ELECTROCHEMICAL
ENGINEERING, MINOR

Requirements for a minor may be completed at any campus location
offering the specified courses for the minor. Students may not change
from a campus that offers their major to a campus that does not offer
their major for the purpose of completing a minor.

Student Outcomes

The integration of knowledge and skills acquired through the inquiry-
based teaching methods should enable students of the program to
achieve the following student educational outcomes:

• solve problems relating to the production, storage, distribution
  and utilization of electrochemical energy and the associated
  environmental issues
• design and conduct experiments, acquire data, define, analyze, and
  interpret data, and solve practical, complex problems on a variety of
  electrochemical technologies such as batteries, solar cells, flow and
  fuel cells, electrolyzers, and supercapacitors
• integrate professional, ethical, social and environmental factors
  in electrochemical engineering design and problem solving and
  understand the impact of these factors on global energy issues
• develop the ability to communicate effectively in writing and orally
  and build teamwork
• acquire the desire for lifelong learning to maintain technical
  competence and keep abreast of new developments in the field.
