NEUROSCIENCE, MINOR

Requirements for a minor may be completed at any campus location offering the specified courses for the minor. Students may not change from a campus that offers their major to a campus that does not offer their major for the purpose of completing a minor.

Career Paths

Students with a Minor in Neuroscience pursue a variety of careers. Many pursue health-related careers, including clinical and/or research tracks. For advanced neuroscience-specific careers (e.g. neuropsychology, neuroscience research, etc.) an advanced degree, graduate or professional, is required. The neuroscience minor provides essential training for this advanced training. Students are encouraged to engage in practical learning experiences to complement formal classroom learning, for example, volunteering in a neuroscience research laboratory.
