ENTERPRISE TECHNOLOGY INTEGRATION, B.S.

Begin Campus: Any Penn State Campus

End Campus: University Park

Program Description
The Enterprise Technology Integration major (ETI) in the College of Information Sciences and Technology is a Bachelor of Science degree program that educates students in the fundamental concepts and state-of-the-art skills in three essential areas: information technology (IT), business concepts, and "soft skills" such as working in teams.

The ETI major focuses on the technology implementation perspective of enterprise system integration. The learning outcomes focus on a) information systems interconnectedness, data interchange, process modeling and reengineering, and distributed computing environments; b) business knowledge in accounting, supply chains and more; and c) teaming, leadership, and other "soft skills." Students graduating with a degree in ETI are prepared for successful careers across industries and government in systems integration and development, as well as IT and business consulting.

What is Enterprise Technology Integration?
Enterprise technology integration explores how information technology resources and data are used within and across organizations. Integrating information technology solutions in an enterprise is essential for businesses in conducting day-to-day activities as well as moving organizations forward as new business models emerge. Enterprises that can easily unify applications, services, systems and databases through information technology integration experience a competitive advantage.
