

BEHAVIOR ANALYSIS, MINOR

Requirements for a minor may be completed at any campus location offering the specified courses for the minor. Students may not change from a campus that offers their major to a campus that does not offer their major for the purpose of completing a minor.

Program Description

This minor is intended for undergraduate students who seek foundational knowledge and applied skills in the field of behavior analysis. The 21 credit minor was designed to help undergraduate students prepare for further academic study (e.g., graduate education) or employment in a variety of settings. The curriculum is specifically designed to prepare students to meet the initial training requirements leading to national board certification in behavior analysis (i.e., Registered Behavior Technician®, Board Certified Assistant Behavior Analyst®).

The overall model of the minor emphasizes the core areas of behavior analysis, their application to people across all human behavior (e.g., adults disposing of trash along the road, children engaging in behaviors impeding learning, or people with diabetes not taking insulin or following diet plans) and disciplines (e.g., autism, education, health, psychology, medicine, business) within research and ethical practice. Training will involve the foundational development of assessment, application, and ethical intervention.
