GEOPHYSICS, MINOR

Requirements for a minor may be completed at any campus location offering the specified courses for the minor. Students may not change from a campus that offers their major to a campus that does not offer their major for the purpose of completing a minor.

Program Description

The Geophysics minor provides the opportunity for students from outside the geosciences to apply the physics, quantitative, and technical skills they are developing in their major program to the geophysical aspects of Earth science, including seismology, volcanology, natural hazards, environmental geophysics, and petroleum and mineral exploration. For students majoring in Geosciences, the completion of the minor will strengthen their physics/quantitative background and develop links between theory and application for these technical and quantitative skills. The minor will prepare students for graduate programs in geophysics and/or employment opportunities in the environmental and exploration industries.

What is Geophysics?

Geophysics is the application of physics to study of the Earth's inner workings. It is a broad field that studies the Earth's internal structure and dynamics through the use of physics and mathematics and applies that knowledge to such areas as oil and gas exploration and mitigation of natural hazards.

You Might Like This Program If...

- You are curious about mechanics of earthquakes, landslides, and other natural hazards.
- You are interested in the physical processes that drive plate tectonics.
- You want to learn more about how geophysical techniques are used to study parts of the Earth we cannot see because they lie beneath its surface.
- You would like to apply your physics, math, or computer skills to predict natural disasters or to develop a better understanding of how the Earth works.

Program Requirements

Requirements for the Minor

The minor consists of 18-20 credits satisfying the requirements below.

A grade of C or better is required for all courses in the minor, as specified by Senate Policy 59-10 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/59-00-minors-and-certificates/#59-10).

| Prescribed Courses: Require a grade of C or better
| GEOSC 1  | Physical Geology                           | 3       |
| MATH 140 | Calculus With Analytic Geometry I          | 4       |
| PHYS 212 | General Physics: Electricity and Magnetism | 4       |
| Additional Courses                               |         | 18-21   |

Academic Advising

The objectives of the university's academic advising program are to help advisees identify and achieve their academic goals, to promote their intellectual discovery, and to encourage students to take advantage of both in-and out-of-class educational opportunities in order that they become self-directed learners and decision makers.

Both advisers and advisees share responsibility for making the advising relationship succeed. By encouraging their advisees to become engaged in their education, to meet their educational goals, and to develop the habit of learning, advisers assume a significant educational role. The advisee’s unit of enrollment will provide each advisee with a primary
academic adviser, the information needed to plan the chosen program of study, and referrals to other specialized resources.
