APLNG 200: Introduction to Language, Culture, and Social Interaction
3 Credits
Introduction to the interrelationships among language, culture, and social interaction and their fundamental links to social identities and discourse communities.

International Cultures (IL)
General Education: Humanities (GH)

APLNG 210: The Ecology of Global English
3 Credits
This course explores how English language enables globalization processes and how globalization changes the structure, norms, and usage of English.

International Cultures (IL)
General Education: Humanities (GH)

APLNG 220N: Multilingual Lives: Stories of Language and Culture Learning
3 Credits
In recent years Applied Linguistics has witnessed a narrative turn, with growing interest in complementing its logico-scientific core with analysis of stories about multilingual experiences. This course will explore how the intersection of knowledge domains from the social sciences and the humanities can enrich our understanding and appreciation of multilingualism, including its challenges and its intellectual benefits. The class will first read and analyze stories about growing up in bi- or multilingual families, immigration in childhood or adulthood, and voluntary learning of languages at home or abroad. Along the way, we will encounter questions about the relationship between language, culture and personal identity as well as questions about the ways in which gender, power, and social class influence our pathways in pursuit of a satisfying sense of self. The stories we read will be interspersed with formal inquiry in second language acquisition, bi- and multilingualism, and language education, such as: How can we understand the processes of language acquisition and attrition? How do individual differences such as age or motivation influence learning? What are the documented cognitive benefits of bilingualism? The class will then conduct a community outreach project, collecting and analyzing stories from multilinguals who may be members of their own families, recent or longer-term immigrants, international students, scholars or retirees, foreign language learners, heritage learners, or parents of bilingual children. This project will encourage students to interrogate lived experiences as objects of study. Presentation of findings may take various forms, e.g., public poster sessions, digital narratives, or contributions to oral history archives (e.g., welisten@psu.edu)

APLNG 250: Peer Tutoring for Multilingual Writers
3 Credits/Maximum of 3
This class provides theoretical and practical training to prepare Writing Center Peer Tutors with specific expertise in tutoring international/multilingual students. This course provides a theoretically-grounded introduction to the principles and practices of peer tutoring with multilingual writers (writers for whom English is not a first language). It is designed specifically for undergraduate students who wish to be employed as Peer Tutors with Penn State Learning at the Writing Center. Like ENGL 250, the class provides a basic orientation to the techniques of being an effective writing tutor, but offers a deeper understanding of the issues faced by writers whose first language is not English. The class may be of particular interest to students who study languages or education, who plan to work in academia, or who have a strong interest in cross-cultural communication or international education. However, undergraduate students of any major and of any language background are welcome to enroll in this course. Drawing upon research in second language acquisition, instructional theory, and composition pedagogy, the class examines the central roles of identity, belief, and cultural perspective in the development of tutoring expertise. Exploring the student’s own development as a writer and learner, engaging in practical training activities, writing intensively, talking about writing, and engaging in reflective exercises comprise the first set of topics in the semester. In the second unit, through readings, interaction, observation and discussion, each tutor-in-training will explore the cultural and linguistic factors in the development and maintenance of second-language writing proficiency for international students in an American university context. There is a strong focus as well on tutoring pedagogy, and the class includes a 10-week structured practicum experience during which each student will tutor an ESL student from a first-year writing class (ESL 15). Students who want to work as Peer Tutors must have completed their own first-year writing requirement; it is recommended that they have completed ENGL 202 also.

Prerequisite: ENGL 015; ESL 015

APLNG 280N: Conducting International Comparative Research
3 Credits
APLNG 280N Conducting International Comparative Research. (3) (Gen Ed:LI; Integrative) (BA) This course meets the Bachelor of Arts degree requirements and may also serve as a methods course in the Global and International Studies (GLIS) major. The goal of this course is to equip
students with effective methods for conducting international and cross-cultural research that addresses issues and problems occasioned by an increasingly globalized world. Students will acquire the background knowledge and skills necessary to analyze and evaluate existing international comparative literature and to design and propose new cross-national and cross-cultural research. The course focuses on projects in five key, contemporary domains of globalization: human rights, culture and identity, global conflict, wealth and inequality, and health and environment, and it draws on multidisciplinary methods from across the humanities and social sciences - including qualitative, quantitative, and mixed methods. Particular attention is paid to working with international datasets and the issue of translation and interpretation. As a result of the course, students will be able to: (1) locate and understand the structure and import of existing international databases, (2) design comparative, cross-national and cross-cultural research projects, (3) evaluate the validity, reliability, and significance of published international comparative research, (4) conduct basic comparative analyses of social, political, and cultural texts (documents) and oral interview data and other audio and visual data, (5) evaluate comparative quantitative data from cross-cultural surveys and other quantitative instruments, and (6) design reports and multimedia presentations of international comparative research.

APLNG 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

APLNG 310: Language Rights, Policy, and Planning
3 Credits

This is a course on language rights, policy, and planning from individual, group, inter-ethnic, and national perspectives. Linguistic minorities are a consequence of colonization by European powers in different regions of the globe. Other effects of colonization and political conflicts include mass movement, migration, and the emergence of nationalism. In such contexts, minorities have made demands for language rights and used language policy and planning as strategies to realize demands for social justice. This course will examine how linguistic minorities secure opportunities to use their own languages and have them accommodated in official legislation as mother tongue, second, or foreign languages. The course will adopt a global perspective and analyze language rights as well as language policy and planning in diverse regions of the globe, including but not restricted to, Africa, Asia, and South America. Analysis will primarily focus on how language policies can be carried out from different perspectives (e.g., literary, linguistic, and political) in different geographical regions. After examining how language policies operate in and influence society, the course will use sociopolitical ideologies to explore the nature of the relationship between language policies and language rights and the ways this relationship enables one to achieve an expanded understanding of the impact of language policies and language rights on local language practices.

APLNG 402: Language, Culture and Cognition in East Asian Context
3 Credits

This course is a linguistic introduction to the relationship between language, culture, and cognition with a focus on Chinese, Japanese, and Korean. In this course, we study the cognitive linguistic view that human cognition is fundamentally embodied and shaped by various figurative processes such as metaphor and metonymy grounded in our bodily and cultural experiences, and that human thought and language are fundamentally metaphorical in nature. We examine how we think and speak figuratively and conceptualize our experience metaphorically in everyday life, and compare the languages in terms of cognitive universals and cultural variations. The objectives of this course are threefold: (1) to lead language students to a linguistic approach to language analysis so that they learn about how individual linguistic expressions fit into a coherent linguistic system; (2) to enable them to see how linguistic structures reflect underlying cognitive, conceptual structures which are derived from the interplay between human embodiment and cultural environment; and (3) to provide them with a broad perspective on similarities and differences among Chinese, Japanese, and Korean as components that form a coherent category known as "East Asian". Class work will include some lecture but will emphasize guided discussions, literature review writings, student presentations, and research papers. This interactive approach is intended to encourage students' participation, involvement, and cooperation in learning, to help them understand the relationship between language, culture, and cognition, and to assist them in developing both analytic and expressive abilities. This course is designed to count as a BA "Other Cultures" and International Culture. Students can take this course as long as they have an interest in the relationship between language, culture and cognition, especially in the context of East Asia.

APLNG 410: Teaching American English Pronunciation
3 Credits

Study and application of principles of North American English phonetics and theories of teaching pronunciation. APLNG 410 Teaching American English Pronunciation (3)(BA) This course meets the Bachelor of Arts degree requirements. This course, for teachers who deal with speakers of other languages, integrates research and theory on the acquisition and development of pronunciation, as well as current pedagogy, to enable them to construct their own principled theory of teaching pronunciation. Students are introduced to the characteristics of the consonant and vowels systems of English. In addition, students are introduced to variations in the production of consonants and vowels by speakers of languages other than English. Students are expected to understand and to be able to describe the stress rhythm, and intonation of English as well as the adjustments that are made in connected speech. Students will learn how grammar and orthography influence the pronunciation of
phonemes. Students will learn how to diagnose an individual's difficulties in the production of North American English and will learn how to develop appropriate curriculum. By focusing on instructional strategies from fields as diverse as theater arts, psychology, and instructional technology, students will be able to individualize their instruction by providing alternative ways to better respond to second language speakers' learning styles and preferences. Moreover, this course requires students to develop and implement appropriate curriculum for both hypothetical, real tutorial, and whole class instruction. The objectives of this course are for teachers 1) to develop a satisfactory understanding of the phonetics of North American English, including consonants, vowels, rhythm, stress, intonation and prominence, 2) to develop an understanding of the relationship between listening and pronunciation, as well as orthography and pronunciation, 3) to develop an ability to explain these phonetic concepts appropriate to students with varying learning styles using a variety of techniques such as kinesthetic and tactile reinforcement, 4) to develop an ability to diagnose speakers' particular pronunciation difficulties and to create instructional materials in response, 5) to develop a coherent philosophy of the teaching of pronunciation, and 6) to develop an ability to evaluate pronunciation textbooks and materials and supplement them when necessary.

Bachelor of Arts: Social and Behavioral Sciences

APLNG 412: Teaching Second Language Writing

3 Credits

This course provides opportunities for exploring various perspectives on theory, research, and pedagogical applications in second language writing. APLNG 412 Teaching Second Language Writing (3) This course has been designed to provide opportunities to explore various perspectives on theory, research, and pedagogical applications in second language writing. Through readings, writing, class discussion, and development of practical applications, students may develop an understanding of how research and theory can inform their practice, as well as an awareness of how personal and professional factors come together to inform their own theory of second language writing. By engaging in instructional activities, such as evaluating writing, responding to writing, and developing materials, students may begin to develop an understanding of how to implement theory in practice aligned with understanding. The overriding objectives are for students to help develop self-awareness as a writer and a teacher of writing, develop their own philosophy of teaching composition in an additional language context and to develop curriculum that embodies this philosophy. Students will be evaluated on reading journals, tutoring in the Writing Center, literature review, materials development project and developing of materials. APLNG 412 is an elective course in the M.A. TESL program and/or PhD option in Applied Linguistics.

APLNG 482: Introduction to Applied Linguistics

3 Credits

Application of theories of language to psycholinguistics, philosophy of language, anthropological linguistics, sociolinguistics, bi/multilingualism, second language acquisition and teaching. APLNG 482 Introduction to Applied Linguistics (3) (IL) This is a survey course concerned with the application of theories of language to issues in the areas of psycholinguistics, philosophy of language, anthropological linguistics, sociolinguistics, bi/multilingualism, second language acquisition, and second language teaching. Specifically, the course focuses on: a) how language influences the way people think and bring meaning to what they do, b) how language users match their utterances to specific functional purposes within specific social contexts, c) how the language practices of a particular culture are closely tied to the beliefs and conceptual principles by which people in the culture live, d) how language is used by speakers of different races, genders, and ethnic backgrounds, and e) how language is acquired, used, and perceived within bi/multilingual societies. Through reading, writing, and discussing the major issues in each of these areas students will come to understand how theories of language have influenced the way we think and bring meaning to what we do, the ways we communicate within different cultures and societies, and the way languages are learned and used.

International Cultures (IL)

Writing Across the Curriculum

APLNG 484: Discourse-Functional Grammar

3 Credits

Develop a working knowledge of the structure of English and apply such knowledge to research and/or classroom situations. APLNG 484 Linguistic Structures for English as a Second Language (3) This course is designed to enable prospective and practicing ESL/EFL teachers to understand the linguistic structures of the English language. Through the use of transformation grammar, students will interpret and analyze the basic grammatical structures of the English language. Students will apply their developing skills of linguistic analysis to recognize, and analyze, and remediate both oral and written grammatical errors in ESL/EFL instructional contexts. Students will understand the current theoretical issues related to pedagogical grammars and develop an appreciation for the practical and theoretical relevance of linguistics analysis for second language educators.

APLNG 491: Theory: Second Language Acquisition

3 Credits

An investigation into current issues in the theoretical bases of second language acquisition. APLNG 491 Theory: Second Language Acquisition (3) This course considers the relationship between second language acquisition (SLA) theory and language teaching. An examination of various aspects of first language (L1) and second language (L2) learning/acquisition processes provides a framework for consideration of basic questions in SLA research and interpretation of findings to date. Of particular interest is the relationship of this research to teaching materials and methods. The questions addressed include the following: What is SLA? What are the methods and aims of SLA Research? How are theories of SLA related to major theoretical models of human language and human learning? What have been or could be important interdisciplinary perspectives in SLA?

APLNG 493: Teaching English as a Second Language

3 Credits

Theory, research, and pedagogy that focus on the teaching of English to speakers of other languages in varied contexts. APLNG 493 Teaching English as a Second Language (3) (IL) This course focuses on the teaching of English to speakers of other languages. Specifically, the course explores the multidimensional nature of the teacher as a learner of teaching, the context of schools and schooling within which teaching occurs, and the activities and content of second language teaching and learning. Throughout the semester, students will engage in a range of theoretical, pedagogical, and reflective activities that will enable them to: 1) understand their own beliefs and knowledge about language
learning and language teaching and become aware of the impact of such knowledge and beliefs on their classroom practices, 2) recognize the highly situated and interpretative processes involved in language teaching and be able to reflect on, critically analyze, and evaluate their own teaching practices, 3) become sensitive to the complex social, cultural, political, and institutional factors that affect language teaching and students’ language learning, 4) come to recognize students’ strengths and development as learners and language learners, 5) understand subject matter content from an instructional perspective and learn to anticipate areas that may require additional instructional support, 6) use their knowledge of theory to inform their instructional practices, 7) participate in professional collaborations with other teachers as they learn about language teachers, language teaching, and language learning.

International Cultures (IL)

APLNG 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

APLNG 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.
