

PHYSICAL MEDICINE AND REHABILITATION (PMR)

PMR 730: Physical Medicine and Rehabilitation Elective (3rd and 4th year)

5 Credits/Maximum of 5

This elective is for 3rd and 4th year medical students interested in gaining experience in the field of Adult and Pediatric Physical Medicine and Rehabilitation, improving diagnostic skills related to the complications of disability, and improving neurologic and musculoskeletal examination skills.

Prerequisite: successful completion of the second year of medical school

PMR 731: Phase II Elective in Physical Medicine and Rehabilitation

6 Credits/Maximum of 6

The Physical Medicine and Rehabilitation (PM&R) Phase II elective will provide foundational exposure and training in PM&R evaluations and treatment plans with a focus on neurologic and musculoskeletal rehabilitation. The elective will expose the student to the field of PM&R including neurological injuries, sports injuries, congenital and acquired disabilities, complications of functional impairment, and the restoration and maintenance of function. The student will be exposed to therapies, medications, and procedures typically used in PM&R practice.

Prerequisite: Successful completion of Phase I coursework.

PMR 740: Physical Medicine and Rehabilitation Acting Internship

5 Credits/Maximum of 15

The medical students will participate in PM&R evaluations, care for patients on the inpatient rehabilitation service, inpatient PM&R consult service and management of patients within the outpatient clinics. The course will allow the student to build on their physical examination and diagnostic skills through clinical participation, practice, and feedback provided by the attending physicians. They will actively participate in management discussion with interdisciplinary teams during their rotation.

Prerequisite: Successful completion of Phases I and II (and prefer additional completion of a general PMR elective).
