and hindered women to play these roles. They will see how Jewish women contributed to the development of their own religion and to the larger culture in which they live. They will develop a deeper appreciation for the complexity of the relationship between women and religion. Topics include images of Jewish women in the Bible and the media, women and Jewish views of sexuality, Jewish ethics, Judaism and feminism, and women and Jewish theology. Students will be evaluated by examination, writing ability (several short papers or one larger paper), and group presentations.

**RL ST 405 (IL) (J ST 405)** Jews and Food (3) Jewish laws, customs and attitudes with regard to food production, agricultural policy and eating from biblical to modern times.

### **RL ST (J ST) 405 Jews and Food (3) (IL)**

This course examines Jewish laws, customs and attitudes with regard to food production, agricultural policy and eating from biblical to modern times. These tenets of the Jewish tradition presently underwrite modern movements concerned with land use and food sustainability, as well as ethical behaviors in food production. The goal of the course is to understand how Jewish tradition can inform and contribute to improvements in the modern food system. The starting point is the ancient world of the Israelites,. Students will study agrarian interpretations of the Hebrew Bible as well as extra-biblical sources and archaeological data. The biblical attitudes toward food, eating, and agricultural practices are then traced into the post-biblical period and rabbinic periods. The course then jumps ahead to the present day, to shed light on a number of modern Jewish agricultural and food initiatives concerned with issues such as healthy land use, sustainability, and justice in food production and distribution. These movements proceed from various interpretations of Jewish law and custom, and illustrate how some modern Jewish attitudes toward food and eating are responsible for reimagining, and in some cases reinvigorating, biblical ideas and practices. At the conclusion of this course, students will be able to identify and understand the historical and theological significance of diet and eating practices of ancient Israelites and will understand the development of Jewish food laws and practices in the post-exilic and early rabbinic eras. Students will be able to evaluate the extent to which ancient Jewish thought has influenced modern Jewish attitudes and actions regarding food and social responsibility, and will be able to envision the ways in which Jewish tradition, both ancient and modern, can contribute to current progress and future improvement in our systems of food production, distribution and consumption. While a wide variety of derivative topics will be discussed, this course is particularly appropriate for students pursuing programs of study dealing with the biblical world, the development of early Judaism, Jewish ethics, and/or modern Jewish thought, as well as those studying agriculture and food systems who are interested in how Jewish tradition addresses these universal concerns. Evaluation will be based on weekly 1-2 page written responses to the assigned readings (45%), a midterm exam (15%), final project (30%), participation (10%). No special facilities are required. Course will be offered each term, enrollment limited to 20 students.

**RL ST 407Y (IL) (HIST 409Y, J ST 409Y) Antisemitisms (3)** Surveys the history of anti-Semitism from antiquity through the Middle Ages to the present.

**RL ST 407Y (HIST 409Y, J ST 409Y) European Anti-Semitism from Antiquity to the Present (3) (IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course analyzes major episodes in the history of anti-Semitism and tries to clarify the Motives and dynamics involved. It seeks to understand what these episodes have in common, and what is unique in each case. Is there a single universal, eternal anti-Semitism? Or are there rather anti-Semitisms", each belonging to a unique historical context? Is there a single continuous line of development in anti-Semitism? What is the relationship of a particular anti-Semitism to the national culture in which it originates?

We will be reading the major original texts of anti-Semitism from Roman and ancient writers, through early Christian texts and medieval Christian Blood Libels against the Jews, documents of the Spanish expulsion, Lutheran tracts, Voltaire's essays, German philosophical texts from Kant to Marx, Wagner's racial essays, the Protocols of Zion, and documents of Nazi anti-Semitism by Hitler and Streicher.

The major part of the grade will depend on a short research paper, which will be presented in various drafts, so that the final version represents the culmination of discussion and constructive criticism and advice. This course is a parallel course to J ST/HIST 416 (Zionist History) and J ST/HIST 118 (Modern Jewish History). This course will count toward the Religious Studies, Jewish Studies, and History majors and minors in the 400-level category.

**RL ST 408 (US;IL) Hindu Studies (3)** Special topics in Hindu studies.

**RL ST 408 Hindu Studies (3) (US;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Religious Studies 408 (Hindu Studies) provides a critical examination of selected philosophical and devotional systems within the diversity of Hindu religious traditions within the context of south Asian history. This course explores the nature of Hindu Darshana or outlook through textual analysis of some of its primary scriptures (in translation), as well as (in English) works by more recent Hindu thinkers and philosophers. Students will trace the emergence of ethical, moral, and social ideals of Hinduism through a detailed study of its belief systems as they had evolved through the ages. For example, a typical research project may involve writing a series of two papers, one focusing on the religious roots of non-violence in heterodox ideals of Jainism of fifth century B.C.E, and a second one, exploring the modern relevance of non-violence in political discourse as represented in the writings of Mohandas Gandhi. Students will be evaluated on a mid-term and a final exam, two research papers and debates. RL ST 408 serves as one of the courses fulfilling the 6 credits requirement of the 400-level course for a Religious Studies major. It also fulfills the United States Cultures and International Cultures designation.

**RL ST 410 (US;IL) (HIST 410, J ST 410) Jews in the Medieval World (3)** Trends in medieval Jewish society under Islam and Western Christendom.

**RL ST 410 (Jews in the Medieval World (3)  
(US;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

The Jews lived in widely scattered communities under Christian and Islamic rule in the medieval period. This course will examine how Jews adapted the traditions they developed in Palestine and Babylonia in the early centuries C.E. to the new conditions they encountered in Europe and the Mediterranean region from the ninth to the fifteenth centuries. It will focus on the general problem of how traditional societies survive in rapidly changing circumstances, particularly when their members are a minority population. The course will aim at developing students' skills in comparative analysis as they compare the adaptive strategies of Jews in different cultural spheres (the Franco-German region versus Spain, for example). They will also be asked to compare the different polemical stances Jews adopted vis-a-vis Christianity, on the one hand, and Islam, on the other. They will be encouraged to understand the ways in which Jews internalized certain aspects of the majority culture and rejected others. It is hoped that they will come to see how deeply Jewish history was intertwined with medieval Christian and Islamic history, despite inter-religious hostilities and the frequent need for Jews to defend against majority aggression.

The course will be linked to most of the courses taught in the field of Jewish Studies, especially J ST 111 (Early Judaism), J ST 114 (Modern Judaism), and J ST 118 (Modern Jewish History from 1492). It will also be linked to offerings in Religious Studies: RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), RL ST 107 (Introduction to Islam), RL ST 124 (Early and Medieval Christianity), and RL ST 165 (Introduction to Islamic Civilization). Further, it would complement HIST 001 and 002 (The Western Heritage), HIST 107 (Medieval Europe), HIST 108 (The Crusades), HIST 407 (Early Medieval Society), HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), and HIST 471W (Classical Islamic Civilization, 600-1258).

The course will count for 3 credits toward: a) the 22 credits required for the minor in Jewish Studies, b) the 33 credits required for the major in Jewish Studies, c) the 30 credits required for the major in Religious Studies, and d) the 36 credits required for the History major.

(GH;US)

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course examines various aspects of U.S. cultures and religious experiences. Different faculty who offer the course select specific topics or avenues of approach to reflect the multicultural reality of the American experience. In this instance, the course examines one of the main issues that determine American Religion and Culture is the American Constitution's First Amendment that has traditionally been understood both to prevent an "establishment" of religion in the United States while protecting religious liberty. More recently, however, the history of the tension between these two "rights" principles has changed. With the rise of the 20th century civil rights movement and the interest in "human rights" in general, historians, legal scholars, and others increasingly point to potential conflict between the right of full citizenship and equal legal standing of citizens on the one hand, and the accommodation of religious conscience when a group or individual claims a right to be exempt from contemporary understandings of equal rights that conflict with religious conviction. This course traces the history of religion's move from establishment to toleration, to religious liberty, and now, religion accommodation in an age of civil rights.

**RL ST (J ST/HIST) 424H (PHIL 434H) Monotheism and the Birth of the West (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Learn about the formation of Western culture, while learning to analyze the texts and other evidence about its formation from a critical, rather than naive, viewpoint. The idea of monotheism probably arose very early, and was even briefly implemented as a state cultic policy in Egypt in the 14th century BCE. Why, then, did it take another seven centuries to become widespread--appearing in ancient Judah, Babylon, and Ionia almost simultaneously? To answer this question, the course focuses on several developments, through the medium of primary texts and archaeology: the shift from a state hinterland based in extensive agriculture and household processing to one organized for intensive agriculture and industrial processing the rise of recognizably modern science; the promotion of individuation and an international elite culture in the context of Assyrian and Babylonian imperial ambitions; the development of the historical and archaeological

arts in the context of archaizing in order to reinvent local traditions; and the socialization of monotheism and of democracy. Students will be evaluated on their discussion of the textual evidence as well as on reports in class and a final paper. This is the sole honors course treating the birth of the West. It expands on knowledge acquired in courses listed as prerequisites and in RL ST/CAMS/J ST 012; CAMS 044; ANTH/CAMS 133; CAMS/PHIL 200; HIST 100; HIST/J ST 102; and PHIL 200 and enriches the students experience in CAMS 400, CAMS 440, and CAMS 480; HIST 402; J ST 411; PHIL 437; PHIL 453, and PHIL 461. This course counts toward the major in Jewish Studies, History, Religious Studies and toward the minor in Jewish Studies and Religious Studies.

### **RL ST (J ST/CAMS) 425W Books of the Bible: Readings and Interpretation (3 per semester/maximum of 12)**

The Bible is a diverse collection of writings sacred to Jews and Christians written over about 1000 years, in a variety of different genres and historical circumstances. This course allows students the opportunity to study in depth a particular book of the Bible, from either the Hebrew Bible/Old Testament or the New Testament. We will explore the literary, historical and cultural context of the book in question. A literary analysis of the book will include consideration of genre and literary devices, and a close reading of the text. A historical analysis will consider the date of composition, its source materials, comparative traditions in other cultures, and relevant historical and cultural factors relevant to understanding the text. The course will introduce students to various other approaches to interpretation of the Bible in modern scholarship, including feminist and post-colonial critiques. We will also explore the varied interpretations and uses of the book in Judaism, Christianity, and Islam throughout history, and its influences in Western culture, including art and literature. The course will be offered once a year with varying content, and students may repeat it when taught with different content.

**RL ST (J ST/PHIL) 478 Ethics After the Holocaust (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course is an examination of ethical theories before the Holocaust and how those theories have failed, philosophically and empirically. Course topics will include the history of ethical theory, the nature and problem of evil, goodness and suffering, witnessing and testimony, and the promise of an ethics. This course provides students with philosophical approaches to the issues that emerge out of the events of the Holocaust. The course will help students expand their knowledge of the events of the Holocaust through a philosophical approach that does not merely expose them to what happened, but asks them to think about the implications of what happened: most specifically, how do we understand ethical life, if it cannot stop or confront evil? This course provides students with the philosophical approaches to the issues that emerge out of the events of the Holocaust. It will encourage them to think critically, write effectively and express their thoughts logically. Student evaluation will be based on weekly reaction papers, group presentations, and a final seminar paper. This course covers material in the history of philosophy, contemporary philosophy, and writings pertaining to the Holocaust in various forms (historical, literary documentary, and so forth). It provides links to other major areas in the history of philosophy, postmodernism, ethics, philosophy of religion, and Jewish history.

**R M 301** Risk and Decisions (3) Introduction to decision-making under uncertainty. Mathematical probability and statistics, decision theory and game theory will be studied.

**R M 301 Risk and Decisions (3)**

Most tough business decisions involve risk. Smart risk-taking requires special analytical problem solving skills and careful consideration of the relevant data. In this course, you will learn how to conceptualize decisions involving risk, how to analyze your choices, how to estimate the risk, and how to communicate and defend your analysis to others. The skills and tools you will learn come from economics, probability, statistics, and game theory. The focus will be on how the tools from these fields are applied to real world business decisions in risky environments. The concept of risk diversification will be discussed under both independent and correlated risks. Decision rules such as expected value maximization and expected utility maximization will be covered. The role in risk aversion of the decision-making process will be discussed along with how it can be measured.

The study of decision analysis will include the use of decision trees. The basic concepts in game theory will be introduced. Students will learn what a Nash equilibrium is and how to derive such an equilibrium. More complicated games with incomplete information will be introduced which are important in decision-making where parties often are missing key pieces of information but must still choose a business strategy. Problems of asymmetric information will be studied; these situations arise when one party to a transaction or contract has more information relevant to the decision than the other party. For these types of problems, such as adverse selection and moral hazard, optimal solutions will be discussed.

**R M 410** Financial Mathematics for Actuaries (3) Compound interest and annuity functions; life annuities; equations of value; determination of yield rates; bonds; introduction to derivatives.

### **R M 410 Financial Mathematics for Actuaries (3)**

The first section of the course focuses on Interest Theory, including compound interest, annuities- certain, and life annuities; equations of value; loans and their valuation; the pricing of bonds (with and without default), determining their yields to maturity and outstanding balances; determination of yield rates, spot rates, forward rates, and At-Par rates; duration of an asset or liability, and immunization of interest rate risk. The second section introduces students to derivatives, including the description, payoffs, and profits of forwards, futures, puts, calls, and swaps, and how to use them to manage a company's or investor's financial risks. The course helps prepare actuarial students for the international actuarial exam FM (Financial Mathematics).

**R M 420 Property, Casualty, and Health Insurance (3)** Actuarial methods and concepts used to model property, casualty and health insurance losses along with credibility theory.

**R M 420 Property, Casualty, and Health Insurance (3)**

This course provides a solid understanding of actuarial methods and concepts used to develop loss models for property and casualty insurance and health insurance. The course makes use of real world numerical examples in order to demonstrate how actuaries use historical claims and pricing data, both company specific and industry, to determine rates and increases. The class also gives students a foundation in Credibility Theory and simulation to prepare for the actuarial examination on loss models.

**R M 440** Risk, Strategy, and Decision Making (3) To examine key strategic concepts, ranging from cognitive to organizational, that are critical for managing risk at the enterprise level.

### **R M 440 Risk, Strategy, and Decision Making (3)**

One of the key ways that a business attempts to manage risk it anticipates and confronts in markets is through organizational-level elements such as its business strategy, structure, and culture. These elements emerge from a series of decisions guided by the insights and biases of individuals. As such, the management of enterprise risk must also include an understanding of how individuals (e.g. managers) approach risk through their decisions and decision making processes. In this course, we look at some of these critical elements separately and then together as they integrate to guide and define enterprise risk management. The basic course objectives are to come away with an understanding of the following:

Forms of strategic risk – From market to internally-driven risk; from emotional to economic-driven, how does strategic risk present itself? How do executives recognize/assess and respond to the “portfolio of risk” that they must address to make the business successful?

Business strategy and structure – One way risk is addressed and articulated is through a business strategy. What is strategy? What are the key decisions that comprise a business strategy? How are organizations structured to implement these strategies and move information across the firm? Where and how is risk assessed in these processes and structures, and incorporated into a strategic risk plan?

Decision making – Decision making around strategy and risk management plays out in various forms and across different levels (i.e., individuals and groups). What goes right and wrong? How are these processes systematically linked to perceptions and actions associated with risk management.

Organizational culture – Perhaps one of the most critical elements in enterprise risk management is the role played by organizational culture (or simply “How we do things around here and my role as an organizational member doing it.”) We examine the roots of organizational culture and how it is aligned to perspectives of risk and its management.

Descriptive vs. prescriptive perspectives – Once we “described” what does/could go on, we need to engage in looking at ways that organizations can prevent pitfalls and correct suboptimal practices.

## **Rural Sociology (R SOC)**

**R SOC 011** (GS;US) Introductory Rural Sociology (3) Basic sociological concepts applied to rural societal institutions and rural communities; causes and consequences of rural social change.

**R SOC 011** Introductory Rural Sociology (3)  
(GS;US)

**(BA) This course meets the Bachelor of Arts degree requirements.**

The objectives of the course are (1) to acquaint students with the fundamental concepts, principles and research methods of rural sociology; and (2) to assist students in applying these concepts and principles to gain an understanding of rural

societal institutions and the forces leading to social change in rural America and globally. Lectures and readings are designed to encourage students to examine their assumptions and understanding of the structure and functioning of rural communities, the forces leading to rural social change, and the likely course of these changes in the future. A major objective is to challenge students to critically analyze rural society and rural social institutions from a sociological perspective. Understanding the changing nature of rural society in an increasingly urbanizing and integrated world is a key consideration. The course meets requirements in the Agricultural Business Management and Environmental and Renewable Resource Economics Majors, as well as one General Education requirement.

**R SOC (AGECO) 134 Sustainable Agriculture Science and Policy (3)  
(GN)**

This general education course will teach students about the soil, plant, animal, and ecological sciences; technologies, and policies of our agroecosystems in an integrated manner. We will examine agricultural resources and options available for sustainable management of resources for food production. Students will have many opportunities to examine and critically analyze scientific knowledge and policies during discussions, writing exercises, and role playing to develop analytical and communication skills. There are no prerequisites for this course. This course can link with other courses that address how research and efforts in agricultural sciences, ecology, policy, economics, philosophy, education, and communication influence sustainable management of natural resources for the present and the future.

**RUS 051 Elementary Intensive Russian for Graduate Students I (3)**

This is the first in a series of three courses designed to give students an intensive introduction to Russian. This is the first half of elementary sequence in reading, writing, speaking, listening, and cultural contexts. Students will learn the Russian vocabulary and will learn to create simple sentences. Lessons are taught in an authentic cultural context.

General Education: None  
 Diversity: None  
 Bachelor of Arts: None  
 Effective: Summer 2008  
 Prerequisite: graduate standing

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**RUS 052 Elementary Intensive Russian for Graduate Students II (3)** Intensive introduction to Russian: second half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts.

**RUS 052 Elementary Intensive Russian for Graduate Students II (3)**

This is the second in a series of three courses designed to give students an intensive introduction to Russian. This is the second half of graduate intensive sequence in elementary reading, writing, speaking, listening, and cultural contexts. Students will learn the Russian vocabulary. Lessons are taught in an authentic cultural context.

**RUS 083S (GH;US;IL) First-Year Seminar in Russian (3)** Russia's cultural past and present.

**RUS 083S First-Year Seminar in Russian (3)**  
 (GH;FYS;US;IL)

**(BA) This course meets the Bachelor of Arts degree requirements.**

Russia, the world's largest country stretching over eleven time zones in Europe and Asia, is currently undergoing a dramatic transformation. For the past hundred years, Russia has served as a laboratory of gigantic dimensions as various social ideals were implemented with unprecedented radicalism. At the same time, Russia's great writers raised "ultimate questions" about social justice, the existence of God, and the meaning of human life with an unparalleled acuity and intensity.

This course surveys Russia's cultural past and present. Although it touches on aspects of Soviet culture, the main emphasis lies on what some people would call the "real Russian culture," eclipsed for seventy years under the Communist regime and now about to be resurrected. At this crucial juncture in the history of Russia, the notion of a "real" culture remains highly problematic and controversial. The course surveys the various attitudes of Russian thinkers and authors toward the question of national identity and national destiny. Examples of Russian high culture (philosophy, literature, art, music) and the Russian religious faith (Orthodoxy) are discussed alongside with daily life in post-communist Russia. Special emphasis will be placed on the in-depth study of a few seminal works of Russian literature. The course also includes some Russian films. A knowledge of Russian is not required. Each section of this course will be limited to twenty students who will be instructed by an experienced professor. Questions and discussion are strongly encouraged.

This course can be used to fulfill the General Education or Bachelor of Arts Humanities requirement, the United States and International Cultures requirement, and the first-year seminar requirement. A series of short papers will train students in

the skills of information gathering and written expression. The course grade will be based on oral participation and on the grade for the papers, which will be evaluated both for content and writing. This course will help to prepare students for a variety of additional courses in the fields of literature and Russian/East European area studies. In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them, including the opportunity to develop relationships with faculty and other students who share their academic interests.

**RUS 100 (GH;IL)** Russian Culture and Civilization (3) The Russian people from the tenth century to present times; their literature, arts, music, science, and philosophy. In English.

### **RUS 100 Russian Culture and Civilization (3) (GH;IL)**

**(BA)** This course meets the Bachelor of Arts degree requirements.

This course surveys Russia's cultural past and present. Although it touches on aspects of Soviet culture, the main emphasis lies on what some people would call the "real Russian culture," eclipsed for seventy years under the Communist regime and now about to be resurrected. At this crucial juncture in the history of Russia, the notion of a "real" culture remains highly problematic and controversial. The course surveys the various attitudes of Russian thinkers and authors towards the question of national identity and national destiny. Examples of Russian high culture (philosophy, literature, art, music) and the Russian religious faith (Orthodoxy) are discussed alongside with daily life in post-communist Russia. The course also includes some Russian films. A knowledge of Russian is not required. The course format consists of lectures, slide, video and audio presentations. Questions and discussion are strongly encouraged.

At the end of the course, students will be familiar with the problems that Russia faces at the present time, they will have a summary knowledge of Russian history and geography, and will be acquainted with representative achievements of Russian high culture.

Students are evaluated on the basis of four multiple choice exams, of which the lowest grade will be dropped (60% of course grade), and a research paper graded for both content and language (40% of course grade). Extra credit can be earned through class presentations, offering an opportunity for practice in public speaking, and by writing reaction papers about lectures offered by the Penn State Center for Russian and East European Studies, or appropriate extracurricular events (e.g., concerts of Russian music, exhibits of Russian art, etc.)

As a General Education course, Russian 100 incorporates the following four elements of active learning: international competence (which is inherent in the subject matter), information gathering and analysis, active use of writing, and dialogue pertaining to social behavior, community, and scholarly conduct, which will be provoked by the reading material. Russian literature and culture is famous for raising the "big questions." Vast in scope, unabashedly ambitious, nineteenth-century Russian literature aspired to nothing less than to teach its readers how to live. The failed communist experiment in the twentieth century raises poignant questions about the desirability and pitfalls of utopian social engineering. Students have to write a 10-page research paper on a topic previously agreed upon with the instructor. For this paper, they have to explore both electronic and print resources. The paper is graded for content, structure, and language. As an option for extra credit, students can volunteer a class presentation on their research topic. Recent presentations included, for example, a lecture on Russian rock music with sound samples and pictures downloaded from the internet, and a presentation on Russian composers of the futurist avant-garde.

**RUS 110** (GH;IL) Russian Folklore (3) Study of byliny, lyrical and historical songs, folktales, drama, ceremonial poetry, chants, charms, proverbs, and mythology of Russia. In English.

**RUS 110 Russian Folklore (3)**  
(GH;IL)

**(BA) This course meets the Bachelor of Arts degree requirements.**

Russian 110 is a general survey of Russian folklore for English-speaking students. It concerns itself not with the aristocratic and intelligentsia culture of Russia, but with the rites of passage, agricultural ceremonies, beliefs, legends, folktales, and epics of the Russian peasants, most of whom were illiterate. Students are evaluated on the basis of three examinations (half short-answer and half essay), a legend collecting project, and a final. The legend project requires students to collect a legend or tale (usually from the American tradition), evaluate it against folklore indices, present it to the other students, and write it up. Russian 110 may be counted toward the major in Russian Translation (BS). It may also be used to fulfill General Education Humanities and International/Intercultural Competency requirements. This course will be offered once a year with 50 seats per offering.

**RUS 143** (GH;IL) (GER 143) The Culture of Stalinism and Nazism (3) The culture of Stalinist Russia and Nazi Germany in comparative perspective.

**RUS (GER) 143 The Culture of Stalinism and Nazism (3)**  
(GH;IL)

**(BA) This course meets the Bachelor of Arts degree requirements.**

The regimes of Stalin and Hitler have decisively shaped the 20th-century historical experience not only in Russia and Germany, but in much of Europe and the world at large. At the same time, there is no consensus about how to classify these systems, whether the term "totalitarian" is appropriate to describe them, and whether Stalinist Russia and Nazi Germany are essentially similar or essentially different historical phenomena.

Espousing a comparative perspective, this course will explore the culture produced by both Stalinist Russia and Nazi Germany. The main focus will be on works of literature, but it will also take into account the visual arts, architecture, music, film, and popular culture. The classics of Stalinist socialist realism and Nazi propaganda, such as Nikolai Ostrovskii's *How the Steel Was Tempered* or Leni Riefenstahl's *Triumph of the Will* will be analyzed both as political statements and works of art. The course will also include a reading of authors who attempted to create artistic representations of life in Stalinist and Nazi societies, such as Yevgeny Zamyatin, Alexander Solzhenitsyn, Bertolt Brecht, or George Orwell.

The course will be team-taught by faculty of the Department of Germanic and Slavic Languages and Literatures. Additional faculty from the Departments of Spanish and Italian and Comparative Literature (Japanese) may be invited to lecture about the totalitarian culture in their respective societies, and members from the Department of History may be invited to lecture about the historical context of Stalinism and Nazism. A knowledge of Russian or German is not required,

as class lectures and discussions as well as all reading assignments will be in English.

At the end of the course, students will have a summary knowledge of the cultural history of Stalinist Russia and Nazi Germany and of the aesthetic and philosophical issues raised by these cultures. Requirements for the course will include a research paper. The course grade will be based on the average score on the mid-term and final exam (using definitions and essay questions) and the grade for the paper, which will be evaluated both for content and style.

This course will fulfill the General Education and Diversity requirements. It complements courses on the politics and history of totalitarian regimes offered by the departments of Political Science and History, and it will provide a background for students wishing to study Holocaust literature or Soviet Literature.

**RUS 400 (IL) Senior Seminar in Russian Culture (3)** Senior seminar devoted to topics in Russian culture; conducted in Russian.

**RUS 400 Senior Seminar in Russian Culture (3) (IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

RUS 400 will be the senior seminar for Russian majors. Building on linguistic and cultural material covered in the second and third levels of study toward the Russian major, it will add depth and sophistication to the students' understanding of basic concepts in Russian culture and improve their ability to discuss and write about these concepts in Russian.

The materials for RUS 400 will be arranged chronologically and will cover the "big themes" of Russian culture: e.g., the legacy of Kievan Rus, the cultural/historical preconditions for the "Third Rome" theory, the rift between the people and the upper classes following Peter the Great, Westernizers versus Slavophiles, the Bolshevik Revolution, the Stalinist terror. Readings will be selected from a wide variety of genres and will reflect a diversity of linguistic styles: e.g., passages from the ancient chronicles, folk legends, memoirs and autobiography, letters, historical and literary texts. Some films will be used.

Students will be evaluated on the basis of frequent quizzes and oral participation. In addition, each student will write a short research paper and present it in Russian to the class. These papers will help round out the presentation of central themes in Russian culture. Research papers might cover such topics as Andrey Rublev, religious sectarianism, peasant beliefs about nature, the biography of Lenin.

Russian 400 will be a required course for both the B.A. and B.S. in Russian. Students must complete RUS 204, 214, and 304 prior to RUS 400.

**RUS 402** Advanced Russian B (3) Advanced Russian grammar, conversation, and composition.

**RUS 402 Advanced Russian B (3)**

RUS 402 is an advanced Russian language course that covers topics in grammar in the context of the spoken and written language. It is taught in Russian and functions as a complement to RUS 401. Emphasis will be placed on prefixed verbs of motion, use of the imperative, comparative and superlative forms, and complex and conditional sentences in Russian. Classes will include group and individual oral presentations, analyses of written texts, and assignments using the internet to access recent oral and written materials that treat current events and illustrate particular linguistic usage. Students will also watch one feature film during class time.

**RUS 403** Advanced Russian Conversation and Composition (3) A conversation and composition course that includes situational topics as well as complex academic discourse.

**RUS 403 Advanced Russian Conversation and Composition (3)  
(IL)**

The Russian 403 course is intended primarily to develop students' oral and composition skills in Russian. The main focus of the course will be on speaking and understanding spoken Russian and writing on a variety of themes. The students will engage in different oral activities on a number of topics from the everyday life of an average Russian person to more complex discussions of current events, culture, history, the arts, and politics. The students will be expected to do a good deal of talking in Russian both with classmates and with the instructor in class, and prepare oral and written assignments at home. The written exercises will enhance the students' ability to perform well on the class assignments. The course will include a practical review and practice of some of the most complex and troublesome aspects of Russian grammar. There will be a considerable emphasis on vocabulary, word-formation for vocabulary building, and communicative strategies in the course. One of the goals of the course is also to increase the students' understanding of Russian culture and the Russian way of life based on Russia's history and current reality.

**RUS 405** (IL) Seminar in Russian Literature (3-6 per semester/maximum of 6) Readings in classical Russian literature; Topics vary.

**RUS 405 Seminar in Russian Literature (3 per semester/maximum of 6)  
(IL)**

In no other culture has literature attained the centrality it enjoyed in nineteenth- and twentieth-century Russia. Political, social and historical constraints propelled Russian writers into figures of witness, prophecy and moral instruction. Yet far

from being limited to the vast, dark novels of legend, Russian literature offers a great deal of variety, including much humor, lyricism and fantasy. Russian 405 is a senior-level seminar devoted to the in-depth study of selected texts of classical nineteenth- and twentieth-century Russian literature. It presupposes a solid reading knowledge of Russian. The choice of authors and texts will vary from one year to the next. Writers discussed on a regular basis will include such major figures as Alexander Pushkin, Mikhail Lermontov, Nikolai Gogol, Ivan Turgenev, Fyodor Dostoevsky, Lev Tolstoy, Anton Chekhov, as well as selected writers from the Soviet and post-Soviet period.

The thematic emphasis will vary from one year to the next. The focus may be on the oeuvre of a single writer, on the development of a particular genre (e.g., lyric poetry or the short story), on a particular time period (e.g., the so-called "Silver Age" at the beginning of the twentieth century), or a particular theme (e.g., the conflict between liberalism vs. radicalism, the "woman question," the role of religion, Russia vs. the West, Russian "Orientalism," the Communist Revolution and its discontents, etc.).

The literary texts will be read in Russian. They will be analyzed both in their socio-historical context and as aesthetically compelling manifestations of verbal art. Explorative analytical writing and class discussion will be essential means to explore the subject matter.

**RUS 406 (IL) Russian Film (3) Conversation and Composition based on classical Russian films.**

### **RUS 406 Russian Film (3) (IL)**

Taught in Russian, this course offers an overview of the development of the film industry in the USSR/Russia within its historical context: from the silent classics of the Soviet Golden Age, to the mass entertainment movies of Socialist Realism, the new-wave productions of the cultural thaw of the 60s, the popular genres of the "stagnating" 70s, the liberated films of the glasnost period, and the most recent movies reflecting Russia's difficult economic transition. Russian cinema will be discussed as an index of sociopolitical trends over the years, as well as a medium in its own right. Therefore, attention will be devoted to historical turning points that affected the cultural policies of the Soviet Union, and consequently the styles, themes, and quality of filmmaking. At the same time, the course will consider the film as text, and analyze the feelings it stirs, the moods it evokes, and the ideological message it conveys. To this end, the course will cover the basic elements and techniques of film language (shots, montage, mise en scene, etc.) and the process of visual perception that affects the audience.

**RUS 410 (IL) Heritage Russian 1 (3) Introductory course for heritage speakers of limited linguistic proficiency aiming at teaching basic reading, writing, and grammar skills in Russian.**

### **RUS 410 Heritage Russian 1 (3) (IL)**

The course is aimed at "heritage speakers" of Russian, i.e., those who grew up speaking Russian in the family without a full Russian educational and cultural background. It is designed for students who have speaking and comprehension ability in Russian, but have minimum or no exposure to writing and reading. This course teaches basic skills of writing, reading, and grammar. It includes simple original reading material (fairy tales, poems, songs), as well as visual and multimedia material, such as cartoons, advertising, etc.) The course will enhance the students' knowledge and understanding of Russian culture as well as increase their awareness of their own complex cultural identity (Students with reading and limited writing proficiency should consider Heritage Russian II (RUS 411).

## **School of Science, Engineering, and Technology (SSET)**

**SSET 295** Internship (1-18) Supervised off-campus, individual training including practical field experiences or internships where written and oral critique of the activity is required.

#### **SSET 295 Internship (1-18)**

The objectives of the Penn State Harrisburg, Capital College Internship Program are to:

- Attract and retain capable students to pursue their educational and career goals in mathematics, engineering, engineering technology, and the sciences,
- Connect students with professionals who practice engineering, mathematics, technical, and science skills daily,
- Establish mentoring programs to break down the barriers between student learners and practicing professionals,
- Create service learning and internship experiences designed to reinforce classroom learning in technical and theoretical subjects, Retain students in the College and in the region by developing a seamless transition from the academy to the workplace.

The instructional and cooperative arrangements with business and industry will begin early, will be sustained throughout the four-year educational program, and will be supported by strong partnerships linking educational, business, industrial, and the intellectual communities in operative regional networks. Cooperation, collaboration, and a commitment to the future of the profession are essential if the "brain drain" is to be reversed in this region.

Another aspect of the internship program is to assist students in finding career-related, temporary employment opportunities, and to provide support and training for such positions while pursuing their education at Penn State Harrisburg, Capital College.

The Internship Program will be administered by the School of Science, Engineering, and Technology. The staff is versed in handling student/employer relations and handles student orientations, resume/job listing database management, interview schedules, registration, evaluations, and final reports. Students who utilize the Internship Program in any way will be required to register for courses applicable to each program. The course credits may range from one to three depending upon the particular program requirements. The utilization or substitution of internship credits to meet degree requirements is strictly a program decision.

This course requires that students submit a report that is of professional quality, concise, and focused on answering the provided questions. It must be typed in 12-point font and double-spaced. Students will be assigned either an SA (satisfactory) or UN (unsatisfactory) grade based on their reports and employer evaluations. The original report, portfolio, and evaluation forms are due on the last day of instruction for the semester or session. The grading will be based on the following criteria:

- 20% Internship Plan
- 20% Portfolio
- 20% Final Report
- 40% Employer Evaluation

No special on-campus facilities are required for the course. The course will be offered every semester including the summer session.

General Education: None

## Science (SC)

**SC 100** Introduction to Research (1) Introduces essential elements of laboratory safety, laboratory techniques, research ethics, and scientific communication skills. Especially for undergraduate research students.

### **SC 100 Introduction to Research (1)**

The main objective of the course is to prepare students for a fulfilling and successful learning experience in the research laboratory. Students who engage in undergraduate research often continue to project for four to six semesters. This course provides students with the necessary introductory information to the undergraduate research experience so that the entire experience is more satisfying and productive for the students. A corollary goal is to introduce research students to other, like-minded students. Several in-class activities will involve group work combined with an explicit discussion of productive group dynamics. The course will cover four major issues associated with a sustained research project: safety, techniques, ethics, and communication. The course will make students more cognizant of the importance of each of these areas and will provide justification for the importance of each activity in the research enterprise. Students will be evaluated via a series of assignments in which the students reflect on the components of each area and the importance of that area to the continuation of scientific knowledge. Students will be quizzed on safe laboratory practices, usually with a laboratory practical on safety. Students will be assessed on the satisfactory performance common laboratory techniques such as using a pipette, using an analytical balance, using a power source, and proper handling of large equipment like super speed centrifuges. Ethics will be assessed via assignments that require students to contemplate a variety of ethical issues. As part of ethical conduct students will be expected to learn the proper composition of a laboratory notebook. The notebook will provide a segue between ethics and communication skills. Students will examine several recent scientific research articles and discuss the way in which the article is written. They will be assessed on their ability to summarize and critique the article in writing. A book on scientific writing could be assigned for this portion of the course because a student would find use of such a resource as they progress on an independent research project. The laboratory technicians or laboratory managers might assist the faculty member who is teaching the course.

**SC 200 (GN) Science in Our World: Certainty and Controversy (3)** A science appreciation course, aimed at making non-scientists more informed consumers of science.

**SC 200 Science in Our World: Certainty and Controversy (3)  
(GN)**

Science is frequently in the news. That's because it affects our everyday lives, shapes our view of the world and our place in it, and will have a profound impact on our future. This course teaches an appreciation of science and scientific thinking. It is aimed at making non-scientists more informed consumers of science by improving their ability to distinguish good science from bad science, and science from non-science. The course assumes no background knowledge. It is not for scientists. Teaching is delivered by case studies of controversies within science and/or the public domain, some of which are resolved, some of which are not. The first section of the course illustrates general principles by studying arguments now largely resolved, but which still resonate, such as child health and IQ, smoking, and why the peacock has such a ridiculous tail. The second section focuses on unresolved scientific controversies which might include climate change, personalized genetic medicine, passive smoking, nanotechnology, the scientific evaluation of the healing power of prayer, or deer management in Pennsylvania. The third section evaluates unresolved scientific issues in the contemporary media: why it is in the news, what are the scientists involved actually doing and arguing about, and how is the media handling the science? This will be likely focused on real time analysis of media reaction to a scientific paper published by PSU faculty during the course. The fourth section will discuss paradigm shifts which have occurred during the students' lifetimes, particularly those involving our view of ourselves and our universe, and end by speculating on the paradigm shifts that could occur in the next twenty years. The course will draw on experts from within and outside of PSU. Throughout, the focus is on the nature of the debates, looking at how scientists evaluate problems, and why that can generate controversy within science and beyond science – but at the same time, generate knowledge which profoundly affects our well being and our understanding of ourselves.

**SC 201 Medical Professions (1)** Learn about the different medical professions and related subjects.

**SC 201 Medical Professions (1)**

The purpose of this course is to provide students with general information on the different health professions and various related subjects as potential career options. Many students come to the university with an interest in pursuing a health profession but do not have a clear idea of what kind of work is involved in the particular profession of their choice. Moreover, students often are not aware that there are other health career options available. This one-credit course is targeted to all students that have a general interest in health and science, and may include students in the following majors: premedicine, science, biology, chemistry, biochemistry and molecular biology, forensic science, nursing, kinesiology, nutrition, and biobehavioral health. Some of the professions discussed are: allopathic and osteopathic medicine, physical therapy, occupational therapy, physician assistant, nurse practitioner, dentistry, maxillo-facial surgery, optometry, audiology, genetic counseling, nursing, podiatry, and pharmacy. In addition to describing the professions, time is spent talking about academic preparation for specific professions and the application process for admission to health profession schools. Furthermore, the nature of various health profession training programs are described, as well as how students obtain tuition funds for payment of such programs. One week's topic generally focuses on health profession training outside the United States (e.g., foreign medical schools). This course is structured as a seminar course; all lectures are given by invited speakers. The speakers talk about the profession in general and may give specific information about the particular school they attend or currently work at. Students are encouraged to ask questions about the health careers and also to interact with the speakers after the class, where they might ask specific questions pertaining to their suitability as an applicant. The course will meet in the evenings, for one hour, one day a week, for 15 weeks. The students that enroll in this course receive a satisfactory or unsatisfactory grade based on attendance only (there are no exams, quizzes or written reports). Students may miss up to three classes during the fifteen week session. Therefore, students that attend twelve of the fifteen lectures will receive a satisfactory grade. If a student needs to miss class due to an evening exam, they will need to fill out an Excused Absence Form, which can be obtained from the instructor (no other activities are excusable except for athletic competitions for students in varsity teams).

**SC 210** Sophomore Science Seminar (2) Covers topics related to success in upper level courses including critical thinking, library resources, reading primary literature, and communication skills.

**SC 210 Sophomore Science Seminar (2)**

The main objective of this course is to serve as a bridge between the first two years of a science program and the last two years. Sophomore students need to understand that upper-level coursework in the sciences requires higher order cognitive skills as well as an intellectual maturity that enables the student to meet the challenge of upper level coursework. Students also require an ability to access the multitude of scientific information available on the web and in library databases therefore students will be expected to demonstrate their ability to retrieve information. Sophomore students are faced with many exciting possibilities that they should be aware of including undergraduate research and cooperative education. This course will enable students to make more informed decisions about how to best structure their own educational needs while meeting the demands of upper level coursework. Students will be assessed via a variety of methods including participation in discussion, actively seeking information from seminar guest speakers (in the form of questions), written reports (interview with faculty member, summary of scientific article, synthesis of newspaper reports about recent discoveries, individually selected research topic), and oral presentations (critique of recent science information in newspapers, independent topic, interview with faculty member).

**SC 401** Basic Science and Disease (1) Clinical aspects of various disease and how basic scientific information contributes towards understanding and treating disease.

**SC 401 Basic Science and Disease (1)**

The purpose of this course is to provide students with some general background on the symptoms, risk factors, prevention, and treatment of various diseases. Along with the clinical aspects of the diseases, we examine how basic scientific research studies contribute information towards helping to understand the mechanisms underlying disease development and control. This one-credit course is targeted to all students that have a general interest in health and science, and may include students in the following majors: premedicine, science, biology, chemistry, biochemistry and molecular biology, forensic science, biobehavioral health nursing, kinesiology and nutrition. Enrollment priority is given to students with fourth semester or above status.

Examples of topics discussed are: Hypertension, Osteoporosis, Infectious Diseases, Asthma, Chronic Obstructive

Pulmonary Disease, Cancer, Diabetes, Sickle Cell Anemia/Anemia, Blood Disorders, Hypercoagulability, Coronary Artery Disease, Alcoholism/Alcohol Poisoning, HIV/AIDS, Tuberculosis, Irritable Bowel Syndrome, Hepatitis, Thyroid Disease, Congestive Heart Failure, Parkinson's Disease, and Arthritis

This course is structured as a seminar. Most lectures are powerpoint presentations by invited speakers, which usually will be local physicians sometimes paired with Penn State research faculty. The speakers introduce the disease topic by discussing the basic anatomy and physiology of the system or body part most affected by the disease. (e.g. lungs, heart, kidneys, etc). Once the foundation is established the pathophysiology is discussed. Risk factors and prevention are also highlighted. One important goal of each seminar is to indicate to students how advances in basic science research can impact the understanding and treatment of disease. Students are encouraged to ask questions after the lecture. The speaker(s) remain afterwards to allow students to ask more specific questions about the disease topic. On occasion, speaker physicians also talk about their medical school training and/or life as a practicing physician. The students that enroll in this course receive a letter grade based on attendance (students must attend 9 out of 10 classes), quizzes and a 2-3 page reaction paper on one of the disease topics. Random short-answer quizzes are sometimes administered at the end of a seminar, testing on information presented during the seminar. Also, reading assignments are sometimes given prior to a seminar, or information handout materials are provided during the seminar. If a student needs to miss class due to an evening exam they need to fill out an Excused Absence Form, which can be obtained from the instructor (no other activities are excusable except for athletic competitions for students in varsity sports).

**SC 476 Human Dimensions of Health Care (3)**

This course, delivered jointly by Penn State and the local medical community, is designed to provide field experience for students with plans for a future in the health professions. The course is structured around rotations through multiple no less than five medical settings, which may include Community Medicine, Dentistry, Emergency Room, Family Medicine, Hospice Care, Oncology, Optometry, Palliative Care, Pediatrics, Physical Therapy, Senior Services, Wound Care, and other specialties.

The first four weeks consist of an introduction and orientation to the goals each setting. The purpose of these sessions is to acquaint the students with the requirements of the course as well as expectations for the on-site rotations. During this time, the students become familiar with the health care issues associated with each setting through literature specific to particular medical settings. At the end of these sessions the students write a course plan, in which they review the major issues common to each setting, and project how they expect to gain and how they expect to contribute in each setting.

During the next nine weeks, the students rotate through the medical settings, spending two afternoons per week in rotation. Students are scheduled to assignments with one of the medical settings for the afternoon. At these times the students are under direct supervision of the setting's staff. Where feasible, students may also sit in on physicians' staff meetings, attend lectures, or receive other forms of special instruction provided by medical staff. All students will maintain a logbook of activities during the rotations.

Weekly meetings on campus are devoted to reports of experiences by each of the students, discussions based on the questions developed during the orientation period, and resolution of issues which may arise. In this way, students assigned to each rotation inform those students who will later enter that setting.

**SCIED 410 Using Technology to Enhance Science Teaching (3)** This course explores contemporary practice and research associated with applications of technology to enhance science learning and teaching.

**SCIED 410 Using Technology to Enhance Science Teaching (3)**

The primary emphasis of this course is to explore current research and practice associated with using technology tools to

enhance the teaching and learning of science. Through participation in the course, students will have the opportunity to:

- \* investigate a variety of technology tools with specific applications in supporting student learning in science (e.g., web-based resources, simulations, tutorials, graphing software, concept mapping programs, hypermedia authoring tools, etc.) and document abilities to use these tools;
- \* incorporate technology tools into science instruction (e.g., making observations, designing and conducting investigations, interpreting and reporting results, etc.) in ways that enhance teaching and learning;
- \* evaluate technology tools within the context of their applications to supporting teaching and learning science;
- \* participate in electronic discussions of central considerations associated with enhancing science teaching with technology; and
- \* author a hypermedia tool that supports science teaching and learning (and incorporates a variety of media).

In addition, students will design and conduct an individualized project targeted at meeting these needs as science teachers and/or graduate students in science education.

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SCIED 411W Teaching Secondary Science I (3)** Introduction to teaching secondary school science, including curriculum, learning theory, media, evaluation as they relate to student progress.

### **SCIED 411W Teaching Secondary Science I (3)**

Science Education 411W is an introduction to secondary science education. The course is a project based course for individuals planning to teach science in grades 7-12 and has a significant emphasis on professional writing. The course is also appropriate for those interested in teaching or in program development of out-of-school science learning environments (e.g., science centers, nature centers, museums). Students will participate in activities that are designed to help forge a 'philosophy of science teaching' that is supported by research based findings on 1) learning and assessing learning, 2) best practices for teaching, 3) images of science and scientific inquiry, and 4) the effective design of lessons and activities. There are several peer-teaching assignments where students teach each other and two student teaching assignments with middle school children from area schools. Students are expected to complete written reports and reflections on-type assignments for lesson plan reviews, curriculum assessments, science research reports, and clinical interviews. One of the major goals of SCIED 411 is to promote 'reflection in action' and 'reflection on action' among the students. These are two constructs put forth by Donald Schon that argues an important meta cognitive dynamic for teachers is to think about what they are doing while teaching (in action), and to also think about what they will do differently in future episodes of teaching (on action).

On each occasion in 411 when students compete a peer teaching or clinic teaching experience they are requested to compete a 'reflection writing assignment'. Criteria for success on the writing assignments is 1) to provide an accurate description (which may include a lesson plan or references to the lesson plan) of the teaching; 2) to diagnose and identify the successes and the shortcomings of the lesson in terms of student learning; 3) to make connections to course readings that offer suggestions for adapting the lesson to promote learning. The reflection assignments are typically 2 to 3 single-spaced pages accompanied by the lesson plan.

Across the semester, from the first 'reflection' assignment to the last 'reflection' assignment there is an expectation that the 411 students will demonstrate a increasing depth and sophistication of reflection, analysis and attention with respect to the construction of learning goals and instruction strategies that promote working with students prior knowledge, employing formative assessment tasks to make students' thinking visible, and using questions and strategies that frame a student-centered discourse learning environment.

The course professor will grade the written assignments and provide written and oral feedback. Each assignment will be revised and posted to an on-line student portfolio.

Written communication is important in the field of education and science. In this course, the importance of written communication as a means to learn and reflect on the subject matter of the science disciplines and on teaching is emphasized. The value of scientific reports, analysis of curricular materials, development and reflection on lesson plans, and statements regarding the student's philosophy of science teaching will be evident through written assignments, feedback, and revision.

Through the experience of reading, discussion, development of lessons, and practice teaching, students will develop the ability to do the following: (a) Use appropriate techniques to probe students' prior knowledge and understandings of scientific concepts. Knowledge about students' alternative conceptions and intuitions is then used to design effective lesson plans and assessments. (b) Plan and teach science lessons employing sound research-based techniques for inquiry teaching. Students will complete both peer and student teaching assignments that are videotaped. (c) Prepare written reflections and evaluations that incorporate analytical perspectives that are based on personal experiences and on course readings and research-based frameworks and practices. Students will be offering written reflective comment on their own teaching and that of classmates.

The course goals include the ability to develop a 'reflection in action' and 'reflection on action' decision-making orientation that is informed by evidence-based practices linked to student learning.

**SCIED 412 Teaching Secondary Science II (3)** Implementation of science instruction using a variety of modern approaches.

### **SCIED 412 Teaching Secondary Science II (3)**

SCIED 412 is the third of three sequenced methods courses for secondary science teachers. In SCIED 412 prospective science teachers practice and develop skills in planning, presenting, and assessing effective science learning and teaching for students in middle and high school grades. The course incorporates theory and practice associated with science learning and teaching in school classroom settings. As in SCIED 410 and 411, emphasis will be on becoming a professional science teacher. Goals include: developing the knowledge, skills, and dispositions that encourage reflective practice, collaborative action, and lifelong inquiry into teaching and learning.

Students will develop an understanding of learning theory, and the approaches that diverse individuals take to construct knowledge; becoming competent in the use of science content and inquiry processes and the various materials that can help in the planning instruction relevant to learners' needs; developing skills in instructional, communication, management, and assessment strategies that contribute to planning meaningful science lessons for middle or high school level students, and will become competent in selecting and integrating appropriate technological tools into instruction.

Finally, students will become aware of major issues facing science education today and consider the implications of those issues for teaching. Additionally, the focus on technology initiated in SCIED 410 and continued in SCIED 411 will be extended in SCIED 412. Students will engage in teaching and learning science using appropriate state-of-the-art technology applications. A variety of software tools will be explored including, but not limited to, probeware, spreadsheets and graphing packages, on-line collaborative inquiry-based projects, and models and simulations. Students will apply their knowledge of technology tools acquired in SCIED 410 to classroom settings. Students will teach a technology-enhanced science lesson in a mentored environment, i.e., small group peer teaching, and strive to integrate technology in their practicum classroom.

**SCIED 457 Environmental Science Education (3)** Philosophy, techniques, and skills for teaching environmental science, including curriculum development, fieldwork, and the use of appropriate technologies.

### **SCIED 457 Environmental Science Education (3)**

This course provides an introduction to teaching environmental science to children. Although our emphasis is school-based instruction in the middle and secondary sciences, the course is also appropriate for grade K-6 teachers and teachers of other environmentally related subjects (e.g., social studies, agriculture), as well as educators who plan to work in nonformal educational settings such as nature centers and museums. The course builds students' knowledge in the philosophy, methods, and skills of environmental education; engages students in environmental curriculum analysis and development; and provides hands-on training in classroom-based and field-based environmental investigations. Training and practice with appropriate environmental technologies is included, including CBLS, GPS, and computer software.

**SCIED 458** Teaching Science in the Elementary School (3) Interpreting children's science experiences and guiding development of their scientific concepts; a briefing of science content material and its use.

### **SCIED 458 Teaching Science in the Elementary School (3)**

SCIED 458 is designed to support teacher candidates in developing their own reflective practice in science teaching for young learners. Candidates in this course engage in a series of experiences that move them from their own understanding of engagement in science, to understanding children's engagement in science, and finally towards methods of designing science instruction for young learners. Central to this work is a focus on reflective practice; expert teachers reflect on their own teaching practices. During this course, candidates learn to be critical of their own learning, instructional design, and teaching. Candidates use this to revise their practice as they grow as science teachers. The course activities, assignments, readings, and placement experiences offer multiple opportunities for candidates to learn essential knowledge and practices to support children's curiosity about the world.

Course assignments and in-class experiences are designed to help teacher candidates understand the importance of engaging their future students in a strongly integrated focus on science content and practice. This encompasses both how scientists work (the practice of doing science and building our knowledge of the world) and how children learn the skills and practices of doing science. Helping children understand the practices of science is of equal importance as helping them learn the content of science.

To start understanding ways of supporting children in learning to do science in age-appropriate ways, teacher candidates in this course contrast their understanding and experiences with those of children. Assignments are designed to help facilitate exploration of the links between understanding children's prior knowledge and beliefs, using knowledge of how people learn, and making pedagogical choices to move children towards specific content and practice goals. Candidates consider the role of differentiated instruction and methods of assessment in science teaching.

Finally, the course examines methods of adapting science curriculum using knowledge of children and specified learning goals. Teacher candidates bring together what they have learned about the practices of science, social constructivist instructional methods, and assessment to think critically about how to support elementary students learning science across time.

SCIED 458 is a part of a block of courses in a PSU teacher education program that is unified by a basic set of principles and a field experience component.

**S T S 100 (GH) Science, Technology, and Culture (3)** A survey of the development and culture of science, technology, and medicine in world history.

**S T S 100 Science, Technology, and Culture (3)  
(GH)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

"Science, Technology, and Culture" surveys the development and culture of science, technology, and medicine in world history. This course will introduce students to using the humanities, social sciences, and the arts to understand the development and uses of science, technology, and medicine in human history. The course focuses on broad trends and changes over time in their social and cultural contexts.

The course is intended to address the needs of a wide range of students. For students majoring in the the arts, humanities and social sciences, the course provides a deeper understanding of the relationship between lay/popular and techno-scientific cultures. For the scientific and technically oriented student, the class exposes students to the study of technical and scientific problems from a broader cultural and historical perspective. All students will develop a knowledge of the values that have motivated and informed scientific, technological, and clinical ventures as well as an appreciation of important cultural dimensions of techno-scientific work, including the influence of religious concepts and practices, the impact of race, class, and gender, the significance of language and symbols, and the role played by local and global traditions.

The course also asks students to think critically about the role of science, technology, and medicine in world history and the impact of that history on today's world. Topics include: the role of scientific and technical expertise in society; the social and economic conditions that have fostered and impeded scientific development and technological innovation; the social, aesthetic, and symbolic considerations that have shaped the way scientific ideas have been framed and used; and the impact of scientific notions and technological innovations on social life.

Students are required to read both primary and secondary texts. Students are also required to augment their classroom readings with scholarly material that they find through library and electronic research. In addition to regular classroom discussions, students will also participate in team-based learning activities and projects that require the students to interact with their peers and to present their thoughts publicly.

**S T S 105 (GHA) (FD SC 105) Food Facts and Fads (3)** Impact on society and the individual of modern food technology, food laws, additives, etc.; historical, current, and futuristic aspects.

**S T S (FD SC) 105 Food Facts and Fads (3)  
(GHA)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Food Facts and Fads is an introductory food course that broadly surveys various aspects of food, agriculture, nutrition, and health. Students in this course explore the components of the food system from producer to consumer; examine issues related to modern food technology, food and nutrition policies, and changes in the food industry; and assess the impact on the food system, consumers, and on society as a whole. Students will assess their own food and nutrition behaviors, become more aware of the environment in which they make food decisions, and devise strategies for improving health through better diet and increased physical activity. Students learn through lectures, videos, guest speakers, discussions, individual and group activities, and optional field trips. This course emphasizes active learning and critical thinking. Students are expected to complete electronic quizzes, write two or more short reflective papers, and complete a project on a food topic of the student's choosing, for which information must be gathered from several sources in a variety of ways.

**S T S 107 (GH) (PHIL 107)** Introduction to Philosophy of Technology (3) The character of technology; its relation to human values; philosophical assumptions in its development; and how it transforms the world.

**S T S (PHIL) 107 Introduction to Philosophy of Technology (3) (GH)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

"Introduction to the Philosophy of Technology" surveys a number of recent thinkers on the meaning of technology, its role in our and other societies, and critiques of its effects. Through readings of classic works on philosophy of technology as well as investigations of contemporary media reports and representations of technology, the course will engage your thought about what technology "means" to you and the values embedded in it. This course meets the broad general education needs of students from the humanities, social sciences, engineering, agriculture, as well as professional tracks such as business and pre-law. As technology is increasingly fundamental to our modern way of life in all its aspects, this course gets students asking question about why we do what we do with technology and how it affects us, others around us, and the environment. Required readings typically include collections of essays ranging in reading level from popular journalism to mass-market fiction to historical analyses of technological change and in-depth philosophical investigations of the concept of technology. Classroom time will be organized around lecture, regular classroom discussion, and a number of student-led debates. Evaluation will be based upon short writings, a small research paper, a midterm, and a final. The course meets the requirement for General Education in the Humanities (GH). Crosslisted with Philosophy it compliments other S T S courses (notably, S T S 101 and 233) and is a pre-requisite for S T S/ Phil 407.

**S T S 122 (GH) History of Science I (3)** A history of science and culture from Stonehenge to the scientific revolution.

**S T S (HIST) 122 History of Science I (3) (GH)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

The purpose of this course is to explore the earliest developments in science, beginning with the prehistoric roots of technology and theories of human origins, followed by an engagement with the achievements of the Mayans, Aztecs, and native North Americans. We then turn to science and technology in the ancient Greek and Egyptian worlds, followed by an analysis of early Chinese and East Indian science, medieval science in Europe, selected African sciences, and the rise of modern science in Scientific Revolution and beyond. The point of the course is to show that science is a world tradition with an ancient history, and that many social, political, cultural, and economic forces can push or pull this peculiar form of knowing in one direction rather than another. There are other history of science courses offered at Penn State, but none treats the history of science in general in relation to its social context and influences. Other history of science courses are more thematic than survey courses. HIST/S T S 123, "History of Science II," treats science from the scientific revolution to the present. Students may take either course alone or out of sequence; the first will not be a prerequisite for the second. The expectation is that students will combine knowledge acquired in this course with knowledge from their required general education courses in science to develop a broader understanding of history and science. HIST/S T S 122 may be used to fulfill a requirement for the History major and the History minor and it is an essential part of the recently proposed science and technology history theme within the Science Technology & Society minor. Nonmajors may use it to fulfill a general education humanities requirement.

**S T S (HIST) 123 History of Science II (3)  
 (GH)**

**(BA)** This course meets the Bachelor of Arts degree requirements.

The purpose of this course is to explore the earliest developments in science, beginning with the prehistoric roots of technology and theories of human origins, followed by an engagement with the achievements of the Mayans, Aztecs, and native North Americans. We then turn to science and technology in the ancient Greek Egyptian worlds, followed by an analysis of early Chinese and East Indian science, medieval science in Europe, selected African sciences, and the rise of modern science in the Scientific Revolution and beyond. The point of the course is to show that science is a world tradition with an ancient history, and that many social, political, cultural, and economic forces can push or pull this peculiar form of knowing in one direction rather than another. There are other history of science courses offered at Penn State, but none treats the history of science in general in relation to its social context and influences. Other history of science courses are more thematic than survey courses (e.g., "History of Mathematics" and "History of Gender in Science and Archaeoastronomy"). HIST 122, "History of Science I," treats science from Stonehenge to the scientific revolution. Students may take either course alone or out of sequence; the first will not be a prerequisite for the second. The expectation is that students will combine knowledge acquired in this course with knowledge from their required general education courses in science to develop a broader understanding of history and science. HIST/S T S 123 may be used to fulfill a requirement for the History major and the History minor and it is an essential part of the recently proposed science and technology history theme within the Science, Technology and Society minor. Students will learn historical techniques for the objective evaluation of readings and the formulation of clear and valid responses. Students' grades will be formed from a combination of a midterm and a final. Students are also required to do a paper for the class, the topic being subject to the approval of the instructor.

General Education: GH

**S T S 124 (GH;US;IL)** (HIST 124) History of Western Medicine (3) This course explores the history of health, illness, and medicine in western society.

**S T S (HIST) 124 History of Western Medicine (3)  
 (GH;US;IL)**

Relying on both primary and secondary sources, the course examines developments in medical thinking and practice, the changing status of medical practitioners, and the experience of patients in order to understand the links between medicine and its social, cultural, intellectual, and political contexts.

This course will also augment offerings in bioethics and medical humanities by providing the historical context of ethical issues and social policies concerning medicine. It will be attractive to students pursuing a health professional career and will provide a historical context to the issues raised in courses such as HD FS 301 "Values and Ethics in Health and Human Development Professions," BIOL 461 "Contemporary Issues in Science and Medicine," PHIL/S T S 432 "Medical and Health Care Ethics," and ANTH 470H "Our Place in Nature." The course will be one of the Humanities Electives for the Bioethics/Medical Humanities Minor as well as the proposed Disability Studies minor.

Within the Department of History, the course is part of the undergraduate offerings in the history of science and , thus, is directly linked to HIST/S T S 122, HIST/S T S 123, and HIST 103. The course would also support the Science, Technology, and Society Program's undergraduate minor, augmenting courses in science and health and medicine, such as S T S 101, S T S 105, S T S 200, and S T S 432.

**S T S 135 (GS) (PL SC 135) The Politics of the Ecological Crisis (3)** The political implications of the increasing scarcity of many of the world's resources.

**S T S (PL SC) 135 The Politics of the Ecological Crisis (3) (GS)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

"The Politics of Scarcity" examines some "big" questions about the prospects for human in general and democracy in the United States in particular. Much of the reading assumes that our civilization faces the twin problems of increasingly serious shortages of resources and a growing ecological crisis that threatens the basis of life. Further, it argues that these "twin crises" feed upon each other, and that together they pose serious short and long run challenges to survival. Some readings attribute these problems to the dominant values that characterize modern Western society. The course does consider some dissents from this perspective, arguments that things will be just fine. However, it concentrates on problems and predictions of trouble. Thus, the class does not claim to present an evenly balanced assessment. Rather, it recognizes that most of what we learn, read, and see supports the status quo and assumes our civilization and energy-dependent way of life will continue. Consequently it makes sense to emphasize the less frequently argued position that we may be headed for disaster.

The class aspires to appeal to students regardless of major or college -- to scientists, engineers, students of the humanities, and even economists and political scientists. It fulfills the University-wide general education requirement in Social Science. Although it discusses the role of politics in general and the role of the American political system in particular in discussing the "twin crises," it mostly grapples with fundamental questions of value that underlie and guide the play of power in our political system and with how the massive changes now taking place globally both affect and are affected by politics.

**S T S 157 (US) (WMNST 157) Science, Technology, and Gender (3)** The role of women and gender in science, technology, and engineering.

**S T S (WMNST) 157 Science, Technology, and Gender (3) (GS;US)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

S T S/WMST 157 examines the role of gender in science, engineering, and technology. The course offers a broad interdisciplinary overview of scholarly research and theory pertaining to women and issues of gender in science, engineering, and technology. The course is interdisciplinary (drawing materials from the natural and social sciences) and cross-cultural (taking a comparative approach to western and non-western sciences and technologies), and it examines the ways that different beliefs and practices related to gender have shaped the practice of science in different times and places. Students study great women scientists and also barriers institutional and ideological - that women have had to overcome in order to participate in science, asking how the presence and absence of women have affected those studies. Students will be graded by several quizzes and two short exams during the semester. To evaluate progress in developing critical thinking skills, the students will be required to write a response journal and/or response papers to major topic areas during the semester. Also, one individual or group presentation will be required. These instruments enable the instructor to assess students' acquisition of knowledge relevant to the general objectives of General Education.

**S T S 233** (GH) (PHIL 233) Ethics and the Design of Technology (3) Ethics and individual and group decision-making in the design of technology including design projects and specific attention to institutional ethics.

**S T S (PHIL) 233 Ethics and The Design of Technology (3)  
(GH)****(BA) This course meets the Bachelor of Arts degree requirements.**

Technology has been around nearly as long as humans have been around. Humans have always created artifacts and artificial environments to aid us in our survival and to help fulfill our needs and desires. Moreover, today technology is all pervasive, transforming and conditioning our social and political relations, our cultural understanding of ourselves, and our relationship with other animals and the natural environment. Yet not much thought has been expended upon the meaning of technology, particularly in its moral dimensions. This course takes several steps to correct this deficiency. Because technologies can have far reaching effects well beyond the domain of their immediate application, the role of

designers is crucial in deciding whether we take an intelligent or unintelligent approach to technology. All technologies exist to serve one human need or another. Designers make important choices concerning the creation, development, and deployment of many if not most technological innovations. Consequently, the task of the designer is an ethical one. Our goal is twofold: First, we will try to broaden our moral imaginations by taking into account the wider ranging effects that technologies have in order to reveal the moral significance of design choices. Second, we will examine the process of design itself, particularly in the way that the design process is similar to ethical reasoning in general. It is hoped that by accomplishing these two tasks, we will be empowered as designers, customers, citizens, and future employers to make choices that better fulfill the moral task of technological innovation. Two means will be used to achieve our course goals. Much of the time will be spent thinking about and discussing the various impacts that particular technologies have upon the social, cultural, and political lives of human beings and upon the natural environment. To facilitate thoughtful discussion, we will read a number of authors, writing short papers in preparation for critical discussion in class. In this way we will be better prepared to discuss and think about the issues at hand by having had the chance to organize our thoughts in advance. The second means is aimed at putting our ideas into practice by working in teams on several design projects. These design projects will require the integration of readings, discussion, and research and their synthesis to solve a design problem. Student teams will work cooperatively on these projects and make oral progress reports as well as final written and oral reports.

**S T S 235 (GH) Science and Religion (3)** This course investigates the relationship between science and religion in multiple cultures.

**S T S 235 Science and Religion (3)  
(GH)**

The purpose of this course, designed to fulfill general education requirements in the humanities (GH), is to encourage students to investigate the relationships between the disciplines of science and religion. While most of the emphasis of the course will be on the historical interaction between science and Western religion, we will also investigate science ("natural philosophy") in the Islamic, Hindu, and Eastern religious traditions. Students will read classic texts that discuss science and religion from scientists such as Newton and Darwin as well as from world Scriptures and contemporary positions of various influential scientists and religious scholars concerning views of the material world as it relates to the spiritual world. There will be no attempt to encourage students to accept a particular religious or secular viewpoint. Rather, the course will be successful if at its conclusion the student can articulate a personal viewpoint while appreciating the reasons others might have for holding alternative opinions. Students will develop an understanding of the arguments and the historical context in which they originated which lead to differing positions. Thus, individual students will be expected to demonstrate this understanding in a series of examinations scheduled throughout the semester, and in a final examination if required by the instructor. Discussion and debate are useful devices in the search for understanding. In order to facilitate such discussion, students will be required to make one presentation to the class on an assigned topic. This presentation will serve as the starting point for class exploration of the topic. To encourage active and collaborative learning, the student presentations may be group efforts, however, no group will consist of more than three students.

**S T S 245 (GS;IL) Globalization, Technology, and Ethics (3)** An investigation of technology and ethics in the globalized world from contemporary, socio-cultural, and historical perspectives.

**S T S 245 Globalization, Technology, and Ethics (3)  
(GS;IL)**

The objective of Globalization, Technology, and Ethics is to prepare students (especially but not limited to engineering and business students) who are headed into the corporate or government world for the challenges and realities of working in a rapidly globalizing world. This course will encourage students to become leaders in a mobile and diverse transnational workplace and help them to become critical citizens of that world. Through team-centered projects and readings from the social sciences and humanities, students will broaden their understanding of engineering, technology, and culture and then be given an introduction to how one makes ethical decisions about that world. The course is designed to provide skills, theories and experiences that will help them to be respectful, diplomatic and professional while being able to successfully work with technology in multiple cultures and contexts.

Globalization, Technology, and Ethics will also address topics of critical international and economic importance by including discussion of the World Trade Organization, World Bank, and International Monetary Fund. Students will understand their relationship to global manufacturing and technology use, off-shoring, outsourcing, international debt

financing, and restructuring of world economies based upon different models of globalism. In addition, the class will address issues of 'glocalization' and student's and citizens' role in the globalized world and the multiple interactions that shape our technological world today.

**S T S 408 (COMM 408) Cultural Foundations of Communications (3)** Examination of oral, scribal, print, industrial and electronic cultures; analysis of impact of technology on communications and social structure.

### **S T S (COMM) 408 Cultural Foundations of Communications (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

S T S (COMM) 408 traces the development of communications technologies and their impact on culture over the last 500 years. Students will examine how different tools for communicating changed the way people organized and made sense of their worlds. The course begins by looking at oral cultures and moves on to the scribal, print, industrial, electronic and post-industrial or postmodern cultures, studying the media developments that marked each of these eras. With each period and its corresponding technology students will examine how and why the new media altered not only the *form* of communication (the type of speech, form of writing and/or speed of information transfer), but also how such changes altered the *content* of knowledge (how people made sense of their lives and communities). Readings are drawn from a range of disciplinary perspectives on the issues, from history, sociology and anthropology, to philosophy, communication studies and cultural theory.

The historical and theoretical knowledge provided by the course will give students a solid foundation for coming to terms with media trends in present-day society and for thinking through their possible epistemological, political and cultural impacts.

The course is a communications elective for the Journalism and Telecommunications majors and the Media Studies minor.

**S T S 416 (US;IL) (AF AM 416) Race, Gender and Science (3)** The class will focus on race and gender as products of science, and how societal values shape scientific activity.

### **S T S (AAA S/WMNST) 416 Race, Gender and Science (3) (US;IL)**

The course's objective is to provide a seminar for students to integrate feminist theory, social theory, and science studies through class discussions, essays and research. The role of science in defining, producing, applying and policing of gender and race in society will be explored through the work of feminists and traditional scholars working in a variety of disciplines from cultural studies to science studies. Students will be encouraged to develop a critical analysis of race and gender in science in order to understand the impact of gender and race on the production of scientific knowledge. This course is designed for students in the humanities, social sciences, science and technical fields. Readings will be taken from past and contemporary social theory (i.e. students will be reading original works not textbooks). Students will be expected to read, understand and synthesize 75-100 pages of reading per class and to discuss them in a seminar fashion in order to analyze, critique and evaluate various theories to develop their own understanding of the interrelationship of science, race and gender. In addition they will do two professional-style book reviews during the semester. At the end of the semester students will integrate theory with social, cultural and historical data that they collect through library research (with a minimum of 50 sources). Students will present the paper to the class in a conference style presentation

that will conclude with a Q&A session.

**S T S 427W** Society and Natural Resources (3) Analysis of the relationship between societal development and enhancement and natural resources.

### **S T S (CED/SOC) 427W Society and Natural Resources (3)**

There is a common tendency to portray environmental and natural resource problems as biophysical in nature. The implication of this tendency is that such problems are best addressed by scientists and engineers who discover evidence of and devise new technologies to fix them. Another common tendency is to assume that people resist solutions to environmental and natural resource problems because of individually held anti-environmental attitudes. In contrast to these two perspectives, sociologists point out that environmental and natural resource problems often lie at the intersection of biophysical processes and social, political, economic, belief, value, and knowledge systems. The goals of this writing-intensive course are to introduce students to the complexity of environmental and natural resource problems and to teach them to think sociologically. In addition to reading assigned books and articles, students will participate in a simulation to negotiate a global environmental treaty, attend a field trip to learn about alternative energy strategies, and conduct research on a local environmental or natural resource issue. After taking this course, students should be better prepared to engage in debates with academics, politicians, and other citizens regarding the causes of and potential solutions to environmental and natural resource problems.

**S T S 430** (IL) (NUTR 430) Global Food Strategies: Problems and Prospects for Reducing World Hunger (3) Technological, social, and political solutions to providing basic food needs; food resources, population, and the environment; current issues.

### **S T S (NUTR) 430 Global Food Strategies: Problems and Prospects for Reducing World Hunger (3) (IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Global Food Strategies examines opportunities for the world's poor to improve their health, nutrition, and physical environment by focusing on their own cultural strengths and organization, reassessing the opportunities within their environment, evaluating the appropriateness of new and old technologies, and gaining a renewed respect for their own abilities. Measures of appropriateness used throughout the course are ecological sustainability and cultural sensitivity.

Approximately one third of the course focuses on the historical basis of underdevelopment up to and including the post-modern era. Topics include economic colonization, the industrialization of agriculture, the impacts of globalization, trade priorities and debt loads on the poor, population and ecological issues; and a critique of the economics of scarcity. The second two thirds focuses on micro-strategies for poverty alleviation. Topics include culturally-appropriate people centered development women's empowerment needs including microlending (small loans), the prospects and rationales for biological agriculture vs. industrialized agriculture, successful models of health and population control, the impact of American consumerism, and ecological footprint analysis. The goals of the course are to 1) awaken the student's interest in hunger and poverty issues and the cultural dimensions of poverty, 2) acquaint the student with viable and sustainable strategies for hunger and poverty alleviation for the very poor, and 3) enable the student to understand enough about globalism that he/she can critically analyze and evaluate international affairs articles in national newspapers. The classes integrate lecture information with films that help with the visualization of poverty problems and prospects, readings, current events, and small group discussion around issues and case studies. Readings are drawn from development classics and from a wide range of recent literature on poverty and change. Evaluation includes student responses to three essay tests posed by the instructor over the semester, and journal keeping. The class project is designed to promote citizenship/leadership skills. Students will make a contract to perform a particular citizen action relating to hunger and poverty alleviation, which they will describe in an oral report and written format. Participation is evaluated.

**SRA 111** (GS) Introduction to Security and Risk Analysis (3) This introductory course spans areas of security, risk, and analysis covering contexts in government agencies and business organizations.

### **SRA 111 Introduction to Security and Risk Analysis (3)**

Introduction to Security and Risk Analysis is a preliminary course with a broad focus, spanning the areas of security, risk and analysis. In addition to familiarizing the student with basic technical terminology, it will also touch upon social and legal issues, risk analysis and mitigation, crime intelligence and forensics, and information warfare and assurance.

This course will motivate students to understand the requirements for security in any government agency or business organization through the use of case studies. Included in this segment are cases related to cyberterrorism, bioterrorism, and critical infrastructure protection. Some concepts to be covered in the area of information security are: confidentiality, integrity, availability, and non-repudiation. Various methods of safeguarding these security concerns will be discussed, such as: single- and multi-factor authentication, encryption, digital signatures, prevention of denial of service attacks, and so forth. This course also covers social and legal issues related to security, in particular identity theft and social engineering. Topics in this section include identity theft, spam, spyware, and adware. This course also covers the principles and the approaches to risk analysis. Here students study vulnerability analysis, crime and intelligence analysis, forensics, techniques for risk assessment and risk mitigation.

The course will prepare students for more in-depth courses such as SRA 211, SRA 221 and SRA 311.

**SRA 211 Threat of Terrorism and Crime (3)** Provides overview of nature, scope, and seriousness of threats to security as a result of terrorism and crime.

#### **SRA 211 Threat of Terrorism and Crime (3)**

Threat of Terrorism and Crime is a course designed to acquaint students with the security threats posed by both terrorist and criminal activity, and with strategies to combat these threats. Terrorism and security are defined as well as terrorism in its historical context. Varieties of terrorist groups, organizations and their actions are studied with targets of terrorism being a focus. Types of crime including street, employee, organized and white collar crime are studied.

Information theft can occur in each of the types of crime. Security threats of each type are studied and mitigation techniques are evaluated. Methods of studying terrorism and crime cover data collection, analysis of the reliability of the data, and fusing the data so that information is obtained that leads to knowledge to combat terrorism and crime.

Finally to put the course in perspective, students study critical shortfalls in our understanding of terrorism and crime including unreliable data, biased estimates and a lack of understanding of terrorist and criminal motives and objectives.

Prerequisite: SRA 111

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SRA 221 Overview of Information Security (3)** Provides an understanding of the overview of information security including security architecture, access control, and internet secure applications.

#### **SRA 221 Overview of Information Security (3)**

SRA 221 focuses on an overview of information security. Students will learn the principles of information security, security architectures and models, aspects and methods of information security such as physical security control, operations security, access control, hacks/attacks/defense, systems and programs security, cryptography, network and web security, worms and viruses, and other Internet secure applications. Students will also learn how to plan and manage security, security policies, business continuity plans, disaster recovery plans, and social and legal issues of information security.

A major component of the course will be several hands-on exercises and a final team-based project. This course will incorporate collaborative and action-learning experiences wherever appropriate. Emphases will be placed on developing and practicing writing and speaking skills through application of the concepts, theories and technologies that define the course.

General Education: None

Bachelor of Arts: None  
Effective: Summer 2006  
Prerequisite: SRA 111IST 110CMPSC 101

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SRA 231** Decision Theory and Analysis (3) Provides an overview of decision theoretical and analytical concepts and tools in the security risk analysis field.

### **SRA 231 Decision Theory and Analysis (3)**

Decision Theory and Analysis is designed for students to build an understanding of how to improve the judgment and decision making of individuals, groups and organizations. Behavioral decision theories provide the theoretical core for the course. These theories draw on insights from a diverse set of disciplines, including cognitive and social psychology as well as economics, statistics and philosophy.

Offered annually (and more if demand requires), this course will foster understanding of: (a) the cognitive, emotional, social and institutional factors that influence judgment and choice, (b) normative (economic) models of rational choice, and (c) how judgment and decision making can be predicted and/or improved through prescriptive aids and models.

Applications of these theories and methods to real-life venues will be used to engage and focus the students. For example, insights on how such concepts apply to supply chain security, bioterrorism threats, legal decision making, large-scale risk assessments (e.g., assessing risks of transnational threat), and first-response/crisis decision making will be common. Where appropriate, real situations and cases are used to bring concepts and scenarios alive.

Overall, the course emphasizes basic skills and concepts that enhance an individual's ability to understand why individuals, groups and organizations behave the way they do, how they formulate the issues and problems they confront, as well as to choose rationally among competing courses of action.

**SRA 311 Risk Analysis in a Security Context (3)** Assessment and mitigation of security vulnerabilities for people, organizations, industry sectors, and the nation.

**SRA 311 Risk Management: Assessment and Mitigation (3)**

Risk Analysis in a Security Context is focused on developing analytical skills aimed at producing credible and meaningful answers to critical questions of risk management. Risk is considered at all levels within this course, including those created by intelligent adversaries, including cybercriminals and terrorists, although risks may also include natural disasters, system failures, accidents, etc. Students successfully completing this course are capable of applying a diverse set of analytic techniques to answer questions in contexts such as information security, counterterrorism and intelligence, or any other particular field where protection is an issue.

Topics in this course include critical thinking, systems analysis, risk assessment and associated analysis methods, risk communication, and risk control.

**SRA 365 Statistics for Security and Risk Analysis (3)** Theoretical foundations and practice of intermediate statistics.

**SRA 365 Statistics for Security and Risk Analysis (3)**

SRA 365 is an intermediate-level statistics course emphasizing how to summarize data using descriptive statistics, how to make data-driven decisions using inferential statistics, and how to critically evaluate data presented in the media, all within the context of security, risk, and analysis. This is both a theory and application course. Students will learn about statistical theories, such as regression, and chi-square analyses, and apply their knowledge of these theories by analyzing and interpreting data using a statistical software package.

**SRA 421 The Intelligence Environment (3)** The Role of information and intelligence introduces students to the architecture and policies of the U.S. Intelligence Community (IC) and examines how U.S. intelligence policies and practices relate to overall U.S. foreign policy objectives and are influenced by today's global environment and emerging technologies. The course examines the users and processes of IC, participants of Competitive Intelligence, and comparative intelligence communities.

**SRA 421 The Intelligence Environment (3)**

This course examines intelligence structures and policies and explores the role and use of information and intelligence in the 21st Century, in support of individual citizens, national defense and corporate America. It will introduce the major actors in the U.S. intelligence community and frame U.S. intelligence policies in terms of overall U.S. foreign policy objectives in the current globalized international arena. The course discusses the history and evolution of U.S. intelligence policies, capabilities and information requirements as well as the legal and constitutional foundations of those policies. The course will examine and apply methods and techniques of the information user and intelligence practitioner. The course will also provide experience in applying principles and techniques learned in the context of a team-based intelligence-analysis simulation exercise.

**SRA 433 Deception and Counterdeception (3)** Deception tactics, technologies and procedures and approaches to counterdeception analysis.

**SRA 433 Deception and Counterdeception (3)**

This course introduces deception and counterdeception and their role in support of security risk analyses in competitive environments. The course covers fundamental theories of deception, human cognition and its vulnerabilities to deception, and the vulnerabilities of technical collection systems and sensors to deception. The course discusses deceptive practices in use by attackers and defenders, including both non-technical and technical means. The course also provides experience applying technical and non-technical counterdeception techniques to security risk analysis problems.

Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2014

Prerequisite: SRA 221 and SRA 311; ENGL 202C or ENGL 202D seventh-semester standing (this course is intended for seniors) and the five common course requirements plus at least three of the required courses in an option

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SRA 468 Visual Analytics for Security Intelligence (3)** Introduce visual analytic techniques for security informatics and intelligence. It covers analytical techniques on visualizing threats, risk, and vulnerability.

### **SRA 468 Visual Analytics for Security Intelligence (3)**

This course surveys techniques for visualizing and analyzing security information and for communicating and using information about threats, risk and vulnerability to decision-makers. It will motivate students by the needs for better intelligence in a broad range of homeland security applications. Through case studies and problem-based learning, students will develop understanding of important concepts and issues, such as data source and data quality, associations and integration of incidence, hazards, and risk factors, and the difficulties of analyzing and communicating knowledge. Various visual analytical methods for homeland security intelligence will be discussed, such as : (1) mapping and visualizing patterns of crime and incidence, (2) identifying targets and agents of terrorist attacks, (3) spatial analysis of social, economic and environmental risk indicators, and (4) prediction of threat and risk. It also pays special attention to the interpretation of analytical results for actions. Geographical information systems and associated spatial analytical tools will be used to exemplify the kinds of information environment available to intelligence community. The course will prepare students to become immediate workforce for security-related industries and government agencies.

General Education: None

Bachelor of Arts: None

Effective: Spring 2008

Prerequisite: IST 110SRA 111

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SRA 471 Informatics, Risk, and the Post-Modern World (3)** Provides in-depth study of how security informatics is influenced by the risk and post-modern culture.

### **SRA 471 Informatics, Risk, and the Post-Modern World (3)**

The post-modern world provides a changing climate and context for defining and understanding threats, intelligence, decisions, and risk. Likewise, post-modern cultures consist of beliefs that are heavily influenced by psychology, social connectivity, collective behavior, religion, ethnicity, and political systems. This system of systems is heavily dependent upon and influenced by information, information technology, and the web (social informatics). When examining human behavior as it impacts risk, these various social-technical factors must be considered in planning for terrorism, intelligence analysis, and emergency events.

As the post-modern world becomes increasingly complicated, the ability to discern, identify, and address threats in terms of risk becomes exceedingly more difficult. Provision of learning underlying psychological, social, political, religious, and technical components of how risk accelerates through various stages will be critical for protection of national and international interests within the security sphere. Security informatics will be at the heart of both recognizing emerging situations and employing tools/agents/measures to assuage emergency, terrorist, or even national disaster events.

This course provides the student with a broad perspective to critically examine both theories and practice of security informatics as related to the cultures in which threats emerge asymmetrically. Students will be placed on the role of systems analysts to problem solve and analyze information from a broad bandwidth of information specifically as informed by culture, post-modern thought, psychological intent, and situation awareness. The course will be grounded by participation in case studies and/or analyzing exercises of risk. Students will be required to do comprehensive reading assignments, engage in team cognition-social interaction, and become familiar with social informatics concepts and tools as related to risk, terrorism, and information warfare.

As the post-modern world becomes increasingly complicated, the ability to discern, identify, and address threats in terms of risk becomes exceedingly more difficult. Provision of understanding some of the underlying psychological, social, political, religious, and technical components of how risk accelerates through various stages will be critical for protection of national and international interests within the security sphere. As extreme events become more prevalent in society, security informatics will be at the heart of both recognizing emerging situations and employing tools/agents to assuage emergency, terrorist, or even national disaster events.

**SRA 472 Integration of Privacy and Security (3)** Exploration of technological, operational, organizational and regulatory issues related to maintenance of individual privacy, confidentiality of organizations, and information protection.

**SRA 472 Integration of Privacy and Security (3)**

This course is designed to introduce students to the major organizational, technical, operational and regulatory issues in information privacy and security, and to give them experience in performing a privacy analysis, designing privacy-aware applications and developing privacy policy in organizations. Topics covered include: conceptualizations and theories of privacy and security, privacy laws and compliance, building a privacy organizational infrastructure, integrating privacy in the software development process, performing a privacy analysis, privacy issues in outsourcing and cross-border data transfers, integrating privacy into customer relationship management and vendor management, information systems audit and intentional standards on privacy and security. This course will mix technical details, applied value and organizational insights of assuring privacy and security through the use of case studies, real-life problems, hands-on exercises and team projects.

## Social Data Analytics (SODA)

**SODA 308** Research Design for Social Data Analytics (3) This course engages students in the study and use of research design tools for the analysis of "big data."

**SODA 308 Research Design for Social Data Analytics (3)**

The tools of social science and social data analytics affect how data scientists and social scientists understand the world. This course engages students in the study and use of research design tools for the analysis of social systems and "big data." Topics to be addressed include: how the scientific method relates to a practice of establishing the validity of propositions and the role that analytics can play in that process when the observations are vast and varied; how the validity of systematic patterns in data are assessed as well as how spurious or biased patterns in the data are ruled out; and how the scientific method can guide the use of exploratory techniques such as machine learning and visual analytics. Through the course, students will learn to develop innovative research designs in an effort to improve the statistical analyses used with social data and how to present these analyses to nontechnical audiences, such as non-profits, employers, and the general public. Course requirements include several short memoranda that require the development and presentation of a research design and data analysis plan. Students will also gain practical experience working with several "big data" sets. Students are required to have an understanding of introductory statistics (equivalent to the knowledge they would gain from PL SC 309) prior to taking this course.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2015

**SO SC 480W** Quantitative Methods in the Social Sciences (4) Students will learn to conduct, analyze and write up quantitative social scientific research according to appropriate professional standards.

**SO SC 480W Quantitative Methods in the Social Sciences (4)**

Students in this course will gain a working understanding of the rationale for the use of a variety of quantitative research methods and become familiar with the design, constraints and appropriate applications of those most frequently used in the applied behavioral and social sciences. They will gain experience designing and conducting research through a blend of class exercises and field research applications. Students will also gain a basic familiarity with the use of tools such as the Statistical Package for the Social Sciences (SPSS) to analyze the data gathered through quantitative research. Finally, through classroom instruction coupled with a process of writing, revising and individual consultation with the instructor regarding their research reports, students will master APA style and develop their academic and professional writing skills including critical thinking and conceptualization in addition to the basics such as spelling and grammar where necessary.

General Education: None

**SO SC 481** Qualitative Research Methods in the Social Sciences (4) Students will learn how to conduct, analyze and write up qualitative social research according to appropriate professional standards.

**SO SC 481 Qualitative Research Methods in the Social Sciences (4)**

Students in this course will gain a working understanding of the philosophy, conceptualization and application of qualitative and participatory research methods in the behavioral and social sciences including such methods as ethnographic research and participant observation, conceptual mapping and interviewing techniques and explore their applications in participatory and action research. Students will also learn how to analyze and write up the results of such research endeavors according to the standards of the field including the use of computerized qualitative data analysis packages (such as NUD\*IST or the Ethnograph) and mastery of APA style.

## **Social Studies Education (SS ED)**

**SS ED 200** (US) American Heritage (3) Essentials of American Heritage for heritage interpretative education applications.

### **SS ED 200 American Heritage (3) (US)**

SS ED 200 is designed to introduce students to Heritage Education as a career opportunity for students interested in teaching history/heritage, working at history museums and heritage sites, Public History, and/or working in related fields and/or to diversify, enhance, and enrich their teacher certification, and/or to enrich their understanding of America's founding. SS ED 200 is the first in a series of four courses that lead to the Heritage Education Certificate (15 credits). Students who complete the program shall be eligible and prepared to complete the requirements for the Certified Interpretative Guide credential as offered by the National Association for Interpretation. In this course, students will synthesize knowledge and understandings of American heritage focused on America's founding as found in past and prevailing curricular sources and more importantly as represented at America's heritage sites and historical museums. Students will have opportunities to apply this knowledge through curricular and presentation experiences. Taking advantage of Penn State's central location and access to heritage/history museums and heritage and historical sites throughout the Northeast, the course will include visitations to select heritage and historical sites and museums. Pending outside funding, one to three field trips to local and regional heritage sites shall be included in this course. Pending arrangements with local and regional sites, typically, trips scheduled shall be "day-trips." Students unable to travel will be provided with alternative assignments. As part of these visits, students will observe heritage presentations by staff,

engage staff, view exhibits/collections, make and record observations via technology (pictures, video, and personal notes). Student assessments will include critical essay reviews on past and present presentations of America's founding as found in relevant sources together with assessments of local, regional, and national heritage sites. Two exams shall also be required.

**SS ED 411** Teaching Secondary Social Studies I (3) Methods for teaching social studies in secondary grades; nature of social studies, content and learning outcomes, instructional strategies and planning.

### **SS ED 411 Teaching Secondary Social Studies I (3)**

Teaching social studies in the secondary grades (7-12) with emphasis on content and methods for the major subjects (citizenship and government, economics, geography, and history). The principal goal is to provide prospective teachers with a better understanding of the nature, structure, and experience of social studies in the U.S., how to identify, select, instruct, and assess rigorous content and learning outcomes, and effective strategies for designing, planning, and implementing instruction. Additional topics may be included as determined by the section instructor.

**SS ED 412W** Teaching Secondary Social Studies II (3) Writing-intensive course focusing on study of the social studies teacher's role in planning instruction; strategies for teaching.

### **SS ED 412W Teaching Secondary Social Studies II (3)**

Advanced study and practice of teaching social studies in the secondary grades (7-12) with emphasis on content and methods for the major subject areas (citizenship and government, economics, geography, and history). The principal goal is to provide prospective teachers with intellectual preparation and relevant practice in selecting and applying rigorous content knowledge to higher-order thinking in the classroom and practical experience designing, planning, and implementing social studies instruction. Topics include the social studies teacher's role in planning and practicing instruction, strategies for implementing and assessing teaching in the social studies, and others as determined by the section instructor. As a writing course (W), SS ED 412W engages students in professional in-depth writing experiences that involve planning, process, development, teaching and learning social studies content, and other relevant writing that teachers are expected to perform.

**SS ED 430W** Teaching Social Studies in the Elementary Grades (3) Principles underlying use of social studies in the elementary school; practical demonstration of desirable methods.

**SS ED 430W Teaching Social Studies in the Elementary Grades (3)**

Social studies transforms the social sciences and humanities to promote civic competence (National Council for the Social Studies, 2002). In this course, teacher candidates learn to coordinate and conceptualize the richness of anthropology, economics, geography, history, civics, and sociology for elementary classroom pedagogy. Candidates become familiar with various instructional strategies that support social studies. Candidates gain an understanding of the information, concepts, theories, analytical approaches, and different perspectives--including global and multicultural perspectives--that are important to teaching social studies. Candidates also learn how to assess social studies learning in a variety of ways.

This course stresses technology, content integration, social science competence, differentiated instruction, multicultural/global knowledge, teaching social historical inquiry, and constructing democratic learning communities. Teacher candidates learn how to apply the State Learning Frameworks and National Standards in their classroom instruction. At the conclusion of the course, candidates have a good understanding of elementary social studies and are able to develop and demonstrate powerful social studies curricula.

Being a "W" course, SS ED 430 incorporates both formal and informal writing into in-class and graded assignments to encourage teacher candidates to develop as critical thinkers and productive writers. This writing includes an essay describing one's own experiences as a social studies learner, reading responses, the creation of a unit of instruction, and several lesson plans that describe significant activities. These writing tasks are meant to professionalize the communication skills required to effectively teach social studies as well as to effectively communicate with parents, educators, and administrators.

SS ED 430W is a part of a block of courses in a PSU teacher education program that is unified by a basic set of principles and a field experience component.

## Sociology (SOC)

**SOC 001** (GS) Introductory Sociology (3) The nature and characteristics of human societies and social life.

**SOC 001 Introductory Sociology (3)**  
(GS)

**(BA) This course meets the Bachelor of Arts degree requirements.**

Introductory Sociology provides perspectives and information useful in understanding all societies. The major theories (functionalism, conflict, and symbolic interactionism) and concepts provide the foundation upon which the remaining material rests. Learning how sociologists do research provides the tools for understanding the production of knowledge and for evaluating the validity of sociological assertions. Familiarity with systematic theorizing and conceptual development, along with some comprehension of the nature of the scientific method as it is applied in sociology, enhances critical reasoning. To promote a more complete understanding of human social life, both in its inherent constraints and in the opportunities it provides; the nature and reality of culture and social structure are explored. The study of socialization provides perspectives on how one becomes a member of society. Exploring social interaction adds insight into the formation of the social self and the salience of group identities and norms. Ending this first section with a discussion of social control highlights the forces of stability and change in society.

The course then progresses to considerations of social stratification and inequality. The nature of privilege and oppression are discussed and considered in the specific contexts of race, ethnicity, gender, and age. The focus then shifts to social institutions. The essential work of society is accomplished via its major institutions: family, education, health care, economy and work, religion, and politics. Applying theoretical perspectives to the form and function of these institutions enhances an understanding of how different social structures provide varying constraints and opportunities to their inhabitants. Finally, considering large-scale forces for change provides a platform to comprehend where human societies have been, are now, and might be headed.

Throughout the course, the lectures as well as the textbook draw amply on cross-cultural and cross-national material. In addition, the course emphasizes the complexity of human social life and describes the many variables (social structural, cultural, interpersonal, and psychological) that influence behavior. A special component of the course deals with topics pertinent to the social behavior and norms of students of the ages typically taking this course. Depending on the faculty member, these topics could include sexual behavior, alcohol use, and problems in interpersonal relationships.

Discussion and questions are encouraged in all sections. Sections of this course may include group research projects, debates, and library or internet-based research. Along with personal contact, students have the opportunity to communicate with teaching assistants and faculty members via e-mail. Writing assignments, along with in-class examinations, are required in all sections.

This course meets a general education requirement in the social and behavioral sciences.

**SOC 003 (GS) Introductory Social Psychology (3)** The impact of the social environment on perception, attitudes, and behavior.

**SOC 003 Introductory Social Psychology (3)  
(GS)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Social psychology is a discipline that bridges sociology and psychology. Sociology focuses on large-scale social trends while psychology emphasizes the individual organism and its functioning. Social psychologists borrow perspectives and methods from both sociology and psychology. The major thrust, however, is on the influence of the social group areas such as socialization, social influence, conformity, group decision-making, interpersonal relationships, and social power. This course provides an overview of the major ideas and research streams that characterize modern social psychology.

Eight major goals guide the form and content of this course: (1) Survey existing theory and research in contemporary social psychology, (2) Enhance students' understanding of how social scientists conduct research, (3) Provide insight into the influence of social settings on human behavior, (4) Relate social psychology to other areas of social and behavioral science, (5) Help students to understand the interface between theory and research in social psychology, (6) Demonstrate the nature and outcomes of different cultural and sub-cultural processes, (7) Relate course material to contemporary personal and social problems, and (8) Provide opportunities for students to sharpen their critical thinking about human behavior. In general, this course is designed to enhance students' understanding of themselves, other individuals, and the world in which they live. For example, after taking the course, students will have a better understanding of why people sometimes help others in trouble and sometimes ignore them, what kinds of situations promote conformity to authority, what factors result in anger and violence, why intergroup conflict is so pervasive, and how attitudes are acquired.

Assessment is based on a combination of objective tests, a written group research project, individual papers, or a series of short research projects, depending on the instructor. All courses have at least one graded writing assignment. Group projects involve research on social influence. For example, students may use the Internet to study how political or religious groups attract supporters. Individual papers sometimes involve a critical book review. Alternatively, individual papers may be based on short research activities, such as examining the roles of women and men in rock videos or television commercials. Discussion and questions are encouraged in all sessions.

Sociology 003 meets a general education requirement in the social and behavioral sciences. This course also provides a useful foundation for advanced social science courses in economics, marketing, political science, counseling, child development, and law enforcement. It is a prerequisite for Sociology 403: Advanced Social Psychology.

**SOC 005 (GS) Social Problems (3)** Current social problems such as economic, racial, and gender inequalities; social deviance and crime; population, environmental, energy, and health problems.

**SOC 005 Social Problems (3)  
(GS)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course is designed to introduce students to the main societal issues facing humanity at the present time and in the

foreseeable future. Although the course examines a number of social issues in the United States (such as crime and poverty), the course generally takes an international and inter-cultural perspective. The primary social issues that affect individuals and their children today are global, rather than national, in scope. For this reason, globalization is a recurring theme in the course.

Discussion and questions are encouraged in all sections. Assessment is based partly on objective and short-answer tests taken in class, including a final examination. All sections also include writing assignments that involve either library or Internet research. For example, in one commonly used assignment, students write a paper describing and analyzing a serious social problem in some country other than the United States, such as Ireland, Egypt, New Zealand, Ethiopia, Argentina, or Indonesia. An alternative writing assignment requires that students investigate and describe a local problem in Centre County. Another variation requires students to research the views of other students and groups on campus and compose a letter to the Penn State university president about an issue or problem on campus involving student behavior.

SOC 005 provides excellent preparation for most upper-level sociology courses. Because this course introduces students to social problems that will confront their generation in the near future, it also is relevant to other majors and disciplines, such as political science, economics, and health and human development. This course meets a General Education requirement in the Social and Behavioral Sciences.

**SOC 012 (GS) (CRIMJ 012, CRIM 012)** Criminology (3) Explanations and measurement of crime; criminal law; characteristics of criminals and victims; violent, property, white-collar, organized, and sexual crimes.

### **SOC (CRIMJ /CRIM) 012 Criminology (3) (GS)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Criminology is the study of the causes of criminal behavior. As such this course is an introduction to the topic with special focus on the major theories explaining criminal behavior including differential association, anomie, control theory and labeling theory. A key focus of the class is examining the most recent scientific research testing the basic theories. The students learn the various research techniques that have been used to study criminal behavior including crime statistics such as the Uniform Crime Report that serves as a monitor on crime trends. Several important areas of study that link understanding criminal behavior and its distribution across the social system are investigated including age, gender, race and ethnicity. One goal of the course is to promote a more complete understanding of crime and how it is enmeshed in human social life. The course concludes by using the knowledge base generated in the course to study the link of our understanding of criminal behavior and the emerging crime control policies of the past few decades. Finally, the course reviews the impact and effectiveness of some of these policies.

Throughout the course, the lectures as well as the readings emphasize the complexity of explaining human behavior and criminal behavior in particular. One aspect of the course is the use of a term paper on the objective and subjective availability of crime to the student. This paper emphasizes the complexity of the student's social life and the role that these factors may have on whether they have engaged in criminal behavior and their analysis of the causes of their criminal behavior. This project personalizes the various theories and helps the student understand the importance of their social environment in whether they have or will engage in crime.

Discussion and questions are encouraged in all sections. Sections of this course may include group research projects, debates, and library or internet-based research. Along with personal contact, students have the opportunity to communicate with teaching assistants and faculty members via e-mail. Writing assignments, along with in-class examinations, are required in all sections.

This course meets a General Education requirement in the Social and Behavioral Sciences for non majors, is required for the CLJBA and CLJBS majors, and may be used in the SOC majors and minors.

**SOC 019 (GS) Sociology of Popular Culture (3)** Students are introduced to the sociological study of how popular culture is produced, consumed, and experienced.

**SOC 019 Sociology of Popular Culture (3)  
(GS)**

**(BA) This course is approved for the Bachelor of Arts degree requirements.**

This course provides an introduction to the sociological study of popular culture. Students are introduced to core sociological perspectives on culture and use them to the study how popular culture is produced, consumed, and experienced across space and time. The course addresses topics such as creativity and innovation in culture production; the rationalization and commercialization of popular culture; cultural capital and social distinctions; popular culture as an identity resource; selling and consuming popular culture, and popular culture in the digital era. Opportunities for students to conduct their own investigations of popular culture promote the development of research, evaluation, and communication skills that facilitate awareness of the significance of popular culture in their daily lives. By studying popular culture via social processes, structures, and interpersonal relationships students become more sociologically savvy observers of the world around them and gain a richer understanding of social stasis and change. The course provides students with a foundation for further study in sociology and related social sciences, as well as academic and applied disciplines that focus on popular culture.

**SOC 023 (GS) Population and Policy Issues (3)** Local, national, and international population trends; basic techniques of demographic analysis; population problems; implications for public planning and policy.

**SOC 023 Population and Policy Issues (3)  
(GS)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Demographic changes are some of the most important factors in understanding the future of specific professions, our nation, and the world. This course introduces students to the discipline of demography, including an overview of demographic issues, theories of population, and major findings from demographic research. Focusing on the state, national, and global level, students will learn how the discipline of demography and how population structure and age are related to social institutions and public policy issues. Students will receive hands-on experience with the data and methods used by professional demographers and health and urban planners. Thus, this course should provide students with 1) a global perspective on population changes, 2) knowledge of demography research and theory, 3) analytical skills

for the application of demography to public policy, 4) an awareness of how the diversity of a population (e.g., age structure, race, ethnicity, sex, and culture) is related to public policy, and 5) the active learning of demographic techniques.

The instructors encourage discussion and questions in all sections. Assessment is based on objective tests taken in class, writing assignments, and student research projects called population analysis exercises. The analysis exercises allow students to use the data and methods of professional demographers. Some sections will also hold in-class debates and will require the performance of in-class assignments.

This course meets a General Education requirement in Social and Behavioral Sciences.

**SOC 030 (GS)** Sociology of the Family (3) Family structure and interaction; functions of the family as an institution; cross-cultural comparisons. Students may take only one course for General Education credit from SOC 030 or HD FS 129.

**SOC 030 Sociology of the Family (3)**  
**(GS)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Family, in all of its forms, is one of the most fundamental and enduring of social institutions. Because almost everyone grows up in a family, we are accustomed to thinking about the ways in which our values, personalities, and goals have been shaped by family experiences. In this course, however, we will examine families and family relationships from a sociological perspective. In particular, we will consider how our private, taken-for-granted family experiences are related to social factors such as gender, race, ethnicity, social class, the economy, and cultural attitudes and values. Through this course, students will (1) gain a better understanding of current U.S. family patterns and trends, based on empirical research, (2) be able to analyze and interpret family patterns and trends using sociological concepts and theories, (3) evaluate family-related information from multiple perspectives, (4) develop a greater appreciation of the diversity and choices in family life today, and (5) clarify their own values with respect to marriage and family life.

The instructors encourage discussion and questions in all sections. Assessment is based on objective tests taken in class and writing assignments. These assignments may include library and Internet research, original empirical research, or a journal in which students describe their developing ideas about marriage and family life.

This course meets a general education requirement in the social and behavioral sciences.

Students may take only one course for General Education credit from SOC 030 or HD FS 129.

**SOC 035** Sociology of Aging (3) Introduction to the sociological study of aging.

**SOC 035 Sociology of Aging (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

The sociology of aging covers social aspects of aging, including common beliefs about older people, the diversity of the aged, and how institutions such as the economy and family influence the aging process. Evaluation methods include two exams, each worth 20 percent of the final grade, and a series of written assignments. For example, there is one 5-7 page paper and a second shorter one on aging in another society. The course serves as a basis for taking SOC 435, Social Gerontology. It can be counted toward the major or minor in Sociology or Human Development and Family Studies.

**SOC 060 (GS;IL)** (ANTH 060, J ST 060, PL SC 060) Society and Cultures in Modern Israel (3) An introduction to the society and cultures of the State of Israel from 1948 to the present.

**SOC (ANTH/J ST/PL SC) 060 Society and Cultures in Modern Israel (3) (GS;IL)**

This course will review the social, cultural, and political systems in the State of Israel as they have developed and changed since its inception in 1948. The role of immigration, ethnicity, and religion on Israeli society and cultures will be explored along with the non-Israeli cultures that have helped to shape conditions there. The course will look into the diverse social and political institutions of contemporary Israel, examine the borders and geographic features of the region, and discuss who lives there, where they reside, and for which portions of this period. It will examine the wars and tensions between Israel and neighboring Arab states; the status of the Arab/Palestinian minority in Israel; and the growth of Palestinian nationalism. Social conditions in the State of Israel are the result of a unique history. Israelis have absorbed large numbers of immigrants from many parts of the world while engaged in ongoing political and military conflicts. Jewish settlers in Israel/Palestine revitalized a language (Hebrew) and developed unusual collectivistic institutions (e.g., the kibbutz). Israeli nationalism is founded both on secular and religious ideologies. It includes notions of a return from Diaspora and the desire for personal and collective redemption. The study of social processes such as these will provide an opportunity to consider the foundations and functions of nation-states and social systems generally. Materials will include selections from primary texts, official documents, novels, films, and ethnographic materials along with scholarly reviews and essays. Students will be exposed to materials produced from a variety of disciplinary and political perspectives. Through writing assignments, projects, and essay examinations, students will integrate, compare, and analyze these materials. The course complements offerings in Jewish Studies, Sociology, Anthropology, Political Science, and Middle East Studies and will satisfy the IL requirement. It enables those in Jewish Studies to examine the roughly 30% of Jews who reside in Israel, builds upon a current course on Zionism, and provides context for the study of modern Hebrew. It offers an additional international alternative for students in Sociology and Political Studies and a topical area in cultural Anthropology. Students in Middle East Studies will find it worthwhile to study a nation with a significant impact on the region.

**SOC 083S (GS)** First-Year Seminar in Sociology (3) Critical approaches to issues in the structure of society.

**SOC 083S First-Year Seminar in Sociology (3) (GS;FYS)**

**(BA)** This course meets the Bachelor of Arts degree requirements.

Each section of this course will be limited to 20 students who will be instructed by an experienced faculty member. Each section will focus on a well-defined body of scholarship that addresses a relatively specific topic while at the same time provide an opportunity for surveying broadly existing knowledge in the discipline. The specific content of the course will vary from offering to offering, and depending on the interests of the instructor, will introduce students to a sociological perspective on particular social issues. For example, one section examines racism and sexism as axes of privilege and oppression. Other sections may deal with major social institutions, such as the family or religion, or with fundamental social processes (e.g., demographic, social, and psychological). Finally, some sections may have a heavier policy emphasis--examining responses to social issues--while others might take a comparative or international approach.

Each section will emphasize the development of discussion, writing, and analytical skills and will give students the opportunity to work individually and in small groups. Students can expect to receive a general introduction to the

University as an academic community and to explore their responsibilities as members of that community. They will also become familiar with the learning tools and resources available to them, and they will be able to establish relationships with faculty and other students who share their academic interests. This course fulfills a general education or Bachelor of Arts requirement in the social/behavioral sciences.

**SOC 103 (US) (AF AM 103, WMNST 103) Racism and Sexism (3)** Critical analysis of the structure of race and gender inequality in the contemporary United States.

**SOC (AAA S/WMNST) 103 Racism and Sexism (3)  
(US)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course focuses on racism and sexism through a critical analysis of race and gender equality/inequality. A primary objective of this course is to provide students with information and conceptual tools necessary for understanding the structure and composition of race and gender inequality in the United States today. The focus on both racism and sexism provides a perspective that is quite different from those of courses that deal with race or sex alone. Racism and sexism have much in common that suggests their combined study. The course examines the way in which these processes are socially constructed and defined and how these constructions and definitions are experienced in daily life at an individual level and societal level. The course also examines how social control dependent on power, privilege, and advantage continues to perpetuate sexism and racism. This understanding is fundamental to considering the ways in which society and its individual members may motivate social change that enhances equality. Other objectives include developing an appreciation of the commonalities and differences among women and among men and women of diverse ethnic groups in terms of their real-life experiences with these processes; expanding the ability to read and/or view critically information/misinformation encountered in everyday life; enhancing the capacity to express knowledge and perspectives both orally and in writing. In addition, each student comes to the class with personal objectives that the instructor attempts to ascertain and incorporate. A common foundation of knowledge is established through consideration of current statistical data and academic research studies, as well as essays and novels based on subjective thought and experience. Also included are historical documents that have influenced the social and legal status of women and of men and women of color throughout our country's history. Videos and the media are supplementary sources. Students are encouraged to be alert to relevant current events and be prepared to discuss them from a critical perspective. The format of the class is informal, emphasizing group participation and responsibility. Grades are based on the evaluation of short papers on the readings, relevant events, and contemporary culture; class participation; a book report; and a final project or take-home exam. AAA S/WMNST/SOC 103 is a supporting course for both the women's studies and sociology majors and minors and the African and African American Studies major. It is an additional course for the African and African American Studies minor. The course also meets the requirement for 3 credits on the topic of women of color for the women's studies major and the minor.

**SOC (WMNST) 110 Sociology of Gender (3)  
(GS;US)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course provides an introduction to the analysis and understanding of how men's and women's lives are different and how they intersect with each other. The course focuses on the social construction of gender and the impact of gender on experiences in a variety of social contexts and institutions throughout the life course, including cross-cultural comparisons of gender expectations. An overriding objective is to help students better assess and analyze the effects of gender throughout history and in their everyday lives.

Class sessions are a mixture of lectures, discussions, group exercises, guest speakers, and films designed to engage the students in the learning process. Each session helps students to critically evaluate the effects of gender discussed in their readings and experienced in their everyday lives. The evaluation tools used for this course extend this critical evaluation. Although the specific evaluation methods vary by sections, all sections use some form of reaction papers, book reviews, and/or journals. These writing assignments require students to demonstrate an understanding of the class readings, lectures, and activities, and to offer an evaluation and assessment of these readings and presentations. Because the social construction of gender is intertwined with family, work, religion, education, government, and all interpersonal interaction, the course overlaps with courses in each of these areas.

This course meets a General Education requirement in Social and Behavioral Sciences. It can be used as a lower-level sociology course in the Sociology BA major and the Sociology minor. It can also be used as a supporting course in the Women's Studies major and minor.

**SOC 119 (GS;US) Race and Ethnic Relations (4)** Historical patterns and current status of racial and ethnic groups; inequality, competition, and conflict; social movements; government policy.

**SOC 119 Race and Ethnic Relations (4)**  
**(GS;US)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course has three objectives. First, the course will help you to think critically about issues related to race and ethnicity in American society. These issues include the meaning of race and ethnicity; the extent of racial and ethnic inequality in the U.S., the nature of racism, discrimination, and racial stereotyping; the pros and cons of affirmative action; the development of racial identity; differences between assimilation, amalgamation, and multiculturalism; and social and individual change with respect to race relations. The second objective is to foster a dialogue between you and other students about racist and ethnocentric attitudes and actions. The third objective is to encourage you to explore your own racial and ethnic identity and to understand how this identity reflects and shapes your life experiences.

The course is offered in both a large and a small enrollment format. In large enrollment courses, you not only attend lectures, but also participate in weekly discussion groups run by teaching assistants. These discussion groups typically have between 10 and 15 students. Your course grade is based on a combination of objective examinations, participation in group discussions, and short writing assignments. One example of a written assignment involves weekly journals. Each of your journal entries (typewritten and one or two pages in length) will focus on personal reactions to course material and answers to questions posed by the instructor. The course also requires out-of-class attendance at two campus events related to race or ethnicity, such as films, speakers, or workshops. For each event, a one-page written summary and personal reaction is required. Teaching assistants provide feedback on writing.

Small (or moderate) sections of the course usually operate without separate discussion sections. In these courses, however, instructors set aside a substantial amount of class time for discussion of course material, equivalent to about one class session per week. During discussions, the class may remain together or divide into smaller discussion groups. After addressing a topic, you may be asked to submit a short written reaction to the issues raised in the discussion. Assessment is based partly on objective examinations. In addition, the course requires a library research project in which you explore in greater detail a controversial topic covered in class. These papers require the use of multiple sources (books, journal articles), excluding the textbooks for the course. The instructor provides written feedback, prior to the end of the semester, on your papers.

This course meets a general education requirement in the social and behavioral sciences as well as a general education requirement in intercultural and international competence.

**SOC 406** (CRIMJ 406, CRIM 406) Sociology of Deviance (3) Theory and research concerning deviant behaviors and lifestyles viewed as significant departures from a group's normative expectations.

**SOC (CRIMJ/CRIM) 406 Sociology of Deviance (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Sociology of Deviance focuses on the theory and research in social construction of social norms, the violation of norms, and social reaction to the violation of norms. The course focuses on the role of social structure and power in the definition of deviance, on structural, cultural, and social psychological processes involved in deviant behavior, and the dynamics of social reaction to deviance. The course includes some content focusing on criminal deviance, but also emphasizes non-criminal deviance, as well as the role of social movements and social change in constructing and contesting deviance definitions. CRIMJ/SOC/CRIM 012 and CRIM/CRIMJ 250W are prerequisites. This course may be counted toward the credits required for the B.A. and B.S. in Crime, Law, and Justice. It would fulfill one of the 400-level requirements in the "Crime" component of the major. The course may also be counted toward credits required for the B.A. and B.S. in Sociology for students with the Deviance and Criminology specialization.

**SOC 409** (US) (AF AM 409) Racial and Ethnic Inequality in America (3) The impact of inequality and discrimination on individual and group identity among various racial and ethnic groups.

**SOC (AAA S) 409 Racial and Ethnic Inequality in America (3)  
(US)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course explores the impact of inequality and discrimination on individual and group identity for a wide range of social groups with special focus on racial and ethnic majorities and minorities. Using an extensive list of readings, writing assignments, small group activities, and journals (for personal reflection and scholarly critique) the students join the instructor in exploring the effects of inequality and discrimination. While emphasis is given to the inequality and discrimination experienced by local and national populations, a significant portion of the class will address issues rooted in international structures and institutions. Students are evaluated on quizzes, reaction papers, and analysis journals. AAA S/SOC 409 is not a required course in Sociology; it is, however, an optional 400-level course for all majors and minors that fulfills one of their upper-level course requirements. AAA S/SOC 409 is not required for the major or minor, but it is one of several optional courses from which they can choose to fulfill major and minor requirements.

General Education: None

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SOC 411** (US) (HD FS 416) Racial and Ethnic Diversity and the American Family (3) This course will explore the nature and determinants of racial and ethnic variation in family processes in the United States.

**SOC 411 (HD FS 416) Racial and Ethnic Diversity and the American Family (3)**

During the last several decades, the racial and ethnic composition of the U.S. population has changed dramatically. At end of the 20th century, non-Hispanic whites accounted for less than 75 percent of the U.S. population. While blacks remained the largest minority group, there were nearly as many Hispanics as blacks, and the number of Asians was increasing. Population projections indicate that by the middle of the 21st century, Hispanics will make up nearly one-fourth of the U.S. population. Blacks, Asians, and American Indians together will comprise an additional fourth of the

population. The last several decades have also brought significant changes in family life in the United States, including declining rates of marriage, a rising age-at-marriage, an increase in cohabitation, and a dramatic rise in the proportion of births outside of marriage. While these trends in family life have been experienced by all racial and ethnic groups, there is substantial variation in family patterns by race and ethnicity. The course will build on other courses in social inequality and the family. The course does not overlap with any existing courses in the Department of Sociology or with courses offered in other relevant departments.

This course will explore the nature and determinants of racial and ethnic variation in family processes in the United States. The student will read articles from major sociological journals and learn to extract major points and issues. He/she will learn to synthesize and critique various arguments on major issues in the field. The student will acquire skills in summarizing and evaluating arguments in essay form. He/she will also develop oral presentation skills. Final grades for the course will be based on class participation, a brief (approximately 5 pages) paper, a group presentation, a midterm examination (essay format) and a final examination (essay format). The course is not required for the Sociology minor or major. However, the course can count as one of the 400-level elective courses in Sociology for the Sociology minor, B.A. or B.S.

**SOC 440 (HD FS 440) Family Policy (3)** An in-depth examination of family policy.

**SOC (HD FS) 440 Family Policy (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course is designed to provide an in-depth examination of family policy. Students will identify and critically analyze major issues, controversies, and policies that affect families. Attention will be devoted to recognizing both intended and unintended consequences of family policies and understanding policy challenges and trade-offs. Students will gain an understanding of how policies are shaped by both facts and myths, as well as our values. Students will examine historical and current trends in family patterns (e.g., divorce, women's labor force participation, nonmarital births) to understand the implications they hold for individuals, families and society. Students will gain an awareness of the social, economic, historical, legal, and political contexts within which family policies exist and are proposed. Although the main focus is on U.S. family policy, some time will be devoted to learning about family policies in other countries. We will learn about several specific family policies in-depth (e.g., welfare), but a final goal is to help students develop a general way of looking at family policy that they can then use to understand any issue of family policy that unfolds throughout their lifetime. This course will foster thoughtful reflection and critical thinking, writing skills, research skills, and skills of synthesis, logic, and argument. Course goals will be accomplished through course readings, writing assignments, lectures, class discussions, debates and group projects. Mastery of course material and student evaluation are assessed in several ways. Students will take a midterm and final exam that cover lectures, class discussions, and assigned readings. Two papers are also required. The first paper is based on an analysis of newspaper articles dealing with family policy issues that students will collect and relate to course materials. The second paper is a literature-based analysis of a family policy in a society outside the United States. Class participation is also essential and its evaluation will be based on a combination of class attendance, contributions to class discussions, participation in group debates and projects, and an oral presentation of the final paper on a non-U.S. family policy.

**SOC 445 U.S. Immigration (3)** This class examines theories of U.S. immigration and immigrant adaptation, effects of immigration, and policy.

**SOC 445 U.S. Immigration (3)**

The United States has long been known as a nation of immigrants. People have come for all sorts of reasons, including economic opportunity, political asylum, and religious freedom. Immigration continues to be a fundamental source of demographic and social change today. However, the nature of the changes brought about by immigration will depend on the pathways immigrants and their descendants take as they incorporate into American society. This course is designed to introduce students to theories of immigration, patterns of immigrant incorporation, immigration's impact on the U.S., and political debates about immigration issues.

Topic to be discussed include:

- Why do immigrants come to the U.S.?
- In what kinds of communities do immigrants live?
- What is the economic impact of immigration on U.S. society?
- What is the social impact of immigration?
- Are new immigrants assimilating?
- What are the problems with current immigration policies and what are the alternative approaches to reform?

**SOC 452 Spatial Inequality (3)** This course provides an introduction to concepts, measurement and study of spatial inequality in the US and across the globe.

### **SOC 452 Spatial Inequality (3)**

This is a lecture and lab-based course that provides an introduction to the concepts, measurement and study of inequality across spatial scales from international and national through to sub-national and local scales, and to study spatial inequality in diverse contexts (urban and rural; historical and contemporary). This will cover diverse substantive topics such as racial segregation, housing and labor markets, exposure to risks (e.g., pollution, crime, NIMBY facilities) and access to resources (e.g., supermarkets, schools, and health care). The lab component introduces undergraduates to geographic information system software and basic spatial analysis.

The lecture component of the course has four main sections. In Section 1 the focus is on fundamental questions such as: Why inequality? How to measure inequality? What are the key dimensions of inequality? This section will be wrapped up by an overview of the causes and consequences of inequality. In Section 2 the focus is on inequality between nations and inequality within nations (i.e., non-US). Section 3 will focus on the United States and specifically examining different levels or "territories" of inequality; neighborhood-level to state-level differences. This section focuses on urban spatial inequality and issues such as spatial segregation, access to services and exposure to risks. Section 3 concludes with discussions of rural inequalities focusing on access to health services. Section 4 focuses on 21st century challenges regarding rapid urbanization in the developing world and revisits themes related to 'Global' inequality.

The lab components of the course will parallel lectures and provide opportunities for practical learning. Specifically the labs are designed to expose students in sociology and across the social sciences to the use of geospatial data, geographic information systems and basic spatial analysis tools providing them with skills that help them to accurately summarize and report data on spatial inequalities. Students will learn how to find, critique, and use data appropriately to measure and map inequality. They will be introduced to spatial analytical concepts and learn how to assemble geospatial databases. They will learn skills associated with basic exploratory spatial data analysis and understand concepts such as scale, spatial heterogeneity, and spatial dependence.

**SOC 457 (US;IL) (ANTH 457, J ST 457) Jewish Communities: Identity, Survival, and Transformation in Unexpected Places (3)** Examines the global array of smaller Jewish communities that have flourished outside the main urban centers of Jewish settlement.

**SOC (ANTH/J ST) 457 Jewish Communities: Identity, Survival, and Transformation in Unexpected Places (3) (US;IL)**

This course addresses an understudied aspect of Jewish experience. It aims to expand our understanding of Jewish communities by focusing on those that are, alternatively, small, situated in out-of-the-way places, culturally outside the Jewish urban mainstream, or embedded in a larger society with markedly different values and traditions. These communities often constitute the points-of-contact between Jews and non-Jews, and in so doing sometimes transform Jews, non-Jews, and the relationships among them. Other such communities constitute experiments in Jewish lifeways and provide mainstream Jews with pilot projects for potential social and cultural change. This course will explore the significance of small, little-known, idiosyncratic, and anomalous Jewish communities on Jewish history and culture, and draw on them to instruct students on the social and cultural processes of small or unusual communities generally. The communities studied will be located both in the U.S. and elsewhere in which Jews have lived as a minority community during modern times. The course will look at the founding, growth, and decline of such communities and at their social processes and institutions. It will explore how to understand and analyze such communities, which vary from one part of the world to another. The social world of Jewish communities, large and small, is a core interest of Penn State's Jewish Studies Program. This course will complement the current offerings in Jewish Studies, strengthening the social, cultural, and contemporary perspectives available in the Program. It will provide students with an opportunity to explore individual experience and micro-level processes among Jews, and to study the dynamics of identity and survival. It will complement the current offerings in Sociology and Anthropology by affording an opportunity to focus on community-level social processes and by adding a course on contemporary Jewry. The course will integrate knowledge from a variety of sources and fields, promote intercultural understanding, and meet US and IL requirements. Materials will be interdisciplinary, and will include ethnographies, sociological studies, population studies, histories, and personal narratives. They will include primary texts, creative works, and scholarly analyses. The assignments will be structured to facilitate preliminary experience in independent analysis, library research, or field research.

**SOC 469** Techniques in Small Group Facilitation (1-4 per semester/maximum of 12) This course is the training course for students working as facilitators with the World in Conversation Project.

### **SOC 469 Techniques in Small Group Facilitation (1-4 per semester/maximum of 12)**

SOC 469 is an advanced training course for students who have been selected to be facilitators for the World in Conversation Project. In this course, students draw on sociological theories and methods to learn how to sharpen their group facilitation skills in order to lead small group dialogues on race relations. The main objective is to learn how to create an ideologically neutral environment in which participants will think critically and speak candidly about their views and roles in race relations. All evaluations are accomplished through "live" observations of students actually facilitating dialogue. In order to be considered for a position as facilitator with the World in Conversation Project, a student must successfully complete SOC 119 (Race and Ethnic Relations) and SOC 300 (Preceptorship in Sociology).

There are different learning objectives for students who take SOC 469 the first time as compared to those returning for multiple semesters. The general objectives are as follows:

**Semester 1:** During the first semester, students develop advanced facilitation skills. In the context of work with the World in Conversation Project, this means that they acquire the tools they need to encourage critical thinking, to address complex racial and culture-related subjects and emotions, to lead "ideologically neutral" dialogue, and to more adeptly understand and implement the Socratic Method. At the core of their learning is study of the sociological dynamics of group process.

**Semester 2:** During the second semester, students develop their social and emotional intelligence as the foundation for implementing successful conversational interventions. The core of their learning involves integrating a more advanced understanding of their own personal cultural identity with more advanced facilitation techniques. In other words, in order to master small group facilitation and group process, students need to explore the nuances of their own personal racial and cultural identities and how these enter into their work as facilitators.

**Semester 3:** Students stay on for a third semester only if they can clearly articulate the advanced facilitation/observation/interpretation skills learned during the first two semesters in a way that allows them to assume the role of a peer mentor with new facilitators.

A student is only invited back for subsequent semesters of SOC 469 if they have successfully accomplished the learning objectives set forth for each semester.

The method of evaluation is standard for each semester that a student takes the class, and consists of a combined approach that includes: 1) live observations via an audio/video monitoring system and performance goal-setting with instructors and WCP staff (weekly), 2) self-evaluation and personal goal-setting through review of recorded small group dialogue sessions (three times per semester), and 3) personal meetings with course instructors (twice per semester).

For Your Information:

What is the WCP?

These are campus wide 90 minute, peer facilitated small groups where trained undergraduate students (former SOC 119 facilitators) help participants explore their personal stories, views, biases and roles in race relations using a version of the

Socratic Method. These inquiry-based sessions are designed to discuss the true nature of race relations face to face in an ideologically neutral environment. The conversations are extremely popular with participants (85 percent rate them as valuable and worthwhile) and the number offered each year has grown from 140 to over 800 in just six years. Currently twenty facilitators work for the project, all Penn State undergraduate students.

**The WCP Mission Statement:**

The mission of the RRP is to create an ideologically neutral environment for dialogue where individuals can voice their true concerns about race relations and begin to address these concerns in a productive and meaningful way.

**WCP Philosophy:**

Our guiding assumption is that the articulation of one's viewpoint on an issue is the beginning of greater understanding and knowledge of that subject. And the experience of doing so with others in a group setting creates a kind of synergy that advances critical thinking as well as bridge building.

**SWENG 311** Object-Oriented Software Design and Construction (3) Design, documentation, testing, and construction of software using software engineering strategies embodied in object-oriented programming languages.

### SWENG 311 Object-Oriented Software Design and Construction (3)

Object-oriented design and programming embody powerful design strategies that are based on practical and proven software engineering techniques. In this class, students will learn how existing object-oriented languages support these strategies, how to apply these strategies to moderately-sized systems, and how to use a visual object-oriented modeling tool such as the Unified Modeling Language (UML). Students will build on programming skills acquired in prerequisite programming courses by programming in a major object-oriented programming language.

**SWENG 411** Software Engineering (3) Software engineering principles including life cycle, dependability, process modeling, project management, requires specification, design analysis, implementation, testing, and maintenance.

**SWENG 411 Software Engineering (3)**

This is an introductory course in software engineering, addressing the software development process, including aspects such as software requirements documentation, design specification, implementation, system integration, testing, and maintenance by individuals and teams. Topics include software process modeling, requirements elicitation and documentation, software architecture design and analysis, detailed design and programming, graphical user interface (GUI's) design and prototyping, software quality assessment, software testing, software maintenance and evolution management, personal and team-based development. In lab students gain practical experience by completing programming assignments and utilizing computer-aided software engineering (CASE) tools for their personal projects tailored to each stage of the software life cycle. A semester long team-based project is required that reinforces teamwork fundamentals and the concepts covered in lecture. The projects and assignments provide an opportunity for student teamwork, document writing, and oral presentations.

Bachelor of Arts: None  
Effective: Spring 2008  
Prerequisite: CMPSC 122  
Concurrent: SWENG 311

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SWENG 421** Software Architecture (3) The analysis and design of software systems using canonical design patterns.

**SWENG 421 Software Architecture (3)**

This course introduces the frequently-used software infrastructures in software development by experienced engineers. The formal UML notations are utilized to design software architecture and help communicate the design visually.

Students will learn the real practice of architectural styles, design patterns and design reuse. As to certain complex problems, alternative architectures will be proposed and their design trade offs will be evaluated. For instance, students compare two-tier with three-tier client/server architectures for distributed systems, and employ multi-process and multi-thread concurrent architectures for high performance computation systems. Moreover, students learn to conduct high level quality analysis from the design artifacts. The quality evaluation will focus on a number of attributes, including reusability, extendibility and performance.

A great deal of effort is placed on the major categories of design types containing dozens of separate design patterns. Students first review the most fundamental design patterns. Afterwards, they apply creational patterns to effectively create objects, partitioning patterns to categorize objects, structural patterns to allocate objects, behavioral patterns to interface the communication between objects, and concurrent patterns to handle tasks simultaneously. These skills will enable students to extend their own knowledge after graduation by giving them the skills to learn new patterns on their own.

Finally, students will integrate their programs with native code applications to enlarge the application domains. To achieve best reusability, they also learn modular designs to develop component-based software. These help them meet today's software needs of cross applications and architectures.

**SWENG 431** Software Verification, Validation, and Testing (3) Introduction to methods of software verification, validation, and testing; mathematical foundations of testing, reliability models; statistical testing.

#### **SWENG 431 Software Verification, Validation, and Testing (3)**

Provides a background necessary for verification, validation, and testing of software systems. Verification addresses the question: "are we building the product right?" In other words, does the product meet the engineering specifications? Validation addresses whether the right product is being built and if it meets the design requirements. The testing aspect of the course addresses many of the methods available to test software systems. The levels of testing explored are 1) unit level (each module is tested independently), 2) integration testing (where the modules are integrated together and tested as a complete system), and 3) acceptance testing (the testing requirements of the users). Following this, specific test methodologies are addressed. By the end of this course the student should also be able to develop an appropriate test plan.

**SWENG 452W** Embedded Real Time Systems (3) The design and implementation of real time systems.

#### **SWENG 452W Embedded Real Time Systems (3)**

Real time operating systems is the study of hardware/software systems in which timing constraints must be met for correctness. Real time systems are embedded in applications ranging from the antilock brakes in cars to the flight control systems for jetliners. Students are first introduced to the concept of systems with real time constraints by examining case studies. The unified modeling languages (UML) with real time extension is introduced allowing students to capture the constraints present in the systems in a variety of models allowing the problem to be described at several levels of abstraction. Tasks and messages are introduced as programming structures which can satisfy the constraints described by the UML models. With a basic understanding of real time systems and how to implement them, the focus of the course shifts away from these technical concerns towards understanding the documentation of the requirements using the Volere Requirements Specification template. All the writing assignments in the class will revolve around Volere in one way or another. Increasingly complex case studies will give the class the opportunity to explore more sophisticated inter-task communications mechanisms as well as common pitfalls present in RTOS applications. Students will learn how to verify the correctness of their applications in order to guarantee that the real time constraints can be met when the system is deployed. Discussion will turn to application programmer interfaces used by hardware vendors to port hardware into a RTOS. The class will end by designing and building a complex RTOS by a team of students using the techniques learned in the class. The project will outline the needs of the RTOS application in a project proposal using the Volere template. The proposal will be developed iteratively with the faculty member until its scope and definition are clear. This proposal will be developed into a complete requirement specification including a time-line and identification of development benchmarks. This system resulting from the development will be documented in the final report write-up.

**SWENG 480** Software Engineering Design (3) Concepts of engineering ethics, economy, and project management, senior capstone project selection, and technical communication skills.

### **SWENG 480 Software Engineering Design (3)**

This course prepares senior software engineering students for industrial engineering design and project management. It covers the engineering design process, project planning and evaluation, engineering ethics, and engineering economy. In addition, students select, specify, and start their capstone design project, which is completed, in the follow-up course, SWENG 481. Students are expected to carry out a group design project that is on par with industrial expectations. Upon completion of this course a student should have a solid understanding of the engineering design process, a clear capstone project description, should have completed some preliminary design work, and be adequately prepared to complete the project in SWENG 481.

## **Soil Science (SOILS)**

**SOILS 071** (GN;IL) Environmental Sustainability (3) An introduction to environmental science, exploring sustainable human- environment interactions with examples from environmental soil science.

### **SOILS 071 Environmental Sustainability (3) (GN;IL)**

This class provides an introduction to environmental sustainability for students with no background in environmental science or soils. The concept of sustainability provides a framework for understanding environmental problems by balancing the needs of current society with the long-term needs of future societies and the environment. Sustainability also provides a framework for linking international cultures because environmental problems and solutions often cross political and cultural boundaries. The goal of the course is to develop critical thinking skills related to sustainable environmental choices. As we explore the concept of sustainability, we will discover the role of soil in mediating human-environment interactions by determining natural plant and animal abundance, supporting agriculture, and buffering the environment against modern pollution.

The five themes of the class are: 1) The science of nature and the nature of science, which introduces students to the scientific method and value systems that affect environmental choices, 2) Population and consumption, where we consider these challenges to global sustainability, 3) the Malthusian dilemma of how we can feed billions of people in the near future, 4) the conservation dilemma of how we can maintain a healthy environment (while feeding billions of people), and 5) Success stories in sustainable environmental science and policy.

The class will include "soils cases" in which examples from environmental soil science are used to convey principles of sustainability, and "sustainability walks" to see examples of sustainable environmental choices near campus. Students will complete the class with: 1) a survey of the key issues in global environmental sustainability, 2) exposure to current scientific information related to these issues, 3) an enhanced ability to interpret environmental data, 4) an increased knowledge of the role of soils in maintaining environmental quality, 5) an increased understanding of how environmental problems and solutions are global phenomena, requiring cooperation among many international cultures, and 6) a significant depth of knowledge about "what it takes" to feed 6.5 billion people while maintaining a healthy environment.

**SOILS 101** (GN) Introductory Soil Science (3) A study of soil properties and processes and relationships to land use, plant

growth, environmental quality, and society.

**SOILS 101 Introductory Soil Science (3)  
(GN)**

This survey and foundational course introduces students to a broad range of subject matter from most sub-disciplines of soil science. We study a range of soil characteristics and seek to understand their relationship to soil function, land use, plant growth, environmental quality, and society/culture. This course introduces students to the variety and complexity of soils on a local, national, and international scale. We identify the physical, chemical, and biological properties and processes of soils and relate these to the way that societies use and abuse soils. Students acquire a working knowledge of the technical terminology of soil science and begin developing observational skills needed to describe and/or locate soil properties for specific locations and to interpret those properties for various uses. We learn to recognize and explain various land use and management practices and to select those that are appropriate at a given site. Students also evaluate the impact of land use and management decisions on agricultural productivity and sustainability, environmental and ecological health, and on community relationships.

This course is required or on a list from which students select for many environmental and agricultural majors. It is specifically listed as a prerequisite for many other SOILS courses and for several soils-related courses taught at Penn State.

**SOILS 102 Introductory Soil Science Laboratory (1)** Laboratory exercise and field trips designed to develop student competency in soil description, analysis, and assessment.

**SOILS 102 Introductory Soil Science Laboratory (1)**

This laboratory course is designed for students who plan to work directly with soils, make land use and management decisions, or to be involved in projects requiring practical application of soil science principals. By conducting weekly laboratory and field exercises and writing reports on their work, students will deepen their understanding of, and learn to apply, the fundamental soil properties and processes introduced in SOILS 101. This laboratory course, in conjunction with the SOILS 101 lecture course, will provide foundational learning in soil science and prepare students for upper level soil science courses. This laboratory course is also designed to provide students with hands on experience in analytical procedures for soil assessment, testing, and interpretation, as well as field experience in observing, characterizing and describing soils.

**SOILS 402** Soil Nutrient Behavior and Management (3) Chemical and biological behavior of soil nutrients; management for plant availability and fate in the environment. Laboratory emphasizes soil testing and soil-plant relationships.

**SOILS 402 Soil Nutrient Behavior and Management (3)**

Soil Nutrient Behavior and Management is a senior/graduate level course that covers the chemical and biological processes that determine the behavior of essential plant nutrients in soils. As this understanding of basic nutrient behavior is developed in the course, it is applied directly to explain the basis for management of nutrients for optimum plant availability. This same nutrient behavior is linked to the fate of nutrients either applied as sources of plant nutrition or through disposal of nutrient containing materials on soils, which is a major environmental issue. Management practices necessary to minimize environmental impacts from nutrients are also covered. From this background students will be able to understand nutrient behavior and management recommendations and adapt management to a variety of soil-plant systems and situations both for plant growth and environmental protection. Real world examples of developing and adapting management systems are used to illustrate this process. The laboratory exposes the student to common soil testing procedures, methods for studying soil nutrient-plant interactions, and examples of practical application of management practices in the field. Evaluation will be based on 3 exams, laboratory reports, homework assignments.

**SOILS 403** Soil Morphology Practicum (2 per semester/maximum of 4) Students develop field skills to describe soil morphology, classify soils, and make land use interpretations.

**SOILS 403 Soil Morphology Practicum (2 per semester/maximum of 4)**

SOILS 403 is an eight week course that provides students with the opportunity to: make detailed soil morphological descriptions and interpretations; evaluate soil properties and their suitability for different land uses; and observe various soils throughout the Northeastern U.S. SOILS 403 synthesizes techniques used to describe soil morphology and site characteristics, classify soils, and make land use interpretations. The field skills taught are highly applicable to those pursuing careers in fields of environmental studies, engineering, waste disposal, horticulture, landscape architecture, agricultural, forestry, consulting, and by those describing soils for research. Students also have the opportunity to try out for the Penn State Undergraduate Collegiate Soil Judging Team each fall.

**SOILS 404** Urban Soils (3) This course introduces the student to natural and human-influenced soils.

**SOILS 404 Urban Soils (3)**

This course introduces the student to the management of soils in urban and suburban settings via comparisons in soil physical, chemical, and biological properties. The soil is also examined as the interface between the biotic and abiotic components of an urban site. Therefore, site management of soil during or following placement is examined in detail. Urban soil physical and chemical properties are discussed in terms of site stability. The interactions between stormwater management, erosion control, soil mechanics, and the soil's ability to support vegetation are examined in the context of sustaining urban environments. The soil design process is presented: site assessment, biophysical analysis, profile construction, specification formulations, and conformance testing and inspection protocols. Professional practical examples such as mine reclamation, brown field restoration, and landscape construction are presented to illustrate the process. The student completes a series of exercises to gain experience in soil examination, soil/land use interpretation, site assessment, soil erosion calculations and a group assignment that evaluates soil issues on a reclamation or construction project.

**SOILS 405** (GEOSC 405) Hydropedology (3) Soil and water interactions across scales, integrated studies of landscape-soil-water relationships, fundamental processes of water flow and chemical transport.

**SOILS (GEOSC) 405 Hydropedology (3)**

Hydropedology is the study of the fluxes, storages, pathways, residence times, and spatio-temporal organization of water in the root and deep vadose zones, and their relations to climate, ecosystem, land use, and contaminant fate. The aim is to characterize integrated physical, chemical, and biological processes of soil-water interactions across scales (including chemicals and energy transported by water flow). This course embraces interdisciplinary and multiscale studies of interactive pedological and hydrological processes in the earth's surface and subsurface environments. The course will address the fundamental issues and practical applications of hydropedology (as a sister discipline of hydrogeology). This course emphasizes *in situ* soils that have distinct characteristics of pedogenic features, structures, layers, and soil-landscape relationships in the real world. Students will gain an in-depth understanding of soil and water interactions across scales from point observations to watershed phenomena, and will gain skills in predicting flow pathways and water fluxes in the landscape. This course promotes active learning, critical thinking, and hands-on skills. Course format will consist of two lectures and one laboratory/field exercise each week. The course will utilize a network of local watersheds with different land uses for demonstrations and class projects. Grading will be based on weekly lab/field exercise (20%), class research project (40%), homework (10%), one midterm exams (15%), and one final exam (15%). Since hydropedology is linked to a wide array of environmental, ecological, geological, agricultural, and natural resource issues of societal importance, SOILS (GEOSC) 405 will support interdisciplinary training of students in Soil Science as well as in other disciplines of the College of Agricultural Sciences, especially Agricultural and Biological Engineering, Agronomy, and Forest Resources. Students in the College of Earth and Mineral Sciences, College of Engineering, Eberly College of Science,

and the Intercollege Graduate Degree Program in Ecology also will find this course useful when undertaking research on the vadose zone, the hydrologic cycle, and the earth system.

Bachelor of Arts: None  
Effective: Summer 2013  
Prerequisite: BIOL 011BIOL 127 orBIOL 110

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SOILS 416** Soil Genesis, Classification, and Mapping (4) Lecture and laboratory course on the genesis of soils, their classification, mapping, and interpretation for land use.

### **SOILS 416 Soil Genesis and Classification (3)**

The study of soil genesis, classification, and mapping examines the evolution of soils, their organization into natural units, and their distribution throughout the world. Physical, chemical, and morphological soil characteristics are studied both in the field and classroom and then used to classify soils. These classification units are in turn used to study the processes that influence soil development. Students acquire a detailed knowledge of the technical terminology of soil genesis and develop observational and analysis skills needed to describe and/or interpret soil morphologies in the context of the landscape a profile is found in. Students learn to recognize and explain soil genetic pathways due to current or past soil forming periods (as affected by climate change for example). Students also evaluate the effect of soil genesis on land use and management decisions, learn how to map soils at multiple scales, and deliver soil mapping information.

The course is comprised of weekly lectures and a laboratory. Exercises in the field and laboratory are designed to further develop a student's ability to ascertain a natural soil's origin using the five soil forming factors. Field skills that will be refined over the course of the semester include profile description, site description, soil mapping, and measurement and characterization of soil physical and chemical properties.

Upon completion of SOILS 416, students will demonstrate: 1) deep understanding of fundamental soil processes that result in the genesis of soils around the world; 2) familiarity with soil analytical and testing protocols for common laboratory and field measurements used in studying the genesis of soils; 3) skills for interpreting soil profiles from the soil orders of the world; 4) accurate prediction of soil genesis pathways for a given landform; 5) the ability to interpret soil profile physical and chemical data, classify a soil according to US Soil Taxonomy, map soils to an order 1 level, and be able to apply soil profile information as gathered from the US Soil Survey program to make land use interpretations.

**SOILS 418** (AGECO 418, AN SC 418) Nutrient Management in Agricultural Systems (3) Comprehensive review of nutrient flow in animal agricultural systems, environmental regulations, and environmental stewardship practices.

### **SOILS (AGECO/AN SC) 418 Nutrient Management in Agricultural Systems (3)**

Nutrient Management in Agricultural Systems is a senior level course that applies the fundamentals of animal and plant sciences to the concept of a nation-wide food animal system. The regional concentration and consolidation of animal production enterprises has resulted in important economic savings for consumers. But these changes have also had some detrimental impacts on the environment. For example, some nutrients such as calcium and phosphorus and certain trace elements are mined, while others such as nitrogen and potassium are derived from crop production systems. In all cases, the nutrients are transported to areas of livestock concentration. A small portion of the nutrients leave the farm in the form of animal products, while 60 to 70% of the nutrients are excreted and applied to nearby crop land. The environmental implications of the net influx of these nutrients to livestock producing communities have only recently been recognized. These concepts will provide the background around which regulations are written and sound nutrient management strategies are developed and implemented.

**SOILS 419 (GEOSC 418) Soil Environmental Chemistry (3)** Introduction to chemical constituents and processes occurring in soils. Topics include mineral weathering, soil solution chemistry and adsorption of solutes.

#### **SOILS 419 (GEOSC 418) Soil Environmental Chemistry (3)**

Upon completion of the course, the students will be able to identify the soil components and properties responsible for the chemical reactivity of soils and will know the fundamental chemical processes that occur in soils. The students will also be able to link theoretical concepts to real life environmental problems.

General Education: None

Bachelor of Arts: None  
Effective: Summer 2013  
Prerequisite: CHEM 112

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SOILS 420 Remediation of Contaminated Soils (3)** Basic principles and technical aspects of remediation of contaminated soils.

#### **SOILS 420 Remediation of Contaminated Soils (3)**

Remediation of contaminated soils is an introduction to the basic principles and techniques of remediation. Upon completion of this course, students will be able to determine what type of remediation technology needs to be used in real-world conditions depending upon the chemical nature and extent of contamination and learn about protocols for soil sampling and leach testing. They will learn about regulatory background and many different types of wastes that will be encountered in contaminated soils. Students gain knowledge of various cationic and anionic species of metal contaminants and how best to fix these using chemical fixation and solidification technique, which is an established remediation technology. In addition, they will learn about other established technologies such as on-site and off-site incineration and innovative technologies such as bioremediation, phytoremediation, vacuum extraction, thermal desorption, soil washing, solvent extraction, ex-situ supercritical oxidation, in-situ vitrification etc. They will be able to determine which technology is cost-effective for a particular contaminated soil. Students are evaluated through written testing of their understanding of basic remediation concepts and an oral presentation about a novel remediation technology through literature search. Soils 420 has no laboratory component.

**SOILS 422 Natural Resources Conservation and Community Sustainability (4)** Conservation, land-use, and community (soil, water, air, plants, animals, and humans) impacting quality of life and sense of place.

SOILS 422

#### **SOILS 422 Natural Resources Conservation and Community Sustainability (4)**

SOILS 422 provides the student with practical knowledge of community and natural resources conservation. The course covers symbiotic aspects of soil, water, air, plants, animals, and humans and their impact on the community. The course focuses on developing methods for the conservation and sustainable use of resources. This involves understanding the land ethic and developing a sense of place.

Conservation awareness has grown in recent years. Originally, erosion control was the sole reason for conservation planning. Eventually water conservation also became a concern addressed by planning. We have now moved into an era of ecosystem-based planning, where soil health, water and air quality, sustainable communities, and much more are considered in conservation planning. This planning involves both natural and human resources.

SOILS 422 covers understanding, designing, and developing best management practices (BMPs) for addressing resource conservation and maintaining sustainable farmland and communities. Calculating runoff and soil loss are researched and integrated into conservation planning as tools for establishing the need for BMPs.

Resources and technologies are covered, such as soil surveys, geographic information systems (GIS), global positioning systems (GPS), and ground penetrating radar (GPR). Networking and partnerships are also covered to give the student a practical knowledge of the critical nature of teamwork. Additionally, workings and interactions between federal, state, and local organizations and agencies are explored.

Land-use patterns, such as urban and suburban sprawl, mining, logging, and resource utilization are explored. Education is enhanced in the form of a community/sense of place project. This project utilizes classroom knowledge and incorporates student research into a practical plan for developing an appreciation and awareness for one's community.

Throughout the course the various aspects of soil, water, air, plants, animals and humans are woven together to emphasize the importance of all decisions on the ecosystem. After completing SOILS 422, the student will be equipped to make valuable and educated decisions to positively affect the community.

Hands-on aspects of the course include various field trips to experience field conservation and community stability.

At the end of the course the student will be able to evaluate effects of human activities on the landscape; make sustainable land-use decisions; determine the need for, and design best management practices; and develop a sense of place and describe individual roles and responsibilities in the community.

**SPAN 083S First-Year Seminar in Hispanic Literatures and Cultures (3)**  
(GH;FYS;IL)

**(BA) This course meets the Bachelor of Arts degree requirements.**

The first-year seminar in Spanish will introduce students to the study of Hispanic literatures and culture in their first semester at the University. Students will read (in English) significant literary texts, view art works (including films and videos), listen to music and explore the Hispanic world in general. These experiences will help prepare them for additional courses in literature and in Spanish, but will also serve as an introduction to things Hispanic, and as a point of comparison with U.S. culture. In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them including the opportunity to develop relationships with faculty and other students who share their academic interests. This course will introduce students to the study of Hispanic literatures and culture in their first semester at the University.

This experience will help prepare them for additional courses in literature and in Spanish. The course satisfies both the first-year seminar and a general education humanities or Bachelor of Arts humanities requirement.

**SPAN 100B** Intermediate Grammar and Composition for Students in Medical-Related Fields (3) Intermediate Grammar and Composition for Students in Medical-Related Fields.

### **SPAN 100B Intermediate Grammar and Composition for Students in Medical-Related Fields (3)**

The main goals of the course are to help students develop their competence in using medical terminology in Spanish and to become familiar with the cultural aspects in the health care of Latinos/Hispanics in the United States. In addition, the course will review intermediate level Spanish-language grammar and will provide structure to improve students receptive (listening and reading) and productive (speaking and writing) skills needed for this specialized vocabulary.

During the semester students will learn and practice health terminology in Spanish, and they will apply the specialized vocabulary through case scenarios, noticias (news) and readings. Participants will be exposed to Spanish from the first day and are expected to stay up-to date with the current health news as it relates to the Hispanic/Latino population of the United States.

The course is intended for those who are beyond the basic level of Spanish (must have taken Span 003), but participants are not expected to be fluent speakers.

General Education: None

### **SPAN 131 Ibero American Civilization (3) (GH;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

The nations and peoples of Latin America have a unique, interesting history and cultural heritage that are rooted in the traditions, beliefs, experiences, values, and struggles of Native American, European, African and other populations. As close neighbors and major trading partners of the United States, Latin American republics have both benefited and suffered from the proximity and foreign policies of the northern capitalist democracy, and have contributed to its strength and growing ethno-racial diversity. This course aims to provide the student with a broad, general introduction to the lands, peoples, and history of Latin America; to inform the student about the region's ethnic diversity, cultural background, and problems of development; and to promote appreciation for the values and practices of other cultures, and a better understanding of relations between the nations of the region and the United States. Classes will usually combine lecture and discussion of reading assignments, with an expectation of high student participation. Films, videos, and recordings will enhance and illustrate readings.

Three examinations (each covering approximately one third of the lessons presented), an occasional quiz, a book report or an annotated bibliography, participation and attendance will be the basis for evaluation of student learning and grades. Students are required and expected to read assignments, to attend class regularly, and to be prepared to participate in class discussions by answering and raising questions relevant to the lessons. Poor attendance will adversely affect a student's standing and grade.

This course will fulfill the Humanities Breadth and Cultural Diversity requirements. The course does not count toward credits in the major or minor in Spanish because it is taught in English. Nevertheless, it will complement the department's offerings by providing students with a greater appreciation of Latin America's cultural origins, socioeconomic development, and everyday realities. Overhead projector and screen will be needed as special facilities.

(GH;US;IL)

**(BA) This course meets the Bachelor of Arts degree requirements.**

The nations and peoples of Latin America have a unique, interesting history and cultural heritage that are rooted in the traditions, beliefs, experiences, values, and struggles of Native American, European, African and other populations. As close neighbors and major trading partners of the United States, Latin American republics have both benefited and suffered from the proximity and foreign policies of the northern capitalist democracy, and have contributed to its strength and growing ethno-racial diversity. This course aims to provide the student with a broad, general introduction to the lands, peoples, and history of Latin America; to inform the student about the region's ethnic diversity, cultural background, and problems of development; and to promote appreciation for the values and practices of other cultures, and a better understanding of relations between the nations of the region and the United States. Classes will usually combine lecture and discussion of reading assignments, with an expectation of high student participation. Films, videos, and recordings will enhance and illustrate readings.

Three examinations (each covering approximately one third of the lessons presented), an occasional quiz, a book report or an annotated bibliography, participation and attendance will be the basis for evaluation of student learning and grades. Students are required and expected to read assignments, to attend class regularly, and to be prepared to participate in class discussions by answering and raising questions relevant to the lessons. Poor attendance will adversely affect a student's standing and grade.

This course will fulfill the Humanities Breadth and Cultural Diversity requirements. The course does not count toward credits in the major or minor in Spanish because it is taught in English. Nevertheless, it will complement the department's offerings by providing students with a greater appreciation of Latin America's cultural origins, socioeconomic development, and everyday realities.

(IL)

**(BA) This course meets the Bachelor of Arts degree requirements.**

The nations and peoples of Latin America have a unique, interesting history and cultural heritage that are rooted in the traditions, beliefs, experiences, values, and struggles of Native American, European, African and other populations. This course focuses on the presence and participation of African peoples and their descendants in the formation and development of societies and cultures in representative areas of the Caribbean, South America, and Central America and on the evolution, diversity, and richness of the African heritage therein. Course content includes the African background, the experience and impact of slavery, the social, cultural, and economic heritage of slavery, the role of race in Latin America, and Afro-Hispanic intellectual, literary, and artistic developments (e.g., aspects of folklore, music). The course aims to provide students with a general introduction to human and cultural elements of African origin within the Spanish- and Portuguese-speaking nations of the Americas so that they may be more knowledgeable of the meaning, significance and widespread influence of the African diaspora. It proposes to provide the student with a better understanding of Africa's contribution to Latin American identity, diversity, culture, and development; to promote appreciation for the values and practices of other cultures, and greater awareness of the relations between the nations of the region and the United States.

### **SPAN 215 Introduction to Spanish Linguistics (3)**

Spanish 215 will introduce students to the fundamental components of linguistics (phonology, morphology, syntax, lexicon, and semantics) using data from the Spanish language. The course requires no previous knowledge of linguistics, but presupposes familiarity with Spanish at the 15 credit level or higher. The underlying purpose is to awaken students' interest in Spanish linguistics; to provide them with a foundation in the terminology and concepts necessary for studying higher level courses that are part of Spanish major and minor curricula; and to help them to decide which of the upper level classes they would be most interested in taking. Student performance in the course will be evaluated by (a) exams designed to verify their familiarity and understanding of linguistic terminology and concepts, their skill in doing phonetic transcription, and their ability to solve problems in phonology, morphology, syntax, and semantics, and (b) their preparedness and participation in classroom activities.

During the semester students will learn how to write, and will practice writing, critical and analytical essays based upon the different genres of literature studied in class. All students will write three compositions during the semester, which will be written twice incorporating in the final draft suggestions made by their peer editors and by their instructor. The writing of the second version will be preceded by a conference with the instructor in which s/he will make comments and suggestions to the students about how to avoid the same errors made in the first draft. The themes for all papers must be chosen in consultation with the professor.

**SPAN 315 (GH;US) (LTNST 315) Spanish and Spanish-speakers in the U.S. (3)** In this course, we investigate various aspects of the language(s) and language behaviors of U.S. Latinos.

**SPAN (LTNST) 315 Spanish and Spanish-speakers in the U.S. (3) (GH;US)**

The course is premised on the idea that language is a crucial component in the formation of identity. To understand Latina/o identity formation in the U.S., then, one must analyze what role languages--Spanish and English--have played in identity formation. The class commences with a brief historical assessment of the various U.S. Latino communities, including Mexican-American, Cuban-American, and Puerto Rican communities. Such a historical purview proves significant in the study of the cultural traditions that persist in these communities, chief among these, the Spanish language. In exploring the Spanish language in U.S. Latino communities, we consider several major sets of questions, among them the following: In what ways do the languages of U.S. Latino communities differ from those of monolingual Spanish- (and English-) speaking communities? What factors contribute to the maintenance and loss of Spanish in these communities? How does language contribute to the creation of individual and societal identity? How is language exploited in the representation of other U.S. Latino cultural traditions? We consider these questions across a variety of genres: poetry, prose (autobiography in particular), film, art, television, and music. These texts reveal how social environments determine language use as well as how artists have used language to reshape social environments, through, for example, the development of new language practices such as Spanish-English code switching. The course also connects these cultural practices to debates on Spanish in public life and policy.

**SPAN 316 Building Words and Sentences in Spanish (3)** Building words and sentences in Spanish. Analysis of Spanish word structure and its relationship to syntactic structures.

**SPAN 316 Building Words and Sentences in Spanish (3)**

"Building words and sentences in Spanish" is an introduction to the study of Spanish morphology and syntax. In linguistics, morphology is the study of the morphemes (e.g. affixes, words, roots) of language and how they combine together to form words. Syntax is the study of how words combine together to form phrases and sentences. Because this course is for Spanish majors and minors, the focus in this course is on the structure of words, phrases, and sentences in Spanish, how Spanish compares to other languages, and how morphology and syntax vary across Spanish dialects. Special focus will be made on explaining the kinds of errors typical of English-speaking learners of Spanish as a second language, and a primary goal of the course is for students to improve their proficiency in using Spanish morphosyntax. The course is taught in Spanish.

**SPAN 326 (GH;US) Reading the Border/Lands (3)** This course examines representations of the U.S.-Mexico border in relation to the actual geographic space.

**SPAN (LTNST) 326 Reading the Border/Lands (3)  
(GH;US)**

This class will center on discussions of the U.S.-Mexico borderlands in cultural theory and practice. "Borderlands" is understood as a transcultural space filled with physical, cultural, economic, political, and mythical elements. The aim is to view how different artists from the Borderlands, both northern Mexican and Chicano, mediate their borderlands reality. That is to say, the goal of the class is to examine the different "imaginative geographies" in the borderlands. We examine a wide-ranging mix of cultural texts that includes prose, poetry, essays, and performance art, as well as film and video art. We explore how writers have historically rethought notions of citizenship, identity, and culture to create more fluid spaces of representation in cultural contact zones. We will in particular, pay close attention to the relationship between national geography and the shaping of regional identities and popular cultures —between the maps that nations draw and the cultural forms that cut across them.

**SPAN 355 Survey of Spanish American Literature Through Modernismo (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course offers a comparative study of the literatures, artistic manifestations, intellectual traditions, and cultural productions of the Latin American region. Throughout the course, we will reflect on the (im)possibility of characterizing a vast region by taking into account ongoing factors its broader history and culture, as well as national and local particularities. Topics will vary by semester and may include: literary and artistic periods and movements, (post)coloniality and decoloniality, the politics of race, gender, and sexuality, urban and rural sociopolitical movements, (self-)representations in old and new media, discourses of the political (populisms, revolutions, dictatorships, and neoliberalism), and migration studies. Students will engage with literary texts, historic documents, art, music, and other materials in order to understand different kinds of writing and forms of representation. While most materials will be in Spanish, the course may also include works in translation from Brazil, as well as the English- and/or French-speaking Caribbean.

### **SPAN (LTNST) 479 U.S. Latina/o Culture in Spanish (3)**

This is an overview of literature and culture, in Spanish, created within the United States. We will read fiction, essays and film, but also consider poetry, travel accounts, visual art and performances, and cultural practice and sociological issues (like "quinceañeras" and soccer leagues) in order to discuss some of the following themes particular to the Hispanic experience within the U.S.: immigration and transnationalism; the imaginary homeland; families and assimilation; conflicted identity; language and a sense of place. We will emphasize two basic tools of literary analysis: "close reading," and library research.

**SPAN 488** War, Revolution, and the Struggles for Modernity: Spain 1898-1939 (3) This course, conducted in Spanish, examines Spanish literature from 1898 to 1939.

### **SPAN 488 War, Revolution, and the Struggle for Modernity: Spain 1898-1939 (3)**

This course, conducted in Spanish, advances questions concerning what constituted artistic, literary, social, and political modernity in Spain between 1898 and 1939. By analyzing a range of texts and artworks, the objective of this course is to understand how the revolutionary forces of modernity (modernidad) shaped one of the most profoundly transformative periods in Spanish history. In thinking about issues such as sexuality, secularism, representation, feminist liberation, social rebellion, political unionism, and artistic innovation, the course will outline the country's advancement toward a new democratic form of government and, tragically, a devastating Civil War. The course will examine the literary and artistic works of Pérez Galdós, Unamuno, Rubén Darío, Picasso, Ramón Gómez de la Serna, Maruja Mallo, Rosa Chacel, Federico García Lorca, and Salvador Dalí, among others. As the course approaches each text or artwork, it will discuss how the author's or artist's social and political views affected their expression; the foreign and domestic influences that shaped their understanding of literature and art; how sexuality, gender, and tradition were questioned in their work; the ways in which personal freedom and liberty were protected and voiced; and the reasons why Spain dovetailed into civil war. By the end of the course, students will have improved their Spanish skills, developed their critical reading and writing skills, and gained a deeper understanding of the complexity of Spanish modernity.

**SPLED 400** Inclusive Special Ed Foundations: Legal, Characteristics, Collaboration, Assessment, and Management (4) Legal issues, learner characteristics, collaboration skills, assessment, and behavior management related to educating students with disability in inclusive settings.

**SPLED 400 Teaching Exceptional Students in General Education Settings (4)**

This course is delivered via a model of blended instruction and addresses foundational skills (assessment and management) and knowledge (laws, etiologies, collaboration) for those working with students with special education needs in general education classrooms. Almost 30% of the content includes student understanding of the history and current relevance of special education law; roles and responsibilities of general education teachers in providing services to students with special education needs; characteristics and etiologies relevant to providing effective instruction to students with mild and severe disabilities; and developing and maintaining effective education teams. Roughly 35% of content is relevant to assessment in inclusive settings and is centered on sound instructional decision making as well as linking instruction to standards based curricula. Coverage includes understanding formative and summative assessment; creating and administering curriculum-based assessments in reading, mathematics, and writing; designing systems to collect behavioral data; interpreting a variety of norm-referenced test scores; using brief experimental analyses is adequate for a given purpose. Roughly 35% of content is relevant to applying principles of Applied Behavior Analysis (ABA) to managing and motivating learners with special needs placed in inclusive settings. Broad objectives include student acquisition of knowledge and skills related to ABA principles and interventions such as: identifying the nature (positive and negative) of consequences maintaining or decreasing specific behaviors; operationally defining behavior; establishing a classroom and school environment conducive to learning for all students; creating class-wide, school-wide; and individual motivation systems; intervening to decrease specific behavior; and using functional behavioral assessments (FBAs) and positive behavior supports.

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Summer 2011

Prerequisite: EDPSY 014 and EDPSY 010 or relevant child development course (e.g. HD FS 229 HD FS 239). Fifth semester standing or higher

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SPLED 400H** Inclusive Special Education Foundations: Honors Section (4) Legal issues, learner characteristics, communication and collaboration, assessing learners with special needs, behavior management.

### **SPLED 400H Inclusive Special Education Foundations: Honors Section**

This course is delivered via a model of blended instruction and addresses foundational skills (assessment and management) and knowledge (laws, etiologies, collaboration) for those working with students with special education needs in general education classrooms. In this HONORS Section, students will participate in activities that allow them to further explore the topics covered, which will ultimately provide them with a deeper level of understanding of the material.

Almost 30% of the content includes student understanding of the history and current relevance of special education law; roles and responsibilities of general education teachers in providing services to students with special education needs; characteristics and etiologies relevant to providing effective instruction to students with mild and severe disabilities; and developing and maintaining effective education teams.

Roughly 35% of content is relevant to assessment in inclusive settings and is centered on sound instructional decision making as well as linking instruction to standards based curricula. Coverage includes understanding formative and summative assessment; creating and administering curriculum-based assessments in reading, mathematics, and writing; designing systems to collect behavioral data; interpreting a variety of norm-referenced test scores; using brief experimental analyses is adequate for a given purpose.

Roughly 35% of content is relevant to applying principles of Applied Behavior Analysis (ABA) to managing and motivating learners with special needs placed in inclusive settings. Broad objectives include student acquisition of knowledge and skills related to ABA principles and interventions such as: identifying the nature (positive and negative) of consequences maintaining or decreasing specific behaviors; operationally defining behavior; establishing a classroom and school environment conducive to learning for all students; A listing of the major topics to be covered with an approximate length of time allotted for their discussion

\*\*\*Please note that these are the same topics covered in SPLED 400.\*\*\*

#### **UNIT 1: Foundational Skills for Working with Students with Special Needs in General Education Classrooms**

##### **Topic 1: Promoting Learning and Participation for Students with Mild Disabilities (8 hours)**

- Describe learning and developmental characteristics of students with mild disabilities.
- Identify appropriate instructional goals for students with mild disabilities.
- Discuss ways to promote academic and social participation for students with mild disabilities.

##### **Topic 2: Promoting Learning and Participation for Students with Severe Disabilities (8 hours)**

- Describe learning and developmental characteristics of students with sensory and severe disabilities.
- Identify instructional goals for students with sensory and severe disabilities.
- Discuss ways to promote academic and social participation for students with sensory and severe disabilities.

##### **Topic 3: History and Legal Foundations of Special Education (8 Hours)**

- Describe the history and legal foundations of special education.
- Describe the rights and responsibilities of the general education teacher for special education referral and evaluation procedures.
- Describe the rights and responsibilities of the general education teacher for supporting the academic participation of students with special education needs in general education classrooms.

##### **Topic 4: Developing Effective Teams for Working with Students with Special Needs (8 hours)**

- Describe historical views of disability.
- Describe the roles of families in education.
- Describe parent perspectives on disabilities.
- Identify the roles of general and special education teachers in providing services.
- Practice effective communication and collaboration skills for teachers.
- Identify and describe strategies for supporting effective family participation in educational programming.

#### **UNIT 2: Monitoring Student Progress and Making Instructional Decisions**

##### **Topic 5: Using Information to Make Decisions (8 hours)**

- Learn to use information to make decisions.
- Sketch and describe the Model for Effective Instruction.
- List current assessment practices in general and special education.
- Identify the stages of assessment and the types of decisions made during the assessment process.
- Use the RIOT Matrix (Howell & Nolet, 2000) to help identify problem areas.

##### **Topic 6: Interpreting Norm-Referenced Test Data (8 hours)**

- Describe information that norm-referenced tests can/cannot give.
- Describe how tests are developed.
- Interpret various scores (t-score, percentile, standard scaled scores).
- Describe common problems of test interpretation.
- Describe accommodations that are made during testing (e.g., alternate assessments; setting, timing, scheduling, presentation, and response accommodations).

Topic 7: Displaying and Interpreting Data (8 hours)

- Describe progress monitoring.
- Identify the basic tenets of curriculum-based measurement.
- Determine how to decide what to assess.
- Write goals and objectives.
- Design methods to assess skills.
- Summarize data using graphs.
- Make instructional decisions.

Topic 8: Progress Monitoring Across Content Areas (8 hours)

- List and describe the skills outlined in National Reading Panel Report.
- Describe and develop methods to assess of letter sound fluency, word identification fluency, and passage reading fluency.
- Describe methods to assess comprehension.
- Describe and develop single-skill math assessments.
- Describe and develop methods to assess vocabulary and written expression.

Topic 9: Monitoring Classroom Behavior (8 hours)

- Determine behaviors that are important to monitor.
- Define behaviors (outcomes versus behaviors).
- Describe indirect and direct methods for monitoring behavior.
- Describe how to schedule observations.
- Calculate inter-observer agreement.

UNIT 3: Inclusive Behavior Management

Topic 10: Understanding Models of Motivation & Principles of Applied Behavior Analysis for Building Behaviors (8 hours)

- Understand how behavior consequences influence behavior repetition.
- Identify the interface between effective instruction and student behavior.
- Identify the role of success expectations and outcomes in motivation.
- Define the scientific (ABA) principles influencing academic and social behavior.
- Understand how behavior consequences influence behavior repetition.

Topic 11: Applications of ABA for Encouraging Behavior – Part 1: Antecedent Structure (8 hours)

- Identify patterns of typical physical and behavioral milestones, recognize how patterns of students with disabilities may be different and plan effectively for positive teaching of appropriate behaviors that facilitate learning through lecture and activities on teacher expectations, scheduling and developing routines.
- Define principles of applied behavior analysis that focus on antecedent structure in classrooms.
- Create an optimal learning environment by utilizing, evaluating, modifying, and adapting the antecedent structure of the classroom setting.
- Use data to systematically monitor student performance and make decisions to change the classroom environment through antecedent structure when appropriate.

Topic 12: Applications of ABA for Encouraging Behavior – Part 2: Interventions (8 hours)

- Describe correct implementation of various evidenced based group and individual motivation systems including token systems and contracts.

Topic 13: Principles of ABA and Applications for Decreasing Behaviors (8 hours)

- Define the scientific (ABA) principles influencing academic and social behavior.
- Understand how behavior consequences influence behavior repetition.
- Describe correct implementation of various evidence-based interventions to decrease behavior including time out, response cost, and overcorrection.
- Describe or identify patterns with use of punishment-based interventions.

Topic 14: Functional Behavior Assessment (8 hours)

- Define the term functional behavior assessment.
- Understand how to conduct a functional behavior assessment.
- Describe correct implementation of indirect and direct procedures for assessing behavior.
- Describe or identify the various tools involved in uncovering the function of a student's behavior.

Long Course Description:

A succinct stand-alone course description (up to 400 words) to be made available to students through the on-line Bulletin and Schedule of Courses.

This course is delivered via a model of blended instruction and addresses foundational skills (assessment and management) and knowledge (laws, etiologies, collaboration) for those working with students with special education needs in general education classrooms. In this HONORS Section, students will participate in activities that allow them to further explore the topics covered, which will ultimately provide them with a deeper level of understanding of the material.

Almost 30% of the content includes student understanding of the history and current relevance of special education law; roles and responsibilities of general education teachers in providing services to students with special education needs;

characteristics and etiologies relevant to providing effective instruction to students with mild and severe disabilities; and developing and maintaining effective education teams.

Roughly 35% of content is relevant to assessment in inclusive settings and is centered on sound instructional decision making as well as linking instruction to standards based curricula. Coverage includes understanding formative and summative assessment; creating and administering curriculum-based assessments in reading, mathematics, and writing; designing systems to collect behavioral data; interpreting a variety of norm-referenced test scores; using brief experimental analyses is adequate for a given purpose.

Roughly 35% of content is relevant to applying principles of Applied Behavior Analysis (ABA) to managing and motivating learners with special needs placed in inclusive settings. Broad objectives include student acquisition of knowledge and skills related to ABA principles and interventions such as: identifying the nature (positive and negative) of consequences maintaining or decreasing specific behaviors; operationally defining behavior; establishing a classroom and school environment conducive to learning for all students; creating class-wide, school-wide; and individual motivation systems; intervening to decrease specific behavior; and using functional behavioral assessments (FBAs) and positive behavior supports.

**SPLED 403A** Evidence-Based Instruction for Elementary Students with Disabilities in Reading, Math, and Writing (3)  
Evidence-based methods for design, delivery, and adaption of instruction for elementary students with disabilities in reading, mathematics, and writing.

#### **SPLED 403A Evidence-Based Instruction for Elementary Students with Disabilities in Reading, Math, and Writing (3)**

This course is delivered via a model of blended instruction and addresses aspects of designing, delivering, and adapting instruction for students across the range of disability (i.e., mild, moderate, and severe) in elementary, inclusive settings. Content on relevant learner characteristics of special needs students is found throughout the course. About half the course covers content on: designing direct and explicit instruction; self-regulated learning; assistive technology; adaptations and accommodation for learners with several disabilities; and the hierarchy of taxonomical units relative to instructional design. The remaining half of the course covers content relevant to a wide range of literacy concerns and includes: evidence based practices for instruction in early reading (e.g. decoding, phonemic awareness, phonic and structural analysis; and vocabulary); reading comprehension at primary and intermediate levels (e.g. test structure, content specific vocabulary, and narrative and expository reading in content domains); writing (e.g. handwriting, spelling grammar, and written expression); and mathematics (e.g. number sense and early numeracy, basic facts and operations, applied skills, problem solving, fractions, decimals, and percents).

**SPLED 403B Evidence-Based Methods for Teaching Secondary Students with Disabilities in Inclusive Settings (3)** Evidence-based methods for designing, delivering, and adapting instruction for students with disabilities in inclusive secondary education settings.

**SPLED 403B Evidence-Based Methods for Teaching Secondary Students with Disabilities in Inclusive Settings (3)**

This course is delivered via a model of blended instruction and addresses aspects of designing, delivering, and adapting instruction for students across the range of disability (i.e., mild, moderate, and severe) in secondary inclusive settings. Content on relevant learner characteristics of special needs students is found throughout the course. About half the course covers content on: designing direct and explicit instruction; self-regulated learning; assistive technology; adaptations and accommodation for learners with several disabilities; and the hierarchy of taxonomical units relative to instructional design. The remaining half of the course covers content relevant to a variety of procedures and approaches to help students with special education needs gain meaningful access to secondary curriculum content without watering it down or ignoring the instructional needs of students without disabilities. Broadly this content includes ways of planning and delivering instruction to help all students, including those with learning problems, understand and retain critical course content. Topics include using graphic organizers, options for presenting content, mnemonics; task specific learning strategies; cooperative groups and peer focused interventions; study guides and guided notes; advance organizers; text structures for narrative and expository text; single and multiple-approaches for reading comprehension; writing mechanics, prompts, and rubrics; narrative, informative, and persuasive writing; problem solving (including Polya's model); analogies; elaborative interrogation; and practice for problem solving.

**SPLED 408 (EDPSY 408) Meeting Instructional Needs of English Language Learners with Special Needs (3)** The course content and activities focus on instruction and assessment for English Language Learners with special needs.

**SPLED (EDPSY) 408 Meeting Instructional Needs of English Language Learners with Special Needs (3)**

The purpose of this course is to bring together two bodies of research to prepare future teachers of learners with special needs who are also English language learners to be effective teachers. The course has been developed to fulfill requirements of Pennsylvania Department of Education and in recognition of the growing number of English Language Learners (ELL) in the general population and thus in special education settings. The course presents (1) theory and research on the instructional needs of English Language Learners (ELLs) and (2) the knowledge base on effective instruction for students with special needs and assists students to integrate the two. Major topic areas include principles and issues in second language acquisition; ELL characteristics including linguistic and cultural factors that affect second language acquisition; techniques and methods of research-based instruction for English Language Learners with special needs; lesson planning and instructional modifications for ELLs with special needs; and appropriate assessment practices for ELLs with special needs. A major objective of this course is for students to be able to develop or modify instructional plans that reflect evidence based practices for adapting for the needs of ELL learners with special needs. Evaluation will be based on a combination of methods including, tests and quizzes, analyses of videos and case studies and reports of observations and interviews.

**SPLED 409A** Fundamental Literacy Skills for Students with Special Needs (3) Effective reading curriculum and teaching methods to teach students with special needs.

### **SPLED 409A Fundamental Literacy Skills for Students with Special Needs (3)**

Effective classroom-based assessment, curriculum development, and instructional strategies for teaching reading to educate students with special needs will be described in this course. Students will learn how to assess, develop curriculum, and provide scientifically based best practice instruction in reading to K-12 students with special needs. Students will learn how to select reading skills necessary to scaffold and enhance students' present reading skills. Methods for using researched based assessment strategies and developing foundational reading skills within a classroom context, will be described.

This course builds on prerequisite Special Education courses in curriculum and instructional methods. Students in SPLED 409A extend knowledge of explicit instructional strategies in the context of reading. The content offered in this course complements 409B and 409C through the integration of researched based methods and sound instructional design within a curriculum to most effectively teach students with special needs.

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Summer 2011

Prerequisite: A grade of C or better required in SPLED 425 SPLED 395 W SPLED 401 SPLED 412 SPLED 454 SPLED 495E

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SPLED 409B** Writing and Content Literacy for Students with Special Needs (3) Effective curriculum and materials for teaching writing and content literacy to students with special needs.

### **SPLED 409B Writing and Content Literacy for Students with Special Needs (3)**

Effective application of classroom-based measurement, curriculum development, and instructional strategies for teaching writing and content literacy to educate students with special needs will be described in this course. Students will learn how to use assessment to develop curriculum and provide scientifically based best practice instruction in writing mechanics (handwriting, spelling, capitalization & punctuation) and written expression (pre-planning to revision) to K-12 students with special needs. Students will learn how to identify, select, and teach content text structure. Methods for using assessment to develop a reading comprehension curriculum within a content classroom context and teach K-12 students with special needs to read and comprehend narrative and expository text (such as text found in Math, Science, Social Studies, and other content textbooks) will be described. Methods for using assessment to develop curriculum and teach K-12 students with special needs to respond to content text and materials through writing will also be examined.

This course builds on prerequisite Special Education courses in curriculum and instructional methods. Students in SPLED 409B will have achieved mastery in basic reading theory, assessment, curriculum, and instructional methods. The content offered in this course adds to the existing course content by specifically addressing writing mechanics, written expression, and content reading, curriculum development, and instructional methods (including plans for generalization and maintenance) for students with special needs.

Written responses for assigned readings will be required for each topic area. Written evaluations and class assignments (including case studies) will be given to assess student learning throughout the course time period. Students' learning will be further evaluated through projects that demonstrate understandings of applying classroom-based measurement, curriculum development, and the instructional methods required to effectively teach writing and content learning to students with special needs. Student applied projects, in coordination with practicum placement, for writing instruction will include: (1) the collection of baseline writing data for a student with special needs, (2) development of a curriculum scope and sequence, (3) development of a research validated instructional intervention, (4) implementation of the intervention, (5) the collection of writing data throughout instruction and after instruction, and (6) development and implementation of an instructional plan for maintenance and generalization. To demonstrate understandings of teaching content reading and writing, students will prepare a presentation of an identified research-based content reading or writing instructional strategy or approach taught within a curriculum scope and sequence.

**SPLED 409C** Mathematics Instruction for Students with Special Needs (3) Research-based practices for teaching mathematics skills to students with special needs.

### **SPLED 409C Mathematics Instruction for Students with Special Needs (3)**

Research-based assessment, instruction, and intervention strategies for teaching mathematics skills to students with

special needs will be described in this course. Students will identify (a) the risk factors associated with mathematics disabilities, (b) effective prevention and remediation models of mathematics disabilities, (c) characteristics of scientifically-based instruction in content-area skills (e.g., counting, addition, fractions, problem solving, geometry) for K-12 students with disabilities, and (d) how to effectively provide and assess the effects of such instruction while provided in general and special education classrooms. This course builds on prerequisite Special Education courses in curriculum and instructional methods. Students in SPLED 409C will have achieved mastery in assessment, curriculum, and instructional methods. The content offered in this course adds to the existing course content by specifically addressing how to teach content-area skills for students with special needs.

Written responses for assigned readings will be required for the topic areas. Written evaluations and class assignments will be given to assess student learning throughout the course time period. Students' learning will be further evaluated through projects that demonstrate understanding of classroom-based assessment, curriculum development, and the instructional methods required to effectively teach content-area mathematics skills to students with special needs. Student applied projects, in coordination with practicum placement, for mathematics instruction will include: (1) the collection of baseline mathematics performance data for a student with special needs, (2) development of a curriculum scope and sequence, (3) development of a research validated instructional intervention, (4) implementation of the intervention, (5) on-going data collection throughout instruction and after instruction, and (6) development and implementation of an instructional plan for maintenance and generalization. To demonstrate understandings of teaching content area mathematics skills, students will prepare a presentation of a self- or instruction-selected research-based curriculum and instructional strategy or approach that meet "best practice" standards (e.g., those identified through previous meta-analysis).

**SPLED 419 Assistive Technology for General Education Teachers (2-3)**

This course will teach students the role of the general education teacher in supporting the use of assistive technology (AT) by students with disabilities in general education classrooms. Students will learn the role of the general education teacher in the AT process, including (as appropriate) how to identify student AT needs, obtain information on common AT applications and devices, make first-hand use of current AT solutions, and evaluate the use of AT to address specific student needs. Particular attention will be given to the use of AT to assist students with disabilities in reading, writing, math, communication, and the development of social skills. Students will learn the role and responsibilities of the general education teacher on the AT team, as well as issues of "scope of practice", and the roles and responsibilities of the other licensed professionals on the AT team. Students will also be provided with resources and strategies for making use of state and national information resources and services related to AT.

**SPLED 425** Foundations of Special Education, Etiologies, Law, and Implications for Practice (4) An introduction to exceptional individuals being served in special education programs across the life span.

**SPLED 425 Foundations of Special Education, Etiologies, Law, and Implications for Practice (4)**

This course is designed to provide an introduction to all exceptionalities included in special education programs as delineated by the most recent federal legislation guiding services for individuals with special needs. An important component of this course is the exploration of typical developmental stages and milestones used to monitor children's growth and progress over time. Fourteen (14) categories of disability are defined in relation to how states define who is eligible for a free appropriate public education under special education law. In addition, recent legislation is explored in relation to services provided, funding requirements, accommodations and classroom placement. The primary objective of this course to provide future educators with a solid foundation for their understanding disabilities, services, and legislation as they enter into the special education profession. Secondary objectives include preparing students to (a) address common misconceptions and myths associated with special education, (b) work with interdisciplinary teams in the formation of Individualized Education Program (IEP), and (c) promote the preparation of exceptional individuals to assume adult roles.

**SPLED 430 Foundational Skills for Working with Students with Special Education Needs in General Education Classrooms**  
(1) Introduction to working with students with special education needs in the general education classroom, including history and legal foundation.

**SPLED 430 Foundational Skills for Working with Students with Special Education Needs in General Education Classrooms (1)**

This is the first course in the Evidence-Based Practices for Inclusive Classrooms and Differentiating Instruction course series. The course is appropriate for pre- or in-service general education teachers who are seeking content on the roles and responsibilities of the general education teacher in providing services to students with special needs. This course serves as an introduction and prerequisite to the subsequent courses in the series.

This course addresses foundational skills for working with students with special education needs in general education classrooms. Board course objectives include student understanding of the history and current relevance of special education law; roles and responsibilities of the general education teacher in providing services to students with special education needs; providing effective instruction to students with mild and severe disabilities; and developing and maintaining effective education teams.

Evaluation of proficiency will occur in a variety of ways including short quizzes, graded application assignments, and course exams. At the beginning of the course, students will receive a packet containing DVD's of faculty presentations with imbedded activities, ungraded quizzes, and checkpoint summaries. Each recorded session will be roughly 2.5 - 3 course total duration, exclusive of the required stopping/starting to complete imbedded, parallel learning activities. Some sessions may involve students accessing various targeted websites relevant to the content. Additionally, for most sessions, there will be assigned readings; an ungraded practice activity with feedback and/or comparison responses; and a graded assignment and quiz items. The latter will be delivered primarily via ANGEL with the instructor available for feedback and questions throughout the course via-PicTel or some similar videoconferencing technology.

**SPLED 431 Evidenced-Based Methods for Monitoring Student Progress and Making Instructional Decisions (2)**  
Evidence-based methods for assessing student progress and making data-based instructional decisions.

**SPLED 431 Evidence-Based Methods for Monitoring Student Progress and Making Instructional Decisions (2)**

This is the second course in the Evidence-Based Practices for Inclusive Classrooms and Differentiating Instruction course series. The course is appropriate for pre- or in-service teachers prepared to work in general education settings who are seeking content on validated methods for supporting the learning of students with special needs (e.g. Learning Disabilities, Emotional/Behavioral Disorders, Communication Disorders, Developmental Delays, etc.) in general education classes. Students should complete this course after they have completed the first course in the series (Foundational Skills for Working with Students with Special Education Needs in General Education Classrooms) and prior to completion of the final course in the series (either Evidence-Based Practices for Inclusive Elementary Classrooms or Evidence-Based Practices for Inclusive Secondary Classrooms).

This course is based on a model of effective instruction that includes (a) deciding what to teach, (b) instructional design, and (c) assessing the effectiveness of instruction. A feedback loop is instruction more effective and more efficient. After completing the class students should be able to: (a) give a rationale for the collection of data in classrooms; (b) describe the assessment process; (c) describe response to intervention and the general educator's role in the process; (d) summarize data using graphs and trendlines; (e) create and administer curriculum-based assessments in reading, mathematics, and writing; (f) design systems to collect behavioral data in classrooms; (g) interpret a variety of norm-referenced test scores; (h) use brief experiential analyses to identify effective academic interventions; (i) interpret norm-referenced test data; and (j) determine if the reliability/validity of an assessment is adequate for a given purpose.

Evaluation of proficiency will occur in a variety of ways including short quizzes, graded application assignments, and course exams. At the beginning of the course, students will receive a packet containing DVDs of faculty presentations with imbedded activities, ungraded quizzes, and checkpoint summaries. Each recorded session will be roughly 2.5 - 3 hours total duration, exclusive of the required stopping/starting to complete imbedded, parallel learning activities. Some sessions may involve students accessing various targeted websites relevant to the content. Additionally, for most sessions, there will be assigned readings; an ungraded practice activity with feedback and/or comparison responses; and a graded assignment and quiz items. The latter will be delivered primarily via ANGEL with the instructor available for feedback and questions throughout the course via e-mail. Furthermore, at least once during the course, instructors will be available live via PicTel or some similar videoconference technology.

**SPLED 432 Evidence-Based Practices for Inclusive Behavior Management (2)** Managing and motivating learners with special needs in general education settings based upon principles of Applied Behavior Analysis.

### **SPLED 432 Evidence-Based Practices for Inclusive Behavior Management (2)**

This is the third course in the Evidence-Based Practices for Inclusive Classrooms and Differentiating Instruction course series. The course is appropriate for pre- or in-service teachers prepared to work in general education settings who are seeking content on validated methods for supporting the learning of students with special needs (e.g. Learning Disabilities, Emotional/Behavioral Disorders, Communication Disorders, Developmental Delays, etc.) in general education classes. Students should complete this course after they have completed the first and second courses in the series (Foundational Skills for Working with Students with Special Education Needs in General Education Classrooms and Evidence-Based Methods for Monitoring Student Progress and Making Instructional Decisions) and prior to completion of the final course in the series (either Evidence-Based Practices for Inclusive Elementary Classrooms or Evidence-Based Practices for Inclusive Secondary Classrooms).

The course addresses aspects of managing and motivating learners with special needs placed in general education settings based upon the principles of Applied Behavior Analysis (ABA). Broad course objectives include student acquisition of knowledge and skills related to ABA principles and interventions such as: identifying the nature (positive or negative) of consequences maintaining or decreasing specific behaviors; operationally defining behavior; establishing a classroom and school environment conducive to learning for all students; creating class-wide, school-wide, and individual motivation systems; and intervening to decrease specific behaviors.

Evaluation of proficiency will occur in a variety of ways including short quizzes, graded application assignments, and course exams. At the beginning of the course, students will receive a packet containing DVDs of faculty presentations with imbedded activities, ungraded quizzes, and checkpoint summaries. Each recorded session will be roughly 2.5 - 3 hours total duration, exclusive of the required stopping/starting to complete imbedded, parallel learning activities. Some sessions may involve students accessing various targeted websites relevant to the content. Additionally, for most sessions, there will be assigned readings; an ungraded practice activity with feedback and/or comparison responses; and a graded assignment of quiz items. The latter will be delivered primarily via ANGEL with the instructor available for feedback and questions throughout the course via e-mail. Furthermore, at least once during the course, instructors will be available live via PicTel or some similar videoconferencing technology.

**SPLED 433 Effective and Explicit Instruction for Students with Learning Difficulties (2)** Evidence-based methods for designing, delivering, and adapting academic instruction for students with mild, moderate, and severe learning difficulties.

### **SPLED 433 Effective and Explicit Instruction for Students with Learning Difficulties (2)**

This is the fourth course in the Evidence-Based Practices for Inclusive Classrooms and Differentiating Instruction course series. This course is appropriate for pre- or in-service teachers prepared to work in general education settings who are seeking content on validated methods for supporting the learning of students with special needs (e.g. Learning Disabilities, Emotional/Behavioral Disorders, Communication Disorders, Developmental Delays, etc.) in general education classes. Students should complete this course after they have completed the first course in the series (Foundational Skills for Working with Students with Special Education Needs in General Education Classrooms) and prior to completion of the final course in the series (either Evidence-Based Practices for Inclusive Elementary Classrooms or Evidence-Based Practices for Inclusive Secondary Classrooms).

The course addresses aspects of designing delivering and adapting instruction for students across the range of disability (i.e., mild, moderate, & severe).

Evaluation of proficiency will occur in a variety of ways including short quizzes, graded application assignments, and course exams. At the beginning of the course, students will receive a packet containing DVDs of faculty presentations with imbedded activities, ungraded quizzes, and checkpoint summaries. Each recorded session will be roughly 2.5 - 3 hours total duration, exclusive of the required stopping/starting to complete imbedded, parallel learning activities. Some sessions may involve students accessing various targeted websites relevant to the content. Additionally, for most sessions, there will assigned readings; an ungraded practice activity with feedback and/or comparison responses; and a graded assignment and quiz items. **SPLED 434A Evidence-Based Practices for Inclusive Elementary Classrooms (2)** Evidence-based methods to effectively serve special needs students in elementary general education settings, including reading, writing, and mathematics instruction.

### **SPLED 434A Evidence-Based Practices for Inclusive Elementary Classrooms (2)**

This course is one of two final class options in the Evidence-Based Practices for Inclusive Classrooms and Differentiating Instruction course series. The course is appropriate for pre- or in-service teachers prepared to work in general education settings who are seeking content on validated methods for supporting the learning of students with special needs (e.g. Learning Disabilities, Emotional/Behavioral Disorders, Communication Disorders, Developmental Delays, etc.) in general education classes. Students should complete this course only after they have completed the first four courses in the series (Foundational Skills for Working with Students with Special Needs in General Education Classrooms, Evidence-Based Methods for Monitoring Student Progress and Making Instructional Decisions, Evidence-Based Practices for Inclusive Behavior Management, Evidence-Based Design and Delivery of Effective Instruction for Students with Learning Difficulties).

This course addresses aspects of providing reading, writing, and mathematics instruction to elementary school students with special needs in the general education classroom. Broad course objectives include student acquisition of knowledge and skills in reading (e.g., word recognition, fluency, reading comprehension, vocabulary); writing (e.g., spelling, grammar, handwriting) and written expression (e.g., narrative, informative, persuasive); and mathematics (e.g., computation and problem solving).

Evaluation of proficiency will occur in a variety of ways including short quizzes, graded application assignments, and course exams. At the beginning of the course, students will receive a packet containing DVDs of faculty presentations with imbedded activities, ungraded quizzes, and checkpoint summaries. Each recorded session will be roughly 2.5 - 3 hours total duration, exclusive of the required stopping/starting to complete imbedded, parallel learning activities. Some sessions may involve students accessing various targeted websites relevant to the content. Additionally, for most sessions, there will be assigned readings; an ungraded practice activity with feedback and/or comparison responses; and a graded assignment and quiz items. The latter will be delivered primarily via ANGEL with the instructor available for feedback and questions throughout the course via e-mail. Furthermore, at least once during the course, instructors will be available live via PicTel or some similar videoconferencing technology.

**SPLED 461** Introduction to Autism Spectrum Disorders: Issues and Concerns (3) Overview of issues, characteristics, and evidenced-based assessment strategies, and approaches for individuals with autism/PDD.

**SPLED 461 Introduction to Autism Spectrum Disorders: Issues and Concerns (3)**

This course will center on working with individuals having Autism Spectrum Disorders (ASD) and Pervasive Developmental Disorders (PDD) in educational and related settings. Topics include an overview of characteristics and diagnosis, ethical issues in treatment, assessment, the use of science in treatment approaches, working effectively with families, and strategies for successful inclusion of students with ASD/PDD in integrated settings. Course content will be delivered through DVD lectures, and required as well as supplemental readings. Evaluation procedures will include on line multiple-choice exams. The course will be changed to assess students through 6 (v.4) online multiple choice exams. Multiple choice format offers immediate feedback to students. To ensure assessment of applications skills, exams will include case studies in which students must apply skills to areas such as child assessment, data analysis, and strategies for working effectively with parents.

**SPLED 463** Communication and Social Competence (3) Overview of deficits and strategies in speech, language, and communication across the Autism Spectrum Disorder.

### **SPLED 463 Communication and Social Competence (3)**

Communication and Social Competence is the third course in the 5 course (12 credit) series leading to the Professional Development Certificate in Autism. All information, activities, and assignments are through videotaped and web-based learning. Content includes an overview of the deficits in the area of speech, language, and communication across the Autism Spectrum Disorders (ASD). Basic information on the nature of these deficits is provided from both a psycholinguistic model as well as a behavioral model. In addition to information on deficits, the majority of the course content will provide practical information related to intervention.

**STAT 184** Introduction to R (1) Introduction to syntax, programming, data summary techniques, and extensions of the R programming language.

### STAT 184 Introduction to R (1)

R is a powerful, open-source programming language used widely for statistical analyses. It is easily extendible, and thousands of user-created packages are publicly available to extend its capabilities. This course will introduce R syntax. Students will be asked to utilize various descriptive and graphical statistical techniques for various types of datasets. These datasets will primarily be drawn from those that are readily available for R; emphasis will not be on obtaining nor cleaning raw data in this course. Furthermore, this course focus on descriptive statistics and graphical summary techniques rather than inferential statistical techniques. In particular, no statistical background will be assumed. In addition to being asked to write well-documented code for functions in R, students will be exposed to development environments (e.g., the open-source RStudio environment) and the Shiny framework for web applications.

General Education: None

**STAT 240 (GQ)** Introduction to Biometry (3) Statistical analysis, sampling, and experimentation in the agricultural sciences; data collection, descriptive statistics, statistical inference, regression, one factor AOV, probability. Students may take only one course from STAT 200, 220, 240, 250 for credit.

**STAT 240 Introduction to Biometry (3)  
(GQ)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This is a course concerned with statistical analysis pertaining to the natural and agricultural sciences. The objective of the course is to provide students with a good basis for understanding uncertainty and its effects on understanding observational studies and experiments. Course content includes data collection, descriptive statistics, statistical inference, regression, and ANOVA. Students will learn through lectures, individual and group problem solving, computer-based activities, and case study discussions. Since real-life use of statistics relies upon computers, this course will provide a strong hands-on analysis element necessitating regular access to computer labs. The statistical background gained by students will provide them with a base for future use of statistics in both their course work and careers.

General Education: GQ

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**STAT 250 (GQ)** Introduction to Biostatistics (3) Statistical analysis and interpretation of data in the biological sciences; probability; distributions; statistical inference for one- and two-sample problems.

**STAT 250 Introduction to Biostatistics (3)  
(GQ)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

STAT 250 is a standard first course in statistics, with an emphasis on applications and statistical techniques of particular relevance to the biological sciences. Students who have successfully completed this course will understand basic concepts of probability and statistical inference, including common graphical and numerical data summaries; notions of sampling from a population of interest, including the sampling distribution of a statistic; construction and interpretation of confidence intervals, test statistics, and p-values; and connections between probabilistic concepts such as normal distributions and statistical inference. They will recognize various types of data, appropriate statistical methods to analyze them, and assumptions that underlie these methods.

General Education: GQ  
Diversity: None  
Bachelor of Arts: Quantification  
Effective: Fall 2014  
Prerequisite: Placement into MATH 021 or higher

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**STAT 296** Independent Studies (1-18) Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**STAT 380** Data Science Through Statistical Reasoning and Computation (3) A case study-based course in the use of computing and statistical reasoning to answer data-intensive questions.

**STAT 380 Data Science Through Statistical Reasoning and Computation (3)**

This course addresses the fact that real data are often messy by taking a holistic view of statistical analysis to answer questions of interest. Various case studies will lead students from the computationally intensive process of obtaining and cleaning data, through exploratory techniques, and finally to rudimentary inferential statistics. This process will exploit students' exposure to introductory statistics as well as the R programming language—hence the required prerequisites—yet novel computing and analytical techniques will also be introduced throughout the course. For the collection of data, students will learn scripting and database querying skills; for their exploration, they will employ R capabilities for graphical and summary statistics; and for their analysis, they will build upon the basic concepts obtained in their introductory statistics course. The varied case studies will elucidate additional statistical topics such as identifying sources of bias and searching for high-dimensional outliers.

A possible textbook for this course is Data Science in R: A Case Studies Approach to Computational Reasoning and Problem Solving (2015) by Deborah Nolan and Duncan Temple Lang.

General Education: None

**STAT 416** (MATH 416) Stochastic Modeling (3) Review of distribution models, probability generating functions, transforms, convolutions, Markov chains, equilibrium distributions, Poisson process, birth and death processes, estimation.

### **Stochastic Modeling (3)**

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Spring 1984

Prerequisite: STAT 318 or STAT 414; MATH 230

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**STAT 418 (MATH 418)** Introduction to Probability and Stochastic Processes for Engineering (3) Introduction to probability axioms, combinatorics, random variables, limit laws, and stochastic processes. Students may take only one course from MATH(STAT) 414 and 418 for credit.

**STAT (MATH) 418 Introduction to Probability and Stochastic Processing for Engineering (3)**

This course gives an introduction to probability and random processes. The topics are not covered as deeply as in a semester-long course in probability only or in a semester-long course in stochastic processes only. It is intended as a service course primarily for engineering students, though no engineering background is required or assumed. The topics covered include probability axioms, conditional probability, and combinatorics; discrete random variables; random variables with continuous distributions; jointly distributed random variables and random vectors; sums of random variables and moment generating functions; and stochastic processes, including Poisson, Brownian motion, and Gaussian processes.

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Fall 2011

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**STAT 440** Computational Statistics (3) Topics related to computing in statistics, including numerical linear algebra, optimization, simulation, numerical integration, and bootstrapping.

**STAT 440 Computational Statistics (3)**

This course introduces many important ideas in statistical computing. Students are expected to possess knowledge of mathematical statistics at the level of STAT 415 and matrices at the level of MATH 220. Students will learn the statistical computing environment called R and use R to implement many of the theoretical computing topics, which include numerical linear algebra, optimization, numerical and Monte Carlo integration, random number generation and simulation, and bootstrapping. Other statistical and mathematical software may be treated briefly, including symbolic mathematics environments like Mathematics and Maple.

**STAT 463** Applied Time Series Analysis (3) Identification of models for empirical data collected over time; use of models in forecasting.

### **STAT 463 Applied Time Series Analysis (3)**

This course covers many major topics in time series analysis. Students will learn some theory behind various time series models and apply this theory to multiple examples. An introduction to time series and exploratory data analysis will be followed by a lengthy study of several important models, including autoregressive, moving average, autoregressive moving average (ARMA), autoregression integrated moving average (ARIMA), and seasonal models. For each model methods for parameter estimation, forecasting, and model diagnostics will be covered. Additional topics will include spectral techniques for periodic time series, including power spectra and the Fourier transform, and one or more miscellaneous topics chosen by the instructor, such as forecasting methods, transfer function models, multivariate time series methods, Kalman filtering, and signal extraction and forecasting. The use of statistical software will be a central component of this course, as will the proper interpretation of computer output. Students enrolling for this course are assumed to have taken a semester-long course on regression.

**STAT 483** Statistical Analysis System Programming (3) Introduction, intermediate, and advanced topics in SAS. Credit can not be received for both STAT 483 and STAT 480/481/482.

**STAT 483 Statistical Analysis System Programming (3)**

The three-credit STAT 483 course is a combination of the three one-credit courses STAT 480, STAT 481, and STAT 482. In STAT 480, students are introduced to the SAS windowing system, basic SAS programming statements, and descriptive reporting procedures, such as the FORMAT, PRINT, REPORT, MEANS, and FREQ procedures. In STAT 481, the focus is primarily on extending the programming skills of the students, as they learn how to read messy data into SAS data sets, how to combine SAS data sets in various ways, how to use SAS character functions, how to read and process date and time variables, how to use arrays and do loops to write more efficient programs, and how to use the Output Delivery System to create SAS output in a variety of formats. STAT 482 provides a survey of the major statistical analysis procedures, such as the TTEST, GLM, REG, MANOVA, FACTOR, DISCRIM, LOGISTIC, and MIXED procedures. Other STAT 482 topics include using the TABULATE procedure to create reports, generating random numbers, exporting data from SAS data sets, using the SAS/Graph module to produce presentation quality graphs, using the SQL procedure to query and combine data tables, and using macros to write more efficient SAS programs. Credit can not be received for both STAT 483 and STAT 480/481/482.

**SCM 404 Demand Fulfillment (3)** Analysis of demand fulfillment and the role of distribution operations management in the supply chain.

**SCM 404 Demand Fulfillment (3)**

This course introduces the student to how customer demand is managed and how subsequent orders are filled in both business-to-business and business-to-consumer markets. Topics focus on the demand fulfillment process, which encompasses flows of goods, information, and funds from the moment a business receives an order from a customer until all requirements for the order are satisfied in full. These topics include:

- \*role of demand management and distribution operations in the supply chain
- \*transportation management
- \*distribution center processes
- \*inventory control and order management elements
- \*facility costing and productivity analysis
- \*strategic demand management and distribution operations issues in the supply chain.

Both theoretical and quantitative perspectives will be offered on these topics. Additionally, each topic will be addressed from strategic and financial perspectives. After completing this course, students will have the knowledge, skills, and abilities to:

- \*Explain the role of demand management in the supply chain
- \*Explain the role of distribution operations in demand management
- \*Determine the strategic and financial impacts of demand management and distribution operations management
- \*Articulate the role of information systems in demand management and distribution operations management
- \*Use quantitative techniques to analyze supply chain processes
- \*Describe related system software.

This is one of three prescribed foundation courses for the Supply Chain and Information Systems major for which SCM 301 Supply Chain Management is a prerequisite. This course also satisfies the prerequisite for SCM 421 Supply Chain Modeling and Analysis. Student evaluations are based on individual and group homework assignments and computer-lab exercises, as well as on at least three written examinations.

**SCM 405 Manufacturing and Services Strategies (3)** Investigates manufacturing and services strategies in supply chain networks.

### **SCM 405 Manufacturing and Services Strategies (3)**

This course examines manufacturing and services strategies, with special emphasis given to quality management concepts, methods, and issues. After completing this course, students will have the knowledge, skills, and abilities to:

- Explain the role of manufacturing or services operations from the boundary-spanning perspective of supply chain management and how supply chain management can be used as a strategic competitive advantage
- Articulate how the various components of a manufacturing strategy are integrated, particularly with respect to the use of information technologies for supply chains
- Effectively apply operational and quality tools useful in implementing manufacturing strategies.

Individual and team assignments form the basis for evaluation. Evaluation methods include a combination of class participation, exams, "hands-on" exercises, case studies, and written assignments. This is one of three prescribed foundation courses in the Supply Chain and Information Systems major for which B A 302 "Supply Chains" is a prerequisite. The course is also an important prerequisite for the capstone course in the major, SC&IS 450 "Supply Chain Leadership."

General Education: None

 Bachelor of Arts: None  
 Effective: Spring 2011  
 Prerequisite: SCM 301 or B A 302

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SCM 406 Strategic Procurement (3)** Analysis of strategic procurement in the supply chain.

### **SCM 406 Strategic Procurement (3)**

SCM 406 provides an in-depth analysis of the procurement process and supplier management, with strong emphasis placed on managing a supplier base for both products and services. Elements examined include the strategic role of procurement in supply chains, the identification and evaluation of requirements, the strategic make-versus-buy decision, how to identify, evaluate, and select potential suppliers and conduct a post-purchase evaluation; and the impact of information technology on strategic procurement. Both theoretical and quantitative perspectives will be offered. In addition, the topics will be addressed from strategic, financial, and global perspectives. In light of these perspectives, the course objectives are to develop a comprehensive understanding of:

- (1) the supplier selection and evaluation process
- (2) the relationship between product design and the supplier base

(3) the types of relationships that exist between buyers and sellers

(4) the impact of information technology on strategic purchasing and supply management.

Students will also develop skills in using quantitative tools to select and evaluate suppliers. This is the third of three prescribed foundation courses in the Supply Chain and Information Systems major.

Bachelor of Arts: None

Effective: Spring 2007

Prerequisite: SCM 301

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SCM 421** Supply Chain Analytics (3) Models and Methodologies for supply chain analysis.

### **SCM 421 Supply Chain Analytics (3)**

This course provides a spreadsheet-based, example-driven approach to learn about important supply chain models, problems, and solution methodologies. The objectives of this course are:

(1) to develop valuable modeling skills that students can appreciate and use effectively in their careers

(2) reinforce and enrich your understanding of supply chain theories, principles, and concepts studied previously in foundation courses.

Student evaluation is based on:

(1) individual and team group performance on problem-based exercises

(2) individual performance on examinations

(3) class participation.

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SCM 450W** Strategic Design and Management of Supply Chains (3) Strategic design and management of supply chains.

**SCM 450W Strategic Design and Management of Supply Chains (3)**

This course is about the strategic design and effective operation of supply chains. It will help prepare you for supply chain management positions in manufacturing, distributing, and other service firms including providers of logistics services. The course focuses on the definition, as well as the application, of a single logic that guides the management of all the supply chain activities. Information decision support systems, primarily computer-based, provide the foundation for this logic. Because the determination of inventory locations and the control of inventory levels play a key role in this logic, we spend considerable time on these subjects. The last section of the course covers ways to lead and organize people to manage cross-firm and cross-functional relationships effectively. After completing this course, students should have the knowledge, skills, and abilities to:

- Articulate the process perspective and the total systems view of supply chain management, the impact of systems thinking on firm performance, and the nature of relationships supply chain networks.
- Quantify the effect of strategic initiatives such as postponement and risk pooling on the financial performance of the firm, as well as on supply chain performance.
- Use and apply selected quantitative tools useful in implementing supply chain strategies.
- Explain the complex nature of human interaction needed to successfully introduce supply chain concepts in the firm. This is the prescribed capstone course for the Supply Chain and Information Systems major. It builds upon the fundamental supply chain knowledge, skills, and abilities developed in foundation and intermediate courses. Students must complete SCM 421 before taking this course.

SCM 450W is a writing-intensive course. In addition to written assignments encompassing case studies, hands-on exercises, and examinations, student evaluations include oral presentations and class participation.

General Education: None

## Surveying (SUR)

**SUR 111** Plane Surveying (4) Plane surveying principles; basic measurement statistics; use and care of equipment; traversing, area, and coordinate computations; differential leveling; RTK-GPS measurements.

### **SUR 111 Plane Surveying (4)**

The objectives of this first course in surveying is to introduce the surveying profession and cover the fundamental methods of plane surveying which include use and care of equipment, field procedures, computations, and measurement error theory. As a result of completing the classroom component of the course, students will be able to: (1) make accurate conversions between commonly used surveying units, (2) apply the rules of significant figures to surveying measurements and calculations, (3) identify sources and types of error in surveying measurements, (4) understand differential leveling theory including note-form, survey closure, and loop adjustment, (5) compute the standard error of a set of repeated measurements and establish an acceptable range of observed values based upon a specified level of confidence, (6) adjust a set of measured angles and compute line directions for a closed traverse, (7) compute and adjust by compass rule the departures and latitudes of a closed traverse, (8) apply coordinate geometry methods to compute coordinates, direction, distance, and area. As a result of completing the laboratory component of this course, students will be able to: (1) perform a differential leveling survey within FCGS third order work, (2) perform a closed traverse survey with a relative precision of 1/10,000 using a total station, (3) use the RTK-GPS field method to measure position of stations in a closed traverse, and (4) complete a set of traverse computations for a closed traverse and present them in a prescribed format. SUR 111 is a prerequisite to all SUR courses. Student performance is based upon a mixture of homework, field exercises, writing assignments, quizzes, exams and a course portfolio. The final exam is comprehensive. All field exercises are held outside and on the campus grounds. Students must dress for weather conditions of the day of the laboratory exercise.

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Spring 2012

Prerequisite: or concurrent:MATH 026 orMATH 040 orMATH 140

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SUR 162** Methods in Large Scale Mapping (3) CAD applications in mapping; data collection using traditional and satellite techniques; map compilation; COGO.

### **SUR 162 Methods in Large Scale Mapping (3)**

SUR 162 is the basic mapping course in the curriculum. The concept of reference datum is introduced; the US national spatial reference system is described. Map design considerations such as scale are introduced. Map compilation emphasizes computer aided drafting. Basic standards and procedures of control and mapping surveys are introduced. Basic concepts of coordinate geometry are introduced. Laboratory exercises incorporate practice in control and mapping surveys, in map compilation and in application of coordinate geometry.

As a result of completing the classroom component of the course students will be able to (1) describe hardcopy and softcopy maps, (2) describe the standard series of maps in the US National Mapping Program, (3) describe US national map accuracy standards, (4) apply map design considerations such as map clarity, order and balance, (5) calculate scale and map layout, (6) apply procedures of interpolation to calculate positions of contours, (7) describe the use of triangulated irregular networks to create contours, (8) describe components of the US national spatial reference system, (9) describe design considerations for triangulation, trilateration, traverse and precise leveling, (10) describe the survey procedures used to locate contours, (11) describe procedures to make a digital elevation model, (12) design a survey to collect mapping data using a data collector to enable efficient drawing, (13) use coordinate geometry to calculate position and elevation of a feature, to calculate direction and distance of a line, to calculate coordinates of a station using intersection, to calculate coordinates of an occupied station using resection.

As a result of completing the laboratory component of the course students will be able to (1) set up a new map compilation project in a mapping program, (2) create and use blocks for standard map features (eg borders, title boxes), (3) use mapping program COGO features, (4) use mapping program contouring capabilities to create a digital terrain model, (5) use mapping program features to load collected positional data and draft a manuscript, (6) design and conduct a control traverse, and a mapping survey to collect data using an electronic data collector.

**SUR 212** Route and Construction Surveying (4) Circular, compound, spiral horizontal curves; equal, unequal tangent vertical curves; alignments, earthwork; control, building, pipe, street, and as-built construction surveys.

**SUR 212 Route and Construction Surveying (4)**

SUR 212 builds directly upon the fundamental surveying principles presented in SUR 111 (Plane Surveying), particularly traverse methods and coordinate geometry calculations. The course covers the fundamental geometric computations for street alignment design starting with simple circular, compound circular and spiral horizontal curves. This includes computation for intersection angles, radius, length, tangents, degree of curvature, stationing and stake-out calculations using coordinate geometry methods. The topics of vertical curve analysis follow which includes street grade, rate of change of grade, stationing, low and high points, passing a curve through fixed point and other alignment related analysis and design. Both equal tangent and unequal tangent vertical curves are discussed. Vertical curves are followed by street cross-sections, templates, slope stake locations, cut/full, earthwork computations and other aspects of 3-D alignment design.

Once curve geometry and street alignment calculations are covered, the course moves into field stake-out methods for construction. Street alignment stake-out is covered first, using industry standard software with traditional and RTK-GPS equipment. A road alignment project is used to combine the aspects of geometric analysis and design with field stake-out methods including a control survey. Beyond street stake-out, other construction surveys are addressed including building, pipe line, culverts, storm and sanitary sewers, as-built and other construction related surveys. The laboratory exercises present field methods for construction projects in accordance with design specifications. Computations of earthwork volumes are also covered for other construction projects beyond that of street alignments.

Prerequisite: SUR 162

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SUR 222** Photogrammetry (3) Basic principles of metric photogrammetry with single and stereopair photos; coordinate transformations; map production with stereo imagery; flight planning. Lab.

**SUR 222 - Photogrammetry (3)**

Photogrammetry covers the basic principles of aerial photography and the geometry of the optics in relation to aerial cameras. Mathematical theories for refining and processing measurements from single aerial photographs are developed. Such measurements are transformed to obtain real world coordinates of features on the surface of the earth.

Two-dimensional conformal, affine, and projective coordinate transformation equations and the three-dimensional conformal coordinate transformation equations are developed and applied to the measurements on the photographs. In addition, the theory underlying the geometry of stereopairs of photographs are developed and used to determine elevations of features on the photograph.

Stereographic equipment and software are used to produce accurate topographic maps of the overlap areas between stereopairs. The course also covers procedures and considerations for planning an aerial photography mission which include flight planning, cost analysis, equipment selection, placement of photo controls, and overall project management.

**SUR 241** Surveying Measurement Analysis (3) Statistical error analysis of surveying measurements; propagation of random errors; confidence intervals and statistical testing. Lab.

**SUR 241 Surveying Measurement Analysis (3)**

Surveying Measurement Analysis explores the fundamental concepts of statistical error analysis with applications to surveying measurements. It covers the normal distribution function and theories describing the fundamental procedures in data including measures of central tendency and measures of data variation. It then explores sampling distribution theory and develops statistical confidence intervals and testing using the  $\chi^2$ , students t, and F distributions. Fundamental concepts in the propagation of variance are developed and applied to the traditional surveying observations of angles, distances, azimuths, elevation differences. These error propagation techniques are further used to explore the propagation of variance in traditional traverse computations. The accompanying lab exercises help reinforce and validate the theoretical foundations of this class.

**SUR 262** Coordinate Systems in Map Projections (2) Introduction to coordinate systems used in the Lambert, Mercator, Transverse Mercator, and UTM map projections; reduction of surveying observations.

### **SUR 262 Coordinate systems in Map Projections (2)**

Coordinate systems in map projections covers the fundamental relationships between the physical earth, the geoid, the ellipsoid and map projections. It will explore the use of map projections in state plane coordinate systems, and the use of these coordinate systems in large mapping and construction projects. The course explores the corrections that must be made to properly use these coordinate systems including the reduction of observed elevations, distances, azimuths and angle.

**SUR 313** Integrated Surveying (3) Control, boundary, mapping and construction surveys; survey planning, coordinating; report and record map preparation.

### **SUR 313 Integrated Surveying (3)**

SUR 313 is intended for SRT and SUR E students in their last year in the programs. Objectives of SUR 313 are directed toward providing instruction and practical experience in activities common in surveying practice, experience requiring the integration of virtually all abilities gained in previous surveying courses.

The class is organized as a student surveying company with the instructor as general supervisor. Objective 1 of the student surveying company is to analyze a letter from a client (the instructor) requesting a survey. The letter will request

a survey (typically ALTA boundary or construction). The client letter will specify standards (ALTA and other) the survey is to meet, standards commonly required in survey practice. The client letter will specify products to be delivered, typically a report of record of survey maps and analyses showing the degree to which required survey standards have been met. In addressing objective 1, students determine exactly what work needs to be done to satisfy client requirements. Typically these include several sub-surveys: (1) a relatively long-range satellite (GNSS) survey to bring control into the project area, (2) a traditional local control survey to create a control network to control subordinate surveys and the surveys producing what the client has requested, typically boundary retracement and mapping surveys. The result of work on objective 1 is the organization of the class into coordinating groups, one per sub-survey plus two additional groups for report compilation and editing and map production and editing.

Objective 2 of the student surveying company is to develop detailed work plans for sub-surveys, report preparation and map production. The result of work on objective 2 is the set of work plans. A written contract (as a letter of understanding) between the student surveying company and the client is prepared.

Objective 3 is to perform that record search, field work, data analysis, mapping and preliminary report writing for the sub-surveys necessary to meet client requirements.

Objective 4 is to compile the final report of survey.

**SUR 341** Adjustment Computations (3) Matrix methods in least squares; random error propagation; observation equation model; conditions between parameters; basic post-adjustment statistical analysis.

### **SUR 341 - Adjustment Computations (3)**

Adjustment computations covers the basic theory and mechanics of a least squares adjustment using the traditional surveying observations of distances, angles, azimuths, and elevation differences. It explores the theory of error propagation, and uses this theory to determine the precision of indirectly measured quantities. It explores post-adjustment analysis through the use of various statistical tests, and error ellipse computation and analysis. This course primarily focuses on the least squares adjustment and analysis of differential leveling, triangulation, trilateration, traverse and network observations.

**SUR 351** Geodetic Models (3) Three dimensional geodesy; computations on the ellipsoid; map projections; reduction of observations and elements of physical geodesy.

### **SUR 351 Geodetic Models (3)**

Course covers the basic gravimetric and geometric geodesy aspects as related to surveying. Motions of the Earth and the effect on reference systems are explored. The Earth's gravity field, its measurement, reduction of gravity observations to the geoid, uses for gravity and gravity anomalies are studied. Different coordinate reference systems are studied including astronomic, geodetic, and satellite coordinate systems. Transformation between the various coordinate systems is covered while also considering crustal plate motion. Basic mathematical representations and transformations between various representative ellipsoids are explored. Satellite navigation and positioning is discussed at a rudimentary level. Both point positioning and relative positioning techniques are discussed.

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SUR 362** Introduction to Geospatial Information Engineering (3) Basic concepts in geographic information engineering; spatial reference frame-works; map and text data; digital environments; software and hardware plat-forms.

**SUR 362 Introduction to Geospatial Information Engineering (3)**

Land has varied meaning and value to different cultures and generations. There is a need to manage land and its resources in order to sustain life and meet the demands of competing interests. Geospatial information technology provides a means through which data about land can be analyzed to obtain information that may be used to support land management decisions. The geospatial information engineering course is the foundation course in the surveying engineering program that introduces students to the technology.

The objective of this course is to teach students to collect and process spatial data, analyze and make decisions, and to communicate the results using maps and other information delivery formats. This course begins with the introduction of geospatial technology and its application in decision making, resource allocation and management, a socio-economic development. Students learn the different types of data that are used in geospatial information technology. They learn about graphical data structures as well as descriptive databases and how to build them. Three spatial data models are discussed together with their advantages and drawbacks, as well as descriptive databases. Students capture various datasets from the field, convert them into usable formats, and process them using the models that have been discussed so as to reinforce the knowledge. Spatial reference systems and map projections are discussed. Procedures for performing geospatial analyses and querying databases are discussed and students conduct laboratory exercises using the field data that they captured. Map making techniques are discussed and students learn to communicate the results of analysis through maps.

**SUR 381 Stormwater Hydraulics and Hydrology (4)** Hydraulics: statics, continuity, energy, friction; hydrology: rainfall, abstractions, travel time, runoff; stormwater design: sewers, culverts, basins, erosion; municipal regulations.

**SUR 381 Stormwater Hydraulics and Hydrology (4)**

Stormwater Management Hydraulics and Hydrology is an elementary treatment of common design practices used to create stormwater management plans for small to medium sized land development projects. Erosion and sedimentation design is also addressed within the context of a stormwater management plan. The course is intended for engineering students who are not required to take formal fluid mechanics or hydrology courses, yet have a need to understand or complete the design aspects of stormwater management as it relates to their professional practice. Some state professional registration laws refer to this type of engineering design as "minor engineering" which is engineering design as it relates to land surveys connected to land development activities. Other types of "minor engineering" include street alignment, sanitary sewers, water lines, utilities and site grading.

The course contains three segments. The first segment covers the elementary hydraulics necessary to design drainage structures and storm water detention facilities. These topics include fluid statics, continuity, conservation of mass, conservation of energy, friction losses, minor losses, energy grade line, open channel flow, weirs and orifices. The second segment covers elementary hydrology methods used to analyze runoff from land development sites and small to medium watersheds. The hydrology topics include watershed characteristics, rainfall, abstractions, runoff, time of concentration, peak flow methods, hydrograph methods, basic channel routing and detention basin routing. The third segment covers government regulations and common design methods used to design storm sewers, detention basins and erosion control plans. A project includes the design of a multiple-element storm sewer system, a stable open channel, a detention facility with a multiple outlet structure, and some erosion control measures.

**SUR 422 Digital Photogrammetry (3)** Mathematical methods for processing digital imagery, creating digital elevation models and ortho-photographs, and applications in spatial data infrastructure.

### **SUR 422 Digital Photogrammetry (3)**

As a continuation to an existing photogrammetry course, this course is designed to provide a deeper understanding of the mathematical principles of photogrammetry as well as current applications of photogrammetric mapping. In recognition of the increasing use of digital images in geospatial technologies, especially in applications involving natural resource inventory and mapping, this course provides advanced knowledge in softcopy photogrammetry. This course deals with mathematical methods for processing tilted aerial photographs. Two- and three-dimensional coordinate transformation methods for correcting the geometry of digital imagery are taught. These are followed with the development of collinearity equations for analytical aerotriangulation and the adjustment of a block of photographs. Extraction of contours and development of elevation models are also taught. Creation of digital ortho-photographs, mosaics and color balancing of mosaicked images are discussed. Applications of ortho-rectified digital images in geospatial technologies are also taught.

Laboratory exercises include the use of computer hardware and software to enhance and classify remotely sensed images, apply softcopy photogrammetry methods to develop contour maps, digital elevation models, and digital orthophotographs from a block of photographs. The course has direct relationship to photogrammetry, adjustment computations, and multipurpose land information systems which are all taught in the surveying program. It is a required course which is offered to baccalaureate degree students in the surveying engineering program. Academic achievement is evaluated through quizzes, home works, and examinations.

Effective: Summer 1994

Prerequisite: SUR 351 . Prerequisite or concurrent:SUR 441

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SUR 462 Parcel-Based Geospatial Information Systems (3)** Acquisition processing of land parcel data; development of land information system and applications in geospatial information technology.

### **SUR 462 Parcel-Based Geospatial Information Systems (3)**

People and cultures around the world have different perceptions of land. Land has different value to many people. As a natural resource, with finite size, there are always competing interests when it comes to allocation use and management of units of land. The basic unit of land is the parcel. All activities are associated with land parcels. With such competing interests, it is important to manage land and its resources in an effective manner so as to ensure its sustainability. To ensure proper stewardship of land, data about each land parcel must be maintained so that information from parcel-based geodatabases may be used to support decisions involving land, people, and communities. Parcel-based information technology serves as a component of the geospatial technology with special applications in placed-based information.

This course builds on the knowledge obtained from SUR 362, Geospatial Information Engineering course. It begins by considering various perceptions of the use and value of land to different cultures, communities, and organizations. A justification is made for the need to manage land and resources in land in order to promote good stewardship. The use of technology for land parcel information management is discussed. From there the course progresses through land parcel

data types and sources, data conversion and geodatabase development. Applications of land parcel data in place-based information management are discussed. Accuracy considerations for parcel data in various applications are also discussed. Spatial analysis and methods for presenting or communicating results are discussed.

Bachelor of Arts: None  
Effective: Summer 1994  
Prerequisite: SUR 372W

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SUR 482 Land Development Design (3)** The land development process; geometric, environmental, aesthetic aspects of development; local regulatory requirements; preparation of final plat and report.

### **SUR 482 Land Development Design (3)**

Land development design is designed for seniors in Surveying Engineering and covers the basic principles of residential design and development. The objective of the course is to provide students with exposure to elements of the land development process from an engineering perspective.

Topics covered include land development regulations, site analysis of soils, site evaluation in terms of opportunities and constraints, sketch design, site layout, preliminary design, street layout including horizontal and vertical design, grading plan, drainage design, stormwater management, sewer and water, and erosion and sedimentation controls.

Students work in teams of two or three on a design project for a local property. Students will utilize AutoCAD Civil 3D (or similar software) and the Virginia Tech/Penn State Urban Hydrology Model (VTPSUHM) (or similar) in the project design. A site visit to the design property is included in the course.

At the end of the course, student teams will exchange their project designs and critique each other's work from the view point of a township engineer. Designs are evaluated for adherence to a pre-selected municipal subdivision and land development ordinance (SALDO). Students are required to present their final designs to the class. They must be prepared to explain their work and defend any design elements that are questioned during the presentation.

After completion of this course, students will be able to: 1) evaluate a site for land development potential, 2) prepare sketch designs for a proposed land development site, incorporating opportunities and constraints, 3) prepare a preliminary design including street alignment for a residential subdivision, sanitary sewer for a residential subdivision, storm sewer with inlets and inverts and a grading plan; and 4) prepare a mock final plan for public review and presentation.

## **Theatre (THEA)**

**THEA 001S** First-Year Seminar: Theatre Production Practices (1) An orientation to the School of Theatre production practices, resources, faculty, and practicum.

### **THEA 001S First-Year Seminar: Theatre Production Practices (1)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

THEA 001S will serve as the First-Year Seminar for all undergraduate majors in the School of Theatre. In all School of Theatre degree programs, backstage production is one of the primary curricular and experiential areas held in common. It is in this area that most theatre students gain their first practical experience in producing theatre on our stages. This course will provide the necessary training and experience for all students to safely practice in the production of live theatre in our spaces.

This course will orient first-year students to faculty, facilities, and practices of production utilized in the School of Theatre season. Students will be introduced to the faculty and their areas of expertise. They will be oriented to the spaces and equipment in our theatres and taught safe operation of the equipment. They will learn the practical and professional expectations placed on students participating in a School of Theatre production. Learning will take place both in lecture/demonstration format and through the practical experience of working on a School of Theatre production.

Students will be evaluated by:

1. Backstage practices and safety will be evaluated through knowledge based quizzes and/or skill demonstrations as appropriate to each subject.
2. Professionalism evaluated through attendance, reliability and skill growth as observed during the execution of practicum assignments.

General Education: None  
Diversity: None  
Bachelor of Arts: Arts  
Effective: Spring 2006  
Prerequisite: admission into Theatre Program

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**THEA 080** (GA) Pit Orchestra (1-3 per semester/maximum of 3) Rehearsal and performance of contemporary and historical musical theatre styles, including operetta and light opera.

### **THEA 080 Pit Orchestra (1-3 per semester/maximum of 3) (GA)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

THEA 080 provides an introduction to the particular demands of the orchestral pit player, with an emphasis on the musical theater repertoire. The course objectives is to prepare the student for a professional theatre engagement. This course parallels the orchestra ensembles in the School of Music (Philharmonia, Chamber Orchestra) but with the added techniques of theatre orchestra: standard vamps, "vocal last time" vamps, fade on cue, cut on cue, etc. Grades are determined by (1) level of performance and improvement, and (2) attendance at all rehearsals, sectionals and performances. The special facilities for this course will include orchestral rehearsal space in the School of Music, as well as the Pit/Performance space in the School of Theatre.

Enrollment will vary depending on the needs of individual musical scores; however, the performance schedule is such that an ensemble large enough to accommodate both players and substitutes is desirable. This is a repeatable course. Students will comprise the orchestra for a School of Theatre's production each semester. An audition is required for admission to this course. Emphasis will be placed on precision ensemble playing, as well as the skill of playing together as a section while simultaneously following the conductor. Because of the highly technical nature of theatrical productions, there are frequent cues given by the conductor which are vitally important to the performance. Mastering the specialized skill of splitting one's attention evenly between the music stand and the podium will be a major objective of this course.

In the process of preparing the music for each production other skills will be taught and acquired, such as: learning when to accompany and when to play in a solo manner; when to follow and when to lead as a section player; for brass players, developing the "Broadway" sound: big, bright, and focused; for reed doublers, the techniques involved in performing on multiple instruments in a single number; for all musicians, familiarity with the plethora of styles now being performed on Broadway: traditional Broadway, pop, rock, and the more classical styles of some of the contemporary theatre composers.

General Education: GA  
Diversity: None  
Bachelor of Arts: Arts  
Effective: Summer 2008

**THEA 100 (GA;US;IL)** The Art of the Theatre (3) An experiential survey of all aspects of the living theatre, as presented by a resident company of theatre artists.

**THEA 100 The Art of the Theatre (3)**  
**(GA;US;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course is an introduction to the living art of the theatre. Beginning with the script as the source of production aesthetics, analysis of textural context, structure, and genre provide tools to the imaginative impulses of the theatre artist and audience. As a variety of individual texts are analyzed and explored, the performance of scenes from the texts supports the imaginative process as each topic is demonstrated by a resident Company of theatre artists. The course is concerned with the universality of the theatrical impulse, and includes a selection of international and multi-ethnic voices and performance techniques. This is a required course for all theatre majors and provides the groundwork for all other theatre courses. At the same time, the course is designed to allow the general student to experience and understand the art of the theatre.

General Education: GA  
Diversity: US;IL  
Bachelor of Arts: Arts  
Effective: Spring 2006

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**THEA 102 (GA)** Fundamentals of Acting (3) Introduction to the art and craft of acting for non-theatre majors.

**THEA 102 Fundamentals of Acting (3)**  
**(GA)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

THEA 102 aims to introduce the student to basic principles of the art and craft of acting, focusing on HOW and WHY actors do what they do in preparation of and for a performance less than on the attainment of performance skills themselves. Students will become acquainted with acting processes, theatre terminology, script analysis, improvisation, and other fundamentals to give them a more inclusive sense of the totality of the actor's work as craftsperson and artist. In so doing, the student actors must tap their own powers of concentration, observation, creativity, and imagination. A major focus in the course is the development of the ability to analyze one's own work and the work of peers in the class. Problem-solving in solo, paired, and/or large group contexts is a daily requirement in class.

THEA 102 is NOT an acting course designed to develop fine actors; it is a course ABOUT acting. Thus, the course objectives are these:

1. To introduce the concept of acting as a process and craft.
2. To develop an understanding of acting skills, script and character analysis, and theatre/acting terminology.
3. To heighten powers of observation, focus, invention, imagination, and the ability to accurately and positively analyze and critique peer's work.
4. To experience the commitment and discipline that acting requires.
5. To learn how best to score, interpret, and use the script as the fundamental source or criterion for truthful behavior on stage.

Educational strategies: to accomplish the above objectives, a variety of strategies will be employed, including lectures, discussions, readings from the text, instructor critiques of student work(s), experiential activities that require full student commitment and participation, presentation of assignments after significant rehearsal outside of class, and other preparations and teaching strategies as necessary and appropriate.

**THEA 113** Musical Theatre Theory I (3) Studies in the fundamentals of music notation and sight-singing.

**THEA 113 Musical Theatre Theory I (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

THEA 113 is designed to provide the beginning musical theatre student with the fundamentals of music theory and diatonic harmony as well as the analytical skills with which to approach and appreciate the structure of songs and musical theatre scores. It is focused primarily on the musical theatre literature to enable the beginning student to learn and appreciate more efficiently the literature that will be central to the performance classes in the major. The class places a rigorous emphasis on pitch and rhythmic identification to develop a high degree of musicianship in the beginning student, both to provide a solid basis for the classes to come and to make the performer more competitive in the musical theatre industry. It is designed to be entry-level in preparation for THEA 114 (Musical Theatre Form and Analysis) and the upper-level theory classes (THEA 212 and THEA 214).

The course presupposes no previous musical training or experience. For those with some previous musical theory education, the course may function successfully as a refresher before the more rigorous analysis courses to follow. It satisfies a significant need in that it focuses on the specific theoretical knowledge the musical theatre student needs to know to become competitive in a professional career.

**THEA 115 B.F.A. Acting Foundations (2)** Fundamental aspects of training the actor's body, voice, mental focus, and imagination.

**THEA 115 B.F.A. Acting Foundations (2)**

THEA 115 is an introduction to the awakening and enhancement of beginning students' physical, vocal, mental, and imaginative instrument in preparation for the demanding work to follow in later acting, voice/speech, and movement studios.

The course will introduce physical conditioning and breathing exercises specifically for actors, introduce exercises to enhance mental focus/concentration, and lead students through a series of exercises designed to stimulate and enhance the actor's imagination and trust in the world of fantasy.

Students will be exposed to a variety of techniques from which they may, over time, develop their own individual physical/mental training discipline. They will be encouraged to accurately assess their own physical/vocal/mental self-image, to develop a plan (with the instructor) to minimize intrusive mannerisms and to maximize positive traits and work habits.

Grading will be based on each student's commitment to the training regimen, application of past lessons in present assignments, quality of daily work, and the ability to accurately perform the exercises taught.

**THEA 130 Introduction to Theatre Scenic and Costume Technology (3)** Introduction to the methods, materials, equipment, concepts and processes involved in the construction of scenery and costumes for the theatre.

### **THEA 130 Introduction to Theatre Scenic and Costume Technology (3)**

This course will familiarize students with the methods, materials, equipment, concepts, and processes involved in the construction of scenery and costumes for the theatre. The emphasis of this course will be on the physical process that results in the production of both scenery and costumes. Lecture topics include:

Soft Goods Layout and Construction

Basic Flat Layout and Construction

Dimensional Scenery

Rigging and Paint

The Costume Shop/The Big Picture

Designer's Sketch to Wearable Costume

Hand Sewing Techniques

Sewing Techniques/The Sewing Machine

In addition to lectures, students will be expected to participate in hands-on laboratory activities that will reinforce and inform the classroom theory. These activities will give students an opportunity to apply the principles they will learn in the lecture component.

These courses enable our students to converse intelligently with *all* of the members of the theatre community, regardless of their specific theatre emphasis. Students will develop a fundamental understanding of the relationship between the various areas of theatre production.

**THEA 189 Theatre Production Practicum (1 per semester/maximum of 6)  
(GA)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

THEA 189 provides hands on experience in the production areas of the theatre including scenery, costumes, electrics and backstage crew. Students will be assigned to various crews during the semester to support the production of scenery, costumes, and lighting theatre shows. The students will be under the direction of faculty, staff, and graduate students (at University Park) who will provide guidance and information in a practical manner. Students will gain practical knowledge in scenic, property and costume construction techniques, painting techniques, and lighting technology. Students will develop skills associated with various tools and equipment used to build properties, costumes, and scenery. In order to accomplish these objectives, students are assigned to a mentor/crew leader at each class meeting who may demonstrate new techniques or skills and then oversee the students as they apply these skills to a current production need. This method of instruction allows students to progress at a pace that is comfortable and permits one-on-one instruction as needed. The course is offered each semester at University Park and taught concurrently with THEA 289 and 489, so ten sections are offered for enrollment. These sections correspond to THEA 289 and 489 sections.

**THEA 200** Script Analysis (2) An introduction to script analysis for theatre majors, which focus on full text analysis as a foundation for area specific analysis. Two styles of analysis (contextual and structural) are studied.

### **THEA 200 Script Analysis (2)**

THEA 200 is a course designed to teach theatre majors and minors the art and craft of understanding play texts. The course begins by exploring the nature and means of transmitting meaning through theatre texts. Discourse theory and contextual analysis are applied to at least two examples of American realism. The second method of analysis is a structuralism approach that will also be applied to at least two examples of American realism. The third area of study is the application of historicism and structuralism to non-realistic scripts.

Students will work individually and in small groups to create written and oral presentations of their analyses. The course is designed to teach through practice and application of methods to a variety of types of scripts written for the theatre.

**THEA 207 (GA;US)** Gender and Theatre (3) A study of theatre and drama literature as formed by issues of gender, race, and ethnic background.

### **THEA 207 Gender and Theatre (3) (GA;US)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Theatre 207 provides a basic survey of issues of representations of gender identity in theatre. The course will trace women's experiences in theatre from their absence on European classical stages to the more recent formation of feminist theatres. The course will explore issues of sexual orientation and gender identity as presented through drama and performance. The plays and writings chosen for study may include selections from African, European, African American, Latina, Asian American, Anglo American, and Native American playwrights. The course will examine issues of gender as they are presented by women of different races and cultures, by men of different races and cultures, and by women and men of various sexual orientations. The goal of the course is to examine the ways theatre and theatrical performances have portrayed individuals within a pluralistic society based on gender identity and ethnicity. Theatre has existed in every known civilization, but until recently, the contributions of predominantly white European males have provided the basis for the study of theatre. Most drama anthologies include plays written predominantly by white European males. By focusing on gender as it has been and is portrayed in theatre from diverse perspectives, THEA 207 will encourage an aesthetic appreciation of the art of theatre while exploring issues of gender identity on artistic creation and critical response.

**THEA 208** (GA;US;IL) (AF AM 208) Workshop: Theatre in Diverse Cultures (3) A performance-oriented class which explores the historic and contemporary theatrical works of various culturally diverse peoples.

**THEA (AAA S) 208 Theatre Workshop in Diverse Cultures (3)**  
(GA;US;IL)

**(BA) This course meets the Bachelor of Arts degree requirements.**

Theatre Workshop in Diverse Cultures is a performance-oriented class that aims to introduce students to the broad cultural diversity that exists in artistic expression. The class will focus on several plays throughout the semester that will represent cultural, ethnic, and gender diversity as well as different literary styles. Students will be exposed to various cultures by working on plays created by artists from those cultures. The course will concentrate on a specific playwright, culture, or region, such as plays from the Caribbean. Students will be required to read, study, analyze, and perform plays from the genre. For example, the class may focus on the works, life, and philosophy of August Wilson and read Joe Turner's Come and Gone, Seven Guitars, Piano Lesson, and Fences. The class may explore Asian styles such as Noh Theatre and Asian American works by D. H. Hwang or work by Nigerian playwright and Nobel Prize winner Wole Soyinka. The presentation of these plays will be a principle part of the class, but the reading and discussion of the material will be as important. Students will participate in some capacity with the production of these plays in areas such as stage management, dramaturgy, sets and props, lights, sound, costumes, house management, publicity, and acting. These pieces will be performed in class, in workshop, and occasionally for the general public. Students will work as an ensemble and become acquainted with basic acting and theatre techniques. The course objectives are:

- 1) to develop and enhance students' appreciation for the discipline and commitment required for multicultural theatrical presentations
- 2) to help to sensitize all students to the broad cultural diversity in artistic expression
- 3) to provide students with an introductory engagement with drama.

AAA S/THEA 208 serves as a primary selection for students pursuing the Theatre minor.

**THEA 209 Hip Hop Theatre (3)** Hip Hop Theatre defines and explores Hip Hop as an art form. The student will explore Hip Hop culture through Hip Hop Theatre aesthetics: Emceeing, DeJaying, Beat boxing, graffiti art, and dance.

**THEA 209 Hip Hop Theatre (3)**

Hip Hop Theatre is designed for students with an interest in Hip Hop Theatre/culture. This class introduces students to Hip Hop Theatre through Hip Hop aesthetics: DJing, Emceeing, Dance, Graffiti art, and Human Beat boxing. In addition, this class includes lecture sessions and discussions about Hip Hop culture Theatre as a global, multi-ethnic, grassroots youth culture committed to social justice and self-expression through specific modes of performance. This course seeks to introduce students to a culturally significant art form, enhance theatrical discourse, and provide practical opportunities for students to apply skills learned in class via collaborative creations, text, and performance. This course is directly related to dance, theatre, African American history and other arts based and humanities based courses. Students will be evaluated on their attendance, participation in class, willingness to learn, and the effort put forth in class.

Students will apply themes studied in Hip Hop THEA 209 or DANCE 271 to this course, which focuses on performance experiences.

**THEA 210 Hip Hop Theatre Performance Workshop (3 per semester/maximum of 9)**

Hip Hop Theatre Performance Workshop is designed for students who want to expand their experience in Hip Hop Theatre and/or African American Dance History to a performance level. The student will use his/her knowledge of Hip Hop aesthetics, historical and cultural references, and natural talent to collaborate in creating an original theatre production. Students will demonstrate their understanding of Hip Hop as a global, multi-ethnic, grassroots youth culture through performance. This course is directly related to dance, theatre, African American history, and other arts and humanities courses. Student work will be observed throughout the semester. Student progress will be evaluated by his/her level of contribution to the process, engaging in discussions, and participation in the culminating performance. Class attendance and effort will also be assessed.

### **THEA 223 Musical Theatre Performance I (2)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

The purpose of this class is to introduce sophomore BFA musical theater students to the art of performing the solo song based on the book musical. While utilizing the performer's skills in acting, singing and dance/movement, the student will learn how to communicate clearly and compellingly

1. who his/her character is
2. to whom the character is singing
3. why the character is singing these particular words to this particular music at this particular time. The student must understand his/her environment, relationships, obstacles, tactics, and stakes in order to accomplish this task.

This is the class that begins to synthesize the student's performance training for the special demands of musical theatre. Most of the work will concentrate on solo performance, building the student's power and confidence and beginning to explore both their individual uniqueness and their crucial relationship to their audience.

Students must prepare two contrasting musical theatre pieces from "book" musicals preferably from "The Golden Age" (1920-1960s). These songs must be chosen in collaboration with musical theatre faculty and the student. Students must obtain copies of the music and lyrics for their songs and the book. A thorough knowledge of the book is as important as a thorough knowledge of the music and lyrics in order to make informed performance choices. Students are required to keep a journal. Written exercises about passive, active, stage directions, and character analysis as well as in-class exercises on these topics will be part of the class assignments.

**THEA 224 Musical Theatre Performance II (2)** Studio training in the unique performance skills, repertoire and business of professional music theatre.

### **THEA 224 Musical Theatre Performance II (2)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course will cover three primary areas of study: musical theatre scene work, the study of the major repertoire in musical theatre from 1965-1990 (excluding Sondheim and Webber), and performance power training.

Scenes that contain songs require special techniques of the actor-singer. Using the preparation and presentation of four such scenes, the musical theatre student will begin to develop successful performance strategies for musical theatre scene work.

Through the use of in-class reports the musical theatre student will continue to gain understanding and appreciate the rich musical theatre literature of the late 1960s and the 1990s. Primarily, the course will cover the works and lives of Bock and Harnick, Jerry Herman, Kander and Ebb, Jule Styne, Jones and Schmidt, and Maltby and Shire.

Through exercises, studies, and improvisation designed to sharpen the student's use of energy, focus, structuring skills, imagining, stylizing, and coordinating, the musical theatre student will obtain a significant increase in his/her performance power.

The musical theatre student will prepare three duet scenes with song and an ensemble scene with song during the semester. Students will have two opportunities to present each duet scene.

THEA 224 is a continuation of Musical Theatre Performance I. These studios represent the core of the musical theatre training program.

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**THEA 225A B.F.A. Acting Studio I (2)** Exercises to develop truthful listening and responding as a foundation for acting studio scene study.

### **THEA 225A B.F.A. Acting Studio I (2)**

Listening and responding in an unadorned, truthful way is the lynch-pin of the actors's work. In THEA 225A, students will begin with exercises designed to enhance truthful behavior on stage. In addition, this semester's work includes exercises to increase awareness of the sensory world around us and its effect on the actor's imagination, availability to emotion, and mental focus. Contentless scene work leads the student through the basics of behavior on stage: playing for a purpose (goal), encountering obstacles, and finding the necessary tactics to behave appropriately in the imaginary circumstances.

THEA 225A is a performance studio, that is, each students will be actively involved each day. Each class will begin with some physical and/or vocal warm-up done by all students. The instructor will look for consistent applications of and growth in individual techniques earlier explored. The core of each day's work will focus on student improvisation or scene work. Students thus are subject to daily observation, daily testing for comprehension and application of material encountered, daily assistance, and daily criticism of their work. In addition to daily critiques, students will receive a mid-semester and semester-end evaluation from the lead instructor.

Bachelor of Arts: None

Effective: Summer 2005

Prerequisite: THEA 115 and admission to B.F.A. in Musical Theatre

Concurrent: THEA 225B and THEA 225C

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**THEA 225B B.F.A. Movement Studio I (2)** Introduction to techniques to condition the actor and improve physical awareness and self-use.

### **THEA 225B B.F.A. Movement Studio I (2)**

THEA 225B is designed to condition the actor's body for the demands of the stage, to begin the long process of self-awareness and effective, efficient self-use, to free the body and mind of restrictive self-images and inefficient, habitual movement/use patterns and to assist the actor in the development of a confident, expressive physical instrument that will be an equal partner with the mind and the voice in the creation of a character for the stage.

Additional resources from which an instructor may draw include contact improvisation, games with balls to develop full commitment to the activity and eye-body coordination, group balancing games, and a host of other well-tested, effective movement-based learning activities.

Because THEA 225B is a laboratory performance course, one in which students must share what they are learning or performing on an almost daily basis, on-going assessment takes place through faculty feed-back in working sessions, through faculty and peer critique of work presented, through a written evaluation at mid-semester (followed by a conference with the instructor), and through a written evaluation and in-person conference at the end of the semester. Performance faculty other than the instructor will often observe and comment upon work and most will view

semester-concluding scene presentations and offer insights. Students thus receive assessment on many occasions in the course of the semester.

**THEA 225C B.F.A. Voice/Speech Studio I (2)** Introduction to actor voice and speech training.

### **THEA 225C B.F.A. Voice/Speech Studio I (2)**

THEA 225C is the first in a sequence of voice and speech courses for the actor. This first semester installment will focus on awareness and conditioning activities related to breath, posture, resonance and articulation. Prose and poetry readings will be used for application activities. Students will experience activities that will heighten their physical awareness of vocalizing. Most activities will involve a re-learning of how they speak, bringing to their conscious awareness the processes of voice/speech which were initially learned through early childhood nurturing. Class events will include awareness of breath patterns and the means to release inhibitive behaviors related to spinal posture, head and neck alignment, and musculature along the breath/vocal tract. Students will also gain awareness of how breath relates to their expressive/emotional system.

Class activities will also include physical awareness of the consonant and vowels sounds and their phonetic transcriptions. Each event will strive to improve actors' intelligibility and increase musicality of speech. Through application assignments with word lists, sentences, poetry and prose, students will increase language sensitivity.

This semester will also address voice quality issues directly and how they relate to the above. Specific events will focus on vibratory awareness in primary resonators and how to apply this awareness in all vocal life. Issues of vocal health, projection and emotional demands will be addressed.

**THEA 250** Introduction to Scene Design (3) Introduction to the history, processes, materials, and concepts involved in designing scenery for the theatre.

### **THEA 250 Introduction to Scene Design (3)**

This course is the introductory course to the art and practice of designing scenery for the stage. The primary goals of the course are to introduce students to the history and profession of scene design, and to help students learn a fundamental design process to apply to the evolution and presentation of design for stage scenery. This process includes play analysis, script and visual research methods, analysis of dramatic action, concept evolution, and visual communication methods. Evaluations will be based on the following:

1. Students will submit papers to demonstrate text analysis skills and to explore the work of specific designers or historical trends (25%)
2. Students will receive in-class critiques to evaluate their design concepts and communication skills (25%)
3. Students will receive comment sheets for each studio project critiquing specific aspects of their design process (50%)

**THEA 251** Theatre Drafting Techniques (2) Introduction to drafting of floor plans, section drawings, construction graphics, and mechanical perspective for the theatre.

### **THEA 251 Theatre Drafting Techniques (2)**

**(BA)** This course meets the Bachelor of Arts degree requirements.

Theatre 251 is a foundation course for all students studying theatre design or technology. Students will learn the lexicon of lines and marks that make up the language of theatre drafting. They will be instructed in traditional drafting techniques

and work to master the skills required to execute complete, accurate, and clear draftings. Drafting is the basic form of communication in theatre design and technology. All students involved in these disciplines will use drafting extensively throughout their careers. As such, the skills introduced and practiced in this course form a necessary foundation for all other design and technology courses. This course prepares students by teaching them a language necessary to advanced coursework. Theatre 251 is a required course in the theatre B.F.A. Production program.

Throughout the course students complete draftings of increasing complexity. These draftings will be evaluated for content, clarity and skill. Individual drafting projects will be assigned a point value.

**THEA 260** Introduction to Costume Design (3) Introduction to costume design process through character analysis and the use of color, line, and texture.

#### **THEA 260 Introduction to Costume Design (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

THEA 260 provides the student the opportunity to experience the costume design process from the reading of the script to the creation of a fully rendered costume design. The work of a costume designer begins with the ability to read the play script from both the perspective of the audience and that of the human beings depicted in the imaginary premise. The student is given a specific methodology for reading a play and determining the plot, the dramatic action, and the theme or significance of the action of the play. Next, the student is exposed to research methods and techniques that illuminate historical periods and genres and allow the designer to fully appreciate the lives of human being living in different times and locations. Beginning projects are derived from contemporary dramatic material that requires relatively little examination into the social and historical period. Subsequent projects, however, move farther away from contemporary realism and require extensive research to grasp the essence of the period. The next section of the course is devoted to an examination of how this research and analysis is used by the costume designer to make artistic choices. Students are introduced to a specific technique for analyzing a character and determining what kind of clothing would be appropriate for the individual based on the student's analysis of their personality, social status, and function in the play. The final project involves the creation of a costume design for the entire play. The student is guided through the process of improving rendering skills, creating a finished representation of each garment worn in the play, and enhancing their ability to communicate these choices to a director and actors.

**THEA 261** Introduction to Costume Construction Techniques (3) Intermediate study of the methods, materials,

equipment, concepts and processes involved in the construction of costumes for the theatre.

**THEA 261 Introduction to Costume Construction Techniques (3)**

This course will advance the knowledge of students in the methods, materials, equipment, concepts and processes involved in the construction of costumes for the theatre.

The emphasis of this course will be on the specialized processes that result in the production of theatrical costumes. Formal course material in the form of lecture/demonstrations will address the specialized approach to the construction and tailoring of theatrical costumes for men's and women's wear. Examination of the historic context of the clothing technique, as well as the contemporary application of such techniques for theatrical use will also be addressed. In addition to lectures and demonstrations, students will be expected to participate in hands-on laboratory activities that will reinforce and inform the classroom theory. These activities will give students an opportunity to apply the principles they learn in the lecture component.

**THEA 285** Introduction to Sound Design (3) An introduction to sound design for the theatre.

### **THEA 285 Introduction to Sound Design (3)**

The purpose of this course is to provide an overview of the techniques and the tools of sound design and the sound designer's role in the collaborative design process in the theatre setting. The goal of this course is to develop a method of understanding sound and sound design, and discovering a language with which to express this understanding in a theatrical context. In order to accomplish these goals, there is fundamental exposure to the terms and techniques of contemporary sound design that is necessary along with an understanding of the challenges and problems inherent in designing sound for the stage. The course also serves as an introduction to continuing advanced study in topics such as audio recording and advanced sound design that relate to sound design.

Projects will make up the majority of the assignments for the class, and therefore will constitute the majority of the grading. The evaluation of these projects will not only consist of written and audio submitted portions, but also the student's presentation of the project to the class. During the sections of the class based on the terminology and tools of theatrical sound design, quizzes will be administered in order to check the progress of the students and ensure their comprehension of the material. Each student will complete a final project in lieu of a final exam: the sound design of a theatrical script. This project will not only consist of the final design work, but also the class presentation of the conceptual basis for the design as well as the implementation of the design.

**THEA 327** Musical Theatre Auditions (2) Research and preparation of auditions for work in professional musical theatre venues.

**THEA 327 Musical Theatre Auditions (2)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Theatre 327 offers junior and senior musical theatre students an opportunity to examine the art of the musical theatre audition from research to performance. Since these students have completed two to three years of vocal and acting study, piano, and music theory, they are ready to work at honing their skills for professional auditions. Each student will prepare four to six professional auditions and simulate them in class. Feedback is provided by the class and visiting guests from the profession. All audition material is memorized and professional attitude as well as dress is required. The audition material is different for each student in the class.

Grading is based on the student's ability to prepare quickly and accurately, take direction, and incorporate it into the audition on the spot. The continued research and performance of new material is required weekly.

Theatre 327 is an elective course in the B.F.A. theatre musical theatre option.

**THEA 402 Theatre History II: From 1700 to Present (3)**

A survey of drama and theatre from the seventeenth century through the modern period. The course is a sequential second half of the history of world theatre. Beginning with the post-Shakespearean era, students study major theatre movements in play writing, acting, theatre architecture and design. Some eras include the English Restoration and Georgian periods, the French Neoclassical period, German Romanticism, and the rise of the Beijing Opera. In addition, emerging post-colonial theatres of Africa and Asia will be explored. For each major era or movement, a play by one of the acknowledged masters of the form will be read and discussed in class. Students will write brief responses to their assigned readings, as well as experience a variety of assessment techniques.

**THEA 412 (US;IL) (AF AM 412) African American Theatre (3)** Exploration of the development of African American theatre from its roots in Africa through the diaspora, to the present time.

**THEA (AAA S) 412 African American Theatre (3)  
 (US;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

In this course, we will explore the development of African American theatre from its roots in Africa and Europe, through the diaspora, to the present time. We will learn something of the rich diversity of African American people and their contribution to the world's creative mainstream. We will become acquainted with both historical and contemporary artists who created and continue to create this unique American art form. The goals of the course are:

- 1) to develop familiarity with African American theatre and the socio-historic context in which it was created
- 2) to develop an understanding of the relationship of African American theatre to mainstream American theatre
- 3) to acquire an appreciation of the schools, styles, and techniques of African American theatre

We will do this by reading and engaging plays in the context of the period in which they were created, viewing films of plays, and attending relevant productions where possible.

**THEA 420 Scene Study I (3 per semester/maximum of 9)** Advanced monologue and scene study techniques. Principal focus on realism.

**THEA 420 Scene Study I (3 per semester/maximum of 9)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

THEA 420 Advanced Scene Study is a course in which students are allowed to explore and deepen their understanding of the art and craft of acting. The course is repeatable for credit and taught by a variety of instructors. This allows students to experience the processes of different pedagogical methodologies. Regardless of the instructor, the shared emphases include: scene work in a variety of styles (from classical verse plays to cutting edge contemporary material) tailored to the needs of the individual student; movement toward increased technical proficiency; deepening awareness that "acting is living truthfully under imaginary circumstances," however similar or different those circumstances may be to the actor's personal life; and, growing self-sufficiency through self-directed scenes and individual rehearsal discipline. The environment of the classroom/rehearsal space is both safe and critical, as students begin to accept that risk is integral to successful acting. The student is also engaged in giving constructive criticism to their peers, learning to be honest, detailed, and nurturing in the process. This critical process requires students to give unconditional support to their peers, support that is geared toward mutual improvement and emotional/physical safety.

**THEA 423** Musical Theatre Performance III (2) Studio training in the unique performance skills, repertoire and business of professional musical theatre.

**THEA 423 Musical Theatre Performance III (2)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

In depth preparation and performance of scenes from the works of Sondheim and Webber. Also, exploration of the adjustments needed to perform successfully in non-traditional performance venues.

The third in a musical theatre performance studio sequence, THEA 423 applies performance technique and methodology studied in previous studio classes to the works of contemporary composers, particularly Stephen Sondheim and Andrew Lloyd Weber. The course also explores the adjustment to performance needed when working in non-traditional stage spaces such as ballrooms, cruise ships, and industrials.

THEA 423 is a continuation of Musical Theatre Performance II. These studios represent the core of the musical theatre training program. Grading will be based on the quality of the musical theatre student's studio work, report, and demonstrated respect for the professional studio environment.

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**THEA 424** Musical Theatre Performance IV (2) Studio training in the unique performance skills, repertoire and business of professional musical theatre.

**THEA 424 Musical Theatre Performance IV (2)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This studio is designed for senior musical theatre majors to hone their skills in acting, singing, and dancing in the last semester of their college career. The majority of the class will be the preparation of the Senior New York Showcase where each student will have the opportunity to perform for an invited audience of agents, alumni, and special guests. Students are responsible for all research and preparation of showcase material. Showcase material will be coached in class, but the main body of preparation relies on the students themselves, utilizing skills and techniques learned throughout their studio training.

Grading will be based on attendance, preparation, and attitude. These are all critical factors for entering the profession and for successfully completing this course. Deadlines and appointments must be kept. Students must do adequate outside preparation.

THEA 424 is a continuation of Musical Theatre Performance III. These studios represent the core of the musical theatre training program.

**THEA 425A B.F.A. Acting Studio II (2) Scene Study**

**THEA 425A B.F.A. Acting Studio II (2)**

THEA 425A is a laboratory or practicum course requiring active student presentation of work in progress for critiques by the instructor and input from peers. Working in pairs, students will be assigned a five-minute scene from modern American realism. Students must read the play from which the assigned scene is taken, do the necessary historical/analytical homework, develop a character biography and a scene score, and present the result of their work in the initial on-the-feet working sessions for faculty critique and peer input. Taking away responses from each working session, the students are expected to rehearse outside of class to address any issues raised in the previous working session and to ready the scene for the next viewing.

In THEA 425A, the instructor will serve, not as a director, but as an acting coach, asking probing questions and using his or her own energy to exhort, guide, and discipline the students. It is expected that faculty intervention will decrease and student self-reliance will increase with each passing studio.

**THEA 425C B.F.A. Voice/Speech Studio II (2)** Advanced voice and speech training for BFA Musical Theatre students.

**THEA 425C B.F.A. Voice/Speech Studio II (2)**

In THEA 425C, B.F.A. Musical Theatre students will continue to develop and expand their vocal instrument. Basics of vocal production will be repeated and developed with a greater focus on the individual actor's application of his/her voice in the performance of various texts.

The first ten weeks will recall the basics of the past two semesters of voice/speech work and continue to expand the actors' capabilities. Extended work in the area of breath support and release, resonance and vocal range, and speech/articulation will all be explored with appropriate texts.

In the last five weeks of the semester, work will focus on text in the performance setting. A short program of text performances will be devised and presented in the last week of class.

**THEA 427C B.F.A. Voice/Speech Studio III (2)** Stage Dialect Studies

**THEA 427C B.F.A. Voice/Speech Studio IV (2)**

THEA 427C focuses on the acquisition of stage dialects and accents. For each dialect the student becomes aware of the resonance, phonetic, inflection, and rhythm changes necessary to perform dramatic text with an accent or dialect. Vocal agility, phonetic recall and the ability to integrate the altered vocal behavior to the demands of acting are the primary

goals. Each dialect unit will have an introductory instruction, a review session, and a presentation of a reading of a dialect monologue. The final project will be the performance of two dialect monologues.

Students will be evaluated upon preparedness, work ethic, focus, openness to change, growth, degree of self-reliant recall, and creative application of new skills. This studio performance class offers opportunity for assessment from the instructor in each class session. Periodic assignments will be made to assess self-reliant application of the work.

**THEA 450** Advanced Topics in Scene Design (3 per semester/maximum of 6) Design emphasis on a variety of production techniques, genre, and styles.

**THEA 450 Advanced Topics in Scene Design (3 per semester/maximum of 6)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course will build upon the basic design process introduced in THEA 250. Students will explore design solutions for shows requiring multiple locals. Students will also be introduced to shows reflecting a variety of dramatic styles and will explore effective design solutions within stylistic constraints. In addition to previously introduced graphic skills, emphasis will be placed on graphic techniques involved in the production of scenery, including design drafting, prop drawings, and paint elevations.

As this course may be repeated, there will be a rotation of topics to ensure that students receive different content each semester. Topics within the rotation may include:

Design for Shakespeare, unit settings

Design for Musicals, practical and stylistic concerns

Design for Opera

Design for shows requiring simultaneous local

Poetic or fragmented realism

Design for contemporary episodic scripts

Epic theatre design

**THEA 458** Digital Imaging for the Theatre (1) Introduction to imaging software and its application in theatrical design and production.

**THEA 458 Digital Imaging for the Theatre (1)**

This course will provide students with an introduction to digital imaging software and explore the use of this software in the theatrical design and production process. An introduction to Photoshop or similar programs will make up the first part of the course. As part of the introduction to software, course time will be devoted to image acquisition using techniques such as Web based research, scanning, and use of the digital camera. The remainder of the course will focus on applying imaging software to the process of evolving and presenting designs for scenery, costumes, and lighting. Design presentation will include output of images for applications such as projection, Web pages, and both large and small-scale printing.

Students will execute a number of projects that will be turned in digitally to the instructor. Each project will have a specific objective and the grade will be outlined in a comment sheet.

**THEA 459** Theatre Portfolio & Business Practices (2) Life as a professional theatre designer. Contracts, taxes, record-keeping, resumes, portfolios, interviewing, job hunting, and legal considerations.

**THEA 459 Theatre Portfolio & Business Practices (2)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course is designed to prepare the student of design for life as a professional theatre designer. There are many challenges to working in the business of design, arising primarily from the fact that most theatre designers are self-employed. It's not enough to be a talented designer; one must also be a savvy business person. Contracts, taxes, recordkeeping, resumes, portfolios, interviewing, job hunting, and legal considerations will all be addressed, as they relate to life as a freelance designer. Special attention will be paid to the assembly of a professional portfolio, which is the centerpiece of any designers' work.

**THEA 460** Advanced Topics in Costume Design (3 per semester/maximum of 6) Developing and executing a design concept in a variety of the performing arts.

**THEA 460 Advanced Topics in Costume Design (3 per semester/maximum of 6)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

THEA 460 places emphasis on the use of text analysis and extensive historical research to make artistic choices as a costume designer in a production of a classical play, opera, or dance. Plays of this sort are of a size and scope not often found in contemporary material, which places exceptional demands on a designer. This course investigates the manner in which the theatrical imagination can be liberated to fulfill the particular requirements of classic theatre, opera, and dance.

The course will require several large-scale projects that reinforce the costume design process in a variety of the performing arts. Each area of work within a project is separately graded. These projects will contain written segment components such as a design statement or character analysis, an oral presentation or explanation of the designer's choices and process, and (where applicable) a demonstration of the fully realized costume renderings.

The student is expected to master the process that takes a costume designer from reading a script (or listening to a piece of music) to the creation of a design concept to the visual presentation of renderings from which clothing can be constructed. Particular emphasis is placed on developing the oral presentation skills necessary to communication with the director and other theatre artists.

**THEA 461** Advanced Topics in Costume Construction and Technology (3 per semester/maximum of 6) A specialized course in advanced costume construction techniques and theatrical costume technologies.

**THEA 461 Advanced Topics in Costume Construction and Technology (3 per semester/maximum of 6)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

THEA 461 addresses the skills and techniques of theatrical costume construction necessary for the undergraduate student to understand and master in preparation for work within a professional costume setting. Emphasis is placed upon the creation of an historic silhouette as illustrated by a theatrical costume rendering for both men and women, with an eye to theatrical execution. Focus is placed on the production of clothing, as well as the creation of theatrical properties and accessories for the historic figure.

The course will require several large-scale projects that reinforce the costume construction process in a variety of historic

eras. Each area of work within a project is separately graded. These projects will contain supporting research and examine the understanding and identification of construction and accessory techniques as manifested in the costume rendering.

A student's approach to problem solving, personal process, communication skills, and successful time management will also be addressed.

**THEA 465** History of Fashion II (3) Survey of dress from 1800 to contemporary fashion.

### **THEA 465 History of Fashion II (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

The course is the second part of the history of fashion that is an elective for graduate theatre students, is required for the B.F.A. Costume Design emphasis, and is an elective for the undergraduate theatre minor. The goal of the course is to identify and examine movements and trends in clothing and fashion from 1800 to the present. Each period is studied by using primary sources, slide presentations, and actual garments to illustrate the relationship between clothing and broad social, historical and artistic developments. Emphasis will be placed on plays that serve as particularly good examples of a period or style of fashion covered in the course.

Grading will be based on periodic quizzes covering topics from class lectures, slide presentations, and textbook readings. There will be one oral presentation, a written comprehensive final exam, and assigned graphic presentations or "redrawings" of clothing pieces.

To complete these "redrawings" the student will find a primary source or a photographic reproduction of a primary source and "redraw" the garment. For example, a student may find a painting, a sculpture, or photo of a garment (usually on a figure) that represents the period being discussed in class. The student would then "redraw" or copy that image, not trace, for the purposes of identifying the clothing pieces that are shown in the original. The "redrawings" are graded not on the student's ability to draw but rather on the content, detail, and thoroughness of the pencil sketch.

**THEA 472** Lighting Technology (3) An introduction to the basics of electricity, dimmer protocols, lightboard programming, lighting paperwork, and master electrician & assistant lighting design practices.

**THEA 472 Lighting Technology (3)**

THEA 472 is an introduction to the basics of electricity, dimmer protocols, lightboard programming, lighting paperwork, and master electrician & assistant lighting design practices. This course will help prepare theatre designers to understand the inner workings of all of the equipment, working practices and safety requirements that are involved with the business of lighting design. This course will also provide students with many of the skills needed to get their foot in the door and get started in the business.

Special attention will be paid to safety, stressing the need for safe working practices and environments over the need to get the show up no matter what.

Students will learn how all of the advanced technology that is being introduced to the world of lighting functions and how these new technologies are all integrated into a functional system.

Students will serve as master electricians and/or as assistant lighting designers as part of the hands-on production aspect of the class, with ample time devoted to process discussions and post-show critiques of the work. Small-group problem solving and system troubleshooting will be discussed in depth and applied to real production situations.

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**THEA 480** Advanced Topics in Technical Direction for the Theatre (3 per semester/maximum of 6) Advanced study of the methods, materials, equipment, facilities, concepts and processes associated with Technical Direction for the Theatre.

**THEA 480 Advanced Topics in Technical Direction for the Theatre (3 per semester/maximum of 6)**

This course will build on the foundations established in THEA 280. Students will be engaged in studying advanced topics through discussions and explorations of current theatre technology, communication and the management systems used to control the processes associated with modern technical direction. Examples of topics include project management, current trends in drafting, advanced technical packages, and structural design for the stage. This course is repeatable and topics will vary.

Students will participate in class discussions, hands-on exploration of equipment, investigate current practices through observation and research, and will complete projects associated with the topics studied.

**THEA 484** Sound Recording Techniques (3) Multi-track audio recording and post production techniques.

**THEA 484 Sound Recording Techniques (3)**

THEA 484 will provide fundamental skills in recording an audio production.

The first four weeks will cover basics of current recording equipment, basic microphone theory and placement according to principles of sound propagation within performance spaces.

The second four weeks will expand on the principles of the first four weeks, considering the problems of recording in a variety of different locations and specific techniques for recording particular instruments.

The final seven weeks will focus on work within a recording studio. Students will need to configure a mixer with a multi-rack digital recorder and create a mastered CD with all appropriate post processing (EQ, compression, reverberation, etc.).

Students will work on teams for various recording projects, with one student serving as producer for each, so that they gain a comprehensive knowledge of the various duties involved in setting up and operating recording equipment.

Team projects will make up the majority of the grading for the class. Periodic quizzes will be administered in order to check the progress of the students and ensure their comprehension of the material. Each student will complete a final project in lieu of a final exam. During the production of this project, they will also be expected to serve in ancillary roles for their classmates' projects. Their participation in these other projects will be considered in the grading of their final project.

**THEA 490H** London Study Tour (3) An intensive academic and cultural experience in the theatre capital of the English-speaking world.

### **THEA 490H London Study Tour (3)**

Theatre-going forms the heart of the LST and of its academic identity. London is the outstanding theatre city of the English-speaking world, offering consistently superb choices in classic plays, contemporary and avant-garde theatre, musical theatre, opera and dance. Students will see a minimum of seven theatre and dance performances: some will be purchased in advance by the instructor, and others will be selected by participants from a wide range of choices. As a complement to the theatre core, the LST's faculty leaders will provide students with an orientation to London and its history, culture, and sights.

## **Turfgrass (TURF)**

**TURF 100** Introduction to Turfgrass Management (3) Introduction to turfgrass species, establishment, maintenance, and pest control of turfgrass species used for sports, lawn/utility turf, and golf courses.

**TURF 100 Introduction to Turfgrass Management (3)**

TURF 100 is an introduction to the major turfgrass species, including their identification, growth and development, adaptation, and practical uses. Students will be introduced to turfgrass establishment and renovation. The importance and timing of cultural practices will be covered as well as an introduction to turfgrass pest management. There are

demonstration labs including field trips and hands-on activities. There will be three exams and seven quizzes. The students will also be graded on projects including identifying various turfgrass species, seeds, insects, diseases, and weeds. This course is designed for non-science majors with little experience in plant science and culture. This course serves primarily as a service course for the Professional Golf Management Option in the College of Health and Human Development. This course has numerous web-based resources that the students can access independently. The students are required to make several visits to a demonstration lab in the research greenhouses. There are also a number of scheduled field trips.

**TURF 425 Turfgrass Cultural Systems (3)** A study of turfgrass maintenance practices and how their interrelationships can be utilized to develop management systems.

### **TURF 425 Turfgrass Cultural Systems (3)**

TURF 425 is offered to students that are in their final year of the turfgrass science major. They are expected to use the information provided in the course and previously learned agronomic principles and concepts, to develop management and problem solving skills. More in depth information pertaining to various management systems are presented which expands upon prerequisite course content. Students are expected to be able to integrate different turfgrass maintenance practices into sound management strategies that lead to the production of high quality turfgrass areas. The management compromise between aesthetic quality and Functionality is stressed and students are challenged to recognize those cultural practices that influence the balance between the two. There are three 100 point exams during the semester. The majority of the content in each exam will come from the information provided since the previous one. Several unannounced quizzes will be given throughout the semester (usually 12 to 13 with only the 10 best counting toward the grade). A soil testing exercise is also included whereby the student is expected to take an appropriate sample from a site of their choosing submit it to the soil testing lab, interpret the soil test results, and make a written recommendation based upon the results. The course will help the student better understand how the maintenance practices and pest control programs learned in other courses inter-relate in the overall management scheme for a given turfgrass site. It will also prepare them for TURF 436 (Case Studies) where they will be expected to work in teams in problem solving situations. The facilities provided in ASI building, associated greenhouses, and the turfgrass field research plots as well as the campus grounds provide ample support for the effective delivery of the course.

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**TURF 434 Turfgrass Edaphology (3)** Characterization of soil physical properties for the establishment and maintenance of sports turf; includes root-zone construction.

### **TURF 434 Turfgrass Edaphology (3)**

TURF 434 is offered to students that are entering their final year of the turfgrass science major. This course builds on introductory turfgrass and soil courses. In this course you will learn to interpret soil physical results using the United States Golf Associated specifications for greens construction. You will learn how to evaluate and manipulate the physical properties of a soil in order to provide a quality turfgrass stand under varying conditions. You will use new information as well as physical and quantitative tools provided to aid in soil management decisions. You will defend your decisions to other students in group-exercises conducted on a computer bulletin board. You will also submit your decision making process and defend your decisions in writing, in the form of business proposals. This class has a series of labs, some of which run over several weeks. You will use class material and the physical and quantitative tools learned in the labs to inform your decision-making processes. Your grade will be based on exams, lab reports, and practicums. The practicums and the labs are interrelated. The practicums, which are mini-case studies of actual turfgrass situations and problems, require you to apply techniques and information learned in the physical lab periods. The practicums are graded on initial draft, final draft, and your critique of other student's solution to a problem. TURF 434 is an advanced course in soil physical properties.

General Education: None

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**TURF 435 Turfgrass Nutrition (4)** Study of turfgrass nutrition and growth; emphasizing constructed and mineral soil fertility, nutrient uptake and function, and fertilizer use efficiency.

### **TURF 435 Turfgrass Nutrition (4)**

Turfgrass Nutrition is a study in the nutrition and growth of turfgrass plants. Upon completion of this course, students will be able to distinguish the function and requirements of nutrients in the turfgrasses; describe how soil physical and soil chemical properties/conditions affect nutrient availability; select soil amendments to remedy soil chemical limitations; identify the best fertilizers and application methods to satisfy site-specific nutritional requirements; prepare nutrient management plans by appraising edaphic and environmental conditions and current cultural management and use; and will have discovered how best to sample soil, tissue, and water; submit samples, choose appropriate specialty tests, and

interpret reports. TURF 435 compliments Turfgrass Edaphology, by examining soil chemical (rather than physical) properties as turfgrass growth parameters and addressing ameliorative measures in concept and operation. Students are introduced to the many classes of specialty fertilizers used in turfgrass management and their specific attributes are revealed through laboratory and field exercises. Students are evaluated through written testing of plant growth and nutrition concepts, interpretation of soil analysis, recommendations of fertilizer type and rate, and nutrient fate and management. TURF 435 has a substantial laboratory component.

**TURF 436W Case Studies in Turfgrass Management (3)** Case study and discussion considering integrated management of selected turfgrass sites; emphasis on problem analysis, principle application, and decision making.

#### **TURF 436W Case Studies in Turfgrass Management (3)**

Case Studies in Turfgrass Management is a three credit, writing intensive course for students in the final year of the Turfgrass Science major. The goal of this 'capstone' course is to provide students with an understanding of processes involved in solving turfgrass and soil problems at the managerial level. Using several real-life scenarios provided by the instructor, students will learn to gather facts associated with a problem, analyze the problem, formulate a set of options for solving the problem, implement a plan of action, and evaluate the results of the action. Once these processes are assimilated, students will form teams and select challenging turf and soil problems, analyze them, formulate options for solving the problems, select the most feasible solutions, and evaluate outcomes. Teams will submit reports and develop presentations for class. Teams will also be charged with questioning presenting teams and evaluating team members. Students will be evaluated through exams, reports, presentations, and class participation.

**UKR 100** (GH;IL) Ukrainian Culture and Civilization (3) Survey of Ukrainian culture and civilization from the Middle Ages to the present.

#### **UKR 100 Ukrainian Culture and Civilization (3) (GH;IL)**

The course acquaints students with Ukrainian culture from the origins of Kyivan-Rus in the 9th Century to the present day. The course will examine the many facets that make up culture: history, politics, language, literature, folklore, religion, science, music, and art. The course will place Ukrainian culture in the broader context of the Slavic nations and peoples. It will focus on the development of national identity from the origins of the Ukrainian people through the colonial period under tsarist Russian domination, through Soviet domination, and finally to post-independence identity following the dissolution of the Soviet Union in 1991. The course will include films and expert guest lectures. The course format will consist of lectures, slide, video and audio presentations. Readings will all be in English. Questions and discussion on class lectures and readings and on topical matters will be strongly encouraged. At the end of the course, students will be familiar with the problems that post-colonial Ukraine faces at present. They will have a basic general knowledge of Ukrainian history and geography, and will be acquainted with representative achievements of Ukrainian high and folk culture. There will be a mid-term (30%), a final exam (30%), and a research paper (30%). The latter will be graded both for content and writing ability. Ten percent of the class grade will be for class participation, including attendance and active participation in discussions. Students may also receive extra credit by making a 10-15 minute oral presentation in class on a pre-approved topic, which will offer students the opportunity to practice public speaking. The exams will include written identification questions, brief essay questions, and a longer essay question that synthesizes knowledge acquired in class. As a General Education course, Ukrainian 100 incorporates the following four elements of active learning: international competence (a much lesser known part of the East European world), information gathering and analysis, active use of writing, and dialogue pertaining to social behavior, community and scholarly conduct. The case of Ukraine as a "submerged nation," subsumed under tsarist Russia and the Soviet Union, will provide students with a colonial paradigm of development of a minority culture and language under a politically stronger colonizing culture. Students need to write a 10-page paper for the course and will learn to explore library and internet resources. The paper will be graded for content, clarity, structure, and effective use of language. As an extra-credit option, students may volunteer to give a class presentation on their research topic or another topic of interest. Students may also acquire extra-credit by writing reaction papers on topical extracurricular lectures or visits to Ukrainian cultural sites (like the Ukrainian Museum in New York, the Ukrainian Embassy in Washington, DC, or historic Byzantine Rite Ukrainian churches). Ukrainian 100 is not required for the B.A. degree in Russian, but may be used under the rubric of "Additional Courses" for the B.S. degree in Russian Translation. UKR 100 may be used to satisfy the Gen Ed Humanities and United States Cultures and International Cultures requirements.

**Veterinary and Biomedical Sciences (VB SC)**

**VB SC 050S** Mechanisms of Disease (3) Introduction to the study of disease pathogenesis and careers in Animal Health Research and Service.

**VB SC 050S Mechanisms of Disease (3)**

Mechanisms of Disease is a first year seminar directed to students with an interest in a career in veterinary medicine or in bio-medical disciplines. Students are introduced to the concepts of epidemiology, cell biology, clinical medicine and toxicology through use of appropriate case material. The importance of basic science courses to the understanding of this material is emphasized. Reading and written assignments are related to the case study material as well as adaptation to the college experience. Grading is based on class participation and written assignments.

**VB SC 101** Careers in Veterinary Medicine and the Allied Professions (1) Exploring career pathways in veterinary medicine and the allied health industry.

**VB SC 101 Careers in Veterinary Medicine and the Allied Professions (1)**

The course is intended for first year students with an interest in careers in veterinary medicine or in the allied industries. Upon completion of the course students will have an understanding of the various careers possible in veterinary medicine; including types of specialization by species and/or by discipline. Students will have the opportunity to discuss careers in industries related to animal health and animal health research. Student learning will occur through the use of guest speakers, written assignments and on-line discussion groups. Student evaluation will be based on performance on assignments and on-line discussion groups.

**VB SC 130** (GHA) Understanding Human Disease (3) An explanation of disease mechanisms, enabling non-scientists to better understand medical journalism and apply basic medical principles to everyday life.

**VB SC 130 Understanding Human Disease (3)  
(GHA)**

All humans are impacted by disease, either personally or through friends or family members who are affected. Understanding Human Disease is an overview of disease processes for individuals not majoring in a scientific field. Students will have the opportunity to study the basic knowledge tools required to understand how different diseases arise, how they progress, how they are treated and in many cases, how they can be prevented. The course material is divided into two segments: the first portion discussing the different ways that diseases develop and includes explanations on normal and abnormal inflammatory processes, different types of infectious diseases, genetic diseases and congenital abnormalities (birth defects), diseases that affect the immune system and metabolic diseases. Diseases that are affecting significant populations such as HIV, diabetes, cancer and heart disease will be discussed. The second segment includes a discussion of the significant diseases affecting different organ systems of the body. Student participation is encouraged through questions. Additional topics of immediate interest as identified by the news media or class interest will be discussed. The course is intended for those who wish to better understand published medical journalism, for individuals who want to be able to discern the caliber of medical information in the popular press, for those students who wish to make healthy choices in their lifestyle and for individuals who may not be destined for a career in a scientific field.

**VB SC 230** The Science of Poisons (3) An introduction to toxicology using real world examples to highlight the impact of toxicants on environmental, biochemical and physiological processes.

**VB SC 230 The Science of Poisons (3)**

Toxicology is the study of poisons (natural and man-made) and how these agents adversely affect living organisms. It involves the prevention of harm and the development of measures to assess risk. As a science it borrows from many disciplines including biochemistry, chemistry, epidemiology, genetics, and physiology. It also has great societal impact with regard to the development and testing of consumer products, exposure to industrial chemicals, and maintaining safe food and water. The course format will be lectures that incorporate real world examples of the effects of toxicant exposure on many levels (cell, organ, whole body, environmental). Students will be evaluated by quizzes, exams, and class participation. Students are required to have a basic understanding of biology and chemistry. The course is offered once per year in the Fall semester.

**VB SC 231** Introduction to Cancer Research and Medicine (3) An understanding of the terminology, basic concepts, techniques, multidisciplinary approaches and challenges in cancer research and medicine.

**VB SC 231 Introduction to Cancer Research and Medicine (3)**

Introduction to Cancer Research and medicine is designed for second year undergraduate students preparing for careers in biomedical research. Students will develop an understanding of the theories, scope, approaches and challenges of cancer related biomedical research. The lectures and discussions will emphasize the interdisciplinary character of the discovery process. Students will be introduced to topics on cellular mechanisms responsible for cancer development and progression; techniques in cancer research involving generation and banking of research materials, and methods for performing molecular, genomic and proteomic analyses; approaches for discovery and validation of diagnostic and prognostic biomarkers as well as systems for high through put screening of targets for rational development of interventional therapeutics. Student evaluation will be based on performance on examinations and class participation.

**VB SC 290H Undergraduate Research Colloquium (1)** Presentations by appropriate faculty on research opportunities for undergraduates.

### **VB SC 290H Undergraduate Research Colloquium (1)**

The goal of the course is for students to acquire the skills necessary to obtain an independent research project of the scope and scale required to complete an Honors Thesis.

Students will learn to use online tools to approach primary literature in order to familiarize themselves with faculty research topics. Department faculty will present overviews of their research programs, including potential opportunities for undergraduate projects. First year honors students in the Veterinary and Biomedical Sciences, Immunology and Infectious Disease, and Toxicology majors should take this course in their second semester. Other interested students may take the course with department approval.

**VB SC 330 Introduction to Molecular Pharmacology (3)** An introduction to the basic principles of pharmacology, drug development and use.

### **VB SC 330 Introduction to Molecular Pharmacology (3)**

Upon completion of this course the student will be able to correlate their knowledge of basic and organic chemistry, biochemistry and physiology to the understanding of drug actions. The molecular interactions between drugs and their tissue receptors and possible modifications of drugs to target different receptors will be discussed. Drugs used to treat infectious disease, treat cardiovascular disease, modulate the immune system, and treat cancer will be examined for their molecular interactions. Students will understand the complexities of new drug design and development from the initial stages of laboratory development to final approval for use by the Food and Drug Administration.

### **VB SC 402W Biology of Animal Parasites (3)**

This course provides students an opportunity to obtain an introduction to the field of animal parasitology. Material presented emphasizes life cycle patterns of animal parasites, host-parasite interactions and pathology, disease patterns and zoonotic potential of parasites to human disease, economic importance of parasitic diseases, taxonomy and parasite control programs. Information presented in this course will be useful to students interested in pursuing a career in veterinary medicine or careers dealing with animal care and management. Evaluation of student performance is achieved by 6 quizzes, three examinations and 3 writing assignments. The course is offered each spring semester with an enrollment of 15 to 25 students.

**VB SC 403H** Principles of Animal Disease Control (3) Principles of disease control based on knowledge of the epidemiology of animal disease.

### **VB SC 403H Principles of Animal Disease Control (3)**

Animal Health and well being has emerged as a clear concern of society. The general public is concerned about the health and well-being of their companion animals as well as the animals that provide them with portions of their daily diet. The Foot and Mouth Disease outbreak that occurred in Great Britain in the spring of 2001 coming on the heels of increased concern about Bovine Spongiform Encephalopathy and its possible links to the human disease; variant Creutzfeldt Jacob Disease, resulted in an increased awareness for the potential for animal disease to have adverse effects on society. These effects range from availability of wholesome food products to the zoonotic transmission of diseases between humans and animals.

The goal of this course is to introduce students to the principles of animal disease prevention. This requires the student recall relevant background knowledge in biology, nutrition, microbiology and animal husbandry and management.

Students will develop an understanding of the complex physiological, biochemical and microbiological mechanisms of importance to the maintenance of health and the prevention of disease.

Examples of certain diseases are used to illustrate the application of general principles of disease control. Diseases of world wide importance as discussed in addition to the major diseases of importance to Pennsylvania animal owners.

Collectively, the course material should provide animal owners, managers and future animal health professionals with the background to improve the decision making process required to maintain animal health and prevent losses from disease. The inherent, environmental and special factors involved in the maintenance of health and the prevention of disease will be emphasized.

**VB SC 405** Laboratory Animal Science (3) Principles involved in maintaining laboratory animals. Emphasis is on management, preventive medicine, and surgical considerations used in laboratory animal colonies.

### **VB SC 405 Laboratory Animal Science (3)**

This course in Laboratory Animal Science introduces students to the biology and characteristics of a variety of laboratory

animal species, explores the care and use of animals in various research environments and examines ethical/legal issues pertaining to the use of animals in research and teaching. The laboratory section reinforces topics discussed in lecture and provides an opportunity for students to learn basic animal handling techniques in a safe and professionally supervised environment. Students work with live laboratory animals including mice, rats, hamsters, guinea pigs, and rabbits. They learn handling techniques, administration techniques (such as by injection), and sample collection techniques (such as blood collection). They also learn surgical principles and perform a surgical procedure using aseptic technique.

The Laboratory Animal Science course appeals to and benefits several general groups of students. Those who plan to pursue careers involving animal research such as in academia or industry receive a broad foundation in the field of laboratory animal science as well as an introduction to techniques commonly employed when handling animals. Those pursuing careers involving veterinary medicine or veterinary technology receive training and the opportunity to develop clinical/technical skills focused on a unique group of species. Students that are undecided in their career choice find that the field of laboratory animal science holds many opportunities for those with animal knowledge, handling skills and an understanding of the societal issues surrounding the use of animals in research.

**VB SC 421 (BIOL 421) Comparative Anatomy of Vertebrates (4)** The comparative anatomy of representative vertebrate animals, discussed from a descriptive and an evolutionary viewpoint.

### **VB SC (BIOL) 421 Comparative Anatomy of Vertebrates (4)**

Upon completion of this course, students will understand the fundamentals of vertebrate anatomy and be able to employ comparisons between phylogenetically distinct vertebrate species to illustrate evolutionary adaptations and the relationship between structure and function. Unique adaptations such as those of ruminants and birds will be explored in addition to the more common fish, amphibians and mono-gastric mammals typically used to illustrate these principles. Laboratory activities utilizing specimens representative of higher and lower vertebrate species will emphasize structure identification and functional adaptations. Students will be evaluated by means of laboratory examinations which will focus on structure identification. Attendance in laboratory is mandatory and laboratory exercises to be completed at each laboratory period will be graded. Students that miss laboratory session due to an excused absence should arrange a make up assignment with the instructor.

**VB SC 423W Pathology of Nutritional and Metabolic Diseases (3)** Overview of nutritional and metabolic diseases of animals integrating concepts from biochemical and physiologic aberrations to clinical applications.

### **VB SC 423W Pathology of Nutritional and Metabolic Diseases (3)**

Nutrition plays a critical role in health, disease and convalescence of man and animals. Understanding the role of nutrition in disease pathogenesis, recovery and prevention requires an integration of biochemical and physiologic sciences and clinical practice. The intent of this course is to help the student integrate their knowledge from various basic science disciplines to real-world clinical issues related to the role of nutrition in disease pathogenesis, management and prevention across various animal species. Common nutrition and metabolic disease of production and companion animals will be used to demonstrate various principles of disease pathogenesis from a biochemical to whole animal basis. Deficiency and toxicity diseases of all essential nutrients will be addressed. In addition, a secondary role of nutrition in disease susceptibility and recovery mediated through immunologic and physiologic processes will be highlighted. In completing the course, students will have an understanding of comparative gastrointestinal anatomy and how this influences essential nutrients required and unique nutritional disease conditions. Additionally, students will gain appreciation for clinical management of nutritional diseases from diagnosis to prevention. Course format will be lectures and case-based discussions. With the integrative approach to course content, students are required to have previous courses in biology, biochemistry and nutrition. The course can meet requirements for writing across the curriculum and satisfies 400-level course requirements for Animal Bioscience and Animal Science majors. Prerequisites for the course include B M B 211 or B M B 401, and AN SC 301 or equivalent nutrition course.

**VB SC 451 Immunotoxicology of Drugs and Chemicals (3)** An in depth discussion of the effect of xenobiotics and drugs on host immune mechanisms.

**VB SC 451 Immunotoxicology of Drugs and Chemicals (3)**

Maintaining good health is a priority for most of us, and a key element in staying healthy is a properly functioning immune system. However, we are constantly exposed to a barrage of chemicals in the environment both natural and man-made. Some of the key questions asked included: 1) do environmental chemicals affect the generation of immunity?, 2) is our environment to blame for bad health? , and 3) can natural compounds cause immunotoxicity? These questions and more will be addressed in Immunotoxicology. This course will focus primarily on the effects of chemicals in the environment but will also cover the impact of other factors such as therapeutics, recreational drugs, and dietary factors on the immune system. Immunomodulatory mechanisms will be examined at systemic, cellular and molecular levels. Discussions will include theory, principles, and methodology and key issues in immunotoxicity, host immune mechanisms, and tumorigenesis. Key issues in regulatory immunotoxicology will be discussed to make students prepared for jobs in Federal Regulatory Agencies. Grading for undergraduates will include midterm and finals, and class participation; while graduate students will be required to also write a short, immunotoxicologically-related research proposal. Our intent is to provide a bridge between the two sciences and the undergraduate majors of Immunology and Toxicology, with an introduction to the basic mechanisms by which environmental, occupational, and therapeutic agents may interfere with immunologic systems. Immunotoxicology is offered every fall semester and is designed for undergraduate students from toxicology, immunology, and forensic science majors.

**WILDL 103** Animal Identification (4) Identification of mammals, birds, reptiles, and amphibians; introduction to their life histories.

### WILDL 103 Animal Identification (4)

This course provides a broad exploration of the amphibians, reptiles, mammals and birds that occur in Pennsylvania. In particular, it investigates the identification of and natural history of over 300 species common to Pennsylvania and the Northeast United States. Students will learn specific field marks to identify species along with natural history including scientific names, upper level taxonomy, habitat, diet and reproduction. Students will be able to identify species in the field and will have a base knowledge of natural history of those species. Identification skills and knowledge of natural history are critical skills to managing wildlife.

## **Wildlife and Fisheries Science (W F S)**

**W F S 209** (GN) Wildlife and Fisheries Conservation (3) Survey of current and historical issues in wildlife and fisheries conservation; emphasis on vertebrate biodiversity, habitat management and protection, and populations.

#### **W F S 209 Wildlife and Fisheries Conservation (3)**

The conservation and management of our natural resources is critical to all aspects of human existence. Wildlife and fishery resources are integral to our food supplies, the quality of our lands, and form a deep foundation of our culture. This course will introduce students to fisheries and wildlife and basic ecological principles as they relate both to the natural and human-influenced environment. It is open to all students with a basic background in biology. Students will learn to identify and understand the interacting components of wildlife and fisheries systems and to apply basic ecological principles to current wildlife and fisheries management and environmental issues. The course will explore the basic tools, practices, and concepts used in the conservation and management of fish, wildlife, and their respective habitats. The course will also explore the human dimensions aspects of managing common property resources, like fish and wildlife, including the roles various stakeholders have in the management of these resources.

**W F S 300** The Vertebrates (2) Overview of the evolution, systematics, ecology, and behavior of the subphylum vertebrata.

**W F S 300 The Vertebrates (2)**

The purpose of this course is to introduce students to vertebrate zoology and will include overviews of vertebrate evolution, systematics, anatomy, physiology, ecology, and behavior. The course will begin by introducing the phylum Chordata. The cephalochordata, amphioxus (*Branchiostoma lanceolatum*), will be discussed and used as a model of a prevertebrate. The basic organization and theories of vertebrate evolution will be reviewed. The superclasses, Agnatha and Gnathostomata, will be introduced. The origin of each of the major group of vertebrates will be traced. The general approach will be phylogenetic and include discussions of the major changes associated with each group's evolution and selected elements of their extant diversity and biology.

**W F S 301** Vertebrate Laboratory (2) Overview of the anatomy, identification, collection, and preservation of the vertebrates.

**W F S 301 Vertebrate Laboratory (2)**

The purposes of this course are to introduce students to the anatomy of the vertebrates and to expose students to the diversity of vertebrates that reside in Pennsylvania. Students will dissect and learn the anatomy of the dogfish, frog, and cat or mink. Additional laboratory periods will concentrate on collecting/observing, and identifying fish, amphibians, reptiles, birds, and mammals. Museum curation techniques will be taught, and students will be required to construct dichotomous keys to specimens that inhabit Pennsylvania. The identification part of the course is meant to introduce students to representatives of the taxa that occur within the Commonwealth in preparation for higher-level courses in ichthyology, herpetology, ornithology, or mammalogy. Collection techniques will emphasize the proper collection and preservation of organisms for natural history museums.

**W F S 406 Ornithology Laboratory (2)** Laboratory and field identification of Pennsylvania birds, avian ecology and behavior, field survey techniques.

**W F S 406 Ornithology Laboratory (2)**

Ornithology Laboratory establishes the basic skills for identifying bird species in the field. This laboratory and field course is open to students with some background in wildlife and should be taken after completing or at the same time as the ornithology lecture course. The objectives of this course are for students to use laboratory specimens, identification software, field guides, and instructor-led field trips to 1) define, locate, and recognize anatomical features used to describe birds and characterize families; 2) recognize and identify approximately 160 species of birds by sight and approximately 60 by song in the field and/or lab; and 3) describe habitat, seasonal abundance, and distribution of bird species within the state. Most weeks include an introductory lecture followed by field instruction.

**W F S 409 Mammalogy Laboratory (2)** Laboratory and field identification of mammals, ecology and behavior of mammals, field survey techniques.

### **W F S 409 Mammalogy Laboratory (2)**

Mammalogy Laboratory provides the necessary skills for identifying North American mammals. Taken concurrently with or after completing the mammalogy lecture course, this laboratory and field course is open to students with some background in wildlife. The objectives of this course are for students to 1) identify North American mammals by skulls and skins, 2) identify eastern North American mammals by tracks in the field, 3) capture and measure small mammals, and 4) gain an understanding of the characteristic behavior and ecology of North American mammals. Fields skills include animal handling, tracking, and observation. Additional skills may include skin and skull preparation and museum techniques for the care of mammals.

**W F S 430 (FOR 430) Conservation Biology (3)** The application of biological principles to issues in the conservation of biodiversity.

### **W F S (FOR) 430 Conservation Biology (3)**

This course applies basic principles of ecology and genetics to issues regarding the conservation forested ecosystems and their associated fisheries and wildlife. The objective of this course is to provide a broad appreciation of the concepts in conservation biology that are important to solving contemporary natural resources problems. Students will be exposed to the history of conservation biology, values of biodiversity, definitions of species concepts, protecting the genetic structure of species, extinction as a natural process, vulnerability to extinction, biodiversity at the community, ecosystem, and landscape levels, habitat fragmentation, metapopulations, legal aspects of conservation, ecosystem management, exotic species, pollution, human population issues, measuring genetic diversity, attitudes towards nature, ex-situ conservation, and ecosystem restoration.

**W F S 435** (E R M 435) Limnology (3) Biogeochemistry and natural history of freshwater ecosystems.

### **W F S (E R M) 435 Limnology (3)**

This course will define and describe major principles (physical, chemical, biological, and ecological) that govern the structure and function of freshwater ecosystems (ponds, lakes, and rivers). Current scientific literature will be critically reviewed and discussed in relation to comparative philosophy, methodology, and case studies that cover a range of topics in limnology. The objectives of E R M (W F S) 435 are to familiarize students with the major physical properties, chemical cycles, taxonomic groups of organisms, and ecological interactions that define and describe the natural function of aquatic ecosystems. The course will use case studies to illustrate and examine pertinent issues (e.g., excessive material loading, introduction to exotic species, habitat fragmentation, and climate change) that can alter the structure and function of aquatic ecosystems. Knowledge of these basic ecosystem principles will be applied towards formulating real-life resolutions to the issues identified in class, in order to better manage aquatic resources (methods to reduce material loads, transport controls of exotic species, habitat restoration, and reduction of global gases). This course will be useful to both undergraduate and graduate students seeking degrees in Environmental Resource Management, Wildlife and Fisheries Science, Ecology, and other related subjects. At the undergraduate level, the course will serve as a 400-level selection in both the Environmental Resource Management and Wildlife and Fisheries Science degree programs. At the graduate level, the course will complement several Wildlife and Fisheries courses that form the compliment of that degree program. Moreover, the course can satisfy the course requirement for ecosystems ecology in the inter-college Ecology graduate program and serve as a breadth course in Water Resources for graduate students in the Watershed Stewardship program.

Prerequisite: BIOL 110BIOL 220WCHEM 110

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**W F S 436** (E R M 436) Limnological Methods (3) Application of current methodologies to evaluate the biological, chemical, and physical characteristics of aquatic ecosystems.

### **W F S (E R M) 436 Limnological Methods (3)**

Limnological Methods will instruct students to apply state of the art analytical measurements in order to gain an understanding of how and why ecosystems support specific biodiversity and biogeochemical cycles. The course will help students define key ecological elements (e.g., ecosystem metabolism, resource limitation, predator-prey relations) in both qualitative and quantitative terms, thereby making them tangible, tractable, and readily understandable. The course will use an instructional rubric to integrate conceptual, analytical, and communicative exercises in order to instruct students about how to evaluate variation in natural ecosystems.

This course provides experiential training in the scientific process (rubric), so students can learn by doing, thereby internalizing their knowledge. Course content is organized into three 5-week sections, each of which will emphasize one component of the biogeochemical cycle (physical, chemical, biological). In each section, students will carry out a focused group study designed to evaluate how a pertinent environmental perturbation can affect that component of the aquatic biogeochemical cycle. The course content in each five-week block will have students: 1) review the experimental design and hypothesis, 2) implement the experimental design in the field or laboratory, 3 and 4) process and analyze samples in the laboratory, and 5) make statistical and graphical evaluations of the experimental results relative to their hypothesis (in class) and present these findings in written form. Knowledge of these basic ecosystem principles will be applied towards formulating real-life solutions to the issues identified in class, in order to better manage aquatic ecosystems.

This course will be useful to undergraduate students seeking degrees in Environmental Resource Management and Wildlife and Fisheries Science, as well as graduate students pursuing degrees in Ecology, Forest Science, Wildlife and Fisheries Science, Watershed Stewardship, and other related subjects. At the undergraduate level, the course will serve as a 400-level elective in Environmental Resource Management degree program, Wildlife and Fisheries Science degree program, and the inter-college Marine Science option. At the graduate level, the course will complement several Forest Science and Wildlife and Fisheries courses. Moreover, the course can also satisfy the requirements for the ecosystems ecology focus in the inter-college Ecology graduate program. Grades will be based on three research papers, and a final laboratory practical.

**W F S 440** Natural Resources Public Relations (3) The course prepares students to integrate public relations concepts with

principles of natural resources management at the community level.

**W F S 440 Natural Resources Public Relations (3)**

This course will bring together the elements of previous courses in speech, writing, resource management, and policy to enable the student to present concepts and ideas to the public about management options. The course introduces the student to techniques used in conducting public relations activities as natural resources professional or as a representative of a natural resources agency or NGO. The course will emphasize current topics of sustainability, stewardship, ecosystem management, and conservation, all of which involve integration of ecological, economic and institutional concerns with a strong focus on effectively communicating with citizens at a local community level.

Professional presentations will be a major component of the class. Teams will develop a series of photographs to accompany a news feature; write a popular article; edit their peers' work; design and build a public display on a resource issue; research a current natural resources topic; develop a presentation and present their team's work to the class for evaluation.

They will learn how to develop media contacts, the aspects of hiring, supervision and interviewing for positions, work with both the electronic and print media, write a news release on a controversial topic, which will be evaluated by a professional in the field. A number of guest lecturers will be used to discuss current concerns and relate practitioner's experiences in the field. The class will focus on individual skills and team oriented projects. Students will be evaluated by their peers, professionals, and through a written mid-term and an oral final.

The course is based on a distinctive sub-discipline in natural resources management, which focuses on "information and education", typically one of five main divisions of a natural resources agency or organization. The central theme of the class is to bring to bear many of the concepts and ideas from a variety of previous classes to focus on the importance of public relations to the resource management field.

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**W F S 450 (E R M 450) Wetland Conservation (3)** Wetland types, classification, functions and values; hydrology, soils, and plants; introduction to wetland identification and delineation; wetland regulations.

**W F S (E R M) 450 Wetland Conservation (3)**

Wetlands are unique ecosystems, differing in many ways from both terrestrial and aquatic environments. They provide recognized values and functions to society, although these values and functions remain difficult to quantify. The study of wetlands is interdisciplinary, requiring background knowledge in science, management and policy disciplines. This course will explore the variety of wetland types and functions, and emphasize the diverse hydrological, biological, chemical, and physical interactions that occur within wetlands. Because wetlands are recognized as valuable assets in the landscape, issues surrounding wetland management and regulation have taken on increased importance; we will address these issues as well. Topics will also include the restoration of degraded wetlands and wetland creation, along with the construction of wetlands for pollution abatement.

Students will become familiar with different wetland types and how they are classified, and will develop skills in understanding the interactions between wetland hydrology, hydric soils and hydrophytic vegetation. They will also develop

an understanding of important national and state policies and regulations pertaining to wetlands and their protection and delineation. Classroom assessment will be based on three cumulative exams, homework assignments, and a final project.

The course will fulfill 3 credits of electives or technical selections in the Wildlife and Fisheries Science major. Other students university-wide may be interested in the course, and the intention is to develop a course that is accessible to a wide variety of traditional and non-traditional students. For proper instruction, a technology classroom with computer projection equipment will be required.

**W F S 454** Field Ichthyology (2) Introduction to collection and field identification of the fishes of Pennsylvania.

### **W F S 454 Field Ichthyology (2)**

This course is designed familiarize students with collection, observation, and field identification of Pennsylvania's fish fauna. Students are taught how to collect, preserve, catalog, curate, and observe fishes. Additionally, they are taught how to gather pertinent in situ behavioral and distributional information on fishes and how to manage, record, and store field data. With the increasing emphasis on biodiversity and environmental monitoring, students need to be able to collect, manage, and store data as well as secure the chain of custody.

This course is offered annually at the end of spring semester at the Tom Ridge Environmental Center in Erie, PA. Classes begin Sunday night at 1800 and extend until 1700 on Friday. After the three-hour introductory class, students meet each day at the Tom Ridge Environmental Center at 0700. Field collections/observations begin promptly, and end about 1700. Students reassemble in the laboratory at 1830 for a two-hour discussion of the day's activities. On one day, a series of night collections is made that extends until midnight. Students are responsible for their motel and food expenses during the week. All transportation to and from the collection sites is provided.

**W F S 463W** Fishery Management (3) Management of sport and commercial fisheries, including biological, political, social, and economic factors; regulations and other management techniques.

**W F S 463W Fishery Management (3)**

This course will introduce students to the management of recreational and commercial fisheries. The course emphasizes fishery management as a goal-oriented process that adapts over time to changes in fish populations and societal goals. Students will learn to recognize and understand that ecological, economic, political, and social forces shape this management process. Major methods of fisheries management involving people, population, and habitat management will be surveyed. Case studies highlighting the application of these management strategies to current fishery management are explored. Writing reports and management plans is emphasized.

**WMNST 008 (GH) (PHIL 008) Philosophy and Feminism (3)** Explores diverse feminist philosophies of culture and knowledge, and examines gender's role in accounts of reality, truth, morality, and justice.

**WMNST (PHIL) 008 Philosophy and Feminism (3)  
(GH)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course familiarizes students with concepts and problems of feminist philosophies. It seeks to examine the feminist critique of theories of knowledge and power, as well as the cultural, political, and linguistic implications of this critique. Students will be expected to evaluate existing epistemological assumptions, social organization, the character of power, and language from the vantage of contemporary feminism and its historical context. Students will be graded on participation, case study analyses, a group presentation and response, and a final paper. WMNST/PHIL 008 satisfies the GH requirement and is geared towards non-Philosophy majors. It may be used to fulfill the minor requirement in philosophy.

**WMNST 083S (GH;US;IL) First-Year Seminar in Women's Studies (3)** Critical approaches to the dimensions and directions in Women's Studies.

**WMNST 083S First-Year Seminar in Women's Studies (3)  
(GH;FYS;US;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Through the reading of texts, discussions (in-class, study groups, listservs), debates, and collaborative research projects, students are introduced:

- (a) to feminist analysis of literature and/or culture
- (b) to the humanities and to the nature of research and scholarship
- (c) to the concepts of interdisciplinary vs. multidisciplinary research and scholarship
- (d) to cross-cultural issues (international)
- (e) to scholarly conduct and responsibilities

Students develop international competence by cultivating curiosity about and empathy for other cultures; by recognizing that social variables such as gender, age, social class, religion, ethnicity, race, sexual orientation, and place of residence affect the way people view the world, behave, and communicate; and by developing the ability to locate, organize, and evaluate information about the culture(s) from a variety of sources (print, electronic, people, and personal observations). The points of departure for the development of all of these competencies are literary and cultural texts from international women writers and artists. Students will be evaluated through class discussions, writing projects, and collaborative group projects. This course will prepare the students for other courses in the humanities by giving them the opportunity to gain insights into the study of the humanities through literary and cultural texts.

In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them, including the opportunity to develop relationships with faculty and other students who share their academic interests.

This course fulfills the first-year seminar requirement as well as one of the humanities requirements in general education or a Bachelor of Arts humanities requirement.

**WMNST 100 (GS;US;IL) Introduction to Women's and Gender Studies (3)** Interdisciplinary consideration of the scholarly

theories and research pertaining to women's experiences and women's status in contemporary American society.

**WMNST 100 Introduction to Women's and Gender Studies (3)**  
(GS;US;IL)

**(BA) This course meets the Bachelor of Arts degree requirements.**

This is an introductory survey course that fulfills general education requirements in social sciences and international and intercultural competence. The course is also a prerequisite for upper-level women's studies courses. Women's Studies 001 focuses on women's shared and unshared experiences, issues of gender roles and stereotyping, questions related to sex/gender systems, and the different disciplinary approaches to the study of women and gender. The course asks how women's behavior, activities, accomplishments, roles, sexuality and status have been shaped by biological, psychological, sociological, cultural, historical and political determinants, as well as by women's experiences based on their racial, class and sexual identities.

Topics studied may include the history of women's liberation movements, women's experiences in home, work and educational settings, gender roles and stereotyping as influenced by media, culture, education, and other social institutions, health and body image issues, and multiple forms of oppression. The course will focus primarily on the US, but will include information from non-Western cultures as well. Women's Studies 001 is therefore both interdisciplinary (drawing information and readings from history, psychology, sociology, as well as from literature and the natural sciences) and broadly inclusive (addressing at all times the relationship between gender, race, class, ethnicity and sexual orientation).

Depending on location, class meetings may be a mixture of lectures, group discussions, individual and group exercises, films and guest speakers. Assigned readings and class meetings may be designed to help students reassess predominant modes of thought and to give students tools to analyze the interactions of power in our society. Depending upon the location, evaluation methods will include a balanced selection from among short papers, longer research papers, journals, book reviews, quizzes, exams, group assignments or other creative activities.

**WMNST (AAA S) 101 African American Women (3)**  
(GH;US)

**(BA) This course meets the Bachelor of Arts degree requirements.**

The African American Woman is a survey course that examines how historic milieu has shaped the African American woman's experiences. The sociological, historical, and political experiences of African American women, their roles and contributions to society are covered in the course. This course is designed to cover the cultural, political, and economic experiences of African American women such as Sojourner Truth and Ida B. Wells to bell hooks. It also examines issues and experiences from the plantation to contemporary times. Students will be required to do written assignments, collaboration on group projects and will be engaged in discussion. The course is designed to encourage students to develop the capacity to pursue research for a paper and for oral reports. The course will require each student to conduct research for a group project and written and oral reports on the class reading assignments. These requirements will enhance the student's public speaking skills.

**WMNST 102 (GH;IL) (AF AM 102) Women of Color: Cross-Cultural Perspective (3)** Global examination of value systems of women of color; attention to minority ethnic groups in the United States and developing countries.

**WMNST (AAA S) 102 Women of Color: Cross-Cultural Perspectives (3)  
(GH;IL)**

Women of Color: Cross Cultural Perspectives is a survey course that examines the similarities and differences of various cultures and the influences that mainstream America has on these cultures. Stereotypes, perceptions, the media, and male influences are also examined. Students will be encouraged to identify contributions made to mainstream America by women representing these cultures. Students will also be required to submit written assignments, participate in group discussions and attend on-campus events relevant to the course. The course is designed to enhance students critical thinking, writing, and speaking skills. This course can be used to fulfill supporting courses and related areas in the Women's Studies and Africana and African American Studies majors and minors. Non majors may use this course to fulfill a general education humanities requirement.

**WMNST 103 (US) (AF AM 103, SOC 103) Racism and Sexism (3)** Critical analysis of the structure of race and gender inequality in the contemporary United States.

**WMNST (AAA S/SOC) 103 Racism and Sexism (3)  
(US)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course focuses on racism and sexism through a critical analysis of race and gender equality/inequality. A primary objective of this course is to provide students with information and conceptual tools necessary for understanding the structure and composition of race and gender inequality in the United States today. The focus on both racism and sexism provides a perspective that is quite different from those of courses that deal with race or sex alone. Racism and sexism have much in common that suggests their combined study. The course examines the way in which these processes are socially constructed and defined and how these constructions and definitions are experienced in daily life at an individual level and societal level. The course also examines how social control dependent on power, privilege, and advantage continues to perpetuate sexism and racism. This understanding is fundamental to considering the ways in which society and its individual members may motivate social change that enhances equality. Other objectives include developing an appreciation of the commonalities and differences among women and among men and women of diverse ethnic groups in terms of their real-life experiences with these processes; expanding the ability to read and/or view critically information/misinformation encountered in everyday life; enhancing the capacity to express knowledge and perspectives both orally and in writing. In addition, each student comes to the class with personal objectives that the instructor attempts to ascertain and incorporate. A common foundation of knowledge is established through consideration of current statistical data and academic research studies, as well as essays and novels based on subjective thought and experience. Also included are historical documents that have influenced the social and legal status of women and of men and women of color throughout our country's history. Videos and the media are supplementary sources. Students are encouraged to be alert to relevant current events and be prepared to discuss them from a critical perspective. The format of the class is informal, emphasizing group participation and responsibility. Grades are based on the evaluation of short papers on the readings, relevant events, and contemporary culture; class participation; a book report; and a final project or take-home exam. AAA S/WMNST/SOC 103 is a supporting course for both the women's studies and sociology majors and minors and the African and African American Studies major. It is an additional course for the African and African American Studies minor. The course also meets the requirement for 3 credits on the topic of women of color for the women's studies major and the minor.

**WMNST 104 (GH;US) (AM ST 104) Women and the American Experience (3)** Selected aspects of the role of women in United States history and culture from colonial to modern times.

**WMNST (AM ST) 104 Women and the American Experience (3)  
(GH;US)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

WMNST/AM ST 104 is a broad-ranging introduction to women in American culture. While specific topics may vary from class to class, the course examines the history and literature of American women, paying particular attention to issues of race and diversity. Students will be evaluated on essay tests, papers, journal entries, and attendance. The course offers

students valuable experience in critical thinking, analysis, and writing. The course offers students a broad introduction to American women's issues, and so serves as preparation for more advanced courses in American studies, American literature, American women's history, and Women's studies.

WMNST/AM ST 104 counts towards the American Studies major and minor and the Women's Studies major and minor. Non-American Studies majors and minors may use this course to fulfill a general education humanities (GH) or Bachelor of Arts humanities credit requirements.

**WMNST 105 (GS;US) Living in a Diverse World (3)** Critical perspectives on the relationship between social difference and power, emphasizing gender, race, sexuality, class, and disability.

**WMNST 105 Living in a Diverse World (3)  
(GS;US)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course uses literature, film and scholarly texts to inspire students to explore how conceptions of social difference, such as those linked to categories of gender, race, sexuality, class and disability, shape society and everyday interactions historically and today. The course takes an intersectional perspective to explore how and why these categories vary over time and space, the effects of such variations for individuals and communities, and the connections between identity and the exercise of power. Geographically, the course emphasizes the relationship between social difference and power in the U.S. history and society, but takes a transnational perspective when possible by making comparisons to contexts beyond the United States. Furthermore, the class examines how individuals and communities most directly marginalized by these processes contest and re-imagine dominant categories and assumptions. Materials and discussions in the class trace broad social and historical trends as well as dive into the mosaic of everyday life. The class is designed to encourage reflection on the ethical challenges that arise when we become aware of how privilege, power and difference are intertwined in our world and daily lives.

**WMNST 106 (GH;US;IL) Representing Women and Gender in Literature, Art and Popular Cultures (3)** Interdisciplinary consideration of primary works and scholarship pertaining to women in the humanities and the arts.

**WMNST 106 Representing Women and Gender in Literature, Art and Popular Cultures (3)  
(GH;US;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This is an introductory survey course that fulfills general education requirements in humanities and international and intercultural competence. The course is also a prerequisite for upper level women's studies courses. Women's Studies 003 examines the experiences, achievements and status of women in the humanities and the arts. The course provides a broad interdisciplinary overview of scholarly research and theory pertaining to women and gender. Students acquire an expanded framework for responding to the humanities and integrating knowledge from other courses in the humanities and the arts.

Topics studied may include the creation of patriarchy, international women's movements in the 19th and 20th centuries, cross-cultural examinations of women's religious roles, women's spirituality and religious expression, and an overview of women in literature and in elite, popular and folk arts. Other topics may include religious witch-hunts of the 16th and 17th centuries (as the expression of misogyny and ethnic bias), and developing an appreciation for aesthetic objects from various media and ethnic origins (such as Pueblo pottery, Amish quilts, Black sculpture, Hispanic painting, Appalachian music, Jewish poetry, Chinese American fiction).

The course will focus primarily upon the United States with concerted diligence to include examples of work made by a wide diversity of aesthetically creative women differing by race, class, ethnicity, national origin and sexual orientation. Women's Studies 003 is therefore both interdisciplinary (drawing information and readings from literature and languages; art history, popular and folk arts; religion and philosophy; history, psychology, sociology) and broadly inclusive (addressing at all times the relationships among gender and class, ethnicity, national origin and sexual orientation).

Depending on the location teaching the course, class meetings may be a mixture of lectures, group discussions, individual and group exercises, films, and guest speakers. Assigned readings and class meetings may be designed to help students reassess predominant modes of thought and to give students tools to appreciate the creative work of highly diverse

women. Depending again upon location, evaluation methods will include a balanced selection from among short papers, longer research papers, journals, book reviews, quizzes, exams, group assignments and other creative activities.

**WMNST 110 (GS;US) (SOC 110) Sociology of Gender (3)** Changing sex role expectations and behavior for men and women in contemporary society.

**WMNST (SOC) 110 Sociology of Gender (3)**  
**(GS;US)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course provides an introduction to the analysis and understanding of how men's and women's lives are different and how they intersect with each other. The course focuses on the social construction of gender and the impact of gender on experiences in a variety of social contexts and institutions throughout the life course, including cross-cultural comparisons of gender expectations. An overriding objective is to help students better assess and analyze the effects of gender throughout history and in their everyday lives.

Class sessions are a mixture of lectures, discussions, group exercises, guest speakers, and films designed to engage the students in the learning process. Each session helps students to critically evaluate the effects of gender discussed in their readings and experienced in their everyday lives. The evaluation tools used for this course extend this critical evaluation. Although the specific evaluation methods vary by sections, all sections use some form of reaction papers, book reviews, and/or journals. These writing assignments require students to demonstrate an understanding of the class readings, lectures, and activities, and to offer an evaluation and assessment of these readings and presentations. Because the social construction of gender is intertwined with family, work, religion, education, government, and all interpersonal interaction, the course overlaps with courses in each of these areas.

This course meets a General Education requirement in Social and Behavioral Sciences. It can be used as a lower-level sociology course in the Sociology BA major and the Sociology minor. It can also be used as a supporting course in the Women's Studies major and minor.

**(GH;US;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

History/Women's Studies 117 is an introductory survey of women in the United States and possibly elsewhere, from the seventeenth to the late twentieth century. The course examines women's history from several different perspectives. First, it introduces students to the methods, sources, and questions of the past thirty years of women's history-writing, and asks students how studying women transforms our understanding of history more generally. Second, it offers a survey of the narrative of modern women's history, stressing women's interactions with the larger processes of economic and political change, their relationship to changing ideologies of gender and feminism, and their complex identities not only as women but as members of a particular race, class, ethnic, and religious group. Throughout, students will ask when gender, and when some other aspect of women's lives and identities, is most salient in identifying the restrictions and

opportunities they faced. Third, students will assume the perspective of historians themselves, as they examine primary sources and attempt to make analytic and historical judgments about what they say and why they matter to the larger narrative. Through significant essay-writing assignments, students will develop analytical and writing skills in learning to think historically about women. Questions about race, class, ethnicity, and sexual orientation, as well as gender, are intrinsic to this course. Students will be evaluated based on their class participation, papers, and final exam. This course is cross-listed in History and Women's Studies and fulfills requirements for both programs' majors and minors. HIST/WMNST 117 will be accepted, but not required, for the History Major, the Women's Studies Major, and the Women's Studies Minor.

**WMNST (L I R) 136 Race, Gender, and Employment (3) (US)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

To accomplish the goals of the course, students will participate in a variety of in-class and out-of-class exercises designed to expose them to issues of inequality generally, and more specifically, to inequalities relating to employment. Activities are designed to connect real world experiences to class readings and discussion. For example, students may be asked to conduct their own job evaluation in conjunction with a reading on gender bias in job evaluation systems. The course also relies heavily on student participation via the reporting of the results of their activities, and in discussion of assigned readings. A semester-long group project will enable students to focus their interests and become experts in one sub-area. Group projects include a collaboratively written paper as well as a class presentation designed to inform the class about a topic previously not covered through class readings, discussions, or lectures.

**WMNST 137 (GH;US;IL) (RL ST 137, J ST 137) Women and Religion (3)** Jewish and Christian religious views on womanhood; thought and lives of important religious women; and feminist understandings of these.

**WMNST (J ST/RL ST) 137 Women and Religion (3) (GH;US;IL)**

Women and Religion examines the historical and contemporary role of women in society and in religion, how those roles are shaped by religious doctrines around leadership, ritual, language, and the valuation of women's experience and history, and the diversity of women's voices speaking to these issues.

An historical inquiry begins with a review of early goddess-based religion and an examination of gender roles promoted in selected creation narratives, including those from Genesis. Additional biblical and non-canonical texts are studied for their various characterizations of woman, the influence of marital status, and her place in the public and private spheres. Historical debates about women consider what roles women played in leadership structures, in religious ceremonies and in the creation of a theological tradition as well as the places women created for themselves outside "official" institutional churches or the formalities of worship.

We study prominent women in biblical history, the early church, the medieval past, and in modern American history. What are their stories and what noteworthy contributions did they make in the history of religion? What do we know of their lives and thought?

Furthermore, the course addresses contemporary issues of importance to women and how those issues are resolved from the multiple perspectives within Judaism and Christianity. Such issues may include dating, marriage, family and divorce; spousal and gender relations; reproductive rights; homosexuality; sexual violence toward women; work outside the home; and religious leadership and inclusion.

Finally, the course examines women's diverse understandings of the ways of being religious. Women are not a homogeneous group and are responding in a multitude of ways to the decisions they face about staying within or working outside established institutions. We consider their choices, from redefining and recreating new traditions and rituals, both within and outside formal worship settings, to returning to goddess worship and other innovations inspired by the most recent feminist movement.

All topics are discussed in light of the different beliefs and understandings across the movements within Judaism as well as within Roman Catholicism and the many Protestant denominations. In addition, the diversity of scholarly interpretation is emphasized, including that offered by feminist theologians and the breadth of women's experience arising from factors of race, ethnicity, sexual orientation, and class and educational background.

**WMNST 157 (US) (S T S 157) Science, Technology, and Gender (3)** The role of women and gender in science, technology, and engineering.

**WMNST (S T S) 157 Science, Technology, and Gender (3)**  
**(GS;US)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

S T S/WMST 157 examines the role of gender in science, engineering, and technology. The course offers a broad interdisciplinary overview of scholarly research and theory pertaining to women and issues of gender in science, engineering, and technology. The course is interdisciplinary (drawing materials from the natural and social sciences) and cross-cultural (taking a comparative approach to western and non-western sciences and technologies), and it examines the ways that different beliefs and practices related to gender have shaped the practice of science in different times and places. Students study great women scientists and also barriers institutional and ideological - that women have had to overcome in order to participate in science, asking how the presence and absence of women have affected those studies. Students will be graded by several quizzes and two short exams during the semester. To evaluate progress in developing critical thinking skills, the students will be required to write a response journal and/or response papers to major topic areas during the semester. Also, one individual or group presentation will be required. These instruments enable the instructor to assess students' acquisition of knowledge relevant to the general objectives of General Education.

**WMNST 194 (GH;US;IL) (ENGL 194) Women Writers (3)** Short stories, novels, poetry, drama, and essays by British, American, and other English-speaking women writers.

**WMNST (ENGL) 194 Women Writers (3)**  
**(GH;US;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

English 194 will constitute a wide ranging study of works by American, British, and other English-speaking women writers, including novels, short stories, poems, plays, and prose. The class will approach this literature from a variety of thematic, historical, and/or generic vantages. Authors under consideration will vary from class to class, but may include writers such as Bradstreet, Wollstonecraft, C. Rosefti, M. Shelley, Austen, C. Bronte, E. Bronte, G. Eliot, D. Wordsworth, Dickinson, Wharton, Stowe, Freeman, Jewett, Fuller, H.D., Moore, Sitwell, Bishop, Brooks, Plath, Cather, Woolf, Stein, Lessing, Bowen, O'Connor, Welty, Porter, Oates, Olsen, Sartre, Gordimer, Atwood, Morrison, Kinkaid, McCarthy, and Churchill. The course seeks to make students aware of the extensive body of literature written by women through the analysis, evaluation, and appreciation of specific works by women writers. The course also seeks to help students understand the female perspectives-the varying values and interests of women--reflected in the texts at hand and to position these perspectives within wider social, historical, and political contexts. The course also seeks to make students aware of the special problems faced by both women writers and the female inhabitants of the societies they describe in their work. As a course in women's literature, Engl/Wmnst 194 concerns itself with questions of gender. In so far as some of these women writers are black or women of color, it concerns itself with questions of race and ethnicity. In as far as the course looks at women's literature in the context of men's literature, it is concerned with the inter-relationship between dominant (male)

and non-dominant (female) culture in the United States as well as in Britain. In so far as the course covers lesbian writers, it is concerned with sexual orientation. Topics under consideration will vary from class to class, but may include a chronological introduction to the development of women's literature, a consideration of a principle theme or themes common to women's literature through a number of works from across a number of historical periods, a consideration of a number of women's works in the context of historical events central to their creation, a consideration of a number of women's works in the context of formal or aesthetic elements common to those works and their various effects. Time allotted for the study of the works under consideration will vary. This class will prepare students for advanced courses in women's literature as well as other academic courses that engage in the verbal and written analysis of complex written texts. Students will be evaluated by means of essays written in and out of class, essay exams, term-long reading journals, and class participation. Students should expect to complete a minimum of three written assignments in the course of the term. The course may be used as English Major elective credit or as credit towards the English Minor.

**WMNST 200** (GS;IL) Global Feminisms (3) This course examines the diverse contents and forms of "feminism" worldwide, emphasizing women's engagement with unequal, unjust, impacts of globalization.

### **WMNST 200 Global Feminisms (3) (GS;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course introduces students to the complexity of feminisms in the context of contemporary globalization. Much of the course focuses on the variety of feminist movement transnationally, particularly as those movements respond to not only local culture and politics, but also to global politics, and as such it touches again and again on the history of power. Explorations of the interanimating systems of power in a given area or region includes attention to ideologies of gender, race, sexuality, colonialism, imperialism, health and welfare, any or all of which are either supported or disrupted by globalism.

The course holds a feminist lens to issues such as: gender and sexualities; the politics of the body; ongoing effects of colonialism—in theory and practice—on women worldwide; women's health; women and the environment; women's labor; political economy; transnational migrations; global class relations; women and/in the media; violence against women; women and war; the global sex/human trafficking trades; silence and marginalization; citizenship politics; women in politics and activism around the globe.

The course examines contemporary feminist theory the so-called First World and or so-called Third World, highlighting the ways in which the term "feminism" continues to be contested. Given that we no longer talk about "feminism" in the singular in the United States, lack of agreement on the priorities of feminists worldwide is even more acute, given diverse cultural, political and economic positions of women around the globe. Thus the course also asks students to resist the kinds of generalizations that have led to inadequate feminist response to urgent challenges faced by women around the world. At the same time, the course will ask what kinds of connections can be made between local feminisms, and transnational feminist movement.

**WMNST 202 (GS;IL) (AFR 202) Gender Dynamics in Africa (3)** Critical analysis of multidisciplinary research on relations between men and women in Africa and critique of Western feminist theories.

**WMNST (AAA S) 202 Gender Dynamics in Africa (3)**  
**(GS;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

In terms of gender studies, western academics have dominated the field. The course will offer a very different, more African-centered, analysis of the gender relations of African. Important African women writers will be read and their works analyzed. The role of African gender dynamics on the African Diaspora (North American, South America, the Caribbean, and the Middle East) will also be studied in this course.

Feminism is one of the latest Western theoretical fashions to be applied to African societies. Following the one-size-fits all (or better still the Western-size fits all) approach to intellectual theorizing, it has taken its place in a long series of Western paradigms.

African scholars, in particular African women scholars and others, are challenging the very conceptualizations of gender that are used to define, describe or categorize women and men. This class will examine the historical relationships between men and women in Africa and examine the new approaches to the study of gender dynamics in Africa. The course will challenge your perceptions of gender. The ability to critically think and an open mind are requirements for this class. You will also be expected to participate in all class discussions.

This course represents a logical sequel to an existing course, AAA S/WMNST 102, Women in a Cross Cultural perspective; and three courses, AAA S/HIST 191, Early African History, AAA S/HIST 192, Modern African History, and WMNST 4, Global Perspectives on Feminism, which have already been approved by the Senate. This course can be used in both the African and African American Studies major and minors. Grades: map exam 10%, oral history 15%, mid term 30%, and final 45%.

**WMNST (COMM) 205 Women, Minorities, and the Media (3)**  
**(GS;US)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course is aimed at consumers of media in any form. It explores the relationship between the media and society through critical analysis of media and its role in education about and creation of social reality. Students research literature on human diversity issues in media representation. Students explore economic, political and social implications of media practice. Course content is designed to help build deeper understanding of gender, race, ethnicity, ability, sexual orientation and class diversity in media. Students explore the role of media and media literacy within the pluralistic democratic US society in the context of a diverse global society. Communication theory helps explain how media representations impact human construction of meaning in social relationships.

**WMNST (ART H/ENGL) 225 Sexuality and Modern Visual Culture (3)  
(GA;GH)**

The terms "feminist" and "homosexual" were invented by the Victorians and reflect profound shifts in conceptions of identity. Another invention of the nineteenth century was the idea of the literary and artistic "avant-garde," a minority contingent with politically and/or aesthetically advanced views. These ideas of minority culture were deeply enmeshed with one another, and have exerted profound influence ever since. This course explores that history with the objective of developing a more sophisticated understanding of how the history of ideas affects our sense of who we are and how we read both texts and images. The course will be relevant to students of American and English studies, art, art history, and women's and sexuality studies.

**WMNST 250 (US) (HD FS 250) Sexual Identity Over the Lifespan (3)** Concepts of affectional and sexual orientation over lifespan, with emphasis on lesbian and gay male personal, family, and community adaptation.

**WMNST (HD FS) 250 Sexual Identity over the Life Span (3)**

**(US)**

This course reviews concepts of sexual identity as informed by a human development perspective. Concepts of sexual orientation are discussed in the context of a review of lesbian, gay male, and bisexual lives. Developmental processes of lesbian and gay life are detailed: personal change from the teenage years through adulthood, changes in family and relationship patterns, and impact of communities, laws, and culture. These processes are contrasted to the developmental processes of women and men who identify themselves as heterosexual. The complex effect of gender, race, ethnicity, class status, and historical time on sexual orientation and its expression has generated ongoing controversies in scholarship as well as in public discourse. The course will be an introduction to these controversies as informed by human development research.

**WMNST (J ST;RL ST) 280 Women and Judaism (3)  
(GH;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Women and Judaism will introduce students to the roles and views of women as seen in the Jewish tradition. Because Judaism is not monolithic, these views will vary even within time periods and even among rabbis. The goal of this course, therefore, is not for students to leave the class with one idea of what a Jewish woman is or one idea of what issues are at stake for women in Judaism. Rather, the goal is for students to understand the complex relationship women have to this religion. This course will also explore the views of Jewish women and the issues that concern them in contemporary society. Objectives include the following: students will begin to understand the stereotypes that influence how Western society views Jewish women, and as a result, how they have come to view themselves. They will be asked to examine the many important roles that Jewish women have played both in their religion and the society at large. They will be asked to examine how the Jewish tradition both helped and hindered women to play these roles. They will see how Jewish women contributed to the development of their own religion and to the larger culture in which they live. They will develop a deeper appreciation for the complexity of the relationship between women and religion. Topics include images of Jewish women in the Bible and the media, women and Jewish views of sexuality, Jewish ethics, Judaism and feminism, and women and Jewish theology.

**WMNST 300** (US) (LTNST 300) Latinas in the US: Gender Culture and Society (3) This course examines the historical development, theoretical premises, and political, social, and artistic contributions of Latina feminisms in the United States.

**WMNST (LTNST) 300 Latina Feminisms (3)  
(US)**

This course examines the historical development, theoretical premises, and political, social, and artistic contributions of Latina feminisms in the United States. It shows the connections to as well as the divergences from Latin American feminism by beginning with an analysis of how the Spanish conquest, the imposition of Catholicism, and subsequent years of colonialism shaped gender and sexual identities. It examines the contemporary effects of these historical issues and inquires into the common concerns of Latin American feminists and Latina feminists. It asks how theories and practices have diverged given different geographies, both between the U.S. and Latin America and within the U.S. The course then moves to the 1960s and 1970s in the U.S., when Chicano and Puerto Rican nationalist movements also gave rise to a feminist consciousness amongst Latinas; the conjuncture of race, ethnicity, gender, and sexuality is considered, with attention to how Latinas critiqued Anglo feminism's narrow focus on gender. The next unit focuses on family formations, considering social science and feminist discourse on the issues of patriarchy. How have Latina feminists valued yet also rearticulated the traditional family? What critiques have been made against heterosexism? How have lesbians and gays formulated new kinds of families? How does migration shape family relations? The final section of the course explores how Latina artists in different genres have responded to and resisted traditional gendered and sexual roles. Literature, film, performance art, and hip hop are all examined for their diverse representations of sexual desire.

**WMNST (AF AM/ANTH) 303 Race and Gender in the Americas: Latin American and Caribbean Cultures (3)**  
**(GS;IL)**

Utilizing a theoretical framework of intersectionality this course examines how racial, gender, sexual, and class identities are constructed in Latin American/Caribbean societies. The course applies an anthropological perspective to a wide range of countries in the region to reflect on how historical events such as the conquest, colonization, slavery, and independence movements are relevant to understanding the region today, as well as how race, gender, and sexuality inform contemporary themes of empire, nation-building, imperialism, neo-colonialism, revolution, violence, militarization, social movements, religion, neoliberalism, U.S. involvement/relations, and popular culture. The course addresses issues of power, culture, racial formation, and citizenship by incorporating interdisciplinary material beyond ethnography such as newspapers, grassroots media, biographies, films, music, novels, personal testimonies, etc.

Rooted in feminist anthropological scholarship, this course emphasizes how power (from above and below) and culture mediate relationships between individual/community agency and institutions/structures. As an effort to encourage students to think about Anthropology and culture beyond superficial or romanticizing celebrations of multiculturalism, food, and music, the course stresses the theoretical importance of situating power and privilege amidst difference. We conceptualize culture not only as socially transmitted patterns of behavior and ideas/meanings, but as a complex and dynamic process/medium grounded in unequal relations in which power is constituted and resisted. The ethnographic emphasis of the course centers on the complex lived realities and voices of people, encouraging students to learn, understand, and respect cultural difference.

The course offers students a broad sense of how power is central in the production of knowledge (particularly within the disciplines of Anthropology and History). Students will critically engage an array of topical issues in Latin America beyond dichotomous thinking. Discussion of course material includes contemplating issues of ethics, subjectivity, bias, and privilege. Conversations regarding processes of 'Othering' and traditional "us vs. them" debates that often occur when discussing developing countries will prompt students to situate their own power/privilege and challenge our assumptions and preconceived notions of Latin America. Moreover, this course teaches Latin American Cultures within a global context of racialization. As such it also stresses the historical and contemporary social, economic, cultural and political significance of the U.S. in Latin America, to demonstrate how we are connected and responsible to what happens "over there."

In order to promote service learning, a core tenant of feminist pedagogy, this course also offers students the opportunity to participate in an optional embedded program entitled "Cuba: Identity, Diversity and Popular Culture". This two week course in Havana, Cuba promotes interactive learning in and outside the classroom with international study. This course component successfully combines academic classes, hands-on activities, and service learning.

**WMNST 400** (US;IL) Debates in Contemporary Feminism (3) Consideration of feminist theories of women's experience in transforming understanding, reconceptualizing old problems, raising new ones, and expanding traditional disciplines.

**WMNST 400 Feminist Theory (3)**  
**(US;IL)**

This course focuses on theoretical analyses of gender as major components of contemporary thought. It is designed to help students develop knowledge of critical texts to better analyze women's issues and comprehend the realities of women's lives, past and present. The course will relate analyses of gender to analyses of race, class, religion, ethnicity, national origin, and sexual orientation. The course addresses theoretical issues rooted in an analysis of gender, critiques theories that do not attend to such issues, and investigates the premises and implications of feminist theory. The course will continue to have a prerequisite of WMNST 301: Introduction to Feminist Thought. For the Women's Studies major, WMNST 400 will fall under the heading of Additional Courses, where students will have a choice of this course or WMNST 401: Feminist Perspectives on Research and Teaching. These are our two most general courses at the 400-level. It may also be used to fulfill a US;IL requirement.

**WMNST 401** Doing Feminism: Theory and Practice (3) Advanced analysis of feminist theory and the nature of its integration (sometimes uneasily) within feminist movements and practices.

**WMNST 401 Feminist Perspectives on Research and Teaching (3)**

The course explores current themes organizing debates and discussions within feminist discussions of teaching and research. Students will become familiar with various research perspectives that feminist researchers use including

interviews, ethnography, and action research. The course will examine debates within feminist research and teaching including power, difference, and race. Key themes will include questions around the politics of representation, the relationship of research to colonialism, the authority of the researcher, researcher-researched relations, and power/knowledge relations in research, classrooms, and knowledge production broadly defined. The aim is not to identify a feminist orthodoxy but rather: 1) to identify and understand the varieties of feminism existing today; 2) to become knowledgeable about a range of themes currently emerging in feminist debates on teaching and research; and 3) to arrive at an appreciation of the transformative effect upon teaching and research these new paradigms, debates, and themes have meant across a range of disciplinary boundaries.

### **WMNST (CED) 420 Women in Developing Countries (3) (US;IL)**

The purpose of this course is to increase understanding of women's lives in third world countries at the time when women's movements, grassroots activism, and feminism are on the rise in the third world. The course examines third world women's challenges to Western definitions of feminism and traces the theoretical shifts and practical changes related to women's issues in African, Asia, and Latin America. Students participate in studying specific community and agricultural development projects. Topics include feminist critiques of development and post-colonialism, ecofeminism and environment, sexuality and reproduction, global restructuring, and grassroots community activism. Students will be

evaluated based on class participation, two written critiques of readings, a final course project, a mid-term, and a final exam. This course will add diversity to both the rural sociology, community and economic development, and women's studies curricula. International, gender, ethnic, and racial issues are core components of the course. The course will be an elective for Women's Studies majors and minors and will serve graduate students in rural sociology, women's studies, and other fields.

**(BA) This course meets the Bachelor of Arts degree requirements.**

Until the 1970s women remained invisible in the analyses of social space: human geography was indeed just that--(hu)man. Recently, feminist geography began to challenge the implicit masculinity of the subject of geography; this

course will examine the evolution of the feminist challenge. The course addresses gendered geographies across multiple scales, such as the body, home, public space, community, nation and globe. Students explore each of these through readings and will produce a series of essays throughout the semester. As a point of entry to discussion of place, space and gender, this course explores the diverse ways in which feminists have seen space as central both to masculine power and to feminist resistance. In particular we will explore arguments from interdisciplinary paradigms, stemming from cultural, post colonial, subaltern, sexuality, gender studies and critical race theory, all of which have influenced current debates across the field of geography.

**WMNST 428 (US;IL) (PL SC 428) Gender and Politics (3)** Gender in politics in the United States and around the world; major areas of women and politics research.

**WMNST (PL SC) 428 Gender and Politics (3)**  
(US;IL)

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course is designed as an overview to the field of women and politics. It examines the role that women play in politics in the United States and around the world. Students will begin by examining how women are socialized differently from men and how that socialization effects women's political attitudes and participation. Then students will focus on women in different political offices and how their behavior compares to that of their male counterparts. Students will then analyze the women's movement in the United States. Finally, students will turn to different theories of the ideal position of women and men in politics and use those theories to explore the issue of pornography. Students will be evaluated on a final exam, short essays ( 4 3-5 page essays), class participation, and a research paper (15 pages). This is an advanced course with 6 credits prerequisite in Women's Studies or Political Science. This course fulfills the American Politics and Comparative Politics distribution as well as the advanced course requirement for the Political Science major. It is an elective for a Women's Studies major. It also fulfills an United States Cultures and International Cultures requirement.

**WMNST 439 (HIST 439, J ST 439) Women and the Holocaust (3)** Analysis of women's experience in the Holocaust and exploration of the role of gender in Holocaust Studies.

**WMNST (J ST/HIST) 439 Women and the Holocaust (3)**

Most of the early study of the Holocaust focused almost exclusively on the experiences of Jewish men. It was men who wrote the first and most widely read Holocaust memoirs and men who produced the first studies of the Holocaust.

The first question motivating this class is thus what we can learn from examining women's experiences. Is it possible that the ghetto, the camp, and the forest look different from women's perspectives? Are there factors we miss when we read primary documents written by only half of the participants in these historical events?

Beyond this, however, our exploration will also lead us to look more broadly at gender as a category of analysis. What do we gain by bringing questions of gender to bear on our study of the Holocaust? Are there any ethical concerns that should inform our approach?

In addition to working intensively on secondary sources from a variety of disciplines in our weekly discussions, students will have the opportunity to apply their insights and methods to the study of primary texts in three papers.

**WMNST 455 (US) (CAS 455) Gender Roles in Communication (3)** Explores the literature on gender research in the discipline of human communication.

**WMNST (CAS) 455 Gender Roles in Communication (3)  
(US)**

This 400-level course is a theory and application course which also satisfies an intercultural requirement. CAS/WMNST 455 strives to ensure that students understand female and male differences and similarities in communication patterns, perceptions of the opposite sex, and expectations and stereotypes regarding the opposite sex. Many researchers find that gender communication is "cross cultural," i.e., that women and men come from two different cultures, and therefore misunderstanding of each others' intent and expectations may frequently occur. This course examines how distinctions in meaning and interpersonal dynamics may create these two differing cultures, and promotes understanding and possibilities for adaptation. It also investigates when and if changing communication styles is desirable, and in which settings. A goal of the course is to help students to solve puzzles toward understanding those we work with and relate to, as well as to apply their knowledge to their own lives and contexts. The course content and format reflects these goals. CAS/WMNST 455 begins with theoretical information, later applying it to situations of interest to most -- relationships, language use differences (verbal and nonverbal), media messages, and workplace issues. Lecture incorporates considerable discussion and exploration of gender issues and most topics are followed by activities, which illustrate how theories work in real life. This course is useful for any students seeking an intercultural course. It is recommended to Communication Arts and Sciences and Women's Studies majors and minors due to emphasis on communication theory and gender issues. Business, Counseling, Psychology, Sociology, Education and any Social Science majors may fulfill a US requirement through 455. Exams are geared toward testing ability to apply theory to life. Other evaluation methods encompass short reaction papers, a book review, application paper, and team research papers and presentations. These assignments and all class exercises focus on application of theory and course content to students' lives.

**WMNST 462 (US) (ENGL 462) Reading Black, Reading Feminist (3)** Female identity and its construction in textual representations of gender, class, color, and cultural difference in English-language literatures.

**WMNST (ENGL) 462 Reading Black, Reading Feminist (3)  
(US)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

ENGL/WMNST 462 provides two important learning opportunities for undergraduate students. The first is to examine the construction of female identity in the textual representations of gender, class, color, and cultural differences by black American women. The second is to identify, explore, and analyze the major issues concerning the discovery and development of a black feminist literary tradition. Authors under consideration will vary from class to class, but may include writers such as Hortense Spillers, Harriet Jacobs, Harriet Wilson, E. Genovese, Hazel Carby, Francis Harper, J. Fauset, Nella Larsen, Zora Neale Hurston, Gwendolyn Brooks, Margaret Walker, Nikki Giovanni, Sonia Sanchez, Maya Angelou, Lorraine Hansberry, Adrienne Kennedy, E. Brown-Guillory, Toni Morrison, S. A. Williams, Alice Walker, Paula Marshall, and Octavia Butler. The course will focus on the complex relationship of slavery and post-slavery black

experience to the literary imagination of African American women, and of issues of gender in black identity in America. Topics covered will vary, but will include issues of the legacy of slavery, the development of black feminist thought, nineteenth-century conceptions of black womanhood, women's roles in the Harlem Renaissance, representations of black womanhood by male writers, and self-representation by female writers, women "Black Power" poets, black female playwrights, neo-slave narratives, the aesthetics of contemporary black feminism, and post-modernism and the challenge to understandings of canonicity posed by black women's writing, and the like. This class will prepare students for advanced courses in African American and feminist literature, as well as other academic courses that engage in the verbal and written analysis of complex written forms. Students will be evaluated by class participation, a group oral presentation, small group problem solving exercises, three out-of-class essays (of 5-8 pages each), and an in-class final examination consisting of essays and short answers. In addition to satisfying requirements for students emphasizing in African American literature within the English major, this course will be important in the offerings of African/African American Studies, American Studies, Women's Studies, and History. The course may be used as English major elective credit or as credit towards the English minor. The course can be used to complete the major and minor in Women's Studies Arts and Humanities area and it also satisfies the Women of Color (WOC) sub-requirement.

**WMNST 464 (US) (BE SC 464) Feminine/Masculine (3)** Study of sex role learning; investigating feminine/masculine labeling; implications for contemporary society.

**WMNST (BE SC) 464 Feminine and Masculine (3)  
(US)**

This course provides a critical examination of the concepts of masculinity and femininity through a consideration of how these have shifted and changed historically and cross-culturally. It considers a variety of theories of gender difference. It investigates how gender is socially constructed and practiced. Thus, it examines how gender is enacted in interpersonal relationships and defined, reinforced, and challenged through processes of socialization as well as through the various institutional spheres of social life. The course addresses the diversity of masculinities and femininities within a single society. Thus, attention is given to race and class-based differences as well as to trans-genderism and homosexuality.

**WMNST 466 (US;IL) (HIST 466) Lesbian and Gay History (3)** Critical exploration of the history of sexuality, focusing especially on the emergence of modern lesbian and gay identities.

**WMNST (HIST) 466 Lesbian and Gay History (3)  
(US;IL)**

This course will explore the relationships in different cultures and historical periods between the dominant culture and homosexuals, whom the culture deemed, at different times, sinful, deviant, criminal or, more recently, a minority community. Students will confront the very nature of difference, and how it has been played out in European and American history. The course will challenge students to deal with how societies define difference itself; how they isolate or punish deviants; and how the creation of the "homosexual" helped establish not simply difference but "normalcy" in a highly sexualized modern culture. Finally, the course will explore notions of identity itself, focusing on the creation of a modern gay and lesbian identity and its impact on broader questions of gender, community, civil rights, and political discourse in the United States.

An example of evaluation methods would be: course presented in a seminar format with grades based on class participation, brief analytical papers, and a longer research or historiographic paper.

**WMNST 471 (US) (PSYCH 479) The Psychology of Gender (3)** Theories and research on gender differences and gender roles. Emphasis on women's and men's current positions in society.

**WMNST (PSY) 471 The Psychology of Gender (3)  
(US)****(BA) This course meets the Bachelor of Arts degree requirements.**

This course examines how psychologists have addressed questions relating to gender in past and present-day research. Our goal is to understand what "gender" is, and how and when gender matters in our evaluations of ourselves and in our interactions with others. The course focuses on four themes:

- (1) When does gender matter? Gender as a system of power relations, as an aspect of personality, as a cue;
- (2) Diversity within gender categories;
- (3) Thinking critically about language and the power of naming;
- (4) Connections between psychological research and social change.

Successful completions of the course will:

- (1) give students an understanding of the major concepts, theories, and methodological issues in past and current psychological research on gender
- (2) enable students to think critically about psychology's study of gender and its implications for social policy and social change
- (3) enable students to relate their history of experience of gender to the academic literature on the topic
- (4) give students an understanding of the importance and complexity of investigating gender in the context of other dimensions of social identity, such as racial ethnicity

Course grade is based on performance on quizzes/exams (30%), homework assignments (30%), a collaborative research project (35%), and class participation (5%). This course covers the psychology of gender in greater depth than does any other undergraduate PSY course, and provides a psychological perspective on topics covered in a variety of Women's Studies courses. It complements other PSY courses that cover related topics in social and personality psychology. The course can be counted as one of the required 400-level courses for the Psychology major and for the Women's Studies major.

**WMNST 472 (LER 472) Work-Life Practices and Policies (3)** Explore the causes and consequences of conflicts between work, family, and other life commitments, and how these may be resolved.

**WMNST (L I R) 472 Work-Life Practices and Policies (3)****(BA) This course meets the Bachelor of Arts degree requirements.**

The interdisciplinary field of work-family and work-life developed as a result of middle-class women's entry into the labor force, a movement that generated conflict between family and paid work commitments. Overall, the course addresses the reasons the field developed, relevant theoretical perspectives regarding the issues, and related problems as well as proposed solutions at both the public and private sector levels. The overarching objectives of the course are to expand students' understanding of conflicts between work and family commitments, and how these might be resolved through private and public sector initiatives. Specifically, the course concerns how individuals, families, and organizations interact to help hinder the achievement of balance between work and life commitments, and relevant effects on those involved. The changing demographics of the family, laws and trends around working time, father and mother time with children, the expanded need for elder care, work-life programs such as flextime, concierge services, paid parental leave, part-time careers, paid time-off banks, and the role of unions, corporations and government legislation are covered. The course attempts to link the likely future needs of students to broader trends in society and how balance could be achieved at the level of individuals, families, other stakeholders in the community, and for society as well. Fields of research relevant to the course include labor studies, women's studies, Industrial/Organizational psychology, the sociology of work and of family, and child development.

**WMNST 489 (ENGL 489) British Women Writers (3)** A study of selected British women writers.

**WMNST (ENGL) 489 British Women Writers (3)**

This course provides the opportunity to study writing by British Women from a historical perspective and to explore the views these women have of themselves as artists. The course will concentrate on a careful reading of works by a variety of authors. It will address the question of the role gender plays in the selection of literary forms and the development of character, theme, symbols, and rhetorical strategies. It will also explore what particular dimensions British women writers have brought to the British literary tradition.

Students will be active learners through keeping reading journals, presenting background reports on the history of women in England, participating in small-group discussions about the texts, and writing 2 shorter essays and one longer research essay for the class. This course focuses on an area of British literature, which more traditionally structured courses tend to obscure. The course will be attractive to students from a variety of programs, including English majors, Women's Studies minors, and Interdisciplinary Humanities students.

**WMNST 490 (US;IL) (ENGL 490) Women Writers and Their Worlds (3)** American and British literature written from the perspective of women.

**WMNST (ENGL) 490 Women Writers and Their Worlds (3)  
(US;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

ENGL/WMNST 490 covers particular aspects of American and British literature written from the perspective of women. The course stresses the diversity of women's authorial worlds, both through time and/or space. The readings and specific focus vary from semester to semester. ENGL/WMNST 490 seeks to make students aware of the extensive body of literature written by women, but, unlike ENGL 194, which is a survey course of women's literature, ENGL/WMNST 490 can be a more intensive course, focusing on selected themes and topics of particular concern to women as reflected in the poetry and fiction of twentieth-century American and British women writers. The class can also be taught in relationship to earlier periods, dealing, for instance, with English women novelists from 1775-1865. In such a class, readings would include fiction by Fanny Burney, Mary Wollstonecraft, Ann Radcliffe, Jane Austen, Mary Shelley, Emily Bronte, Elizabeth Gaskell, and George Eliot. The course would then place each novel in its historical, social, intellectual, and literary context, and explore the various ways in which some of England's best writers transformed their female experience of the world into fiction that extended the range and influenced the development of the novel. Regardless of the particular focus, all sections of the course pose the following questions throughout: Do women use the same myths, archetypes, and literary conventions as male writers? Or do they sometimes have to modify the myths, archetypes, and literary conventions originated by their male precursors in order to adapt them to female experience? Is there such a thing as a distinctively female imagination, with a symbolic language of its own? Is there such a thing as a chain of literary influence linking women writers to each other? What are the strategies for coping with the anxieties of authorship? What is the interaction between gender and genre? In what ways are creativity and procreativity modes of defying prevailing ideologies? Does a woman's psychological development have an effect on the plots a woman novelist conceives? How does women's literature reflect the realities of women's lives? As a course in women's literature, ENGL/WMNST 490 concerns itself with questions of gender. In so far as some of these women writers are black or women of color, it concerns itself with questions of race and ethnicity. In as far as the course looks at women's literature in the context of men's literature, it is concerned with the inter-relationship between dominant (male) and non-dominant (female) culture in the United States as well as in Britain. In so far as the course covers lesbian writers, it is concerned with sexual orientation. The course not only prepares students for taking up literary and cultural analysis in English classes, but also in any other class that engages in the verbal and written analysis of complex written texts, and in other classes in Women's Studies or in other Penn State departments that address the social, cultural, or ethical issues of gender. The course may be used as English Major elective credit or as credit towards the English Minor; it may also be used in the Women's Studies major and minor.

**WMNST 492W** Contemporary Feminist Analysis: The Capstone Senior Seminar (3) Applied critical analysis of any aspect of society and/or culture from a contemporary feminist perspective.

### **WMNST 492W Current Feminist Issues**

This course is the capstone course for the Women's Studies major. We keep the course small (15-20 students) and offer it every spring. It is constructed to provide you the opportunity to apply the knowledge and skills you have developed in Women's Studies to some of the major topics being addressed in current academic feminist discourse. The first goal of the course is for each student to become familiar with the major arguments and evidence regarding some of the current major topics in feminism. The second goal is for each student to learn more about the multidisciplinary perspectives of women's studies. The third goal of the course is for each student to develop and demonstrate her skill at carrying out feminist scholarship.

There are two core elements of the course. The first is class discussion of readings addressing some of the major current feminist issues. Each year a new set of these topics is put together by the instructor, drawing upon the suggestions of other Women's Studies faculty and majors. The second core element of the course is each individual student doing a term paper. Work on these papers will take place both publicly and privately, so that everyone in the course will learn something about how feminist projects are constructed in the various disciplines represented by the students' choices of topics for their papers.

Because this is a W course, 2/3 of your grade will be based on writing assignments. Throughout the course, you will write short (2 page) papers on the readings that we will be discussing in our seminars. You will also write a term paper and some preliminary assignments related to it, including a topic justification paper, an annotated bibliography accompanied by a text description of the major themes identified in the bibliography, a class presentation on your paper topic, and the final 10-15 page paper. The other third of your grade will be based on your participation in seminar discussions.

**W P 203** Anatomical Properties of Wood (1) Provide information on tree form/growth, cell wall formation/composition, structure of wood/bark cells; macroscopic/microscopic identification of hardwood/softwood cells.

**W P 203 Anatomical Properties of Wood (1)**

The purpose of this course is to introduce students to the basic concepts of the anatomical properties of wood and bark cells. Students taking this class will learn:

- 1) basic information on tree form and growth
- 2) basic information on cell wall chemical composition, formation and structure
- 3) identification and differentiation of different hardwood and softwood cells.

Course grade will be based on weekly quizzes.

W P 203 is a foundation course for the wood products major and a basic information course for the forest science major. The course will be taken by students in the fall semester in their sophomore or junior year for Wood Products major and in the their sophomore, junior or senior year for the Forest Science major.

This course provides essential background information for students in the Wood Products major. The information presented in this course will be needed for understanding advanced concepts present in 400-level courses. All wood products and forest science students will be required to take this course. It is listed as a prerequisite for most W P 400-level courses. The course is designed to provide information necessary for understanding advanced concepts presented in W P 400-level courses.

Macroscopic and microscopic hardwood and softwood cell identification will be taught in a specialized laboratory made available by the School of Forest Resources.

**W P 416** Wood Industries Management Development (3) Managerial concepts and issues important to forest products organizations will help prepare students to assume management-level positions.

**W P 416 Wood Industries Management Development (3)**

This course will introduce students to managerial concepts and issues important to wood products manufacturers. The design of the course is to help students think more critically about problems and issues that are directly related to efficiency and effectiveness within the wood-based industry, with an emphasis on utilizing human capital to increase competitive advantage. The overall goal of the course is to prepare students to assume management-level positions within wood-based businesses. Course content will be designed to meet the unique production environments our graduates will face. For example, managing an hourly workforce that is under-motivated with insufficient skills, in an environment that is often unpleasant and physically challenging. The course will include case studies from relevant industrial settings and will expose students to current managerial issues (i.e., via field trips to mills and guest lecturers from industry). Students will give oral presentations based on assigned readings from a best selling managerial book and will also be asked to complete numerous in-class and out-of-class exercises (e.g., learning styles inventory, conflict style assessment, to-do lists, resume, etc.).

**W P 438 Business Concepts for Wood Manufacturing (4)** The course will cover manufacturing strategies and related financial measures in a wood production environment.

**W P 438 Business Concepts for Wood Manufacturing (4)**

This course will introduce students to the challenges inherent in attempting to profitably manufacture quality products with wood as a raw material. This will lay the groundwork for student understanding that positive margins and profitability are not a given for all wood producers. Students will receive an overview of the operations function and how it should synergize with other business functions such as R&D and marketing. The remainder of the course will be dedicated to exposing students to (1) managerial finance and accounting topics pertinent to using wood as a raw materials in a manufacturing environment and (2) modern manufacturing strategies relevant to the wood products industry. The overall goal of the course is to give students a set of skills that will allow them to make informed economic decisions for a wood manufacturing organization. Knowledge of such topics as continuous process improvement from a business strategy standpoint should provide a framework for making decisions (using the managerial finance subject matter) that will improve the economic competitiveness of their employers. The course will include case studies from relevant industrial settings and will expose students to current managerial issues through field trips to mills and guest lecturers from industry. Students will also give an oral presentation based on assigned readings from a manufacturing-management text.

**WF ED 270** Introduction to Industrial Training (3) Overview of training profession. Introduction to economic and psychological foundations. Examination of relationship of industrial training to education.

**WF ED 270 Introduction to Industrial Training (3)**

This course is designed to prepare individuals for a variety of training practitioner roles in businesses and industry. This course is actually the first of two courses and is an introduction to the required core courses for emphasizing the training and development professional curriculum in the Department of Adult Education, Instructional Systems and Workforce Education and Development. It is the intent of this course to equip participants with entry-level knowledge and skill to successfully pursue other designated professional core courses on needs assessment, organization development, and cross-cultural training. All of these courses fall into the category called Human Resource Development (HRD).

Industry trainers have had the opportunity to provide formal training to many persons with a wide variety of skills and competencies. Previous train-the-trainer courses in this series have addressed presentation techniques, assessment, facilities management and safety. This course will help trainers gain a total understanding of their role in the larger picture of Human Resource Development. Although traditional education is often focused on helping individuals lead better lives, training is usually focused specifically on the work that people do in one organizational setting. HRD deals with the financial value of human beings to organizations. In this course, the HRD field will be examined with respect to the training component with which participants are connected.

**WF ED 310 Leadership Competencies for Supervisors (3)**

Leadership Competencies for Supervisors is a course designed primarily for adult learners engaged in supervisory roles and functions in the workplace. Its purpose is to ensure that all students are equipped with the contemporary supervisory leadership competencies that are needed to function effectively in today's workplace. Upon completion of this course, the student should be able to a) Recognize the important role and function of supervisory leadership, b) Relate common critical situations experienced by supervisors and how they were handled, c) Demonstrate proficiency in competency areas important to supervisory success such as effective communication strategies, methods for resolving conflict, managing employees, etc., and d) Demonstrate ability to develop individuals and teams. Students will be assessed and evaluated through quizzes, instructor and peer observation, self-assessments and reflection, and demonstration of project deliverables.

**WF ED 395B Occupational Resources Competence (1-8 per semester, maximum of 24)** An analysis of competence in the workplace within occupations providing resources usage and management-related experience.

**WF ED 395B Occupational Resources Competence (1-8 per semester/maximum of 24)**

Occupational Resources Competence is a course designed primarily for adult learners who demonstrate an adequate understanding of contemporary resource usage and management related competencies that are needed to function effectively in today's global business environment. These competencies include: resource usage, resource management, computer and basic literacy, and understanding of systems in the workplace. Students will demonstrate competence through documentation of tasks performed and reflection on specialized accomplishments.

**WF ED 405 (ENGR 405)** Project Management for Professionals (3) Covers the essential concepts and skills needed to make effective contributions on projects, on time and within budget.

### **WF ED (ENGR) 405 Project Management for Professionals (3)**

Professionals in the workplace carry out many different projects every day ranging from somewhat small tasks, e.g., planning events and designing courses, to big projects, e.g., launching an enterprise wide system. Project Management for Professionals is a practical "hands-on" course designed for mid-career adult students and covers the essential concepts and skills needed to make effective contributions and have an impact on the successful accomplishment of projects on time and within budget.

Project management principles and techniques are presented with an emphasis on how they are applied to real world workforce development projects. Topics include the project management life cycle and process; techniques for planning, scheduling, budgeting, and controlling project performance; project manager responsibilities and skills; project team development and effectiveness; project communication; and organization structures.

**WF ED 410** Leadership Competencies for Professionals (3) Designed to teach contemporary professional leadership competencies for workforce professionals who do not currently have supervisory responsibilities.

### **WF ED 410 Leadership Competencies for Professionals (3)**

Leadership Competencies for Professionals is a course designed primarily for adult learners who demonstrate high leadership potential and who may not have significant supervisory and managerial responsibilities. Its purpose is to ensure that all students develop an adequate understanding of the contemporary professional leadership competencies that are needed to function effectively in today's global business environment. These competencies include: collaboration / multi-disciplinary team-building, leadership in diversely distributed team environments, interpersonal communication in the workplace, conflict resolution / human performance management, project management, problem-solving / creative thinking / ethical decision making, and contemporary and emerging technology usage. Students will be assessed and evaluated through quizzes, instructor and peer observation, self-assessments and reflection, and team projects and presentations.

**WF ED 424** (CN ED 424) Facilitating Career Development (3) This course provides individuals with relevant skills and knowledge to assist others in planning careers and obtaining meaningful work.

#### **WF ED (CN ED) 424 Facilitating Career Development (3)**

This course provides individuals with relevant skills and knowledge to assist others in planning careers and obtaining meaningful work. This course addresses the following 12 Career Development Facilitator (CDF) competencies: 1) helping skills, 2) labor market information and resources, 3) assessment, 4) diverse populations, 5) ethical and legal issues, 6) career development models, 7) employability skills, 8) training clients and peers, 9) program management/implementation, 10) promotion and public relations, 11) technology, and 12) consultation.

These 12 competencies are identified by the National Career Development Association (NCDA) for those who (will) deliver career development programs and services in a variety of settings. Potential job titles of CDFs include career group facilitator, job search trainer, career resource center coordinator, career coach, career development case manager, intake interviewer, occupational and labor market information resource person, human resource career development coordinator, employment/placement specialist, and workforce development staff.

With certain years of work experience in career development, students who complete this course are eligible to apply for the Global Career Development Facilitator (GCDF) certification through the Center for Credentialing & Education (CCE), which is affiliated with the National Board for Certified Counselors (NBCC). A GCDF is a person who works in any career development setting or who incorporates career development information or skills in their work with students, adults, clients, employees, or the public. As of January 2011, about 18,000 individuals acquired the GCDF certification world-wide including Bulgaria, Canada, China, Germany, Japan, Romania, Turkey, South Korea, and New Zealand.

The goal of the GCDF credential was to provide standards, training specifications, and credentialing for diverse career development practitioners. This GCDF credential differentiates two levels of career practice, which are 1) career counseling and 2) career facilitation that does not require a counseling degree. This differentiation reflected the reality where many individuals who are currently providing career assistance are not professional counselors.

This course is taught by a nationally and internationally trained CDF Instructor (CDFI) who is certified by the NCDA. In addition, the CDF curriculum is updated every three years by the Career Development Leadership Alliance (CDLA) under the supervision of the NCDA CDF Advisory Council in order to keep up with recent changes in the field.

## **World Languages Education (WL ED)**

**WL ED 295A** Early Field Experience for World Languages Teacher Preparation (3) Selected observation of schooling situations in Pre-K-1st grade settings focusing on language acquisition/language teaching.

#### **WL ED 295A Early Field Experience for World Languages Teachers Preparation (3)**

This course has two major parts: one that is conducted in a workshop-like classroom and the second part is the field experience. In this course, we will provide prospective World Language teachers with several opportunities to observe/work with infants while focusing on language acquisition processes. As part of the field experience, students will have the opportunity to observe and work in an early childhood environment. There, students will have opportunities to plan, design and deliver second language related activities. All these activities will include connections with language acquisition theories, Foreign Language National Standards and specific cognitive behavioral and communicative goals. During the workshop sessions, students will discuss their experiences, develop necessary didactic materials and teaching props, and receive guidance on how to develop their professional portfolios.

This course should be taken concurrently with a Foundations of Second Language Teaching (WL ED 300) course.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2004

Prerequisite: Third-semester standing; PA Act 34 and Act 151 Clearances required; FBI background information check; and Professional Liability Insurance.  
Concurrent: WL ED 300

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**WL ED 300** Foundations of Second Language Teaching (3) Critical understanding of basic concepts and principles in second language acquisition and teaching.

#### **WL ED 300 Foundations of Second Language Teaching (3)**

This course is designed to give prospective World Languages teachers a critical understanding of basic concepts and principles in, first and second language acquisition and teaching. The core of the course explicates processes of language acquisition viewed from major theories of first and second language acquisition and common issues within these major theories are presented and debated.

This course should be taken concurrently with WL ED 295A (Early Field Experience for World Languages Teacher preparation). Using the field experience component, students will be able to critically examine language teaching methodologies derived and implied from first and second language acquisition theories and to apply them while in their field experience. This course requires participating in the field experience component, group-reflections and self-critique as well as to complete the required readings, and to develop a professional growth portfolio including the four domains

stated in the Penn State model of Teacher Preparation (planning and preparing for student learning; teaching; inquiring and analyzing learning and teaching- and professionalism).

This course should be taken concurrently with the Early Field Experience for World Languages Teacher Preparation (WL ED 295A).

**WL ED 400** Foundations of Language in Second Language Teaching (3) Critical understanding of basic concepts and principles in second language acquisition and teaching.

### **WL ED 400 Foundations of Language in Second Language Teaching (3)**

This is an advanced course designed for practicing classroom teachers who want to further their knowledge of language acquisition/language teaching. It provides a critical understanding of basic concepts and principles in first and second language acquisition and teaching. The core of the course explicates processes of language acquisition viewed from major theories of first and second language acquisition and common issues within these major theories are presented and debated.

Using their classroom experiences, students will be able to critically examine language teaching methodologies derived and implied from first and second language acquisition theories and to apply them in their classrooms. This course requires active participation, group-reflections and self-critique, and completion of required readings; 20-30 hours of volunteer work in an ESL setting; and development of a professional growth portfolio including the four domains stated in the Penn State Model of Teacher Preparation (planning and preparing for student learning; teaching; inquiring and analyzing learning and teaching; and professionalism) and the competencies for English Usage and Developing Linguistic Awareness stated by the Pennsylvania Department of Education.

**WL ED 411** Methods of Teaching World Languages in Grades 1-5 (3) Exploration of the complexity of teaching World Languages and development of curricular designs for teaching in grades 1-5 schools.

### **WL ED 411 Methods for Teaching World Languages in Grades 1-5**

In this course prospective World Languages teachers will engage in a variety of theoretical, pedagogical and reflective events to explore the complex nature of language learning/teaching including (1) individual beliefs and knowledges, (2) issues related to language/power, (3) language/cultural diversity, and (4) development of curricular designs for teaching World Languages in grades 1 - 5. This course will be conducted in a workshop style. It will have three parallel strands: (a) we will review together basic concepts and principles of language learning/teaching through readings, class discussions and presentations; (b) make connections between the readings and the L2 experience in the Practicum-World Languages Teaching in grades 1-5 (WL ED 495B); and (c) as a group, the class will design thematic units, class plans, activities and didactic materials.

**WL ED 412W** Methods of Teaching World Languages in Grades 6-12 (3) Exploring the complexity of teaching World Languages and development of curricular designs for teaching World Languages in grades 6-12.

**WL ED 412W Methods of Teaching World Languages in Grades 6-12 (3)**

The purpose of this course is to help students develop a principled approach to designing and implementing lessons in their World Language classroom. Specifically, students will work towards an understanding of the processes of developing abilities in a second language that acknowledges a range of theories and associated methods but that is also situated within a particular theoretical framework of language and language learning. In this way, students will be better positioned to make the myriad instructional decisions they will face in middle school and high school contexts, ranging from materials development to lesson planning and classroom management to assessment. This is a writing-intensive course. Students will engage in a variety of formal and informal writing activities both in and out of class. Taken together, these activities function to enhance students' abilities as both producers and consumers of a range of texts relevant to their teaching practice. In addition, writing is understood to be a process integral to the fulfillment of each of the course goals.

**WL ED 444** (CI ED 444) Language, Culture and the Classroom: Issues for Practitioners (3) Critical understanding of cultural linguistic diversity to facilitate the inclusion of English Language Learners in a globalized classroom.

**WL ED (CI ED) 444 Language, Culture and the Classroom: Issues for Practitioners (3)**

In this course we will focus on the issues of power raised by the use of Standard English as the school language while in its grounds there are an increasing number of students who are using more than one language/dialect to communicate. We will also discuss how language mutates into an exceptional hegemonic/counterhegemonic device central to the problematic regarding school socialization. Finally, we will critically understand teachers' and schools' roles in building a safe classroom where diversity of languages and cultures are welcome and encouraged.

## Associate Degree Programs

Majors that lead to two-year associate degrees are available at most of Penn State's undergraduate locations. These majors provide concentrated instruction to prepare graduates for specialized occupational assignments, except for the Letters, Arts, and Sciences major, which provides graduates with a general education and some specialization in their fields of interest.

More than twenty associate degree majors lead to either the Associate in Arts degree, the Associate in Engineering Technology degree, or the Associate in Science degree.

In addition, check out Penn State's World Campus for available two-year degrees at [www.worldcampus.psu.edu](http://www.worldcampus.psu.edu).

**Concurrent and Sequential Majors Programs**--At the baccalaureate or associate degree level, students may be approved for admission to more than one major under the Concurrent Majors program. A Concurrent Majors program is one in which students take courses to concurrently meet the requirements of at least two majors, with graduation for all majors in the program occurring during the same semester. Concurrent majors must all be at the baccalaureate or associate degree level. Under the Sequential Majors program, upon graduation from an associate or baccalaureate degree program, a student may apply for re-enrollment in another undergraduate degree program.

## Business Administration

Abington College (2BAAB)

Altoona College (2BAAL)

Berks College (2BABL)

Capital College (2BACA)

University College (2BACC): Penn State Brandywine, Penn State DuBois, Penn State Fayette, Penn State Hazleton, Penn State Mont Alto, Penn State New Kensington, Penn State Lehigh Valley, Penn State Schuylkill, Penn State Shenango, Penn State Wilkes-Barre, Penn State Worthington Scranton, Penn State York University College (2BACC): Via World Campus

Not all options are available at every campus. Contact the campus you are interested in attending to determine which options are offered.

The associate degree program in Business Administration provides a foundation in business that, through two options, prepares graduates for either entrance to the Bachelor of Science in Business (BSB) programs in business or for direct entry into the work place. The primary objective of this major is to provide a business-oriented program with sufficient communicative and mathematical skills, socially relevant course work, and specific business specialties to develop a well-rounded and knowledgeable graduate.

The General Business Option provides an introductory foundation to core aspects of the business environment while also preparing students for future transfer into the Bachelor of Science in Business (BSB).

The Professional Studies Option provides a technically oriented program that prepares students for direct entry into the work force. Because some of the course work in this option is not accepted in baccalaureate business programs, students are encouraged to work closely with faculty and staff advisers.

Students who plan to continue into BSB should meet with their advisers regarding entrance to major and other related requirements.

For the Associate in Science degree in Business Administration, a minimum of 60 credits is required.

*Scheduling Recommendation by Semester Standing given like (Sem: 1-2)*

**GENERAL EDUCATION:** 21 credits

(9 credits of these 21 credits are included in the REQUIREMENTS FOR THE MAJOR)  
(See description of General Education in this bulletin.)

**REQUIREMENTS FOR THE MAJOR:** 48-50 credits

(This includes 3 credits of GQ General Education courses and 6 credits of GWS General Education courses.)

**COMMON REQUIREMENTS FOR THE MAJOR (ALL OPTIONS):** 30-31 credits

**PRESCRIBED COURSES** (13 credits)

CAS 100 GWS(3) (Sem: 2-4)

ACCTG 211(4), ENGL 202D GWS(3) [\[1\]](#), MIS 204(3) (Sem: 2-4)

**ADDITIONAL COURSES** (17-18 credits)

ENGL 015 GWS(3) [\[1\]](#) or ENGL 030 GWS(3) [\[1\]](#) (Sem: 1-2)

MATH 021 GQ(3), MATH 022 GQ(3), or MATH 110 GQ(4) (Sem: 1-2) [\[74\]](#)

B A 243(4) [\[1\]](#) or B A 241(2) [\[1\]](#) and B A 242(2) [\[1\]](#) (Sem: 1-4)

ECON 102 GS(3) or ECON 104 GS(3) (Sem: 1-4)

SCM 200 GQ(4) or STAT 200 GQ(4) (Sem: 2-4)

**REQUIREMENTS FOR THE OPTION:** 18-19 credits

(Both options may not be available at every campus.)

**GENERAL BUSINESS OPTION:** (18-19 credits)

**ADDITIONAL COURSES** (18-19 credits )

a) Select 3 credits from MGMT 301(3) [\[1\]](#) or MGMT 301W(3) [\[1\]](#) (Sem: 3-4)

b) Select 3 credits from MKTG 301(3) [\[1\]](#) or MKTG 301W(3) [\[1\]](#) (Sem: 3-4)

c) Select 12-13 credits from B A 250(3); CAS 250(3) or CAS 252(3); LER 100 GS(3) or LER 136 US(3); ECON 102 GS(3) or ECON 104 GS(3); MATH 022 GQ(3), MATH 110 GQ(4), MKTG 220(3) (Sem: 1-4)

**PROFESSIONAL STUDIES OPTION:** (18 credits) [\[75\]](#)

**ADDITIONAL COURSES** (18 credits )

Select 18 credits from ACCTG 151(3), ACCTG 152(3), ACCTG 153(3), ACCTG 160(3), B A 100 GS(3), B A 250(3); ECON 102 GS(3) or ECON 104 GS(3); CMPSC 109(3), FIN 100(3), FIN 108(3), H P A 101(3), IST 110 GS(3), IST 210(3), IST 220(3), IST 250(3), LER 100 GS(3), LER 136 US(3); MGMT 100(3) or MGMT 100W(3); MGMT 150(3), MIS 103(3), MIS 106(1-6); MIS 190(3), MKTG 220(3); MKTG 221(3) or MKTG 221W(3); R M 100(3) (Sem: 1-4)

[\[1\]](#) A student enrolled in this major must receive a grade of C or better, as specified in Senate Policy 82-44.

[\[74\]](#) Students should work closely with academic advisers to ensure the completion of any and all course work required for entrance to BSB.

[\[75\]](#) This Option is designed for students planning to enter the work force directly upon graduation. Some courses included in this option will not transfer into baccalaureate business programs. Students are encouraged to work closely with their advisers.

Last Revised by the Department: Fall Semester 2007

UC

## Biomedical Engineering Technology

University College: Penn State New Kensington (2 BET)

PROFESSOR Joie Marhefka, Program Coordinator, Penn State New Kensington

PROFESSOR IVAN E. ESPARRAGOZA, Director of Engineering Technology and Commonwealth Engineering, Penn State Brandywine

PROFESSOR SVEN BILÉN, Head, School of Engineering Design, Technology, and Professional Programs, Penn State University Park

The medical community has grown to depend on medical devices and systems to diagnose, treat and monitor patients in health care. These medical devices have become very complex systems, as they are becoming microprocessor controlled, PC based, and networked to share information. Biomedical Equipment Technicians (BETs) are specialized individuals who are educated and trained on the methods of: physiological measurement; equipment application and operation; safety, performance and preventive maintenance testing; calibration; problem solving; and troubleshooting. In addition, BETs may be involved in equipment and technology management programs, selection and installation of medical equipment, manufacturer and FDA recalls of medical devices, quality improvement programs, and training programs for hospital personnel in the safe and proper use of medical equipment. The classroom and laboratory portions of this major focus on electronically and PC based medical devices for patient monitoring and life-support equipment. The student is exposed to a much broader spectrum of medical equipment through a 400-hour (ten-week) practical internship in an approved health care facility.

### Program Educational Objectives

The BET major prepares graduates who, during the first few years of professional practice, will be able to:

1. Understand the use, application, operation, corrective actions, installations, acceptance testing and preventive maintenance (PMs) inspections on a wide range of medical devices.
2. Securing employment in the medical equipment maintenance profession, attempt professional certification or advance to a higher level of education.
3. Have an awareness, understanding and application of applicable standards, regulations, and quality improvement plans regarding medical equipment support.
4. Communicate effectively with co-workers, clinical professionals and other healthcare related professionals by functioning effectively on committees and by independent work.

### Program Outcomes (Student Outcomes)

The BET program outcomes are as follows:

- a) Understand use, application, operation, installation, acceptance testing, preventive maintenance, performance assurance and safety inspections (PMs) on select medical devices.
- b) Understand and apply a fundamental knowledge of electrical and electronic engineering technology fundamentals, components, circuits and networking fundamentals.
- c) Apply basic mathematical and scientific principles to identify, analyze and solve technical problems.
- d) Awareness and understand of diversity, professional and ethical responsibilities, applicable standards and regulations regarding medical equipment support.
- e) Work with fellow technicians, clinical professionals and other related professionals by functioning effectively on teams and by independent work.
- f) Communicate effectively with fellow technicians, clinical professionals and other related professionals.
- g) Recognize and understand the need for continued professional development, including formal and informal study.
- h) Recognize, observe and participate when possible in quality improvement programs, timeless and commitment to continuous improvement that support medical equipment and systems.
- i) The application of circuit analysis and design, analog and digital electronics, microcomputers, bioengineering systems, and safety in the building, testing, operation, and maintenance of biomedical equipment.
- j) The applications of physics, chemistry, and biological sciences to building, testing, operation, and maintenance of biomedical equipment in a rigorous mathematical environment at or above the level of algebra and trigonometry.

Students completing the 2 BET degree need only complete several additional courses to obtain the Associate in Engineering Technology degree in Electrical Engineering Technology. Graduates of the program may qualify for admission to the baccalaureate degree major in Electrical Engineering Technology offered at Penn State Harrisburg, Electrical and Computer Engineering Technology offered at Penn State Erie, and Electro-Mechanical Engineering Technology offered at Penn State Altoona, Berks, New Kensington and York.

For the Associate in Engineering Technology degree in Biomedical Engineering Technology, a minimum of 71 credits is required. This program is accredited by the Engineering Technology Accreditation Commission of ABET, [www.abet.org](http://www.abet.org).

*Scheduling Recommendation by Semester Standing given like (Sem: 1-2)*

**GENERAL EDUCATION:** 21 credits

(12 of these 21 credits are included in the REQUIREMENTS FOR THE MAJOR) (See description of General Education in front of *Bulletin*.)

**REQUIREMENTS FOR THE MAJOR:** 62-63 credits

(This includes 12 credits of General Education courses: 3 credits of GN courses; 3 credits of GQ courses; 6 credits of GWS courses.)

**PRESCRIBED COURSES** (47 credits)

BE T 101(1), CHEM 101 GN(3), EET 105(3), CMPET 117(3), CMPET 120(1), ENGL 015 GWS(3), IST 110 GS(3) [\[1\]](#), IST 220(3) (Sem: 1-2)

BE T 201(5) [\[1\]](#), BE T 204W(5) [\[1\]](#), BE T 205(4) [\[1\]](#), CAS 100 GWS(3), PHYS 150 GN(3), RADSC 230(3) (Sem: 3-4)

BE T 203 (4) [\[1\]](#)[\[2\]](#) (Sem: 5)

**ADDITIONAL COURSE** (15-16 credits)

MATH 022 GQ(3) and MATH 026 GQ(3) or MATH 040 GQ(5) (Sem: 1-2)

BE T 202(4) [\[1\]](#) or BE T 206(4) [\[1\]](#) (Sem: 3-4)

BI SC 004 GN(3) or BIOL 141 GN(3) (Sem: 3-4)

Select 3 credits from the following technical courses: BE T 210(3), BE T 296(1-18), BE T 297(1-9), BIOL 129 GN(4), CMPET 211(3), CMPSC 101 GQ(3), EDSGN 100(3), EET 213W(5), EET 297(1-3), EG T 201(2) or MCH T 111(3) (Sem: 3-4)

**[1]** A student enrolled in this major must receive a grade of C or better, as specified in Senate Policy 82-44.

**[2]** BE T 203(4) Internship must be the last course taken for the degree.

## Criminal Justice

*Altoona College (2 CJ)*

PROFESSOR Peter M. Hopsicker, Division Head, Division of Education, Human Development, and Social Sciences

Students receiving an associate degree in criminal justice should understand each of the three main components of the criminal justice system and their interrelationships. This program includes study in law enforcement, courts, and corrections individually and as components of a system, plus work in theories of crime causation, and crime control policy. Students should expect reading, writing, and critical thinking skills to be rigorously applied and developed throughout the degree program. The Associate in Science degree in Criminal Justice prepares students for entry-level positions in criminal justice or for study at the baccalaureate level.

For the Associate in Science in Criminal Justice, a minimum of 64 credits is required.

*Scheduling Recommendation by Semester Standing given like (Sem: 1-2)*

**GENERAL EDUCATION:** 21 credits

(13 of these credits are included in the REQUIREMENTS FOR THE MAJOR)

(See description of General Education in this bulletin.)

## Electrical Engineering Technology

*Penn State Erie, The Behrend College*  
*University College: Penn State Fayette, Penn State York (2 EET)*

PROFESSOR DAVID LOKER, *Program Coordinator, Penn State Erie, The Behrend College*  
 PROFESSOR ANDRZEJ GAPIŃSKI, *Program Coordinator, Penn State Fayette*  
 PROFESSOR MICHAEL MARCUS, *Program Coordinator, Penn State York*  
 PROFESSOR IVAN E. ESPARRAGOZA, *Director of Engineering Technology and Commonwealth Engineering, Penn State Brandywine*  
 PROFESSOR SVEN BILÉN, *Head, School of Engineering Design, Technology, and Professional Programs, Penn State University Park*

The Electrical Engineering Technology (2 EET) major helps prepare graduates for technical positions in the expanding fields of electronics, computers and microprocessors, instrumentation, and electrical equipment. The primary objective is to provide a broad foundation of theoretical and practical knowledge in the areas of electrical and electronic circuits, digital circuits, computers, electrical machinery, and programmable logic controls. The program also articulates with Pennsylvania Department of Education-approved Tech Prep programs. Secondary students who have graduated from a program covered by a signed Penn State Tech Prep Articulation Agreement may be eligible for special admission procedures and /or advanced placement.

### Program Educational Objectives

To produce graduates who, during the first few years of professional practice, will:

1. Demonstrate broad knowledge of electrical/electronics engineering technology practices to support design, application, installation, manufacturing, operation, and maintenance as required by their employer,
2. Apply basic mathematical and scientific principles for technical problem solving in areas which may include circuit analysis and analog and digital electronics, microprocessors, programmable logic control, and electrical machines,
3. Utilize computers and software in a technical environment,
4. Demonstrate competence in written and oral communication,
5. Work effectively as an individual and as a member of a multidisciplinary team,
6. Show awareness of social concerns and ethical/professional responsibilities in the workplace, and
7. Matriculate into a baccalaureate degree and/or continue their professional training and adapt to changes in the workplace, through additional formal or informal education."

### Program Outcomes (Student Outcomes)

Students should possess

- a) an ability to apply the knowledge, techniques, skills and modern tools of their disciplines to electrical engineering technology activities,
- b) an ability to apply a knowledge of mathematics, science, engineering, and technology to engineering technology problems that require limited application of principles but extensive practical knowledge,
- c) an ability to conduct standard tests and measurements, and to conduct, analyze and interpret experiments,
- d) an ability to function effectively as a member of a technical team,
- e) an ability to identify, analyze and solve narrowly defined engineering technology problems,
- f) an ability to communicate effectively regarding electrical engineering technology activities,
- g) an understanding of the need for and an ability to engage in self-directed continued professional development, including engineering standards,
- h) an understanding of and a commitment to address professional and ethical responsibilities including a respect for diversity,
- i) a commitment to quality, timeliness and continuous improvement.

Graduates of the Electrical Engineering Technology major may qualify for admission to the baccalaureate degree majors in Electrical Engineering Technology or Computer Engineering Technology offered at Penn State Harrisburg, Capital College; the baccalaureate degree major in Electrical Engineering Technology at Penn State Erie, The Behrend College; or the baccalaureate degree major in Electro-Mechanical Engineering Technology offered at Penn State Altoona, Penn State New Kensington or Penn State York.

For the Associate in Engineering Technology degree in Electrical Engineering Technology, a minimum of 66 credits is required. This program is accredited by the Engineering Technology Accreditation Commission of ABET, [www.abet.org](http://www.abet.org).

*Scheduling Recommendation by Semester Standing given like (Sem: 1-2)*

**GENERAL EDUCATION:** 21 credits  
 (15 of these 21 credits are included in the REQUIREMENTS FOR THE MAJOR)  
 (See General Education description in front of *Bulletin*.)

**REQUIREMENTS FOR THE MAJOR:** 60-61 credits  
 (This includes 15 credits of General Education courses: 3 credits of GN courses; 3 credits of GQ courses; 6 credits of GWS courses, 3 credits of GH or GS)

**PRESCRIBED COURSES** (38 credits)  
 EET 105(3), CMPET 117(3)<sup>[1]</sup>, CMPET 120(1), ENGL 015 GWS(3), MATH 022 GQ(3), MATH 026 GQ(3), MCH T 111(3), MCH T 112(1), MET 105(3) (Sem: 1-2)  
 CAS 100 GWS(3), CMPET 211(3), EE T 114(4)<sup>[1]</sup>, EE T 118(1)<sup>[1]</sup>, EET 212W(4) (Sem: 3-4)

**ADDITIONAL COURSES** (22-23 credits)  
 EDSGN 100(3); or EG T 119(2) and EET 002S(1) (Sem: 1-2)  
 S T S 200 GS(3) or S T S 233 GH(3) or S T S 245 GS;IL(3) (Sem: 1-2)  
 PHYS 150 GN(3) or PHYS 250 GN(4) (Sem:3-4)

Select 13 additional credits from one of the following tracks **a** or **b**:

- a.** Students following the baccalaureate track must complete the following courses (10-11 credits):  
 EET 214(3); MATH 083 GQ(4) or MATH 140 GQ(4); CHEM 110 GN(3) and CHEM 111 GN(1) or PHYS 151 GN(3) or PHYS 251 GN(4) (Sem: 3-4)  
 Select at least 3 additional credits from the following technical courses:  
 BE T 201(5), BI SC 003 GN(3), CHEM 101 GN(3), CHEM 110(3), CHEM 111(1), CMPSC 101 GQ(3), CMPSC 201 GQ(3), EET 215(1), EET 275(3), EET 297(1-9), EMET 230(3), IST 210(4), IST 220(3), IST 221(3), MATH 141 GQ(4), TELCM 140(2) (Sem: 3-4)
- b.** Students following the general track must select at least 3 credits science from the following:  
 CHEM 110 GN(3) and CHEM 111 GN(1), PHYS 151 GN(3), PHYS 251 GN (4) (Sem: 3-4)  
 Select at least 10 additional credits from the following technical courses: BE T 201(5), BI SC 003 GN(3), CHEM 101 GN(3), CHEM 110 (3), CHEM 111(1), CMPSC 101 GQ(3), CMPSC 201 GQ(3), EET 214(3), EET 215(1), EET 275(3), EET 297(1-9), EMET 230(3), IST 210(4), IST 220(3), MATH 083 GQ(4) or MATH 140 GQ(4), MATH 141 GQ(4), PHYS 151 GN(3) or PHYS 251 GN(4), TELCM 140(2) (Sem: 3-4)

**[1]** A student enrolled in this major must receive a grade of C or better, as specified in Senate Policy 82-44.

## Forest Technology

*University College: Penn State Mont Alto  
University Park, College of Agricultural Sciences (2 FORT)*

PROFESSOR CRAIG T. HOUGHTON, *in charge*

The objectives of the major are to train forestry field personnel in the technical aspects of evaluating, managing, and protecting forest resources. Laboratories held in the Michaux State Forest, adjacent to Penn State Mont Alto, stress field applications of classroom theory. Written and oral communication skills are stressed in all courses. Graduates of the program are employed by private businesses including forestry consulting firms, sawmills, and other wood products manufacturers; public agencies including federal, state, and municipal forest resource management and recreation programs; urban tree service companies, pulp and paper manufacturers, surveying firms and landscaping firms, utility companies, and other businesses requiring personnel skilled in field inventory procedures, analysis, and presentation.

Some graduates transfer their credits to bachelor's degree programs such as forest ecosystem management, wildlife and fisheries science, recreation park and tourism management, biorenewable systems, environmental resource management, plant sciences, biology, and business management.

For the Associate in Science degree in Forest Technology, a minimum of 64 credits is required.

*Scheduling Recommendation by Semester Standing given like (Sem: 1-2)*

**GENERAL EDUCATION:** 21 credits  
(15 of these 21 credits are included in the REQUIREMENTS FOR THE MAJOR)  
(See description of General Education in this bulletin.)

## General Business

*Penn State Erie, The Behrend College (2GBBC)*

PROFESSOR JOHN M. MAGENAU III, *Director, School of Business, Behrend College*

The associate degree major in General Business offers an introduction to several aspects of business. In addition, it provides a foundation that allows those students who qualify for admission to baccalaureate degree programs in business to make a smooth transition into four-year business majors offered at Penn State Erie, The Behrend College. The business coursework required by the major introduces students to basics of accounting, economics, management information systems, quantitative business analysis, business law, the social and ethical environment of business, finance, management, marketing, and supply chain management. To complete the major, students have the option of earning a certificate in Oracle or SAP, Enterprise Resource Planning (ERP) or Financial Planning. The general education and other requirements of the major provide an opportunity for students to strengthen their skills in oral and written communication and quantitative reasoning which are essential for success in business careers.

For the Associate in Science degree in General Business, a minimum of 61 credits is required.

*Recommended Scheduling by Semester Standing given like (Sem: 1-2)*

**GENERAL EDUCATION:** 21 credits

(12 of these 21 credits are included in the REQUIREMENTS FOR THE MAJOR)

See description of General Education in this bulletin.)

**FIRST YEAR SEMINAR:**

(Included in ELECTIVES or GENERAL EDUCATION course selections)

**UNITED STATES CULTURES AND INTERNATIONAL CULTURES:**

(Included in ELECTIVES, GENERAL EDUCATION course selection, or REQUIREMENTS FOR THE MAJOR)

**WRITING ACROSS THE CURRICULUM:**

(Included in GENERAL EDUCATION course selections or REQUIREMENTS FOR THE MAJOR)

**ELECTIVES:** 0-1 Credit

**REQUIREMENTS FOR THE MAJOR:** 51-52 credits

(This includes 12 credits of General Education courses: 6 credits of GWS courses; 3 credits of GQ courses; 3 credits of GS courses.)

**PRESCRIBED COURSES** (34 credits)

ENGL 015 GWS(3), CAS 100 GWS(3) (Sem: 1-2)

ACCTG 211(4)[\[1\]](#), ECON 102 GS(3), ECON 104 GS(3), ENGL 202D GWS(3), MIS 204(3)[\[1\]](#) (Sem: 2-3)

FIN 301(3)[\[1\]](#), MGMT 301(3)[\[1\]](#), MKTG 301(3)[\[1\]](#), SCM 301(3)[\[1\]](#) (Sem: 3-4)

**ADDITIONAL COURSES** (11-12 credits)

MATH 021 GQ(3), MATH 022 GQ(3), or MATH 110 GQ(4) (Sem: 1-2)

SCM 200 GQ(4) or STAT 200 GQ(4) (Sem: 2-3)

B A 243(4) or B A 241(2) and B A 242(2) (Sem: 2-4)

**SUPPORTING COURSES AND RELATED AREAS** (6 credits)

Select 6 credits from one of the following supporting course areas: General Education, Financial Planning[\[1\]](#), Oracle Business Suite Certificate[\[1\]](#), and SAP Certificate[\[1\]](#), or other 300-or 400-level business courses[\[1\]](#) in consultation with a faculty advisor (Sem: 3-4)

**[1]** A student enrolled in this major must receive a grade of C or better, as specified in Senate Policy 82-44.

NOT ACCEPTING NEW STUDENTS  
Begin Date of Enrollment Hold: July 14, 2016**

## Information Sciences and Technology

*Berks College (2ISBL)*

*Continuing Education, University Park (2 IST)*

*University College: Penn State DuBois, Penn State Fayette, Penn State Hazleton, Penn State Lehigh Valley, Penn State Mont Alto, Penn State New Kensington, Penn State Wilkes-Barre, Penn State Worthington Scranton, Penn State York (2ISCC)*  
*World Campus*

Not all options are available at every campus. Contact the campus you are interested in attending to determine which options are offered.

PROFESSOR MARY BETH ROSSON, *Associate Dean for Graduate and Undergraduate Studies*

This associate degree major is structured to prepare graduates for immediate and continuing employment opportunities in the broad disciplines of information science and technology. This includes positions such as application programmers, associate systems designers, network managers, Web designers and administrators, or information systems support specialists. Specifically, the major is designed to ensure a thorough knowledge of information systems and includes extensive practice using contemporary technologies in the creation, organization, storage, analysis, evaluation, communication, and transmission of information. The major fosters communications, interpersonal, and group interaction skills through appropriate collaborative and active learning projects and experiences. Technical material covers the structure of database systems, Web and multi-media systems, and considerations in the design of information systems. Team projects in most courses, a required internship, and a second-year capstone experience provide additional, focused venues for involving students in the cutting-edge issues and technologies in the field.

The Associate of Science in IST degree will be offered at multiple campuses within the Penn State system of colleges and campuses. Note that not all options will be available at all locations.

**Baccalaureate Option:** This option provides maximum articulation with the baccalaureate degree. Students who complete this option will meet all lower division requirements for the baccalaureate degree. This is not the case with the remaining options, although the degree of articulation is quite high for all associate degree options.

**Generalized Business Option:** This option enables students to specialize in the general business areas of accounting, marketing, and management.

**Individualized Option:** This option enables students to work closely with an adviser to develop a plan of study that meets the dual objectives of allowing a flexible academic program and providing breadth of technical specialization. An example would be a program where a student would take some of the courses listed in the Web Administration option and the remainder in the Software option.

**Software Option:** This option prepares graduates for entry-level programming support positions in industry. Students take courses in Web programming, database programming, and other contemporary programming environments.

**Networking Option:** This option prepares graduates for positions as entry-level computer network administrators. Students take courses in personal computer hardware, networking essentials, and network administration.

**Telecommunications Option:** This option prepares graduates for entry-level positions in the telecommunications industry. Students take courses in voice and data communications, protocols, networks, and wireless systems.

For the Associate in Science degree in IST, a minimum of 60 credits is required.

*Scheduling Recommendation by Semester Standing given like (Sem: 1-2)*

**GENERAL EDUCATION:** 21 credits

(9-12 of these 21 credits are included in the REQUIREMENTS FOR THE MAJOR)  
(See the description of General Education in this bulletin.)

**ELECTIVES:** 4-7 credits

**REQUIREMENTS FOR THE MAJOR:** 44-46 credits

(This includes 9-12 credits of General Education courses, i.e., ALL options: 3 credits of GQ courses; 6 credits of GWS courses. The Baccalaureate Option also includes 3 credits of GS courses to equal a total of 12 credits that double count; the General Business Option also includes 0-3 credits of GS courses to equal 9-12 credits that double count.)

**COMMON REQUIREMENTS FOR THE MAJOR (ALL OPTIONS):** 29 credits

**PRESCRIBED COURSES** (25 credits)

CMPSC 101 GQ(3) [11](#) (Sem: 1-2)

CAS 100B GWS(3), IST 110 GS(3) [11](#), IST 111S(1) [11](#), IST 210(3) [11](#), IST 220(3) [11](#), IST 250(3) [11](#), ENGL 015 GWS(3) (Sem: 1-2)

IST 260W(3) [11](#) (Sem: 3-4)

**ADDITIONAL COURSES** (4 credits)

ENGL 202C GWS(3) or ENGL 202D GWS(3) (Sem: 3-4)

IST 295A(1) [11](#) or IST 295B(1) [11](#) (Sem: 3-4)

**REQUIREMENTS FOR THE OPTION:** 15-17 credits

**BACCALAUREATE OPTION:** (17 credits)

**PRESCRIBED COURSES** (13 credits)

IST 230(3) [11](#) and IST 240(3) [11](#) (Sem: 3-4)

ECON 102 GS(3) (Sem: 3-4)

STAT 200 GQ(4) (Sem: 3-4)

**ADDITIONAL COURSES** (4 credits)

MATH 110 GQ(4) or MATH 140 GQ(4) (Sem: 1-2)

**GENERALIZED BUSINESS OPTION:** (15-16 credits)

**ADDITIONAL COURSES** (15-16 credits)

Select 15 credits in consultation with the adviser from the following list: (Sem:1-4)

ACCTG 151(3), ACCTG 152(3), ACCTG 153(3), ACCTG 160(3), ACCTG 170(3), ACCTG 211(4), B A 250(3), MKTG 220(3), MKTG 221(3), MKTG 310(3), MKTG 327(3), MGMT 100(3), MGMT 150(3), MGMT 321(3), MGMT 341(3)

ECON 102 GS(3), ECON 104 GS(3), or ECON 014 GS(3)

MATH 017 GQ(3), MATH 021 GQ(3), MATH 022 GQ(3), or MATH 026 GQ(3)

**INDIVIDUALIZED OPTION:** (15 credits)

**SUPPORTING COURSES AND RELATED AREAS** (15 credits)

Select 15 credits in consultation with an adviser that follow a coherent theme in information sciences and technology with a grade of C or better required for all [IST](#) courses. (Sem: 1-4)

**SOFTWARE OPTION:** (15 credits)

**PRESCRIBED COURSES** (12 credits)

CMPSC 302(3) (Sem: 2-4)

IST 211(3)[\[1\]](#), IST 247(3)[\[1\]](#), and IST 256(3)[\[1\]](#) (Sem: 3-4)

**ADDITIONAL COURSES** (3 credits)

MATH 017 GQ(3), MATH 021 GQ(3), MATH 022 GQ(3), or MATH 026 GQ(3) (Sem: 1-2)

**NETWORKING OPTION:** (15 credits)

**PRESCRIBED COURSES** (12 credits)

IST 225(3)[\[1\]](#), IST 226(3)[\[1\]](#), IST 227(3)[\[1\]](#), and IST 228(3)[\[1\]](#) (Sem: 3-4)

**ADDITIONAL COURSES** (3 credits)

MATH 017 GQ(3), MATH 021 GQ(3), MATH 022 GQ(3), or MATH 026 GQ(3) (Sem: **1-2**)

**TELECOMMUNICATIONS OPTION:** (15 credits)

**PRESCRIBED COURSES** (12 credits)

IST 221(3)[\[1\]](#), IST 222(3)[\[1\]](#), IST 223(3)[\[1\]](#), and IST 224(3)[\[1\]](#) (Sem: 3-4)

**ADDITIONAL COURSES** (3 credits)

MATH 017 GQ(3), MATH 021 GQ(3), MATH 022 GQ(3), or MATH 026 GQ(3) (Sem: 1-2)

**[1]** A student enrolled in this major must receive a grade of C or better, as specified in Senate Policy 82-44.

## Letters, Arts, and Sciences

*Abington College (2LAAB)*

*Altoona College (2LAAL)*

*Penn State Erie, The Behrend College (2LABC)*

*Berks College (2LABL)*

*Penn State Harrisburg (2LACA)*

*University College (2LACC): Penn State Brandywine, Penn State DuBois, Penn State Fayette, Penn State Hazleton, Penn State Mont Alto, Penn State New*

*Kensington, Penn State Schuylkill, Penn State Shenango Valley, Penn State Wilkes-Barre, Penn State Worthington-Scranton*

*University Park, College of the Liberal Arts (2 LAS)*

*World Campus*

ASSOCIATE DEAN CHRISTOPHER P. LONG, *in charge, Penn State University Park*

The objectives of the Letters, Arts, and Sciences major are to broaden the student's understanding, interests, and skills; to help the student become a more responsible, productive member of the family and community; and to offer a degree program with sufficient electives to permit some specialization according to the student's interests or career plans. Letters, Arts, and Sciences is a complete two-year degree major. However, graduates who later seek admission to baccalaureate degree majors may apply baccalaureate credits toward the new degree.

In addition to a wide variety of baccalaureate majors offered at University Park campus, graduates of the Letters, Arts, and Sciences major may qualify for admission to the baccalaureate degree majors in Behavioral Sciences, Elementary Education, Humanities, or Public Policy offered at Penn State Harrisburg. Or they may qualify for any of a large number of baccalaureate degree majors offered by Penn State Erie, The Behrend College, in business, the liberal arts, and sciences.

For the Associate in Arts degree in Letters, Arts, and Sciences, a minimum of 60 credits is required.

*Scheduling Recommendation by Semester Standing given like (Sem: 1-2)*

**GENERAL EDUCATION:** 21 credits

(6 of these 21 credits are included in the REQUIREMENTS FOR THE MAJOR)  
(See description of General Education in this bulletin.)

**ELECTIVES:** 15 credits

**REQUIREMENTS FOR THE MAJOR:** 30 credits#[\[1\]](#)

(This includes 6 credits of General Education GWS courses.)

**PRESCRIBED COURSES** (6 credits)

ENGL 015 GWS(3) (Sem: 1-2)

CAS 100 GWS(3) (Sem: 3-4)

**ADDITIONAL COURSE** (3 credits)

ENGL 202A GWS(3), ENGL 202B GWS(3), ENGL 202C GWS(3), or ENGL 202D GWS(3) (Sem: 3-4)

**SUPPORTING COURSES AND RELATED AREAS** (21 credits)

Select 3 credits in any course designated as arts\* (Sem: 1-4)

Select 3 credits in any course designated as humanities\* (Sem: 1-4)

Select 3 credits in any course designated as social and behavioral sciences\* (Sem: 1-4)

Select 3 credits in any course designated as physical, biological, or earth sciences\* (Sem: 1-4)

Select 9 credits in any one of the following areas\*: arts, humanities, social and behavioral sciences, natural sciences and quantification, and foreign language skills. (If foreign language courses are chosen, it is recommended that these courses be in one foreign language sequence.) (Sem: 1-4)

**[1]**A student enrolled in this major must receive a grade of C or better, as specified in Senate Policy 82-44.

**#**The required credits of General Education and Requirements for the Major must be baccalaureate-level courses. For students intending to seek admission to a baccalaureate program upon graduation, it is recommended that most, if not all, of the courses be at the baccalaureate level. For those students who will seek a bachelor of arts degree upon graduation from Letters, Arts, and Sciences, it is strongly recommended that a foreign language be taken since admission to a bachelor of arts program in the College of the Liberal Arts requires one college-level course, or the equivalent, in a foreign language.

\*Courses that will satisfy the arts, humanities, social and behavioral sciences, natural sciences, and quantification requirements are defined on the Letters, Arts, and Sciences checklist, which may be obtained from the College of the Liberal Arts associate dean for undergraduate studies at the University Park campus or from any Letters, Arts, and Sciences representative at other locations.

## Mechanical Engineering Technology

*Penn State Erie, The Behrend College*

*University College: Penn State DuBois, Penn State York (2 MET)*

PROFESSOR SVEN BILÉN, *Head, School of Engineering Design, Technology, and Professional Programs, Penn State University Park*

PROFESSOR IVAN ESPARRAGOZA, *Director of Engineering Technology and Commonwealth Engineering, Penn State University Park*

PROFESSOR DAVID JOHNSON, *Program Coordinator, Penn State Erie, The Behrend College*

PROFESSOR DOUGLAS MILLER, *Program Coordinator, Penn State DuBois*

PROFESSOR MARSHALL COYLE, *Program Coordinator, Penn State York*

This major helps graduates prepare for technical positions in manufacturing, machine and tool design, computer drafting and design, computer integrated manufacturing, materials selection and processes, technical sales, and other related industries in mechanical applications. The primary objective of the program is to provide a broad foundation in mechanical systems and applications; computer systems in drafting (CAD), manufacturing (CAM), and automation and robotics (CIM); production and product design; mechanics, dynamics, and strength of materials. This program also articulates with Pennsylvania Department of Education-approved Tech Prep programs. Secondary students who have graduated from a program covered by a signed Penn State Tech Prep Articulation Agreement may be eligible for special admission procedures and/or advanced placement. Graduates of the Associate Degree in Mechanical Engineering Technology program will:

- Practice in the areas of applied design, manufacturing, testing, evaluation, technical sales, or 2D and 3D modeling.
- Communicate effectively and work collaboratively in multi-disciplinary teams.
- Learn and adapt to changes in a professional work environment.
- Demonstrate a high standard of professional ethics and be cognizant of social concerns as they relate to the practice of engineering technology.

Graduates of this major may qualify for admission to the baccalaureate degree majors in Mechanical Engineering Technology and Structural Design and Construction Engineering Technology programs at Penn State Harrisburg; the Mechanical Engineering Technology and the Plastics Engineering Technology programs at Penn State Erie, The Behrend College; or the baccalaureate degree major in Electro-Mechanical Engineering Technology offered at Penn State Altoona, Penn State Berks, Penn State New Kensington, or Penn State York.

For the Associate in Engineering Technology degree in Mechanical Engineering Technology, a minimum of 64 credits is required. This program is accredited by the Engineering Technology Accreditation Commission of ABET, [www.abet.org](http://www.abet.org).

## Medical Laboratory Technology

*University College (2 MLT): Penn State Hazleton*

This two-calendar-year Medical Laboratory Technology major (four semesters, two summer sessions) is designed to provide the necessary general and technical training for hospital personnel between the level of the medical laboratory technician (certificate program) and the medical technologist (baccalaureate program). The course of study includes one year of intensive clinical experience at an affiliated hospital and the theoretical background necessary for the clinical procedures performed by the certified medical laboratory technician (associate degree program). Upon completion of program requirements, the student receives the associate degree and is eligible to sit for examinations leading to certification and registry as a medical laboratory technician.

The Medical Laboratory Technology Program at Penn State Hazleton is fully accredited by the National Accrediting Agency for Clinical Laboratory Sciences (NAACLS, 5600 N. River Rd, Suite 720, Rosemont, IL 60018-5119, Phone 847-939-3597 Website: <http://www.naacls.org>).

Graduates of this accredited MLT program are eligible to take national certification examinations such as the American Society of Clinical Pathology (ASCP) Board of Certification exam, to become certified as an MLT (ASCP).

For the Associate in Science degree in Medical Laboratory Technology, a minimum of 72 credits is required. (Scheduling of courses in summer session depends on campus location.)

*Scheduling Recommendation by Semester Standing given like (Sem: 1-2)*

**GENERAL EDUCATION:** 21 credits

(12 of the 21 credits are included in the REQUIREMENTS FOR THE MAJOR)  
(See description of General Education in this bulletin.)

**REQUIREMENTS FOR THE MAJOR:** 63-65 credits

(This includes 12 credits of General Education courses: 3 credits of GWS courses; 6 credits of GN courses; 3 credits of GQ courses.)

**PRESCRIBED COURSES** (56 credits)

BIOL 141 GN(3), BIOL 142(1), CHEM 110 GN(3), CHEM 111 GN(1), MICRB 201(3), MICRB 202(2) (Sem: 1-2)

CAS 100 GWS(3), CHEM 202(3), ENGL 015 GWS(3), MICRB 150(4) [\[1\]](#), MIS 103(3) (Sem: 1-2, Summer)

## Physical Therapist Assistant

*University College (2 PTA): Penn State DuBois, Penn State Fayette, Penn State Hazleton, Penn State Mont Alto, Penn State Shenango*

PROFESSOR RENEE L. BORROMEO, *Director, Penn State Mont Alto*  
 PROFESSOR BARBARA E. REINARD, *Coordinator, Penn State DuBois*  
 PROFESSOR STACY A. SEKELY, *Coordinator, Penn State Fayette*  
 PROFESSOR ROSE PETRILLA, *Coordinator, Penn State Hazleton*  
 PROFESSOR GIZELLE DEAN, *Coordinator, Penn State Shenango*

This major helps prepare individuals to become skilled technical health workers who assist the physical therapist in patient treatment. Students develop knowledge and skills in the appropriate use of equipment and exercise associated with various physical therapy treatment interventions. In order to accomplish these tasks, the curriculum combines general education, science, and technical courses specifically designed for the physical therapist assistant. The program culminates with full-time clinical experiences.

The size of each entering class is limited so that optimal clinical experiences and practical application situations can be maintained. Students must progress through the PTA program as prescribed in the Recommended Academic Plan for their campus of admission. Clinical affiliations are maintained over a wide geographical area. Students may be required to make special housing and transportation arrangements during the clinical phase. In order to accommodate the clinical practicum, this major requires five semesters to satisfy graduation requirements.

In addition to a PTA certification/licensure, many state licensing boards and clinical facilities require a criminal background check, child abuse clearance, and a drug screening. PTA students are required to complete clinical requirements that may include FBI fingerprint check, child abuse clearance, state background check and drug screening prior to the beginning of the clinical practicum. Students will be responsible for completion and purchase of the necessary checks/clearances through a University approved vendor and providing results to the clinical sites. Students with criminal records should contact the physical therapy licensing board in the state they plan to practice prior to applying for admission to the PTA Program to inquire about potential restrictions for licensure.

The Associate of Science degree in Physical Therapist Assistant at Penn State is accredited by the Commission on Accreditation in Physical Therapy Education (CAPTE), 1111 North Fairfax Street, Alexandria, Virginia 22314; telephone: 703-706-3245; email: [accreditation@apta.org](mailto:accreditation@apta.org); website: <http://www.capteonline.org>. Graduation from a physical therapist assistant education program accredited by CAPTE is necessary for eligibility to sit for the licensure examination, which is required in all states.

Effective April 30, 2014 The physical therapist assistant program at The Pennsylvania State University, DuBois Campus has been granted Candidate for Accreditation status by the Commission on Accreditation in Physical Therapy Education (1111 North Fairfax Street, Alexandria, VA, 22314; phone: 703-706-3245; email: [accreditation@apta.org](mailto:accreditation@apta.org)). Candidate for Accreditation is a pre-accreditation status of affiliation with the Commission on Accreditation in Physical Therapy Education that indicates that the program may matriculate students in technical/professional courses and that the program is progressing towards accreditation. Candidate for Accreditation is not an accreditation status nor does it assure eventual accreditation.

For the Associate in Science degree in Physical Therapist Assistant, a minimum of 68 credits is required.

*Scheduling Recommendation by Semester Standing given like (Sem: 1-2)*

**GENERAL EDUCATION:** 21 credits

(9-12 of these 21 credits are included in the REQUIREMENTS FOR THE MAJOR)  
 (See description of General Education in this bulletin.)

**REQUIREMENTS FOR THE MAJOR:** 59-61 credits

(This includes 9-12 credits of General Education courses; 3-6 credits of GWS courses; 3 credits of GN courses; 3-6 credits of GS courses.)

**PRESCRIBED COURSES** (45 credits)

BIOL 129 GN(4) [\[1\]](#), BIOL 141 GN(3) [\[1\]](#), BIOL 142(1) [\[1\]](#), ENGL 015 GWS(3), P T 100(3) [\[1\]](#), PSYCH 100 GS(3) (Sem: 1-2)  
 P T 290 (1) [\[1\]](#), P T 384(4) [\[1\]](#), P T 395E(3) [\[1\]](#)\* (Sem: 3-4)  
 P T 150(2) [\[1\]](#), P T 160(3) [\[1\]](#), P T 250(4) [\[1\]](#), P T 260(3) [\[1\]](#) (Sem: 3-5)  
 P T 395F(4)\* [\[1\]](#), P T 395G(4)\* [\[1\]](#) (Sem: 5)

**ADDITIONAL COURSES** (14-16 credits)

Select 1 credit from KINES 013(1) or KINES 303 GHA(3) (Sem: 1-4)  
 Select 3 credits from CAS 203 GS(3), ENGL 202C GWS(3) or PSYCH 212 GS(3) (Sem: 1-5)  
 Select 2-3 credits from any P T course not listed above in prescribed or additional courses [\[1\]](#) (Sem: 1-5)  
 Select 4 credits from P T 270(3-4) [\[1\]](#), P T 270A(3-4) [\[1\]](#), or P T 270W(4) [\[1\]](#) (Sem: 2-4)  
 Select 4-5 credits from P T 280(4-5) [\[1\]](#) or P T 280W(4-5) [\[1\]](#); or P T 281(2) [\[1\]](#) and P T 282(3) [\[1\]](#) or P T 282W(3) [\[1\]](#) (Sem: 3-4)

**[1]**A student enrolled in this major must receive a grade of C or better, as specified in Senate Policy 82-44.

\*Courses that include clinical education experiences may require the student to travel long distances or obtain housing near the assigned clinic. Housing and transportation arrangements are the responsibility of the student.

## Radiological Sciences

*University College: Penn State New Kensington (2RSCC), Penn State Schuylkill (2RSCC)*

For students interested in pursuing an education in the paramedical field of radiography (radiologic technology), the radiological sciences major meets the educational and clinical requirements for the graduate to function as an entry-level radiographer. Required course work is divided into three interrelated areas including general education, radiography specific, and clinical education components. During the clinical education component, students perform radiographic exams under the directed supervision of certified radiographers at multiple area clinical education settings. The clinical component emphasizes the concepts of team practice and patient-centered care. Both the radiography-specific course work and the clinical component are structured sequentially over six or seven consecutive semesters, commencing each fall semester. Upon successful completion of the 72-credit associate degree, the graduate will be eligible to attempt the American Registry of Radiologic Technologists (ARRT) examination for certification.

For the Associate in Science degree in Radiological Sciences, a minimum of 72 credits is required.

*Scheduling Recommendation by Semester Standing given like (Sem: 1-2)*

**GENERAL EDUCATION:** 21 credits

(15 of these 21 credits are included in the REQUIREMENTS FOR THE MAJOR)  
(See description of General Education in this bulletin.)

**REQUIREMENTS FOR THE MAJOR:** 66 credits

(This includes 15 credits of General Education courses: 3 credits of GH courses; 3 credits of GN courses; 3 credits of GQ courses; 3 credits of GS; 3 credits of GWS courses.)

**PRESCRIBED COURSES** (59 credits)

BIOL 129 GN(4)[\[1\]](#), RADSC 101(4)[\[1\]](#), RADSC 110(3)[\[1\]](#) (Sem: 1)  
BIOL 141 GN(3), ENGL 015 GWS(3), IST 110 GS(3), MATH 021 GQ(3), PHIL 103 GH(3), RADSC 102(4)[\[1\]](#), RADSC 103(3)[\[1\]](#), RADSC 204(3)[\[1\]](#), RADSC 205(3)[\[1\]](#),  
RADSC 210W(3)[\[1\]](#), RADSC 220(3)[\[1\]](#), RADSC 295B(1)[\[1\]](#), RADSC 295D(1)[\[1\]](#), RADSC 230(3)[\[1\]](#) (Sem: 1-5)

## Science

### *Altoona College (2SCAL)*

The Science major is designed primarily to provide for the basic educational needs of students who want to pursue professional programs in various scientific or medical fields. The program provides a fundamental group of science courses of value to those who seek positions in government or industry where such knowledge is necessary or desirable. The program offers sufficient flexibility to meet diverse academic and career goals.

Graduates of the of the program may qualify for admission to the baccalaureate degrees in science. Students planning on continuing in baccalaureate degrees are encouraged to work closely with their advisers.

For the Associate in Science degree in Science, a minimum of 67 credits is required.

*Scheduling Recommendation by Semester Standing given like (Sem: 1-2)*

**GENERAL EDUCATION:** 21 credits

(15 of these 21 credits are included in the REQUIREMENTS FOR THE MAJOR)  
(See description of General Education in this bulletin.)

**REQUIREMENTS FOR THE MAJOR:** 61 credits

(This includes 15 credits of General Education courses: 3 credits of GN courses; 3 credits of GQ courses; 3 credits of GWS courses; 3 credits of GH courses; 3 credits of GQ, GWS, GH, or GN courses.

**PRESCRIBED COURSES** (14 credits)

BIOL 110 GN(4)[\[1\]](#), CAS 100 GWS(3)[\[1\]](#), CHEM 110 GN(3)[\[1\]](#), CHEM 111 GN(1)[\[1\]](#) ENGL 015 GWS(3)[\[1\]](#) (Sem: 1-4)

**ADDITIONAL COURSES** (22-27 credits)

*(Note: PHYS 250 and PHYS 251 and MATH 140 are recommended for students planning to continue in baccalaureate programs of science.)*

Select 4-6 credits from MATH 022 GQ(3), MATH 026 GQ(3), or MATH 040 GQ(5), or MATH 140 GQ(4) (Sem: 1-2)

Select 3-4 credits from STAT 200 GQ(4), STAT 220(3), STAT 250 GQ(3) (Sem: 1-4)

Select 3 credits from PHIL 002 GH(3), PHIL 103 GH(3), PHIL 103W GH(3), PHIL 110 GH(3), PHIL 118 GH(3), PHIL 221 GH(3) (Sem: 1-4)

Select 3 credits from CMPSC 100(3), MIS 103(3), CMPSC 101 GQ(3) (Sem: 1-4)

Select 6-8 credits from PHYS 150 GN(3) and PHYS 151 GN(3) or PHYS 250 GN(4) and PHYS 251 GN(4) (Sem: 2-4)

Select 3 credits from CHEM 112 GN(3), CHEM 202(3) (Sem: 2-4)

**SUPPORTING COURSES AND RELATED AREAS** (20-25 credits)

Select 20-25 credits from approved departmental list of BIOLOGICAL/MATH/PHYSICAL SCIENCES (Sem: 1-4)

**[1]** A student enrolled in this major must receive a grade of C or better, as specified in Senate Policy 82-44.

## Surveying Engineering Technology

University College: Penn State Wilkes-Barre (2 SRT)

PROFESSOR FRANK DERBY, Program Coordinator, Penn State Wilkes-Barre

PROFESSOR IVAN E. ESPARRAGOZA, Director of Engineering Technology and Commonwealth Engineering, Penn State Brandywine

PROFESSOR SVEN BILÉN, Head, School of Engineering Design, Technology, and Professional Programs, Penn State University Park

The Surveying Engineering Technology major provides the basic undergraduate education required for private and public service as a technician in the surveying profession. Basic knowledge is provided in the areas of boundary, construction, topographic, and photogrammetric surveying. The curriculum is designed to develop an individual understanding of the skills and equipment needed to make precise surveying measurements.

### Program Educational Objectives

Specific educational objectives of the program are to prepare graduates who, after the first few years of their surveying careers:

1. Proficiently apply basic principles and methods of surveying practice to perform surveys and analyze results
2. Effectively convey technical and professional information in written, verbal, and graphic forms, as individuals and as members of a professional team
3. Demonstrate their recognition of the importance of professional organizations for their development as surveying technologists
4. Demonstrate their recognition of the need for continuous, life-long learning

### Program Outcomes (Students Outcomes)

The SRT program has adopted for its program student outcomes the following outcomes as listed in the general criteria of the TAC of ABET "Criteria for Accrediting Engineering Technology Programs, 2012-2013." Each program must demonstrate that graduates have:

- a) an ability to apply the knowledge, techniques, skills, and modern tools of the discipline to narrowly defined engineering technology activities;
- b) an ability to apply a knowledge of mathematics, science, engineering, and technology to engineering technology problems that require limited application of principles but extensive practical knowledge;
- c) an ability to conduct standard tests and measurements, and to conduct, analyze, and interpret experiments;
- d) an ability to function effectively as a member of a technical team;
- e) an ability to identify, analyze, and solve narrowly defined engineering technology problems;
- f) an ability to apply written, oral, and graphical communication in both technical and non-technical environments; and an ability to identify and use appropriate technical literature;
- g) an understanding of the need for and an ability to engage in self-directed continuing professional development;
- h) an understanding of and a commitment to address professional and ethical responsibilities, including a respect for diversity; and
- i) a commitment to quality, timeliness, and continuous improvement.

Also adopted are the following TAC of ABET's Program Criteria for Surveying/Geomatics Engineering Technology Programs, 2012-2013. Associate degree programs must demonstrate that graduates are capable of:

- a) Utilizing modern measurement technologies to acquire spatial data;
- b) Employing industry-standard software to solve technical problems.

Graduates of the Surveying Engineering Technology major may qualify for admission to the baccalaureate degree majors in Surveying Engineering at Penn State Wilkes-Barre or Structural Design and Construction Engineering Technology at Penn State Harrisburg.

For the Associate in Engineering Technology degree in Surveying Engineering Technology, a minimum of 67 to 70 credits is required. This program is accredited by the Engineering Technology Accreditation Commission of ABET,

*Scheduling Recommendation by Semester Standing given like (Sem: 1-2)*

### GENERAL EDUCATION: 21 credits

(12 of these 21 credits are included in the REQUIREMENTS FOR THE MAJOR)  
(See description of General Education in this bulletin.)

### REQUIREMENTS FOR THE MAJOR: 58-61 credits

(This includes 12 credits of General Education courses: 3 credits of GN courses; 3 credits of GQ courses; 6 credits of GWS courses.)

### PRESCRIBED COURSES (31 credits)

SUR 111(4) [1], SUR 162(3) [1] (Sem: 1-2)

SUR 212(4), SUR 222(3), SUR 241(3), SUR 262(2), SUR 272(3) [1], SUR 313(3), SUR 362(3), SUR 372W(3) (Sem: 3-4)

### ADDITIONAL COURSES (27-30 credits)

CAS 100A GWS(3) or CAS 100B GWS(3) (Sem: 1-2)

EDSGN 100(3); or EG T 101(1), EG T 102(1) and ET 002(1) (Sem: 1-2)

ENGL 015 GWS(3) or ENGL 030 GWS(3) (Sem: 1-2)

ENGL 202C GWS(3) or ENGL 202D GWS(3) (Sem: 3-4)

MATH 022 GQ(3) and MATH 026 GQ(3); or MATH 040 GQ(5) (Sem: 1-2)

MATH 110 GQ(4) or MATH 140 GQ(4) (Sem: 3-4)

PHYS 150 GN(3) or PHYS 211 GN(4) or PHYS 250 GN(4) (Sem: 1-2)

PHYS 151(3) or PHYS 212 GN(4) or PHYS 251 GN(4) (Sem: 3-4)

[1] A student enrolled in this major must receive a grade of C or better, as specified in Senate Policy 82-44.

Last Revised by the Department: Spring Semester 2011

## Turfgrass Science and Management

University Park, College of Agricultural Sciences (2 TSM)  
World Campus

PROFESSOR ANDREW S. McNITT, Program Coordinator

445 ASI Building  
814-863-1368  
asm4@psu.edu

The Turfgrass Science and Management (2 TSM) major prepares graduates for the Bachelor of Science in Turfgrass Science (TURF) program or direct entry into the work place. The primary objective of this major is to train current/future turfgrass facility managers in communicative and mathematical skills, and initiate student mastery of technical aspects unique to management of turfgrass systems.

Graduates of this program are qualified to support golf course, landscape, and athletic field maintenance operations; production of sod commodities; equipment sales and service; and technical research programs. Graduates may also apply their credits to pursue completion of Baccalaureate programs such as Soil Science, Environmental Resource Management, Recreation and Parks Management, and Turfgrass Science (TURF). Students who plan to continue in the TURF degree program should meet with their advisors regarding entrance to major and other requirements.

For the Associate in Science degree in Turfgrass Science and Management, a minimum of 61 credits is required.

*Scheduling Recommendation by Semester Standing given like (Sem: 1-2)*

**GENERAL EDUCATION:** 21 credits

(15 of these 21 credits are included in the REQUIREMENTS FOR THE MAJOR)  
(See description of General Education in this Bulletin.)

**UNITED STATES CULTURES OR INTERNATIONAL CULTURES:**

(Included in ELECTIVES or SUPPORTING COURSES AND RELATED AREAS course selections) (Sem: 1-4)

**WRITING ACROSS THE CURRICULUM:**

(Included in REQUIREMENTS FOR THE MAJOR) (Sem:1-4)

**ELECTIVES:** 3 credits (Sem: 1-4)

**REQUIREMENTS FOR THE MAJOR:** 52 credits

(This includes 15 credits of General Education courses: 6 credits of GN courses; 3 credits of GQ courses; 3 credits of GWS courses; 3 credits of GH courses.)

**PRESCRIBED COURSES** (31 credits)

BIOL 011 GN(3), CHEM 202(3), ENGL 015 GWS(3), ENT 317(3)[\[1\]](#), MATH 021 GQ(3), PHIL 103W GH(3), SOILS 101 GN(3)[\[1\]](#), TURF 230(1)[\[1\]](#), TURF 235(3)[\[1\]](#), TURF 238(3)[\[1\]](#), TURF 295(3) (Sem: 1-4)

**ADDITIONAL COURSES** (3 credits)

Select 3 credits from CHEM 101 GN(3) or CHEM 110 GN(3) (Sem: 1-2)

**SUPPORTING COURSES AND RELATED AREAS** (18 credits)

Select 9 credits from department professional agriculture list (Sem: 1-4)

Select 9 credits from department professional management and economics list, 3 of the 9 credits must be from bolded sub-list (Sem: 1-4)

[\[1\]](#)Classes in which students pursuing the 2 TSM degree must earn a grade of C or better, as specified in Senate Policy 82-44.

Last Revised by the Department: Fall Semester 2012

Blue Sheet Item #: 41-03-004

Review Date: 11/13/2012

## Wildlife Technology

*University College: Penn State DuBois  
University Park, College of Agricultural Sciences (2 WLT)*

PROFESSOR AARON STOTTLEMYER, *in charge, Penn State DuBois*

The Wildlife Technology major helps prepare students in the techniques of wildlife management. Personnel trained in this field are needed to assist in the applied phases of natural resource management, wildlife biology, range management, and the care, maintenance, and propagation of animals. Graduates should be able to support professionals in wildlife biology, park managers, game refuge managers, and laboratory technicians in research. The Wildlife Technology Program is accredited by the North American Wildlife Technology Association (NAWTA).

For the Associate in Science degree in Wildlife Technology, a minimum of 64 credits is required.

*Scheduling Recommendation by Semester Standing given like (Sem: 1-2)*

**GENERAL EDUCATION:** 21 credits  
(9 of these 21 credits are included in REQUIREMENTS FOR THE MAJOR.)

**REQUIREMENTS FOR THE MAJOR:** 52 credits  
( This includes 9 credits of General Education courses: 3 credits of GN and 6 credits of GWS.)

**PRESCRIBED COURSES** (45 credits)  
BIOL 110 GN(4), FORT 150(3), FORT 160(3), ENGL 202C GWS(3), WILDL 101(3)[\[1\]](#), WILDL 103(4)[\[1\]](#), WILDL 106S(4) (Sem: 1-2)  
AG 113(1), CAS 100 GWS(3), FOR 242(3), KINES 013 GHA(1), WILDL 207(3), WILDL 208W(3)[\[1\]](#), WILDL 211(4), WILDL 213(3) (Sem: 3-4)

**ADDITIONAL COURSES** (7 credits)  
Select 3 credits from: ENGL 015 GWS(3) or ENGL 030 GWS (3) (Sem: 1-2)  
Select 4 credits from: WILDL 204(4) or STAT 200 GQ(4) (Sem: 3-4)

**[1]** A student enrolled in this major must receive a grade of C or better, as specified in Senate Policy 82-44.

## Human Development and Family Studies

Altoona College (2FSAL)

University College (2FSCC): Penn State Brandywine, Penn State DuBois, Penn State Fayette, Penn State Mont Alto, Penn State Schuylkill, Penn State Shenango, Penn State Worthington Scranton, Penn State York

University Park, College of Health and Human Development (2EHFS): offered via World Campus

Not all options are available at every campus. Contact the campus you are interested in attending to determine which options are offered.

For more information, contact 119 Health and Human Development Building, University Park campus.

This major integrates practical and academic experiences to provide the student with entry-level professional competence in the human service field. The objective of the major is to offer a general education background, a knowledge base in life span and family development, and a core of professional skills that may be applied in program planning and service delivery activities. The major is offered part-time, in the evening, and through independent learning.

**ADULT DEVELOPMENT AND AGING SERVICES OPTION:** This option is designed to prepare students for a wide variety of service roles in mental health facilities, nursing homes and other institutions for the aged, area agencies on aging, public welfare and family service agencies, women's resource centers, human relations programs, employee assistance programs and consumer services and consumer relations programs in business and industry. An improved field experience in any of a wide variety of settings that serve adults, the aged, and their families, is required for this option.

**CHILDREN, YOUTH, AND FAMILY SERVICES OPTION:** This option is designed to prepare students for service roles in preschools; day care centers; hospitals; institutional and community programs for emotionally disturbed, abused, or neglected children and adolescents; as well as a variety of public welfare and family service agencies. An approved field experience in a children, youth, or family services setting is required for this option.

**EARLY CHILDHOOD CARE AND EDUCATION OPTION:** This option is designed to increase professional capabilities in child care training in regard to issues of quality, affordability, and accessibility of programming. The primary foci are on language, literacy, and science reasoning. In the course work, there is a blending of theory and practice that requires experience in a group setting with young children. Courses concentrate on infants and toddlers as well as older preschoolers. Each course has a strong parent/family communications component and stresses observation techniques appropriate for assessing and evaluating the development of young children.

For the Associate in Science degree in Human Development and Family Studies, a minimum of 60 credits is required.

*Scheduling Recommendation by Semester Standing given like (Sem: 1-2)*

**GENERAL EDUCATION:** 21 credits

(15 of these 21 credits are included in the REQUIREMENTS FOR THE MAJOR)  
(See description of General Education in this bulletin.)

**ELECTIVES:** 0-3 credits

**REQUIREMENTS FOR THE MAJOR:** 51-55 credits

(This includes 15 credits of General Education courses: 6 credits of GWS courses; 3 credits of GS courses; 3 credits of GN courses; and 3 credits of GQ courses.)

**COMMON REQUIREMENTS FOR THE MAJOR (ALL OPTIONS):** 30-31 credits

**PRESCRIBED COURSES** (21 credits)

CAS 100 GWS(3), ENGL 015 GWS(3), HD FS 129 GS(3)[\[1\]](#), HD FS 301(3)[\[1\]](#), PSYCH 100 GS(3) (Sem: 1-2)  
HD FS 395(6) (Sem: 3-4)

**ADDITIONAL COURSES** (9-10 credits)

EDPSY 101 GQ(3)[\[1\]](#), STAT 100 GQ(3)[\[1\]](#), or STAT 200 GQ(4)[\[1\]](#) (Sem: 1-2)  
HD FS 315 US(3)[\[1\]](#) or SOC 030 GS(3) (Sem: 3-4)  
BIOL 141 GN(3), BIOL 155 GN(3), or BI SC 004 GN(3) (Sem: 3-4)

**REQUIREMENTS FOR THE OPTION:** 21-24 credits

**ADULT DEVELOPMENT AND AGING SERVICES OPTION:** (21 credits)

**PRESCRIBED COURSES** (6 credits)

HD FS 249 GS(3)[\[1\]](#), HD FS 311(3)[\[1\]](#) (Sem: 1-4)

**SUPPORTING COURSES AND RELATED AREAS** (15 credits)

Select 15 credits in consultation with the adviser from University-wide offerings that enhance competence in the option (Sem: 1-4)

**CHILDREN, YOUTH, AND FAMILY SERVICES OPTION:** (24 credits)
