PROJECT AND SUPPLY CHAIN MANAGEMENT, MINOR

Requirements for a minor may be completed at any campus location offering the specified courses for the minor. Students may not change from a campus that offers their major to a campus that does not offer their major for the purpose of completing a minor.

Program Description

The Project and Supply Chain Management Minor is designed to introduce students within the School of Business to advanced topics in supply chain and project management. The minor can provide options and opportunities beyond those offered by a major program of study. Students enrolled in nonbusiness majors should explore the minor in Operations and Supply Chain Management whereas students in a business major can pursue the Project and Supply Chain Management Minor.

What is Project and Supply Chain Management?

It has been estimated that well over half of all activities in modern corporations are project-based. From developing a new product to constructing a new building, the list of efforts that organizations must plan, manage, and deliver (ideally on time and under budget) is nearly endless. At the same time, globalization creates a growing need for professionals who can effectively manage complex supply chains. The study of project and supply chain management emphasizes the integration of manufacturing and service operations, logistics, purchasing, and distribution—the functions that enable organizations to cultivate value-creating supply chain networks.

You Might Like This Program If...

- You are an business student who wants to take management and supply chain course work beyond what is required for your major.
- You are a business student who would like to add a specialization to your primary field of study.
