

RENEWABLE BIOPRODUCTS, MINOR

Requirements for a minor may be completed at any campus location offering the specified courses for the minor. Students may not change from a campus that offers their major to a campus that does not offer their major for the purpose of completing a minor.

Program Description

The Renewable Bioproducts minor informs students about renewable sources of carbon to produce industrially relevant bioproducts. Students will learn about how agricultural, forestry, and municipal solid waste residues could be used to create new bioproducts, including polymers. Students will learn about the intersection of principles of biologically-based materials, science, and engineering. In addition, students will learn about systems-level analysis of production and conversion of agricultural and forest materials into new bioproducts.
